

trellis rust (*Gymnosporangium fuscum*), Asian pear black spot (*Alternaria* spp.), or phylloxera (*Aphanostigma* sp. poss. *jackusiensis*), APHIS may reject the lot or consignment and may prohibit the importation into the United States of fragrant pears from the production site for the season. The exportation to the United States of fragrant pears from the production site may resume in the next growing season if an investigation is conducted and APHIS and the NPPO of China agree that appropriate remedial action has been taken. If any of these pests is detected in more than one registered production site, APHIS may prohibit the importation into the United States of fragrant pears from China until an investigation is conducted and APHIS and the NPPO of China agree that appropriate remedial action has been taken.

(5) After harvest, the NPPO of China or officials authorized by the NPPO of China must inspect the pears for signs of pest infestation and allow APHIS to monitor the inspections.

(6) Upon detection of large pear borer (*Numonia piovorella*), pear curculio (*Rhynchites fovepessin*), or Japanese apple curculio (*R. heros*), APHIS may reject the lot or consignment.

(b) *Packing requirements.* (1) The fragrant pears must be packed in cartons that are labeled in accordance with §319.56-5(e).

(2) The fragrant pears must be held in a cold storage facility while awaiting export. If fruit from unregistered production sites are stored in the same facility, the fragrant pears must be isolated from that other fruit.

(c) *Shipping requirements.* (1) The fragrant pears must be shipped in insect-proof containers and all pears must be safeguarded during transport to the United States in a manner that will prevent pest infestation.

(2) The fragrant pears may be imported only under a permit issued by APHIS in accordance with §319.56-3(b).

(3) Each consignment of pears must be accompanied by a phytosanitary certificate issued by the NPPO of China stating that the conditions of this section have been met and that the consignment has been inspected

and found free of the pests listed in this section.

(Approved by the Office of Management and Budget under control number 0579-0227)

§319.56-40 Peppers from certain Central American countries.

Fresh peppers (*Capsicum* spp.) may be imported into the United States from Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, and Panama only under the following conditions and in accordance with all other applicable provisions of this subpart:

(a) For peppers of the species *Capsicum annuum*, *Capsicum frutescens*, *Capsicum baccatum*, and *Capsicum chinense* from areas free of Mediterranean fruit fly (Medfly), terms of entry are as follows:

(1) The peppers must be grown and packed in an area that has been determined by APHIS to be free of Medfly in accordance with the procedures described in §319.56-5 of this subpart.

(2) A pre-harvest inspection of the growing site must be conducted by the national plant protection organization (NPPO) of the exporting country for those pests listed in the bilateral workplan provided to APHIS by the NPPO of the exporting country, including any of the following pests: The weevil *Faustinus ovatipennis*, pea leafminer, tomato fruit borer, lantana mealybug, passionvine mealybug, melon thrips, bacterial wilt, the rust fungus *Puccinia pampeana*, Andean potato mottle virus, and tomato severe leaf curl virus. If any of the pests listed in the workplan are found to be generally infesting the growing site, the NPPO may not allow export from that production site until the NPPO has determined that risk mitigation has been achieved.

(3) The peppers must be packed in insect-proof cartons or containers or covered with insect-proof mesh or plastic tarpaulin at the packinghouse for transit to the United States. These safeguards must remain intact until arrival in the United States.

(4) The exporting country's NPPO is responsible for export certification, inspection, and issuance of phytosanitary certificates. Each consignment of peppers must be accompanied by a phytosanitary certificate issued by the NPPO and bearing the declaration,

“These peppers were grown in an area recognized to be free of Medfly and the consignment has been inspected and found free of the pests listed in the requirements.”

(b) For peppers of the species *Capsicum annuum*, *Capsicum frutescens*, *Capsicum baccatum*, *Capsicum chinense*, and *Capsicum pubescens* from areas in which Medfly is considered to exist:

(1) The peppers must be grown in approved production sites registered with the NPPO of the exporting country. Initial approval of the production sites will be completed jointly by the exporting country's NPPO and APHIS. The exporting country's NPPO will visit and inspect the production sites monthly, starting 2 months before harvest and continuing through until the end of the shipping season. APHIS may monitor the production sites at any time during this period.

(2) Pepper production sites must consist of pest-exclusionary greenhouses, which must have double self-closing doors and have all other openings and vents covered with 1.6 mm (or less) screening.

(3) Registered sites must contain traps for the detection of Medfly both within and around the production site.

(i) Traps with an approved protein bait must be placed inside the greenhouses at a density of four traps per hectare, with a minimum of two traps per greenhouse. Traps must be serviced on a weekly basis.

