and oxygen hose lines are not reconnected at the supply manifold unless the lines are given a positive means of identification when they were first connected and the lines are tested using a drop test or other positive means to ensure the integrity of fuel gas and oxygen burning system.

§ 1915.504 Fire watches.
(a) Written fire watch policy. The employer must create and keep current a written policy that specifies the following requirements for employees performing fire watch in the workplace:
   (1) The training employees must be given (§1915.508(c) contains detailed fire watch training requirements);
   (2) The duties employees are to perform;
   (3) The equipment employees must be given; and
   (4) The personal protective equipment (PPE) that must be made available and worn as required by 29 CFR Part 1915, Subpart I.
(b) Posting fire watches. The employer must post a fire watch if during hot work any of the following conditions are present:
   (1) Slag, weld splatter, or sparks might pass through an opening and cause a fire;
   (2) Fire-resistant guards or curtains are not used to prevent ignition of combustible materials on or near decks, bulkheads, partitions, or overheads;
   (3) Combustible material closer than 35 ft. (10.7m) to the hot work in either the horizontal or vertical direction cannot be removed, protected with flame-proof covers, or otherwise shielded with metal or fire-resistant guards or curtains;
   (4) The hot work is carried out on or near insulation, combustible coatings, or sandwich-type construction that cannot be shielded, cut back, or removed, or in a space within a sandwich type construction that cannot be inerted;
   (5) Combustible materials adjacent to the opposite sides of bulkheads, decks, overheads, metal partitions, or sandwich-type construction may be ignited by conduction or radiation;
   (6) The hot work is close enough to cause ignition through heat radiation or conduction on the following:
      (i) Insulated pipes, bulkheads, decks, partitions, or overheads; or
      (ii) Combustible materials and/or coatings;
   (7) The work is close enough to unprotected combustible pipe or cable runs to cause ignition; or
   (8) A Marine Chemist, a Coast Guard-authorized person, or a shipyard Competent Person, as defined in 29 CFR Part 1915, Subpart B, requires that a fire watch be posted.
(c) Assigning employees to fire watch duty. (1) The employer must not assign other duties to a fire watch while the hot work is in progress.
   (2) Employers must ensure that employees assigned to fire watch duty:
      (i) Have a clear view of and immediate access to all areas included in the fire watch;
      (ii) Are able to communicate with workers exposed to hot work;
      (iii) Are authorized to stop work if necessary and restore safe conditions within the hot work area;
      (iv) Remain in the hot work area for at least 30 minutes after completion of the hot work, unless the employer or its representative surveys the exposed area and makes a determination that there is no further fire hazard;
      (v) Are trained to detect fires that occur in areas exposed to the hot work;
      (vi) Attempt to extinguish any incipient stage fires in the hot work area that are within the capability of available equipment and within the fire watch’s training qualifications, as defined in §1915.508;
      (vii) Alert employees of any fire beyond the incipient stage; and
      (viii) If unable to extinguish fire in the areas exposed to the hot work, activate the alarm.
   (3) The employer must ensure that employees assigned to fire watch are physically capable of performing these duties.

§ 1915.505 Fire response.
(a) Employer responsibilities. The employer must:
   (1) Decide what type of response will be provided and who will provide it; and
(2) Create, maintain, and update a written policy that:
   (i) Describes the internal and outside fire response organizations that the employer will use; and
   (ii) Defines what evacuation procedures employees must follow, if the employer chooses to require a total or partial evacuation of the worksite at the time of a fire.

(b) Required written policy information—
   (1) Internal fire response. If an internal fire response is to be used, the employer must include the following information in the employer’s written policy:
       (i) The basic structure of the fire response organization;
       (ii) The number of trained fire response employees;
       (iii) The fire response functions that may need to be carried out;
       (iv) The minimum number of fire response employees necessary, the number and types of apparatuses, and a description of the fire suppression operations established by written standard operating procedures for each type of fire response at the employer’s facility;
       (v) The type, amount, and frequency of training that must be given to fire response employees; and
       (vi) The procedures for using protective clothing and equipment.

   (2) Outside fire response. If an outside fire response organization is used, the employer must include the following information in the written policy:
       (i) The basic organizational structure of the combined fire response;
       (ii) The number of combined trained fire responders;
       (iii) The fire response functions that may need to be carried out;
       (iv) The minimum number of fire response employees necessary, the number and types of apparatuses, and a description of the fire suppression operations established by written standard operating procedures for each particular type of fire response at the worksite; and
       (v) The type, amount, and frequency of joint training with outside fire response organizations if given to fire response employees.

   (3) A combination of internal and outside fire response. If a combination of internal and outside fire response is to be used, the employer must include the following information, in addition to the requirements in paragraphs (b)(1) and (2) of this section, in the written policy:
       (i) The basic organizational structure of the combined fire response;
       (ii) The number of combined trained fire responders;
       (iii) The fire response functions that may need to be carried out;
       (iv) The minimum number of fire response employees necessary, the number and types of apparatuses, and a description of the fire suppression operations established by written standard operating procedures for each particular type of fire response at the worksite; and
       (v) The type, amount, and frequency of joint training with outside fire response organizations if given to fire response employees.

