(5) The maximum allowable ground vibration shall be reduced by the regulatory authority beyond the limits otherwise provided by this section, if determined necessary to provide damage protection.

(6) The regulatory authority may require an operator to conduct seismic monitoring of any or all blasts and may specify the location at which the measurements are taken and the degree of detail necessary in the measurement.

(e) The maximum airblast and ground-vibration standards of paragraphs (b) and (d) of this section shall not apply at the following locations:

1. At structures owned by the permittee and not leased to another person.
2. At structures owned by the permittee and leased to another person, if a written waiver by the lessee is submitted to the regulatory authority before blasting.

§817.68 Use of explosives: Records of blasting operations.

The operator shall retain a record of all blasts for at least 3 years. Upon request, copies of these records shall be made available to the regulatory authority and to the public for inspection. Such records shall contain the following data:

(a) Name of the operator conducting the blast.
(b) Location, date, and time of the blast.
(c) Name, signature, and certification number of the blaster conducting the blast.
(d) Identification, direction, and distance, in feet, from the nearest blast hole to the nearest dwelling, public building, school, church, community or institutional building outside the permit area, except those described in §817.67 (e).
(e) Weather conditions, including those which may cause possible adverse blasting effects.
(f) Type of material blasted.
(g) Sketches of the blast pattern including number of holes, burden, spacing, decks, and delay pattern.
(h) Diameter and depth of holes.
(i) Types of explosives used.
(j) Total weight of explosives used per hole.
(k) The maximum weight of explosives detonated in an 8-millisecond period.
(l) Initiation system.
(m) Type and length of stemming.
(n) Mats or other protections used.
(o) Seismographic and airblast records, if required, which shall include—

1. Type of instrument, sensitivity, and calibration signal or certification of annual calibration;
2. Exact location of instrument and the date, time, and distance from the blast;
3. Name of the person and firm taking the reading;
4. Name of the person and firm analyzing the seismographic record; and
5. The vibration and/or airblast level recorded.

(p) Reasons and conditions for each unscheduled blast.

§817.71 Disposal of excess spoil: General requirements.

(a) General. You, the permittee or operator, must place excess spoil in designated disposal areas within the permit area in a controlled manner to—

1. Minimize the adverse effects of leachate and surface water runoff from the fill on surface and ground waters;
2. Ensure mass stability and prevent mass movement during and after construction;
3. Ensure that the final fill is suitable for reclamation and revegetation compatible with the natural surroundings and the approved postmining land use; and
4. Minimize disturbances to and adverse impacts on fish, wildlife, and related environmental values to the extent possible, using the best technology currently available.

(b) Static safety factor. The fill must be designed and constructed to attain a minimum long-term static safety factor of 1.5. The foundation and abutments of the fill must be stable under all conditions of construction.

(c) Compliance with permit. You, the permittee or operator, must construct the fill in accordance with the design
