TUESDAY, JULY 11, 1995

HOUSE OF REPRESENTATIVES,
COMMITTEE ON WAYS AND MEANS,
Washington, DC.

The Committee met, pursuant to call, at 10:02 a.m., in room 1100, Longworth House Office Building, Hon. Bill Archer (Chairman of the Committee) presiding.

[The advisory announcing the hearings follows:]

ADVISORY

FROM THE COMMITTEE ON WAYS AND MEANS

June 30, 1995
No. FC-8

Archer Announces Hearing on Miscellaneous Tax Reforms

Congressman Bill Archer (R-TX), Chairman of the Committee on Ways and Means, today announced that the Committee will hold a series of hearings on miscellaneous tax reforms. **The hearings will take place on Tuesday, July 11, Wednesday, July 12, and Thursday, July 13, 1995, in the main Committee Hearing Room, 1100 Longworth House Office Building, beginning at 10:00 a.m.**

BACKGROUND:

This hearing will cover various revenue issues which have been brought to the attention of the Committee as well as tax simplification legislation which was most recently before the Committee on Ways and Means as part of H.R. 3419 in the 103rd Congress.

Because of the large number of items described below which are within the scope of the hearing, it will not be possible for the Committee to hear oral testimony on all of the issues. Written submissions are strongly encouraged in lieu of appearances before the Committee. Requests to appear are strongly discouraged with respect to issues that have previously been the subject of a hearing before the Committee (including simplification items from H.R. 3419 which are not proposed below to be modified).

In announcing the hearing, Chairman Archer stated: "The purpose of the hearing is to allow the Committee on Ways and Means to consider various relatively minor ways to simplify and improve the current tax laws while the Committee continues its longer range project of fundamental reform of our nation's tax system. Because of the large number of proposals, it will obviously not be possible for the Committee to take action on all of them. As the Committee moves forward, I intend to oppose any proposals which are targeted tax relief or which have significant cost. In addition, any proposals which are adopted will be accompanied by a sufficient offset to avoid increasing the deficit."

The proposals below, which are the subjects of the hearings, will be more fully described in a pamphlet to be issued by the Joint Committee on Taxation prior to the hearing.

MISCELLANEOUS TAX PROPOSALS

Accounting

1. Expense certain costs associated with natural disasters
2. Allow installment method of reporting income from sale of certain residential real property to first-time homebuyers
3. Eliminate "look-back method" for nonresidential construction contractors
4. Repeal 1986 provision requiring contributions in aid of construction to be included in gross income
5. Allow trading partnerships and corporations to use a mark-to-market method of accounting for securities
6. Allow partnerships and S corporations to use fiscal year by paying estimated tax on behalf of their owners
7. Allow deduction for intrastate operating rights of motor carriers

8. Permit taxpayers to estimate shrinkage for inventory accounting
9. Provide exclusion for certain amounts received by a utility with respect to nuclear decommissioning costs
10. Repeal Treasury ruling requirement for nuclear decommissioning costs
11. Treatment of certain compensation payable by certain personal service corporations using an accrual method of accounting
12. Treatment of livestock sold on account of weather-related conditions
13. Treatment of certain crop insurance proceeds and disaster assistance payments
14. Clarify availability of cash accounting method for construction contractors

Business expenses

1. Any period during which a Federal employee is certified by the Attorney General to be participating in a Federal criminal investigation not included in computation of one-year limitation with respect to deductibility of travel expenses while temporarily away from home
2. Deduction for regularly scheduled air transportation limited to normal tourist class fare
3. Increase deductibility of business meal expenses for individuals subject to Federal hours of service limitations

Business tax credits

1. Credit for rehabilitation of certain historic homes
2. Tax credit for electric vehicles
3. Tax credit and tax-exempt financing for environmental remediation expenses

Capital gains

1. 10-percent alternative tax on gains from assets held 5 years or more
2. One-time exclusion of the sale of a principal residence by an individual who has attained age 55
   a. Allow multiple exclusions where two otherwise eligible taxpayers marry
   b. Allow multiple exclusions in certain cases
   c. Allow multiple exclusions in the case of certain unemployed persons
   d. Treat certain disabled persons as satisfying the age 55 requirement
3. Revise targeted capital gains exclusion for small business
4. Restore exception to market discount rules for tax-exempt bonds

Charitable deduction

1. Deduction for commemorative coins purchased from U.S. Mint
2. Charitable deduction for non-itemizers
3. Remove charitable deductions from overall limitation on itemized deductions
4. Repeal charitable substantiation rule for contributions of $250 or more
5. Allocation of basis to sale portion of bargain sales of real estate interests to charities or governments
6. Enhanced deduction for corporate contributions of scientific equipment for design research

Child Care Credit -- Extend dependent care credit and dependent assistance programs to certain overnight camp expenses

Compliance

1. Allow offset of State tax liability with overpayments of Federal tax
2. Repeal reporting requirement for real estate brokers
3. Extend IRS offset authority for undercover operations
4. Modify tip income reporting rules

Corporate

1. Provide that Alaska Native Corporation distributions of the proceeds from sale of ANCSA resources not be treated as taxable dividends until shareholders have received a return of capital on the resources sold
2. Lengthen corporate capital loss carryover from 5 to 15 years
3. Eliminate rule that accumulated earnings tax applies without regard to number of

shareholders
4. Provide exception to large corporate interest underpayment rules

Depreciation and amortization
1. Normalization of consolidated tax adjustments of a non-regulated subsidiary of a regulated public utility
2. Establish 15-year recovery period for small retail motor fuel outlet stores
3. Establish 3-year recovery period for semiconductor manufacturing equipment
4. Establish 3-year recovery period for property subject to certain rental purchase agreements
5. Establish 10-year recovery period for "qualified commercial improvement property"
6. Establish 10-year recovery period for leasehold improvements
7. Treatment of intermodal cargo containers
8. Exempt acquisition of software and software services businesses from 15-year intangibles amortization

EITC -- Allow State agencies to administer an advanced EITC payment

Education
1. Exclusion for income earned on State prepaid tuition plans
2. Adopt education savings accounts
3. Expand section 108(f) to provide that cancellation of certain private college student loans not taxable income

Employment taxes
1. Tax status of certain fishermen
2. FICA exemption for certain seasonal children camp employees
3. Extend FICA tip credit with respect to tips received by all persons who receive tips in connection with the provisions of food or beverages
4. Effective date of FICA tip credit
5. Repeal presumption that bakery distributors are employees for employment tax purposes
6. FUTA exemption for certain religious schools
7. FICA tax on health professionals' corporation paid by two or more entities under single employment contract
8. Repeal section 1706 of the 1986 Tax Reform Act

Empowerment zones
1. Expand number of community development corporations (from 20 to 40) eligible for tax credit and increase aggregate amount of contributions eligible for the credit
2. Tax incentives for economic recovery in designated areas with employment loss in financial and real estate businesses
3. Allow 20-percent tax credit for commercial revitalization costs in empowerment zones and other specially designated areas

Energy
1. Amend the section 29 credit for fuels derived from nonconventional sources
   a. Allow the credit to be claimed against the alternative minimum tax
   b. Repeal the requirement that fuel be sold to an unrelated party in certain cases
   c. Expand the definition of a qualifying facility in the case of fuel derived from an underground coal gasification process
   d. Redefine "tar sands" as a qualifying source and extend the period during which recovery of fuel from tar sands may commence (and credit-eligible fuel may be produced)
2. Increase the permitted refining activity in which an independent producer may engage while still qualifying for tax benefits not available to integrated producers
3. Allow independent producers to engage in retail sales through regulated utility affiliates while still qualifying for tax benefits not available to integrated producers
4. Allow a tax credit for lubricating oil produced for discarded motor oil
5. Allow oil and gas producers to expense geological and geophysical expenses in the year incurred

6. Extend the tax credit for electricity derived by wind and closed-loop biomass processes to electricity from certain gas-powered fuel cells

Estate and gift tax

1. Exemption for historic properties
2. Exempt certain land subject to permanent land conservation easement from estate tax
3. Estate tax marital credit for certain employees of international organizations
4. Relief from retroactive gift tax regulation on disclaimers
5. Extend the "predeceased parent exception" to collateral heirs and to taxable terminations and distributions
6. Increase special use valuation limit to $1.5 million
7. Credit for fair market value of inherited conservation property donated to Federal Government against estate tax
8. Package of proposals to simplify and improve estate and gift taxation
9. Require notification to charitable beneficiaries of charitable remainder trusts

Excise taxes

1. Modify the diesel motor fuel excise tax collection rules, including refund procedures, collection of tax on recreational boat diesel fuel, penalty for use of dyed fuel for taxable purposes, and exemption for a State exempt from Clean Air Act dyeing requirements
2. Treat kerosene as diesel motor fuel for excise tax purposes
3. Equalize the rail diesel motor fuel excise tax rate to that imposed on competing transportation modes
4. Exempt AMTRAK from the excise tax on rail diesel motor fuel
5. Exempt from excise tax motor fuels used in highway engines to power non-highway equipment mounted on trucks
6. Modify the gasoline excise tax refund procedure for gasoline sold to States and local governments
7. Reduce the excise tax rates on propane, CNG, LNG, and methanol to reflect their BTU equivalence to gasoline
8. Move the point of collection of the heavy truck excise tax from retail sale to manufacture, and clarify activities which constitute taxable remanufacture of existing trucks
9. Consolidate the current two-tier aviation gasoline excise tax at the terminal rack
10. Exempt fixed-wing air ambulances from the aviation excise taxes
11. Reduce the harbor maintenance excise tax if the unobligated balance of the accompanying Trust Fund program exceeds $100 million at the end of any year
12. Reduce current ethanol fuels tax subsidies if carbon dioxide produced as a by-product is marketed by the producer
13. Reduce the excise tax rate on hard apple cider to the rate of tax imposed on beer
14. Expand the tax credit for alcohol derived from fruit that is blended into distilled spirits to include alcohol from other agricultural products (e.g. whey)
15. Modify or phaseout the excise tax on luxury automobiles
16. Modify the excise tax on ozone-depleting chemicals to (a) exempt certain imported, recycled chemicals and (b) chemicals used in metered-dose inhalers (for 5 years)
17. Exempt stretch limousines from the gas-guzzler excise tax
18. Allow in-bond transfers of bottled distilled spirits among commonly owned distilled spirits plants
19. Drawback of distilled spirits tax on spirits used in nonbeverage products

Exempt organizations

1. Treatment of certain costs of private foundation in removing hazardous substances
2. Prevent reclassification as UBIT of certain dues paid to agricultural or horticultural organizations
3. Private foundations
   a. modify rules for private foundation grants to foreign organizations
   b. extend due date for first quarter estimated tax by private foundations
4. Common investment fund for private foundations
5. Exclusion from UBIT for corporate sponsorship payments received by tax-exempt organizations in connection with public events

6. Repeal 1986 extension of UBIT to games of chance
7. Clarify UBIT treatment of licensing of Olympic trademarks
8. Exception from debt-financed rules (sec. 514(c)(9)) for private foundation debt to improve real property
9. Permit tax-free liquidation of certain closely held corporations whose stock is given to charity and exempt certain assets from section 514(c)(2) debt financed rules
10. Allow conversion of scholarship funding corporation to taxable corporation
11. Treatment of certain amounts received by telephone cooperatives
12. Clarify that parent holding companies for hospitals may qualify as public charities rather than private foundations
13. Income of a rural electric cooperative for allocable shares of maintenance, etc. expenses to power a nonmember's electric co. takes from a separately owned and jointly operated electric generating facility is not included in 85-percent member income test
14. Codify IRS directive governing calculation of UBIT liability from charitable gaming
15. Extend private inurement rule to section 501(c)(4) organizations
16. Permit certain corporate conversions to tax-exempt title holding company without asset appreciation tax where corporation is wholly owned by tax-exempt entity that received stock as a gift or bequest

Financial institutions

1. Delete 1993 Act retroactive denial of losses reimbursed by FSLIC assistance for failed thrifts
2. Treat small commercial finance companies as small banks for bad debt reserve deduction

Foreign

1. Increase in section 911 exclusion from $70,000 to $100,000 with indexing
2. Repeal of limitation on foreign sales corporation exemption for military property
3. Inclusion of computer software as foreign sales corporation export property
4. Recharacterization of overall domestic loss for foreign tax credit purposes
5. Election to use earnings and profits basis for allocation of interest expense for foreign tax credit limitation purposes
6. Extension and modification of special allocation of research and experimental expenditures to U.S. source income for foreign tax credit limitation purposes
7. Repeal foreign tax credit basket for "10/50" noncontrolled corporations
8. Extension of period to which excess foreign tax credit may be carried
9. Extend deemed paid foreign tax credit to dividends from, or Subpart F income of, CFCs below third tier
10. Translation of foreign taxes into U.S. dollar amounts using average exchange rate during taxable year
11. Expansion of de minimis exception to Subpart F income treatment
12. Treatment of foreign base company sales and services income of controlled foreign corporations in the European Community
13. Exclusion of foreign base company shipping income from Subpart F income for certain controlled foreign corporations
14. Exempt controlled foreign corporations from uniform capitalization rules
15. Reporting of foreign corporation earnings and profits on a U.S. GAAP basis
16. Permit shareholder of a "10/50" corporation to elect to treat it as a CFC for foreign tax credit and Subpart F purposes
17. Increase in reporting threshold for stock ownership of a foreign corporation
18. Modification of excess passive assets provision for corporations with active financing income
19. Exception from foreign personal holding company income and foreign base company services income for active financing income
20. Repeal of excess passive asset provision and modification of passive foreign investment company provisions
21. Exemption of U.S. shareholders of controlled foreign corporations from passive foreign investment company provisions
22. Valuation of assets of a controlled foreign corporation under the passive foreign investment company and excess passive assets provisions

23. Exempt certain income derived by insurance brokers or agents from PFIC rules
24. Prizes and awards received from a foreign payor by a nonresident alien relating to competitions held in the United States are not treated as U.S. source income
25. Exempt service income of a nonresident alien earned on international ships or aircraft from U.S. tax
26. Repeal portfolio interest exemption
27. Exempt certain short-term OID obligations held by a non-resident alien from U.S. estate tax
28. Carryover of excess possession tax credit
29. Pass-through treatment for investments in U.S. mutual funds by foreigners
30. Consolidate income and loss of same country foreign corporations that elect to be taxed as domestic insurance companies

Housing cooperatives
1. Tax relief for housing coops on interest on reasonable reserves and income from laundries and parking; for limited equity coops, tax relief for commercial rentals
2. Treatment of coops owning only land

Insurance
1. Treatment of salvage and subrogation of property and casualty insurance companies
2. Health insurance organizations eligible for benefits of section 833
3. Treatment of certain gains and losses of life insurance companies under section 818(b)
4. Treatment of certain charitable risk pools
5. Small property and casualty insurance company deduction
6. Treatment of deposits under certain perpetual insurance policies
7. Extend section 130 exclusion to structured settlements for workmen's compensation payments
8. Treatment of certain small property and casualty insurance companies under AMT
9. Tax treatment of consolidations of life insurance departments of mutual savings banks
10. Extend section 832(e) to financial guarantee insurance
11. Increase dollar limits for burial insurance
12. Foreign companies carrying on insurance business

Low-income housing
1. Provide 15-year depreciation and other tax incentives to encourage the preservation of low-income housing
2. Allow HOME funds to be used with 91-percent credit
3. Expand community service area costs eligible for credit
4. Change state credit authority limitation stacking rule
5. Expand credit to lead paint removal
6. Expand credit to certain cooperative housing

Minimum tax
1. Allow deduction of partnership investment expenses under AMT
2. Allow energy tax credits against AMT

Partnerships -- Permanent extension of publicly traded partnership grandfather rule

Passive losses
1. Modify the application of passive loss rules to timber activities
2. Modify the application of the passive loss rules to farming activities

Pass-through entities
1. Subchapter S reform proposals to expand availability of Subchapter S and improve its operation
2. Subchapter S corporations eligible for rules applicable to real property subdivided for sale by noncorporate taxpayers
3. Establish financial asset securitization investment trusts (FASITS)
4. Establish tax-exempt municipal investment trusts (TEMICs)
5. Package of proposals to simplify and improve REIT provisions

6. Allow bank common trust funds to be transferred to more than one mutual fund without taxing trust beneficiaries

Peace Tax Fund -- establish U.S. Peace Tax Fund to receive conscientious objectors' income, estate or gift tax payments to be used only for WIC, Head Start, U.S. Institute of Peace, and Peace Corps

Pensions and employee benefits

A. Pensions
  1. Nondiscrimination rules
     a. Repeal special nondiscrimination tests for qualified cash or deferred arrangements
     b. Modify definition of highly compensated employee to eliminate 1-officer rule
     c. Repeal top-heavy rules (sec. 416)
     d. Modify separate line of business rules
     e. Modify safe harbor rule for leased employees
     f. Exempt state judicial plans from nondiscrimination requirements
     g. Repeal OBRA '93 provision limiting compensation taken into account to $150,000
     h. Repeal for pilots OBRA '93 provision limiting compensation taken into account to $150,000
     i. Repeal minimum participation rule (sec. 401(a)(26))
  2. Distribution rules
     a. Repeal 15-percent excise tax on excess distributions
     b. Provide that pension distributions are taxed as capital gains
     c. Reinstate 10-year forward averaging
     d. Permit penalty-free withdrawals for unemployed individuals
  3. Limits on contributions and benefits (sec. 415)
     a. Modification of interest rate provisions enacted in General Agreement on Tariffs and Trade (GATT)
     b. Eliminate combined limitation for participants in both a defined contribution plan and a defined benefit plan (sec. 415(e))
  4. Employee stock ownership plans
     a. Modify rules relating to deferral of gain on certain sales of stock to an ESOP (sec. 1042)
     b. Permit ESOP to be beneficiary of charitable remainder trust
     c. Treatment of certain securities transferred to ESOP from terminated defined benefit plan
     d. Permit closely-held corporation to pay estate tax if stock transferred to an ESOP
  5. Permit permanently disabled persons to contribute to section 401(k) plans
  6. Modify sanctions for failure to comply with qualification requirements
  7. Allow prenuptial waiver of spousal annuity benefits
  8. Deny Federal tax information to States imposing a pension source tax
  9. Unfunded deferred compensation plans of tax-exempt and governmental organizations (sec. 457)
     a. Exempt deferred compensation plans for volunteer firefighters
     b. Increase deferred compensation limit for group medical practices
     c. Require individual ownership of plan assets
  10. Provisions relating to individual retirement arrangements (IRAs)
     a. Permit tax-free rollover of certain severance payments
     b. H.R. 682 ("Savings and Investment Incentive Act of 1995")
  11. Treatment of Indian tribal governments under section 403(b)
  12. Special rules for church pension plans

B. Employee Benefits
  1. Tax treatment of certain disability benefits for police and firefighters
  2. Exclude from income retirement benefits that an employee elects to use to purchase employer-provided accident or health care
  3. Modify restrictions on golden parachute payments
  4. Provide that academic health center employee housing may be excludable from income

Tax-exempt bonds

1. Expansion of arbitrage rebate exception for certain bonds
2. Bonds for certain governmental output facilities
3. Bonds for emergency response vehicles of certain volunteer fire departments
4. Space port exempt-facility bonds
5. Bonds for solar energy facility
6. Bonds for the sale of the Alaska Power Administration facility
7. Bonds for the United Nations
8. Bonds for certain pre-1990 issues in the State of Connecticut
9. Bonds related to the transfer of Port Everglades, Florida
10. Qualified mortgage bonds - home improvement loans
11. Qualified veterans' mortgage bonds
12. Modification of exception to bank interest deduction disallowance for qualified 501(c)(3) bonds
13. Expansion and indexing of the $10 million capital expenditure limitation for qualified small-issue bonds
14. Repeal special exception for Student Loan Marketing Association allowing deduction for interest expense attributable to investment in tax-exempt bonds

Tax return checkoff

1. Permit individual tax return checkoff for U.S. Olympic Trust Fund
2. Permit individual tax return checkoff for deficit reduction

Trusts and estates

1. Reduce tax rate increase for trusts for disabled individuals
2. Apply same income tax rates to trusts and estates as for married individuals filing separate returns

Other

1. Allow nonprofit educational foundations to sell U.S. savings bonds

POSSIBLE MODIFICATIONS TO SIMPLIFICATION PROVISIONS CONTAINED IN H.R. 3419 (103rd Congress)

Provisions Relating to Individuals

1. Permit payment of taxes by credit card (section 112 of the bill)

Consideration is being given to clarifying that the fees that may be imposed for using a credit card to pay Federal taxes could not be borne by the Federal government.

2. Election by parent to claim unearned income of certain children on parent's return (section 113 of the bill)

Consideration is being given to deleting the provision contained in H.R. 3419, because it is included in the technical corrections provisions contained in H.R. 1215, as passed by the House of Representatives on April 5, 1995.

3. Expanded access to simplified income tax returns (section 116 of the bill)

Consideration is being given to deleting the provision in H.R. 3419 directing the Internal Revenue Service to study whether the ability of taxpayers to file simplified Federal income tax returns should be expanded because the Committee understands that such a study is ongoing.

Pension Simplification

1. Tax-exempt organizations eligible under section 401(k) (section 212 of the bill)

H.R. 3419 would permit nongovernmental tax-exempt organizations to maintain

qualified cash or deferred arrangements (i.e., 401(k) plans) for their employees. Consideration is being given to providing that a tax-exempt employer that elects to establish a 401(k) plan for its employees would not also be permitted to provide for the deferral of compensation pursuant to section 457.

2. Nondiscrimination rules for qualified cash or deferred arrangements and matching contributions (sec. 223 of the bill)

H.R. 3419 provides a design-based safe harbor that employers can utilize to satisfy the nondiscrimination requirements for qualified cash or deferred arrangements. Consideration is being given to extending this design-based safe harbor to simplified employee pensions ("SEPs").

3. Full-funding limitation of multiemployer plans (section 235 of the bill)

H.R. 3419 would repeal the 150-percent of current liability full-funding limit for multiemployer pension plans. Consideration is being given to deleting this provision of the bill.

4. Alternative full-funding limitation (section 236 of the bill)

H.R. 3419 would provide that the 150 percent of current liability full-funding limit would be increased for certain employers and that the Treasury Department would adjust the full-funding limit for all other employers so as to ensure that the provision is approximately revenue neutral. Consideration is being given to deleting this provision of the bill.

5. Special rules for plans covering pilots (section 242 of the bill)

Under present law, a special provision permits plans covering airline pilots covered under a collective bargaining agreement to be tested separately for nondiscrimination purposes. H.R. 3419 would extend this special provision to all airline pilots without regard to whether they are covered under a collective bargaining agreement. Consideration is being given to deleting this provision of the bill.

6. Treatment of employer reversions required by contract to be paid to the United States (section 244 of the bill)

H.R. 3419 would provide an exception to the excise tax on reversions in the case of a reversion of excess pension plan assets that is required, by Federal law or regulation, to be paid to the Federal government. Consideration is being given to deleting this provision of the bill.

7. Continuation health coverage for employees of failed financial institutions (section 245 of the bill)

H.R. 3419 would provide that the Resolution Trust Corporation would be required to provide continuation health coverage to certain employees of failed financial institutions. Consideration is being given to deleting this provision of the bill.

8. Clarify relationship between community property rights and retirement benefits

Consideration is being given to including a provision that would clarify the relationship between community property rights and retirement benefits (e.g., the interaction of qualified plan requirements with state community property laws).

<u>Treatment of Large Partnerships</u>

1. Simplified flow through for large partnerships (section 301 of the bill)

H.R. 3419 would modify the tax treatment of a large partnership (generally, a partnership with at least 250 partners, or an electing partnership with at least 100 partners)

and its partners. The bill reduces the number of possible items that must be separately reported to partners. Consideration is being given to deleting this provision.

2. Simplified audit procedures for large partnerships (section 302 of the bill)

H.R. 3419 would create a new audit system for large partnerships (in addition to the present-law system of partnership audit rules enacted in TEFRA). The bill would define "large partnership" the same way for audit and reporting purposes (generally partnerships with at least 250 partners). Under the bill, partnership adjustments generally would flow through to the partners for the year in which the adjustment takes effect. Thus, the current-year partners' share of current-year partnership items of income, gains, losses, deductions, or credits would be adjusted to reflect partnership-level adjustments that take effect in that year. The adjustments generally would not affect prior-year returns of any partners. Consideration is being given to deleting this provision.

3. Partnership returns on magnetic media (section 304 of the bill)

H.R. 3419 would authorize the Internal Revenue Service ("IRS") to require large partnerships and other partnerships with 250 or more partners to provide the tax return of the partnership (Form 1065), as well as copies of the schedules sent to each partner (Form K-1), to the IRS on magnetic media. Consideration is being given to requiring that magnetic media filing of partnership tax returns (Form 1065) and copies of schedules sent to each partner (Form K-1) be made mandatory, effective for partnership taxable years beginning after December 31, 1995 (in lieu of authorizing the IRS to require magnetic media filing).

Foreign Provisions

1. Deferral of tax on income earned through foreign corporations and exceptions to deferral (sections 401 - 404 of the bill)

H.R. 3419 would provide some coordination among the various anti-deferral regimes applicable to U.S. persons who hold stock in foreign corporations. Consideration is being given to the possibility of applying subpart F to U.S. persons who hold stock in foreign corporations without regard to the level of U.S. ownership in such corporations.

Provisions Relating to Regulated Investment Companies

1. Require brokers and mutual funds to report basis to customers (section 522 of the bill)

Consideration is being given to deleting the mandatory information reporting requirement in H.R. 3419 because it is understood that much of the industry is voluntarily reporting basis to shareholders.

Tax-Exempt Bond Provisions

1. Clarification of definition of "investment-type property" (section 535 of the bill)

The provision contained in H.R. 3419 would be deleted because it was clarified by a recent Treasury regulation (Treas. reg. section 1.148-1(b)).

Administrative Provisions

1. Administrative practice and procedural simplification (sections 831-839 of the bill)

H.R. 3419 would make nine modifications related to administrative practice and procedure. Because these provisions have generally been included in bills relating to taxpayer bill of rights, which are likely to be considered separately by the Committee, consideration is being given to dropping these provisions from H.R. 3419.

Estate and Gift Tax Provisions

1. Statute of limitations applicable to valuation of gifts

Consideration is being given to adding a new provision providing that a gift for which the limitations period has passed cannot be revalued for estate tax purposes, e.g., for purposes of determining the applicable estate tax bracket and available unified credit. The provision would apply to decedents dying after the date of enactment.

DETAILS FOR SUBMISSIONS OF REQUESTS TO BE HEARD:

Requests to be heard at the hearing must be made by telephone to the Committee's tax staff at (202) 225-2743 no later than the close of business, Friday, July 7, 1995. The telephone request should be followed by a formal written request to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. The staff of the Committee will notify by telephone those scheduled to appear as soon as possible after the filing deadline.

In view of the limited time available to hear witnesses, the Committee may not be able to accommodate all requests to be heard. Those persons and organizations not scheduled for an oral appearance are encouraged to submit written statements for the record of the hearing. All persons requesting to be heard, whether they are scheduled for oral testimony or not, will be notified as soon as possible after the filing deadline.

Witnesses scheduled to present oral testimony are required to summarize briefly their written statements in no more than five minutes. **THE FIVE MINUTE RULE WILL BE STRICTLY ENFORCED. The full written statement of each witness will be included in the printed record.**

In order to assure the most productive use of the limited amount of time available to question witnesses, all witnesses scheduled to appear before the Committee are required to submit 300 copies of their prepared statements for review by Members prior to the hearing. **Testimony should arrive at the Committee's tax staff, room 1135 Longworth House Office Building, no later than 12:00 noon on Monday, July 10, 1995.** Failure to do so may result in the witness being denied the opportunity to testify in person.

WRITTEN STATEMENTS IN LIEU OF PERSONAL APPEARANCE:

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement, with their address and date of hearing noted, by the close of business on Thursday, July 27, 1995, to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filing written statements wish to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Committee's tax staff, room 1135 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

Each statement presented for printing to the Committee by a witness, any written statement or exhibit submitted for the printed record or any written comments in response to a request for written comments must conform to the guidelines listed below. Any statement or exhibit not in compliance with these guidelines will not be printed, but will be maintained in the Committee files for review and use by the Committee.

1. All statements and any accompanying exhibits for printing must be typed in single space on legal-size paper and may not exceed a total of 10 pages including attachments.

2. Copies of whole documents submitted as exhibit material will not be accepted for printing. Instead, exhibit material should be referenced and quoted or paraphrased. All exhibit material not meeting these specifications will be maintained in the Committee files for review and use by the Committee.

3. A witness appearing at a public hearing, or submitting a statement for the record of a public hearing, or submitting written comments in response to a published request for comments by the Committee, must include on his statement or submission a list of all

clients, persons, or organizations on whose behalf the witness appears.

4. A supplemental sheet must accompany each statement listing the name, full address, a telephone number where the witness or the designated representative may be reached and a topical outline or summary of the comments and recommendations in the full statement. This supplemental sheet will not be included in the printed record.

The above restrictions and limitations apply only to material being submitted for printing. Statements and exhibits or supplementary material submitted solely for distribution to the Members, the press and the public during the course of a public hearing may be submitted in other forms.

Note: All Committee advisories and news releases are now available over the Internet at 'GOPHER.HOUSE.GOV' under 'HOUSE COMMITTEE INFORMATION'.

*****

Chairman ARCHER. The Committee will come to order.

Before we commence the official agenda of the Committee this morning, I would like to officially welcome our new Member, Congressman Greg Laughlin from Texas. We are happy to have you on board, and I know that you will make an excellent contribution to the Committee, as every Member of the Committee does. We are glad to have you here as we begin to consider the hearing subject matter today, which is a result of many bipartisan requests that I have received from many House Members seeking consideration of various tax legislation. Although we have a very busy agenda this summer, I have agreed to honor the request for a hearing, and I am interested in learning about the various bills that have been proposed.

The purpose of this hearing is to allow our Committee to consider relatively minor ways to change the current Income Tax Code while the Committee continues its longer range project of fundamental reform of our Nation's tax system. Because of the large number of proposals, it will obviously not be possible for the Committee to take action on all of them, and I can't promise Members that we will be able to take action on any of them. That will depend upon how this process unfolds.

As the Committee moves forward, I intend to oppose any proposals which are rifle-shot targeted tax relief or proposals which have any significant cost. Let me stress that we are here to clean up the Code and fix some of its counterproductive and complicated provisions. We are not here to create loopholes in the Code.

In addition, any package or proposals which may be marked up as a result of the hearing won't be reported out unless accompanied by offsets that guarantee no increase in the deficit.

Now, having said that, I do look forward to hearing the testimony today; and I now recognize my friend, the Ranking Minority Leader of the Committee, Sam Gibbons.

Mr. GIBBONS. Thank you, Mr. Chairman. I concur in what you have to say, and I would only make the suggestion that if we get far enough along in this to do revenue offsets, I would hope that we would have some kind of public airing of those offsets. It seems to me that past experience has shown me that we have taken too many shots in the dark on offsets and come up with some unfortunate results, but that is the only thing I have to add and look forward to working with you.

Chairman ARCHER. That is a constructive comment; and, time permitting, we certainly do want to know what we are doing when we entertain any offsets.

Now before us in our first panel today we have Hon. Barbara Kennelly from Connecticut, Hon. Sander Levin from Michigan, and Hon. Amo Houghton from New York. In my part of the country we have the saying, "ladies first," so, Barbara, would you like to start off?

STATEMENT OF HON. BARBARA B. KENNELLY, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CONNECTICUT

Mrs. KENNELLY. Thank you, Mr. Chairman.

Chairman Archer, I appreciate your having this hearing, and I appreciate your letting me testify. First, I would like to say I will

cut my testimony short because I know how many witnesses you have and ask that my whole testimony be placed in the record.

I am going to discuss two issues. The first is number two under empowerment zones, tax incentives for economic recovery; and the second is number one under employee benefits, tax treatment of certain disability benefits for police and firefighters.

My first proposal would create three additional empowerment zones geared to the financial services, banking and real estate or "FIRE" industries, as categorized by the Federal Reserve.

Mr. Chairman, Mr. Rangel, and a former Member of this House, Mr. Kemp, worked very closely on enterprise zones and that concept has become a success. This is an extension of that very concept. But as excellent as the present enterprise zone concept is, it will not work for every community, particularly for those with economies based on services.

I will use my town as an example—but I heard what you said about rifle shots, Chairman Archer, and I know that has always been a tradition of this Committee, and so I have written the legislation so it has a very definite national impact. But let me use Hartford, my town, as an example.

Hartford has long been known as the insurance capital of the world and as a center for financial services. But the banking industry in New England is consolidating. The real estate market collapsed not too long ago and has not yet recovered. An unprecedented change is sweeping the insurance industry. As I said, Hartford is not alone.

In the past decade, the entire country has had banking and S&L problems. We have seen Bermuda, to name just one of our international competitors, attract $4 billion in insurance capital. Later this year, we will debate allowing banking and other service industries, including securities and insurance, to affiliate. Even with every merger and spinoff, every mayor, every city council, and thousands of employees across this country ask, What does this mean for jobs? How will this affect the property tax base and the real estate in my city, town, or State?

My proposal would create three additional enterprise zones with modified tax incentives targeted to services. These FIRE zones, which could include central business districts and encompass entire cities, would be created in areas where at least 12 percent of FIRE employment, or 5,000 jobs, have been lost.

New or existing businesses would receive a range of tax incentives, including a wage credit, unlimited expensing on FIRE buildouts and computer equipment, as well as elimination of passive loss restrictions on historical rehabilitation. As you know, Chairman Archer, and Mr. Gibbons knows so well, there really has just been historical rehabilitation since that change—the proposal also includes reduced capital gains rates for zone properties held 5 years—10 percent for individuals, 17 percent for corporations, and double deductions for security expenses within the zone.

The second issue that I come before this Committee for is something that is very, very important to me, something I have worked on for years and yet almost get there and then don't.

Connecticut is one of several States where an error in State law has caused benefits intended as Workman's Comp. to be brought

into income on audit. In our case, the State law providing benefits for police and firefighters included an irrebuttable presumption that heart and hypertension conditions were the result of hazardous work conditions.

Connecticut has now corrected the law to satisfy the IRS by permitting the State or municipality to require medical proof that the conditions were the result of hazardous work, but the IRS has said that those who received the benefits must pay 3 years back taxes plus interest and penalties, even though paying interest and penalties is quite beyond the means of most of these families, where the primary breadwinner is disabled.

This legislation would recognize that the individual towns and cities were acting in good faith. This provision was reported by the Committee in 1992, passed the House on the suspension calendar, and ultimately was vetoed by the President. This provision enjoys strong bipartisan support. I hope the Committee would see fit to provide families with the tax relief they need most.

Chairman Archer, I will just end by saying, can you imagine if you were a fireman or policeman, had a heart attack, was disabled, was told that you would collect that disability, some people even died, and then they get a letter from the IRS saying, Sorry, we have changed our minds, and you have got to pay back taxes when you are just trying to keep yourself together?

Thank you, Chairman Archer.

[The prepared statement follows:]

The Honorable Barbara B. Kennelly
Testimony before the
Committee on Ways and Means
Miscellaneous Tax Reforms Hearing
July 11, 1995

Mr. Chairman, thank you for the opportunity to address the Committee today. I will be brief but want to take the opportunity to discuss two important issues. The first is number two under empowerment zones--tax incentives for economic recovery in designated areas with employment loss in financial and real estate businesses. The second is number one under Employee benefits--tax treatment of certain disability benefits for police and firefighters.

My first proposal is to create 3 additional empowerment zones geared to the financial services, banking and real estate or "FIRE" industries as categorized by the Federal Reserve. Charlie (Rangel), you worked on empowerment or enterprise zones on a bipartisan basis for years with Jack Kemp and others. I salute you for it. I supported you in your efforts and I think the competition for both the zone and community designation provides ample evidence of the broad support for these efforts.

My City of Hartford applied for designation as an enterprise community but was denied. But when I started looking at the details, it was clear to me that while empowerment zones/enterprise communities are excellent economic development tools, they just don't quite fit many areas.

As this Committee well knows, the tax incentives in empowerment zones include a wage credit, expensing of up to $75,000 and a loosening of restrictions on tax-exempt bonds--all incentives seemingly geared to manufacturing. Hartford and a number of other cities around the nation, however, are different--our base is services and we would frankly benefit from a different mixture of tax incentives.

Let me talk about Hartford for a moment though. Hartford has long been known as the insurance capital of the world. Mr. Christensen, I know you are aware of this. We have also traditionally been a center for financial services. However, any reader of the Wall Street Journal is aware of the consolidation in the banking industry in New England and the collapse of the real estate market. On top of this, we are in the midst of unprecedented change in the insurance industry. In just one ten day period recently, a number of announcements were made in Hartford: Connecticut Mutual Life Insurance was be acquired by Mass Mutual, the Travelers was selling its stake in Metrahealth--the last vestige of its health business, ITT would spin off its ITT/Hartford insurance division effective January 1st and <u>Business Week</u> listed Security-Connecticut as one of the hottest take-over targets in the insurance business.

But enough about Hartford because this proposal isn't just about Hartford. In the past decade, we have seen unprecedented change in our financial services industries. We have had banking and S&L problems, face increasing competition in the global marketplace, and later in the year will debate allowing banking, and other service industries including securities and insurance to affiliate. In addition, we have seen Bermuda attract over $4 billion in insurance capital in the past few years. It is certainly a beautiful place, but most importantly, it's also a tax haven.

And while change can certainly be good, it does creates a tremendous amount of uncertainty. With each and every merger or spin-off, every mayor and every city council, not mention the thousands of effected employees ask the same two questions: what does this mean for jobs; and what impact will this have on the property tax base and real estate values?

That is why I am asking the Committee modify the traditional notion of enterprise zone to include services. My proposal would create 3 additional zones with tax incentives targeted to services.

Specifically, these FIRE zones would be patterned after existing enterprise zones, but could encompass an entire city or municipality, and more important, could include central business districts. Eligibility would be the same as for existing enterprise zones, with an additional requirement that an eligible city would have to have experienced the loss of at least 12 percent of FIRE industry employment, or alternatively, 5000 jobs.

In lieu of traditional enterprise zone tax incentives, new or existing businesses in FIRE zones would receive a range of tax incentives.

First, to deal with jobs, there would be a wage credit for the creation of new jobs within the zone. This would encourage businesses to hire displaced and underemployed insurance, real estate and banking workers as well as create entry level jobs for clerks, and janitors.

Second, to deal with the high commercial vacancy rate problem that plagues many cities, there would be unlimited expensing on FIRE buildouts and computer equipment. The proposal would also remove the passive loss restrictions on historic rehabilitation.

Next, to provide an incentive for investors, the proposal would provide for a reduction in the individual capital gains rate for zone property held for 5 years to 10 percent. In addition, capital gains on zone property would not be considered a preference item for individual alternative minimum tax purposes. The corporate capital gains tax rate would also be reduced, to 17 percent.

Finally, many big cities aren't always as safe as we would like. Therefore, the proposal would provide for a double deduction for security expense within the zone. This should give employers an added stake in the safety of our cities.

I hope that the Committee will look favorably on this important issue and look forward to working with you on the details.

While the second issue is one the Committee has previously considered and indeed acted upon, this is the single most important tax issue bar none to roughly 1100 families in Connecticut as well as one of my top priorities this session. I wanted to address it to for the benefit of the many new members of the Committee.

I have introduced legislation in this area, H.R. 98. It would simply clear up a situation where erroneous state law has caused benefits that were intended to be treated as workmen's compensation to be brought into income on audit. In several states, including Connecticut, the state law providing these benefits for police and fire fighters included an irrebuttable presumption that heart and hypertension conditions were the result of hazardous work conditions.

In Connecticut, at least, the state law has been corrected so that while there is a presumption that such conditions are the result of hazardous work, the state or municipality involved could require medical proof. This change satisfies the IRS definition of workmen's compensation. Therefore, all this legislation would do is exempt from income those payments received by these individuals as a result of faulty state law but only for the past three years--1989, 1990 and 1991. From January 1, 1992 forward those already receiving these benefits would have to meet the standard IRS test.

The importance of this legislation is that these individuals believed that they followed state law. The cities and towns involved believed that they followed state law and therefore all parties involved believed that these benefits were not subject to tax. However, the IRS currently has an audit project ongoing in CT and has deemed these benefits taxable. All this legislation says is that all parties involved made a good faith effort to comply with what they thought the law was. The state was in error. That error has been rectified but those individuals on disability should not required to pay 3 years back taxes plus interest and penalties. I don't have to tell you that the interest and penalties on this tax continue to increase each day and are quite beyond the means of most of these families where the primary breadwinner is disabled.

This provision was reported by this Committee in 1992, passed the House on the suspension calendar, included in H.R. 11 and ultimately vetoed by the President. This provision enjoys the bipartisan support of the entire Connecticut Congressional delegation. I hope that the Committee would see fit to provide these Connecticut families with the tax relief they need most.

Thank you.

Chairman ARCHER. Thank you, Ms. Kennelly.

Hon. Sander Levin. Sandy.

STATEMENT OF HON. SANDER LEVIN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MICHIGAN

Mr. LEVIN. Thank you, Mr. Chairman and Mr. Gibbons and my colleagues—our colleagues.

I am so glad to be here today with my colleague and friend, Representative Houghton, to talk just briefly about our proposal, H.R. 1690. I believe you have a copy of my testimony, and under our rules it will be entered into the record so I won't bother to read it all.

I know that you, Mr. Chairman, and you, Mr. Gibbons, have been interested in this area for a number of years. This is a matter that very much relates to the competitiveness of American business. Last year, we spent a lot of time crafting a historic piece of legislation implementing the Uruguay round, and I think that was a step to help competitive American businesses compete overseas. I also think our recent efforts on a bipartisan basis relating to United States-Japan is also relevant to that.

But no matter how effective our trade policy may be, often it is frustrated by our tax policy, and this is an effort to simplify what is a very complex area of the law. Representative Houghton and I have a friendly race to see who can understand this piece of our Tax Code first, and we are both losing because, while we have tried to begin to delve into this and don't, at least on my part, claim anything close to expertise, it is unusually complicated. What this bill tries to do is to move toward simplification and rationalization. H.R. 1690 is just a first downpayment, we hope a substantial one, toward simplification and rationalization.

Simplifying, for example, in especially the foreign tax credit and antideferral mechanisms. They are going to have to be there, I think, no matter what is the reform of our Tax Code, but they have to be far, far less complex. Also, to encourage exports and to provide incentives for R&D in the United States and overall to enhance the competitiveness of the United States.

We have made a lot of progress in competitiveness. We now have the most competitive, productive business sector in the world. There has been very substantial improvement in recent years, but our tax laws, if they don't strangle, do thwart.

Mr. Chairman, this isn't a new problem. Your predecessor, Chairman Rostenkowski, and Bill Gradison introduced H.R. 5270 3 years ago, and this legislation is modeled after that. There is no claim here for originality. I think there is a hope for perseverance.

The bill has strong support in the business community, and the reason is these companies in this instance aren't looking for a tax break. They are really looking for understandability, for intelligibility. I believe each of you has a copy of the "Dear Colleague" from Mr. Houghton and myself that spells out some of the basic provisions.

Could I just close by emphasizing this point? This is only a first step. We don't claim this bill is a finished product. We want everybody's input, including our colleagues', and further input from

not only the business community but others who have an interest in this area.

We are attempting to remember fiscal constraint. We don't have a bottom line figure on this bill. The bill doesn't cover all of the problems in part because of the need to take into account fiscal restraints. But, again, this is a first step. It is preliminary. We hope it is a move in the right direction, and we hope that this product could be in a position in the next period of time so that if there is action on miscellaneous tax reforms or if it might be possible to insert these provisions or modifications thereof into a reconciliation bill, Mr. Chairman, we would be ready. This is clearly an important area of the law that badly needs reform.

Thank you very much.

[The prepared statement and attachment follow:]

STATEMENT OF

CONGRESSMAN SANDER LEVIN

BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS

HEARING ON MISCELLANEOUS TAX REFORMS

JULY 11, 1995

Thank you, Mr. Chairman, for the opportunity to testify with my friend and colleague, Congressman Amo Houghton, on H.R. 1690, the International Tax Simplification and Reform Act of 1995.

Last year, this Committee helped craft historic trade legislation implementing the GATT Uruguay Round agreements that passed Congress with strong bipartisan support.

But our trade policy too often is frustrated by our tax policy.

Our trade policy seeks the mutual benefits of open trade, and in particular the benefits of opening foreign markets for U.S. exports so that America can take advantage of its superior competitiveness to create good jobs here at home. But our tax policy often dictates that our largest companies move those jobs overseas, or that our smallest companies are prevented from ever getting into the game.

Now is the time -- as the historic Uruguay Round trade agreements begin to take effect -- to reform the international tax provisions in a comprehensive manner so that they are more in line with our trade policy.

The first step toward bringing our tax policy in line with our trade policy must be simplification. The international provisions are among the most complicated and impenetrable in the Internal Revenue Code. And as we simplify, we must try to accommodate other important trade policy objectives.

H.R. 1690, represents a substantial down payment in the effort to rationalize the international area. In general, the bill seeks in modest but important ways to: (1) simplify this overly complex area, especially the foreign tax credit and the various antideferral mechanisms; (2) encourage exports; (3) provide incentives for performance of R&D in the U.S.; and (4) enhance U.S. competitiveness in other industrialized countries.

And it seeks to achieve these objectives in a revenue-conscious manner.

This bill has a solid foundation in previous efforts. Ten days of hearings before this Committee in 1991 gave rise to the introduction of a similar bipartisan bill, H.R. 5270, by Congressmen Dan Rostenkowski and Bill Gradison in 1992. And in January 1993, the Bush Administration Treasury Department issued its report on possible reform along these lines.

The bill has strong support in the business community, including the National Association of Manufacturers, the Emergency Committee for American Trade, the National Foreign Trade Council, the U.S. Council for International Business, and the American Petroleum Institute. In addition, over twenty of this nation's largest employers have expressed their individual support for this legislation.

One of those employers, the Mobil Corporation, testified at last month's hearings on overhauling the tax system that a disproportionate amount of its annual 76-pound federal income tax return was attributable to two areas -- the international provisions, and the interaction of the alternative minimum tax with the depreciation provisions. I am happy to report that Mobil's Senior Tax Counsel, Bill Dakin, recently wrote that H.R. 1690 "would reduce the cost of preparing Mobil's federal income tax return, with little or no impact on the amount of the tax due."

If the same is true for other employers -- and I suspect it is -- then this confirms that H.R. 1690 will achieve its intended objectives.

The bottom line is clear: If the United States is to continue to be the preeminent economic force in the world and if our economy is to continue to create good jobs, we must ensure at the very least that the international provisions of U.S. tax law do not continue to stand in the way.

Current law tends to frustrate the legitimate goals and objectives of American business. It erects artificial, unnecessary barriers to U.S. competitiveness. These issues cannot be swept under the rug by throwing out the current system and replacing it, for example, with a "flat" tax, because any system must face the thorny problem of properly taxing income earned across borders.

H.R. 1690 will not solve all of the problems, but we believe it is an important step in the right direction, at the right time. We urge you to support this bipartisan effort by including H.R. 1690's comprehensive international tax reform as part of this year's tax legislation.

Congress of the United States
House of Representatives
Washington, DC 20515

June 7, 1995

Dear Colleague:

We are writing to urge you to cosponsor H.R. 1690, the International Tax Simplification and Reform Act of 1995.

The international tax provisions are among the most complicated and impenetrable in the Internal Revenue Code. In many instances they lead to results that are fundamentally at odds with this nation's trade policy. Comprehensive reform of these provisions is long overdue and is relevant even under a "flat" or "flatter" tax system.

H.R. 1690 represents a substantial down payment in the effort to rationalize the international area. In general, the bill seeks in modest but important ways to: (1) simplify this overly complex area, especially the foreign tax credit and the various antideferral mechanisms; (2) encourage exports; (3) provide incentives for performance of R&D in the U.S.; and (4) enhance U.S. competitiveness in other industrialized countries.

And it seeks to achieve these objectives in a revenue-conscious manner.

If the United States is to continue to be the preeminent economic force in the world and if our economy is to continue to create good jobs, we ought to ensure that the international provisions of U.S. tax law do not stand in the way. Current law tends to frustrate the legitimate goals and objectives of American business. It erects artificial, unnecessary barriers to U.S. competitiveness.

Clearly, H.R. 1690 is not going to solve all of the problems, but we believe it is an important bipartisan step in the right direction. Please join us in cosponsoring H.R. 1690 by calling Hugh Hatcher (5-3161) or Craig Kramer (5-4961). A summary of the bill is attached.

Many thanks,

Amo Houghton

Sander Levin

H.R. 1690

INTERNATIONAL TAX SIMPLIFICATION AND REFORM ACT

Simplify and Reform the Foreign Tax Credit ("FTC")

1. Repeal basket for noncontrolled "10/50" corporations.
2. Extend carryback and carryover rules to 3 and 15 years.
3. Compute FTCs using average exchange rate.
4. Extend indirect FTC from the third to the sixth tier.

Simplify and Reform the Anti-deferral Regimes

1. Treat the EU as one country under the subpart F rules.
2. Restore the active business exception for financial services income.
3. Increase the de minimis exception to subpart F to less than 10 percent of gross income.
4. Exempt controlled foreign corporations ("CFCs") from the passive foreign investment company ("PFIC") rules.

Other Simplification Proposals

1. Exempt CFCs from the uniform capitalization rules.
2. Permit U.S. GAAP reporting of foreign subsidiary E&P.
3. Raise the § 6046(a) reporting threshold to 10 percent.

Other Reform Proposals

1. Allow election to use E&P basis for purposes of allocating interest expense.
2. Permit domestic losses to be resourced.
3. Make permanent the 64-percent allocation to U.S. source of research and development performed in the U.S.

Chairman ARCHER. The gentleman, in my opinion, is correct. It desperately needs reform.

The gentleman from New York, Mr. Houghton.

STATEMENT OF HON. AMO HOUGHTON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. HOUGHTON. Thank you, Mr. Chairman. Mr. Gibbons, good to be with you and my associates here today.

I am not going to try to duplicate some of the statements which Mr. Levin, my associate, has spoken of. What I thought I would do is wind my way through certain things that I happen to think are important.

Also, I would like to feel that we could submit our testimony, which I will not be reading, and also a variety of other different letters. We have letters from the National Foreign Trade Council, National Association of Manufacturers, and a whole variety of other people who agree with this general thrust.

Mr. Chairman, if I had my druthers, we would be doing much more. In 1991–93 there were various stabs at changing the international tax provisions. This I think probably started with Bill Frenzel, and then he left and then Bill Gradison. The scope of the suggestions that both of them made was far greater than anything which we propose here, but here is an attempt to start down the road of correcting abuses which really prevent American job creation because of the complexity of the Tax Code, rather than trying to correct them.

There are 14 individual items in this bill. Six of them cost absolutely nothing. The other eight I am not sure what they are going to cost because we do not have a costing out of these, but I can't imagine they would cost very much. But even if you did only the six which cost nothing, it would be a start here.

There are a variety of things which are important here, but basically what they do is cut through redtape, make it possible for American companies to trade in this market, which we are encouraging through either regional or totally global constructs such as NAFTA or GATT, and try to make it possible for Americans to create jobs, either to invest or to export abroad.

A few weeks ago, there was testimony here by Mobil, and you probably remember some of the statistics. I mean, the 1993 tax returns consisted of 6,300 pages, 4 feet high, and weighed 76 pounds. I think those were roughly the numbers, and I don't know how many millions it costs Mobil, but lots. They have 745 companies, and when each of those companies operating outside received a package of instructions, they were inundated which took away from their ability to do the thing which we want to encourage, which is competing. Paperwork simplicity is very, very important.

Another suggestion here would be that you could only claim a tax credit for taxes paid by someone else if you own 10 percent or more of the company. Yet the Tax Code requires that for informational purposes alone, if you own 5 percent of that company, you have to develop reams and reams of pages justifying what you are doing and spelling out and breaking down the various different business units. Doesn't make any sense at all.

Another rather simple approach is to take an average annual exchange rate computation rather than having to go into a spot market any time you do a transaction and do numerous specific calculations—and these are by the hundreds—you could do an average over the year.

I will not go into some of the other more technical details because I don't think it is appropriate now. I do think we are on the road to doing something which is extremely important, hopefully that we can get back to where we were in terms of the pre-1986 act, which had a couple of baskets—an active operating basket and an inactive passive basket—where we can do very simple calculations and put the emphasis, rather than on the Tax Code, on building the businesses.

So, I thank you very much for hearing us out, and we would like to submit our testimony.

[The prepared statement and attachments follow:]

STATEMENT OF THE HONORABLE AMO HOUGHTON

BEFORE THE

COMMITTEE ON WAYS AND MEANS

JULY 11, 1995

Mr. Chairman, and fellow members of the Committee, thank you for the opportunity to appear before you, with our colleague Sandy Levin. We wish to discuss a bill, H.R.1690, that we introduced on May 24, 1995. The title of the bill is "International Tax Simplification and Reform Act of 1995". The fourteen provisions of the bill are included in the Advisory, No. FC-8, June 30, 1995, issued by the Chairman under the heading "Foreign" on page 5. The subject of the three days of hearings is the list of miscellaneous tax reforms included in the Advisory.

The subject of these hearings -- miscellaneous tax reforms -- is timely, and much on point with the simplification and reform measures proposed in our bill. I won't go into the details of those provisions. What I'd like to do is provide a bit of perspective on why we are proposing the changes, then ask for your support.

Let me say that we have the support of such organizations as: The National Foreign Trade Council, The American Petroleum Institute, The U.S. Council for International Business, ECAT (Emergency Committee for American Trade), and NAM (National Association of Manufacturers). They represent many of the major multinational companies in the United States.

Would these provisions, if enacted, benefit many of these companies? The answer is yes, but many of the provisions, such as average exchange rates and the relaxation of reporting requirements, provide a benefit in the right direction -- reducing the regulatory and paperwork burden on multinational companies. This is a burden that many of their foreign competitors do not have. It is one which also is questionable from a cost-benefit standpoint. Trade policy has advanced, but our international tax laws have not kept up with the changes in the trade laws, and have become a detriment to carrying out that policy.

For some period of time, the Committee on Ways and Means has been considering issues relating to international competitiveness and proper taxation of U.S.-based multinational corporations. In 1991, the Committee held 10 days of public hearings on the issues: international competitiveness including tax, trade, education, technology and other important issues affecting the nation's ability to compete internationally.

In 1992, two former members of this Committee, Messrs. Rostenkowski and Gradison, introduced H.R. 5270. It attempted to address many of the same issues included in our bill. More recently, in January of 1993, the Department of the Treasury issued a study entitled "International Tax Reform: An Interim Report."

Now as we begin the process of re-examining in fundamental ways our income tax system, we believe it imperative to address the area of international taxation. In an Internal Revenue Code stuffed with eye-glazing complexity, there is probably no area that contains as many difficult and complicated rules as international taxation.

Neither one of us is under any illusion that the measure which we introduced removes all complexity or breaks bold new conceptual ground. For example, other areas of concern include section 956A and the sheer number of foreign tax credit "baskets". We believe, however, that the enactment of H.R.1690 would be a significant step in the right direction. The enactment of this measure would enhance the ability of American business in its efforts to compete abroad. It would also be a major step in the long overdue process of simplifying the international taxes. Why not then move toward creating a set of international tax rules which taxpayers can understand, and the government can administer?

H.R. 1690 focuses on changes in three broad areas. One category involves changes to the foreign tax credit. Foreign tax credits ought to operate fairly and with a reasonable measure of administrative simplicity to avoid the burden of double taxation. We believe that the measures outlined in H.R. 1690 go a long way toward making a foreign tax credit system fairer and simpler.

A second category relates to the so-called antideferral mechanisms set forth in the Internal Revenue Code. Though the United States has had the general policy of not taxing income of foreign subsidiaries earned abroad until that income is brought back into the United States, the anti-abuse rules (began with the enactment of Subpart F in 1962) have now reached the point at which the exceptions have virtually swallowed the rule.

A bewildering array of antideferral rules (under Subpart F, the foreign personal holding company rules and the passive foreign investment company rules) has created serious complexity. American business finds it hobbling to compete abroad if it must comply with rules which at best frustrate legitimate business activity and at worst create an administrative nightmare. Neither corporate taxpayers nor the Internal Revenue Service can understand them. We do not suggest that anti-tax havens and anti-abuse rules are not appropriate. But it is clear that the balance has moved too far in the direction of excessive restrictions and overwhelming complexity. The measures set forth in H.R. 1690 are a significant and important step in correcting this imbalance.

Finally, H.R. 1690 incorporates several significant changes in allocation and accounting rules. These changes are required to better ensure that the foreign tax credit rules operate properly, i.e. provide for greater taxpayer compliance by eliminating unnecessary complexity, also to make U.S. companies more competitive abroad and by creating a more equitable and administrable means of making certain allocations.

In summary, therefore the proposed changes we believe represent a creditable package and a "down payment" on further reform in the international tax area. We ask you to join us, in this bipartisan effort, by supporting these changes as part of this year's tax legislation. Thank you.

PRESS RELEASE

NFTC Offers Support for Houghton/Levin Legislation

The National Foreign Trade Council, Inc. (NFTC) wishes to offer praise and support for the legislation (H.R. 1690) introduced today by Representatives Amo Houghton (R-NY) and Sander Levin (D-MI). As prominent members of the Tax-Writing House Ways and Means Committee, Representatives Houghton and Levin are to be saluted for showing extraordinary bipartisan leadership in tackling one of the most difficult and complex areas of the U.S. federal income tax system, namely, the U.S. international tax regime.

The current U.S. international tax rules were developed in a much different era when U.S. companies were dominant, and competition from foreign companies was virtually nonexistent. The global economy of the contemporary era demands that the U.S. rules be modernized to reflect current competitive realities.

The proposals contained in the Houghton/Levin legislation reflect an attempt by the authors to achieve certain objectives for the U.S. business community operating abroad without completely overhauling the U.S. international tax regime. The NFTC strongly supports pursuit of these objectives, which include:

- Allowing U.S. companies to compete on a more equal footing for market share against their foreign counterparts;

- Reducing the incidence of double taxation on U.S. companies operating abroad;

- Mitigating the inordinate compliance costs to U.S. companies operating in foreign jurisdictions without causing a serious revenue loss to the Treasury;

- Supporting proposals that are generic in nature and apply to a broad spectrum of U.S. industry conducting business abroad; and

- Encouraging manufacturing and the performance in the U.S. of research and development, which will lead to the licensing and sale of U.S. products in foreign markets.

In particular, the NFTC would like to express its support for the following provisions in the legislation:

- Apply the Look-Through Rule to 10/50 Corporations. The provision would apply the look-through rule to noncontrolled foreign corporations and would repeal the separate foreign tax credit limitation for the noncontrolled so-called 10/50 corporations/i.e./ corporations in which the U.S. taxpayers own at least a 10 percent, but not more than a 50 percent voting interest. The proposal would relieve the incidence of double taxation that quite often is imposed on U.S. companies that acquire a minority interest in joint ventures with foreign concerns to develop or market a product line in a particular jurisdiction or region. Foreign companies are not forced to comply with similar restrictions under the tax laws of their own countries.

- Exempt Controlled Foreign Corporations (CFCs) from the PFIC Rules. Both the Subpart F provisions and the PFIC rules were intended to require current taxation of the earnings of foreign companies in which U.S. taxpayers either earn a controlling interest or are investors. The Subpart F rules tax the U.S. shareholder on the current earnings of a CFC where the earnings are derived principally from passive income or active income generated in tax haven jurisdictions. The PFIC rules were intended to tax U.S. investors currently on earnings from certain mutual funds abroad even where the investors do not own a controlling interest. The proposal would eliminate the duplication between the two anti-deferral regimes that cause unintended adverse results to U.S. companies, while dramatically reducing the compliance costs associated with the Subpart F and PFIC rules.

- Extend the Foreign Tax Credit Carryback and Carryover Rules. The legislation would extend the carryback and carryover rules for excess foreign tax credits to three years for carrybacks and 15 years for carryovers of excess foreign tax credits. Due to restrictive foreign tax credit rules and the lower corporate rate adopted in the 1986 Tax Reform Act, many U.S. companies have excess foreign tax credits, which are about to expire. If the current limits are not extended, U.S. companies will face double taxation on income earned abroad.

- Provisions to Expand Export Sales. The NFTC support the following provisions in the legislation which will boost U.S. exports and promote the sales of U.S. products through CFCs: increase the deminimis exception from Subpart F to less than 10 percent of gross income; treat the European Union as one country under the Subpart F rule; and allow resourcing of domestic losses to parallel current rules regarding resourcing of foreign losses.

- Restore Deferral for Active Financing Income. The legislation would help to place the U.S. financial service industry on a more equal footing with its foreign counterparts by restoring deferral for most active financing income.

Simplification Provisions. The legislation also contains a number of needed simplification provisions, several of which are incorporated from the foreign simplification package in H.R. 3419, which was not enacted last year. These include: extension of the indirect foreign tax credit from the third to the sixth tiers; permit use of the average foreign exchange rate in computing foreign tax credits; raise the reporting threshold under Section 6046(a) to 10 percent; and exempt CFCs from the uniform capitalization rules under Section 263A.

The impact of these provisions, if enacted, would improve the position of U.S. companies in the international arena in a number of important respects: it would allow them to compete on a more level playing field for tax purposes against their foreign counterparts; it would encourage the performance of manufacturing and R&D in this country which will lead to licensing and sales abroad; it would reduce the incidence of double taxation on the global income of U.S. companies; and it would drastically reduce the inordinate compliance costs that U.S. companies face in reporting their multinational income for tax purposes.

The NFTC congratulates Representatives Houghton and Levin and their staffs in devising a well balanced, constructive approach to addressing the competitive problems that U.S. companies face under current U.S. tax rules in the global marketplace. We look forward to working with their offices to enact this legislation. We would urge prompt public hearings on this legislation, and expeditious consideration by the Congress.

NAM National Association of Manufacturers

Gil Thurm
Vice President
Taxation & Economic Policy

July 10, 1995

The Honorable Amo Houghton
United States House of Representatives
1110 Longworth House Office Building
Washington, DC 20515

Dear Representative Houghton:

We are writing to express NAM's strong support of H.R. 1690, the International Tax Simplification and Reform Act of 1995, and to commend you and Representative Levin for your leadership on this bill.

The international provisions of the Internal Revenue Code are hopelessly complicated. They impose an enormous compliance burden on U.S. taxpayers, and often needlessly restrict the ability of American companies to engage in international transactions and to compete effectively in the world market. Comprehensive reform of these provisions to make them consistent with U.S. economic and trade policy is critical to providing U.S. jobs and growth.

The NAM believes that H.R. 1690 is a good beginning on such reform, at a minimal revenue cost. We are particularly pleased that the bill would repeal the "10/50" basket for foreign tax credits, and reduce double taxation by (1) extending the number of years to which foreign tax credits can be carried forward and back, and (2) extending the number of tiers from which indirect foreign tax credits can be claimed. Recognition of the European Union as a single country, and elimination of the overlap of the CFC and PFIC rules are important steps in the simplification and rationalization of the Subpart F provisions. Finally, the NAM believes that making the "64% R&D allocation" permanent and allowing the election to use E&P basis for allocating interest expense is an important step in encouraging U.S. research and eliminating controversy and inequities in the allocation provisions.

The NAM strongly supports this bill.

Sincerely,

TO: Committee on Industry Statements

The Honorable
Bill Archer
Chairman, Committee on Ways and Means
U.S. House of Representatives
Longworth Office Building
Washington, DC 20515-6348

Dear Mr. Chairman:

The American Petroleum Institute (API) would like to express its support for H.R. 1690, The International Tax Simplification and Reform Act of 1995, introduced by Congressmen Levin and Houghton on May 24. For many of API's members with international operations the proposed simplifications would substantially alleviate current tax compliance burdens within the complex system of U.S. taxation of foreign operations.

In comments to the tax writing committees in past years API has identified the issues in the taxation of foreign operations which are of concern to our members. While H.R. 1690 does not address all of these issues, it does include many of them. At the present, of specific interest are Bill Sec. 4 (exception from UNICAP rules), Sec. 6 (extension of foreign tax credit carryover rules), Sec. 7 (extended look-through with respect to income from noncontrolled section 902 companies), Sec. 9 (exclusion of CFC shareholders from PFIC regime), and Sec. 11 (recapture of overall domestic loss).

In view of the continuing growth of the global market with a more complex international involvement of U.S. companies, any step toward simplification like H.R. 1690, particularly in the area of tax compliance and administration, is needed and should be promoted.

Sincerely,

Charles J DiBona

Emergency Committee for American Trade 1211 Connecticut Ave. N.W. Washington, D.C. 20036 (202) 659-5147

July 10, 1995

The Honorable Amo Houghton
United States House of Representatives
1110 Longworth House Office Building
Washington, D.C. 20515-3231

Dear Congressman Houghton:

I am writing to express the strong support of the members of the Emergency Committee for American Trade (ECAT) for H.R.1690, the "International Tax Simplification and Reform Act of 1995," introduced by yourself and Congressman Sander Levin. We have long advocated and supported many of the provisions of the bill, and we commend you for your initiative in introducing it. All provisions of H.R. 1690 represent sound tax policy.

Without attempting to catalog ECAT positions on each of the bill's provisions, let me simply note that enactment of H.R.1690 would temper some of the excesses in the taxation of foreign source income included in the 1986 tax reform bill and in other pieces of legislation. By simplifying several complex areas of the tax code concerning foreign source income, the provisions of H.R.1690 would reduce the administrative burden and costs of compliance. We particularly welcome the provisions concerning the allocation of R & D and interest expenses and those simplifying and reforming the foreign source income "deferral" provisions..

H.R.1690 is of more than academic interest to the members of ECAT. Enactment of the bill would assist their competitiveness at home and abroad. The approximately 60 members of ECAT are all U.S. headquartered firms with extensive international business interests. Their annual worldwide sales are over $1 trillion. They employ about five million workers, and they account for a substantial portion of total U.S. exports. ECAT member firms operate facilities in every state and in nearly all 435 congressional districts.

Again, thanks for your initiative in introducing H.R. 1690.

Sincerely,

Bob McNeill

June 2, 1995

The Honorable Bill Archer
Chairman, Committee on Ways and Means
United States House of Representatives
Longworth House Office Building
Washington, DC 20515-6348

Dear Mr. Chairman:

The United States Council for International Business wishes to express its support for H.R. 1690, the International Tax Simplification and Reform Act of 1995, which was introduced last week by Congressmen Houghton and Levin. The provisions of this bill, if adopted, would substantially alleviate the burden of tax code complexity which U.S. corporations now face with regard to the international area, and thus enhance their international competitiveness vis-a-vis their foreign competitors.

We are pleased to note that this bill contains many of the changes which we recommended in our letter to you of March 8, 1995, wherein we expressed our support for simplification in the foreign area and for your efforts in this regard. Specifically, the allowance of look-through treatment for non-controlled Section 902 company dividends and the repeal of the separate basket approach for these companies would allow cross crediting of foreign taxes, and level the playing field between U.S. companies and foreign companies which are not subject to additional home country taxation. The exemption of U.S. controlled foreign corporations (as defined in Subpart F) from the passive foreign investment company rules would correct an inadvertent overlapping of the PFIC and Subpart F rules, and thus greatly reduce complexity in the case of such companies. The extension of the foreign tax credit beyond the third tier and the extension of foreign tax credit carryovers would also significantly reduce complexity and would help reduce the double taxation of foreign source income which impedes U.S. competitiveness abroad.

The bill also contains many helpful provisions which we have not mentioned heretofore, such as the exclusion of CFCs from uniform capitalization rules, making permanent the 64% allocation of U.S. R&D expenses to U.S. source, the recapture of domestic losses as foreign sourced income, increasing the de minimis exception to Subpart F treatment to less than 10% of gross income, and the use of the average rate of exchange in translating foreign taxes.

We regret that the bill does not address the problems created by the excess passive assets rule (Section 956A). We hope that this issue may be addressed as your Committee further considers H.R. 1690. We will, of course, be prepared to work with your staff on the repeal of Section 956A which, we believe, will result in little or no revenue cost because of the interaction between 956A and Subpart F.

In sum, this bill makes great strides toward simplifying the international provisions of the U.S. Internal Revenue Code. We therefore strongly urge that this bill be acted upon, with the incorporation of our suggestion as noted above, as soon as possible, with a view to incorporating it into this year's budget reconciliation bill.

Sincerely,

Robert T. Scott
Chairman, Committee on Taxation

Richard M. Hammer
International Tax Counsel

Chairman ARCHER. I want to thank all three of you for very thoughtful input to the Committee, and now I recognize Mr. Gibbons for inquiry.

Mr. GIBBONS. Mr. Levin, Mr. Houghton, I wish you well in your crusade to straighten out the foreign tax problems that we have. It is my estimation that we spend more money trying to collect these foreign taxes than we actually collect in taxes. If you go around the world, you will find a U.S. representative of the Internal Revenue Service in about every major city on Earth and sometimes numerous members of the IRS in those places.

Eventually, we are going to have to go to a consumption-based tax which every industrialized country except the United States and Australia have gone to, and nobody makes the effort to reach out and tax their businesses and their citizens to the extent that we do. Our foreign tax provisions are absolutely unproductive, all because we got mad at a few Hollywood starlets who moved their tax status to Mexico to get out of paying U.S. income taxes.

There are better ways of doing it. A value-added tax is probably the easiest and fairest and fits in with the international picture better than anything else. But good luck. Appreciate your trying.

Mr. Houghton, I hope you are able to pass that little bill that Barber Conable originated and passed on to me and you cosponsored this time. We certainly need to do that. We have unfairly treated surviving spouses of international civil servants who are assigned to this country by the way we tax them on their estates, and it ought to be corrected.

Mr. HOUGHTON. Thank you.

Chairman ARCHER. Are there any other Members who wish to inquire? If not, thank you very much.

Mrs. KENNELLY. Thank you, Chairman Archer.

Chairman ARCHER. Our next panel is Hon. William Goodling, Hon. Barney Frank, Hon. Tim Johnson, Hon. Peter Blute, and Hon. Peter Torkildsen. Will you please come and take seats at the witness table.

Gentlemen, we are happy to have you before the Committee today and pleased to entertain your suggestions for changes in the Code and particularly want to welcome the Chairman of the Economic and Educational Opportunities Committee, Mr. Goodling.

You may proceed. Your entire statement, if you have one in writing, will, without objection, be entered in the record, and you may summarize orally in any way that you wish.

STATEMENT OF HON. WILLIAM F. GOODLING, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF PENNSYLVANIA

Mr. GOODLING. Thank you, Mr. Chairman.

First of all, could I take one of these pitchers along to show my staff how it is done on my Committee?

Several years ago, I had an opportunity to visit a housing site where a young contractor had built and sold approximately 150 single-unit homes. He was able to do this because he was able to help these first-time homeowners get around the idea of where do I get the downpayment. Usually, first-time home buyers, that is their big stumbling block. What he did was get a bank to finance the 80 percent; he, in turn, took a second mortgage for the down-

payment, for the 20 percent, with the same rates as the bank charged and the same situation as the bank had.

The bank was very happy to do this because they realized that both the home and the land and so on were far more valuable than the kind of money they were putting up for that mortgage, a 30-year mortgage. He sold over 100 of those single-unit homes in 1 year's time—or about 18 months.

I visited there and also went through the homes and visited the families who were living there who were very thankful for this very creative way of helping them become first-time home buyers.

And along came the 1986 tax changes and, inadvertently, his program was hit right on the head and squashed dead in its tracks because there you were aiming at those people who were trying to—businesses and individuals who were seeking tax shelters. The only problem was the IRS then ruled that he fitted into the same category because they said that he had to pay tax the first year on the 100-percent purchase price. Well, of course, that took all of the money away that he was going to use for the downpayment, for the 20 percent. Because when they taxed him, even though he didn't collect the money over that first year but over many years, they taxed him as if all of the money came in in the first year.

What I have tried to do is take us back to where we were in 1986, because I know that was not what you had planned when you made those tax changes. As I said, you were after businesses and individuals who were seeking tax shelters.

What I did in H.R. 1076 is take us back prior to the 1986 tax changes so that he would then be able to continue to use that money to put up that 20 percent downpayment so these first-time home buyers would be able to purchase the homes. I hope that you will take a careful look at the legislation because, as I indicated, I am sure that was not what you had hoped to do in the 1986 tax changes, but it is just, unfortunately, the way the IRS interpreted what was done.

This man is—his creative way of helping people become first-time home buyers and create a lot of jobs in our area because, of course, they are producing homes, was wiped out. So, I would hope that you would take a look at it.

I thank Mr. English also for helping me get to this point because I think it is something you really need to look at and I hope that you will.

Chairman ARCHER. Thank you, Mr. Chairman. I appreciate your suggestions.

I would just quickly file a disclaimer that Phil Crane and I led the opposition to the 1986 act on the floor of the House, so we take no blame for any of the provisions that are in it.

Mr. GOODLING. But you will take a lot of credit if we get it changed.

Chairman ARCHER. Any time we can improve the Tax Code, that is what we are here for.

[The prepared statement follows:]

TESTIMONY OF HON. WILLIAM F. GOODLING A MEMBER IN CONGRESS FROM THE STATE OF PENNSYLVANIA

Good Morning. First, I would like to thank Chairman Archer and Mr. Gibbons for the opportunity to testify on legislation I recently introduced, the "First Time Homebuyers Assistance Act." I would also like to thank my colleague from Pennsylvania, Congressman Phil English, for his assistance.

I believe my bill, the "First Time Homebuyers Assistance Act," will make the American dream of owning a home a reality for thousands of renters. Today's renters often pay as much for rent as homeowners pay for a monthly mortgage payment.

It is not surprising that the 1994 Fannie Mae National Housing Survey found 86 percent of renters believe they would be better off owning a home. To many Americans, homeownership means financial, psychological, and familial security. It means a stronger economy, safer neighborhoods, and a better quality of life.

Given such an optimistic view of homeownership, why do so many renters continue to rent? According to the Fannie Mae survey, an overwhelming 65 percent of renters rank the downpayment as their primary obstacle to owning a home.

Several years ago, one of my constituents, Barry Rauhauser, a home builder in York, PA, developed a unique and innovative arrangement in which moderately-priced single-family homes are constructed for purchase with no downpayment.

A local financial institution finances 80 percent of the loan, while the remaining 20 percent, in the form of a second mortgage, is financed by the local builder. This creative financing plan makes the purchase of a home affordable to hard-working people who cannot afford a downpayment. Mr. Rauhauser has noted that many more banks are accepting this type of financing as they are assured they are well protected and see the positive results of increased homeownership.

My bill will encourage builders to finance the cost of the downpayment for low- to mid-priced single family homes. The current tax code penalizes builders who finance the downpayment on behalf of the purchasers. The law limits a builder's ability to finance second mortgages because it assumes that buyers are paying the entire balance in the year the property is purchased.

The law requires builders to pay taxes on the entire amount of the income received from a mortgage in the year the purchase is made. For a builder, it becomes almost impossible to pay these taxes, not having cash on hand to do so until the balance of the mortgage payment is received at a future date.

In short, the Tax Code prohibits a builder from using the installment method to calculate his tax liability. This situation places a builder in a financial bind and jeopardizes the future of this and similar housing programs.

H.R. 1076 would apply to single family, owner-occupied units. The purchaser must be a first-time homebuyer who qualifies for 100 percent of the loan. Further, the legislation directs that a second mortgage on the property be no more than 20 percent of the sale price and applies only to single-family homes costing no more than 75 percent of the median home price for newly constructed one-family residential real property in a given area.

Last month the Clinton Administration announced a National Homeownership Strategy plan to increase homeownership in America from 64 percent to an all-time high level of 67.5 percent by the year 2000. According to the Department of Housing and Urban Development, this increase represents 8 million additional homeowners. I believe my legislation would contribute significantly to this goal.

As the Committee on Ways and Means considers various tax proposals, I urge the Committee's support of H.R. 1076 which encourages creative financing and is specifically geared to helping those Americans who need the most assistance in buying a home. This legislation is a win-win-win situation for all involved. It's a win for the builder who can create more jobs in the housing industry. It's a win for the economy. And, most importantly, it's a win for the first-time homebuyer who can make the American dream of owning a home an American reality!

Chairman ARCHER. Mr. Johnson, you are recognized. As I mentioned earlier, for all of you, if you have a written statement, the entire statement, without objection, will be printed in the record, and you may proceed verbally to summarize in any way that you wish.

STATEMENT OF HON. TIM JOHNSON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF SOUTH DAKOTA

Mr. JOHNSON of South Dakota. Thank you, Mr. Chairman and Ranking Member Gibbons.

I will submit my full written statement for the record and summarize briefly legislation, H.R. 1588, which I bring before the Committee. This legislation would correct an oversight in the Tax Code affecting farmers and ranchers who are forced to sell their livestock prematurely due to weather-related conditions.

I believe that this particular legislation is precisely the kind of responsible but minor change in the Tax Code that these hearings were called to address. While this bill would have a huge impact on a sector of our economy, it is a minor change in the overall scheme of things.

The current Tax Code contains two provisions that serve to spread out the financial pain that drought conditions impose on livestock producers. The first is a provision which allows livestock producers to defer taxes on any gain from forced sales of livestock when they invest the proceeds in similar property within 2 years. In other words, producers may use the proceeds of the sale to rebuild their herds without incurring a tax penalty.

The second provision permits producers who do not reinvest in similar property to include the proceeds of their sale in their taxable income during the following year, rather than during the same year that they are facing the drought.

These provisions have been very helpful to producers who have experienced a drought. However, due to an oversight, they do not apply to livestock sold on account of flooding or other weather-related conditions. Floods, Mr. Chairman, can be just as devastating to producers as drought conditions and can cause the disruption of crops grown to feed livestock, loss of critical pasture land, damage to fences, and high loss of young stock.

The heavy rains and flooding that we have experienced in my State of South Dakota this year, for instance, caused calf losses as high as 40 percent in some areas in the spring, with 10 percent being common. Many areas are still under water from excessive rainfall. A great many ranchers have had to put their cattle out to pasture early, before spring growth, meaning they will face a shortage of forage. With the flooding also producing a steep increase in feed prices, these ranchers will be forced to sell their cattle prematurely.

My legislation would simply take the provisions in the Tax Code relating to forced sale of livestock due to drought and extend them to include flooding and other weather-related conditions.

More evidence of the fairness of this proposed tax change is that farmers who lose crops due to natural disasters, including flooding, are able to benefit from certain provisions in the Tax Code. For instance, farmers who receive insurance or disaster payments when

their crops are lost or damaged due to severe weather conditions are often permitted to include these payments in the year following the disaster. I find it difficult to justify the fact that farmers who lose crops on account of flood conditions are covered by these provisions while producers who are forced to sell livestock because of that same flooding are not.

The Joint Tax Committee has completed an analysis of the revenue implications of the bill. This legislation would have a negligible impact on Federal revenues, averaging about $2 million a year. The assistance that the bill would provide to producers affected by floods and other weather-related conditions is well worth that minor cost.

Mr. Chairman, I am pleased to state that this legislation has bipartisan support in the House. Cosponsors of the bill include Mr. Hostettler, Mr. Peterson of Minnesota, Mr. Lightfoot, Mr. Stenholm, and Mr. Laughlin. Additionally, I want to thank Mr. Gibbons for his kind letter offering support of the bill.

We have a corresponding bill on the Senate side which also has bipartisan support, and this legislation is endorsed by the National Cattlemen's Association, the National Pork Producers Council, the National Farmers Union, and the American Farm Bureau Federation.

Mr. Chairman, thank you for allowing me this opportunity to testify on behalf of this small—but nonetheless, critically important for a certain sector of our economy change in the Tax Code. I am certain that you and the rest of the Committee will agree that it is unfair to deny disaster-related provisions of the Tax Code to livestock producers simply because a disaster involved is a flood rather than a drought. I appreciate very much your careful consideration of this legislation.

[The prepared statement follows:]

TESTIMONY BY CONGRESSMAN TIM JOHNSON ON H.R. 1588, LEGISLATION THAT WOULD ESTABLISH MORE EQUITABLE TAX TREATMENT FOR LIVESTOCK PRODUCERS WHO ARE FORCED TO SELL LIVESTOCK ON ACCOUNT OF WEATHER-RELATED CONDITIONS

BEFORE THE COMMITTEE ON WAYS AND MEANS

JULY 11, 1995

Mr. Chairman, Ranking Member Gibbons, and other members of the Committee, I appreciate the opportunity to come before you to testify on behalf of H.R. 1588, legislation that would correct an oversight in the tax code affecting farmers and ranchers who are forced to sell their livestock prematurely due to weather-related conditions. I believe that this legislation is precisely the kind of responsible, minor change in our tax code that these hearings were called to address.

The current tax code contains two provisions that serve to spread out the financial pain that drought conditions impose on livestock producers. The first provision allows livestock producers to defer tax on any gain from forced sales of livestock when they reinvest the proceeds in similar property within two years. In other words, producers may use the proceeds of the sale to rebuild their herds without incurring a tax penalty. The second provision permits producers who do not reinvest in similar property to include the proceeds of their sale in their taxable income during the following year, rather than during the same year they are facing the drought.

These provisions are very helpful to producers who have experienced a drought. However, due to an oversight, they do not apply to livestock sold on account of flooding or other weather-related conditions. Floods can be just as devastating to producers as drought conditions, and can cause the destruction of crops grown to feed livestock, loss of critical pasture land, damage to fences, and high losses of young stock. The heavy rains and flooding we have been experiencing in my State of South Dakota caused calf losses as high as 40% in some areas this spring (with 10% loss being common), and many areas are still under water from excessive rainfall. A great many ranchers had to put their cattle out to pasture early, before spring growth, meaning that they will face a shortage of forage. With the flooding also producing a steep increase in feed prices, these ranchers will be forced to sell their cattle prematurely. My legislation would simply take the provisions in the tax code relating to forced sales of livestock due to drought and extend them to include flooding and other weather-related conditions such as the kind livestock producers in the upper Midwest and other areas of the country are experiencing.

More evidence supporting the fairness of this proposed tax change is that farmers who lose crops due to any natural disaster, including flooding, are able to benefit from certain provisions in the tax code. For example, farmers who receive insurance or disaster payments when their crops are lost or damaged due to severe weather conditions are often permitted to include these payments in the year following the disaster. Provisions such as this are designed to spread out the impact of taxes on farmers in these situations. I find it difficult to justify the fact that farmers who lose crops on account of flood conditions are covered by these provisions, while producers who are forced to sell livestock because of the same flooding are not.

Although the Joint Tax Committee has not completed its analysis of the revenue implications of this bill, my legislation should have a negligible impact on federal revenues, somewhere in the range of a few million dollars a year. The assistance that this bill would provide to producers affected by floods and other weather-related conditions is well worth the small cost.

Mr. Chairman, I am pleased to state that this legislation has bipartisan support in the House. Cosponsors of the bill include Mr. Hostettler, Mr. Peterson of Minnesota, Mr. Lightfoot, Mr. Stenholm, and Mr. Laughlin. Additionally, I would like to thank Mr. Gibbons for his kind letter offering support of this bill. On the Senate side, identical legislation has been introduced by Senator Daschle, and his bill also has cosponsors from both sides of the isle. A number of important agricultural organizations have announced their support of this bill, including the National Cattlemen's Association, the National Pork Producers Council, the National Farmers Union, and the American Farm Bureau Federation.

Mr. Chairman, thank you for allowing me the opportunity to testify on behalf of this small, but nonetheless very important, change in our tax code. I am certain that you and the rest of the committee will agree that it is unfair to deny the disaster-related provisions of the tax code to livestock producers just because the disaster involved is a flood and not a drought. I ask you to join me in making this common-sense change to the federal tax code, and provide some needed assistance to our nation's livestock producers.

While I am before you, I would like to share my concerns relative to another area where our tax code needs some clarification Since I was not called before the committee to testify on this matter, and I know that you have a very busy schedule, I will not spend a great deal of your time discussing this problem. However, I would like to call your attention to how certain agricultural vehicles are affected by the highway excise tax. As you know, an excise tax is placed on the sale of heavy trucks, trailers, and tractors in order to compensate for the wear and tear of these vehicles on our highways. Many agricultural vehicles — such as those used to prepare and haul feed, seed, and fertilizer — are exempt from this tax based on the principle that their use on the highways is limited. However, it seems that the IRS has interpreted congressional intent in an overly-narrow fashion, and has attempted to apply the excise tax to some agricultural vehicles despite the fact that they are only used on a seasonal basis (3 to 4 months per year), that they contain specialized equipment that is used for loading and unloading farm products, and that several states restrict their use on the highways. I am referring specifically to cotton module trucks and trailers. One company that manufactures these cotton module haulers is based in the town of Eden, South Dakota. I believe that Congress should clarify its original intent in order to ensure that the highway excise tax should not be applied to specialized farm equipment that is used on a seasonal basis. I am working with the National Cotton Council and the National Ginners Association on legislative language that would clarify the tax code as pertaining to agricultural vehicles of this sort. I hope that you will look favorably upon this legislation at the appropriate time.

Chairman ARCHER. Thank you for your testimony.

Our next witness is the gentleman from Massachusetts, Mr. Barney Frank. Mr. Frank, you are recognized, and you may proceed.

STATEMENT OF HON. BARNEY FRANK, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MASSACHUSETTS

Mr. FRANK. Thank you, Mr. Chairman.

I am here with my colleague with whom I share a number of communities, Mr. Blute, because this is a very important issue involving the fishing industry which affects both of our districts.

Your Committee, Mr. Chairman, has previously acted on this particular legislation favorably. In fact, the provision that Mr. Blute and I are seeking—and we have the support, I believe, also of others in our delegation—Mr. Torkildsen, Mr. Studds, Mr. Neal, who has been helpful—it has twice been included in other legislation noncontroversially, but the legislation in which it was included was not noncontroversial and got vetoed.

What we have is a dispute over fishermen on fishing boats and whether they ought to be treated for withholding purposes as employees or independent contractors. We now have agreement as to what it should be in the future; and, indeed, we have an offset in this bill that Mr. Blute and I worked on that makes it a revenue raiser because it will have reporting in the future which everybody would agree to, but it would raise $38 million while it would cost $12 million.

The problem is that a dispute arose in 1970 as to whether or not these fishermen, the crews, were to be treated as employees or contractors. They had always been treated as independent contractors. They got a share of the catch, and so forth.

In 1976 Congress passed a statute that people thought resolved this so there would not be liability. The IRS, however, did not, I believe, interpret this in the spirit in which Congress passed it, and a dispute grew over what "normally" meant. I believe we are talking about people who are unfairly caught in a dispute over what "normally" means, and they are now facing a retroactive liability. It has gone to court. There have been a series of concerns.

What this legislation would do would be to do away with that retroactive liability that has accrued over the period when we think there was legitimate dispute. It is reflective of a position Congress twice took, basically saying these were independent contractors and not employees, but it has reporting for the future.

We have talked to the Treasury Department about this. The Treasury Department thinks that the solution as to the future is a good one. Specifically on the question of the retroactivity, they have told us that they have no opinion whatsoever. They have no opposition, no support. They leave that to us.

I am told they never have supported in their view retroactive liability, but they are not opposing in this case, and we have an industry here in particular that is in some difficulty, the fishing industry.

If we are not able to enact this legislation which wipes out that retroactive liability and says that these are not employees in that period, an industry that is already hurting faces absolute devasta-

tion. You will see some of the people who are still able to make it just be wiped out. Frankly, I believe that the revenue lost to the government would be even greater because you are going to see some people put out of business.

·But even on the static analysis, in our terms, we have an offset that is greater than the revenue lost. As I said, this has twice passed the Congress in exactly the form that we are proposing it now. It was vetoed because it was included in other legislation. The Treasury Department has no objection to it and supports the formula, and we believe it really is a case of equity, and if there were any other way to do it, we would get involved.

Unfortunately, a lawsuit did come during this period. The lawsuit had a mixed result. The IRS won a couple of points, and the fishermen won a couple of points. I think the very mixed nature of the lawsuit shows the ambiguity of the law.

What we have are people who are hard working and decent. No one has accused them of being evasive, of trying to not pay their taxes. They are in a tough industry, and we are trying to give them a clear footing at no cost whatsoever to the government the way this would be worked out. We hope that, once again, this could be included and this time maybe in a piece of legislation that will ultimately get signed.

Thank you, Mr. Chairman.

Chairman ARCHER. Thank you for your explanation.

The other gentleman from Massachusetts, Mr. Blute.

STATEMENT OF HON. PETER BLUTE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MASSACHUSETTS

Mr. BLUTE. Thank you very much, Mr. Chairman, for the opportunity to come before the Committee to discuss miscellaneous tax issues. I would also like to thank you for holding these hearings and soliciting the concerns of Members as this Committee works toward consideration of comprehensive tax reform legislation.

I would like to address the Committee regarding two separate tax issues. Before doing so, I would like to thank two Members of the Committee, my colleague from Massachusetts, Mr. Neal, and my good friend from Texas, Mr. Johnson, who have been helpful to me on these issues.

The first issue I would like to address pertains to the tax treatment of certain fishermen. In the interest of time, I would simply reiterate my colleague Mr. Frank's comments about the devastating effects and unfair nature of the IRS claims on the fishing industry in Massachusetts and nationwide.

As my colleague stated, boatowners are subjected to enormous tax burdens as a result of certain IRS interpretations of the IRC, Internal Revenue Code. The IRS is seeking to make boatowners the guarantors of the tax liabilities of their crew members.

Mr. Chairman, by asking for a rewrite of that provision, we propose what I believe is a fair and equitable offset. By requiring seafood dealers to report the identity of the seller, the government will collect taxes on millions of dollars of previously unreported income. I support my colleague's efforts and ask that the Committee give this proposal its very serious consideration.

At this time, I would like to briefly turn to another tax issue that is of great concern to many individuals throughout Massachusetts. Specifically, I would request that the Committee consider an amendment to the Internal Revenue Code which would assist a hardship case in my home State of Massachusetts. The SBLI, Savings Bank Life Insurance Co. of Massachusetts, seeks to clarify that the 12-year dividend payout to consumers is treated as a deductible policyholder dividend as opposed to a nondeductible redemption of any equity interest.

Created in 1907 by the Massachusetts legislature to provide low-cost life insurance to consumers, SBLI is often the subject of national praise and has been noted for providing quality products in nationally recognized publications, including Consumer Reports. Today, SBLI has more than 500,000 policies and $12 billion of in-force insurance.

In 1990 Massachusetts passed legislation to consolidate SBLI into a nonpublic stock insurance company while still allowing for the sale of its products through Massachusetts banking institutions. The plan consolidated 50 separate life insurance departments into a closely held stock company.

In recognition of the improved efficiencies and profitability of the company, the new Massachusetts law requires that the total combined surplus of the prior SBLI insurance department is to be paid out over a 12-year period to current policyholders as an additional policy dividend. SBLI is seeking legislation from this Committee which would ensure clarification from the IRS that this payout is treated as a deductible policyholder dividend since its policyholders have never held the normal attributes of ownership, such as the right to vote and the right to participate in the distribution of assets.

I will submit the rest of my testimony in the interest of time, but I would ask the Committee to consider this amendment.

Thank you, Mr. Chairman.

[The prepared statement follows:]

STATEMENT OF THE HONORABLE PETER BLUTE

ON MISCELLANEOUS TAX ISSUES
BEFORE THE COMMITTEE ON WAYS & MEANS
July 11, 1995

MR. CHAIRMAN:

THANK YOU FOR THE OPPORTUNITY TO COME BEFORE THE COMMITTEE TO DISCUSS MISCELLANEOUS TAX ISSUES. I WOULD ALSO LIKE TO THANK YOU FOR HOLDING THESE HEARINGS AND SOLICITING THE CONCERNS OF MEMBERS AS THIS COMMITTEE WORKS TOWARD CONSIDERATION OF COMPREHENSIVE TAX REFORM LEGISLATION.

I WOULD LIKE TO ADDRESS THE COMMITTEE REGARDING TWO SEPARATE TAX ISSUES. THE FIRST IS REGARDING AN EMPLOYMENT TAX, NAMELY THE TAX STATUS OF CERTAIN FISHERMEN AND THE OTHER IS REGARDING A LIFE INSURANCE TAX ISSUE.

AS YOU MAY KNOW, SINCE 1988 THE INTERNAL REVENUE SERVICE HAS BEEN ATTEMPTING TO NOT ONLY IMPOSE A CONTROVERSIAL INTERPRETATION OF THE WITHHOLDING RULES FOR CERTAIN FISHING CREWS, BUT TO MAKE THE INTERPRETATION RETROACTIVE TO JANUARY 1, 1985. CONGRESS HAS TWICE PASSED LEGISLATION WHICH WOULD HAVE ACCOMPLISHED THE NECESSARY CLARIFICATION OF THE RULES AND ENSURED MORE FAIR TREATMENT OF THE FISHERMEN. UNFORTUNATELY, THE FISHING PROVISION NEVER BECAME LAW BECAUSE TWO DIFFERENT TAX BILLS IN WHICH IT WAS INCLUDED WERE VETOED FOR UNRELATED REASONS. AS A RESULT, MANY MEMBERS OF THE FISHING FLEETS IN MASSACHUSETTS REMAIN IN AN UNCERTAIN AND FINANCIALLY PRECARIOUS POSITION.

SPECIFICALLY, THE IRS HAS CLAIMED THAT THE OWNERS OF FISHING BOATS ARE NOT ENTITLED TO THE EXEMPTION FROM PAYROLL TAX OBLIGATIONS WHICH THE CONGRESS PROVIDED IN 1976 FOR SMALL BUSINESSPERSONS IN THE FISHING INDUSTRY IN SECTION 3121(b)(20) OF THE INTERNAL REVENUE CODE. THERE HAVE BEEN SEVERAL CASES WHERE THE IRS HAS ASSESSED OWNERS WITH UNPAID INCOME AND FICA TAXES WHICH CREW MEMBERS SHOULD HAVE PAID AS SELF-EMPLOYED PERSONS, DESPITE THE FACT THE OWNERS HAD PAID THE ENTIRE COMPENSATION OWED TO EACH CREW MEMBER AFTER EVERY VOYAGE. IN ADDITION, THE IRS HAS ALSO ISSUED A CLAIM THAT IF A BOAT SAILS WITH 9 CREW MEMBERS THEN THE OWNER IS CONSIDERED AN EMPLOYER SUBJECT TO ALL OF THE PAYROLL TAX RESPONSIBILITIES OF ANY OTHER EMPLOYER.

MR. CHAIRMAN THIS AMOUNTS TO THE IRS SEEKING TO MAKE BOAT OWNERS THE GUARANTORS OF THE PAYMENT OF THE TAX LIABILITIES OF THEIR CREW MEMBERS. CLEARLY, THIS IS AN UNFAIR PRACTICE THAT WILL RESULT IN SEVERE FINANCIAL BURDENS ON BOAT OWNERS NOT ONLY IN MASSACHUSETTS, BUT ACROSS THE COUNTRY.

IN PROPOSING A CHANGE IN THIS TAX PROVISION, MY COLLEAGUES AND I HAVE IDENTIFIED A NEW PROVISION OF THE INTERNAL REVENUE SERVICE WHICH WILL REQUIRE THOSE SEAFOOD DEALERS, WHO PURCHASE PRODUCT FOR CASH, TO REPORT TO THE IRS THE IDENTITY OF THE SELLER AND THE AMOUNT OF THE PURCHASE. THIS IS A NEW OBLIGATION TO REPORT TO THE IRS WHICH THE SEAFOOD DEALERS PRESENTLY DO NOT HAVE, NO MATTER WHAT THE SIZE OF THE CASH PURCHASE. BASED ON ESTIMATES BY THE IRS, THE AMOUNT OF UNREPORTED INCOME THROUGHOUT THE COUNTRY CAUSED BY A CASH ECONOMY IN SEAFOOD PRODUCTS IS IN THE RANGE OF TENS OF MILLIONS OF DOLLARS PER YEAR. BY IMPOSING STIFF PENALTIES ON SEAFOOD DEALERS

WHO PURCHASE PRODUCT FOR CASH WITHOUT MAKING THE REQUIRED REPORTS TO THE IRS, THIS PROVISION WILL RAISE SUBSTANTIALLY MORE INCOME TAX YEAR AFTER YEAR THAN WILL BE LOST BY GIVING RETROACTIVE EFFECT TO THE PROVISION THAT WILL AMEND SECTION 3121 (b)(20).

MR. CHAIRMAN, THE SUBSTANTIAL MAJORITY OF FISHING BOAT OWNERS IN THE UNITED STATES WHO MARKET THEIR PRODUCT THROUGH THE WELL-ESTABLISHED COMMERCIAL DISTRIBUTION CHANNELS OBEY THE CONSERVATION GUIDELINES REGARDING THE SIZE OF THE PRODUCT WHICH THEY KEEP, AND PAY ALL OF THEIR FEDERAL AND STATE TAXES. HOWEVER, AS IN ANY BUSINESS, THERE ARE THOSE WHO VIOLATE THE ESTABLISHED NORMS OF PRACTICE, THEREBY SEEKING TO GAIN AN ADVANTAGE OVER HONEST BUSINESSMEN.

ONE WAY TO AVOID THE TAXES AND OTHER REQUIREMENTS IMPOSED ON THE FISHING OPERATORS IS TO SELL EACH CATCH TO UNLICENSED DEALERS WHO BACK THEIR TRUCKS UP TO A PIER AT NIGHT, UNLOAD THE SEAFOOD, AND PAY CASH TO THE CAPTAIN OF THE BOAT. THIS CASH IS NOT REPORTED AS INCOME BY THE RECIPIENTS, MEANING BOTH THE FISHING BOAT OWNER AND THE CREW MEMBERS WHO SHARE THE CASH.

THIS PROBLEM IS NOT LOCAL TO MASSACHUSETTS, BUT IS PRACTICED QUITE FREQUENTLY NATIONWIDE. THEREFORE, MILLIONS AND MILLIONS OF DOLLARS OF INCOME GO UNREPORTED AT A SIGNIFICANT LOSS TO THE GOVERNMENT.

I URGE THE COMMITTEE TO GIVE SERIOUS CONSIDERATION TO THESE PROPOSALS AND TO ENACT LEGISLATION THAT PENALIZES THOSE THAT ARE WORKING AROUND THE SYSTEM, RATHER THAN PENALIZING HARDWORKING BOAT OWNERS THROUGH AN UNFAIR INTERPRETATION OF THE EMPLOYMENT TAX CODE.

MR. CHAIRMAN, I WOULD ALSO LIKE TO ADDRESS THE COMMITTEE REGARDING AN AMENDMENT TO THE INTERNAL REVENUE CODE WHICH WOULD ASSIST A HARDSHIP CASE IN MY HOME STATE OF MASSACHUSETTS.

THE SAVINGS BANK LIFE INSURANCE COMPANY OF MASSACHUSETTS (SBLI) SEEKS TO CLARIFY THAT THE TWELVE-YEAR DIVIDEND PAYOUT TO CONSUMERS IS TREATED AS A DEDUCTIBLE POLICY HOLDER DIVIDEND, AS OPPOSED TO A NON-DEDUCTIBLE REDEMPTION OF ANY EQUITY INTEREST.

CREATED IN 1907 BY THE MASSACHUSETTS LEGISLATURE TO PROVIDE LOW-COST LIFE INSURANCE TO CONSUMERS, SBLI IS OFTEN THE SUBJECT OF NATIONAL PRAISE AND HAS BEEN NOTED FOR PROVIDING QUALITY PRODUCTS IN NATIONALLY RECOGNIZED PUBLICATIONS, INCLUDING CONSUMER REPORTS. TODAY, SBLI HAS MORE THAN 500,000 POLICIES AND $12 BILLION OF IN-FORCE INSURANCE.

IN 1990, MASSACHUSETTS PASSED LEGISLATION TO CONSOLIDATE SBLI INTO A NON-PUBLIC STOCK INSURANCE COMPANY, WHILE STILL ALLOWING FOR THE SALE OF ITS PRODUCTS THROUGH MASSACHUSETTS BANKING INSTITUTIONS. THE PLAN CONSOLIDATED FIFTY SEPARATE LIFE INSURANCE DEPARTMENTS INTO A CLOSELY HELD STOCK COMPANY.

IN RECOGNITION OF THE IMPROVED EFFICIENCIES AND PROFITABILITY OF THE COMPANY, THE NEW MASSACHUSETTS LAW REQUIRES THAT THE TOTAL COMBINED SURPLUS OF THE PRIOR SBLI INSURANCE DEPARTMENTS BE PAID OUT OVER A 12-YEAR PERIOD TO CURRENT POLICYHOLDERS AS AN ADDITIONAL POLICY DIVIDEND. SBLI IS SEEKING LEGISLATION FROM THIS COMMITTEE WHICH WOULD ASSURE CLARIFICATION FROM IRS THAT THIS PAYOUT IS TREATED AS A DEDUCTIBLE POLICYHOLDER DIVIDEND SINCE ITS POLICYHOLDERS HAVE NEVER HELD THE NORMAL ATTRIBUTES OF OWNERSHIP SUCH AS THE RIGHT TO VOTE AND THE RIGHT TO PARTICIPATE IN THE DISTRIBUTION OF ASSETS.

THE JOINT COMMITTEE ON TAXATION REPORTED IN MARCH OF THIS YEAR

THAT THE EFFECT OF THIS PROPOSED AMENDMENT WOULD COST APPROXIMATELY $25 MILLION OVER THE NEXT FIVE YEARS. SBLI ASSERTS THAT DESPITE THIS COST, THE CONSOLIDATION OF SBLI WILL RESULT IN THEIR PAYING MORE IN FEDERAL INCOME TAXES AS ONE LARGE TAXPAYER THAN IN PREVIOUS YEARS. IN 1992, FOR EXAMPLE, SBLI PAID MORE THAN $5 MILLION IN TAXES TO THE FEDERAL GOVERNMENT.

MR. CHAIRMAN, RELIEF FOR SBLI IN ANY TAX LEGISLATION THAT IS BEING CONSIDERED BY THIS COMMITTEE IS BOTH CRITICAL AND TIMELY. SHOULD THIS MATTER NOT BE ADDRESSED DURING THIS SESSION OF CONGRESS, SBLI WILL BE SUBJECT TO A TAX INEQUITY THAT WILL BE PASSED ON TO THE CONSUMERS. IN ORDER TO CONTINUE TO PROVIDE CONSUMERS IN MY STATE WITH COST-EFFECTIVE INSURANCE COVERAGE LEGISLATION MUST BE PASSED TO CLARIFY THE TREATMENT OF THE DIVIDEND PAYOUT. I AM HOPEFUL THAT YOU WILL GIVE THIS PROPOSAL EVERY CONSIDERATION.

MR. CHAIRMAN, THAT CONCLUDES MY TESTIMONY BEFORE THIS COMMITTEE. AGAIN, THANK YOU FOR THE OPPORTUNITY TO COME BEFORE THE COMMITTEE TODAY AND I AM HOPEFUL THAT THE COMMITTEE WILL GIVE SERIOUS CONSIDERATION TO THE AFOREMENTIONED ISSUES.

Chairman ARCHER. My congratulations to each of you for your testimony.

Mr. Gibbons, do you care to inquire? Does any other Member of the Committee wish to inquire? Mr. Christensen.

Mr. CHRISTENSEN. Thank you, Mr. Chairman.

Mr. Frank and Mr. Blute, I applaud your efforts in cleaning up that part of the Tax Code.

Last week I submitted a bill, H.R. 1972, that had 100 original cosponsors. The bill will clarify the independent contractor and employee status. It is the White House Conference on Small Business' number one issue, as you probably already know. I want to ask you if my legislation would help your particular problem.

Currently, there is a 20-point test that the IRS lays out to determine whether someone is an employee or an independent contractor. As you well know, it is a very subjective test and the IRS can find one person an employee, the other person an independent contractor, and they have the exact same criteria.

Then, as you have so eloquently testified to, they go back and they make that small businessowner come forward with back taxes, unemployment insurance, and FICA and hire an accountant and attorney. It is really a waste of time and a lot of waste of money, and it takes a lot of people under.

My legislation would create an alternate test of three simple criteria: Was there a written contract between the fisherman and the person he was working with? Was there a written contract? If there was, that would be the first stipulation.

The second thing would be, has he invested time or money in equipment or training? Has he got his own fishing boat or has he got his own type of training for that particular job?

Three, is he independent? Is he working for several entities or is it just one business that he is working under? Would those three criteria help your particular instance?

Mr. FRANK. I think some of them would, Mr. Christensen. There are some peculiarities here because of the fishing industry and what were traditional practices there. There is a phrase called "pers," which I sometimes know what it means when I study it hard, but at other times I hope it is not on the test, as to whether or not these people were or weren't "pers." Part of this problem had to do with how you interpreted "normally." Did normally mean— it was whether they measured it annually or quarterly.

I think the answer is, yes, your proposals would help us, but there may be some other peculiarities there. They were relying on what they found to be common practice.

I would say one thing which confirms what you say. They had situations where different IRS agents would come to different conclusions, and I think that goes to the point you made about the indeterminacy of this which is not helpful. I have not seen your legislation, and I will take a look at it.

Mr. CHRISTENSEN. Yes, absolutely. You have put your finger on a real touchy issue with "Main Street America." You mention the independent contractor IRS rules and you raise the hair on the back of their head because it is definitely an issue that is causing a lot of concern in small business.

Mr. FRANK. In this case, Main Street includes the ocean.

Mr. CHRISTENSEN. That is right.

Mr. BLUTE. I would just congratulate you for your legislation, and I intend to cosponsor it because I think you are right on target.

Mr. CHRISTENSEN. H.R. 1972.

Chairman ARCHER. Mr. English.

Mr. ENGLISH. Thank you.

Congressman Goodling, I think you have been a very effective advocate for this bill, and I know you have been fighting for years to get what is now House Resolution 1076 passed. I appreciate your efforts.

I guess my simple question was, if we move to an installment method of reporting income from the sale of this residential property, would there be any sort of substantial revenue loss to the Federal Government?

Mr. GOODLING. It has been indicated that when all of these hearings are over we are going to get that kind of information.

I do not believe there would be a substantial loss, and it is the way it was done up until the change of 1986. I think where you would pick up probably much more revenue than you would ever lose is the fact that you are creating jobs and, therefore, people are paying more and more money as taxpayers because of the creation of those jobs. Because as these first-time homeowners are able to purchase a home simply because they can use that money to put up their downpayment, it creates those jobs and provides more tax revenue coming to the Treasury of the United States.

I think the increased employment—and this would be all over the Nation. Home buying is down at the present time. Home building is down at the present time. Usually, it is the first to go down when you are going into a recessionary period and the first to come back when you are coming out. I think that anything we could do at this point would certainly be an advantage to receiving more revenue for the Treasury of the United States.

Mr. ENGLISH. I agree with you. Although we haven't seen an official revenue estimate, my guess is that this will have very little negative and possibly a positive effect on our revenue position and, in the process, will provide a dramatic new way for a lot of younger families to enter home ownership. Again, I salute you for this creative proposal. Thank you, sir.

Chairman ARCHER. Does any other Member wish to inquire?

Mr. NEAL. Mr. Chairman.

Chairman ARCHER. Mr. Neal.

Mr. NEAL. Thank you, Mr. Chairman.

I just would like to speak once again in support and offer reenforcement to the argument that has been made by Mr. Frank and Mr. Blute. This is an issue particularly for fishermen that has languished for some time, and we would like, if possible in this session, to get it corrected.

In addition, the Savings Bank Life Insurance issue I think is an important consumer issue back in Massachusetts. The truth is that they have just gotten caught in a peculiar circumstance, and I hope that the Committee and the House will have an opportunity in this session to correct both of those measures. Given the longstanding issue of the fishermen for Mr. Frank and Mr. Blute, I think that is equally important.

Chairman ARCHER. Anyone else?

Gentlemen, thank you very much.

Our next panel will be Robert Israeloff, chairman of the Board of Directors, American Institute of CPAs; Patricia Healy, counsel, Utility Decommissioning Tax Group; and Rich Shavell, senior manager and director of Construction Tax Advisory Services of Zelenkofske, Axelrod & Co., Jenkintown, Pennsylvania, on behalf of ABC, Associated Builders & Contractors.

If the three of you are here, would you take seats at the witness table?

Mr. DASIC. Mr. Chairman, my name is Ray Dasic. I am a partner of Patricia Healy. She is here. She stepped out, but she is physically present in this building. I haven't been able to find her.

Chairman ARCHER. Thank you for that notification. I think what we will do is hear from Mr. Shavell, since he is here, and be prepared to hear from her when she returns.

Chairman ARCHER. Mr. Shavell, I think you have probably heard my previous comments that your entire written testimony, without objection, will be printed in the record, and you may proceed with your oral presentation. We would appreciate it if you would limit it to 5 minutes.

Mr. SHAVELL. Thank you.

Chairman ARCHER. Mr. Shavell, you are recognized.

STATEMENT OF RICH SHAVELL, SENIOR MANAGER AND DIRECTOR OF CONSTRUCTION TAX ADVISORY SERVICES, ZELENKOFSKE, AXELROD & COMPANY, JENKINTOWN, PENNSYLVANIA, ON BEHALF OF ASSOCIATED BUILDERS & CONTRACTORS

Mr. SHAVELL. My name is Rich Shavell. I am director of Construction Tax Advisory Services at Zelenkofske, Axelrod & Co., in Jenkintown, Pennsylvania.

I am pleased to have the opportunity to speak before the Ways and Means Committee today on the issue of whether nonresidential construction contractors performing long-term contracts should be subject to the look-back method of accounting. The look-back requirement has been a matter of concern for the members of ABC.

ABC represents 18,000 contractors, subcontractors, and suppliers through 81 chapters nationwide who share the merit shop philosophy of awarding construction contracts to the lowest responsible bidder.

As you may be aware, the look-back method grew out of the 1986 Tax Reform Act and the requirement that long-term contractors utilize the percentage of completion method. The percentage of completion method requires contractors to estimate contract revenues and costs. The look-back method goes further and requires contractors, at the completion of the contract, to look back to the beginning of the contract and substitute actual costs and revenues for those estimated amounts to determine if taxable income has been underreported or overreported on a hypothetical basis. This hypothetical under or overreported taxable income is tax effected, and an interest charge is computed based on the hypothetical tax.

These complex interest computations use daily compounded interest rates that change quarterly. Refunds to contractors can re-

sult as easily as required payments. Small contractors in many cases are exempt from the percentage of completion method for regular tax purposes and thus would appear to be exempt from the look-back method.

However, for alternative minimum tax purposes, all nonresidential contractors must recognize income under the percentage of completion method. Thus, many contractors must report look-back computations solely for alternative minimum tax purposes.

In many cases, the look-back method must be performed with all of its complexities simply to reflect that no liability is owed. Further, these computations reverse under these hypothetical rules so that these complexities must be addressed each and every year so that future years' computations can be later performed.

There are several reasons that the look-back method should be eliminated. First, the look-back method is revenue neutral and does not meet its initial function of a watchdog on the construction industry. We do not see the look-back method affecting nonresidential contractors' estimates under the percentage of completion method. The strict lending and credit requirements of surety bond companies and banks provide a strong incentive for contractors to not underestimate revenue. Financial integrity is in the best interest of the contractor. Construction contractors necessarily apply good business sense and experience to achieve successful estimates.

Second, the current de minimis rules are inadequate to alleviate the complex administrative burdens.

Third, the look-back method is a redundant enforcement tool. There are already significant penalties in the Internal Revenue Code to address situations where contractors underestimate or underreport their income.

Fourth, contractors do not have the financial management tools to implement complexities like the look-back method. Unnecessary overhead and professional fees are the result.

Fifth, the look-back method should not target construction contractors. We are not convinced it was the intent of Congress in 1986 to burden nonresidential construction contractors with the look-back method.

Attempts at look-back exemptions for those hardest hit by these burdensome calculations have proven ineffective, especially in light of the necessity of performing look-back for alternative minimum tax purposes. Thus, look-back is superfluous as an enforcement mechanism.

Because of the unique nature of the construction industry, the look-back method has no real relevance and is revenue neutral. Even when, as is frequently the case, look-back calculations result in a refund or even a payment, the compliance costs are such that look-back consistently puts the construction industry at a disadvantage.

ABC believes that the look-back method should be eliminated for nonresidential construction contractors filing tax returns after January 1, 1995. ABC welcomes the opportunity to work with the Members of the Committee to eliminate this burdensome and unnecessary extra check on construction contractors.

I thank you for your consideration of this proposal. This concludes my prepared testimony.

[The prepared statement follows:]

STATEMENT OF RICH SHAVELL
ZELENKOFSKE, AXELROD & CO.
ON BEHALF OF ASSOCIATED BUILDERS & CONTRACTORS

My name is Rich Shavell. I am Senior Manager and Director of Construction Tax Advisory Services for the accounting firm of Zelenkofske, Axelrod & Co. in Jenkintown, Pennsylvania. I am pleased to have the opportunity to speak before the Ways and Means Committee today on the requirement that monies derived to nonresidential construction contractors from long term contracts be subject to the "look-back" method of accounting. The look-back requirement has been a matter of longstanding concern for the members of Associated Builders and Contractors (ABC). ABC believes that look-back should be eliminated for construction contractors. Its calculations place unnecessary burdens on the construction industry and yet its effect on Treasury is revenue neutral.

