§ 98.361 Reporting threshold.

Livestock facilities must report GHG emissions under this subpart if the facility meets the reporting threshold as defined in 98.360(a) above, contains a manure management system as defined in 98.360(b) above, and meets the requirements of §98.2(a)(1).

§ 98.362 GHGs to report.

(a) Livestock facilities must report annual aggregate CH\textsubscript{4} and N\textsubscript{2}O emissions for the following MMS components at the facility:
1. Uncovered anaerobic lagoons.
2. Liquid/slurry systems (with and without crust covers, and including but not limited to ponds and tanks).
3. Storage pits.
4. Digesters, including covered anaerobic lagoons.
5. Solid manure storage.
6. Dry lots, including feedlots.
7. High-rise houses for poultry production (poultry without litter).
8. Poultry production with litter.
10. Manure composting.

(b) A livestock facility that is subject to this rule only because of emissions from manure management system components is not required to report emissions from subparts C through PP (other than subpart JJ) of this part.

(c) A livestock facility that is subject to this part because of emissions from source categories described in subparts C through PP of this part is not required to report emissions under subpart JJ of this part unless emissions from manure management systems are 25,000 metric tons CO\textsubscript{2}e per year or more.

§ 98.363 Calculating GHG emissions.

(a) For all manure management system components listed in 98.360(b) except digesters, estimate the annual CH\textsubscript{4} emissions and sum for all the components to obtain total emissions from the manure management system for all animal types using Equation JJ–1.
Environmental Protection Agency § 98.363

\[
\text{CH}_4 \text{Emissions}_{\text{MMSc}} \text{ (metric tons/yr)} = \sum_{\text{animal type}} \sum_{\text{MMSc}} \left[ \text{TVS}_{\text{AT}} \times \text{VS}_{\text{MMSc}} \times (1 - \text{VS}_{\text{ss}}) \times \text{days/yr} \times \text{B}_0 \times \text{MCF}_{\text{MMSc}} \right] \times 0.662 \text{ kg CH}_4/\text{m}^3 \times 1 \text{ metric ton}/1000 \text{ kg} \]  \quad \text{(Eq. JJ-2)}

Where:
- \( \text{MMSc} \) = Manure management systems component.
- \( \text{TVS}_{\text{AT}} \) = Total volatile solids excreted by animal type, calculated using Equation JJ-3 of this section (kg/day).
- \( \text{VS}_{\text{MMSc}} \) = Fraction of the total manure for each animal type that is managed in MMS component MMSc, assumed to be equivalent to the fraction of VS in each MMS component.
- \( \text{VS}_{\text{ss}} \) = Volatile solids removal through solid separation; if solid separation occurs prior to the MMS component, use a default value from Table JJ-4 of this section; if no solid separation occurs, this value is set to 0.
- \( \text{B}_0 \) = Maximum \( \text{CH}_4 \)-producing capacity for each animal type, as specified in Table JJ-2 of this section (m\(^3\) \text{CH}_4/kg VS).
- \( \text{MCF}_{\text{MMSc}} \) = \( \text{CH}_4 \) conversion factor for the MMS component, as specified in Table JJ-5 of this section (decimal).

\[ \text{TVS}_{\text{AT}} = \frac{\text{Population}_{\text{AT}} \times \text{TAM}_{\text{AT}} \times \text{VS}_{\text{AT}}}{1000} \]  \quad \text{(Eq. JJ-3)}

Where:
- \( \text{TVS}_{\text{AT}} \) = Daily total volatile solids excreted per animal type (kg/day).
- \( \text{Population}_{\text{AT}} \) = Average annual animal population contributing manure to the manure management system by animal type (head) (see description in § 98.363(a)(1) and (i) below).
- \( \text{TAM}_{\text{AT}} \) = Typical animal mass for each animal type, using either default values in Table JJ-2 of this section or farm-specific data (kg/head).
- \( \text{VS}_{\text{AT}} \) = Volatile solids excretion rate for each animal type, using default values in Table JJ-2 or JJ-3 of this section (kg VS/day/1000 kg animal mass).

