Corps of Engineers, Dept. of the Army, DoD § 203.61

(b) Policies—(1) Active non-Federal projects. A levee owner’s manual developed and distributed by the Corps will be provided to all sponsors of Active non-Federal projects. The levee owner’s manual will include the standards that must be met to maintain an Active status in the Rehabilitation and Inspection Program. Levee owner’s manuals will also be provided, upon request, to sponsors of Inactive non-Federal projects so that the sponsors may evaluate their projects and prepare for an IEI to gain an Active status in the RIP.

(2) Federal projects. The Operation and Maintenance Manual specified by 33 CFR 208.10(a)(10) will fulfill the requirement of providing a levee owner’s manual if the Corps has not provided a separate levee owner’s manual to the sponsor of a Federal project.

(c) Procedural requirements. Levee Owner’s Manuals will be initially provided to non-Federal sponsors of Active flood control works during scheduled CEI’s and IEI’s. Sponsors of Inactive projects and private levee owners will be provided manuals upon written request to the responsible Corps district.

§ 203.52 [Reserved]

Subpart E—Emergency Water Supplies: Contaminated Water Sources and Drought Assistance

§ 203.61 Emergency water supplies due to contaminated water source.

(a) Authority. The Chief of Engineers is authorized to provide emergency supplies of clean water to any locality confronted with a source of contaminated water causing, or likely to cause, a substantial threat to the public health and welfare of the inhabitants of the locality.

(b) Policies. (1) Any locality faced with a threat to public health and welfare from a contaminated source of drinking water is eligible for assistance.

(2) Eligibility for assistance will be based on one or more of the following factors:

(i) The maximum contaminant level or treatment technique for a contaminant, as established by the Environmental Protection Agency pursuant to the Safe Drinking Water Act (see 40 CFR 141), is exceeded.

(ii) The water supply has been identified as a source of illness by a tribal, State, or Federal public health official. The specific contaminant does not have to be identified.

(iii) An emergency (e.g., a flood or chemical spill) has occurred that has resulted in either: one or more contaminants entering the source on a sufficient scale to endanger health; or, the emergency has made inoperable the equipment necessary to remove known contaminants.

(iv) The presence of a contaminant is indicated on the basis of other information available.

(3) Corps assistance will be directed toward the provision of the minimum amount of water required to maintain the health and welfare requirements of the affected population. The quantity of water and the means of distribution will be at the discretion of the responsible Corps official, who will consider the needs of the individual situation, the needs of the affected community, and the cost effectiveness of providing water by various methods.

(4) If a locality has multiple sources of water, assistance will be furnished only to the extent that the remaining sources, with reasonable conservation measures, cannot provide adequate supplies of drinking water.

(5) Loss of water supply is not a basis for assistance under this authority.

(6) Water will not be furnished for commercial processes, except as incidental to the use of existing distribution systems. This does not prohibit the furnishing of water for drinking by employees and on-site customers. Water for preparing retail meals and similar personal needs may be provided to the extent it would be furnished to individuals.

(7) The permanent restoration of a safe supply of drinking water is the responsibility of local interests.

(8) Corps assistance is limited to 30 days, and requires the local interests to provide assurances of cooperation in a CA. (See subpart G of this part.) Extension of this 30-day period requires agreement (as an amendment to the previously signed CA) between the
State and the Corps. This agreement must cover specified services and responsibilities of each party, and provision of a firm schedule for local interests to provide normal supplies of water.

(9) State, tribal, and local governments must make full use of their own resources, including National Guard capabilities.

(c) Governor’s request. A letter signed by the Governor, or his or her authorized representative, requesting Corps assistance and addressing the State’s commitments and capabilities in response to the emergency situation, is required. All requests should identify the following information:

(1) Describe the local and State efforts undertaken. Verify that all reasonably available resources have been committed.

(2) Identify the specific needs of the State, and the required Corps assistance.

(3) Identify additional commitments to be accomplished by the State.

(4) Identify the project sponsor(s).

(d) Non-Federal responsibilities. Non-Federal interests are responsible for restoration of the routine supply of clean drinking water, including correcting any situations that cause contamination. If assistance is furnished by the Corps, local interests must furnish the basic requirements of local cooperation as detailed in the Cooperation Agreement. In all cases, reasonable water conservation measures must be implemented. Local interests will be required to operate and maintain any loaned equipment, and to remove and return such equipment to Federal interests, in a fully maintained condition, after the situation is resolved.

§ 203.62 Drought assistance.

(a) Authority. The Chief of Engineers, acting for the Secretary of the Army, has the authority under certain statutory conditions to construct wells for farmers, ranchers, political subdivisions, and to transport water to political subdivisions, within areas determined to be drought-distressed.

(b) General policy. (1) It is a non-Federal responsibility for providing an adequate supply of water to local inhabitants. Corps assistance to provide emergency water supplies will only be considered when non-Federal interests have exhausted reasonable means for securing necessary water supplies, including assistance and support from other Federal agencies.

(2) Before Corps assistance is considered under this authority, the applicability of other Federal assistance authorities must be evaluated. If these programs cannot provide the needed assistance, then maximum coordination should be made with appropriate agencies in implementing Corps assistance.

(c) Governor’s request. A letter signed by the Governor, requesting Corps assistance and addressing the State’s commitments and capabilities with response to the emergency situation, is required. All requests should identify the following information:

(1) A description of local and State efforts undertaken. A verification that all available resources have been committed, to include National Guard assets.

(2) Identification of the specific needs of the State, and the required Corps assistance.

(3) Identification of the additional commitments to be accomplished by the State.

(4) Identification of the project sponsor(s).

(d) Definitions applicable to this section—(1) Construction. This term includes initial construction, reconstruction, or repair.

(2) Drought-distressed area. An area that the Secretary of the Army determines, due to drought conditions, has an inadequate water supply that is causing, or is likely to cause, a substantial threat to the health and welfare of the inhabitants of the impacted area, including the threat of damage or loss of property.

(3) Eligible applicant. Any rancher, farmer or political subdivision within a designated drought-distressed area that is experiencing an inadequate supply of water due to drought.

(4) Farmer or rancher. An individual who realizes at least one-third of his or her gross annual income from agricultural sources, and is recognized in the community as a farmer or rancher. A farming partnership, corporation, or similar entity engaged in farming or