ABC represents 18,000 contractors, subcontractors, and suppliers in 81 chapters nationwide who share the merit shop philosophy of awarding construction contracts to the lowest responsible bidder regardless of labor affiliation, through open and competitive bidding. With merit, or open shop, contracting representing approximately 80 percent of the construction market, ABC is proud to be their voice.

THE LOOK-BACK RULE

As you may be aware, the look-back rule for long-term contracts using percentage of completion method (PCM) accounting grew out of the 1986 Tax Reform Act. The rule requires that when a contract is completed, the contractor must "look-back" and substitute the actual costs and revenues for the estimated costs and revenues used in prior years' PCM computations. This must be done for each year the contract was in progress under the percentage of completion method of accounting. Small firms in many cases are exempt from the PCM for regular tax purposes, but must continue to apply look-back for alternative minimum tax (AMT) purposes.

Tax liability for all years of the contract's life must be recalculated for both regular tax and alternative minimum tax purposes. Then, the differences are determined between the taxes paid each year and taxes that would have been paid each year had final rather than estimated amounts been available. Then more calculations are required using daily compounded interest rates on the differences to determine whether interest is owed to or due from Treasury.

The look-back calculations can number quite literally in the thousands. Filling out the look-back form can take upwards of 15 hours (and has been known to reach 30 hours), and that does not include the many more hours of calculations made before the contractor reaches the point of filling out the form.

For example, in a simple two year contract with a price of $1 million, look-back calculations must be performed several times. The contractor must look-back after the first year and compare his estimated costs to the actual costs. These calculations must be repeated after the second year. Then if the contract is accepted, but some additional work is requested that stretches into the following year, look-back must again be reapplied under the post-completion adjustment rules in the regulations. Additionally, under the post-completion rules any revenue (or cost) received through a claim or dispute after a contract is completed is subject to look-back.

CURRENT EXCEPTIONS TO LOOK-BACK ARE INSUFFICIENT

The current de minimis rule, which exempts contracts which are the lesser of $1 million or one percent of average gross revenues, is too narrow to be effective. Long term contracts are typically larger than $1 million, and a contractor would have to have one very low priced long term contract in comparison to all others to meet the one percent rule. Additionally, attempts to exempt smaller firms from look-back calculations have been unsuccessful due to the necessity of performing the calculations for alternative minimum tax purposes. For these reasons, ABC advocates the total elimination of look-back for construction contractors.

LOOK-BACK DUPLICATES OTHER ENFORCEMENT MECHANISMS

Look-back accounting is superfluous. Unlike situations in other industries, the price of the construction product is set on a very competitive basis before work begins.

The competitive bidding procedures that are inherent to the construction industry demand exacting estimates of costs and revenues. Construction contracts are often fixed priced with net income margins averaging one or two percent. This does not leave much room for imprecise estimates. Indeed, the percentage of completion method was designed to address deferrals of income by requiring contractors to recognize income based on the costs incurred to date. The percentage of completion method is burdensome enough with out adding a redundant compliance tool.

The strict lending and credit requirements of surety bond companies and banks provide a strong incentive to not underestimate revenue. Additionally, stiff penalties exist in the Internal Revenue Code for understatement of income tax. Financial integrity is in the best interest of the contractor. Construction contractors necessarily apply good business sense and experience to achieve successful estimates.

Although I do not have the resources to provide you with a sophisticated study on the negative effects of look-back on the construction industry, I can tell you that in my years of experience in construction and with ABC on both the tax and legislative committees, I have found that construction contractors end up paying thousands of dollars to comply with look-back while it has virtually no impact on their recognition of revenue. Indeed, when I testified on this issue several years ago, Treasury testified that look-back is revenue neutral.

ELIMINATION OF LOOK-BACK IS REVENUE NEUTRAL

Elimination of look-back is a revenue neutral proposal. In fact, look-back was never intended to be revenue positive. Look-back was enacted for two reasons. First, it was intended to perform as an extra watchdog, working in conjunction with PCM to provide a deterrent to deferral. Look-back was also intended to assist contractors who estimate incorrectly, particularly large manufacturers using PCM.

For long term contracts the manufacturing or defense industries face quite a different situation than that found in the real property construction industry. For obvious reasons, it is far more difficult for the defense and manufacturing industries to estimate costs and revenues. However, the experience of the construction industry is that real property construction contractors are necessarily accurate in estimating their contracts. While look-back may help industries who have difficulties anticipating developments in long term contracts, it places excessive burdens on the construction industry and rarely results in significant monetary exchanges with Treasury.

CONCLUSION

Attempts at look-back exemptions for those hardest hit by the burdensome calculations have proven ineffective, especially in light of the necessity of performing look-back for alternative minimum tax purposes. Look-back is superfluous as an enforcement mechanism. Elimination of look-back is revenue neutral. Because of the unique nature of the construction industry, the look-back method has no real relevance. Even when, as is frequently the case, look-back calculations result in a refund or a payment, the compliance costs are such that look-back consistently puts the construction industry at a disadvantage. Associated Builders and Contractors believes that look-back accounting should be eliminated for nonresidential construction contractors filing tax returns after January 1, 1995.

ABC welcomes the opportunity to work with members of the Committee to eliminate this burdensome and unnecessary extra check on construction contractors. I thank you for your consideration of this proposal.

This concludes my prepared testimony. I would be pleased to address any questions from the Committee.

Chairman ARCHER. Thank you, Mr. Shavell.

Our next witness is Patricia Healy. And in the event that you were out of the room, if you have a written statement, without objection, it will be printed in its entirety in the record. You may proceed verbally to summarize. We would like you to stay within 5 minutes, if you will. I would say the same thing to Mr. Israeloff.

STATEMENT OF PATRICIA M. HEALY, COUNSEL, ON BEHALF OF UTILITY DECOMMISSIONING TAX GROUP AND NUCLEAR ENERGY INSTITUTE

Ms. HEALY. Thank you, Mr. Chairman. Good morning.

My name is Patricia Healy. I am a partner with the law firm of Reid & Priest.

I am testifying today on behalf of the Utility Decommissioning Tax Group and the NEI, Nuclear Energy Institute. The Utility Decommissioning Tax Group includes 26 nuclear electric utility companies and 28 investment management firms and trustees involved with nuclear decommissioning funds. NEI has approximately 300 member companies, including all U.S. nuclear electric utilities that operate the Nation's facilities.

The members of the Utility Decommissioning Tax Group and NEI strongly support the elimination from the Internal Revenue Code of the requirement that a utility company seek and obtain a ruling from the IRS before being permitted to make a deductible contribution to qualified decommissioning funds under code section 468A. This proposal is contained in H.R. 1637, the Nuclear Decommissioning Costs Simplification Act of 1995, which was introduced in this Congress by Representative Phil Crane.

This legislation has a single, unassailable purpose—to decrease unnecessary administrative costs that, under current law, are being borne both by the government and by taxpayers alike. This result can be achieved without any revenue loss to the government or any adverse effect on nuclear plant safety.

Nuclear companies collect moneys to pay for future decommissioning costs paid by customers over the life of the plant. In 1984 Congress enacted code section 468A, which allowed a utility company to currently deduct its contributions to a qualified decommissioning fund that it established for a nuclear power plant. The fund is a trust to which the utility contributes amounts that it collects from its customers that will be used exclusively to pay for future decommissioning costs of a nuclear plant. If a nuclear utility has multiple reactors, it has got to establish separate funds for each plant.

Code section 468A contains a unique feature. It requires the taxpayer to request and obtain from the IRS a schedule of ruling amounts, a private letter ruling for each plant that it owns before it can make a contribution to that fund. A schedule of ruling amounts is requested, considered, and issued by the national office of the IRS. The schedule, in essence, represents advance approval by the IRS of the taxpayer's annual deductions for nuclear decommissioning costs.

This requirement to obtain an advance ruling in code section 468A is the only instance in the Tax Code in which the taxpayer is required to obtain a ruling in advance before claiming a deduc-

tion on its tax return. The current procedures for obtaining schedules of ruling amounts are burdensome and expensive. They provide absolutely no benefit to the government in terms of revenue raising or enhancement of compliance. Each request for a schedule carries a user fee of approximately $3,600. The fee did not exist in 1984 when code section 468A was enacted.

Where companies have multiple reactors, they must submit multiple requests and pay multiple user fees, even where the documentation is similar if not identical. In addition to the user fees, taxpayers are obligated to hire outside counsel or use internal resources to prepare the ruling request and process them with personnel at the IRS.

The ruling process is a recurring one. Typically, the utility company must seek a revised schedule of ruling amounts each time its public service commission adjusts the amount of decommissioning costs included in rates. This can occur as frequently as annually.

In addition, in a number of circumstances, the IRS has arbitrarily limited schedules of ruling amounts to 5-year periods, thus requiring a taxpayer to make a total of eight filings over the typical 40-year life of the plant. The IRS has issued over 400 schedules of ruling amounts since code section 468A was enacted. We are aware of no instance in which the IRS has denied the taxpayer's request for the schedule of ruling amounts, thus demonstrating that the ruling process itself does not enhance taxpayer compliance.

The ruling procedure and the associated costs should be eliminated. The proposed legislation, H.R. 1637, would do this. The computation of the ruling amounts would not change. The amount of the deductible contributions would not change. The rules governing the operation of these decommissioning funds also would not change.

For the record, I note the description of this proposal prepared by the staff of the Joint Committee on Taxation erroneously states that it would repeal the provision that allows the IRS to disqualify a fund where the assets are not used for decommissioning or where there is self-dealing between the fund and the utility. H.R. 1637 does not contain these provisions, and the Utility Decommissioning Tax Group and NEI are not advocating these changes.

In sum, the effect of H.R. 1637 would be to treat the deduction under code section 468A like every other deduction in the Code. It would be audited in the normal course. The proposal would eliminate costly and unnecessary regulation. The Utility Decommissioning Tax Group and NEI believe this proposal makes good sense and should be enacted.

We thank you for your consideration of this matter. I am prepared to answer any questions of the Committee Members.

[The prepared statement follows:]

STATEMENT OF THE UTILITY DECOMMISSIONING TAX GROUP AND THE NUCLEAR ENERGY INSTITUTE TO THE HOUSE WAYS AND MEANS COMMITTEE

MISCELLANEOUS TAX REFORMS

PROPOSAL TO REPEAL THE RULING REQUIREMENT FOR NUCLEAR DECOMMISSIONING COSTS

SUBMITTED BY PATRICIA M. HEALY, ESQ.
PARTNER, REID & PRIEST LLP
JULY 10, 1995

I am Patricia M. Healy, a partner in the law firm of Reid & Priest LLP. I am submitting this statement on behalf of the Utility Decommissioning Tax Group ("Group") and the Nuclear Energy Institute ("NEI"). The Group is composed of 26 electric utility companies that have interests in nuclear power plants and 28 investment management companies and trustees that are involved with the administration of nuclear decommissioning funds. Attached as Exhibit A is a list of the members of the Group. NEI has approximately 300 member companies including all U.S. nuclear electric utilities that operate the nation's 109 nuclear power plants.

The Group and NEI wish to express their strong support for the proposal to eliminate from the Internal Revenue Code ("Code") the requirement that a utility company seek and obtain a ruling from the Internal Revenue Service ("Service") before being permitted to make deductible contributions to a qualified nuclear decommissioning fund under Code section 468A. This proposal is contained in H.R. 1637, the Nuclear Decommissioning Costs Simplification Act of 1995, which was introduced in this Congress by Representative Phil Crane (R-Illinois).

This legislation has a single, unassailable purpose--to decrease unnecessary administrative costs that, under current law, are being borne by both the Service and taxpayers alike. Achieving this purpose would result in absolutely no revenue loss to the government nor in any adverse effect on nuclear plant safety.

By way of background, Code section 468A was enacted in 1984 as an exception to the economic performance rules for deductions (which also were enacted in 1984). Section 468A permits a utility company to deduct its contributions to a "qualified" nuclear decommissioning fund that it has established for a nuclear power plant. A qualified nuclear decommissioning fund is a trust to which a utility contributes amounts that it collects from its customers to pay for decommissioning a nuclear plant at the end of its useful life. A utility company must establish a separate qualified nuclear decommissioning fund with respect to each nuclear plant in which it has an ownership interest.

The amount that may be contributed in a given year to a qualified nuclear decommissioning fund is limited by Code section 468A to the lesser of the "cost of service amount" or the "ruling amount." The cost of service amount is the amount of decommissioning costs for the associated nuclear plant that the utility company is authorized to recover from its customers through the rates it charges. The ruling amount is computed under a regulatory formula which is designed to do two things: (1) assure that contributions are made no more rapidly than on a "level" annual basis and (2) limit the annual contribution to that portion of decommissioning costs that is allocable to the life of the nuclear plant after 1984, the year of enactment of section 468A.

Code section 468A, however, contains a unique feature. It requires a taxpayer to request and obtain from the Service a "schedule of ruling amounts" before making any contributions to a qualified nuclear decommissioning fund. A schedule of ruling amounts is requested, considered and issued under the Service's rules governing private letter rulings. A schedule of ruling amounts represents the Service's advance approval of the taxpayer's deduction for nuclear decommissioning costs. The requirement to obtain a schedule of ruling amounts is the only instance in the Code in which a taxpayer is required to obtain an advance ruling before claiming a deduction on its income tax return.

The proposed legislation would simply eliminate the requirement to seek an advance ruling from the Service. The computation of the ruling amounts would not change in any way, so the amount of deductible contributions to qualified funds would not change in any respect. The rules governing the operation of qualified nuclear decommissioning funds would not change in any respect either.

Thus, the effect of the proposal would be to treat the deduction under Code section 468A like every other deduction in the Code. The taxpayer would compute and claim the deduction, which then would be subject to audit by the Service. Given the fact that all Federal income tax returns of nuclear electric utilities are audited each year by the Service as part of the Coordinated Examination Program, all deductions claimed under Code section 468A not only would be subject to examination by the Service, but in fact will be examined by the Service's auditors.

The current procedures for obtaining schedules of ruling amounts are extremely burdensome and expensive, particularly in view of the fact that they provide absolutely no benefit to the government in terms of revenue raising or enhancement of compliance. Each request for a schedule of ruling amounts must be accompanied by a user fee of $3,575 payable to the Service. In the case of companies having ownership interests in multiple nuclear power plants, a separate user fee must be paid for each power plant, even if (as is usually the case) the documentation for the computation of the ruling amounts is identical. In addition to the user fee, taxpayers are obliged to hire outside counsel or to use internal resources to prepare the ruling requests and to process the ruling request with personnel at the Service.

The ruling process is a recurring one: a utility company typically must seek a revised schedule of ruling amounts for each of its nuclear plants each time its public service commission adjusts the amount of decommissioning costs included in its rates (usually every few years, although some companies must do so every single year). In addition, in a number of circumstances, the Service has arbitrarily limited schedules of ruling amounts to five-year periods, thus requiring a taxpayer to make a total of eight filings over the typical 40-year operating life of a nuclear plant.

The Service has issued over 400 schedules of ruling amounts since Congress enacted Code section 468A. Our firm has handled approximately 275 of these requests. We are aware of no instance in which the Service has denied the taxpayer's request for a schedule of ruling amounts, thus demonstrating that the ruling process itself does not enhance taxpayer compliance. This ruling procedure and the attendant costs for both the government and taxpayers should be eliminated.

The proposal contained in H.R. 1637 will eliminate costly and unnecessary regulation, without compromising the public fisc or nuclear safety in any way. It makes good sense and should be enacted.

SUPPLEMENTAL STATEMENT OF THE UTILITY DECOMMISSIONING TAX GROUP AND THE NUCLEAR ENERGY INSTITUTE TO THE HOUSE WAYS AND MEANS COMMITTEE

MISCELLANEOUS TAX REFORMS

PROPOSAL TO REPEAL THE RULING REQUIREMENT FOR NUCLEAR DECOMMISSIONING COSTS

SUBMITTED BY PATRICIA M. HEALY, ESQ.
PARTNER, REID & PRIEST LLP
JULY 27, 1995

I am Patricia M. Healy, a partner in the law firm of Reid & Priest LLP. This submission on behalf of the Utility Decommissioning Tax Group (Group) and the Nuclear Energy Institute (NEI), supplements my statement dated July 10, 1995, concerning H.R. 1637, the Nuclear Decommissioning Costs Simplification Act of 1995.

On July 11, 1995, one day after I submitted my earlier statement, the staff of the Joint Committee on Taxation (JCT) released its description of miscellaneous tax proposals (JCS-19-95), which included a description of H.R. 1637 (although not specifically designated as such). The explanation of H.R. 1637 set forth in JCS-19-95 erroneously states that H.R. 1637 would repeal the provision of section 468A of the Internal Revenue Code (Code) that allows the Internal Revenue Service (IRS) to disqualify a qualified nuclear decommissioning fund where the fund's assets are not used for decommissioning or where there is self-dealing between the fund and the utility. See JCS-19-95, page 12 and 13.

The purpose of this supplemental statement is to state unequivocally that H.R. 1637 does not contain the foregoing provisions cited in the description of H.R. 1637 prepared by the JCT, and to affirm that the Group and NEI are not advocating these changes. As provided in my earlier statement, H.R. 1637 simply would eliminate the requirement that a taxpayer seek and obtain a ruling from the IRS before claiming a deduction for contributions to a qualified nuclear decommissioning fund under Code section 468A.

Chairman ARCHER. Thank you, Ms. Healy.
Mr. Israeloff, you may proceed.

STATEMENT OF ROBERT L. ISRAELOFF, CHAIRMAN, BOARD OF DIRECTORS, AMERICAN INSTITUTE OF CERTIFIED PUBLIC ACCOUNTANTS

Mr. ISRAELOFF. Thank you, Mr. Chairman.

Mr. Chairman and Members of this distinguished Committee, I am Bob Israeloff, a local CPA from Long Island, New York, and chair of the Board of Directors of the AICPA, American Institute of Certified Public Accountants.

The AICPA is the national professional organization of certified public accountants comprised of more than 320,000 members who advise clients on Federal, State, and international tax matters as well as prepare income and other tax returns for millions of Americans. Thank you for the opportunity to present our views today.

Prior to passage of the 1986 Tax Reform Act, partnerships, S corporations, and personal service corporations were, like today's C corporations, entitled to more flexibility in choosing fiscal years. Many such entities had years ending other than December 31, in numerous situations because their natural business year ended other than in December.

During the hearings on the Senate version of the 1986 act as a way to pay for liberalization of the low-income housing credit requested by Senator George Mitchell, these three types of entities were all required to adopt calendar years for tax purposes. The loss of the fiscal year election for some small businesses that are formed as S corporations and partnerships has proven to be a major disruption to their business operations because the calendar year end can fall in the middle of their busiest seasons. Taking time out to comply with this arbitrary requirement hamstrings their ability to maximize production, generate revenues, and create jobs.

In addition, because these businesses also use their tax year, which is now the calendar year, for financial reporting, they have to close their books as of December 31 and their independent accountants are faced with the need to undertake year-end audits and credit-compliance reviews for shareholders and creditors in the same few months as required for the preparation of tax returns. Consequently, these entities have found their accountants are least available at the time they are most needed.

The specific result on the CPA profession has been to intensely compress its workload. Financial statement audits, reviews and compilation, other financial work required to be done for banks and creditors and tax return preparation, all have to be addressed for these entities in the first 3½ months following the close of the calendar year. This has been a good deal more than a tax problem for CPA firms. While driven by a tax law change, the result has been a practice management problem of major proportions with many firms, especially small- and medium-sized firms such as mine, finding 65 to 75 percent of their annual workload falling between January 1 and April 15. To a CPA, it is the equivalent of scaling Mount Everest the first 4 months of the year and trekking through Death Valley the rest of the year.

In 1987, Congress enacted a limited improvement in the law—section 444—permitting electing entities to have a fiscal year ending in September, October, or November; but at the price of paying a deposit to the government, an interest-free loan, if you will, which approximated the tax to be deferred through election of the fiscal year. It has been recognized that the fiscal year deposit approach of Internal Revenue Code section 444 was of limited value, but it was not possible to obtain further relief because of the revenue neutrality requirements of the Budget Act in existence at that time, which requirements continue today.

As a result, the great majority of partnerships and S corporations on fiscal years in 1986, and those coming into existence thereafter, which would have elected fiscal years, are now operating on a calendar year.

The problem has become even more exacerbated with the enactment of the 1993 increase in individual tax rates. Because of the mechanics of section 444, the deposit presently payable on deferred income has increased with those individual rates and is now set at 40.6 percent, even though most owners of electing entities will themselves be in the 31- or 36-percent brackets, or even lower brackets. Thus, simple financial self-interest dictates that for most affected entities, the proper course of action is to terminate the fiscal year election, making the CPAs' workload compression problems even more intense.

On May 17, Hon. E. Clay Shaw introduced the Small Business Tax Flexibility Act of 1995, H.R. 1661, a bill that will lead to fairer tax treatment of small businesses and will help relieve the compressed workload forced on CPA's by enactment of the Tax Reform Act of 1986. The AICPA strongly endorses H.R. 1661 as it is intended to maintain the government's cash flow while at the same time providing a way for CPA's to credibly recommend to their partnership and S corporation clients that they adopt a fiscal year.

Under this approach, a partnership or S corporation may elect any fiscal year not limited to September, October, or November as under section 444. However, an entity electing a fiscal year would be required to pay in quarterly estimated taxes to the IRS on behalf of its owners, the partners, or shareholders. Rather than determining an individual owner's tax bracket, a flat statutory rate would be required to be paid on the entity's quarterly income.

The statutory rate at which these payments are made has been determined based on revenue neutrality needs. That rate is 34 percent for most electing entities and 39.6 percent for high-income entities. At the end of the partnership or S corporation year, when an information form schedule K–1 is sent to the owner, it would indicate, as it does today, the amount of income the owner must report on his or her form 1040. It would also, however, indicate how much estimated tax had been paid on behalf of the owner, and the owner would take credit for that tax in determining how much was owed from the IRS.

The bill also contains a de minimis section exempting entities that would owe less than $5,000 for the year from paying estimated tax. While this exempts a significant number of entities from the administrative aspects of the provision, it involves very little loss of revenue to the government.

Additionally, numerous sections are included to avoid the opportunity for abuse. While this adds some complexity to the provision, it only affects those attempting to stretch the provision beyond its purpose.

The AICPA is also committed to working with the IRS and Treasury to ensure that this legislation not only provides a solution to the problems created for small businesses and CPA's but can be administered in a reasonable manner. By allowing businesses to choose the fiscal year that best suits their business cycle, the business and the CPA will benefit. The government will get the money it expects and the business can choose the fiscal year it wants. Everyone wins.

Again, we thank the Committee for the opportunity to present our views, and I would be pleased to answer any questions.

Chairman ARCHER. My compliments to all three witnesses.

Are there any Members who wish to inquire?

Mr. CRANE. Mr. Chairman.

Chairman ARCHER. Mr. Crane.

Mr. CRANE. Mr. Chairman, I don't have an inquiry, but I wanted to thank Ms. Healy for acknowledging that H.R. 1637 would eliminate costly and unnecessary regulation.

Thank you.

Ms. HEALY. Thank you, Congressman.

Chairman ARCHER. Any other Member?

Mr. Laughlin.

Mr. LAUGHLIN. Mr. Shavell, I noticed in your testimony, you talked about the elimination of look-back as revenue neutral. Do you have any information about the cost to the members of your industry of the preparation of that provision?

Mr. SHAVELL. Cost, meaning administrative costs?

Mr. LAUGHLIN. Yes, the preparation costs for that provision.

Mr. SHAVELL. Our firm services over 120 contractors and the cost of doing look-back is always an issue for our construction clients.

Mr. LAUGHLIN. That is the cost of trying to determine, what is it per client, or a ballpark——

Mr. SHAVELL. It depends on the volume of contracts, because you are computing look-back contract by contract. To use a simple example, assume I have a contractor who has, say, 10 to 15 contracts that are going to be subjected to the look-back method. I would estimate that the typical fee would be in the neighborhood of $1,500 to $2,500. This is in addition to preparing tax returns.

Mr. LAUGHLIN. That is what I was trying to determine, what was the cost, either per contract or per contractor, of preparing the look-back provisions.

That is all I have.

Thank you, Mr. Chairman.

Chairman ARCHER. Mr. English.

Mr. ENGLISH. Thank you, Mr. Chairman.

Mr. Shavell, I have enjoyed your testimony. I have been very concerned about the impact of the look-back provision on contractors in Pennsylvania, and we appreciate your coming down today to testify. I have a couple of specific questions.

There are a number of de minimis rules currently in the Code to alleviate precisely this kind of a situation. Have any of them

been effective in reducing the burden of look-back, and is simply an expansion of the de minimis rules a possible alternative?

Mr. SHAVELL. The de minimis rules have not been effective, is the straight answer. The problem is that a contractor is not exempted from performing the look-back method with the de minimis rules. The de minimis rules will exempt certain contracts from going through the computations.

The rules don't exempt that many contracts to begin with, and furthermore, you still have to go through the computation to determine whether those specific contracts can be exempted. In essence you are going through a lot of effort to find out if you can throw out a few smaller contracts from the computations.

Mr. ENGLISH. Does the volume of business have any effect on the requirement that contractors do a look-back process?

Mr. SHAVELL. That is the most frustrating point. The Code provides an exemption from the percentage of completion method for contractors that meet certain requirements. We are talking about the small contractor exemption under section 460(e). If the contractor's average gross annual revenue is under $10 million, they do not have to report on the percentage of completion method for regular tax purposes.

The problem is that for alternative minimum tax purposes, they have to use the percentage of completion method, thereby using estimated profit computations. The look-back method also applies to those alternative minimum tax computations because that is where the small contractor is performing the percentage of completion computations. If you are considering a small contractor, that you would ordinarily believe would be exempted from such complex computations, the regulations say that they are required to do those computations for alternative minimum tax purposes.

Mr. ENGLISH. What has been your experience with IRS enforcement of the look-back provision?

Mr. SHAVELL. Last year I had the distinct pleasure of speaking at an AICPA function in Las Vegas on the construction industry and certain tax issues. On this panel I had the opportunity to ask the audience whether or not they had faced any enforcement measured on their clients by the Internal Revenue Service. It was obvious—the fact was that nobody had faced any enforcement. Our experience has been that this is so complex that the Internal Revenue Service, I believe, has some difficulty in enforcing the rules because the rules are so complex themselves.

Mr. ENGLISH. What size payments and refunds have you seen?

Mr. SHAVELL. If the contractor is a small contractor doing under $10 million, you are seeing small payments in maybe the $800 range, maybe $300 refunds, $500 refunds. If you see a large contractor, the numbers are typically offsetting, and again you are seeing smaller and smaller refunds and payments in relationship to the volume of the business. It is just an insignificant number.

Mr. ENGLISH. In the time remaining, can you give us a sense of how look-back came about, how it was put in the Code as it applies to contractors?

Mr. SHAVELL. What happened was that in the middle eighties, there was concern that the completed contract method was being abused by certain long-term contractors, and I am not necessarily

just specifying the construction industry. Also, you have the aerospace and the defense industry that are required to use term-long contract methods, such as the completed contract method or the percentage of completion method.

In order to address the concern over the completed contract method, the method by which these taxpayers were recognizing revenue needed to be adjusted so there was a move toward a percentage of completion method. Unfortunately, this pulled in the entire construction industry as well. Later there was an exemption for home construction contractors so home construction contractors have been exempted from the percentage of completion method and also the look-back.

Mr. ENGLISH. Does this have a greater impact on your membership than, say, on Grumman?

Mr. SHAVELL. Absolutely.

Mr. ENGLISH. Thank you very much.

Thank you very much, Mr. Chairman.

Mr. SHAVELL. Thank you.

Chairman ARCHER. Mr. Portman.

Mr. PORTMAN. I thank the witnesses, and I have a brief question for Mr. Israeloff regarding the taxable year, the ability of sub S corporations and partnerships to elect any fiscal year. Having practiced with a lot of sub S corporations and partnerships as clients, I can fully appreciate the concern you raise. You said 65 to 75 percent of your workload occurs between January 1 and April 15.

I think it is something like 90 percent for some of the small accounting firms that I have had experience with, and it also seems to me that you would have a more even distribution of workload at the company level, the client level, with other professionals and at the IRS level, and there is a certain efficiency in that. Common sense would indicate that we ought to permit more flexibility. But I just wanted to probe a little bit as to how we do it.

You talked about quarterly payments being based on some statutory rate that would be set and it would be based on revenue neutrality. Can you expand on that a little and explain how that would work?

Mr. ISRAELOFF. Yes. Obviously, when a business—when an individual can report income in the year—1 year later on a fiscal year, in other words, for example, a June year, the income earned from July 1 through December 31 is not reported by that entity until the following June 30, so the owner would report it in the following year. There is a deferral, never a loss, a deferral of revenue to IRS. What we are trying to do is make the IRS, the government, whole by having the entity pay in an estimated tax on the earnings as the company goes along so that the government would get its money in, let's say, 1995, even though the owner wouldn't report the income until 1996. For revenue neutrality, the studies that have been done—we have a whole economic survey, right now the way the bill has been introduced, it has got a flat 34-percent statutory rate in the proposed legislation.

Mr. PORTMAN. That rate of 34 percent is based on historical data.

Mr. ISRAELOFF. Yes, all historical data. The same data used, I understand, back in 1986 and bringing it all the way forward.

Mr. PORTMAN. In essence, although you don't address this specifically in your testimony, perhaps you are not in a position to comment on it today, but in essence you are saying there would be no revenue impact based on the historical data that the Joint Tax Committee staff or some other entity might use to analyze the provision, because you would, in a sense, be ensuring that the government would continue to have the revenue flow through the flat statutory rate.

Mr. ISRAELOFF. I am prepared to say exactly that. We have done the studies and we feel that the 34-percent statutory rate will make the government whole. In addition, there is a provision in there that says if a business has owners that average more than a $250,000 income per owner from that business, which is a very large S corporation or partnership, then the statutory rate would be 39.6 percent, equal to the highest individual rate. We have tried to put everything in the bill that provides security to the government that the revenue flow will be there.

Mr. PORTMAN. That sounds like sort of the flat tax proposals I have heard of. Flat tax, but at an incremental level.

I thank you and thank the Chairman.

Chairman ARCHER. Thank you.

We have a 15-minute vote, with 10 minutes still remaining on the floor of the House, to be followed by a series of 5-minute votes. I hesitate to start the next panel when we can only stay here for about another 5 minutes before we have to leave for this first 15-minute vote. The Chair will recess the Committee until the conclusion of the 5-minute votes.

We don't know how long that will be and I apologize for that to our next set of witnesses. But there is no other alternative.

We will recess now to vote. We will come back immediately after the beginning of the last 5-minute vote.

The Committee will stand in recess.

[Recess.]

Chairman ARCHER. The Committee will come to order.

We are going to try again, although we expect more votes on the floor of the House.

If we could ask our next panel to be seated, we have Charles Smith, president of Smith Management Co., Houston, who represents the National Automobile Dealers Association; Doug Metz, managing director, Wine & Spirits Wholesalers of America; John Huber, counsel, Petroleum Marketers Association of America; and Edwin L. Harper, president, chief executive officer of the Association of American Railroads.

If you gentlemen would have seats at the witness table, I will be pleased to hear your presentations. Hopefully, the Committee will make up in quality what it lacks in quantity with the number of Members who are here.

I do apologize to you because we never know when these votes will come up, and obviously, we have got to get over there and make the votes when they do.

Mr. Smith, would you like to lead off?

I suppose I should formally introduce you because you are my constituent from Houston, Texas, and we are delighted to have you before us today.

I would say to all of you that, as I mentioned to other witnesses, if you have a statement in writing, without objection, the entire statement will be entered into the record, and you may proceed verbally, limiting your verbal presentation to 5 minutes.

Mr. Smith, here we go again. Would you like to commence?

STATEMENT OF CHARLES M. SMITH, PRESIDENT, SMITH & LIU MANAGEMENT CO., HOUSTON, TEXAS, ON BEHALF OF NATIONAL AUTOMOBILE DEALERS ASSOCIATION AND AMERICAN INTERNATIONAL AUTOMOBILE DEALERS ASSOCIATION

Mr. SMITH. Sure.

Good morning, Mr. Chairman. It is a pleasure to be here.

I am Charles Smith, and I am an automobile dealer from Houston, Texas, representing both domestic and international franchises. My family has been in the business since 1917, and I am here to testify on behalf of thousands of American small businessmen and women across this Nation just like myself who have been unfairly shouldering the burden of our Nation's sole "luxury" tax, the 10-percent excise tax on the price of automobiles above $32,000.

The so-called "luxury taxes" were originally placed on certain boats, planes, jewelry, furs, and autos by Congress in 1990 in an effort to soak the rich by taxing the purchases of high-income individuals. In 1993, Congress repealed all luxury taxes except on autos. Congress became convinced that these taxes did not impact the high-income purchaser but instead caused harmful unintended consequences for American businesses.

While the wisdom of imposing the tax on autos is subject to the same question, it was not repealed simply because it raised too much revenue. The auto excise tax has had a significant adverse impact on the U.S. auto industry. While dealerships are not necessarily in jeopardy of closing down due to the excise tax, our already narrow profit margins have been further eroded by this tax.

I didn't come up to Capitol Hill armed with facts or figures from the Congressional Budget Office or the most popular think tank in town. I am merely a small businessman working hard, paying taxes, creating jobs in my community, and doing the best to live the American dream.

While I am not an expert on tax policy, I can tell you how this tax is affecting my business and the jobs in my dealerships. Mr. Chairman, the auto tax is a tax on small business. I have seen its effects on the bottom line.

Sales in my showroom have been jeopardized because after my customers have agreed to a price, I have to go back and say, by the way, you owe 10 percent excise tax on top of the agreed price. The intended target of the tax, the customer, sidesteps it by forcing me to pay all or part of the tax. They feel like it is a totally unfair tax.

You may think it is worth my paying the excise tax on each car to make a sale, but let me point this out: Auto dealerships in America realize an average of only $130 net profit per new vehicle retail, $130. Obviously, a few hundred dollars in excise tax on each new vehicle can push already razor-thin profits into the red.

As the price of the vehicles has risen over the past few years, I have seen the effects of the tax spill over onto vehicles which

American middle-class families demand to meet their transportation needs. Today, vehicles impacted by the tax include the popular vehicles, minivans, sports utilities, and family sedans. Models of the Ford Explorer and the Oldsmobile Aurora, for example, now stand above the threshold of the tax. The consumers that purchase these vehicles are not the wealthy we hear so much about, but middle-class Americans trying to purchase a vehicle to fit their transportation needs.

This tax is also fundamentally unfair and unjust. Today, the average price of a new car is $20,000. It is a strange tax policy that does not call the $1 million yacht or $500,000 diamond necklace or $75,000 fur coat a luxury item but targets a $32,000 car. Obviously, something is wrong.

I understand this Congress is looking to cut the Federal deficit. I wholeheartedly—and I repeat, I wholeheartedly support this effort and simply ask Congress not to do it on the backs of the American small business auto dealers. All we ask is that the Committee consider phasing down of this unfair tax so that we can sunset it at its scheduled date in 1999.

Mr. Chairman, auto dealers like me have paid their fair share, and we will continue to pay our fair share in the future under this proposal. I commend Congresswoman Dunn and Congressman Levin for their efforts in support of the phasedown and sunset on the auto tax and several other Members of the Committee who have indicated a willingness to move ahead on the issue.

Mr. Chairman, as I have previously pointed out, small business auto dealers have been paying the price for a flawed tax for the past 5 years. Let's wind down this unfair tax, remove the burden of a national sales tax on a single industry and allow small businesses' entrepreneurs to drive the engine of growth and prosperity in this country.

On behalf of the members of the National Automobile Dealers Association and the American International Automobile Dealers Association, I urge this Committee to support a phasedown and sunset of the auto tax.

I would like to add for the record that this proposal I have addressed today enjoys the full support of General Motors, Ford Motor Co., and all international automakers.

Thank you for allowing me this opportunity to appear before you, and I will happily answer any questions.

Chairman ARCHER. Thank you, Mr. Smith.

Mr. Metz, you may proceed.

STATEMENT OF DOUGLAS W. METZ, MANAGING DIRECTOR, WINE & SPIRITS WHOLESALERS OF AMERICA

Mr. METZ. Thank you, Mr. Chairman.

My name is Doug Metz, managing director of the Wine & Spirits Wholesalers of America. Our members under license purchase for resale over 90 percent of the distilled spirits distributed in the 32 licensed States, the District of Columbia, and Puerto Rico. We appreciate the opportunity to testify in support of a simple revenue-neutral change in the method of paying the Federal excise tax on distilled spirits.

This proposal was advanced 10 years ago, and the two colleagues immediately to your right and the gentleman to your left were supporters of the measure. It failed largely because of an inability to provide a revenue-neutral offset to the cost of the revenue lag.

We believe we have solved that this year, Mr. Chairman. This proposal would consolidate responsibility for collection of the Federal excise tax on distilled spirits in one and not two Federal agencies. It would reduce a major regulatory burden by eliminating dual agency supervision of distilled spirits warehouses.

We have appended to our record photographs showing the arbitrary requirement of construction of a cage to be bonded as a part of the warehouse facility. On one side of the cage Customs has jurisdiction. On the other side of the cage, the BATF, Bureau of Alcohol, Tobacco and Firearms. We would eliminate that.

The proposal would simplify collection and compliance by combining the wholesale point of payment of both Federal and State excise taxes on distilled spirits. And last, it would end the favored treatment of imported bottled products which makes wholesaler costs for competing domestic products some 40 percent higher.

The problem that I am addressing today is one of great importance to hundreds of small American businesses. Currently, wholesalers can purchase foreign bottled distilled spirits "in-bond," that is, tax free, paying the Federal excise tax to the Federal Government directly after sale to a retailer. In contrast, when a wholesaler buys domestically bottled distilled spirits, which is nearly 86 percent of his total spirits inventory, the price includes the Federal excise tax prepaid by the distiller.

The inequity caused by this discrimination favoring foreign over domestic products means that hundreds of U.S. family-owned businesses increase their inventory financing costs, as I mentioned, by 40 percent when buying U.S. products. Under this proposal, wholesalers would be able to purchase domestically produced or bottled spirits "in-bond" as now permitted for competing foreign products.

It would allow suppliers to save the carrying costs on the tax which they bear pending payment by wholesalers in the 18 control States which operate their own liquor systems. The movement of the Federal excise tax point of payment on domestic spirits from the supplier to the wholesaler will create a one-time 60-day lag in tax receipts by the Treasury.

This revenue lag would be neutralized by requiring "All-In-Bond" electing companies annually on September 20, to make an estimated payment of excise taxes due in October and November based on tax payments for the same months for the preceding year.

In addition to the described benefits to hundreds of American wholesalers as well as suppliers of bottled distilled spirits and the 18 control States, the proposal offers significant advantages for the Federal Government.

First, it places responsibility for assuring tax collection and compliance with a single agency of jurisdiction over matters related to the sale of alcohol beverages, namely the BATF.

Second, it offers BATF an opportunity to streamline excise tax collections and minimize auditing practices by utilizing procedures already used by the States. Every wholesale purchaser of domestically bottled spirits currently pays excise taxes.

It reduces the regulatory compliance burden by eliminating the requirement for segregated warehouse supervision by two Federal agencies.

It offers significant overall savings to Treasury because the States perform the same function and there are opportunities for synergies and interaction with the States.

In conclusion, Mr. Chairman, I believe that this "All-In-Bond" proposal is a sound tax policy and offers an opportunity to benefit American business.

Thank you very much.

[The prepared statement and attachments follow:]

TESTIMONY OF DOUGLAS W. METZ
WINE AND SPIRITS WHOLESALERS OF AMERICA, INC.

Thank you, Mr. Chairman, for the opportunity to testify in support of a simple, revenue neutral change in the method of paying the federal excise tax on distilled spirits. This proposal would (1) consolidate responsibility for collection of this tax in one federal agency; (2) reduce a major regulatory burden by eliminating dual agency supervision of distilled spirits warehouses; (3) simplify collection and compliance by combining the wholesale point of payment of federal and state excise taxes on distilled spirits; and (4) end the favored treatment of imported bottled products which makes wholesaler costs for competing domestic products some 40 percent greater.

My name is Doug Metz, Managing Director of the Wine and Spirits Wholesalers of America (WSWA). WSWA members, under license, purchase for resale over 90 percent of the distilled spirits distributed in the 32 license states, the District of Columbia and Puerto Rico.

The problem that I am addressing today is of great importance to hundreds of small American businesses. Currently, wholesalers can purchase *foreign* bottled distilled spirits "in-bond" (tax-free), paying the federal excise tax (FET) to the federal government directly after sale to a retailer. In contrast, when a wholesaler buys *domestically* bottled spirits (nearly 86 percent of his total spirits inventory) the price includes the FET, pre-paid by the distiller.

The inequity caused by this discrimination (favoring foreign over domestic products) means that hundreds of U.S. family-owned wholesale businesses increase their inventory financing costs by 40 percent when buying U.S. products.

Under the proposal, wholesalers would be able to purchase domestically produced or bottled spirits "in-bond" as now permitted for competing foreign products. It would allow suppliers to save FET carrying costs borne pending payment by wholesalers and the eighteen control states which operate their own liquor systems.

Movement of the FET payment point on domestic spirits from the supplier to the wholesaler will create a one-time, 60-day lag in tax receipts by the Treasury. This revenue lag would be neutralized by requiring All-In-Bond electing companies annually, on September 20, to make an estimated payment of excise taxes due in October and November based on tax payments for the same months of the previous year.

In addition to the described benefits to hundreds of American wholesalers as well as suppliers of bottled distilled spirits and the eighteen control states, the proposal offers significant advantages for the federal government. It:

- Places responsibility for assuring tax collection and compliance with the single agency of jurisdiction over matters related to the sale of alcohol beverages, namely the Bureau of Alcohol, Tobacco and Firearms (BATF).

- Offers BATF an opportunity to streamline excise tax collections and minimize auditing practices by utilizing procedures already used by states. Every wholesale purchaser of domestically bottled spirits currently pays state excise taxes.

- Reduces regulatory compliance burden by eliminating requirement for segregated warehouse supervision of spirits by two federal agencies, BATF and Customs.

- Offers significant overall savings to Treasury. The states already perform an excise tax collection function nearly as significant in dollar terms as the federal government's, and conduct audits at least once a year. The Treasury could piggy-back on state procedures with

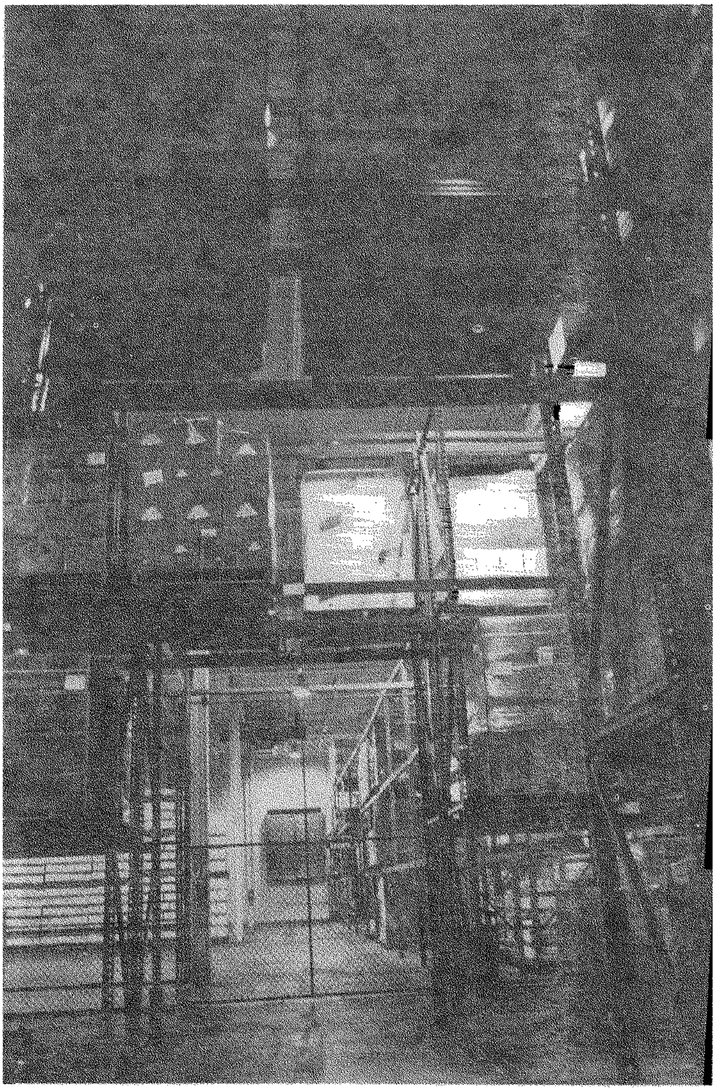
a high degree of confidence that all excise taxes are being collected. The use of joint excise tax reporting forms, with identical copies going to state agencies and the Treasury, offers cost saving opportunities.

- Restrains increases in tax collection points through minimum gallonage requirement and by operation of brand franchising contracts and state laws which qualify purchasers of distilled spirits at wholesale.

In conclusion, Mr. Chairman, I believe that this "All-In-Bond" proposal promotes sound tax policy by ending discrimination against domestic products while freeing up substantial working capital for U.S. family-owned businesses. In addition, it unifies the point of payment of both federal and state excise taxes, thus strengthening tax administration and compliance by providing parallel tax audit trails. "All-In-Bond" provides additional revenue protection in the form of annual estimated tax payments. It is revenue neutral. Attached to my written testimony are photographs depicting the regulatory burden resulting from the requirement to regulate warehouse facilities under dual agency supervision.

Mr. Chairman, I appreciate the Committee's time and trust that the Committee will include this proposal in the package under consideration.

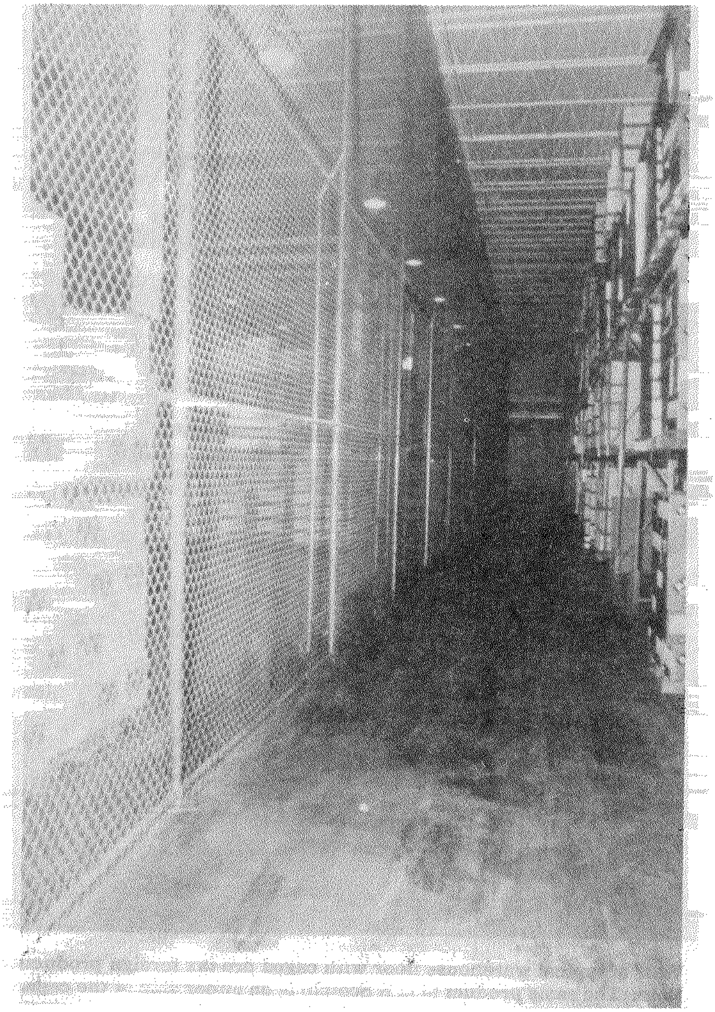
Attachments

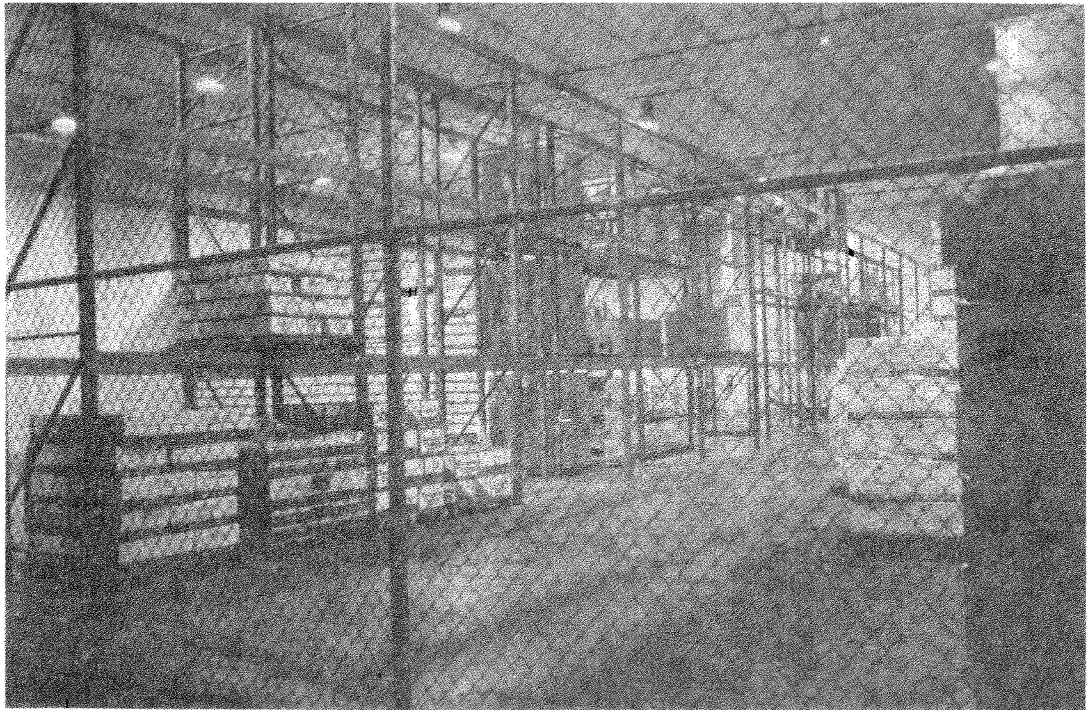


View of typical warehouse floor with caged pre-tax foreign products. Note: The same product (J & B Scotch) is on either side of the cage.

Bonded portion of the warehouse for pre-tax foreign products (supervised by U.S. Customs).

Unbonded portion of warehouse for tax-paid domestic goods (supervised by BATF).





**Bonded portion of warehouse for pre-tax foreign goods.
Note inflexible, wasted space due to existing regulations.**

Chairman ARCHER. Thank you, Mr. Metz.

I have only a couple of minutes to go vote. Hopefully, there will be another Member of the Committee who will arrive shortly who will share the continuation of the hearing for this panel.

I would ask you if you would keep your seats, and we will recommence just as soon as we can.

Thank you.

[Recess.]

Ms. DUNN [presiding]. The Committee will reconvene.

Mr. Huber, I apologize for our break for votes, but please do continue with your testimony.

STATEMENT OF JOHN HUBER, PETROLEUM MARKETERS ASSOCIATION OF AMERICA

Mr. HUBER. Thank you.

On behalf of the PMAA, Petroleum Marketers Association of America, I would like to express our support to this Committee in its examination of many tax issues affecting small businessmen and petroleum marketers.

PMAA has two primary concerns with the present tax system. The first involves the excise tax collection system for motor fuels. The second involves the efforts of the Internal Revenue Service to restrict access to depreciation schedules for marketers.

First, we would like to congratulate and express our thanks to Congressmen McCrery, Jacobs, Herger, and English for their efforts to resolve many of the outstanding issues relating to motor fuel excise taxes.

As you know, in 1993, the collection point for diesel tax collection was changed in an effort to reduce evasion and increase revenues. Unfortunately, these changes have had a direct and substantial impact on the marketers that PMAA represents.

We believe that these impacts were not anticipated by the Congress and that it is appropriate to reexamine the tax collection system to mitigate the impact of these changes on petroleum marketers. We believe the modest changes that are included in H.R. 1947 can improve the tax collection system without compromising the tax.

PMAA's primary concern with the tax is its impact on marketers selling gasoline to State and local governments. These entities are entitled to purchase gasoline tax free. Unfortunately, marketers selling to them purchase the gasoline tax paid and sell it to them tax free and then apply for a refund of taxes from the IRS. These refunds take from 45 days to 4 months to process. The result is that marketers are floating interest-free loans to the government for a substantial period of time. H.R. 1947 would mandate that the IRS pay claims within 20 days or pay interest on the claim.

Additionally, H.R. 1947 would improve the refund situation for many classes of diesel users who must apply for their own refunds, including construction companies, loggers, and all the other miscellaneous users.

Intercity buses have also had a difficult time with refunds over the past year. H.R. 1947 would provide them with a method to buy diesel at the legal rate and eliminate their need to file claims with the IRS.

This bill would also improve the tax collection system for sales of diesel to noncommercial vessels. Under current law, these vessels must only buy undyed diesel fuel which is not available at many marinas.

PMAA would also encourage the Committee to consider two other areas of the excise tax collection system which need to be remedied.

We would like to direct the attention of the Committee to the expiration of 26 U.S. Code 6427(f) which allows marketers to file claims for refunds on gasoline which is blended with ethanol. We would encourage the Committee to take action to ensure that this provision does not expire October 1.

We would also like to direct the Committee's attention to a conflict between IRS regulations and how the industry does business. At this time, both gasoline and diesel are taxed upon removal from the terminal. The IRS has instituted a policy that the person owning the fuel immediately prior to its removal from the tank is a taxpayer and must remit the tax.

Under current regulations, the following transactions cannot occur. A marketer may not sell diesel tax free to a State and local government with an oil company credit card. A marketer who is licensed as an ethanol blender cannot buy gasoline at a tax-reduced rate at an exchange terminal. We believe that the position holder concept rule adopted by the IRS could be greatly improved by providing necessary flexibility.

PMAA would now like to draw your attention to an issue regarding depreciation of facilities used to market petroleum products. Under the modified accelerated cost recovery system, petroleum marketing facilities are entitled to depreciate the real property over 15 years. This schedule is reflective of actual practice in the industry and the typical useful life of a gasoline station.

However, the IRS has issued audit guidelines which indicate that if over 50 percent of the floor space of a gasoline convenience store sells nonautomotive items, then the building must be depreciated over 39 years. Such a policy has been established even though the majority of revenues from these buildings comes from gasoline or diesel sales and even though the appearance of the building and property clearly indicates that it is a service station. This policy will be particularly hard on small business petroleum marketers.

Again, we thank the Chairwoman and the Members of this Committee for their concern and interest in resolving many outstanding issues. We will gladly respond to any questions that you may have.

[The prepared statement follows:]

TESTIMONY OF JOHN HUBER
PETROLEUM MARKETERS ASSOCIATION OF AMERICA

On behalf of the Petroleum Marketers Association of America, I would like to express our support to this committee and its examination of many tax issues affecting small businessmen and petroleum marketers. PMAA is a federation of 41 state and regional trade associations representing more than 10,000 independent petroleum marketers throughout the United States. These marketers sell in excess of 40 percent of the gasoline, 75 percent of the home heating oil and 60 percent of the diesel fuel consumed in this country. Eighty-nine percent of PMAA's membership is classified as small business under size categories established by the Small Business Administration.

PMAA has two primary concerns with the present tax system. The first involves the excise tax collection system for motor fuels. The second involves the efforts of the Internal Revenue Service to restrict access to depreciation schedules for marketers that are more attractive and more reflective of actual business practices.

First, we would like to congratulate and express our thanks to Congressmen McCrery, Jacobs and Herger for their efforts to resolve many of the outstanding issues relating to motor fuel excise taxes. As you know, in 1993 the collection point for diesel tax collection was changed in an effort to reduce evasion and increase revenues. Unfortunately, these changes have had a direct and substantial impact on the marketers that PMAA represents. We believe that these impacts were not anticipated by the Congress and that it is appropriate to reexamine the tax collection system to mitigate the impact of these changes on petroleum marketers. We believe the modest changes that are included in H.R. 1947 can improve the tax collection system without compromising the tax.

PMAA's first and primary concern with the tax is its impact on marketers who are selling gasoline to state and local governments and non-profit educational organizations. These entities are entitled to purchase gasoline tax free. Unfortunately, marketers selling to them must purchase the gasoline tax paid and then sell it to them tax free and apply for a refund of taxes from the Internal Revenue Service. These refunds may take from 45 days to four months to process. The result is that marketers are floating interest free loans to the government for a substantial period of time. H.R. 1947 would mandate that the IRS pay claims within 20 days or pay interest on the claim. This would encourage the IRS to pay the claims more quickly, and have no impact on taxes collected.

Additionally, H.R. 1947 would improve the refund situation for the many classes of diesel users who must apply for their own refunds. Construction companies must often buy diesel tax paid, even though they use it in a tax free manner. Under current law they can only apply quarterly for these refunds, and the Service is under no obligation to process their claims rapidly. H.R. 1947 would ensure that these small businesses recover their excess tax payments quickly. Intercity buses have also had a difficult time with refunds over the past year. H.R. 1947 would provide them with a method to buy diesel at the legal rate, and eliminate their need to file claims with the IRS.

This bill would also improve the tax collection system for sales of diesel to non-commercial vessels. Under current law, these vessels must only buy undyed diesel fuel, which is not available at many marinas. This provision would allow marinas to sell to all classes of diesel powered boats without having to install a second diesel pump.

PMAA would also like to direct the committee's attention to two other areas of the excise tax collection system which need to be remedied. First, we would like to direct the attention of the committee to the expiration of 26 U.S.C. 6427(f), which allows marketers to file claims for refund on gasoline which is blended with ethanol. We would encourage the committee to take action to ensure that this provision does not expire.

We would also like to direct the committee's attention to a conflict between IRS regulations and how the industry does business. At this time, both gasoline and diesel are taxed upon removal from the terminal. The IRS has instituted a policy that the person owning the fuel immediately prior to its removal from the tank is the taxpayer and must remit the tax. Unfortunately, this policy makes it impossible for many transactions to occur efficiently. Under current regulations, the following transactions cannot occur. A marketer may not sell diesel tax free to a state and local government with an oil company credit card. A marketer who is licensed as an ethanol blender cannot buy gasoline at a tax reduced rate at an exchange terminal. We believe that the position holder concept rule adopted by the Service could be greatly improved by providing flexibility and utilizing the tracking systems already in place in the private sector.

PMAA would now like to direct the attention of the committee to an issue regarding depreciation of facilities used to market petroleum products. Under the Modified Accelerated Cost Recovery System (MACRS), petroleum marketing facilities are entitled to depreciate the real property over fifteen years. This schedule is reflective of actual practice in the industry and the typical useful life of gasoline stations. However, the IRS has issued audit guidelines which indicate that if over fifty percent of the floor space of a gasoline/convenience store sells non-automotive items then the building must be depreciated over 39 years. Such a policy has been established even though the majority of revenues from these buildings comes from gasoline or diesel sales, and even though the appearance of the building and property clearly indicates that it is a service station. This policy will be particularly hard on small business and petroleum marketers. We would encourage the Committee to examine this issue and encourage the Service to develop guidelines which are more appropriate to the gasoline retail industry.

Again, we thank the Chairman and the members of this committee for their concern and interest in resolving many outstanding issues. We will gladly respond to any questions that you may have.

Ms. DUNN. Thank you very much, Mr. Huber.

Does anyone on the Ways and Means Committee wish to question the witnesses?

Apparently there are no questions. You did such a great job. We thank you all for coming and for your testimony.

Mr. Harper.

Mr. HARPER. Yes, may I make a statement?

Ms. DUNN. Oh, I am sorry. You haven't testified. I am very sorry, Mr. Harper. Of course, we would love to hear what you have to say.

STATEMENT OF EDWIN L. HARPER, PRESIDENT AND CHIEF EXECUTIVE OFFICER, ASSOCIATION OF AMERICAN RAILROADS

Mr. HARPER. Thank you very much, Madam Chairman.

I know it is kind of confusing taking the hand-off. Madam Chairman, Members of the Committee, I am Edwin L. Harper, president and chief executive officer of the Association of American Railroads. I appreciate this opportunity to address a threatened tax inequity against the Nation's freight railroads.

Unless the Congress acts before October 1, 1995, the railroads will be singled out as the only transportation mode paying 1.25 cents per gallon deficit reduction fuel tax. It simply is discriminatory to require the railroads to pay 1.25 cents more per gallon toward deficit reduction than their major competitors.

To avoid putting the railroads at a competitive disadvantage, the Association of American Railroads respectfully urges that all modes of transportation contribute equally to deficit reduction. This can be done fairly and with no revenue impact.

Prior to 1990, the sole purpose of the transportation fuels tax was to finance the Highway Trust Fund. Therefore, railroads, like other nonhighway users, did not pay this tax. The 1990 Reconciliation Act extended the fuel tax beyond its historical role as the highway user fee by introducing a 2.5-cent-per-gallon deficit reduction tax on transportation fuels.

The original 2.5-cent tax was payable by most transportation modes into the General Fund of the Treasury. The 1993 Reconciliation Act imposed an additional 4.3-cent-per-gallon deficit reduction rate on all surface transportation modes. At present, and until October 1, 1995, both railroads and trucks pay a combined deficit reduction rate of 6.8 cents; that is the 4.3- plus 2.5-cent-per-gallon deficit reduction rate of transportation fuel.

Under the 1993 Reconciliation Act, the 2.5 cents paid by highway users will be redirected into the Highway Trust Fund instead of being dedicated to deficit reduction. Thus, on October 1, 1995, the railroads will be left as the only payers of the original deficit reduction tax at a rate of 1.25 cents per gallon. Highway users will pay only 4.3 cents per gallon into the Treasury's General Fund, while railroads will pay 5.55; that is, the 4.3 plus the 1.25 cents per gallon for deficit reduction.

Unless the deficit reduction rate levied on the railroads is reduced to the level of its competitors, the railroad industry will be subjected to tax discrimination, as we have shown in a chart in the record that we have submitted. Currently, the railroads and the trucking industry both pay 6.8 cents. As of October 1, 1995, unless

the Congress acts, the railroads will be paying 5.55 cents and the trucking industry 4.3 cents, as well as inland waterways.

Tax equity begins with the recognition that the differences between the railroads and their competitors are in the funding of infrastructure. The Highway Trust Fund, funded by highway user taxes, provides the financing for the construction and maintenance of the public roads used by the trucking industry.

The railroad industry operates over its own privately funded, privately maintained rights of way with respect to which the industry also pays significant property taxes and interest on debt. Moreover, because the railroads do not enjoy, require, or want a trust fund, the diversion of the excise tax paid by trucks into the Highway Trust Fund should be balanced by a repeal of the fuel tax paid by the railroads.

If, on the other hand, a fuel tax is deemed appropriate for deficit reduction, all transporters should be required to make equal contributions. This can be done without creating a revenue shortfall.

First, if airlines are excluded from paying fuel taxes, a 0.028-cent-per-gallon tax on fuel used by the same transporters, including railroads, subject to the 1993 deficit reduction tax, would raise enough revenue to eliminate the 1.25-cent discriminatory tax on railroads. This proposal would allow fuel taxes paid by the other modes to be directed into their respective trust funds in a revenue-neutral manner, with all modes contributing equally to deficit reduction.

Alternatively, if airlines begin to pay the 4.3-cent-per-gallon fuel tax effective October 1, the railroad tax could be decreased from 5.5 cents to 4.3 cents, which the airlines would also be paying. This reduction would equalize fuel taxes at 4.3 cents for all modes and bring in revenues of $482 million.

Thank you. I would be happy to answer any questions you might have.

[The prepared statement follows:]

STATEMENT BY EDWIN L. HARPER
ASSOCIATION OF AMERICAN RAILROADS
ELIMINATION OF THE 1.25 CENT-PER-GALLON DEFICIT REDUCTION FUELS TAX
before the
UNITED STATES HOUSE OF REPRESENTATIVES
COMMITTEE ON WAYS AND MEANS
July 11, 1995

Mr. Chairman and members of the committee, I am Edwin L. Harper, president and chief executive officer of the Association of American Railroads. I appreciate this opportunity to address a threatened tax inequity against the nation's freight railroads. Unless Congress acts before October 1, 1995, the railroads will be singled out as the only transportation mode paying the 1.25 cents-per-gallon deficit reduction fuel tax. It is simply discriminatory to require railroads to pay 1.25 cents more per gallon towards deficit reduction than their major competitors. To avoid putting the railroads at a competitive disadvantage, the Association of American Railroads respectfully urges that all modes of transportation contribute equally to deficit reduction. This can be done fairly and with no revenue impact.

I. UNDER CURRENT LAW BOTH RAILROADS AND THEIR MAJOR COMPETITORS CONTRIBUTE EQUALLY TO DEFICIT REDUCTION.

Prior to 1990, the sole purpose of the transportation fuels tax was to finance the Highway Trust Fund. Therefore, railroads (like other non-highway users) did not pay this tax. The 1990 Reconciliation Act extended the fuel tax beyond its historical role as a highway user fee, by introducing a 2.5 cents-per-gallon deficit reduction tax on transportation fuels.

The original 2.5 cent tax was payable by most transportation modes into the general fund of the Treasury. The 1993 Reconciliation Act imposed an additional 4.3 cents-per gallon deficit reduction rate on all transportation modes. At present and until October 1, 1995, both railroads and trucks pay a combined deficit reduction rate of 6.8 (4.3 plus 2.5) cents-per-gallon of transportation fuel.

II. UNLESS CONGRESS ACTS BEFORE OCTOBER 1, 1995, RAILROADS WILL BE PLACED AT A DISADVANTAGE, BECAUSE THEY WILL BE REQUIRED TO PAY MORE TOWARDS DEFICIT REDUCTION THAN THEIR COMPETITORS.

Under the 1993 Reconciliation Act, the 2.5-cents tax paid by highway users will be redirected into the Highway Trust Fund instead of being dedicated to deficit reduction. Thus, on October 1, 1995, railroads will be left as the only payers of the original deficit reduction tax at a rate of 1.25 cents-per-gallon. Highway users will pay only 4.3 cents-per-gallon into the Treasury's general fund, while railroads will pay 5.55 (4.3 plus 1.25) cents-per-gallon for deficit reduction. Unless the deficit reduction rate levied on the railroads is reduced to the level of its competitors, the railroad industry will be subjected to tax discrimination as shown:

Transport-Mode	Current Tax Per-Gallon	October 1, 1995 Tax Per Gallon
Railroads	6.8 cents	5.55 cents
Trucking	6.8 cents	4.3 cents
Inland Water	4.3 cents	4.3 cents

III. EITHER THE DEFICIT REDUCTION FUEL TAX IMPOSED ON RAILROADS SHOULD BE REPEALED OR ALL MODES SHOULD BE ASSESSED A LOWER TAX RATE TO RESTORE BALANCE.

Tax equity begins with recognition of the differences between railroads and their competitors on infrastructure funding. The Highway Trust Fund, funded by highway user taxes, provides the financing for the construction and maintenance of the public roads used by trucks. The railroad industry operates over its own privately funded rights-of-way, with respect to which the industry pays significant property taxes and interest on debt. Moreover, because the railroads do not enjoy, require, or want a trust fund, the diversion of the excise tax paid by trucks into the Highway Trust Fund should be balanced by the repeal of the fuel tax paid by railroads.

If, on the other hand, a fuel tax is deemed appropriate for deficit reduction, all transporters should be required to make equal contributions. This can be done without creating a revenue shortfall. First, if airlines are excluded from paying fuel taxes, a .028 cent-per-gallon tax on fuel used by the same transporters, including railroads, subject to the 1993 deficit reduction tax would raise enough revenue to eliminate the 1.25-cent discriminatory tax on railroads. This proposal would allow fuel taxes paid by the other modes to be directed into their respective trust funds in a revenue neutral manner, with all modes contributing equally to deficit reduction

Ms. DUNN. Are there any questions?

Since there are no questions, we thank you, Mr. Harper, for your testimony.

Gentlemen, thank you very much for being here today.

We have a last panel with witnesses, Andrew Lawlor, Peter Roberts, and Harvey Shulman.

Welcome, gentlemen. Why don't we begin, even though Mr. Shulman is not yet here.

Dr. Lawlor, would you like to begin?

STATEMENT OF ANDREW C. LAWLOR, PH.D., ASSOCIATE VICE PRESIDENT FOR ACADEMIC PROGRAMS, ON BEHALF OF EDINBORO UNIVERSITY OF PENNSYLVANIA, EDINBORO, PENNSYLVANIA

Mr. LAWLOR. Certainly. Madam Chairman and Members of the Committee, thank you for holding these hearings on miscellaneous tax reform items, and thank you for allowing me to testify on behalf of Edinboro University of Pennsylvania.

I am here in support of an important education initiative. Our university, as a member of the Pennsylvania State System of Higher Education, supports legislation introduced by a Member of the Committee, Congressman Phil English, providing an exclusion for income earned on State prepaid tuition programs and encouraging States to adopt education savings accounts.

First, let me provide a brief introduction to public higher education and Edinboro University of Pennsylvania. Edinboro is located in northwestern Pennsylvania in Mr. English's congressional district. Edinboro was founded in 1857 as Edinboro Academy and has since become one of the 14-member institutions of the Pennsylvania State System of Higher Education. We currently offer over 100 different baccalaureate and master degree programs and have an enrollment of nearly 7,500 students. Under the leadership of President Foster F. Diebold, Edinboro University now generates locally an economic impact of comfortably more than $120 million annually, utilizing a $70 million annual budget.

As I am sure you will realize, of the 3,400 colleges and universities in the United States, roughly one-half are public sector institutions. Edinboro University is pleased to be among the public sector which, as a whole, educates approximately 80 percent of the total number of students in the United States.

I am here today for two reasons: First, to talk about the success of the tuition assistance program in Pennsylvania in order to encourage other States to adopt similar programs; and, second, to explain a tax problem our program will soon be faced with that Congressman English has been working to address and I hope the Committee will assist him with.

Our university is involved in a program established by the State of Pennsylvania in September 1993, the TAP, Pennsylvania Tuition Account Program. TAP is designed to provide for the advance purchase of college tuition credits in order to assist families of all income levels planning for the future educational expense of their children. TAP enables people to beat inflation and save money by locking in a price today to pay for tomorrow's tuition.

The TAP is administered by the Pennsylvania Treasury. The treasury is responsible for investing the money so that when a child is ready for college, the account will have increased in value to cover any increase in tuition. Though the program is designed to cover tuition of all State systems, State-related and community colleges in Pennsylvania, TAP credit may be applied to any accredited college in the United States.

TAP has been overwhelmingly successful for our State. On June 6 of this year, our State treasurer reported that Pennsylvania families have helped the program reach a new milestone by purchasing more than $30 million in TAP credits for their children's future college education. More than 11,300 children have been enrolled in the tuition prepayment program since it was started.

The problem we will soon face, however, concerns the tax liability of prepurchased credits. While this is a smart, successful program, unfortunately any increase in the value of the credits is subject to Federal income taxation. The purchaser will incur a tax liability when the credits are used or in the event of a refund.

While Pennsylvania's program is new and those participating are not able to use the credits, when they do, they will meet with a huge tax burden. Other States with similar programs are all too familiar with what a disincentive this liability is to the program, and States who are contemplating a program are thinking twice about it.

Congressman English has introduced bipartisan legislation to address this problem. The bill will encourage States to adopt college tuition savings programs and help States with existing programs by exempting the earnings on tuition credits of individuals participating in these programs from gross income for tax purposes. This is the main tenet of his legislation, the issue he submitted for Committee consideration, and the only drawback to programs like TAP.

I am hopeful that this legislation will prove to be the low-cost proposal that many of us who have worked on it feel it is. Nonetheless, I know this proposal has universal appeal and the potential to improve the quality of life for citizens of every State as well as providing a well-educated work force.

I urge the Committee's strong consideration of this proposal. It is time to stop penalizing families who are trying to save for their children's education.

Thank you for the opportunity to testify.

[The prepared statement follows:]

Dr. Andrew C. Lawlor, Edinboro University of Pennsylvania

Mr. Chairman and Members of the Committee, thank you for holding these hearings on miscellaneous tax reform items and thank you for allowing me to testify on behalf of Edinboro University in support of an important education initiative. Our university, as a member of the Pennsylvania State System of Higher Education, supports legislation introduced by a Member of the Committee, Congressman Phil English, providing an exclusion for income earned on State Prepaid tuition programs and encouraging states to adopt education savings accounts.

Edinboro University is located in Northwestern Pennsylvania in Mr. English's Congressional District. Edinboro was founded in 1857 as Edinboro Academy and has since become one of the 14 member institutions of the Pennsylvania State System of Higher Education. We currently offer over a hundred different baccalaureate and masters degree programs and have an enrollment of nearly 7,500 students. We generate locally an economic impact of comfortably more than $120 million annually, utilizing a 70-million dollar annual budget. As I am sure you realize, of the 34-hundred colleges and universities in the United States, roughly half are public sector institutions. Edinboro is pleased to be among the public sector institutions which, as a whole, educate approximately 80 percent of the total number of students in the United States.

I am here today for two reasons. First, to talk about the success of a tuition assistance program in Pennsylvania in order to encourage other State's to adopt similar programs, and second, to explain a tax problem our program will soon be faced with that Congressman English has been working to address and that I hope the Committee will assist him with.

Our university is able to take advantage of a program established in the State of Pennsylvania in September, 1993 -- the Pennsylvania Tuition Account Program, or TAP program. The TAP program is designed to provide for the advance purchase of college tuition credits in order to assist families of all income levels planning for the future educational expense of their children. The TAP program enables people to beat inflation and save money by locking in a price today to pay for tomorrow's tuition.

For the Pennsylvania program, a "tuition credit" equals 1/24th of the annual tuition at member colleges and universities for full-time undergraduate students. Tuition credit prices are set annually based on current tuition prices, expected tuition inflation and the expected earnings of the Fund. The program allows the credits to be used anytime after they mature, the minimum period being four years.

The TAP program is administered by the Pennsylvania Treasury. Treasury is responsible for investing the money so that when a child is ready for college, the account will have increased in value to cover any increase in tuition. Though the program is designed to cover tuition of all State System, State Related, and Community Colleges in Pennsylvania, TAP credits may be applied to any accredited college in the U.S.

The TAP program has been overwhelmingly successful for our State. On June 6th of this year our State Treasurer reported that Pennsylvania families have helped the program reach a new milestone by purchasing more than $30 million in TAP credits for their children's future college education. More than 11,300 children have been enrolled in the tuition pre-payment program since it was started.

While this program helps both the State investing the funds and the families who save, it also helps the enrollment of universities like Edinboro that are popular among middle-income families. The program assures that funds invested for college are available when needed without unexpected depletion, to assist those who are able to sacrifice to plan for the future. All too often we encounter individuals who have always wanted to attend college, but are financially unable to do so when the time comes. This situation not only hurts the individuals and their families, but it impedes our country's opportunity to have a well-educated citizenry.

The problem we will soon face concerns the tax liability of the pre-purchased credits. While this is a smart, successful program, unfortunately, any increase in the value of the credits are subject to Federal income taxation. The purchaser will incur a tax liability when the credits are used, or in the event of a refund. While Pennsylvania's program is new and those participating are not yet able to use the credits, when they do - they will be met with a huge tax burden. Other states with similar programs are all too familiar with the disincentive this liability is to the program, and states who are contemplating starting a program are thinking twice.

Congressman English has introduced bipartisan legislation to address this problem. The bill will encourage states to adopt college tuition savings programs and help states with existing programs by exempting the earnings on tuition credits of individuals participating in these programs from gross income for tax proposes. This is the main tenet of his legislation, the issue he submitted for Committee consideration and the only drawback to programs like TAP.

While I am unaware of many of the specifics of the administration of the program and the revenue implications of the desired exemption -- considering that Pennsylvania's program is only two years old and that the fund has to be allowed to mature for four years -- there would be no revenue impact for our State. I know, however, that States like Michigan and Florida have had similar programs that have been in existence for much longer periods of time. I am hopeful that this will prove to be the low-cost proposal that many of us who have worked on it feel it is. Nonetheless, I know that this proposal has universal appeal and the potential to improve the quality of life for citizens of every state -- as well as increasing their human resource potential.

I urge the Committee's strong consideration of this proposal. It is time to quit penalizing families who are trying to save for their children's education.

Thank you for the opportunity to testify.

Ms. DUNN. Thank you very much, Dr. Lawlor.
Mr. Roberts.

STATEMENT OF PETER A. ROBERTS, PRESIDENT, CHIEF EXECUTIVE OFFICER, COLLEGE SAVINGS BANK, PRINCETON, NEW JERSEY

Mr. ROBERTS. Yes. I would like to thank the Committee for giving me this opportunity to testify today.

Briefly, I am the founder, chairman, and chief executive officer of College Savings Bank, a New Jersey chartered FDIC-insured savings bank located in Princeton.

College Savings Bank was formed for the primary purpose of originating and marketing the patented CollegeSure CD, certificate of deposit, America's first commercially available and nationally marketed college cost prepayment product. I am also the inventor of the CollegeSure CD.

One solution to increasing the rate at which families save for college is to provide tax incentives. However, the tax incentives have to be carefully designed so as to permit college savers sufficient investment flexibility and encourage the participation of the private sector.

Legislation, H.R. 1328, recently has been introduced which would make State college savings programs exempt from Federal taxes. H.R. 1328 excludes from gross income any amounts distributed from qualified State educational savings plans when used to pay for college. Also, the bill exempts from Federal taxation State agencies that administer educational savings plans. In the short run, this might increase college-targeted savings and, we all hope, overall savings.

However, the bill has several significant flaws with long-term consequences. The new legislation converts taxable prepaid investment contracts into tax-exempt obligations with yields matching the pretax yields of U.S. Treasury and corporate obligations.

The bill, if enacted, would create preemptive State savings products which would crowd out virtually all private sector competition in the marketplace. This form of tax exemption will distort investor choices and divert the portion of the family's total savings earmarked for college away from other savings vehicles and into State savings plans.

Now, the effect of tax exemption on State savings plans is very different from the effect of tax exemption on municipal bonds. Whereas the market adjusts the yields on municipal bonds to be lower than the yields on taxable bonds, the yields on the obligations issued by State savings plans are reflective of the yields on the taxable investments in the trusts, and, because the obligations issued by the trust are nonnegotiable, they are not able to seek equilibrium to the yields on other tax-exempt instruments.

The tax-exempt feature creates a superordinary aftertax yield, preempts all comparable investments in the marketplace, and has the effect of flooding the market with subsidized above-market-rate and below-market-price instruments. In international banking parlance, they call this rate dumping.

The disintermediation and market-damaging effects caused by a preemptive savings product will discourage those entities that now

seek to help savers and reduce the range and variety of investment choices. What is more, in order to compete with federally subsidized obligations issued by the State savings plans, the rate on tax-exempt bonds will rise, thereby increasing the cost of capital to States and municipalities, and eventually budget deficits will swell and jobs will be lost.

Let's increase the college savings rate through market-based solutions. Congress should reject the approach in H.R. 1328 and instead focus on developing market-based incentives, provide college savers with a wide range of investment choices, maintain a level playingfield, reach a broad spectrum of eligible families, and create a competitive, healthy, and innovative marketplace that is necessary to maximize the national savings rate.

The best way to maximize the effectiveness of the tax benefits offered to college savers would be to extend such benefits to all savings placed in an ADSA, American dream savings account, such as the one proposed in H.R. 1215. All the legislation needs is—to be clarified to say that State prepaid tuition contracts are eligible investments, as any other investment that is eligible for an IRA.

Although there are no deductions for contributions to the ADSAs, earnings on the amounts deposited by parents in the ADSA would not be taxed and would be exempt from taxation when withdrawn to pay college expenses. The proposal contains contribution limits.

The ADSA helps level the playingfield for all market participants and avoids the market-damaging effects that may be caused by a preemptive government savings product. State savings plans could resolve their Federal tax problems via the ADSA. Like the present proposal, amounts distributed from State savings plans to pay higher education expenses generally would be exempt from Federal taxation. In addition, the tax asymmetry afflicting State college savings trusts would be resolved.

State college savings trusts generally are subject to tax on gross interest income currently but able to claim interest expense deductions only in future years when tuition benefits are paid out. This exposes the trust to enormous tax liabilities in the early years, which reduces their assets and net worth.

By placing the prepaid contract in the ADSA, the trust, without impacting the tax benefit to the family, can claim interest expense deductions in current years, offsetting the trusts taxable interest income. This would reduce the need to exempt the State educational savings trusts from Federal taxation as provided in the current proposal and greatly reduce the cost to the Federal taxpayer.

The ADSA is a market-based solution. It helps provide college savers with a wide range of investment choices, reaches a broad spectrum of eligible families, and creates a competitive and innovative marketplace necessary to maximize the college savings rate. Without increasing the size of government, ADSAs tap the abundant resources of the private sector to cultivate thrift among families with college-bound children and improve the rate at which families save. Furthermore, it addresses the present needs of public and private sector savings programs.

Thank you very much.

[The prepared statement and attachment follow:]

TESTIMONY OF PETER A. ROBERTS
COLLEGE SAVINGS BANK, PRINCETON, N.J.

I would like to thank Chairman Archer and other members of the Ways and Means Committee for giving me this opportunity to discuss the role that the private sector can play in helping to increase the rate of savings in the United States and, in particular, the rate of savings for a college education.

Briefly, I am the founder, chairman, and chief executive officer of College Savings Bank, a New Jersey-chartered, FDIC-insured savings bank located in Princeton.

College Savings Bank in 1987 was formed for the primary purpose of originating and marketing the patented CollegeSure® Certificate of Deposit, America's first commercially available and nationally marketed college cost prepayment product.

I am also the inventor of the CollegeSure CD.

QUESTIONABLE SOLUTION: PREEMPTIVE STATE SAVINGS PRODUCTS

One solution to increasing the rate at which families save for college is to provide tax incentives. However, the tax incentives have to be carefully designed so as to permit college savers sufficient investment flexibility and encourage the participation of the private sector.

Legislation recently has been introduced which would make state college savings programs exempt from federal taxes. H.R. 1328 excludes from gross income any amounts distributed from qualified state educational savings plans and used to pay for college. Also the bill exempts from federal taxation state agencies that administer educational savings plans.

In the short-run, this might increase college-targeted savings and, we all hope, overall savings. However, the bill has several significant flaws with long-term consequences.

The new legislation converts taxable prepaid investment contracts into tax-exempt obligations with yields matching the pre-tax yields of U.S. Treasury and corporate obligations (See Figures).

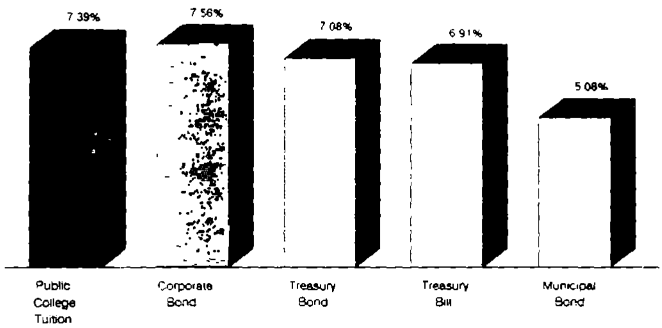
The bill, if enacted, would create pre-emptive state savings products which would crowd out virtually all private sector competition in the marketplace. This form of tax exemption will distort investor choices and divert the portion of a family's total savings earmarked for college away from other savings vehicles and into the state savings plans.

The effect of tax exemption on state savings plans is very different than the effect of tax exemption on municipal bonds. Whereas the market adjusts the yields on municipal bonds to be lower than the yields on taxable bonds, the yields on the obligations issued by state savings plans are reflective of the yields on the taxable investments in the trust and, because the obligations issued by the trust are non-negotiable, not able to seek equilibrium to the yields on other tax-exempt instruments. The tax-exempt feature creates a superordinary after-tax yield which preempts all comparable investments in the marketplace. It has the effect of flooding the market with subsidized, above-market rate and below-market priced instruments. In international banking parlance, it's called 'rate dumping.'

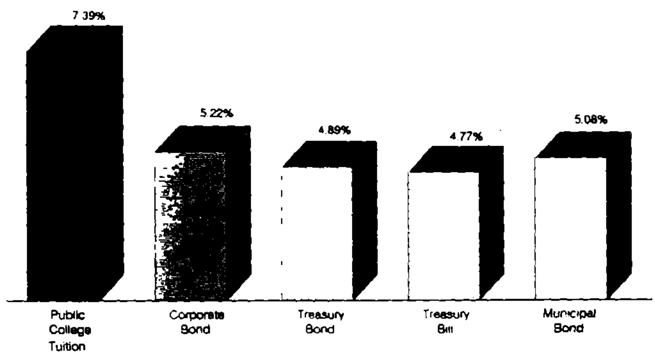
FIGURES

Average Annual College Inflation Rate Versus Rates of Return on Selected Corporate, U.S. Treasury, and Municipal Securities , 1964-1992

Pre-Tax



After-Tax



NOTES: The after-tax graph assumes a 31% marginal income tax rate.

College inflation is measured as the annual rate of change in tuition and required fees (in-state) for all public higher education institutions in the United States as reported in "Digest of Education Statistics", U.S. Department of Education, Washington, D.C. (1993)

Average annual rates of return on corporate bonds, U.S. Treasury bonds and U.S. Treasury bills were calculated from total annual returns reported in "Stocks, Bonds, Bills and Inflation, 1994 Yearbook," Ibbotson Associates, Inc., Chicago (1994).

Average annual rate of return on municipal bonds was calculated in the same manner as Ibbotson Associates computed annual corporate and Treasury returns based on monthly yield data for 10-year, prime grade, general obligation municipal bonds reported in "Analytical Record of Yields and Yield Spreads," Salomon Brothers Inc., New York, September 1990 and monthly updates through 1992.

The disintermediation and market-damaging effects caused by a preemptive savings product will discourage those entities that now seek to help savers and reduce the range and variety of investment choices. **What's more, in order to compete with federally subsidized obligations issued by the state savings plans, the rate on tax-exempt bonds will rise, thereby increasing the cost of capital to states and municipalities.** And, eventually, budget deficits will swell and jobs will be lost.

LET'S INCREASE THE COLLEGE SAVINGS RATE THROUGH MARKET-BASED SOLUTIONS

Congress should reject the approach in H.R. 1328 and instead focus on developing market-based incentives that:

- Provide college savers with a wide range of investment choices;
- Maintain a level playing field;
- Reach a broad spectrum of eligible families; and
- Create a competitive, healthy and innovative marketplace that is necessary to maximize the national savings rate.

ALTERNATIVE FEDERAL LEGISLATION

The best way to maximize the effectiveness of tax benefits offered to college savers would be to extend such benefits to all savings placed in an American Dream Savings Account (ADSA) proposed in H.R. 1215.

Eligible investments for an ADSA should include: deposits made in state-sponsored college savings plans, bank accounts, investment accounts, and other accounts that satisfy Individual Retirement Account requirements. Although there are no deductions for contributions to ADSAs, earnings on amounts deposited by parents in an ADSA would not be taxed and would be exempt from taxation when withdrawn to pay college education expenses. The proposal contains contribution limits.

The ADSA helps level the playing field for all market participants and avoids the market damaging effects that may be caused by a preemptive government savings product.

State savings plans could resolve their federal tax problems via the ADSA. Like the present proposal (H.R. 1328), amounts distributed from state savings plans to pay higher education expenses generally would be exempt from federal taxation.

In addition, the tax asymmetry afflicting state college savings trusts would be resolved. State college savings trusts generally are subject to tax on gross interest income currently but able to claim interest expense deductions only in future years when tuition benefits are paid out. This has exposed the trusts to enormous tax liabilities in the early years which reduce their assets and net worth.

By placing the prepaid contract in the ADSA, the trust (without impacting the tax benefit to the family) can claim interest expense deductions in current years, thereby offsetting the trust's taxable interest income. This would reduce the need to exempt the state educational savings trusts from federal taxation, as provided in the current proposal, and greatly reduce the cost to the federal taxpayer.

The ADSA is a market-based solution. It helps provide college savers with a wide range of investment choices, reaches a broad spectrum of eligible families, and creates a competitive and innovative marketplace necessary to maximize the college savings rate. Without increasing the size of government, ADSAs tap the abundant resources of the private sector to cultivate thrift among families with college bound children and improve the rate at which families save. Furthermore, it addresses the present needs of public and private sector savings programs.

Ms. DUNN. Thank you, Mr. Roberts.
Mr. Shulman.

STATEMENT OF HARVEY SHULMAN, COCHAIR, COALITION TO REPEAL SECTION 1706

Mr. SHULMAN. Thank you.

Madam Chair, imagine a witness asking this Committee's support for a principle on which there has been agreement among Mr. Armey, Mr. DeLay, Mr. Crane, Mr. Herger—and also Mr. Gephardt, Mr. Ford, Mr. Neal, Mr. Owens, and many others. Imagine a witness telling you that a similar agreement also exists among Senators Kennedy, Moseley-Braun, Mikulski, Simon, Robb, and Hollings—and also Senators Coats, Faircloth, Warner, Gregg, Lott, Hatfield, and dozens of others.

I am delighted to say that there is such agreement on the principle that we need to eliminate the employment tax discrimination which exists against the computer and engineering industries—discrimination which was created by the enactment of section 1706 of the 1986 Tax Reform Act.

It is hard to believe, Madam Chair, but section 1706 was a tax reform experiment that singled out only the technical services industry and made it uniquely difficult for only agencies in our industry to use self-employed workers.

Section 1706 did so by removing the so-called section 530 employment tax safe haven from only our industry. As a result, we are the only industry in the United States which must judge its employment tax obligations solely on the basis of an ancient and unpredictable common law employment test.

It is not surprising, therefore, that thousands of technical services firms refuse to do any business with technical consultants who are sole proprietors or otherwise small businesses. Likewise, it is not surprising that tens of thousands of computer and engineering consultants have a unique barrier to face in their quest for the economic empowerment that comes from self-employment.

In short, section 1706 created havoc and unfairness in our industry by paternalistically forcing employment status on many workers. Doesn't it amaze you that we actually have an employment tax law that uniquely hinders entrepreneurship in America's high-tech industries?

Our written testimony provides the details of the reasons for the section 1706 experiment and why new facts not known in 1986 have undermined the bases for section 1706. Relying on such facts—not myths and theories, but facts—a consensus has emerged among leaders in government, business, and professional associations to repeal section 1706. They recognize that repeal is not special interest legislation but, instead, is giving back to us the same thing that every other industry in the United States enjoys.

For example, in 1987 the Small Business Administration urged repeal of section 1706. In 1991 a study of the Treasury Department concluded that section 1706's coverage was "difficult to justify on equity or other policy grounds." The Treasury Department found that tax compliance of self-employed engineering and computer consultants was actually above average compared to other industries that still have the employment tax safe haven.

In 1992 the House Government Operations Committee flat out stated that section 1706 "should be repealed."

In 1994 the prestigious American Tax Policy Institute found that, now that the original basis for section 1706 "has been refuted," the law should be repealed. The institute said there is "no justification" to exclude firms which use technical workers from the employment tax safe haven.

In closing, please heed the statements of two Members of Congress who could not be from more different backgrounds, districts, and political philosophies but who both value the economic empowerment of self-employment in our high-tech industry. As Speaker Gingrich wrote in Newsweek Magazine:

> We need to comb through our laws to clean out the barriers to starting businesses and creating new wealth. We need to alter Tax Codes that virtually punish people for working as independent contractors or starting their own businesses. We must clear the path for the next Tom Edison or Ray Kroc or Bill Gates or Steve Jobs.

The Speaker's words echo those of Congressman Major Owens from Bedford-Stuyvesant, who testified before this Committee 3 years ago and said the following:

> I have heard from many African-American computer programmers who have had the door to self-employment slammed in their face because of section 1706. Many businesses are unwilling to use the services of valid self-employed consultants because they do not want to attract the attention of the IRS auditors. Some of the students—in Brooklyn Technical High School in my district—might have the dream of being self-employed. We want to encourage them and make their high-tech industries grow. In this light, how can I justify a discriminatory law like section 1706 to them?

Madam Chair, where there is a will, there must be a way. A strong bipartisan consensus has emerged to repeal section 1706 and eliminate the unique discrimination against our industry. The time for more study and discussion is over. It is time for action. Please do not let us down.

[The prepared statement and attachment follow:]

Before the
Ways and Means Committee
United States House of Representatives
July 11, 1995

STATEMENT OF HARVEY SHULMAN, COCHAIR COALITION TO REPEAL SECTION 1706

We are the representatives of small business entrepreneurs, who own or manage over ten thousand software, engineering, data processing and technical writing companies throughout the United States -- including many thousand that are minority and/or women-owned. We are delighted that Congress is finally moving to repeal of Section 1706 of the 1986 Tax Reform Act -- <u>an employment tax law which on its face discriminates against America's high technology industry</u> and has a particularly adverse effect on small business as well as minority and women entrepreneurs in our industry. Congress has begun to see, more clearly than in the past, the need to help small business, and to encourage entrepreneurship in our high-tech industry; as a coalition representing both constituencies, we ask for your support and leadership now.

We will not attempt, in this short statement, to explain all the details of our problem. Instead we are providing attachments with this letter. These attachments show that because of Section 1706, the technical services industry is the only industry in the United States that does not have the "employment tax safe haven" protection of Section 530 of the 1978 Revenue Act, or any other alternative "safe haven". Instead, pursuant to Section 1706 our employment tax obligations are governed only by the vague and unpredictable 20 question common law test -- the very test for which Section 530 was enacted as a safeguard from the common law test's frequently capricious effects. These effects of Section 1706 are felt most adversely by new market entrants. Why? Because the common law test emphasizes a lengthy history of entrepreneurship, large capital investment, several concurrent customers, advertising and other factors that are more difficult for many newly self-employed independent consultants to meet. In addition <u>all</u> self-employed high-tech professionals have faced far fewer consulting opportunities as businesses are fearful to use their services because of Section 1706.

Every independent analysis of Section 1706 -- including the Treasury Department, the House Government Operations Committee, the American Tax Policy Institute, and <u>ComputerWorld</u> (the leading publication for the computer industry) -- has found Section 1706 to contain unreasonable and discriminatory provisions.

If we really want to promote America's high-technology industry and restore tax fairness, then the <u>repeal of Section 1706 should be included in the upcoming tax bill</u>.

- REPEAL SECTION 1706 OF THE 1986 TAX REFORM ACT - NOW IS THE TIME TO END THE EMPLOYMENT TAX DISCRIMINATION AGAINST THE TECHNICAL SERVICES INDUSTRY

Is there "employment tax discrimination" against the technical services industry? Yes. The technical services industry is the only industry in this country where a firm's employment tax liabilities are determined under only one test, the "20-factor common law employment test" which originated in medieval England (a test which even government officials have regularly criticized as "unpredictable", "arbitrary", and "subjective"). In every other industry, every firm has its employment tax obligations determined under two alternative tests: either the "20-factor common law employment test" or a "back-up, alternative employment tax safe haven" (which, under Section 530 of the 1978 Revenue Act, allows a firm to treat workers as "self-employed" if the firm has a "reasonable basis" for such treatment). If a worker is determined to be self-employed under either test, then the worker -- and not the firm -- must pay the employment taxes The denial of both alternatives to the technical services industry is clearly discriminatory. Section 1706 has seriously hurt many small businesses and has deterred thousands of entrepreneurial computer programmers, analysts and engineers from becoming self-employed.

How did the discrimination against the technical services industry arise and has it ever been studied? Several years ago the technical services industry also had the same protection granted to other industries under the Section 530 "back-up, alternative employment tax safe haven", but this protection was eliminated by Section 1706 of the 1986 Tax Reform Act. Section 1706 originated as a "revenue offset" measure that was estimated to raise $12 million per year (immediately after its passage, OMB and the Treasury Department estimated that only 0-$5 million per year might be gained at best). But it was also somewhat of an "experiment" in reaction to claims that the Section 530 "back-up, employment tax safe haven" was "too liberal" and had led to tax noncompliance which sometimes resulted in unfair competitive advantages to certain firms and workers claims which, it should be noted, would apply to every industry. Unfortunately, however, this "experiment" put the technical services industry in the very same vulnerable situation that all firms faced in the 1970's and that led to enactment of the Section 530 "back-up, alternative employment tax safe haven". As a result, Congress received thousands of complaints that the Section 1706 "experiment" had failed, and it passed Section 6072 of TAMRA requiring the Treasury Department to study the impact of Section 1706.

Does the Treasury Department Study provide new information which supports replacement of Section 1706? Yes. The Treasury Department Study was released in March 1991. The Treasury Department Study contains new information, available for the first time, which confirms that the discrimination against the technical services industry cannot be justified -- and that legislative relief is necessary. First, the Study concluded that although the technical services industry had been the only industry singled out for loss of the Section 530 "back-up, alternative employment tax safe haven", that discrimination had been imposed against an industry in which there is actually better tax compliance in comparison to many other industries. When Congress enacted Section 1706, it did not know this fact! Second, the Study found that especially because of its application to only so-called "three-party situations" in the technical services industry", Section 1706 is "difficult to justify on equity or other policy grounds." Third, the Study confirmed that application of the "20 factor common law [employment] test can be difficult, in particular in the multi-party situations affected by Section 1706" (emphasis added); indeed, the Study quoted an Assistant Treasury Secretary who admitted that this test "may also produce inappropriate results" and "does not yield clear, consistent, or satisfactory answers".

Does it matter whether the technical services industry has a "back-up, alternative employment tax safe haven"? Yes. Without a "back-up, alternative employment tax safe haven", if an IRS auditor determines that a worker is an employee of a firm that paid him or her -- rather than self-employed -- the IRS imposes substantial back employment tax assessments on the firm, even if the worker already paid those taxes and even though those assessments could bankrupt the firm. That is why a "back-up alternative employment tax safe haven" was and continues to be important.

If the present situation is unworkable because of Section 1706, what can be done for the technical services industry? It is time for Congress to restore to our industry - the only industry presently excluded - the protections of Section 530 which were taken from our industry in 1986. This may also require a transitional provision to deal with all that has happened since 1986.

Would restoration of a "safe haven" for the technical services industries be "special relief"? Absolutely not Restoration of a "safe haven" for the technical services would simply give our industry the same kind of protection already available to small businesses in every other industry. All industries should enjoy protection from arbitrary IRS action when they use the services of self-employed workers. Repealing Section 1706 is not "special interest" legislation.

How much support is there for changing Section 1706? The support to eliminate Section 1706 is overwhelming and continually growing:

> There is widespread support in our industry, including from the American Consulting Engineers Council, the Black Data Processing Associates, the Computer Software Industry Association, the Data Processing Management Association, the Independent Computer Consultants Association, the Institute of Electrical and Electronics Engineers, the Information Systems Consultants Association, the National Association of Computer Consultant Businesses, the National Association of Women Business Owners, the National Writers Union, Professional & Technical Consultants Association, the Technical Consultants National Association and others.
>
> In 1987, the U.S. Small Business Administration stated that the absence of "succinct guidance alone argues most effectively for the repeal of Section 1706."
>
> As stated above, in 1991 the Treasury Department concluded that the reach of Section 1706 is "difficult to justify on equity or other policy grounds."
>
> In November 1992 the House Government Operations Committee, after a detailed study and hearings, recommended in House Report No. 102-1060, p. 15 that "the limited exception from Section 530 protection for certain technical service workers, commonly referred to as Section 1706, should be repealed."
>
> In 1994, a White Paper issued by the prestigious, non-partisan American Tax Policy Institute concluded that "the original basis for [Section 1706] enactment has been refuted" and urged its repeal; "There is no justification to support the exclusion of three party technical service workers. Their exclusion merely serves to complicate the law."

THE WALL STREET JOURNAL WEDNESDAY, APRIL 7, 1993

The IRS vs. the Self-Employed

By JAMES BOVARD

The Internal Revenue Service is carrying out a sweeping campaign to slash the number of Americans permitted to be self-employed—and to punish the companies that contract with them. The IRS's attack has devastated thousands of small businesses and is undermining high-tech industries, the health-care industry and even freedom of religion. IRS officials indicate that more than half the nation's self-employed should no longer be allowed to work for themselves.

This controversy originates in arcane federal regulations on the proper classification of workers. If a person is an employee, the employer must withhold all of that person's payroll taxes and remit them to the IRS, pay half of the employee's Social Security taxes and all of the unemployment insurance tax. But if an individual is an independent contractor, a business need only file a Form 1099 with the IRS reporting how much it paid that person, and the contractor pays his taxes directly to the IRS.

The IRS has long sought to forcibly reduce the number of self-employed Americans and maximize the number subject to tax withholding. The IRS enforcement campaign is targeting businesses with less than $3 million in assets—in most cases businesses without in-house counsel that cannot afford a lengthy court fight. The House Government Operations Committee concluded in a report in November that "IRS enforcement activities [on independent contractors] present small business taxpayers with a veritable nightmare of problems and policies that defy common sense."

Master and Servant

The IRS bases its classification decisions primarily on a list of 20 questions on the relationship between the employer and the contractor-employee. These questions are derived from common law precedents dating to the Middle Ages. An assistant U.S. Treasury secretary admitted in 1981 that the common law employment test was "developed centuries before the income tax to determine the rules of the doctrine that the master is liable for the torts of his servant." A 1991 Treasury Department report conceded that "the common law tests . . . lack precision and predictability" and in many cases do not "yield clear, consistent or satisfactory answers."

Once an IRS agent announces that a company has misclassified its employees (as happens in nine of 10 audits), the company often faces a staggering tax bill—largely because the IRS intentionally forces businesses to double-pay taxes already paid by independent contractors. The House Government Operations Committee noted: "The assessments are based on the use of preset mandatory formulas which even the IRS admits result in double tax collections. These back tax assessments have been responsible for putting a number of those businesses out of business." IRS agents have assessed more than $500 million in penalties and back taxes since 1988 (averaging $68,000 per company) and forced businesses to reclassify over 400,000 independent contractors as employees. (The IRS is now "converting" almost 2,000 independent contractors into employees each week.)

> *The IRS enforcement campaign is targeting businesses with less than $3 million in assets—in most cases, businesses that cannot afford a lengthy court fight.*

These businesses, in most cases, have not broken any clear law or manifested any intent to dodge taxes. Harvey Shulman, counsel for the National Association of Computer Consultant Businesses, observed: "I have had grown men and women—40 or 50 years old—cry on the phone to me, telling me that their marriage is threatened, they are seeking counseling, all because the business that they built up in the last 15 years of their lives—the house and other things they've earned from the fruits of their labor—is all threatened by this IRS employment classification audit. They ask me, 'What did I do wrong? Why am I being persecuted?'"

Many IRS officials threaten harsh penalties to coerce businesses to sign agreements promising not to use independent contractors in return for a reduction or waiver of the taxes and penalties. Such perpetual cease-and-desist orders may be appropriate when the government is dealing with wife-beaters or child molesters, but they are bizarre when it is seeking a pretext to permanently control the day-to-day operation of small businesses.

One industry that is especially hurt by the IRS crackdown is health care. Marc Catalano, president of the Private Care Association, an association of health-care agencies, accused the IRS of following a "search and destroy posture with respect to businesses that use independent contractors." Comprehensive Care Corp. was hit in 1991 with an IRS demand for $19.4 million in back taxes and penalties for treating psychologists and physicians as independent contractors.

John Bailey, a psychologist at the Family Therapy Center of Madison, Wis., complained to a congressional committee last August that his clinic "has come under attack. . . . The IRS methods have been too subjective, applied with ferocity and arbitrariness, and have caused untold grief for us and other well meaning small businesses." Mr. Bailey reported that the IRS "attack has threatened the very survival" of several Wisconsin clinics.

The IRS tried to penalize several Pennsylvania corporations for paying dentists as independent contractors instead of employees. But the Pennsylvania Dental Board had warned the corporations that it would be illegal under state law for the corporations to hire dentists as employees since the corporations themselves were not licensed to practice dentistry. A federal judge threw out the IRS's case in 1991.

The IRS is launching a high-profile assault on the use of independent contractors in Hollywood. The IRS began a similar crackdown on the Minnesota film industry last year. One Minnesota film producer complained to a local magazine that IRS agents "want me to classify a lighting tech who works for two hours and who I never see again as a part-time [employee]. That's absurd."

In some regions, IRS officials have ordained that all United Methodist ministers must be reclassified as employees. The Rev. Robert McKibben of Alabama informed the House Ways and Means Committee that he was told by an IRS examiner that "all ministers" are "statutory employees." Mr. McKibben informed the IRS agent of a U.S. Tax Court decision upholding the self-employment status of United Methodist ministers, but the IRS official said he was not bound by the ruling.

Mr. McKibben observed that the systematic misclassification of ministers "results in . . . the IRS dictating to the church the type of relationship they must have." Craig Hoskins, counsel for the church, estimated that more than 1,000 Methodist clergymen have faced IRS audits over their employment status. (The IRS has not yet attempted to impose penalties on God for not withholding taxes from the ministers' pay.)

High-tech industries have probably been hit hardest by the IRS's crackdown. In 1978, Congress enacted a provision to prevent the IRS from penalizing companies that had a "reasonable basis" for classifying people as independent contractors. But in the 1986 tax act, Sen. Daniel Patrick Moynihan (D., N.Y.) slipped in an amendment—Section 1706—that revoked the "reasonable basis" protection for engineers, computer programmers and other technical service professionals.

A 1987 Data Processing Managers Association survey found that 74% of firms decreased their contracts made directly with independent technical service consultants as a result of Section 1706. Rep. Major Owens (D., N.Y.) said last year that "many African-American computer programmers and analysts have had the door to self-employment slammed in their faces because of Section 1706."

IRS agents are often heavy handed in how they carry out employment tax audits. IRS officials have encouraged private companies to secretly betray their competitors. At a 1990 meeting in California, an IRS agent distributed "snitch sheets" to business people and asked them to make allegations of illegal independent contractor use by other companies. The IRS agent told attendees to mail the completed snitch sheets to him in unmarked plain envelopes and promised to follow up all leads.

Tax Dodging

The IRS estimates that 3.4 million Americans now working as independent contractors should be reclassified as employees. The Small Business Administration says that there are roughly five million independent contractors. Thus more than half of all the independent contractors in the U.S. could be forced to find a boss.

The IRS justifies its crackdown because some of the self-employed dodge taxes. But the Treasury Department concluded in a 1991 report on technical service workers: "Misclassification of employees as independent contractors increases tax revenues . . . and tends to offset the revenue loss from undercompliance by such individuals, because direct compensation to independent contractors is substituted for tax favored employee fringe benefits."

The IRS apparently believes that payroll tax withholding is more important than Americans' freedom of contract. Being self-employed and starting one's own business have long been part of the American Dream. But the IRS has apparently decided that it can no longer afford to permit others to pursue their dreams.

Mr. Bovard, an independent contractor, writes frequently on public policy.

Ms. DUNN. Thank you, Mr. Shulman.

We will start with questions from Mr. English, please.

Mr. ENGLISH. Thank you, Madam Chairman.

Dr. Lawlor, thank you for coming down from northwestern Pennsylvania to testify on the one aspect of the legislation that we are considering, and we very much appreciate your perspective on this.

Having been in higher education for a long time, working for a university that provides affordable, higher quality education in a way that many people in my district benefit from participation in Edinboro University who otherwise could not afford higher education, what impact does paying, say, a capital gain on a prepaid tuition program have on the affordability for these kids?

Mr. LAWLOR. Congressman English, being that many of our students come from working families, I feel that the capital gains would probably be pretty devastating and, in fact, families may not elect to participate in this kind of plan to begin with and therefore are going to tend to look for other sources of aid, perhaps through State or Federal loans or grants.

In effect I believe that this bill really would help students and their families to take the long view and plan for a college education to benefit both of them, but also, in the end, the entities incurring those grants and loans.

Mr. ENGLISH. I have run into many constituents who have confirmed that their reluctance to participate in the TAP is based on this expected tax liability. Edinboro receives a substantial subsidy from the State, as does the rest of the State system of higher education, does it not?

Mr. LAWLOR. That is right.

Mr. ENGLISH. That allows you to provide tuition at an affordable rate, like any other State school around the country.

Mr. LAWLOR. Right. Currently, I believe that rate is—about 49 percent from the State.

Mr. ENGLISH. Mr. Roberts, as I understand your testimony, you discuss some market-damaging effects from this legislation, including things like swelling budget deficits and jobs lost. Can you quantify any of that, from this narrowly crafted bill, that is aimed at a specific range of current State programs?

Mr. ROBERTS. Well, if you begin to offer tax-exempt obligations in the marketplace that have a yield that is comparable to treasuries or corporate obligations, the other tax-exempt bonds in the marketplace will have to seek that level to compete.

Mr. ENGLISH. I understand that, Mr. Roberts. I am curious, though, if you can quantify, since this is such a narrowly crafted tax bill which was done so for minimal revenue loss. The expected universe of people participating in it is not a large one. Is it really going to have that kind of crowding-out effect?

Mr. ROBERTS. I believe when you have that sort of tax advantage that other States might be compelled to offer such a product and there will be more obligations in the marketplace. Florida already has $1 billion in obligations in the marketplace. If their product is tax exempt and they issue $1 billion in municipal bonds a year, I believe it will cause a rise in those municipal bonds of many basis points, which will have millions of dollars in higher capital costs to the States and municipalities.

Mr. ENGLISH. OK. You are concerned then that this is going to have a dramatic effect on the cost of capital, even though it has been narrowly crafted.

Let me ask you, do you have a problem—and knowing you are currently suing Florida and trying to knock their program out, do you have a problem with the idea of subsidizing these kinds of State programs? I mean, even as we subsidize higher education for State institutions?

Mr. ROBERTS. I believe that we should maintain a level playingfield. Either they are all taxable, including the private sector, or you provide tax incentives across the board. Otherwise, you are going to cause tremendous distortions in the marketplace.

Mr. ENGLISH. I want to thank you for coming in with a specific alternative proposal which appeals to me because it is broad based, but how much is it going to cost? Do you have any sense, revenue lost?

Mr. ROBERTS. What is the revenue estimate on your proposal?

Mr. ENGLISH. On your proposal.

Mr. ROBERTS. On the American dream savings account?

Mr. ENGLISH. No, on what you propose to do with the American dream savings account.

Mr. ROBERTS. I am not sure it will impact it, the revenue estimate, one bit.

Mr. ENGLISH. I would be happy to take a look at your proposal, and I appreciate your being here to testify. I obviously disagree with your objection to providing this kind of a tax preference to State programs that I don't think were originally intended to be taxed under the Federal code, but I appreciate this puts you under some competition.

Madam Chairman, I thank you for the opportunity to question these witnesses.

Ms. DUNN. Thank you, Mr. English.

Are there other Members of the Ways and Means Committee who wish to question the witnesses? Mr. Ford.

Mr. FORD. Thank you, Madam Chairman. I will be very brief.

Just picking up where Mr. English left off, Mr. Roberts, the cost estimates on your proposal versus that of Dr. Lawlor's, even though Mr. English has indicated that it is narrowly pointed in the direction, can you just briefly explain your proposal. I am not sure that this is a rifle shot because this certainly can be opened up and may be made generic. States can easily come within the guidelines of the legislation Dr. Lawlor supports.

The American dream savings account for higher education is something that we will continue to examine closely. How do you compare Dr. Lawlor's bill with your proposal now? What is the distinct difference between those proposals regarding their impact on those seeking higher education?

Mr. ROBERTS. Thank you, Mr. Ford, for that question.

The American dream savings account probably has the latitude to allow a State prepaid tuition contract to be an eligible investment. It could be clarified slightly in the legislation, but I believe it now has that latitude.

The American dream savings account has a contribution limit of a couple thousand dollars a year, whereas Mr. English's proposal,

there is really no contribution limit. Mr. English's proposal is really in many ways a giveaway to the rich because you can put just as much money in as you like and the wealthier person can put in more money than the less wealthy person.

Mr. English's proposal is a big government proposal. It increases the size of State governments. The American dream savings account is more of a private sector initiative where you don't increase the size of government but you are able to cultivate thrift among college savers.

Mr. English's proposal would end up being cross-subsidized by States who don't have such a program. That is, say New Jersey, which currently doesn't want a big government, may not want a big government solution, might end up subsidizing, say, the taxpayers of Pennsylvania or, specifically, the people who are participating in that program.

Those are, basically, the differences. The American dream savings account is less tax regressive, doesn't cause the cross-subsidization, and isn't a big government proposal.

