§ 1210.3

(f) Surrogate lighter means a device that: approximates the appearance, size, shape, and weight of, and is identical in all other factors that affect child resistance (including operation and the force(s) required for operation), within reasonable manufacturing tolerances, to, a lighter intended for use by consumers; has no fuel; does not produce a flame; and produces an audible or visual signal that will be clearly discernible when the surrogate lighter is activated in each manner that would normally produce a flame in a production lighter. (This definition does not require a lighter to be modified with electronics or the like to produce a signal. Manufacturers may use a lighter without fuel as a surrogate lighter if a distinct signal such as a “click” can be heard clearly when the mechanism is operated in each manner that would produce a flame in a production lighter and if a flame cannot be produced in a production lighter without the signal. But see §1210.4(f)(1).)

(g) Model means one or more cigarette lighters from the same manufacturer or importer that do not differ in design or other characteristics in any manner that may affect child-resistance. Lighter characteristics that may affect child-resistance include, but are not limited to, size, shape, case material, and ignition mechanism (including child-resistant features).

§ 1210.4 Test protocol.

(a) Child test panel. (1) The test to determine if a lighter is resistant to successful operation by children uses a panel of children to test a surrogate lighter representing the production lighter intended for use. Written informed consent shall be obtained from a parent or legal guardian of a child before the child participates in the test.

(2) The test shall be conducted using at least one, but no more than two, 100-child test panels in accordance with the provisions of §1210.4(f).

(3) The children for the test panel shall live within the United States.

(4) The age and sex distribution of each 100-child panel shall be:

(i) 30 + or - 2 children (20 + or - 1 males; 10 + or - 1 females) 42 through 44 months old;

(ii) 40 + or - 2 children (26 + or - 1 males; 14 + or - 1 females) 45 through 48 months old;

(iii) 30 + or - 2 children (20 + or - 1 males; 10 + or - 1 females) 49 through 51 months old.

NOTE: To calculate a child’s age in months:

1. Subtract the child’s birth date from the test date.

Month Day Year
Test Date 8 3 94
Birth Date 6 23 90
Difference 2 -20 4

2. Multiply the difference in years by 12 months.

4 years × 12 months = 48 months.

3. Add the difference in months.

48 months + 2 months = 50 months.

4. If the difference in days is greater than 15 (e.g., 16, 17), add 1 month.

If the difference in days is less than -15 (e.g., -16, -17) subtract 1 month.

50 months - 1 month = 49 months.

5. If the difference in days is between -15 and 15 (e.g., -15, -14, ... 14, 15), do not add or subtract 1 month.

(5) No child with a permanent or temporary illness, injury, or handicap that would interfere with the child’s ability to operate the surrogate lighter shall be selected for participation.

(6) Two children at a time shall participate in testing of surrogate lighters. Extra children whose results will