(1) Average annual animal populations for static populations (e.g., dairy cows, breeding swine, layers) must be estimated by performing an animal inventory or review of facility records once each reporting year.

(2) Average annual animal populations for growing populations (meat animals such as beef and veal cattle, market swine, broilers, and turkeys) must be estimated each year using the average number of days each animal is kept at the facility and the number of animals produced annually, and an equation similar or equal to Equation JJ-4 below, adapted from Equation 10.1 in 2006 IPCC Guidelines for National Greenhouse Gas Inventories, Volume 4, Chapter 10.

\[ \text{Population}_{\text{AT}} = \text{Days onsite}_{\text{AT}} \times \left( \frac{\text{NAPA}_{\text{AT}}}{365} \right) \]  \quad \text{(Eq. JJ-4)}

Where:
- \( \text{Population}_{\text{AT}} \) = Average annual animal population (by animal type).
- \( \text{Days onsite}_{\text{AT}} \) = Average number of days the animal is kept at the facility, by animal type.
- \( \text{NAPA}_{\text{AT}} \) = Number of animals produced annually, by animal type.

(b) For each digester, calculate the total amount of \text{CH}_4 emissions, and then sum the emissions from all digesters, as shown in Equation JJ-5 of this section.
\[ H_4 \text{ Emissions}_{AD} = \sum_{i=1}^{AD} (CH_4C - CH_4D + CH_4L) \quad (\text{Eq. JJ-5}) \]

Where:
- \( CH_4 \text{ Emissions}_{AD} = CH_4 \) emissions from anaerobic digestion (metric tons/yr).
- \( AD = \) Number of anaerobic digesters at the manure management facility.
- \( CH_4C = CH_4 \) flow to digester combustion device, calculated using Equation JJ-6 of this section (metric tons CH_4/yr).
- \( CH_4D = CH_4 \) destruction at digesters, calculated using Equation JJ-11 of this section (metric tons CH_4/yr).
- \( CH_4L = \) Leakage at digesters calculated using Equation JJ-12 of this section (metric tons CH_4/yr).

\[ CH_4C = \left( \frac{V \times C \times 520^\circ \text{R}}{100\% \times T \times 1 \text{ atm}} \right) \times \frac{0.454 \text{ metric ton}}{1,000 \text{ pounds}} \] \quad (\text{Eq. JJ-6})

Where:
- \( CH_4C = CH_4 \) flow to digester combustion device (metric tons CH_4/yr).
- \( V = \) Average annual volumetric flow rate, calculated in Equation JJ-7 of this subsection (cubic feet CH_4/yr).
- \( C = \) Average annual CH_4 concentration of digester gas, calculated in Equation JJ-8 of this section (% wet basis).
- \( 0.0423 = \) Density of CH_4 lb/scf (at 520 °R or 60 °F and 1 atm).
- \( T = \) Average annual temperature at which flow is measured, calculated in Equation JJ-9 of this section (°R).
- \( P = \) Average annual pressure at which flow is measured, calculated in Equation JJ-10 of this section (atm).

\[ \sum_{n=1}^{OD} \frac{V_n \times 1,440 \text{ minutes}}{\text{day}} \] \quad (Eq. JJ-7)

Where:
- \( V = \) Average annual volumetric flow rate (cubic feet CH_4/yr).
- \( OD = \) Operating days, number of days per year that the digester was operating (days/yr).
- \( V_n = \) Daily average volumetric flow rate for day \( n \), as determined from daily monitoring as specified in §98.364 (acfm).

\[ \sum_{n=1}^{OD} \frac{C_n}{OD} \] \quad (Eq. JJ-8)

Where:
- \( C = \) Average annual CH_4 concentration of digester gas (% wet basis).
- \( OD = \) Operating days, number of days per year that the digester was operating (days/yr).
Environmental Protection Agency § 98.363

\[ C_n = \text{Average daily CH}_4 \text{ concentration of digester gas for day } n, \text{ as determined from daily monitoring as specified in §98.364 (\% wet basis).} \]

\[ T = \frac{\sum_{n=1}^{\text{OD}} T_n}{\text{OD}} \]  \hspace{1cm} (Eq. JJ-9)

Where:
- \( T \) = Average annual temperature at which flow is measured (°R).
- \( \text{OD} \) = Operating days, number of days per year that the digester was operating (days/yr).
- \( T_n \) = Temperature at which flow is measured for day \( n \) (°R).

\[ P = \frac{\sum_{n=1}^{\text{OD}} P_n}{\text{OD}} \]  \hspace{1cm} (Eq. JJ-10)

Where:
- \( P \) = Average annual pressure at which flow is measured (atm).
- \( \text{OD} \) = Operating days, number of days per year that the digester was operating (days/yr).
- \( P_n \) = Pressure at which flow is measured for day \( n \) (atm).