Mr. FORD. Will the States have to assume some of this responsibility under Mr. English's proposal?

Mr. ROBERTS. Oh, the States would create government-sponsored enterprises, like government-sponsored banks or government-sponsored mutual funds. They call them prepaid tuition trusts. They would create those because they would have a significant tax advantage over all the private sector competitors; and may feel compelled to create those sorts of institutions. It would create a burden on the States to administer such enterprises.

Mr. FORD. Thank you very much.

Ms. DUNN. Thank you, Mr. Ford.

Mr. Payne.

Mr. PAYNE. Thank you very much, Madam Chairman. I want to thank all the witnesses.

I just had one brief question for Mr. Shulman about section 1706. In your testimony, you stated that when this action was taken in 1986, that the estimate at that time was that some $12 million would flow into the Treasury each year as a result of doing this. I suppose the thinking at that time was that there were revenues that were being missed, that somehow this system would ensure that those taxes would be paid, is that correct?

Mr. SHULMAN. I think that is basically correct. The revenue estimate has actually been something that has been bounced around quite a bit. At that time, the difference between the Social Security rate paid for employees and that paid by self-employed workers was different. That was one component of it. There was also some belief that some revenue was lost by simple nonpayment.

But when the Treasury Department came out with its study in 1991, Treasury concluded that when you look at employees and independent contractors, at least in our industry, different things offset one another.

For example, employees get a lot of tax-free fringe benefits. They get a lot of things that are never taxable. When independent contractors in our industry pay for those things, they pay for them with aftertax dollars; also Treasury noted the FICA rate and the SICA rate were equalized. Treasury basically concluded that there

ought to be pretty much revenue neutrality in our industry when someone works as an independent versus an employee. That information was not known back in 1986.

Mr. PAYNE. Had that information been known in 1986, the revenue estimate would have been zero.

Mr. SHULMAN. I believe it would have been zero. In fact, the Office of Management and Budget and the Treasury Department back then estimated the revenue might be zero to $5 million gain "at best," and I think "at best" is exactly "the best" it would be.

Mr. PAYNE. The policy reason for doing this was to raise revenue?

Mr. SHULMAN. The policy reason at the time was it was a revenue offset for another provision that was taken out of the bill. There was some concern by some individuals back then that computer programmers and engineers were really tax cheats, that they all drive fancy cars and they take lots of deductions and they don't pay their taxes. There was never any study done, there were never any hearings, nothing ever was done to look into this. It was a floor amendment in the Senate.

Interestingly, it was the Treasury report that, when it looked at the data, found that the tax compliance in our industry was much greater and much higher than industries that still enjoy the safe haven.

Mr. PAYNE. The Treasury has essentially refuted the estimate of $12 million. And if the purpose of the section was to raise the $12 million, the conclusion would logically be that there is no reason why this provision should be in the Tax Code.

Mr. SHULMAN. I agree that is logical, Congressman.

Mr. PAYNE. Thank you very much.

Mr. SHULMAN. Thank you.

Ms. DUNN. Thank you, Mr. Payne. And thank you, gentlemen.

This Committee will stand in recess until 10 a.m. tomorrow morning, at which time this hearing will reconvene.

[Whereupon, at 1:01 p.m., the hearing was adjourned, to reconvene on Wednesday, July 12, 1995, at 10 a.m.]

MISCELLANEOUS TAX REFORMS

WEDNESDAY, JULY 12, 1995

HOUSE OF REPRESENTATIVES,
COMMITTEE ON WAYS AND MEANS,
Washington, DC.

The Committee met, pursuant to notice, at 10 a.m., in room 1100, Longworth House Office Building, Hon. Bill Archer (Chairman of the Committee) presiding.

Chairman ARCHER. The Committee will come to order.

Today we continue with our hearings on miscellaneous tax reform, and our first witness, if he is here, is Senator McConnell.

I do not see Senator McConnell, so we will postpone his testimony until his arrival, and in the meantime, we are pleased to hear from our former colleague on the Ways and Means Committee, the gentleman from Louisiana, Mr. Jefferson.

Jeff, you know the rules here. You can put your entire printed statement in the record without objection, and if you would like to proceed in oral summary, we would be pleased to hear your suggestions.

STATEMENT OF HON. WILLIAM J. JEFFERSON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF LOUISIANA

Mr. JEFFERSON. Thank you, Mr. Chairman. It is good to be back in this Committee room, if only this time as a witness.

I hope to work closely with you and with the Committee and with my colleagues—one from Louisiana I see has arrived—on this legislation which I am going to discuss very briefly, which does four important things.

First, it helps the Federal Government to continue its low-income housing policy in a very important way. Second, it serves to save the Federal Government money as a second goal. Third, it reinvigorates the real estate market from the point of view of investors, developers, and owners. And fourth, it will help to revitalize communities.

I am going to summarize my discussion and ask that my statement be submitted in the record.

The bill addresses a well-recognized need—that there is a crisis in the existing inventory of low-income housing that is privately owned but insured and assisted by HUD, the Department of Housing and Urban Development. There are projections that there can be defaults in this area that could end up costing the Federal Government some billions of dollars, some as high as $10 billion.

This bill permits that projects with a majority of low-income housing tenants, which projects are insured by HUD, are eligible for assistance.

In a nutshell, here is what the bill does. Right now, if you have a housing development in a low-income area, let us say, with low-income tenants in it, and you want to dispose of it, there is no market for it; and there is no market for a number of reasons. The 1986 tax law made it less attractive to own these properties, and because there is no market for it, the projects continue to deteriorate because there is no incentive to invest in them. The result is that the tenants have a poor place to live; the owners have a project for which there is no market; communities deteriorate; and in the end, the Federal Government has to pick up a lot of the default.

So, we make a few changes here. The two most significant ones are that we set up a straight-line depreciation method for 15 years, instead of 27.5 years, which it presently is, and we entitle these investors to some relief from the passive loss rules.

The benefit is going to be that for those owners of these properties, after this is put in place, they will have an incentive—they will only get the benefits of this bill, Mr. Chairman, if they put their own money in as well. This induces them to make private investment into these properties for which, afterward, they receive these tax incentives and deductions, and the depreciation accelerated as it is here, straight line, and they then have an incentive to put in their money.

This is only going to go to new owners. People who own property now are not going to get the benefit of it. The benefit they will get is that they will have a market to exchange property in. Once they are able to find someone who is willing to take advantage of these inducements and to take this property on, they will pay a capital gains tax which in effect will pay for the whole bill.

If you look at the fiscal notes on this, you will see that over 5 years, this bill costs $80 million, yet it stands to save the Federal Government billions of dollars from defaults that may occur.

We asked the Chairman of the Banking and Housing Committee, Mr. Lazio, who is working on important legislation that is going to reduce the participation of HUD and the Federal Government in this area, whether this was a good complement to what he was aiming to do. You may recall, Mr. Chairman, that he wrote a letter to you and to Mr. McCrery a few weeks ago saying that he thought this legislation would be a good complement to what he is trying to do in his Banking Committee work.

I think it is consistent with the goals and objectives of the Banking Committee Chairman, and Senator D'Amato is a cosponsor of the companion legislation in the Senate, so this bill does have bipartisan support.

In the end, I think if this Committee sees fit to pass it, it will achieve the four objectives we have in mind, which I shall just restate and then conclude.

It will, first off, potentially save the Federal Government tens of billions of dollars in defaults. Second, it will create for the first time in many years, at least since 1986, a real vital market in low-income housing transactions for those who own the properties and

those willing to purchase them. Third, it will revitalize communities that are now being run down because there is no incentive for owners to invest in these properties, and there is not an exchange going on, so they are just deteriorating. In the fourth place—and perhaps it goes in the first place—it will continue to enable the Federal Government to meet its objective of giving low-income persons the opportunity for decent housing, at a cost that the government can afford.

With those objectives, Mr. Chairman, I would submit that this bill is one that I think this Committee ought to pass and ought to embrace, because I think it meets the objectives of this Congress, particularly the objectives of this new Congress, to save money for the Federal Government, to meet important goals of relying on private investment as leverage to move Federal policies along, and of revitalizing communities with some private sector capital.

With that, I would yield my time and ask the Committee for its careful consideration of this bill and, ultimately, its passage.

[The prepared statement follows:]

Statement on H.R. 931, The Low-Income Housing Preservation Act
by
Congressman William J. Jefferson

Thank you for the opportunity to speak for a few minutes about H.R. 931, the Low-Income Housing Preservation Act. The bill addresses the widely-recognized crisis in the existing inventory of low-income housing that is privately owned, but insured and assisted by HUD. This inventory of low-income-housing is aging. Many of the projects are at least 20 years old and are not receiving the additional private capital they need. These projects are badly needed to meet the housing needs of low-income tenants. They also represent a major investment of the federal government. If these housing units are allowed to fail, the federal government will suffer a significant financial loss as the insurer of the mortgages on the projects.

H.R. 931 makes some limited changes in the tax treatment of these projects to address this pressing problem. Projects participating in several specific HUD programs that have a majority of low-income tenants would qualify. Altogether, there are almost a million units, located in every state of the union that would be eligible for the bill's benefits. Investors who purchase and restore qualifying projects will be entitled to deduct the

property over 15 years, instead of 27.5 years, and they will be entitled to limited relief from the passive loss rules. This benefit will continue only so long as the project continues to serve a majority of low-income tenants. Whenever investors sell their interests in the project, they will pay capital gains taxes on their investments. Additionally, a variety of safeguard provisions will insure that the bill's incentives will remain carefully targeted and limited.

I am grateful that six members of this committee have co-sponsored the legislation, and that there are some 39 co-sponsors from both parties. I hope that the Committee will act favorably on this bipartisan legislation, because under current budgetary and industry conditions, this bill makes especially good sense. Here are a few of the reasons:

* *H.R. 931 builds on the success of the Low-Income Housing Tax Credit in leveraging private capital and initiative. Since the 1986 Tax Act, the tax credit has proved a very successful way to encourage private construction of new low-income projects. But the tax credit has had little or no applicability to the preservation of existing projects. In my state, for example, in 1994 approximately 1.11% of*

the value of the tax credits were made available to the kind of projects that would benefit from this bill. The history of the tax credit suggests we can have similar success in the area of existing low-income projects. H.R. 931 will not interfere with the continued effectiveness of the tax credit program, but it follows the precedent set by that law, and it is fully consistent with this Committee's long-standing commitment to providing incentives to encourage the private sector to provide low-income housing.

* *H.R. 931 will reduce the considerable expense the U.S. government will have to incur if nothing is done, and some of these projects default on their HUD-insured mortgages. Recently, I have had the chance to talk personally with Chairman Lazio about the work he is doing in the Banking Committee to reform HUD's multifamily housing programs. He views H.R. 931 as an important complement to his own work because in future years there is inevitably going to be less direct HUD assistance to these projects. There is going to be more need for the projects to compete in the market place for tenants. By enhancing the physical and financial condition of these projects,*

the bill will ease the transition of owners and tenants alike to the new HUD policies, and reduce the number of defaults. [You may recall, Mr. Chairman, that Mr. Lazio wrote to you last month in support of the bill, and I would ask consent to put that letter in the record.] I would also add that on the Senate side, the Chairman on the Banking Committee, Mr. D'Amato, is a co-sponsor of the companion Senate bill.

* *H.R. 931 is cost-effective. The Joint Tax Committee has estimated that the bill would cost a total over the first 5 years of $86 million. The bill provides for a deduction, and not a credit, so that when the project is eventually resold, the Treasury will recoup lost revenues in the form of capital gains taxes. At the same time, it is evident that the bill would save many times this amount in claims against the HUD insurance fund. Even before taking into account some of the proposed reforms under consideration in the Banking Committee, HUD estimated that it would lose some $10 billion in multifamily loan default over the next 6 years. H.R. 931 will reduce the expense to the government of mortgage defaults, and increase the amount the*

government can recoup when owners do default. Finally, it is just common sense and costs generally less to save the existing projects and the government's ivestment in them rather than let the current housing inventory deteriorate until the government must help replace the housing units at great expense.

* *H.R. 931 will have a direct and beneficial effect on housing conditions in many areas of the country. By improving the projects themselves, the bill will have a significant effect on the living conditions of the tenants in the projects. I have seen the need for new capital to improve the condition of these projects in my own district, and I am confident that the same pressing needs exist in the districts of many members of this committee. By improving the projects, the bill will also improve the condition of the neighborhood and the overall quality of life for residents of the areas. Many of the millions of individuals living in theses units are elderly or disabled. The bill will reduce the number of these tenants who are forced to move because the projects are abandoned, or they are no longer able to afford the rents in light of the cutback in the level of HUD assistance.*

* *H.R. 931 offers a reasonable solution to the problem faced by a significant number of investors who invested in projects before the sweeping changes made in the 1986 Tax Act, and who are now locked into the properties without the practical ability to sell their interests. Under current market conditions, should the investors try to sell, they would raise less in cash than they would owe in taxes due to the very low tax basis the investors have in the property. Very few if any owners are prepared to sell their interests under those circumstances. H.R. 931 offers a practical way to address this problem, without actually forgiving any taxes an investor may owe.*

In short, Mr. Chairman, I believe this is a sensible solution to a serious problem. Please let me know if I can provide you with any additional information. Thank you for your attention, and for holding this hearing.

Chairman ARCHER. Mr. Jefferson, thank you for a very thoughtful presentation.

Our next witness is a well-respected Member of the Senate, the Senator from Kentucky, Mr. McConnell. You may proceed, and if you wish to have your entire written statement inserted in the record, without objection, we will do so, and we would be pleased to hear your oral presentation.

STATEMENT OF HON. MITCH McCONNELL, A U.S. SENATOR FROM THE STATE OF KENTUCKY

Senator MCCONNELL. Thank you, Mr. Chairman. I appreciate the opportunity to be here, and I will be very brief. I am also pleased to see my Kentucky colleague, Jim Bunning, here.

Mr. Chairman, the facts are clear. Education costs are outpacing average wages, and this has created, obviously, a barrier to attending college. Throughout the eighties, education costs have risen by over 8 percent per year, or roughly double the rate of inflation. In 1994 the average tuition in America rose by 6 percent. It was also the smallest increase since 1989, according to the College Board. In Kentucky, tuition rocketed 11.2 percent at the University of Kentucky and the University of Louisville in 1993.

As tuition continues to increase, so does the need for assistance. In 1990 over 56 percent of all students accepted some form of financial assistance, and the statistic was even higher for minority students. It is increasingly common for students to study now and pay later. In fact, more students than ever are forced to bear the additional loan costs in order to receive an education. In 1994 the Federal education loan volume rose by 57 percent from the previous year. On top of that, students have increased the size of their loan burden by an average of 28 percent.

Mr. Chairman, not only are more students taking out loans, but they are taking out bigger loans as well. This year, nearly one-half of the college graduates hit the pavement with their diplomas in one hand and a stack of loan repayment books in the other.

I believe we need to reverse this trend by boosting savings and helping parents meet the educational needs of their children before they enter college. I have introduced in the Senate S. 386, a bill that will make changes to the Tax Code, maximizing the scope and the investment in State-sponsored education savings plans. This legislation has been endorsed by the National Association of State Treasurers, the National Association of State Scholarships and Grant Programs, and Kentucky Advocates for Higher Education.

This legislation, which I hope this Committee might see fit to make part of some tax measure coming out of Ways and Means, would permit parents to contribute up to $3,000 annually in aftertax dollars to State-sponsored plans. This amount will be indexed to match the annual growth in education costs.

The real benefit of this program will allow earnings to accumulate tax free when used to meet education costs. Any earnings not used for educational purposes will be taxed at the student's individual rate. I believe this will provide a significant benefit to families and correct, at least in this particular instance, the unfair tax discrimination toward savings.

Under this plan, participants do not have to be rich to benefit. In fact, the average monthly contribution in my State is just $47.22. This proposal rewards those who are serious about their future and who are committed over the long term to the education of their children.

For the more than 30 States that have established savings programs, whether they are prepaid, savings or bond programs, this legislation will provide tax-exempt status to the organizations that administer these programs. In November 1994, the U.S. Appeals Court in Cincinnati ruled that the Michigan Education Trust is not subject to Federal income tax. Although the circuit court was quite clear on this issue, it is my understanding that the IRS is looking for a different avenue to tap this growing investment pool.

This tax designation will serve two purposes. One, it will send a clear message regarding each organization's mission to help families finance a child's education. Second, it will reduce the administrative expenses, thus increasing the investment in education.

Mr. Chairman, I accept your invitation to put my full statement in the record, but encourage the Committee to take a look at this. I understand Mr. English is promoting legislation very similar to this. I certainly want to congratulate him, and he is certainly in a good position, being on the Committee, to maybe convince everyone to include this in some package that emerges from this Committee.

I also want to say how good it is to see my colleague Jim Bunning again. I appreciate so much this opportunity to appear.

[The prepared statement follows:]

McCONNELL STATEMENT
BEFORE THE HOUSE WAYS AND MEANS COMMITTEE ON S. 386
THE HIGHER EDUCATION TRUST FUND SAVINGS ACT
JULY 12, 1995

Mr. Chairman, and Members of the Committee, I appreciate you taking time to hold these hearings and greatly appreciate you allowing me to testify on what I feel is a very important matter -- the education of our children. Unfortunately, the dream of a college eduction is simply out of reach for many who can not meet the skyrocketing costs of higher education. I am sure all of my colleagues will agree that this nation's future success is dependent on the education of all our children today.

The facts are clear. Education costs are outpacing average wages and this has created a barrier to attending college. Throughout the 1980's education costs have risen by over 8 percent per year, or roughly double the rate of inflation. In 1994, the average tuition in America rose by 6 percent. It was also the smallest increase since 1989, according to the College Board. In Kentucky, tuition rocketed 11.2 percent at the University of Kentucky and the University of Louisville in 1993.

As tuition continues to increase, so does the need for assistance. In 1990, over 56 percent of all student accepted some form of financial assistance and the statistic was even higher for minority students. It is increasingly common for students to study now, and pay later. In fact, more students than ever are forced to bear the additional loan costs in order receive an education. In 1994, federal education loan volume rose by 57 percent from the previous year. On top of that, students have increased the size of their loan burden by an average of 28 percent. So, not only are more students taking out loans, but they are taking out bigger loans as well.

This year, nearly half of the college graduates hit the pavement with their diplomas in one hand and a stack of loan repayment books in the other. I believe that we need to reverse this trend by boosting savings and helping parents meet the education needs of their children before they enter college. I have introduced S. 386, a bill that will make changes to the tax code maximizing the scope and the investment in state-sponsored education savings plans. This legislation has been endorsed by the National Association of State Treasurers, the National Association of State Scholarships and Grant Programs and the Kentucky Advocates for Higher Education.

This legislation, which I urge this Committee to include as part of the Committee tax bill, will permit parents to contribute up to $3,000 annually in after-tax dollars to a state-sponsored plan. This amount will be indexed to match the annual growth in education costs.

The real benefit of this program will allow earnings to accumulate tax-free when used to meet education costs. Any earnings not used for educational purposes will be taxed at the student's individual rate. I believe this will provide a significant benefit to families and correct, at least in this instance, the unfair tax discrimination toward savings.

Under this plan, participants don't have to be rich to benefit. In fact, the average monthly contribution in Kentucky is just $47.22. This proposal rewards those who are serious about their future and are committed over the long term to the education of their children.

For the more than 30 states that have established savings programs -- whether they are prepaid, savings or bond programs -- this legislation will provide tax-exempt status to the organizations that administer these programs. In November 1994, the U.S. Appeals Court in Cincinnati ruled that the Michigan Education Trust is not subject to federal income tax. Although the Circuit Court was quite clear on this issue, it is my understanding that the IRS is looking for a different avenue to tap this growing investment pool.

This tax designation will serve two purposes. One, it will send a clear message regarding each organization's mission to help families finance a child's education. Second, it will reduce the administrative expenses, thus increasing the investment in education.

This legislation is not a funding cure but is a serious effort to encourage long-term savings, by eliminating the tax disincentive to do so. Aside from limited assistance through bond programs, we have done everything to encourage borrowing, thereby further escalating the cost of education.

I believe it is widely agreed that it is in our best interest as a nation to maintain a quality education system for everyone. We need to make a decision, however, on how we will spend our limited resources to ensure that both access and quality are maintained.

It is unrealistic to assume that the government can afford to provide for everyone. Therefore, the best option is to help families to reach the goal of a college education through savings.

The alternative option is to continue in our futile attempt to outpace the rising cost of education through subsidies and aid. More than likely, this would exacerbate the dollar chase, driving costs even higher. It is also important to note the tremendous burden borne by taxpayers as a result of the federal government guarantee of student loans. Between 1988 and 1993, the federal government, rather taxpayers, lost $14 billion to loan defaults.

Before I close, I would like to take a moment and acknowledge Mr. English for his efforts in the House to move this issue along. Although our bills differ slightly, I believe aspects from both bills can provide families with an incentive to save for education purposes which I believe is critical to the nation's well being.

I hope that Members of this Committee will carefully this issue and will work with me in helping families provide for their children's higher education.

Mr. Chairman, I ask that a copy of my bill be printed in the record. Again, I would like to thank the Committee for permitting me to testify today.

Chairman ARCHER. Senator, thank you, and again my compliments to both of you because I think you have both made some very constructive suggestions to this Committee.

I do want to ask you about a concept that seems to be afoot in this capital city now, and that is the concept of corporate welfare. I know that your leader, Mr. Jefferson, speaks of it frequently; the President has spoken of it in his budget. I am not sure what the definition is, but I am told the definition is any tax provision that is out of the ordinary and does not follow the norm.

Mr. Jefferson, as I understand your proposal, you want to give a special tax preference to certain business entities that put in low-income housing. Do you consider that to be corporate welfare?

Mr. JEFFERSON. No, sir. I think it is just common sense. We follow the policy in this Committee and in our government that if there are targeted activities that we want to provide incentives to see fostered, that one way we have thought to do that is through the Tax Code from time to time, in various special circumstances. There has been a goal, as we all know, of the Federal Government to try to see to it that there is a low-income housing market out there that works for low-income tenants. One way we have tried to do that is through the tax credit method which is on the books now, which is working really well, but it only works for new units.

In my State, only 1.1 percent of the units that got that tax credit were old ones. For existing units, there is a complete void. This brings some parity into that area, and no, it is not corporate welfare. There are going to be a lot of small people, first of all, a lot of small businesses, that are going to benefit from this that own just one or two units and cannot do anything with them. There will be some large concerns, also, but there will be many, many more smaller ones. There are millions of these across the country, and if you look at the list, in every State, many units will be affected.

No, sir, I do not believe that this would come under—I do not know what the definition is to begin with, but as far as I am concerned, I do not believe this is, and if it is, this is one we ought to do because it works for a lot of people.

Chairman ARCHER. Well, as I understand your response—and I am sympathetic to it—you are saying that if this Committee or the Congress elects to reduce the tax burden on certain operations within our society to achieve certain goals that are desirable, even though that creates something that is out of the ordinary in the way of taxation of businesses, then that is something we should consider, as I understand your response.

Mr. JEFFERSON. Yes, sir.

Chairman ARCHER. And that each of these instances where we have certain items in the Tax Code that are different from the norm, if they can be justified as bringing about the kind of result that we want to see in society, then that is something we should continue to pursue.

Mr. JEFFERSON. Yes, sir.

Chairman ARCHER. Senator McConnell, your suggestion, which is not for businesses but which is for creating an additional area where certain income, as we now classify it, would not be taxed, is in some ways similar to the deduction for home mortgage interest, which some people say is an unjustified preference under the

Tax Code. I do not want to put words in your mouth, but I assume your response would be similar to that of Mr. Jefferson, that where we can use the Tax Code to bring about desired results, that is an appropriate thing for us to do. Would that be a fair statement?

Senator MCCONNELL. Mr. Chairman, as long as we continue to tax income—something that I gather you think we ought to take another look at, and I am somewhat drawn to the suggestions that you have made, that maybe we ought not go at the business of raising revenue for the Federal Government the way we do—but as long as we continue to tax income, obviously, it seems to me we are going to, up here in this city and in this Congress, determine what kinds of activities we ought to encourage and what kinds of activities we ought to discourage. What I am saying is that as long as the business of earning income is a taxable event, it seems to me the business of educating our children is extraordinarily important, and we ought to favor efforts to save money to pay for the education of our children.

As long as the Code is going to be roughly similar to what it is today, I think these kinds of preferences are inevitable, and in many instances desirable.

Chairman ARCHER. Well, I thank both of you for your presentations.

Are there any other Members of the Committee who wish to inquire?

Mr. Bunning.

Mr. BUNNING. I would like to ask the Senator, do you know how many people presently take advantage of this in other States besides Kentucky?

Senator MCCONNELL. Congressman, I am not sure how many do. It is estimated by all of the organizations that support this legislation that if there were some preferential treatment at the Federal level, the participation would go up dramatically. Under the measures that I have suggested here, it is aftertax dollars; it is only the buildup that I would insulate against taxation. But I do not think we have a clear picture of how many are participating. All of the State treasurers feel that the number participating would dramatically increase if there were some tax advantage to doing so.

Mr. BUNNING. Do you know how much the proposal might cost?

Senator MCCONNELL. Yes. If you have the contributions in aftertax dollars, the best revenue estimate we have is $1.5 billion over 5 years, as opposed, for example, to the President's suggestion on television earlier this year which would have about a $23 billion bite.

Mr. BUNNING. In Kentucky, how many people are taking advantage of this now?

Senator MCCONNELL. I am sorry. We do not know the answer to that; we should, but we do not.

Mr. BUNNING. OK. Thank you for your testimony.

Senator MCCONNELL. Thank you, Congressman.

Chairman ARCHER. Mr. McCrery.

Mr. MCCRERY. Mr. Chairman, I want to compliment Mr. Jefferson on his presentation this morning. I think the presentation that he gave us makes a lot of sense—common sense, as he put it.

Mr. Chairman, I have two letters that I would like to offer for the record, one from your good friend, Jack Kemp, and another from two Subcommittee Chairmen of the Banking Committee, Mr. Lazio and Mr. Baker. I think the thrust of both of these letters is that an ounce of prevention is worth a pound of cure; and unfortunately, in our static analysis that we use in this Congress, we are stuck with an $86 million cost of this legislation over 5 years.

However, if you read the two letters from Mr. Kemp and Mr. Lazio, you will see that what we are trying to do with this legislation is prevent the eventual default of a large number of instruments that are backed up by HUD and that could cost this government considerably more than the static analysis indicates the cost of this bill will be.

I urge the Committee to consider this legislation as we move forward.

Thank you, Mr. Chairman.

[Letters from Mr. Kemp, Mr. Lazio, and Mr. Baker follow:]

JACK KEMP
March 23, 1995

Honorable Bill Archer
U.S. House of Representatives
1236 Longworth House Office Bldg.
Washington, DC 20515

Dear Bill:

I want to urge you to act this year on an innovative tax proposal that would be a significant plus for the nation's supply of affordable housing, while obviating the need for much more costly alternative housing programs.

The proposal leverages private capital to fix-up and maintain a large category of multifamily rental projects serving low-income tenants. This inventory of privately-owned projects plays a vital role in the nation's overall efforts to meet the housing needs of low-income residents in Houston and in hundreds of other towns throughout the country. Yet these projects are aging, and the inventory is in crisis because it is not attracting the new private capital needed to rehabilitate and maintain the projects. In order to promote resumption of private investment in these projects, the proposal provides limited relief from the depreciation and passive loss rules for those projects that meet the bill's substantial criteria.

The Joint Tax estimated last year that the proposal would cost no more than $100 million in all over five years. It would pay for itself many times over, because it would allow Congress to eliminate existing or proposed HUD preservation programs that would cost much more, and that in my experience are not all that effective.

This is the kind of approach I believe we should be doing more to implement as Republicans. It places greater reliance on private initiative and the discipline of the market place, rather than government grant programs. It is cost effective. It would help cities rebuild, but it would not bail them out. It would demonstrate that a Republican Congress can find new and better ways to respond effectively to the needs of low-income members of the population. On this last point, it is my understanding that a majority of the Black Caucus co-sponsored the legislation in the last Congress. This included Charlie Rangel and all the other Black Caucus members of the Ways and Means Committee.

For your background, I have enclosed a summary of the proposal and its purposes. I look forward to calling you and talking with you further about it.

Very sincerely yours,

Jack Kemp

P.S. I'd be interested in your comments, as an old pal!

U.S. HOUSE OF REPRESENTATIVES

SUBCOMMITTEE ON HOUSING AND COMMUNITY OPPORTUNITY
OF THE
COMMITTEE ON BANKING AND FINANCIAL SERVICES
ONE HUNDRED FOURTH CONGRESS
B-303 RAYBURN HOUSE OFFICE BUILDING
WASHINGTON, DC 20515

June 8, 1995

Congressman Jim McCrery
225 Cannon House Office Building
Washington, D.C. 20515

Dear Congressman McCrery:

We are writing to let you know of our interest, as members of the Banking Committee, in working with you on the Low-Income Housing Preservation Act (H.R. 931).

One of the key issues the Banking Committee faces as it wrestles with ways to restructure the Department of Housing and Urban Development (HUD) is how to treat the large inventory of privately-owned multifamily projects that are insured and assisted by HUD. A number of the projects are aging and at risk. It is perhaps inevitable that the owners of some of these projects will default on their mortgages in response to the variety of other changes we will be making in the HUD programs. The number of such expensive defaults would be reduced, however, if there was a way to attract additional private investment in those projects.

H.R. 931 uses limited tax deductions to encourage investors to purchase the older HUD-assisted projects, and to invest capital in them. At minimal cost to the Treasury, the approach proposed in H.R. 931 would help preserve and improve the stock of aging housing, reduce the number of mortgage defaults that occur, and increase the amount the federal government can recoup in the capital markets when defaults on insured mortgages do occur. By emphasizing enhanced reliance on the private sector, the approach in H.R. 931 provides an important complement to our own efforts to increase the cost effectiveness of our non-subsidized federally-insured multifamily housing programs.

As we continue to review H.R. 931, our staff intends to work with the staff of the Ways and Means Committee to ensure that the legislation is consistent with the changes we will be considering in the Banking Committee. But the overall approach is a promising one that we hope will receive your active support. We thank you for bringing this to our attention.

Sincerely,

Rick Lazio

Congressman Rick Lazio
Chairman, Housing and Community
Opportunity Subcommittee

Richard Baker

Congressman Richard Baker
Chairman, Capital Markets, Securities
and GSEs Subcommittee

Senator MCCONNELL. Mr. Chairman, if I may, I will just indicate to Congressman Bunning that we will have that figure for you later today in terms of the number of people currently participating in Kentucky and submit it for the record, if the Chairman will agree, and get it to your office.

Chairman ARCHER. Thank you. We will be pleased to receive it.

Senator MCCONNELL. Thank you, Mr. Chairman.

[The following was subsequently received:]

Mr. Bunning, it is my understanding that in Kentucky there are 2,137 participants in the Kentucky Educational Savings Plan Trust that was established in 1988. Participants of this plan range in age between 19 to 82 years old. As expected, the largest number of participants are the 40- to 49-year-old age group. It is no surprise since these individuals are parents of children preparing to enter college. In fact, the average age of the Kentucky plan beneficiaries is 9 years old.

I would also like to point out that not only do all age groups contribute, but families from all income groups participate as well. The largest number of participants report an annual gross family income of about $50,000. The lowest income reported by a Kentucky plan participant was just $4,000.

I believe these statistics clearly demonstrate that the Kentucky plan benefits all families who are committed to providing their children an opportunity to receive a college education. I would urge you to keep in mind that these families participate in the plan despite the fact that their contributions receive no Federal tax preference.

With regard to the Committee's question on national participation, I have been informed that those numbers are not currently available. However, prepaid tuition plans operated in Ohio, Florida, Michigan, Alabama, Alaska, Pennsylvania, Wyoming, and Massachusetts report that they represent over 400,000 participants.

Chairman ARCHER. Mr. English.

Mr. ENGLISH. Thank you, Mr. Chairman.

Senator McConnell, I want to thank you for appearing here today. You have been a very, very effective advocate of the State systems of prepaid tuition. I agree with you.

My finding, having become involved in the issue, has been that these State programs do not work as effectively as they could in assisting particularly middle-class families in making college affordable and in planning for tuition.

I want to thank you for your efforts and get your comments on some testimony that we had yesterday from the president of the College Savings Bank of Princeton, New Jersey who, as you may know, has initiated a lawsuit against Florida to try to block their program as unfairly competing with the product which he offers in the marketplace. He described in broad terms the kind of tax bill that we have been talking about, and yours and mine differ in a modest way, as tax cuts for the rich, creating a tax advantage that would crowd out the municipal market, and also a tax break that would lead to massive deficits, including a substantial job loss.

Under questioning, he could not quantify that, but could you respond to these claims?

Senator MCCONNELL. Well, there is not any question it is not going to produce massive deficits. The State plans are targeted to meet State educational needs and cooperate with State schools to increase attendance. This is very narrowly targeted. Currently, Congressman, over 32 States operate plans that provide safe and viable investment vehicles for the colleges.

These plans maintain low operating costs to ensure affordability for everyone. Families can open an account with as little as $25 a

month. I mean, if this suggestion is going to be criticized as a break for the rich, then we are all rich.

In addition, the Kentucky plan offers an incentive through the endowment to students who remain in the State. This is clearly a program to benefit people of modest means, to give them a chance to get ahead of the curve and to give their children an opportunity to realize the American dream. I think the criticism is completely wrong-headed.

Mr. ENGLISH. Senator, I appreciate again your being here, and it has made no sense to me that a middle-class family, buying in advance a college credit, would have to pay a capital gains tax on the eventual appreciation of that credit. That is not what Congress had in mind. That may make sense to the green-eyeshade types over at Treasury. But I appreciate very much your involvement in this issue and thank you for coming today.

Thank you, Mr. Chairman.

Chairman ARCHER. Mr. Ensign.

Mr. ENSIGN. Thank you, Mr. Chairman.

Congressman Jefferson, I appreciate your being here today, and I appreciate your testimony. I do have a couple of questions on your proposal.

First of all, one of the things we have seen in low-income type housing is that sometimes, when they get breaks, then people turn around and end up charging higher than market rates in that area.

Are there any assurances in your bill that these tax credits will not go to give people breaks and then later, 3 or 4 years down the line, their rates actually end up not being just for low-income people, but they end up charging higher than market rates?

Mr. JEFFERSON. HUD has rules that govern this whole area of when it will provide insurance, for what types of developments, and what the rent rates ought to be. That is controlled by HUD. It would not be contained within this legislation, but that is a matter of the kinds of units that HUD will insure. I think that that will be protected in that way.

What we say here is that a majority of the units must meet those HUD requirements, so there could be no case where, if HUD were to continue to insure the property, it could get out of line with the low-income housing tenants.

Mr. ENSIGN. I guess the reason why I ask that question is because from talking to various people who were working on some of the HUD reforms, that is one of the problems with HUD currently, that people are either getting around the rules or that they were actually charging higher than market rates, and then when HUD threatened to do something to them, they would say, "Fine, we will just default on our loans."

Well, the Federal Government guaranteed those loans, and those places were not worth as much as the mortgages were. In other words, if they defaulted, the Federal Government would actually lose more money.

What I am asking is whether there is anything in your bill to assure we do not end up with that same scenario?

Mr. JEFFERSON. Let me explain just a little bit about it. What it would mean in this bill is that a new owner who had agreed to come in and make a substantial investment would then be eligible

for the deductions and the depreciation schedule that this bill provides for.

The old owner, the person who now has the property sitting there, maybe with the problems you are talking about, who is now headed toward default and who has done all sorts of machinations just to stay around and stay alive, that person gets removed from the scene and a new owner comes in, and the new owner has to put up his or her real money to attract the incentives of this bill. A majority of the tenants there, although not all of them, have to be eligible on a low-income basis under HUD rules.

While there is nothing in this legislation that says you cannot raise the rents or do this, that, and the other, that is not really what it is designed to do. That comes under Mr. Lazio's Committee and the work he must do to make sure there is no cheating under the low-income rules.

This is just a way of saying we are going to create a market for these properties that does not now exist. This market will drive the revitalization of these areas. It will depend upon private money to leverage the incentives, which is where I think we are headed in this country and in our government. We cannot keep putting money into projects, and it will be privately leveraged. And it will save the government in the end, hopefully, a huge amount of defaults that might otherwise occur.

That is what we are getting at here. I understand the problem you are pointing to, but that is Mr. Lazio's Committee that will have to tighten up that end of it.

Mr. ENSIGN. OK. Just real quickly, the other thing that I am very interested in—and I do not think it is addressed in your bill, and I do not know if there is any way that we can adjust this—home ownership and ownership in these types of units by the individuals themselves is something that I very strongly believe we should somehow encourage similar to "Habitat to Humanity." I would love to work with you on this bill, because the bottom line is that we are obviously trying to help low-income people be able to realize affordable housing, but beyond just paying rent, I would love to see them able to have a stake in the American dream, and if we could somehow coordinate that with your bill, I would like to work with you on that.

Mr. JEFFERSON. Well, thank you. I am very open to whatever suggestions you might make to improve the direction we are trying to head in, and I deeply appreciate your participation.

Mr. ENSIGN. Thank you.

Thank you, Mr. Chairman.

Chairman ARCHER. Mr. Shaw.

Mr. SHAW. Thank you, Mr. Chairman.

I want to associate myself with the remarks of Senator McConnell, as well as Mr. English, with regard to the matter that you have brought before us. The gentleman from Florida, Mr. Gibbons, and I have spoken on this on several occasions and are in sympathy with what we are trying to do, and perhaps we will be fortunate enough to make that part of the law this year.

I also want to take this time to tell Mr. Jefferson it is good to see him back in this room. He was certainly a valuable Member of

this Committee, and you look as good sitting there as you looked sitting up here. Welcome back.

Thank you, Mr. Chairman.

Mr. JEFFERSON. Thank you very much.

Chairman ARCHER. Mr. Hancock.

Mr. HANCOCK. One real quick question. Thank you, Mr. Chairman.

On your plan, Senator McConnell—we are talking about saving money for education, and I frankly am a very strong advocate for even a tax-deductible saving education plan to help parents pay for educating their children.

The 1986 tax law effectively got rid of the benefit of the uniform gift to minors because the tax law requires the tax on the income from the uniform gift to be a tax at the parents' rate rather than the child's rate.

Has there been any consideration, or have you considered anything whereby we might be able to change that Uniform Gift to Minors Act back for educational plans? In fact, we have a tax-free accumulation here, but it is only in a State-sponsored plan, and those State-sponsored plans are invested in fixed dollar return rather than the possibilities of taking a little bit more of a risk for a greater return.

Senator MCCONNELL. About the only thing we did in our bill, frankly, due to concerns about revenue loss, was to provide that if the funds were converted by the children to be used for noneducational purposes, the funds would pay taxes at the child's rate instead of the parents'.

Mr. HANCOCK. But as I said, in your analysis of this, have you considered any change in the uniform gift to minors as part of enabling people to accumulate money for their children's education?

Senator MCCONNELL. I have not, but I think that raises a much larger question I assume this Committee is going to address in the context of broader tax reform, and I think your point is extremely well made. We did not consider it in the context of this rather narrowly crafted legislation really designed to promote the use of these 30 some-odd existing State plans.

Mr. HANCOCK. I would like to have it on the record.

Thank you.

Senator MCCONNELL. Thank you, Congressman.

Chairman ARCHER. Thank you again, gentlemen.

Our next witness is a gentleman who is no stranger to this Committee. For a number of years, he was the Ranking Minority Member of the Committee, became President of the World Bank, and now has gone on to other, I am sure, halcyon activities.

We are delighted to have you back, Barber, Hon. Barber Conable, and you are no stranger to the rules of the Committee, so you may proceed at will.

STATEMENT OF HON. BARBER CONABLE, ALEXANDER, NEW YORK; FORMER PRESIDENT, WORLD BANK, AND FORMER MEMBER OF CONGRESS

Mr. CONABLE. Thank you, Mr. Chairman, Member of the Committee. I very much appreciate your holding these hearings.

I am here as an individual citizen in support of H.R. 1401, sponsored by Mr. Gibbons and Mr. Houghton. This measure has been around in one form or another since 1990, looking for a suitable vehicle. I understand the legislation you are considering might be a suitable vehicle, and I commend H.R. 1401 to your attention for that purpose.

Mr. Chairman, I do have a short written statement, and I would appreciate, if it pleases the Committee, that it be included in the record in its entirety.

Chairman ARCHER. Without objection, it will be entered in the record.

Mr. CONABLE. Thank you very much.

This has to do with the taxation of the employees of international institutions that are sited in the United States. The Bretton Woods agreement that set up the IMF and the World Bank in particular provided immunity from taxation in a general way. The courts have held that inheritance tax, however, is subject to taxation as the Congress may specify, and in 1988, in TAMRA, while the president of the World Bank slept, this Committee added some provisions to raise a very small amount of money where arithmetic appeared to be the motive rather than justice. The result was that the nonresident employees of international institutions that had previously not been subject to a punitive tax, as a result of the inheritance tax provisions, suddenly found themselves denied the full spousal marital deduction, found that their exemption was $60,000 rather than $600,000, and found that they were being taxed on the actuarial value of derivative pension benefits.

Let me explain the problem that that caused. If an employee had worked for the World Bank, for instance, for 15 years and was killed in a plane crash or got some exotic tropical disease in Africa, and his widow had derivative pension benefits and was, let us say, 35 years old, those pension benefits could amount to a lot of money. If she died the next day, she would still under TAMRA be taxed the full actuarial value of the pension benefits as of the date of the husband's death, and that could be a very large sum of money.

In any event, these foreign employees working for international institutions have G–4 visas which require them to be out of the country in 60 days. It meant that a spouse of such a deceased World Bank, IMF, or U.N. employee would have to borrow the money to pay the inheritance tax on a substantial assumed actuarial value of the derivative pension and the full appreciated value of any real estate they had purchased while working here in this country, and they had to do it on a pretty much crisis basis because they had only 60 days to get out of the country.

Now, this particular provision is a modest one; it does not change it all back to the way it was previously, but it does increase the spousal benefit for nonresident employees of international institutions from $60,000 to $600,000, thus giving them some reduction on what otherwise could be an almost confiscatory inheritance tax.

I hope the Committee can consider it favorably. It raises very small amounts of money for the Treasury, but it has greatly affected the ability of the World Bank to recruit in Japan and in Europe, and we are supposed to have employee representation on the

Bank staff or on the IMF staff equivalent to the ownership share of that country.

For instance, right now, 25 percent of the employees at the World Bank are American and therefore subject to normal American taxation. It should be only 17 percent, because that is the American ownership of the World Bank. It is very difficult to attract highly skilled, trained Japanese and Europeans to come here and work in Washington when they know in advance that they will be faced with this kind of an inheritance tax problem if something happens to them while they are working here.

Thank you.

[The prepared statement follows:]

Testimony of the Honorable Barber Conable Before the
House Ways and Means Committee of the
House of Representatives, U. S. Congress

Estate Tax Marital Credit For Certain Employees of International Organizations
July 12, 1995

My name is Barber Conable. I was a member of the U.S. House of Representatives from 1964 to 1984, during which time I served on the House Ways and Means Committee. In 1986, I was appointed President of the World Bank, and served in that capacity until September 1991. I remain keenly interested in matters before this Committee which affect the World Bank, other multilateral institutions and their employees, and, in this context, I appear before you today in my individual capacity to discuss certain aspects of U.S. estate tax law which have placed a disproportionate and unfair burden on certain employees of international organizations and their families.

Under its Articles of Agreement, the World Bank is mandated to recruit staff on as wide a geographical basis as possible," subject to "the highest standards of efficiency and technical competence." Consequently, a large number of World Bank employees are citizens of other countries who have come to the United States in order to work for the Bank at its headquarters in Washington while maintaining their citizenship in, and contacts with, their home countries.

In 1988, TAMRA changed the rules governing estate taxes in a way which has had a significant adverse impact on employees of the World Bank, the IMF and other international organizations who are present in the United States for purposes of international organization employment. TAMRA affected surviving spouses who are not U.S. citizens by denying them use of the unlimited marital deduction, which is otherwise available to U.S. spouses, and imposing estate tax on the full value of jointly held property passing to non-U.S. surviving spouses.

Often, the principal source of financial support for a surviving spouse of a World Bank employee will be the spousal benefit paid by the Bank's pension plan. Under the TAMRA amendments, the full actuarial value of the spousal pension benefit, payable over the lifetime of the spouse, may be subject to immediate estate tax even though cash may not be available to pay the tax and the value of the pension may be completely consumed during the remaining lifetime of the surviving spouse. Prior to TAMRA, the U.S. had never imposed estate tax on spousal pension benefits. Moreover, except to the extent that it can be established that the spouse contributed toward the purchase of the family residence, the full appreciated value of the family residence, also a noncash asset, may be subject to estate taxes. Even for modest and illiquid estates, the tax burden imposed on non-U.S. international organization employees may be substantial and much higher than where both spouses are U.S. citizens.

In the case of estates of non-residents, the rate of taxation was increased to nearly the same rate which applies to resident estates. However, for purposes of the unified credit, the exemption equivalent of $60,000 applying to estates of non-residents, compared to the $600,000 exemption equivalent for resident estates, remained unchanged. This change represented a significant tax increase on non-resident estates.

H.R. 1401 contains a provision introduced by Representatives Houghton and Gibbons which would significantly lessen the impact on all but the largest estates of international organization employees who are present in the U.S. on G-4 visas. This would be achieved by adoption of a marital transfer credit against the estate tax for estates of international organization employees and their spouses in an amount up to the equivalent of a $600,000 deduction. I urge the Committee to support this piece of legislation to diminish the unwarranted burden imposed upon international organization employees by TAMRA. Indeed, enacting this provision would be consistent with the United States' obligation, as host to the World Bank and other international organizations, not to place undue burdens on the organizations and their employees.

Chairman ARCHER. Thank you for your testimony. I appreciate your taking the time to explain this issue to the Committee.

Are there any Members who wish to inquire?

Mr. Houghton.

Mr. HOUGHTON. Maybe I should yield first to Mr. Gibbons, if that would be all right.

Chairman ARCHER. Go ahead.

Mr. GIBBONS. Thank you, Mr. Houghton. I am glad that you and I are cosponsoring this, and I am glad that you are the lead sponsor, because maybe now that it has a good lead sponsor, we will pass it. This is a serious piece of mischief that we did back in the eighties to some very fine people who did not deserve the kind of treatment we gave them, those employees who must come here because of the situs of their international job. These are international civil servants, and we have penalized them by the tax provisions that we have put on them.

I want to tell you, Barber, that I recognize every day that I sit in the Barber Conable seat here on the Ways and Means Committee—I feel honored to be in the position that you occupied so distinctively——

Mr. CONABLE. Gently, Sam, gently.

Mr. GIBBONS [continuing]. And with such great honor for so many years. I would ask that God give me the wisdom that he gave you to occupy this seat.

But Barber, I hope we can get it passed. I know that what you are doing is in the best interest of these institutions, and in just plain, simple fairness under our tax laws. I am glad that Amo and I are working together on this, and maybe we can get the Chairman recruited on this one, too.

Mr. CONABLE. Thank you, Mr. Gibbons.

I must say it seems like a modest matter, but recruitment is a very serious problem in international institutions at this point to get the skilled people you need, and quite frankly, the World Bank, to choose only one institution, one that I know something about, contributes a great deal to the Washington economic environment. It has a staff of over 6,000 people, three-quarters of them non-American, and they are very much concerned about the confiscatory nature of the current inheritance tax provisions.

We are not asking that they be put in the same position as American decedents, but only that the penalty on them for having come to work at an international institution be reduced.

Chairman ARCHER. Mr. Houghton.

Mr. HOUGHTON. If I could speak, Mr. Chairman, I would like to follow up on Mr. Gibbons statement. Barber, it is wonderful to have you here; you represent a lot, but one of the things that you do represent is a sensitivity to people's conditions, and I totally agree with you on this. Obviously, my name is associated here. But when we are going to consider ourselves an international nation, a host nation, we must look at the implications of that for the people. Whether it is in expenses, or whether it is in salaries, or whether it is in the beneficiary benefits such as we are talking about here, it makes a great deal of sense.

I am looking at the present law, which was written prior to 1988. This was costed out in 1993 as costing $12 million over a

5-year period. I do not know what it is now, but it is de minimis compared to what you are talking about in being able to attract people. As I understand it, it is not that we can willy nilly attract the people we want; there are certain percentage requirements by the World Bank from foreign countries which we must attract—isn't that right, Barber?

Mr. CONABLE. That is correct. We are supposed to have representation on the Bank staff equivalent to the ownership of the Bank. The United States has a 17-percent share, Japan has a 7-percent share; Britain, Germany, and France have about a 6-percent share each, and we are supposed to have that degree of representation on the staff. It is very difficult to achieve.

I must tell you that when I went there, I was much embarrassed to find that American representation was 8 percent above what it was supposed to be, and that meant that all my friends up here on Capitol Hill, when they sent me their uncles and their cousins and their aunts to be hired, I had to turn them down almost out of hand, simply because we were overrepresented by Americans on the staff at that time.

Mr. HOUGHTON. Just to conclude, Barber, and Mr. Chairman, it makes a great deal of sense; it has far greater implications than the dollars involved, and I think we ought to do it.

I thank you very much.

Chairman ARCHER. Thank you.

Mr. Kleczka.

Mr. KLECZKA. Thank you, Mr. Chairman.

Mr. Conable, I was not here in 1988, so I will not take any credit or blame for this provision. But what tweaks me is what was the rationale back then, and if you do not know it, maybe Mr. Gibbons does.

Mr. CONABLE. I think the rationale was mathematical. They needed to raise a certain amount of money, and they had an estimate that this would cover that, and people were not concerned about foreigners, inevitably. Here their major concern was local citizens. This appeared to be a politically easy way to raise the money.

Unfortunately, if it had been explained in terms of recruitment potential for institutions that must have skillful people working for them, I think it might have changed the result.

Mr. KLECZKA. Well, the World Bank is one of the entities you indicate that is covered by this. Are there others in a similar situation that are housed in this country?

Mr. CONABLE. No, there are not a lot of international institutions sited in the United States, but there is the United Nations and there is the IMF. These would be covered also by the legislation that is being offered here as a corrective.

Mr. KLECZKA. The last question is, How are American citizens in a similar situation treated in a foreign country? Was reciprocity part of the debate at that point?

Mr. CONABLE. I think that is one of the issues. You see, most of these nationals are also taxed by their own countries. That is why the Bretton Woods Treaty assigned tax exemption generally—I mean, it provided for tax exemption by the United States for those working here temporarily under G–4 visas.

Mr. KLECZKA. That individual would be taxed at his home, his country of origin, and at that rate versus the United States——

Mr. CONABLE. Yes.

Mr. KLECZKA [continuing]. Except for inheritance tax, and we would get them on inheritance tax.

Mr. CONABLE. We get them on inheritance tax at this point, yes. The actual provision of the Bretton Woods Treaty, which was subject to interpretation, is this: "No tax shall be levied on or in respect of salaries and emoluments paid by the Bank to executive directors, alternates, officials, or employees of the Bank who are not local citizens, local subjects, or other local nationals." The courts have held that that does not apply to the inheritance tax, and therefore the inheritance tax is assessed on people, because they have worked here in international institutions over a long period of time. If they become American citizens—and they have the right to permanent residence if they have worked in this country for 15 years—of course, they are subject to American taxes in the same way, or if they become permanent residents, they are subject to American taxes.

We are talking only about those in G–4 visas who remain nationals of other countries and are expecting to return after they have completed their employment here. These people, because they have to get out in 60 days, are really very seriously harassed by an inheritance tax that hits them, requires the sale of their homes, requires the computation of the actuarial value of any derivative pension the spouse has, and the borrowing of money to pay the inheritance tax for it. This proposal simply alleviates that situation and does not correct it.

Mr. KLECZKA. Fine. Thank you very much.

Thank you, Mr. Chairman.

Chairman ARCHER. Barber, thank you again on behalf of all the Members of the Committee. It is a real pleasure to see you back in this room.

Mr. CONABLE. It is a pleasure to be back, Mr. Chairman.

Chairman ARCHER. We wish you well. We hope you are happy in your life and that you are pursuing, as usual, constructive goals. Mr. Ford.

Mr. FORD. Mr. Chairman, I just wanted to take this opportunity to welcome Barber back to the Ways and Means Committee. I am glad to see you.

Mr. CONABLE. Thank you, Harold. My best to Tennessee.

Chairman ARCHER. Thank you, Barber.

The Chair announces for the benefit of the Committee that we will continue to work through this vote, so that Members can proceed to vote and come back as they wish.

Chairman ARCHER. Our next panel includes Edgar Spears, Dr. William Conway, William Taylor, and J. Michael Keeling, if you would all come forward to the witness table, please.

Mr. Spears, if you would identify yourself for the record, and after that identification, you may proceed.

STATEMENT OF EDGAR SPEARS, SENIOR DIRECTOR, HUMAN RESOURCES OPERATIONS, LOWE'S COMPANIES, INC., NORTH WILKESBORO, NORTH CAROLINA

Mr. SPEARS. Thank you, Mr. Chairman.

My name is Edgar Spears. I am senior director for Human Resources Operations at Lowe's Companies, Inc. I appreciate the opportunity to testify before this Committee today in support of a proposal to repeal the current 15-percent penalty tax on excess distributions from retirement plans.

We believe this tax is an inappropriate penalty on workers who have planned wisely and saved for their retirement, and that it discourages younger workers from saving for their retirement. We strongly support repeal of this penalty tax.

Lowe's Companies, Inc., is one of America's top 30 retailers, serving the home improvement and home construction markets. Lowe's 346 stores employ over 45,000 dedicated workers and serve customers in 22 States, principally in the South Atlantic and South Central regions.

Lowe's provides both a 401(k) plan and a combination stock bonus and money purchase plan for its employees. The company has made contributions to the stock bonus money purchase plan equal to 13 percent of earnings for all eligible employees for each of the past 10 years. Employees save their own money enthusiastically through our 401(k) plan, and the company matches those savings at an average of more than 50 percent. Through these plans, participants have seen their retirement accounts grow dramatically.

Unfortunately, when the 15-percent excess distribution tax is added to the current income tax structure, the total tax burden has the potential to wipe out over one-half of a retiree's accumulation.

The Tax Reform Act of 1986 imposed the 15-percent excise tax on aggregate distributions from retirement plans, tax-sheltered annuities, and IRAs to the extent they exceed $150,000 in any calendar year. At the same time, the act reduced individual income tax rates to 15 and 28 percent.

The 15-percent penalty presumably was intended to be a proxy for the tax benefit enjoyed by retirees on distributions over $150,000. But as personal income tax rates have risen, that benefit no longer exists.

Similar penalties apply to post-death distributions from retirement plans. In lieu of the annual penalty tax, an additional estate tax equal to 15 percent of the decedent's excess retirement accumulation is imposed. This surtax is particularly onerous when added to the tax due for an estate possibly subject to the top rate of 55 percent.

In light of the increases in individual tax rates since 1986, the reinstatement of the 55-percent top estate tax rate in 1993, and the low savings rate in America in general, it is appropriate to reexamine and eliminate this penalty tax on savings.

The 15-percent penalty tax affects far more than just chief executive officers and other highly paid executives in this country. Of Lowe's 579 fully vested retirees in 1994, 268, fully 46 percent, could be subject to this tax. Many of our retirees use a portion of their retirement benefits to reinvest in new startup businesses. To penalize individuals who save wisely and who seek to remain productive in their later years is contrary to this company's need for savings, for investment, and for creative, entrepreneurial, job-generating businesses.

Therefore, on behalf of our employees, I strongly urge this Committee to repeal this onerous penalty.

Mr. Chairman, that concludes my statement. Thank you for this opportunity to testify.

[The prepared statement follows:]

STATEMENT OF EDGAR SPEARS,
SENIOR DIRECTOR FOR HUMAN RESOURCES OPERATIONS,
LOWE'S COMPANIES, INC.
NORTH WILKESBORO, NORTH CAROLINA
BEFORE THE COMMITTEE ON WAYS AND MEANS,
U.S. HOUSE OF REPRESENTATIVES,
WASHINGTON, D.C.
WEDNESDAY, JULY 12, 1995

Good morning. My name is Edgar Spears, and I am Senior Director for Human Resources Operations, Lowe's Companies, Inc. I appreciate the opportunity to testify before this Committee today in support of a proposal to repeal the current 15-percent penalty tax on excess distributions from retirement plans. We believe this tax is an inappropriate penalty on those workers who have planned wisely for their retirement years and discourages young workers from saving adequately for their future retirement. We strongly support the repeal of this penalty tax.

Background on Lowe's Companies

Lowe's Companies, Inc. ("Lowe's" or the "Company") is one of America's top thirty retailers, serving the do-it-yourself home improvement, home decor, home electronics and home construction markets. Lowe's 346 stores serve customers in 22 states located mainly in the South Atlantic and South Central regions, with 45,500 dedicated employees.

Lowe's provides two long-term retirement benefit plans for its associates: a 401(k) plan and a combination stock bonus and money purchase plan. The Company has made contributions equal to 13 percent of earnings for all eligible employees for each of the past 10 years. Employees save enthusiastically through the 401(k) plan, and the Company matches those savings at an average rate of 50 percent. During that time, participants have seen dramatic growth in the value of their accounts, principally due to growth in the stock of their company.

Unfortunately, when the 15-percent excess distribution tax is added to the current income tax structure, the total tax burden is confiscatory and punitive-- penalizing workers who have saved wisely and successfully for their retirement.

Background on the 15-percent excess distribution penalty tax

Under present law, a 15-percent excise tax is imposed on aggregate distributions from retirement plans, tax-sheltered annuities and IRAs to the extent that they exceed the greater of $150,000 or $112,500 (indexed for inflation) in any calendar year (Code sec. 4980A). Under certain circumstances, retirees may be able to exempt as much as $750,000 from this penalty tax, but only if taken as a lump-sum distribution and taxed in full in a single year.

Special rules are applied to post-death distributions from retirement plans. In lieu of subjecting post-death distributions to the annual penalty tax on excess distributions, an additional estate tax equal to 15 percent of the decedent's excess retirement accumulation is imposed. The tax may not be offset by any credits against the estate tax, including the unified credit.

A distribution of benefits from a qualified plan generally is includible in gross income in the year it is paid, except to the extent the amount distributed represents the employee's investment in the contract, (that is, his basis in the contract). Special rules apply to lump-sum distributions, distributions rolled over to an IRA, and distributions of employer securities.

The Tax Reform Act of 1986 (P.L. 99-514)(the "Act") added this excise tax as a substitute for a combined limit on contributions to tax-favored retirement plans, including IRAs, and to account for appreciation in defined contribution plans (sec. 1133 of the Act). At the same time, the Act reduced individual income tax rates to 15 and 28 percent.

The 15-percent amount presumably was intended to be a proxy for the tax benefit enjoyed by the individual on amounts in excess of $150,000 because of the tax-favored treatment of the plans and the contributions made to them. However, it does not appear to capture the savings precisely, nor can it fairly account for, or predict, appreciation in plan accounts.

The estate tax surtax is particularly onerous when added to the tax due from an estate subject to the top rate of 55 percent, and taking into account the potential state and local transfer or inheritance taxes that may be applicable to such an estate.

Moreover, individual income tax rates are currently 15, 28, 31, 36 and 39.6 percent. These rates are considerably higher than they were in 1986 when the penalty tax was enacted. Estate and gift tax rates range from 18 to 55 percent, which is also a 5 percent increase at the top end.

In light of the increases in individual tax rates since 1986, the reinstatement of the 55 and 53 percent top estate tax rates in 1993, and the persistently low rate of savings in America in general, it is appropriate to reexamine and eliminate this penalty tax on savings.

The excess distribution penalty tax should be repealed.

Ideally, the excess distribution penalty should be repealed. At a minimum, it should be reduced to 5 percent with respect to lifetime distributions, and to zero in the case of post-death distributions, to reflect the increase in individual and estate tax rates and to provide an incentive for Americans to save adequately for retirement.

Repeal of the excess distribution tax will help primarily middle-income employees.

The 15-percent excess distribution penalty tax affects far more individuals than just chief executive officers and other high-paid executives in this country. A review of the 579 fully vested employees who retired from Lowe's (the "Company") in 1994 (a "1994 Company retiree") reveals that 268 (or approximately 46 percent) would be subject to the excess distribution penalty tax.

Most of these individuals retired as middle-income employees, with an average annual salary of $38,000. However, they had served many years with the Company (the median is 17 years) and thus were able to benefit from the Company's growth, increased productivity, and the concomitant appreciation in stock value.

Moreover, even after many years of service, the median age of a 1994 Company retiree who faces this penalty is 45. Only six 1994 retirees were in their 60s. Because of the relative youth of our retirees, many use a portion of their retirement earnings to reinvest in new, start-up businesses.

To penalize those individuals who have saved wisely for their future and are attempting to remain productive in their later years is contrary to this country's need for savings, investment, and creative, entrepreneurial, jobs-generating businesses. Therefore, on behalf of our employees, I strongly urge this Committee to repeal this onerous penalty.

Mr. Chairman, that concludes my statement. Thank you for this opportunity to testify.

Chairman ARCHER. Thank you, Mr. Spears.

With the Committee's indulgence, the Committee will be in recess for a very short period of time, because I have got to run over and vote on the floor. We will be back very quickly, so please keep your seats and be patient; it will only be a couple of minutes.

[Recess.]

Mr. CRANE [presiding]. If you folks will please take your seats, we will resume.

Mr. Taylor, please.

STATEMENT OF R. WILLIAM TAYLOR, PRESIDENT, AMERICAN SOCIETY OF ASSOCIATION EXECUTIVES

Mr. TAYLOR. Thank you, Congressman Crane. I thank you for the opportunity of testifying today.

I am going to speak very briefly on three issues. First, we want to support H.R. 1161 which Representative Camp has introduced. Second, we want to ask that 401(k) opportunities again be available to employees of nonprofit organizations. Third, we want to express concern about IRS attempts to tax membership dues of nonprofit organizations. I will be brief; the written record contains most of what I need to tell you.

Just a brief word about the ASAE, American Society of Association Executives. My name is Bill Taylor, and I am president of that organization. We have over 23,000 members. Approximately one-third of them work for (c)(3) organizations. The remaining two-thirds manage professional societies and trade associations, 501(c)(6) organizations for the most part. And these are all types of organizations, about 11,000 organizations in ASAE, national, State, local, international, and so forth. They serve over 200 million Americans.

Let me tell you first of our concern about the taxing of associate member dues. ASAE and the association community have been dueling with IRS for the past couple of years over their attempt to reverse their previous position and to dramatically expand the attempted taxation of dues commonly referred to as associate member dues. In short, the IRS, through revenue procedures, technical advice memoranda, litigation, audit instructions, and public speeches, has been attempting to tax dues received from those who have fewer rights and benefits in the organization than others.

This enforcement initiative is not supported by the unrelated business income tax laws. It is a complete reversal of many years of regulatory and judicial precedent. With no change in the law to justify this change, it poses a serious threat to the ability of associations to carry out their nonprofit mission, and certainly it is an affront to association self-governance.

Membership organizations are tax exempt for good reasons. They perform a wide variety of invaluable functions such as self-regulation, standard-setting, public education, public service, to name a few—things that government itself has decided not to do. And membership organizations have various classes of membership with various rights and responsibilities, also for good reason.

For example, in many situations, there are antitrust laws that preclude certain classes of competitors from establishing policies affecting entire industries.

Take the student membership category in the ABA, American Bar Association, for example, and the right of the practitioner to suggest a law student could not be a member of the ABA and has no stake in furthering that particular profession is ludicrous Yet, it is reasonable for ABA not to give student members voting rights in sophisticated policy debates. There are reasons why everybody does not have voting rights.

Certainly, taxation of dues is appropriate where a certain class of members might join an organization solely to receive one or more benefits or services that are unrelated to the tax status and purpose of the organization. Also, we know that income from unrelated benefits and services to any class of members is already taxable, so the member dues income issue is what we are concerned about at this time.

ASAE proposes that the Congress enact legislation to clarify what Congress has authorized the IRS to do under unrelated business income taxation laws.

In short, we want to ensure that all forthcoming guidance issued by the IRS in this area reflects the principle that association membership dues are to remain exempt from taxation unless it is clear that members join the tax-exempt organization for no other bona fide reason than to receive one or more unrelated benefits or services.

Representative Camp has introduced H.R. 783, and that is a good start in this direction, but it is very limited in scope and substance. Among other limitations of H.R. 783 is that it benefits only 501(c)(5) farm organizations, and the bill needs to be significantly broadened to be fair and effective, both in terms of to whom it applies and the terms of standards it sets. This is an issue affecting all organizations, not just farm organizations.

To finalize on this subject, ASAE hopes that you will consider legislation that will, first, clarify the provision that unrelated benefits to a class of association members will not cause the dues paid by such members to be taxable unless these benefits constitute the principal purpose for the organization to have such a class of members; second, if the existence of a class of members helps to significantly further one of the organization's tax-exempt purposes, then the dues paid by the class of members will not be taxable; third, any income directly resulting from the provision of unrelated benefits or services will continue to be taxed according to the current law; fourth, the existence of different categories of members will not make some members more bona fide than others and thus more or less subject to taxation; fifth, the abilities to vote and hold office in an organization are not the deciding issues on who is a bona fide member; and sixth and finally, no one factor shall be fatal to the tax-exempt status of dues income.

We would welcome the opportunity to work with the Committee on this issue because we do think it is an important issue.

Next, very briefly, 401(k) eligibility retirement for employees of nonprofits. Through some mistake, back in 1986, the ability of people employed by nonprofit organizations to have 401(k)s was taken away. This is an issue that we have faced many times. The House of Representatives has four times passed legislation to reinstate 401(k)s for employees of tax-exempt organizations. It has passed

the Senate twice. It has been vetoed by President Bush twice as part of larger tax bills. The time has come for the Congress to reinstate 401(k) plan eligibility for all employees, providing the same incentives for employees of tax-exempt organizations as other American workers.

Finally, we would like to endorse the bill by Representative Camp, H.R. 1161, on corporate sponsorship payments. They should not be taxed as unrelated business income where events merely recognize the contributions of sponsors and where there is no expectation that the sponsor will receive any substantial return benefit.

We thank you for the opportunity to testify, sir.

[The prepared statement follows:]

STATEMENT OF R. WILLIAM TAYLOR, PRESIDENT AMERICAN SOCIETY OF ASSOCIATION EXECUTIVES

Good afternoon, Mr. Chairman and members of the Committee. My name is R. William Taylor, CAE.[1] I am president of the American Society of Association Executives (ASAE). ASAE is a not-for-profit, tax-exempt, umbrella organization organized to serve and represent associations. Its membership includes approximately 22,300 association executives and staff, as well as suppliers of goods and services to the association community. Approximately one-third of the association executives and staff manage charitable and philanthropic organizations; the remaining two-thirds manage professional societies and trade associations. The more than 10,700 organizations managed by ASAE members include international, national, regional, state, and local groups, as well as multi-tiered federations and coalitions. ASAE is testifying today on behalf of the organizations it represents, all of whom have a strong interest in these issues.

Specifically, I would like to discuss three pieces of proposed legislation — bills concerning the tax treatment of associate member dues income, the reinstatement of 401(k) plan eligibility for tax-exempt organizations, and the tax treatment of corporate sponsorship income. I will begin with the associate member dues issue.

I. TAXING ASSOCIATE MEMBER DUES

As the Committee may know, ASAE and the association community have been dueling with the IRS for the past couple of years over the IRS' attempts to reverse its previous position on, and dramatically expand its attempted taxation of, a class of dues income received by membership associations commonly referred to as "associate member dues." In short, the IRS — through a Revenue Procedure, technical advice memoranda, litigation, audit instructions, and public speeches — has been attempting to greatly increase its taxation of dues received from certain classes of association members, specifically, those who have lesser rights and benefits in an organization than others.

This enforcement initiative is wholly unsupported by the unrelated business income tax (UBIT) laws which purportedly give the IRS its authority in this area. In addition, it is a complete reversal of many years of regulatory and judicial precedent – with no change in the law to justify such action – and poses a serious and dangerous threat to the ability of associations to carry out their nonprofit missions. Finally, it is, above all else, an affront to the principles of association self-governance.

By way of context, this Committee should be aware that membership organizations — for good reason — often have various classes of members with varying rights, responsibilities and benefits in the organization. The mere existence of these categories does not make some classes of members more *bona fide* than others, although the IRS' briefs in a recently-decided U.S. Tax Court case (*National League of Postmasters v. Commissioner*), which it won, certainly make such an implication — implying that "members" with less than full rights and privileges in an organization are generally not *bona fide* members, and as such, their dues should be taxed. Associations have sound policy reasons for distinguishing between different classes of members and providing them with different rights in the organization. For example, the antitrust laws may play a role in precluding certain classes of competitors from establishing policies affecting entire industries. Similarly, student membership may legitimately reflect a different relationship with

---

[1] Certified Association Executive

the association's governing structure. To suggest, for example, that a law student member of the American Bar Association (ABA) has no stake in furthering the tax-exempt purposes of the Association is ludicrous, yet, clearly, it is reasonable for the ABA not to give student members voting rights in sophisticated policy debates.

It is undisputed that, in the egregious situations where a certain class of members joins an organization *solely* to receive one or more benefits or services which are unrelated to that organization's tax-exempt purpose, dues from that class of members should be taxable as unrelated business income (UBI). What is of great dispute, however, is the IRS' recent attempts to tax the dues of classes of members who *do* have rights and benefits which are substantially related to the organization's tax-exempt purposes. This lies at the root of ASAE's concerns.

With the exception of a few "bad apples" (which the IRS has and should continue to pursue), membership organizations are tax-exempt for good reason. They perform a wide variety of invaluable functions (such as industry self-regulation, standard-setting, public education, and public service, to name a few) which the government has chosen not to conduct itself. Taxing the dues of members who receive unrelated benefits — *in addition to* related benefits — would do enormous financial damage to nonprofit organizations, and would greatly hinder (and, in some cases, eliminate) their ability to carry out their nonprofit missions. Income *directly* flowing into an association from its provision of unrelated benefits or services to *any* class of members is *already* taxable as UBI; it is the member *dues* income which is at issue. Such dues taxation is not warranted or authorized by the UBIT statutes.

As such, ASAE proposes that Congress enact legislation to clarify what Congress has authorized the IRS to do under the UBIT laws — in short, to ensure that any and all forthcoming guidance issued by the IRS in this area reflects the principle that **association membership dues are to remain exempt from taxation unless it is clear that members join the tax-exempt organization for *no other* bona fide *reason* than to receive one or more unrelated benefits or services.** While the bill introduced by Rep. Dave Camp, H.R. 783, is a good start, it is limited in both scope and substance. At present, H.R. 783 benefits only 501(c)(5) farm organizations. The bill needs to be significantly broadened — both in terms of to whom it applies and in terms of the standards it sets — in order to be fair and effective. This is an issue which, as the IRS has already recognized, has application across the whole universe of tax-exempt membership organizations.

In this regard, ASAE proposes legislation which would, beyond codifying the previously-stated principle, also clarify that:

1) the provision of unrelated benefits to a class(es) of association members will not cause the dues paid by such members to be taxable unless the receipt of such benefits is the *principal purpose* for the organization to have such a class(es) of members;

2) if the existence of a class of members helps to significantly further one of the organization's tax-exempt purposes — as defined in the organization's articles of incorporation and application for tax exemption — then dues paid by that class of members will not be taxable;

3) any income *directly* resulting from the provision of unrelated benefits or services will continue to be taxable according to current law;

4) the existence of different categories of members will not make some members more *bona fide* than others, and thus more or less subject to taxation;

5) the abilities to vote and hold office in an organization are *not* dispositive factors when deciding who is a *bona fide* member; and

6) no *one* factor in this highly factual determination shall be "fatal" to the tax-exempt status of dues income.

Background

By way of background, the associate member dues issue first came onto the association community's radar screen by way of two 1993 IRS rulings — one issued to a 501(c)(6) professional society and the other to a 501(c)(5) farm organization — concluding that dues paid by the associate members of those organizations were really not tax-exempt dues, but rather were taxable unrelated business income. (Note that the term "associate" member has acquired a generic meaning, and is used as such by the IRS to describe any class of members with less than full rights and privileges in an organization.) In the 501(c)(6) case (TAM 9345004), the IRS said the supplier member dues were essentially purchasing "advertising" (an unrelated activity), and not much more; in the 501(c)(5) case (TAM 9416002), the IRS held that the dues of non-farmer associate members were purchasing access to insurance programs (an unrelated activity), and not much more. (See below for more on these TAMs.) In both cases, the dues were thus deemed to be taxable.

Numerous public speeches by IRS officials following the 1993 rulings confirmed that the rulings indeed represented a significant change from prior IRS enforcement in this area, and that the IRS would now be aggressively scrutinizing dues paid by "less than full members" to determine if they were not *bona fide* members, but rather joined the association primarily to receive one or more unrelated benefits (*e.g.*, advertising, access to insurance, etc.). If so, the IRS would tax such dues as UBI.

On March 23, 1995, the IRS continued down this path by issuing its first "precedential" guidance in this area, in the form of a Revenue Procedure (95-21). The Rev. Proc. establishes a *principal purpose* test for determining whether a class of dues income will be subject to unrelated business income tax.

Specifically, it says that if an associate member category has been *formed* or *availed of* for the *principal purpose* of producing unrelated business income, then dues from associate members will be taxed. The Rev. Proc. defines unrelated business income, for these purposes, as income from the sale of, or the provision of access to, goods or services produced by an activity which constitutes a trade or business, is regularly carried on, and is not substantially related to the organization's tax-exempt purposes. Finally, the Rev. Proc. says that in applying this standard, the IRS will look to the purposes and activities of the *organization* rather than of its *members*.

Speaking at an ASAE-sponsored legal conference in April, IRS Exempt Organizations Division Director Marcus S. Owens elaborated on the scope and significance of the Rev. Proc. He said that while the guidance technically only applies to 501(c)(5)s (labor unions and agricultural organizations), it is a statement of IRS policy in this area generally, and will be

applied to all classes of 501(c) organizations. Owens went on to say that the objective of the IRS in issuing the Rev. Proc. was to spell out the general legal standard the IRS will apply in these cases, as well as to clarify that there will be no *allocation* of dues between related and unrelated purposes (*i.e.*, associate member dues will either completely taxable or completely tax-free). He said that the Rev. Proc. is simply a reiteration of the policy reflected in the 1993 IRS rulings, and acknowledged that it does not provide much useful guidance to associations attempting to minimize their potential tax exposure. Owens added that this broad policy statement will likely be followed up later this year with proposed audit guidelines which will spell out specific factors IRS auditors should consider when determining whether a given class of members is truly a *bona fide* class, or whether their dues are merely (taxable) "access" charges to gain one or more unrelated benefits.

Finally, Owens said that as part of his annual training of his revenue agents this year, he will be including a session on the tax treatment of associate member dues. As a result, Owens said, associations should expect increased IRS audit activity in this area.

Departure from Prior IRS Policy

Rev. Proc. 95-21, the two 1993 TAMs and Marcus Owens' public comments all represent a significant departure from past IRS enforcement in this area.

Under the UBIT rules, if a trade or business is regularly carried on and is not substantially related to the organization's exempt purposes, then any income derived from that activity will be treated as UBI. In the two 1993 TAMs, for example, the unrelated activities were advertising and providing access to insurance, respectively. Both advertising and insurance are historically unrelated activities, and income *directly* attributable to them (even when received from *bona fide* members) has always been treated as UBI (*e.g.*, advertising revenue, insurance premiums, fees received for sponsoring and administering insurance programs, etc.).

The difference here, however, is that dues (historically tax-exempt income) from associate members are also being attributed to these activities — something that, except in egregious circumstances, has never happened before. The IRS is now saying that when associate members receive unrelated services or benefits, if it cannot be established that they are *bona fide* members, then all dues received from them will be taxed as UBI (in addition to the prior taxation of fees and other payments directly attributable to these services and benefits).

Who Is a Member?

The question of who is a *bona fide* member is thus the central question in this analysis. A variety of definitions of an association "member" have been adopted in recent years — by the IRS, the Supreme Court, the U.S. Tax Court, the Federal Election Commission (FEC), state legislatures, and others. Which definition takes precedence? Unfortunately, there is, to date, no definitive answer as to what constitutes a *bona fide* member.

In TAM 9345004, the IRS acknowledged that associations often have several classes of members, but that associate members in this case would not be treated as members under non-profit

corporation law standards. While state non-profit corporation laws vary on this issue, it is noteworthy that section 1.40(21) of the ***Revised Model Non-Profit Corporation Act*** (1987) defines a member as "any person or persons who on more than one occasion, pursuant to a provision of a corporation's articles or bylaws, have the right to vote for the election of a director or directors."

In TAM 8834006, the IRS said, "The term 'member,' at the least, denotes a formal relationship in which a person, whether specifically described as a member or not, has specified rights and obligations in relation to an organization. In addition, 'membership' assumes some right to participate in the organization's direction as well as an obligation to help support the organization through regular financial contributions." The TAM goes on to say that "most importantly," *[bona fide]* members "have voting rights and have a voice in the administration and direction" of the organization. It therefore concludes, "Where the payment of dues is the only requirement of membership and where 'members' have no right to participate in the direction of the organization, these individuals will not be deemed *[bona fide]* 'members.'"

In *FEC v. National Right to Work Committee*, 459 U.S. 197 (1982), the U.S. Supreme Court considered whether certain individuals constituted members of a tax-exempt organization for purposes of the *Federal Election Campaign Act.* Relying on the *Act's* brief legislative history, the Court determined that members of non-stock corporations (*i.e.*, non-profit corporations) should be defined, at least in part, by analogy to stockholders of business corporations and members of labor unions. As stated by the Court, viewing this question from this perspective means that "some relatively enduring and independently significant financial *or* organizational attachment is required to be a 'member'" under the statute. *Id.* at 204. In holding that the National Right to Work Committee's (NRWC) purported "members" did not meet this test, the Court noted, "Members play no part in the operation or administration of the corporation; they elect no corporate officials...There is no indication that NRWC's asserted members exercise any control over the expenditure of their contributions." *Id.* at 206.

In (belated) response to the *National Right to Work Committee* decision, on August 30, 1993, the FEC issued final regulations which, among other things, define what constitutes a "member" of a membership association. (The regulations are codified at 11 C.F.R. §§ 100.8(b)(4)(iv), 114.1(e) and 114.7(k).) Under the new rules, a "member" must meet one of the following four tests: (1) "Have some significant financial attachment to the membership association, such as a significant investment or ownership stake (but not merely the payment of dues);" (2) "Are required to pay on a regular basis a specific amount of dues that is predetermined by the association *and* are entitled to vote directly either for at least one member who has full participatory and voting rights on the highest governing body, or for those who select at least one member of those on the highest governing body of the membership association;" (3) "Are entitled to vote directly for *all* of those on the highest governing body of the membership association;" or (4) On a "case by case" basis for those who do not fit the precise definition of the general rule. 11 C.F.R. § 114.1(e).

In *Hunt v. Washington Apple Advertising Commission*, 432 U.S. 333 (1977), the U.S. Supreme Court held that certain persons should be treated as members of a Commission for standing purposes where such persons alone elected the members of the Commission, served on the Commission, and financed its activities through assessments levied on them. *Id.* at 344.

The U.S. Tax Court has applied the holdings of these cases in determining whether individuals were members of an association within the meaning of section 1.512(a)(3)-a(f)(3)(iii) and (iv) of the unrelated business income tax advertising regulations. *National Association of Life Underwriters v. Commissioner,* __ T.C.M. __ (1993). The Court held that certain individuals were not members of a trade association because: (1) the association's articles and bylaws did not constitute them as members; (2) the individuals had no "rights or obligations" in the association; (3) the individuals did not pay dues to the association; and (4) the individuals had no voting ("representation") rights in the association. *Id.* at 388-389.

As can be seen by this brief survey of the law in this area, there is, as of yet, no definitive "bright line" definition of a *bona fide* member. The IRS has promised audit guidelines on this issue, but has noted that any such guidelines will only contain a list of "factors" to be considered in making such a determination (in the same way that the often-confusing IRS determination is now made as to whether someone is an employee or an independent contractor). A clear, bright-line standard, such as that proposed by ASAE above, is acutely needed.

Prior IRS Rulings Say Associate Member Dues Are Not Taxable

If the Committee needs any evidence that the evolving IRS enforcement policy on taxing associate member dues is nothing short of a complete reversal in policy, it need look no further than three prior TAMs (8302009, 8302010 and 9128002), all of which held that associate member dues are *not* taxable as UBI.

In the two 1983 TAMs, in circumstances strikingly similar to those in TAM 9416002, the IRS concluded that associate member dues were not taxable because although the payment of dues gave associate members the right to participate in the insurance programs, the IRS was "unable to identify a nexus to that portion of non-earmarked dues" allocable to the insurance programs.

Interestingly, the IRS pointed to the fact that associate members received other benefits besides the ability to participate in the insurance plans, including legislative advocacy on issues of concern to both regular and associate members, educational lectures and seminars, and various publications including a newsletter providing free classified advertising for members. The associate members in these TAMs had *no* voting rights or ability to serve on the board. Yet, the IRS still said, "These benefits indicate that dues paid by [associate members]...provide more than the right to participate in [the insurance programs]," and therefore are not subject to tax.

In the 1991 TAM (9128002), the associate members were suppliers of goods and services to the regular members, the dues paid by associate members were higher than those paid by regular members, and the associate members had no rights to vote or hold office. Yet, unlike the more recent TAM 9345004, the IRS held that the dues paid by associate members were *not* taxable. The facts were as follows: The organization was comprised principally of two classes of members — active and associate members. The organization had 75 active and 44 associate members. Active members were defined as those engaged in the management of a particular type of business. Associate members were defined as anyone who represents a company that provides or offers products or services to that type of business. Associate members were comprised primarily of sales

and marketing personnel of hotels and conference centers. Active members paid annual dues of $110, while associate members paid $185 annually to be members. Associate members received the same rights and benefits as active members except they could not vote or hold office.

In concluding that the dues paid by associate members were not taxable as UBI, TAM 9128002 held, "The term 'unrelated trade or business' includes activities carried on for the production of income from the sale of goods or performance of services. Factually, it cannot be concluded that the admission of associate members under a graduated dues structure is the performance of a service or a sale of goods. That is, merely permitting admittance of a limited number of associate members does not rise to the level of carrying on a trade or business. In essence, there is not the degree of activity nor the typical *quid pro quo* found in ordinary commercial transactions. Furthermore, the collection of such dues does not place the organization in competition with taxable organizations. Consequently, the taxation of dues paid by associate members would not eliminate a source of unfair competition."

TAM 9128002 went on to say, "In addition, the collection of dues is ordinary income from a related activity. Although the associate members pay greater dues, they receive all the ordinary benefits without the responsibility of the organization's operations. To the extent that the organization can demonstrate a reasonable basis for the greater dues paid by the associate members, the Service will not second guess the necessity of disproportionate dues; however, if the amount or the basis is not reasonable, the Service will consider the likelihood that a commercial reason underlies the graduated dues structure. Because of the foregoing, we conclude that dues paid by the associate members of the organization do not constitute unrelated business income to it."

Considering that the benefits and rights (and lack thereof) received by associate members in these three TAMs are very similar to those in the two 1993 rulings (the most recent ones in this area), yet the outcomes are completely apposite, it is difficult not to conclude that IRS policy on this issue has been deliberately and significantly reversed — a reversal which is completely unwarranted and flies in the face of the existing UBIT statutes. The IRS appears to be completely ignoring its previous rulings in this area, as well as the statutorily-supported reasoning that accompanied them.

Conclusion

This issue has tremendous consequences for many associations. The need for clear and reasonable direction from Congress is more acute than ever. ASAE would welcome the opportunity to work with this Committee to ensure that the IRS does not continue to usurp the authority of Congress by writing new and dangerous law which attacks the very basis of association self-governance. The IRS has overstepped the authority granted to it by Congress, and this abuse of power poses a critical threat to the ability of the association community to carry out its many nonprofit missions.

II. SECTION 401(K) PLAN ELIGIBILITY REINSTATEMENT

ASAE strongly urges Congress to extend the availability of Section 401(k) retirement plans to all tax-exempt organizations. This is a matter of fairness to hundreds of thousands of

association employees. ASAE believes that employees of trade and professional associations and other tax-exempt employers are entitled to the same opportunity to save for their retirement on a tax-favored basis as employees of charitable and educational organizations, federal, state and local governments, and the private sector. It is unfair and discriminatory to prevent one type of employer from being able to offer to its employees a particular type of employee benefit that is available in one form or another to employers in every other sector of the economy. It is ultimately the employees of those employers whose ability to save for retirement is being restricted.

Many of ASAE's members work for associations which employ less than 10 employees. Approximately two-thirds of ASAE's members represent trade and professional associations exempt from taxation under Internal Revenue Code (IRC) section 501(c)(6). Many of ASAE's member associations either sponsor or are contemplating sponsoring some form of qualified retirement plan, including 401(k) plans, if they would be permitted by law.

As this Committee is aware, most employers may establish programs that allow their employees to save for retirement on a tax-favored basis. For-profit employers may offer their employees the opportunity to participate in 401(k) plans, and, if employing less than 25 employees, salary reduction simplified employee pensions ("SEPs"). Organizations exempt under IRC section 501(c)(3) and certain educational organizations may offer their employees tax-sheltered annuities under IRC section 403(b). Employees of state and local governments may participate in an eligible deferred compensation plan under IRC section 457 (457 plans). And, within the past few years, even the federal government has provided its employees with a tax-deductible salary reduction retirement savings program.

Only tax-exempt organizations, other than those described in IRC section 501(c)(3), are unable to provide all of their employees with an opportunity to save for their retirement on a tax-favored basis. To further compound the problem, many individuals may no longer make tax-deductible contributions to individual retirement accounts after the passage of *Tax Reform Act of 1986*.

During the *Tax Reform Act of 1986* debates, many incorrectly believed that tax-sheltered annuities under IRC Section 403(b) were available to employees of *all* tax-exempt organizations. In fact, they are available only to employees of organizations exempt from taxation under IRC Section 501(c)(3). Another misconception was that the extension of eligible deferred compensation plans under IRC Section 457 to all tax-exempt organizations would provide tax-deductible salary reduction retirement arrangements to all employees of those organizations. In fact, since ERISA requires that pension and other retirement plans of non-highly compensated employees be funded, and since IRC Section 457 prohibits funding, these eligible deferred compensation plans are available only to highly compensated or management employees of tax-exempt organizations. "Rank and file" employees may not participate. Therefore, it is important that 401(k) plans be extended to employees of all nongovernmental, tax-exempt organizations for the following reasons:

1. It is unfair to prohibit a single group of employees in a particular community of organizations from participating in tax-deductible salary reduction retirement savings programs.
2. The national push for international competitiveness requires that employees and employers be able to respond to the shifting needs of the economy. It is difficult for nongovernmental, tax-exempt organizations that do not currently have 401(k) plans to attract and retain qualified employees if they are the only employers that cannot provide tax-deductible salary reduction retirement savings programs to their employees.
3. Congress and the federal government are increasingly shifting the responsibility for retirement income security from the public sector to the private sector. Personal tax savings are an important part of any retirement savings program. Therefore, it is important that employees of nongovernmental, tax-exempt organizations be encouraged to save for their retirement on a tax-deductible basis. All other employees in the economy are permitted to save for their retirement on a tax-deductible basis, including the employees of the federal government.

Many members of Congress continue to fight against the inequity of this situation, and have sought to rectify it during the 102nd and 103rd Congresses. Sen. David Pryor had included language in the *Employee Benefits Simplification and Expansion Act of 1991*, S. 1364, that would reinstate 401(k) plans. In May 1991, Reps. Sander Levin and Bill Archer introduced H.R. 2327, which would have allowed all tax-exempt organizations to have access to 401(k) retirement plans. This bill had strong bipartisan support with 98 cosponsors, including 10 from the Ways and Means Committee.

In February 1991, former Sen. Steve Symms introduced a similar bill which also had strong bipartisan support with 25 co-sponsors, including nine members of the Senate Finance Committee. In addition, the language from H.R. 2327 was included in two major pension simplification bills: Former House Ways and Means Committee Chairman Dan Rostenkowski's bill, H.R. 2730, and Rep. Ben Cardin's bill, H.R. 2742.

At the close of the 102nd Congress, when Congress and the President began work in earnest on a tax bill, members of the 401(k)s for 501(c)s Coalition, headed by ASAE, worked to ensure that 401(k) reinstatement would be included in any tax legislation passed by Congress. ASAE was successful when the tax measure which passed the House and Senate (H.R. 11) included 401(k) reinstatement. Unfortunately, due to other provisions in the bill, President Bush vetoed the measure.

In the 103rd Congress, ASAE once again lobbied to restore 401(k) eligibility to all exempt organizations. As Congress convened in the first week of January, one of the first bills introduced, the *Tax Simplification and Technical Corrections Act of 1993* (H.R. 3419), included the reinstatement of 401(k) plans for all 501(c) organizations. In addition, 401(k) reinstatement was included in the *Pension Simplification Act of 1993* (S. 862), introduced by Sen. Pryor.

In May 1994, the House of Representatives passed by voice vote the *Tax Simplification and Technical Corrections Act of 1994*, H.R. 3419. This bill included reinstatement of Section

401(k) plans for all 501(c) organizations. Although passed by the House, the *Act* died a quiet death by inaction in the Senate.

In the 104th Congress, Sen. Pryor has included Section 401(k) reinstatement in the *Pension Simplification Act of 1995*, S. 1006. Additionally, President Clinton has included Section 401(k) reinstatement in his pension reform plan, which has yet to be formally introduced in Congress.

III. CORPORATE SPONSORSHIP INCOME

In 1993, the Internal Revenue Service issued proposed regulations concerning corporate sponsorship payments to tax-exempt organizations. The IRS has yet to finalize these proposed rules – over two and a half years after their issuance, and, at present, the IRS has no plans to do so.

The IRS' proposed regulations (EE-74-92) attempt to clarify the tax status of corporate-sponsored events hosted by tax-exempt organizations. Under the proposed rules, an exempt organization generally will not have to pay unrelated business income tax on payments from a sponsor for displaying a sponsoring corporation's logo and/or distributing samples of its products. The proposed regulations reflect the fact that in such circumstances, the exempt organization is merely "acknowledging" the sponsor(s) of the event. The proposed rules also define "advertising" activities which may result in UBIT.

In addition, the proposed regulations do not apply to the sale of advertising in exempt organization periodicals; all types of sponsorship activity involving broadcast, print and other forms of corporate acknowledgment are subject to the rules; and distribution of samples of a sponsor's product constitutes an "acknowledgment" rather than "advertising."

While the IRS' proposed rules answer a number of questions posed by associations, ASAE supports the efforts of Rep. Camp and his legislation, H.R. 1161. Corporate sponsorship payments should not be treated as UBIT where events merely recognize the contributions of sponsors, and such recognition is only incidental to the contribution and there is no expectation that the sponsor will receive any substantial return benefit. The mere use of the sponsor's name or logo, and/or the furnishing of facilities or services, should not generate UBIT.

Thank you for this opportunity to testify. I would welcome any questions members of the Committee may have at this time.

Mr. CRANE. Thank you, Mr. Taylor.
Dr. Conway.

STATEMENT OF WILLIAM A. CONWAY, M.D., VICE CHAIRMAN, HENRY FORD HEALTH SYSTEM, DETROIT, MICHIGAN; ON BEHALF OF AMERICAN GROUP PRACTICE ASSOCIATION, MEMBER, BOARD OF TRUSTEES

Dr. CONWAY. Thank you for the opportunity to testify.

I am Dr. Bill Conway, vice chairman of the Henry Ford Medical Group, which is part of the Henry Ford Health System in Detroit, Michigan. We are a nonprofit organization that provides the full spectrum of health care services through a staff of 1,000 employee physicians.

Today I am pleased to testify on behalf of the AGPA, American Group Practice Association, as a member of its board of trustees. The association is composed of about 250 group practices, with more than 25,000 physicians nationwide.

Although there are only a few nonprofit medical group practices in our country today, their size and impact are enormous. Many of these are icons of American medicine. Among them are Mayo, Leahy, Cleveland, Geisinger, Virginia Mason, and Henry Ford.

In addition to having an international reputation for excellence, these practices provide significant charity care. They offer some of the world's best medical education and training. They are leaders in medical research and quality improvement. And, most importantly, they are sincerely devoted to community service.

One of the bipartisan issues in the debate on health care reform has been the need for access to quality health care for millions of Americans in inner cities and rural areas. These group practices are serving these vulnerable communities.

Continuing quality health care for these underserved communities is going to depend on the ability of these community-based nonprofit organizations remaining viable and able to attract and keep highly qualified professionals.

Before describing the details of our issue, I would like to thank Congresswoman Dunn for her recognition of our issue and her leadership in developing a solution. I would also like to thank Congressman Camp from my own State of Michigan and Congressman Portman of Ohio for their understanding and active support.

Using some data from the Henry Ford Medical Group as an example of this issue in group practices across the country, I would like to explain that the average salary for an employed physician in our group is $135,000. Comparable physicians in the for-profit sector average $40,000 to $50,000 more per year in direct compensation. That gap has always been there, and we have been able to compete despite it.

In the past couple of years, as a result of the decrease in the salary cap on qualified retirement plans, 20 percent of our medical staff at Henry Ford lost 25 to 35 percent of their retirement benefits that would have accrued by age 65. Because of other options for retirement, this did not affect for-profit enterprises as much as our staff.

Because of this increasing gap in total compensation possibilities and its impact on our recruiting and retention capabilities, we are

seeking an amendment to the Internal Revenue Code. This would provide a limited exemption from IRC section 457 to eligible nonprofit group practices. First, it would increase the dollar limitations for employees of nonprofit integrated health systems. Second, it would index the deferral amount for inflation. Third, it would create an exemption from the limitations of section 457(c).

We believe there are sound reasons why a change in the law is good public policy, and I would like to outline these briefly.

The first is to support effective reform of the health care system. Many Members of Congress and the private sector look to integrated health care systems as the model best able to achieve cost containment with continued high quality care. In many instances, a nonprofit salaried physician group is at the core of these systems that are forming today. Without adjustments to the Tax Code, existing and forming physician groups are encouraged to avoid or abandon nonprofit status.

The second reason is the availability of quality physicians where most needed. Under current tax law, employers who retain nonprofit status are at a significant disadvantage in recruiting and retaining the brightest physicians. Many of these professionals, as I pointed out earlier, are serving millions of inner city and rural residents.

The third reason is tax equity and simplicity. The recent reduction of the salary cap from $235,000 to $150,000 has made it difficult for tax-exempt employers to provide competitive retirement packages. Taxable employers deal with this problem through more generous salary increases and nonqualified plans. Tax-exempt employers are limited by rules governing private inurement and limits on nonqualified plans and have fewer options.

To restore balance to the system, tax-exempt organizations need more flexibility to offer reasonable and competitive retirement benefits.

Finally, our medical professionals in these nonprofit group practices forego substantial benefits in order to serve their communities. To compel them to deepen that sacrifice compared with their for profit colleagues is unrealistic and unfair. We are concerned that, if the competitive disadvantage created by the recent Tax Code change continues, it will have a serious adverse effect on our unique medical institutions. The ultimate loss will be to the community and patients, and the diversity of the American health care system.

Mr. Chairman, on behalf of the AGPA's 25,000 physicians, I wish to thank you for hearing us on this critical issue today.

[The prepared statement follows:]

STATEMENT OF WILLIAM A. CONWAY, M.D.
VICE CHAIRMAN, HENRY FORD HEALTH SYSTEM
ON BEHALF OF AMERICAN GROUP PRACTICE ASSOCIATION

Mr. Chairman, thank you for the opportunity to testify. I am William A. Conway, M.D., Vice Chairman of Henry Ford Medical Group, which is part of the Henry Ford Health System in Detroit, Michigan. We are a non-profit organization that includes virtually the entire continuum of health care services.

I am pleased to submit testimony on behalf of the American Group Practice Association, where I serve as a member of the Board of Trustees. AGPA is the only physician-governed organization representing the needs of integrated, multispecialty group practices in the country. AGPA membership is comprised of integrated multi-specialty group practices which are committed to providing the highest quality, most cost-effective care to their patients under both managed care and fee-for-service arrangements. AGPA is dedicated to the continuous improvement of clinical practice and cost performance. With approximately 250 member groups, AGPA represents more than 25,000 physicians nation-wide.

We are asking the Committee to consider an equity provision that would allow us the ability to offer our professionals reasonable deferred compensation packages, in a manner comparable to those allowed for profit groups under the tax code.

Congress and the private sector look to integrated health systems as models best able to achieve cost-containment with continued, high-quality care. In many instances, the non-profit salaried physician group is the optimal foundation for creating the kind of managed care plans that promise true delivery-system reform for Americans of all ages and income status. Without adjustments to the tax code, physician groups are encouraged to avoid non-profit status. Groups that remain non-profit are at a great disadvantage in recruiting top-flight talent. This is movement in the opposite direction from where health care should be going.

On behalf of our members, I want to thank Congresswoman Jennifer Dunn, not only for her recognition of this as an important health policy problem, but also thank her for her leadership in developing a solution. I want to thank Congressman Dave Camp of our own state of Michigan, and Congressman Rob Portman of Ohio for their understanding and active support.

There are only a few non-profit medical group practices in our country today, but their impact on health care is enormous. Their names constitute a "Hall of Fame" in medicine, among them: Mayo, Lahey, Cleveland, Virginia Mason, and Henry Ford. In addition to a well-deserved, international reputation for medical excellence, the non-profit group practices have several other characteristics in common.

- They provide significant charity care and other uncompensated care.
- They offer some of the finest medical education and training in the world.
- They are acknowledged leaders in medical research and quality improvement.
- And perhaps most important, they are devoted to community service and participate significantly in the economic viability of their community.

An issue stressed by both Republicans and Democrats in the debate on health care, Medicare and Medicaid is that of access to quality health care for millions of Americans who live in inner cities and rural areas. In the future, Quality health care for under-served communities will depend almost entirely on the ability of the community-based, non-profit organizations to come together as health plans and to attract and keep highly qualified professionals.

Currently, coverage for inner-city and rural populations is a combination of Medicaid, Medicare and charity care in clinics and hospital emergency rooms, where the need for physicians is particularly high. Government payment rates and malpractice insurance costs have already driven many of the private physician providers to higher income areas. The hospitals and non-profit health systems are hiring physicians to fill the gaps.

These health care professionals often are attracted to these non-profit settings by teaching and research opportunities. They will serve part or all of their professionals careers in the non-profit setting out of a deep sense of social obligation. They often are part of a multi-specialty group which accepts risk for an enrolled population through various HMO arrangements, which effectively eliminates their ability to improve personal income through referrals or increased visits.

At the Henry Ford Health System in Detroit, patients receive their care from both the Henry Ford Medical Group, comprised of about 1,000 salaried physicians, as well as 1,200 private practice physicians connected to the Henry Ford Health System through network arrangements with our own H.M.O., Health Alliance Plan of Michigan, with 425,000 enrolled members. We are a pluralistic medical model, like many of the other large multi-specialty group practice organizations throughout the country.

We serve more than 40,000 Medicaid and 50,000 Medicare patients under both enrolled and fee-for-service arrangements--again similar to the diversity your will find in the other large medical groups. We own and operate four community hospitals and 36 ambulatory centers throughout Southeast Michigan. And like many of the other large medical groups--including Mayo in Minnesota, Cleveland Clinic in Ohio, and Lahey Clinic in New England--teaching and research are central to our mission. Charity care runs about $38 million per year for Henry Ford Health System, with an additional $40 million in other uncompensated care, particularly through the Medicaid Program, which pays about 35 cents on the dollar in Michigan for physician services.

Our preferred clinical approach is patient-focused managed care -- irrespective of the type of health insurance coverage the patient has.

At the Henry Ford System, the average salary of an employed physician is $135,000, whereas it is about $150,000 for the other large groups. In contrast, physicians in the for-profit sector average $50,000 more per year in compensation. About one-third of our physicians are affected by the tax code limitations we want to fix. Nationally, we estimate that about 20,000 salaried physicians in non-profit health care organizations were adversely affected by the 1993 changes in the tax code. As a result of the salary cap, twenty percent of our medical staff at Henry Ford lost 25 to 35 percent in retirement benefits at age 65.

We are seeking an amendment to the Internal Revenue Code which would provide a limited exemption from IRC Section 457 to eligible non-profit group medical practices. It would:

- increase the dollar limitations for employees of non-profit integrated health systems;
- index the deferral amount for inflation; and
- create an exemption from the limitations of Section 457 (c)(2).

There are sound reasons why a change in the law is good public policy. I will summarize these briefly:

1. The first is <u>**Availability of Quality Physicians Where Most Needed**</u>. Under current tax law, non-profit employers are at a significant disadvantage in recruiting and retaining the best and brightest physicians. Many salaried professionals are on the front lines, delivering primary care and related services to millions of inner city and rural residents. Because IRC Section 457 (e)(1)(B) limits the ability of non-profits to offer attractive and competitive compensation packages, such medical practices lose out in the national and local competition for top physicians and other health professionals to the for-profit entities which are able to offer more favorable retirement alternatives.

2. The second reason is <u>**Availability of Critical Medical Institutions**</u>. An important way to maintain high quality and availability is to affirmatively encourage physician groups and other medical professionals to continue to organize in a non-profit status. Current law provides incentives to abandon non-profit status and discourage health institutions and professionals who would collaborate and consolidate themselves under non-profit coverage agreements for Medicare, Medicaid or private practice.

3. The third reason is **Effective Reform of the Total Health Care System**. The evolving health care system will rely on physicians and other care providers working together in integrated health care networks. Instead of expediting the formation of such integrated networks, current law regarding deferred compensation acts as a serious barrier. Groups of physicians and other medical professionals who might join together with hospitals and other non-profit entities to form cost-efficient integrated networks are reticent because of the significant retirement benefits they lose. An exemption to IRC Section 457 will remove an important barrier to the formation of integrated health care delivery networks.

4. The fourth and final reason is **Tax Equity and Simplicity**. Professional compensation usually includes a combination of employer-paid and employee-paid retirement plans. Rules governing these retirement arrangements are spelled out in several parts of the tax code. IRC Section 457 governs deferred compensation arrangements between non-profit organizations and their employees. The recent reduction of the salary cap from $235,000 to $150,000, combined with other limits, has made it difficult for many employers to provide adequate and competitive retirement packages. Taxable employers have been able to deal with this problem through their non-qualified deferred compensation plans. Tax-exempt employers do not have similar options, as compensation is limited by rules governing private inurement and community benefits. To restore some balance to the system, tax-exempt organizations should be allowed the flexibility to offer reasonable benefits.

Congress has begun to recognize the inequities of current law and this Committee recently approved legislation exempting state and local governments from the dollar limitations contained in IRC Section 457 (b)(2) and Section 457 (c)(1). The Tax Simplification and Technical Corrections Act of 1993 (H.R. 3419) amends Sections 415 and 457 to provide that excess benefit arrangements of government entities will not be subject to IRC Section 457 (b)(2) and Section 457 (c)(1) limits. As a matter of fairness, as well as good health care and tax policy, non-profit group practices should be accorded similar treatment.

Toward the end of the 103rd Congress, the Senate Finance Committee began to take such action. It reported a provision, as part of the "Health Security Act," which would have removed the current cap on deferred compensation plans for certain medical group practices. The bi-partisan Senate "Mainstream Group" adopted a similar provision.

Our intent with this legislation is not a total balance between for-profit and non-profit organizations. We recognize that non-profit organizations have certain beneficial and inherent advantages. The tax code and other laws are designed to take this into account. However, the realities of a competitive marketplace, with intense cost pressures and performance pressures do create a disadvantage for us in recruiting professional staff and in our efforts to consolidate into integrated systems. The remedy in Congresswoman Dunn's bill is designed to bring the laws for non-profits to a reasonable standard -- to restore a better balance between what we can offer highly qualified and productive staff and what they find available from the for-profit companies.

Medical professionals in tax-exempt group medical practices already forego substantial, personal economic benefits in order to serve their communities. To compel them to deepen that sacrifice, compared with those made by their for-profit colleagues, is both unrealistic and unfair. The ultimate loss in such circumstances is to the community and the patients, who have a right to expect the best, most cost-efficient health care America's medical profession can provide.

Mr. Chairman, on behalf of AGPA's 25,000 members, I thank you and the members of your Committee for hearing us on this critical issue.

Mr. CRANE. Thank you, Dr. Conway.
Mr. Keeling.

STATEMENT OF J. MICHAEL KEELING, PRESIDENT, EMPLOYEE STOCK OPTION PLAN ASSOCIATION

Mr. KEELING. My name is Michael Keeling, and I am the president of the ESOP, Employee Stock Option Plan Association. Today, I comment on five proposals before the Committee.

Proposal one would permit a subchapter S corporation to sponsor an ESOP. Proposal two would modify rules relating to deferral of gain on certain sales to an ESOP under code section 1042. Proposal three would permit an ESOP to be a beneficiary of a charitable or remainder trust. Proposal four would permit a closely held corporation to pay estate tax if stock were transferred to an ESOP. And proposal five would alter the treatment of certain dividends on stock in an ESOP transferred from a terminated defined benefit plan.

You should appreciate that the ESOP community believes employee ownership will improve American competitiveness, increase productivity through greater employee participation in the workplace, strengthen our free enterprise economy, create a broader distribution of wealth, and will maximize human potential, enhancing self-worth, dignity, and the well-being of our people. These beliefs form the core of our vision for America.

Of the five proposals before you, four will increase to a very small extent employee ownership in America and thus align with our vision. Therefore, we ask the Committee to include these four proposals, one, two, three, and four, in any bill you send to the floor of the Congress.

But let me make it clear that if the majority of this Committee does not accept as real the power of employee ownership, then you should not go forward with any of these proposals. May I state that I personally believe that a majority of this Committee does believe in the positive and powerful aspects that employee ownership can have in America, as set forth in the vision.

My evidence for this statement is not just my 14 years representing ESOP advocates before Congress, but by the fact that of the four proposals, three were included in H.R. 2088 introduced by Congressmen Ballenger and Rohrabacher in the last Congress. Ten Members of this Committee sponsored that legislation. By their actions, these Members earned the accolade from the ESOP community as ESOP champions. And we thank Congresswoman Johnson, Congressmen Bunning, Houghton, Herger, McCrery, Hancock, Camp, Ramstad, Johnson, and Payne.

Joining your Committee Members in sponsoring this legislation were 105 Members of the 103d Congress, including people with names such as Gingrich, Armey, DeLay, Paxon, Molinari, McCollum—and the list goes on. Obviously, I am dropping names to bolster my case, and I do so without shame.

Mr. Chairman and Members of the Committee, let me say this. If there is any problem, any consideration of the revenue impact that these proposals may have, the ESOP community stands ready to work with you and your Committee staff to ensure that the pro-

posals meet the definitions that you have set forth—that these be miscellaneous tax proposals.

You must obviously consider their impact on the underlying provisions of law and their impact in terms of the revenue impact on the Federal Treasury. We will work to make sure that most of them are scored at $1 million a year, $5 million a year, and so forth.

But let me go back, Mr. Chairman, in conclusion, to the basic premise of my statement. If you feel that employee ownership is good for America, then in all likelihood, you will want to include at least four of the five proposals commented on in any tax bill. But I, Michael Keeling, do not speak of the power of employee ownership, nor do the former owners that have transferred stock to the ESOP. The employee owners speak for ESOPs in your districts and in towns and communities across America.

In 1988 Congressman Rangel told the ESOP community to prove the value of employee ownership through the voices of employee owners—not the paid lobbyists, not the top executives. We have taken his advice to heart, and today ESOP participants actively engage in all of our government relations activities, including meeting face-to-face with the President and his advisors.

While the rather technical nature of today's ESOP discussion has no direct impact on the employee owners of the year who have come with me today to stand up for ESOPs before the Ways and Means Committee, I would like Doreen Eng, 1995 Minnesota Employee Owner of the Year, Emilia Podkowiak, 1995 New England Employer Owner of the Year, and Darrel Tackett, 1995 Ohio and the National Employee Owner of the Year, to stand for just 1 second so that you may see them.

If you wish to know the value of our belief or whether our belief has validity in the real world, take the time to talk to these men and women and to the employee owners in your district.

Yes, I am more than pleased to engage you and your staff and your Committee staff over the nuances of ESOP law and even its bigger impact; but the true witnesses for our statement today are Doreen, Emilia, Darrel, and their millions of colleagues across America.

I thank you for having us.

[The prepared statement follows:]

STATEMENT OF J. MICHAEL KEELING, PRESIDENT EMPLOYEE STOCK OPTION PLAN ASSOCIATION

INTRODUCTION: On behalf of The ESOP Association, a 501(c)(6) entity with nearly 1,200 U.S. corporations sponsoring Employee Ownership Plans, or ESOPs, and their nearly 1 million employee owners, I thank Chairman Archer, the Ways and Means Committee members, and its staff for permitting me to visit briefly with you today on several proposals before the Committee that fall into the category of "miscellaneous" tax proposals.

My name is J. Michael Keeling, and I am the President and Chief Staff Officer of The ESOP Association, headquartered here in Washington. I have held this position for over four years, and have worked with the ESOP and employee ownership community for nearly 14 years. In the past four years I have visited with the management and non-management employee owners in over 250 companies from our borders with Canada, to rural areas of Hawaii, southern Florida, to southern California, and many points inbetween.

Although it sounds like bragging, I am proud of these facts as I feel it qualifies me to speak openly and objectively about the status of the employee ownership movement in America today.

Today, I make a statement to you on five proposals pending before your Committee.

Proposal One, would permit a Subchapter S corporation to have its stock held by a trust meeting the requirements of what we refer to as "ERISA", which in turn means that a Subchapter S corporation may sponsor an ESOP.

Proposal Two, would modify rules relating to deferral of gain on certain sales of stock to an ESOP, under Code section 1042.

Proposal Three, would permit an ESOP to be a beneficiary of a charitable remainder trust.

Proposal Four, would permit a closely-held corporation to pay estate taxes if stock were transferred to an ESOP, as set forth in former Code section 2210.

And, **Proposal Five**, would alter the treatment of certain securities transferred to an ESOP from a terminated defined benefit.

But before I comment on these five proposals before you, I wish to explain my recommendation to you that you follow a "two" step analysis in reviewing these proposals, which I believe will permit you and your staff to come to closure as to whether you wish any, or all, to be included in any recommendation you make to the full House for passage of a 1995 Miscellaneous revenue bill.

STEP ONE: Your Step One analysis should recognize that the ESOP community believes that employee ownership will improve American competitiveness...that it will increase productivity through greater employee participation in the workplace...that it will strengthen our free enterprise economy and create a broader distribution of wealth...and that it will maximize human potential by enhancing the self-worth, dignity, and well-being of our people.

Because we sincerely believe these things, this belief forms the core of The ESOP Association's Vision for America, and from this Vision, we analyze everything.

Of the five proposals before you, four will increase employee ownership in America, and thus align with our Vision.

But, let me make it clear, if you, or the majority of the Committee do not accept the belief that I just gave as to the power of employee ownership, then you should not go forward with consideration of these four proposals as part of any 1995

Miscellaneous Tax bill.

Your Step One analysis must also recognize that if the four proposals I am speaking of do become law, they will not increase employee ownership in America to any significant extent. If they would, Congressman Ballenger, who submitted three of the four to you, and Congressmen Hancock and Johnson, who each submitted one, would not have done so because they obviously would not be "miscellaneous", as defined by Mr. Archer.

May I state that I personally believe that most members, even a majority, of this Committee, do generally, and I emphasize generally, believe in the same positive, and powerful, impact employee ownership can have on America as do ESOP advocates, as set forth in our Vision statement.

My evidence for this statement is not just my fourteen years of representing ESOP advocates before Congress, and mainly before this Committee, but by the fact that of the five proposals, three were included in H.R. 2088, introduced by Congressmen Ballenger and Rohrabacher last Congress. Ten members of this Committee co-sponsored that legislation, and thus these three provisions.

By their action, these members earned the accolade from the ESOP community as "ESOP Champions", and we thank Congresswoman Johnson, and Congressmen Bunning, Houghton, Herger, McCrey, Hancock, Camp, Ramstad, Johnson, and Payne.

Joining your Committee members in sponsoring this legislation were 105 other members of the 103rd Congress, including people with names such as Gingrich, Armey, DeLay, Boehner, Paxon, Molinari, McCollum, and the list could go on.

Obviously I am dropping names to bolster any Step One analysis, but I do so without shame.

In all candor, to both you, and ESOP advocates, I must note that while this Step One analysis is necessary, again these are minor ESOP proposals. The ESOP community has developed them over the years, beginning in 1990, in order to make some common-sense changes in existing ESOP law, and to have a few more encouragements for ESOP creation that do not affect the revenue stream to the Federal Treasury to any significant extent.

