§ 172.755 Stearyl monoglyceridyl citrate.

The food additive stearyl monoglyceridyl citrate may be safely used in food in accordance with the following provisions:

(a) The additive is prepared by controlled chemical reaction of the following:

<table>
<thead>
<tr>
<th>Reactant</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Citric acid</td>
<td>Prepared by the glycerolysis of edible fats and oils or derived from fatty acids conforming with § 172.860.</td>
</tr>
<tr>
<td>Monoglycerides of fatty acids</td>
<td></td>
</tr>
<tr>
<td>Stearyl alcohol</td>
<td>Derived from fatty acids conforming with § 172.860, or derived synthetically in conformity with § 172.864.</td>
</tr>
</tbody>
</table>

(b) The additive stearyl monoglyceridyl citrate, produced as described under paragraph (a) of this section, meets the following specifications:

- Acid number 40 to 52.
- Total citric acid 15 to 18 percent.
- Saponification number 215 to 255.

(c) The additive is used or intended for use as an emulsion stabilizer in or with shortening containing emulsifiers.

§ 172.765 Succinyl monoglyceridyl citrate.

The food additive succinyl monoglyceridyl citrate may be safely used in food in accordance with the following provisions:

(a) The additive is prepared by controlled chemical reaction of the following:

<table>
<thead>
<tr>
<th>Reactant</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Succinic acid</td>
<td>Prepared by the reaction of succinic anhydride with fatty acids conforming with § 172.860.</td>
</tr>
<tr>
<td>Stearyl alcohol</td>
<td>Derived from fatty acids conforming with § 172.860, or derived synthetically in conformity with § 172.864.</td>
</tr>
</tbody>
</table>

(b) The additive succinyl monoglyceridyl citrate, produced as described under paragraph (a) of this section, meets the following specifications:

- Acid number 50 to 150.
- Hydroxyl number 15 to 50.
- Succinyl ester content 45 to 75 percent.

(c) The additive is used or intended for use as an emulsifier in or with shortenings and edible oils intended for use in cakes, cake mixes, fillings, icings, pastries, and toppings, in accordance with good manufacturing practice.

§ 172.770 Ethylene oxide polymer.

The polymer of ethylene oxide may be safely used as a foam stabilizer in fermented malt beverages in accordance with the following provisions:

(a) It is the polymer of ethylene oxide having a minimum viscosity of 1,500 centipoises in a 1 percent aqueous solution at 25 °C.

(b) It is used at a level not to exceed 300 parts per million by weight of the fermented malt beverage.

(c) The label of the additive bears directions for use to insure compliance with paragraph (b) of this section.

§ 172.775 Methacrylic acid-divinylbenzene copolymer.

Methacrylic acid-divinylbenzene copolymer may be safely used in food in accordance with the following prescribed conditions:

(a) The additive is produced by the polymerization of methacrylic acid and divinylbenzene. The divinylbenzene functions as a cross-linking agent and constitutes a minimum of 4 percent of the polymer.

(b) Aqueous extractives from the additive do not exceed 2 percent (dry basis) after 24 hours at 25 °C.
