§ 524.920 Fenthion.

(a) Specifications. Each milliliter of solution contains 50 milligrams (mg) fenthion.

(b) Sponsor. See No. 000859 in § 510.600(c) of this chapter.

(c) Conditions of use—(1) Beef cattle and nonlactating dairy cattle—(i) Amount. It is used at the rate of one-half fluid ounce per 100 pounds of body weight applied topically on the backline of the animal. Only one application per season should be made for grub control and this will also provide initial control of lice. A second application for lice control may be made if animals become reinfested, but no sooner than 35 days after the first treatment. Proper timing of treatment is important for grub control; cattle should be treated as soon as possible after heel-fly activity ceases.

(2) Conditions of use—(1) Beef cattle and nonlactating dairy cattle—(i) Amount. 1.2 mg/lb (2.7 mg/kg) applied topically to the dorsal scapular area 2 to 4 hours prior to surgery.

(ii) Indications for use. For the control of postoperative pain associated with surgical procedures in dogs.

(iii) Limitations. Fentanyl is a Class II controlled substance. Observe all “black-box warnings” on product labeling. Federal law restricts this drug to use by or on the order of a licensed veterinarian.

(2) [Reserved]

(77 FR 47512, Aug. 9, 2012, as amended at 78 FR 44433, July 24, 2013)

§ 524.920 Fentanyl.

(a) Specifications. (1) The drug is a liquid containing:

(i) 3 percent of fentanyl; or

(ii) 20 percent fentanyl.

(2) The drug is a solution containing either 5.6 or 13.8 percent fentanyl. Each concentration is available in 2 volumes which are contained in single-dose applicators.