But again, before you bother with a Step Two analysis, think to yourself on my Step One recommendation. Ask yourself if you generally accept the view that employee ownership will improve American competitiveness...that it will increase productivity through greater employee participation in the workplace...that it will strengthen our free enterprise economy and create a broader distribution of wealth...and that it will maximize human potential by enhancing the self-worth, dignity, and well-being of our people.

STEP TWO: If you reach Step Two, then you must engage in the more traditional analysis of the five proposals on which I comment today. In Step Two, you will examine whether the proposals are truly "miscellaneous" with minor, or no revenue impact, whether the proposals are fair and equitable, and whether they alter to any significant degree the underlying provision of the tax law they amend.

Frankly, it is just like the management of a well-run employee-owned company--your Congressional colleagues have delegated to you, or as we say "empowered" you to decide on the details about these proposals. If my Step One comments are correct, and the majority of your colleagues do wish to have more and better employee ownership in America, this does not mean that they consider themselves "expert" or "with the obligation" to look at the details on these ESOP proposals--they trust you to make the best decision.

And, unfortunately for those who like to deal with "Vision" and the "Big" picture, you meet your obligation only by looking at each one of the five proposals one by one, in some detail.

Thus, I provide the ESOP communities' comments on:

PROPOSAL ONE: The Chairman's press release announcing these hearings included what is generally known as the Subchapter S reform legislation, which has garnered significant support from the small business community, and professional groups such as the American Bar Association and the American Institute of Certified Public Accountants. These reform proposals contain one section that relates directly to ESOPs, and is an expansion of a provision proposed first by a former member of this Committee, Beryl Anthony when he introduced pro-ESOP legislation in 1990, with Congressmen Ballenger and Rohrabacher.

This provision would permit a Subchapter S corporation to sponsor an ESOP, and thus make employees of a Subchapter S employee owners through an ESOP.

I will not take a great deal of time explaining this proposal, except to note that the Sub S reform proposal before you permits any ERISA plan, not just an ESOP, to hold the stock of the Sub S sponsor.

The ESOP community has no objection of the expansion of the original Anthony-Ballenger-Rohrabacher ESOP-only proposal to all ERISA plans.

We proudly note that when the House Committee on Small Business, Subcommittee on Procurement, Taxation, and Tourism, held hearings on the 103rd Congress version of the Sub S reform legislation, nearly all of the small business witnesses, representing a variety of business entities, specifically noted the importance of permitting Sub Chapter S corporations to sponsor ESOPs, and cited this provision as one of the major reasons Congress should pass Sub S reform.

Clearly, I do not speak to the other ten to twelve Sub S reform ideas embodied in the overall Sub S package, as I am not qualified to do so.

I do state that America's experience with employee ownership the past twenty years does demonstrate that the use of the ESOP in a closely-held business culture, is particularly impressive and powerful.

As to revenue impact, I cannot say as at the time this testimony was being prepared, we had no estimate from the Joint Committee on Taxation.

The proposal permits that portion of the Sub S's taxable income allocable to the ERISA trust's ownership share of the corporation, to be subject to the unrelated business income tax, which is imposed at the corporate rate. Whereas before recent tax law changes this UBIT tax rate was higher than the individual rate and one could make the case that the change proposed in 1990 was a revenue raiser--i.e. shifting income from a lower tax bracket to a higher bracket--now the individual rate is higher than the UBIT, or corporate rate.

In looking at this particular revenue impact of the Sub S proposal, it probably must be placed in the context of the overall package, not just the so-called ESOP part.

But, if there is a need to massage the ESOP piece, or even the ERISA piece of the Sub S reforms to meet some revenue considerations, the ESOP community stands ready to work with the Committee in a constructive manner.

In sum, The ESOP Association strongly endorses permitting Subchapter S corporations sponsoring ESOPs and employee ownership.

PROPOSAL TWO: The second ESOP proposal is probably the most technical of the group, and perhaps the most difficult to explain in plain English. As background, I.R.C. Section 1042 permits the seller of closely-held stock to defer the capital gains tax on proceeds from sale of his/her stock to a corporation's ESOP if the seller reinvests the proceeds in qualified replacement property, which means securities of an U.S. operating corporation, within a certain period of time, and if the ESOP holds at least 30% of the corporate sponsors highest class of stock, or equivalent, after the sale. If the seller sells any or all of the replacement property, he/she pays a gains tax based on the basis of the original stock sold to the ESOP, not the basis of the replacement property.

There are many restrictions and complex rules governing a so-called 1042 transaction, and the operation of the ESOP that obtained stock in a 1042 transaction. Despite these restrictions and complexities, it is estimated that since 1989, 60 to 70% of the approximate 500 ESOP transactions a year involve 1042 transactions.

But two restrictions contained in the original 1042 law enacted in 1984 have created problems for ESOP creation and operation.

To explain one restriction, 1042 (c)(1)(B)(ii) does not permit 1042 treatment for any stock the seller acquired as 1. his/her current compensation, 2. that he/she purchased at fair market value, or 3. that he/she acquired from an exercise of a stock option, which he/she had when employed by the sponsor of the ESOP. In tax law lingo, this stock, which an employer holds directly is known as Section 83 stock, which governs the tax treatment of stock acquired directly by an employee as a result of his/her employment.

In sum: the IRS interprets, partially correct, partially incorrect, in my view, section 1042 (c)(1)(B)(ii) to prohibit Section 83 stock from receiving section 1042 treatment.

And, in plain English, the proposed change before you would alter that prohibition and provide "yes, Section 83 stock is eligible for 1042 treatment."

As background ESOP advocates, particularly those who had direct knowledge of the drafting of 1042 in 1984, which includes yours truly, always understood that this provision was added to the 1984 bill in order to prevent a taxpayer from escaping all tax on gain when exercising a tax-qualified stock option at the same time the employer who issued the option took a tax deduction for the value of the exercised option. Note that tax incentives for stock options were changed in the late 80's, thus negating some of the reasons for the 1984 restrictions.

In the late 80's the IRS issued letter rulings that held that the 1042 restriction applied not only to stock acquired in a tax incentive stock option, but also to stock that an employee paid fair market value for, and to stock that the employee was paid as compensation! In both instances there is no tax advantage to the employee--if he/she pays fair market value for stock, then the taxpayer is like any other investor in the company, who should clearly be eligible for 1042 treatment. If the employee gets stock as current compensation, the value of the stock is income to the employee and he/she pays current income tax on the value of the stock. For this employee to sell to an ESOP later under 1042 creates no unique tax advantage other than the one clearly intended by 1042. In other words, the IRS position set forth in these letter rulings does not address any so-called "double" tax avoidance scheme.

As for Section 83 stock acquired as part of a stock option, the proposal denies a corporation a deduction for the value of the option if the employee sells to an ESOP within 60 days of getting the stock. This denial of an immediate corporate deduction should actually cause a revenue increase or at least revenue neutrality. Now if the stock option is part of an incentive stock option plan, the deferral through a 1042 transaction is nearly the same as the current law: no tax on the gain of the stock until realized by the taxpayer.

The problem with the current IRS interpretation of the 1042 restriction is that employees who obtained stock as a result of their employment are treated unfairly compared to the owner-founders and the outside investors. In many companies, stock ownership schemes outside an ESOP are not as attractive because this stock is not eligible for the incentives to have it become more broadly distributed through an ESOP.

The revenue impact of this expansion of 1042 cannot be significant--in fact a case may be made that it might even raise revenue as the immediate loss of the corporate compensation deduction when a non-qualified stock option is exercised, which are the most common stock options, might be greater than the loss of the time-value of money on the expansion of 1042, plus the delayed corporate deduction for the contribution of the stock to an ESOP.

But even if the proposal does not increase revenue, the impact should not be significant. For example, at no time in the history of 1042 since 1984 has this provision ever been estimated to lower individual income taxes by more than $50 million per year. (1042 is a tax deferral advantage available to individuals, and is thus scored in the tax expenditures tables under the individual tax column.)

So, to expand 1042 to a subset of an existing universe never more than $50 million, leads one to speculate that it has to be less than the entire $50 million universe by a substantial degree, probably, single digit.

Clearly, if the seller holds the replacement property until death, and heirs get the stepped up basis, the loss of the corporate deduction may be less than the final loss to the Treasury. This loss, however, might not be in the five year window that is used to calculate revenue estimates, and again becomes rather small for revenue estimating purposes.

But permit me to reiterate, if you find a significant revenue problem we in the ESOP community did not anticipate, we pledge to work to eliminate that problems.

The second part of Proposal Two contains another technical 1042 fix that is even more technical than that discussed above, and is even more insignificant in terms of potential revenue impact, as it presents a problem to only a few existing ESOPs.

Among the many restrictions related to 1042 is the restriction that "25% owners" and relatives may not participate in allocations of ESOP stock acquired with in a 1042 transaction.

Throughout the tax code are certain restrictions on 25% owners of a business in terms of tax breaks, etc. In nearly most instances, including a variety of areas applying to ESOPs, a 25% owner is defined as someone holding securities in the company that equals at least 25% or more value of the entire corporation, or at least 25% of the voting power of the corporation.

But I.R.C. Section 409(n)(1)(B)(i) sets forth an unusual definition of a 25% owner be defining him/her as someone who owns 25% of "any" class of stock. (Code section 409(n) sets forth restrictions on ESOP stock and allocations of that stock if

obtained in a 1042 transaction.

How is this definition a problem? Let's assume that we have a corporation valued at $10 million dollars. Let's assume that 100% of the highest common stock is owned by one person, and it is valued at $7.5 million. Let's assume that in the life of this corporation, one time the owner needed an infusion of capital, and issued an outside investor a preferred stock with a preferred dividend, and this stock is valued at $2 million. Now let's assume that the owner has created a third class of stock that has a dividend preference, but one lower than the outside investor's preferred. He has compensated some of his senior managers with this third class of stock as a performance incentive. Assume that this stock is worth $500,000.

Assume that two senior managers each has $250,000 of this preferred stock. In value they own only 2.5% of the corporation, and have no voting stock.

But under the current unusual definition of 25% owners as set forth in 409(n), these two men are 25% owners, and cannot participate in an ESOP with 1042 stock.

The second part of ESOP Proposal Two would amend 409(n) to conform its definition of 25% owner with the more commonly-used tax code definition--it would be any person owning 25% or more of the value of the corporation, or any person owning stock with 25% or more of the voting power of the corporations' stock.

The expansion here is really minor. It would permit a few more people to participate in an ESOP. Since it is possible for these people to participate in other tax qualified deferred compensation plans, putting these people in an ESOP with 1042 stock should not expand the number of persons participating in a tax qualified deferred compensation plan. If it does, it cannot do so be much.

In sum, this second ESOP proposal corrects some unfair technicalities currently found in the most popular ESOP tax law incentive Code Section 1042, and is in essence, technical corrections as opposed to a true "miscellaneous" tax law amendment.

PROPOSAL THREE: This proposal was not included in those submitted to the Committee by Congressman Ballenger, but it is one that The ESOP Association has reviewed, and has noted that its revenue impact, as estimated by the Joint Committee, is negligible, (less than $1 million per year.) In fact, Congressman Ballenger is considering including this proposal in any new pro-ESOP legislation he is considering for the 104th Congress.

Based on its description, we believe the proposal is the same as H.R. 1962, which was introduced by your colleague Congressman Sam Johnson, one of our ESOP champions. It appears to be the same as H.R. 1807, as well, by former Congressman Mike Andrews on which the former Subcommittee on Select Revenue Measures held hearings on June 17, 1993, among other bills. That hearing record contains basic information about this proposal, and there is no need to reinvent, or waste your time reading the old testimony to you.

Briefly, the proposal would allow a deduction in determining Federal estate tax for employer securities transferred to an ESOP in a "qualified gratuitous transfer". For a transfer to qualify, certain requirements would have to be met. The stock would have to have been first transferred from an estate to a trust. In addition, after the remainder interest vests in the ESOP, allocations of stock under the employee stock ownership plan could not be made to any family member of the decedent or to employees owning more than five percent of the shares outside the plan. A transfer would be qualified gratuities transfer to the extent that:

1. the securities were received by a trust from a decedent's estate.

2. no deduction under section 404 (relating to the income tax deduction allowed employers for contributions to tax-qualified pension plans) is allowed with respect to the transfer,

3. the ESOP provides that the securities are allocated to plan participants in manner that does not discriminate in favor of highly compensated employees,

4. the ESOP treats the securities as attributable to employer contributions (except that no employer income tax deduction is allowed),

5. the securities cannot be allocated, directly or indirectly, to any family members of the decedent or to any employees owning five percent or more of the issuing corporation's stock outside the plan,

6. the securities cannot be traded on an established securities market, and

7. certain other requirements are met with respect to the allocation of the securities to plan participants.

While the ESOP community would love to see Congress permit a deduction for the transfer of any employer securities from an estate to an ESOP, we realize that the limited approach recommended here is more realistic in that the revenue impact is very minor since the underlying requirement is that the stock either go to charity or an ESOP--i.e. there will be a deduction in any respect.

PROPOSAL FOUR: This proposal, part of H.R. 2088, and one of the three proposals submitted to you by Congressman Ballenger, would put back into the Tax Code Section 2210, which Congress repealed in the 1989 tax law changes as part of an overall overhaul of tax incentives for ESOP creation and operation.

Important things first--when this provision was law between 1984 and 1989, at no time did it have a revenue impact greater than $5 million per year. A July 29, 1991, revenue estimate from the Joint Committee for a forerunner of H.R. 2088, confirmed this number of less than $5 million.

As to operation, former Code Section 2210 permitted an ESOP to assume federal estate tax liabilities to the extent that the ESOP acquires employer securities from a deceased shareholder or his/her estate. If the stock constituted more than 35% of the decedent's adjusted gross estate and is stock of a "closely-held" corporation, the ESOP may be eligible for special installment payments of the tax liability (over as long as 14 years). The ESOP obligation to pay the estate tax must be guaranteed by the employer.

Estate tax experts will recognize that the special payment rules track rules under Code section 6166, and ESOP experts will note that the scheme follows what a corporation does when it engages in a leveraged ESOP transaction--the corporation has to guarantee payment of the debt. Given the economic reality of perfecting a 2210 transaction, nearly all corporations taking advantage would be Section 6166 corporations, as others assuming the estate tax would have to pay a big lump sum payment.

There is an element of fairness to restoring Code Section 2210. Its repeal was part of a 1989 Ways and Means Committee amendment offered by ESOP Champion Anthony as a counter to more major cutbacks in ESOP law proposed by former Chairman of the Committee Mr. Rostenkowski. Mr. Anthony, as a tactical matter, included this repeal of the less than $5 million provision with a

repeal of a more significant ESOP tax incentive involving a straight tax deduction for an estate transferring stock to an ESOP that saved nearly $300 million per year. The view at the time was both were estate tax-related ESOP incentives, and to win the day it would be better not to try to distinguish the two.

But, we have a few reports of some people writing wills between 1984 and 1989 to take advantage of Code Section 2210,and the Committee action in 1989 sort of pulled the rug out from under their plans if they did not die in that timeframe.

Again, The ESOP Association urges the restoration of former Code Section 2210 as a modest way to strengthen the use of ESOP as a estate planning and business succession tool.

PROPOSAL FIVE: Of the proposals before the Committee, this one does not create more ESOPs, and thus does not necessarily need to undergo Step One analysis. Instead, it would ease the operation of a small number of ESOPs that took advantage of a provision of law that existed between 1986 and 1989.

This provision permitted the sponsor of terminated defined benefit plan to escape the "penalty" tax imposed on the sponsor's recapture of the surplus monies of a terminated defined benefit plan if the surplus was transferred to an ESOP. During this time frame, the tax was 10%.

This provision of law expired at year end 1988, and no attempt has ever been made to restore this incentive. In fact, the policy of Congress has become even more harsh towards the use of defined benefit plan surplus by the sponsoring employer by imposing an effective 100% tax on the surplus.

The former law made the taxpayer who utilized the provision to allocate the employer securities acquired with the defined benefit surplus within seven years.

It is our understanding that mechanics of that requirement have created some administration problems co-ordinating allocations from the ESOP funded with the defined benefit surplus, other ESOPs in the corporate mix, and other plans under ERISA.

In candor, we have not studied this proposal in detail; and while we have no reason to believe that it is anything but equitable, and with little revenue impact, we would have to work with staff to obtain more details about this proposal's impact and its need before providing an unqualified statement that we urge its enactment.

CONCLUSION: Mr. Chairman, and members of the Committee, in conclusion, I would like to again go back to the basic premise of my statement--if you feel that employee ownership is good for America, based on its historical performance, then in all likelihood you will want to include at least four of the five proposals commented upon in any 1995 miscellaneous tax bill.

But, I do not speak of the power of employee ownership--nor do the former owners of employee-owned companies that have transferred stock to an ESOP.

The employee owners speak for ESOPs in your district and in town and communities across America.

In 1989, Congressman Rangel told the ESOP community to prove the value of employee ownership through the voices of the employee owners--not the paid lobbyist, not the top executives. Although he may not realize this, we have taken his advice to heart, and today have ESOP participants actively engaged in all of our government relations activities, including meeting face-to-face with the President and his advisors.

And while the rather technical nature of today's ESOP discussion has no direct impact on the Employee Owners of the Year who have come with me today to stand up for ESOPs, I would like Doreen Eng, Minnesota Employee Owner of the Year, Emilia Podkowiak, New England Employee Owner of the Year, and Darrel Tackett, Ohio and the National Employee Owner of the Year to stand for just one second so that you may see them.

If you wish to know the value of our belief, or whether our belief has validity in the real world, take the time to talk to these men and women, or to the employer owners of your communities.

Yes, I am more than pleased to engage you, your staff, and your committee staff over the nuances of ESOP law, and even its bigger impact; but the true witnesses for our statement today are Doreen, Emilia, and Darrel, and their millions of colleagues across America. They are here today all day for any conversation you might wish to have with them.

Again, I thank you for having us.

Mr. CRANE. We thank you for your testimony.

Are there any questions that Members have?

Ms. Dunn.

Ms. DUNN. Thank you very much, Mr. Chairman, and welcome, gentlemen.

I do have a couple of questions for Dr. Conway on his legislation, with which I am familiar and heartily support and urge my colleagues to support.

The Henry Ford Health System, Dr. Conway, where you serve as vice chairman, like the Virginia Mason Clinic in Seattle, which is in my part of the country, is one of the top medical facilities in the Nation. Why would institutions like these have any real difficulty in attracting qualified medical personnel, and how do limits on nonqualified plans like the one that you have discussed, section 457, have a bearing on this problem?

Dr. CONWAY. I think it is true—our reputation and our education and research programs provide recruitment attraction potential. That is true, and that is what has made up for the base salary gap between these nonprofit group practices and the for-profit sector.

In the last couple of years, the retirement benefit opportunity has increased the economic gap between different kinds of organizations, and we are afraid that even our reputation and our education and research programs are not going to be able to make up for the economic gap. Today, we have graduates and young physicians with large medical school bills; they have families, and they need to begin looking forward to retirement, and a total retirement program that has a 25- to 30-percent gap compared to the for-profit sector is something that is very hard to overcome.

Ms. DUNN. Thank you, Dr. Conway. Also, could you spend 1 minute with us, giving us your point of view on how current law, specifically with regard to IRC section 457, provides disincentives for integrated health care systems that involve for-profit and not-for-profit institutions?

Dr. CONWAY. Increasingly, as people are attempting to form integrated health care systems around the country, they are hearing today from their physician components that they should be organized in a for-profit entity, in part because of these pension differences.

As you are attempting to organize an integrated entity, one of the things you want to accomplish is alignment of incentives, and if the whole entity is for-profit, then you are all aligned around the same mission incentive, which is to make a profit. If the entity is a nonprofit entity, you want alignment around mission and a different set of values. And if the physician component of that entity has to be for-profit, and the overall entity is not-for-profit, it creates internal dissension and lack of alignment.

Ms. DUNN. Thank you, Dr. Conway.

Thank you, Mr. Chairman.

Mr. CRANE. Mr. Camp.

Mr. CAMP. Thank you, Mr. Chairman, and I thank all of the witnesses for being here today, and Dr. Conway particularly, thank you for being here.

I just have one brief question. Have you had a Joint Tax Committee estimate of your proposal or the proposal that you are interested in, that you know of?

Dr. CONWAY. We do not have that yet. We look forward to an opportunity to submit something in writing at a future date.

Mr. CAMP. I would be very interested in that. If, when you get it, you could make sure I see a copy of that as well, I would appreciate it.

Thank you very much.

Mr. CRANE. Mr. Coyne.

Mr. COYNE. No questions.

Mr. CRANE. Mr. Neal.

Mr. NEAL. No questions.

Mr. CRANE. Mr. Laughlin.

Mr. LAUGHLIN. Thank you, Mr. Chairman.

Mr. Taylor, in your testimony, you made numerous references to unrelated benefits or services to an organization's tax-exempt purpose. Could you give me several examples of what you mean by unrelated benefits or services?

Mr. TAYLOR. Yes. Every tax-exempt organization was given tax exemption for carrying out certain activities related to the exempt purpose of the organization, and anything that is unrelated to the basic purpose of the organization is taxable at this time. I was talking about related activities versus unrelated activities, saying unrelated activities already are taxed; unrelated business income activities are taxable and are currently taxed. Related to the tax-exempt purpose, those are not taxed. And I was trying to draw the distinction in associate member dues that dues are considered related income, related to the tax-exempt purpose, as long as the members who pay those dues are joining for the purpose of taking advantage of what the association does.

Mr. LAUGHLIN. Using the bar association as an example, could you give us a couple of examples of the unrelated services if the bar association indeed provides those?

Mr. TAYLOR. I do not know a whole lot about the bar association.

Mr. LAUGHLIN. Well, pick another association.

Mr. TAYLOR. Advertising in the bar association journal, for example, would be taxable as nonrelated business income. If they rented any space in the bar association building, that would be unrelated business income. If they carried out executive search activities or things of that nature, it might be considered unrelated business income.

The IRS and Congress have set aside certain areas which are unrelated to the tax-exempt purpose and taxable.

Mr. LAUGHLIN. But if it were a continuing legal education program, then it would not be taxable.

Mr. TAYLOR. That would be related to the exempt purpose.

Mr. LAUGHLIN. Now, under your proposal, do we gain or lose revenue?

Mr. TAYLOR. On associate member dues, we are asking you to prevent IRS from imposing this tax, and so there is no revenue to be lost there.

Mr. LAUGHLIN. Thank you very much.

Thank you, Mr. Chairman.

Mr. CRANE. Thank you.

Are there any other Members who wish to inquire?

[No response.]

Mr. CRANE. If not, we thank the panel for its participation today.

We now ask the panel of Harold Adrion, Stanley Ruchelman, Letitia Chambers, and Robert Blair to please come to the witness table.

We will open with you, Mr. Adrion.

Mr. RUCHELMAN. Mr. Chairman, Mr. Adrion and I are presenting together, and I would like to speak first, if possible.

Mr. CRANE. Fine.

STATEMENT OF STANLEY C. RUCHELMAN AND HAROLD L. ADRION, NEW YORK, NEW YORK

Mr. RUCHELMAN. Mr. Chairman and Members of the Committee, my name is Stanley Ruchelman. I am an attorney practicing in New York City, and I am accompanied today by my colleague, Mr. Adrion.

We are here to testify on one aspect of the miscellaneous tax reforms now being considered by the Committee, and we wish to thank you for this opportunity.

We are here because we believe that the exemption allowed to foreign persons for interest on items of portfolio and indebtedness should be continued in U.S. law. We believe it serves a valid function for a wide range of taxpayers in the United States.

The exemption allows for U.S. business to have access to overseas funds in an efficient manner which does not run afoul of any international tax policy of the U.S. Government. In addition, we believe that a repeal of the exemption may not be consistent with proposals designed to significantly restructure U.S. tax law that are currently being considered by the Congress at this time.

To put our comments in perspective, ordinarily the payment of interest to a foreign person attracts a 30-percent withholding tax. This tax is waived if the interest is paid on an item of portfolio debt. The exemption is currently fashioned so that large institutional taxpayers may raise funds in the Eurodollar market through the issuance of bearer securities that are targeted to foreign investors. These are instruments that meet stringent requirements designed to prevent them from being acquired by U.S. investors.

According to statistics prepared by the Federal Reserve, the $300 billion level was exceeded several years ago, which means that there is a significant amount of this type of instrument outstanding abroad, and a significant amount of money has flown into the United States.

At the same time, the exemption is broad enough so that small private companies may raise funds from private sources abroad through a relatively simple method of issuing a registered instrument and obtaining a certificate of foreign status on a form W–8. In our experience, companies owned by naturalized citizens and resident aliens whose country of birth does not have in effect an income tax treaty with the United States frequently utilize this procedure to borrow from persons still resident in that country.

Certain foreign persons do not qualify for the exemption. Most importantly, foreign banks do not qualify with regard to interest

received on the extension of credit arising from a loan agreement entered into in the ordinary course of business. Exemptions are provided for U.S. Government debt.

Foreign persons who are the 10-percent shareholders of the borrower do not qualify for the exemption, and controlled foreign corporations controlled by U.S. shareholders do not qualify with regard to interest arising from loans to a related person, including the 10-percent or greater U.S. shareholder.

It is important to note that this exemption is provided under the domestic law of the United States and not under an income tax treaty which might eliminate U.S. withholding tax on the payment of interest. As a result, there is no incentive on the part of a foreign investor or the U.S. borrower to construct a web of international companies in order to "borrow" the benefits of an income tax treaty. That was the situation that existed prior to 1984 when the exemption was first enacted.

The exemption is thus consistent with the existing tax treaty policy of the United States, which is to limit treaty benefits to qualified residents of the United States and its treaty partner. This policy appears in limitations on benefits provisions of recent income tax treaties concluded by the United States, certain aspects of the branch profits tax that appear in code section 884, and also in code section 7701(l), which authorizes the IRS to issue regulations that recharacterize conduit financing transactions where appropriate to prevent U.S. tax avoidance.

If the exemption is repealed, U.S. borrowers will either attempt to structure borrowings in a manner that will borrow a tax benefit from an income tax treaty or will absorb the investors' withholding tax liability. In either event, the administrative cost and additional cost to the U.S. borrower will be significantly increased.

To illustrate, the absorption of a 30-percent withholding tax by a borrower in the United States will increase its interest expense by 43 percent. Presumably, taxable income and tax will be reduced by the added cost.

We also believe that the proposal to repeal the exemption is inconsistent with the restructuring proposals that are currently under consideration by the Congress.

Mr. CRANE. Thank you.

Mr. Adrion.

Mr. ADRION. Thank you, Mr. Chairman.

One of the principal arguments made for imposing a withholding tax on interest paid to foreigners is that the borrower is allowed to deduct interest that is paid abroad, thereby reducing domestic tax liability. If the interest is not subject to tax in the hands of the recipient, there is most likely no offsetting increase in the tax base of the United States or any other jurisdiction.

The tax system is out of balance. The result likely will not occur under the major restructuring proposals currently being considered by Congress. In general, those proposals do not allow businesses to deduct interest. In the absence of a deduction at the level of the borrower, the system is not eroded by the absence of tax at the level of the recipient of the interest.

We recognize that one could ask why the restructuring proposals being considered by Congress do not render meaningless many of

the proposed modifications to the international provisions that are now being reviewed in these hearings. Under this view, the portfolio interest exemption is properly subject to modification or repeal.

However, a meaningful difference exists between the exemption and the other provisions. The other provisions are intended to modify U.S. law to comport with economic practices or transactions that were not in existence at the time the various code provisions were first enacted.

An example is the treatment of member countries of the European Union for purposes of subpart F of the Code. In comparison, the proposed repeal of the portfolio interest exemption at this time is not premised on any such purpose.

The restructuring proposals that are currently in existence I believe are generally designed to encourage U.S. businesses to be able to compete abroad. The portfolio interest exemption has a similar premise in that it enables U.S. companies to compete with foreign companies in the capital markets.

One could argue that fairness demands that foreign recipients of interest income should be treated in a manner that is similar to domestic recipients of interest. However, the issue is not one of fairness to U.S. lenders; rather, the issue relates to the availability of capital to fund expansion of U.S. businesses.

It is interesting to note that with respect to a number of U.S. holders of debt instruments, they are exempt from tax, so that the disequilibrium is not quite as significant as has traditionally been noted.

Mr. Chairman, we have tried to note the highlights of our points, and if you would like, we would be happy to submit other written testimony on these points.

Thank you.

[The joint statement follows:]

RETENTION OF PORTFOLIO INTEREST EXEMPTION

Testimony Presented to the Committee on Ways and Means
U.S. House of Representatives
by
Harold L. Adrion, Esq.
Stanley C. Ruchelman, Esq.

July 12, 1995

MR. CHAIRMAN AND MEMBERS OF THE COMMITTEE, thank you for this opportunity of testifying on a specific aspect of miscellaneous tax reforms now being considered by the Committee. We are here because we believe that the exemption allowed to foreign persons by the Internal Revenue Code for interest on items of portfolio indebtedness should be continued. It serves a valid function for a wide range of taxpayers in the U.S. The exemption allows U.S. business to have access to overseas funds in an efficient manner which does not run afoul of any international policy of the U.S. Government. In addition, we believe that a repeal of the exemption may not be consistent with proposals designed to significantly restructure U.S. tax law.

The exemption is currently fashioned so that large institutional taxpayers may raise funds in the Eurodollar market through the issuance of bearer securities that are targeted to foreign investors. These instruments must meet stringent requirements that are designed to prevent them from being acquired by U.S. investors.

At the same time, the exemption is broad enough so that small private companies may raise funds from private sources abroad through a relatively simple method of issuing a registered instrument and obtaining a certificate of foreign status on Form W-8. In our experience, naturalized citizens and resident aliens whose country of birth does not have in effect an income tax treaty with the U.S. utilize this procedure to borrow from persons still resident in that country.

Certain foreign persons do not qualify for the exemption. Most importantly, foreign banks do not qualify with regard to interest received on the extension of credit arising from a loan agreement entered into in the ordinary course of business, with the exception of interest paid on an obligation of the U.S. Foreign persons who are 10% shareholders of the borrower do not qualify for the exemption. And controlled foreign corporations do not qualify with regard to interest arising from loans to a related person, including a 10% or greater U.S. shareholder.

The exemption is provided under the domestic law of the U.S. and not under an income tax treaty. As a result, there is no incentive on the part of the foreign investor or the U.S. borrower to construct a web of international companies in order to "borrow" the benefits of an income tax treaty. The exemption is consistent with the existing tax treaty policy of the U.S., which is to limit treaty benefits to qualified residents of the contracting states. This policy appears in the limitations on benefits article in recent income tax treaties negotiated by the U.S. and in Section 7701(l) which authorizes the I.R.S. to issue regulations to recharacterize any multiple-party financing transaction where appropriate to prevent U.S. tax avoidance. Regulations were proposed in October 1994.

If the exemption of interest on items of portfolio indebtedness is repealed, U.S. borrowers will either attempt to structure borrowings in a manner that will benefit from an income tax treaty or will absorb the investor's withholding tax liability. In either event the administrative cost to the U.S. borrower will be increased. Alternatively, foreign sources of debt capital will be eliminated.

We also believe that the proposal to repeal the exemption of interest on items of portfolio indebtedness is inconsistent with the restructuring proposals that are currently under consideration by Congress.

One of the principal arguments made for imposing a withholding tax on interest paid to foreigners is that the borrower is allowed to deduct the interest that is paid abroad, thereby reducing domestic tax liability. If the interest is not subject to tax in the hands of the recipient, there is most likely no offsetting increase in the tax base of the U.S. or any other jurisdiction. The tax system is out of balance. This result likely will not occur under the major restructuring proposals currently being considered by Congress. In general, those proposals do not allow business borrowers to deduct interest expense. In the absence of a deduction at the level of the borrower, the system is not eroded by the absence of tax at the level of the recipient of the interest.

We recognize that one could ask why the restructuring proposals being considered by Congress do not render meaningless many of proposed modifications to the international provisions of the Code now being reviewed in these hearings. Under this view, the portfolio interest exemption is properly subject to modification or repeal. However, a meaningful difference exists between the exemption and the other provisions. The other provisions are intended to modify U.S. law to comport with economic practices or transactions that were not in existence at the time the various Code provisions were first enacted. An example is the treatment of member countries of the European Union for purposes of Subpart F of the Code. In comparison, the proposed repeal of the portfolio interest exemption at this time is not premised on any such purpose.

One could argue that fairness demands that foreign recipients of interest income should be treated in a manner that is similar to domestic recipients of interest. However, the issue is not one of fairness to U.S. lenders. Rather, the issue relates to the availability of capital to fund expansion of U.S. business. If it is in the economic interest of the U.S. to attract foreign capital in the form of a non-equity instrument, current law should not be changed. Stanley C. Ruchelman can be reached at (212) 843-8822. Harold L. Adrion can be reached at (212) 559-0715.

Mr. CRANE. Thank you.
Dr. Chambers.

STATEMENT OF LETITIA CHAMBERS, PRESIDENT, COALITION OF PUBLICLY TRADED PARTNERSHIPS

Ms. CHAMBERS. I appreciate this opportunity to testify, Mr. Chairman, on behalf of the Coalition of Publicly Traded Partnerships. PTPs, publicly traded partnerships, are limited partnerships whose ownership shares are traded on public exchanges and are regulated by the SEC.

As its first priority, the Coalition urges the Committee to enact H.R. 1686, which was introduced by Congressman Houghton and cosponsored by 11 other Members of the Committee. This would extend the permanent partnership treatment to the 27 publicly traded partnerships which do not meet the qualifying income test imposed by the 1987 Tax Act and which are nearing the end of the 10-year grandfather period. This proposal has been described in detail for the record by Mr. Houghton and will be covered at length in written statements to be submitted by the Coalition.

There are several problems with the current tax law which hinder capital formation for PTPs. The Coalition strongly supports the large partnership simplification provisions and believes that it is essential that these provisions be enacted. Understanding the items on a K–1 and entering them in the proper spaces on a tax return is complex and difficult even for those who are most sophisticated in tax matters. The system should be simplified so that it no longer penalizes investors. The provisions address complexity by establishing a simplified reporting system and also reporting on a simplified form. The proposed simplification provisions actually originated within the Treasury Department based on audit concerns. The concerns of the IRS are addressed by a new audit system which provide for adjustments determined after an audit to be made in the current year.

These provisions enjoy broad bipartisan support and are an effective response to a significant problem. The Committee would like to propose that two additional changes be incorporated into the large partnership simplification which will remove significant and unwarranted complexities from the Tax Code.

Under UBIT, the unrelated business income tax rules, a tax-exempt organization investing in a partnership is considered to be engaged in that partnership's trade or business, and the organization's share of PTP income is taxed as unrelated business income unless it falls within a special exemption or is below a $1,000 threshold. This rule creates great complexity for pension funds, IRAs, and other tax-exempt entities investing in partnerships.

In the case of PTPs, this complexity serves no purpose whatsoever, certainly not the purpose for which the UBIT, unrelated business income tax, rules were intended. The purpose of UBIT is intended to prevent tax-exempt organizations from using their tax-exempt status to engage in unfair competition with taxable businesses. In the case of publicly traded partnerships, an individual partner is only one of tens or hundreds of thousands of investors. The partner is not engaging in or managing the PTP's business, but is only providing a small portion of its capital.

We would propose that a de minimis rule be added to partnership simplification which exempts from UBIT investments representing less than 5 percent interest in a partnership's capital and also to allow 10 percent investment for a PTP's own employee pension plan.

A similar problem exists for mutual funds. Under the RIC, Regulated Investment Co., rules, mutual funds must receive 90 percent of their gross income from specified sources. Income from PTPs or other partnerships do not qualify. These rules force mutual funds investing in PTPs to monitor their investments to ensure that they do not exceed 10 percent of their gross income. This complexity is unnecessary. It may have made sense to omit partnerships from the list of qualifying income sources when the RIC rules were conceived because at that time, there was no such thing as publicly traded partnerships, partnerships that were regulated fully by the SEC. That is not the case today. PTPs are as appropriate an investment for a mutual fund as any other publicly traded SEC-regulated security.

In conclusion, the Coalition strongly supports extension of the grandfather period for the few PTPs to which it applies, enactment of large partnership simplification, a de minimis rule for partnership holdings by tax-exempt investors, and removing barriers to investments in publicly traded partnerships by mutual funds.

Mr. Chairman, I will be happy to answer any questions. I also want to note that I am accompanied today by executives of publicly traded partnerships who are in the audience and who would be happy to meet with any Committee Members or staff who have questions concerning the provisions that I have discussed.

[The prepared statement and attachment follow:]

**TESTIMONY OF LETITIA CHAMBERS
PRESIDENT OF CHAMBERS ASSOCIATES
AND
PRESIDENT OF THE COALITION OF PUBLICLY TRADED PARTNERSHIPS
BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS
July 12, 1995**

Mr. Chairman and members of the Committee, I appreciate the opportunity to submit testimony to the Committee today on issues of concern to publicly traded partnerships. My name is Letitia Chambers, and I am the President of the Coalition of Publicly Traded Partnerships. The Coalition is a trade association representing PTPs and the accounting, law, and service firms who work with them.

Publicly traded partnerships, as you know, are limited partnerships whose ownership shares are traded as "units" on public securities exchanges. PTPs, most of which operate in the energy, natural resources, and real estate sectors, are regulated by the SEC comparably to other publicly traded securities. The relative safety, liquidity, and competitive yields of PTPs make them potentially attractive investment options not only for individuals, their primary purchasers, but also for pension funds, IRAs, and other tax-exempt entities, as well as for mutual funds. PTPs also allow the natural resource and real estate industries to tap new pools of investors and thus promote capital formation in those industries.

The Coalition urges the enactment of H.R. 1686, the legislation introduced by Congressman Houghton and co-sponsored by nine other members of the Committee, that would extend permanent partnership treatment to the 27 PTPs which are nearing the end of the ten-year grandfather period imposed by the Omnibus Reconciliation Act of 1987. As this proposal has been described in detail for the record by Mr. Houghton, and will be covered at length in written statements to be submitted by the Coalition and other members of the PTP community, I will not go into any further detail here. Because this issue is so time sensitive, however, it is the highest legislative priority of the Coalition.

There are other problems with the current tax law which hinder PTPs' potential as investment and capital formation vehicles and make investment in PTPs more difficult and complex than is necessary. The Coalition believes that these problems could be addressed by adopting, with two amendments that I will describe, the simplification provisions for large partnerships in H.R. 3419 that are described in the announcement for this hearing.

Large Partnership Simplification

The publicly traded partnership community strongly supports the large partnership simplification provisions and believes that it is essential that these provisions be enacted. One of the major problems that PTPs and other large partnerships encounter in trying to attract investors is the sheer complexity of accounting for the investment when income tax season arrives. Understanding the items on a K-1 and entering them in the proper places on a tax return is difficult even for those who are sophisticated in tax matters; for average investors it is a headache that they are sorely tempted to do without. The tax code should be simplified so that it no longer penalizes investors of modest means.

It is not only large partnerships and their investors that need the simplification provisions. These provisions actually originated within the Treasury Department based on two concerns: first, that the nature of the current K-1 prevented the IRS from matching this return to partners' individual returns to check for compliance, and second, the extreme difficulty of collecting additional tax owed after an audit from the hundreds or thousands of individual partners that comprise today's large partnerships. These concerns were reinforced in a study of widely held partnerships undertaken by Treasury at Congress' direction, which found that the current reporting and audit system, which was developed with smaller partnerships in mind, does not work well for large partnerships.

The proposed simplification provisions, a response to that study, were developed jointly by Treasury, the IRS, the staff of the Congressional tax writing committees, the Coalition of Publicly

Traded Partnerships, and other representatives of the partnership community. The provisions address the complexity faced by partnership investors by establishing a simplified reporting system under which various items of partnership income, gain, loss, deductions, and credits are combined at the partnership level and reported on a simplified form. The concerns of the IRS are addressed by a new audit system which provides for adjustments to tax determined after an audit to simply be added to (or subtracted from) the partnership's income in the year in which the adjustment takes effect.

The large partnership simplification provisions enjoy broad bipartisan support and were actually passed twice by Congress in 1992, as part of larger tax bills that were ultimately vetoed. The provisions are an effective response to a significant problem faced by both the industry and federal tax officials, and Congress should move expeditiously to enact them.

The Coalition would like to propose that two additional changes be incorporated into the large partnership provisions which we believe will remove significant, unnecessary complexities from the tax code and make it easier for a variety of investors to realize the benefits offered by PTPs. The first change concerns the treatment of PTPs under the unrelated business income tax (UBIT) rules.

Unrelated Business Income Tax

Under the UBIT rules (Code section 512(c)), a tax-exempt organization investing in a PTP (or any partnership) is considered to be engaged in that partnership's trade or business. The organization's share of PTP income is thus taxed as unrelated business income unless it falls within one of the special exceptions in section 512(b): interest, dividends, rents, royalties. If the PTP holds debt-financed property, the income may be subject to UBIT even if it falls into one of the exempted categories. Partnership investors may benefit from the $1,000 deduction provided in section 512(b)(12).

This rule creates great complexity for pension funds, IRAs, and any other tax-exempt entity wishing to invest in a PTP -- including PTPs' own employee plans. The entity must carefully monitor its share of income from the PTP, along with income from any other investments subject to UBIT, to ensure that such income does not, in aggregate, exceed the $1,000 threshold. If it does, a form 990 must be filed. This requirement is especially onerous for individuals investing in PTPs through their IRAs, who may not even be aware that the income could become taxable if it exceeds the $1,000 threshold. Needless to say, this complexity is a significant deterrent to investment in PTPs.

The critical point is that at least as far as PTPs are concerned, this complexity serves no purpose--certainly not the purpose for which the UBIT rules were created. The purpose of the unrelated business income tax is to prevent tax-exempt organizations from using their exempt status to engage in businesses that would compete unfairly with taxable businesses. Income from PTPs and other partnerships is subject to UBIT because of the flow-through nature of a partnership: since there is no separate entity, the partners, including tax-exempt partners, are considered collectively to be engaging in the partnership's business. In the case of a publicly traded partnership, however, an individual partner is only one of tens or hundreds of thousands of investors. The partner is not really engaging in or managing the PTP's business but is only providing a small portion of its capital.

The amendment that the Coalition proposes to add to the simplification bill recognizes these facts by providing a *de minimis* rule which excludes from unrelated business income a tax-exempt organization's share of income and deductions from partnership interests it holds which represents less than a 5% interest in the partnership's capital. A PTP's employee retirement plan could hold up to 10% of the partnership's capital. Such a limited interest would also be exempted from the restrictions related to acquisition indebtedness. The amendment also amends an ERISA provision which allows only employee retirement plans of PTPs existing as of December 17, 1987, to hold employer securities. The amendment would allow retirement plans of all PTPs to hold employer securities.

This simplification proposal by the Coalition is a needed and appropriate addition to the large partnership provisions in H.R. 3419.

Mutual Funds

A similar problem exists with regard to mutual funds, another important segment of the capital markets which could benefit from access to PTP investment. Under the Regulated Investment Company (RIC) rules in Code section 851, mutual funds must receive 90 percent of their gross income from specified sources. Income received from a PTP or other partnership does not qualify. Thus, a mutual fund cannot invest in a PTP or other partnership unless it is certain that the income it receives from that partnership, together with all other nonqualifying income sources, will not exceed 10 percent of its gross income.

These rules force mutual funds choosing to invest in PTPs to carefully monitor their income from those investments to ensure that it does not exceed the 10 percent threshold. The consequences of failure are severe: loss of its passthrough status as a regulated investment company. The Coalition knows of one mutual fund which came close to having this happen because a PTP in which it had invested had an unexpectedly profitable year and was allocating income to the fund at a rate which nearly brought it over the limit.

This complexity is completely unnecessary and serves to needlessly deprive PTPs of investment capital. It may have made sense to omit partnerships from the list of qualifying income sources when the RIC rules were originally conceived, as there were no *publicly traded* partnerships then. Partnership investments at that time were always illiquid and often risky, and it was understandable that Congress would deem them not to be an appropriate investment for a mutual fund. PTPs, however, are as appropriate an investment for a mutual fund as any other publicly traded security. Mutual funds are an increasingly important part of the capital market, and it is unfair to deny PTPs access to them on the basis of rules that have no current policy justification.

The Coalition proposes to enhance capital formation for those doing business as PTPs by adding to the simplification provisions an amendment to the RIC rules in Code section 851(b) to include income from publicly traded partnerships as qualifying income for mutual funds. The Coalition's proposal would accomplish this by treating such income as a dividend solely for the purpose of the gross income test in section 851(b).

Conclusion

The Coalition of Publicly Traded Partnerships commends the Ways and Means Committee for returning tax simplification to the Congressional agenda. We believe that these provisions have languished for far too long and look forward to seeing action on them this year. The Coalition urges that in its consideration of simplification, the Committee take the following actions:

- Retain the large partnership simplifications now in the bill in their entirety.
- Improve upon large partnership simplification by adding provisions that would:
    - Eliminate unnecessary complexity for pension funds, IRAs, and other tax-exempt investors by exempting from UBIT any investment representing less than 5% of the partnership's capital; and
    - Eliminate unnecessary complexity for mutual funds wishing to invest in PTPs by making PTPs a qualifying source of income under the RIC rules.

On behalf of the Coalition of Publicly Traded Partnerships, I thank the Committee for its attention to and consideration of our views.

**TESTIMONY OF
THE COALITION OF PUBLICLY TRADED PARTNERSHIPS
SUBMITTED FOR THE WRITTEN RECORD OF
THE HOUSE COMMITTEE ON WAYS AND MEANS
HEARINGS ON MISCELLANEOUS TAX BILLS
July 11-12, 1995**

The Coalition of Publicly Traded Partnerships appreciates the opportunity provided by the Committee to offer these additional comments to the testimony we provided orally at the hearing on the issues which are of concern to its members. The Coalition is a trade association representing publicly traded partnerships (PTPs) and the accounting, law, and service firms that work with them.

The oral testimony delivered to the Committee by Letitia Chambers, President of the Coalition, at the July 12 hearing covered four legislative provisions which the publicly traded partnership community wishes to see enacted in the near future, including H.R. 1686, sponsored by Congressman Amo Houghton and nine other Committee members, which provides a permanent extension of partnership treatment for "grandfathered" PTPs not meeting the qualifying income test enacted in 1987. This statement will expand on that testimony with regard to the grandfather extension, which is the first priority of the Coalition in the 104th Congress.

Background

The current status of the "grandfathered" PTPs derives from section 10211 of the Omnibus Reconciliation Act of 1987 ("the 1987 Act"), which placed restrictions on the types of PTPs which could enjoy partnership status. These provisions were the result of concerns of the Committee leadership at the time that if no restrictions were placed on publicly traded partnerships, the corporate revenue base would be seriously eroded as corporations adopted the PTP form to avoid the corporate income tax.

The Coalition argued at the time that these fears were highly overblown, and still believes that to be true. In the first place, the repeal of the *General Utilities* doctrine in 1986 had ensured that there would be no further corporate conversions by making the tax consequences prohibitively expensive. In addition, the PTP form is suitable only to certain types of businesses, primarily those generating a substantial cash flow which is available for distribution to investors. The businesses themselves are in a better position than Congress to know whether a PTP makes economic sense. Nevertheless, the concern was strong enough to prompt the Ways and Means Committee, and ultimately Congress, to take action.

Section 10211 of the 1987 Act created section 7704 of the Internal Revenue Code, which states that a PTP will be accorded partnership tax status only if 90 percent of its gross income comes from specified sources (primarily natural resource and real estate activities). PTPs meeting the test, including those PTPs formed since the Act, can continue to operate indefinitely as partnerships. PTPs not meeting this test are taxed as corporations. Section 10211(c) provided a transition rule under which PTPs in existence at the time of enactment would retain their partnership status through December 31, 1997, regardless of whether they met the gross income test, as long as they did not enter a substantial new line of business.

At the time this legislation was enacted, there were about thirty-five PTPs with the "wrong" kinds of income. Since then, the number has been reduced as PTPs have been acquired by other companies, have reincorporated (for reasons unrelated to their grandfathered status), or for other

reasons have ceased to be traded partnerships. There are now twenty-seven grandfathered PTPs remaining (see attached list). They are in a variety of businesses, and have hundreds of thousands of employees and unitholders in states across the nation.

The Legislation

H.R. 1686 simply removes the 1997 sunset date from the transition rule and gives this small group of PTPs the option of continuing their partnership status as long as they wish. It does not change the substantive rule of section 7704, nor the restriction on entering new lines of business, nor in any way alter the policy of Congress with regard to the taxation of publicly traded partnerships. It simply maintains the status quo.

This legislation has solid bipartisan support. The ten cosponsors include six Republicans and four Democrats. In the 103rd Congress, the bill was also introduced with a bipartisan group of sponsors led by Representative Mike Andrews. On the Senate side, where the legislation was introduced in the 103rd Congress by Finance Committee Chairman Packwood, it will also be introduced by a bipartisan group of cosponsors.

Enactment of the Grandfather Extension is Appropriate and Fair

A permanent grandfather is appropriate tax policy.

It is a long established principle of tax policy that legislation changing the tax law should be prospective in application. This principle recognizes that it is unfair to penalize taxpayers which have entered into transactions in reliance on the tax law existing at the time. Thus tax legislation routinely provides taxpayers who have entered or made a binding commitment to a transaction before a certain date with a transition rule allowing them to continue using the tax law on which they had relied with regard to that transaction. It is also quite routine for such a transition rule to be indefinite in term, allowing the taxpayer the benefit of previous tax law until the contract or transaction to which it applies has run its natural course.

Thus, the ten-year transition rule which was given to PTPs that were already trading or in registration at the time of the 1987 Act was not a special benefit. What was unusual was the limited term of the transition rule. It would have been more usual for the existing PTPs to be grandfathered for as long as they continued to operate. The legislative history of the 1987 Act offers no policy justification for limiting the grandfather in this way

There is in fact no policy justification for requiring the grandfathered status of these PTPs to sunset at the end of 1997. The policy goal of the PTP provisions of the 1987 Act, to strictly limit the use of the PTP form in order to ensure that it was not used for large-scale evasion of the corporate income tax, was met by the establishment of the gross income test in section 7704. New PTPs can now be formed only by a few industries, and only a few new PTP issues come on the market each year. No more PTPs with nonqualifying income will be formed. The concerns about the growth of PTPs have been addressed.

Moreover, looking at the larger picture, allowing the grandfather to expire would result in exactly the type of government interference with business and capital formation that the 104th Congress is trying to reduce. These companies chose the business structure that they felt would work best for them and for their investors and made a sizeable investment in that structure. Their investors showed their faith in this decision by purchasing partnership units and providing the companies with hundreds of millions of dollars in new capital. The desire of these companies to continue in partnership form shows that the decision has worked. Why should Congress force these companies to abandon a structure that is working well for them and to incur enormous conversion costs in the process?

Failure to extend the grandfather will impose unnecessary costs on PTPs and investors.

There is thus no reason to force the few remaining grandfathered PTPs into an unwanted corporate conversion, and many reasons not to. If the grandfather is not extended, the affected PTPs cannot simply go about their business as partnerships through December 31, 1997 and then continue on as corporations on January 1, 1998. There is an extraordinary amount of planning and work involved in developing the "exit strategy" that will best meet the needs of the company, in shepherding investors through the conversion process, in doing all the things necessary to comply with securities law, and in anticipating and planning for the tax consequences. To the extent that the company is focused on these matters, it is not engaging in productive activities that could contribute to profit, employment, and growth. This is a loss both to the company itself and to the economy as a whole.

The forced conversion will impose enormous costs on the PTPs and their investors. For the PTPs the costs will include legal, accounting, and other service fees; staff time; and opportunity costs, as resources that could be more productively employed in furthering the business of the company are diverted to the conversion. The investors, predominantly middle class individuals who bought their units with no expectation that the nature of their investment would be greatly changed, face the tax consequences of the various steps in the conversion (depending on how it is structured, the conversion may trigger recapture of tax benefits, realization of gain, etc.), as well as a drop in the value of their units caused both by the market reaction to the forced conversion and the diversion of resources away from activities producing profit and growth. In fact, many grandfathered PTPs feel that the pending sunset date is already be affecting the price of PTP units and depriving their investors of value. In return for all this, the federal government would gain only $68 million in additional revenue between now and the year 2000, according to the Joint Committee on Taxation.

A permanent grandfather is fair.

Besides imposing a large amount of cost and effort on these companies for no particular reason, failing to extend the grandfather would be simply unfair. The affected PTPs, no less than those that happened to have "qualifying" income when the law changed in 1987, were formed in good faith (and after the expenditure of considerable time and expense) under a tax code that provided them with partnership tax treatment. Like the qualifying PTPs, they did nothing more or less than what the law allowed them to do. It is unfair to force them to convert because they were not sufficiently clairvoyant to know at the time they were formed that their business' income would fall on the wrong side of a qualifying line that would be imposed at some future date.

An issue that is sometimes raised in this connection is the fairness of the grandfather extension to other companies in the same industries as the grandfathered PTPs which cannot avail themselves of PTP status. It should be remembered that these other companies had exactly the same opportunity that the grandfathered PTPs did before the law changed in 1987. They, too, could have structured all or part of their operations in PTP form. Presumably they did not do so because they decided that this was not the option that best met the needs of their company. If that has changed, it is unfortunate that the tax law no longer allows them this option, but it is not unfair. Having passed up an opportunity of which others availed themselves is a very different thing from having incurred the costs involved in structuring or restructuring a business in reliance on existing law and then facing the prospect of having to restructure again because the law has changed.

Why the grandfather needs to be extended this year

There are a little over two years left before the grandfather provision sunsets. As discussed above, the conversion, if it must occur, will require extensive planning and preparation. Coalition members have indicated that a two-year lead time is not unusual when it comes to planning something on this scale. It is therefore essential that the matter be resolved now, rather than in the final months before the sunset date.

In addition, there are indications that the pending expiration of the grandfather is already depressing the market price of the units for these PTPs. Even PTPs that are not subject to the

grandfather may be affected, as many people may be under the belief that *all* PTPs will undergo a forced conversion at the end of 1997.[1] It is in the interest of the tens of thousands of middle class investors who own PTP units to remove this drag on the value of their investment.

Conclusion

In the overall scheme of the policy issues with which Congress must deal this year, the extension of the grandfather provision for twenty-seven publicly traded partnership is a very small matter. For the PTPs that are affected, however, it is an issue of enormous consequence, affecting every business decision that they will make for the next two years. The Coalition of Publicly Traded Partnerships strongly urges that H.R. 1686, Congressman Houghton's bill providing a permanent extension, be included in the Committee's next tax bill. The reasons for doing so are clear:

- A permanent grandfather is appropriate tax policy, and serves the larger goals of this Congress.

- Allowing the grandfather to sunset would impose substantial costs on the affected companies and their investors for no good policy reason.

- Allowing the grandfather to sunset would be unfair to the grandfathered PTPs and their investors, as it would penalize companies that chose their business structure on the basis of the tax law in existence at the time and those that backed that choice with their capital.

- Extending the grandfather this year will allow the affected PTPs to plan for the future and remove the shadow that the sunset has cast over their long-term business planning and the value of their units in the marketplace.

The Coalition appreciates the Committee's attention to this issue and stands ready to provide whatever information and assistance might be needed.

Mr. CRANE. Thank you, Dr. Chambers.
Mr. Blair.

STATEMENT OF ROBERT A. BLAIR, CHAIRMAN, S-CORPORATION REFORM PROJECT

Mr. BLAIR. Thank you, Mr. Chairman. My name is Robert Blair, and I am chairman of the S–Corporation Reform Project, a coalition of approximately 40,000 companies nationwide. I am here today to talk about apple pie, motherhood, and the American way.

When you talk about tax reform and tax issues, you tend to talk about technical provisions, and there are a ton of technical provisions in the S corporation reform legislation that has been pending before the Congress off and on for a number of years. The important thing is not to lose sight of what these technical provisions do for the American economy and the American people.

I would also quickly like to thank you, Mr. Chairman. You are an original cosponsor of legislation about to be introduced by Mr. Shaw, and I thank you for your willingness to go on this legislation this year.

What are S corporations? S corporations are about 1.9 million strong; they are by definition closely held companies; they are the vehicle of choice for many family businesses—in fact, until the arrival and the advent of the LLC, limited liability corporation, the S corporation was the way to go. It is still the way to go for those who have chosen that method—1.9 million companies. They have been the job-creating machines of the United States. In this era of big companies downsizing, laying off, trying to figure out how to squeeze another dollar out of the bottom line, who has been taking up the slack? That slack has been taken up by a number of small corporations, but S corporations being the vehicle of choice for so many families and "mom and pop" operations, I say it is the vehicle for the job creation here in the United States.

Why are we talking about apple pie, motherhood, and the American way, and why is S corporation reform legislation needed? It is because of the success that Congress helped to create in 1958 and in successive legislation in 1982 and other amending provisions over time.

Why the success? The success occurred because you permitted companies to go out, to have limited liability, while taking the calculated risk; that is, the amount of money they put up in order to start businesses. And these businesses are across the spectrum. I talked about the 40,000 companies in S corporations. They are everything from pet crematoriums to trucking companies to rent-a-car companies to travel agents. You name it, they do it.

Particularly among families, since S corporation legislation was created in 1958, you now have second and third generations of families who are part of these companies. It is wonderful; it is terrific. Families, making money together, bringing in the sons and daughters, the grandsons and granddaughters. That is the success. That is also the problem.

The problem is that the rules that you so wisely passed in 1958 and amended in 1982 need further revision. Success breeds more success. What are the problems that these rules today foster and create?

One is the problem of limited access to capital. If you are a company and you are trying to expand into new horizons, if you are attempting to hire more people, if you are trying to take more risk, you have got to have access to capital. It is a problem.

What happens when these companies go to their favorite lender, the bank, and ask for money to expand? I will give you the example that one gentleman, Brad Barney, found in Utah. He went to the bank and asked for $1 million to expand. The bank said, We will lend it to you provided you put up $1 million in the bank, on deposit, and by the way, we will charge you a 4.5-percent spread for the use of that money.

As Mr. Barney so appropriately said: In other words, they will loan me my own money for 4.5 percent. Not exactly a fair deal. He needs to raise capital, however, because he wants to diversify and move into other arenas. He did not take the deal that was offered, so that diversification, that expansion did not occur.

Other areas include the limited number of shareholders. Only 35 shareholders are permitted with S corporations. If you need capital, how do you get it? You have got to go out and get shareholders to put money into your company. Many of these families, many of these operations have expanded to the point of being at 32, 33, 34 shareholders. Where do you get the capital? You cannot do it if you cannot have more shareholders.

S corporations also cannot have a wholly owned subsidiary. If you have developed, as one father did with his company—he is now in his seventies, and he had a great business—you may be hindered from expansion opportunities. That father's son comes along, for example, and wants to expand into a more risky business. The father says no, because he does not want to put at risk all of his capital that he has earned and held onto over these years. Well, a wholly owned subsidiary would permit the father's company to go out and diversify, expand, create more jobs, continue the good story that is there.

There is a bill on the Senate side, S. 758, with 29 bipartisan cosponsors, which solves many of these problems. On the House side, Congressmen Shaw, Matsui, and Portman will be introducing legislation, I was told, just before this hearing, within the next day or two, to help solve these problems.

There are 25 original cosponsors of the draft House legislation, including 20 Members of this Committee, and I am sure that that number will grow because everybody wants to be part of a success story, apple pie, motherhood, and the American way.

I urge this Committee to please act on this legislation as soon as possible after its introduction.

Thank you, Mr. Chairman.

STATEMENT OF ROBERT A. BLAIR
CHAIRMAN
THE S CORPORATION REFORM PROJECT

HEARING BEFORE THE
COMMITTEE ON WAYS AND MEANS
OF THE U.S. HOUSE OF REPRESENTATIVES

WASHINGTON, D.C.
JULY 12, 1995

Mr. Chairman and Members of the Committee, thank you for taking time to address the concerns of America's entrepreneurs related to capital access, improving operating efficiency and overcoming the obstacles associated with managing family businesses from one generation to the next. It is my hope that, though the efforts of this Committee, real legislative answers can be found for these very real problems affecting productivity and growth for S corporations, which are an increasingly critical part of the economy.

My name is Robert A. Blair, and I am the founder and chairman of a coalition called the S Corporation Reform Project, known as S-CORP. We are the only organization devoted exclusively to addressing the federal policy concerns of America's 1.9 million S corporations. S-CORP was formed in 1993 by several dozen S corporations which sought to improve the legislative environment governing their business operations. Nearly two years later, through our members, affiliates and trade association affiliations, we speak on behalf of more than 40,000 S corporations nationwide.

Who Are America's S Corporations?

The latest Treasury Department statistics available indicate that there are more than 1.9 million S corporations in America today. These businesses are not concentrated in any geographic region, nor are they aggregated in a particular industry. Rather, they are evenly spread across the industrial base, with about a third operating in the service sector, a third in the retail trade and financial sectors, and a third in manufacturing, mining, agriculture and other traditionally "heavier" industries.

Because the S corporation structure has been well-suited for closely held and managed companies, the S corporation structure is very common among family businesses. Because a growing number of U.S. companies are operated as closely-held or family-owned companies, moreover, S corporations have become an increasingly important segment of American industry. While in 1978, S corporations made up only about 20 percent of U.S. corporations, they now account for almost 50 percent of all corporations in this country. S corporations also account for about 40 percent of the U.S. corporate tax base. From these statistics, we can tell that S corporations are an integral part of the U.S. economy, and that they tend to be most prevalent among small- and medium-sized businesses. In fact, a report issued in May by the Joint Committee on Taxation noted that S corporations hold a relatively small share of corporate assets in America despite their large numbers nationwide. Thus, the report concludes, S corporations are mostly small businesses.

The Restrictive Legislative Environment for S Corporations

S corporations share some other important features: The rules governing their operations severely limit their capital access, their ability to grow and streamline their businesses, their ability to manage family operations from one generation to the next, and thus their ability to maximize productivity and long-term competitiveness.

I do not believe that Congress intended to set productivity traps for S corporations when it originally created the rules for these businesses as part of the Technical Amendments Act of 1958. In fact, I would argue that, in the nearly four decades that have passed since the S corporation provisions of the Internal Revenue Code were enacted, Congressional efforts to promote entrepreneurship have been highly successful. Indeed, by creating this special corporate structure, Congress has encouraged literally millions of Americans to form new businesses. Given the quadrupling in the number of S corporations from 1978, when there were fewer than half a million of these businesses, to today, when more than 1.9 million exist, I would submit that much of what Congress has done has worked

Unfortunately, many of the rules governing S corporations are no longer appropriate. The S corporations that were established a twenty or thirty years ago have matured. The generation responsible for the S corporations that emerged in the 1960s and 1970s has brought its children, nieces and nephews in to run and, hopefully, to grow their businesses. The operations of these companies, as they have added new facilities across the United States and, in some cases, across the globe, are naturally more complex than ever before. As a result of the maturation and growth of these companies, together with the significant changes that have occurred in the global business environment over the past 40 years, many of the S corporations rules implemented in 1958 to encourage entrepreneurship now serve to restrict the growth of these companies instead.

Congress certainly did not set out to hinder or impede the growth of S corporations in subsequent years, when S corporation rules were amended and modified. Instead, many of the current burdens on S corporations are the by-products of other legislative efforts A glaring example of this was the 1993 increase in top personal tax rates, which rose from 31 percent to 39.6 percent. Since S corporation shareholders pay taxes at rates which apply to individuals, the rate increase exacerbated disproportionately the tax burden borne by S corporations relative to all other corporations.

Although my task today is not specifically to argue for rate relief, I nevertheless must point out to this Committee that S corporations have suffered a far higher increase in their tax burden than any other type of corporate entity, since the 1993 Budget Reconciliation Act pushed up the top corporate rate by only one percentage point, while the personal rate -- which is applied to S corporations -- rose by almost nine times that amount. More troubling is that the increase in rates paid by S corporations does not distinguish between the earnings distributed to S corporation shareholders and the funds that are reinvested in these businesses for upkeep and growth. As a direct result, S corporation shareholders pay higher taxes on their own take-home earnings and on their pro rata share of corporate reinvestment.

The unintended result of this tax policy is easily illustrated. Let us assume that an S corporation owner's "share" of her company's earnings in a given year is $250,000. Of that amount, she takes home $125,000 in wages and distributions, and invests the remaining $125,000 to purchase a new machine and hire new workers. According to current law, the owner must pay taxes on the full $250,000 as if it were her own income. Thus, at the end of the year, she will pay federal income taxes at an astonishing rate of 64 percent of her actual take-home pay. **More importantly, she will pay the same tax bill as another business owner who took home $250,000 in salary and distributions and chose to reinvest nothing in his business.** I cannot conceive of a greater disincentive for growth.

It should not be surprising, therefore, that many S corporations are now scaling back investment in their operations. This trend is nothing short of alarming, given the importance

of S corporations to the national economy and their longstanding role as job-creators and engines of productivity growth.

The lesson to be learned from this, I believe, is that any broad-based national economic policy is likely to have some effect on S corporations, and that policymakers must therefore take these companies and their unique corporate structure into consideration when developing major new initiatives -- from tax policy to health care reform to the establishment of new estate planning rules. A blind eye to the needs of S corporations is something akin to building a national highway system whose entry ramps are too narrow to accommodate almost half the cars getting on. In the competitive national and international economy, access and opportunity are critical.

Hindered Capital Access

When burdens are placed on the capital of S corporations, it is important that alternative and accessible forms of capital be made available to these companies. Without accessible and reasonably-priced capital, a company's short- and long-term plans for growth can be severely restricted.

Unfortunately for S corporations, there are many restrictions on capital which hinder their ability to grow. These restrictions range from limitations on the type of debt and equity an S corporation may have to limitations on the number and type of shareholders which can invest in an S corporation. Capital is thus available only from a limited number of equity participants, or from bank debt, which can itself be scarce. The troubling result for too many S corporations -- regardless of their creditworthiness, their performance history or their promise -- is that their cost of capital is often extremely high, and their ability to compete is proportionately diminished.

I recently learned, in fact, that one of our members who owns a successful trucking company was asked to pay 9 percent to borrow short-term funds from his local bank. The cost of these funds certainly didn't take into account his company's considerable track record over more than four decades, the fact that the funds were required for a customer-driven expansion, the fact that his company had provided much of the bank's local business for decades, or the fact that the bank required that this businessman keep as much cash in an account with them as he take out in the form of a loan. Of course, the latter requirement defeated the purpose of seeking the loan in the first place.

What the price of capital reflected was the fact that bank debt was the only outside capital source available to this extremely desirable borrower. The truth is that such situations are all too common for S corporations in search of funding today.

<u>Debt and Equity Restrictions</u>. S corporations are very restricted in capital access because they are permitted to have only one class of shareholders. This prohibits these companies from having, among other things, a two-tiered equity structure, or from issuing debt that can be converted to equity.

Without the ability to have multiple classes of equity, S corporations are forced to trade off voting rights, and often the management of their businesses, in return for any new equity capital. Moreover, this rule, as well as the prohibition on any type of convertible debt, generally makes S corporations ineligible for funding from the many types of investors and lenders who prefer to be sheltered from the direct risk associated with holding the common stock of a small or closely held business. Such preferences are typical among venture capitalists and other similar private equity investor groups, which might -- absent current limitations -- otherwise play an important role in fueling the continued growth of S corporations.

<u>Limits on Shareholder Number and Type</u>. Current law also limits an S corporation to 35 shareholders, and prohibits many types of shareholders -- including most trusts and all taxexempt

entities -- from owning S corporation stock. These restrictions result in both capital and operating difficulties for S corporations.

As a result of the numerical limitation on S corporation shareholders, family businesses which are run by more than one family or by several generations of a single family will eventually be disqualified as S corporations when they surpass the shareholder limit; it is simply a matter of time. Consequently, participation in a family's business may have to be denied to important family members -- either senior members who know the business best, or junior members who hold the most promise for the business' future. Either way, the business suffers.

The limitations on the type of permissible S corporation shareholders raise even further problems. S corporations are not currently allowed to include many types of important institutional shareholders -- like "multiple beneficiary" trusts, spray trusts, and charitable institutions -- which are common among shareholders in C corporations, partnerships and limited liability companies ("LLCs"). By limiting the type of entity that can invest in an S corporation, the company is further limited in its capital sources. Frequently, moreover, these rules lock out many employees from participating in their companies directly, and thus benefiting from their own hard work.

By disallowing multiple beneficiary trusts as S corporation shareholders, for example, current law effectively prohibits S corporations from having employee stock ownership programs, or ESOPs. It is widely accepted that ESOPs provide an important productivity incentive for a company's workers, and that they are immensely valuable as a means of rewarding many years of service by long-time employees. ESOPs also provide an important means for some business owners to obtain new sources of reliable capital without forcing them to turn "outside the company" for these funds.

Unique Operating Burdens

The disallowance of other multiple beneficiary trusts, like those which would "spray" benefits among a business owners heirs depending on the needs and circumstances of each potential beneficiary, raise additional, operating problems for S corporations. The ineligibility of S corporation "spray" trusts, for instance, forces S corporation owners to spend thousands of extra dollars -- sometimes tens of thousands -- to create separate trusts for each of their separate beneficiaries. When an S corporation has more than one owner, which is common, this rule can be extremely burdensome to the owners and the company.

Several other, often more serious operating difficulties exist for S corporations. One of the most onerous of these is the inability of S corporations to own and operate wholly owned subsidiaries. Without being able to have a subsidiary, an S corporation is often forced to grow in inefficient fits and spurts, or create complicated organizational structures to get around the problem. This prohibition frequently limits an S corporation from expanding into new areas of business, new geographic regions, or both. The restriction on operating flexibility inherently limits an S corporation's ability to compete with other types of businesses in the same industry, and as a result, frequently curtails long-term growth.

Other difficulties arise because of the excessive and unnecessary administrative burdens placed on S corporation tax planning, additional statutory complexities related to estate planning, and the proliferation of unnecessary and obsolete tax traps which serve only to "catch" the unwary S corporation tax planner. Separately and together, these prohibitions seriously restrict the growth of the sizeable American S corporation community.

Legislative Solutions Are Within Reach

Fortunately for 1.9 million companies, there are legislative solutions to these issues well within reach. In the Senate, S. 758, or the "S Corporation Reform Act of 1995," was introduced May 4 by Senators Orrin Hatch and David Pryor to alleviate many of the burdens which unnecessarily plague S corporations and limit their growth. Companion legislation will soon be introduced in the House, thanks to the considerable efforts of Congressmen Clay Shaw, Robert Matsui, Rob Portman and their staff. S-CORP strongly supports this measure, and extends its appreciation to the leaders of S Corporation Reform legislation for their hard work to improve the financial and operating environment for America's S corporations.

The Shaw-Matsui-Portman bill would grant S corporations access to important types of capital which are presently unavailable. New classes of debt and equity could be issued, and the limits on the number and type of permissible shareholders would be expanded to 75 from the current limit of 35. Companies would be able to create ESOPs and have other multiple beneficiary trusts, and would be able to have many types of institutional shareholders. S corporations would be able to have wholly owned C corporation subsidiaries as well as S corporation subsidiaries, thereby permitting these companies to grow through acquisitions as well as start-ups.

Efforts to pass family businesses from one generation to the next would be enhanced through improvements to estate planning and the reclassification of all family members as a single shareholder of the company. The bill would also simplify S corporation taxes by eliminating many of the obsolete tax traps which continue to plague S corporation owners and managers.

This legislation makes good business sense for S corporations, their employees, the communities in which they operate, and the national economy. It represents a pro-active legislative approach to solving real business problems with real and realistic solutions.

Some have raised the notion that while legislation such as the S Corporation Reform Act would vastly improve the competitive playing field for S corporations, it may be unnecessary due to the recent spread of limited liability companies, or LLCs. While I agree that the advent of the LLC is indeed important and positive for American entrepreneurs, I would nevertheless argue that the LLC format is not an economically feasible option for entrenched S corporations, due to the very high "toll charge" these companies would pay as a result of switching over from S corporation status to LLC status.

At the time of such a switch, the S corporation would have to pay a severe tax penalty on accounting gains -- a penalty that is generally so high that it will never be economic to convert to and then operate as an LLC. Given the very low likelihood that significant numbers of S corporations will convert to LLCs, we can count on the fact that most of these 1.9 million businesses will continue to require legislative solutions to the serious capital and operating issues I have raised today. The value of the S Corporation Reform legislation about to be introduced by Congressmen Shaw, Matsui and Portman is, and will remain, considerable.

I should reiterate at this junction that, while not all S corporations are small businesses, the vast majority of them are. Therefore, the lion's share of the benefits of the proposed legislation will accrue to these companies, though some medium-sized and larger S corporations will also be helped by this important legislation. This result is, I believe, as it should be: Reform legislation should address the difficulties faced by any company operating as an S corporation, because these obstacles affect these companies equally, regardless of their size. Moreover, this legislation should encourage and facilitate long-term growth, and not limit it by being narrowly applied to only a subset of the S corporation community.

I believe that the S Corporation Reform Act of 1995 will measurably improve the competitiveness of America's S corporations. And I do not believe that our coalition is alone

in that belief: I am profoundly encouraged by the wide acceptance and support this legislation has gained since its very recent introduction in this Congress. Since it was introduced in the Senate only 10 weeks ago, 29 Senators have cosponsored this measure, including seven Members of the Finance Committee. More relevant to this Committee -- and perhaps even more impressive -- is that, even before this bill is introduced in the House, 24 Members of this Chamber, including an impressive 20 Members of this Committee, have endorsed the Shaw-Matsui-Portman companion bill. In both the House and the Senate, furthermore, support for this legislation is strongly bipartisan.

Not surprisingly, strong support for this legislation has also emerged from American industry. In fact, the S Corporation Reform Project (S-CORP) is working closely with 22 associations and coalitions in a wide variety of industries to pass this legislation this year. I have included a list of the supporting trade groups with my testimony today.

I believe that the proposed legislation is so widely embraced because it represents fairness and real simplification, and is intended not to benefit any particular sector or region, but rather to help American entrepreneurs broadly. The legislation recognizes the economic value that S corporations have long created, as well as the economic potential that matured and growing S corporations hold on a national scale. Finally, it represents a critical opportunity for a true cross-section of the U.S. industrial base and the American populace.

I thank the Chairman for his foresight in addressing some of the central concerns of S corporations, and for calling this hearing today. I very much appreciate the hard work and commitment from Congressmen Shaw, Matsui and Portman, whose leadership and determination can make a significant difference to the competitiveness of 1.9 million companies across America. I hope that others on this Committee will follow the important and admirable leadership of the Chairman and the sponsors of S corporation reform legislation, and help to make S corporation reform a reality in 1995. Thank you.

Mr. CRANE. Thank you, Mr. Blair.

Mr. McCrery, do you have any questions of the witnesses?

Mr. MCCRERY. No questions.

Mr. CRANE. Mr. Collins, do you have any questions?

Mr. COLLINS. No questions.

Mr. CRANE. Mr. Christensen.

Mr. CHRISTENSEN. No questions.

Mr. CRANE. Mr. Hancock.

Mr. HANCOCK. Thank you very much.

I would like to question Mr. Blair for just a moment on this LLC as a substitute in many cases for S corporations. I was recently visiting with some legal people, and in many cases, they are saying the LLC is so new that there are different State laws, and they are saying be extremely careful with the limited liability corporation. Have you been hearing that also?

Mr. BLAIR. Indeed, you have got to look State to State, and even as to the State to State differences, there is another trick bag for S corporations that exists today, Mr. Hancock. That is that if you are already an S corporation, you could not convert to an LLC anyway, without paying a terrible tax penalty.

Mr. HANCOCK. I understand that, but for a small company—say, in my district, for instance, or in my area—doing business in four States, which would be Missouri, Arkansas, Oklahoma, and Kansas, the only alternative is an S corporation. Even though the LLC appears to be a good vehicle, it is so new that we need to—I would just like to get on the record that we need to fix the S corporation before we start looking at these other things. Would you agree with that?

Mr. BLAIR. I couldn't agree more with that, Mr. Hancock.

In fact, the LLC is not a new vehicle in the world. They have been in Europe for many years. I remember back in 1975 researching an issue of a Saudi SARL, which is equivalent to an LLC here in the United States, but the differences between Saudi Arabia, Lebanon, France, and so forth as to those LLCs caused people to look at different vehicles, and they had to be very careful about how they did that.

I agree with you. If you are going particularly into multi-States, and different States have different laws, one must be very careful how one goes about that.

The beauty of the S corporation is that it is a federally created opportunity to limit your liability, and the Federal rules are there. They are straightforward; you just have to abide by them. As I suggested, they are a little limited today, and we need to broaden them.

Mr. HANCOCK. Well, that is true enough, but there are also some problems of having to pay 40 percent taxes on your profits on money that you need to leave in the business. That is another area that we need to address on S corporations.

Mr. BLAIR. Would you permit me to make a comment on that? That was in my written remarks, but I ran over and didn't have the chance to address this issue before, so I apologize. Something that a lot of folks up on Capitol Hill do not understand is that when you went from a 31- to 39.6-percent tax rate, whether you agreed or disagreed with that, whether you voted for it or against

it, it took a massive toll on S corporations which are pass-through entities. Many of these S corporations self-capitalize. What that 39.6 percent tax did to these S corporations is it made them distribute money to the shareholders to pay the higher taxes to the U.S. Treasury, therefore creating part of this capital access problem, because if you do not make money in the business and keep it and reinvest it, you have got to get it from somewhere, or you do not expand, and indeed, in some respects, S corporations have had to hold back some, retrench from their expansion.

Maybe the 39.6 percent was good for some. I submit, for S corporations, it bordered on a disaster.

Mr. HANCOCK. Well, I happened to have been a businessman before I came into the Congress, and last year, as a matter of record, the profits of the company, which the company cannot pay me—I cannot put it in my bank account—I have had to pay 45.6 percent income tax on the money that I cannot receive and cannot get. That 45.6, if they could just cut that down to the regular corporate tax of 35, would make it a little bit more reasonable, anyway.

Mr. BLAIR. Indeed.

Mr. HANCOCK. Anyway, thank you for your testimony.

Mr. BLAIR. Thank you.

Mr. CRANE. Mr. Portman.

Mr. PORTMAN. I thank the Chairman, and I appreciate the testimony here today.

Mr. Blair, I guess I have just one question for you. I am very supportive of everything you said with regard to encouraging sub S corporations, family businesses. In the Senate hearings, there was a discussion as to whether this legislation should be limited as to the size of sub S corporations. I think the Treasury Department proposed that the reforms were a good idea, but that they should be applied to sub S corporations that were "small"—perhaps below a certain annual revenue figure or a certain number of employees figure.

Can you comment on that? Sub-S corporations for the most part are small businesses, but some of them would be classified as midsize businesses. Does it make any sense to have an arbitrary cutoff in terms of the size of the company that would receive these necessary reforms and benefits?

Mr. BLAIR. Well, if you look at what Treasury said—and I was at that hearing and was frankly disturbed to hear the comment—if you are successful as an S corporation, that is, if you are able to generate revenues, if you are able to hire people, if you are able to expand your business, then the Treasury position, it would necessarily follow, is that if you are successful, you do not get the benefits of reform, and you are the one who really needs the benefits. You need a higher number of shareholders because you are expanding, you are bringing in family members, you are bringing in other capital, or you are looking to venture capitalists who do not want to come in as a common shareholder, but they want to come in in some preferred position—for example, preferred stock, not permitted under current S corporation rules. Treasury's suggestion flies in the face of the success of S corporations.

Maybe Treasury does not understand the success story that is out there, but every small S corporation that forms today—and I

think this is the beauty of America; you go out and talk to somebody who has just set up an S corporation, and that person is going to be the king or the queen of the hill in 5 years, and they want to grow, they want to get there—terrific. Give them the benefit. But do not take it away from those who have taken the risk, have attained success, and now need to continue to expand and move forward.

Mr. PORTMAN. I would just make one comment. I would concur with that. I do not think it makes any sense to have an arbitrary cutoff. In fact, I think it does create a disincentive to growth. I would also say that one of the reasons why there has been an interest in narrowing the legislation as to its application is because of the revenue impact. I think we have done a good job in the last couple of months of taking this legislation and narrowing the legislation itself, particularly with regard to the health care benefit, to come up with a revenue estimate that is much less than last year and which I think will be consistent with what this Committee, and Congress as a whole, is trying to do with regard to the budget deficit.

I think we have done our work to narrow this down and to make a responsible effort, and I think that is reflected in the fact that we have 20 Members of this Committee as cosponsors.

Thank you for your testimony.

Thank you, Mr. Chairman.

Mr. BLAIR. May I make one comment, Mr. Chairman, on that?

Mr. CRANE. Certainly.

Mr. BLAIR. Because there is a question—there is not a bill yet on the House side, and therefore, there is not a revenue estimate yet. But I do know that when they did some projections a couple of years ago, the provision that was stripped from this year's bill that you are about to be a lead on, Mr. Portman, is the fringe benefit deduction, which was estimated to be 60-plus percent of any revenue loss that the bill would have caused.

The 30 percent of the cost was some arbitrary figure, 30 of the 100 percent, that a number of C corporations would convert to S corporations, I think you have done the job of stripping this back to make it as clean and as revenue-neutral as possible.

Mr. CRANE. Mr. Coyne.

Mr. COYNE. No questions.

Mr. CRANE. Mr. Jacobs.

Mr. JACOBS. Mr. Chairman, I want to observe for the record on this portfolio exemption from taxation for foreign nationals that what it boils down to is that Uncle Sam in effect is paying higher interest rates to foreign nationals than he pays to his own nieces and nephews. It came about in 1984, as the witness said, and I will go so far as to say that the problem faced by people who anted to get reelected that year was that interest rates were rising rapidly because of the enormous borrowing by the Federal Government and pressures on money markets in the United States.

Here is how the reasoning went: We have to stop putting pressure on the money markets in the United States. How can we do that? We will borrow on foreign money markets? Well, why would the foreigners lend us any more than they already have? Because we will pay them higher interest rates. Well, if we do that, every-

body in the United States will think there is something wrong if they buy a bond and get a certain interest rate, and the foreign national buys a bond and gets a higher interest rate. That does not sound fair to the average person. Yes, but we can do it in the following way—we will make it tax free to foreigners whereas it is taxable to American citizens.

That is the origin. That is the motivation of it. It was applied to all portfolio investments in the first instance. The following year, certain people wanted to narrow it down just to government obligations, and that never got off the ground.

I simply say that for the record so the other side can be read.

Mr. SHAW [presiding]. Thank you.

Mr. Blair, I want to thank you for your comments. I have a copy of your written statement. The companion bill to the Senate bill that you refer to regarding S corporations now has 20 cosponsors on this Committee. It is moving ahead, and it seems to have a lot of support, and it certainly has a lot of common sense behind it.

If there are no other Members seeking recognition, we will dismiss this panel. Thank you very much for being here.

The Committee will resume at 1 p.m. this afternoon.

[Whereupon, at 11:52 a.m., the Committee was recessed, to reconvene at 1 p.m. this same day.

Chairman ARCHER. The Committee will come to order.

We are now ready to receive testimony from our last panel of the day, which includes Mr. Threadgill, Mr. Bannister, Mr. Dumbacher, and Mr. Enochs.

I would first like to recognize Mr. Threadgill. If you would identify yourself for the record and, having done so, you may proceed. Your entire printed statement will be entered into the record without objection, and we would like for you, if you could, to summarize verbally in 5 minutes or less.

Mr. Threadgill.

STATEMENT OF DELMER R. THREADGILL, VICE PRESIDENT AND DIRECTOR OF TAX, J.C. PENNEY CO., INC., DALLAS, TEXAS, ON BEHALF OF THE NATIONAL RETAIL FEDERATION

Mr. THREADGILL. Thank you, Mr. Chairman.

My name is Del Threadgill, and I am vice president and director of tax for the J.C. Penney Co. I am also the current chairman of the NRF, National Retail Federation's Committee on Taxation, and on behalf of that federation and its members, I am pleased to appear before you today to briefly address three issues that are before the Committee.

As you indicated, my written statement has been entered, and I will be as brief as possible.

First, NRF urges the Committee to enact the proposal to allow taxpayers to estimate the deduction for shrinkage used in accounting for inventories. Current law allows retailers a deduction for shrinkage, shrinkage being missing inventory due to theft, breakage, bookkeeping errors, and so on.

The Internal Revenue Service maintains that shrinkage is only deductible if it has been verified by a physical count of the inventory at the end of the year. For valid business reasons, many retailers and other taxpayers cannot or do not take a physical inventory

count at the end of their tax year. They do take a physical count, but it is at some other time during the year. Shrinkage is verified at that time and recorded on their books, but from the point in time of the physical count to the end of the year, retailers and other taxpayers calculate and deduct an estimated shrinkage amount using a reference to historical shrinkage patterns as a percentage of sales.

In many cases, the IRS has chosen to litigate this issue and in the only decision thus far, the Tax Court in 1993 ruled in favor of a retailer, stating that an estimate of inventory shrinkage may be used in computing year-end inventory so long as it clearly reflects income.

Although the NRF has attempted to engage the IRS in developing a shrinkage methodology that would be acceptable to the industry and the Service, the IRS has chosen to litigate this issue on a case-by-case basis. Therefore, to avoid the continued waste of both taxpayer and government resources on these controversies and to help eliminate and simplify these kinds of problems, the NRF asks the Congress to enact legislation that would prescribe acceptable methodologies for calculating shrinkage.

As to the second proposal we wish to comment on, the NRF urges the Committee to act on legislation to create a new, 10-year depreciable life for qualified commercial improvement property, such as improvements made by retailer owners and lessors to improve their retail space. Currently, additions of this type are forced into the same 39-year life as buildings, and this treatment grossly overstates the economic useful life of these retail improvements.

Successful retailers generally need to remodel their stores as often as every 5 to 7 years to reflect changes in customer tastes and needs. Commercial improvements will be changed out, several times before the end of any 39-year life.

There are other proposals, including one that is before the Committee in these sessions, that deal with the depreciable treatment for leasehold improvements. They deal, however, only with assets in leased property and do not address the situation where an owner of a building makes the same type of improvements to the interior space that they use for their own retail establishment. The decision to lease or own space should have no impact on the depreciable treatment of subsequent renovations.

Thus, the NRF requests the Committee to include in its legislation a provision creating a new, economically appropriate, 10-year class life for all qualified commercial improvement property whether leased or owned.

Finally, the NRF urges the Committee to act on legislation to modify penalties associated with certain errors in complying with the requirements for qualified employer pension and profitsharing plans. The IRS is currently very active in auditing large employer plans, and while the IRS at times can be very reasonable, the present rules call for a disqualification even when a very small percentage of inadvertent errors is found. An aggressive application by the IRS has also resulted in penalties being assessed in amounts that are far in excess of the cost of correcting these violations.

The NRF asks that the Committee consider the proposal to modify—certainly not do away with, but modify—the sanctions for inadvertent and de minimis errors in satisfying the qualification requirements in order that the level of punishment would better fit the level of the crime. As an example, one proposal would be to limit the amount of the penalty to 100 percent of the cost of the errors that were found and corrected.

Mr. Chairman, that concludes my remarks. Thank you.

scheduled for hearings before the
HOUSE COMMITTEE ON WAYS AND MEANS
as part of hearings on
MISCELLANEOUS TAX REFORMS

ON BEHALF OF THE NATIONAL RETAIL FEDERATION
by
DELMER R. THREADGILL, VICE PRESIDENT AND DIRECTOR OF TAX
J.C. PENNEY COMPANY, INC.

I am Delmer R. Threadgill, Vice President and Director of Tax for J.C. Penney Company, Inc., and Chairman of the Taxation Committee of the National Retail Federation. The National Retail Federation (NRF) is the world's largest retail trade association with membership that includes the leading department, specialty, discount, mass merchandise and independent stores, as well as 32 national and 50 state associations. NRF members represent an industry that encompasses over 1.4 million U.S. retail establishments, employs nearly 20 million people, or 1 in 5 American workers, and registered 1994 sales of more than $2.2 trillion. NRF's international members operate stores in more than 50 nations.

I am honored to be here today to testify on behalf of the NRF in support of three of the proposals that are the subject of this week's hearings -- a proposal to provide a methodology that taxpayers may use in estimating inventory shrinkage; a proposal to establish a 10-year recovery period for commercial improvements; and a proposal to modify sanctions for failure to meet the requirements of "qualified plans."

INVENTORY SHRINKAGE

The NRF urges the Committee to act on legislation that would permit taxpayers to estimate their "shrinkage" deduction for inventory accounting. "Shrinkage" is the reduction in a retailer's inventory that results from theft, breakage and bookkeeping errors.

Under current law, retailers may take a deduction for the "shrinkage" in their inventory. However, many retailers have been mired in disputes with the IRS over the appropriate methodology for calculating the amount of a taxpayer's inventory shrinkage. Since 1988 the NRF has worked towards developing a methodology for estimating inventory shrinkage that would be acceptable to the IRS, in order to eliminate these protracted controversies. To date, the IRS has chosen to litigate this issue on a case-by-case basis to determine if the methodology utilized by each taxpayer clearly reflects income, rather than setting forth rules that establish acceptable methodologies that may be relied upon by both taxpayers and the IRS. To avoid the continued waste of taxpayer and government resources on these controversies, the NRF respectfully requests that Congress enact legislation that would prescribe methodologies taxpayers may utilize in calculating shrinkage without IRS challenge.

By way of background, the IRS Retail Industry Specialization Program (ISP) published a position paper that would deny taxpayers a deduction for inventory shrinkage that is based on a calculation other than a year-end physical count of the inventory. Based on this position, many taxpayers have received proposed audit adjustments that deny a current deduction for the estimated shrinkage that occurred after the most recent physical inventory count and before the taxpayer's year-end. Several cases are at various stages in the litigation process. In the only decision on this issue thus far, the Tax Court has concluded that an estimate of inventory shrinkage may be used in computing year-end inventory so long as it clearly reflects income. *Dayton Hudson Corporation and Subsidiaries v. Commissioner of Internal Revenue*, 101 T.C. 462 (1993). Subsequent to this decision, the IRS continues to litigate this issue to determine if each taxpayer's methodology clearly reflects income.

Many retailers (and many manufacturers as well) keep a perpetual inventory system that reflects purchases, sales, returns, and shrinkage (reductions due to theft, breakage and

bookkeeping errors). The starting point in any perpetual inventory is the actual inventory amount determined by a physical count of the inventory. The perpetual inventory is verified, or "trued-up," by a subsequent physical count of the inventory. Typically, this physical count occurs at lease once each year in order to keep the perpetual inventory current. Due to significant business constraints that result from assembling the resources needed to physically count inventory in every location at the end of the fiscal year, the physical count by many retailers does not always occur on the last day of the taxable year at all (and perhaps not at any) locations where inventory is maintained.

For financial statement purposes, taxpayers that do not physically count all their inventory on the last day of the fiscal year generally compute the amount of inventory shrinkage that has occurred since the most recent physical inventory count by reference to historical shrinkage patterns as a percentage of sales. This treatment is intended to most accurately reflect the true value of the taxpayer's inventory at year-end in situations where an actual year-end physical count is not practicable. These taxpayers generally use the identical treatment for purposes of computing taxable income.

The overwhelming reason why a taxpayer would not physically count inventory at the end of the fiscal or tax year is because management has determined that it is uneconomical to count all or any locations as of the end of that date due to the number of employees and amount of equipment that would be required. In addition, the availability of shrinkage data prior to the end of the fiscal year allows management to react to problems on a more timely basis.

The accrual method of accounting, which is used in determining inventories, requires that liabilities be taken into account when economic performance and all events that fix the liability have occurred. However, a taxpayer need not be aware of the liability in order to deduct it in the year in which it is accrued, but rather the fact of the liability must be knowable. Similarly, the regulations do not require that the exact amount of the liability can be determined, but rather that the taxpayer is able to compute the liability with reasonable accuracy. Treas. Reg. 1.461-1(a)(2)(ii). Again, to determine this amount with reasonable accuracy, the accrual method of accounting does not require that the amount of liability is known at the end of the year, but that it is knowable. *See Continental Tie and Lumber Corp. v. U.S.*, 286 U.S. 290 (1932). Clearly, the fact and amount of a taxpayer's inventory shrinkage is knowable at the end of the year even, if a physical count has not verified it.

In order to clearly reflect income, taxpayers must be able to match income and expenses. Therefore, retailers must be able to match inventory shrinkage to their sales income for the year. Treasury regulation 1.471-2(d) permits taxpayers to utilize a perpetual method of inventory accounting and thereby approximate the value of inventory, which the regulations require be verified by physical inventories at reasonable intervals. The rationale behind permitting taxpayers to use a perpetual method of inventory accounting is that it is not feasible for taxpayers to count all inventory on the last day of the fiscal year. Because this method of accounting is based on a taxpayer's estimates of inventory, if a taxpayer cannot estimate the inventory shrinkage that occurs from the time of their last physical count until the end of the fiscal year, the perpetual method will not clearly reflect income.

In a November 1993 decision, the Tax Court in *Dayton Hudson* denied the IRS motion for summary judgment in holding that an estimate may be used to compute year-end inventory so. long as it clearly reflects income. The IRS has decided to litigate the factual issue as to whether the taxpayer's method for estimating shrinkage clearly reflects income. As stated previously, there are several other cases docketed in the Tax Court, and it is unclear at this time whether the IRS will litigate the factual issues in each case to determine whether the methodology adopted by each taxpayer clearly reflects income.

The NRF respectfully requests the Committee to include in 1995 tax legislation provisions that would provide taxpayers with methodologies that could be used in estimating inventory shrinkage and thereby eliminate the need for protracted controversies. In the aftermath of the *Dayton Hudson* decision, the industry was hopeful that the IRS would be willing to issue a set of straight-forward rules in this area that could be voluntarily applied by taxpayers on a consistent basis. Unfortunately, the IRS continues to pursue a litigation strategy that appears to prevent them from issuing administrative guidance at this time. As a result, taxpayers will have to continue to litigate this issue. This course of action will result in an extremely high level of controversies between taxpayers and the IRS, similar to the situation that arose in the

intangibles area. For this reason the retail industry believes that since the IRS is unwilling to issue administrative guidance in this area, a methodology for estimating inventory shrinkage should be included in tax simplification legislation. The NRF would appreciate the opportunity to work with the Committee to develop acceptable methodologies for making this calculation that may be relied on by taxpayers.

LEASEHOLD IMPROVEMENTS

The NRF urges the Committee to act on legislation to establish a new 10-year depreciable life for "qualified commercial improvement property" – such as improvements made by retail owners and lessors to improve their retail space. Currently, a building owner must depreciate the costs of improvements to its space over the 39-year life of the building. However, this treatment grossly overstates the actual economic life of retail improvements, thereby increasing the cost of capital and distorting business decisions. Providing a 10-year life for these improvements would better reflect economic reality and would remove the current-law distortion in business decisions.

Successful retailing periodically requires a fresh look; it does not allow the same improvements to be used for 39 years. Instead, retailers generally need to remodel their stores as often as every 5 to 7 years to reflect changes in customer taste and needs. Moreover, improvements simply do not last as long as 39 years and must be replaced far more frequently. Thus, adopting the proposed 10-year life for retail improvements would far better reflect economic reality.

In addition, it makes little sense to ascribe to improvements the same 39-year life that is ascribed to buildings. As indicated above, the economic lives of retail improvements are far shorter than the lives of the buildings in which they are contained. Moreover, providing the proposed 10-year life for these improvements would not represent a return to the complexity of the component system of depreciation. The proposal avoids the complexity of the component system by providing a single class life for all eligible items and by being inapplicable to new buildings and to structural components. Therefore, the current policy of providing one single, extremely long, life for both buildings and improvements should be changed; the depreciable life of improvements should be modified to reflect their far shorter economic life.

Some legislative proposals have attempted to address some of the problems associated with the current treatment of building improvements. However, while NRF appreciates these efforts and recognizes them as good first steps in addressing serious cost recovery issues, NRF believes that these proposals fall short of addressing the current problems – especially with respect to retailers who own, rather than lease, their retail space. For example, the recently-passed House version of the Contract With America included a provision that would address the current treatment of lessor-owned leasehold improvements that are removed at the termination of the lease; however, it would not address a situation in which a lessor disposes of leasehold improvements *during* the term of a lease or in which an *owner* of a building removes the same type of improvements to the interior space (for example, as part of renovation). As another example, Congressmen Shaw and Rangel (and other Members of Congress) have introduced legislation (H.R. 1171) that would create a new 10-year class life for certain "leasehold improvement property." While the NRF applauds this initiative, it is concerned that the proposed legislation (like the House version of the Contract) would not address the concerns of retailers that have chosen to own rather than to lease their retail space.

Proposals designed to address the problems arising out of the current treatment of improvements clearly should not be limited to leased property. The decision to lease or own is primarily a financing and business decision and has no effect whatsoever on the useful life of improvements within a retail space. It would be inappropriate to apply radically different depreciation systems depending upon which approach is chosen. Such treatment would create, in effect, a significant tax incentive for retailers to lease rather than to own their stores. The tax laws clearly should not interfere in this type of business decision. Thus, the NRF respectfully requests the Committee to include in 1995 tax legislation a provision that creates a new, economically appropriate, 10-year class life for all "qualified commercial improvement property" – whether leased or owned.

QUALIFIED PLAN COMPLIANCE

The NRF urges the Committee to act on legislation to modify the penalties associated with failure to comply with the qualification requirements for qualified employee pension and profit sharing plans. In recent IRS audits of large employer qualified plans, the IRS has imposed enormous penalties (in the millions of dollars) for technical violations of the qualified plan rules. The NRF believes that a penalty can be established that is more closely linked to the errors found in these plans so as not to unduly threaten the economic viability of the employer but yet still meet the policy goal of encouraging voluntary compliance.

The Internal Revenue Code ("IRC") provides for employer tax-deductible contributions to employee pension and profit sharing plans that meet certain specific IRC qualification requirements ("qualified" plans). The requirements include ensuring that there is broad based employee participation in the plan, that highly compensated employees don't receive a disproportionate amount of benefits, and that rights, benefits and features of the plans are available on a non-discriminatory basis. The tax favored status of these plans promotes (and is intended to promote) retirement savings by and on behalf of employees. The qualified plans of large employers often have billions of dollars in plan trusts, which are tax-exempt as long as the plan remains "qualified" by operating pursuant to the specific IRC requirements. Employees pay income tax on the benefits when distributed after retirement or other termination of employment.

Plan disqualification has disastrous results both for the employer and the employees covered by the plan. The employer retroactively loses the tax deductibility of its plan contributions and the plan benefits become immediately taxable to plan members. (The plan trust is also taxable on previously exempt income.)

The challenge for employers, some of which administer their respective plans for tens of thousands of employees, is to ensure they have met every letter of the law for the continued "qualification" of the tax exempt nature of their retirement plans. The Treasury regulations implementing the IRC qualification rules are complex, overwhelmingly detailed and highly technical, and in most cases, include no exceptions for de minimis errors in administration or a reasonableness standard of enforcement. Theoretically, a $10 understatement of a benefit, or omitting one employee out of 10,000 in determining plan eligibility, can "disqualify" the plan, creating a tax burden so large as to effectively necessitate plan termination.

The IRS recently has begun intensive auditing of large employer qualified plans. Technical violations inevitably are found, and, in lieu of "disqualifying" the retirement plan (which is recognized as placing an enormous burden on the employees who are to be benefited by the plans), the IRC "negotiates" a "relief" settlement with the employer. The starting point for the negotiation is an amount which is the total tax which would be due by the employer, the plan trust and the highly compensated employees if the plan were disqualified. Cases have been documented recently where the "relief" required the payment of penalties exceeding $10 million.

The penalties are paid to the IRS (rather than to the qualified plan involved in the audit) and are non-deductible. Therefore, the penalty program not only does not contribute to the retirement security of the covered employees, but arguably, in large penalty cases, it jeopardizes that security by undermining the financial strength of the plan's corporate sponsor. Presumably, in some cases, the threat of penalties would deter an employer from establishing or continuing to offer qualified plans as an employee benefit.

The IRS has initiated a program that permits an employer to voluntarily audit its plans and submit its findings to the IRS along with a proposal to correct operational errors (at the employer's expense), but no employer can be sure it has found each and every "disqualifying" error. The threat of arbitrary penalties continues. As suggested by the current Congressional trend of applying private sector laws to the public sector, this situation is analogous to mandating Congress to ensure the U.S. Government will not make a single error in Social Security administration and imposing a monetary penalty on Congress if errors are made.

The goal of encouraging plan sponsors' voluntary compliance can be met without imposing unduly burdensome penalties on employers. Specifically, legislation could be enacted to

provide a penalty, to be assessed in the form of an excise tax that may not be more than 100% of the amount involved in the correction of operational errors found upon plan audit.

CONCLUSION

The NRF respectfully requests that the Committee include in 1995 tax legislation provisions that would provide acceptable methodologies for estimating a retailer's inventory shrinkage; provide a 10-year recovery period for commercial improvement property; and modify sanctions for failure to comply with qualified plan requirements. We look forward to the opportunity to work with the Committee in developing these three legislative proposals.

Chairman ARCHER. Thank you, Mr. Threadgill.

The Chair recognizes a Member of the Committee, the gentleman from Georgia, Mr. Collins, to introduce the next witness.

Mr. COLLINS. Thank you, Mr. Chairman.

I am pleased to introduce to the Committee and welcome before the Committee Bob Dumbacher. Mr. Dumbacher is with Racetrac Petroleum. Racetrac has a number of facilities in and around the Atlanta area, not only in the Third District of Georgia, but also in Committee Member John Lewis' district.

Mr. Dumbacher is the chief financial officer for Racetrac. Racetrac has been in business in Georgia for some 60 years. They have been headquartered in Atlanta for some 20 years. Mr. Dumbacher wants to speak to us today in regard to depreciation and changes in depreciation schedules and allowances that the IRS is putting forth in rule changes.

We welcome you, Mr. Dumbacher, and Mr. Chairman, it is my honor to introduce Bob Dumbacher.

Chairman ARCHER. Mr. Dumbacher, we are pleased to have you with us, and you may proceed.

STATEMENT OF ROBERT J. DUMBACHER, CHIEF FINANCIAL OFFICER, RACETRAC PETROLEUM, INC., ATLANTA, GEORGIA, ON BEHALF OF NATIONAL ASSOCIATION OF CONVENIENCE STORES AND SOCIETY OF INDEPENDENT GASOLINE MARKETERS OF AMERICA

Mr. DUMBACHER. Thank you, Mr. Chairman and Members of the Committee, and thank you, Mr. Collins, for that nice introduction.

We are a petroleum retailer, and we have outlets from Virginia to Florida to Texas, covering 13 States. We employ 2,300 people, and as was just mentioned, we have been in business for 60 years, serving the petroleum and motoring needs of American drivers.

We thank you for the opportunity to appear on behalf of Racetrac and the SIGMA, Society of Independent Gasoline Marketers of America, and the NACS, National Association for Convenience Stores, which are two national trade associations representing more than 2,000 petroleum marketers.

I do want to testify today on the depreciation of buildings located at the retail motor fuel outlets. This is an issue of great importance to petroleum marketers and of particular importance to Racetrac. The IRS is currently examining Racetrac, and the two issues that consume most of my time doing an examination are the depreciation periods for buildings and for canopies located at our retail motor fuel outlets.

For many years, the depreciation period for motor fuel outlet buildings was clear. It was 15 years. However, at the beginning of this year, the IRS issued a coordinated issue paper in which it takes the position that most retail motor fuel outlets where nonpetroleum products are sold must depreciate the buildings over 39 years because in their opinion the buildings are not primarily used in the marketing of petroleum products.

The IRS says that these buildings are like small grocery stores or typical convenience stores. At the heart of the IRS' new position is its contention that a retail motor fuel outlet does not meet its primary use requirement unless 50 percent or more of the gross

revenue at a retail motor fuel outlet is from petroleum marketing activities, and 50 percent or more of the floor space of the building at that outlet is devoted to marketing petroleum products.

The IRS' new position is wrong, both for technical and policy reasons. It reads into the rules a primary use requirement that does not exist and is contrary to economic reality. Even if there were a primary use requirement, the IRS' two-pronged mechanical test to determine primary use is overly restrictive and unreasonable.

Racetrac, like most petroleum markets, has been in the business of marketing petroleum products for many years. This is our primary business. A Racetrac outlet is obviously different than a small grocery store or typical convenience store. We have passed out some pictures that will illustrate this.

Our retail motor fuel outlets have up to 24 gasoline fueling positions, a larger canopy over the pumps, and large signs informing the driving public of the price of gasoline.

Racetrac's customer surveys overwhelmingly demonstrate that what causes a person to drive into one of our retail motor fuel outlets is the desire to purchase gasoline at the price stated on the sign.

The typical retail motor fuel outlet has evolved into a somewhat larger outlet with a greater variety of products as a result of customer demand. However, this customer demand for services and products does not change this establishment from a petroleum marketing outlet, nor does the customer lose his or her identity as a retail gasoline customer.

The retail motor fuel outlet's primary reason for having a building at the location is to sell gasoline and other petroleum-related products.

In addition to being technically incorrect, the IRS position ignores economic reality. I can personally attest to the fact that the owner of a retail motor fuel outlet spends a tremendous amount of time and tens of thousands of dollars worrying about and complying with the many rules and regulations that specifically affect petroleum marketers, not grocery stores or fast food establishments.

Moreover, selling real property that was once the site of a retail motor fuel outlet is far more difficult than selling real property that was the site of a small grocery store.

The economic and useful life of buildings located at retail motor fuel outlets has remained constant for more than 70 years. As early as 1925, the Board of Tax Appeals found a gasoline station to have a 12½-year useful life. Recent industry experience still shows that these buildings have an average economic useful life of 12 years whether or not food products are also marketed at the outlet.

An issue that clearly demonstrates the unreasonableness of the IRS in this area is the depreciation of canopies. The IRS insists on requiring canopies to be depreciated over 15 years even though the U.S. Tax Court has clearly held that canopies that are not inherently permanent structures are depreciable over 5 years. The IRS agents have stated to us that it is the IRS' national position that they are a 15-year property.

The petroleum marketing industry is not asking Congress for something new or different. We are simply asking that the IRS not change the longstanding and well-established depreciation period for retail fuel outlet buildings. The IRS agents we have dealt with have conceded that their position may be extreme. Racetrac agrees and asks Congress to help us with this problem.

Thank you, Mr. Chairman, and Members of the Committee for the opportunity to comment on these important issues.

[The prepared statement follows:]

STATEMENT OF ROBERT J. DUMBACHER
CHIEF FINANCIAL OFFICER, RACETRAC PETROLEUM, INC.
ON BEHALF OF NATIONAL ASSOCIATION OF CONVENIENCE STORES AND SOCIETY OF INDEPENDENT GASOLINE MARKETERS OF AMERICA

Mr. Chairman and members of the Committee: I am Robert J. Dumbacher. I am the Chief Financial Officer of Racetrac Petroleum, Inc., a position I have held for the past twelve years. Racetrac is a petroleum marketer with outlets from Virginia to Florida to Texas, covering 13 states. We employing 2,300 people, and have recently celebrated our sixtieth year of serving the petroleum and motoring needs of American drivers. Thank you for this opportunity to appear on behalf of Racetrac and the Society of Independent Gasoline Marketers of America ("SIGMA") and the National Association of Convenience Stores ("NACS"), two national trade associations representing more than 2,000 petroleum marketers.

I am testifying today on the depreciation of buildings located at retail motor fuel outlets. This is an issue of great importance to petroleum marketers, and of particular importance to Racetrac. The Internal Revenue Service ("IRS") is currently examining Racetrac, and the two issues that have consumed most of my time during this examination are the depreciation periods for the buildings and canopies located at our retail motor fuel outlets. This is especially frustrating because there should be no question about the proper depreciation of these assets.

For many years, the depreciation period for retail motor fuel outlet buildings was clear - 15 years. This 15-year period is currently set forth in Asset Class 57.1 of Revenue Procedure 87-56, 1987-2 C.B. 674, issued by the IRS. About five years ago, however, IRS agents began challenging the 15-year depreciation period for buildings at retail motor fuel outlets where food and other non-petroleum goods were being sold, arguing that such buildings are non-residential real property depreciable over 31.5 years (now 39 years). The IRS refers to these buildings as gasoline convenience store buildings.

These challenges, which are contrary to Asset Class 57.1 and case law, were not the independent acts of IRS agents, but the result of a coordinated effort by the IRS National Office. With the release of a Coordinated Issue Paper earlier this year, the IRS made clear its position that gasoline convenience store buildings must be deprecated over 39 years unless certain limited requirements are met. To support its position, the IRS gives the following reasons:

(1) Typically, only about 10 to 20 percent of the gasoline convenience store building's floor space is devoted to the marketing of petroleum products;

(2) The building contains none of the features typically associated with traditional oil company service stations such as service bays, tire changing and repair facilities, and car lifts; and

(3) The building is a fully adaptable retail building that competes with other convenience stores and small grocery stores.

The Coordinated Issue Paper contains an exception that allows a gasoline station convenience store building to come within the meaning of Asset Class 57.1, thereby qualifying for the 15-year depreciation period, if it is *primarily* used in petroleum marketing. A two-prong test is used for determining whether a building is primarily used in petroleum marketing. Under this test, a building meets the primary-use requirement only if:

(1) 50 percent or more of the gross revenues "generated by the C-store" are derived from gasoline (and presumably diesel fuel) sales; and

(2) 50 percent or more of the floor space in the building (including rest rooms, counter, and other areas allocable to traditional service station "services") is devoted to the petroleum marketing activity.

In addition to the two-prong test, the Coordinated Issue Paper provides that the IRS will not challenge the 15-year depreciation period "[i]f an island marketer's building has 1,400 sq. ft. or less . . .."

Efforts by Racetrac, SIGMA, NACS, and other industry representatives to persuade the IRS from adopting its new position on the depreciation of gasoline convenience store buildings have been unsuccessful, notwithstanding the fact that the Technical and Miscellaneous Revenue Act of 1988 repealed the Treasury Department's authority to change any Asset Class Life.

The IRS' new position is wrong for technical and policy reasons. It reads into Asset Class 57.1 a primary-use requirement that does not exist, and it is contrary to economic reality.

Asset Class 57.1 provides, in relevant part, that it "[i]cludes section 1250 assets, including service station buildings and depreciable land improvements, whether section 1250 property or section 1245 property, used in the marketing of petroleum and petroleum products." The phrase " including service station buildings and depreciable land improvements, whether section 1250 property or 1245 property," is illustrative. It does not restrict the general rule that Asset Class 57.1 *includes section 1250 assets used in the marketing of petroleum and petroleum products*. This point was made clear in the recent United States Tax Court decision in *JFM, Inc. and Subsidiaries v. Commissioner*, T.C. Memo 1994-239, involving the appropriate depreciation period of gasoline pump canopies, in which the court said "[i]t is clear that classes 57.0 and 57.1 were intended to cover *all possible types of real and personal property used in the marketing of petroleum products* . . .." Emphasis supplied. There is nothing indicating that a primary-use requirement should be incorporated into Asset Class 57.1, and the IRS is technically wrong in its new application of Asset Class 57.1.

Even if Asset Class 57.1 incorporated a primary-use requirement, the IRS' adoption of the two-prong mechanical test to determine primary use is overly restrictive and unreasonable. Racetrac, like most petroleum marketers, has been in the business of marketing petroleum products for many years -- this is its primary business. No sane person would ever mistake a Racetrac outlet or other typical retail motor fuel outlet for a small grocery store or typical convenience store. These retail motor fuel outlets have a number of gasoline pumps, a large canopy over the gasoline pumps, and large signs informing the driving public of the price of gasoline - all clearly visible from a distance.

What causes a person to drive into a retail motor fuel outlet is the desire to purchase gasoline (or diesel fuel) at the price stated on the sign. While there the driver may clean the windshield, check the oil, water, and tires, purchase windshield wiper blades and washer fluid, oil, and antifreeze, if needed, and use the rest rooms - all services in the traditional service station sense. Even though he or she may purchase a soda, cigarettes, or some other item, his or her primary reason for driving into the retail motor fuel outlet is to buy gasoline and service, albeit self-service, his or her automobile.

The typical retail motor fuel outlet has evolved into a somewhat larger outlet with a greater variety of products as a result of customer demand, and any marketer who does not respond to customer wants will soon find itself uncompetitive and eventually out of business. Customer demand for additional services and products, however, does not change the establishment from a petroleum marketing facility nor does the customer lose his or her identity as a retail gasoline customer.

As with the retail gasoline customer, the retail motor fuel outlet's primary reason for having the building at the location is to sell gasoline and other petroleum related products. The availability of non-petroleum products is merely a convenience to the drivers. I recently confirmed this directly with our customers by conducting numerous surveys of our customers asking them what first attracted them to our outlets and what was the principal use of our outlets. The overwhelming response from our customers

was that they were attracted to us as a gasoline marketer and they were there to buy gasoline. As a gasoline customer, however, they were also, in many cases, wanting to get a drink or snack while refueling, rather than having to make a second stop. Determining primary use in these cases is not a function of a mechanical test, but simple common sense.

