For use only:
1. At levels not to exceed 0.25 percent by weight of polymers used as provided in §176.180 of this chapter.
2. At levels not to exceed 0.25 percent by weight of the following polymers when used in articles that contact food of Types I, II, IV-B, VI-B, VII-B, and VIII described in table 1 of §176.170(c) of this chapter: Olefin polymers complying with §177.1520(c) of this chapter, items 1.1, 1.2, 1.3, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3, or 4 or complying with other sections in parts 174, 175, 176, 177, 178 and §179.45 of this chapter; vinyl chloride polymers; and/or vinyl chloride copolymers complying with §177.1980 of this chapter.
3. At levels not to exceed 0.1 percent by weight of the following polymers when used in articles that contact food of Types III, IV-A, V, VI-A, VI-C, VII-A, and IX described in table 1 of §176.170(c) of this chapter: Olefin polymers complying with §177.1520(c) of this chapter, items 1.1, 1.2, 1.3, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3, or 4 or complying with other sections in parts 174, 175, 176, 177, 178 and §179.45 of this chapter; vinyl chloride polymers; and/or vinyl chloride copolymers complying with §177.1980 of this chapter.
4. As provided in §175.105 of this chapter.
5. At levels not to exceed 0.2 percent by weight of polystyrene and/or modified polystyrene polymers identified in §177.1640 of this chapter.
6. At levels not to exceed 0.25 percent by weight of acrylonitrile-butadiene-styrene copolymers used in contact with nonalcoholic foods.
7. At levels not to exceed 0.2 percent by weight of closure-sealing gasket compositions complying with §177.1210(b) of this chapter.

For use only:
1. At levels not to exceed 0.2 percent by weight of isobutylene-isoprene copolymers complying with §177.1420 of this chapter: Provided, That the finished copolymers contact food only of the types identified in §176.170(c) of this chapter, table 1, under Types V, VII, VIII, and IX.
2. At levels not to exceed 0.02 percent by weight of polypropylene polymers complying with §177.1520(c), item 1.1 of this chapter.

Zinc palmitate.
Zinc salicylate .......................................................... For use only in rigid polyvinyl chloride and/or rigid vinyl chloride copolymers complying with §177.1980 of this chapter. Provided, That total salicylates (calculated as the acid) do not exceed 0.3 percent by weight of such polymers.

Zinc stearate.

Editorial Note: For Federal Register citations affecting §178.2010, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and at www.fdsys.gov.

§ 178.2550 4-Hydroxymethyl-2,6-di- tert -butylphenol.

4-Hydroxymethyl-2,6-di-tert-butylphenol may be safely used as an antioxidant in articles intended for use in contact with food, in accordance with the following prescribed conditions:
(a) The additive has a solidification point of 140°–141 °C.
(b) The concentration of the additive and any other permitted antioxidants in the finished food-contact article does not exceed a total of 0.5 milligram per square inch of food-contact surface.

§ 178.2650 Organotin stabilizers in vinyl chloride plastics.

The organotin chemicals identified in paragraph (a) of this section may be safely used alone or in combination, at levels not to exceed a total of 3 parts per hundred of resin, as stabilizers in vinyl chloride homopolymers and copolymers complying with the provisions of §177.1950 or §177.1980 of this chapter and that are identified for use in contact with food of types I, II, III, IV (except liquid milk), V, VI (except malt beverages and carbonated non-alcoholic beverages), VII, VIII, and IX described in table 1 of §176.170(c) of this chapter, except for the organotin chemical identified in paragraph (a)(3)
of this section, which may be used in contact with food of types I through IX at temperatures not exceeding 75 °C (167 °F), and further that the organotin chemicals identified in paragraphs (a) (5) and (6) of this section may be used in contact with food of types I through IX at temperatures not exceeding 66 °C (150 °F), conditions of use D through G described in table 2 of §176.170(c) of this chapter, and further that dodecyltin chemicals identified in paragraph (a)(7) of this section which may be used in contact with food of types I, II, III, IV (except liquid milk), V, VI (except malt beverages and carbonated nonalcoholic beverages), VII, VIII, and IX described in table 1 of §176.170(c) of this chapter at temperatures not exceeding 71 °C (160 °F), in accordance with the following prescribed conditions:

(a) For the purpose of this section, the organotin chemicals are those listed in paragraphs (a) (1), (2), (3), (4), (5), (6), and (7) of this section.

(1) Di(n-octyl)tin S,S′-bis(isooctylmercaptoacetate) is an octyltin chemical having the formula \( \text{C}_8\text{H}_{17}\text{Sn} \left( \text{SCH}_2\text{CO}_2\text{H} \right)_2 \) (CAS Reg. No. 26401–86–5) having 13.4 to 14.8 percent by weight of mercapto sulfur. It is made from a mixture of di(n-octyl)tin dichloride and (n-octyl)tin oxide.

