§ 400.53 Yield certification and acceptability.

(a) Production reports must be provided to the crop insurance agent no later than the production reporting date for the crop insured.

1. Production reports must provide an accurate account of planted acreage for annual crops or insurable acres for perennial crops, as well as harvested and appraised production by unit.

2. The insured must certify the accuracy of the information.

3. Production reported for more than one crop year must be continuous. A year in which no acreage was planted to the crop on a unit or no acreage was planted to the crop during the year is not considered a continuous crop year.

(b) Records may be kept on a computer. If records are stored on a computer, the insured must maintain a copy of the computer software program used for the production records and provide the software to the crop insurance agent upon request. If the insured is required to store records in hard copy, the records must be stored in a safe and secure location.

§ 400.53 Yield certification and acceptability.

(a) Production reports must be provided to the crop insurance agent no later than the production reporting date for the crop insured.

1. Production reports must provide an accurate account of planted acreage for annual crops or insurable acres for perennial crops, as well as harvested and appraised production by unit.

2. The insured must certify the accuracy of the information.

3. Production reported for more than one crop year must be continuous. A year in which no acreage was planted to the crop on a unit or no acreage was planted to the crop during the year is not considered a continuous crop year.

(b) Records may be kept on a computer. If records are stored on a computer, the insured must maintain a copy of the computer software program used for the production records and provide the software to the crop insurance agent upon request. If the insured is required to store records in hard copy, the records must be stored in a safe and secure location.

§ 400.53 Yield certification and acceptability.

(a) Production reports must be provided to the crop insurance agent no later than the production reporting date for the crop insured.

1. Production reports must provide an accurate account of planted acreage for annual crops or insurable acres for perennial crops, as well as harvested and appraised production by unit.

2. The insured must certify the accuracy of the information.

3. Production reported for more than one crop year must be continuous. A year in which no acreage was planted to the crop on a unit or no acreage was planted to the crop during the year is not considered a continuous crop year.

(b) Records may be kept on a computer. If records are stored on a computer, the insured must maintain a copy of the computer software program used for the production records and provide the software to the crop insurance agent upon request. If the insured is required to store records in hard copy, the records must be stored in a safe and secure location.
planted to a practice, type, or variety requiring an APH yield will not be considered a break in continuity. Assigned yields, at the discretion of the FCIC, may be used to maintain continuity of yield data of file. Production on uninsured (for those years a crop insurance policy under the Federal Crop Insurance Act is in effect) or uninsurable acreage (for other years of the period) will not be used to determine APH yield unless production from such acreage is commingled with production from insured or insurable acreage.

(b) Production reports and supporting records are subject to audit or review to verify the accuracy of the information certified. Production and supporting records may be reviewed and verified if a claim for indemnity is submitted on the insured crop. The reported yield is subject to revision, if needed, so that the claim conforms to the records submitted at that time.

(1) Inaccurate production reports or failure to retain acceptable records shall result in the verifier combining optional farm units and recomputing the approved APH yield. These actions shall be taken at any time after reporting or record discrepancies are identified and may result in reduction of the approved APH yield for any calendar year.

(2) Records must be provided by the insured at the time of an audit, review, or as otherwise requested, to verify that the acreage and production certified are accurate. Records of any other person having shares in the insured crop, which are used by the insured to establish the approved APH yield, must also be provided upon request.

(c) The agent will explain the APH Program to insureds and prospective insureds. When necessary, the agent will assist the insured in preparation of production reports. The agent will determine the adjusted or unadjusted transitional or determined yields in accordance with § 400.54(b). The agent will review the production reports and forward them to the verifier, along with any requested and required supporting records for determination of an approved APH yield.

(d) The verifier will determine if the certified production reports are acceptable and calculate the approved APH yield.

§ 400.55 Qualification for actual production history coverage program.

(a) The approved APH yield is calculated from a database containing a minimum of four yields and will be updated each subsequent crop year. The database may contain a maximum of the 10 most recent crop years and may include actual, assigned, and adjusted or unadjusted T or D-Yields. T or D-Yields, adjusted or unadjusted, will only occur in the database when there are less than four years of actual and/or assigned yields.

(b) The insured may be required to provide production records to determine the approved APH yield, if production records for the most recent crop year are available. If acceptable records of actual production are provided, the records must be continuous.