The IRS places importance on the fact that gasoline convenience store buildings do not have mechanics to service the automobiles. The reason many retail motor fuel outlets do not have mechanics is that automobiles need far less maintenance today than they did a decade ago. In fact, many automobile manufacturers now claim that they build cars that can be driven 100,000 miles before they need a tuneup, and tires with 60,000 mile warranties are common. The fact that automobiles need less servicing today does not alter the fact that a retail motor fuel outlet's primary reason for its existence and the use of its building is the marketing of petroleum products.

In addition to being technically incorrect, the IRS position ignores economic reality. The economic realities of the petroleum marketing industry are very different from the economic realities of the grocery store industry, and equating the economics associated with a building used in the petroleum marketing industry to the economics associated with a building used in the grocery store industry or fast food industry is misplaced. For more than twenty years, Federal, state, and local governments have adopted tighter and tighter controls on businesses that extract, produce, transport, store, and sell petroleum products. These controls have focused on both energy conservation and environmental concerns.

The typical owner of a small grocery store spends little time or money worrying about the Clean Air Act, the Clean Water Act, or the Resource Conservation and Recovery Act. On the other hand, I can attest to the fact that the owner of a retail motor fuel outlet spends a tremendous amount of time and tens of thousands of dollars worrying about and complying with the many rules and regulations that affect the zoning of a site for petroleum marketing, delivery of petroleum products, the storage tanks, the dispensing pumps, the recycling of used oil, the reporting of gasoline and diesel fuel spills, and many, many other issues. Moreover, selling real property that was once the site of a retail motor fuel outlet is far more difficult than selling real property that was the site of a small grocery store.

These factors directly affect the economic and useful life of buildings located at retail motor fuel outlets. A survey conducted by the national accounting firm of GrantThornton shows that retail motor fuel outlet buildings have an average economic useful life of 12 years, whether or not food products are marketed at the outlet. This relatively short economic useful life is a function of the need to constantly relocate, renovate, or rebuild to respond to commercial demands and regulatory requirements. This is not a recent phenomena. In fact, the economic life of retail motor fuel outlet buildings has remained constant for more than 70 years. As early as 1925, the Board of Tax Appeals found an oil service station to have a 12 1/2-year useful life. *Moberly Oil Co. v. Commissioner*, 3 B.T.A. 163 (1925). In 1944, the Tax Court found the physical useful life of a gasoline station to be 15 years, and its economic useful life to be only 10 years. *Austin v. Commissioner*, 3 TCM (CCH) 1106 (1944).

The new position of the IRS is wrong as a technical matter and it is wrong as a policy matter. Without assistance from Congress, petroleum marketers will be forced into time consuming and costly litigation with the IRS. An issue that clearly demonstrates the unreasonableness of the IRS in this area is the depreciation of canopies, which I mentioned earlier. Most canopies today are readily moveable, and therefore, qualify for 5-year depreciation under Asset Class 57.0. The IRS insists on requiring canopies to be depreciated over 15 years, even though the United States Tax Court clearly held in *JFM, Inc. and Subsidiaries, supra,* that canopies that are not inherently permanent are depreciable over 5 years. The IRS agents examining Racetrac refuse to follow the *JFM* case, even though Racetrac has clearly demonstrated that its

canopies are moveable (and, in fact, have been moved). The IRS agents have stated that it is the IRS National position that canopies are to be depreciated over 15 years.

The petroleum marketing industry is not asking Congress for something new or different. It is simply asking that the IRS not change the long-standing and well-established depreciation period for retail motor fuel outlet buildings. The IRS agents we have dealt with have conceded that their "position may be extreme." Racetrac agrees and asks Congress to help us with this problem.

The IRS does not have the authority to change Asset Class 57.1. Nor should it be allowed to change the application of Asset Class 57.1 by reading into it a primary-use requirement. If the IRS insists on maintaining its new position, legislation should be enacted to clarify the current state of the law. This could be done by amending section 168(e)(3)(E) of the Internal Revenue Code of 1986 to read as follows:

(E) 15-year property. The term "15-year property" includes--
(i) any municipal wastewater treatment plant,
(ii) any telephone distribution plant and comparable equipment used for 2-way exchange of voice and data communications, and
(iii) any building and depreciable land improvement, whether section 1245 or 1250 property, used in the marketing of petroleum products, such as a retail motor fuel outlet building where gasoline and food are sold, but not including any of these facilities related to petroleum and natural gas trunk pipelines.

To address concerns that this provision could be abused (*e.g.*, placing a gasoline pump in front of a supermarket), the legislative history could provide that this provision is not intended to cover any section 1250 asset used only to an insubstantial extent in the retail marketing of petroleum and petroleum products.

The IRS' new position on the depreciation of retail motor fuel outlet buildings will substantially increase the cost of capital for small businesses. It is contrary to a clear reading of Asset Classes 57.0 and 57.1, and totally ignores economic reality. Without the help of Congress, taxpayers will be forced into time consuming and expensive litigation with the IRS.

Thank you Mr. Chairman and the members of the Committee for the opportunity to comment on this important issue.

Chairman ARCHER. Thank you, Mr. Dumbacher.

Next, we will hear from George Enochs, president of Cutler/Williams, Inc., Dallas, Texas, on behalf of the National Association of Computer Consultant Businesses.

Welcome, sir.

STATEMENT OF GEORGE ENOCHS, PRESIDENT, CUTLER/WILLIAMS, INC., DALLAS, TEXAS; ON BEHALF OF THE NATIONAL ASSOCIATION OF COMPUTER CONSULTANT BUSINESSES

Mr. ENOCHS. Thank you, Mr. Chairman, and thank you for the courtesy the Committee has afforded me in adjusting to a difficult travel schedule. I appreciate the chance to visit with you now.

I am here on behalf of the 230-member firms of the National Association of Computer Consultant Businesses to share with you some information about how the leased employee laws are causing unnecessary layoffs of U.S. workers and can damage the productivity of Fortune 1000 customers we serve.

Our firms provide highly skilled technical professionals in the computer and engineering fields to these customers who need help for temporary technical project support.

The leased employee laws were intended by Congress to stop abuses by firms that fired their employees and simply leased them back through other companies to avoid pension coverage. But these laws have been extended far beyond their original intent in a way that has hurt the technology projects which are feeding the growth of U.S. companies.

In my oral statement, I want to focus on two basic points. First, the two new safe harbors proposed in the Joint Tax Committee report before you would do very little if anything to solve the problem in our high-tech industry. Instead, we will offer another safe harbor option.

Second, more fundamentally, unless we redefine who is a leased employee, enacting any new safe harbor is merely rearranging deck chairs on the Titanic.

As to the first issue of safe harbor, the Joint Tax Committee report describes one new safe harbor proposal that will be available only to qualified leasing organizations that meet extensive criteria and that register with the IRS. We strongly oppose this proposal. It would create a new, intrusive IRS bureaucracy with the mission of affecting marketplace competition by giving the Good Housekeeping seal of approval to selected organizations.

Nor can we support the second new safe harbor proposal in the Joint Tax Committee report, which would treat certain leasing organizations as the sole employer of their leased employees under certain defined conditions. This proposal is too narrow and contains many uncertainties.

In our industry, for example, service recipients have some role in controlling certain aspects of computer projects on which our employees work, and recipients may also help evaluate performance.

Instead of the above options, we urge that a simple 401(k) plan be considered as a new safe harbor. But even then, requiring employer contributions to such a plan is an unwise, one-size-fits-all approach that could seriously depress wages in industries like ours.

We pay premium wages to highly educated, highly skilled professionals. If Congress wants to require workers to contribute to their own plans, then please do so directly, as was done with Social Security. Do not make employees believe that employers can pay both premium wages and offer safe harbor plans to which employers make expensive pension contributions.

The more fundamental issue, however, that I mentioned above—that is, the definition of leased employee—is really the key to reform in this area. We would not need safe harbor plans if the definition of leased employee were appropriately modified for our industry. In this regard, not only current law, but also the proposed "control" definition creates major problems for our industry. As I mentioned, we provide professionals to supplement a customer's programming or engineering staff for special projects of limited duration that cannot easily be staffed with available in-house expertise. Over one-third of special computer projects take more than 1 year to complete. Many but not all of these are completed in 2 years.

Unfortunately, under current law and the proposed "control" test, the IRS might argue that our customers control professionals that we provide to them so that these workers would be leased employees after 1 year on a special project. We propose any of the following three redefinitions of leased employee that will not unreasonably interfere with bona fide arrangements in our industry that have nothing to do with firing and rehiring abuses.

First, exclude professionals sent by a temporary help service from the definition of leased employee. Texas, New York, Massachusetts, Minnesota, Florida, and many other States have an analogous exclusion for Workman's Comp. purposes, and it helps our industry greatly.

Second, increase the threshold to 2 years before a professional becomes a leased employee. Ironically, the Federal Government currently has a 2-year window for all of its temporary employees. Private industry should not be treated more harshly. This would also greatly help our industry.

Third, adopt a different version of the "control" test from the overly broad one that was in last year's H.R. 3419. We can work with you to refine this definition.

To conclude, please do not just rearrange the deck chairs on a sinking ship. Instead, marry a reasonable safe harbor with a fair definition of leased employee that will stop the layoffs in our industry and that will allow our Fortune 1,000 customers to complete their high-tech projects with greater productivity, which will enhance their ability to compete in the global economy.

Thank you, Mr. Chairman.

[The prepared statement follows:]

NATIONAL ASSOCIATION OF COMPUTER CONSULTANT BUSINESSES

WRITTEN TESTIMONY OF
NATIONAL ASSOCIATION OF COMPUTER CONSULTANT BUSINESSES
GEORGE ENOCHS, CHAIR, GOVERNMENT AFFAIRS COMMITTEE
Before the
COMMITTEE ON WAYS AND MEANS
U.S HOUSE OF REPRESENTATIVES

July 12, 1995

Mr. Chairman, the National Association of Computer Consultant Businesses ("NACCB") opposes the proposal to create a new safe harbor under which leased employees can be excluded from the pension plans of service recipient organizations. We testified previously at September 16, 1991 and June 17, 1993 hearings on Pension Simplification on the broader issue of "leased employees", and we are pleased to give you our alternative proposal today.

I. Description of NACCB and Summary of Testimony

NACCB has 230 member firms, with over 500 offices nationwide and combined annual revenues exceeding $2 billion, which are mostly small and mid-sized businesses. We are the only national association that represents — exclusively — companies providing highly skilled technical professionals in the computer and engineering fields to service recipient customers who need help for temporary technical project support. Project can typically last from several months to two or three years, and sometimes consist of separate phases. The professionals who work on these projects are either employees of our member technical services firms or, in appropriate cases, subcontractors, and they often earn $50,000 per year or more.

Let me start by briefly summarizing our concerns about the two principal proposals before you today to create alternative safe harbors under the leased employee laws and our suggestions for more fundamental reforms. While we agree with the proponents of the safe harbor proposals that current law fails to provide any realistic relief, the two safe harbor proposals would provide little relief to an industry which Congress never intended to regulate under this law — namely, temporary help firms that provide customers with technical professionals. More importantly, they would only further complicate the administration of the "leased employee" rules.

The first proposal would create a new safe harbor plan for "qualified leasing organizations" that meet extensive criteria and "register" with the IRS. Overall, we believe that Congress should not create a new IRS bureaucracy with the mission of giving the "Good Housekeeping Seal of Approval" to selective organizations. We cannot support more rules and more intrusive government interference into the competitive marketplace. The second proposal would treat certain leasing organizations as the "sole employer" of their leased employees is too narrow and contains too many uncertainties. In our industry, for example, service recipients have some role in controlling certain aspects of the computer project on which our employees work, and the recipients may also evaluate performance. Likewise, it is unclear what is meant by the requirements for "universal fringe benefits" and billing to clients "on a total-fee basis rather than on a direct cost pass-through basis".

Instead of these two proposals, we urge that a simple 401(k) plan be considered as a new safe harbor. But even then, requiring employer contributions to such a plan is an unwise, "one-size-fits-all" approach that could seriously depress wages in industries like ours. We pay premium wages to highly-educated, highly-skilled professionals. If Congress wants to require workers to contribute to their own plans, then please do so directly — as was done with Social Security; don't make employees believe that employers can pay <u>both</u> premium wages <u>and</u> make expensive pension contributions.

Lastly, we believe that the focus on the safe harbor under the leased employee law is misplaced. Rather, Congress should refine the definition of leased employee. The "control test" for defining a leased employee, which Congress has favored in the past, provides no relief for our industry. Instead, NACCB supports any of the following options: (1) excluding "professionals" sent by a "temporary help service" from the definition of leased employee, (2) increasing the threshold to 2 years before a professional becomes a leased employee, or (3) adopting a version of the "control" different from the overly broad one that was in last year's H.R. 3419.

II. The Proposal for New Safe Harbor Will Only Further Complicate the Administration of the "Leased Employee" Rules

Now that we have given you an overview of our position, let's talk about the specifics of each proposal. Our comments on the proposals for a new safe harbor will focus on two key issues. First, we will address the narrow issue of the safe harbor itself, both as a conceptual matter and as it would be implemented. Second, we will discuss the more fundamental problem with the current "leased employee" law. We believe that these two issues are inextricably intertwined.

The first proposal provides that if a "leasing organization" meets a large number of detailed criteria for a safe harbor, then the IRS would "register" the "leasing organization". Assuming that this proposal is similar to a proposal advanced in 1991 and 1993, among the criteria to be met are those involving employer contributions which equal limitations under Section 415(b) or (c) of the Internal Revenue Code; satisfaction of vesting requirements under Section 416(b)(1)(B) of the Code; and accounting for certain services that are not required to be taken into account by Section 411(a)(4)(D) of the Code. In addition, the "leasing organization" would also be treated as the "sole employer" of a worker if it had the sole right to hire, terminate and transfer the worker; if it directed, controlled and evaluated the manner and means of the worker's performance; if it provided universal fringe benefits; and if it billed the service recipient on a total fee basis rather than on a pass-through basis; etc.

We object to the fact that the concept of "registration" places the government in the position of essentially giving a "Good Housekeeping Seal of Approval" to certain companies. Make no mistake: these companies will then have every incentive to take their IRS registration certificates directly to service recipient clients and, in a blatant manner to harm competitors, they may warn those clients to do business only with "registered" firms in order to avoid potential pension plan problems. Most directly harmed would be those "leasing organizations" which can qualify for registration, but which choose not to expend the time or money to go through the registration process. The "leased employee" laws will have grown from a well-meaning effort to protect workers into a whole new federal licensing scheme which -- as experience shows in other areas -- imposes unreasonable start-up barriers against new entrants and excessive costs upon smaller businesses.

Mr. Chairman, not only do we object to the concept of "registration" — however well-intentioned it might be — but we also see major problems with administering such a system. The requirements for registration will not be self-enforcing. The IRS would have to evaluate each and every "leasing organization" that filed for registration. Because of the potentially anti-competitive effects on firms that choose not to register, perhaps hundreds if not thousands of firms would decide to register — even if registration was not universal. We already know the problems faced by the IRS in applying the even simpler pension plan requirements to non-"leasing organizations", and we can only imagine the added difficulty of applying the new and complex testing criteria of the proposed safe harbor to "leasing organizations". Of course, IRS evaluations would have to be done on an ongoing basis since organization's pension plans and operating procedures that affect registration can change from year-to-year; there would then have to be procedures for "de-registering" organizations that no longer met the criteria. Assuming the complexity of these tasks could be overcome, where is the IRS going to get the personnel to perform these functions? Is Congress ready to fund such new positions?

The second proposal would treat certain leasing organizations as the "sole employer" of their leased employees is too narrow and contains too many uncertainties. This proposal has flaws and contains terms that requires further clarification. For example, our experience indicates that service recipients inevitably have some role in controlling certain aspects of the computer project on which our employees work. Oftentimes our employees work independently at the service recipient's work site without the supervision of a project manager from the service provider. As a result, the recipients may have some role in evaluating the performance of a service provider. We would need assurances that the independent manner in which our professionals perform services would not jeopardize their status under the proposed safe harbor. Likewise, it is unclear what is meant by the requirements for "universal fringe benefits" and billing to clients "on a total-fee basis rather than on a direct cost pass-through basis". Contracts for projects in our industry, because of the complexity of the work involved, are often based on an hourly rate for each professional, rather than on a total project cost basis. It is not clear that this practice would qualify our industry for the safe harbor.

For the above reasons, NACCB opposes the concept and implementation of a registration system for "leasing organizations" and the alternate safe harbor. Moreover, as we explain below, we believe that the concept of registration takes reform of the "leased employee" laws in the opposite direction from the type of simplification that is really required.

III. Appropriate Reform of The Leased Employee Laws Should Focus on the Re-Definition of "Leased Employee" Because the Existing Laws Lead to Unreasonable and Arbitrary Results

Mr. Chairman, NACCB believes that an effort to create a new safe harbor under the "leased employee" laws ignores the more fundamental problems with those laws. We all know the genesis of the "leased employee" laws: employers which fired their employees and then "leased" them back through another company in order to avoid providing those employees with certain benefits. NACCB believes that the employees in this type of situation are certainly "leased employees" and they should be treated like employees of the service recipient for purposes of testing the service recipient's plans.

On the other hand, the "leased employee" laws go far beyond the situation which first generated Section 414(n). Unfortunately, these laws appear to be a mechanism by which Congress is attempting - in an indirect manner — to impose pension plan obligations upon certain types of employers which are really not "leasing organizations", such as NACCB member firms. If Congress wants employers to provide pension plans, it should apply this requirement to all employers — and it should tackle that issue head-on and should not use an indirect approach. The present "leased employee" laws, as we explain below, lead to unreasonable and arbitrary results.

Have you heard of the term "out-sourcing", Mr. Chairman? Did you know that in "out-sourcing" situations large employers have fired entire departments of lower-level employees, have arranged to have these former employees hired by a new employer, and then have subcontracted with the new employer to have the very same work done? Because the "out-sourced" work is performed under the direction of the subcontractor and in an adjacent room or building rented by the subcontractor, the subcontractor is not a "leasing organization" and the workers are not leased employees" The very types of workers that are supposed to be protected by the "leased employee" laws escape protection in this situation.

Let's also look at the situation involving administrative workers like secretaries, receptionists, data entry workers, and other clerical workers. Do you realize that these workers are often sent to one service recipient client for up to a one year period and then are systematically transferred to another client? In such situations, the transfers are easily effectuated and within days the workers adjust to the new client. Yet these workers — the very types of workers supposed to be protected by the "leased employee" laws — escape protection because they have not performed services for one service recipient organization for more than one year.

But who is "caught up" in the "leased employee" laws, Mr Chairman? In too many cases, those firms entangled in these laws are technical services firms like NACCB members which are not — and have not historically been considered to be — in the "employee leasing" business. Technical services firms do not exist because their service recipient clients want to avoid including workers in benefit plans; technical services firms exist because the rapidly changing technology in the computer and engineering industries typically means that service recipient clients cannot possibly obtain from only their own in-house employees the degree of technical expertise and specialization required. In such instances the service recipient clients seek the services of technical services firms to locate and provide the services of these "outside" workers for such special project work. Much like a law firm might provide a team of legal specialists to help a client with a major antitrust law problem — even though the client already has an in-house general counsel — so too technical services firms like NACCB members provide technical specialists to their clients.

Unfortunately, however, the present "leased employee" definition in the Internal Revenue Code is so broad that computer and engineering professionals paid by technical services firms, but who perform on-site services for clients, are often alleged to be "leased employees". The adverse consequences of this conclusion are real and serious: at the end of one year of service, these professionals are removed from projects by service recipient clients who do not want to take the risk that their own benefit plans might be jeopardized by using such workers and who do not want to undertake the administrative and paperwork burdens to prove otherwise. The service recipient clients thereby often find that their own projects are delayed and over-budget because they must locate new "outside" workers to pick up where the removed "outside" workers have left off.

Although these results seem bizarre, Mr. Chairman, they regularly occur because of how the Internal Revenue Code defines "leased employees". Ironically, relatively highly-paid, professional workers - those least in need of federal protection — are the victims of the "leased employee" laws.

NACCB believes that the only way to tackle to "over-inclusiveness" and "under-inclusiveness" of the "leased employee" laws is not through the creation of new safe harbor, but through the redefinition of who is a "leased employee".

IV. The "Control" Definition of "Leased Employee" in 1992 Legislation Must Be Further Refined If the Goals of Section 414(n) Are To Be Met in a Reasonable Manner

Mr. Chairman, last year the House considered a new definition of "leased employee" that would replace the currently over-broad test in Section 414(n) — which inquires whether work has been "historically performed" by employees — with a test of whether the services performed are "under the control" or "under any significant direction or control" of the service recipient client;

NACCB appreciates the effort made by the Congress to move away from the clearly unacceptable "historically performed" test. However, <u>we believe that using terminology of the "control" test will be virtually as broad and troublesome as the existing test</u>

A. General Problems With a "Control" Test

By way of background, under present law the IRS inquires whether the leased employees are performing services that have been "historically performed by employees". To determine if services have been "historically performed by employees", the IRS has asked whether "it was not unusual for services of [the] type [at issue] to be performed by employees ...." Of course, to determine whether "it was not unusual for "employees" to perform such services, it is necessary to determine who is an "employee" — and that requires application of the IRS 20-question common law employment test.

The common law employment test is, in reality, a form of "control" test. As the IRS Manual states, "Under the common law test, a worker is an employee if the person for whom he works has the right to direct and control him in the way he works both as to final results and as to the details of when, where and how the work is to be done.... The factors or elements that show control are described below in the following 20 items." IRM-Administration, Exhibit 5(10)00-4.

Unfortunately, it is precisely this same "control" test which has been long-criticized. The following words have been used by respected government officials and in comprehensive government studies to describe the "control" test: "complex", "open to broad and inconsistent interpretation", "extremely difficult to apply", "extremely subjective and often inconsistently applied by the IRS", "lack[ing] precision and predictability", "produc[ing] inappropriate results", and "not yield[ing] clear, consistent or satisfactory answers".

There are several reasons why the "control" test has been thus criticized, some of the major reasons being that:

* There are too many "control" factors to consider.

* Even on an individual basis, many of the factors are too imprecise, subjective and unpredictable.

* Attempts to balance several "control" factors to determine, on an overall basis, if there is "control" are too difficult because:

-- it is unclear how many factors must be present or absent to determine whether there is "control", and

-- it is unclear which factors must be present or absent to determine whether there is "control" since each factor may have a different degree of importance in any particular situation.

* In virtually every working relationship of any type, there is always some degree of "control" over a worker by a recipient of services. Hence, there is an inherent problem in drawing a line between how much "control" is too much "control".

* In view of the imprecise, subjective and inherently encompassing nature of the "control" test, the IRS has historically applied it in an overly broad manner which results in a conclusion of employment in the overwhelming number of situations. For example, according to the April 1991 issue of The Practical Accountant, in only 8% of the Private Letter Rulings issued by the IRS between January 1, 1987 and March 31, 1988, did the IRS conclude that a worker was not an employee; for the period July 1, 1989 through September 30, 1990, only 75 Private Letter Rulings were issued on the same issue, and in only one of these did the IRS conclude the worker was not an employee.

Governmental leaders have repeatedly made these same points in the well-recognized Report of the Comptroller General, GGD-77-88, entitled "Tax Treatment of Employees and Self-Employed Persons by the Internal Revenue Service: Problems and Solutions", (November 1977); in Hearings on H.R. 3245 before Subcommittee on Select Revenue Measures of House Ways & Means Committee, 96th Cong., 1st Sess., at pp. 5, 9; in a November 1990 House Government Operations Committee Report; in a March 1991 study released by the Treasury Department, entitled "Taxation of Technical Services Personnel: Section 1706 of the Tax Reform Act of 1986"; and in virtually unanimous testimony from over 20 witnesses in a hearing entitled "Misclassification of Employees and Independent Contractors for Federal Income Tax Purposes", before the Subcommittee of Select Revenue Measures of the House Ways & Means Committee, July 23, 1992.

B. Problems with a "Control" Test for "Leased Employees"

Unfortunately, we do not see a great deal of difference between the "control" tests adopted in last year's 'leased employee' legislation and the 20-question common law employment test which has been so soundly criticized What difference may exist is simply a matter of degree, rather than of kind, and the degree is quite small, as we now explain. We have already identified the problems with the "control" test in the employment tax area. Addressing these problems one-by-one, it becomes clear that the "control" test for "leased employees" does little to solve them.

As to the number of factors that must be considered to determine if there is "control" by the service recipient, legislative history in past years has been used to narrow the particular factors that were relevant. However, despite such efforts, it could well be that there are 10 relevant factors, or 15, or even 20 or more — a possibility that confronts the taxpayer with too many factors to consider, which is a major problem with the employment tax "control" test. Our concern about the need to consider too many factors is not eliminated by past efforts to identify certain common law employment "control" factors that are not relevant to the "control" test under proposed amendments to the "leased employees" definition. In fact, the deletion of these factors — which would otherwise tend to show that the service recipient does not exercise "control" — only further confuses the issue of how to decide what other factors are relevant or irrelevant.

As to the fact that many of the "control" factors are too imprecise, subjective and unpredictable, again we see very little difference between the "control" test for leased employees" and the common law employment "control" test. For example, in IRS employment tax audits, major controversies have arisen over whether it constitutes "instructions about when, where and how to perform services" if a firm instructs a worker that he or she can begin a project by one date and must finish it by a second date. Taxpayers take the reasonable position that such instructions hardly amount to "control" over work hours, whereas the IRS often takes the opposite view. Likewise, taxpayers and the IRS typically disagree over what degree of involvement by a service recipient amounts to "supervision" over a worker. Disputes even arise over whether a service recipient is "controlling" the order or sequence in which a project must be completed where the services being performed are during only one stage of a multi-stage project — such as building construction — and it is obvious that certain stages must be completed before others can begin. Yet, even though substantial disputes exists over these factors — because they are too imprecise, subjective and unpredictable — these same factors have been identified as relevant to a determination of "control" under the "leased employee" test.

As to the issue of the difficulty in balancing several factors to determine, on an overall basis, if there is "control", again we see little difference between the tests under the "leased employee" legislation and the common law employment "control" test. It is seldom that all of the relevant factors which point towards "control" will be present. Major problems will exist regarding the weight to be given to each factor, as well as how to balance the existence of some relevant factors against the non-existence of other relevant factors. This has clearly been the experience in the common law employment "control" test, and there is no reason why it would be much different under either of these bills.

As to the concern that there is always inherently some "control" by a service recipient over a worker, this problem is not solved in the least by last year's "leased employee" legislation. By implicitly focusing on the existence of actual "control" and identifying certain relevant factors — such as "supervision" by the service recipient — these bills have failed to recognize a point made by one of America's great jurists, Judge Learned Hand, several decades ago. In discussing an IRS claim that a taxpayer's "control" over certain workers meant that the workers were the taxpayer's employees, Judge Hand stated:

> In the case at bar the plaintiff did intervene to some degree; but so does a general building contractor intervene in the work of his subcontractors. He decides how much the different parts of the work must be timed, and how they shall be fitted together; if he finds it desirable to cut out this or that from the specification, he does so. Some such supervision in inherent in any joint undertaking, and does not make the contributing contractors employees.

Radio City Music Hall Corp. v U.S., 135 F.2d 715, 718 (2d Cir. 1943) (emphasis added).

Precisely because of the above concerns, as is the case with the common law employment "control" test, the problem remains that the IRS can engage in an overly broad interpretation of the definitions in last year's legislation. Indeed, there is no sound basis for any confidence that the IRS will draw reasonably clear lines which would exclude from the new definition of "leased employees" more than a tiny fraction of workers who are likely to be designated as "leased employees" under the currently "historically performed by employees" test in Section 414(n). In short, if Congress truly believes that the present test is too broad and over-inclusive, so few workers will be affected by last year's "leased employee" definitions that legislation cannot be called "reform" legislation.

Finally, there is a new problem here which does not exist with the common law employment "control" test. As we will explain, rather than represent pension "simplification", we believe that it is likely that last year's legislation would only introduce "complication" to the "leased employee" issue. What we mean is that by virtue of its overbreadth, the "historically performed by employees" test in the current law is actually relatively simple to apply once it is understood that the IRS will almost always conclude that a worker is a "leased employee". In contrast, by introducing a new degree of "control" that is different from the existing degree of "control" which classifies a worker as a common law employee, the "leased employee" legislation from last year only further complicate matters. More specifically, if either of these bills is adopted, there will really be three degrees of "control" that are relevant to the analysis of every worker's status:

* If there is some "higher" degree of "control" by a service recipient, then a worker will be considered to be the common law employee of the service recipient.

* If there is some "mid-level" degree of "control" by a service recipient — but less than the degree of "control" which would classify the service recipient as a common law employer — then the worker will be considered to be the "leased employee" of the service recipient.

* If there is no "control" or only a "minimal" degree of "control" in the service recipient, then the worker is neither a "leased employee" nor a common law employee of the service recipient.

In addition, in all three situations there will still remain the separate question of whether or not there is enough "control" by the firm which provides the worker to the service recipient so that such firm is the common law employer of the worker. However, in answering this separate question of "control" in the employment tax context, taxpayers will have to consider some, but not all, of the very same factors that are relevant to the determination of "control" in the leased employee" context.

In conclusion, we believe that the "control" definition of "leased employee" in last year's definition will not solve — and may further exacerbate — the problems with the existing "historically performed by employees" language in Section 414(n). As with the common law employment tax "control" test, taxpayers will have too many relevant factors to consider; they will be uncertain about how to interpret several vague factors; they will not be clear about how to weigh each factor and how to balance the different factors together; they will have to consider factors which inherently include elements of "control" in most any situation; they will be left with a test which is likely to lead the IRS to engage in an overly broad interpretation of who is a "leased employee"; and they will be faced with the confusing task of distinguishing between two different concepts of "control" which have a substantial overlap of relevant factors. This is not simplification.

C. Possible Reforms of the "Control" Test

NACCB believes that if Congress wants to use some form of a "control" test, it would be most appropriate to use the "control" test in a bill from the 102nd Congress, H.R. 2641, which differs in a significant respect from the "control" tests that passed the House last year as part of H.R. 3419. Rather than focusing on the broad concept of "control" with its numerous component factors, the H.R. 2641 "control" test classifies a worker as a "leased employee" if "the [service] recipient exercises primary control over the manner in which such services are performed". H.R. 2641 was sponsored by Representatives Archer, Johnson, Matsui, and Chandler. We believe that this "manner of control" test — along with an exclusion for "professionals," as discussed below — is far more preferable to the much broader "control" tests in the other bills for a number of reasons.

First, the H.R. 2641 "Archer-Johnson-Matsui-Chandler" test focuses on only one aspect of "control", i.e., control over "the manner in which such services are performed." Although the "manner" of performing services might be described by a further reference to some other factors, it is clear that such other factors would be fewer in number and more narrow in scope than the factors that otherwise determine the existence of "control" as defined other legislation. For example, we do not believe that the "manner in which services are performed" would include consideration of directions as to the result that must be obtained by the performance of the services, or even of general instructions by the service recipient as to when and where the services should be performed; nor would a requirement that the services be performed by a particular worker amount to "control over the manner in which the services are performed". In contrast, where a service recipient provides detailed directions and instructions on the steps and methods to be used to achieve a stated result, this might constitute "control over the manner in which the services are performed."

Second, because fewer and more narrow factors would be considered in determining "control over the manner in which the services are performed", there would be less vagueness in this test. A line between the existence or non-existence of this type of "control" could be more easily drawn by taxpayers who would be better able to weigh the existence and non-existence of each individual relevant factor, and then arrive at an overall determination of whether such "control" exists.

Third, we believe that the H.R. 2641 "Archer-Johnson-Matsui-Chandler" test comes closest to covering the type of workers about whom Congress was most concerned when it initially adopted Section 414(n) typical support staff employees — like clerical workers, receptionists, and licensed practical nurses in doctors' offices — who perform routine support services in a "manner" that is directed and controlled by service recipients Other types of workers whose manner of performing services is not controlled by a service recipient — including high-level computer systems analysts and programmers who exercise a substantial amount of discretion and independent judgment in how to perform their services — were never intended to be covered by Section 414(n) and would not be covered under the test in H.R. 2641.

Although we believe that H.R. 2641 offers the most predictable and reasoned definition of "leased employee", we also believe that some further refinements should be made in the statutory language in this bill so that the potential problems associated with any form of "control" test can be minimized.

In particular, we urge that the phrase "the recipient exercises primary control over the manner in which such services are performed" should be changed to read "the recipient primarily provides detailed directions and instructions as to the manner in which the services are to be performed." This change would accomplish two major benefits:

* It would remove the word "control" and instead focus on "directions and instructions" — and thus hopefully remove most of the critical "baggage" from the employment tax area that is associated with the word "control".

* It would focus only on "detailed" directions and instructions as to the manner in which the services are to be performed — and thus preempt any argument that "general" instructions and directions might suggest that the worker is a "leased employee". We appreciate that there may be some dispute over what is "general" versus "detailed", but at least the statutory language will serve to narrow the degree of the dispute.

We also urge that if H.R. 2641 is used, it should be amended to specifically exclude "professionals" from the definition of "leased employee". This exclusion would accomplish two major goals:

* It would establish for some types of work a "bright line" between covered and non-covered workers. In particular, it seems that the emphasis in last session's version of H.R. 2641 is to cover only those workers for whom the service recipient controls the "manner" in which the work is performed. This type of worker is on the opposite end of the spectrum from a worker who typically exercises significant discretion and independent judgment in performing his or her work. The latter type of worker is epitomized by the "professional". Rather than requiring a painstaking application of the "manner" test to every type of occupation, it is appropriate to create an explicit exclusion for "professional" workers.

* The inclusion of an exemption for "professionals", or a two-year threshold for such "professionals", would provide relief for individuals which Congress did not intend to include as "leased employees' Congress could specify which types of workers would be considered "professionals" for purposes of this law The IRS could be given authority to add other classes of "professionals". There is clear precedent for this type of exemption in other laws For example, the Fair Labor Standards Act includes a "professional" exemption from the overtime laws, and the Department of Labor has defined the term "professional. "[1]

With the above changes, a new H.R. 2641 would read as follows:

"(C) the recipient primarily provides detailed directions and instructions as to the manner in which the services are to be performed, provided however that professional workers (as defined by the Secretary) shall not be included within this definition."

If Congress insists on retaining a "control test" as proposed by H.R. 3419, NACCB would support three options as an exclusion from the "control" test: (a) exclude "professionals" sent by a "temporary help service" from the definition of leased employee (this is based upon, and more narrow than, similar exclusions in many state statutes which regulate leasing organizations for workers' compensation purposes); or (b) increase the threshold to 2 years before a worker (or at least a "professional" from a "temporary help service") becomes a leased employee (because professionals may need to spend more time on complicated projects and are more difficult to replace in midstream).

D. Examples of the Presence and Absence of "Detailed Directions and Instructions As to Manner" in Which Services Are Performed

Even with a shorter, more predictable definition of "leased employee", Congress must provide clear illustrations of who is not a "leased employee" and who is. This will assist the IRS — and ultimately the courts — in assuring implementation of Congressional intent as to the breadth of any new definition.

We appreciate that last year's legislative history has done this in a limited respect. Certainly secretaries and similar support staff would be considered "leased employees" because, typically, service recipients which utilize temporary secretarial help often require a secretary to greet visitors in a certain manner, to take telephone messages in a certain way, to type documents in a certain format, and to file documents in a certain order. These are "detailed directions and instructions as to the manner in which the services are to be performed."

On the other hand, where a service recipient uses "outside" computer programmers, systems analysts, and other similarly skilled workers to provide their services on a particular computer project or to meet requirements that are not being met by a service recipient's own "in-house" employees, these "outside" professionals should generally not be considered "leased employees" regardless of whether they are employees of an "outside" technical services firm or are independent contractors who have contracted through an intermediary "broker". In these typical situations the service recipient would not primarily provide detailed directions and instructions as to the manner in which the services are to be performed. Rather, the manner in which the work is done is usually established by the worker using his or her own discretion and judgment — albeit under a timetable and in stages set by the service recipient according to well-accepted quality assurance procedures and techniques in the industry. Also the workers would be considered exempt "professionals".

IV. Conclusion

NACCB believes that a safe harbor of the type proposed for "leasing organizations" which "register" with the IRS is an inappropriate solution to the current problems with Section 414(n). Instead, Congress should re-define the term "leased employee" so that Section 414(n) applies only to the truly abusive situations which require governmental intervention.

---

[1] Where the Department of Labor has interpreted that term too narrowly, Congress has intervened. See, e.g., P.L. 101-583, where Congress directed the Department to include computer systems analysts, computer programmers, software engineers and similarly skilled workers as "professionals . "

Chairman ARCHER. Thank you, sir.

Next, we will go to Bob Bannister, senior staff vice president, National Association of Home Builders.

Welcome, Mr. Bannister.

STATEMENT OF ROBERT BANNISTER, SENIOR STAFF VICE PRESIDENT, GOVERNMENT AFFAIRS DIVISION, NATIONAL ASSOCIATION OF HOME BUILDERS

Mr. BANNISTER. Thank you, Mr. Chairman.

I am Bob Bannister, for the NAHB, National Association of Home Builders. I appreciate the opportunity to appear before the Ways and Means Committee today on several issues that are important not only to the housing industry but housing consumers.

At the outset, Mr. Chairman, I want to thank the Members of this Committee who worked to make it possible to provide tax relief to the American people under H.R. 1215. I think it is particularly important at this time that we move forward on that tax relief, considering the precarious position of the economy.

As many are aware, housing is very significant to the economy; it has led us into and out of every recession since World War II. We are particularly concerned at this time because 4 out of the 5 past months, housing production and housing starts have dropped. The May figure for housing inventory is the highest in almost 5 years, at 347,000 units. We believe it is essential that Congress move forward with much needed tax relief.

Mr. Chairman, in my oral statement I want to highlight two issues; in the written statement, we have several other recommendations on matters before the Committee.

The first issue is the treatment of contribution in aid of construction. Prior to the 1986 Tax Reform Act, which repealed section 118(b) of the Internal Revenue Code, when an individual builder or developer contributed infrastructure to a utility, that was considered a contribution to capital. That was not taxed. After the 1986 act repealed section 118(b), it was considered income to the utility and therefore taxable.

Most public utilities cannot pass this increased tax on to their utility-based consumers; therefore, it is passed on to the builder or the developer. As a result, the builder or developer, for the privilege of donating the infrastructure to the utility, has to pay an additional fee, which is the tax that the utility bears. What makes matters worse is there is a gross up calculation increasing that to make the utility whole. Obviously, that is passed on to the housing consumer, and it is something that is of major concern. It varies in different areas of the country as to how much impact that is and to the given utilities, but it can range as high as $5,000 per home. If that fee is added to the other impact fees, it is easy to see the housing affordability problem that that type of fee can cause to the housing consumer.

I want to applaud the leadership and Members of this Committee who have worked on this issue—Nancy Johnson, who introduced legislation earlier this year, to correct this situation, and we support H.R. 957, which addresses this issue. However, we would request that the repeal apply not only to water companies, but also to all utilities as well.

The other issue that I want to refer to is the issue dealing with capital gains. We certainly applaud the efforts of the Committee and its actions earlier this year, but in addition we applaud a provision that is being considered at this hearing. That is, we want to voice our support for the proposal that would allow individual taxpayers who have held assets for 5 years to elect to pay either the present law tax, which we assume will be changed in the near future, hopefully, or a tax equal at 10 percent of the sales proceeds. We believe that more favorable capital gains treatment would not only encourage purchase of existing properties, but would also encourage investment in new construction, rehabilitation, and remodeling in the housing industry.

NAHB believes that taxation of assets at a lower rate than ordinary income certainly encourages investments and savings and is a job generator.

We believe a capital gains tax cut would benefit a wide range of taxpayers, and we note that one-half of the tax returns in 1991 claiming capital gains were for incomes of $60,000 or below, so it affects all income filers. And equally important, it is a job creator and helps economic activity.

In real estate, lower capital gains would increase investor and owner incentives to purchase rental housing property. In part, that would help to lower rents across the rental base. We think that this is particularly important when there is consideration being given to cutting certain HUD and housing programs, then this should be looked at very closely.

In concluding, I want to refer the Committee to the written statement and in particular ask that consideration be given to the low-income housing tax credit. There are some recommendations that we put forward in there, and as the proposals move forward in the appropriations process on cutting back on certain multifamily housing programs, it is important that this Committee realize that the low-income housing tax credit is one of the driving housing policies left in this country to provide low-income housing.

Thank you, Mr. Chairman.

[The prepared statement follows:]

**TESTIMONY OF THE
NATIONAL ASSOCIATION OF HOME BUILDERS
BEFORE THE
HOUSE COMMITTEE ON WAYS AND MEANS
July 12, 1995**

Mr. Chairman, members of the committee, my name is Robert Bannister, I am the Senior Staff Vice-President of the Government Affairs Division of the National Association of Home Builders. On behalf of the National Association of Home Builders (NAHB) and its 186,000 members, I congratulate and thank you for holding this hearing. I am particularly appreciative of having the opportunity to appear here today as these hearings address a number of issues which are very important to our industry and which, without your insightful leadership Mr. Chairman, might not have seen the legislative light-of-day.

CONTRIBUTIONS IN AID OF CONSTRUCTION

As you are aware, the 1986 Tax Reform Act repealed Internal Revenue Code section 118(b) which allowed corporate regulated utilities to treat contributions in aid of construction as nontaxable contributions to capital. Congress believed, quite simply, that such contributions represented prepayments for services. As a result, CIAC is taxable to the utility company in the year of receipt. In order to make the utility whole, that is, in a position equal to its position prior to the tax law change, CIAC must be "grossed up" to compensate for taxes paid. The term "grossed up" is applied to the series of mathematical calculations required to determine the amount of money needed to offset the tax liability.

It is important to note that most public utility companies prohibit the inclusion of the cost of the added liability in the rate base. If this were allowed, the cost would be spread to all consumers. In reality, however, the utility companies simply consider their increased tax liability as an increase in the cost of adding new customers. As a result, most utilities charge the builder/developer a fee for transferring capital contributions in aid of construction that is equivalent to the tax. Builders often must pass these costs on to the buyer. Worse, the cost to the buyer is generally greater than the tax because the builder must borrow these funds during the development stages but does not recoup them until sale. Hence, home costs are increased by a multiple of the "gross up" to compensate for time and risk to the lender.

While the impact of CIAC varies across the country depending upon whether the particular area is served by a regulated public utility (tax paying) or a tax-exempt municipal or county utility, the costs can be as much as $5,000.00 per home depending on the area of the country affected.

The tax on CIAC fall more heavily on moderate income families. Most capital expansion for utility service is related to the number of units rather than the price of units. Hence a $2,000 extra cost of home in the affordable price range is a much higher percentage of cost than the same dollar increase to a luxury home.

CAPITAL GAINS

Prior to the Tax Reform Act of 1986, taxpayers who recognized gain from the sale of a capital asset-including depreciable real estate-received favorable tax treatment in the form of an exclusion from taxation on a portion of that gain. The theory was that this tax incentive generated investment. The Tax Reform Act of 1986 eliminated the tax preference for capital gains and treated all gains as ordinary income.

As a result of several modifications of the law since then, gains on the sale of capital assets held for more than a year are taxed at a maximum rate of 28%, and ordinary income may be taxed at higher rates, depending upon income. However, taxpayers with marginal tax rates of 28% or lower receive no tax differential for holding real estate, and taxpayers

with marginal tax rates over 28% receive only partial differential treatment.

NAHB supports the proposal to allow individual taxpayers who have held an asset for at least five years to elect pay to pay either present-law taxes on capital gains or, tax equal to 10 percent of the sales proceeds. More favorable capital gains treatment would not only encourage purchases of existing properties, but would also encourage investment in new construction, rehabilitation and remodeling. It would also reduce required rents on new construction.

NAHB believes that taxation of assets at a lower rate than ordinary income encourages investment and savings. However, taxation of realized gains on long-held assets at ordinary income rates (i.e. on sale or transfer) reduces the economic incentives to invest in the most efficient, highest return opportunities. Removal of the retardant effect of current law taxation would allow taxpayers to place their capital in the most promising sectors of the economy. More efficient capital flows would create jobs and stimulate the economy.

A capital gains tax cut would not benefit only higher income taxpayers. One-half of the 1991 tax returns claiming a capital gain or loss reported incomes below $60,000. Furthermore, encouraging investment through reduced taxes on the gains from that investment would create jobs and economic activity at all levels of income.

With respect to real estate, a capital gains preference would increase investors and owners incentives to purchase, rehabilitate and operate rental housing. Part of the total return to investors who own rental housing is property appreciation. The greater the owners after-tax income from the appreciation portion of their return, the less income required from rents to achieve the same earnings. Reducing capital gains tax rates will reduce residential rents. Since much of the appreciation in housing is due to price inflation, adjusting the gains for inflation will reduce rents even more.

We must insist however, that any capital gains incentive include real estate. Just as real estate served as the engine to lead the economic recovery, so it must be included in any capital gains reduction in order to maximize the dynamic economic impact of the proposal. Indeed, inclusion of real estate effectively rebuts any argument that a capital gains tax cut would favor only wealthy taxpayers. Mr. Chairman. I know this has been a long standing position of yours.
We also support the proposals to enhance the one time exclusion on the sale of a principal residence by an individual who has attained age 55.

LOW INCOME HOUSING

NAHB fully supports the proposals to change the Low Income Housing Tax Credit (LIHTC) State authority limitation stacking rule and to allow HOME funds to be used with the 91% credit. Currently, over 95 percent of the production of affordable rental housing for low- and moderate-income households involves the use of the low income housing tax credit program. The tax credit supplies a critical incentive for affordable rental apartments and supported the acquisition, rehabilitation, or construction of over 650,000 rental housing units between 1987 and 1993. In 1993 alone, the LIHTC was responsible for the construction of 67,279 new rental units and 38,729 rehabilitated units. The construction and rehabilitation of these units created nearly 90,000 jobs. The direct job impact generated $2.8 billion in wages and salaries. The wages and salaries, and company profits generated $1.4 billion in taxes to the federal, state and local governments.

This critical affordable housing program is in dire need of further improvement. Under current law, State tax credit agencies stack unused tax credit authority for the preceding year after the current year's per capita credit authority. In many states, this system operates to limit the period of usage of tax credit authority to one year. NAHB

with marginal tax rates over 28% receive only partial differential treatment.

NAHB supports the proposal to allow individual taxpayers who have held an asset for at least five years to elect pay to pay either present-law taxes on capital gains or, tax equal to 10 percent of the sales proceeds. More favorable capital gains treatment would not only encourage purchases of existing properties, but would also encourage investment in new construction, rehabilitation and remodeling. It would also reduce required rents on new construction.

NAHB believes that taxation of assets at a lower rate than ordinary income encourages investment and savings. However, taxation of realized gains on long-held assets at ordinary income rates (i.e. on sale or transfer) reduces the economic incentives to invest in the most efficient, highest return opportunities. Removal of the retardant effect of current law taxation would allow taxpayers to place their capital in the most promising sectors of the economy. More efficient capital flows would create jobs and stimulate the economy.

A capital gains tax cut would not benefit only higher income taxpayers. One-half of the 1991 tax returns claiming a capital gain or loss reported incomes below $60,000. Furthermore, encouraging investment through reduced taxes on the gains from that investment would create jobs and economic activity at all levels of income.

With respect to real estate, a capital gains preference would increase investors and owners incentives to purchase, rehabilitate and operate rental housing. Part of the total return to investors who own rental housing is property appreciation. The greater the owners after-tax income from the appreciation portion of their return, the less income required from rents to achieve the same earnings. Reducing capital gains tax rates will reduce residential rents. Since much of the appreciation in housing is due to price inflation, adjusting the gains for inflation will reduce rents even more.

We must insist however, that any capital gains incentive include real estate. Just as real estate served as the engine to lead the economic recovery, so it must be included in any capital gains reduction in order to maximize the dynamic economic impact of the proposal. Indeed, inclusion of real estate effectively rebuts any argument that a capital gains tax cut would favor only wealthy taxpayers. Mr. Chairman, I know this has been a long standing position of yours.
We also support the proposals to enhance the one time exclusion on the sale of a principal residence by an individual who has attained age 55.

LOW INCOME HOUSING

NAHB fully supports the proposals to change the Low Income Housing Tax Credit (LIHTC) State authority limitation stacking rule and to allow HOME funds to be used with the 91% credit. Currently, over 95 percent of the production of affordable rental housing for low- and moderate-income households involves the use of the low income housing tax credit program. The tax credit supplies a critical incentive for affordable rental apartments and supported the acquisition, rehabilitation, or construction of over 650,000 rental housing units between 1987 and 1993. In 1993 alone, the LIHTC was responsible for the construction of 67,279 new rental units and 38,729 rehabilitated units. The construction and rehabilitation of these units created nearly 90,000 jobs. The direct job impact generated $2.8 billion in wages and salaries. The wages and salaries, and company profits generated $1.4 billion in taxes to the federal, state and local governments.

This critical affordable housing program is in dire need of further improvement. Under current law, State tax credit agencies stack unused tax credit authority for the preceding year after the current year's per capita credit authority. In many states, this system operates to limit the period of usage of tax credit authority to one year. NAHB

strongly urges that state credit authority limitation stacking rule be changed to stack credit authority carried forward from the previous year before the current year's per capita credit authority.

NAHB also supports the proposal to extend eligibility for the 91% and 39% credits, available in qualified census tracts and difficult development areas, to otherwise qualified buildings with HOME Funds. Effective large-scale national programs or techniques for debt financing for multi-family projects assisted by the tax credit do not exist. Few projects financed by tax-exempt bonds are viable at the lower credit percentage. Accordingly, we further urge that the proposal be modified to provide that projects financed with tax-exempt bonds or below market federal loans be made eligible for the 70 percent value credit.

Although we do not have policy with respect to H.R. 931, NAHB supports the concept of providing 15-year depreciation, exception to the passive loss rules and modification of the alternative minimum tax provisions to encourage the preservation of low-income housing.

SUBCHAPTER S REFORM

The S Corporation Reform Act (S. 758) would, in part, provide clear and objective rules with respect to preservation of S corporation status and simplification of requirements for qualifying for, and maintaining, subchapter S status. The bill would also raise the maximum number of eligible shareholders from 35 to 50, and preserve family businesses.

The industry, building single family housing, is comprised mostly of small businessmen and women. Over 50 percent of NAHB members build less than 10 houses per year. Approximately 15 percent build more than 25 houses per year and less than 2 percent of the builders build over 500 houses per year. A builders' organizational structure tends to depend on the size of the business. Two out of three builder firms are organized as corporations. Twenty-five percent of small-volume builders (builders who build less than 25 homes per year) are sole proprietorships, whereas only 8 percent of the medium- (25-99 houses per year) and large- (over 100 houses per year) volume builders choose to operate under that structure. The average remodeling firm has one office employee on payroll and operates in one or two counties. Approximately half of the remodeling firms are corporations, while 44 percent are sole proprietorships. During the last ten years, more builders and remodelers have been organizing as Subchapter S corporations, so that they can combine limited liability with taxation on only individual earnings.

Under the present law, although the IRS may waive the effect of an inadvertent S corporation termination, it does not have the authority to waive the effect of an inadvertent invalid Subchapter S election. We support the S. 758 proposal to remove tax traps for the unwary, by allowing the IRS to also waive the effect of an inadvertent, invalid, or untimely S corporation election. We also agree with the suggestion that the proposal include a provision to change the S corporation definition of "passive income" to exclude income earned from the active conduct of a rental real estate trade or business. The current law definition precludes many rental real estate operating companies from electing S corporation status.

Finally, under present law, to qualify as an S corporation, the corporation may not have more than 35 shareholders. NAHB supports the proposal to expand the maximum number of shareholders to 50 and to allow all family members to be treated as one shareholder. This important change would do much towards making federal tax law more favorable to preserving family-owned businesses.

H.R. 1213, introduced by Representative Stark, would allow S corporations that subdivide unimproved land held for at least 5 years to enjoy capital gains treatment provided

the land had not previously been held as inventory property. Although NAHB has not adopted formal policy on this proposal, we believe it is an important component of S Corporation reform and therefore support H.R. 1213.

ESTABLISH A 10-YEAR RECOVERY PERIOD FOR CERTAIN LEASEHOLD IMPROVEMENTS

Under the present law, if a leasehold constitutes an addition or improvement to commercial property already placed in service, the improvement must be depreciated using the straight-line method over a 39-year recovery period. NAHB supports the proposal (H.R.1171) to provide a recovery period and class life of 10 years for certain real property leasehold improvements and suggests that the proposal be modified to include residential real estate and improvements benefitting common areas.

Environmental restrictions and technological advancements make certain elements of a building obsolete or otherwise unusable prior to the expiration of the applicable recovery period for residential or commercial real estate (such as Heating Ventilation and Air Conditioning systems. Replacement or remedy of said elements of a building often creates a phantom asset with a recovery period far in excess of its real useful life.

MODIFICATION OF RULES FOR REAL ESTATE INVESTMENT TRUSTS

Under current law, a 100 percent tax is imposed on the net income of a REIT from dealer property. The proposal would modify the safe harbor from the 100% tax to cover any number of sales per year, provided that the gross income from the sales does not exceed 10 percent of the adjusted basis (determined before any reduction for depreciation) of all the REIT's assets at the beginning of the REIT's taxable year. NAHB supports this proposal as a step in the right direction.

REITs represent an important vehicle for real estate investment by providing liquidity and opening up real estate investments to a broader range of investors. Accordingly, NAHB suggests that the 100% tax on income from dealer property as it applies to equity investments in housing production, and the limit on REIT income that may be derived from the sale of real property held for less than four years, be eliminated.

INSTALLMENT METHOD OF REPORTING OF INCOME FROM SALE OF SINGLE-FAMILY RESIDENTIAL LOTS

Under the tax law prior to 1986, a taxpayer who sold property on the installment basis was taxed as payments were received. Treating the income otherwise requires a tax on the entire gain in the year of sale when only a small portion of total sale proceeds may have been received in the year of sale.

The 1986 Tax Act prohibited the use of the installment method for dealer sales of developed lots. As a result, landowners are less likely to sell to builders on an installment basis or seek higher prices to compensate for the extra tax burden. Higher land costs and fewer willing land owner partners in new home building increases the cost of new homes and creates affordability problems for potential home buyers.

The instant proposal would allow real estate dealers to use the installment method of accounting treatment to recognize income from sales of newly constructed single-family homes if, inter alia: the sale price does not exceed 75 percent of the area median newly constructed home price, any second mortgage held by the builder does not exceed 20 percent of the purchase price, and the purchaser is financially qualified to finance 100 percent of the mortgages arising from the purchase.

It is difficult to determine the impact of this proposal. First, with respect to the downpayment provision, the majority of mortgage transactions are handled on the secondary market by FHA, Fannie Mae, Freddie Mac and private mortgage insurance companies. These organizations will not permit a seller to provide a second mortgage to finance a buyer's downpayment. We would suggest that the current restrictions be removed for such purchases.

We agree that some form of downpayment assistance is sorely needed. First time home buyers do not have sufficient cash for the down payment and closing costs nor do they have sufficient income to support the large mortgages necessary to purchase todays homes. Three in five potential first time home buyers do not have the income to support a representative home if the mortgage interest rate were 8 percent. About another 10 percent are disqualified if interest rates were 10 percent.

The Census Bureau report entitled *Who Can Afford to Buy a House?* supports these conclusions. According to that report, by including more mortgage qualification requirements (mortgage debt to income ratio and all debt to income ratio), about 90 percent of young renter families cannot afford to purchase even a modestly priced home. About seven out of every ten renter families who cannot afford to purchase have more than one affordability problem. The majority of renters who cannot afford to purchase have insufficient income to make the mortgage payment and insufficient cash, either to pay down other long term debt to within the mortgage underwriting guidelines for total debt burden or insufficient cash to make the down payment and closing costs.

The dual-edged problem many families face in trying to buy their first home is that the smaller the down payment, the larger the monthly payments. Hence, even if they are able to save enough for the minimum down payment, the mortgage necessary to finance the rest of the purchase requires monthly payments beyond their means. To worsen this situation, these young households are just starting job careers so that their current incomes are relatively low, especially compared to their potential over a lifetime. Further hindering their ability to borrow for a home, they have already incurred debt for their education, an automobile, furniture, etc. These responsibilities come at exactly the wrong time for a young household to incur additional debt and use their limited savings for a down payment.

NAHB supports the concept of this proposal and believes that it would provide and important step in alleviating the housing affordability problem.

PENSION SIMPLIFICATION

Under the H.R. 3419 proposal, nongovernmental tax-exempt organizations would be permitted to maintain qualified cash or deferred arrangements for their employees. NAHB fully supports the H.R. 3419 proposal. It would allow state and local home builder associations to establish 401(k) plans and would allow state home builder association employees to receive equal treatment under the federal tax laws.

CONCLUSION

For the reasons stated above, the National Association of Home Builders believes that the miscellaneous tax proposals would be of great benefit to the home construction and remodeling industry. As noted above, certain of these provisions (e.g. the CIAC proposal and the LIHTC stacking rule change) would provide urgently needed relief from certain unintended consequences of the Internal Revenue Code. Also, as we have stated, we suggest that certain proposals be modified to have a more meaningful and immediate impact.

Once again Mr. Chairman, NAHB thanks you for this opportunity to present our recommendations. We look forward to working more closely with you and your staff in the coming years.

Mr. COLLINS. Thank you, Mr. Bannister. All of your full statements will be entered into the record.

It is pleasing to hear—and of course, it usually comes from outside the beltway—but it is pleasing to hear that we have people out there who support the fact that we put forth a very good tax bill earlier in this Congress. We are going to push it all the way through before the end of this year. These proposals will stimulate the economy, will add to family budgets, will assist in the transfer and title of property and equipment, and will be very beneficial not only to the public but to the government.

I yield now to the Chairman of this Committee, Chairman Archer.

Chairman ARCHER. Gentlemen, thank you for your input.

I would like to ask Mr. Threadgill a question relative to his proposal on improvements that are done by an owner of a property rather than a lessor of the property.

In the Contract With America, we inserted a provision that if you were the lessor, any time that you removed a partition or some improvement to the property, you could write it off and not have to continue to depreciate it over the 39-year life of the property.

I am wondering whether that same sort of provision, if applied to owner's improvements, would not take care of your problem.

Mr. THREADGILL. Mr. Chairman, I think that IDEA would certainly go a long way in that regard, but I think part of the reason for the 10-year life is that when you are remodelling or refurbishing a store and doing a lot of different things, building a wall here, building a wall there, being able to identify how much cost goes into each of those particular assets that may later be ripped out or torn out is very hard to do. Basically, it goes in as one lump asset for that store for those improvements.

After a 5- to 7-year period, when you go in to renovate the space again, some of those assets may continue to remain in service, and others may be ripped out. Being able to identify which of those you can retire from your books and go ahead and write off versus those that are still being maintained and kept in service becomes almost impossible to do, certainly in a retail or in a department store setting. But it would certainly help.

Chairman ARCHER. OK. Thank you very much.

Mr. Collins.

Mr. COLLINS. Mr. Christensen, do you have any questions?

Mr. CHRISTENSEN. No questions.

Mr. COLLINS. Mr. Laughlin.

Mr. LAUGHLIN. Thank you, Mr. Chairman.

Mr. Bannister, I certainly support the proposal that you presented in your written statement about allowing taxpayers who hold an asset for at least 5 years to pay either the present law tax on capital gains or the tax equivalent of 10 percent, and also the one-time exclusion at age 55.

I want to go a step further and ask what would be your position or the position of Home Builders for a person who owns the household for 10 years, paying no capital gains tax. I represent a fairly senior citizen population in a very rural district, and a lot of people live in their homes a lot longer than 10 years, paying substantial taxes, inflation is added to the price, and then generally, when they

sell that property, it is what they live on for the remainder of their lives, and they generally sell to move closer to a child or other family members for assistance.

I just wonder if you have a position where, if the home is owned in excess of 10 years, there would be no capital gains.

Mr. BANNISTER. We certainly, Mr. Laughlin, would support what the Chairman has advocated for some time as no capital gains tax. In today's political climate, that is not a reality.

However, you touch on a very important point. That is, the average American has $66,000 in equity in his home, and to the extent that that is taxed at any point, it lessens his ability to have some of that for retirement. There is more equity in the Nation's homes today than in all types of pensions and savings. We think it is part of our program, if you will, in this country not only to provide shelter, but in a way to provide a comfortable retirement for an aging population. That is why we would certainly support anything that would encourage those in housing for a certain period of time to lessen their tax consequence when they leave that home for whatever reason.

Mr. LAUGHLIN. The Chairman and I have never discussed this issue, but I certainly think we should do all we can to encourage home ownership and then do the least amount of damage on taxing or penalizing the person when he finds it necessary to sell that home for whatever reason.

Mr. BANNISTER. I agree. Thank you.

Mr. LAUGHLIN. Thank you.

Chairman ARCHER. Thank you, Mr. Laughlin.

We thank each of you gentlemen for coming today and testifying before the Committee with your recommendations. We are pleased to have had such a good response in yesterday's hearing and in this one.

We stand adjourned.

[Whereupon, at 1:30 p.m., the hearing was adjourned.]

[Submissions for the record follow:]

WRITTEN STATEMENT OF LESLIE B. SAMUELS
ASSISTANT SECRETARY (TAX POLICY)
DEPARTMENT OF THE TREASURY
BEFORE THE
HOUSE COMMITTEE ON WAYS AND MEANS

Mr. Chairman and Members of the Committee:

I am pleased to submit this statement presenting the views of the Administration on miscellaneous revenue issues as described in the July 10, 1995, pamphlet prepared by the Joint Committee on Taxation[1] ("JCT Pamphlet").

The Committee has before it over 250 proposals representing substantive changes to a wide range of tax provisions. Many of these proposals deal with complex provisions of the law. In many cases, the proposals raise questions whether existing law should be thoroughly reviewed and subject to hearings, considering, among other things simplification and rationalization. For instance, Treasury is studying the treatment of financial instruments and entities engaged in financial services transactions and ways to modernize their regulatory and tax treatment. Some proposals that are the subject of these hearings might more appropriately be considered in the context of such a modernization effort.

In developing our positions on the proposals before the Committee, we have relied on a number of tax policy principles. One such principle is tax simplification. Given the widespread interest that has been expressed in simplifying the tax code, we believe that in evaluating these proposals, great weight should be given to the extent that they may either simplify or complicate the tax laws. Many taxpayers have complained that one of the greatest sources of complexity in the tax laws is frequent change in the law. We urge the Committee in considering these miscellaneous proposals to bear in mind the additional complexity that may result from large numbers of even meritorious changes in the tax laws.

The Administration strongly supports many of the simplification provisions contained in H.R. 3419, as it passed the House in the 103rd Congress and as proposed to be modified in the JCT Pamphlet. The Administration has recently announced additional tax simplification proposals.

For instance, last month the President announced a pension simplification package. A number of the miscellaneous tax proposals included in these hearings are the same as or similar to items in the Administration's pension simplification proposal. We believe that the complexity of the private pension system has raised the compliance and administrative costs of maintaining a plan to a level that discourages certain employers, particularly small employers, from providing any retirement plan for their employees. Accordingly, one of the principal elements of the Administration's proposed pension simplification package is a new, simple retirement plan for employers with 100 or fewer employees, known as the NEST (or National Employee Savings Trust). The NEST would combine the most attractive features of IRAs and 401(k) plans, and would not be subject to the top-heavy

---

[1] Joint Committee on Taxation, <u>Description of Miscellaneous Tax Proposals</u> (JCS-19-95), July 10, 1995.

rules or to any other complex nondiscrimination rules. We look forward to working with Congress on a bipartisan basis to achieve this and other pension simplification this year.

In June, President Clinton also announced proposals, as part of the Administration's Reinvention of Government II (REGO II) initiative, to simplify the tax and wage reporting system, and to expand the Internal Revenue Service's partnership program with State tax authorities. We note that one of the simplification proposals in H.R. 3419 would permit IRS to enter into cooperative agreements with State tax authorities. The Administration supports this provision and is eager to work with the Committee to improve it.

In addition to tax simplification, the Administration has relied on several other tax principles in evaluating the miscellaneous proposals that are before the Committee. We oppose "rifleshot" measures that provide special tax relief to a targeted group of taxpayers. We generally oppose purely retroactive provisions that seek to supplant the judicial process. We favor equity among similarly situated taxpayers. We insist upon the administrability of each provision. Finally, to the extent that miscellaneous tax proposals represent tax expenditures, the relevant cost to taxpayers, and whether there are proposed revenue-raising offsets, are important factors to be considered.

The Administration's view with respect to many of the proposals under consideration today assumes that appropriate revenue measures will be proposed. Consequently, even for tax proposals that are meritorious, they must be offset by revenue-raising provisions that are compatible with the principles of deficit reduction. Moreover, even if appropriate revenue-raising offsets can be identified, the Administration will want to work with the Committee and the Congress as a whole to set priorities for the use of those revenues.

The remainder of this statement is a detailed discussion of the Administration's positions on the miscellaneous tax proposals that are the subject of the hearing. The discussion follows the order of the proposals described in the JCT pamphlet.

ADMINISTRATION POSITION ON MISCELLANEOUS TAX PROPOSALS

I. MISCELLANEOUS PROPOSALS

A. TAX ACCOUNTING PROVISIONS

1. Expensing of Certain Costs Associated with Natural Disasters

Administration Position. **Do not support.** The Administration is aware of concerns relating to lost or damaged crops. This proposal, however, goes well beyond allowing deductions to restore acreage to its pre-disaster condition by allowing deductions for capital investments.

2. Allow Installment Method of Reporting Income from Sale of Certain Residential Real Property

Administration Position. **Oppose.** Current law appropriately denies the installment method with respect to sales of real property by dealers. This provision would add significant complexity to the Internal Revenue Code and would be difficult for the Internal Revenue Service ("IRS") to monitor. Also, it is inconsistent with the narrow exceptions of current law, as it would not impose an interest charge on the deferred tax.

3. Eliminate "Look-Back Method" for Nonresidential Construction Contracts

Administration Position. **Oppose.** The look-back provisions serve to compensate either the government or the taxpayer for the under- or over-estimation that is inherent in the use of estimates. The narrow exceptions to the use of this method currently available serve to exclude those taxpayers for whom the calculations are overly burdensome.

4. Treatment of Contributions in Aid of Construction for Water Utilities

Administration Position. **Do not oppose.** Congress enacted the current statute in 1986 to prevent utilities from permanently excluding the income associated with these contributions. Congress believed that regulated utilities had the flexibility to recoup these expenditures (if they were incurred directly) through the ratemaking mechanism. It is not clear, however, that utilities have this flexibility. For example, many utilities are restricted to fixed-rate structures that do not permit them to earn a return on property of the type under consideration. Therefore, in these cases, there is no permanent exclusion of income as contemplated by Congress in the Tax Reform Act of 1986 ("1986 Act"). It is unclear, however, from a tax policy perspective why this proposal should be limited to water utilities.

5. Allow Trading Partnerships and Corporations to Use a Mark-to-Market Method of Accounting for Securities

Administration Position. **Do not support.** The Treasury is studying the treatment of financial instruments and entities engaged in financial services transactions and ways to modernize their regulatory and tax treatment. This proposal is more appropriately considered in the context of the larger issues. Furthermore, there are a number of technical issues that will have to be addressed with this type of treatment, such as the character of gain or loss on a mark of a capital asset generating ordinary income flows.

6. Allow Partnerships and S Corporations to Elect Taxable Years Other than Required Taxable Years by Paying Estimated Taxes on Behalf of Their Owners

Administration Position. **Oppose.** This provision is extremely complex and will impose greater administrative and compliance burdens on the IRS. Furthermore, there are a number of technical problems. For example, the entity makes payments at the corporate rate, unless owners have income from the entity above a certain amount, or, if the entity is a partnership, it has income above a certain amount without regard to the number of partners. This may result in significant deferral of estimated payments by the owners, depending upon their tax brackets. As another example, the owners may find it difficult to determine the actual amount of credit against their own tax liabilities that is flowing from the entity if ownership is changing throughout the year.

7. Allow Deduction for Intrastate Operating Rights of Motor Carriers

Administration Position. **Oppose.** Allowing a current deduction for the adjusted basis of operating authorities would contravene long-standing cost recovery principles and is even more generous than the Economic Recovery Tax Act of 1981 provision affecting interstate operating rights.

8. Allow Taxpayers to Estimate Shrinkage for Inventory Accounting

Administration Position. **Oppose.** The Administration believes that the use of estimates based on historical data in this context does not result in a clear reflection of income.

9. Provide Exclusion for Certain Amounts Received by a Utility with Respect to Nuclear Decommissioning Costs

Administration Position. **Do not support.** The effect of this proposal is to allow the utility to exclude from income customer contributions to future decommissioning costs without reducing the amount the utility is permitted to deduct for contributions to a nuclear decommissioning fund.

10. Repeal Treasury Ruling Requirement for Nuclear Decommissioning Costs

Administration Position. **Do not support.** Taxpayers are required to obtain a ruling establishing the schedule of contributions to a nuclear decommissioning fund in order to prevent excess accumulations in the fund and to assure that contributions are not deducted more rapidly than level funding.

We believe that centralized administration, through a ruling procedure, is the most efficient method of achieving these purposes. The Internal Revenue Service's experience with the ruling requirement is that the schedules submitted by taxpayers in their ruling requests frequently require adjustments in order to prevent excessive or accelerated deductions. We are concerned that, if the ruling requirement is eliminated and enforcement of limitations on contributions is left to the audit process, errors in the schedule of contributions are more likely to escape detection. We also believe the Internal Revenue Service should not be deprived of its discretionary authority to disqualify a nuclear decommissioning fund if the fund's assets are not used for decommissioning or there is self-dealing between the fund and the utility.

We recognize that, under current rules, it is possible that taxpayers may be required to request a new ruling to reflect

minor changes in the assumptions on which the taxpayer's original ruling was based. The Internal Revenue Service and Treasury are aware that in such cases, it is appropriate to streamline the procedures to ease administrative burdens on both taxpayers and the Internal Revenue Service.

11. Treatment of Certain Compensation Payable by Certain Personal Service Corporations Using an Accrual Method of Accounting

Administration Position. **Do not oppose, with possible modifications.** Provided the amount of compensation which may be deducted under this provision is limited in a manner similar to that proposed in H.R. 11 in the 102nd Congress, the mismatch that would result from this provision would not undermine the purposes of section 267.

12. Treatment of Livestock Sold on Account of Weather-Related Conditions

Administration Position. **Support.** This provision promotes the policy of allowing farmers to avoid unpredictable tax results due to events not within their control, and allows these taxpayers to associate expenses with income directly attributable to those expenses in the same manner as the natural business cycle.

13. Treatment of Certain Crop Insurance Proceeds and Disaster Assistance Payments

Administration Position. **Support.** This provision promotes the policy of allowing farmers to avoid unpredictable tax results due to events not within their control, and allows these taxpayers to associate expenses with income directly attributable to those expenses in the same manner as the natural business cycle.

14. Allow Certain Contractors to Use the Cash Method of Accounting

Administration Position. **Oppose.** The Administration does not believe that a statutory change is necessary.

B. ALTERNATIVE MINIMUM TAX

1. Allow Certain Investment Expenses to be Deducted for Alternative Minimum Tax Purposes

Administration Position. **Do not oppose, with modifications.** From a tax policy perspective, the AMT treatment of these expenses is inconsistent with one of the purposes of the AMT (to assure that economic income is subject to tax) and results in a mismeasurement of economic income. This relief should not be limited to individuals receiving distributive shares of section 212 expenses from partnerships. The economic distortion at issue applies no matter what form the taxpayer's investment takes.

2. Allow Energy Tax Credits Against Alternative Minimum Tax

Administration Position. **Oppose.** There is no reason that energy credits should be subject to substantially more favorable treatment than other tax credits, which generally are not allowed against the AMT. In addition, the purpose of the AMT, to assure that taxpayers with economic income are subject to tax, will be weakened if credits may be fully utilized against it.

C. BUSINESS EXPENSES

1. Any Period During Which a Federal Employee Is Certified By the Attorney General To Be Participating in a Federal Criminal Investigation Not Included in Computation of One-Year Limitation with Respect to Deductibility of Travel Expenses While Temporarily Away from Home

Administration Position. **Do not support.** It has not been established that the impact of the amendment of section 162(a) by the Energy Policy Act of 1992 upon federal investigators is unique or more burdensome than the impact upon State and local investigators or other governmental or business activities. Deduction of expenses for travel away from home may result in the deduction of personal expenses as business expenses. A universally applicable fixed time limit is appropriate and should minimize administrative disputes.

2. Deduction for Regularly Scheduled Air Transportation Limited to Normal Tourist Class Fare

Administration Position. **Oppose.** Imposing a new limitation on the deductibility of airline fares would create significant administrative burdens. In addition, it would be inappropriate to single out the airline industry in contrast to other forms of transportation by limiting deductions for airfare to a particular fare.

3. Increase Deductibility of Business Meal Expenses for Individuals Subject to Federal Hours of Service Limitations

Administration Position. **Oppose.** We are not persuaded that the circumstances of those individuals who would be affected by this proposal are sufficiently unique to warrant special treatment.

D. BUSINESS TAX CREDITS

1. Credit for the Rehabilitation of Certain Historic Homes

Administration Position. **Oppose.** The subsidy represented by the proposed credit is not warranted. Moreover, the transferability of the credit pursuant to rehabilitation mortgage credit certificates raises significant administrative concerns.

2. Increase Tax Credit and Modify Other Provisions with Respect to Electric Vehicles

Administration Position. **Do not support.** The current 10 percent credit (subject to a $4000 cap) for electric vehicles was enacted in 1992, effective for vehicles placed in service after June 30, 1993. We are concerned that certain of the proposed modifications would create greater disparity in the tax incentives for electric vehicles and the special expensing allowed for other clean-fuel vehicles.

3. Tax Credit and Tax-Exempt Financing for Environmental Remediation Expenses

Administration Position. **Do not support.** Although the Administration fully supports the goal of environmental cleanup, the proposal would be complex and difficult to administer. In addition, the proposal would have significant revenue cost, and would not be the most efficient means of providing subsidies to finance cleanup costs.

E. CAPITAL GAINS

1. Ten Percent Alternative Tax on Gains Held Five Years

Administration Position. **Oppose.** This type of proposal is inconsistent with the principles of an income tax since taxpayers with the same amount of capital gain would pay greatly different amounts of tax in many cases. The proposal would be very complex due to its potential interaction with other provisions such as loss carryovers, the 28 percent maximum tax on capital gains, limits on the deduction of investment interest expense, and the alternative minimum tax. In addition, this proposal would lose significant revenue.

2. One-Time Exclusion of Gain on the Sale of a Principal Residence by an Individual Who Has Attained Age 55

(a). Allow Multiple Exclusions Where Two Otherwise Eligible Taxpayers Marry

Administration Position. **Do not oppose.** There are a number of anomalies in existing law, particularly with respect to individuals who remarry. It is clear that improvements to the current rules can be made for otherwise eligible taxpayers who marry. We are happy to work with Congress to develop proposals to simplify current law.

(b). Allow Multiple Exclusions in Certain Cases

Administration Position. **Do not support.** This proposal has the potential to allow two exclusions within a marriage for a total of up to $250,000 in excluded gains. There are a number of anomalies in existing law, particularly with respect to individuals who remarry. We are happy to work with Congress to develop proposals to simplify current law, but we are concerned about the possibility in this proposal of allowing two exclusions within a marriage.

(c). Allow Multiple Exclusions in the Case of Certain Unemployed Persons

Administration Position. **Oppose.** This proposal raises significant administrative concerns.

(d). Treat Certain Disabled Persons as Satisfying the Age 55 Requirement

Administration Position. **Do not support.** It is unclear that this is an appropriate, targeted way to assist the disabled. In addition, we have concerns about the definitions used in the proposal.

3. Revise Targeted Capital Gains Exclusion for Small Business

Administration Position. **Do not support.** Section 1202 as currently drafted provides an appropriate incentive for investment in small business corporations. The Administration, however, recognizes the potential problems that can be created by the current provisions regarding shareholder redemptions and the amount of working capital that is treated as used in the active conduct of a trade or business. We would be happy to work with Congress to devise appropriate corrections to address these specific problems.

4. Exempt Tax-Exempt Bonds from Treatment as Market Discount Bonds

Administration Position. **Oppose.** Market discount on a tax-exempt bond is attributable to the time value of money and is appropriately treated as discount.

F. CHARITABLE DEDUCTION

1. Deduction for Commemorative Coins Purchased from U.S. Mint

Administration Position. **Oppose.** This proposal runs contrary to the fundamental tax policy principle which holds that a taxpayer makes a charitable contribution only to the extent the taxpayer's payment exceeds the value of anything provided in return. The U.S. mint sells commemorative coins for a set price per coin. A taxpayer who pays the set price for a commemorative coin has gotten back something of equivalent value, and therefore has not made any charitable contribution that would merit a deduction.

2. Charitable Deduction for Non-Itemizers

Administration Position. **Oppose.** A charitable contribution factor is already built into the standard deduction. Therefore, allowing taxpayers who do not itemize to claim a deduction for charitable contributions would effectively provide many taxpayers with a double deduction, and would pose significant budgetary and administrative problems.

3. Remove Charitable Deductions from Overall Limitation on Itemized Deductions

Administration Position. **Oppose.** There is no tax policy reason for distinguishing the charitable contribution deduction from any other itemized deduction that is subject to the reduction imposed by section 68.

4. Repeal Charitable Substantiation Rule for Contributions of $250 or More

Administration Position. **Oppose.** The substantiation requirement of section 170(f)(8) is intended to stop known abuse of the charitable contribution deduction by taxpayers seeking to deduct payments to charity that are actually payments for goods or services rather than contributions. Requiring written substantiation provides the IRS with an effective mechanism for verifying that a taxpayer's payment genuinely represents a charitable contribution.

5. Allocation of Basis to Sale Portion of Bargain Sales of Real Estate Interests to Charities or Governments

Administration Position. **Oppose.** By allowing a taxpayer to offset the gain from a bargain sale of real property to charity with the full basis in the property, this proposal removes an important check on the taxpayer's interest in inflating the value of the charitable contribution. It also increases the preference for using appreciated real property rather than cash to make charitable contributions. Furthermore, by preventing the IRS from considering negotiations and the actual sales prices when determining the fair market value of a restriction on use of real property that has been sold to a charity, the proposal creates an unwarranted exception to the general principles of fair market value. Arm's-length bargaining and sales prices are essential elements in any principled analysis of fair market value. Prohibiting their consideration would encourage taxpayers to claim unjustifiably that they have made bargain sales.

6. Enhanced Deduction for Corporate Contributions of Scientific Equipment for Design Research

Administration Position. **Oppose.** The special rule for contributions of scientific property for research was enacted in response to studies that showed that universities were unable to meet the rising costs of scientific equipment in such equipment-intensive research areas as physics, chemistry, and electrical

engineering. This rationale does not apply to contributions of equipment for use in design research. Moreover, there is no evidence that the costs of the equipment used in design research are rising. In fact, the cost of computer equipment, one of the principal tools of design research, is generally falling.

G. CHILD CARE CREDIT

1. Extend Dependent Care Credit and Dependent Assistance Programs to Certain Overnight Camp Expenses

Administration Position. **Oppose.** Taxpayers may claim this credit for certain child-care costs incurred in order to enable the taxpayer to work, but generally may not deduct expenses which are predominately for the entertainment or education of their child. In addition, this provision appears to limit the amount of allowable expenses on a weekly basis, adding significant complexity to the calculation of the credit and exclusion amounts.

H. COMPLIANCE

1. Allow Offset of State Tax Liability with Overpayments of Federal Tax Law (H.R. 757)

Administration Position. **Do not oppose.** The Administration supports the goals of H.R. 757, but believes modifications are necessary to ensure that the IRS can continue to administer its refund offset program in an efficient manner. We would be pleased to work with the Committee in crafting the needed modifications.

2. Repeal of Information Reporting on Real Estate Transactions

Administration Position. **Oppose.** This information reporting requirement is important in enabling the IRS to monitor compliance. The Congressional concern underlying the enactment of this provision in 1986 remains valid.

3. Extend IRS Offset Authority for Undercover Operations

Administration Position. **Support.** When it was available, offset authority was used by the IRS to conduct effective undercover investigations of crimes such as money laundering and motor fuel excise tax fraud. The offset authority also was used to conduct undercover investigations that led to the indictment of major drug traffickers and organized crime figures, and the seizure of millions of dollars in illicitly derived assets. The authority should be extended.

I. CORPORATE

1. Certain Distributions by Alaska Native Corporations and Treatment of Certain Settlement Trusts

Administration Position. **Do not support.** Any changes to the taxation of Alaska Native Corporations ("ANCs") should be structured to minimize administrative burdens on the IRS. The proposal would increase the situations in which the determination of basis in shares of ANC stock becomes relevant, and thus would increase administrative complexity.

2. Lengthen Corporate Capital Loss Carryover From 5 to 15 Years

Administration Position. This proposal would permit capital losses to be carried forward 15 years instead of five. The current five-year carry-forward may be unduly short. We are

concerned, however, about revenue effects and whether the proposed modification is appropriate for existing losses. We believe this proposal should be considered in light of the treatment of carryovers generally.

3. Repeal Rule that Accumulated Earnings Tax Applies Without Regard to the Number of Shareholders

Administration Position. **Do not support.** Changes to the accumulated earnings tax rules must be carefully considered, particularly with respect to their coordination with other anti-avoidance provisions in the Code, including the personal holding company and foreign personal holding company rules. Although changes in these rules may be justified, they should await a thorough review of these anti-avoidance provisions.

4. Modify Rules for Interest on Large Corporate Underpayments

Administration Position. **Do not support.** This proposal is inconsistent with the original design and intent of the 1990 legislation that imposes the higher rate of interest on large corporate underpayments.

J. DEPRECIATION AND AMORTIZATION

1. Normalization of Consolidated Tax Adjustments with Respect to Non-Regulated Subsidiary of a Regulated Public Utility

Administration Position. **Do not support.** The Administration is not convinced that regulatory commissions should be prohibited from allocating any of the consolidated tax benefits resulting from the accelerated use of losses incurred by unregulated affiliates to the customers of the utility against whose income the losses were applied. Moreover, if Congress wishes to restrict a regulatory commission's discretion, sanctions other than the loss of accelerated depreciation may be more appropriate.

2. Establish 15-Year Recovery Period for Small Retail Motor Fuel Outlet Stores

Administration Position. **Oppose.** The proposal is likely to lead to significant abuses and controversies.

3. Establish 3-Year Recovery Period for Semiconductor Manufacturing Equipment

Administration Position. **Do not support.** Changes in depreciable lives should be made only after detailed analysis of relevant economic and other evidence supporting a change.

4. Establish 3-Year Recovery Period for Property Subject to Certain Rental Purchase Agreements

Administration Position. **Oppose.** The Administration is unaware of any economic analysis that supports a shorter life for property subject to rent-to-own contracts.

5. Establish 10-Year Recovery Period for Commercial Improvement Property

Administration Position. **Oppose.** The Treasury is unaware of any economic analysis that supports this modification to the prohibition on component depreciation or the 10-year recovery period of this proposal.

6. Establish 10-Year Recovery Period for Certain Leasehold Improvements

Administration Position. **Oppose.** The Treasury is unaware of any economic analysis that supports this modification to the prohibition on component depreciation or the 10-year recovery period of this proposal.

7. Treatment of Intermodal Cargo Containers

Administration Position. **Oppose.** The investment tax credit and accelerated depreciation provisions were intended to stimulate investment in the United States. This proposal is inconsistent with that objective, and due to its retroactive nature, will not directly result in new investment. Moreover, the amendment of tax returns for many prior years presents significant administrative burdens for the IRS.

8. Exempt Acquisition of Software and Software Services Businesses from 15-Year Intangibles Amortization

Administration Position. **Do not support.** We are concerned that this proposal will lead to disputes over whether an acquisition qualifies for exemption from 15-year amortization and thus will undermine the goals of the 1993 intangibles legislation.

K. EITC

1. Advance Payment of the Earned Income Tax Credit through State Agencies

Administration Position. **Support, with modifications.** This proposal is very similar to a demonstration program proposed by the Administration in 1994 (section 741 of H.R. 4605, 103rd Congress). We would support this proposal if it were modified to conform to our proposal, primarily by addressing the critical issue of the States' responsibility for excessive payments and limiting the provision to a demonstration project involving a specified number of States for a limited duration with an agreement to share data for purposes of evaluating the program.

L. EDUCATION

1. Exclusion For Income Earned on State Prepaid Tuition Plans

Administration Position. **Support Administration's budget proposal.** The Administration strongly supports incentives for investing in and saving for education, but believes that the President's IRA and educational expense deduction proposals are a more flexible way to encourage savings and a more cost-effective means of helping middle- and lower-income individuals afford education. Moreover, the exemption under current law of interest on Series EE Savings Bonds used for education largely satisfies the needs addressed by this proposal for middle- and lower-income individuals saving for their children's education. In addition, we believe that the proposal has technical problems, and may have large revenue costs.

We understand, however, that the prepaid tuition plans currently in place in a number of States are appealing to individuals trying to save for their children's education. We also understand that uncertainty about the tax treatment of the plans under current law may discourage some from using the plans to save for college. We would be happy to work with Congress to create a less expensive, more targeted approach to dealing with this problem.

2. Adopt Education Savings Accounts

Administration Position. **Support Administration's budget proposal.** The Administration supports efforts to encourage savings and to promote investment in higher education. We believe, however, that our proposals to allow deductions for educational expenses and to expand IRAs is a preferable approach. The Administration's proposals are targeted on middle-income families and thus are a more cost-effective way to increase the savings rate in this country. Since there is no income limitation under this proposal, it may provide a tax windfall for higher-income individuals without increasing their overall rate of savings. The Administration's proposals are targeted to provide incentives for lower- and middle-income people who need help saving and paying for college. Finally, we prefer the Administration's IRA proposal because it is a more flexible approach to enhancing the savings rate.

3. Expand Section 108(f) To Provide That Cancellation of Private College Student Loans Is Not Taxable Income

Administration Position. **Do not oppose.** If Congress decides that the exclusion of cancellation of indebtedness income under section 108(f) should be extended to student loans from educational institutions under a program of an institution designed to encourage its students to serve in occupations or geographic areas with unmet needs, we would not oppose such a change on a revenue-neutral basis in the context of otherwise acceptable legislation. However, the Administration remains strongly committed to its prior proposal to clarify that debt forgiveness on Federal direct student loans with income-contingent repayment is excluded from income. The Administration sees its proposal as a priority.

M. EMPLOYMENT TAXES

1. Employment Tax Status of Certain Fishermen

Administration Position. **Do not oppose.** The proposal would take the traditional operation of fishing fleets into account in determining the employment tax status of crew members while ensuring that income paid to crew members is reported. We note that a determination of crew size based on the preceding calendar year (rather than the preceding four quarters) would simplify compliance and administration burdens related to the provision.

2. FICA Exemption for Certain Seasonal Children Camp Employees

Administration Position. **Oppose.** The proposal would create disparities between full-time students employed by children's camps and other students or young adults employed in a trade or business.

3. Extend FICA Tip Credit

(a). Extend FICA Tip Credit to All Employees Who Receive Tips

Administration Position. **Oppose.** The FICA tip credit was intended to apply only to the employer FICA tax paid on tips received from customers in connection with the provision of food or beverages for consumption on the premises of a food or beverage establishment. The Administration does not believe it is appropriate to expand this special tax treatment to tips received by employees for other services.

(b). <u>Effective Date of FICA Tip Credit</u>

<u>Administration Position</u>. **Oppose.** We oppose the application of the FICA tip credit to taxes paid on tips that are not timely reported by employees. Under current law, employers are eligible for the credit only for taxes paid on tips that are timely reported to them by employees. The extension of the credit to taxes paid on unreported tips would provide a disincentive for employers to encourage employees to report tips.

We also oppose the retroactive application of the FICA tip credit to taxes paid after December 31, 1993 with respect to tips received for services performed before January 1, 1994. This proposal, in combination with the proposed extension of the credit to unreported tips, would provide a significant windfall to employers whose employees did not report all or a portion of their tips received before January 1, 1994 and to employers that did not pay FICA taxes on the tips that their employees did report before January 1, 1994. These employers would be eligible for a 100 percent credit, even for their delinquent FICA taxes. In contrast, employers that timely paid their FICA taxes on timely reported tips and employers that encouraged their employees to accurately report their tips would have only received a deduction for their share of FICA taxes attributable to pre-1994 tips. In addition, extending the availability of the credit in the manner proposed could result in an unanticipated drain on general revenues.

4. <u>Repeal Presumption That Bakery Distributors are Employees for Employment Tax Purposes</u>

<u>Administration Position</u>. **Do not support.** Bakery drivers have been treated as statutory employees for employment tax purposes since 1951. We do not believe that there is sufficient reason to change this longstanding provision and disrupt existing arrangements.

5. <u>FUTA Exemption for Certain Religious Schools</u>

<u>Administration Position</u>. **Do not support.** We do not believe that there is sufficient reason to reduce unemployment compensation coverage for this group of workers and their employers. In addition, an exception that is based on whether the employer has a "primary religious purpose" would increase administrative complexity in the statute.

6. <u>Application of Common Paymaster Rules to Certain Agency Accounts at State Universities</u>

<u>Administration Position</u>. **Do not support.** The current provision is a narrow exception that is specifically limited to faculty practice plans where at least 30 percent of the plan employees are also employed by a State university medical school. We understand that technical State law issues prevent certain medical schools from utilizing this provision, and we would not oppose a change more narrowly tailored to address that problem. However, we have concerns about the elements of this proposal that would expand the types of institutions qualifying for common paymaster treatment and that would eliminate the concurrent employment requirement.

7. <u>Repeal Section 1706 of 1986 Tax Reform Act</u>

<u>Administration Position</u>. Worker classification issues should not be addressed on a piecemeal basis. It would be preferable to develop a more comprehensive approach that appropriately deals with worker classification issues. We would be happy to work with Congress to develop such an approach.

N. EMPOWERMENT ZONES

1. Expand Number of Community Development Corporations (from 20 to 40) Eligible for Tax Credit and Increase Aggregate Amount of Contributions Eligible for Tax Credit

Administration Position. **Oppose.** The Administration believes that it is premature to modify these provisions until there is better evidence on how the 1993 provisions are working.

2. Tax Incentives for Economic Recovery in Designated Areas with Employment Loss in Financial and Real Estate Businesses

Administration Position. **Oppose.** This proposal, in contrast to the Empowerment Zone and Enterprise Community program authorized in 1993, is focused too narrowly on reductions in employment and includes a number of tax incentives that in and of themselves would be unlikely to improve economic conditions in distressed areas.

3. Allow 20-percent Tax Credit for Commercial Revitalization in Empowerment Zones and Other Specially Designated Areas

Administration Position. **Oppose.** This proposed credit is unlikely to be effective in overcoming the primary barriers to non-residential development in these distressed areas, is likely to adversely affect businesses already located in these areas, and would be extremely complex to administer.

O. ENERGY

1. Modifications to Tax Credit for Producing Fuels from Nonconventional Source

(a). Allow the Credit to Be Claimed Against the Alternative Minimum Tax

Administration Position. **Oppose.** There is no reason that energy credits should be subject to substantially more favorable treatment than other tax credits, which generally are not allowed against the alternative minimum tax ("AMT"). The purpose of the AMT, to assure that taxpayers with economic income are subject to tax, will be weakened if credits may be fully utilized against it.

(b). Unrelated Party Sale Requirement

Administration Position. **Oppose.** Under either proposal, a taxpayer would have the incentive to erect an electric plant, sell electricity produced from self-generated gas on the national grid, receive the credit, and buy back the electricity from the national grid rather than using its own self-generated electricity. Use of self-generated electricity is already a common practice for many industries without the credit; therefore, this proposal would expand use of the section 29 credit beyond what was originally intended. Moreover, absent an arm's-length transaction, the amount of section 29 gas "constructively" or "deemed" sold would not be verifiable. Finally, the number of potential taxpayers who could claim the section 29 credit under the proposal (and hence the amount of the associated revenue loss) is far greater than originally estimated by Treasury in 1993, when the proposal was previously considered.

(c). Underground Coal Gasification

Administration Position. **Oppose.** The proposal would allow certain modules newly drilled within a coal production area to

qualify for the section 29 credit if there is an existing above-ground gas transportation system to bring the gas generated from in-situ processing to an existing above-ground facility for further processing. This could expand the use of the credit virtually indefinitely for a given coal seam and would, therefore, disadvantage other facilities that would have to comply with the placed-in-service expiration date.

(d). Definition of Tar Sands

Administration Position. **Oppose.** The placed-in-service date for wells from tar sands to qualify for the section 29 credit expired at the end of 1992. The source of the definition of tar sand presently in use by the IRS is a ruling by the Federal Energy Administration. The Tax Court has determined that this definition is the proper definition for purposes of section 29 the Code. In addition, there is no tax policy justification for creating a windfall by recharacterizing a significant number of deposits as eligible for the credit, when the oil or gas has already been economically produced. Moreover, the Administration would anticipate substantial difficulty implementing any standard that requires measurement of a gas-free viscosity at original reservoir temperature.

2. Determination of Independent Oil and Gas Producer Status

(a). Increase Permitted Retail Sales

Administration Position. **Oppose.** Producers that are sufficiently integrated to sell at retail are most likely large companies of the type intended to be excluded from percentage depletion. Regulated public utilities, which tend to be relatively large companies, should not be given a favorable rule for purposes of determining whether they qualify as independent producers.

(b). Increase Permitted Refining Activity

Administration Position. **Oppose.** The current 50,000 barrels of production threshold was carefully considered. There is no tax policy reason for adjusting the threshold.

3. Tax Credit for Lubricating Oil Produced from Re-refined Oil

Administration Position. **Oppose.** Motor oil, like other materials, is recycled when dictated by environmental regulations or when economically profitable. Today, lubricating oil is being recycled without the credit. Moreover, this credit would be difficult to administer. Because used oil is frequently blended with other hydrocarbons as part of the re-refining process, determination of the amount of lubricating oil that is actually derived from used oil would be complex. Implementation would also require a precise definition of "lubricating oil."

4. Allow Geological and Geophysical Costs Incurred in Connection with Oil and Gas Development to be Expensed in the Year Incurred

Administration Position. The Administration believes that the objectives of any proposal to change the tax treatment of geological and geophysical (G&G) expenditures should be simplification and neutrality. This proposal, however, does not achieve these goals. Instead, under this proposal, G&G costs would be treated more favorably than intangible drilling costs. The proposal would not reduce complexity. The Administration would welcome the opportunity to work with Congress on a proposal for G&G that would reduce compliance burdens for the industry and provide more equal treatment for both types of expenditures.

5. Extend the Renewable Electricity Production Credit to Electricity from Certain Fuel-Cell Power Plants

Administration Position. **Oppose.** There is no tax policy justification to single out fuel-cell power plants for a tax credit, since fuel-cell power plants have been competing in the international marketplace for several years.

F. ESTATE AND GIFT TAX PROVISIONS

1. Exemption From Estate Tax For Qualified Historic Property Subject To Permanent Conservation Easement

Administration Position. **Oppose.** The Administration believes that the deduction allowed under current law for the grant of a charitable easement on historic properties is sufficient. The proposal would permit a complete exclusion for qualified historic property of unlimited value from the gross estate, rather than the value of the charitable easement alone. The proposal would be subject to abuse and would erode the tax base.

2. Exempt Certain Land Subject To Permanent Conservation Easement From Estate Tax

Administration Position. **Oppose.** The Administration believes that the deduction allowed under current law for the grant of a charitable easement is sufficient. The proposal would permit an exclusion for surrounding land of unlimited value from the gross estate, rather than the value of the charitable easement alone. The proposal would be subject to abuse and would erode the tax base.

3. Estate Tax Marital Credit For Certain Employees of International Organizations

Administration Position. **Support, with technical modifications.** The Administration believes that the proposal is consistent with the United States' special role as host to international organizations.

4. Relief From Retroactive Gift Tax Regulation On Disclaimers

Administration Position. **Oppose.** The proposal would open up the statute of limitations for certain disclaimers for a one-year period. The United States Supreme Court decided this issue in the cases of Jewett v. Commissioner and Irvine v. U.S. We believe that this issue was properly resolved by the courts.

5. Extend the "Predeceased Parent Exception" To Collateral Heirs and To Taxable Terminations and Distributions

Administration Position. **Do not oppose.** The policies that underlie the special rule for transfers to a grandchild whose parent is deceased (Code section 2612(c)(2)) generally would support the proposed expansion to cover collateral heirs and to apply the rule to taxable terminations and taxable distributions, as well as to direct skips. The bill (H.R. 1099), however, requires technical modifications.

6. Increase Special Use Valuation Limit to $1.5 Million

Administration Position. **Do not oppose.** If Congress decides that the maximum of $750,000 by which the value of real property may be reduced under section 2032A is not sufficient, we would not oppose an appropriate increase in the context of otherwise acceptable legislation.

7. Estate Tax Credit For Conservation Property Donated to Federal Government.

Administration Position. **Oppose.** The Administration believes that the deduction allowed under current law for transfers of interests in property to the Federal Government for conservation purposes is sufficient. To the extent that this proposal is designed to assist taxpayers with liquidity problems, that issue is more appropriately addressed through the section 6166 installment payment provisions.

8. Proposals To Simplify and Improve Estate and Gift Tax

This proposal includes 33 specific proposed changes to "simplify and improve" the estate and gift tax. The proposals are discussed individually below. In some instances, the proposals are not sufficiently well developed at this time to permit the Administration to take a position.

(a). Equal Treatment For Individuals Who Utilize Revocable Trusts

Administration Position

(i) **Support,** with respect to the sixty-five day rule in proposal (2); and the equal treatment of individuals and revocable trusts with regard to amortization of reforestation proposal (10) (provided that in the case of proposal (10) the revocable trust and the grantor together are entitled to amortize a total of up to $10,000 of reforestation expenses). Proposal (2) would be beneficial to estates, would eliminate a distinction between wills and revocable trusts and would have no tax cost. Proposal (10) furthers the policy of treating the assets of a grantor trust as if they were owned directly by the grantor during the grantor's lifetime.

(ii) **Do not oppose,** with respect to the passive loss rule of proposal (4); the treatment as qualified shareholder for Subchapter S purposes in proposal (6); and the gifts from revocable intervivos trusts in proposal (8). Proposals (4) and (6) would eliminate differences between wills and revocable trusts and therefore are consistent with the goal of simplification. Proposal (8) furthers the policy of treating the assets of a grantor trust as if they were owned directly by the grantor during the grantor's lifetime.

(iii) **Do not support,** with respect to the set-aside deduction of proposal (1); the sales to related persons in proposal (5); and the taxable year of proposal (7). These proposals either create potential for abuse or create new complications not outweighed by their improvements.

(iv) While we share the goals of the separate share rule of proposal (3) and the equal generation skipping tax treatment of estates and revocable trusts following death of settlor in proposal (9), we need to study them further in order to make certain that they do not create opportunities for abuse.

(b). Eligibility for Ordinary Loss Deduction On Loss On Small Business Stock

Administration Position. **Do not oppose,** provided that the revocable trust and the grantor together are entitled to only one ordinary loss deduction. This proposal furthers the policy of treating the assets of a grantor trust as if they were owned directly by the grantor during the grantor's lifetime.

(c). Repeal of Income-Shifting Provisions (i.e., Throwback Rules (Code Secs. 665-668), Capital Gains (Code Sec. 644)

Administration Position. **Support,** but only for domestic trusts that have never been foreign trusts and only for accumulations after 1986. Limiting the application of these provisions would greatly simplify the income taxation of trusts and eliminate a confusing and burdensome requirement for taxpayers.

(d). Restore Unified Credit In Case of Split Gifts

Administration Position. **Support.** This proposal corrects a problem that leads to double taxation of lifetime gifts by allowing restoration of the surviving spouse's unified credit where the property is subsequently included in the deceased spouse's estate.

(e). Provide For Portability of Unified Credit and GST Exemption

Administration Position. This proposal has merit and may simplify estate planning by individuals. Particularly, this proposal would decrease the use of certain trusts that are now employed solely for their tax benefits. The Administration is concerned, however, that the proposal has some potential for abuse and believes that a more specific proposal must be developed before a position can be taken.

(f). Making Use of Unified Credit Optional

Administration Position. **Do not support.** This proposal creates new complications not outweighed by its benefits.

(g). Modification of Rules Relating To Marital Deduction

Administration Position. **Do not support.** Any proposal to allow reformations of QTIP trusts must include, at a minimum, limitations in terms of time and scope. The proposal to allow a surviving spouse to hold a limited power of appointment over the assets of a QTIP trust is contrary to the limited purpose for which QTIP trusts were established. QTIP trusts should remain devoted to the benefit of the surviving spouse for such spouse's lifetime.

(h). Provide For Federal Disclaimer Rules

Administration Position. **Support.** These technical changes to section 2518(c)(3), as well as the clarification that disclaimers are effective for income tax purposes, clarify and simplify federal disclaimer law. These proposals would conform provisions on transfer-type disclaimers to those that govern all other disclaimers.

(i). Provide That Disclaimer of Interests in Qualified Plans Do Not Violate the Spendthrift Restriction Applicable To Such Plans

Administration Position. **Support.** This proposal serves to increase taxpayers' flexibility in post-mortem planning without undermining the policy of prohibiting the assignment or alienation of qualified plan assets.

(j). Modify Rules For Qualified Domestic Trusts (QDOTs)

(1) Modification of Rules Relating To Trustee of a QDOT

Administration Position. **Do not support.** This proposal would allow taxpayers to comply with the QDOT trustee provisions of the Technical and Miscellaneous Revenue Act of 1988 ("TAMRA"), the

Omnibus Budget Reconciliation Act of 1990 ("1990 Act"), or OBRA 93. We favor the proposal contained in H.R. 3419, 103rd Congress, which extends relief only to QDOTs executed before the 1990 Act that conform with the TAMRA requirements.

(2) Modify Non-Estate Tax Consequences of Transfers By Surviving Spouse to QDOT

Administration Position. **Oppose.** This proposal would make the decedent the transferor of a trust the terms of which are written by the surviving spouse after the decedent's death, with potential tax implications not envisioned by the decedent.

(3) Transfers In Civil Law Countries to QDOT

Administration Position. This proposal is not sufficiently developed for the Administration to take a position. The Government's interest in collecting estate tax on the surviving spouse's death must be adequately protected in any proposed alternative to a QDOT arrangement.

(4) Delete Requirement That U.S. Trustee Have Power To Approve Distributions From a QDOT

Administration Position. **Oppose.** The requirement that a QDOT have a U.S. trustee is critical to the Government's ability to collect the estate tax due on the death of the surviving spouse.

(5) Clarification of Who Is the Transferor For GST Purposes in Case of QDOT

Administration Position. **Support.** The Administration supports giving the surviving spouse the right to elect to be treated as the transferor of the QDOT for GST purposes. This would give an alien spouse an election equivalent to that available to estates and surviving spouses under section 2652(a)(3).

(k). Modification of Generation-Skipping Transfer Tax Rules

Administration Position. **Do not support.** Most of these proposed changes address issues arising from the proposed regulations. These regulations are on the Priorities Guidance List to be issued in final form this year. We believe that it is premature to address these issues legislatively when the regulations have not been finalized.

(l). Modification of Period of Limitations For Assessment and Collection Against Transferees

Administration Position. **Oppose.** The Administration believes that the additional one-year period for collection of tax from a transferee is necessary due to the transfer of the property.

(m). Extension of Tax-Free Transfers Between Former Spouses to All Types of Property and To Transfers At a Spouse's Death

Administration Position. **Oppose.** The Administration believes that this proposal is overly broad and would create opportunities for tax avoidance.

9. Required Notices To Charitable Beneficiaries of Charitable Remainder Trusts

Administration Position. **Do not support.** While in principle the Administration favors requiring notification to a charitable remainderman that a trust exists for its ultimate benefit, the

proposal is too complicated and burdensome. The Administration is willing to work with the Committee to develop a less complicated and burdensome proposal.

Q. EXCISE TAXES

1. Modifications to Diesel Fuel Excise Tax Provisions

(a). Retail Collection of Tax on Recreational Boat Fuel

Administration Position. **Oppose.** The tax on diesel fuel used in pleasure boats would be unenforceable if collected at the retail level. Allowing the use of dyed fuel in pleasure boats would eliminate the utility of visual inspections, depriving the Internal Revenue Service of its primary enforcement mechanism under current law.

It appears that while many marinas carry both dyed and clear fuel, some marinas are carrying only dyed fuel for their commercial customers due to limited tankage. As a result, there have been complaints that pleasure boats are unable to buy clear fuel at all marinas. Many marinas, however, have already incurred the expense of adding a separate tank for clear, taxed diesel fuel in order to comply with current law. We are monitoring marinas in various areas and have found that clear diesel fuel is readily available in areas where recreational boating is popular. Moreover, availability has improved significantly since the summer of 1994, even in areas such as the Gulf Coast of Louisiana, where commercial boating predominates and retailers are least likely to accommodate recreational users. We believe that the availability of clear diesel fuel should continue to improve as the market adjusts to the new rules.

We are cognizant of safety concerns and want to receive more information about any area where the tax may have caused safety problems. We are also concerned, however, that uncertainty over the permanence of the new rules is retarding the adjustment process and may have discouraged some marina operators from installing the facilities needed to serve their pleasure boat customers.

(b). Penalty-Free Dilution of Dye Concentrations in Certain Cases

Administration Position. **Oppose.** The IRS currently permits the blending of kerosene with dyed diesel fuel after the fuel is removed from the terminal so long as the resulting blend continues to satisfy the generally applicable dye color and concentration requirements. Notice 94-21, 94-1 C.B. 339. The dye concentration requirements were adopted after extensive consultations with refiners, pipeline and terminal operators, and diesel fuel distributors. The Treasury Department made every effort to accommodate their concerns and set the concentration requirement at the lowest level consistent with effective enforcement of the tax. Thus, we are concerned that this proposal would either impair enforcement of the tax or require an increase in generally applicable dye concentration requirements to offset post-terminal dilution.

The Committee should also note that the Administration supports proposal Q.2. below to treat kerosene as diesel fuel. If this proposal is adopted, untaxed kerosene will be dyed when it is removed from the terminal and there will be no need to blend clear kerosene with dyed diesel fuel.

(c). Refunds for Bad Debt and Casualty Losses

Administration Position. **Oppose.** Many products other than diesel fuel are subject to Federal excise taxes. In general,

these taxes are not refunded when a casualty loss or bad debt loss is experienced with respect to a tax-paid article. We are aware of no reason for treating a loss with respect to tax-paid diesel fuel any differently than, for example, the total loss of a tax-paid luxury automobile in a traffic accident.

Property owners generally can protect themselves against casualty losses through insurance that compensates for losses attributable to excise taxes embedded in the cost of the property in the same manner as it compensates for other components of the property's cost. Although bad debt losses typically are not covered by insurance, creditors generally compensate for these losses by including a risk premium in the interest rates or prices they charge.

(d). Interest-Bearing Refunds for Certain Diesel Fuel Users

Administration Position. **Oppose.** Congress decided in 1993 that taxing fuels at the terminal rack and dyeing nontaxable diesel fuel are the best methods for ensuring compliance and preventing fraud. Current law reflects this decision. All nontaxable and partially exempt users of diesel fuel may purchase dyed diesel fuel on which no tax was imposed. Refunds are permitted when clear fuel is used for a nontaxable or partially exempt purpose, but these refunds are generally subject to strict limitations.

The proposed changes, by making the refund procedure easier and more attractive than under current law, would reduce the incentive to use only dyed fuel for nontaxable and partially exempt uses, and increase the extent to which the taxability of diesel fuel is determined after the terminal rack. We are concerned that the proposed changes would result in an increased volume of refund claims, thereby adding substantial administrative burdens and increasing opportunities for refund fraud.

(e). Exempt Alaska from Diesel Dyeing Requirement

Administration Position. **Support.** Alaska is the only State that is currently exempt from the Clean Air Act's dyeing requirements. The Administration believes the Clean Air Act and Internal Revenue Code dyeing requirements should be as harmonious as feasible, respecting the differences between the two statutes. Accordingly, we support a corresponding exemption from the Code's diesel dyeing requirements for diesel fuel sold in Alaska, subject to procedures established by the Treasury Department.

2. Treat Kerosene as a Diesel Fuel for Excise Tax Purposes

Administration Position. **Support, with modifications.** The Administration believes that the continuation of the present nontaxable treatment of kerosene would perpetuate the problems that Congress sought to correct in the Omnibus Budget Reconciliation Act of 1993 (OBRA 93), and that a change is essential if the new diesel fuel tax system is to function as Congress intended. We also believe, however, after consulting with the Consumer Product Safety Commission, that it is imperative to consider the consumer safety issues of adding dye to kerosene used in space heaters. Therefore, we would like to work with Congress, mindful of the differing needs of the consumer and the distributor, to devise a limited ultimate vendor refund rule in this specific case. We urge the Congress to address this issue as soon as possible.

3. Modify Rail Diesel Motor Fuel Tax Rate

(a). Equalize Diesel Fuel Taxes

Administration Position. **Oppose.** In OBRA 93, Congress decided to raise revenue for general fund purposes, and thus reduce the deficit, by increasing taxes on fuel used for transportation purposes. We are satisfied that Congress carefully considered the rates of tax that should apply to fuel used in various transportation modes, and we do not believe Congress should reconsider its decision at this time. It would be appropriate, however, to re-examine this issue in 1999 when the tax rate on railroad diesel fuel is scheduled to drop to 4.3 cents per gallon.

(b). Exempt AMTRAK

Administration Position. **Oppose.** We believe that any additional subsidies to AMTRAK should be provided through the appropriations process, where they will be subject to regular review, rather than through the tax code.

4. Expand Off-Highway Business Use Exemption from Motor Fuels Excise Taxes

Administration Position. **Oppose.** Allowing a refund for fuel used by a truck's engine while operating, for example, a power take-off on dump trucks, is unenforceable and would lead to widespread tax evasion. The courts have recently upheld the regulatory interpretation of the statute governing this provision, and we continue to support the position taken in the regulations.

5. Modify Gasoline Tax Refund Procedure for Gasoline Sold to States and Local Governments

Administration Position. **Oppose.** The IRS generally processes gasoline tax refunds within 45 days. Paying these claims within 20 days would require special manual processing and substantially increase processing costs.

The IRS is committed to providing quality customer service, including prompt payment of valid refund claims, and is moving toward this goal through its modernization effort. Customer service goals must be balanced, however, against the need to ensure the integrity of the tax administration system and improve overall compliance. Thus, the IRS carefully scrutinizes questionable claims to prevent the payment of fraudulent refunds. We believe Congress should take no action that might discourage such careful scrutiny.

Although gasoline wholesale distributors no longer have the opportunity to credit gasoline tax refunds against their diesel fuel tax liability, they are still treated more favorably than other claimants. In most cases, a person entitled to a payment with respect to a nontaxable use of gasoline is required to claim an income tax credit unless the payment to which the person is entitled exceeds a specified amount. In contrast, a wholesale distributor can file a claim for refund as soon as the gasoline is sold to a State or local government at a tax-excluded price.

6. Adjust Certain Fuels Tax Rates for BTU Equivalency to Gasoline

(a). Exempt LNG From Some Motor Fuels Taxes; Adjust the LNG Rate on Other Taxes

Administration Position. **Oppose.** There is no justification for exempting liquified natural gas (LNG) from the Highway Trust Fund component of the special motor fuels excise tax. The Highway Trust Fund portion of the special motor fuels excise tax applies to liquid fuels, and LNG is a liquid fuel. Under the OBRA 93 provisions, Congress maintained imposition of the Highway Trust Fund portion of the tax and imposed the deficit reduction portion of the tax on LNG, and made compressed natural gas (CNG) subject only to the deficit reduction portion of the tax. We believe that this issue should not be reopened at this time. We also believe that this issue should be re-examined in 1999 when the Highway Trust Fund component of the tax expires.

(b). Reduce the Tax Rates on Certain Fuels Based on BTU Equivalence

Administration Position. **Do not support.** In 1993, Congress carefully considered and agreed to an allocation of the motor fuels taxes on a broad base of transportation fuels. We believe that piecemeal unravelling of the agreement would be a mistake, although we believe that this issue should re-examined when the Highway Trust Fund component of the tax expires in 1999.

(c). Adjust Tax Rate for Propane Based on BTU Equivalence

Administration Position. **Oppose.** There is no justification for adjusting only the propane tax rate to a rate based on propane's BTU equivalence to gasoline. If adjustments are to be made, they should be made to all fuels. We also believe that this issue should re-examined in 1999, when the Highway Trust Fund component of the tax expires.

