§ 416.924b Age as a factor of evaluation in the sequential evaluation process for children.

(a) General. In this section, we explain how we consider age when we decide whether you are disabled. Your age may or may not be a factor in our determination whether your impairment(s) is severe (see § 416.924(c)) and whether it functionally equals the listings (see § 416.926a). Except in the case of certain premature infants, as described in paragraph (b) of this section, age means chronological age.

(1) When we determine whether you have an impairment or combination of impairments that is severe, we will compare your functioning to that of children your age who do not have impairments.

(2) When we determine whether your impairment(s) meets a listing, we may or may not need to consider your age. The listings describe impairments that we consider of such significance that they are presumed to cause marked and severe functional limitations.

(i) If the listing appropriate for evaluating your impairment is divided into specific age categories, we will evaluate your impairment according to your
age when we decide whether your impairment meets that listing.

(ii) If the listing appropriate for evaluating your impairment does not include specific age categories, we will decide whether your impairment meets the listing without giving consideration to your age.

(3) When we compare an unlisted impairment or a combination of impairments with the listings to determine whether it medically equals the severity of a listing, the way we consider your age will depend on the listing we use for comparison. We will use the same principles for considering your age as in paragraphs (a)(2)(i) and (a)(2)(ii) of this section; that is, we will consider your age only if we are comparing your impairment(s) to a listing that includes specific age categories.

(4) We will also consider your age and whether it affects your ability to be tested. If your impairment(s) is not amenable to formal testing because of your age, we will consider all information in your case record that helps us decide whether you are disabled. We will consider other generally acceptable methods consistent with the prevailing state of medical knowledge and clinical practice that will help us evaluate the existence and severity of your impairment(s).

(b) Correcting chronological age of premature infants. We generally use chronological age (that is, a child’s age based on birth date) when we decide whether, or the extent to which, a physical or mental impairment or combination of impairments causes functional limitations. However, if you were born prematurely, we may consider you to be younger than your chronological age. When we evaluate the development or linear growth of a child born prematurely, we may use a “corrected” chronological age; that is, the chronological age adjusted by a period of gestational prematurity. We consider an infant born at less than 37 weeks’ gestation to be born prematurely.

(1) We apply a corrected chronological age in these situations—

(i) When we evaluate developmental delay in premature children until the child’s prematurity is no longer a relevant factor; generally no later than about chronological age 2 (see paragraph (b)(2) of this section);

(ii) When we evaluate an impairment of linear growth, such as under the listings in §100.00 in appendix 1 of subpart P of part 404 of this chapter, until the child is 12 months old. In this situation, we refer to neonatal growth charts which have been developed to evaluate growth in premature infants (see paragraph (b)(2) of this section).

(2) We compute a corrected chronological age as follows—

(i) If you have not attained age 1, we will correct your chronological age. We compute the corrected chronological age by subtracting the number of weeks of prematurity (i.e., the difference between 40 weeks of full-term gestation and the number of actual weeks of gestation) from your chronological age. The result is your corrected chronological age.

(ii) If you are over age 1, have a developmental delay, and prematurity is still a relevant factor in your case (generally, no later than about chronological age 2), we will decide whether to correct your chronological age. Our decision will be based on our judgment and all the facts of your case. If we decide to correct your chronological age, we may correct it by subtracting the full number of weeks of prematurity or a lesser number of weeks. We will also decide not to correct your chronological age if we can determine from the evidence that your developmental delay is the result of your medically determinable impairment(s) and is not attributable to your prematurity.

(3) Notwithstanding the provisions in paragraph (b)(1) of this section, we will not compute a corrected chronological age if the medical evidence shows that your treating source or other medical source has already taken your prematurity into consideration in his or her assessment of your development. Also, we will not compute a corrected chronological age when we find you disabled using the examples of functional equivalence based on low birth weight in §416.926a(m)(6) or (7).

§ 416.925 Listing of Impairments in appendix 1 of subpart P of part 404 of this chapter.

(a) What is the purpose of the Listing of Impairments? The Listing of Impairments (the listings) is in appendix 1 of subpart P of part 404 of this chapter. For adults, it describes for each of the major body systems impairments that we consider to be severe enough to prevent an individual from doing any gainful activity, regardless of his or her age, education, or work experience. For children, it describes impairments that cause marked and severe functional limitations.

(b) How is appendix 1 organized? There are two parts in appendix 1:

(1) Part A contains criteria that apply to individuals age 18 and over. We may also use part A for individuals who are under age 18 if the disease processes have a similar effect on adults and children.

(2) Part B contains criteria that apply only to individuals who are under age 18; we never use the listings in part B to evaluate individuals who are age 18 or older. In evaluating disability for a person under age 18, we use part B first. If the criteria in part B do not apply, we may use the criteria in part A when those criteria give appropriate consideration to the effects of the impairment(s) in children. To the extent possible, we number the provisions in part B to maintain a relationship with their counterparts in part A.

(ii) Although the severity criteria in part B of the listings are expressed in different ways for different impairments, “listing-level severity” generally means the level of severity described in § 416.926a(a); that is, “marked” limitations in two domains of functioning or an “extreme” limitation in one domain. (See § 416.926a(e) for the definitions of the terms marked and extreme as they apply to children.) Therefore, in general, a child’s impairment(s) is of “listing-level severity” if it causes marked limitations in two domains of functioning or an extreme limitation in one. However, when we decide whether your impairment(s) meets the requirements of a listing, we will decide that your impairment is of “listing-level severity” even if it does not result in marked limitations in two domains of functioning, or an extreme limitation in one, if the listing that we apply does not require such limitations to establish that an impairment(s) is disabling.

(c) How do we use the listings? (1) Most body system sections in parts A and B of appendix 1 are in two parts: an introduction, followed by the specific listings.

(2) The introduction to each body system contains information relevant to the use of the listings in that body system; for example, examples of common impairments in the body system and definitions used in the listings for that body system. We may also include specific criteria for establishing a diagnosis, confirming the existence of an impairment, or establishing that your impairment(s) satisfies the criteria of a particular listing in the body system. Even if we do not include specific criteria for establishing a diagnosis or confirming the existence of your impairment, you must still show that you have a severe medically determinable impairment(s), as defined in §§ 416.908, 416.920(c), and 416.924(c).

(3) In most cases, the specific listings follow the introduction in each body system, after the heading, Category of Impairments. Within each listing, we specify the objective medical and other findings needed to satisfy the criteria of that listing. We will find that your impairment(s) meets the requirements of a listing when it satisfies all of the criteria of that listing, including any relevant criteria in the introduction, and meets the duration requirement (see § 416.909).

(4) Most of the listed impairments are permanent or expected to result in death. For some listings, we state a specific period of time for which your impairment(s) will meet the listing. For all others, the evidence must show that your impairment(s) has lasted or can be expected to last for a continuous period of at least 12 months.

(5) If your impairment(s) does not meet the criteria of a listing, it can medically equal the criteria of a listing. We explain our rules for medical
