graduated ratings will commence at the end of the 1-year period. For a veteran who was not receiving or entitled to receive compensation on August 19, 1968, ratings will be assigned in accordance with the Schedule for Rating Disabilities (part 4 of this chapter). This section is not applicable to running award cases.

[33 FR 16275, Nov. 6, 1968]

§ 3.373 [Reserved]

§ 3.374 Effect of diagnosis of active tuberculosis.

(a) Service diagnosis. Service department diagnosis of active pulmonary tuberculosis will be accepted unless a board of medical examiners, Clinic Director or Chief, Outpatient Service certifies, after considering all the evidence, including the favoring or opposing tuberculosis and activity, that such diagnosis was incorrect. Doubtful cases may be referred to the Chief Medical Director in Central Office.

(b) Department of Veterans Affairs diagnosis. Diagnosis of active pulmonary tuberculosis by the medical authorities of the Department of Veterans Affairs as the result of examination, observation, or treatment will be accepted for rating purposes. Reference to the Clinic Director or Chief, Outpatient Service, will be in order in questionable cases and, if necessary, to the Chief Medical Director in Central Office.

(c) Private physician’s diagnosis. Diagnosis of active pulmonary tuberculosis by private physicians on the basis of their examination, observation or treatment will not be accepted to show the disease was initially manifested after discharge from active service unless confirmed by acceptable clinical, X-ray or laboratory studies, or by findings of active tuberculosis based upon acceptable hospital observation or treatment.

§ 3.375 Determination of inactivity (complete arrest) in tuberculosis.

(a) Pulmonary tuberculosis. A veteran shown to have had pulmonary tuberculosis will be held to have reached a condition of “complete arrest” when a diagnosis of inactive is made.

(b) Nonpulmonary disease. Determination of complete arrest of nonpulmonary tuberculosis requires absence of evidence of activity for 6 months. If there are two or more foci of such tuberculosis, one of which is active, the condition will not be considered to be inactive until the tuberculous process has reached arrest in its entirety.

(c) Arrest following surgery. Where there has been surgical excision of the lesion or organ, the date of complete arrest will be the date of discharge from the hospital, or 6 months from the date of excision, whichever is later.

§§ 3.376–3.377 [Reserved]

§ 3.378 Changes from activity in pulmonary tuberculosis pension cases.

A permanent and total disability rating in effect during hospitalization will not be discontinued before hospital discharge on the basis of a change in classification from active. At hospital discharge, the permanent and total rating will be discontinued unless (a) the medical evidence does not support a finding of complete arrest (§ 3.375), or (b) where complete arrest is shown but the medical authorities recommend that employment not be resumed or be resumed only for short hours (not more than 4 hours a day for a 5-day week). If either of the two aforementioned conditions is met, discontinuance will be deferred pending examination in 6 months. Although complete arrest may be established upon that examination, the permanent and total rating may be extended for a further period of 6 months provided the veteran’s employment is limited to short hours as recommended by the medical authorities (not more than 4 hours a day for a 5-day week). Similar extensions may be granted under the same conditions at the end of 12 and 18 months periods. At the expiration of 24 months after hospitalization, the case will be considered under § 3.321(b) if continued short hours of employment is recommended or if other evidence warrants submission.