7. Modifications to the Retail Truck Excise Tax

(a). Impose Tax on Manufacturer

Administration Position. **Do not oppose, if conforming changes included.** Imposing the heavy truck tax on sales by the manufacturer, rather than the first retail sale, is likely to improve the administration of the tax. Until its modification by the Surface Transportation Act of 1982, the heavy truck tax was imposed on manufacturer sales, with generally good results. At that time, although as many as 1500 small trailer manufacturers were required to file returns, approximately 10 to 15 major manufacturers accounted for most of the sales revenue subject to the tax. Under this system, the IRS was able to target its enforcement efforts efficiently and taxpayers were generally well aware of their obligations. The 1982 change resulted in thousands of additional, generally smaller and less well-informed taxpayers, and less-focused enforcement efforts by the IRS.

In 1982, Congress changed the heavy truck tax because it was concerned that a manufacturers tax was likely to create a financial hardship for retail dealers who carry inventories of tax-paid trucks for long periods before the trucks are sold at retail. This concern may be less significant now because interest rates are much lower than at that time. The Committee should also note that a manufacturers tax on heavy trucks is not entirely free of administrative difficulties. In particular, the tax on subsequent additions of parts and accessories would apply much more frequently than under current law, offsetting to some extent the advantages of shifting the tax to the manufacturer.

If the proposal is adopted, certain conforming changes will be necessary. Under current law, the amount of tax is based on the retail sales price. If the tax is imposed on the manufacturer, the amount of tax should be based on the manufacturer's selling price and the tax rate should be increased to the extent necessary to avoid a revenue loss.

(b). Certain Activities Not Treated as Remanufacture

Administration Position. The meaning of "manufacture" is generally the same for purposes of the heavy truck excise tax as for all other manufacturers and retailers excise taxes. See Treas. Reg. §48.0-2(a)(4). In addition, however, the Code specifically provides that certain activities are not treated as manufacture for purposes of the heavy truck tax. We are willing to work with this Committee to develop appropriate bright-line tests in addition to those currently provided.

8. Consolidate Collection of Aviation Gasoline Excise Tax

Administration Position. **Support.** We believe that consolidation of the collection of the aviation gasoline excise tax at the terminal removal level, with the full 19.4 cents-per-gallon tax collected at that point, would improve efficiency and enforcement of the tax.

9. Expand Aviation Excise Tax Exemptions for Air Ambulances

Administration Position. **Oppose.** Aviation excise taxes support the Airport and Airway Trust Fund, which in turn provides funding for the maintenance and improvement of airports and airways. All users of airports and aviation services supported by the Airport and Airway Trust Fund should pay their appropriate share of the Fund's expenditures.

10. Reduce Harbor Maintenance Excise Tax

Administration Position. **Oppose.** The Administration is concerned that the proposed annual reductions in the ad valorem excise tax on cargos and passengers entering and leaving U.S. ports, followed by a rule that would trigger increases or decreases in the tax depending on the balance in the Harbor Maintenance Trust Fund, would be disruptive. The Administration has proposed that certain expenditures of the National Oceanic and Atmospheric Administration (NOAA) that aid commercial navigation be funded out of the Trust Fund. The Congress may want to consider funding construction projects out of the Trust Fund rather than the General Fund.

11. Reduce Ethanol Fuel Tax Subsidy if Carbon Dioxide Produced as a Byproduct is Marketed by the Producer

Administration Position. **Do not support.** Adjusting excise tax rates on gasohol to reflect the circumstances under which the ethanol contained in the mixture was produced would impose substantial complexities and administrative costs. The excise tax on gasohol cannot, as a practical matter, be set at a rate that varies according to the quantity of carbon dioxide produced and marketed as a byproduct of ethanol production. The tax is paid downstream from the ethanol producer; therefore, the taxpayer will have no way of knowing how much carbon dioxide may have been produced as a byproduct of any particular batch of ethanol and whether the producer of that ethanol directly marketed the carbon dioxide.

12. Provide a Lower Rate of Tax on Certain Hard Ciders

Administration Position. **Oppose.** The excise taxes imposed on a particular alcoholic beverage should be revised only in the context of a general review of alcoholic beverage excise tax

rates. The Committee should also be aware that some hard cider producers may object to the proposed change because they will lose part of the benefit of the credit for small domestic wine producers. For producers that currently receive the full credit, the tax would increase from 17 cents per gallon to 22.6 cents per gallon.

13. Wine Spirits -- Permit the Use of Other Agricultural Products

Administration Position. **Do not oppose, with modifications.** Under the proposal, the definition of wine spirits would be expanded to include spirits derived from agricultural wine (i.e., wine made from agricultural products other than fruit). Thus, agricultural products that currently are wasted could be used to make wine spirits to fortify nonstandard wines such as wine coolers.

To preserve the integrity of natural wine, the proposal should be clarified to provide that wine spirits made from agricultural products may not be used to fortify natural wine. In addition, to avoid inconsistency with the National Performance Review, which recommended repeal of the wine and flavor credit, the proposal should also be modified to provide that alcohol derived from agricultural products does not qualify for the credit.

14. Phased Repeal and Modifications of the Luxury Excise Tax on Automobiles

(a). Phase Out or Phase Down of Tax

Administration Position. **Oppose.** This proposal will have significant revenue costs. Congress decided in the Omnibus Budget Reconciliation Act of 1990 that it was appropriate to impose a tax on luxury automobiles for deficit reduction purposes. This decision was reaffirmed in OBRA 93, which repealed the taxes on other luxury goods and made minor changes to the luxury tax on automobiles. We believe it would be a mistake to revisit this issue.

(b). Exemption for Electric Cars

Administration Position. **Oppose.** Although the Administration supports limited tax incentives to encourage the use of electric automobiles, this proposal would provide an unlimited exemption from the luxury tax, unrelated to the additional cost attributable to the use of an electric propulsion system. This unlimited exemption is broader than necessary to encourage the use of electric automobiles and is inconsistent with the decision to raise revenues for deficit reduction purposes by imposing a tax on luxury automobiles.

15. Modifications to the Excise Tax on Ozone-Depleting Chemicals

(a). Exemption for Imported Recycled Chemicals

Administration Position. **Support, with modifications.** The Environmental Protection Agency is concerned that the tax imposed on imported recycled Halons, a group of ozone-depleting chemicals that the Montreal Protocol phased out of production at the end of 1993, is impeding the free flow of foreign stocks of recyclable Halons to essential uses in the United States. This may have adverse environmental consequences because foreign owners who are deprived of a market for recycled Halons will be more likely to vent unwanted Halons into the atmosphere.

The exemption for imported recycled ozone-depleting chemicals should be limited so as not to disadvantage domestic producers that are required to pay tax on the chemicals. Thus, we do not support an exemption for imports of chemicals other than Halons

so long as domestic production of those chemicals is permitted under the Montreal Protocol.

(b). Exemption for Metered-Dose Inhalers

Administration Position. **Oppose.** The use of ozone-depleting chemicals in metered-dose inhalers already enjoys a substantial tax advantage over all other uses of ozone-depleting chemicals. The base tax amount applicable to all other ozone-depleting chemicals is $5.35 per pound in 1995 and increases by 45 cents per pound in each year after 1995. The tax on chemicals used in metered-dose inhalers is permanently frozen at $1.67 per pound.

16. Exemption from Gas Guzzler Excise Tax for Limousines

Administration Position. **Oppose.** The Omnibus Budget Reconciliation Act of 1990 modified the treatment of limousines, including stretch limousines, to encourage a reduction in domestic consumption of petroleum products. In view of continuing concerns regarding the effects of inefficient fuel use on the environment and energy security, we do not think it is appropriate to modify the treatment of limousines at this time.

17. Allow In-Bond Transfers of Bottled Distilled Spirits Among Commonly Owned Distilled Spirits Plants

Administration Position. **Oppose.** The proposed change would adversely affect enforcement of the distilled spirits tax. The principal effect of the change would be to move the point at which tax is imposed downstream from the facility where the distilled spirits are produced. Currently there are approximately 117 tax collection points, but that number is likely to increase substantially if the collection point is moved downstream. This would greatly increase the administrative burden required for effective enforcement of the tax. In addition, permitting tax-free removals of bottled spirits, which can be more easily diverted than bulk spirits during a transfer, would provide increased opportunities for tax evasion.

The proposed change would result in revenue losses over the budget period because, in addition to increasing the potential for tax avoidance, it permits distillers to defer payment of taxes beyond the time at which payment would be required under current law.

18. Drawback of Distilled Spirits Tax on Spirits Used in Nonbeverage Products

Administration Position. **Oppose.** The current system for collecting the tax is simple and effective. It allows drawback of the tax only after distilled spirits have been used in a nonbeverage use, encourages accurate records, and avoids the need for controls to assure that distilled spirits withdrawn for a nonbeverage use are not subsequently diverted. The proposed change would reduce or negate these benefits and increase the potential for abuse and nonpayment of the tax.

The proposed change would result in revenue losses over the budget period because, in addition to increasing the potential for tax avoidance, it permits nonbeverage users to obtain the benefit of the drawback before the time at which the drawback would be allowed under current law.

R. **Exempt Organizations**

1. Treatment of Certain Costs of Private Foundation in Removing Hazardous Substances.

Administration Position. **Oppose.** This proposal would present an opportunity for inurement or private benefit. Taxpayers owning property that requires environmental clean-up would donate the property to a private foundation. The proposal would allow the foundation to use money it receives in the form of deductible contributions to pay for clean-up costs that the donor would otherwise have been forced to incur. These payments would not serve charitable purposes, and, therefore, should not be treated as qualifying distributions.

2. Prevent Reclassification as UBTI of Certain Dues Paid to Agricultural or Horticultural Organizations.

Administration Position. **Do not support.** This proposal would allow dues paid to a special category of tax-exempt organizations to avoid taxation as unrelated trade or business income regardless of whether the dues payments were related to the organization's tax-exempt purpose. There is no clear tax policy basis for treating section 501(c)(5) agricultural and horticultural organizations more favorably than section 501(c)(5) labor organizations, let alone organizations exempt under other parts of section 501(c). Moreover, this proposal would allow agricultural and horticultural organizations to run businesses that compete directly with for-profit entities but do not pay income tax simply because they label the business's income as membership dues.

3. Private Foundations

(a). Modify Rules for Private Foundation Grants to Foreign Organizations

Administration Position. **Do not oppose.** This proposal would simplify international grant-making by U.S. private foundations to certain foreign charities. Requiring private foundations to accept expenditure responsibility for such grants would provide adequate safeguards to ensure that the grant is properly classified as a qualifying distribution.

(b). Extend Due Date for First-Quarter Estimated Tax by Private Foundations

Administration Position. **Support.** Changing this due date will reduce the number of filing deadlines a private foundation must remember. It will also improve the foundation's ability to calculate its estimated tax liability accurately so as to avoid additions to tax.

4. Common Investment Fund for Private Foundations

Administration Position. **Do not oppose.** Such a fund would enable small private foundations to expand their investment capabilities by banding together and accepting grants of seed money from large private foundations. Presumably, such a fund would eventually increase the amount of resources available to serve charitable purposes. Allowing such a fund to be a tax-exempt charitable organization would be consistent with the exemption that the Code already provides for similar college and university common funds (section 501(f)).

5. Exclusion from UBIT for Corporate Sponsorship Payments Received by Tax-Exempt Organizations in Connection with Public Events

Administration Position. **Oppose.** This proposal would give tax-exempt organizations a competitive advantage over taxable enterprises in offering advertising to businesses. It would also favor large organizations that obtain sponsors for a single sizeable event once a year over smaller organizations that solicit corporate sponsors for several small fundraisers each year.

6. Repeal 1986 Extension of UBIT to Games of Chance

Administration Position. **Oppose.** Tax-exempt organizations are not necessarily furthering charitable purposes by regularly carrying on gambling activities. Thus, there is no tax policy justification for exempting income from such activities from the unrelated business income tax, especially where the exemption is available only in States that had laws permitting nonprofits to conduct gambling as of October 5, 1983. The decision made by a number of States to subsidize nonprofit organizations by granting them exclusive rights to conduct gambling activities does not affect the determination as to the proper federal income tax treatment of the proceeds from those activities.

7. Clarify UBIT Treatment of Licensing of Olympic Trademarks

Administration Position. **Do not oppose, if revised.** There is a need for additional guidance on the scope of the UBIT exception for royalties. However, it should apply to royalties received not only by qualified amateur sports organizations, but by all tax-exempt organizations. The proposed definition of "royalty" would include payments for which the right to use a trademark or similar item was a substantial part -- but not all -- of the consideration. This expansion of the definition would allow royalties to include income earned from unrelated trade or business activities conducted in direct competition with for-profit entities. We favor a proposal clarifying that the provision of certain types of services closely related to the use of a trademark or similar item will not cause a payment to cease to be a royalty.

8. Exception to Debt-Financed Rules (Sec. 514(c)(9)) For Private Foundation Debt to Improve Real Property

Administration Position. **Oppose.** The section 514(c)(9) exception to the debt-financed income rules was reviewed in 1993. There is no tax policy justification for creating an additional narrowly tailored category of organizations eligible to benefit from this exception.

9. Permit Tax-Free Liquidation of Certain Closely Held Corporations Whose Stock Is Given to Charity and Exempt Certain Assets from Section 514(c)(2) Debt Financed Rules

Administration Position. **Oppose.** In the wake of the repeal of General Utilities, the Treasury Department is studying the issues raised by conversions from taxable to tax-exempt status in a broader context than that presented by this proposal. We believe that these issues should be addressed on a comprehensive basis and not in response to discrete types of transactions.

The other aspect of the proposal concerns the debt-financed income rules. There is no tax policy basis for exempting a charity from UBIT on its income from debt-financed assets under these circumstances. Allowing charities to assume mortgages on property they receive not only as a bequest but also as a lifetime gift presents a significant opportunity for private

benefit, since it may be a means of improving a donor's personal credit position.

10. Allow Conversion of Scholarship Funding Corporation to Taxable Corporation

Administration Position. **Do not support.** The proposal would enable taxable, for-profit corporations to obtain the benefit of tax-exempt financing. The benefit is equal to the built-in arbitrage of the difference between the tax-exempt interest rates on the debt issued by the qualified scholarship funding corporations and comparable taxable interest rates. For-profit entities should not be entitled to such benefit. The proposal also creates an unwarranted exception to the excess business holdings rule. The excess business holdings rule was specifically created to prevent private foundations from controlling for-profit entities because there is the possibility that disqualified persons will use the foundation to run the business for their personal benefit rather than as a means of support for charitable purposes.

11. Treatment of Certain Amounts Received by Telephone Cooperatives

Administration Position. **Do not support.** This provision is inconsistent with the general tax treatment of cooperatives. It allows an organization to be treated as a tax-exempt cooperative even though it does not derive substantially all of its revenues from its members.

12. Clarify That Parent Holding Companies for Hospitals May Qualify as Public Charities Rather than Private Foundations

Administration Position. **Support.** The Administration supported this change as part of its proposal for health care reform. As health-care provider systems become increasingly sophisticated, it is common for them to form a nonprofit parent organization that coordinates and oversees the activities of the system as a whole. For the same reasons that a supporting organization is treated as a public charity rather than a private foundation, a health system parent organization that meets the criteria for tax exemption under section 501(c)(3) also should be treated as a public charity. This proposed addition to section 509(a) will eliminate technical questions that currently arise because the supporting organizations described in section 509(a)(3) have traditionally been expected to be subsidiaries of public charities rather than parents.

13. Treatment of Rural Electric Cooperatives

Administration Position. **Oppose.** The proposal is inconsistent with the general tax treatment of cooperatives and raises administrative concerns. It allows an organization to be treated as a tax-exempt cooperative even though it does not derive substantially all of its revenues from its members.

14. Codify IRS Directive Governing Calculation of UBIT Liability from Charitable Gambling

Administration Position. **Oppose.** Tax-exempt organizations are not necessarily furthering exempt purposes by regularly carrying on gambling activities. Therefore, they should be subject to unrelated business income tax on the profits from such activities. This fundamental principle is not affected by the legal rationale that enables certain non-charitable tax-exempt organizations to take a deduction for the mandatory contribution of their gambling profits to charity. Nor is it affected by the decision of a number of States to subsidize nonprofit organizations by granting them exclusive rights to conduct gambling activities. Finally, appropriate policy on this legal

question should not be tied to an IRS enforcement directive designed to allow for efficient administration of an IRS audit program.

15. Extend Private Inurement Rule to Section 501(c)(4) Organizations

Administration Position. **Support.** Current restructuring in the health care market is providing greater opportunities for insiders of nonprofit health care organizations to divert the resources of these organizations to their personal benefit. Under current law, health care organizations that want to avoid the inurement prohibition that applies to organizations exempt from tax under section 501(c)(3) may seek tax exemption under section 501(c)(4). Extending the prohibition against inurement to section 501(c)(4) organizations would deter insiders from seeking to take advantage of the restructuring of nonprofit health care organizations for their personal gain.

16. Permit Certain Corporate Conversions to Tax-Exempt Title Holding Company Without Asset Appreciation Tax Where Corporation is Wholly Owned by Tax-Exempt Entity that Received Stock as a Gift or Bequest

Administration position. **Oppose.** In the wake of the repeal of General Utilities, the Treasury Department is studying the issues raised by conversions from taxable to tax-exempt status in a broader context than that presented by this particular proposal. We believe that these issues should be addressed on a comprehensive basis and not in response to discrete types of transactions as contemplated by this proposal.

S. FINANCIAL INSTITUTIONS

1. Delete OBRA 1993 Denial of Losses Reimbursed by FSLIC Assistance for Failed Thrifts

Administration Position. **Oppose.** There is no tax policy justification for repealing this provision, which the Treasury concluded in a 1991 study was a clarification of existing law. Repeal would likely result in additional IRS and taxpayer resources being devoted to resolution of the issue.

2. Treat Small Commercial Finance Companies as Small Banks for Bad Debt Reserve Deductions

Administration Position. **Oppose.** The reserve method of accounting may allow taxpayers to claim deductions before a loss is realized. Treasury is studying the various tax and regulatory treatments of financial intermediaries and financial products. Any disparities in treatment of financial intermediaries operating similar businesses are more appropriately considered in the context of these larger issues.

T. Foreign

1. Increase in Section 911 Exclusion from $70,000 to $100,000 With Indexing

Administration Position. **Oppose.** The current exemption of $70,000 provides substantial simplification in tax filing for workers earning modest salaries abroad. Increasing the exclusion from $70,000 to $100,000 would not be appropriate in the context of our efforts to reduce the budget deficit.

2. Repeal of Limitation on Foreign Sales Corporation Exemption for Military Property

Administration Position. **Do not support.** At present, exports of military property through a foreign sales corporation (FSC) are entitled to only 50 percent of the FSC benefits that are available for other exports. Military property is defined as an arm, ammunition, or instrument of war designated in the Munitions List, established pursuant to 22 U.S.C. 2778. If Congress finds that U.S. exports of military property, either generally or specific items of military property, are facing increased competition, then it may be appropriate to repeal or partially repeal this limitation.

3. Inclusion of Computer Software as Foreign Sales Corporation Export Property

Administration Position. **Do not oppose.** Under current law, films, tapes, and records licensed for reproduction abroad qualify as export property for purposes of the foreign sales corporation provisions. However, technological developments are making the distinction between films, records, tapes and computer software less clear. Therefore, we would not oppose an extension of foreign sales corporation benefits to computer software licensed for reproduction abroad.

4. Recharacterization of Overall Domestic Loss for Foreign Tax Credit Limitation Purposes

Administration Position. **Do not support.** Allowing taxpayers to recharacterize overall domestic losses is expensive and complex and is not theoretically justified. Taxpayers can choose to defer certain foreign earnings while realizing foreign losses. Therefore, it is appropriate to require taxpayers who offset U.S. source income with foreign losses to recapture those losses out of future foreign earnings. The current overall foreign loss rules are necessary to prevent abuses, and should not necessarily be mirrored for domestic losses.

5. Election to Use Earnings and Profits Basis for Allocation of Interest Expense for Foreign Tax Credit Limitation Purposes

Administration Position. **Do not support.** This provision is intended to eliminate the disparity in the interest allocation regulations between the basis of foreign assets, computed under special U.S. rules that apply to foreign assets, and the basis of U.S. assets, computed under general U.S. rules. In particular, the accelerated depreciation allowed for U.S. assets tends to diminish their basis for purposes of interest allocation, while foreign assets are generally depreciated using straight-line depreciation. Using E&P basis would synchronize the computation of basis for U.S. and foreign assets. There are two significant problems, however. First, accelerated depreciation already provides taxpayers with substantial tax benefits; allowing taxpayers to use straight-line depreciation for interest allocation may be seen as providing an unwarranted additional benefit. Second, the proposal introduces additional complexity into an already complex area, as taxpayers would have to compute an E&P basis for each asset, along with the tax basis.

6. Extension and Modification of Special Allocation of Research and Experimental Expenditures to U.S. Source Income for Foreign Tax Credit Limitation Purposes

Administration Position. **Support permanent extension at 50 percent.** This proposal is similar to section 864(f) of the Internal Revenue Code, which generally expired on December 31, 1994. It differs from current section 864(f) in that it would increase the 50 percent exclusive apportionment percentage of

section 864(f) to 64 percent. This proposal would also allow a taxpayer to elect not to utilize the place of performance rule under the sales method. As stated in the President's fiscal year 1996 budget, the Administration supports the permanent revenue-neutral extension of current section 864(f), which provides a 50 percent exclusive apportionment percentage. The Administration does not oppose the election to waive the place of performance rule under the sales method. However, the Administration does not support increasing the exclusive apportionment percentage to 64 percent.

7. Repeal Foreign Tax Credit Basket for "10/50" Noncontrolled Corporations

Administration Position. **Oppose.** The proposal offers taxpayers an inappropriate opportunity to average foreign tax rates on different types of income earned through different 10/50 companies and also effectively applies an election (on a company-by-company basis) to apply a "look-through" approach. The proposal opens even more opportunities for abuse than would pure look-through. Although the Administration opposes this proposal, it is generally sympathetic to the burdens presented by the 10/50 basket and therefore does not oppose the alternative 10/50 proposal at item T.14., below.

8. Extension of Period to Which Excess Foreign Tax Credit May Be Carried

Administration Position: **Do not support.** The reason the Code permits the carryover of foreign taxes is that foreign and domestic tax accounting rules may differ, resulting in income being taxed in the United States and a foreign country in different years. The current carryover periods generally are appropriate to account for these differences. Moreover, the availability of deferral effectively allows taxpayers to choose when to begin the carryover periods. Extension of the carryforward period to 15 years would permit inappropriate averaging of high- and low-taxed foreign source income, which the foreign tax credit rules generally seek to limit. It also would have significant revenue losses outside the revenue-estimating window.

9. Expansion of De Minimis Exception to Subpart F Income Treatment

Administration Position. **Do not support.** The proposal would raise the ceiling of the subpart F de minimis exception from 5 to 10 percent and eliminate the $1 million limit of current law. The Administration would be pleased to work with the Committee to consider alternative methods of revising the de minimis exception in order to simplify the operation of subpart F. However, we believe that any exception should contain a dollar limit, as well as a percentage limit, to avoid excessive deferral of U.S. tax on income not subject to substantial foreign taxation.

10. Treatment of Foreign Base Company Sales and Services Income of Controlled Foreign Corporations in the European Union

Administration Position. **Oppose.** Although the European Union is moving towards economic integration, the lack of direct tax harmonization creates inappropriate tax-planning opportunities. For example, the proposal would exempt income from taxation under subpart F even where it is subject to little or no foreign tax. Therefore, the European Union should not be treated as a single country for subpart F purposes at this point.

11. Exclusion of Foreign Base Company Shipping Income From Subpart F Income for Certain Controlled Foreign Corporations

Administration Position. **Oppose.** The proposal would reinstate prior law provisions granting deferral for certain shipping income. The Administration believes that the concerns regarding the absence of tax on such income, which motivated the Congress to curtail deferral in 1986, remain valid.

12. Limit Application of UNICAP Rules to Foreign Persons

Administration Position. **Do not oppose.** As we understand the proposal, it would exempt foreign persons from the uniform capitalization requirements of current law, except with respect to their U.S. effectively connected income and their subpart F income. Although this proposal would yield results that are somewhat less accurate from a theoretical perspective, we believe that it could achieve significant simplification for affected taxpayers.

13. Reporting of Foreign Corporation Earnings and Profits on a U.S. GAAP Basis

Administration Position. **Do not support.** Generally accepted accounting principles ("GAAP") are determined by the Financial Accounting Standards Board. In the interest of protecting shareholders and other stakeholders from aggressive accounting practices, GAAP earnings tend to accelerate losses and defer income. We believe, therefore, that it would be inappropriate to delegate the function of determining the amount of income to be picked up by controlled foreign corporations to an administrative body the interests of which may run counter to the tax system. However, we would be willing to work to with the Committee in an effort to identify limited opportunities where GAAP could be used to achieve simplification without adverse revenue consequences.

14. Permit Shareholder of a "10/50" Corporation to Elect to Treat It as a CFC for Foreign Tax Credit and Subpart F Purposes

Administration Position: **Do not oppose.** This proposal is a reasonable way to simplify the 10/50 basket rules. The proposal's coupling of foreign tax credit and subpart F consequences is consistent with Congressional intent as evidenced by the legislative history of the 10/50 rule (enacted in 1986). That legislative history indicates a Congressional belief that a multiple separate-basket approach for 10/50 corporation dividends was appropriate, because 10/50 corporations, unlike CFCs, could not be considered part of the same economic unit as the U.S. shareholder. It would be consistent with this legislative history, however, to permit single-economic-unit (i.e., CFC) treatment for foreign tax credit purposes, if the taxpayers are required to apply CFC treatment for subpart F purposes as well.

The bill's consistency rule may preclude certain taxpayers from making the CFC election if they cannot obtain sufficient data from one or two 10/50 companies to apply the look-through or subpart F rules (e.g., due to substantial majority foreign ownership). The consistency rule properly prevents taxpayers from electing CFC treatment only with respect to 10/50 corporations that have, for example, no subpart F income. Treasury would be pleased to work with the Committee to consider other alternative reforms of the 10/50 basket rules if it appears that a consistency rule would limit too severely the utility of a CFC election.

15. Increase in Reporting Threshold for Stock Ownership of a Foreign Corporation

Administration Position. **Do not oppose.** Although the basic corporate information collected under section 6046 is valuable, the Administration believes that raising the reporting threshold to 10 percent would not significantly jeopardize that interest and would ease the filing burden of U.S. shareholders holding minority interests.

16. Modification of Excess Passive Assets Provision for Corporations with Active Financing Income

Administration Position. **Oppose.** The Administration believes that this proposal creates significant administrative difficulties because it differentiates between "active" financing income and "passive" income outside the context of regulated entities that qualify for the existing banking, insurance and securities exemptions. We believe that this line is very difficult to draw. Moreover, this form of relief is inappropriate because it treats corporations differently depending on the manner in which they finance their businesses, not on the basis of how active those businesses are.

17. Exception from Foreign Personal Holding Company Income and Foreign Base Company Services Income for Active Financing Income

Administration Position. **Oppose.** The proposal would reinstate, with modifications, pre-1987 law provisions granting deferral for certain income derived in the active conduct of a banking, financing, or similar business or from certain investments made by insurance companies. The Administration believes that the concerns regarding the mobility of this income, which motivated the Congress to eliminate or curtail deferral for such income in 1986, remain valid.

18. Repeal of Excess Passive Assets Provision and Modification of Passive Foreign Investment Company Provisions

Administration Position. **Oppose.** The proposal would eliminate the excess passive assets provision and modifications to the passive foreign investment company assets test that were enacted in 1993 to prevent controlled foreign corporations from deferring tax indefinitely, as they were able to do before 1993 by managing their passive income and assets so as to avoid the passive foreign investment company thresholds. The third alternative proposal regarding passive foreign investment companies would make it even easier for a corporation to avoid treatment as a passive foreign investment company. In addition, the proposal to exempt controlled foreign corporations from the passive foreign investment company rules would allow less than 10-percent shareholders to achieve unlimited deferral of taxation on passive income. The Administration believes that the concerns regarding the ability of investors in foreign corporations to achieve unlimited deferral through the accumulation of passive assets abroad, which led to the passage of the passive foreign investment company rules in 1986 and the excess passive assets provision in 1993, remain valid.

19. Exemption of United States Shareholders of Controlled Foreign Corporations from Passive Foreign Investment Company Provisions

Administration Position. **Do not oppose.** The Administration believes that it may be possible to exempt the 10-percent United States shareholders of controlled foreign corporations from the passive foreign investment company provisions of the Code. We believe that this proposal could simplify the anti-deferral

provisions of current law without significant detriment to the policy concerns underlying those provisions, because the provisions added to subpart F in 1993 now inhibit the accumulation by controlled foreign corporations of excessive passive assets abroad, as the asset test does in the case of passive foreign investment companies.

20. Valuation of Assets of a Controlled Foreign Corporation under the Passive Foreign Investment Company and Excess Passive Assets Provisions

Administration Position. **Oppose.** We understand that the proposal is intended to benefit certain service companies that have substantial amounts of self-generated intangibles. Because it applies only to the extremely small number of controlled foreign corporations whose stock is publicly traded, it would not, however, benefit the vast majority of foreign service corporations. In addition, the proposal raises substantial problems, as well as associated administrative burdens, in determining valuations on an on-going basis.

21. Exempt Certain Income Derived by Insurance Brokers or Agents from PFIC Rules

Administration Position. **Oppose.** It is unclear that the situation of insurance brokers and agents is more similar to that of banks, insurance companies, and securities dealers, to whom the Congress has granted limited exceptions from the passive foreign investment company rules, than to that of service companies, to whom the Congress has not granted any exception. Moreover, the Administration believes that the proposed exemption is broader than necessary to achieve the stated purpose of treating insurance brokers and agents in a manner comparable to banks, insurance companies, and securities dealers. As drafted in H.R. 4626 (103rd Congress), the proposal would treat insurance brokers and agents more favorably.

22. Prizes and Awards Received from a Foreign Payor by a Nonresident Alien Relating to Competitions Held in the United States and Not Treated as Foreign Source Income

Administration Position. The staff of the Ways & Means Committee has advised Treasury that the explanation of this provision in the JCT pamphlet is incorrect. Treasury understands that this provision relates to compensation received by nonresident aliens in connection with Olympic competitions held in the United States. Treasury is concerned about creating a tax exemption for commercial activities related to the Olympics. However, Treasury is prepared to work with the Committee to ensure that the tax laws do not create an impediment to holding the Olympics in the United States.

23. Exempt Service Income of a Nonresident Alien Earned on International Ships or Aircraft from U.S. Tax

Administration Position. **Do not support.** Income earned within the United States should be subject to U.S. tax. Treasury would be willing to work with the Committee in order to evaluate whether the method of withholding tax applicable to international crew members is appropriate to the circumstances of international shipping.

The proposal also would exclude certain days spent within U.S. territory for purposes of determining residency under the substantial presence test of section 7701; this proposal is not acceptable as described. Treasury would be willing to work with the Committee in order to identify the proper residence status for tax purposes of alien individuals who do not enter the United States for purposes of immigration law.

24. Repeal Portfolio Interest Exemption

Administration Position. **Oppose.** Repealing the portfolio interest exemption would substantially increase the cost of government and corporate borrowing in international markets.

25. Exempt Certain Short-Term OID Obligations Held by a Non-Resident Alien from U.S. Estate Tax

Administration Position. **Support.** As we understand it, the proposal would extend the estate tax exemption for OID obligations held by nonresidents who are not U.S. citizens to include certain short-term OID obligations described in Code section 871(g)(1)(B)(i). This would conform the estate and income tax treatment of such obligations and remove a disincentive to purchase them.

26. Carryover of Excess Possession Tax Credit

Administration Position. **Do not support.** We do not support the proposal because the carryback of the excess possession credit would provide a windfall for taxpayers. The economic activity limitation is intended to increase possession employment and investment. A carryforward of excess possession credit might have that effect, but a carryback would not.

27. Pass-Through Treatment for Certain Dividends Paid by a Regulated Investment Company ("RIC") to Foreign Persons

Administration Position. **Do not oppose in part.** We do not oppose the provisions of the proposal that would treat RIC dividends as "interest-related dividends" to the extent attributable to interest income that would be exempt from U.S. tax if earned directly by a foreign person or as "short-term capital gain dividends" to the extent attributable to the excess of short-term capital gains over long-term capital losses. We also do not oppose the proposed treatment of RIC shares for estate tax purposes with respect to the estates of decedents dying after the date of enactment, except to the extent described below relating to "taxable interest dividends." We believe that these provisions will enhance the ability of U.S. mutual funds to attract foreign investors and eliminate needless complications now associated with the structuring of vehicles for foreign investment in U.S. securities.

However, we oppose the provision that would treat RIC dividends as "taxable interest dividends" to the extent attributable to interest income that would be taxable if earned directly by a foreign person. This provision would unilaterally extend to foreign investors in RICs the benefits of the reduced withholding rates for interest and estate tax treatment provided in our income and estate tax treaties, with no guarantee that comparable benefits will be provided for U.S. investors by our treaty partners.

28. Consolidate Income and Loss of Same Country Foreign Corporations That Elect To Be Taxed as Domestic Insurance Companies

Administration Position. **Oppose.** Current law provides specific "chain deficit" rules permitting U.S. shareholders of controlled foreign corporations in a chain to consolidate their income and loss from qualified activities, including insurance, in appropriate circumstances. Additional relief for certain insurance companies does not appear necessary or appropriate.

U. HOUSING COOPERATIVES

1. Tax Relief for Housing Coops on Interest on Reasonable Reserves and Income from Laundries and Parking; for Limited Equity Coops, Tax Relief for Commercial Rentals

Administration Position. **Do not support.** Although it may be appropriate to treat income from parking and laundry facilities (attributable to use by tenant-stockholders and their guests) as patronage-sourced, interest on reserves and rental income should not be treated as patronage-sourced.

2. Treatment of Coops Owning Only Land

Administration Position. **Do not oppose, if prospective.** The Administration is not aware of any reason why land cooperatives should not be entitled to the same treatment as housing cooperatives. However, the retroactive effective date (to December 31, 1987) is not appropriate.

V. INSURANCE

1. Treatment of Salvage and Subrogation of Property and Casualty Insurance Companies

Administration Position. **Do not oppose.** The Administration does not oppose a proposal that alters the statutory language contained in the 1990 Act to clarify Congressional intent.

2. Health Organizations Eligible for Benefits of Section 833

Administration Position. **Do not support.** Blue Cross/Blue Shield organizations receive special tax treatment that was granted in their transition to taxable status. These tax benefits include, among others, a special deduction, and the elimination of the 20 percent reduction in unearned premium reserves that applies generally to all property and casualty insurance companies. The scope of these special tax benefits should not be expanded on a retroactive basis.

3. Treatment of Certain Gains and Losses of Life Insurance Companies Under Section 818(b)

Administration Position. **Do not support.** Although life insurance companies do not get the benefit of section 1231 for depreciable property used in connection with a non-insurance business, this is one of the many features of the taxation of life insurance companies that do not conform to the taxation of non-insurance businesses. Any change in the taxation of life insurance companies should be considered in connection with the overall scheme of life insurance company taxation. In addition, the proposal would add complexity to the law by segregating the loss into capital and ordinary components on a percentage basis and allowing the ordinary portion to be deductible over five years.

4. Treatment of Certain Charitable Risk Pools

Administration Position. The laws of at least one State provide for the organization of charitable risk pools that provide insurance coverage to charitable organizations that are members of the pool. The courts have held that these charitable risk pools do not qualify for tax exemption under sections 501(c)(3) or 501(m).

The Administration would not oppose a provision under which a charitable risk pool could qualify as a section 501(c)(3)

organization, notwithstanding section 501(m), provided that the charitable risk pool receives a sufficient amount of contributions from non-members that it uses to subsidize the coverage provided to members. The Administration believes that, in the absence of such subsidized coverage, the operations of a charitable risk pool would be virtually identical to a mutual insurance company, and as such should be subject to tax in accordance with the policies underlying section 501(m).

5. <u>Deduction for Small Property and Casualty Insurance Companies</u>

<u>Administration Position</u>. **Oppose.** The proposal would provide an additional tax-induced distortion favoring the sale of insurance through small firms, lose significant revenues, and create substantial additional complexity in the Code. Under present law, property and casualty insurance companies with net written premiums (or, if greater, direct written premiums) that do not exceed $350,000 are exempt from federal income tax. In addition, a property and casualty insurance company may elect to be taxed solely on taxable investment income for any taxable year its net written premiums (or, if greater, direct written premiums) exceed $350,000 but do not exceed $1.2 million. A special deduction for small property and casualty insurance companies in addition to the tax benefits available to these insurers under existing law is not necessary.

6. <u>Treatment of Deposits Under Certain Perpetual Insurance Policies</u>

<u>Administration Position</u>. **Oppose.** Under a perpetual insurance contract, a policyholder deposits a one-time payment with the insurer in return for casualty insurance that is provided until the policy is canceled and the deposit is refunded to the policyholder. The policyholder generally may cancel the insurance at any time. The investment earnings on the deposit are retained by the insurer to fund insurance costs. If a purchase of a perpetual insurance contract is not treated as a below-market loan, the policyholder avoids tax on the interest earned on the deposit, allowing casualty insurance to be purchased with pre-tax dollars.

7. <u>Extend Section 130 Exclusion to Structured Settlements for Workmen's Compensation Payments</u>

<u>Administration Position</u>. **Do not oppose.** There appears to be no policy justification, apart from revenue considerations, for allowing less favorable tax treatment for work-related physical injury claims than other physical injury claims.

8. <u>Treatment of Certain Small Property Casualty Insurance Companies Under the Alternative Minimum Tax</u>

<u>Administration Position</u>. **Oppose.** Applying the small company election to be taxed solely on taxable investment income in calculating alternative minimum tax liability would subvert the goal of the alternative minimum tax to measure the economic income of companies and impose some tax on that income. In addition, piecemeal amendments to the alternative minimum tax is not desirable. Any revisions should be evaluated in the context of overall simplification of the alternative minimum tax.

9. <u>Tax Treatment of Consolidations of Life Insurance Departments of Mutual Savings Banks</u>

<u>Administration Position</u>. **Do not oppose.** The Administration does not oppose this proposal as long as it is limited to consolidation of life insurance departments of mutual savings banks under section 594 under requirement of State law, the provision applies only if policyholders have no rights to surplus

and no voting rights prior to the consolidation, and their approval was not required in order for the consolidation to occur.

10. Extend Section 832(e) to Financial Guarantee Insurance

Administration Position. This proposal does not raise a significant federal income tax issue, but instead relates primarily to regulatory matters. Because a company that claims a deduction under section 832(e) must purchase "tax and loss", noninterest-bearing federal government bonds equal to the amount of the tax savings attributable to the deduction, the amount that the company pays the government in a given year is the same regardless of whether it claims the deduction. The principal effect of the provision is to allow the company to report an asset for regulatory purposes as a result of the payment.

11. Increased Dollar Limits for Burial Insurance

Administration Position. **Do not oppose.** Apart from revenue considerations, it may be appropriate to increase the dollar limits applicable in the case of an insurance contract to cover payments of burial expenses or in connection with prearranged funeral expenses to reflect inflation.

12. Foreign Companies Carrying on Insurance Business

Administration Position. **Do not oppose, subject to provision of a prospective effective date.** Although we do not believe that the provisions of current law violate our treaty obligations, we believe the proposed amendments, effective prospectively, could improve the operation of the statute.

W. LOW-INCOME HOUSING

1. Provide 15-year Depreciation and Other Tax Incentives to Encourage the Preservation of Low-Income Housing

Administration Position. **Oppose.** Generous tax advantages, including substantial credits and relief from the passive loss rules, already exist for low-income housing. Shortening the depreciable life to 15 years, doubling the exception to the passive loss rules (from $25,000 to $50,000), and reducing the depreciable life for AMT purposes (from 40 years to 15 years) are not justified at this time.

2. Low-Income Housing Credit Provisions

(a). Allow HOME Funds To Be Used with 91% Credit

Administration Position. **Oppose.** Given the ceiling on tax credits, current law restrictions on combining federal subsidies are reasonable.

(b). Expand Community Service Area Costs Eligible for Credit

Administration Position. **Do not oppose, with modifications.** The low-income housing tax credit is a credit for housing and functionally related facilities. While there may be some justification for extending the credit to certain community service buildings, this proposal might allow financing of commercial-type facilities that allow as much as 49% of the use to be for persons other than residents. Any extension of the credit should provide a more targeted definition of community service buildings and use by residents.

(c). Change State Credit Authority Limitation Stacking Rule

Administration Position. **Do not support.** This change would effectively allow States to carry over unused authority for an unlimited period. Although this change should have little revenue impact, it could significantly reduce the flow of credits to the national pool. This could result in an inefficient use of the credit by benefiting States that could not use all of their credit authority at the expense of the States that did use all of their credit authority.

(d). Expand Credit to Lead Paint Removal

Administration Position. **Do not support.** The low-income housing tax credit is a credit for housing targeted to serve low income persons. It is an inappropriate vehicle to provide incentives for removal of lead paint in older buildings.

(e). Expand Credit to Certain Cooperative Housing

Administration Position. **Do not support.** The low-income housing tax credit was enacted to increase the stock of rental housing for low income families and individuals. Extending the credit to owner-occupied housing would dilute the goal of increasing rental property.

X. PARTNERSHIPS

1. Permanent Extension of Publicly Traded Partnership Grandfather Rule

Administration Position. **Oppose.** The effective date provisions of section 7704 provided existing partnerships with a generous 10-year period for preparing to comply with Section 7704. The debate regarding the effective date provisions of Section 7704 should not be reopened.

Y. PASSIVE LOSSES

1. Modify the Application of Passive Loss Rules to Timber Activities

Administration Position. **Do not support.** The current regulatory limitations on the facts-and-circumstances test for material participation are rules of administrative convenience designed to prevent disputes when there is little chance the taxpayer will prevail. Although the elimination of these limitations may increase the number of disputes between the Internal Revenue Service and taxpayers, taxpayers who are precluded from using the facts-and-circumstances test under current law (for example, because they do not participate in an activity for more than 100 hours) will still find it very difficult to establish, based on all the facts and circumstances, that their participation is regular, continuous, and substantial.

2. Modify the Application of Passive Loss Rules to Farming Activities

Administration Position. **Do not support.** The Administration position on this proposal is the same as its position on the similar proposal to modify the application of the passive loss rules to timber activities.

Z. PASS-THROUGH ENTITIES

1. Subchapter S Reform Proposals to Expand Availability of Subchapter S and Improve Its Operation

Administration Position. The Administration supports the goal of providing small business with needed S corporation reform and simplification. The Administration also supports many of the technical and administrative provisions of the proposals, such as increasing the number of shareholders from 35 to 50. We are concerned, however, that certain provisions of the proposals may unintentionally create undue complexity and provide increased opportunities for large taxable C corporations to escape corporate taxation by electing S corporation status. This seems to be an inappropriate consequence of proposals intended to benefit small businesses. We would be pleased to work with the Committee to produce a revenue-neutral reform package that is more precisely targeted to small business and does not introduce additional complexity into the Code.

There have been two recent developments that should strongly influence the shape of any S corporation reform. First, limited liability companies ("LLCs") have emerged as a tremendously popular alternative to S corporations. LLCs combine the flexibility of a partnership for tax purposes with the liability protection of an S corporation. LLCs, like S corporations and other forms of partnerships, are generally not subject to tax; the results of their operations flow through to the owners. Virtually all States have enacted some form of LLC legislation and, for most new enterprises seeking extended flow-through treatment, an LLC will likely become the preferred entity. Thus, as we consider S corporation reform, we should keep in mind that it can be expected generally to benefit only certain existing businesses.

Second, Treasury and the IRS have recently proposed a "check-the-box" system that would allow LLCs and other unincorporated entities to elect to be treated as partnerships for tax purposes simply by checking a box. This check-the-box system has been generally praised by taxpayers and tax practitioners. However, it would not apply to enterprises formed as corporations. We do not have the authority to extend the check-the-box system to non-publicly traded corporations -- large or small -- including S corporations.

In light of these developments, we believe that, as an alternative to some of the proposals, we should consider allowing, at least for a limited period of time, certain S corporations to convert to a partnership on a tax-free basis under prescribed circumstances. There are currently several practical limitations on an S corporation's ability to convert to a partnership. In particular, such a conversion generally results in a tax liability that may be too steep a price for many S corporations to pay, as well as various transaction costs (lawyer and accountant fees, State transfer taxes, etc.). If adopted, this proposal would eliminate or reduce the tax cost of the conversion and enable certain S corporations to elect the more flexible partnership treatment.

As part of this proposal, consideration should be given to whether it would be appropriate to grant Treasury authority to extend the check-the-box proposal to converting S corporations. If Congress were to do so, we would be authorized to issue regulations that would allow S corporations to continue their existing corporate status while converting to partnership treatment for federal tax purposes. As a result, S corporations that wanted to be treated as a partnership for federal tax purposes would simply file an election to be treated as a flow-

through partnership, rather than actually having to transfer assets to a new partnership entity. This proposal would enable S corporations to achieve partnership tax treatment without incurring the transaction costs involved in actually converting to a partnership (including an LLC).

Finally, the dual concerns of providing appropriate revenue offsets to this proposal and targeting it to small business suggest that we explore another possible S corporation reform. Specifically, we should consider whether it is advisable to conform the tax treatment of the conversion of large existing C corporations to S corporations with the treatment of their conversion to a partnership (including an LLC). This proposal (as applied to all converting C corporations, not just large C corporations) was suggested by the Joint Committee on Taxation in 1990 as part of an earlier simplification package. The Joint Committee recommended that "a shift from C corporation status to passthrough entity status where the passthrough entity is an S corporation [be] conformed to the present-law treatment where the passthrough entity is a partnership." See letter to Chairman Dan Rostenkowski from Ronald A. Pearlman, Chief of Staff of the Joint Committee on Taxation, reprinted in Committee on Ways and Means, Written Proposals on Tax Simplification, WMCP 101-27, May 25, 1990, p.20. Currently, electing S status rather than converting to a partnership generally enables large C corporations -- corporations that would not meet anyone's definition of small business -- to escape most corporate taxes. In light of the recent developments discussed above, now may be an appropriate time to review the Joint Committee's proposal.

2. Subchapter S Corporations Eligible for Rules Applicable to Real Property Subdivided for Sale by Noncorporate Taxpayers

Administration Position. **Oppose.** The proposal would extend section 1237 treatment to S corporations and thereby equalize the treatment of S corporations and partnerships with regard to the sale of certain subdivided real property. The proposal, however, is to be effective for sales after January 1, 1992 and to sales before January 1, 1992 for purposes of characterizing post-1991 sales as falling under section 1237. While the Administration is generally sympathetic to equalizing the treatment of S corporations and partnerships, we oppose the proposal on the basis of this effective-date provision.

3. Treatment of Financial Asset Securitization Investment Trusts (FASITS)

Administration Position. **Do not oppose, with modifications.** The Administration did not support a similar proposal introduced in 1993. Since 1993, the proposal has been improved significantly. We still have concerns, however, about the complexity of the proposal and whether the safe harbor treatment of debt securities allows equity-like interests to be treated as debt. In addition, we have concerns about creating another special purpose tax entity rather than improving or expanding existing law. Finally, we are concerned about potential revenue losses outside the budget window. We believe that this proposal should be considered in the context of Treasury's study of the treatment of financial instruments and entities engaged in financial services transactions.

4. Treatment of Tax-Exempt Municipal Investment Conduits (TEMICS)

Administration Position. **Do not support.** We are not aware of the need for this proposal, which would introduce significant complexity into the tax law.

5. Modification of Rules For Real Estate Investment Trusts (REITS)

Administration Position. **Do not support.** The Administration is sympathetic to arguments that there are technical problems with the current REIT rules in the tax law. We are concerned, however, with the way this proposal addresses those problems. We look forward to working with the Committee to resolve these issues in an appropriate and revenue-neutral manner. We believe that the proposal should be considered in the context of Treasury's study of the treatment of financial instruments and entities engaged in financial services transactions.

6. Allow Bank Common Trust Funds To Be Transferred to More than One Mutual Fund without Taxing Trust Beneficiaries

Administration Position. **Do not oppose, with modifications.** This proposal would allow smaller banks that lack sufficient funds to create proprietary mutual funds to transfer their common trust funds to one or more larger mutual funds. We support this goal. We have, however, significant concerns about the complexity and effectiveness of the basis-pooling rules, and believe that this part of the proposal should be substantially revised.

AA. PEACE TAX FUND

1. Establish U.S. Peace Fund to Receive Conscientious Objectors' Income, Estate, or Gift Tax Payments To Be Used Only for WIC, Head Start, U.S. Institute of Peace, and Peace Corps

Administration Position. **Oppose.** The proposal would provide one category of individuals with more direct say over the way the government spends tax dollars, as opposed to the influence all taxpayers exert through the normal political processes and the ballot box. In this regard, it is similar to the provision in H.R. 1215 which we oppose regarding a Public Debt Reduction Trust Fund. The proposal also presents significant administrative problems.

BB. PENSIONS AND EMPLOYEE BENEFITS

A. PENSIONS

1. Nondiscrimination Rules

(a). Repeal Special Nondiscrimination Tests for Qualified Cash or Deferred Arrangements

Administration Position. **Oppose.** We oppose the repeal of the special nondiscrimination tests for qualified cash or deferred arrangements (known as the ADP test) and for employer matching contributions and employee after-tax contributions (known as the ACP test). These tests protect nonhighly compensated employees under a 401(k) or 401(m) arrangement by ensuring that they receive reasonable contributions (as a percentage of compensation) compared to highly compensated employees. However, the ADP and ACP tests, including the related correction procedures, can be complicated and costly to administer. The Administration's pension simplification package has proposed a simple "safe harbor" alternative that allows employers to avoid all ADP and ACP testing but that also protects nonhighly compensated employees. These design-based safe harbors -- which would apply both for 401(k) plans and for the Administration's proposed simple plan for small employers, the NEST (for National Employee Savings Trust) -- consist mainly of employer matching

and nonmatching contributions designed to increase the likelihood that nonhighly compensated employees will have meaningful contributions.

(b). Modify Definition of Highly Compensated Employee to Eliminate 1-Officer Rule

Administration Position. **Support.** H.R. 3419 defines a highly compensated employee (HCE) as any employee who is a more-than-5 percent owner of the employer or who earns more than $50,000 ($66,000 as adjusted in 1995 for cost of living). The proposal would eliminate the additional rule in H.R. 3419 that, if no employee is an HCE under this definition, then the highest-paid officer is treated as an HCE. In its pension simplification package, the Administration has proposed to define an HCE simply as any employee who is a more-than-5 percent owner or who earns more than $80,000 (effective for 1996 and indexed for future years), without a highest-paid officer rule. Consistent with our simplification proposal, we support the proposed deletion of the highest-paid officer rule. We also believe that raising the dollar threshold to $80,000, as under the Administration's proposal, would prevent many middle-income taxpayers from being classified as HCEs who are prohibited from receiving better benefits than others.

(c). Repeal Top-Heavy Rules

Administration Position. **Oppose.** The top-heavy rules provide rank-and-file employees with important protection not currently provided by any other Code provision. However, the top-heavy rules may require complex calculations that deter small employers from adopting qualified plans. To address this problem, as well as many other concerns unique to small business, the Administration has proposed a new, simple plan for small employers -- the NEST. The NEST would be exempt from the top-heavy requirements (and other nondiscrimination testing rules); instead, the structure of the NEST itself is designed to promote meaningful contributions for all eligible employees.

(d). Modify Leased Employee Rules

Administration Position. **Oppose.** The proposal does not simplify or clarify the leased employee rules; it adds new layers that increase complexity. The proposed five-year graded vesting schedule is likely to result in reduced benefits for rank-and-file employees who remain with leasing organizations for a relatively short time. The safe harbor alternative would permit service recipients and qualified leasing organizations to circumvent the existing safe harbor limit on the percentage of leased employees. In addition, the safe harbor would require a qualified leasing organization to register with the IRS. It is not clear what the IRS's responsibilities would be under this requirement. If, for example, registration required the IRS to evaluate each leasing organization that applied for registration and conduct a periodic review of the registrants, the provision could impose significant administrative burdens.

(e). Exempt State Judicial Plans From Nondiscrimination Requirements

Administration Position. **Do not support.** Tax-qualified plans of governmental employers generally are deemed to satisfy minimum participation, nondiscrimination and coverage requirements until plan years beginning on or after January 1, 1999. The delayed effective dates allow time for the development of appropriate nondiscrimination provisions for governmental plans. We do not believe that there is a sufficient tax policy justification for providing a total exemption from the nondiscrimination rules for any one class of employees.

(f). Repeal OBRA 1993 Provision Limiting Compensation Taken into Account to $150,000

Administration Position. **Oppose.** The OBRA 1993 reduction in the amount of compensation that may be taken into account under a qualified plan serves to reduce the extent to which employers can provide tax-qualified retirement benefits that favor the highly compensated employees. Reversal of that reduction would permit a larger share of the employer's tax-favored contributions to be allocated to employees who can better afford to save for their own retirement. In addition, the proposal would have significant revenue cost.

(g). Repeal for Pilots OBRA 1993 Provision Limiting Compensation Taken into Account to $150,000

Administration Position. **Oppose.** For the reasons noted above, we oppose the repeal of the OBRA 1993 reduction in the amount of compensation that may be taken into account under a qualified plan. Furthermore, we do not believe there is a legitimate tax policy reason to repeal the reduction (and thus have a different compensation definition) for one class of employees.

(h). Repeal Minimum Participation Rule

Administration Position. **Support, as applied to defined contribution plans.** As applied to defined benefit plans, the minimum participation rule prevents significant abuse. It prevents an employer from establishing individual defined benefit plans for highly compensated employees in order to provide those employees with more favorable benefits than those provided to lower paid employees under a separate plan. The rule also prevents an employer from favoring one small group of participants over another in other ways (for example, by covering them under two separate defined benefit plans and funding one plan better than the other). Accordingly, we oppose the repeal of the minimum participation rule for defined benefit plans. However, as applied to defined contribution plans, the minimum participation rule adds complexity for employers without delivering commensurate benefits to the system. Thus, consistent with the Administration's pension simplification proposal, we support the repeal of the minimum participation requirement for defined contribution plans.

2. Distribution Rules

(a). Repeal 15-percent Excise Tax on Excess Distributions

Administration Position. **Do not support.** Both the 15 percent excess distribution penalty and the section 415(e) combined plan limit (which applies to any employee who participates in a qualified defined benefit plan and a qualified defined contribution plan of the same employer) were designed to safeguard against an individual accruing excessive tax-favored retirement benefits under multiple plans. There is considerable duplication in the application of the two provisions. Because the 415(e) combined limit is the far more complicated provision -- and because it, unlike the 15 percent excise tax, applies only to the plans of a single employer -- we believe, consistent with the Administration's simplification proposal, that the cause of simplification would be best served by repealing the combined limit rather than by repealing the 15 percent penalty.

(b). Provide that Pension Distributions are Taxed as Capital Gains

Administration Position. **Oppose.** Under existing law, qualified plans receive very favorable tax treatment. Employees are not taxed on contributions to these plans; the trusts do not pay taxes on their earnings; and employees are eligible for special

tax treatment for certain types of distributions. We believe that the proposed additional tax incentive to provide compensation in the form of retirement benefits is not needed. In addition, the proposal would lose significant revenue.

(c). Reinstate Ten-Year Forward Averaging

Administration Position. **Oppose.** Reinstating ten-year averaging for lump sum distributions, which was generally repealed by the Tax Reform Act of 1986, would do nothing to simplify the taxation of lump sum distributions, and would lose substantial revenue. The application of ten-year averaging often involves difficult definitional determinations and complicated calculations.

(d). Permit Penalty-Free Withdrawals for Unemployed Individuals

Administration Position. **Support Administration's version of this legislation.** The Administration supports the objective of allowing unemployed individuals to make penalty-free withdrawals from IRAs, as included in the Middle Class Bill of Rights, H.R. 980. The Administration believes that this change should be part of a comprehensive expansion of IRAs for middle-income taxpayers, as provided in H.R. 980. In addition, this change should be limited to individuals facing long-term unemployment.

3. Limits on Contributions and Benefits

(a). Modification of Interest and Mortality Rate Provisions of the Retirement Protection Act

Administration Position. **Oppose.** The change in the interest rates and the specification of the mortality table that may be used for purposes of applying the section 415 limitations contained in the Uruguay Round legislation reestablished the principle that a plan may not provide a benefit in the form of a lump sum that is worth more than the equivalent of the maximum single life annuity that would be permitted at the same age under section 415. The effective date of the changes need not be deferred, because the Uruguay Round legislation also provided that a plan may protect the benefit accrued prior to the effective date of the new provision.

(b). Eliminate Combined Plan Limit for Participants in Both a Defined Contribution Plan and a Defined Benefit Plan

Administration Position. **Support.** The repeal of this limit has also been proposed by the Administration. The combined limit is cumbersome, requiring information concerning a plan participant's entire work history, and is commonly determined incorrectly. The goal of the combined limit -- to safeguard against an individual accruing excessive retirement benefits on a tax-favored basis -- is also addressed by the 15 percent excise tax on excess distributions, which the Administration's proposal would retain.

4. Employee Stock Ownership Plans

(a). Modify Rules Relating to Deferral of Gain on Certain Sales of Stock to an ESOP (section 1042 exchanges)

Administration Position. **Oppose.** We do not believe that there is sufficient tax policy justification for this expansion of section 1042.

(b). Permit ESOP to be Beneficiary of Charitable Remainder Trust

Administration Position. **Oppose.** We do not believe that the current charitable estate tax deduction for charitable remainder trusts should be expanded to cover ESOPs.

(c). Treatment of Certain Securities Transferred to an ESOP From Terminated Defined Benefit Pension Plan

Administration Position. **Oppose.** The Treasury historically has not favored this type of retroactive provision that provides tax benefits to a narrow class of taxpayers.

(d). Permit Payment of Estate Tax Liability by an ESOP

Administration Position. **Oppose.** We do not believe that there is sufficient tax policy justification for reinstating this benefit, which Congress repealed in 1989.

5. Permit Permanently Disabled Persons to Contribute to Section 401(k) Plans

Administration Position. **Do not oppose.** To encourage contributions for disabled workers, plans should be allowed to permit disabled former employees, highly compensated as well as nonhighly compensated, to make elective contributions to 401(k) plans. We would support legislation that achieves this goal if technical issues relating to the implementation of the proposal are appropriately resolved. We would be happy to work with the Committee to that end.

6. Modify Sanctions for Failure to Comply with Qualification Requirements

Administration Position. **Oppose.** By effectively eliminating sanctions in all but the most egregious cases, the proposal reduces employers' incentives to adopt systems and procedures that assure operational compliance with plan qualification rules. Unlike the current IRS administrative programs, the proposal is not targeted to providing incentives for voluntary compliance, such as implementation of plan procedures that minimize future errors. As a consequence, adoption of the proposal might well have an adverse effect on participants' benefits and rights and could significantly increase the need for IRS examination and enforcement efforts. As current administrative programs evolve, Treasury and the IRS will continue to work to structure systems that reduce plan burdens while encouraging voluntary compliance.

7. Allow Prenuptial Waiver of Spousal Annuity Benefits

Administration Position. **Oppose.** The proposal could undermine the important Federal retirement policy of protecting a spouse's rights, by permitting waivers to be made many years before retirement and long before meaningful information might be available concerning the value of benefits being waived.

8. Deny Federal Tax Information to States Imposing a Pension Source Tax

Administration Position. **Oppose.** The exchange of tax information between State and Federal tax authorities for tax administration is essential to the orderly collection of both State and Federal tax revenues. Prohibiting the exchange of tax information would interfere with the administration and enforcement of Federal tax laws. The access of States to Federal tax information should not be conditioned on compliance with requirements unrelated to the needs of Federal tax administration.

9. Unfunded Deferred Compensation Plans of Tax-Exempt and Governmental Organizations

(a). Exempt Deferred Compensation Plans for Volunteer Fire Fighters

Administration Position. **Oppose.** The proposal would effectively allow volunteer fire and rescue personnel to defer up to 100 percent of their compensation. Other employees of tax-exempt organizations or of State and local governments are generally limited to deferring one third of their compensation (or $7,500 if less). There is no tax policy reason to distinguish employees who perform these services from any other employees of tax-exempt or governmental employers.

(b). Increase Deferred Compensation Limit for Group Medical Practices

Administration Position. **Support a broader proposal that would apply to all tax-exempt organizations and State and local governments.** There is no tax policy reason to confer special benefits exclusively on such a narrow class of taxpayers. However, because excess benefit plans provide certain employees with benefits that are already provided to other employees under a qualified plan, we believe that excess benefit plans maintained by all tax-exempt organizations and State and local governments should be exempt -- without limit -- from the restrictions of section 457. The Administration's pension simplification proposal provides for this exemption.

(c). Require Individual Ownership of Plan Assets

Administration Position. **Oppose.** This proposal would, by its terms, require amounts deferred under a nonqualified deferred compensation plan of a tax-exempt organization or a State or local government to be funded for the exclusive benefit of plan participants. However, income tax on these amounts would be deferred as if they were not funded. This favorable tax treatment of participants would confer on a category of nonqualified deferred compensation plans significant benefits that are specifically reserved under the current statutory scheme for retirement plans that meet numerous nondiscrimination and other qualification requirements. Section 457 plans not only are allowed to discriminate in favor of highly compensated employees, but, in the case of tax-exempt organizations, they also are generally permitted to cover only a select group of management or highly compensated employees because of the interaction of the Code and ERISA requirements. We oppose extending significant benefits of qualified retirement plans to this very broad category of nonqualified deferred compensation plans.

10. Provisions Relating to Individual Retirement Arrangements ("IRAs")

(a). Permit Tax-Free Rollover of Certain Severance Payments

Administration Position. **Do not support.** We do not believe that it is generally appropriate to expand the individual retirement account rollover provisions to otherwise taxable severance payments that have not been dedicated to retirement savings under a tax-qualified plan.

(b). H.R. 682 (the "Savings and Investment Incentive Act of 1995")

Administration Position. **Support Administration's version of this proposal.** The Administration supports the expansion of IRAs, but believes the President's IRA proposal in H.R. 980 provides a more cost-effective way to increase net national

savings. The President's proposal expands savings incentives to individuals with more moderate incomes, who are now doing little saving. We also believe that penalty-free withdrawals should be made available to pay for long-term care expenses for an incapacitated parent, as proposed by the President.

11. Treatment of Indian Tribal Governments under Section 403(b)

Administration Position. **Do not support.** The Administration believes it would be more appropriate to address the retirement saving needs of tribal government employees through comprehensive pension simplification that would include consideration of all tax-exempt organizations. Accordingly, as part of its pension simplification proposal, the Administration has proposed allowing tax-exempt organizations and Indian tribal governments to sponsor section 401(k) plans in the future. Also, as a general matter of tax policy, the Administration does not favor this type of retroactive tax relief.

12. Special Rules for Church Pension Plans

Administration Position. **Oppose, except for certain technical changes.** As a general matter, the Administration opposes the proposal for the following reasons:

- We believe that the proposed exemption from the trust and nondiscrimination requirements for most qualified church retirement plans and section 403(b) annuities is not justified by differences in church organizational structures or polity, or other unique attributes of churches or church plans. Church employees are entitled to the same safeguards as employees of other organizations, regardless of their employer's internal administration. We have similar reservations about most of the other new special rules for church plans in the proposal. The proposed amnesty included in the proposal for all past violations of sections 401(a) and 403(b) and the retroactive effective dates of many of the proposals are contrary to our general policy against retroactive relief from prior compliance obligations.

- We believe that the current statutory approach of exempting church plans from certain provisions that are difficult to apply or inappropriate in the church plan context is the right approach because it applies, to the extent possible, the same retirement policy for all employers and employees.

- We oppose the extension of the special rules currently applicable only to qualified church-controlled organizations (QCCOs) to all church-controlled or affiliated organizations (other than certain hospitals and universities) because it is inappropriate to provide special treatment reserved generally for churches to organizations that function more as secular charities or commercial enterprises. We are, however, sensitive to problems that exist in applying the QCCO definition. We are also concerned about the problems that exist in applying the generally applicable employer aggregation rules to churches. We would be pleased to work with the Committee to develop simplified rules to address these issues.

We do not oppose certain technical changes included in the proposal. For example, the clarification of the ability of self-employed ministers to participate in a church plan may facilitate the application of certain provisions to church plans, and we would like to work with the Committee to develop this proposal more fully. In addition, we note that the proposal to modify the age 70 1/2 required beginning date for distributions is consistent with the Administration's proposal to generally eliminate the requirement that distributions from a qualified

plan must begin at age 70 1/2 even for an employee who continues to work for the employer maintaining the plan.

B. EMPLOYEE BENEFITS

1. Tax Treatment of Certain Disability Benefits for Police and Fire Fighters

Administration Position. **Do not support.** The Treasury Department generally has not favored this type of targeted retroactive tax relief.

2. Exclude from Income Retirement Benefits that an Employee Elects to Use to Purchase Employer-Provided Accident or Health Care

Administration Position. **Oppose.** Enactment of the proposed exclusion from income would create an entirely new mechanism for prefunding retiree accident and health benefits, and it is not clear whether any nondiscrimination or vesting rules would apply. The proposal may result in significant revenue loss.

3. Modify Restrictions on Golden Parachute Payments

Administration Position. **Do not support.** We do not support eliminating the 75 percent shareholder approval requirement in cases where one person owns more than 50 percent of the voting power of a corporation. The super-majority rule serves to promote serious shareholder consideration of compensation paid upon changes of control.

4. Employee Housing For Certain Medical Research Institutions

Administration Position. **Do not oppose.** The proposal would eliminate disparities in the tax treatment of employer-provided faculty housing for schools and institutions providing similar medical instruction for students.

CC. TAX-EXEMPT BONDS

1. Expansion of Arbitrage Rebate Exception for Certain Bonds

Administration Position. **Do not support.** It may be appropriate to review the arbitrage rebate exceptions as part of the Administration's effort to simplify the tax law. The arbitrage rebate rules were enacted to discourage unnecessary and early issuance of tax-exempt bonds by requiring that arbitrage profits be turned over to the federal government. However, this type of proposal should be considered in the context of a general review of these rules which would exempt more issues rather than more dollar volume from the rebate requirements while still preventing arbitrage abuse.

2. Bonds for Certain Output Facilities

Administration Position. **Do not oppose.** Although this change would have a revenue cost, it would simplify the tax laws. There does not appear to be any reason to treat municipal output facilities more harshly than other municipal facilities.

3. Bonds for Emergency Response Vehicles of Certain Volunteer Fire Departments

Administration Position. **Do not oppose.** Although this proposal will result in a slight revenue loss, it is a reasonable expansion of the limited authority to issue tax-exempt bonds under current law.

4. Spaceport Exempt-Facility Bonds

Administration Position. **Oppose.** This proposal would principally benefit a single municipality in Florida. Further, there could be a significant revenue loss because these bonds would not be subject to the volume cap.

5. Bonds for Solar Energy Facility

Administration Position. **Do not support.** Use of tax-exempt financing, particularly in combination with other federal subsidies exempt from the federal guarantee rule, would not be an efficient vehicle for encouraging solar energy facilities. Other federal tax incentives are available to support solar energy development.

6. Bonds for the Sale of the Alaska Power Administration Facility

Administration Position. **Oppose.** This proposal would principally benefit a single State in the purchase of a federal power facility which has already received other federal benefits.

7. Bonds for the United Nations

Administration Position. **Support.** The Administration believes that the proposal to use tax-exempt financing to provide office space for the United Nations is a matter of great importance and benefit to the United States. There would be an insignificant revenue impact because these bonds would be subject to the volume cap.

8. Bonds for Certain Pre-1990 Issues in the State of Connecticut

Administration Position. **Oppose.** This proposal would benefit a single State and have retroactive effect.

9. Bonds Related to the Transfer of Port Everglades, Florida

Administration Position. **Oppose.** This proposal would principally benefit a single municipality.

10. Qualified Mortgage Bonds - Home Improvement Loans

Administration Position. **Do not oppose.** It may be appropriate to review the dollar limitation on home improvement loans to persons meeting specified income limits. However, this type of change should be considered in the context of a general purpose of the mortgage revenue bond program, which is to provide housing to certain first-time homebuyers meeting income and purchase-price limits.

11. Qualified Veterans' Mortgage Bonds

Administration Position. **Do not support.** The qualified veterans' mortgage bond program continues to apply to only five States and to a limited class of veterans as a grandfather rule and it is not appropriate to further expand the program in this manner. Veterans' programs should apply uniformly across the nation. Veterans may be able to qualify for mortgages supported by tax-exempt mortgage revenue bonds or mortgage credit certificates.

12. Modification of Exception to Bank Interest Deduction Disallowance for Qualified 501(c)(3) Bonds

Administration Position. **Oppose.** This proposal would have significant revenue cost. This change effectively increases the $10 million small issuer limit by removing a significant category

of bonds from its coverage. In addition, by providing every 501(c)(3) organization with its own annual $5 million limit, the applicability and complexity of the small issuer rule would be increased substantially.

13. Qualified Small-Issue Bonds

Administration Position. **Do not support.** The small-issue bond provisions were extended permanently to provide a benefit targeted to small manufacturing businesses. This change is a significant increase in the ability of larger business to benefit from tax-exempt bonds.

14. Repeal Student Loan Marketing Association's Exception to the Rule Disallowing Interest Deductions on Debt Used to Acquire or Carry Investments in Tax-Exempt Bonds

Administration Position. **Support.** The Administration believes that it is appropriate to provide a transition rule for interest deductions during the period of time that the Student Loan Marketing Association moves toward either privatization or dissolution.

DD. TAX RETURN CHECKOFF

1. Permit Individual Tax Return Checkoff for U.S. Olympic Trust Fund

Administration Position. **Oppose.** Regardless of how meritorious the beneficiary of any voluntary checkoff on a tax return, such proposals add complexity to the return, result in confusion, and impose significant administrative burdens.

2. Permit Individual Tax Return Checkoff for Deficit Reduction

Administration Position. **Oppose.** This Administration has a strong commitment to deficit reduction. Nevertheless, this particular proposal would add complexity to the return, result in confusion, and impose significant administrative burdens.

EE. TRUSTS AND ESTATES

1. Income Tax Rates Applicable To Trusts and Estates

Administration Position. **Oppose.** These proposals reduce the income tax rates applicable to all (H.R. 329) or certain (H.R. 960) trusts. The tax rate brackets applicable to trusts were compressed in 1986. We believe that the present tax-rate schedule for trusts is appropriate, and we would consider a change to this schedule only in the context of a complete overhaul of the income taxation of trusts and estates.

FF. OTHER

1. Allow Nonprofit Educational Foundations to Sell U.S. Savings Bonds

Administration Position. **Oppose.** Although the Administration strongly supports efforts to make it easier for individuals to save and invest, the proposal to allow nonprofit educational foundations to be agents for the sale of U.S. savings bonds would increase risks and expenses to investors and to the Treasury, and likely would not result in additional investments in savings bonds. In addition, changing the prohibition against the use by private parties of the words "United States Savings Bonds" in advertising or solicitations would inhibit Treasury's efforts to stop deceptive advertising and solicitation practices. The

Treasury is developing guidelines for appropriate and acceptable uses of the words "United States Savings Bonds" by private parties.

II. POSSIBLE MODIFICATIONS TO SIMPLIFICATION PROVISIONS CONTAINED IN H.R. 3419 (103RD CONGRESS)

1. Provisions Relating to Individuals

(a). Permit Payment of Taxes by Credit Card

Administration Position. **Support.** Clarifying that the fees that may be imposed for using a credit card to pay federal taxes could not be borne by the federal government would improve this provision.

(b). Election by Parent to Claim Unearned Income of Certain Children on Parent's Return

Administration Position. **Do not oppose deletion.** Because this provision of H.R. 3419 was included in H.R. 1215, as passed by the House of Representatives, the Administration does not oppose deleting the provision from this tax simplification package.

(c). Expanded Access to Simplified Income Tax Returns

Administration Position. **Support deletion.** Section 116 of H.R. 3419 required the Commissioner to study ways to expand access to simplified individual income tax returns, including permitting itemizers to use Form 1040A and removing or raising the taxable income limitations on use of Form 1040A, and to submit a report discussing such actions. Since the Service is already working on such a study, this provision is unnecessary, and Treasury supports deleting this proposal from the simplification package.

2. Pension Simplification

(a). Tax-Exempt Organizations Eligible under Section 401(k)

Administration Position. **Oppose.** This proposal would impose a restriction on tax-exempt organizations that is not imposed on for-profit employers. For-profit employers are allowed to provide a nonqualified deferred compensation plan in addition to a broad-based section 401(k) plan. Restricting the ability of tax-exempt organizations to do the same would be contrary to the spirit of the basic provision (i.e., allowing tax-exempt organizations to maintain 401(k) plans), which is to put for-profits and tax-exempt organizations on an equal footing. In addition, the section 457 dollar limit (generally $7,500) for any individual is offset dollar for dollar by elective deferrals made by the individual to a 401(k) plan. Therefore, the benefits that are provided under a 457 plan to an employee who also participates in a 401(k) plan are already restricted.

(b). Nondiscrimination Rules for Qualified Cash or Deferred Arrangements and Matching Contributions

Administration Position. We support the Administration's proposal to provide a new simpler plan for small employers instead of modifying the SARSEP rules. We believe that one of the reasons SARSEPs have not been more widely used is that they do not allow employers to match employee deferrals. The extension of the 401(k) safe harbors to SARSEPs would presumably allow matching contributions to be used under a SARSEP as an incentive to induce employees to make elective contributions. We believe that nondiscrimination safe harbors (and the ability to have matching contributions) would be a significant improvement to SARSEPs. However, under the proposal, the matching contribution safe harbor would not appear to be a meaningful option for the many

SARSEPs that are top-heavy and therefore required to provide a 3 percent minimum nonelective employer contribution for all nonkey employees. At the same time, if no employer contribution is required for employees who do not elect to make salary reduction contributions, the matching contribution safe harbor currently proposed will not do enough to promote meaningful contributions for nonhighly compensated employees.

Instead of simply modifying the SARSEP provisions, the Administration has proposed a new, simple plan for small employers, known as the National Employee Savings Trust, or NEST. The NEST provides for design-based safe harbors that are almost identical to the safe harbors proposed in H.R. 3419, except that the NEST safe harbors exempt the employer from the top-heavy rules while also providing for a 1 percent nonelective employer contribution as part of the matching contribution safe harbor.

(c). Full-Funding Limitation of Multiemployer Plans

Administration Position. **Oppose deletion.** H.R. 3419 proposed to repeal the 150 percent limitation on deductible contributions for multiemployer plans and to allow triennial actuarial valuations (rather than annual valuations) for these plans. Consistent with the Administration's pension simplification proposal, we oppose the current proposal to delete these provisions from H.R. 3419. The 150 percent limit is intended to limit the extent to which an employer can deduct contributions to a defined benefit plan for liabilities that have not yet accrued. However, an employer has little, if any, incentive to make "excess" contributions to a multiemployer plan. The amount an employer contributes to a multiemployer plan is fixed by the collective bargaining agreement, and a particular employer's contributions are not set aside to pay benefits solely to the employees of that employer. Without the 150 percent limit, annual actuarial valuations are unnecessary and overly burdensome. Therefore, we believe that triennial valuations should be allowed for multiemployer plans if the 150 percent limit is repealed.

(d). Alternative Full-Funding Limitation

Administration Position. **Support deletion.** While we recognize that the OBRA 1987 full funding limitation has the effect of limiting pension plan funding for plans with liability that is heavily weighted towards younger employees, we believe that a narrow rule eliminating the effect of the OBRA 1987 change for a few employers is inappropriate. Furthermore, this proposal requires an offsetting adjustment to the 150 percent full funding limit to maintain revenue neutrality. This adjustment will be difficult to determine on an annual basis and will subject the employers affected by the adjustment to uncertainty.

(e). Special Rules for Plans Covering Pilots

Administration Position. **Support deletion.** We do not believe that an extension of the current exception for pilots to nonunionized pilots is warranted.

(f). Treatment of Employer Reversions Required by Contract to be Paid to the United States

Administration Position. **Oppose deletion.** The excise tax is intended to apply to reversions received by employers. Accordingly, it is inappropriate to impose the excise tax on the portion of a reversion that must be paid by a government contractor to the United States. The President's pension simplification proposal includes a provision excluding these reversions from excise tax.

(g). Continuation Health Coverage for Employees of Failed Financial Institutions

Administration Position. **Do not oppose deletion.** The primary motivation for including this provision in H.R. 3419 is now moot.

(h). Clarify Relationship Between Community Property Rights and Retirement Benefits

Administration Position. While the scope of the provision as described is unclear, the Administration generally supports clarification of the relationship between community property rights and retirement benefits. The Administration generally supports, with technical modifications, the proposal (described in the June 16, 1993 Joint Committee on Taxation Description of Miscellaneous Tax Proposals (JCS-8-93) at 71-72) to clarify the availability of the marital deduction where the non-participant spouse in a community property State predeceases the participant spouse.

3. Treatment of Large Partnerships

(a). Simplified Flow Through for Large Partnerships

Administration Position. **Oppose deletion.** The Administration opposes the suggestion of deleting the provisions that would modify the tax treatment of large partnerships and reduce the number of items that must be separately reported to the partners. The Administration would be happy to work with the Committee to devise any revisions that may be needed to provide more simplified flow through treatment for large partnerships.

(b). Simplified Audit Procedures for Large Partnerships

Administration Position. **Oppose deletion.** The Administration opposes the suggestion of deleting the provisions providing simplified audit procedure for large partnerships. The new audit system created by these provisions would improve the IRS's ability to audit large partnerships in a timely and efficient manner. The Administration would be happy to work with the Committee to devise any revisions that may be needed to provide more efficient audit procedures for large partnerships.

(c). Partnership Returns on Magnetic Media

Administration Position. **Support.** The Administration supports requiring magnetic media reporting for large partnerships and other partnerships with more than 250 partners. The Administration also supports the provision of H.R. 3419 that would provide the IRS with authority to require magnetic media reporting for large partnerships. Magnetic media reporting would assist the IRS in auditing large partnerships in a timely and efficient manner.

4. Foreign Provisions

(a). Deferral of Tax on Income Earned through Foreign Corporations and Exceptions to Deferral

Administration Position. **Support foreign simplification efforts.** The Administration supports meaningful simplification of the foreign provisions of the Code to the extent permitted by budgetary constraints. We would be pleased to work with the Committee to further develop simplification proposals.

5. Provisions Relating to Regulated Investment Companies

(a). Require Brokers and Mutual Funds to Report Basis to Customers

Administration Position. **Support deletion.** Because we understand that much of the industry is now voluntarily reporting basis to shareholders, we support deleting the mandatory reporting requirement in H.R. 3419.

6. Tax-Exempt Bond Provisions

(a). Clarification of Definition of "Investment-Type Property"

Administration Position. **Support deletion.** This issue was clarified in Treasury regulations.

7. Administrative Provisions

(a). Administrative Practice and Procedural Simplification

Administration Position. **Do not oppose deletion.** H.R. 3419 included nine provisions modifying administrative practice and procedure. Because these provisions are presently being considered separately in connection with the Taxpayer Bill of Rights proposals, Treasury does not oppose deleting these provisions from this simplification package.

8. Estate and Gift Tax Provisions

(a). Statute of Limitations Applicable To Valuation of Gifts

Administration Position. **Do not support.** The proposal as described appears too broad. It requires additional study to ascertain its administrative costs as well as its estimated revenue loss.

9. Other Provisions

(a). Treatment of Pre-Need Funeral Trusts

Administration position. **Oppose.** When trust income is distributed to the provider, it is taxable as a payment for services or merchandise, regardless of its original character to the trust. If the provider were treated as the owner of the trust, then trust income distributed as a payment for services or merchandise could escape tax, depending on the nature of the trust corpus. In addition, the proposed amendment would inappropriately allow purchasers and providers of a pre-need funeral to choose which party will bear the tax burden with respect to the income earned by the trust.

Statement of

AMERICAN VINTNERS ASSOCIATION

by Robert G. Kalik
President

Submitted for the

COMMITTEE ON WAYS AND MEANS
UNITED STATES HOUSE OF REPRESENTATIVES

July 13, 1995

Introduction

Chairman Archer and Members of the Committee, my name is Robert G. Kalik, and I am President of the American Vintners Association ("AVA"), the national trade association of American wineries with a membership of over 450 wineries in 38 states.

I very much appreciate the opportunity to submit testimony concerning a proposal which would clarify the application of the uniform capitalization rules to certain agricultural crop losses.

The proposal to allow current deductibility of the costs incurred for replanting necessitated by casualty damage, including both weather and pest related damage, for any edible crop for human consumption, is necessitated by an overly restrictive IRS position disallowing full expensing of the costs of replanting. The IRS position appears to be at odds with both the plain language of section 263A(d)(2)(A) of the Internal Revenue Code ("Code") and an explanation of legislative intent behind the adoption of this language as expressed in a 9/29/92 colloquy on the floor of the United States Senate between Senator Robert Packwood and then Finance Committee Chairman Lloyd Bentsen. Senator Packwood's comments were particularly relevant because he was the Finance Committee Chairman in 1986, the year section 263A was enacted. The proposed legislation would assure that the IRS will administer section 263A(d)(2)(A) as originally intended by the Congress when it passed the Tax Reform Act of 1986.

The Current Conflict of Interpretation

The plain language of section 263A(d)(2) is seemingly beyond dispute. It states, in part: "this section shall not apply to **any** costs of the taxpayer of replanting plants bearing the same type of crop (emphasis supplied)."

Unfortunately, the Internal Revenue Service ("IRS") has chosen to give the provision a narrow interpretation. Under their interpretation, expenses required for replanting after natural disasters is limited to only preproductive period expenses. Such an interpretation thwarts the intent of Congress, as evidenced by the plain meaning of the provision, and impedes the efficient restoration of damaged farmlands, the central purpose of this provision.

Specifically, the IRS takes the position not all costs of replanting costs are exempt. Some costs should be capitalized rather than exempt from the provisions. Under IRS interpretation capitalized replanting costs include, for vineyards, (1) the engineering and design of the new vineyard (2) preparation of the land for replanting, (3) including fumigation, (4) purchase of vines, irrigation equipment and trellis system, (5) planting and installation costs, and (6) the grafting of scions onto appropriate rootstock.

We believe that this interpretation conflicts with congressional intent and the plain meaning of section 263A(d)(2)(A). First, the legislative history indicates that Congress intended section 263A to be the exclusive capitalization rule for farming businesses expenditures. Congress enacted section 263A as part of the Tax Reform Act of 1986 ("TRA") in response to its concern that different capitalization rules were being applied depending upon the nature and intended use of property. Section 263A provided a single, comprehensive set of capitalization rules. (See Joint Committee on Taxation, General Explanation of the Tax Reform Act of 1986 (May 4, 1987), at 508-509.)

Congress also intentionally applied the new capitalization rules to farming businesses. The Senate's version of the 1986 TRA provision exempted farming businesses from the new capitalization rules, but the conference agreement followed the House provision which applied the new rules to farming businesses. (See H.R. Conf. Rep. No. 99-841, 99th Cong., 2d Sess., vol. II, at 113-114 (1986).)

The legislative history also indicates that Congress intended that the agricultural casualty loss exemption of section 263A apply broadly to the deductibility of all replanting costs, through section 263A(d)(2)(A). When section 263A was enacted in 1986, Congress repealed the former casualty loss provision contained in section 278©. Former section 278© had allowed a farming business to deduct replanting "amounts allowable as deductions (without regard to section 278)." However, reflecting a concern that section 278© was too narrowly drawn and restricted a farmer's ability to restore a vineyard to its original condition, Congress expanded the application of the loss provision when it enacted section 263A(d)(2)(A). Consistent with this belief that additional relief was needed, Congress modified the language of section 263A(d)(2) to exempt more broadly "*any costs*" associated with replanting under this code section. Moreover, the House report states that the loss exemption is for costs attributable to replanting, cultivation, maintenance, and development. This definition is much broader than merely costs incurred during the preproductive period (See H R. Conf. Rep. No. 99-841, at 113.)

The September 1992 colloquy on the floor of the United States Senate between Senator Robert Packwood and then-Finance Chairman Lloyd Bentsen also revealed the congressional intent with respect to section 263A. Senator Packwood's comments were particularly relevant because he was the Finance Committee Chairman in 1986, the year section 263A was enacted. In this colloquy, Senator Bentsen cited natural disasters like Hurricanes Andrew and Iniki, which destroyed crops in Florida and Hawaii, respectively, as well as the phylloxera infestation of Oregon, Washington, and California. The Senator also noted that the costs of replanting and the resulting lost production could cost $1 billion in Napa and Sonoma counties alone, and that such costs could force some wineries into bankruptcy.

Senator Bentsen asked Senator Packwood whether Congress intended section 263A(d)(2)'s exception to apply to "all costs otherwise subject to the capitalization requirements in section 263A or section 263 if section 263A did not apply?" Senator Packwood responded:

> Yes; it is. The exception to section 263A contained in paragraph (d)(2) of that section is intended to apply to all costs otherwise subject to 263A, or section 263 if section 263A does not apply, incurred as a result of freezing temperatures, disease, drought, pests, or casualty. The provision is intended to permit all replanting costs, not just preproductive costs associated with restoring orchards or groves to their original condition to be deductible.
>
> * * *
>
> [I]n the case of vineyards destroyed by phylloxera B, preproductive costs, costs such as replacement vines, replanting of rootstocks, the purchase of trellis and drain tile and irrigation equipment solely to replace equipment, the removal of which was necessitated by the infestation, and the costs of land preparation, would all be deductible under this exception.
>
> * * *
>
> Of course, since it was the intention of this exception to place a taxpayer in the same position as before the loss occurred, we would assume the IRS would not permit a taxpayer to upgrade the vineyard, grove or orchard . . . Similarly, we should also assume the IRS will prevent a double deduction from occurring under section 165(m).
>
> 138 CONG. REC. S15593-15594 (daily ed. September 29, 1992) (statements of Sens. Packwood and Bentsen).

The Solution: Clarification through Amendment

Because the IRS is insisting on a narrow interpretation of the section's exemption, a legislative clarification has been proposed. The proposed amendment states that the exemption applies to all preproductive period costs and 80 percent of all other costs of a taxpayer incurred by replanting plants destroyed by freezing temperatures, disease, drought, pests, or casualty.

The 80 percent rule is proposed to equitably deal with the fact that under certain circumstances, replanting of a grove, orchard or vineyard may, benefit a business beyond what is necessary to restore the affected property to the condition it was in prior to the destruction. Nevertheless, the rule recognizes that a substantial portion of the replanting costs should be deductible in accord with the intent of Congress. The 80 percent rule would simplify administration of the tax law in this area. The amendment also retains full deductibility of preproductive expenses, which has never been contested by the IRS.

To avoid the double deduction to which Senator Packwood alluded in his colloquy, the proposed amendment would also redesignate subsection (m) of Section 165 as subsection (n) and insert new language which bars section 165 deductions where the costs of replanting are deducted under section 263A(d)(2)(A).

We believe that these proposed amendments would eliminate the confusion surrounding section 263A(d)(2), in a way which recognizes the original intent of Congress when the provision was enacted in 1986.

The Costs Inflicted by Phylloxera and Frostkill

Among other agricultural growers, vintners whose vineyards are infested with phylloxera or have suffered severe frost damage known as "frostkill" would be helped by this provision. Phylloxera is an aphid-like louse which cannot be combated by conventional pesticide methods; only the complete removal of the infested vineyards, including irrigation equipment, drain tiles, and trellis systems, followed by the fumigation and replanting of root stocks resistant to the pest, can remedy an infestation. Frostkill is a serious problem in the wine growing regions of New York, Pennsylvania, Ohio, Michigan, Missouri and Arkansas. Frostkill leads to seriously weakened vines that become extremely susceptible to disease and infestation. For example, as a result of recent severe weather in Missouri, Stone Hill Winery, the largest winery in the state, has been forced to remove an entire vineyard. There are numerous other examples of similar weather problems in other states. Whether the damage is caused by phylloxera, frostkill, or other grape related disease, the vines and roots cannot be removed without the elimination of related improvements, since the irrigation equipment, trellis systems, and drain tiles are completely intertwined with the vines.

By clarifying existing law, this amendment would greatly facilitate financing of replanting by grape growers in California, New York, Oregon, Missouri, Michigan, Ohio, Pennsylvania, Washington and other states who occasionally must shoulder huge and unexpected financial expenses because of plants lost by virtue of a natural disaster.

Mr. Chairman, on behalf of the American Vintners Association, and the entire wine industry, I thank you and the entire Committee for the opportunity to testify on the proposed amendment to clarify Internal Revenue Code section 263A(d)(2). I would be pleased to answer any questions you may have.

July 14, 1995

The Honorable Bill Archer
Chairman
Ways and Means Committee
U.S. House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20515

Dear Chairman Archer:

The Associated General Contractors of America (AGC) is a national trade association of more than 33,000 firms, including 8,000 of America's leading general contracting firms. They are engaged in the construction of the nation's commercial buildings, shopping centers, factories, warehouses, highways, bridges, tunnels, airports, water works facilities, waste treatment facilities, dams, water conservation projects, and defense facilities.

AGC applauds your efforts to address and, it is our hope, to correct numerous problems with the current tax system. For this reason, AGC welcomes the opportunity to provide this statement of support to the House Ways and Means Committee regarding the proposal to eliminate the lookback method of accounting for non-residential construction contractors.

The lookback method, which was added by the 1986 tax act, requires a construction contractor to file a completely new tax return for every contract that is subject to lookback in the year the contract is completed and to refile it in subsequent years if income or costs in the contract change. In the year a long-term construction contract is completed, the construction firm must go back and substitute for each year the contract was in progress the <u>actual</u> costs and revenues for the <u>estimated</u> costs and revenues used in the prior years tax computations. Then taxes for all prior years must be recalculated for both regular and alternative minimum tax purposes. Next, the difference between the taxes actually paid each year and the taxes that would have been paid must be calculated. Finally, daily compounded interest subject to rate change on quarterly basis must be completed on that difference. The construction contractor then either pays interest to or receives interest from the government.

AGC believes that repealing the lookback method of accounting for nonresidential construction contracts is an excellent way to simplify the tax code for several reasons.

- First, the complexity and lack of knowledge of the lookback method causes unneeded disputes.
- Second, the lookback rule costs far more for taxpayers to comply with than the revenue it produces for the federal government. It imposes a tremendous accounting burden on construction contractors, because of the thousand of calculations that are required.
- Third, it is AGC's experience that nine out of ten times the lookback method is either a revenue loser or revenue neutral for the federal government.

AGC is fully convinced that there is no purpose, fiscal or regulatory, that the lookback method of accounting serves in relation to nonresidential construction contractors. Now is the time to repeal this expensive and senseless tax burden. AGC looks forward to working with the Ways and Means Committee on this very important issue.

Sincerely,

Stephen E. Sandherr
Executive Director
Congressional Relations

TESTIMONY OF

THE CONSTRUCTION FINANCIAL MANAGEMENT ASSOCIATION

REGARDING CERTAIN MISCELLANEOUS TAX PROPOSALS

BEFORE

THE HOUSE WAYS AND MEANS COMMITTEE

JULY 11, 1995

[written testimony submitted for the record]

Mr. Chairman and members of the Committee:

The Construction Financial Management Association (CFMA) is pleased to comment on two of the accounting proposals among the numerous miscellaneous tax proposals currently before the Ways and Means Committee: (1) allowing certain contractors to use the cash method of accounting; and (2) elimination of the "look-back" method of accounting for nonresidential construction contracts.

CFMA represents more than 5,500 financial managers in the construction business. Our members are employed by over 2,500 construction companies across the U.S. More than one-third of them have gross annual revenue ranging from $25-99 million.

Federal tax policy plays an important role in the continued growth and profitability of the construction industry. If enacted, the proposals to eliminate the look-back method of accounting and to assure entitlement to the cash method of accounting for certain construction concerns would positively affect how we do business. We commend Chairman Archer and the Committee for its leadership in raising these issues, and we appreciate the opportunity to comment.

CASH METHOD OF ACCOUNTING

The cash receipts and disbursement method of accounting is specifically listed in section 446(c) as a permissible overall method of accounting. Congress has limited this general rule by enacting specific Internal Revenue Code provisions that preclude the use of the cash method by certain taxpayers. For example, section 448 prohibits the use of the cash method for large C corporations, large partnerships that have a C corporation as a partner, and tax shelters. A partnership or a C corporation is considered large if the three year average annual gross receipts of the company exceed $5,000,000.

In the legislative history to section 448, Congress specifically stated that it believed that small businesses should be allowed to continue to use the cash method.[1] In addition to Congress' explicit statements in the legislative history, the definition contained in code section 448 itself indicates that small businesses were to be exempted from the prohibition on the use of the cash method. A partnership or a C corporation that is not considered large because its three year average annual gross receipts do not exceed $5,000,000 is not subject to section 448, and thus is not prohibited from using the cash method by this section. It is logical to conclude that Congress intended that a partnership or C corporation that was not considered large was one type of small business that Congress referred to in the legislative history when Congress directed that small business should be allowed to continue to use the cash method.

---

[1] House Ways and Means Committee Report to H.R. 3838, the *Tax Reform Act of 1985* (H.Rept. 99-426), pg. 605, December 7, 1985.

IRS Actions

Despite the clear directive in section 448's legislative history that small businesses were to be allowed to continue to use the cash method, the Internal Revenue Service has continually challenged the use of the cash method by small businesses. The Tax Court in a recent case held that the IRS abused its discretion when it attempted to deny the use of the cash method to a C corporation that was not considered large because its three year average annual gross receipts did not exceed $5,000,000. In the case, Ansley-Sheppard-Burgess Co. v. Commissioner, 104 T.C. No. 17 (1995), the company and the IRS agreed that the company was not subject to Section 448. However, the IRS believed that the company's use of the cash method of accounting did not clearly reflect income.

The IRS proposed to put the company on the method of accounting that the IRS believed would clearly reflect income: the percentage-of-completion method. The court disagreed with the IRS, and held that the company was entitled to use the cash method. The court noted that the following factors weighed heavily in its decision: (1) the company did not maintain an inventory; (2) the company consistently used the cash method since its incorporation; and (3) the company made no attempt to unreasonably prepay expenses or defer the recognition of income.

It appears that the IRS will continue its challenges to the use of the cash method by small contractors.

IRS Ruling

In the recently released Technical Advice Memorandum PLR 9524001 (June 1995), the IRS concluded that a contractor's materials are "inventory" for tax purposes, thus requiring the use of the accrual method. The IRS reached this conclusion based on the grounds that merchandise was an income producing factor requiring the use of inventories, and because the cash method did not clearly reflect income.

Although it is hoped that the Ansley decision would deter the IRS from challenging the use of the cash method based upon the "clear reflection of income" doctrine, PLR 9524001 indicates that the Service will continue its negative view of this method of accounting.

Proposal

The proposal currently before the Committee would clarify that a "qualified" contractor who meets a $5 million gross receipts test may use the cash method of accounting. A "qualified" contractor would be one who:

- performs services pursuant to a contract;
- does not take title or have other indicia of ownership with respect to the subject matter of the contract; and
- for whom the provision of services, rather than the sale of merchandise, is a material income-producing factor under the contract.

The proposal would be effective for taxable years beginning after December 31, 1985.[2]

Suggested Modification

It is respectfully suggested that the third element of this definition be clarified by adding language to the legislative history to indicate that for purposes of determining whether the provision of services is a material income-producing factor, "merchandise" does not include the sale of materials that result in the construction of improvements to real property. This clarification

---

[2] *Description of Miscellaneous Tax Proposals* (JCS-19-95), Joint Committee on Taxation, pg. 17, July 10, 1995.

would be in accordance with case law that holds that real property is not subject to inventory accounting rules.[3]

Although some case law authority has held that construction industry activities are subject to the inventory accounting rules of section 471, this case law should be limited to its particular facts.[4]

Benefits of Proposed Changes

The cash method is beneficial to the construction industry since it is the most simple method, and imposes the least burden to meet Federal income tax filing requirements.

REPEAL OF THE LOOK-BACK METHOD

The Tax Reform Act of 1986 instituted the use of the "look-back" rule for long-term contracts using the percentage of completion method (PCM) of accounting. Under PCM accounting, contract costs and revenues are determined by estimated, rather than the actual figures. When the contract is completed, the look-back method is applied to substitute actual costs and revenues used in the prior years' PCM computations. Upon completion of these substitutions and computations, the taxpayer is either compensated for overestimating the taxes that were due or assessed taxes in cases where the taxpayer underestimated taxes due.

Problems Facing The Construction Industry

Under the present percentage of completion method, companies are required to make a good faith estimate of their total contract revenue and total contract costs. The look-back rule acts as a backstop to imprecise estimates, and requires that the taxpayers and the IRS to correct any imprecision in the estimates in the year the contract is actually completed. The application of the look-back rule may result in a company owing additional amounts to the IRS if it "underpaid" its taxes in the early part of a contract due to the imprecision of its estimates. Or, application of the rule may result in the IRS owing the company additional amounts if the company "overpaid" its taxes in the early part of the contract. The extreme complexity added by the look-back rule is not justified in light of the relatively insignificant "true up" that results from it.

The repeal of the look-back rule is appropriate since it imposes a heavy compliance burden on contractors in that it requires them to make complex calculations to recompute completely their Federal income tax liability to achieve the usually small "true up" of the cost of either "underpaying" or "overpaying" their taxes in the early part of a contract. It is respectfully suggested that the look back method is an example of unnecessary complexity in the Internal Revenue Code that is created by attempting to reach a technically "perfect" result. A much more beneficial policy is a simpler system that achieves "rough justice." A simpler tax code and "rough justice" will be achieved through repeal of the look-back method as provided in the proposed legislation.

Proposal

The proposal would eliminate the look-back method with respect to nonresidential construction contracts, and would be effective for contracts completed in taxable years ending after date of enactment.

[3] W.C. and A.N. Miller Development Co. v. Commissioner, 81 T.C. 619 (1983).

[4] Thompson Electric, Inc. v. Commissioner, T.C. Memo. 1995-292 (electrical supplies); J.P. Sheahan Associates, Inc. v. Commissioner, T.C. Memo 1992-239 (roofing materials); Independent Contractors, Inc. v. United States, 73 A.F.T.R.2d Par. 94-677; 94-1 USTC Par. 50,135 (N.D. Ala. 1994) (Heating, ventilating, and air conditioning (HVAC) systems).

Reasons Why Repeal Of Look-Back Is Necessary

Significant Compliance Costs: The cost to contractors in time and money to compute required look-back calculations is significant. Thousands of look-back calculations are often necessary. The use of the PCM method is burdensome enough without the added effort expended on "look-back".

Companies in AMT Still Affected: An exception for small construction contracts from PCM does exist but its impact is minimal. To qualify, a contract must be completed within two years and be performed by a taxpayer with average annual gross receipts that do not exceed $10 million. However, if the contractor is subjected to the Alternative Minimum Tax (AMT), then the PCM computations are required.

Current Exceptions Are Insufficient: The current de minimis rule, which exempts from the look-back method contracts completed within two tax years where the contract price does not exceed the lesser of: $1 million, or one percent of average gross receipts for the three preceding taxable years, is too narrow to be effective. Most long-term contracts are generally larger than one percent of gross receipts.

For example, if a contractor had gross receipts of $8,000,000, only contracts under $80,000 that were completed in less than 2 years would not be subject to the look-back method. Thus, the de minimis exception to the look-back method exempts very few contracts.

Not Applicable to Construction Industry: When the look-back rule was instituted in 1986, Congress believed that the completed contract method of accounting for long-term contracts permitted unwarranted use of deferral of income from those contracts.[5]

Congress reasoned that requiring the taxpayer to estimate costs and revenues and then to "look-back" after the contract was complete to calculate the actual amounts would limit this abuse. In reality, what has resulted is a complex and burdensome reporting system requiring innumerable computations that construction contractors must comply with.

CONCLUSION

These two miscellaneous tax proposals would greatly relieve some of the tax compliance burdens on the construction industry. As the recent IRS private letter ruling indicates, the Service will continue to attempt to require construction contractors to use the accrual method of accounting. Clarifying Congress' original intent in determining situations when contractors can use the cash method of accounting would provide tremendous relief. In addition, repeal of the look-back rule would eliminate some of the numerous computations and time-consuming paperwork requirements that are currently demanded of contractors.

CFMA appreciates the opportunity to comment on these proposals and looks forward to working with the Committee to alleviate some of the debilitating burdens facing construction contractors.

Statement of the
National Association of Regulatory Utility Commissioners
for the
Committee on Ways and Means
on
Repeal of the Tax on Contributions in Aid of Construction
July 12, 1995

Dear Mr. Chairman and Members of the Committee:

The National Association of Regulatory Utility Commissioners (NARUC) appreciates the opportunity to comment on the miscellaneous tax reform measure being considered by this committee. The NARUC is a quasi-governmental non-profit organization of the governmental agencies engaged in the regulation of public utilities located in all fifty States, the District of Columbia, Puerto Rico and the Virgin Islands. The organization's primary objective is to serve the consumer by seeking ways to improve the quality and effectiveness of public regulation in America.

The NARUC urges the Committee to include in the legislation being considered a provision that would repeal the tax on Contributions in Aid of Construction (CIAC). Earlier this year, Representative Nancy Johnson introduced a bill (H.R. 957) to achieve this objective. The NARUC believes including this proposal in the tax measure will increase the accessibility of reliable drinking water to utility ratepayers; reduce the burden on small, troubled water systems; and increase service quality.

Since enactment of the Tax Reform Act of 1986, State regulators in general have permitted water companies to collect through rates from homebuilders, small local governments, and individuals the amount equal to the Federal tax liability associated with the tax on CIAC. Because upfront collection of the amounts equal to these taxes are also subject to income taxation, State regulators also permit water companies to collect amounts equal to these additional taxes.

What is a "Contribution in Aid of Construction"?

Water suppliers, like all utilities, are capital intensive businesses. Historically, they have received capital for the construction of a utility extension directly from the customer (typically a homebuilder, although public school systems, local governmental agencies or individual homeowners also contribute such capital). The customer contributes this capital (e.g., property or a cash equivalent) to the utility. This practice eliminates the need for utilities to spread additional borrowing costs in the form of rate increases to the existing customer base, who have already paid, and continue to pay, for the infrastructure they use. State regulators of these utilities work to avoid shouldering existing ratepayers with the burden associated with bringing new customers on-line. It is primarily for this reason that State commissions generally require private and investor-owned water and sewer utilities to collect upfront from the entity making the contribution any taxes or fees associated with the extension of the new service.

How Did This Tax Evolve?

Prior to enactment of the Tax Reform Act of 1986, CIAC was not considered as gross income of a private or investor-owned utility and, therefore, not subject to Federal income tax. Moreover, utilities were not permitted to profit from CIAC, nor could they benefit from tax depreciation or investment tax credits on CIAC.

The Tax Reform Act of 1986 repealed section 118(b) of the Internal Revenue Code, thereby subjecting CIAC to tax as gross income. This "reform" was included in the 1986 tax measure without the benefit of hearings and strictly as a means to raise revenue.

Negative Consequences Associated With the CIAC Tax

Several negative consequences have arisen as a result of this onerous tax, some of which reach all the way down to individual ratepayers. Estimates suggest that where utilities collect the CIAC tax upfront from the new customer contributing the capital or property, as much as $2,000 can be added to the cost of a new home In trying to avoid this tax, a new customer, in the case of a homebuilder, will often reduce or outright abandon a new housing project, having a depressing effect on the local economy. Another means of avoiding the tax is by connecting to a municipal utility. Because these utilities are not required to pay taxes at all, the net effect is a further erosion on the respective community's potential tax base and economic vitality. Last but not least, a new customer may opt to develop a new separate water system to avoid the CIAC tax. Therefore, the CIAC tax has the effect of preventing water system consolidations, which runs contrary to the Environmental Protection Agency's (EPA) stated goal of increasing small water system consolidations to improve water service reliability and quality while ensuring compliance with the Safe Drinking Water Act.

How H.R. 957 Resolves the Revenue Implications of a CIAC Tax Repeal

As stated earlier, H.R. 957 seeks to restore the pre-1986 tax treatment of CIAC to water and wastewater utilities. To offset the costs for restoring the pre-existing tax treatment, H.R. 957 would extend from 20 to 25 years the depreciable life of water utility property placed in service after the date of enactment of this measure, using straight-line depreciation methods rather than using the 150 percent declining balance method.

The congressional Joint Committee on Taxation has estimated repeal of the CIAC tax could reduce Federal revenues by $108 million over a period of five years. The extension of depreciation for CIAC property as proposed in H.R. 957 will, on the other hand, raise $140 million over the same period, resulting in a net gain of $32 million to the U.S. Treasury.

Conclusion

EPA estimates suggest that water utilities will need to spend nearly $50 billion from now until the year 2000 to comply with the Safe Drinking Water Act, as currently written. Ultimately, utility ratepayers and local governments will bear these additional costs. The NARUC is working with others to see that the Safe Drinking Water Act is amended in order to contain some of the Act's compliance costs while ensuring safe drinking water. Repealing the CIAC tax would be a good first step to relieve some of the burden facing private and investor-owned water utilities. By relieving water utilities from these costs in the shorter term, utility ratepayers would be benefitted in the longer term through increased utility restructuring and consolidation activities, which result in increased service efficiencies, reliability and quality.

In addition, the U.S. Treasury Department has stated that it is not opposed to repealing the CIAC tax. Furthermore, H.R. 957 as drafted would not deplete the U.S. Treasury of already scarce resources. Finally, a consortium of state regulators, water utilities, homebuilders, and realtors have supported such an approach.

To ensure that utility ratepayers enjoy reliable, high quality water service at affordable rates, the NARUC urges the Committee to enact legislation which includes provisions to repeal the tax on Contributions in Aid of Construction, and appreciates the opportunity to comment on the miscellaneous tax reform measure.

TESTIMONY OF THE NATIONAL ASSOCIATION OF WATER COMPANIES

The National Association of Water Companies (NAWC) would like to thank Chairman Archer for holding hearings on Miscellaneous Tax Reform provisions. As part of these reforms, we urge the committee on Ways and Means to act quickly on one such revenue neutral provision in particular, the repeal of the tax on Contributions in Aid of Construction as introduced in H.R. 957 by Representatives Johnson, Matsui, Jacobs, Kennelly, Herger, Neal, Thomas, Hancock, English, and Zimmer. Passage of this legislation will increase the public's access to safe reliable drinking water, decrease the number of small troubled water systems, and work to level the playing field between municipal and investor-owned water systems.

NAWC is the trade association representing the nation's investor-owned water utilities. Its more than 370 members in 41 states provide safe, reliable drinking water to more than 22 million Americans every day. Our members employ a combined work force in excess of 15,000 and have $9 billion invested in gross plant and equipment.

WHAT IS OUR CONCERN?

Since the enactment of the Tax Reform Act of 1986, most of our members have had to collect federal taxes from the builders of new homes, local governments, individuals and even the federal and state governments, for "Contributions in Aid of Construction" or CIAC. In addition, because the Internal Revenue Code treats collection of these up front taxes as taxable income to our members, our members often must also collect taxes on these taxes. This so-called "gross up" can result in the total taxes collected for Contributions in Aid of Construction equaling as much as 70 percent of the original contribution.

WHAT IS A "CONTRIBUTION IN AID OF CONSTRUCTION" OR CIAC?

Water suppliers, like all utilities, are capital intensive businesses. Historically, they have been advised by State Public Utility Commissions to obtain the capital for the construction of service extensions directly from the customer (typically a home builder, although it can be a public school, a government agency, or an individual homeowner). The customer contributes - or advances - this property, or a cash equivalent, to the utility.

It is important to keep in mind that privately owned water suppliers are regulated by State Public Utility Commissions. Almost all state commissions do not allow our members to earn a return for their stockholders from water and wastewater main extensions paid for by others. Also, with a few exceptions, state commissions require private and investor owned water and wastewater utilities to collect up-front from the entity paying the CIAC, any taxes or fees associated with the extension of new service.

WHY DO WE PAY TAXES ON CIAC?

Prior to enactment of the Tax Reform Act of 1986, the Internal Revenue Code exempted CIAC from the gross income of an investor-owned utility and CIAC therefore was not subject to federal income tax. In addition, utilities could not take tax depreciation or investment tax credits on CIAC.

The Tax Reform Act repealed section 118 (b) of the Internal Revenue Code and thus subjected CIAC to tax as gross income. This change was done at the time without the benefit of a hearing.

WHAT ARE THE NEGATIVE CONSEQUENCES OF TAXING CIAC?

The repercussions of this onerous tax are many and far reaching. For instance, it has been estimated that this tax can add as much as $2000 to the cost of a new home.

In order to circumvent this tax, new customers try to avoid doing business with an investor-owned water company. This, of course, creates a competitive disadvantage for investor-owned water systems and discourages privatization efforts.

Other negative aspects of this tax include:

A) Potential customers may either abandon or downsize new projects, with resultant depressing effects on the local economy.

B) Potential customers will seek connection to a municipal system - rather than an investor-owned system - which doesn't pay taxes at all, thereby reducing revenues to local, state and federal government entities.

C) New customers may build a new separate water system. This action is inconsistent with the Environmental Protection Agency's goal of discouraging the proliferation of small independent water systems, the very systems which are most often out of compliance with the Safe Drinking Water Act.

HOW DOES H.R. 957 SOLVE THIS PROBLEM AND HOW DOES IT OFFSET ANY LOST REVENUE TO THE FEDERAL GOVERNMENT?

H.R. 957 restores the pre-Tax Reform Act tax treatment of CIAC to water and waste-water utilities. H.R. 957 pays for restoration by extending the depreciable life of water utility property placed in service after enactment of the CIAC tax repeal from 20 years to 25 years using straight-line depreciation rather than the 150 percent declining balance method.

The Joint Committee on taxation has estimated repeal of the tax on CIAC will cost $108 million over five years. The extension of depreciation for water utility property is estimated to raise $140 million over five years, for a net gain to the Treasury of $32 million.

CONCLUSION

Tens of billions of dollars will be needed through the end of the century by America's water supply systems to comply with just the Safe Drinking Water Act. The growing cost pressure on localities dictates that increased privatization and access to private funds will be needed. The tax on Contributions in Aid of Construction unnecessarily discourages this much needed privatization, and ultimately only hurts the customers and taxpayers.

The Treasury Department has testified that it does not oppose this repeal. Further, the NAWC has worked closely with the staff of your committee to assure that every concern with the legislation has been addressed. The Senate has passed its version of this legislation twice in the past. Furthermore, the legislation would bring in $32 million over five years to the U.S. Treasury. The bill is supported by the National Association of Regulatory Utility Commissioners, the National Association of Home Builders, and the National Association of Realtors.

We urge the Committee on Ways and Means to adopt H.R. 957, legislation to repeal the tax on Contributions in Aid of Construction.

Re: Comments on Proposed Mark-to-Market Regime for Investment Partnerships--for the Record of Miscellaneous Reform Hearings

Dear Mr. Mosely:

We understand that the Ways and Means Committee is considering proposed changes to the taxation of securities investment partnerships and their partners. In particular, we understand that the Committee may be considering an election to allow investment partnersips to mark their securities portfolio to market at year-end.

We are writing to express support for this proposal and to offer suggestions for coordination of the mark-to-market election with other rules in the Internal Revenue Code (the "Code"), in particular the wash sale rules of section 1091.[1] We believe that, without such coordination, the objectives intended by the Committee through the mark-to-market election would be undermined.

Investor and Tax Accounting Complexities

Bryn Mawr Capital, L.P., like most other funds of its type, essentially marks its portfolio to market each year when it reports its economic results to its investors. Unfortunately, because a mark-to-market election is not available for federal income tax accounting purposes, Bryn Mawr Capital, L.P. is effectively forced to keep two sets of books, one for investor reporting purposes and one for tax purposes. As one can imagine, the time and expense to comply with this dual reporting obligation is enormous.

The Wash Sale Rules

The wash sale rules present additional and unique complications. Section 1091 is designed to prevent investors from recognizing a loss with respect to a security if, within a period beginning 30 days before and ending 30 days after the disposition triggering the loss, the investor has acquired a substantially identical stock or security. The legislative intent behind the wash sale rule is discussed further below.

---

[1] All section references are to the code unless otherwise indicated.

It is easy to imagine the complexity involved in tracking a substantial number of trades per year to determine compliance with the wash sale rule. In many cases Bryn Mawr Capital, L.P. must effectively shut down its trading in many securities for at least 31 days to avoid an enormous build-up in realized but unrecognizable losses because of the wash sale rule.

The Proposed Mark-to-Market Election

To eliminate some of the duplicate recordkeeping and reporting complexities discussed above for investment partnerships, we understand that the Committee is considering a mark-to-market election, enabling certain securities investment partnerships to effectively conform their investor reporting and tax reporting. While we have not seen any particular legislative proposals, we would imagine that the mark-to-market election would operate in a manner similar to the mark-to-market system applicable to regulated futures contracts under section 1256 and the mark-to-market regime applicable to dealers in securities under section 475.

We support this election as a means to simplify the complex accounting and tax reporting required for securities investment partnerships. Providing a mark-to-market election would be a logical extension of the mark-to-market rules.