   (4) Employee evacuation. The employer must include the following information in the employer’s written policy:
       (i) Emergency escape procedures;
       (ii) Procedures to be followed by employees who may remain longer at the worksite to perform critical shipyard employment operations during the evacuation;
       (iii) Procedures to account for all employees after emergency evacuation is completed;
       (iv) The preferred means of reporting fires and other emergencies; and
       (v) Names or job titles of the employees or departments to be contacted for further information or explanation of duties.

   (5) Rescue and emergency response. The employer must include the following information in the employer’s written policy:
       (i) A description of the emergency rescue procedures; and
       (ii) Names or job titles of the employees who are assigned to perform them.

   (D) States that the employer will not allow the use of incompatible hose connections.

   (E) Sets forth how hose and coupling connection threads are to be made compatible and includes where the adapter couplings are kept; or

   (F) States that the employer will not allow the use of incompatible hose connections.
§ 1915.505
(c) Medical requirements for shipyard fire response employees. The employer must ensure that:
(1) All fire response employees receive medical examinations to assure that they are physically and medically fit for the duties they are expected to perform;
(2) Fire response employees, who are required to wear respirators in performing their duties, meet the medical requirements of § 1915.154;
(3) Each fire response employee has an annual medical examination; and
(4) The medical records of fire response employees are kept in accordance with § 1915.1020.
(d) Organization of internal fire response functions. The employer must:
(1) Organize fire response functions to ensure enough resources to conduct emergency operations safely;
(2) Establish lines of authority and assign responsibilities to ensure that the components of the internal fire response are accomplished;
(3) Set up an incident management system to coordinate and direct fire response functions, including:
   (i) Specific fire emergency responsibilities;
   (ii) Accountability for all fire response employees participating in an emergency operation; and
   (iii) Resources offered by outside organizations; and
(4) Provide the information required in this paragraph (d) to the outside fire response organization to be used.
(e) Personal protective clothing and equipment for fire response employees—(1) General requirements. The employer must:
   (i) Supply to all fire response employees, at no cost, the appropriate personal protective clothing and equipment they may need to perform expected duties; and
   (ii) Ensure that fire response employees wear the appropriate personal protective clothing and use the equipment, when necessary, to protect them from hazardous exposures.
(2) Thermal stability and flame resistance. The employer must:
   (i) Ensure that each fire response employee exposed to the hazards of flame does not wear clothing that could increase the extent of injury that could be sustained; and
   (ii) Prohibit wearing clothing made from acetate, nylon, or polyester, either alone or in blends, unless it can be shown that:
      (A) The fabric will withstand the flammability hazard that may be encountered; or
      (B) The clothing will be worn in such a way to eliminate the flammability hazard that may be encountered.
   (3) Respiratory protection. The employer must:
      (i) Provide self-contained breathing apparatus (SCBA) to all fire response employees involved in an emergency operation in an atmosphere that is immediately dangerous to life or health (IDLH), potentially IDLH, or unknown;
      (ii) Provide SCBA to fire response employees performing emergency operations during hazardous chemical emergencies that will expose them to known hazardous chemicals in vapor form or to unknown chemicals;
      (iii) Provide fire response employees who perform or support emergency operations that will expose them to hazardous chemicals in liquid form either:
        (A) SCBA, or
        (B) Respiratory protective devices certified by the National Institute for Occupational Safety and Health (NIOSH) under 42 CFR Part 84 as suitable for the specific chemical environment;
      (iv) Ensure that additional outside air supplies used in conjunction with SCBA result in positive pressure systems that are certified by NIOSH under 42 CFR Part 84;
      (v) Provide only SCBA that meet the requirements of NFPA 1981–2002 Standard on Open-Circuit Self-Contained Breathing Apparatus for Fire and Emergency Services (incorporated by reference, see § 1915.5); and
      (vi) Ensure that the respiratory protection program and all respiratory protection equipment comply with § 1915.154.
   (4) Interior structural firefighting operations. The employer must:
      (i) Supply at no cost to all fire response employees exposed to the hazards of shipyard fire response, a helmet, gloves, footwear, and protective
§ 1915.506 Hazards of fixed extinguishing systems on board vessels and vessel sections.

(a) Employer responsibilities. The employer must comply with the provisions of this section whenever employees are exposed to fixed extinguishing systems that could create a dangerous atmosphere when activated in vessels and vessel sections, regardless of geographic location.

(b) Requirements for automatic and manual systems. Before any work is done in a space equipped with fixed extinguishing systems, the employer must either:

1. Physically isolate the systems or use other positive means to prevent the systems’ discharge; or

2. Ensure employees are trained to recognize:
   - Systems’ discharge and evacuation alarms and the appropriate escape routes; and
   - Hazards associated with the extinguishing systems and agents including the dangers of disturbing system components and equipment such as piping, cables, linkages, detection devices, activation devices, and alarm devices.

(c) Sea and dock trials. During trials, the employer must ensure that all systems shall remain operational.

(d) Doors and hatches. The employer must:

1. Take protective measures to ensure that all doors, hatches, scuttles, and other exit openings remain working and accessible for escape in the event the systems are activated; and
