necessary to implement State policies, standards and criteria.

(4) A State must have a procedure whereby it reviews and certifies the local program’s compliance with State standards and criteria. This procedure must include provisions for:

(i) Opportunity for the public and governmental entities (including Federal agencies) to participate in the development of local programs; and

(ii) Opportunity for the public and governmental entities (including Federal agencies) to make their views known (through public hearings or other means) to the State agency prior to approval of local programs; and

(iii) Review by the State of the adequacy of local programs consideration of facilities identified in a State’s management program in which there is a national interest.

(5) A State must be able to assure implementation and enforcement of a local program once approved. To accomplish this a State must:

(i) Establish a monitoring system which defines what constitutes and detects patterns of non-compliance. In the case of uses of regional benefit and facilities in which there is a national interest, the monitoring system must be capable of detecting single instances of local actions affecting such uses or facilities in a manner contrary to the management program.

(ii) Be capable of assuring compliance when a pattern of deviation is detected or when a facility involving identified national interests or a use of regional benefit is affected in a manner contrary to the program’s policies. When State action is required because of failure by a local government to enforce its program, the State must be able to do one or a combination of the following:

(A) Directly enforce the entire local program;

(B) Directly enforce that portion of the local program that is being enforced improperly. State intervention would be necessary only in those local government activities that are violating the policies, standards or criteria.

(C) Seek judicial relief against local government for failure to properly enforce;

(D) Review local government actions on a case-by-case basis or on appeal and have the power to prevent those actions inconsistent with the policies and standards.

(E) Provide a procedure whereby the responsibility for enforcing a program shifts to an intermediate level of government, assuming statutory authority exists to enable the immediate of government to assume this responsibility.

§ 923.43 Direct State land and water use planning and regulation—Technique B.

(a) The management program must provide for any one or a combination of general techniques specified in subsection 306(d)(11) of the Act for control of land and water uses within the coastal zone. The second such control technique, at subsection 306(d)(11)(B) of the Act, is direct state land and water use planning and regulation (control technique B).

(b) To have control technique B approved, the State must have the requisite direct authority to plan and regulate land and water uses subject to the management program. This authority can take the form of:

(1) Comprehensive legislation—A single piece of comprehensive legislation specific to coastal management and the requirements of this Act.

(2) Networking—The utilization of authorities which are compatible with and applied on the basis of coastal management policies developed pursuant to §923.3.

(c) In order to apply the networking concept, the State must:

(1) Demonstrate that, taken together, existing authorities can and will be used to implement the full range of policies and management techniques identified as necessary for coastal management purposes; and

(2) Bind each party which exercises statutory authority that is part of the management program to conformance with relevant enforceable policies and management techniques. Parties may be bound to conformance through an executive order, administrative directive or a memorandum of understanding provided that:
§ 923.44

(i) The management program authorities provide grounds for taking action to ensure compliance of networked agencies with the program. It will be sufficient if any of the following can act to ensure compliance: The State agency designated pursuant to subsection 306(d)(6) of the Act, the State’s Attorney General, another State agency, a local government, or a citizen.

(ii) The executive order, administrative directive or memorandum of understanding establishes conformance requirements of other State agency activities or authorities to management program policies. A gubernatorial executive order will be acceptable if networked State agency heads are directly responsible to the Governor.

(3) Where networked State agencies can enforce the management program policies at the time of section 306 approval without first having to revise their operating rules and regulations, then any proposed revisions to such rules and regulations which would enhance or facilitate implementation need not be accomplished prior to program approval. Where State agencies cannot enforce coastal policies without first revising their rules and regulations, then these revisions must be made prior to approval of the State’s program by the Assistant Administrator.

§ 923.44 State review on a case-by-case basis of actions affecting land and water uses subject to the management program—Technique C.

(a) The management program must provide for any one or a combination of general techniques specified in subsection 306(d)(11) of the Act for control of land and water uses within the coastal zone. The third such control technique, at subsection 306(d)(11)(C) of the Act, is state administrative review for consistency with the management program of all development plans, projects, or land and water use regulations, including exceptions and variances thereto, proposed by any state or local authority or private developer, with power to approve or disapprove after public notice and an opportunity for hearings (control technique C).

(b) Under case-by-case review, States have the power to review individual development plans, projects or land and water use regulations (including variances and exceptions thereto) proposed by any State or local authority or private developer which have been identified in the management program as being subject to review for consistency with the management program. This control technique requires the greatest degree of policy specificity because compliance with the program will not require any prior actions on the part of anyone affected by the program. Specificity also is needed to avoid challenges that decisions (made pursuant to the management program) are unfounded, arbitrary or capricious.

(c) To have control technique C approved, a State must:

(1) Identify the plans, projects or regulations subject to review, based on their significance in terms of impacts on coastal resources, potential for incompatibility with the State’s coastal management program, and having greater than local significance;

(2) Identify the State agency that will conduct this review;

(3) Include the criteria by which identified plans, projects and regulations will be approved or disapproved;

(4) Have the power to approve or disapprove identified plans, projects or regulations that are inconsistent with the management program, or the power to seek court review thereof; and

(5) Provide public notice of reviews and the opportunity for public hearing prior to rendering a decision on each case-by-case review.

§ 923.45 Air and water pollution control requirements.

The program must incorporate, by reference or otherwise, all requirements established by the Federal Water Pollution Control Act, as amended (Clean Water Act or CWA), or the Clean Air Act, as amended (CAA), or established by the Federal Government or by any state or local government pursuant to such Acts. Such requirements must be the water pollution control and air pollution control requirements applicable to such program. Incorporation of the air and water quality requirements pursuant