While we have not undertaken to quantify the impact of the mark-to-market election, we believe that the election would be revenue neutral (or at least revenue "fair") because it would encourage investment partnerships to make the election for business reasons and thereby accelerate income into the mark-to-market year.

Guidance on taxpayer behavior with respect to a mark-to-market election can be seen in the other areas of the Code where a mark-to-market system has been suggested. For example, taxpayers have suggested a mark-to-market election to simplify reporting in the passive foreign investment company area. We believe that the number of recommendations for a mark-to-market system to simplify reporting and recordkeeping in a variety of areas in the Code is an indication that taxpayers would forego the tax benefits of deferral in order to realize the non-tax benefits of simpliying their books and records and reporting systems.

Impact of the Wash Sale Rules on a Mark-to-Market Election

We believe that if a mark-to-market system is proposed for certain securities investment partnerships, a "carve-out" or exemption from the wash sale rules would be necessary so that the benefits of the mark-to-market system are not unintentionally undermined. If the wash sale rule were to apply, tax and economic results could still differ significantly simply because the wash sale rule would trigger a deemed dispostion of the portfolio and require testing under the 61-day wash sale period.[2] This would be contrary to the objectives sought by the mark-to-market election in the first place. Accordingly, in order to achieve the goals desired by the mark-to-market election, we believe a carve-out would be necessary under which section 1091 would not apply to investment funds which have elected mark-to-market treatment.

Congress has provided a carve-out for section 1091 in other areas of the Code where a mark-to-market regime applies. For example, in 1993 when Congress enacted the mark-to-market requirement for securities dealers, it specifically precluded the operation of the wash sale rules.[3] Similarly, in making changes to the wash sale rules in the 1988 Act, Congress gave Treasury regulatory authority to

---

[2] The section 1256 mark-to-market system treats the regulated futures contracts as having been sold for the purposes of Subtitle A of the Code.
[3] See section 475(d)(1).

provide exceptions to the wash sale rules for contracts subject to the section 1256 mark-to-market requirement.[4] Accordingly, we believe that a carve-out for the application of section 1091 when a mark-to-market system applies is appropriate and consistent with Congressional intent.

Moreover, the legislative intent behind section 1091 suggests that the rules were not intended to reach investment activity of the type engaged in here but instead were intended to prevent "taxpayers from taking colorable losses in wash sales and other fictitious exchanges."[5] This indicates that the wash sale rules were designed to prevent artifical crystallization of losses where a taxpayer did not effectively dispose of the underlying asset. When that intent is applied here, the need for and logic of the wash sale rule breaks down.

Conclusions

As discussed, we actively support the development of a mark-to-market election for securities investment partnerships. We believe this election would significantly simplify the reporting and recordkeeping requirements for these funds and eliminate many of the complex accounting procedures necessary to comply with the various :ode rules.

In connection with a mark-to-market election, we suggest that any such mark-to-market system include an exception to the application of the wash sale rules. Such a carve-out would enable the goals of the mark-to-market election to be achieved. Moreover, a carve-out for section 1091 would be consistent with legislative intent surrounding the wash sale rules.

Sincerely yours,

Kenneth B. Gray, Jr.

Re: Proposed Mark-to Market Method of Accounting for Securities

Dear Committee Member:

Included among the miscellaneous tax proposals scheduled for hearings before the Committee is one which would allow securities trading partnerships and corporations to elect the mark-to-market method of accounting for their actively traded property. We are writing to express our support for this proposal.

We are the general partner of a securities trading partnership. Like other funds of its type, we currently mark our portfolio to market for financial reporting purposes and for the determination of the economic value of our partners' capital accounts. However, except in the limited circumstances provided under the Internal Revenue Code (the "Code"), firms which are not dealers in securities are required to report income on the basis of historical cost in accordance with numerous complex and arcane rules. The result has been to create complex and duplicative recordkeeping which requires significant time and expense to maintain.

The election under this proposal automatically recognizes income on an economic basis in a simplified and more cost effective manner. This proposal, we believe, represents a logical extension of the mark-to-market rules which already exist under Code section 475. Integration of this elective treatment with the operative rules of Code section 475 and other related sections of the Code works toward the goals of tax simplification and uniformity.

The decision to make this election for eligible entities such as ours is a logical business one in that it reduces the burdensome and expensive recordkeeping requirements currently mandated by the Code. The tax impact to the treasury of this election is likely one of revenue neutrality. However, to the extent that it accelerates the recognition of unrealized capital gain income it would result in an increase in federal revenues.

We urge you to consider this proposal for inclusion in any pending tax legislation before the committee.

Feel free to contact me if I can be of assistance or provide further information regarding the importance of this issue.

Sincerely,

Eliot Goldberg

Re: Proposed Mark-to-Market Regime for Investment Partnerships

Dear Sir or Madam:

We understand that the Ways and Means Committee is considering proposed changes to the taxation of securities investment partnerships and their partners. In particular, we understand that the Committee may be considering an election to allow investment partnerships to mark their securities portfolio to market at year-end.

We are writing to express support for this proposal and to offer suggestions for coordination of the mark-to-market election with other rules in the Internal Revenue Code (the "Code"), in particular the wash sale rules of Section 1091.[1] We believe that, without such coordination, the objectives intended by the Committee through the mark-to-market election would be undermined.

Investor and Tax Accounting Complexities

Glenwood Partners L.P., like most other funds of its type, essentially marks its portfolio to market each year when it reports its economic results to its investors. Unfortunately, because a mark-to-market election is not available for federal income tax accounting purposes, Glenwood Partners L.P. is effectively forced to keep two sets of books, one for investor reporting purposes and one for tax purposes. As one can imagine, the time and expense to comply with this dual reporting obligation is enormous.

The Wash Sale Rules

The wash sale rules present additional and unique complications. Section 1091 is designed to prevent investors from recognizing a loss with respect to a security if, within a period beginning 30 days before and ending 30 days after the disposition triggering the loss, the investor has acquired a substantially identical stock or security. The legislative intent behind the wash sale rule is discussed further below.

It is easy to imagine the complexity involved in tracking a substantial number of trades per year to determine compliance with the wash sale rule. In many cases, partnerships in which we invest must effectively shut down their trading in many securities for at least 31 days to avoid an enormous build-up in realized but unrecognizable losses because of the wash sale rule.

The Proposed Mark-to-Market Election

To eliminate some of the duplicate recordkeeping and reporting complexities discussed above for investment partnerships, we understand that the Committee is considering a mark-to-market election, enabling certain securities investment partnerships to effectively conform their investor reporting and tax reporting. While we have not seen any particular legislative proposals, we would imagine that the mark-to-market election would operate in a manner similar to the mark-to-market system applicable to regulated futures contracts under Section 1256 and the mark-to-market regime applicable to dealers in securities under Section 475.

We support this election as a means to simplify the complex accounting and tax reporting required for securities investment partnerships. Providing a mark-to-market election would be a logical extension of the mark-to-market rules.

While we have not undertaken to quantify the impact of the mark-to-market election, we believe that the election would be revenue neutral (or at least revenue "fair") because it would encourage investment partnerships to make the election for business reasons and thereby accelerate income into the mark-to-market year.

Guidance on taxpayer behavior with respect to a mark-to-market election can be seen in the other areas of the Code where a mark-to-market system has been suggested. For example, taxpayers have suggested a mark-to-market election to simplify reporting in the passive foreign investment company areas. We believe that the number of recommendations for a mark-to-market system to simplify reporting and recordkeeping in a variety of areas in the Code is an indication that taxpayers would forego the tax benefits of deferral in order to realize the non-tax benefits of simplifying their books and records and reporting systems.

Impact of the Wash Sale Rules on a Mark-to-Market Election

We believe that if a mark-to-market system is proposed for certain securities investment partnerships, a "carve-out" or exemption from the wash sale rules would be necessary so that the benefits of the mark-to-market system are not unintentionally undermined. If the wash sale rule were to apply, tax and economic results could still differ significantly simply because the wash sale rule would trigger a deemed disposition of the portfolio and require testing under the 61-day wash sale period.[2] This would be contrary to the objectives sought by the mark-to-market election in the first place. Accordingly, in order to achieve the goals desired by the mark-to-market election, we believe a carve-out would be necessary under which Section 1091 would not apply to investment funds which have elected mark-to-market treatment.

---

2 The Section 1256 mark-to-market system treats the regulated futures contracts as having been sold for purposes or Subtitle A of the Code.

Congress has provided a carve-out for Section 1091 in other areas of the Code where a mark-to-market regime applies. For example, in 1993 when Congress enacted the mark-to-market requirement for securities dealers, it specifically precluded the operation of the wash sale rules.[3] Similarly, in making changes to the wash sale rules in the 1988 Act, Congress gave Treasury regulatory authority to provide exceptions to the wash sale rules for contracts subject to the Section 1256 mark-to-market requirement.[4] Accordingly, we believe that a carve-out for the application of Section 1091 when a mark-to-market system applies is appropriate and consistent with Congressional intent.

Moreover, the legislative intent behind Section 1091 suggests that the rules were not intended to reach investment activity of the type engaged in here but instead were intended to prevent "taxpayers from taking colorable losses in wash sales and other fictitious exchanges."[5] This indicates that the wash sale rules were designed to prevent artificial crystallization of losses where a taxpayer did not effectively dispose of the underlying asset. When that intent is applied here, the need for and logic of the wash sale rule breaks down.

Conclusions

As discussed, we actively support the development of a mark-to-market election for securities investment partnerships. We believe this election would significantly simplify the reporting and recordkeeping requirements for these funds and eliminate many of the complex accounting procedures necessary to comply with the various Code rules.

In connection with a mark-to-market election, we suggest that any such mark-to-market system include an exception to the application of the wash sale rules. Such a carve-out would enable the goals of the mark-to-market election to be achieved. Moreover, a carve-out for Section 1091 would be consistent with legislative intent surrounding the wash sale rules.

Sincerely,

Christopher P. Brown

STATEMENT OF
LEON M. METZGER
SENIOR VICE PRESIDENT AND CHIEF ECONOMIST
PALOMA PARTNERS MANAGEMENT COMPANY

CONCERNING MARK-TO-MARKET ACCOUNTING FOR SECURITIES TRADING PARTNERSHIPS

PRESENTED TO THE
COMMITTEE ON WAYS AND MEANS
UNITED STATES HOUSE OF REPRESENTATIVES

For Hearings Scheduled to Begin on July 11, 1995

INTRODUCTION

Chairman Archer, Rep. Gibbons, Members of the Committee:

I am Leon Metzger, Senior Vice President and Chief Economist of Paloma Partners Management Company, which provides management services to multi-tiered securities trading partnerships and trading advisors. Our partnerships and clients, directly or indirectly, are significant participants in several securities markets. I am pleased to have this chance to submit this written statement to the Committee on Ways and Means on allowing trading partnerships to elect to use a mark-to-market method of accounting.

I applaud you, Mr. Chairman, for your leadership in holding these hearings to consider ways to simplify and improve the current tax laws while the Committee continues its longer-range project of fundamental reform of our nation's tax system. I particularly want to thank Rep. Nancy Johnson for bringing this proposal to the Committee's attention.

I submit my written statement to support the proposal to allow partnerships and corporations whose primary activity is buying and selling actively-traded personal property to use the mark-to-market method of accounting for tax purposes. Adopting this proposal will eliminate unnecessary costs imposed on businesses like ours, make markets more efficient, and improve market depth and liquidity.

This statement discusses the economic background behind my support for allowing trading partnerships to elect to use the mark-to-market accounting method to more clearly reflect the economic substance of a partnership's income and losses. Because using this method would be **elective**, non-dealers would not be forced to adopt the method.

The effect of adopting the proposal would be to avoid inequities that currently exist among partners of certain partnerships. Moreover, as I understand the federal-budget score-keeping rules, this proposal will raise revenues because it tends to accelerate the recognition of taxable income. However, I want to emphasize that our desire to accelerate taxes is not altruistic -- it is motivated by sound business reasons that I will describe in this statement.

PROBLEMS WITH CURRENT LAW

The current tax rules create a number of problems for trading partnerships like ours. The problems involve both the tax law requirements for recognizing current losses and investor concerns about inheriting someone else's tax liability. The discussion below sets out the current problems and why we think using a mark-to-market tax accounting method will provide a better solution.

Wash-Sale Losses

Market-neutral trading partnerships employ strategies like convertible and warrant hedging, mean-reversion, and option trading. In convertible hedging, one may buy a convertible debenture (a bond that the holder can convert into common stock) and simultaneously sell short an equal amount of market value of the underlying common stock when the market is not charging a sufficient "premium" for the right to convert the bond into stock. Assume that we place the trade on January 2 and (after the bond premium widens) we close out our positions on January 15. Let us also assume that during that two-week period the markets rose. Our profit on the convertible bond side, say 2%, should exceed the loss on the stock side, say 1%. Now assume that the premium narrows such that we repeat that trade on February 1, the pattern repeats itself, and we close out our positions on February 15. Now assume that this pattern is repeated every month for the balance of the year. We have earned an economic return of 12% (2% per month from the long side, less 1% per month from the short side); yet for tax purposes we must report 24% (the long-side profit only) because of the wash-sale-loss provision of § 1091 of the Internal Revenue Code ("Code").

§ 1256(d) Mixed Straddle Account ("MSA") Election

To the extent that our partnerships hedge their interest-rate or foreign-currency risk in the transaction with a regulated futures contract ("RFC"), they can eliminate this difference between economic and taxable income by making an MSA election. This election requires them, however, to mark their securities to market every day. While daily marking achieves the objective of making taxable and economic income the same, it creates logistic hurdles also.

For example, while our partnerships electronically receive independent price quotations as of month-end, less-actively-traded derivative securities, of which we trade many, do not receive daily coverage from the independent pricing services. To require our traders to place daily telephone calls to their trading counterparties to get more than one quotation for **each** less-actively traded security, perhaps 3,000 positions, reduces time to trade and, thus, has a negative impact on profitability and on market efficiency. Alternatively, to create an intra-month pricing algorithm brings many overhead costs with it.

Moreover, one cannot elect MSA treatment for some trading strategies. For example, one trading group buys long and simultaneously sells short baskets of securities. No RFC exists that would be economically appropriate to this strategy. Without the RFC, one cannot make an MSA election. Therefore, to eliminate the wash-sale losses, the trading group stops trading for 30 days, the market does not maintain its efficiency, and those who invested capital lose an opportunity to profit. Thus, by not allowing a trading partnership to mark to market for tax purposes, although it already does so for its financial statements, the Code creates economic inefficiencies.

UNDESIRABLE TAX DEFERRAL

While it is generally considered desirable by investors to defer taxable income, deferral can sometimes result in serious problems for investors in partnerships like ours. Because from time to time, new partners join or existing partners withdraw from these partnerships, because of partial withdrawals of capital and the contribution of additional funds, the relative interests of partners may change from year to year. Our

partnerships generally keep account of a partner's entitlement upon his or her withdrawal on the basis of economic income, which tends to exceed taxable income (because of unrealized gains). When that partner withdraws in full, a cash distribution that liquidates his or her interest in the partnership effectively results in that partner recognizing his or her share of unrealized partnership gains. Furthermore, because the partnership has not disposed of any appreciated securities to make the distribution to the withdrawing partner, under current tax law the remaining partners also will bear the tax burden of any gain subsequently realized by the partnership upon the actual disposition of those assets. This inequity is not corrected until the last partner leaves and the partnership liquidates.[1]

The following example shows how that problem arises when a partner contributes additional capital. Two investors, X and Y, form a partnership on January 1, 1994 and contribute $50 each. 1994's income, $100, all unrealized, is shared pro rata under the partnership agreement. On January 1, 1995, Y contributes an additional $100. 1995's unrealized appreciation, $300, plus 1994's unrealized appreciation which the partnership realizes in 1995, $100, are shared pro rata.

Note that a § 754 election to adjust the basis of partnership assets is not a practical solution to these problems. McKee, Nelson and Whitmire (Federal Taxation of Partnerships and Partners, page 24-33) write:

> If a transferee acquires an interest in a partnership that itself holds an interest in another partnership, the basis of the upper-tier partnership in its interest in the second-tier partnership is adjusted under § 743(b) if the first-tier partnership has a § 754 election in effect... The mechanical difficulties inherent in the application of § 743(b) to tiered partnerships are significant when there are inside-outside basis discrepancies in the lower-tier partnership.

On page 24-38, they continue:

> Another drawback of the [§ 754] election is the consequent increase in the records that must be maintained by the partnership. The extent of this clerical burden is a function of the number of assets held by the partnership and the frequency with which transfers of partnership interests and certain types of distributions occur. These problems may not be important in a closely held partnership, but they can be substantial, for example, in a large, publicly held limited partnership that owns many assets, particularly if the assets are depreciable.
>
> The decision whether to elect under § 754 is further complicated because the benefits of the election do not fall evenly on the partners in the case of § 743(b) adjustments arising from transfers of partnership interests, the immediate benefits of which are limited to transferee-partners. The continuing partners may well decide that the benefits of the election to their new partners are more than outweighed by the potential long-term detriments to themselves, in the form of record keeping headaches and possible future basis decreases as to their interests.

December 31, 1995 capital balances	200	400	600
1994's unrealized appreciation realized in 1995	33	67	100

Because Y made a contribution at a time when the partnership held unrealized gain, Y pays taxes on some of X's economic income.

It is this inequity that our partnerships would like to eliminate. We would like to assure all investors that they will never pay taxes on other investors' capital gains. If we could use the mark-to-market accounting method for tax purposes, economic income and taxable income, in general, would coincide.

ECONOMIC BENEFITS OF ALLOWING THE MARK-TO-MARKET METHOD

When investors badly overprice a stock, liquidity dries up to the extent of the mispricing; without liquidity, a real market no longer exists; without a real market, owners cannot sell. If the security is overpriced, some, if not all, of the paper profits on the trade are fictitious, disappearing very quickly when one tries to sell the shares. The sell order causes the price decline until it reaches its correct value, a value at which buyers can be found.

When a market-neutral trader sees that investors have overpriced a security, that trader borrows the security from one of the owners who was unwilling to sell it, and sells it short while, at the same time, buying other securities to remain market-neutral. As a result, the trader prevents the extreme market inefficiencies that cause liquidity to shrivel. The trader is essential to the proper functioning of the market.

Nowadays, the capital base of most stock-exchange specialists is too small to allow them to trade a significant percentage of the total shares outstanding in the stocks for which they are responsible. As a result, each specialist regards highly the value of market-neutral traders who stand prepared to help the specialist by buying the specialist's stock on declines, and by selling the stock on rises. Without the market-neutral traders, the markets would be subject to much larger swings than they experience now. In fact, 1993 had the lowest volatility on record and 1992 had the second lowest, according to an early-1994 article in Barron's. I think that the 1987 market crash would likely have been less severe or might not have occurred at all had there been enough market-neutral traders in the market then.

Our partnerships perform a market-making function by profiting from mispricings. Just as current law allows dealers to mark their positions to market and declare their taxable

profits and losses that way, it makes perfect economic sense for our partnerships to mark their positions to market, a procedure that accurately states their true profits and losses, and one that will not distort their true taxable income.

Impediments to the functioning of our partnerships harm the best and proper functioning of the markets. In the end, such impediments do more harm than good. If current tax rules prevent our partnerships from marking to the market, they are an obstacle to the partnerships' performance of an important economic service.

Cash Method

Two reasons why current law treats individuals as cash-basis taxpayers are that they generally account for their income and expenses using the cash method, and that they do not necessarily have the cash to pay taxes on unrealized gains. For example, the average taxpayer who bought $10,000 of stock that doubled in price within one year, would probably have to liquidate his or her investment, in part, to generate cash to pay the taxes on his or her unrealized gain.

Being a provider of liquidity to the marketplace means that the partnerships have to be prepared themselves to be illiquid. Therefore, our partnership agreements provide for limited liquidity. Most investors pay for the taxable income generated by our partnerships with cash from sources other than the partnership. Furthermore, the partnerships mark to market for accounting purposes, as required by the American Institute of Certified Public Accountants' guide to audits of investment companies. Thus, the reasons for employing the cash method of accounting do not apply to our partnerships.

REVENUE IMPLICATIONS

I believe that if Congress adopts this proposal, there will be an acceleration of income recognition for tax purposes. This should result for two primary reasons. The first is that Congress will have eliminated barriers to using our trading strategies for thirty days, usually at year end. The second results from the very nature of our business. We are in the business of producing returns for our partners. We only earn money when our partners profit. If we become too concerned with maximizing tax differentials or with trying to reduce the tax liabilities of old and new partners, we are not maximizing the profits for either ourselves or our partners. If Congress adopts this proposal, we can concentrate all our energies on maximizing the economic profits of our investors. The nature of our business precludes us from any attempt to use the mark-to-market rules for a tax advantage. Any mark-to-market losses created for tax purposes would also be real losses to our investors. We could not stay in business if that were our goal.

PRECEDENTS FOR ALLOWING MARK-TO-MARKET TREATMENT

Precedents exist for allowing or even requiring taxpayers to mark to market. These precedents were driven, in part, by longstanding financial-accounting principles of using the mark-to-market method for financial instruments. They prove that such method is a proper one for companies that engage in passive-type income activities commonly considered as no more than investments.

§ 1256 Treatment

First, § 1256 of the Code requires taxpayers to report gain and loss from RFCs annually under a mark-to-market rule which corresponds to the daily cash settlement, mark-to-market system employed by commodity-futures exchanges in the United States for determining margin requirements.

The broker marks RFCs to the market daily. Simply put, to the extent that the account shows profit, the customer can use that daily profit as margin on additional RFCs or can receive it in cash. Similarly, to the extent that the account has a loss, the customer must add cash or securities to his or her account to the extent of the loss. Thus it makes economic sense to mark to market RFCs because even cash-basis taxpayers constructively receive income as it is accrued although the positions are not closed out.

MSA Election

Second, by providing for MSA elections (as discussed above), the Code permits taxpayers to mark to market trading strategies that include RFCs.

§ 475 Treatment

Last, § 475 of the Code requires securities dealers to mark to market non-inventory securities at the end of the tax year unless they identify those securities as held for investment or not held for sale. Were our trading groups to have even a single customer, they would fall under this section and thus be entitled to use the mark-to-market method for all of the securities we hold. The trading we do often mirrors the proprietary trading done for their own accounts by major international brokerages (which, unlike us, have customers). Those brokerages formerly employed many of our traders. Although the partnerships do not have the brokerages' major underwritings, large sales forces, or customer bases, the partnerships very much replicate what the brokerages do with their own capital, namely, invest in low-risk, market-neutral strategies. As a result, the Code permits international brokerage houses that compete with our partnerships to mark to market their proprietary trading securities for tax purposes, but it does not permit our partnerships to do the same.

The reason that our partnerships do not have customers is that the partnerships do not want to become dealers in securities and thus have significant overhead costs and risks. Furthermore, Connecticut, the state where they are domiciled, exempts non-resident partners from tax on their share of partnership income only if the partnership trades solely for its own account.

CONCLUSION

If Congress adopts this proposal, it would alleviate a significant problem for market-neutral trading partnerships like ours, but does not force any non-dealer to adopt the practice. Most important, from the government's point of view, it will raise revenue by causing the partners of the electing entities to pay taxes currently on appreciated securities, rather than at some distant date when the partnership sells those securities.

Although it may sound odd that the partnerships are advocating this position, we tell our investors that our concern is maximizing profits appropriate for the level of risk. Those investors who seek tax deferrals and other advantages are not the

ones we encourage to join our partnerships. We believe that the best investment is one that does not rely on artificial incentives.

Thank you for giving me this opportunity to testify.

REGAL ASSET MANAGEMENT
C O R P O R A T I O N

July 20, 1995

House Committee on Ways and Means
United States House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20525

Re: Proposed Mark-to-Market Regime for Investment Partnerships

Dear Sirs,

We understand that the Ways and Means Committee is considering proposed changes to the taxation of securities investment partnerships and their partners. In particular, we understand that the Committee may be considering an election to allow investment partnerships to mark their securities portfolio to market at year-end.

We are writing to express support for this proposal and to offer suggestions for coordination of the mark-to market election with other rules in the Internal Revenue Code (the "Code"), in particular the wash sale rules of section 1091. We believe that, without such coordination, the objectives intended by the Committee through the mark-to-market election would be undermined.

Investor and Tax Accounting Complexities

Regal Asset Management Corporation, like most other funds of its type, essentially marks its portfolio to market each month when it reports its economic results to its investors. Unfortunately, because a mark-to-market election is not available for federal income tax account purposes, Regal Asset Management Corporation is effectively forced to keep two sets of books, one for investor reporting purposes and one for tax purposes. As one can imagine, the time and expense to comply with this dual reporting obligation is enormous.

The Wash Sale Rules

The wash sale rules present additional and unique complications. Section 1091 is designed to prevent investors from recognizing a loss with respect to a security if, within a period beginning 30 days before and ending 30 days after the disposition triggering the loss, the investor has acquired a substantially identical stock or security. The legislative intent behind the wash sale rule is discussed on the following page.

Regal Asset Management Corporation, 8201 Preston Road, Suite 400, Dallas, TX 75225, 214-890-8800

It is easy to imagine the complexity involved in tracking a substantial number of trades per year to determine compliance with the wash sale rule (our firm does approximately 200,000 trades a year for all of our accounts). In many cases, Regal Asset Management Corporation must effectively shut down, or substantially curb its trading in many securities for at least 31 days to avoid an enormous build-up in realized but unrecognizable losses because of the wash sale rule.

The Proposed Mark-to-Market Election

To eliminate some of the duplicate recordkeeping and reporting complexities discussed above for investment partnerships, we understand that the Committee is considering a mark-to-market election, enabling certain securities investment partnerships to effectively conform their investor reporting and tax reporting. While we have not seen any particular legislative proposals, we would imagine that the mark-to-market election would operate in a manner similar to the mark-to-market system applicable to regulated futures contracts under section 1256 and the mark-to-market regime applicable to dealers in securities under section 475.

We support this election as a means to simplify the complex accounting and tax reporting required for securities investment partnerships. Providing a mark-to-market election would be a logical extension of the mark-to-market rules.

While we have not undertaken to quantify the impact of the mark-to-market election, we believe that the election would be revenue neutral (or at least revenue "fair") because it would encourage investment partnerships to make the election for business reasons and thereby accelerate income into the mark-to-market year.

Guidance on taxpayer behavior with respect to a mark-to-market election can be seen in the other areas of the Code where a mark-to-market system has been suggested. For example, taxpayers have suggested a mark-to-market election to simplify reporting in the passive foreign investment company area. We believe that the number of recommendations for a mark-to-market system to simplify reporting and recordkeeping in a variety of areas in the Code is an indication that taxpayers would forego the tax benefits of deferral in order to realize the non-tax benefits of simplifying their books and records and reporting systems.

Impact of the Wash Sale Rules on a Mark-to-Market Election

We believe that if a mark-to-market system is proposed for certain securities investment partnerships, a "carve-out" or exemption from the wash sale rules would be necessary so that the benefits of the mark-to-market system are not unintentionally undermined. If the wash sale rule were to apply, tax and economic results could still differ significantly simply because the wash sale rule would trigger a deemed disposition of the portfolio and require testing under the 61-day wash sale period. This would be contrary to the objectives sought by the mark-to-market election in the first place. Accordingly, in order to achieve the goals desired by the mark-to-market election, we believe a carve-out would be necessary under which section 1091 would not apply to investment funds which have elected mark-to-market treatment.

House Securities and Ways and Means

Congress has provided a crave-out for section 1091 in other areas of the Code where a mark-to-market regime applies. For example, in 1993 when congress enacted the mark-to-market requirement for securities dealers, it specifically precluded the operation of the wash sale rules. Similarly, in making changes to the wash sale rules in the 1988 Act, Congress gave Treasury regulatory authority to provide exceptions to the wash sale rules for contracts subject to the section 1256 mark-to-market requirement. Accordingly, we believe that a carve-out for the application of section 1091 when a mark-to-market system applies is appropriate and consistent with Congressional intent.

Moreover, the legislative intent behind section 1091 suggests that the rules were not intended to reach investment activity of the type engaged in here, but instead were intended to prevent "taxpayers from taking colorable losses in wash sales and other fictitious exchanges." This indicates that the wash sale rules were designed to prevent artificial crystallization of losses where a taxpayer did not effectively dispose of the underlying asset. When that intent is applied here, the need for and logic of the was sale rule breaks down.

Conclusions

As discussed, we actively support the development of a mark-to-market election for securities investment partnerships. We believe this election would significantly simplify the reporting and recordkeeping requirements for these funds and eliminate many of the complex accounting procedures necessary to comply with the various Code rules.

In connection with a mark-to-market election, we suggest that any such mark-to-market system include an exception to the application of the wash sale rules. Such a carve-out would enable the goals of the mark-to-market election to be achieved. Moreover, a carve-out for section 1091 would be consistent with legislative intent surrounding the wash sale rules.

I would be happy to discuss the foregoing issues in more detail if necessary. Please feel free to write me or call me for any additional recommendations.

Sincerely,

Jay W. Thompson
Chief Financial Officer

Re: Request for Written Testimony
Hearings on Miscellaneous Tax Proposals
Proposed Mark-to-Market Regime for Investment Partnerships (Accounting Item #5)

Dear Mr. Moseley:

On behalf of Ridgeline Partners, L.P., a professionally managed securities investment partnership ("Ridgeline"), we are responding to the Committee's June 30, 1995 request for written testimony regarding proposed legislation which would allow an election to allow investment partnerships to mark their securities portfolio to market at year-end.

On behalf of Ridgeline, we are writing to express support for this proposal and to offer suggestions for coordination of the mark-to-market election with other rules in the Internal Revenue Code (the "Code"), in particular the wash sale rules of section 1091.[1] We believe that, without such

---

[1] All section references are to the Code unless otherwise indicated.

coordination, the objectives intended by the Committee through the mark-to-market rules would be undermined.

About Ridgeline and the Industry

Ridgeline is a California limited partnership which seeks gains through active trading in equity securities listed on the New York and American Stock Exchanges.[2] Ridgeline uses a proprietary investment model based on technical methods which produce a statistical forecast of future securities prices. These analytical techniques are used to predict movements in the prices of individual securities.

The investment model predicts changes in the prices of securities which predictions form the basis for trades made by Ridgeline throughout a particular trading day. During a typical trading year, Ridgeline enters into about 250,000 trading transactions and trades about 1 million shares per day. This is equal to roughly 0.4% of the total NYSE trading volume. Under the current version of the investment model, Ridgeline's investment portfolio turns over every 5-20 days. As can be seen, Ridgeline realizes primarily short-term capital gains from its investment activities, taxable as such.

Ridgeline is part of an estimated $100 billion industry loosely referred to as the "hedge fund" industry. In general, hedge funds actively invest in a broad spectrum of securities, often using proprietary models.

The hedge fund industry itself is but a small subset of the entire investment partnership industry which, in various forms, groups individual and institutional investment in the securities markets. Investors receive reports on at least on annual basis, which reports identify the change in net asset value of the securities in the partnership. Net asset value is the main criterion used by investors and potential investors to make decisions whether to buy interests in the partnership or redeem their investments therein. In short, investment decisions are generally based on net asset value which is derived through an analysis of the then existing market value of the securities portfolio.

---

[2] Ridgeline is not a publicly traded partnership within the meaning of the Code or the various securities regulations. Investments in the fund are sold through confidential private placement memoranda.

Investor and Tax Accounting Complexities

Ridgeline, like most investment funds, marks its portfolio to market each year when it reports its economic results to its investors both at year-end and periodically throughout the year. Unfortunately, because a mark-to-market election is not available for federal income tax accounting purposes, Ridgeline is effectively forced to keep two sets of books, one for investor reporting purposes and one for tax purposes. As one can imagine, given the magnitude of the trades Ridgeline and the rest of the industry make each year, the time and expense to comply with this dual reporting obligation is enormous.

Moreover, the reports given to investors for tax purposes are not generally used by the investor to make investment or redemption decisions. Since this information is generally given between two and six months after the close of the previous year, the information on the partnership's Form K-1 is not particularly relevant to the investor's investment decisions. Accordingly, the second set of books and records maintained by the investment partnership for tax purposes is of little use to the partnership or the investor outside of the tax reporting area.

The Proposed Mark-to-Market Election

The Committee's June 30 Press Release indicates that the Committee is considering a mark-to-market election, enabling certain securities investment partnerships to effectively conform their investor reporting and tax reporting. On behalf of Ridgeline, we support this election as a means to simplify the complex accounting and tax reporting required for securities investment partnerships. Providing a mark-to-market election for Ridgeline's industry would be a logical extension of the mark-to-market rules and would enable investment decisions to be made in a manner consistent with tax reporting.

The Press Release indicates that proposals will not be considered which involve a significant revenue cost. While we have not undertaken to quantify the impact of the mark-to-market election, we believe that the election would be revenue neutral (and may ultimately raise revenue) because it would encourage investment partnerships to make the election for business reasons notwithstanding the effect that the election would accelerate income into the mark-to-market year.

In this regard, we believe that the number of investment partnerships that would make the election for non-tax reasons and thereby accelerate income into the mark-to-market year would more than offset any revenue loss that might arise when a mark-to-market election accelerates losses into the mark-to-market year. Indeed, we note that when section 475 was enacted requiring dealers to mark their securities inventory to market, it was expected that the provision would raise revenue.[3] This is an indication that a mark-to-market election here would also be revenue generating.

Guidance on taxpayer behavior with respect to a mark-to-market election can be seen in the other areas of the Code where a mark-to-market system has been suggested. For example, taxpayers have suggested a mark-to-market election to simplify reporting in the passive foreign investment company area.[4]

We believe that recommendations for a mark-to-market system to simplify reporting and recordkeeping in other areas of the Code is an indication that taxpayers would forego the tax benefits of deferral in order to realize the non-tax benefits of simplifying their books and records and reporting systems.

Issues Involved Under a Mark-to-Market Regime

Other than the brief language in the Joint Committee explanation accompanying the hearings, we have not seen any proposed legislative language. However, we would imagine that the mark-to-market election would operate in a manner similar to the mark-to-market system applicable to regulated futures contracts under section 1256 and the mark-to-market regime applicable to dealers in securities under section 475.[5] In this

---

[3] The revenue estimates at the time section 475 was being considered by Congress indicated a revenue increase of about $3.8 billion over five-years. The revenue estimate included another minor technical change to the Code and the estimate was not broken down between the two items.

[4] See, e.g., Comments by the Investment Company Institute on the Treatment of Shareholders of Certain Passive Foreign Investment Companies, August 19, 1992, reprinted on LEXIS at 92 TNI 34-54; Comments by the New York State Bar Association on H.R. 13, May 3, 1993, reprinted on LEXIS at 93 TNI 84-15.

[5] In fact, one way of accomplishing the election would be to provide for the mark-to-market election in section 475 itself.

respect, a number of technical and mechanical issues arise that we would like to comment on.

(i) Qualifying Entities

The Joint Committee explanation indicates that the election will be available to partnerships and corporations which own "qualifying assets" having a value equal to 90% of total assets. The Joint Committee explanation indicates that qualifying assets will be defined as "actively traded" property as defined under the straddle rules of section 1092.[6] We agree that the straddle definition of actively traded property is appropriate in this case and that a 90% threshold is an appropriate threshold so as to target the election to those entities predominantly engaged in securities trading.

To the extent the definition of a "qualifying entity" is determined by reference to the "value" of the underlying assets, we would suggest the Committee consider the impact when the securities portfolio fluctuates in value relative to non-qualifying assets. We suggest that once an entity qualifies as a qualifying entity by meeting the 90% test, it remains a qualifying entity for future tax periods. Accordingly, we do not believe an entity should be precluded from remaining in the mark-to-market system if the value of its qualifying assets fall below 90% of total assets.

(ii) Annual or One-Time Election

We would expect that the Committee will consider whether the mark-to-market election would be an annual election or a one-time election as an accounting method which could then only be changed with Commissioner consent. We believe that the mark-to-market election can only be workable as a one-time election. However, we believe that there are certain partnership events which justify the ability to elect out of the regime. For example, if the partnership is deemed to dissolve under section 708 because of a substantial sale or exchange of interests in the partnership, we believe the "new" partnership should be able to make a new determination as to whether to make the election.

---

[6] See Reg. Sec. 1.1092(d)-1(a).

(iii) Section 481 Relief

As noted, we believe that a mark-to-market election would at least be revenue neutral because the number of taxpayers that will elect mark-to-market for non-tax purposes (notwithstanding the acceleration of income) will offset the number of taxpayers electing mark-to-market to accelerate the recognition of losses. Moreover, we believe any anti-abuse rules developed by the Committee will curb potential abuse.

However, we believe that there should not be a significant disincentive for investment partnerships to make a mark-to-market election and suggest that the Committee consider allowing Section 481 relief for the election year, namely reporting of the accelerated income in the election year over a five year period. This would encourage partnerships to make the election and would also serve to mitigate the consequences that would arise if taxpayers could not make the election on an annual basis.[7]

(iv) Partnership Election

A mark-to-market election would benefit the investment partnership as a whole because it would enable the partnership to conform its overall financial recordkeeping with its tax books and records. Accordingly, we believe the mark-to-market election should be made at the partnership level rather than at the partner level. This would be similar to elections under section 754. Moreover, if the election were made at the partner level, the partnership would still be forced to keep two sets of books, one for partners which elect and one for partners which forego the election.

(v) Treatment of Mark-to-Market Income

Section 1256 contains special rules regarding the character of income recognized under the special mark-to-market regime applicable there. Under those rules, 40% is treated as short-term capital gain or loss and 60% is treated as long-term capital gain or loss. On the other hand, the section 475 mark-to-market rules do not alter the ordinary income treatment otherwise required for dealers.

Indeed, the availability of section 481 relief for dealers affected by section 475 reinforces our earlier point that a mark-to-market system raises revenue.

We believe that a mark-to-market election should not recharacterize gains and losses from capital to ordinary. We believe sections 475 and 1256 correctly deal only with the timing of income recognition and not the character of the underlying gain or loss.

It is possible that the Committee will wish to consider whether to apply some form of split between short and long term treatment for gains and losses recognized under a mark-to-market election. In fact, if the Committee did not consider such a rule, it is possible that a mark-to-market election would have the effect of treating all gains and losses as short-term since the property would be always be treated as held for one year or less under a mark-to-market system. As a result, if the legislation did not provide for a long-term component, investment partnerships which otherwise realize a significant amount of long-term gains would be unduly penalized in electing mark-to-market. Accordingly, we believe the legislation should, at a minimum, provide for a 60% long-term component consistent with the section 1256 rules. Moreover, we believe that there are justifications for a much greater long-term component.

The Wash Sale Rules

The wash sale rules present additional and unique complications for the securities investment partnership industry. Section 1091 is designed to prevent investors from recognizing a loss with respect to a security if, within a period beginning 30 days before and ending 30 days after the disposition triggering the loss, the investor has acquired a substantially identical stock or security. The legislative intent behind the wash sale rule is discussed further below.

It is easy to imagine the complexity involved in tracking 250,000 trades per year to determine compliance with the wash sale rule. To comply with section 1091, Ridgeline maintains a complex computer model and spends substantial time and expense each year making calculations to accurately report the impact of the wash sale rule to its investors. In many cases, Ridgeline must effectively shut down its trading in many securities for at least 31 days to avoid an enormous build-up in realized but unrecognizable losses because of the wash sale rule. Thus, Ridgeline forgoes substantial economic gains in the securities in which it is forced to restrain from trading.[8]

In fact, we believe the complexity in this area contributes in large part to a general lack of compliance in this area by some similarly situated investment funds. In this

Impact of the Wash Sale Rules on a Mark-to-Market Election

We believe that if a mark-to-market system is proposed for certain securities investment partnerships, an exemption from the wash sale rules would be necessary so that the benefits of the mark-to-market system are not unintentionally undermined. If the wash sale rule were to apply to funds like Ridgeline which make a mark-to-market election under the Committee's proposal, tax and economic results could still differ significantly simply because the wash sale rule would trigger a deemed disposition of the portfolio and require testing under the 61-day wash sale period.[9] This would be contrary to the objectives sought by the mark-to-market election in the first place. Accordingly, in order to achieve the goals desired by the mark-to-market election, we believe a carve-out would be necessary under which section 1091 would not apply to investment funds which have elected mark-to-market treatment.

Congress has provided a carve-out from section 1091 in other areas of the Code where a mark-to-market regime applies. For example, in 1993 when Congress enacted the mark-to-market requirement for securities dealers, it specifically precluded the operation of the wash sale rules.[10] Similarly, in making changes to the wash sale rules in the 1988 Act, Congress gave Treasury regulatory authority to provide exceptions to the wash sale rules for contracts subject to the section 1256 mark-to-market requirement.[11] Accordingly, we believe that a carve-out for the application of section 1091 when a mark-to-market system applies is appropriate and consistent with Congressional intent.

---

regard, Ridgeline is at a competitive disadvantage simply because it is complying with the wash sale rules.

[9] The section 1256 mark-to-market system treats the regulated futures contracts as having been sold for purposes of Subtitle A of the Code.

[10] See section 475(d)(1).

[11] Conf. Comm. Rep., Statement of Managers, Pub. L. 100-647, Technical and Miscellaneous Revenue Act of 1988 (October 24, 1988). In this regard, given the potential delay in issuing regulations on this topic, we suggest that Congress specifically provide for the exemption from the wash sale rules rather than leave the exemption for Treasury to provide in regulations.

Moreover, the legislative intent behind section 1091 suggests that the rules were not intended to reach investment activity of the type engaged in by Ridgeline but instead were intended to prevent "taxpayers from taking colorable losses in wash sales and other fictitious exchanges."[12] This indicates that the wash sale rules were designed to prevent artificial crystallization of losses where a taxpayer did not effectively dispose of the underlying asset. When that intent is applied to an investment partnership such as Ridgeline, the need for and logic of the wash sale rule breaks down. Ridgeline is in the business of generating short-term gains and may buy and sell the same security several times during the year. Each trade is an economic decision based on the predicted movement in the security made by the model rather than an artificial transaction designed simply to recognize a loss.

Conclusions

As discussed, we actively support the development of a mark-to-market election for securities investment partnerships. We believe this election would significantly simplify the reporting and recordkeeping requirements for these funds and eliminate many of the complex accounting procedures necessary to comply with the various Code rules. We believe the election would at least be revenue neutral and would ultimately raise revenue if only because investment partnerships would have less overhead and would be able to pass more taxable income on to their investors.

In connection with a mark-to-market election, we suggest that any such mark-to-market system include an exception to the application of the wash sale rules. Such a carve-out would enable the goals of the mark-to-market election to be achieved. Moreover, a carve-out from section 1091 would be consistent with legislative intent surrounding the wash sale rules.

We would be happy to discuss our comments with you in person in greater detail and provide any further information you may desire. In the meantime, please feel free to call me at (213) 669-7295 if you have any questions.

Best regards.

Very truly yours,

Michael S. Lebovitz
for O'MELVENY & MYERS

12 House Ways and Means Comm. Rep., Internal Revenue Bill of 1921, H.R. Rep. No. 350, 67th Cong. 1st Sess. 10 (1921).

MORRISON & FOERSTER

STATEMENT OF CONSOLIDATED FREIGHTWAYS, INC. AND AFFILIATED COMPANIES ON MISCELLANEOUS TAX PROPOSALS -- Accounting -- Allow Deduction for Intrastate Operating Rights of Motor Carriers*/

Consolidated Freightways, Inc. supports the simplification proposal to allow a motor carrier to deduct its adjusted basis in intrastate operating rights which it held on January 1, 1995. These intrastate operating rights were preempted on that date by section 601 of the Federal Aviation Administration Authorization Act of 1994 which rendered them valueless. Deduction of the basis will recognize the loss incurred by the carriers and provide a certain and uniform result which conforms with the correct accounting treatment required by financial accounting standards.

Consolidated Freightways, Inc. and its affiliated companies is one of the largest cargo transportation companies in the United States. Its motor carrier companies employ over 28,000 persons. Its affiliate, Emery Worldwide, is an integrated air freight carrier which employs 7,500 persons. Both the motor carrier companies and Emery operate throughout the United States and internationally.

1994 Preemption of State Operating Rights

Last year, Congress preempted and prohibited state economic regulation of motor carriers, effective January 1, 1995, in Section 601 of the Federal Aviation Administration Authorization Act of 1994. The Act preempted state regulation of routes, rates, prices, and services. States may continue to regulate safety, financial responsibility, insurance, vehicle size and weight, and other non-economic issues.

Prior to that federal preemption, approximately 41 states required motor carriers to obtain state operating rights (certificates of public convenience and necessity or permits) to operate intrastate trucking routes. Motor carriers incurred substantial expense to obtain these operating rights in regulatory proceedings or by acquisition of existing carriers or routes. At the time of preemption, these rights represented substantial and valuable assets.

Value of Consolidated Freightways' Intrastate Operating Rights

Consolidated Freightways has acquired substantially valuable state operating rights and authorities in 39 of the 41 previously regulated states. Consolidated Freightways, Inc. acquired many of these rights in regulatory proceedings which involved substantial expense to establish "public convenience and necessity". Consolidated Freightways also

---

*/ Item A7, Page 10, "Allow Deduction for Intrastate Operating Rights of Motor Carriers," Joint Committee on Taxation, Description of Miscellaneous Tax Proposals (JCS-19-95), July 10, 1995

purchased rights either directly, as a purchase of all of the assets of another carrier, or indirectly, by the purchase of the stock of another carrier followed by an election to treat the stock acquisition as a purchase of assets.

Consolidated Freightways and affiliates reported their intrastate operating rights and authorities as assets in the financial statements.*/ Lenders, and others, relied upon the value or costs of these intrastate operating rights in evaluating the credit-worthiness of the company. The basis of intrastate rights held by Consolidated Freightways and affiliates is approximately $11 million.

Loss in Value of Operating Rights

These intrastate operating rights have been rendered worthless by federal preemption. The Conference Committee Report "recognize[d] that this [federal preemption] will eliminate the asset value of the operating authority of those affected motor carriers."

Preemption of state regulation of intrastate operations has eliminated the value of the intrastate operating rights held by Consolidated Freightways affiliates. This loss in value of the intrastate operating rights is similar to the result of the Motor Carrier Act of 1980 which deregulated interstate operating rights awarded by the Interstate Commerce Commission ("ICC").

For financial accounting purposes, Consolidated Freightways was required to write-off the basis of its intrastate operating rights as an extraordinary item in 1994. (Statement of Financial Accounting Standards No. 44.) This treatment was also required by the Financial Accounting Standards Board ("FASB") as a result of the deregulation of interstate operating rights in 1980. The basis for the FASB action was that the resale and collateral values of the operating rights had been substantially impaired resulting in an economic loss to the company which should be charged to income.

Historical Precedent for Legislative Relief

A similar solution was provided by Congress in 1981 after federal deregulation of the interstate motor carrier industry. The Motor Carrier Act of 1980, which preempted interstate regulation of motor carriers, also did not include tax relief for the industry. However, the legislative history then, as now, also recognized the loss in value of the operating rights due to deregulation.

Subsequently, in 1981, ERTA permitted carriers to amortize the total amount of their basis in the deregulated ICC operating rights over a 60-month period. In 1986,

---

*/ Until the Revenue Reconciliation Act of 1993, which added section 197 to the Internal Revenue Code, such operating rights were nonamortizable for federal income tax purposes. Operating rights acquired after August 10, 1993 (or July 25, 1991 for certain electing taxpayers) may be amortized over 15 years. Consolidated Freightways' operating rights were acquired prior to that date and continue to be nonamortizable.

similar tax relief was provided to bus companies and freight forwarders following deregulation.

The arguments considered by Congress in 1981 and 1986 with regard to the loss in value of federal operating rights as a result of deregulation are equally applicable to the preemption of intrastate operating rights.

Write-Off For Intrastate Operating Rights May Not Be Uniformly Available under Current Tax Law

The IRS has not taken a position regarding the tax effects of the 1994 preemption of intrastate operating rights, or more specifically, the ability of a motor carrier to deduct its basis in intrastate operating rights rendered void as a result of federal preemption. Prior experience following deregulations indicates that the availability of a write-off for tax purposes may not be uniform or consistent among carriers. It is clear, however, that the motor carriers have a stronger position as a result of the federal preemption then was true in the case of deregulation because after deregulation, certificates continued to be required. Here federal law prohibits any such continuing requirement for economic regulation.

The IRS position typically has ignored the economic substance of the loss, instead focusing on the formal significance of the paper certificates. The rulings generally have concluded that the impact of deregulation only reduces the value of the operating rights but does not render them valueless. Absent a sale or abandonment of the asset (the operating rights or other state-granted right), or more particularly, the line of business in which the intangible asset was used, no loss deduction is permitted. See Consolidated Freight Lines, Inc. v. Commissioner, 101 F.2d 813 (9th Cir.), cert. denied, 308 U.S. 562 (1939). This analysis is reflected in numerous IRS rulings over the last 50 years, including rulings relating to the 1980 motor carrier deregulation and the 1978 airline deregulation. The IRS rulings following the 1980 deregulation denied any deduction unless a carrier could prove that it abandoned each interstate operating authority. The IRS position is heavily dependent on the facts and circumstances of each case, indeed, of each operating right. See CRST v. Commissioner, 92 T.C. 1249 (1989), aff'd, 909 F.2d 1146 (8th Cir. 1990). Nevertheless, in similar circumstances taxpayers have prevailed. George Freitas Dairy, Inc. v. United States, 502 F. 2d 500 (9th Cir. 1978), aff'g 407 F. Supp. 1395 (D. Haw. 1976).

Absent legislative relief, the ability of Consolidated Freightways or any carrier to obtain an immediate federal tax deduction is heavily dependent on the facts and circumstances regarding each intrastate operating right. For example, if a state were to declare its outstanding operating rights to be null and void, the IRS might agree that the company may deduct its basis in that operating right. However, if a state declares that existing operating authorities are temporary evidence that the carrier meets safety and insurance requirements, the IRS may contend that the operating right was devalued but not valueless and challenge the deduction upon audit. Similarly, so long as carriers remain in business, the IRS may challenge deductions, contending that there was no closed and completed transaction.

Without Congressional action, there likely will be substantial litigation and uncertainty regarding the right of carriers to deduct their costs in intrastate operating rights, as well as the timing of the deduction. This will result in inconsistent and inequitable treatment of individual carriers depending on how each state handles deregulation, the business activities conducted by the carrier before and after preemption, the timing of the claimed deduction, which court has jurisdiction, and how each carrier acts to prove its case. As a result, deductions may only be available to sophisticated carriers that structure their affairs to effect an abandonment of the intrastate operating rights and that have the resources to prove abandonment of each and every route in every state. This consequence undermines the fair and equitable treatment that the Congress was seeking to achieve through federal preemption.

The State Response to Deregulation

Not surprisingly, the states' response to the 1994 deregulation has been anything but uniform or consistent. To date, each state appears to be taking its own approach to the treatment of preexisting certificate holders. Some states have indicated that existing certificate holders may use their current certificates for purposes of temporarily evidencing compliance with safety and insurance requirements. Others require existing holders of intrastate operating rights to obtain new proof they meet safety and insurance requirements but afford them procedural advantages which may make the application process easier for existing rights holders *vis a vis* new applicants. Still others have cancelled the old certificates, and are requiring all carriers to reapply on an equal footing. A few states are resisting deregulation altogether, challenging the federal law. This spectrum of state response places carriers in a difficult and uncertain situation until new regimes which conform to the federal preemption are established and in place in each state.

The Simplification Proposal -- Uniform and Equitable Relief

This proposal, in effect, simply declares that as of January 1, 1995, the state operating rights and authorities are not only null and void for economic regulatory purposes, but also are null and void for tax purposes. The proposal will permit deduction of the adjusted basis in all such rights as of the effective date of preemption, that is, the date that Congress intended them to be invalid for all economic regulatory purposes. Consolidated Freightways believes that this proposal will provide uniform and equitable relief to all carriers holding intrastate rights in any state, thereby averting costly and time-consuming litigation over the fact or timing of deduction of numerous operating authorities in various states.

Under current law, Consolidated Freightways is firmly convinced that it will sustain deduction of all, or certainly the vast majority of its basis in intrastate operating rights. Nevertheless, this issue is of great importance to Consolidated Freightways. Under current law, it is likely the IRS will challenge claimed deductions. This will result in audit disputes and litigation. The final results may not be determined for many years and then

only at substantial costs of litigation. Consolidated Freightways wants to avoid these wasteful expenditures and to obtain certain and equitable results promptly. This proposal achieves that goal.

July 27, 1995

WRITTEN STATEMENT OF

WARREN E. HOEMANN
Vice President -- Government Relations

on behalf of
YELLOW CORPORATION

HEARING BEFORE THE
COMMITTEE ON WAYS AND MEANS

House of Representatives

on the
Miscellaneous Tax Reforms

July 11-13, 1995

Yellow Corporation is a transportation holding company whose subsidiaries include Yellow Freight System of Overland Park, Kansas; Preston Trucking Company of Preston, Maryland; Saia Motor Freight of Houma, Louisiana, and WestEx of Phoenix, Arizona. Each of these subsidiaries is a less-than-truckload (LTL) motor carrier operating in both interstate and intrastate commerce. On their behalf, Yellow Corporation submits these comments to support the deductibility of the remaining tax basis for intrastate operating authorities held by the several companies prior to the passage of the Federal Aviation Administration Act of 1994. That Act in Section 601 preempts and prohibits state regulation of the price, route or service of intrastate operations of motor carriers, effective January 1, 1995.

Prior to the 1994 federal preemption of state economic regulation of motor carriers, 41 States to one extent or another regulated the ability of a motor carrier to enter the intrastate trucking market, the rates motor carriers could charge for their services, the types of services they could offer to the shipping public, the size and weight of the freight they could handle and the routes they could traverse in conducting their business. Commonly, any motor carrier wishing to enter an intrastate market in one of the 41 regulated States or wishing to expand its geographical coverage or scope of services was required to prove that "Public Convenience and Necessity" (PC&N) required the services of the applicant motor carrier. These applications were protested by other existing motor carriers, seeking to protect their own share of the intrastate trucking market. The state regulatory bodies who considered these applications for intrastate operating authority and who also set the rates that motor carriers could charge for their services commonly considered trucking companies to be public utilities that should be guaranteed a certain rate of return through restricted competition and minimum rates.

Because of the time and expense involved in obtaining intrastate operating authorities and because of the restricted competition and virtually assured profitability, intrastate operating authorities had great value that was reflected on the corporate books of motor carriers. That value is demonstrated by the active market which existed for the sale of intrastate operating authorities. For example, in 1991, Yellow Corporation, through subsidiary Yellow Transportation, paid $6 million for the intrastate operating authorities held by another motor carrier in various states. The purchase was solely for those state operating authorities, and a large portion of that $6 million purchase price is attributable to the intrastate operating authority for Texas, as Texas was one of the most heavily regulated and restrictive states at that time. These intrastate operating authorities were later transferred internally to Yellow's subsidiary, Saia Motor Freight, and formed the essential basis for Saia's expansion into a regional motor carrier.

While intrastate operating authorities were essential to the conduct of business in those markets and while they had great value, as demonstrated by the market for their purchase and transfer, the timing or the circumstances surrounding the granting or acquisition of those

intrastate operating authorities can result in tax basis for various motor carriers holding identical intrastate operating authorities having differing adjusted tax bases.

In 1980 when Congress passed the Motor Carrier Act, loosening the reins of Interstate Commerce Commission control over motor carrier entry and rates, Congress also recognized that motor carriers had lost a valuable asset (in that case, interstate operating authorities) and that the impact of that loss could differ according to the circumstances of each motor carrier. So, Congress followed up in the 1981 Economic Recovery Tax Act with permission for motor carriers to amortize the total amount of their tax basis in the deregulated operating authorities over a 60-month period. Today we are requesting that Congress similarly follow up the Federal Aviation Administration Authorization Act of 1994 with provision for motor carriers to deduct currently the remaining tax basis of their intrastate operating authorities.

There are two major differences between the situation in 1980 and 1981 and that which we have today: First, the federal "deregulation" of interstate operating authorities in 1980 was not nearly as complete as last year's federal preemption of state economic regulation. Under the Motor Carrier Act of 1980, the ICC retained jurisdiction and control over motor carrier entry and rates, although those controls were substantially loosened. It was not until the Trucking Industry Regulatory Reform Act of 1994 that the remaining ICC entry and rate controls were completely eliminated. Even today, vestiges of tariff filing remaining at the ICC.

By contrast, the federal preemption of state economic regulation of trucking immediately eliminated all state jurisdiction and control over motor carrier entry, rates, services, routes, and tariff filing. Confirming that fact are the subsequent actions of various state legislatures and regulatory bodies. Those state legislatures on the regulatory bodies are adjusting their laws or regulations, respectively, to conform to the preemptive provisions of the Federal Aviation Administration Act of 1994. Just as the Statement of Managers accompanying the Conference Report to the Act recognize that the deregulation of intrastate operating authorities would eliminate the asset value for affected motor carriers, and just as the Financial Accounting Standards Board (FASB) has already required motor carriers to take a charge against earnings for the remaining book value of these operating authorities, the various states and regulatory bodies are also recognizing that the old intrastate authorities now have no value by eliminating them from the legal framework in virtually all cases. State legislation and official state regulatory orders have used such terminology as "null and void," "valueless," "canceled," and "revoked" in prescribing the status of intrastate operating authorities held by motor carriers before the January 1, 1995 effective date of intrastate deregulation. For example, the Texas Legislature has passed S.B. No. 3, effective September 1, 1995, under which "all certificates of public convenience and necessity and permits issued to contract carriers under Chapter 314, Acts of the 41st Legislature, Regular Session, 1929 (Article 911b, Vernon's Texas Civil Statutes), are cancelled." This legislation has been signed by the Governor. As a further example, Louisiana has passed H.B. 2100, which cancels its operating authorities effective June 19, 1995.

For Yellow Corporation and its subsidiaries, various states in which Yellow operates and which have on their own already recognized the loss of value in intrastate operating authorities, account for over 92% of Yellow's remaining tax basis. Therefore, we believe there is a far more compelling case for tax deductibility today than there was in 1981.

Second, the potential revenue impact from the deduction of the remaining tax basis in these operating authorities is substantially less today than that considered by Congress in the 1981 ERTA. Where as in 1981, Congress estimated $356 million of revenue impact from the deductibility of interstate operating authorities, today the industry is estimating a revenue impact of only $10 million to possibly $25 million from the deductibility of the remaining tax basis of intrastate operating authorities. The revenue estimate by the Staff of the Joint Tax Committee may be even less under their "scoring" methods.

Yellow believes that Congress should eliminate the current uncertainty over how the deduction of these intrastate operating authorities would be treated by the IRS. On the assumption that the IRS will challenge the current deductibility of these operating authorities, action by this Committee to provide for the current deductibility of the remaining tax basis of intrastate operating authorities would obviate years of litigation and appeal, at considerable expense to both motor carriers and the IRS. This amendment would treat all motor carriers and all authorities equally, irrespective of the circumstances and timing that led to the acquisition of the authorities, and irrespective of the exact approach taken by a state in conforming to the federal legislation. For this reason, the provision would greatly simplify the Internal Revenue Code and the administration of the tax laws. Finally, by approving this amendment, the Committee will round out the intent of Congress that the movement of our Nation's freight should benefit from open and fair competition in the trucking industry, without the restraints of economic regulation or, here, the happenstance of tax status.

For these reasons, Yellow Corporation urges the Committee to provide for the deductibility of the remaining tax basis of intrastate operating authorities for motor carriers.

TESTIMONY OF THE INTERNATIONAL MASS RETAIL ASSOCIATION

The Proposal to Permit Taxpayers to
Estimate Shrinkage for inventoryAccounting
July 27, 1995

The International Mass Retail Association is pleased to provide its comments on, and support for, the proposal before the House Ways and Means Committee to mandate the development of a methodology to estimate accrued inventory shrinkage.

The International Mass Retail Association represents 170 mass retailers that include discount department stores, home centers, catalogue showrooms, dollar stores, variety stores, warehouse clubs, deep discount drugstores, specialty discounters and off-price stores. Collectively, IMRA retail members operate more than 54,000 stores in the U.S. and abroad and employ over a million people. The retail members represent the overwhelming majority of the $282 billion mass retail industry.

IMRA has been a leader in working toward a solution to the inventory shrinkage issue since 1989, when the IRS issued a proposed "Industry Specialization Program" paper that challenged the authority to accrue a deduction for inventory losses before confirmation occurred. IMRA has met with IRS and Treasury officials on numerous occasions and provided technical support for the deduction as well as evidence to support the methodology used by the majority of companies that accrue shrink.

Inventory shrinkage is the loss resulting from theft, breakage and error in bookkeeping. Typically, that loss occurs throughout the year and is verified when annual inventory is taken. Accrued shrinkage is the loss occurring between the date the inventory is taken and the end of the taxable year.

The original position of the IRS was based on a decision of the Tax Court in *Altec Corp. v. Commissioner*, T.C. Memo 1977-738, which denied a taxpayer's deduction for estimated shrink, based entirely on the fact that the taxpayer made no attempt whatsoever to substantiate its deduction. The decision is very similar to the denial of legitimate business expenses for lack of proper substantiation. In fact, the Government's trial briefs indicate that the accrual was acceptable if verifiable. Notwithstanding the grounds for denial, not to mention the fact that shrinkage has been accrued and unchallenged for at least fifty years, the IRS proceeded to adopt the position that *Altec* stood for the legal proposition that the accrual of shrinkage was not permitted in any case.

Even though the retailing industry has provided abundant evidence to the IRS and Treasury officials supporting the proposition that accrued shrinkage can be estimated statistically with a high degree of accuracy, the Government has maintained its position and has forced numerous companies into settlement of the issue and at least five companies into litigation. The first decision rendered on the issue upheld the taxpayer's position on the technical question of whether the accrual is permitted under the statutes. The summary judgment of the Tax Court in *Dayton Hudson and Subsidiaries v. Commissioner*, 101 T. C. 30, left open the question of whether the taxpayer's methodology for calculating the accrual clearly reflected income.

After the Tax Court's decision in *Dayton Hudson*, the only remaining issue concerns the methodology used to calculate a taxpayer's accrual. This issue has been discussed at length with IRS and Treasury officials over the last several years. A well-reasoned methodology was presented to the IRS in 1991. This proposal dealt with the Government's primary concern, which is assurance that over-accruals could not occur. The methodology recommended a "look-back" approach, whereby the accrual would be verified in the subsequent year and any amount accrued in excess of actual shrinkage would be returned by the taxpayer, with interest, as an audit adjustment. The Government was also provided statistical analysis that demonstrated that the assumptions used to calculate the deduction were valid.

The *Dayton Hudson* decision has also removed the shrinkage issue as a revenue concern for the government, and taxpayers are entitled to accrue shrinkage under present law. The question is whether the government will provide taxpayers with a simple way to estimate shrinkage such as a formula based on sales, or whether complexity will prevail.

In spite of the strength of the taxpayer' positions, the issue remains mired in litigation, which is wasting considerable time and expense for the Government and taxpayers alike. Additional resources will be wasted even if the Government should prevail on the clear reflection issue. A finding that certain taxpayers' methodologies do not clearly reflect income does nothing to settle the issue for hundreds of other taxpayers. The solution to this issue does not rest with the Tax Court. It would be exceedingly burdensome to decide each and every case through this highly inefficient process. The solution lies in a workable methodology that addresses the concerns of all parties.

The retail industry has a made a good-faith effort to settle this issue in an efficient and amicable manner. In the best interest of all concerned, it is now up to Congress to step in and settle the issue.

The members of the International Mass Retail Association, representing the largest and fastest growing segment of the retail industry, support the Ways and Means Committee's effort in proposing a solution. We would like to work with the Committee and its staff to structure the specifics of a method of estimating accrued shrinkage that is simple for taxpayers to use but protects the revenue concerns of the Treasury that shrinkage will not be over-accrued. We need to put this issue to rest once and for all. IMRA stands ready to provide the Committee with any assistance necessary.

Testimony of
Maurice Scully, Executive Director
Connecticut Municipal Electric Energy Cooperative
Submitted to
House Committee on Ways and Means
Hearings on Miscellaneous Tax Reforms
July 11-13, 1995

Explanation of the Proposed Amendment to the Internal Revenue Code to Enhance the Ability of Municipal Utilities to Prudently Fund for Future Nuclear Decommissioning Liabilities

Thank you, Mr. Chairman and members of the Committee, for this opportunity to submit written testimony on behalf of the amendment submitted by Congresswoman Nancy Johnson.

The Connecticut Municipal Electric Energy Cooperative (CMEEC) is a joint action agency that supplies wholesale electric power to all of the municipal utilities in Connecticut. CMEEC has a joint ownership interest in one nuclear power plant and purchases power from five other nuclear units under "life-of-the-unit, take-or-pay" contracts with Northeast Utilities (NU). CMEEC and its customers are legally responsible for a proportional share of the costs of decommissioning each of the nuclear units.

As permitted under current tax laws, CMEEC has established a separate decommissioning trust for the Millstone 3 nuclear unit, in which it has an ownership interest. The experience with this trust has been very favorable, it has enabled CMEEC to amass more funds for decommissioning Millstone 3, at a lower cost to CMEEC's ratepayers. Because municipal utilities are exempt from federal and state income taxes, CMEEC does not pay income taxes on annual deposits to the trust or on earnings from fund investments.

By contrast, when CMEEC makes payments into NU's decommissioning trusts for the five nuclear units under contract, a portion of those payments is subject to income tax. In addition, NU's trust fund investments are subject to income tax (except for investments in tax-exempt securities), whereas all earnings on investments made by the CMEEC trust for Millstone 3 are non-taxable. Thus, by paying into NU's decommissioning trusts instead of into a

separate CMEEC trust, CMEEC and its customers are bearing greater costs and accumulating less money for decommissioning the five units under contract.

Nuclear decommissioning cost estimates have increased dramatically in recent years, and there is a great deal of uncertainty about the ultimate magnitude of costs because of a lack of actual experience in decommissioning commercial nuclear power plants and unresolved questions about disposal of nuclear waste. Given these realities, CMEEC believes that it is prudent to plan for the possibility of higher decommissioning costs in the future. CMEEC could accumulate additional money for decommissioning, while achieving substantial savings for its ratepayers, by establishing separate trusts for the five nuclear units whose output it purchases under contract.

Assuring efficient funding of nuclear decommissioning is sound national policy and in the interest of all citizens of Connecticut. However, Treasury Regulation 1.88-1, issued by the IRS in 1988, makes it difficult, if not economically infeasible, to establish a separate decommissioning trust fund for the five nuclear units under contract. The IRS regulation requires that monies contributed to a separate trust fund by a customer utility (such as CMEEC) that buys power under contract from a taxpayer utility (such as NU) be assigned as income of the taxpayer utility in the same year and subject to income tax.

Therefore, we encourage Congress to amend Section 88 of the Internal Revenue Code to provide that amounts paid by a wholesale electric customer into a separate nuclear decommissioning trust shall not be included in the seller's gross income until the taxable year when the funds are paid to the seller. The proposed amendment would require that such a trust be consistent with the guidelines promulgated by the Nuclear Regulatory Commission and the Federal Energy Regulatory Commission, and consistent with restrictions on self-dealing in the Code.

CMEEC's preliminary analysis indicates that the amendment is not likely to result in a significant loss of revenues to the Treasury. Our best estimate is that the federal revenue loss would be less than $400,000 over the next five years.

Given the minimal fiscal impact of this amendment, we believe there is a strong public interest in providing for the efficient funding of ultimate decommissioning costs. In enacting the nuclear decommissioning amendments to the Internal Revenue Code in 1984, Congress recognized that tax policy should promote nuclear decommissioning funding. The Conference Report to the Deficit Reduction Act of 1984 stated:

> The conferees recognize the importance of ensuring that utilities comply with nuclear power plant decommissioning requirements. In view of this concern, the conferees believe it may be appropriate for the tax-writing committees to study further the merits of providing tax incentives for establishing decommissioning funds.[1]

CMEEC participants are Groton, Jewett City, Norwich, South Norwalk, Wallingford and Norwalk.

The text of the proposed amendment is attached, followed by a brief revenue impact estimate.

House Conf. Rept. No. 98-861 on H.R. 44170, 98th Cong., 2nd Sess. (June 23, 1984), p. 879.

The Proposed Amendment

§88. **Certain amounts with respect to nuclear decommissioning costs.**

(a) In the case of any taxpayer who is required to include the amount of any nuclear decommissioning costs in the taxpayer's cost of service for ratemaking purposes, there shall be includible in the gross income of such taxpayer the amount so included for any taxable year, unless the requirements of subsection (b) are met.

(b) In the case of any taxpayer who sells nuclear energy pursuant to a contract or rate schedule which provides for payment of nuclear decommissioning costs to the taxpayer at the time when decommissioning occurs rather than at the time when the electric energy is supplied and consumed, amounts paid by a customer into a separate nuclear decommissioning trust, or customer contribution and earnings on such contributions currently, shall not be included in the gross income of the taxpayer until the taxable year when the trust funds are paid to the taxpayer, provided that the customer's nuclear decommissioning trust is funded and administered in a manner consistent with the decommissioning funding guidelines promulgated by the Nuclear Regulatory Commission for licensees and by the federal Energy Regulatory Commission for public utilities, and also provided that the customer's nuclear decommissioning trust satisfies the requirements of section 468A(e)(4) and (5). Such amounts shall include all payments made subsequent to this amendment, and all amounts on account for an affected customer in any qualified trusts established by the taxpayer transferred to a nuclear decommissioning trust as provided for herein

Estimate of Revenue Impact to the Treasury

The attached represents CMEEC's estimate of the revenue impact of the establishment of separate municipal trusts for CMEEC's decommissioning liability for the Millstone 1 and Millstone 2 nuclear units. CMEEC has been advised by Connecticut Light and Power (CL&P) that all contributions to the trust are tax-qualified (*i.e.*, there is a tax deduction for these contributions). Therefore, the impact to the U.S. Treasury attributable to the annual contribution to the trust is zero. The actual revenue impact results from earnings on the trust itself. We have been advised by CL&P that all but a very small percentage (five percent) of the investments in the fund are tax-exempt securities. For our analysis we assumed a much higher level (50 percent) to be invested in taxable securities. We made this assumption in recognition of the fact that trusts ae taxed at a relatively low tax rate (20 percent) and that the new FERC guidelines for investments will most likely provide an economic basis for investing more in taxable investments. Even with this generous assumption, the net impact on the treasury is less than $400,000 over the five-year period. If 100 percent of the trust is invested in taxable securities and earnings are at 10 percent, which is highly improbable, the maximum impact on the treasury would be approximately $1,000,000 over the five-year period.

WRITTEN COMMENTS
OF
COMMONWEALTH EDISON COMPANY
REGARDING
MISCELLANEOUS TAX PROPOSALS
BEFORE THE
COMMITTEE ON WAYS AND MEANS
U.S. HOUSE OF REPRESENTATIVES

Commonwealth Edison Company ("ComEd") appreciates the opportunity to submit written comments concerning one of the miscellaneous tax proposals considered in your recent hearings held on July 11 and 12, 1995. In particular, ComEd submits comments on the proposal that would repeal the ruling requirement for nuclear decommissioning costs. In addition, ComEd respectfully encourages the Committee to enact those provisions of the miscellaneous tax proposals that would simplify the tax of complying with the tax law and promote fair and open competition.

ComEd is located in Chicago, Illinois, is an investor-owned electric utility which ComEd services more than 3 million customers in the northern third of Illinois.

ComEd owns and operates 13 member electric generating units, one of which is retired. As a result, ComEd maintains 13 separate qualified nuclear decommissioning funds. ComEd is the nation's leader in nuclear electric generating capacity. Because of that, ComEd is concerned with the efficient funding of the future cost of nuclear decommissioning.

In the interest of simplifying and reducing the cost of compliance for both government and taxpayers, ComEd strongly supports the proposal to eliminate the current statutory requirement that a utility company seek and obtain an advance ruling from the Internal Revenue Service ("Service") before being permitted to make deductible contributions to a qualified nuclear decommissioning fund under Code Section 468A.

This proposal, described on page 12 of Description of Miscellaneous Tax Proposals (JCS-10-95) July 10, 1995, in contained in H.R. 1637, the Nuclear Decommissioning Cost Simplification Act of 1995, which was introduced in this Congress by Representative Phil Crane (R-Illinois).

This legislation has a simple, single purpose -- to reduce the unnecessary administrative cost incurred by both the Service and taxpayers to comply with the advance ruling requirement of Section 468A. This change will reduce compliance cost for both taxpayers and the Internal Revenue Service with no revenue loss of the federal government and will have no adverse effect on public health or safety considerations.

Code Section 468A, permits a utility company to deduct contributions to a qualified nuclear decommissioning fund. A qualified nuclear decommissioning fund is a trust that is used to accumulate monies collected from utility customers and contributed by utilities to pay for the decommissioning of a nuclear plant at the end of its useful life. A utility is required to establish a separate qualified nuclear decommissioning fund for each nuclear plant unit that it owns or in which it has an ownership interest.

The amount of payment that may be contributed to a qualified nuclear decommissioning fund is limited to the lesser of (i) the amount of nuclear decommissioning costs allocable to the fund which is included in the taxpayer's cost of service for ratemaking purposes for such taxable year, or (ii) the ruling amount applicable to such taxable year. If the fund accepts any payment other than payments which represent allowed deductions, the nuclear decommissioning fund may be disqualified and treated as having distributed all of its funds. In order to determine the allowable payment amount for purposes of Section 468A, the taxpayer must request and receive a Schedule of Amounts ("SRA") from the Secretary of the Treasury. This requires taxpayers to prepare and submit a detailed application to the Secretary for each separate qualified nuclear decommissioning fund.

Section 468A is the only provision of the Internal Revenue Code in which a deduction is made conditional upon pre-approval by the Secretary of the Treasury. The process of preparing and filing for the SRA is entirely computational and presents no unusual issues requiring a change from the normal practice and policy which allows taxpayers to claim deductions on their tax returns subject to a subsequent audit by the Service.

The proposed legislation would simply eliminate the current requirement to seek and obtain an advance ruling from the Service. The computation of the allowable deduction and the rules governing the operation of qualified nuclear decommissioning funds would not change in any respect.

This simplification would merely conform Section 468A to the rest of the Internal Revenue Code which allows taxpayers to compute and claim deductions on their tax returns subject to audit by the Service. Given the fact that all Federal income tax returns of nuclear electric utilities are audited each year by the Service as part of the Coordinated Examination Program, all deductions claimed under Section 468A will be examined by the Service. Taxpayers would be required to keep documentation to support deductions claimed and, if the documentation did not justify the amount of the deduction, the Service would subject the taxpayer to additional tax payments, interest and penalties. The taxpayer would not however, be required to go through the current pre-clearance procedure, and the fund would not be deemed to have made a complete distribution of the amount of the payment, or a portion thereof, which was not allowed as a deduction under Section 468A.

The current requirements for obtaining a Schedule of Ruling Amounts are extremely burdensome and expensive and provide no benefit to the government or to taxpayers. Each request for a ruling requires a user fee of $3,575 and most nuclear utilities have ownership interest in multiple nuclear plant units. In addition to user fees, taxpayers incur substantial compliance cost to hire outside counsel and other resources to prepare and process the ruling requests. The ruling process is also recurring, adding to the cost and burden. Utilities must seek a revised Schedule of Ruling amounts for each nuclear unit each time is regulatory commission adjusts the amount of decommissioning costs included in electric service rates.

In summary, Commonwealth Edison Company urges the Committee to adopt the provisions of H.R. 1637 which will eliminate a costly and burdensome provision of the Code that provides not benefit to the government, taxpayers or the public at large. This provision will have no detrimental revenue impact to the government and will in no way compromise public health or safety.

WRITTEN COMMENTS
OF THE
SOUTHERN CALIFORNIA EDISON COMPANY
REGARDING
MISCELLANEOUS TAX PROPOSALS
BEFORE THE
COMMITTEE ON WAYS AND MEANS
U.S. HOUSE OF REPRESENTATIVES
JULY 24, 1995

The Southern California Edison Company ("Edison") appreciates the opportunity to submit these written comments concerning one of the miscellaneous tax proposals considered in your recent hearings held on July 11 and 12, 1995. In particular, Edison submits comments on the proposal that would repeal the ruling requirement for nuclear decommissioning costs. In addition, Edison respectfully encourages the Committee to enact those provisions of the miscellaneous tax proposals that would simplify the task of complying with the tax law and promote fair and open competition.

Edison, which is headquartered in Rosemead, California, is the nation's second-largest electric utility based on number of customers. Edison, a 108-year old investor-owned utility, services more than 4.1 million customers in Central and Southern California. Our service territory covers over 50,000 square miles and has a total population exceeding 11 million. Edison is a subsidiary of SCEcorp, which is primarily an energy services company.

Southern California Edison owns a majority interest in the San Onofre Nuclear Generating Station, consisting of two operating units and one retired unit, located in California. The Company also owns a minority interest in three operating units at the Palo Verde Nuclear Generating Station located in Arizona. As a result, the Company maintains six separate qualified nuclear decommissioning funds and is very interested in assuring that nuclear decommissioning funds are collected and available to meet our decommissioning and decontamination obligations on the most efficient and least cost basis.

In the interest of simplifying and reducing the cost of compliance for both government and taxpayers, the Company strongly supports the proposal to eliminate the current statutory requirement that a utility company seek and obtain an advance ruling from the Internal Revenue Service ("Service") before being permitted to make deductible contributions to a qualified nuclear decommissioning fund under Code Section 468A.

Repeal Treasury Ruling Requirement for Nuclear Decommissioning Funds

This proposal, described on page 12 of Description of Miscellaneous Tax Proposals (JCS-19-95) July 10, 1995, is contained in H.R. 1637, the Nuclear Decommissioning Cost Simplification Act of 1995, which was introduced in this Congress by Representative Phil Crane (R-Illinois).

This legislation has a simple, single purpose—to reduce the unnecessary administrative cost incurred by both the Service and taxpayers to comply with the advance ruling requirement of Section 468A. This change will reduce compliance cost for both taxpayers and the Internal Revenue Service with no revenue loss to the federal government and will have no adverse effect on public health or safety considerations.

Code Section 468A, which was enacted in 1984, permits a utility company to deduct contributions to a qualified nuclear decommissioning fund. A qualified nuclear decommissioning fund is a trust that is used to accumulate monies collected from utility customers and contributed by utilities to pay for the decommissioning of a nuclear plant at the end of its useful life. A utility is required to establish a separate qualified nuclear decommissioning fund for each nuclear plant unit that it owns or in which it has an ownership interest.

The amount of payment that may be contributed to a qualified nuclear decommissioning fund is limited to the lesser of (i) the amount of nuclear decommissioning costs allocable to the fund which is included in the taxpayer's cost of service for ratemaking purposes for such taxable year, or (ii) the ruling amount applicable to such taxable year. If the fund accepts any payment other than payments which represent allowed deductions, the nuclear decommissioning fund may be disqualified and treated as having distributed all of its funds. In order to determine the allowable payment amount for purposes of Section 468A, the taxpayer must request and receive a Schedule of Ruling Amounts (SRA) from the Secretary of the Treasury. This requires taxpayers to prepare and submit a detailed application to the Secretary for each separate qualified nuclear decommissioning fund.

Section 468A is the only provision of the Internal Revenue Code in which a deduction is made conditional upon pre-approval by the Secretary of the Treasury. The process of preparing and filing for the SRA is entirely computational and presents no unusual issues requiring a change from the normal practice and policy which allows taxpayers to claim deductions on their tax returns subject to a subsequent audit by the Service.

The proposed legislation would simply eliminate the current requirement to seek and obtain an advance ruling from the Service. The computation of the allowable deduction and the rules governing the operation of qualified nuclear decommissioning funds would not change in any respect.

This simplification would merely conform Section 468A to the rest of the Internal Revenue Code which allows taxpayers to compute and claim deductions on their tax returns subject to audit by the Service. Given the fact that all Federal income tax returns of nuclear electric utilities are audited each year by the Service as part of the Coordinated Examination Program, all deductions claimed under Section 468A will be examined by the Service. Taxpayers would have to submit documentation to support deductions claimed and, if the documentation did not justify the amount of the deduction, the taxpayer would be subject to additional tax payments, interest and penalties consistent with all other deductions claimed on tax returns. The taxpayer would not, however, be required to go through the current pre-clearance procedure, and the fund would not be deemed to have made a complete distribution of the amount of the payment, or a portion thereof, which was not allowed as a deduction under Section 468A

The current requirements for obtaining a Schedule of Ruling Amounts are extremely burdensome and expensive and provide no benefit to the government or to taxpayers. Each request for a ruling requires a user fee of $3,575 and most nuclear utilities have ownership interests in multiple nuclear plant units. In addition to user fees, taxpayers incur substantial compliance cost to hire outside counsel and other resources to prepare and process the ruling requests. The ruling process is also recurring, adding to the cost and burden Utilities must seek a revised Schedule of Ruling Amounts for each nuclear unit each time its regulatory commission adjusts the amount of decommissioning costs included in its rates.

In summary, the Southern California Edison Company urges the Committee to adopt the provisions of H.R. 1637 which will eliminate a costly and burdensome provision of the Code that provides no benefit to the government, taxpayers or the public at large. This provision will have no detrimental revenue impact to the government and will in no way compromise public health or safety. This provision is a win for the Service and for taxpayers and should be enacted as a component of your tax simplification efforts.

U.S. Department of Justice

Federal Bureau of Investigation

Office of the Director

Washington, D.C. 20535

July 11, 1995

Honorable Bill Archer
Chairman
Committee on Ways and Means
House of Representatives
Washington, D.C.

Dear Mr. Chairman:

Over the last two decades, the FBI has seen criminal enterprises and activities become more complex and sophisticated. Our ability to successfully pursue these criminals is due in large part to our willingness to commit our investigative and support resources to these cases...cases which can take years as investigators review thousands of pages of financial documents; undertake 24-hour-a-day, seven days a week surveillances, participate in long-term undercover assignments; or assist in long-term monitoring of court-authorized interceptions of oral communications. Our Agents and professional support assigned to these long-term investigations are often selected because they have a particular specialty, training, or experience considered critical to the successful conclusion of the case. These employees willingly disrupt their personal lives to work such important long-term cases.

Since October 1992, 560 FBI Special Agents have been on Temporary Duty (TDY) assignments, 79 of which have lasted more than one but less than two years. However, this number could very well have been larger but for the fact that the FBI rotated personnel in some cases to avoid the tax liability from reimbursements paid to the employee for travel and related expenses associated with the temporary assignment. Those assigned to TDYs do so at no small sacrifice - they are away from friends and family in a strange city working long hours all with a goal of seeing criminals brought to justice. Some face another burden - a tax burden because of these long-term assignments.

As you know, current law [Title 26, U.S.C. Section 162 (a)] permits the deduction from income of travel expense reimbursements received by an employee while away from home in the pursuit of a trade or business. However, the Energy Policy Act of 1992 amended the statute to limit the deduction to only those instances where the period of travel does not exceed one year.

This limitation has had an adverse effect on our ability to staff investigations that last more than one year. To avoid the adverse tax consequences to our employees on extended TDY assignments, the FBI will attempt to rotate the employee out of the assignment before the end of one year. If the employee is removed from his temporary assignment before the case has concluded, the investigation is hurt by the loss of knowledgeable personnel. This is a costly disruption to our law enforcement efforts. The employees removed from the assignment are most familiar with the investigation and all the facts and nuances associated with it. Their relocation results in a serious loss of institutional knowledge. Although new employees will be assigned to the case, there is a negative impact on the investigation as these employees expend many hours familiarizing themselves with what has occurred prior to their arrival so they can pick up the reins and move the case forward. In the alternative, we face the expense of permanently reassigning the employee to the investigation's locale knowing that when the case concludes and there is no longer justification for the additional resources in a field division, the employee will again be relocated.

To require a changeover in personnel just to alleviate personal tax consequences to an employee is both inefficient and unproductive. It also increases costs since new personnel require time to become familiar with the case. The alternative, a permanent transfer of the employee until the conclusion of an investigation in order to avoid the tax consequences of an extended TDY, is also a needless expense for the government. It also disrupts the employees' and their families' lives.

I do not believe the concerns I have raised are unique to the FBI - any federal agency which undertakes the investigation of federal crimes would face similar concerns with assigning employees TDY to long-term investigations.

I appreciate your interest in this law enforcement-related problem. If you should have any questions concerning this matter, please do not hesitate to contact me.

Sincerely yours,

Louis Freeh

Louis J. Freeh
Director

TESTIMONY OF

THE AMERICAN MOVERS CONFERENCE

REGARDING MISCELLANEOUS TAX PROPOSALS

BEFORE

THE HOUSE WAYS AND MEANS COMMITTEE

JULY 11, 1995

[written testimony submitted for the record]

Mr. Chairman and members of the Committee:

The American Movers Conference (AMC) is pleased to comment on the miscellaneous tax proposal to increase from 50 percent to 80 percent the deductibility of business meal expenses for individuals subject to Federal hours of service limitations.

AMC is the largest national trade association of household goods movers. AMC is the principal voice for an industry employing over 450,000 people and generating over $7 billion per year in revenues. AMC represents nearly 3,000 members nationwide and represents all facets of the moving industry including national van lines, their affiliated agents, independent regional and national carriers, and owner-operators.

Our members employ or contract with 30,000 drivers who own their own tractor-trailer and move goods coast-to-coast. These drivers are essential to the moving business. Other than occasionally hiring temporary employees, these independent owners not only drive their own trucks but load and unload their trucks as well. Being a long-haul truck driver often means spending months at a time on the road and requires innumerable "necessary and ordinary" meals.

DEDUCTIBLE BUSINESS MEALS

Presently, 50 percent of necessary and ordinary (not lavish or extravagant) meal expenses are deductible under Internal Revenue Code Section 274. The deduction was reduced from 80 percent to 50 percent as part of the *Omnibus Budget Reconciliation Act of 1993* (P.L. 103-66). This is in addition to the 20 percent reduction already suffered as part of the *Tax Reform Act of 1986* (P.L. 99-514).

This reduction to 50 percent has greatly hampered the ability of our drivers to survive economically during a time when their costs are increasing, their income is decreasing, and their tax burden has increased when their income has not.

PROPOSAL

The proposal currently before the Committee would provide that 80 percent of meal expenses would be deductible with respect to food or beverages consumed by an individual during, or incident to, the period of duty subject to the hours of service limitations of the Department of Transportation (DOT). The proposal would be effective for taxable years beginning after December 31, 1994. It would apply to four general categories of individuals who are currently subject to the hours of service limitations: (1) interstate truck and bus drivers; (2) certain air transportation employees; (3) certain railroad employees; and (4) certain merchant mariners.

This proposal is currently embodied as H.R. 1003, the *Fairness for Workers on the Road Act*, a bi-partisan bill introduced by House Ways and Means Oversight Subcommittee Chairwoman Nancy Johnson (R-CT) and Committee Member Richard Neal (D-MA). Senator Herb Kohl (D-WI) has introduced companion legislation (S. 434) in the Senate.

Chairwoman Johnson's introductory statement in the Congressional Record reflects her acknowledgement of the significant burden that the changes enacted in 1993 place on the trucking industry. Ms. Johnson states, "Long-haul truck drivers spend over 200 days per year away from home. They eat at roadside diners and truck stops and sleep in their trucks or modest hotels. In doing so, they incur the legitimate and necessary business expenses required in their work and do not enjoy the expense-account lifestyles of the individuals originally targeted in the 1993 legislation." [1]

WHY THE CHANGE IS NECESSARY

No Martini Lunches

Long-haul truck drivers from moving companies often spend eight to ten months on the road each year. The expenses incurred for meals are not the "three martini lunches" that Congress intended to curb in 1986 and 1993, but rather, are quick meals at truck stops. They are not optional personal expenses since there is scarcely a substitute for eating on the road in this occupation.

---

1 *Fairness for Workers on the Road Act*, Congressional Record, pg. E391, February 21, 1995.

For example, one of our drivers logged in 310 days on the road during a 12 month period. He spent on average $25 per day for meals, for a yearly total of $7,750. Another driver was on the road for a total of 290 days and spent an average of $20 per day on meals. These meals are almost exclusively eaten at facilities spacious enough to accommodate tractor-trailers.

On a rare occasion, a truck driver may seek to enjoy a "nice sit-down meal"; however, the areas where these restaurants are located are usually not accessible to a truck pulling a 50 foot trailer.

The end result of the reduced deductibility enacted in 1993 is significant. For a driver with $6,000 a year in meal expenses, the change means an additional $1,800 in legitimate and necessary, yet non-deductible, expenses. This increased expense can mean the difference between success and failure in a highly and economically distressed industry.

DOT Federal Service Limitations

To further compound the situation. DOT Federal hours of service limitations require that a driver cannot spend more than 10 hours per day or 70 hours during a seven day period on the road. Under these rules, truck drivers are required to take layovers that force them to spend additional days on the road.

For example, after six weeks on the road, a driver may be only one day's drive from home. However, because the driver drove 70 hours during the previous seven days, the hours of service limitations require that the driver take a layover for an additional day before finishing the trip. This extra day on the road results in the driver buying additional meals that cannot be fully deducted.

Costs Are Rising

AMC conducts extensive surveys of the moving industry annually to determine average expenses and revenues of our members. The trend that we have discovered is not surprising. Over the past decade, expenses as a percentage of total revenue are going up and net income is going down.

For example, in 1980, the average travel expenses (including meals and lodging) as a percentage of total revenue equaled 8.3 percent. This average rose to 9.5 percent in 1992. Total expenses rose during this period from 72.6 percent to 78.9 percent of revenue. Conversely, total net income as a percentage of revenue dropped during this period from 27.4 percent to 21.1 percent.[2]

---

[2] Movers Statistical Profile for 1994, American Movers Conference, March 1994.

This tax cost has become, in essence, an uncontrollable cost, much like our fuel expense, and has worsened an already bleak cost picture. In light of these figures, restoration to the pre-OBRA 1993 deductibility level of 80 percent is essential to the economic well-being of this vital component of our industry.

Other Exceptions to Current Law

Full deductibility is currently allowed for meal expenses incurred by individuals on certain oil and gas platforms or drilling rigs who do not have access to restaurants or other eating facilities.[3]

In providing the exception, the Ways and Means Committee acknowledged the high cost of supplying meals to crews located offshore and stated, "it is appropriate to allow full deductibility of such food and beverage costs." [4]

We respectively submit that the same argument applies to long-haul truck drivers. The Federal hours of service limitations, coupled with the logistics of maneuvering a 50 foot trailer through city streets, severely limits our drivers to truck stops and other facilities that are accessible to large vehicles. These facilities understand the location advantage they possess and generally charge far higher prices for fuel, meals and beverages. It is no wonder that the costs associated with legitimate business meals are so high when our drivers experience $7 hamburgers and $3 soft drinks at truck stops.

Furthermore, Federal law generally restricts large tractor-trailers to interstates and highways with only a few exceptions. For example, an interstate household goods mover is only allowed to leave the interstate long enough to proceed to the destination point to load or unload goods. Upon completion of this service, the mover is required to proceed back to the interstate.

CONCLUSION

The moving industry provides a vital and necessary service to the nation. AMC believes that the reduction in the business meals deduction from 80 percent to 50 percent amounts to a tax increase on these hard-working middle-class Americans. This tax burden has further eroded the ability of our drivers to serve the millions of people who change residences each year.

---

3 The Conference Report to Accompany H.R. 4333, the *Technical and Miscellaneous Revenue Act of 1988* (H.Rept. 100-1104), pgs. 134-135, October 21, 1988.

4 *The Miscellaneous Revenue Act of 1988* (H.Rept. 100-795), pgs. 526-527, July 26, 1988.

More importantly, long-haul drivers have no choice but to eat on the road. One cannot pack a lunch to cover three consecutive months on the road. Our drivers often move household goods and tradeshow materials coast-to-coast taking only the Federally required breaks. Tight scheduling and potential hazards such as weather or mechanical difficulties leave little time to shop at a grocery store when they are on the road.

When introducing S. 434, Senator Kohl summed it up best when he stated, "The reduced business meal deduction is a tax on workers who have no control over the length of their trips, the amount of time they must rest during a delivery, or, in many cases, the places where they can stop to eat." [5]

AMC urges the Committee to act soon on this proposal. Each day without the ability to deduct legitimate business meals means additional pressure on drivers in an industry facing increased fuel costs, taxes, and regulatory requirements.

COMMITTEE ON WAYS AND MEANS
U.S. HOUSE OF REPRESENTATIVES

Statement for the Record of

AMERICAN TRUCKING ASSOCIATIONS

on

RESTORING 80% DEDUCTION FOR MEAL COSTS OF INDIVIDUALS SUBJECT TO FEDERAL HOURS-OF-SERVICE LIMITATIONS

July 27, 1995

The American Trucking Associations (ATA) submits these comments in support of legislation to restore the deductibility of meal expenses for truck drivers and others subject to federal hours-of-service limitations. Specifically, ATA supports H.R. 1003, which would restore 80% deductibility for these costs, the level that prevailed in 1987-93. We commend Reps. Nancy Johnson (R-CT), Richard Neal (D-MA) and William Jefferson (D-LA), the original cosponsors of H.R. 1003, as well as the dozens of Ways and Means members and other Representatives who have signed onto the bill.

Who We Are

ATA is the national association of the trucking industry. Over 34,000 carriers, ranging from individual owner-operators to multinational companies, belong directly to ATA or to our 51 state and 12 specialized national affiliates. Thousands of these businesses send trucks on medium-to-long hauls that require drivers to be on the road from one night to weeks at a time. These companies and their drivers, whether they are employees or independent contractors, have a strong interest in the tax treatment of business meals.

Prior and Current Law

Until 1987, meals consumed while on business away from home overnight were fully deductible. From 1987 through 1993, these meals were 80% deductible. However, since January 1, 1994, business meals have been only 50% deductible.

The cutbacks in the deduction enacted in 1986 and 1993 were billed as a way of curbing lavish business deductions for entertainment and, to a lesser extent, meals. The provision was sometimes characterized as affecting mainly executives and lobbyists living high on expense accounts.

Impact on Truck Drivers

But the harsh reality is that the 1993 reduction in particular struck squarely at hard-working, middle-class truck drivers whose meal expenses are anything but lavish. Tens of thousands of truck drivers, whose only choice of eatery is which truckstop to pull into, were suddenly told their meals were now just 50% deductible.

The burden is compounded by federal hours-of-service regulations, which limit the amount of time a truck driver can be on the road. Drivers must remain away from home until they have accumulated sufficient off-duty hours to resume driving and complete their trip. This can necessitate additional nights on the road.

Rather than keep receipts for every cup of coffee, most drivers or their companies follow the IRS guidelines for meal and incidental expense (M&IE) allowances. Currently these rules allow transportation workers $32 per day for meals and incidentals.

For a truck driver who is on the road 300 days a year, the allowance comes to $9600 per year. Only $4800 of that is deductible, a stiff reduction ($2880) from the $7680 that was formerly deductible. For a driver in the 28% tax bracket, this reduction in allowable expenses means a tax increase of $806--quite a wallop in the wallet of a worker who may be netting $35,000 per year.

Furthermore, truck drivers are nicked on "incidental" nonfood expenses as well as meals. Executives on business trips stay in hotels in which showers are included in the price of the room. They typically get home often enough that they do not have to pay for laundry on the road. Not so with drivers. Drivers must often pay as much as $5 for a shower and inflated rates for coin laundries. Yet under IRS rules, for workers who use M&IE allowances instead of keeping track of every item, these incidental costs are subject to the same 50% limitation as actual meal expenses.

Treatment of other workers

Congress has recognized that other workers who have no discretion over where to eat their business meals should not have to suffer a denial of deductibility. Internal Revenue Code section 274(n)(2)(E) allows full deductibility if

(E) such expense is for food or beverages--
(i) required by any Federal law to be provided to crew members of a commercial vessel,
(ii) provided to crew members of a commercial vessel--
(I) which is operating on the Great Lakes, the Saint Lawrence Seaway, or any inland waterway of the United States, and
(II) which is of a kind which would be required by Federal law to provide food and beverages to crew members if it were operated at sea,

(iii) provided on an oil or gas platform or drilling rig if the platform or rig is located offshore, or
(iv) provided on an oil or gas platform or drilling rig, or at a support camp which is in proximity and integral to such platform or rig, if the platform or rig is located in the United States north of 54 degrees north latitude.

In many parts of the country, a truck driver's rig limits choice of eatery almost as much as the oil worker's rig. The tax code should not treat truck drivers as second-class citizens when it comes to meal costs in comparison to either executives or oil, gas and vessel crews.

Although truck drivers are as deserving of full meal deductibility as these other workers, ATA recognizes that revenue considerations may make only 80% deductibility feasible this year. Accordingly, ATA supports enactment of H.R. 1003.

H.R. 1003

H.R. 1003 is a narrowly drawn bill, designed to restore partial equality among different categories of transportation workers, yet mindful of the severe revenue pressures facing the Committee. The bill returns workers covered by federal hours-of-service rules to the 80% deduction they received in 1987-93. These workers include long-distance truck and bus drivers plus aircraft, rail and merchant marine crews. Each of these categories of workers is constrained by federal regulations and the nature of their workplace as to when and where they can stop to eat, much as vessel and offshore or North Slope oilfield crews are. (Other transportation workers are subject to hours-of-service regulations but do not normally perform their jobs away from home; thus, they would not qualify for any meal deduction under IRS regulations.)

Because truck drivers and other affected workers already receive meal allowances for travel away from home, this bill would not entail any additional paperwork burden. Individuals (or their employers) would merely claim an 80% deduction for meals (or M&IE allowances) that currently qualify for a 50% deduction. As under current law, on those days in which the individual is not away from home, no deduction would apply.

Conclusion

ATA urges you to restore at least 80% deductibility for business meals of truck drivers and others subject to federal hours-of-service limits that constrain their choice of where to eat and when to get home. When revenues permit, we hope you will again allow these hard-working individuals the full deduction they deserve for their modest meal costs.

Daniel P. Gaither

Black Eagle, MT 59414

July 10, 1995

Committee on Ways and Means
Attn: Mr. Philip D. Moseley, Chief of Staff
U.S. House of Representatives
1102 Longworth House Office Building
Washington, DC 20515

RE: Deductibility of business meals for truckers (H.R. 1003)

Dear Committee Members:

I am writing as a small businessman to call your attention to an extreme and unfair tax increase that has been imposed on me and thousands of other hard-working truckers. I'm writing about the cutback in the deduction for business meals that took effect last year, and to the fact that U.S. Department of Transportation (DOT) regulations limiting hours of service make this cutback especially unjust for truckers. I urge the Committee to restore for truckers at least the 80% deduction that existed from 1987 to 1993, as included in H.R. 1003. Full deductibility would be even fairer, if revenues permit.

I am an owner-operator. I own and drive my own tractor and trailer, which I lease to North American Van Lines (NAVL)--Alaska Highway Division. I haul household goods throughout the continental United States and Canada. In 16 years, I have traveled 2 million accident-free miles, and I have been awarded NAVL's Hauler of the Year in 1990, 1991 and 1992. This year I'm one of 11 spokespersons for America's Road Team, teaching highway safety to motorists and truckers and representing the industry to news media, transportation officials and government leaders from coast to coast.

As you can imagine, my schedule keeps me on the road a lot--275 to 320 days a year. DOT regulations limiting driving and on-duty hours often dictate when and where I stop to eat. This can force me to spend another night on the road instead of getting home. Also, there are restrictions imposed by city, county, state and federal governments on where an 18-wheeler can travel or park. As a result, I sometimes end up paying monopoly prices in truckstops for foods most people buy for much less, even when I eat in my cab. Just last week, I had to pay $4.98 at a truckstop for a box of Cheerios.

It is unfair that the tax law says I can deduct only half the cost of my meals on the road, even when the sole reason I am on the road sometimes is because of the DOT hours-of-service rules.

My meals are not fancy, since often my only choice is which truckstop to park at, but the costs are significant to me. Under current IRS rules, I can claim only $32 per day for meals <u>and</u> incidental expenses. (My actual expenses are probably much higher, but it's hard to get receipts from most coffee vending machines and coin-operated laundries.) In a typical year, when I'm on the road for 300 days, that comes to $9600. The $9600 used to be fully deductible, which seems only right to me. In 1987, that deduction was trimmed to 80% of actual cost, or $7680. Last year, the deductible portion fell to 50%, or $4800, a drop of $2880. That's a tax increase of more than $800 if I'm in the 28% tax bracket.

Adding insult to injury, I have to count my shower and laundry expenses on the road as part of my meal allowance and take only a 50% deduction for those. You may not realize it, since you probably are never billed separately for showers and usually get to do laundry at home, but drivers sometimes pay as much as $5 for a shower at a truckstop, along with inflated prices for detergent, laundry and other "incidental" costs.

Maybe most members of Congress thought they were only going after lobbyists and executives when they cut back the meal and entertainment deductions. It's hard to believe they <u>meant</u> to punish struggling small-businessmen like myself or the thousands of employee drivers who were hit by these cutbacks. In fact, I understand that boat crews and oilfield workers offshore or in Alaska can still deduct 100% of their meal costs. But the fact remains that DOT regulations and the size of our tractors restrict long-haul truckers' choice of eateries almost as much as those other workers. Yet we are now "eating" half the cost of our meal, shower and laundry expenses on the road because of the 1993 change in law, even when we are still on the road because the DOT rules keep us away from home an extra night.

I hope you will give individuals subject to hours-of-service rules the same fair treatment as workers who have no choice but to eat on ships or oil rigs. At a minimum, I urge you to adopt H.R. 1003, which allows truckers and others under hours-of-service limits to deduct 80% of meal costs. Thank you.

Sincerely,

Daniel P Gaither

NATIONAL RESTAURANT ASSOCIATION

Testimony of

Elaine Z. Graham, Senior Director of Government Affairs

July 27, 1995

Thank you for the opportunity to submit testimony with regard to the Ways and Means Committee hearing on miscellaneous tax provisions.

As the leading trade association for America's foodservice industry, the National Restaurant Association applauds your consideration of H.R. 1003, legislation which would restore the deductibility of business meal expenses for individuals who are subject to federal hours of limitation under Department of Transportation regulations. Further, we support the restoration of the deduction to 100% for all business meals and entertainment.

The reduced business meal and entertainment deduction has affected users of the deduction as well as restaurateurs who have experienced decreased sales. The recently concluded White House Conference on Small Business, which was composed of men and women from around the country, made restoration of the deduction a priority issue. Business meals are a legitimate marketing tool and a necessary expense for a wide variety of people. Many businesses, particularly the small ones, rely on the one-on-one relationships that are forged over a meal. For these businesses, other types of advertising are either too expensive or not effective.

In addition, restaurateurs have seen decreased consumer spending in their establishments. Lower business lunch sales have been reported, which, from conversations with customers, can be traced to the decreased business meal deduction. For example-and there are many-the mid-priced Via Real Restaurant in Irvine, Texas has seen a 10-12% drop in its business since June 1994, despite an upswing the region's economy. Polls of the restaurant's customers indicate some reasons: bigger companies in and around Irvine are cutting back on large-scale business dining events. Jay's Restaurant, in Dayton, Ohio, closed its doors for lunch July 14, 1994, following a 15% decrease in lunch business—a loss of 2,000 lunch customers—during the previous six months. One Dayton company that provided the restaurant over $200,000 in business each year is no longer reimbursing employees for any business lunch expenses. As further evidence, a September 1994 American Express study indicated that small and medium-sized companies have either taken or anticipate taking some action that potentially reduces restaurant spending, including changes in travel and entertainment guidelines.

Unfortunately, the 1993 decrease in the business meal deduction amounted to nothing less than a $15 billion tax increase on the foodservice and entertainment industries. We strongly urge the Committee to consider full restoration for the business meal and entertainment deduction.

Before the

U.S. HOUSE OF REPRESENTATIVES

Committee on Ways and Means

Comments of the
Owner-Operator Independent Drivers Assn., Inc.

On Proposal For
Miscellaneous Tax Reforms

These comments are submitted on behalf of the Owner-Operator Independent Drivers Association, Inc. ("OOIDA" or "Association") and its members. OOIDA is the national trade association representing the interests of the nation's more than 350,000 owner-operators and small business truckers. The Association is a not-for-profit corporation incorporated in 1973 under the laws of the State of Missouri. Its principal place of business is in Grain Valley, Missouri. The mailing address of the Association is:

Owner-Operator Independent Drivers Assn., Inc.
P.O. Box L
Grain Valley, Missouri 64029

Owner-operators represent up to half of the total number of Class 7 and 8 trucks operated in the United States. The more than 29,000 members of OOIDA are small business men and women that live and work in all 50 states and Canada. Collectively, OOIDA's members own and operate more than 48,000 individual heavy duty trucks and small truck fleets. On average, these individuals drive approximately 100,000 miles per year and spend more than three hundred nights away from home.

The Association advocates the views of small business truckers on issues that affect their interests. These interests range from economic and highway safety issues to those directly affecting

their health and welfare. As part of its representation, the Association regularly presents the views of small business truckers to Congress. Its representatives also serve on various committees of the National Governors' Association, the Commercial Vehicle Safety Alliance, the Professional Truck Driver Institute of America, the American Association of State Highway and Transportation Officials, and other groups.

As small businesses, over the past several years owner-operators have been directly affected by efforts to reduce federal budget deficits. In general, small business truckers are concerned with the size of the deficit and its overall impact on the economy. The trucking industry is very sensitive to economic fluctuations, hence, anything that tends to stabilize the economy is generally good for trucking. However, small business truckers feel that they have been disproportionately singled out to pay more than their fair share of the bill for reducing the deficit and have borne the brunt of substantial increases in highway taxes.

As a result of previous attempts to control the deficit, small business truckers are paying far higher amounts in taxes earmarked for deficit reduction than are other segments of the population. A typical owner-operator truck consumes 20,000 gallons of fuel each year while delivering the nation's goods. At the current rate of 6.8¢ per gallon in fuel taxes dedicated to deficit reduction, each of our members is paying nearly $1,400 per truck per year toward deficit reduction. Even when this amount is reduced by 2½¢ per gallon on October 1st, our members will still be paying, on average, nearly $900 in increased fuel taxes each year toward deficit reduction. The economic condition of the trucking industry precludes owner-operators from passing this cost on. For small business owners that typically have adjusted gross incomes of $20-25,000 per year, the fuel tax increase was the equivalent of a direct five percent loss of income. In addition to tax increases, small business truckers have been squeezed

in the other direction by reduction in, or elimination of, certain tax deductions for items necessary for conducting business.

The Committee has before it a measure that could provide substantial relief with regard to meal deductions. The Committee should also consider other measures which would aid small businesses; in particular the small business truckers that have shouldered the burden of the fuel tax increase. These measures concern full deductibility of health care premiums and complete deductibility of home office expenses.

As previously noted, a typical owner-operator drives nearly 100,000 miles per year. He or she spends more than 300 nights per year, sleeping on the road and away from home. While they are on the road, small business truckers incur living expenses that, under recent amendments, are no longer fully deductible. Further, these individuals' work schedules are governed by federal hours of service regulations that force them to spend even more time away from home which adds to their operation costs.

Currently, there is a pending provision that would change the present law which allows 50 percent deductibility of meal and entertainment expenses in conjunction with a trade or business. According to the new proposal, the owner-operator could deduct 80 percent of his or her meal expenses while on the road. This 30 percent increase in deductibility for meal expenses would significantly help the small business trucker recover their business related costs while on the road.

Moreover, these individuals are regulated by federal hours of service regulations that force them to stop driving and spend a night away from home when they may otherwise be within a one to two hour drive of home. Others not subject to these regulations, such as outside salesmen, would be able to return home and not incur the expense. Unlike the discretionary spending that the provision was

aimed at correcting, small business truckers do not have the ability to reduce their spending by choosing to eat more meals at home. This inability to control costs is based on both their work schedules and compliance with federal regulations. Under the circumstances, they should be allowed to deduct these meal expenses.

Owner-operator businesses revolve around the operation of the truck. For the owner-operator, it is both workplace and living quarters for a large portion of the work year. However, there are functions that cannot be performed in the truck. Typically, they are performed at the small business owners' home. These include filing of quarterly tax reports, accounting functions, maintenance of records, etc.. In many cases, records such as state fuel tax reporting forms, drivers' daily logs, and tax receipts must be kept on file for specific lengths of time in order to comply with federal and state requirements. These records cannot be transported on a truck; nor would that be an efficient way to conduct business. Because they are small businesses that operate on relatively thin profit margins, owner-operators are not afforded the luxury of having a fixed office site; rather, these functions are performed in the home. If the functions were performed in another location, the related expenses would be fully deductible. It is simply not fair to permit one class of businessmen to deduct expenses because their economic circumstances allow them to have an office outside the home while penalizing others who maintain a home office for fulfilling government mandates. For that reason, the Association urges the adoption of legislation that would ensure that home office expenses are fully deductible.

The Association also wishes to comment on the deductibility of health insurance premiums by self-employed individuals. During the recent debate on health care reform OOIDA surveyed its members in order to determine their health care insurance status. The Association found that approximately 40 percent of small business truckers had no health care coverage. The overwhelming

reason cited by these individuals for not having insurance coverage was cost. This cost would be dramatically reduced if self-employed persons were able to fully deduct their health insurance. Ironically, if they provided health insurance to their drivers and other employees, they would be permitted to deduct the full amount. However, as individual small business owners they are precluded from doing so under current law.

The cost of treating a serious illness today can be devastating for a family, even if the individual recovers and returns to work. Some families are never able to recover financially from a major medical expense for which there was no insurance coverage. The Association is deeply concerned that such a large portion of its members operate their businesses with inadequate health care insurance for themselves. OOIDA believes that permitting self-employed individuals to fully deduct the cost of their own health care (as they already can for their employees) is not only good policy, but also is morally necessary. For that reason, the Association encourages the Committee to address this issue in its legislative proposal. The Association believes that the Committee might also wish to consider approving the implementation of "medical savings accounts." Such accounts could be treated in a manner similar to an Individual Retirement Account ("IRA"), such that individuals would be able to invest monies at a reasonable rate to cover future medical expenses.

As the Committee considers various tax reform measures, it will be unable to accommodate all interests. Though these tax reforms will affect a wide range of individuals, we urge the Committee to keep in mind the concerns of the small business person; namely the owner-operator. With continued regulation of the trucking industry and requirements for federal hours of service, OOIDA believes that adjustments should be made to encourage small businesses. OOIDA fully supports H.R. 1003 and any legislation that benefits our owner-operators.

Butte, Montana 59701

Representing:
Butte Historical Society
Community, Culture and Heritage

Reference: HR 1662
Date of Hearing: July 11,12 and 13, 1995

Dear Mr. Moseley:

I am writing in support of HR 1662, the Historic Homeownership Assistance Act, which provides for a tax credit for the rehabilitation of historic homes. For nearly 20 years, Federal income tax incentives have been available for the rehabilitation of historic, income producing properties. This tax credit has provided an important incentive for the revitalization of these structures and has served as a catalyst for the renewal of many of our nation's downtowns. However, this incentive has not been available to owners of private residences.

Historic homes, if listed on the National Register of Historic Places (or in an Historic District), were eligible to receive matching grants from the National Park Service for restoration activities. However, there has been little or no funding of the program which provides these grants for more than a decade. Community Development Block Grants through HUD (the Department of Housing and Urban Development) and newer affordable housing programs have provided some assistance to low and moderate income individuals and families in eligible neighborhoods. However, these programs are highly competitive and don't begin to address the large stock of homes which were built before 1940. Overall, our nation's older neighborhoods continue to face deterioration and disenfranchisement.

In Montana, approximately one third of all residences were built prior to 1940. While age is not necessarily an indication of condition, according to the 1992 Montana Comprehensive Housing Affordability Strategy (CHAS), homes of that age have potential problems "related to inadequate foundations, floor supports, and roofs which inevitably grow worse over time". Of those, 25% are owned by elderly residents, who are often less able to afford upkeep. Butte, Montana is home to one of the largest National Landmark Districts in the United States, made up of more than 4000 structures, most of which are private residences. Existing assistance programs are simply not adequate to address this enormous need.

A tax incentive for homeowners to restore their historic homes would serve to begin "filling the gap" between need and available resources to restore these important elements of our American heritage. I heartily encourage your support of HR 1662 and appreciate your thoughtful consideration of this statement.

Sincerely,

Janet A. Cornish

July 24, 1995

Phillip D. Moseley
Chief of Staff, Committee on Ways and Means
U.S. House of Representatives
1102 Longworth House Office Building
Washington D.C. 20515-6384

Dear Mr. Moseley,

The California Preservation Foundation strongly supports HR 1662, the Historic Homeownership Assistance Act of 1995, hearings for which were held July 11, 12, and 13, 1995.

The California Preservation Foundation is a statewide, nonprofit, tax-exempt educational organization, representing 100,000 Californians through its members and member organizations, and is concerned with encouraging historic preservation and neighborhood revitalization in California.

