Equation 19
\[ \text{Slope} = \frac{\sum_{j=1}^{J} (R_j - \bar{R}) (\bar{C}_j - \bar{C})}{\sum_{j=1}^{J} (R_j - \bar{R})^2} \]

Equation 20
\[ \text{Intercept} = \bar{C} - \text{slope} \times \bar{R} \]

(4) To pass this test, at each test site:
(i) The slope (calculated to at least 2 decimal places) must be in the interval specified for regression slope in table C-4 of this subpart; and
(ii) The intercept (calculated to at least 2 decimal places) must be in the interval specified for regression intercept in table C-4 of this subpart.
(iii) The slope and intercept limits are illustrated in figures C-2 and C-3 of this subpart.

(h) Tests for comparison correlation. (1) For each test site, calculate the (Pearson) correlation coefficient, \( r \) (not the coefficient of determination, \( r^2 \)), using equation 21 of this section:
\[ r = \frac{\sum_{j=1}^{J} (R_j - \bar{R})(\bar{C}_j - \bar{C})}{\sqrt{\left(\sum_{j=1}^{J} (R_j - \bar{R})^2\right)\left(\sum_{j=1}^{J} (\bar{C}_j - \bar{C})^2\right)}} \]

(2) For each test site, calculate the concentration coefficient of variation, CCV, using equation 22 of this section:
\[ \text{CCV} = \frac{1}{\bar{R}} \sqrt{\frac{\sum_{j=1}^{J} (R_j - \bar{R})^2}{J - 1}} \]

(3) To pass the test, the correlation coefficient, \( r \), for each test site must not be less than the values, for various values of CCV, specified for correlation in table C-4 of this subpart. These limits are illustrated in figure C-4 of this subpart.
