§ 510.205  
(4) CMS posts the following to the CMS Web site:
   (i) Potential revisions to the exclusion to allow for public comment; and
   (ii) An updated exclusions list after consideration of public comment.

§ 510.205  Beneficiary inclusion criteria.

(a) Episodes tested in the CJR model include only those in which care is furnished to beneficiaries who meet all of the following criteria upon admission to the anchor hospitalization:
   (1) Are enrolled in Medicare Parts A and Part B.
   (2) Eligibility for Medicare is not on the basis of end stage renal disease, as described in §406.13 of this chapter.
   (3) Are not enrolled in any managed care plan (for example, Medicare Advantage, health care prepayment plans, or cost-based health maintenance organizations).
   (4) Are not covered under a United Mine Workers of America health care plan.
   (5) Have Medicare as their primary payer.
   (6) For episodes beginning on or after July 1, 2017, are not prospectively assigned to—
      (i) An ACO in the Next Generation ACO model;
      (ii) An ACO in a track of the Comprehensive ESRD Care Model incorporating downside risk for financial losses; or
      (iii) A Shared Savings Program ACO in Track 3.
(b) If at any time during the episode a beneficiary no longer meets all of the criteria in this section, the episode is canceled in accordance with §510.210(b).

[80 FR 73540, Nov. 24, 2015, as amended at 82 FR 613, Jan. 3, 2017]

§ 510.210  Determination of the episode.

(a) General. The episode begins with the admission of a Medicare beneficiary described in §510.205 to a participant hospital for an anchor hospitalization and ends on the 90th day after the date of discharge, with the day of discharge itself being counted as the first day in the 90-day post-discharge period.
(b) Cancellation of an episode. The episode is canceled and is not included in the determination of NPRA as specified in §510.305 if the beneficiary does any of the following during the episode:
   (1) Ceases to meet any criterion listed in §510.205.
   (2) Is readmitted to any participant hospital for another anchor hospitalization.
   (3) Initiates an LEJR episode under BPCI.
   (4) Dies.

Subpart D—Pricing and Payment

§ 510.300  Determination of episode quality-adjusted target prices.

(a) General. CMS establishes episode quality-adjusted target prices for participant hospitals for each performance year of the model as specified in this section. Episode quality-adjusted target prices are established according to the following:
   (1) MS–DRG and fracture status. MS–DRG assigned at discharge for anchor hospitalization and present of hip fracture diagnosis for anchor hospitalization—
      (i) MS–DRG 469 with hip fracture;
      (ii) MS–DRG 469 without hip fracture;
      (iii) MS–DRG 470 with hip fracture; or
      (iv) MS–DRG 470 without hip fracture.
   (2) Applicable time period for performance year episode quality-adjusted target prices. Episode quality-adjusted target prices are updated to account for Medicare payment updates no less than 2 times per year, for updated quality-adjusted target prices effective October 1 and January 1, and at other intervals if necessary.
   (3) Episodes that straddle performance years or payment updates. The quality-adjusted target price that applies to the type of episode as of the date of admission for the anchor hospitalization is the quality-adjusted target price that applies to the episode.
   (4) Identifying episodes with hip fracture. CMS develops a list of ICD–CM hip fracture diagnosis codes that, when reported in the principal diagnosis code files on the claim for the anchor hospitalization, represent a bone fracture for which a hip replacement procedure, either a partial hip arthroplasty or a...
Centers for Medicare & Medicaid Services, HHS

§ 510.300

total hip arthroplasty, could be the primary surgical treatment. The list of ICD–CM hip fracture diagnosis codes used to identify hip fracture episodes is posted on the CMS Web site.

(i) On an annual basis, or more frequently as needed, CMS updates the list of ICD–CM hip fracture diagnosis codes to reflect coding changes or other issues brought to CMS' attention.

(ii) CMS applies the following standards when revising the list of ICD–CM hip fracture diagnosis codes.

(A) The ICD–CM diagnosis code is sufficiently specific that it represents a bone fracture for which a physician could determine that a hip replacement procedure, either a FHA or a TKA, could be the primary surgical treatment.

(B) The ICD–CM diagnosis code is the primary reason (that is, principal diagnosis code) for the anchor hospitalization.

(iii) CMS posts the following to the CMS Web site:

(A) Potential ICD–CM hip fracture diagnosis codes for public comment; and

(B) A final ICD–CM hip fracture diagnosis code list after consideration of public comment.

(5) Quality performance. Quality-adjusted target prices reflect effective discount factors or applicable discount factors based on a hospital’s composite quality score, as specified in §§ 510.300(c) and 510.315(f).

(b) Episode quality-adjusted target price. CMS calculates quality-adjusted target prices based on a blend of each participant hospital’s hospital-specific and regional episode expenditures. The region corresponds to the U.S. Census Division associated with the primary address of the CCN of the participant hospital and the regional component is based on all hospitals in said region, except as follows. In cases where an MSA selected for participation in CJR spans more than one U.S. Census Division, the entire MSA will be grouped into the U.S. Census Division where the largest city by population in the MSA is located for quality-adjusted target price and reconciliation calculations. The calendar years used for historical expenditure calculations are as follows:

(i) Episodes beginning in 2012 through 2014 for performance years 1 and 2.

(iii) Episodes beginning in 2016 through 2018 for performance year 5.

(2) Specifically, the blend consists of the following:

(i) Two-thirds of the participant hospital’s own historical episode payments and one-third of the regional historical episode payments for performance years 1 and 2.

(ii) One-third of the hospital’s own historical episode payments and two-thirds of the regional historical episode payments for performance year 3.

(iii) Regional historical episode payments for performance years 4 and 5.

(3) Exception for low-volume hospitals. Quality-adjusted target prices for participant hospitals with fewer than 20 CJR episodes in total across the 3 historical years of data used to calculate the quality-adjusted target price are based on 100 percent regional historical episode payments.

(4) Exception for recently merged or split hospitals. Quality-adjusted target prices for participant hospitals that have undergone a merger, consolidation, spin off or other reorganization that results in a new hospital entity without 3 full years of historical claims data are determined using the historical episode payments attributed to their predecessor(s).

(5) Exception for high episode spending. Episode payments are capped at 2 standard deviations above the mean regional episode payment for both the hospital-specific and regional components of the quality-adjusted target price.

(6) Exclusion of incentive programs and add-on payments under existing Medicare payment systems. Certain incentive programs and add-on payments are excluded from historical episode payments by using the CMS Price (Payment) Standardization Detailed Methodology used for the Medicare spending per beneficiary measure in the Hospital Value-Based Purchasing Program.

(7) Communication of episode quality-adjusted target prices. CMS communicates episode quality-adjusted target prices to participant hospitals before
§ 510.305 Determination of the NPRA and reconciliation process.

(a) General. Providers and suppliers furnishing items and services included in the episode bill for such items and services in accordance with existing rules and as if this part were not in effect.

(b) Reconciliation. CMS uses a series of reconciliation processes, which CMS performs as described in paragraphs (d) and (f) of this section after the end of each performance year, to establish final payment amounts to participant hospitals for CJR episodes for a given performance year. Following the end of each performance year, CMS determines actual episode payments for each episode for the performance year (other than episodes that have been canceled in accordance with §510.210(b)) and determines the amount of a reconciliation payment or repayment amount.

(c) Data used. CMS makes beneficiary-identifiable data available to a participant hospital in accordance with applicable privacy laws and only in response to the hospital’s request for such data for a beneficiary who has been furnished a billable service by the participant hospital corresponding to the episode definitions for CJR.

(d) Data sharing. CMS makes available to participant hospitals, through the most appropriate means, data that CMS determines may be useful to participant hospitals to do the following:

(1) Determine appropriate ways to increase the coordination of care.

(2) Improve quality.

(3) Enhance efficiencies in the delivery of care.

(4) Otherwise achieve the goals of the CJR model described in this section.