(ii) If a single Medfly is detected inside a registered production site or in a consignment, the registered production site will lose its ability to export peppers to the United States until APHIS and the exporting country's NPPO mutually determine that risk mitigation is achieved.

(iii) Medfly traps with an approved lure must be placed inside a buffer area 500 meters wide around the registered production site, at a density of 1 trap per 10 hectares and a minimum of 10 traps. These traps must be checked at least every 7 days. At least one of these traps must be near the greenhouse. Traps must be set for at least 2 months before export and trapping must continue to the end of the harvest.

(iv) Capture of 0.7 or more Medflies per trap per week will delay or suspend

the harvest, depending on whether harvest has begun, for consignments of peppers from that production site until APHIS and the exporting country's NPPO can agree that the pest risk has been mitigated.

(v) The greenhouse must be inspected prior to harvest for those pests listed in the bilateral workplan provided to APHIS by the NPPO of the exporting country, including any of the following pests: The weevil *Faustinus ovatipennis*, pea leafminer, tomato fruit borer, lantana mealybug, passionvine mealybug, melon thrips, bacterial wilt, the rust fungus *Puccinia pampeana*, Andean potato mottle virus, and tomato severe leaf curl virus. If any of pests listed in the workplan, or other quarantine pests, are found to be generally infesting the greenhouse, export from that production site will be halted until the exporting country's NPPO determines that the pest risk has been mitigated.

(4) The exporting country's NPPO must maintain records of trap placement, checking of traps, and any Medfly captures. The exporting country's NPPO must maintain an APHIS-approved quality control program to monitor or audit the trapping program. The trapping records must be maintained for APHIS' review.

(5) The peppers must be packed within 24 hours of harvest in a pest-exclusionary packinghouse. The peppers must be safeguarded by an insect-proof mesh screen or plastic tarpaulin while in transit to the packinghouse and while awaiting packing. Peppers must be packed in insect-proof cartons or containers, or covered with insect-proof mesh or plastic tarpaulin, for transit to the United States. These safeguards must remain intact until arrival in the United States or the consignment will be denied entry into the United States.

(6) During the time the packinghouse is in use for exporting peppers to the United States, the packinghouse may accept peppers only from registered approved production sites.

(7) The exporting country's NPPO is responsible for export certification, inspection, and issuance of phytosanitary certificates. Each consignment of peppers must be accompanied by a

phytosanitary certificate issued by the NPPO and bearing the declaration, “These peppers were grown in an approved production site and the consignment has been inspected and found free of the pests listed in the requirements.” The shipping box must be labeled with the identity of the production site.

(c) For peppers of the species *Capsicum pubescens* from areas in which Mexican fruit fly (Mexfly) is considered to exist:

(1) The peppers must be grown in approved production sites registered with the NPPO of the exporting country. Initial approval of the production sites will be completed jointly by the exporting country’s NPPO and APHIS. The exporting country’s NPPO must visit and inspect the production sites monthly, starting 2 months before harvest and continuing through until the end of the shipping season. APHIS may monitor the production sites at any time during this period.

(2) Pepper production sites must consist of pest-exclusionary greenhouses, which must have double self-closing doors and have all other openings and vents covered with 1.6 mm (or less) screening.

(3) Registered sites must contain traps for the detection of Mexfly both within and around the production site.

(i) Traps with an approved protein bait must be placed inside the greenhouses at a density of four traps per hectare, with a minimum of two traps per greenhouse. Traps must be serviced on a weekly basis.

(ii) If a single Mexfly is detected inside a registered production site or in a consignment, the registered production site will lose its ability to ship under the systems approach until APHIS and the exporting country’s NPPO mutually determine that risk mitigation is achieved.

(iii) Mexfly traps with an approved protein bait must be placed inside a buffer area 500 meters wide around the registered production site, at a density of 1 trap per 10 hectares and a minimum of 10 traps. These traps must be checked at least every 7 days. At least one of these traps must be near the greenhouse. Traps must be set for at least 2 months before export, and trap-

ping must continue to the end of the harvest.

(iv) Capture of 0.7 or more Mexflies per trap per week will delay or suspend the harvest, depending on whether harvest has begun, for consignments of peppers from that production site until APHIS and the exporting country’s NPPO can agree that the pest risk has been mitigated.

(v) The greenhouse must be inspected prior to harvest for those pests listed in the bilateral workplan provided to APHIS by the NPPO of the exporting country, including any of the following pests: The weevil *Faustinus ovatipennis*, pea leafminer, tomato fruit borer, lantana mealybug, passionvine mealybug, melon thrips bacterial wilt, the rust fungus *Puccinia pampeana*, Andean potato mottle virus, and tomato severe leaf curl virus. If any of the pests listed in the workplan, or other quarantine pests, are found to be generally infesting the greenhouse, export from that production site will be halted until the exporting country’s NPPO determines that the pest risk has been mitigated.