(3) For each digester, calculate the \( \text{CH}_4 \) destruction at the digester combustion device using Equation JJ–11 of this section.

\[ \text{CH}_4D = \text{CH}_4C \times \text{DE} \times \text{OH/Hours} \]  \hspace{1cm} (Eq. JJ-11)

Where:
- \( \text{CH}_4D \) = \( \text{CH}_4 \) destruction at digester combustion device (metric tons/yr).
- \( \text{CH}_4C \) = Annual quantity of \( \text{CH}_4 \) flow to digester combustion device, as calculated in Equation JJ–6 of this section (metric tons \( \text{CH}_4 \)).
- \( \text{DE} \) = \( \text{CH}_4 \) destruction efficiency from flaring or burning in engine (lesser of manufacturer’s specified destruction efficiency and 0.99). If the gas is transported off-site for destruction, use \( \text{DE} = 1 \).
- \( \text{OH} \) = Number of hours combustion device is functioning in reporting year.
- \( \text{Hours} \) = Hours in reporting year.

(4) For each digester, calculate the \( \text{CH}_4 \) leakage using Equation JJ–12 of this section.

\[ \text{CH}_4L = \text{CH}_4C \times \left( 1 - \frac{1}{\text{CE}} - 1 \right) \]  \hspace{1cm} (Eq. JJ-12)

Where:
- \( \text{CH}_4L \) = Leak at digesters (metric tons/yr).
- \( \text{CH}_4C \) = Annual quantity of \( \text{CH}_4 \) flow to digester combustion device, as calculated in Equation JJ–6 of this section (metric tons \( \text{CH}_4 \)).
- \( \text{CE} \) = \( \text{CH}_4 \) collection efficiency of anaerobic digester, as specified in Table JJ–6 of this section (decimal).

(c) For each MMS component, estimate the annual \( N_2O \) emissions and sum for all MMS components to obtain total emissions from the manure management system for all animal types using Equation JJ–13 of this section.

\[ \text{Direct } N_2O \text{ Emissions (metric tons/year)} = \sum_{\text{animal types}} \left[ \sum_{\text{MMS}} N_{\text{ex,AT}} \times N_{\text{ex,MMS}} \times (1 - N_{\text{ex}}) \times EF_{\text{MMS}} \times 365 \text{ days/yr} \times 44 \text{ N}_2O \times 28 \text{ N}_2O - N \times 1 \text{ metric ton}/1000 \text{ kg} \right] \]  \hspace{1cm} (Eq. JJ-13)
§ 98.364 Monitoring and QA/QC requirements.

(a) Perform an annual animal inventory or review of facility records (for static populations) or population calculation (for growing populations) to determine the average annual animal population for each animal type (see description in §98.363(a)(1) and (2)).

(b) Perform an analysis on your operation to determine the fraction of total manure by weight for each animal type that is managed in each on-site manure management system component. If your system changes from previous reporting periods, you must reevaluate the fraction of total manure managed in each system component.

(c) The CH₄ concentration of gas from digesters must be determined using ASTM D1946-90 (Reapproved 2006) Standard Practice for Analysis of Reformed Gas by Gas Chromatography (incorporated by reference see §98.7).

(d) All temperature and pressure monitors must be calibrated using the procedures and frequencies specified by the manufacturer. All equipment (temperature and pressure monitors) shall be maintained as specified by the manufacturer.

(e) For digesters with gas collection systems, install, operate, maintain, and calibrate a gas flow meter capable of measuring the volumetric flow rate to provide data for the GHG emissions.
