§ 76.70 Exemption from input selector switch rules.

(a) In any case of cable systems serving communities where no portion of the community is covered by the predicted Grade B contour of at least one full service broadcast television station, or non-commercial educational television translator station operating with 5 or more watts output power and where the signals of no such broadcast stations are “significantly viewed” in the county where such a cable system is located, the cable system shall be exempt from the provisions of §76.66. Cable systems may be eligible for this exemption where they demonstrate with engineering studies prepared in accordance with §73.686 of this chapter or other showings that broadcast signals meeting the above criteria are not actually viewable within the community.

(b) Where a new full service broadcast television station, or new non-commercial educational television translator station with 5 or more watts, or an existing such station of either type with newly upgraded facilities provides predicted Grade B service to a community served by a cable system previously exempt under paragraph (a) of this section, or the signal of any such broadcast station is newly determined to be “significantly viewed” in the county where such a cable system is located, the cable system at that time is required to comply fully with the provisions of §76.66. Cable systems may retain their exemption under paragraph (a) of this section where they demonstrate with engineering studies prepared in accordance with §73.686 of this chapter or other showings that broadcast signals meeting the above criteria are not actually viewable within the community.
