(3) They are moved in accordance with any additional conditions prescribed in the permit and determined by the Administrator to be necessary to ensure that the live fish, fertilized eggs, or gametes through the United States do not introduce SVC into the United States.

(4) For a holding facility to be approved by the Administrator:
   (i) The holding facility must be sufficiently isolated to prevent direct or indirect contact of the live fish, fertilized eggs, or gametes it contains with any other SVC-susceptible species in the United States;
   (ii) The holding facility must be constructed to provide adequate protection against environmental conditions and so that it can be adequately cleaned, washed and disinfected;
   (iii) Provision must be made for disposal of fish carcasses, shipping water, waste and any associated shipping materials in a manner that will prevent dissemination of disease;
   (iv) Provision must be made for adequate sources of feed and water and for attendants for the care and feeding of live fish, fertilized eggs, or gametes in the facility;
   (v) The holding facility must comply with all applicable local, State and Federal requirements for environmental quality.
   (vi) The holding facility must comply with any additional requirements that may be imposed by the Administrator for a particular shipment if necessary to prevent the dissemination of disease.

(Approved by the Office of Management and Budget under control number 0579–0301)

§ 93.902 Ports designated for the importation of live fish, fertilized eggs, and gametes.

(a) The following ports are designated as ports of entry for live fish, fertilized eggs, and gametes of SVC-susceptible species imported under this subpart:
   (1) Air and ocean ports. Los Angeles and San Francisco, CA; Miami and Tampa, FL; Atlanta, GA; Honolulu, HI; Chicago, IL; Boston, MA; Newark, NJ; New York, NY; Portland, OR; Dallas-Ft. Worth, TX; and San Juan, PR.
   (2) Canadian border ports. Detroit, MI; Buffalo-Niagara, NY; and Blaine and Seattle, WA.
   (3) Mexican border ports. Otay Mesa, CA.
   (b) Designation of other ports. Other ports may be designated by the Administrator in specific cases with the concurrence of the Secretary of the Department of Homeland Security.

§ 93.903 Import permits for live fish, fertilized eggs, and gametes.

(a) Live fish, fertilized eggs, or gametes of SVC-susceptible species imported into the United States must be accompanied by an import permit issued by APHIS and must be imported within 30 days after the proposed date of arrival stated in the import permit.

(b) An application for an import permit must be submitted for each shipment of live fish, fertilized eggs, or gametes of SVC-susceptible species to the Animal and Plant Health Inspection Service, Veterinary Services, National Center for Import and Export, 4700 River Road Unit 38, Riverdale, MD 20737–1231. Application forms for import permits may be obtained from this address.

(c) A completed application shall include the following information:
   (1) The name and address of the person intending to export live fish, fertilized eggs, or gametes of SVC-susceptible species to the United States;
   (2) The proposed date of shipment to the United States;
   (3) The name and address of the person intending to import live fish, fertilized eggs, or gametes of SVC-susceptible species into the United States;
   (4) The species and number of live fish, fertilized eggs, or gametes of SVC-susceptible species to be imported into the United States;
   (5) The purpose of the importation;
   (6) The port of embarkation;
   (7) The mode of transportation;
   (8) The route of travel, including all carrier stops en route;
   (9) The port of entry in the United States;
   (10) The proposed date of arrival in the United States; and
§ 93.904 Health certificate for live fish, fertilized eggs, and gametes.

(a) General. All live fish, fertilized eggs, and gametes of SVC-susceptible species that are imported from any region of the world must be accompanied by a health certificate issued by a full-time salaried veterinarian of the national government of the exporting region, or issued by a certifying official and endorsed by the competent authority of that country. The health certificate must be written in English or contain an English translation. The health certificate will be valid for 30 days from the date of issuance. The health certificate for the live fish, fertilized eggs, or gametes must state that:

(1) The live fish, fertilized eggs, or gametes were inspected by the veterinarian or certifying official who issued the certificate within 72 hours prior to shipment, and were found to be free of any clinical signs of disease consistent with SVC; and

(2) The live fish, fertilized eggs, or gametes covered by the health certificate meet the requirements of this section.

(b) Surveillance. The live fish, fertilized eggs, or gametes must meet the following conditions to be eligible for importation into the United States:

(1) The live fish, fertilized eggs, or gametes must originate in a region or establishment which conducts a surveillance program for SVC under the supervision of the competent authority.

(2) The region or establishment must demonstrate freedom from SVC through a minimum of 2-years’ continuous health history, supported by laboratory testing by a pathogen detection facility approved for SVC viral assays by the competent authority.

(3) SVC-susceptible fish populations in the region or establishment must be tested at least twice annually, with at least 3 months between the tests and at times or under environmental conditions that would facilitate the detection of SVCV if it were present. Sampling procedures must utilize an assumed pathogen prevalence of 2 percent, with a corresponding confidence level of 95 percent. Samples must be collected and submitted by a certifying official or veterinarian recognized by the competent authority. The standard screening method for SVC must include isolation of SVCV in cell culture, using either the epithelioma papulosum cyprini (EPC) or fathead minnow (FHM) cell lines. However, the Administrator may authorize other assays for SVCV detection in lieu of virus isolation through cell culture, if the Administrator determines that such assays provide equivalent assurance of the SVC status of an exporting region or establishment. All viral testing results must be negative.

(c) Shipping containers. All live fish, fertilized eggs, and gametes must be shipped to the United States in new containers or in used containers that have been cleaned and disinfected in accordance with this section.

(1) Cleaning and disinfection of shipping containers must take place under the supervision of the veterinarian or certifying official who issues the health certificate.

(2) Cleaning and disinfection must be sufficient to neutralize any SVC virus to which shipping containers may have been exposed. Acceptable disinfection procedures include individual or combination treatments with: Solutions having a pH of 12 or higher or 3 or lower with a contact time of at least 10 minutes; heat at or above 56 °C for at least 15 minutes; chlorine solutions having a concentration of at least 500 ppm with a contact time of at least 10
