PART 214—EMERGENCY SUPPLIES OF DRINKING WATER

Sec.
214.1 Purpose.
214.2 Applicability.
214.3 Reference.
214.4 Additional authority.
214.5 Policy.
214.6 Discussion.
214.7 Delegation of authority.
214.8 Exclusions.
214.9 Requirements.
214.10 Types of assistance.
214.11 Costs.

SOURCE: 41 FR 7506, Feb. 19, 1976, unless otherwise noted.

§ 214.1 Purpose.

This provides information, guidance, and policy for execution of the Chief of Engineers’ authority to furnish supplies of clean drinking water pursuant to Pub. L. 84–99, as amended by section 82(2), Pub. L. 93–251 (88 Stat. 34).

§ 214.2 Applicability.

This regulation is applicable to Corps of Engineers field operating agencies assigned Civil Works activities, including the USAED Alaska, and the Pacific Ocean Division. Its provisions are applicable within the 50 states, and the District of Columbia, Puerto Rico, Virgin Islands, American Samoa, and Guam.

§ 214.3 Reference.

(b) Pub. L. 93–251, Section 82(2).
(c) Pub. L. 93–523.
(d) ER 500–1–1.

§ 214.4 Additional authority.

Section 82(2), Pub. L. 93–251, dated 7 March 1974, revised Pub. L. 84–99, as amended, by adding the following new sentence, “The Chief of Engineers, in the exercise of his discretion, is further authorized to provide emergency supplies of clean drinking water, on such terms as he determines to be advisable, to any locality which he finds is confronted with a source of contaminated drinking water causing or likely to cause a substantial threat to the public health and welfare of the inhabitants of the locality.” This authority expands the measures the Chief of Engineers may employ in providing emergency relief pursuant to Pub. L. 84–99.

§ 214.5 Policy.

Emergency work under this authority will be applied to situations in which the source of water has become contaminated. The contamination may be accidental, deliberate, or caused by natural events. The maximum contaminant levels in drinking water are set forth by the Environmental Protection Agency pursuant to Pub. L. 93–523. However, loss of the water source or supply due to any cause is not included in the language of Section 82(2), Pub. L. 93–251, and furnishing emergency supplies by the Corps of Engineers under those situations was not intended by this legislation. Approval of measures to furnish clean drinking water will be pursuant to this regulation, and in accordance with procedures outlined in ER 500–1–1 by HQDA (DAEN-CWO-E) WASH DC 20314. DAEN-CWO-E will be notified by telephone when the emergency water situation becomes known.

§ 214.6 Discussion.

(a) The amendment provides for furnishing emergency supplies of drinking water. The method of furnishing those supplies is not provided for in the amendment, and is left to the discretion of the Chief of Engineers. Any feasible method, including restoration of service from an alternate source when the main source has been contaminated, is authorized where most feasible (however, see paragraphs (d) and (e) of this section).

(b) The scope of work is limited solely to providing emergency supplies of clean drinking water. Sewage treatment and disposal, and other sanitary requirements, are not included. In addition, the Corps of Engineers role in providing emergency supplies is a temporary measure until the locality is able to assume their responsibility. The locality is ultimately responsible for providing supplies of drinking water.
§ 214.8 Exclusions.

The authority does not require correcting the contamination, or repair of water systems so that clean drinking water supplies become available again. Reestablishing community water supplies remains the responsibility of local government and other Federal programs. These methods may be employed under the authority, if they are the most feasible ways to provide emergency supplies of clean drinking water, but there is no mandate to do so. To the extent state or local governments can provide water with their own resources, the locality will be excluded from the provision of emergency supplies under Pub. L. 84–99. In general, the following situations are not considered to be appropriate for Corps action under this authority:

(a) Contamination which causes a loss of palatability, but poses no material threat to public health and welfare.

(b) Contamination, such as by bacteria, which can be reduced to a safe level by the users boiling the water.

(c) Confrontation with normal levels of impurities or contaminants in a drinking water source that does not pose substantial threat to the public health.

(d) Contamination by natural intrusions over a period of time, which are known to be occurring and which may accumulate in sufficient concentrations to pose a future health threat, but which have not yet reached the level of a present hazard.

(e) Loss or diminishing of a water source, due to such things as an earthquake or drought.

(f) Contamination of a drinking water source as a regular occurrence due to recurring events such as drought or flooding, when no corrective community action has yet been initiated.

(g) Contamination which, while posing a substantial threat to health and welfare, can be corrected by local authorities, other Federal authorities, or other appropriate means before emergency supplies are deemed necessary.
