Environmental Protection Agency

N_s = Total number of regeneration emission tests.

(Subtitle “s” refers to standard test schedule)

5. Refer to table I and determine t_s at (N_s – 2)_s degrees of freedom and t_s at (N_s – 2)_std degrees of freedom.

6. If (A_s)^{1/2} ≥ t_s / (B_s)^{1/2} the proposed plan is acceptable.

APPENDIX XVI TO PART 86—POLUTANT MASS EMISSIONS CALCULATION PROCEDURE FOR GASEOUS-FUELED VEHICLES AND FOR VEHICLES EQUIPPED WITH PERIODICALLY REGENERATING TRAP OXIDIZER SYSTEMS CERTIFYING TO THE PROVISIONS OF PART 86, SUBPART R

(a) Gaseous-Fueled Vehicle Pollutant Mass Emission Calculation Procedure:

1. For all TLEVs, LEVs, and ULEVs, the calculation procedures specified in Chapter 5 of the California Regulatory Requirements Applicable to the National Low Emission Vehicle Program (October, 1996) shall apply. These procedures are incorporated by reference (see §86.1).

1. Exhaust Emissions. (i) The provisions of §86.1777 apply to vehicles equipped with periodically regenerating trap oxidizer systems, except that the following shall apply instead of the requirements in §86.144–94(a):

(ii) The final reported test results for the mass particulate (Mp) in grams/mile shall be computed as follows.

(iii) For light-duty and light-duty trucks:

\[ Y_{\text{em}} = 0.43 \left( (Y_{\text{ct}} + Y_{\text{st}}) / (D_{\text{ct}} + D_{\text{st}}) \right) + 0.57 \left( (Y_{\text{ht}} + Y_{\text{st}}) / (D_{\text{ht}} + D_{\text{st}}) \right) \]

(iv) For purposes of adjusting emissions for regeneration:

\[ Re = ((Y_{r1} - Y_{ct}) + (Y_{r2} - Y_{st}) + (Y_{r3} - Y_{ht})) / (D_{ct} + D_{st} + D_{ht}) \]

Where:

Ywm = Weighted mass emissions of each pollutant, i.e., HC, CO, NOx or CO , in grams per vehicle mile.

Yct = Mass emissions as calculated from the “transient” phase of the cold start test, in grams per test phase.

Yht = Mass emissions as calculated from the “transient” phase of the hot start test, in grams per test phase.

Dct = The measured driving distance from the “stabilized” phase of the cold start test, in miles.

Dht = The measured driving distance from the “stabilized” phase of the hot start test, in miles.

Ds = The measured driving distance from the “transient” phase of the cold start test, in miles.

Yr = Regeneration emission test.

Yr = Mass emissions of each pollutant attributable to regeneration in grams per mile.

Yr1 = Mass emissions, during a regeneration emission test, as calculated from the “transient” phase of the hot start test, in grams per test phase.

Yr2 = Mass emissions, during a regeneration emission test, as calculated from the “transient” phase of the cold start test, in grams per test phase.

Yr3 = Mass emissions, during a regeneration emission test, as calculated from the “transient” phase of the hot start test in grams per test phase.

(2) Particulate Emissions. (i) The provisions of §86.1778 apply to vehicles equipped with periodically regenerating trap oxidizer systems, except that the following shall apply instead of the requirements §86.145–92(a):

(ii) The final reported test results for the mass particulate (Mp) in grams/mile shall be computed as follows.

(iii) For purposes of adjusting emissions for regeneration:

\[ Mp = 0.43(Mp1 + Mp2) / (Dct + Ds) + 0.57(Mp3 + Mp2) / (Dht + Ds) \]

\[ Re = ((Mp1 - Mp1) + (Mp2 - Mp2) + (Mp3 - Mp3)) / (Dct + Dst + Dht) \]

\[ Mpr = Mp + Re \]

Where:

(1) Mp1 = Mass of particulate determined from the “transient” phase of the cold start test, in grams per test phase. (See §86.110–94(d)(1) for determination.)
Pt. 86, App. XVII

(2) $Mp_2$ = Mass of particulate determined from the “stabilized” phase of the cold start test, in grams per test phase. (See §86.110–94(d)(1) for determination.)

(3) $Mp_3$ = Mass of particulate determined from the “transient” phase of the hot start test, in grams per test phase. (See §86.110–94(d)(1) for determination.)

(4) $Dct$ = The measured driving distance from the “transient” phase of the cold start test, in miles.

(5) $Ds$ = The measured driving distance from the “stabilized” phase of the cold start test, in miles.

(6) $Dht$ = The measured driving distance from the “transient” phase of the hot start test, in miles.

(7) $Mpr$ = Regeneration emission test

(8) $Re$ = Mass of particulate attributable to regeneration in grams/mile.

(9) $Mpr_1$ = Mass of particulate determined, during a regeneration emission test, from the “transient” phase of the cold start test in grams per test phase. (See §86.110–94(d)(1) for determination.)

(10) $Mpr_2$ = Mass of particulate determined, during a regeneration emission test, from the “stabilized” phase of the cold start test, in grams per test phase. (See §86.110–94(d)(1) for determination.)

(11) $Mpr_3$ = Mass of particulate determined, during a regeneration emission test, from the “transient” phase of the hot start test, in grams per test phase. (See §86.110–94(d)(1) for determination.)

(c) Fuel Economy Calculations for Gaseous Fuels Based on the Cold Start CVS–1975 Federal Test Procedure.

(1) Assume the fuel meets HD–5 specifications ($95\% C_3H_8$, $5\% nC_4H_{10}$, by volume).

(ii) Density of the HD–5 fuel:

$$0.95 \times 4.235 + 0.05 \times 4.868 = 4.267 \text{ lb/gal @ 60°F}$$

(iii) Molecular Weights:

(A)

<table>
<thead>
<tr>
<th>Species</th>
<th>Mol. Wt.</th>
<th>Sp. Gr.</th>
<th>Liquid density (lb/gal @ 60 °F)</th>
<th>Liquid density of Hd–5 (lb/gal @ 60 °F)</th>
</tr>
</thead>
<tbody>
<tr>
<td>$C_3H_8$</td>
<td>44.094</td>
<td>0.508</td>
<td>4.235 $\times$ 0.95 = 4.0233</td>
<td></td>
</tr>
<tr>
<td>$nC_4H_{10}$</td>
<td>58.12</td>
<td>0.584</td>
<td>4.868 $\times$ 0.05 = 0.2434</td>
<td></td>
</tr>
</tbody>
</table>

(iv) Weight of Carbon in:

$$C = wt. \text{ of } CO \times (12.0115 / 28.01055) = wt. CO \times (0.429)$$

$$nC_4H_{10} = wt. \text{ of } CO_2 \times (12.0111 / 44.00995) wt. CO_2 \times (0.273)$$

$$CH_{2.658} = wt. \text{ of } CH_{2.658} \times (12.0111 / 14.6903) = wt. CH_{2.658} \times (0.818)$$

(v) Wt. of Carbon per gallon of LPG:

$$\text{wt. of carbon} = 4.2667 \text{ lb/gal} \times 453.59 \text{ gms/lb} \times 0.818 = 1583 \text{ grams C/gal HD–5}$$

(vi) Fuel economy:
