(vi) Tests used with children with impaired sensory, manual or communication skills must be administered so that they reflect the children’s attitudes and achievement levels and not just the disabilities.

(vii) Tests and materials must assess all areas related to the suspected disability.

(viii) In the case of a child whose primary disability appears to be a speech or language impairment, the team must assure that enough tests are used to determine that the impairment is not a symptom of another disability and a speech or language pathologist should be involved in the evaluation.

(3) Parental consent in writing must be obtained before a child can have an initial evaluation to determine whether the child has a disability.

(4) Confidentiality must be maintained in accordance with grantee and State requirements. Parents must be given the opportunity to review their child’s records in a timely manner and they must be notified and give permission if additional evaluations are proposed. Grantees must explain the purpose and results of the evaluation and make concerted efforts to help the parents understand them.

(5) The multidisciplinary team provides the results of the evaluation, and its professional opinion that the child does or does not need special education and related services, to the disabilities coordinator. If it is their professional opinion that a child has a disability, the team is to state which of the eligibility criteria applies and provide recommendations for programming, along with their findings. Only children whom the evaluation team determines need special education and related services may be counted as children with disabilities.

[58 FR 5501, Jan. 21, 1993, as amended at 61 FR 57227, Nov. 5, 1996]

§ 1308.7 Eligibility criteria: Health impairment.

(a) A child is classified as health impaired who has limited strength, vitality or alertness due to a chronic or acute health problem which adversely affects learning.

(b) The health impairment classification may include, but is not limited to, cancer, some neurological disorders, rheumatic fever, severe asthma, uncontrolled seizure disorders, heart conditions, lead poisoning, diabetes, AIDS, blood disorders, including hemophilia, sickle cell anemia, cystic fibrosis, heart disease and attention deficit disorder.

(c) This category includes medically fragile children such as ventilator dependent children who are in need of special education and related services.

(d) A child may be classified as having an attention deficit disorder under this category who has chronic and pervasive developmentally inappropriate inattention, hyperactivity, or impulsivity. To be considered a disorder, this behavior must affect the child’s functioning severely. To avoid overuse of this category, grantees are cautioned to assure that only the enrolled children who most severely manifest this behavior must be classified in this category.

(1) The condition must severely affect the performance of a child who is trying to carry out a developmentally appropriate activity that requires orienting, focusing, or maintaining attention during classroom instructions and activities, planning and completing activities, following simple directions, organizing materials for play or other activities, or participating in group activities. It also may be manifested in overactivity or impulsive acts which appear to be or are interpreted as physical aggression. The disorder must manifest itself in at least two different settings, one of which must be the Head Start program site.

(2) Children must not be classified as having attention deficit disorders based on:

(i) Temporary problems in attention due to events such as a divorce, death of a family member or post-traumatic stress reactions to events such as sexual abuse or violence in the neighborhood;

(ii) Problems in attention which occur suddenly and acutely with psychiatric disorders such as depression, anxiety and schizophrenia;

(iii) Behaviors which may be caused by frustration stemming from inappropriate programming beyond the child’s
§ 1308.8

Eligibility criteria: Emotional/behavioral disorders.

(a) An emotional/behavioral disorder is a condition in which a child’s behavioral or emotional responses are so different from those of the generally accepted, age-appropriate norms of children with the same ethnic or cultural background as to result in significant impairment in social relationships, self-care, educational progress or classroom behavior. A child is classified as having an emotional/behavioral disorder who exhibits one or more of the following characteristics with such frequency, intensity, or duration as to require intervention:

(1) Seriously delayed social development including an inability to build or maintain satisfactory (age-appropriate) interpersonal relationships with peers or adults (e.g., avoids playing with peers);

(2) Inappropriate behavior (e.g., dangerously aggressive towards others, self-destructive, severely withdrawn, non-communicative);

(3) A general pervasive mood of unhappiness or depression, or evidence of excessive anxiety or fears (e.g., frequent crying episodes, constant need for reassurance); or

(4) Has a professional diagnosis of serious emotional disturbance.

(b) The eligibility decision must be based on multiple sources of data, including assessment of the child’s behavior or emotional functioning in multiple settings.

(c) The evaluation process must include a review of the child’s regular Head Start physical examination to eliminate the possibility of misdiagnosis due to an underlying physical condition.

§ 1308.9

Eligibility criteria: Speech or language impairments.

(a) A speech or language impairment means a communication disorder such as stuttering, impaired articulation, a language impairment, or a voice impairment, which adversely affects a child’s learning.

(b) A child is classified as having a speech or language impairment whose speech is unintelligible much of the time, or who has been professionally diagnosed as having speech impairments which require intervention or who is professionally diagnosed as having a delay in development in his or her primary language which requires intervention.

(c) A language disorder may be receptive or expressive. A language disorder may be characterized by difficulty in understanding and producing language, including word meanings (semantics), the components of words (morphology), the components of sentences (syntax), or the conventions of conversation (pragmatics).

(d) A speech disorder occurs in the production of speech sounds (articulation), the loudness, pitch or quality of voice (voicing), or the rhythm of speech (fluency).

(e) A child should not be classified as having a speech or language impairment whose speech or language differences may be attributed to:
