§ 98.93 Calculating GHG emissions.

(a) You must calculate total annual facility-level emissions of each fluorinated GHG used in electronics manufacturing production processes at your facility, for each process type, using Equations I-6 and I-7 of this subpart according to the procedures in paragraphs (a)(1), (a)(2), (a)(3), (a)(4), (a)(5), or (a)(6) of this section, as appropriate. Facilities to which the procedures in paragraphs (a)(1) of this section or (a)(2) of this section apply may elect to use the procedures in paragraph (a)(3) as an alternative. If your facility uses less than 50 kg of a fluorinated GHG in one reporting year, you may calculate emissions as equal to your facility’s annual consumption for that specific gas as calculated in Equation I-11 of this subpart. Where your facility is required to perform calculations using default emission factors for gas utilization and by-product formation rates according to the procedures in paragraphs (a)(1) or (a)(2) of this section, and default values are not available for a particular input gas and process type or sub-type combination in Tables I-3, I-4, I-5, I-6, or I-7, you must follow the procedures in paragraph (a)(6) of this section.

(b) You must calculate annual manufacturing capacity of a facility using Equation I-5 of this subpart.

\[ S = \sum_{x}^{12} W_x \]  
(Eq. I-5)

where:

- \( S \) = 100 percent of annual manufacturing capacity of a facility (m²).
- \( W_x \) = Maximum designed substrate starts of a facility in month \( x \) (m² per month).
- \( x \) = Month.

§ 98.92 GHGs to report.

(a) You must report emissions of fluorinated GHGs (as defined in §98.6), N₂O, and fluorinated heat transfer fluids (as defined in §98.98). The fluorinated GHGs and fluorinated heat transfer fluids that are emitted from electronics manufacturing production processes include, but are not limited to, those listed in Table I-2 to this subpart. You must individually report, as appropriate:

1. Fluorinated GHGs emitted from plasma etching.
2. Fluorinated GHGs emitted from chamber cleaning.
3. Fluorinated GHGs emitted from wafer cleaning.
4. N₂O emitted from chemical vapor deposition and other electronics manufacturing processes.
5. Emissions of fluorinated heat transfer fluids.
6. All fluorinated GHGs and N₂O consumed, including gases used in manufacturing processes other than those listed in paragraphs (a)(1) through (a)(5) of this section.

(b) CO₂, CH₄, and N₂O combustion emissions from each stationary combustion unit. You must calculate and report these emissions under subpart C of this part (General Stationary Fuel Combustion Sources) by following the requirements of subpart C of this part.

\[
\text{Process type } E_i = \sum_{j=1}^{N} E_{ij} \quad (\text{Eq. I-6})
\]

where:
- \(E_i\) = Annual emissions of input gas \(i\) from the processes type (metric tons).
- \(E_{ij}\) = Annual emissions of input gas \(i\) from recipe, process sub-type, or process type \(j\) as calculated in Equation I-8 of this subpart (metric tons).
- \(N\) = The total number of recipes or process sub-types \(j\) that depends on the electronics manufacturing facility and emission calculation methodology. If \(E_{ij}\) is calculated for a process type \(j\) in Equation I-8 of this subpart, \(N = 1\).
- \(i\) = Input gas.
- \(j\) = Recipe, process sub-type, or process type.

\[
\text{Process type } BE_k = \sum_{j=1}^{N} \sum_{i} BE_{ijk} \quad (\text{Eq. I-7})
\]

where:
- \(BE_k\) = Annual emissions of by-product gas \(k\) from the processes type (metric tons).
- \(BE_{ijk}\) = Annual emissions of by-product gas \(k\) formed from input gas \(i\) used for recipe, process sub-type, or process type \(j\) as calculated in Equation I-9 of this subpart (metric tons).
- \(N\) = The total number of recipes or process sub-types \(j\) that depends on the electronics manufacturing facility and emission calculation methodology. If \(BE_{ijk}\) is calculated for a process type \(j\) in Equation I-9 of this subpart, \(N = 1\).
- \(i\) = Input gas.
- \(j\) = Recipe, process sub-type, or process type.
- \(k\) = By-product gas.

(1) If you manufacture MEMS, LCDs, or PVs, you must, except as provided in §98.93(a)(3), calculate annual facility-level emissions of each fluorinated GHG used for the plasma etching and chamber cleaning process types using default utilization and by-product formation rates as shown in Table I-5, I-6, or I-7 of this subpart, and by using Equations I-8 and I-9 of this subpart.

(2) If you manufacture semiconductors on wafers measuring 300 mm or less in diameter, except as provided in §98.93(a)(3), you must adhere to the procedures in paragraphs (a)(2)(i) or (a)(2)(ii) of this section.

(i) If your facility has an annual manufacturing capacity, as calculated using Equation I-5 of this subpart, of less than or equal to 10,500 m² of substrate, you must adhere to the procedures in paragraphs (a)(2)(i)(A) through (a)(2)(i)(C) of this section.

(A) You must calculate annual facility-level emissions of each fluorinated GHG used for the plasma etching process type using default utilization and by-product formation rates as shown in Table I-3 or I-4 of this subpart, and by using Equations I-8 and I-9 of this subpart.

(B) You must calculate annual facility-level emissions of each fluorinated GHG used for each of the process sub-types associated with the chamber cleaning process type, including in-situ plasma chamber clean, remote plasma chamber clean, and in-situ thermal chamber clean, using default utilization and by-product formation rates as shown in Table I-3 or I-4 of this subpart, and by using Equations I-8 and I-9 of this subpart.

(C) You must calculate annual facility-level emissions of each fluorinated GHG used for the wafer cleaning process type using default utilization and by-product formation rates as shown in Table I-3 or I-4 of this subpart and by using Equations I-8 and I-9 of this subpart.

(ii) If your facility has an annual manufacturing capacity of greater than 10,500 m² of substrate, as calculated using Equation I-5 of this subpart, you must adhere to the procedures in paragraphs (a)(2)(i)(A)
through (a)(2)(i)(C) of this section, except that you may use the procedures specified in paragraph (a)(2)(i) of this section for the 2011, 2012, and 2013 reporting years.

(A) You must calculate annual facility-level emissions of each fluorinated GHG used for the plasma etching process type using recipe-specific utilization and by-product formation rates determined as specified in §98.94(d), and by using Equations I-8 and I-9 of this subpart. You must develop recipe-specific utilization and by-product formation rates for each individual recipe or set of similar recipes as defined in §98.98. Recipe-specific utilization and by-product formation rates must be developed each reporting year only for recipes which are not similar to any recipe used in a previous reporting year, as defined in §98.98.

(B) You must calculate annual facility-level emissions of each fluorinated GHG used for each of the process subtypes associated with the chamber cleaning process type, including in-situ plasma chamber clean, remote plasma chamber clean, and in-situ thermal chamber clean, using default utilization and by-product formation rates as shown in Table I-3 or I-4 to this subpart, and by using Equations I-8 and I-9 of this subpart.

(C) You must calculate annual facility-level emissions of each fluorinated GHG used for the wafer cleaning process type using default utilization and by-product formation rates as shown in Table I-3 or I-4 to this subpart, and by using Equations I-8 and I-9 of this subpart.

(3) If you do not adhere to procedures as specified in paragraphs (a)(1) and (a)(2) of this section, you must calculate annual facility-level emissions of each fluorinated GHG for all fluorinated GHG-emitting production processes using recipe-specific utilization and by-product formation rates determined as specified in §98.94(d) and by using Equations I-8 and I-9 of this subpart. You must develop recipe-specific utilization and by-product formation rates for each individual recipe or set of similar recipes as defined in §98.98. Recipe-specific utilization and by-product formation rates must be developed each reporting year only for recipes that are not similar to any recipe used in a previous reporting year, as defined in §98.98.

(4) If you manufacture semiconductors on wafers measuring greater than 300 mm in diameter, you must calculate annual facility-level emissions of each fluorinated GHG used for all fluorinated GHG emitting production processes using recipe-specific utilization and by-product formation rates as specified in §98.94(d), and by using Equations I-8 and I-9 of this subpart. You must develop recipe-specific utilization and by-product formation rates for each individual recipe or set of similar recipes as defined in §98.98. Recipe-specific utilization and by-product formation rates must be developed each reporting year only for recipes that are not similar to any recipe used in a previous reporting year, as defined in §98.98.

(5) To be included in a set of similar recipes for the purposes of this subpart, a recipe must be similar to the recipe in the set for which recipe-specific utilization and by-product formation rates have been measured.

(6) Where your facility is required to perform calculations using default emission factors for gas utilization and by-product formation rates according to the procedures in paragraphs (a)(1) or (a)(2) of this section, and default values are not available for a particular input gas and process type or sub-type combination in Tables I-3, I-4, I-5, I-6, or I-7, you must follow the procedures in either paragraph (a)(6)(i) or (a)(6)(ii) of this section and use Equations I-8 and I-9 of this subpart.

(i) You must use utilization and by-product formation rates of 0.

(ii) You must develop recipe-specific utilization and by-product formation rates determined as specified in §98.94(d) for each individual recipe or set of similar recipes as defined in §98.98. Recipe-specific utilization and by-product formation rates must be developed each reporting year only for recipes that are not similar to any recipe used in a previous reporting year, as defined in §98.98.
where:

\[ E_{ij} = C_{ij} \times (1 - U_{ij}) \times (1 - a_{ij} \times d_{ij}) \times 0.001 \]  
(Eq. I-8)

\[ BE_{ijk} = B_{ijk} \times C_{ij} \times (1 - a_{ij} \times d_{jk}) \times 0.001 \]  
(Eq. I-9)

**§ 98.93**  
40 CFR Ch. I (7–1–13 Edition)

where:

- \( E_{ij} \) = Annual emissions of input gas \( i \) from recipe, process sub-type, or process type \( j \) (metric tons).
- \( C_{ij} \) = Amount of input gas \( i \) consumed for recipe, process sub-type, or process type \( j \), as calculated in Equation I-13 of this subpart (kg).
- \( U_{ij} \) = Process utilization rate for input gas \( i \) for recipe, process sub-type, or process type \( j \) (expressed as a decimal fraction).
- \( a_{ij} \) = Fraction of input gas \( i \) used in recipe, process sub-type, or process type \( j \) with abatement systems (expressed as a decimal fraction).
- \( d_{ij} \) = Fraction of input gas \( i \) destroyed or removed in abatement systems connected to process tools where recipe, process sub-type, or process type \( j \) is used, as calculated in Equation I-14 of this subpart (expressed as a decimal fraction).
- \( 0.001 \) = Conversion factor from kg to metric tons.
- \( i \) = Input gas.
- \( j \) = Recipe, process sub-type, or process type.
- \( BE_{ijk} \) = Annual emissions of by-product gas \( k \) formed from input gas \( i \) from recipe, process sub-type, or process type \( j \) (metric tons).
- \( B_{ijk} \) = By-product formation rate of gas \( k \) created as a by-product per amount of input gas \( i \) (kg) consumed by recipe, process sub-type, or process type \( j \) (kg).
- \( C_{ij} \) = Amount of input gas \( i \) consumed for recipe, process sub-type, or process type \( j \), as calculated in Equation I-13 of this subpart (kg).
- \( a_{ij} \) = Fraction of input gas \( i \) used for recipe, process sub-type, or process type \( j \) with abatement systems (expressed as a decimal fraction).
- \( d_{jk} \) = Fraction of by-product gas \( k \) destroyed or removed in abatement systems connected to process tools where recipe, process sub-type, or process type \( j \) is used, as calculated in Equation I-14 of this subpart (expressed as a decimal fraction).
- \( 0.001 \) = Conversion factor from kg to metric tons.
- \( j \) = Recipe, process sub-type, or process type.
- \( k \) = By-product gas.

(1) You must use a factor for \( N_{2}O \) utilization for chemical vapor deposition processes pursuant to either paragraph (b)(1)(i) or (b)(1)(ii) of this section.

(i) You must develop a facility-specific \( N_{2}O \) utilization factor averaged over all \( N_{2}O \)-using chemical vapor deposition processes determined as specified in §98.94(e).

(ii) If you do not use a facility-specific \( N_{2}O \) utilization factor for chemical vapor deposition processes, you must use the default utilization factor as shown in Table I-8 to this subpart for \( N_{2}O \) from chemical vapor deposition processes.

(2) You must use a factor for \( N_{2}O \) utilization for other manufacturing processes pursuant to either paragraph (b)(2)(i) or (b)(2)(ii) of this section.

(i) You must develop a facility-specific \( N_{2}O \) utilization factor averaged over all \( N_{2}O \)-using electronics manufacturing production processes other than chemical vapor deposition processes determined as specified in §98.94(e).

(ii) If you do not use a facility-specific \( N_{2}O \) utilization factor for manufacturing production processes other than chemical vapor deposition, you must use the default utilization factor as shown in Table I-8 to this subpart for \( N_{2}O \) from manufacturing production processes.
Environmental Protection Agency

§ 98.93

processes other than chemical vapor deposition.

\[ E(N_2O)_j = C_{N_2O,j} \times (1 - U_{N_2O,j}) \times (1 - a_{N_2O,j} \times d_{N_2O,j}) \times 0.001 \]  
(Eq. I-10)

where:
\[ E(N_2O)_j \] = Annual emissions of N\(_2\)O for N\(_2\)O-using process \( j \) (metric tons).
\[ C_{N_2O,j} \] = Amount of N\(_2\)O consumed for N\(_2\)O-using process \( j \), as calculated in Equation I-13 of this subpart and apportioned to N\(_2\)O process \( j \) (kg).
\[ U_{N_2O,j} \] = Process utilization factor for N\(_2\)O-using process \( j \) (expressed as a decimal fraction).
\[ a_{N_2O,j} \] = Fraction of N\(_2\)O used in N\(_2\)O-using process \( j \) with abatement systems (expressed as a decimal fraction).
\[ d_{N_2O,j} \] = Fraction of N\(_2\)O for N\(_2\)O-using process \( j \) destroyed or removed in abatement systems connected to process tools where process \( j \) is used, as calculated in Equation I-14 of this subpart (expressed as a decimal fraction).
\[ 0.001 \] = Conversion factor from kg to metric tons.
\( j \) = Type of N\(_2\)O-using process, either chemical vapor deposition or other N\(_2\)O-using manufacturing processes.

(c) You must calculate total annual input gas \( i \) consumption for each fluorinated GHG and N\(_2\)O using Equation I-11 of this subpart. Pursuant to §98.92(a)(6), for all fluorinated GHGs and N\(_2\)O used at your facility for which you do not calculate emissions using Equations I-6, I-7, I-8, I-9, and I-10 of this subpart, calculate consumption of these fluorinated GHGs and N\(_2\)O using Equation I-11 of this subpart.

\[ C_i = (I_{Bi} - I_{Ei} + A_i - D_i) \]  
(Eq. I-11)

where:
\( C_i \) = Annual consumption of input gas \( i \) (kg per year).
\( I_{Bi} \) = Inventory of input gas \( i \) stored in containers at the beginning of the reporting year, including heels (kg). For containers in service at the beginning of a reporting year, account for the quantity in these containers as if they were full.
\( I_{Ei} \) = Inventory of input gas \( i \) stored in containers at the end of the reporting year, including heels (kg). For containers in service at the end of a reporting year, account for the quantity in these containers as if they were full.
\( A_i \) = Acquisitions of input gas \( i \) during the year through purchases or other transactions, including heels in containers returned to the electronics manufacturing facility (kg).
\( D_i \) = Disbursements of input gas \( i \) through sales or other transactions during the year, including heels in containers returned by the electronics manufacturing facility to the chemical supplier, as calculated using Equation I-12 of this subpart (kg).
\( i \) = Input gas.

(d) You must calculate disbursements of input gas \( i \) using facility-wide gas-specific heel factors, as determined in §98.94(b), and by using Equation I-12 of this subpart.

\[ D_i = \sum_{l=1}^{M} (h_{il} \times N_{il} \times F_{il}) + X_i \]  
(Eq. I-12)

where:
\( D_i \) = Disbursements of input gas \( i \) through sales or other transactions during the reporting year, including heels in containers returned by the electronics manufacturing facility to the gas distributor (kg).
\( h_{il} \) = Facility-wide gas-specific heel factor for input gas \( i \) and container size and type \( l \) (expressed as a decimal fraction), as determined in §98.94(b). If your facility uses
§ 98.93

less than 50 kg of a fluorinated GHG or N\textsubscript{2}O in one reporting year, you may assume that any h\textsubscript{i} for that fluorinated GHG or N\textsubscript{2}O is equal to zero.

N\textsubscript{a} = Number of containers of size and type l returned to the gas distributor containing the standard heel of input gas i.

F\textsubscript{l} = Full capacity of containers of size and type l containing input gas i (kg).

X\textsubscript{i} = Disbursements under exceptional circumstances of input gas i through sales or other transactions during the year (kg). These include returns of containers whose contents have been weighed due to an exceptional circumstance as specified in §98.94(b)(4).

i = Input gas.
l = Size and type of gas container.
M = The total number of different sized container types. If only one size and container type is used for an input gas i, M=1.

(e) You must calculate the amount of input gas i consumed for each individual recipe (including those in a set of similar recipes) process sub-type, or process type j, using Equation I-13 of this subpart.

\[ C_{ij} = f_{ij} \times C_i \] (Eq. I-13)

where:

C\textsubscript{i,j} = The annual amount of input gas i consumed for recipe, process sub-type, or process type j (kg).

f\textsubscript{ij} = Recipe-specific, process sub-type-specific, or process type-specific input gas i apportioning factor (expressed as a decimal fraction), as determined in accordance with §98.94(c).

C\textsubscript{i} = Annual consumption of input gas i as calculated using Equation I-11 of this subpart (kg).

f = Input gas.
j = Recipe, process sub-type, or process type.

(f) If you report controlled emissions pursuant to §98.94(f), you must calculate the fraction of input gas i destroyed in abatement systems for each individual recipe (including those in a set of similar recipes) process sub-type, or process type j by using Equation I-14 of this subpart.

\[ d_{ij} = \frac{\sum p C_{ijp} \times d_{ijp} \times u_p}{\sum p C_{ijp}} \] (Eq. I-14)

where:

d\textsubscript{ij} = Fraction of input gas i destroyed or removed in abatement systems connected to process tools where recipe, process sub-type, or process type j is used (expressed as a decimal fraction).

C\textsubscript{ijp} = The amount of input gas i consumed for recipe, process sub-type, or process type j fed into abatement system p (kg).

d\textsubscript{ijp} = Destruction or removal efficiency for input gas i in abatement system p connected to process tools where recipe, process sub-type, or process type j is used (expressed as a decimal fraction). This is zero unless the facility adheres to requirements in §98.94(f).

u\textsubscript{p} = The uptime of abatement system p as calculated in Equation I-15 of this subpart (expressed as a decimal fraction).

i = Input gas.
j = Recipe, process sub-type, or process type.
p = Abatement system.

(g) If you report controlled emissions pursuant to §98.94(f), you must calculate the uptime by using Equation I-15 of this subpart.

\[ u_p = \frac{t_p}{T_p} \] (Eq. I-15)
§ 98.94 Monitoring and QA/QC requirements.

(a) For calendar year 2011 monitoring, you may follow the provisions in paragraphs (a)(1) through (a)(3) of this section for best available monitoring methods.

(1) Best available monitoring methods. From January 1, 2011 through December 31, 2011, owners or operators may use the best available monitoring methods for any parameter that cannot reasonably be measured according to the monitoring and QA/QC requirements of
