Similarly, the performance of jobs on different machines or equipment would not necessarily result in a determination that the work so performed is unequal within the meaning of the statute if the equal pay provisions otherwise apply. If the difference in skill or effort required for the operation of such equipment is inconsequential, payment of a higher wage rate to employees of one sex because of a difference in machines or equipment would constitute a prohibited wage rate differential. If the difference in skill or effort is required from the lower paid sex, the fact that the machines or equipment used to perform substantially equal work are different does not defeat a finding that the EPA has been violated. Likewise, the fact that jobs are performed in different departments or locations within the establishment would not necessarily be sufficient to demonstrate that unequal work is involved where the equal pay standard otherwise applies. This is particularly true in the case of retail establishments, and unless a showing can be made by the employer that the sale of one article requires such higher degree of skill or effort than the sale of another article as to render the equal pay standard inapplicable, it will be assumed that the salesmen and saleswomen concerned are performing equal work. Although the equal pay provisions apply on an establishment basis and the jobs to be compared are those in the particular establishment, all relevant evidence that may demonstrate whether the skill, effort, and responsibility required in the jobs in the particular establishment are equal should be considered, whether this relates to the performance of like jobs in other establishments or not.

§ 1620.15 Jobs requiring equal skill in performance.

(a) In general. The jobs to which the equal pay standard is applicable are jobs requiring equal skill in their performance. Where the amount or degree of skill required to perform one job is substantially greater than that required to perform another job, the equal pay standard cannot apply even though the jobs may be equal in all other respects. Skill includes consideration of such factors as experience, training, education, and ability. It must be measured in terms of the performance requirements of the job. If an employee must have essentially the same skill in order to perform either of two jobs, the jobs will qualify under the EPA as jobs the performance of which requires equal skill, even though the employee in one of the jobs may not exercise the required skill as frequently or during as much of his or her working time as the employee in the other job. Possession of a skill not needed to meet the requirements of the job cannot be considered in making a determination regarding equality of skill. The efficiency of the employee’s performance in the job is not in itself an appropriate factor to consider in evaluating skill.

(b) Comparing skill requirements of jobs. As a simple illustration of the principle of equal skill, suppose that a man and a woman have jobs classified as administrative assistants. Both jobs require them to spend two-thirds of their working time facilitating and supervising support-staff duties, and the remaining one-third of their time in diversified tasks, not necessarily the same. Since there is no difference in the skills required for the vast majority of their work, whether or not these jobs require equal skill in performance will depend upon the nature of the work performed during the latter period to meet the requirements of the jobs.

§ 1620.16 Jobs requiring equal effort in performance.

(a) In general. The jobs to which the equal pay standard is applicable are jobs that require equal effort to perform. Where substantial differences exist in the amount or degree of effort required to be expended in the performance of jobs, the equal pay standard cannot apply even though the jobs may be equal in all other respects. Effort is concerned with the measurement of the physical or mental exertion needed for the performance of a job. Job factors which cause mental fatigue and stress, as well as those which alleviate fatigue, are to be considered in determining the effort required by the job. “Effort” encompasses the total requirements of a job. Where jobs are
