headings 8701 through 8705, an importer, exporter, or producer may average the amounts calculated under the formula set forth in paragraph (d)(2) of this section over the producer's fiscal year using any one of the categories described in paragraph (d)(3)(i) of this section either on the basis of all motor vehicles in the category or those motor vehicles in the category that are exported to the territory of one or both Parties.

(ii) Categories. The categories referred to in paragraph (d)(3)(i) of this section are as follows:

(A) The same model line of motor vehicles, in the same class of vehicles, produced in the same plant in the territory of a Party, as the motor vehicle for which the regional value content is being calculated;

(B) The same class of motor vehicles, and produced in the same plant in the territory of a Party, as the motor vehicle for which the regional value content is being calculated; and

(C) The same model line of motor vehicles produced in the territory of a Party as the motor vehicle for which the regional value content is being calculated.

(4) Other automotive goods—(i) General. For purposes of calculating the regional value content of a good under General Note 34, HTSUS, and for purposes of applying the de minimis (see §10.3018) provisions of General Note 34, HTSUS, the value of a material is:

(1) In the case of a material imported by the producer of the good, the adjusted value of the material;

(2) In the case of a material acquired by the producer in the territory where the good is produced, the value, determined in accordance with Articles 1 through 8, Article 15, and the corresponding interpretative notes of the Customs Valuation Agreement, of the material, i.e., in the same manner as for imported goods, with reasonable modifications to the provisions of the Customs Valuation Agreement as may be required due to the absence of an importation by the producer (including, but not limited to, treating a domestic purchase by the producer as if it were a sale for export to the country of importation); or

(3) In the case of a self-produced material, the sum of:

(i) All expenses incurred in the production of the material, including general expenses; and

(ii) An amount for profit equivalent to the profit added in the normal course of trade.

(b) Examples. The following examples illustrate application of the principles set forth in paragraph (a)(2) of this section:

Example 1. A producer in Colombia purchases material x from an unrelated seller in Colombia for $100. Under the provisions of Article 1 of the Customs Valuation Agreement, transaction value is the price actually paid or payable for the goods when sold for export to the country of importation adjusted in accordance with the provisions of Article 8. In order to apply Article 1 to this
domestic purchase by the producer, such purchase is treated as if it were a sale for export to the country of importation. Therefore, for purposes of determining the adjusted value of material x, Article 1 transaction value is the price actually paid or payable for the goods when sold to the producer in Colombia ($100), adjusted in accordance with the provisions of Article 8. In this example, it is irrelevant whether material x was initially imported into Colombia by the seller (or by anyone else). So long as the producer acquired material x in Colombia, it is intended that the value of material x will be determined on the basis of the price actually paid or payable by the producer adjusted in accordance with the provisions of Article 8.

Example 2. Same facts as in Example 1, except that the sale between the seller and the producer is subject to certain restrictions that preclude the application of Article 1. Under Article 2 of the Customs Valuation Agreement, the value is the transaction value of identical goods sold for export to the same country of importation and exported at or about the same time as the goods being valued. In order to permit the application of Article 2 to the domestic acquisition by the producer, it should be modified so that the value is the transaction value of identical goods sold within Colombia at or about the same time the goods were sold to the producer in Colombia. Thus, if the seller of material x also sold an identical material to another buyer in Colombia without restrictions, that other sale would be used to determine the adjusted value of material x.

(c) Permissible additions to, and deductions from, the value of materials—

(1) Additions to originating materials. For originating materials, the following expenses, if not included under paragraph (a) of this section, may be added to the value of the originating material:

(i) The costs of freight, insurance, packing, and all other costs incurred in transporting the material within or between the territory of one or both of the Parties to the location of the producer;

(ii) Duties, taxes, and customs brokerage fees on the material paid in the territory of one or both of the Parties, other than duties and taxes that are waived, refunded, refundable, or otherwise recoverable, including credit against duty or tax paid or payable;

(iii) The cost of waste and spoilage resulting from the use of the material in the production of the good, less the value of renewable scrap or byproducts.

(2) Deductions from non-originating materials. For non-originating materials, if included under paragraph (a) of this section, the following expenses may be deducted from the value of the non-originating material:

(i) The costs of freight ("cost of freight" includes the costs of all types of freight, including in-land freight incurred within a Party's territory, regardless of the mode of transportation), insurance, packing, and all other costs incurred in transporting the material within or between the territory of one or both of the Parties to the location of the producer;

(ii) Duties, taxes, and customs brokerage fees on the material paid in the territory of one or both of the Parties, other than duties and taxes that are waived, refunded, refundable, or otherwise recoverable, including credit against duty or tax paid or payable;

(iii) The cost of waste and spoilage resulting from the use of the material in the production of the good, less the value of renewable scrap or byproducts; and

(iv) The cost of originating materials used in the production of the non-originating material in the territory of one or both of the Parties.

(d) Accounting method. Any cost or value referenced in General Note 34, HTSUS, and this subpart, must be recorded and maintained in accordance with the Generally Accepted Accounting Principles applicable in the territory of the Party in which the good is produced.

§ 10.3017 Accumulation.

(a) Originating materials from the territory of a Party that are used in the production of a good in the territory of another Party will be considered to originate in the territory of that other Party.

(b) A good that is produced in the territory of one or both of the Parties by one or more producers is an originating good if the good satisfies the requirements of §10.3014 and all other applicable requirements of General Note 34, HTSUS.