(2) Di(n-octyl)tin maleate polymer is an octyltin chemical having the formula \( \text{C}_8\text{H}_{17}\text{Sn} \left( \text{SCH}_2\text{CO}_2\text{H} \right)_n \left( \text{C}_4\text{H}_6\text{O} \right) \), (where \( n \) is between 2 and 4 inclusive), having 25.2 to 26.6 percent by weight of tin (Sn) and having a saponification number of 225 to 255. It is made from di(n-octyl)tin dichloride or di(n-octyl)tin oxide meeting the specifications prescribed for di(n-octyl)tin dichloride or di(n-octyl)tin oxide in paragraph (a)(1) of this section.

(3) C_{10-16}-Alkyl mercaptoacetates reaction products with dichlorodioctylstannane and trichlorooctylstannane (CAS Reg. No. 83447–69–2) is an organotin chemical mixture having 10.8 to 11.8 percent by weight of tin (Sn) and having 8.0 to 8.6 percent by weight of mercapto sulfur. It is made from a mixture of di(n-octyl)tin dichloride and (n-octyl)tin trichloride which has an organotin composition that is not less than 95 percent by weight di(n-octyl)tin dichloride/(n-octyl)tin trichloride, and not more than 1.5 percent by weight of tri(n-octyl)tin chloride. The alkyl radical in the mercaptoacetate is derived from a mixture of satu¬rated n-alcohols which has a composition that is not less than 50 percent by weight tetradecyl alcohol, and that is not more than 50 percent by weight total of decyl alcohol and/or dodecyl alcohol, and/or hexadecyl alcohol.

(4) (n-Octyl)tin S,S′S′ tris(isooctylmercaptoacetate) is an octyltin chemical having the formula \( \text{C}_8\text{H}_{17}\text{Sn} \left( \text{SCH}_2\text{CO}_2\text{H} \right)_3 \) (CAS Reg. No. 26401–86–5) having 13.4 to 14.8 percent by weight of tin (Sn) and having 10.9 to 11.9 percent by weight of mercapto sulfur. It is made from (n-octyl)tin trichloride. The isooctyl radical in the mercaptoacetate is derived from oxo process isooctyl alcohol. The (n-octyl)tin trichloride has an organotin composition that is not less than 95 percent by weight of (n-octyl)tin trichloride and not more than 5 percent by weight of tri(n-octyl)tin chloride. Di(n-octyl)tin oxide has an organotin composition that is not less than 95 percent by weight of di(n-octyl)tin oxide and not more than 5 percent by weight of bis[tri(n-octyl)tin] oxide, and/or mono n-octyltin oxide.

(5) Bis(beta-carboxobutoxyethyl)tin bis(isooctylmercaptoacetate) (CAS Reg. No. 63397–60–4) is an ester tin chemical having 14.0 to 15.0 percent by weight of tin (Sn) and having 7.5 to 8.5 percent by weight of mercapto sulfur. It is made from bis(beta-carboxobutoxyethyl)tin dichloride. The isooctyl radical in the mercaptoacetate is derived from oxo process primary alkyl alcohols. The bis(beta-carboxobutoxyethyl)tin dichloride has an organotin composition that is not less than 95 percent by weight of bis(beta-carboxobutoxyethyl)tin dichloride and not more than 5 percent by weight of bis(beta-carboxobutoxyethyl)tin trichloride. The triestertin chloride content of bis(beta-carboxobutoxyethyl)tin
dichloride shall not exceed 0.02 percent.

(6) Beta-carbobutoxyethyltin tris(isooctylmercaptoacetate) (CAS Reg. No. 69438-80-2) is an ester tin chemical having 13.0 to 14.0 percent by weight of tin (Sn) and having 10.5 to 11.5 percent by weight of mercapto sulfur. It is made from beta-carbobutoxyethyltin trichloride. The isooctyl radical in the mercaptoacetate is derived from oxo process primary isooctyl alcohol. The beta-carbobutoxyethyltin trichloride has an organotin composition that is not less than 95 percent by weight of beta-carbobutoxyethyltin trichloride and not more than 5 percent total of triestertin chloride and diestertin chloride.

(7) The dodecyltin stabilizer is a mixture of 50 to 60 percent by weight of n-dodecyltin S,S,S′-tris(isooctylmercaptoacetate) (CAS Reg. No. 67649-65-4) and 40 to 50 percent by weight of di(n-dodecyl)tin S,S′-didi(isooctylmercaptoacetate) (CAS Reg. No. 84030-61-5) having 13 to 14 percent by weight of tin (Sn) and having 8 to 9 percent by weight of mercapto sulfur. It is made from a mixture of dodecyltin trichloride and di(dodecyl)tin dichloride which has not more than 0.2 percent by weight of dodecyltin trichloride, nor more than 2 percent by weight of dodecylbutyltin dichloride and not more than 3 percent by weight of tri(dodecyl)tin chloride. The isooctyl radical in the mercaptoacetate is derived from oxo process primary octyl alcohols.

(b) The vinyl chloride plastic containers, film or panels in the finished form in which they are to contact food, shall meet the following limitations:

(1) The finished plastics intended for contact with foods of the types listed in this section shall be extracted with the solvent or solvents characterizing those types of foods as determined from table 2 of §176.170(c) of this chapter at the temperature reflecting the conditions of intended use as determined therein. Additionally, extraction tests for acidic foods shall be included and simulated by 3-percent acetic acid at temperatures specified for water in table 2 of §176.170(c) of this chapter. The extraction tests shall cover at least three equilibrium periodic determinations, as follows:

(i) The exposure time for the first determination shall be at least 72 hours for aqueous solvents, and at least 6 hours for heptane.

(ii) Subsequent determinations shall be at a minimum of 24-hour intervals for aqueous solvents, and 2-hour intervals for heptane. These tests shall yield total octylin stabilizers not to exceed 0.5 parts per million as determined by analytical method entitled “Atomic Absorption Spectrometric Determination of Sub-part-per-Million Quantities of Tin in Extracts and Biological Materials with Graphite Furnace.” Analytical Chemistry, Vol. 49, p. 1090-1093 (1977), which is incorporated by reference. Copies are available from the Center for Food Safety and Applied Nutrition (HFS-200), Food and Drug Administration, 5100 Paint Branch Pkwy., College Park, MD 20740, or available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

(iii) Subsequent determinations for the dodecyltin mixture described in paragraph (a)(7) of this section shall be at a minimum of 24-hour intervals for aqueous solvents and 2-hour intervals for heptane. These tests shall yield di(n-octyl)tin S,S′-bis(isooctylmercaptoacetate), or di(n-octyl)tin maleate polymer, or (C10-C16)-alkymercaptoacetate reaction products with dichloro octylstannane and trichloroctylstannane, or n-octyltin S,S,S′-tris(isooctylmercaptoacetate), tris(isooctylmercaptoacetate) and di(n-dodecyl)tin bis(isooctylmercaptoacetate) or any combination thereof, not to exceed 0.5 parts per million as determined by an analytical method entitled “Atomic Absorption Spectrophotometric Determination of Sub-part-per-Million Quantities of Tin in Extracts and Biological Materials with Graphite Furnace,” Analytical Chemistry, Vol. 49, pp. 1090-1093 (1977), which is incorporated by reference in accordance with 5 U.S.C.
§ 178.3010  Adjuvant substances used in the manufacture of foamed plastics.

The following substances may be safely used as adjuvants in the manufacture of foamed plastics intended for use in contact with food, subject to any prescribed limitations:

<table>
<thead>
<tr>
<th>List of substances</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Azodicarbonamide</td>
<td>For use as a blowing agent in polyethylene complying with item 2.1 in §177.1520(c) of this chapter at a level not to exceed 5 percent by weight of finished foamed polyethylene.</td>
</tr>
<tr>
<td>1,1,2,2-Tetrafluoroethane</td>
<td>For use only as a blowing agent adjuvant in polystyrene at a level not to exceed 0.3 percent by weight of finished foamed polystyrene intended for use in contact with food only of the types identified in §176.170(c) of this chapter, table 1, under Categories I, II, VI, and VIII.</td>
</tr>
<tr>
<td>Toluene</td>
<td>For use only as a blowing agent adjuvant in polystyrene at a level not to exceed 0.35 percent by weight of finished foamed polystyrene.</td>

Subpart D—Certain Adjuvants and Production Aids

§ 178.3120  Animal glue.

Animal glue may be safely used as a component of articles intended for use in producing, manufacturing, packing, processing, preparing, treating, packaging, transporting, or holding food, subject to the provisions of this section.

(a) Animal glue consists of the proteinaceous extractives obtained from hides, bones, and other collagen-rich substances of animal origin (excluding diseased or rotted animals), to which may be added other optional adjuvant substances required in its production or added to impart desired properties.

(b) The quantity of any substance employed in the production of animal glue does not exceed the amount reasonably required to accomplish the intended physical or technical effect nor any limitation further provided.

(c) Any substance employed in the production of animal glue and which is the subject of a regulation in parts 174, 175, 176, 177, 178 and §179.45 of this chapter conforms with any specification in such regulation.

(d) Optional adjuvant substances employed in the production of animal glue include:

(1) Substances generally recognized as safe in food.

(2) Substances subject to prior sanction or approval for use in animal glue and used in accordance with such sanction or approval.

(3) Substances identified in this paragraph (d)(3) and subject to such limitations as are provided:
