\textbf{Subpart G—Ammonia Manufacturing}

\section*{§ 98.70 Definition of source category.}

The ammonia manufacturing source category comprises the process units listed in paragraphs (a) and (b) of this section.

(a) Ammonia manufacturing processes in which ammonia is manufactured from a fossil-based feedstock produced via steam reforming of a hydrocarbon.

(b) Ammonia manufacturing processes in which ammonia is manufactured through the gasification of solid and liquid raw material.

\section*{§ 98.71 Reporting threshold.}

You must report GHG emissions under this subpart if your facility contains an ammonia manufacturing process and the facility meets the requirements of either §98.2(a)(1) or (2).

\section*{§ 98.72 GHGs to report.}

You must report:

(a) \(\text{CO}_2\) process emissions from steam reforming of a hydrocarbon or the gasification of solid and liquid raw material, reported for each ammonia manufacturing process unit following the requirements of this subpart (\(\text{CO}_2\) process emissions reported under this subpart may include \(\text{CO}_2\) that is later consumed on site for urea production, and therefore is not released to the ambient air from the ammonia manufacturing process unit).

(b) \(\text{CO}_2\), \(\text{CH}_4\), and \(\text{N}_2\text{O}\) emissions from each stationary fuel combustion unit. You must report these emissions under subpart C of this part (General Stationary Fuel Combustion Sources), by following the requirements of subpart C, except that for ammonia manufacturing processes subpart C does not apply to any \(\text{CO}_2\) resulting from combustion of the waste recycle stream (commonly referred to as the purge gas stream).

(c) \(\text{CO}_2\) emissions collected and transferred off site under subpart PP of this part (Suppliers of \(\text{CO}_2\)), following the requirements of subpart PP.
