

§ 10.599

case of a textile or apparel good that is a yarn, fabric, or fiber, the term “component of the good that determines the tariff classification of the good” means all of the fibers in the good.

[CBP Dec. 08-22, 73 FR 33678, June 13, 2008, as amended by CBP Dec. 10-26, 75 FR 50699, Aug. 17, 2010]

§ 10.599 Fungible goods and materials.

(a) *General.* A person claiming that a fungible good or material is an originating good may base the claim either on the physical segregation of the fungible good or material or by using an inventory management method with respect to the fungible good or material. For purposes of this section, the term “inventory management method” means:

- (1) Averaging;
- (2) “Last-in, first-out;”
- (3) “First-in, first-out;” or

(4) Any other method that is recognized in the Generally Accepted Accounting Principles of the Party in which the production is performed or otherwise accepted by that country.

(b) *Duration of use.* A person selecting an inventory management method under paragraph (a) of this section for a particular fungible good or material must continue to use that method for that fungible good or material throughout the fiscal year of that person.

§ 10.600 Accessories, spare parts, or tools.

(a) *General.* Accessories, spare parts, or tools that are delivered with a good and that form part of the good’s standard accessories, spare parts, or tools will be treated as originating goods if the good is an originating good, and will be disregarded in determining whether all the non-originating materials used in the production of the good undergo an applicable change in tariff classification specified in General Note 29(n), HTSUS, provided that:

(1) The accessories, spare parts, or tools are classified with, and not invoiced separately from, the good, regardless of whether they appear specified or separately identified in the invoice for the good; and

19 CFR Ch. I (4–1–13 Edition)

(2) The quantities and value of the accessories, spare parts, or tools are customary for the good.

(a) *Regional value content.* If the good is subject to a regional value content requirement, the value of the accessories, spare parts, or tools is taken into account as originating or non-originating materials, as the case may be, in calculating the regional value content of the good under §10.595 of this subpart.

§ 10.601 Retail packaging materials and containers.

(a) *Effect on tariff shift rule.* Packaging materials and containers in which a good is packaged for retail sale, if classified with the good for which preferential tariff treatment under the CAFTA–DR is claimed, will be disregarded in determining whether all non-originating materials used in the production of the good undergo the applicable change in tariff classification set out in General Note 29(n), HTSUS.

(b) *Effect on regional value content calculation.* If the good is subject to a regional value content requirement, the value of such packaging materials and containers will be taken into account as originating or non-originating materials, as the case may be, in calculating the regional value content of the good.

Example 1. Guatemalan Producer A of good C imports 100 non-originating blister packages to be used as retail packaging for good C. As provided in §10.596(a)(1) of this subpart, the value of the blister packages is their adjusted value, which in this case is \$10. Good C has a regional value content requirement. The United States importer of good C decides to use the build-down method, $RVC = ((AV - VNM)/AV) \times 100$ (see §10.595(b) of this subpart), in determining whether good C satisfies the regional value content requirement. In applying this method, the non-originating blister packages are taken into account as non-originating. As such, their \$10 adjusted value is included in the VNM, value of non-originating materials, of good C.

Example 2. Same facts as in Example 1, except that the blister packages are originating. In this case, the adjusted value of the originating blister packages would *not* be included as part of the VNM of good C under the build-down method. However, if the U.S. importer had used the build-up method, RVC

= (VOM/AV) × 100 (see § 10.595(c) of this subpart), the adjusted value of the blister packaging would be included as part of the VOM, value of originating material.

§ 10.602 Packing materials and containers for shipment.

(a) *Effect on tariff shift rule.* Packing materials and containers for shipment, as defined in § 10.593(m) of this subpart, are to be disregarded in determining whether the non-originating materials used in the production of the good undergo an applicable change in tariff classification set out in General Note 29(n), HTSUS. Accordingly, such materials and containers are not required to undergo the applicable change in tariff classification even if they are non-originating.

(b) *Effect on regional value content calculation.* Packing materials and containers for shipment, as defined in § 10.593(m) of this subpart, are to be disregarded in determining the regional value content of a good imported into the United States. Accordingly, in applying the build-down, build-up, or net cost method for determining the regional value content of a good imported into the United States, the value of such packing materials and containers for shipment (whether originating or non-originating) is disregarded and not included in AV, adjusted value, VNM, value of non-originating materials, VOM, value of originating materials, or NC, net cost of a good.

Example. Producer A of the Dominican Republic produces good C. Producer A ships good C to the United States in a shipping container that it purchased from Company B in the Dominican Republic. The shipping container is originating. The value of the shipping container determined under section § 10.596(a)(2) of this subpart is \$3. Good C is subject to a regional value content requirement. The transaction value of good C is \$100, which includes the \$3 shipping container. The United States importer decides to use the build-up method, $RVC = (VOM/AV) \times 100$ (see § 10.595(c) of this subpart), in determining whether good C satisfies the regional value content requirement. In determining the AV, adjusted value, of good C imported into the U.S., paragraph (b) of this section and the definition of AV require a \$3 deduction for the value of the shipping container. Therefore, the AV is \$97 (\$100 – \$3). In addition, the value of the shipping container is

disregarded and not included in the VOM, value of originating materials.

§ 10.603 Indirect materials.

An indirect material, as defined in § 10.582(m) of this subpart, will be considered to be an originating material without regard to where it is produced.

Example. Honduran Producer C produces good C using non-originating material A. Producer C imports non-originating rubber gloves for use by workers in the production of good C. Good C is subject to a tariff shift requirement. As provided in § 10.594(b)(1) of this subpart and General Note 29(n), each of the non-originating materials in good C must undergo the specified change in tariff classification in order for good C to be considered originating. Although non-originating material A must undergo the applicable tariff shift in order for good C to be considered originating, the rubber gloves do not because they are indirect materials and are considered originating without regard to where they are produced.

§ 10.604 Transit and transshipment.

(a) *General.* A good that has undergone production necessary to qualify as an originating good under § 10.594 of this subpart will not be considered an originating good if, subsequent to that production, the good:

(1) Undergoes further production or any other operation outside the territories of the Parties, other than unloading, reloading, or any other operation necessary to preserve the good in good condition or to transport the good to the territory of a Party; or

(2) Does not remain under the control of customs authorities in the territory of a non-Party.

(b) *Documentary evidence.* An importer making a claim that a good is originating may be required to demonstrate, to CBP's satisfaction, that the conditions and requirements set forth in paragraph (a) of this section were met. An importer may demonstrate compliance with this section by submitting documentary evidence. Such evidence may include, but is not limited to, bills of lading, airway bills, packing lists, commercial invoices, receiving and inventory records, and customs entry and exit documents.
