containing elastomeric yarns (excluding latex) in the component of the good that determines the tariff classification of the good will be considered an originating good only if such yarns are wholly formed in the territory of one or both of the Parties. For purposes of this paragraph, “wholly formed” means that all the production processes and finishing operations, starting with the extrusion of filaments, strips, film, or sheet, and including slitting a film or sheet into strip, or the spinning of all fibers into yarn, or both, and ending with a finished yarn or plied yarn, took place in the territory of one or both of the Parties.

(3) Yarn, fabric, or fiber. For purposes of paragraph (c) of this section, in the case of a textile or apparel good that is a yarn, fabric, or fiber, the term “component of the good that determines the tariff classification of the good” means all of the fibers in the good.

§ 10.919 Fungible goods and materials.

(a) General. A person claiming that a fungible good or material is an originating good may base the claim either on the physical segregation of the fungible good or material or by using an inventory management method with respect to the fungible good or material. For purposes of this section, the term “inventory management method” means:

(1) Averaging;
(2) “Last-in, first-out;”
(3) “First-in, first-out;” or
(4) Any other method that is recognized in the Generally Accepted Accounting Principles of the Party in which the production is performed or otherwise accepted by that country.

(b) Duration of use. A person selecting an inventory management method under paragraph (a) of this section for a particular fungible good or material must continue to use that method for that fungible good or material throughout the fiscal year of that person.

§ 10.920 Accessories, spare parts, or tools.

(a) General. Accessories, spare parts, or tools that are delivered with a good and that form part of the good’s standard accessories, spare parts, or tools will be treated as originating goods if the good is an originating good, and will be disregarded in determining whether all the non-originating materials used in the production of the good undergo an applicable change in tariff classification specified in General Note 32(n), HTSUS, provided that:

(1) The accessories, spare parts, or tools are classified with, and not invoiced separately from, the good, regardless of whether they are specified or separately identified in the invoice for the good; and
(2) The quantities and value of the accessories, spare parts, or tools are customary for the good.

(b) Regional value content. If the good is subject to a regional value content requirement, the value of the accessories, spare parts, or tools is taken into account as originating or non-originating materials, as the case may be, in calculating the regional value content of the good under §10.915 of this subpart.

§ 10.921 Goods classifiable as goods put up in sets.

Notwithstanding the specific rules set forth in General Note 32(n), HTSUS, goods classifiable as goods put up in sets for retail sale as provided for in General Rule of Interpretation 3, HTSUS, will not be considered to be originating goods unless:

(a) Each of the goods in the set is an originating good; or
(b) The total value of the non-originating goods in the set does not exceed:

(1) In the case of textile or apparel goods, 10 percent of the adjusted value of the set; or
(2) In the case of a good other than a textile or apparel good, 15 percent of the adjusted value of the set.

§ 10.922 Retail packaging materials and containers.

(a) Effect on tariff shift rule. Packaging materials and containers in which a good is packaged for retail sale, if classified with the good for which preferential tariff treatment under the PTPA is claimed, will be disregarded in determining whether all non-originating materials used in the
production of the good undergo the applicable change in tariff classification set out in General Note 32(n), HTSUS.

(b) Effect on regional value content calculation. If the good is subject to a regional value content requirement, the value of such packaging materials and containers will be taken into account as originating or non-originating materials, as the case may be, in calculating the regional value content of the good.

Example 1. Peruvian Producer A of good C imports 100 non-originating blister packages to be used as retail packaging for good C. As provided in §10.916(a)(1) of this subpart, the value of the blister packages is their adjusted value, which in this case is $10. Good C has a regional value content requirement. The United States importer of good C decides to use the build-down method, RVC = (AV - VNM) / AV × 100 (see §10.915(b) of this subpart), in determining whether good C satisfies the regional value content requirement. In applying this method, the non-originating blister packages are taken into account as non-originating. As such, their $10 adjusted value is included in the VNM, value of non-originating materials, of good C.

Example 2. Same facts as in Example 1, except that the blister packages are originating. In this case, the adjusted value of the originating blister packages would not be included as part of the VNM of good C under the build-down method. However, if the U.S. importer had used the build-up method, RVC = (VOM / AV) × 100 (see §10.915(c) of this subpart), the adjusted value of the blister packaging would be included as part of the VOM, value of originating materials.

§10.923 Packing materials and containers for shipment.

(a) Effect on tariff shift rule. Packing materials and containers for shipment, as defined in §10.913(m) of this subpart, are to be disregarded in determining whether the non-originating materials used in the production of the good undergo an applicable change in tariff classification set out in General Note 32(n), HTSUS. Accordingly, such materials and containers are not required to undergo the applicable change in tariff classification even if they are non-originating.

(b) Effect on regional value content calculation. Packing materials and containers for shipment, as defined in §10.913(m) of this subpart, are to be disregarded in determining the regional value content of a good imported into the United States. Accordingly, in applying the build-down, build-up, or net cost method for determining the regional value content of a good imported into the United States, the value of such packaging materials and containers for shipment (whether originating or non-originating) is disregarded and not included in AV, adjusted value, VNM, value of non-originating materials, VOM, value of originating materials, or NC, net cost of a good.

Example. Peruvian producer A produces good C. Producer A ships good C to the United States in a shipping container that it purchased from Company B in Peru. The shipping container is originating. The value of the shipping container determined under section §10.916(a)(2) of this subpart is $3. Good C is subject to a regional value content requirement. The transaction value of good C is $100, which includes the $3 shipping container. The U.S. importer decides to use the build-up method, RVC = (VOM / AV) × 100 (see §10.915(c) of this subpart), in determining whether good C satisfies the regional value content requirement. In determining the AV, adjusted value, of good C imported into the U.S., paragraph (b) of this section and the definition of AV require a $3 deduction for the value of the shipping container. Therefore, the AV is $97 ($100 - $3). In addition, the value of the shipping container is disregarded and not included in the VOM, value of originating materials.

§10.924 Indirect materials.

An indirect material, as defined in §10.902(m) of this subpart, will be considered to be an originating material without regard to where it is produced.

Example. Peruvian Producer A produces good C using non-originating material B. Producer A imports non-originating rubber gloves for use by workers in the production of good C. Good C is subject to a tariff shift requirement. As provided in §10.914(b)(1) of this subpart and General Note 32(n), each of the non-originating materials in good C must undergo the specified change in tariff classification in order for good C to be considered originating. Although non-originating material B must undergo the applicable tariff shift in order for good C to be considered originating, the rubber gloves do not because they are indirect materials and are considered originating without regard to where they are produced.

§10.925 Transit and transshipment.

(a) General. A good that has undergone production necessary to qualify as