(4) The exporting country’s NPPO must maintain records of trap placement, checking of traps, and any Mexfly captures. The exporting country’s NPPO must maintain an APHIS-approved quality control program to monitor or audit the trapping program. The trapping records must be maintained for APHIS’ review.

(5) The peppers must be packed within 24 hours of harvest in a pest-exclusionary packinghouse. The peppers must be safeguarded by an insect-proof mesh screen or plastic tarpaulin while in transit to the packinghouse and while awaiting packing. Peppers must be packed in insect-proof cartons or containers, or covered with insect-proof mesh or plastic tarpaulin, for transit to the United States. These safeguards must remain intact until arrival in the United States or the consignment will be denied entry into the United States.

(6) During the time the packinghouse is in use for exporting peppers to the United States, the packinghouse may accept peppers only from registered approved production sites.

§ 319.56-41

7 CFR Ch. III (1-1-14 Edition)

(7) The exporting country's NPPO is responsible for export certification, inspection, and issuance of phytosanitary certificates. Each consignment of peppers must be accompanied by a phytosanitary certificate issued by the NPPO and bearing the declaration, "These peppers were grown in an approved production site and the consignment has been inspected and found free of the pests listed in the requirements." The shipping box must be labeled with the identity of the production site.

[72 FR 39501, July 18, 2007, as amended at 76 FR 52546, Aug. 23, 2011]

§ 319.56-41 Citrus from Peru.

Grapefruit (*Citrus paradisi*), limes (*C. aurantiifolia*), mandarins or tangerines (*C. reticulata*), sweet oranges (*C. sinensis*), and tangelos (*Citrus tangelo*) may be imported into the United States from Peru under the following conditions:

(a) The fruit must be accompanied by a permit issued in accordance with § 319.56-3(b).

(b) The fruit may be imported in commercial consignments only.

(c) *Approved growing areas.* The fruit must be grown in one of the following approved citrus-producing zones: Zone I, Piura; Zone II, Lambayeque; Zone III, Lima; Zone IV, Ica; and Zone V, Junin.

(d) *Grower registration and agreement.* The production site where the fruit is grown must be registered for export with the national plant protection organization (NPPO) of Peru, and the producer must have signed an agreement with the NPPO of Peru whereby the producer agrees to participate in and follow the fruit fly management program established by the NPPO of Peru.

(e) *Management program for fruit flies; monitoring.* The NPPO of Peru's fruit fly management program must be approved by APHIS, and must require that participating citrus producers allow APHIS inspectors access to production areas in order to monitor compliance with the fruit fly management program. The fruit fly management

program must also provide for the following:

(1) *Trapping and control.* In areas where citrus is produced for export to the United States, traps must be placed in fruit fly host plants at least 6 weeks prior to harvest at a rate mutually agreed upon by APHIS and the NPPO of Peru. If fruit fly trapping levels at a production site exceed the thresholds established by APHIS and the NPPO of Peru, exports from that production site will be suspended until APHIS and the NPPO of Peru conclude that fruit fly population levels have been reduced to an acceptable limit. Fruit fly traps are monitored weekly; therefore, reinstatements of production sites will be evaluated on a weekly basis.

(2) *Records.* The NPPO of Peru or its designated representative must keep records that document the fruit fly trapping and control activities in areas that produce citrus for export to the United States. All trapping and control records kept by the NPPO of Peru or its designated representative must be made available to APHIS upon request.

(f) *Cold treatment.* The fruit, except for limes (*C. aurantiifolia*), must be cold treated for *Anastrepha fraterculus*, *A. obliqua*, *A. serpentina*, and *Ceratitidis capitata* (Mediterranean fruit fly) in accordance with part 305 of this chapter.

(g) *Phytosanitary inspection.* Each consignment of fruit must be accompanied by a phytosanitary certificate issued by the NPPO of Peru stating that the fruit has been inspected and found free of *Ecdytolopha aurantiana*.

(h) *Port of first arrival sampling.* Citrus fruits imported from Peru are subject to inspection by an inspector at the port of first arrival into the United States in accordance with § 319.56-3(d). At the port of first arrival, an inspector will sample and cut citrus fruits from each consignment to detect pest infestation. If a single live fruit fly in any stage of development or a single *E. aurantiana* is found, the consignment will be held until an investigation is completed and appropriate remedial actions have been implemented.

§ 319.56-42 Peppers from the Republic of Korea.

Peppers (*Capsicum annuum* L. var. *annuum*) from the Republic of Korea
