§ 75.1103–6  
Automatic fire sensors; actuation of fire suppression systems.  

Point-type heat sensors or automatic fire sensor and warning device systems may be used to actuate deluge-type water systems, foam generator systems, multipurpose dry-powder systems, or other equivalent automatic fire suppression systems.  

§ 75.1103–7  
Electrical components; permissibility requirements.  

The electrical components of each automatic fire sensor and warning device system shall:  

(a) Remain functional when the power circuits are deenergized as required by §75.706; and  

(b) Be provided with protection against ignition of methane or coal dust when the electrical power is deenergized as required by §75.313, but these components shall be permissible or intrinsically safe if installed in a return airway.  

§ 75.1103–8  
Automatic fire sensor and warning device systems; examination and test requirements.  

(a) Automatic fire sensor and warning device systems shall be examined at least once each shift when belts are operated as part of a production shift. A functional test of the warning signals shall be made at least once every seven days. Examination and maintenance of such systems shall be by a qualified person.  

(b) A record of the functional test conducted in accordance with paragraph (a) of this section shall be maintained by the operator and kept for a period of one year.  

(c) Sensors shall be calibrated in accordance with the manufacturer’s calibration instructions at intervals not to exceed 31 days. A record of the sensor