HR 1662 is of prime importance because it promotes stability in older neighborhoods which are traditionally disadvantaged and underpopulated. By allowing lower income families to convert the credit into a mortgage credit certificate, and by providing tax credits to middle class homeowners and potential homeowners, HR 1662 will revitalize neighborhoods. Areas which had not been attractive to families will draw new residents and convert renters to homeowners, taxpayers who can support local government and businesses, creating construction and permanent jobs. A valuable side-effect is that homeownership in fringe neighborhoods strengthens the community and motivates residents to combat urban problems including vandalism and crime. For people who rent apartments, these problems can be abandoned by moving to a different building, but homeowners have strong motives for improving life in their neighborhoods.

Ownership of a historic building fosters a stronger sense of community and a sense of pride in one's place in that community. The history of the building and the neighborhood becomes a source of identity for the owners, motivating them to appreciate and take better care of their environment. A neighborhood like West Oakland, for example, is rich in ethnic and architectural history. West Oakland is a mix of modern housing projects and the Victorian houses which have made San Francisco famous. These houses, now in poor repair, could form a base for a thriving neighborhood. Although rental units in housing projects

CALIFORNIA PRESERVATION FOUNDATION

can provide shelter, owner occupied historic structures contribute identity and continuity.

The Federal Government has already recognized that tax credits are useful in the preservation of structures used for commercial, industrial and rental residential purposes. Tax credits for these types of use encouraged diversity in and the continued use of our cities' downtowns, as well as affordable housing. HR 1662 makes available the same benefits for owner occupied properties, stabilizing older neighborhoods and ensuring that a diverse portion of the populace has access to our cultural heritage.

Because of the pressing need to stabilize lower income and middle class communities, we urge that the Historic Homeownership Assistance Act be included in current tax reform proposals being considered by Congress.

Thank you for your consideration of our position.

Most sincerely,

Jeff Eichenfield
Interim Executive Director

CORNERSTONE
RESTORATIONS
EST 1989

July 20, 1995

Mr. Phillip D. Moseley, Chief of Staff
Committee on Ways and Means
U. S. House of Representatives
1102 Longworth House Office Bldg.
Washington, DC 20515-6384

Dear Mr. Moseley:

My name is David Nathans and I am president of Cornerstone Restorations, Inc.

I have been involved in Investment Tax Credit restoration in Wilmington, N. C. since 1990.

I have completed projects at 114 N. Eighth Street, 317 N. Fourth Street, 110 N. Eighth Street and 721 Chestnut Street. These projects have sparked the rehabilitation of other houses located in economically depressed inner-city neighborhoods. They have created affordable housing in areas that had no new construction being done at all. We have tried to use as much local labor as possible.

HR 1662 will accomplish the same economic benefits in these same neighborhoods for an individual home-owner. Therefore, this bill would encourage home ownership in these same neighborhoods.

Sincerely,

David Nathans
Cornerstone Restoration, Inc.

Secretary of State

July 26, 1995

Mr. Phillip D. Moseley, Chief of Staff
Committee on Ways and Means
U. S. House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20515-6384

Dear Mr. Moseley:

This letter is for the official record of the Ways and Means Committee hearing held on July 11, 12 and 13, 1995, regarding the revenue and cost estimates for a number of proposed tax bills including the proposed Historic Homeownership Assistance Act, HR 1662.

We are writing to express our unqualified support for the proposed Historic Homeownership Assistance Act. This important measure would amend the Internal Revenue Code to provide a credit against income to home owners who rehabilitate their historic homes or who are the first purchasers of rehabilitated historic homes for use as their principal residence. It will promote historic preservation, home ownership and neighborhood revitalization.

Healthy historic neighborhoods are valuable assets to our cities. Not only do they embody the unique heritage of our communities and regions, they provide established, stable and secure environments, architectural variety and the "sense of place" often lacking in contemporary suburban development, and a quality living environment which fosters community pride.

In Florida, every major city has one or more historic neighborhoods which are in decline or need assistance. Examples include Springfield in Jacksonville; Ybor City, West Tampa and Tampa Heights in Tampa; East Hill in Pensacola; Pleasant Street in Gainesville; Parramore in Orlando; Roser Park in St. Petersburg; Overtown in Miami; and Bahama Village in Key West. Dedicated citizens and local governments are working together to return the vitality and security to many of these neighborhoods. Regrettably, these efforts are not always enough. In some neighborhoods, the struggle is for survival.

Florida has recently established a local option ad valorem tax exemption for improvements to historic properties. While this, for the first time, offers some assistance to homeowners, it is certainly not as effective as a federal income tax credit would be. Since Florida has no state income tax, it is difficult for Florida to offer many other financial incentives to homeowners or developers of historic properties.

Based on the record of other states which have a tax credit on state income taxes, we can estimate what the impact of this federal tax credit might be in Florida. The average qualified investment in the six states which offer an income tax credit or deduction is approximately $50,000 per building. The National Park Service estimates that of the 23,719 contributing National Register properties in Florida, approximately 21,000 of these are residential properties. If only 1% of these required substantial rehabilitation and qualified for the credit offered by the proposed Act, expenditures for labor, materials and fees would be $10.5 million. Using a conservative economic multiplier of four, the estimated impact of this investment on the local economy is an increase in gross output (earnings, personal income taxes, corporate income taxes and state and local sales taxes) of $41 million. Furthermore, a 1994 University of Rhode Island study shows that every

$32,922 in rehabilitation costs generates one full-time annual job. If this ratio holds true in Florida, the $10.5 million estimate given above would create 1,275 full-time jobs.

While incentives have been provided by the federal government to encourage private investment in the rehabilitation of historic income-producing properties for almost three decades, never has there been a program offering significant encouragement for private investment by owners or purchasers of historic homes. The proposed Act recognizes the potential of our historic neighborhoods, and their importance to the well-being of the state and nation.

The incentive offered by the Historic Homeownership Assistance Act would substantially offset the feared increase in ad valorem taxes which has caused many property owners to put off needed improvements and would provide a substantial boost to the local construction industry. With the ability to pass the incentive on to the purchaser of a rehabilitated home, developers will find historic house rehabilitation more attractive.

It is particularly important to note that the proposed Act offers assistance to homeowners at all income levels. Lower income homeowners who cannot make use of the tax credit would be able to secure a Mortgage Credit Certificate, in lieu of the tax credit. This Certificate would be used to reduce the interest rate on the mortgage securing the purchase and rehabilitation of the historic home. This could mean the difference between continued rental housing and home ownership for many families.

Also important are the special provisions for historic homes in enterprise and empowerment zones and targeted distressed areas which are aimed at making rehabilitation of homes in these areas more economically feasible. Through these provisions, we believe that the proposed Act holds great promise in helping to meet our growing demand for decent and affordable housing.

The Historic Homeownership Assistance Act, HR 1662, would make a major contribution to the preservation of significant historic resources, home ownership and family security, and the rebirth of declining older neighborhoods. We urge your support of this bill.

Sincerely,

George W. Percy

George W. Percy, Director
Division of Historical Resources

GWP/sw

WRITTEN TESTIMONY
IN SUPPORT OF THE HISTORIC HOMEOWNERSHIP ASSISTANCE ACT
TO THE WAYS AND MEANS COMMITTEE
OF THE HOUSE OF REPRESENTATIVES
JULY 11, 12, AND 13, 1995

I am Mark R. Edwards, Director of the Historic Preservation Division, Georgia Department of Natural Resources (500 The Healey Building, 57 Forsyth Street, NW, Atlanta, GA 30303). I am also Georgia's State Historic Preservation Officer. I urge you to support passage of H.R. 1662 - the Historic Homeownership Assistance Act.

For almost twenty years, owners of income-producing, historic buildings have been able to apply for federal tax incentives. In Georgia alone, we have seen nearly a thousand historic buildings rehabilitated and put back into use, largely due to opportunities created by tax credits. These projects have resulted in approximately $500 million invested into the state's economy.

Even with this success, there has been a constant, overriding source of concern. I cannot tell you the number of inquiries we receive from individuals who are trying to buy a historic house and who want to make it their home. Or the calls from individuals who have bought an old house in a historic neighborhood and are tackling the financial realities of rehabilitation costs. All of their questions are basically the same: "Are there any programs available to help me purchase a historic house or to help me make it liveable for my family?" Regrettably, we can offer only very limited assistance.

Many of these calls and inquiries have been from middle-class Georgians. While some have been supporters of preservation activities for years, many are individuals who simply have found a historic house or older neighborhood in which they wish to live and raise their families. These citizens - the backbone of our society - need encouragement and support as they take on the sometimes difficult task of bringing buildings and neighborhoods back to life.

The Georgia General Assembly tried to address this problem and passed a property tax assessment freeze during its 1989 session. Since then, over 500 historic buildings, either residential or income-producing, have benefited from this incentive. This represents over $52 million dollars invested in Georgia communities. This is a reflection, however, of only a small number of the residential buildings listed on Georgia's statewide inventory of historic properties. Of 60,000 historic buildings identified, 70% are residential. If the Historic Homeownership Assistance Act passes, the possibilities for neighborhood revitalization, affordable housing opportunities, and for preservation of buildings representing our American heritage will be tremendous.

If passed, this legislation will help bring life back into our historic residential neighborhoods. It will benefit individuals working to buy their first home and provide opportunities for individuals seeking decent affordable housing. It will help young families striving to create homes, and it will encourage safer, more liveable older neighborhoods in our cities. Costs to taxpayers will be minimal since most of these buildings are in areas with infrastructure already in place. Construction and rehabilitation activity will generate jobs, and money for building materials and supplies will often be spend in local neighborhoods.

I ask that you please support the Historic Homeownership Assistance Act. It will benefit Americans of varying economic status - all working toward a goal of home ownership, and it will insure the preservation of America's historic houses for another generation. Thank you.

STATEMENT OF JAMES A. GLASS, DIRECTOR, GRADUATE PROGRAM IN HISTORIC PRESERVATION, COLLEGE OF ARCHITECTURE AND PLANNING BALL STATE UNIVERSITY, MUNCIE, INDIANA 47306

Submitted for the Record of Hearings Held by the Committee on Ways and Means
July 11, 12, and 13, 1995

I am writing in support of HR 1662, the Historic Homeownership Assistance Act of 1995, which has been introduced by Representative Clay Shaw of Florida.

In a twenty-year career in the field of historic preservation, I have witnessed the dramatic impact of federal income tax incentives for revitalizing the commercial areas of downtowns in Indiana, first as staff historian of the Indianapolis Historic Preservation Commission from 1975 to 1982, then as the Deputy State Historic Preservation Officer for Indiana from 1990 to 1994, and since 1994 as Director of the Master of Science in Historic Preservation degree at Ball State University.

Prior to the creation of the current historic rehabilitation tax credit for income-producing historic buildings under the Economic Recovery Tax Act of 1981, the older buildings in the downtown areas of Indiana cities and towns were deteriorated and often vacant or marginally occupied. Few historic preservation advocates were hopeful prior to adoption of the 1981 act that many of these buildings had an economic future. Although of key importance to the history and identity of Indiana communities, the historic commercial buildings could not attract developer and investor interest. The federal tax code favored new construction and development, and capital flowed to new projects for which the maximum amounts of tax incentives were available.

After 1981, an amazing transformation in the marketplace took place in Indianapolis and other cities. Investors and developers learned of the new 25% investment tax credit for rehabilitating income-producing buildings listed in the National Register of Historic Places, and rehabilitation projects soon were taking place all over downtown Indianapolis. The tax credit was a key element during the 1980s in the economic feasibility of the $50 million Union Station rehabilitation, the Lockerbie Marketplace rehabilitation of the historic Sears, Roebuck and Co. department store, the rehabilitation of the historic Marott and Severin Hotels, and the rehabilitation of at least a dozen historic apartment buildings in the downtown area.

In more recent years, the tax credit, though reduced to 20% and of less appeal to investors because of changes in the passive loss rule in the 1986 Tax Reform Act, still has been the deciding element in feasibility for rehabilitation projects in smaller cities and communities in Indiana. These have included the rehabilitation of the former Central High School and Stephenson Mill in South Bend as mixed market-rate and affordable apartments, the rehabilitation of the historic Knightstown Academy in Knightstown, Indiana as elderly housing units, and the rehabilitation of the former Shelbyville, Indiana High School as housing. In all these cases, these buildings were abandoned and deteriorated before rehabilitation began; they were eyesores that were detracting from the neighborhoods in which they were located. They were contributing nothing to the property tax base of their communities.

In a similar fashion, I believe that the Historic Homeownership Assistance Act has the potential to spur private individuals to invest in residential neighborhoods. Everyone has seen the substantial deterioration of older neighborhoods in cities and towns across the United States. Many of these areas are important parts of the heritage of their communities, as well as home to thousands of residents. Although tax incentives have been available for income-producing historic buildings for twenty years and spurred the substantial private investment mentioned above, there have been no comparable federal tax incentives for private homeowners.

Restoring and rehabilitating a historic house can often be a time-consuming and costly undertaking. Although many individuals take on such projects in order to enjoy the high qualities of space, craftsmanship, and character, based on our experience with the income-producing tax credit, I believe that many others might invest in historic homes in older neighborhoods if there were federal tax incentives to encourage them.

Although there is some discussion in Congress regarding a flat income tax, which might mean elimination of most tax credits and deductions, the need for private investment in older neighborhoods is reaching a critical point in many cities and towns. The marketplace is tending to focus almost exclusively on opportunities in new residential construction in suburban areas.

The Historic Homeowners Assistance Act could make a significant impact in stimulating private investment in neighborhoods, and I urge the Ways and Means Committee to include the provisions of the Shaw bill in a Miscellaneous Tax Reform bill this year.

Thank you for the opportunity to comment.

HISTORIC DISTRICTS COUNCIL

45 WEST 67th STREET, NEW YORK, NEW YORK 10023 212-799-5837 FAX 212 875-0209

July 21, 1995

Hon. Bill Archer, Chairman
c/o Phillip D. Moseley, Chief of Staff
Committee on Ways and Means
U.S. House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20515

Re: H.R. 1662, Historic Homeownership Assistance Act
Hearing dates: July 11, 12, & 13, 1995

Dear Congressman Archer:

The Historic Districts Council is a community-based organization dedicated to strengthening New York City's historic neighborhoods. We strongly support H.R. 1662, the Historic Homeownership Assistance Act, heard by your committee on July 11, 12, and 13.

The Historic Districts Council believes that this proposal could substantially benefit New York City's 66 designated historic districts, which comprise over 20,000 buildings. These historic districts are singled out for protection by the city's Landmarks Preservation law because of their special architectural, social, cultural, or historic significance. Through landmark designation, the city seeks to stabilize communities that are important to the long term economic and social health of New York as a whole.

The Historic Homeownership Assistance Act is based on the very successful Historic Rehabilitation Investment Tax Credit, extending it to owner occupied homes. It would stimulate economically sound reinvestment in existing buildings in communities across the country, encouraging homeownership for the rising middle class and potentially reviving fragile neighborhoods. The legislation has been very thoughtfully written to encourage the involvement of the real estate professional, who can pass on the tax credit earned to the buyer of a rehabilitated cooperative or condominium.

Nothing strengthens neighborhoods more than the commitment of resident homeowners who will be encouraged by this legislation to invest, financially and morally, in their communities. While fostering local stability, this investment will also promote an increased tax base for municipalities, and generate jobs in the labor intensive rehabilitation industry.

We urge you to support this legislation.

Sincerely,

Frances Eberhart

INDIANAPOLIS, INDIANA 46202

Submitted for the Record of Hearings Held by the Committee on Ways and Means
July 11, 12, and 13, 1995

On behalf of Historic Landmarks Foundation of Indiana, I am writing in support of HR 1662, the Historic Homeownership Assistance Act of 1995. By assisting home owners through a Federal income tax credit, this Act would provide incentive for preserving a vast and rich part of our national heritage: the American home.

As a organization representing over 3,700 members, with staff located in seven offices throughout Indiana, I can attest to the high level of support for the proposed Historic Homeownership Assistance Act. In fact, one could call it a groundswell.

The strong, bi-partisan support already expressed for the Act further indicates its widespread appeal. We feel that it is only right to extend to home owners--who are the stewards of so many historically and architecturally significant properties--similar benefits to those long enjoyed by owners of income-producing properties.

I urge you to consider this Act favorably in light of the tremendous potential it holds for encouraging responsible investment in our homes and communities.

In Support of H.R. 1662

The Historic Preservation Foundation of North Carolina, Inc., (Preservation North Carolina) and the aforementioned organizations enthusiastically support the passage of H.R. 1662, the Historic Homeownership Assistance Act. This act would create a powerful boost for private sector rehabilitation of historic properties, especially in downtown areas, whether in large cities or small towns.

The Rehabilitation Investment Tax Credits created in 1981 (and, unfortunately, seriously weakened in 1986) have been a powerful tool for reinvestment in older areas of America's cities and towns. More than $16.7 billion of private sector investment ($300 million in North Carolina) has been stimulated by these tax credits, which are limited to income-producing properties. The tax credits program has by far been the most successful downtown revitalization

program ever created by the Federal government, in large part because it has catalyzed private investment.

If H. R. 1662 is passed, the tax incentives will create a new and substantial burst of rehabilitation activity throughout older areas in the United States. The results will be enormously beneficial:

- Jobs will be created.
- Public expenditures for new infrastructure (roads, schools, water and sewer lines, etc.) will be reduced.
- Homeownership will increase, as less expensive urban properties become better investments.
- Crime, *de facto* suburban segregation, and other social problems will be lessened as older areas are reclaimed.
- Urban sprawl will be abated.
- Energy will be saved.
- Pressure will be reduced on our landfills.
- Our cities and towns will become better places to live and work.
- And, our Nation's heritage will be preserved.

The leverage rate for Federal funds spent on a homeowner tax credit will be enormous. When the State of North Carolina added a 5% rehabilitation tax credit to supplement the Federal tax credit, a study showed that the tax incentive would actually result in a *net gain* for the State's coffers because of added revenue generated from income taxes on labor and sales taxes on materials. The study did not take into account the savings which result from reduced demands for new infrastructure.

Prominent legislators in North Carolina have agreed to introduce a 5% supplemental State income tax if H.R. 1662 becomes law.

Preservation North Carolina, a private nonprofit organization that tries to find sympathetic buyers for endangered historic properties, can attest first-hand to the number of people who would respond positively to the passage of the Historic Homeownership Assistance Act. Literally on a daily basis, Preservation North Carolina receives numerous calls from people requesting information on available incentives. Unfortunately, no incentive currently exists for the private rehabilitation of a historic house for owner occupancy. Current Federal laws allow a 20% federal tax credit for rehabilitation of historic structures, but only if they are used to generate income. The Historic Homeownership Assistance Act would offer these same incentives to individuals interested in rehabilitating a historic property as a primary residence. A powerful incentive for restoring a historic home would be available to a much larger group of people. The act would make the "American Dream" of homeownership affordable and attractive for millions of young people and others who cannot afford the steep prices of new construction.

Restoration of historic properties makes good economic sense for many reasons. Local tax bases can be substantially enhanced by the rehabilitation of historic structures without public expenditures for new roads, sidewalks, water and sewer lines, schools and fire stations. Historic buildings also tend to appreciate at a better rate than most new construction. The superior materials and craftsmanship as well as the unique characteristics of older structures make them enjoyable and desirable as residential choices.

Rehabilitation and restoration conserve energy by recycling existing construction, rather than encouraging costly demolition and the landfilling of otherwise viable materials. Furthermore, local economies are stimulated by rehabilitation. In a community which spends $1 million on rehabilitation over new construction, the following are true:

- Five to nine more construction jobs will be created than with new construction.
- Retail sales in the community will increase $34,000 more than with new construction.
- $120,000 more will initially stay in the community, because rehabilitation is more labor-intensive than materials-intensive.

Finally, the availability of tax credits for residential properties will encourage the revitalization of communities, both urban and rural, across the nation. Many North Carolina towns and cities have already recognized and benefited from the preservation of their historic architecture. Tourists from all over the nation visit historic sites from our coastal plain to the mountains.

Communities not only reap the rewards of tourist dollars but they enjoy the beauty and pride of place which historic neighborhoods instill. Both wealthy and poor citizens can share in the satisfaction of seeing their familiar surroundings revitalized. Community pride is fostered by historic preservation.

Preservation North Carolina has been involved with numerous properties rehabilitated under the existing tax credit program for income-producing properties. The passage of this act will take the successes of that program and expand it to include a vastly greater number of properties and tax payers. Our society will benefit enormously. We urge your support of H.R. 1662.

STATEMENT

Nashville, like many cities, benefited greatly from the tax credit which became available in 1976 for the rehabilitation of income-producing historic properties. By stimulating private investment of more than $120 million, the tax credit has proven crucial in the revitalization of downtown Nashville. Thanks to the credit, we continue to see the economic impact of millions of private dollars invested.

HR 1662 promises comparable potential to revitalize historic neighborhoods by placing home ownership within the reach of many who could not otherwise afford it. At the same time, passive investment rules would minimize federal tax revenue loss.

The effects we anticipate in Nashville include:
- Significant increases in private investment and construction in historic neighborhoods.
- Stabilization and improvement of property values, based on increased investment and home ownership. From local experience, we know that such stability always encourages spin-off investment by other homeowners and makes banks more likely to lend.
- Increased local tax revenue from economically healthy neighborhoods.
- Making redevelopment a more viable competitor to building on undeveloped land, resulting in better use of existing infrastructure, improving chances for open space preservation, and discouraging expensive sprawl.
- Preservation of viable housing stock close to commercial areas, reducing transportation costs for everyone.

There are equally important, if less quantifiable, reasons to support the bill: Community is nurtured by home ownership and investment in historic districts. Several of our most active neighborhood associations began with urban pioneers rallying to save their streets -- house by house. Such people invest in a community, not just a house. They know and take responsibility for their neighbors. To see democratic values at their best, look at the Nashville neighborhoods that have already been revitalized. Passage of this bill could be a watershed event for aging and historic neighborhoods in Nashville and throughout the country, empowering more Americans to invest in home and community.

We encourage you to support HR 1662.

TESTIMONY OF DONNA DIAZ
COMMUNITY/EDONOMIC DEVELOPMENT
LAKE CUMBERLAND AREA DEVELOPMENT

Statement in Support of HR 1662

Among the issues involved in the hearings last week on Miscellaneous Tax Reforms is HR 1662, the Historic Homeownership Assistance Act. This measure deserves to be in the major tax bill under consideration.

As Director of Community and Economic Development for a 10-county planning agency in rural Kentucky, a major concern is condition of housing stock and ways to preserve and improve housing stock in the entire area. The Historic Homeownership Assistance Act, a tax credit for rehabilitation of historic homes, would act as an incentive to preserve our historic housing and give preservation efforts additional visibility. It will encourage investment and homeownership in our disinvested neighborhoods. This in turn will increase the tax base for local taxing districts and will go far in strengthening the local economy by providing construction jobs and through the increased sales of building materials and goods.

This bill will create circumstances under which people of diverse income levels can become homeowners for the first time and/or rehabilitate older housing stock which is currently substandard. Standards of living can be elevated using only this incentive, without the commitment of federal dollars to a cumbersome and expensive federal program. The Historic Homeowner's Tax Credit is an attractive initiative, developing pride and encouraging private action. The appearance of neighborhoods will be improved. Utilization of existing infrastructure will save additional taxpayer dollars.

In rural Kentucky it is becoming more and more difficult to achieve home ownership. Poverty levels coupled with high construction costs make home ownership cost prohibitive for many families. These families, because of poverty level, often have little or no tax liability. To be able to convert earned tax credit into a mortgage credit certificate to obtain a reduced interest rate from the mortgage lender, would make the Historic Homeowners Tax Credit even more effective in a widespread accomplishment of the benefits outlined in these comments.

Representatives Clay Shaw and Barbara Kennelly and Senators John Chafee and Bob Graham are to commended for introducing the Historic Homeownership Assistance Act of 1995, which will be a significant economic stimulator in rural Kentucky as in all other parts of the United States.

Washington, D.C. 20515

RE: Historic Homeownership Assistance Act
Hearing: July 11-13, 1995

Dear Mr. Moseley:

Landmarks Harlem is pleased to support passage of the federal Historic Homeownership Assistance Act.

Harlem's buildings and neighborhoods have suffered from neglect, unnecessary demolition and abandonment for far too long. The Historic Homeownership Assistance Act will provide an opportunity to focus on the architectural and cultural significance of those buildings that gave rise to Harlem's prominence in the Twenties.

Communities survive when there is a turnover in homeownership. While Harlem has been attracting young professionals to purchase homes, the areas of choice have been restricted, mainly, to those areas where historic districts exist -- Mt. Morris Park, Strivers' Row, Hamilton Heights. The need is to populate the multiple dwellings that line Harlem's avenues and streets. These buildings were once home to generations of Harlem residents who raised their families and formed strong neighborhood and community ties.

The fact that the bill allows, among other things, for rehabilitation of older apartment buildings for condominiums and co-operatives is very encouraging. Since these buildings contributed to the cultural growth of Harlem, it is hoped that the Historic Homeownership Assistance Act will spur interest in families returning to many of our historic structures.

Best of luck on your hearing.

Respectfully,

Thomas J. Bess
Executive Director

The Massachusetts Historical Commission, the historic preservation agency for the Commonwealth of Massachusetts, encourages your committee's favorable consideration on HR 1622, the Historic Homeownership Assistance Act, hearings for which were held by the House Committee on Ways and Means on July 11, 12, and 13, 1995.

Massachusetts leads the nation in the number of properties listed in the National Register of Historic Places and owner-occupied historic residential buildings comprise the single largest category of National Register listed properties in our state. Unfortunately, Massachusetts and many other states have no form of financial or economic incentive to encourage the sensitive rehabilitation of privately owned historic residential properties. In 1994 a special state legislative commission on historic preservation noted that the lack of meaningful economic incentives to assist private property owners was perhaps the single biggest obstacle in advancing historic preservation in the Commonwealth HR 1622 would help address an obvious gap in the nation's historic preservation program by recognizing the important fundamental relationship which exists between historic preservation and private property ownership. When private property owners make a decision to preserve their historic property, their private actions have enormous public benefit.

The appropriate rehabilitation and restoration of historic homes often costs more than non-historic properties, given the special knowledge, skills, and materials sometimes required of preservation projects. These costs are generally borne almost exclusively by private homeowners, even though their investment has broader public benefit. Unlike commercial properties, the preservation of historic residential properties is not presently supported by federal grants or tax incentives. HR 1622 would provide a meaningful and long overdue economic incentive to encourage the preservation of historic residential properties nationwide.

At a time when many states and municipalities are meeting with increased resistance to official designations of historic properties, the provision of a tangible benefit to National Register listing would help balance the real and perceived regulatory impacts associated with such designation. In addition, there is the potential for widespread economic benefit resulting from the increased rehabilitation activity generated by the incentive. By its nature historic preservation is labor intensive, generating building activity employing carpenters, painters, masons, plasterers and a host of other building trades. The rehabilitation of properties through historic preservation also employs the services of architects, landscape architects and other design professionals.

HR 1622 will assist residential property owners in preserving many of our nation's historic resources, and provide a stimulus for historic preservation activity nationwide. I encourage your committee to act favorably on this legislation.

Washington, D.C. 20515-6384

By:

The Historic Preservation Commission
of the Township of Montclair, New Jersey
205 Claremont Avenue
Montclair, New Jersey 07042

July 26, 1995

TO THE MEMBERS OF THE WAYS AND MEANS COMMITTEE:

The Montclair Preservation Commission offers its most enthusiastic support for the Historic Homeownership Assistance Act of 1995. Having just completed the nomination process for approximately 650 properties in the Township for landmark status under a recently enacted local historic preservation ordinance, the testimony offered during the public hearings on these nominations have made us well aware of the need for such legislation. We have been closely monitoring the progress of this bill since it was first introduced in November of 1994, just prior to the end of that year's session.

During public testimony at our hearings, homeowners expressed great fears that preservation would cost them more dollars, at a time when federal and state budget cuts have thrown an enormous financial burden on the shoulders of local governments to maintain services and programs. As a result, property taxes in our town have skyrocketed in recent years, and homeowners who have been longtime residents are finding it extremely difficult to remain here. As a result, we have lost many who have been important contributors to the civic and cultural life of our town -- from those who live in affordable housing, no longer so affordable, to those who live at middle and higher income levels.

Montclair is a town possessed of a rich architectural heritage that includes public buildings, churches, commercial buildings, and, most crucial to this legislation, a large number of residences -- both high style mansions and vernacular workers' housing -- that are considered to be

architecturally and/or culturally significant. We have five historic districts and 91 individual landmarks that are on the New Jersey State Register or National Register of Historic Places. All of the properties that were nominated for landmark status in recent Commission action were listed on one or both of those Registers. Our citizens share a great appreciation for the history and architecture of the township, and yet, when faced with regulation under a local ordinance at a time when township taxes were already extremely burdensome to many, citizens drew the line to safeguard their pocketbooks from what they thought would be costly regulation without benefit.

Since last year, our Commission has looked to this legislation as a possible benefit not only to the owners of landmark residences, but also to our efforts to preserve these buildings. Anything that will help property owners, especially those owning affordable housing, to maintain their buildings in a sensitive way would help us safeguard the heritage of this township. In order to assess exactly how it would affect various types of housing in our town, we walked through the provisions with a tax attorney, and concluded that the benefits from such legislation could be felt across the board, in a variety of circumstances, although certainly the greatest effect was felt at the sector that was most in need of assistance: owners of affordable housing. This sector is one that in our town has had the most difficulty maintaining its buildings, resulting to a loss in the township not only in buildings demolished, but substandard living conditions for those who wish to remain here at whatever cost they can afford. For those of this income group who cannot remain, we feel the loss to our community in an increasing lack of diversity -- long a cherished characteristic of our civic life.

The Montclair Historic Preservation Commission encourages reinvestment into already established communities such as Montclair, and considering the successful rehabilitation efforts supported by the commercial tax credit for qualified expenditures on historic buildings, it sees only a positive outcome for such relatively small tax expenditures for residences. We urge the members of the House Ways and Means Committee to vote in favor of this legislation that would encourage reinvestment in our older residential neighborhoods, and offer to homeowners of many types of residences a benefit to the sensitive preservation of their homes.

Respectfully submitted:

The Montclair Historic Preservation Commission

Mary Delaney Krugman, Chair

Date: July 26, 1995

STATEMENT OF
DAVID M. DOMINICK, MAYOR,
CITY OF MUNCIE, INDIANA, 47305

Submitted for the Record of Hearings Held by the Committee on Ways and Means
July 11, 12, 13, 1995

I am writing in support of the Historic Homeownership Assistance Act of 1995 (HR 1662), a bill that was introduced in the House of Representatives by Clay Shaw (R-FL) and co-sponsored by Barbara Kennelly (D-CT).

If passed, the Act will create a twenty percent federal income tax credit available to homeowners who rehabilitate their home (or buy a qualified rehabilitated historic home), limited to $50,000 for each principal residence. Taxpayers with little or no tax liability may convert the credit into a mortgage credit certificate to obtain a mortgage interest rate reduction from their lender.

In Muncie, the credit would help reverse the disinvestment and blight in our older residential neighborhoods. It would provide an incentive for private property owners to rehabilitate their homes which would help strengthen our cities' tax base. The tax credit is not another large federal program but an incentive for people committed to turning decaying buildings into their primary residences. The credit would reach out to current homeowners as well as the many middle class families currently on the verge of homeownership. Furthermore, rehabilitation activities would provide jobs for area residents of diverse incomes.

I believe that if the Historic Homeownership Assistance Act is passed, it will encourage revitalization efforts already underway in Muncie's inner-city neighborhoods. Attached, please find a copy of a proclamation passed by the Muncie Historic Preservation and Rehabilitation Commission last month. I join the Commission in strongly urging the Committee on Ways and Means to include the provisions of H.R. 1662 in a Miscellaneous Tax Reform bill this year.

Thank you for the opportunity to comment on this important issue.

City of Muncie

Proclamation

WHEREAS, the abandonment and destruction of older and historic buildings presents a growing threat to public safety and the social and financial well-being of the citizens of Muncie, Indiana; and

WHEREAS, there are not, at present, sufficient financial incentives to attract homeowners to rehabilitate older buildings in Muncie's distressed and declining neighborhoods; and

WHEREAS, a strong base of homeowners is essential to the civic and economic health of this community and its tax base; and

WHEREAS, there has been introduced in the Congress the "Historic Homeownership Assistance Act" which would provide homeownership incentives for the rehabilitation of older buildings in historic districts through a Federal Historic Rehabilitation Tax Credit specifically for homeowners; and

WHEREAS, the "Historic Homeownership Assistance Act" would stimulate the revival of decaying neighborhoods and the preservation of historic buildings and districts in Muncie through homeownership:

NOW, THEREFORE, we, the members of the Muncie Historic Preservation and Rehabilitation Commission, do proclaim our endorsement of the

HISTORIC HOMEOWNERSHIP ASSISTANCE ACT

and that with this proclamation, we encourage its prompt enactment.

IN WITNESS WHEREOF, we have hereunto set our hands and caused the Seal of the City of Muncie to be affixed this 22nd day of June, 1995.

Statement in Support of H.R. 1662
Historic Homeownership Assistance Act

TO: Philip D. Moseley, Chief of Staff
Committee on Ways and Means
US House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20515-6384

FROM: Eric Hertfelder, Executive Director

DATE: 27 July 1995

RE: Ways and Means Committee Hearings on July 11-13, 1995

The National Conference of State Historic Preservation Officers wishes to go on record in strong support of H.R. 1662, the *Historic Homeownership Assistance Act*.

The National Conference represents the gubernatorially appointed officials that carry out the national historic preservation program for the Secretary of the Interior (National Historic Preservation Act, 16 USC 470). Included among the responsibilities of the State Historic Preservation Officers is assisting the Secretary in certifying qualifying projects for the current Historic Rehabilitation Tax Credit applicable to income producing properties.

H.R. 1662 would extend, in a limited way, the benefits of the current tax credit to qualified owner occupied dwellings. There are several benefits to this proposal. First, H.R. 1662 would extend the incentives for reinvesting in historic properties to an important group left out of the current tax credit: homeowners. The availability of this credit will help both urban and rural neighborhoods to resist decay, improve property values, and thereby help municipalities to stabilize their tax base. The special provisions in the bill for distressed areas (Section 2.d.2.) and for a mortgage credit certificate (Section 2.h.) will ensure that some of the neediest homeowners and neediest historic properties will not be excluded from the program.

Second, the addition of homeowners to the program will extend the economic benefits associated with the reuse of historic structures. As has been proven with the existing tax credit, rehabilitation of existing structures is labor intensive, creates new tax revenues, and can reduce the strain on municipal budgets by not having to build and maintain new infrastructure.

Third, at a time when direct public assistance is shrinking, incentives to spur private investment become even more critical to preserving the nation's historic buildings and neighborhoods. Such places, when properly rehabilitated, offer high quality living environments with more character and often more convenience than new construction.

H.R. 1662 contains several provisions important to the States concerning administration of the program. The provision in Section 2.d.3. for certifications made under a cooperative agreement or contract between a State and the Secretary is a great improvement over the current system, and will provide much more efficient service to the public. Under the terms of the National Historic Preservation Act, such agreements are operative only within the context of the Secretary's overall certification and oversight of the State's entire historic preservation program, thus assuring quality control and consistency.

H.R. 1662 also permits the collection of fees provided such fees are dedicated to the work of processing the applications (Section 2.k.). Since the administration of the new credit will add to the workload of States and participating local governments, this provision is needed to help defray costs.

Statement of Richard Moe
President
National Trust for Historic Preservation

Presented to the House of Representatives
Committee on Ways and Means
in support of
H.R. 1662, the Historic Homeownership Assistance Act
July 11, 12, and 13, 1995

I am pleased to have this opportunity to present to the House of Representatives Committee on Ways and Means the views of the National Trust for Historic Preservation on H.R. 1662, the Historic Homeownership Assistance Act, which would provide an income tax credit based on expenditures related to the certified rehabilitation of a qualified historic property as an owner-occupied home. The National Trust for Historic Preservation, chartered by Congress in 1949, is a nonprofit organization with more than 265,000 members. As the leader of the national historic preservation movement, the Trust is committed to saving America's diverse historic environments and to preserving and revitalizing the livability of communities nationwide.

I. The Need for a Historic Homeowner Tax Credit

America's historic resources are at risk. In the decades since World War II, in tragic counterpoint to the growth of the sprawling new suburbs, we have witnessed the progressive erosion and loss of older neighborhoods and communities all across the country.

I believe that all Americans are committed at heart to the preservation of our heritage. As preservationists, we have developed tools to save the individual treasured building from the wrecker's ball. We do not always succeed, but we are not without the means to show the way and make the case for preservation.

What we lack are the tools to address the problems of blight and abandonment that threaten entire older neighborhoods and communities. In the decade from 1980 to 1990, Chicago lost 41,000 housing units to abandonment, Philadelphia 10,000 and St. Louis 7,000. Smaller communities have suffered the same fate, and the trend continues. Some of these houses were architectural gems; many were ordinary houses in which ordinary people lived. But taken together they constituted the physical fabric of a way of life which is now gone.

Clearly, this is no time for massive government programs which might or might not be successful in helping to preserve these resources. What is needed is an incentive which will involve a minimum of government involvement and a maximum of individual initiative, one that is modest in cost and limited in scope but that can spark broad private activity. We believe H.R. 1662 is a fair, feasible and effective answer.

H.R. 1662 is designed to work in a broad range of contexts; each community is likely to find its own applications. For example, in many of the small towns of New England and the Midwest, older housing that would qualify for the credit has suffered from blight and abandonment as the mills and retail businesses upon which those communities depended declined and closed. Enterprising developers could buy up abandoned homes, rehabilitate them so as to qualify them for the credit, and sell them to young families, passing on the credit to the purchaser. These families might prefer living in a renovated older home in town, with the amenities of an earlier era and the convenience of in-town living. The result would be new life for the town, new customers for the town's small businesses, and new tax revenues for the town's hard-pressed treasury.

At the other end of the spectrum, many cities, large and small, possess older office buildings that would qualify for the credit, but which can no longer attract commercial tenants. Many of these buildings are architectural assets, but without an economic function they are targets

for the wrecking ball. However, a federal homeownership credit could make these buildings economically attractive to a developer who could rehabilitate them as residential condominiums. The developer would, in effect, be selling the unit along with the credit. In this way these buildings could be saved, and the homeowners attracted to them would provide new customers for local merchants and new taxpayers for the city.

II. Major Provisions of H.R. 1662

Rate of Credit

The credit, which would equal 20% of qualified rehabilitation expenditures, would be available to homeowners in condominiums and cooperatives as well as single-family homes. It could be used by the do-it-yourself rehabber, or someone who purchases a home rehabilitated by a developer. In the latter case, the credit would accrue not to the developer, but to the purchaser of the home.

Eligible Structures

The universe of buildings eligible for the tax credit is a limited one. Only buildings that are listed in the National Register of Historic Places, are contributing buildings in National Register Historic Districts or in nationally-certified state or local districts, or are individually listed on a nationally-certified state or local register would qualify. The National Park Service has estimated that slightly in excess of 800,000 buildings nationwide presently fall in those categories.

To insure that their historic character is preserved, buildings receiving the credit would have to be rehabilitated in accordance with the Secretary of the Interior's Standards for Rehabilitation. However, the bill provides that certification of compliance may be performed by states or even localities under cooperative agreements entered into with the Secretary of the Interior. In addition, the bill authorizes the states to charge processing fees, the proceeds of which would be used to fund the costs of processing the applications for certification.

Maximum Credit, Minimum Expenditures

The maximum credit allowable would be $50,000 for each principal residence, subject to Alternative Minimum Tax provisions. As with the current credit, rehabilitation must be substantial--the greater of $5,000 or the adjusted basis of an eligible building, with an exception for buildings in census tracts targeted as distressed for Mortgage Revenue Bond purposes under I.R.C. Section 143(j)(1) and Enterprise and Empowerment Zones, where the minimum would be $5,000. At least five percent of the qualified rehabilitation expenditures would have to be spent on the exterior of the building

III. Homeownership and Historic Preservation

Central to the American dream is the desire to own one's own home. But home ownership is more than just a personal goal; by giving residents a true stake in their community, it promotes the qualities of neighborliness needed to heal and revive threatened and decaying residential areas.

The existing federal tax credit for historic rehabilitation is not available to homeowners, but applies only to commercial property or other property held for the production of income. H.R. 1662 fills that gap. Moreover, because the tax credit that H.R. 1662 would create is limited to persons who occupy the building for which the tax credit is claimed as their personal residence, there are no tax shelters, no "passive losses" and no syndications.

Opportunities for Low and Moderate Income Home Buyers

There is a widespread misperception that historic districts are places where only rich people live. While it is true that some of the better known districts on the National Register have been rehabilitated by or for affluent people, it is equally true that the older housing stock in the

United States tends far more to be occupied by the poor than by the rich. Indeed, according to an analysis of 1990 census data, 29% of the 8,700 National Register historic districts lie within or contain tracts with poverty rates greater than 20%.

This legislation has been drafted to provide homeownership opportunities in rehabilitated historic buildings to Americans at all income levels. For those who do not have sufficient income to be able to use a tax credit, the bill creates a Historic Rehabilitation Mortgage Credit Certificate that can be used to reduce the interest rate on their mortgage loan.

Rehabilitation would have to be substantial. As I stated earlier, the bill would follow existing law by requiring a minimum investment in qualified rehabilitation expenditures equal to the greater of $5,000 or the adjusted tax basis of the building. However, an exception would be made for economically distressed census tracts where the minimum investment required would be $5,000. Taxpayers at all income levels would be permitted to use the credit, but the amount of credit available to a homeowner would be limited to $50,000.

Consider, as an example, a hypothetical home rehabilitated by a developer which qualifies for the credit. Assume that the home has a selling price of $150,000 and contains $100,000 in qualified rehabilitation expenditures. The credit on this home is $20,000 (20% of $100,000). This would more than cover a down payment of 10% on the home. In this case the credit would have the effect of reimbursing the home purchaser for the down payment. Although this example involves a developer, the credit could also be used by an individual homeowner to help defray the cost of rehabilitating his current or newly-purchased residence.

IV. Costs and Benefits

Because of the constraints on eligibility that I have described, the revenue implications of H.R. 1662 would be modest. Nevertheless I believe it can make a real difference in communities all across the county-- from decaying small towns to threatened big-city neighborhoods. By providing an incentive for Americans at all income levels to invest in the rehabilitation of deteriorated buildings and become home owners in older neighborhoods and communities, it can provide the following benefits:

- saving invaluable historic resources, which would otherwise be lost through decay, abandonment and demolition.

- stabilizing and rescuing endangered communities through the infusion of new home owners, who will make a commitment to the enhancement of community life through their purchase of a home.

- providing cities and towns with the chance to strengthen their tax bases by attracting middle-income and more affluent residents.

- creating jobs and stimulating economic activity in areas where economic opportunities are scant.

When preservation begins in a community, good things follow. H.R. 1662 is not a cure-all for ailing communities. Change for the better, if it is to come, will be incremental. It will result from decisions made by individual Americans, one family at a time. But H.R. 1662 can be a spark that ignites those private decisions to the benefit of our families, our communities, and our heritage as Americans. On behalf of the 265,000 members of the National Trust for Historic Preservation, I strongly urge the prompt enactment of this legislation.

PRESERVATION
Action

**TESTIMONY OF NELLIE L. LONGSWORTH
PRESIDENT OF PRESERVATION ACTION
ON THE HISTORIC HOMEOWNERSHIP ASSISTANCE ACT OF 1995
HEARING: JULY 11, 12, 13 1995**

Preservation Action, the national citizens lobby for historic preservation and neighborhood issues, strongly supports the Historic Homeownership Assistance Act of 1995 - HR 1662 - introduced by Clay Shaw and Barbara Kennelly on May 17, 1995. Our grassroots organization has a membership that includes 1,000 organizations, corporations, and individuals active in preservation from coast-to-coast. We act as their eyes and ears in Washington, DC, keeping them abreast of legislative and administrative agendas that impact the preservation of their older communities and neighborhoods. Since historic preservation is one of the few urban policies that seems to work these days, we ardently request that the Ways and Means Committee give serious consideration to including HR 1662 in the tax bill which is scheduled for introduction this summer.

Preservationists have been deeply involved in the revitalization of older neighborhoods from coast-to-coast, cultivating experience in their own community as to what produces results - and what does not. We have seen commercial historic areas blossom anew with renovated buildings and renewed tax base in the '80's, thanks specifically to the federal rehabilitation tax credit. We have been dismayed that there have been almost no incentives to support the improvement of adjacent residential areas except where there were rental properties. While everyone agrees that homeownership is the answer to pulling older neighborhoods up by their bootstraps, no one has found the means to make it happen with a minimum of overhead and freedom from governmental involvement.

Unfortunately, many federally appropriated programs, including some of HUD's, have not created the long term improvements in older urban neighborhoods that encourage homeownership. Agencies have exhibited little or no interest in adopting policies that convert existing structures for homeownership, despite our efforts to the contrary. We have learned the hard way that throwing public dollars at projects does not necessarily spawn responsibility and pride, in fact, it often leads to administrative waste, corruption, and futility. In the end, neighborhoods are about people: what they want; what they need; and how they can make it happen. It is about community: a safe place to live and work. The homeowners tax credit for rehabilitation is a tool targeted to assist people in making "community" happen.

There are many reasons to focus efforts on revitalizing historic neighborhoods. The infrastructure is in place and functioning saving communities and local governments millions of dollars through avoiding the expense of building new streets and sewers and adding to the cost of doing business. Jobs will be created - permanent as well as temporary - which are labor intensive also providing opportunities for training young people in skills with lifelong professional value. The tax base can be revitalized producing savings for everyone.

The Historic Homeownership Assistance Act provides the answer. It is NOT another large federal program but an incentive for people committed to turning decaying buildings in primary residences. The credit would reach out to current homeowners as well as the many middle class families currently on the cusp of homeownership. It is also attractive to those in lower tax brackets who can transfer the credit to a lending institution in return for a reduced interest rate loan.

Simply the credit provides for the following:

A 20% federal income tax credit is available to homeowners who rehabilitate or buy a qualified rehabbed historic house. The credit is limited to $50,000 for each principal residence. Expenditures must be greater than $5,000 or the adjusted basis, with exceptions

for buildings in low income census tracts targeted as distressed, and Enterprise or Empowerment Zones where the minimum would be $5,000. 5% of the rehabilitation expenditure must be spent on the exterior.

Single-family and multi-family residences, condominiums, and cooperatives listed on the National Register would qualify and the credit could be taken for a portion of a qualified building used as a principle residence.

A developer may rehab a qualifying property and sell it to a homeowner with the credit. The homeowner may apply the credit to tax liability over a number of years but, **if the property is sold before 5 years, the credit is subject to ratable recapture.** To avoid recapture, a homeowner is making a 5 year commitment to the community.

Taxpayers with little or no tax liability may convert the credit into a mortgage credit certificate to obtain a mortgage interest rate reduction from the lender.

- The Secretary of Interior's Standards are required, but final certification will consider such factors as location in a "targeted area", Enterprise Zone, or Empowerment Zone.

This bill can impact and reverse the fortunes of historic neighborhoods in every member's district. The credit will attract people of diverse incomes. The credit rebuilds neighborhoods by attracting people willing to make a 5 year commitment to a historic house as their primary residence; these are our model community-makers. On behalf of the membership of Preservation Action, we ask the Ways and Means Committee will take action of this important measure promptly.

PRESERVATION ALLIANCE OF VIRGINIA

Post Office Box 1407 Staunton, Virginia 24402-1407 (540) 886-4362

July 23, 1995

TO: Mr. Phillip D. Moseley, Chief of Staff
Committee on Ways and Means
U.S. House of Representatives
1102 Longworth House Office Building
Washington, DC 20515-6384

FROM: Preservation Alliance of Virginia
David J. Brown, Executive Director
P.O. Box 1407
Staunton, VA 24402-1407

DATE OF HEARING: July 11, 12, and 13, 1995

RE: Support for HR 1662

The Preservation Alliance of Virginia, a consortium of over 150 preservation and conservation groups representing over 40,000 Virginians, strongly supports HR 1662, "The Historic Homeownership Assistance Act of 1995." We believe that HR 1662 will provide major incentives to encourage much needed reinvestment in our central cities and older residential neighborhoods. Since the program is designed to encourage individuals and families to turn decaying buildings in their primary residence, we feel it will bring our ailing cities a rejuvenated tax base, take advantage of existing infrastructure, and save taxpayer dollars.

In our work with a variety of older residential neighborhoods, we constantly see the need for new investment in these areas. HR 1662 will bring that investment. More importantly, with the mortgage credit certificate" feature of the bill, lower income families can also use the credit and join the ranks of homeowners.

We believe this bill is a win-win situation. Homeowners benefit by the credit that encourages investment. Builders and contractors benefit by the increased rehabilitation activity. Our central cities and older residential neighborhoods benefit from a much-needed infusion of new investment. Government at all levels see the benefits that will come from more stable and secure neighborhoods.

The Preservation Alliance encourages the members of the Ways and Means Committee and the House of Representatives to support this very important bill.

Gateway to the Bluegrass

J[illegible] 18, 1995

Phillip D. Moseley
Chief of Staff
Committee on Ways and Means
US House of Representatives
1102 Longworth House Office Building
Washington, DC 20515-6384

Dear Mr. Moseley,

As Chairman of the Shelby Development Corporation, I felt it urgent to write and encourage you to support the HR 1662 Historic Homeownership Assistance Act, the tax credit for rehabilitation of historic homes. This Act is essential to continuing our successful work in downtown Shelbyville. As you may know, our approach to downtown management follows the direction of the Kentucky Main Street Program.

As a local banker, I felt it extremely important to encourage you to look favorably on this Act. The assistance provided by this tax credit could stimulate improvements and investments that might otherwise go undone.

The bill was introduced in the House by Rep. Clay Shaw (R-FL) and is critical to the developments of historic structures in our community. This bill would provide a powerful incentives for business owners who wish to live downtown over their stores or offices or for people who wish to purchase upper-floor downtown spaces. This is a project that the Shelbyville 2000 Plan supports and has pushed for in the past 5 years.

It will also encourage homeowners to re-invest in their historic properties. (Our City recently passed an ordinance that allows for a tax moratorium for re-habs in the Historic District of Shelbyville - another incentive that SDC lobbied for to encourage local development.)

As you know, the continuing support of programs such as ours is critical to the growth and development of our downtown communities. In Shelbyville we have over 50 volunteers that are currently working on issues pertaining to downtown Shelbyville-it is for them that I ask for your support!

Sincerely,

Billie Wade

Billie Wade
Citizens Union Bank, CEO
SDC Chairman

WRITTEN TESTIMONY IN SUPPORT OF THE HISTORIC HOMEOWNERS ASSISTANCE ACT TO THE WAYS AND MEANS COMMITTEE OF THE HOUSE OF REPRESENTATIVES JULY 11, 12, 13

I am Nancy H. Bell, the executive director of the Vicksburg Foundation for Historic Preservation (P.O. Box 254, Vicksburg, MS 39181), and I write this statement on behalf of the Vicksburg Foundation for Historic Preservation, Vicksburg Landmarks, Inc., the Vicksburg Historic Preservation Commission, the Vicksburg Board of Architectural Review, the Vicksburg Downtown Conservation Commission, and the Vicksburg Main Street Program. These six organizations support the passage of HR 1662- the Historic Homeownership Assistance Act.

Vicksburg has a wealth of historic residences in its low and moderate income neighborhoods that are in serious need of rehabilitation. The Historic Homeowners Tax Credit would provide a catylist for the owners of these houses to rehabilitate them thereby providing additional jobs for area residents, increasing property values and enhancing neighborhoods which will help to increase tourist activity as well as pride in our community. In addition, there is a large percentage of middle class non-homeowners who can only afford to purchase older residences in need of repair. However, without some financial assistance, such as a tax credit, these individuals cannot afford the purchase price and the amount necessary for rehabilitation.

We work every day, with varying success, to bring people back to the inner city area to live. The Historic Homeowners Tax Credit would, we believe, be just the incentive we need in order to rejuvenate what was once the "Gibraltar of the South" and what is today decaying at an alarming rate.

As everyone knows, the economic benefits of rehabilitating buildings far outweights the benefits provided through new construction. Using existing buildings recycles natural resources and requires little additional use of natural materials, utilizes infrastructure that is already in place and paid for (therefore saving resources and taxpayer dollars), and is more labor intensive thereby providing jobs for a more diverse segment of the workforce. The rehabilitation of historic buildings is not only economically beneficial, but it should also be considered "patriotic." The most tangible link to our past is the built environment. Saving and reusing these buildings helps us remember who we are and where we came from and, therefore, what a great country we have.

Forty percent of Vicksburg's housing is considered to be substandard due to disinvestment in certain historic neighborhoods. We believe that this Act will provide low to moderate income residents with the financial ability to rehabilitate their homes, provide non-homeowners with an incentive and financial ability to purchase homes and rehabilitate them in these neighborhoods, and as a result, the City's tax base will increase, neighborhood businesses will flourish from increased patronage, unemployment will decrease through the employment of artisans and those in the construction field, and the Federal government will reap the benefit of increased income taxes.

We ask that you please support the Historic Homeowners Assistance Act as it will help many people secure the American dream-- the ownership of a safe, secure home and the knowledge that they are preserving the heritage of our Nation.

STATEMENT OF
THE HONORABLE RICHARD M. DALEY,
MAYOR OF CHICAGO,
IN SUPPORT OF THE
ENVIRONMENTAL REMEDIATION TAX CREDIT
AND TAX-EXEMPT FINANCING PROPOSAL
UNDER CONSIDERATION BEFORE THE
HOUSE WAYS AND MEANS COMMITTEE

JULY 13, 1995

The City of Chicago strongly supports the Environmental Remediation and Tax-Exempt Financing proposal which creates a demonstration program to clean up and redevelop abandoned, contaminated industrial properties across the country. I am a longtime advocate of utilizing the tax code to encourage the private sector to involve itself in cleaning up contaminated industrial sites and returning them to productive use. The current tax proposal before the Committee is essentially identical to the provisions of HR 2340 from the 103rd Congress which was developed by the City of Chicago and introduced at my request. This program, through a combination of federal tax incentives and local contributions, will help to stem the abandonment and the waste of already developed industrial facilities and infrastructure, and to provide economic growth and job creation without consuming more open land. I strongly urge that this proposal be enacted this Congress.

Cleaning up contaminated industrial sites and returning them to productive use poses a vexing problem for governments at all levels. The costs of environmental remediation are usually too great for state and local governments, and the federal Superfund program cannot even begin to cover all the sites across the country that need to be cleaned up More sites are severely contaminated than Superfund has the resources or staffing to remediate promptly, and many sites are contaminated enough to pose health and safety issues, but not enough to rank high on the National Priorities List and be eligible for Superfund dollars.

The private sector, by and large, refrains from purchasing and cleaning up these properties because of the potential large costs, liability questions, and other uncertainties involved. Current owners in many cases are under severe financial stress, and sometimes out of business altogether. Although many of these properties are located in the nation's older industrial cities, examples can be found throughout the United States.

The current situation produces several damaging consequences:

- The properties remain contaminated for years, with no clean-up on the horizon. There can be a substantial risk of migration of the contaminants to adjacent sites and into aquifers where the risk of human exposure and the risk to health and safety may increase.

- Where the owner's financial condition is particularly bad, the owner may be forced to abandon the property because the owner can neither afford to clean up the property nor find a buyer willing to purchase the property in its contaminated state. The structures on the property deteriorate. Fly-dumping, scavenging, and other illegal activities occur on the site, which frequently compound the environmental problems at the site.

- Cities with deteriorating industrial bases find that they cannot replace the economic activity, the jobs, and the tax revenue when an industrial firm goes out of business at a particular site, because the site cannot be re-used for an economically productive purpose without first being cleaned up. Thus, as

unemployment rises, government revenue shrinks, crippling government's ability to provide the services necessary to retain businesses and industry or to respond to growing problems of unemployment and poverty related to the departure of industry.

- Where sites within a city cannot be redeveloped, new development will occur on the fringes of urban areas. The resulting development follows a pattern of "urban sprawl" that leads to accelerated consumption of open land and agricultural areas for development, and to greater dependence on automobile transportation compared to the city sites, which are generally accessible by public transportation to large numbers of potential workers, and which are generally served by existing infrastructure.

This Environmental Remediation proposal involves a two prong tax incentive: tax credits and tax exempt financing. In addition to cleaning up the property, a participating party would have to redevelop the site for commercial or industrial use. The program would be available in a limited number of cities and states, based on a selection process targeting those areas that have high manufacturing job loss. The environmental remediation tax proposal would work in the following way.

- <u>Tax Credit</u>: A tax credit of 25 percent of the total clean up costs, over a five year period, would be allowed to taxpayers who are "qualified" parties (persons not responsible for the condition of the site). To ensure compliance of the program, the first year the tax credit is available to the taxpayer would be the year of completion of an approved clean up plan. The national annual aggregate tax credits allocation would be $75 million.

- <u>Tax Exempt Financing</u>: Government units with bonding authority could issue tax exempt Environmental Remediation Bonds (ERBs). ERBs would be subject to the volume cap for tax exempt bond issues. ERB proceeds could be used for acquisition of contaminated property and remediation expenses (60 percent of the proceeds would have to be used for remediation expenses).

- <u>Local Contribution</u>: A participating jurisdiction must have an established program that would contribute to the environmental remediation of a selected site. The local participation may take the form of grants, loans, property or income tax abatement contributions, donation of property, or other direct or indirect financial assistance.

The City of Chicago is one of many cities in the United States with many contaminated sites that could benefit from such a policy. Under the program, Chicago could be eligible for about $6 million in federal tax credits. The $6 million in federal tax credits could leverage $24 million in private funds, which is enough to restore a dozen or more industrial sites in the first year of the program. A federal contribution in the form of tax incentives would make even better Chicago's local remediation program which has already experienced early successes.

The essential virtue of the program is that it uses the federal tax system to enlist the private sector in the cause of job creation and environmental clean-up. It trades $375 million in tax credits in the future for $1.5 billion in private sector investment over the next five years. By creating a partnership among the private sector, local governments and the federal government, this program not only distributes the burden of the clean-up costs, it also builds on our common interests in retaining and creating employment in our cities and towns.

In conclusion, simple modifications to federal tax policy, along with local assistance, will encourage private clean-up and redevelopment of environmentally contaminated properties. Such a policy will bring four major advantages to the public:

- It will help clean up and return to productivity sites that currently might never be cleaned up, providing jobs and tax revenue for state and local governments and their residents.

- It will promote private sector involvement in clean-up efforts to lessen the need for government funding of environmental remediation.

- Development will again occur where existing, underutilized infrastructure can be used, rather than being forced to new areas where significant expenditures must be made to construct new highways, transit, and other infrastructure in undeveloped areas.

- This proposal will help reverse the trend of increasing urban sprawl and curb the consumption of prime agriculture land and the environmental damage to open lands and air quality produced by such trend.

Without these tax incentives, properties such as these will remain contaminated and economically unproductive for an indefinite period of time. The economic base of industrial communities will remain impaired, while the need for new growth will push urban areas ever outward, with negative consequences for air quality, farmland, and open space.

On behalf of the City of Chicago I strongly urge the Ways and Means Committee and Congress to support and pass this Environmental Remediation and Tax-Exempt Financing proposal.

Written Statement
of the
Synthetic Organic Chemical Manufacturers Association
on
Miscellaneous Tax Reforms Hearings
July 11-12, 1995

Introduction

The Synthetic Organic Chemical Manufacturers Association (SOCMA) appreciates the opportunity to submit this written statement for inclusion in the printed record of the House Committee on Ways and Means' hearing on Miscellaneous Tax Reforms, held on July 11-12, 1995 in Washington, D.C. Prior to that hearing, the Committee outlined a number of miscellaneous tax proposals on which it was open to comment. SOCMA's comments will focus on tax reform measures related to three broad categories outlined by the Committee: business tax credits; depreciation and amortization; and, minimum tax. Specifically, SOCMA will urge the Committee to enact tax incentive legislation which encourages accelerated installation of pollution abatement and pollution prevention systems by providing: tax credits and/or accelerated depreciation allowance; alternative minimum tax exemption; and, a five-year minimum term per system to reflect design, permitting, construction and startup time. SOCMA believes that these incentives should apply equally to C and S corporations.

SOCMA is the national trade association of batch and custom chemical manufacturers, the highly innovative, entrepreneurial and customer-driven sector of the U.S. chemical industry. More than 2,000 batch processing facilities produce over 95% of the 50,000 chemicals produced in the U.S. at an annual value in excess of $60 billion. SOCMA's 260 members are representative of these facilities which are typically small businesses, with fewer than 50 employees and less than $50 million in annual sales.

SOCMA supports public policy initiatives which result in jobs creation, international competitiveness and cost effective environmental protection. U.S. manufacturers, workers and consumers alike will benefit from enhanced competitiveness of U.S. products in the world marketplace, creation of additional high paying jobs and expedited environmental protection.

Background

Industry in the United States is subject to environmental laws which are among the most stringent in the world. Many U.S. companies, and particularly small specialty chemical manufacturers, find that their products traded in the world market are competitively disadvantaged, not only because of stringent environmental regulations per se, but also because of the disparity between U.S. tax policy and that of our international trading partners. The disparity is documented in a study prepared by the Law Library of Congress.[1] That study of eleven foreign countries, who are major U.S. trading partners, revealed:

- o U.S. tax law is far more complex and punitive.
- o No comparable foreign alternative minimum tax.
- o Competitors from these foreign countries commonly have more liberal depreciation allowances, tax incentives and subsidized financing.

In light of the recently enacted North American Free Trade Agreement (NAFTA), it is instructive to compare the tax policies of Mexico and Canada with those of the U.S. as related to pollution prevention investments. Mexico provides a first-year deduction of 91% of acquisition cost on equipment used to control and prevent air, water or noise pollution. Under Canadian tax law, antipollution equipment can be depreciated at the rate of 25% using the declining balance method. By contrast, U.S. companies can only depreciate comparable investments at 8% to 17% annually depending upon their Alternative Minimum Tax (AMT) status.

As a result, U.S. products traded in world markets are competitively disadvantaged because the capital cost recovery provisions for the plants and equipment needed to produce these products are less favorable than those of other countries. Moreover, pollution prevention initiatives may be delayed or canceled because of high cost burden, and by force of economic necessity, may delay a company's installation of abatement equipment until mandated to do so. German and Japanese companies enjoy a comparable advantage relative to their U.S. competitors.

---

[1] Steven F. Clarke, "The Tax Treatment of Expenditures on Antipollution and Facilities in Selected Foreign Countries," as exerpted in U.S. Environmental Policy and Economic Growth: How Do We Fare? (Washington, D.C., ACCF Center for Policy Research), March 1992, pp. 53-61.

SOCMA's Pollution Prevention Tax Incentives Initiative

Recognizing the critical nature of these issues to the chemical industry, and particularly to small batch and custom chemical manufacturing facilities, SOCMA initiated efforts to revise U.S. tax policy for capital recovery of pollution abatement devices. Specifically SOCMA has sought to convince policy makers to provide tax incentives to companies which invest in pollution abatement prevention systems. The benefits to be derived from properly crafted legislation include:

- o Level global playing field for U.S. companies
- o Cleaner environment.
- o Retention and creation of more U.S. jobs.

In the 103rd Congress, two bipartisan bills were introduced to provide such incentives: H.R. 2456 and S. 1684. H.R. 2456, a bill to provide more rapid depreciation of pollution abatement equipment in accordance with a sliding scale based upon a company's annual sales, was introduced by Rep. Donald M. Payne (D-NJ-10). "The Environmental Protection Encouragement Act of 1993", S. 1684, which was introduced by Senator Frank Murkowski (R-AK), provided that the cost of any environmental improvement property could be treated as a deduction for the taxable year in which such property was placed into service.

In 1994, to facilitate SOCMA's support of these two legislative proposals, the Association surveyed its 150 chemical manufacturing members to obtain quantitative, real world data of the impact of tax incentives in accelerated installation of pollution abatement and pollution prevention systems. The following is one of the 41 responses by SOCMA member companies:

TAX INCENTIVES FOR INVESTMENT IN POLLUTION ABATEMENT EQUIPMENT

Background

The Synthetic Organic Chemical Manufacturers Association (SOCMA) has been working for the past two years to convince policy makers of the need to provide tax incentives to companies which invest in pollution abatement equipment to achieve pollution prevention results through end of pipe controls, recycling, process redesign, source reduction, etc. Such incentives would create the promotion of jobs, particularly among smaller businesses; would enhance environmental quality; and would level the playing field for U.S. companies relative to their international trading partners.

To date, two bills have been introduced in Congress to provide such incentives. H.R. 2456 would accelerate the depreciation period for pollution abatement equipment from the current seven year write-off period to one year expensing for companies with less than $100 million in annual sales; three years for companies with annual sales of $101 million to $250 million; and, five years for companies with more than $250 million in annual sales. S. 1684, the "Environmental Protection Encouragement Act of 1993", would provide expensing of the cost of any environmental improvement property in the taxable year in which it is placed into service (i.e., *first year expensing*).

To facilitate SOCMA's efforts in moving these bills forward, it would be very helpful to have an understanding of the dollar value which such accelerated depreciation or expensing would have for our member companies. You can assist SOCMA in quantifying the impact that tax incentive legislation would have by completing the following brief survey and returning it to Mary Legatski by no later than February 18, 1994.

Capital cost of the following for	**1993**	**1994**	**1995**
Pollution abatement devices	$131,000	$200,000	$200,000
Pollution abatement installed systems	$554,000	$1,000,000	$1,000,000
Source reduction installed systems, including recycling	$275,000	$550,000	$1,050,000
Actual or anticipated number of employees	# 215	# 220	# 230

What tax-related incentive would cause you to accelerate two (2) future years' expenditures into one year or five (5) years' into three (3), etc.?

	Engineering & Design Credit Yes	Engineering & Design Credit No	Accelerated Depreciation Yes	Accelerated Depreciation No	Tax Credit Yes	Tax Credit No	Other (specify)
Pollution Abatement	☐	X	X	☐	X	☐	with ATM exclusion
Source Reduction including recycling	☐	X	X	☐	X	☐	with ATM exclusion

*Engineering design credit would also help accelerate, but not as great as the other 2 categories

Would you prefer a larger incentive for source reduction/recycling X or for pollution abatement ___ investments?

Available to any facility with less than 500 employees

Would you prefer that the incentive be tied to sales or number of employees per facility X or by company _?

Forty-one (41) companies, representing 27% of SOCMA's manufacturing members, completed and returned the tax incentives survey form. Of the 41 respondees, 28 were companies with fewer than 200 employees; 7 were companies with between 201 and 1,000 employees; and, 6 were companies with between 1,000 and 12,000 employees.

Actual and anticipated capital costs of specified pollution abatement equipment and systems for the period 1993, 1994 and 1995 for the total 41 respondents are summarized below:

CAPITAL COSTS FOR 41 COMPANIES

	1993	1994	1995
Pollution Abatement Devices	$ 30,603,000	$ 28,925,000	$ 35,075,000
Pollution Abatement Installed Systems	$ 78,706,000	$ 91,345,000	$125,907,000
Source Reduction Installed Systems	$ 40,155,000	$ 44,760,000	$ 74,085,000

To put these expenditures into perspective, it is useful to look at the average cost per employee of these various pollution abatement investments. The following table depicts the anticipated 1995 capital costs on a per employee basis by size of company based on total number of employees.

CAPITAL COSTS Per Employee (anticipated for 1995)

	Small Company (0-200)	Medium Company (201-1,000)	Large Company (1,001-12,000)
Pollution Abatement Devices	$ 8,910	$ 980	$ 370
Pollution Abatement Installed Systems	$ 22,080	$ 1,360	$ 1,820
Source Reduction Installed Systems	$16,680	$ 820	$ 930

Note that small companies anticipate spending nearly $31,000 per employee on pollution abatement and pollution prevention systems in 1995. If the average employee pay is roughly $30,000 per year, these small companies are paying fully 100% upcharge in pollution prevention and pollution abatement investments.

With regard to those tax-related incentives which would prompt a company to accelerate two (2) future years' expenditures into one year or five (5) years' expenditures into three (3) years, SOCMA members responded as follows:

	YES	NO
POLLUTION ABATEMENT		
Engineering/Design Credit	29%	39%
Accelerated Depreciation	58%	24%
Tax Credit	85%	7%
SOURCE REDUCTION		
Engineering/Design Credit	31%	34%
Accelerated Depreciation	41%	24%
Tax Credit	75%	7%

CONCLUSIONS

From the results of its 1994 survey, SOCMA has been able to draw the following conclusions with regard to its membership's interest in incentives to accelerate pollution prevention and pollution abatement systems installation, as well as quantitative evaluation of the value of that incentive to their specific facilities.

- Survey results indicate that the chemical industry, which employs approximately 1,100,000 workers, will in 1995 spend

  $2,739,000,000 on pollution abatement expenditures
  and
  $1,617,000,000 on pollution prevention expenditures.
- The expense burden is heavier for smaller companies, and the expenses are trending upward
- Incentives such as tax credits and accelerated depreciation would encourage companies to accelerate expenditures on pollution prevention and pollution abatement systems

RECOMMENDATIONS

SOCMA urges the 104th Congress to promote the goals of jobs creation, international competitiveness and cost effective environmental protection by enacting tax incentives legislation with key elements of :

- Accelerated depreciation and/or tax credits for installed systems.
- Exemption from the alternative minimum tax.
- Specification of a five-year minimum window to reflect permit and construction time requirements.

A miscellaneous tax reform bill, such as that under current consideration by the Committee on Ways and Means, would provide an effective vehicle for achieving these important societal goals. SOCMA urges the Committee on Ways and Means to consider the data submitted in these comments, and the more extensive data points contained in the attached February 1995 SOCMA "Pollution Prevention Tax Incentives Initiative: Initial Findings and Recommendations", and to proceed to enact these recommendations as expeditiously as possible.

SOCMA is aware that the Committee is looking beyond the immediate to a more extensive overhaul of the U.S. tax system, a process which might take a number of years to implement. However, as the Committee on Ways and Means moves forward on a miscellaneous tax reform bill, or a "tearing out by the roots" overhaul of the existing tax system, SOCMA believes that the issues of retaining and creating U.S. jobs, leveling the global playing field and promoting a cleaner environment should remain at the forefront of the debate.

Should the Committee have any questions regarding the SOCMA study and recommendations, please contact Mary James Legatski, SOCMA's Vice President of Public Affairs at (202) 414-4198.

[THE FEBRUARY 1995 SOCMA STUDY REFERRED TO ABOVE IS BEING RETAINED IN THE COMMITTEE FILES.]

MISCELLANEOUS REVENUE HEARINGS HOUSE COMMITTEE ON WAYS AND MEANS

Mr. Chairman and Members of the Committee, thank you for allowing me to speak on behalf of my colleague Congressman English from Pennsylvania to testify concerning my strong support of the Environmental Remediation Tax Credit and Tax-Exempt Financing of which I am an original co-sponsor.

Currently, the private sector does not play a substantial role in the clean-up of contaminated sites. Open land is continually being developed for industrial purposes while contaminated sites are left abandoned because it is not advantageous to the private sector to engage in clean-up efforts. It is in our best interest to curb this consumption of open land. Furthermore, it is clearly unsafe for humans to be exposed to abandoned contaminated property.

Now is the time for action to involve the private sector. The federal Superfund program does not have the resources to remedy this ever-growing problem. This program encourages the private sector to begin re-development of the already urban areas, and stimulates clean-up efforts while providing economic growth.

The proposal is a combination of federal tax provisions and local contributions that provide incentives for the private sector to clean-up and re-develop abandoned, contaminated industrial sites. The program is open to those areas that meet pre-determined criteria and are best served by this process, aimed primarily at areas with high manufacturing job loss.

The proposal involves a two-pronged tax incentive: Tax Credit and Tax Exempt Financing. A tax credit of 25 percent of the total clean-up costs, over a five year period, would be allowed to taxpayers who are considered "qualified" parties. Meaning that they were not responsible for the contamination of the site. The tax credit would be reduced in the event that the amount of the tax is less than that specified in the audit. The taxpayer is not entitled to the tax credit until the year of completion of the approved clean-up plan. Thus ensuring compliance with the program. This Environmental Remediation Tax Credit would be allowed in annual installments over a five year period.

An additional incentive for site clean-up is to make it possible for the private sector to acquire property and pay for the clean-up with tax-exempt financing. A tax-advantaged financing policy could be established with a tax credit program and used in combination to provide clean-up incentives. For example, Environmental Remediation Bonds could be issued by Governmental units with bonding authority. The proceeds could then be used for acquisition of contaminated property. These bonds would be subject to the volume cap for tax-exempt bond issues. Thus involving very little or no additional cost.

It is necessary, however, that the participating city or state must have an established program that would contribute to the environmental remediation. This local participation may take one of many forms: grants, loans, property or income tax abatement, contributions by another non-federal government agency, donation of property, private party contributions, or other direct or indirect financial assistance.

This program uses the federal tax system in conjunction with the private sector to cause job creation, economic growth, and environmental clean-up. All these benefits are combined with the lessening of our open lands being used for industrial purposes. Not only will development occur where existing sites lay, but the contamination will be cleaned up and the risks to society as a whole will be lessened. Furthermore, environmental and agricultural damage will decrease.

On behalf of myself and Congressman English, I strongly urge The Ways and Means committee to pass this Environmental Remediation and Tax-exempt Financing Proposal.

July 24, 1995

Phillip D. Mosley,
Chief of Staff
Committee on Ways and Means,
U.S. House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20515

Re: Request For Statements, Miscellaneous Tax Reforms Dates of Hearing: July 11-13

Dear Mr. Mosley:

My name is Mark Greenstein and I do not submit this comment on behalf of any client. I urge the Committee to approve legislation that fulfills the stated intent of the Tax Reform Act of 1986, to minimize the effect of taxes upon economic decision making. This can best be accomplished by adopting a provision which provides the taxpayer the lower of a tax on a percentage of the total amount realized upon disposition of a capital asset or the tax computed in the standard manner. This would introduce into our system of taxation a marketplace mechanism which utilizes the same self interest which makes capitalism the world's dominant economic system.

Capital gains are generally recognized only when the person who owns the asset decides to dispose of it. The influence of capital gains taxes on this decision is based, in large part, on the amount of tax relative to the value (amount realized on disposition) of the asset.

For example, Amy has a building that cost $50,000, is worth $1,000,000, and yields $70,000 in rent net of expenses. If Amy lives in a high-tax state, such as New York, more than one-third of the value of the building would disappear in taxes on disposition. To obtain the $70,000 she was receiving, Amy would have to obtain a yield of over 10 percent on the roughly $650,000 she would receive, net of taxes, if she sold the building. Because of this disincentive, it is likely that Amy will never sell her building. Instead, she will simply leave it to her heirs and, under current law, the gain will never be subject to an income tax. However, if the building cost $950,000, capital gains taxes would be unlikely to influence Amy's decision whether or not to sell it because less than 2 percent of the value of the building disappears in capital gains taxes.[1]

The solution is to formulate an alternative method of taxing capital gains that recognizes the perspective of the taxpayer. This approach would limit the capital gains tax to a set percent-

---

[1] While the disincentive is the most obvious in the case of income-producing property, the disincentive is also present in other property. If the property in the example were raw land, Amy would have the appreciation potential of a $1,000,000 property if she did not sell it; if she did sell, she would be left with only $650,000 to invest.

age of the amount realized on disposition of an asset. For example, if the limit were 10 percent in the first situation posited, Amy would pay $100,000 in federal tax on disposition, but her taxes would not be affected in the second and the full tax rate would apply.[2]

The beauty of this approach is its flexibility. By choosing the appropriate rate, the goal of enhancing revenue could be achieved or, if more mobility of capital were desired, a rate designated to bring in the same or even less revenue could be enacted. In either case, these two major policy goals of a capital gains tax are best served by this approach as it targets a capital gains reduction to those transactions that are least likely to occur in the absence of a reduction in the tax payable on disposition. Thus, if the limit is set at an appropriate percentage, tax revenue will be enhanced by the same mechanism that encourages mobility of capital to different (and presumably more effective) uses, by those very persons whose economic judgment has proven to be astute.

I note that this topic was initially examined in an article which I wrote for Tax Notes which was published in the issue dated December 26, 1994, a copy of which I have enclosed for your convenience. I have also enclosed draft legislation to assist you in your consideration.

If you desire any further clarification of the above I would be delighted to discuss this subject at your convenience.

Very truly yours,

Mark Greenstein

---

[2] Because, for individuals, the disincentive is greater the closer to death the owner is (because assets are valued at fair market value at date of death, or the alternate valuation date) it may be appropriate to reduce the limit for those with a limited life expectancy. This disincentive is already implicitly recognized by the exclusion of gain on the sale of a residence for those age 55 or older.

viewpoint

A Fresh Approach to Capital Gains Taxation

by Mark Greenstein

Mark Greenstein is an attorney in the Tax Department of Rosenman and Colin, New York. He previously worked in the Pension and Welfare Benefits Administration.

The two policies central to how capital gains should be taxed, which are typically characterized as in conflict, are raising revenue and encouraging the mobility of capital. This article will propose a novel approach to the taxation of capital gains that attempts to harmonize these objectives.

Capital gains are generally recognized only when the person who owns the asset decides to dispose of it. The influence of capital gains taxes on this decision is based, in large part, on the amount of tax relative to the value (amount realized on disposition) of the asset.

For example, Amy has a building that cost $50,000, is worth $1,000,000, and yields $70,000 in rent net of expenses. If Amy lives in a high-tax state, such as New York, more than one-third of the value of the building would disappear in taxes on disposition. To obtain the $70,000 she was receiving, Amy would have to obtain a yield of over 10 percent on the roughly $650,000 she would receive, net of taxes, if she sold the building. Because of this disincentive, it is likely that Amy will never sell her building. Instead, she will simply leave it to her heirs and, under current law, the gain will never be subject to an income tax. However, if the building cost $950,000, capital gains taxes would be unlikely to influence Amy's decision whether or not to sell it because less than 2 percent of the value of the building disappears in capital gains taxes.[1]

The solution is to formulate an alternative method of taxing capital gains that recognizes the perspective of the taxpayer. This approach would limit the capital gains tax to a set percentage of the amount realized on disposition of an asset. For example, if the limit were 10 percent in the first situation posited, Amy would pay $100,000 in federal tax on disposition, but her taxes would not be affected in the second and the full tax rate would apply.[2]

This illustrates how both aspects of the debate can be addressed. The two policy objectives of a capital gains tax are furthered by targeting the reduction to those transactions that are least likely to occur in the absence of a reduction in the tax payable on disposition. Thus, if the limit is set at an appropriate percentage, tax revenue will be enhanced by the same mechanism that encourages mobility of capital to different (and presumably more effective) uses, by those very persons whose economic judgment has proven to be astute.

[1]While the disincentive is the most obvious in the case of income-producing property, the disincentive is also present in other property. If the property in the example were raw land, Amy would have the appreciation potential of a $1,000,000 property if she did not sell it; if she did sell, she would be left with only $650,000 to invest.

[2]Because, for individuals, the disincentive is greater the closer to death the owner is (because assets are valued at fair market value at date of death, or the alternate valuation date) it may be appropriate to reduce the limit for those with a limited life expectancy. This disincentive is already implicitly recognized by the exclusion of gain on the sale of a residence for those age 55 or older.

The Election Results: A Mandate For Change or a Window of Opportunity for Tax Simplification

by J. David Mason

J. David Mason is an assistant professor in the Department of Accounting, School of Business, at East Carolina University in Greenville, N.C.

The election results are in and the results are a Republican-controlled Congress for the first time in four decades. The political prognosticators are interpreting the results of the election as a message from the people of a mandate for change. In tax circles, there is talk about reviving the capital gains deduction, among other tax law changes. But wait a minute! Why waste this mandate for change on reinstituting the capital

The Internal Revenue Code of 1986 is amended by adding a new section (i) to section (1):

(i) (A) Alternate Maximum Capital Gains Rate. If a taxpayer which is a natural person disposes of a capital asset during the year, the tax imposed under this subtitle shall not exceed the applicable percentage of the amount realized.

(B) Applicable Percentage - the Applicable Percentage, for purposes of this section shall mean --% and except that for each five years of age the taxpayer attains in excess of 60, as of January 1, of the taxable year the applicable percentage shall be reduced by --%.

(C) Coordination with Other Sections. Any capital gain to which this section is applicable shall not be considered in determining any other taxable amount under this Subtitle.

Re-Evaluated 6/30/95

AT NO COST, A SIMPLE CAPITAL GAINS OPTIONAL SALES TAX CAN GREATLY BENEFIT ONGOING TREASURY RECEIPTS AND PAINLESSLY CUT THE FEDERAL DEFICIT

SUMMARY

- This is not a "tax-cut" proposal because present Treasury tax receipts are not reduced; constructively, there is voluntary creation of additional tax receipts not otherwise now available, and that will disappear if not used.

- Recently ('90-'92) the total Treasury gains-tax receipts from equity plus real estate were $25-$28 billion/year.

- Now, the Congressional Budget Office estimates a future additional federal deficit of a bit over $20 billion/year -or $100 billion over the next 5 years.

- To help appreciably cut that future deficit, legislate a capital-gains-related 10% optional sales tax aimed at encouraging sale during their life-time of very low-cost "locked-up" unrealized gains from assets held over 5 years by taxable investors. That optional 10% sales tax is not advantageous for taxable investors when relative costs are high or moderate, and when stated capital gains rates are about 20% or above as they have been for 40 years. However, the optional sales tax gets increasingly advantageous as those relative costs decline towards zero. Judging from IRS-derived data, unrealized low-cost gains are now very large, and (if unused) disappear for tax-calculation purposes upon death. Such unrealized gains have been increasing for a long time -- but especially over the past 10-15 years. If investors see fit to federally unlock those large very low cost gains at 10% of sale price (instead of deciding not to sell at current judgementally prohibitive stated 28% gains tax or effectively yet higher federal Alternate Minimum Tax rates), then (starting in '95) at least $120 billion/year average (600 billion over 5 years) are the potential Treasury receipts. That is in addition to actual past gains taxes such as in '90-'92. If even a fraction of the potential is added to other deficit-cutting efforts, those presently unrecognized benefits should still be of very meaningful additional size relative to those '90-'92 receipts, and to future estimated yearly deficits.

  Concerning the above "unlocking" potentials, even stated capital gains tax rates as low as 20% (which historically meant about 15% effective because of tax-calculation State-payment deductions, etc.), in the past have still been judged prohibitive by taxable individuals.

  Such overall potentials should be carefully evaluated immediately, either as independent legislation, or as an addition to the current House Ways & Means capital gains proposal, so as to add very large Treasury receipt benefits. In that W. & M. proposal, very-low-cost sales are not encouraged. Data justification, available upon request, is conservatively derived from IRS studies.

Such a simple, voluntary optional 10% gains-related sales tax would eliminate the need for calculating asset costs, and should uniquely hurt no one. The optional sales tax specific title should facilitate ear-marking such tax receipts (possibly with a yearly "cap") for specific application to deficit reduction. Overall, the optional 10% sales tax proposal could be the most attractive bargain in the Budgetary area.

The above proposal is different because it expands past small tax-rate-capping suggestions in a numerically logical and advantageous manner not now generally thought possible. In reality, from the point of view of moderate tax-payers and the needy, those new funds at no cost are the equivalent of vast new "pocket-book" national savings benefits.

Ten Percent Optional Sales Tax on Capital Gains

Fact Sheet

3/4/95
Re-evaluated 6/30/95

Background on Capital Gains Taxes

The original GOP "Contract With America" contained three capital gains provisions (1) Individual and corporate taxpayers would exclude 50 percent of their capital gains from income. The new effective capital gains tax rates would have been 7.5 percent, 14 percent, 15.5 percent, 18 percent, and 19.8 percent for individuals, depending upon the individual's tax bracket. Corporations would have been subject to a top effective capital gains tax rate of 17.5 percent. (2) The basis of capital assets (the original cost) would have been indexed for inflation occurring after 1994. (3) A deduction for the loss on the sale of a principal residence would have been allowed. Furthermore, the Alternative Minimum Tax would no longer enter into capital gains tax calculations. In recent years the A.M.T. effectively exceeded stated gains tax rates.

New proposals may alter the above.

The Ten Percent Optional Sales Tax on Capital Gains

The GOP proposal for capital gains tax relief could be beneficial to the U.S. economy. It should reduce the cost of capital and encourage saving and entrepreneurial activity. It would not, however, provide a strong incentive for taxpayers to realize capital gains on the large segment of old, *very* low cost assets now "locked up." For many individual taxpayers, a 19.8 percent capital gains tax (which in the past was associated with continuing "locking-up") would historically be too high to make them want to realize a gain. Instead, they would let the asset pass into their estates. Their heirs would inherit the asset with a "stepped up" basis, valued at the market price at the time of the original owner's death. Thus the Treasury would lose out because it receives no related previous gains-related revenue unless the heir sells the asset above its new estate cost.

The option of paying a 10 percent tax on the sales price of the asset should be provided for taxpayers who have held assets for at least five years. The optional sales tax, which I have further developed from previous such "cap" efforts, *almost uniquely would hurt no one*. Most tax bills merely take from one group to give to another. This optional tax would make capital gains realizations attractive to investors holding old, <u>very</u>-low-cost assets. It should encourage legislative approval by voluntarily adding to related Treasury receipts at no cost. <u>In accordance with the presently-recognized urgent need to soon begin serious federal deficit reduction, the optional 10% sales tax proceeds could be so targeted</u>; there could be limitations such as for at least 5 years, and limited to $10 bil /yr Furthermore, that optional sales tax <u>would eliminate the need to calculate the cost of assets</u>, which can be difficult and expensive.

> For an example of an asset of almost zero cost, it may produce a total yield of 10%/yr for an investor in a high-tax State such as California or New York. If it were sold now, more than a third of the market value would disappear in taxes. Therefore, net proceeds re-invested in a similar asset would only have a total yield of perhaps 6 1/2% on the previous holding. So, the investor may not sell - and would leave that asset for heirs, with the gain not soon producing any additional voluntary Treasury receipt.

The Optional 10 Percent Sales Tax on Capital Gains Should Be Adopted

- *Revenues Would Increase from Sale of Old 'Locked up' Assets* Until '95, taxable investors had an estimated present $1,200 billion in unrealized equity gains. Conservatively, if only half of these assets are soon sold, the optional sales tax could yield an additional $60 billion within 5 years. If 30 percent of perhaps $1,200 billion real-estate were sold (with no recapture of past depreciation), the 5 year potential sales-tax could be about $35 billion.

  See Note A
  See Note B

- *Revenue Increase from Sale of Equity Assets at Future Higher Prices* Equities (the Wilshire 5000 Index) historically have increased in value by at least 7 percent per year through 1992 With early '95 levels reflecting only a current historically low 14 P/E ratio* for a low foreseeable real inflation, that translates into gains of $175 billion per year accruing to taxable stockholders. Many investors with these gains would be more likely to realize them under the optional 10 percent sales tax than under the GOP proposal. By allowing the taxpayer a choice, tax receipts are likely to be much larger since the decision to realize a capital gain is strictly voluntary at a lower rate.

  Starting with '95, a far more optimistic equity outlook appears plausible over the next 5 years. As of 1989, and derived from the Wilshire 5000 equity Index and IRS data, there was an estimated $5,200 bil., total market value of equities - of which, through '94, taxable individuals owned about half or $2,500 bil. At present (6/30/95) that individual market value portion largely because of additional locked-up market value was almost $6,000 billion with about $1,100 bil. in the first 6 months of '95. With the S&P 500 quality/growth index now selling for about 16 P/E on an impressive consensus basis for '95, and 15 P/E for '96, I believe these equity markets are still reasonably priced for long-term taxable investors Following is my reasoning - despite the great interest in locked-up, unrealized capital gains in recent years. Enclosed are two charts: Capital Gains Related (Numerical) Data, and an adaptation of a long-term Securities Research C Line chart.

  As a 40 year historical market-price-trend influence for quality/growth investors, perhaps the two most important factors have been U.S. active participation in Middle-East-oil-related wars (see "Line Chart") and the adjusted status of inflation. The end of the Vietnam War and the leveraged buyout era ('84-'89) bear separate discussions, which in the interest of time I will not here evaluate.

  For 15 years from 1955, equity prices generally were 20-35% above "normal" largely because of low inflation (sometimes 1%/yr. compared to an adjusted possible (and satisfactory) 2%/yr. increase now. During that period, their price lows (lasting less than 2 years) were during our active participation which reflected about 16-17 P/E for the S&P 500 and DJIA long-term trend. Otherwise, the above equity indices could have continued the 20-35% above the satisfactory 16-17 P/E long-term trend. The simplified historical inference: unless drastically changed major negative international balances occur, present market levels for taxable investors with more than a few years time horizon objectives, look reasonable. With good fortune, equity index price levels (capital only) could soon be perhaps 15% higher during '95 and '96 or about $700 bil./yr. ongoing over 5 years. At 10%/yr, that could be up to $70 bil. above present gains receipts. If we become actively involved (and this Administration shies away from such direct action), history indicates only a short down period to something close to present levels. Thus, the 16-15 P/E on near-term earnings seem reasonable as does inflation.

For more information please contact John P. Renshaw, chairman, Van Strum & Towne, Inc. 505 Sansome Street, Suite 1001, San Francisco, California 94111 415/981 3455 (p) 415/981 3425 (f)

The above proposal for an optional sales tax on assets held over 5 years so as to unlock large unrealized gains, should enrich the Treasury which greatly needs such an infusion - yet it costs that Treasury nothing, and should help low tax-bracket tax-payers - and the needy.

Revenue Increases from Sale of Real Estate Assets at Future Higher Prices.

See Note C If real estate starts to slowly recover (after a presumed drop of 25% since 1989), that could be a 5 year $35 billion sales tax potential.

✿✿ *Total Revenues Including the Optional Sales Tax*: This generally large and unrecognized total of past and future additional direct, cash-receipt Treasury potential from both equity and real-estate voluntary sales could easily approach $350 billion over the FY 1995 2000 period, or an average of $70 billion per year. Most of this is described in the text and attributable to equity increases starting in '95. Just a portion of this realized could be of tremendous national benefit in reducing budgetary deficits. Aside from direct cash Treasury benefits, substantial indirect but related benefits could also accrue. And taxing States could advantageously conform. All this *additional* compares to under $30 billion per year actually received in 1990 1992, and which could at least separately continue.

See Note D

See Note E

✿ *Optional Sales Tax Would Provide an Additional Strategy for Economic Growth*: Although the economy is expanding, worries about the future appear to be multiplying. A cut in the capital gains tax to a top marginal rate of 19 8 percent plus the option of paying only 10 percent on the sales price instead could be a very effective economic and budgetary panacea in view of the steady past and foreseeable future increase of unrealized, "locked-up" gains of long-held, very-low-cost taxable investor assets. The combination of these two proposed gains-tax-reducing options would surely give a strong boost to useable Treasury receipts and to values of capital assets (e.g., real-estate and the stock market). That should further increase potential gains sales taxes for Treasury use. It should also encourage investment by both mature and new business. If (within the total promised time constraints of the legislative "Contract With America's first 100 days" ending April 14th) the House Ways & Means does not see fit to carefully evaluate the capital-gains related optional sales-tax add-on, then later the Senate may more effectively do so with its influential filibuster powers giving more time to evaluate for members of either party.

John P. Renshaw

SCR Century-Plus Chart retained in Committee Files.

Calculation Appendix.
These Are Notes to "The Optional 10 Percent Sales Tax on Capital Gains Should Be Adopted"

March 4, 1995
Re-evaluated 6/30/95

Note A. Concerning "$60 bil." From past equity appreciation to date ("old holdings"): $1,200 bil. = 1/3 of $2,500 bil. of IRS estimated taxable investor locked-up unrealized holdings in 1989*, plus a further 50% Wilshire 5000 equity increase from '89 to the present. If only half of $1,200 bil. is liquidated within 5 years to be voluntarily subject to 10% optional sales tax, that results in $60 bil. additional Treasury revenues. Past gains-related asset sales by taxable investors were of relatively high-cost assets. Thus, especially over the past 10-15 years, very-low-cost, "locked-up" assets continued to increase in current market dollars as growth and inflation-aided earnings trended higher, and may so continue until assets enter estate status.

Note B. Concerning "$35 bil." From past real-estate locked-up, unrealized appreciations: from 2/3 of $2,500 bil. estimated by the IRS to be locked-up gains in 1989, presume a subsequent market value drop of 25% to the present (i.e., from about $1,600 bil. to $1,200 bil.) Then assume 30% of $1,200 bil. past unrealized gains are voluntarily sold subject to 10% gains sales tax. Therefore $36 bil. (say $35 bil.) sales tax could result within 5 years. ($1,200 x 30% x 10%). The absence of recapture of past depreciation, etc. upon sales, should be conducive to real-estate unlocking and therefore greater net Treasury receipts.

Note C. Concerning "$35 bil. over 5 years" from future real-estate appreciation: If (See Note B) a present $1,200 bil. locked-up market value (after the 25% assumed drop from '89) starts to increasingly recover and averages perhaps a 6%/yr. recovery over 5 years, that is $360 bil. of additional locked-up unrealized market values for the period. At 10% optional gains sales tax, the 5 year Treasury potential is therefore $36 bil. (say $35 bil. rounded out).

Note D. Concerning over a $600 bil. 5 year total" starting in '95 of additional Treasury receipts ($45 bil./yr average): that consists of $60 bil. from Note A, plus $35 bil, from Note B, plus $600 bil. from Note C, plus $35 bil from Note D -- or $600 bil. over 5 years.

Note E. Substantial associated indirect - but difficult to determine - benefits to the $230 bil. direct Treasury receipts in Note E should be additionally derived from general economic stimulus (e.g.: deficit-reduction progress leading to lower interest rates, greater savings, sounder economic growth, etc.).

About 22% of Equities Removed by Sales

Wilshire Increased 4 Times

John P. Renshaw

* Source: American Council for Capital Formation Tabulation of U.S. Treasury Data.

** Over 20 years Wilshire 5000 equity index prices rose about 7%/yr. cumulative.

*--> *** Wilshire 5000 index is probably about 90% of all U.S. equity market values. For instance, 3,000 on index would be $3,000 bil. ($3 Tril). In 1992, individuals own almost half.
On 6/30/95 Wilshire 5000 was $5,360 bil.

LBOs = Leveraged Buyout Era often mandated capital gains

* 1971–1993 represents a long–term complete equity price–index cycle; The Wilshire 5000 index rose over 7%/yr. cumulatively. Thus, on that trend, an equity sale represents a cost" (or market value) 5 years before of about 70% of the "sales" price.

Commentary

on events at home and abroad

By Caspar W. Weinberger, *Chairman*

AN ELEGANT NEW PROPOSAL

RECENTLY, A NEW PROPOSAL to improve the capital gains tax has been made that is elegant in its simplicity and is astonishing in that it helps the taxpayer, the Treasury and the economy while hurting no one.

The capital gains tax illustrates better than any other issue the difference between Republican and Democratic economic policies. Historically, Democrats favor a high capital gains tax because they believe that it primarily hits the rich (thinking only the rich own stocks or real property), that it brings a fair amount of revenue into the Treasury for politically popular spending programs, and that favoring it brings little political pain.

Republicans think, generally, that the capital gains tax discourages development and, because people keep their assets "locked up" to avoid the tax, discourages the realization of gains that could be used for new job-producing investment, thereby helping the economy and people of all income levels.

John Renshaw: Designer of a new capital gains proposal.

The new proposal, devised after many years of study by John P. Renshaw, an MIT graduate and an investment counselor in San Francisco, offers taxpayers an alternative to the 28% capital gains tax. This alternative is a 10% sales tax on the amount anyone receives for the sale of stocks or real estate held for five years or longer. This would be most attractive to owners who acquired their property at very low cost, measured by today's prices. For others the existing capital gains tax would be less costly and would be used.

An examination of stock prices and other data indicate that for most owners whose initial stock cost is 64% or less than the current selling price of their stock, the proposed 10% sales tax would be better than the capital gains tax. But if their cost is 80%, then the 28% tax would be better.

The prime purpose of Renshaw's proposal is to encourage more holders of low-cost properties to sell them, thereby unlocking and using the capital gains. This would secure approximately $30 billion a year in new revenue for the Treasury that isn't being realized now because the high capital gains tax is a disincentive for these owners to sell. Another benefit is that, because this is a sales tax, the alternative eliminates the need to calculate the cost of assets, which can be difficult and expensive.

Since many low-cost property owners do not sell their property during their lifetime, the government does not realize any capital gains tax revenue until an owner's death, after which the property is revalued. Would this proposal be enough to unlock these capital gains? There is some interesting evidence:

- In 1972 the capital gains tax was 35%, and about $5.7 billion was paid in capital gains taxes. In 1981 the Reagan tax cut reduced capital gains taxes to 20%; subsequently, nearly $13 billion in capital gains was paid to the Treasury, proving the frequently made point that government gets more revenue when taxes are cut.
- During the heyday of leveraged buyouts (1984 to 1989), absurdly high prices were offered for stocks so the buyers could gain control of certain corporations. That proved to be a strong enough inducement for vastly increased sales and realized capital gains. Indeed, total realized gains increased from $122 billion in 1983 to $326 billion in 1986, with Treasury revenue increasing from $18.5 billion in 1983 to $49.7 billion in 1986.

Given these figures, it seems clear that with sufficient inducement longtime owners of low-cost property are willing to unlock and sell.

Renshaw's estimate of a yearly $30 billion in new revenue for the Treasury is based on data showing that there is about $5 trillion in accrued and unrealized capital gains from stocks and real estate. Of this huge sum, taxable individuals own about $800 billion in stocks and $1.6 trillion in real estate. If the alternative tax induced the sale and realized the gains of 50% of these locked-up stocks and 30% of the real estate, over a three-year period there would be $30 billion a year in new revenue for the Treasury. And because there wouldn't be an incentive to lock up assets, the benefits to the Treasury should be ongoing.

. Renshaw's proposal seems to be an alternative that Congress could accept, applying it to the long-held, low-cost assets. It is a simple, elegant and, I think, highly desirable plan that warrants careful study and rigorous analysis. ■

Citizens Commemorative Coin Advisory Committee
Established by Act of Congress, Public Law 102 390

July 26, 1995

The Honorable Bill Archer
Chairman
Committee on Ways and Means
U.S. House of Representatives
Washington, D.C. 20515

Dear Mr. Chairman:

We are writing to request your support for a legislative initiative which will greatly benefit U.S. commemorative coin programs authorized by Congress and the collectors who purchase the coins. This initiative would allow a deduction for the purchase of commemorative coins, thus recognizing the charitable contribution made with the purchase of such coins and providing a boost to a significant profit-making venture of the Federal government.

As you know, each year Congress authorizes the U.S. Mint to produce special coins to commemorate persons, places, and events of cultural and historical significance to the United States. Each commemorative coin program carries a surcharge to benefit designated charitable organizations. This year's programs will provide millions of dollars in surcharges to the Atlanta Committee on the Organization of the 1996 Summer Olympic Games, the Special Olympics, and the Civil War Trust.

In recent years, commemorative coin sales have been in decline, resulting in corresponding decreases in profits for the Federal government and surcharges for beneficiary organizations. This decline can be traced to increasing frustration among coin collectors that Congress ignores their interests and regards commemorative programs largely as a way to raise funds for favored projects without raising taxes.

Although charitable organizations receive surcharges from coin sales, the tax code does not recognize commemorative coin purchases as deductible as charitable contributions. By allowing for a tax deduction for the purchase price of a commemorative coin minus its face value, Congress would clearly recognize the contributions that collectors make to charitable organizations when they purchase these coins. In addition, this change in the tax code would more than pay for itself by enhancing commemorative coin sales and thereby increasing profits deposited in the Federal Treasury.

You may be interested to know that since 1982, the U.S. Mint's commemorative coin programs have generated $650 million in net revenues for the Federal Treasury through program profits and the sale of stockpiled gold and silver, while raising $283 million in surcharges to support such American icons as the Statue of Liberty, the U.S. Capitol, Mount Rushmore, Monticello, the Vietnam Veterans Memorial, and the U.S. Olympic team.

We understand that Members of the Committee on Ways and Means have voiced their support to you for allowing such a deduction. We would like to join them in their support and request that you assist in moving this initiative at the earliest opportunity. If you have any questions concerning this matter, please do not hesitate to contact one of us or Eric Hallerberg at the United States Mint at (202) 874-7405.

We thank you for your consideration of this matter.

Sincerely,

Philip N. Diehl, Chairman	Elvira Clain-Stefanelli
Reed Hawn	David L. Ganz
Danny Hoffman	Elsie Sterling Howard
Thomas V. Shockley, II	Charles H. Atherton

TESTIMONY OF THE SPECIAL OLYMPICS INTERNATIONAL

Mr. Chairman and Members of the Committee, Special Olympics is pleased to present this written statement in support of an important tax reform measure, which if adopted, would benefit Congressionally-authorized commemorative coin programs and those collectors who purchase coins through these programs. The legislative proposal would allow a tax deduction for commemorative coins purchased directly from the United States Mint, thus acknowledging the charitable contribution that coin purchasers make when they buy commemorative coins.

Since 1982 Congress has authorized the United States Mint to issue commemorative coins to honor persons, places, and events of cultural and historical significance to the United States. Each commemorative coin authorization incudes a mandatory surcharge to benefit a statutorily-designated charitable organization. Last fall, Congress mandated that a $10.00 surcharge on the sale of Special Olympics commemorative silver dollars be contributed to the 1995 Special Olympics World Games Organizing Committee to provide a world-class sporting event for athletes with mental retardation and to demonstrate to a global audience the extraordinary talents, dedication, and courage of persons with mental retardation.

Special Olympics is deeply honored to have been designated by Congress to be the recipient of commemorative coin surcharges, especially since it is the first time a nation's legal tender celebrates the competency and abilities of persons with mental retardation. Other beneficiaries of commemorative coin surcharges in 1995 are the Civil War Trust and the Atlanta Committee on the Organization of the 1996 Olympic Games.

Although charitable organizations like ours receive surcharges from coin sales, coin purchases currently are not deductible as charitable contributions. By clarifying the tax code to allow for deductions for the purchase price of a commemorative coin minus its face value, Congress would clearly acknowledge the importance of numismatic support of charitable causes like Special Olympics.

We also believe such a clarification in the tax code would increase commemorative coin sales, which in recent years have been in decline. This decline is particularly distressing when one realizes that commemorative coin programs are a money-maker for the United States Treasury. Since 1982, the United States Mint's commemorative coin programs have generated almost $650 million in net revenue for the federal treasury in program profits and in proceeds from the sale of one million ounces of gold and 30 million ounces of excess silver from the nation's stockpiles. Additionally, $283 million in surcharges were raised to support American landmarks and charitable organizations like the Statue of Liberty, the United States Capitol, Mount Rushmore, Monticello, the Vietnam Veterans Memorial, the U.S.O., the United States Olympic team and athletes with mental retardation who participated in the recently-completed 1995 Special Olympics World Games. (See Exhibit I: Distribution of Commemorative Coin Surcharges).

With the decline in commemorative coin sales, there has been a corresponding decrease in profits for the federal government and in surcharges for beneficiary organizations. In the case of Special Olympics, coin sales to date have been about half of the original projections. As a result, the 1995 Special Olympics World Games has been left with a deficit which we are actively trying to erase though additional coin sales to our long-time corporate sponsors and supporters. A tax deduction for such purchases would be enormously helpful in this effort.

Moreover, we believe that this tax reform provision will help spark a renewed interest among coin collectors to purchase commemorative coins and ensure their profitability for the federal treasury. In addition, this change will more than pay for itself by enhancing commemorative coin sales and thereby increasing profits deposited at the federal treasury. (See Exhibit II: Cost and Profit Aspects of Proposed Legislation).

Mr. Chairman, I am happy to report that this tax reform proposal is endorsed by the Congressionally-established Citizens Commemorative Coin Advisory Committee and the American Numismatic Association. Sponsors of the following commemorative coin programs also support this proposal, including the Botanical Gardens Commemorative Coin Program; the West Point Military Academy Commemorative Coin Program; the 1995/1995 Atlanta Centennial Olympics Games Commemorative Coin Program; the National Community Service Commemorative Coin Program and the Robert F. Kennedy Memorial Commemorative Coin Program.

Thank you for allowing Special Olympics the opportunity to provides comments on this important tax reform proposal (See Exhibit III: Proposed Bill Language). Its enactment would greatly enhance our ability to provide year-round training and sports opportunities for persons with mental retardation in each of the 50 states and around the world.

SURCHARGE RECIPIENT ORGANIZATIONS
U.S. COMMEMORATIVE COIN PROGRAMS
1982 through 1995

Year	Program	Surcharges (in millions)	Recipient Organizations	Purpose
1982	George Washington	N/A*	Federal Treasury (General Fund)	To reduce the Federal budget deficit
1984	Olympic	$73.5	Los Angeles Olympic Organizing Committee	To support the United States Olympic Team and the staging of the 1984 Summer Olympic Games in Los Angeles
1986	Statue of Liberty	$83.2	Statue of Liberty - Ellis Island Foundation, Inc.	To support restoration of the Statue of Liberty and Ellis Island
1987	U.S. Constitution	$52.7	Federal Treasury (General Fund)	To reduce the Federal budget deficit
1988	Olympic	$22.9	U.S. Olympic Committee	To support the United States Olympic Team
1989	U.S. Congress	[illegible]	U.S. Capitol Preservation Commission	To support refurbishment of the U.S. Capitol
1990	Eisenhower Centennial	[illegible]	Federal Treasury (General Fund)	To reduce the Federal budget deficit
1991	Mt. Rushmore	$12.1	Mt. Rushmore National Memorial Society of Black Hills	To support Mt. Rushmore
1991	Korean War	[illegible]	Korean War Veterans Memorial Fund	To support the Korean War Veterans Memorial
1992	United Service Organizations	[illegible]	United Services Organization; Federal Treasury	[illegible] reduce the Federal budget deficit
1992	Olympic	[illegible]	U.S. Olympic Committee	To support the United States Olympic Team

COST AND PROFIT ANALYSIS OF PROPOSED AMENDMENT ALLOWING DEDUCTION FOR PURCHASES OF COMMEMORATIVE COINS
(per coin)

Costs as tax revenue foregone

Average price of a silver dollar commemorative coin	$29.72		
Face value of a silver dollar commemorative coin	$1.00		
Proposed deduction	$28.72		
Average tax rate for taxpayers taking deduction	31%		
Percentage of taxpayers who would claim deduction	29%		
AVERAGE TAX REVENUE FOREGONE PER COIN		$2.58	

Revenues from commemorative coin sales and sales of government stockpiled silver

COIN SALES			
Average price of a silver dollar commemorative coin	$29.72		
Average profit margin	0.12		
Average profit per coin	$3.57		
SILVER SALES			
Total proceeds on Treasury and DLA sales of silver to U.S. Mint (in millions)	$120.8		
Total sales of silver dollar commemorative coins (in millions)	25.9		
Average proceeds per coin	$4.66		
TOTAL AVERAGE REVENUE PER COIN TO GENERAL FUND		$8.23	
NET BENEFIT TO FEDERAL TREASURY			$5.65

SOURCE: U.S. Mint

Explanation of Cost and Profit Analysis for the Proposed Amendment Allowing a Deduction for Purchases of Commemorative Coins

The analysis presents on a per-coin basis projected costs of tax revenue foregone from the proposed deduction and revenues directly associated with the sale of United States silver dollar commemorative coins and the sale of silver in Federal government stockpiles.

The projected tax revenue foregone is derived by multiplying the proposed per-coin deduction (the 1994 average price of a silver one dollar commemorative coin minus its $1.00 face value) by an average tax rate for taxpayers taking the deduction and a 3-year IRS average of the percentage of taxpayers who claimed itemized deductions on their personal income tax returns.

Revenues from commemorative coin sales and sales of silver are derived separately and then combined. The average price of a 1994 silver one dollar commemorative coin is multiplied by the Mint's historical profit margin for all modern commemorative programs (1982-1994) to derive per-coin profit. Per-coin revenues from silver sales are calculated by dividing total revenue from the sale of stockpiled silver from the Treasury Department and the Defense Logistics Agency to the U.S. Mint by the number of silver one dollar commemorative coins sold as part of modern commemorative programs. The sum of these figures is the total average revenue per coin that is deposited to the Treasury's General Fund.

The net benefit to the Federal Treasury is average per-coin revenue deposited to the General Fund minus the average per-coin tax revenue foregone from the proposed deduction.

EXHIBIT III

A BILL

To amend the Numismatic Public Enterprise Fund to allow tax deductions for commemorative coin purchases from the U.S. Mint.

Be it enacted by the Senate and House of Representatives or the United States of America in Congress assembled,

SECTION. 1. SHORT TITLE.

This Act may be cited as the "Numismatic Public Enterprise Fund Tax Amendment of 1995".

SEC. 2. TAX DEDUCTIONS AUTHORIZED.

Section 5134 of title 31, United States Code, is amended by adding subsection (e):

"(e) Tax Deductions. Any commemorative coin purchased directly from the U.S. Mint shall be considered a charitable deduction at an amount equal to the coin's purchase price minus its face value.".

Information about INDEPENDENT SECTOR

INDEPENDENT SECTOR (IS) is a nonprofit coalition of 800 corporate, foundation and voluntary organization Members with national interest and impact in philanthropy and voluntary action. The organization's mission is to create a national forum capable of encouraging the giving, volunteering, and not-for-profit initiative that help all of us better serve people, communities and causes. Attached is our Membership list.

The organizations of INDEPENDENT SECTOR and its mission derive from its Members' shared commitment to fundamental values relating to the creation and maintenance of a truly free society. Our Membership list is attached.

Background on H.R. 1493 and Charitable Tax Incentives

The Charitable Contributions Legislation was introduced by Congressmen Philip M. Crane, Charles Rangel, and Christopher Cox on April 7. The legislation will permit partial deduction for nonitemizers and will eliminate the 3% floor on charitable tax deductions for upper-income taxpayers.

Before providing detailed information regarding why this legislation should be enacted, I want to lay to rest any questions regarding the value of tax incentives to charitable giving.

Individuals are motivated to make charitable contributions primarily by their altruistic nature. However, as with any decision related to the use of limited resources, the amount a person gives to charitable causes will be influenced by the cost to them of giving.

A large body of research has shown that tax incentives can have a powerful effect on the amount individuals give. Tax laws can also have important effects on the types of gifts and on the types of groups that receive these gifts.

Assume that a person with a 25 percent marginal tax rate is giving $1,000 when the contribution is deductible (e.g. the price of giving is 0.75). If the contribution is made non-deductible, the price of giving increases to 1.0, a 33% increase. Thus, this person's giving would fall by 38% (33% x -1.13), or by $380. In this example, eliminating deductibility of the contribution reduces giving from $1,000 to $620.

It's a good investment by the federal government to allow the charitable tax deduction. The federal government, by "investing" $250 in revenue lost as a result of the charitable tax deduction, gains $380 or 52% in funds expended by the charity on public purposes such as feeding the homeless, comforting the sick, rehabilitating drug abusers, supporting community arts groups, preserving historic houses, protecting wetlands from pollution and neighborhoods from crime, and serving countless other local, regional, national and even international purposes.

If [the] deductibility [of charitable contributions] were eliminated, itemizers would reduce the amount they give. In 1992, approximately 32 million itemizers reported approximately $63 billion of charitable contributions. If the deductibility of contributions were eliminated, this level of giving would likely have been more than $20 billion lower. While charitable organizations may be able to offset some of this reduction by more aggressive fund raising techniques, a substantial short-fall is inevitable.

Clearly, charitable tax incentives play an important part in the decision regarding the amount that taxpayers will give. Following is information related both to the enormous value of these increased charitable tax incentives for nonprofit organizations and people they serve, as well as additional information regarding the incentive effect that charitable tax deductions have on giving.

A CHARITABLE TAX DEDUCTION FOR NONITEMIZERS SHOULD BE ENACTED BY CONGRESS

Since Congress permitted the charitable tax deduction for nonitemizers to sunset in 1986, seven of ten taxpayers, the nonitemizers, can no longer deduct their charitable contributions and the resulting loss in charitable giving has been substantial. This becomes obvious when a comparison is made of the amount contributed by itemizers and nonitemizers who are in the same income groups.

Income Group	Amount Contributed by Itemizers	Amount Contributed by Nonitemizers	% of Income Contributed by Itemizers	% of Income Contributed by Nonitemizers
0 - $10,000	$317	$244	1.3%	2.8%
$10,000 - $19,000	$795	$421	3.0%	2.1%
$20,000 - $29,000	$813	$505	2.2%	2.9%
$30,000 - $39,000	$726	$543	3.0%	1.1%
$40,000 - $49,000	$1,289	$692	1.9%	0.6%
$50,000 - $74,000	$1,341	$898	1.9%	1.3%
$75,000 - $99,000	$1,612	$1,899	2.2%	1.0%
$100,000 +	$2,491	$2,199	3.8%	2.0%

The average annual amount contributed by itemizers is $1,313; the average by nonitemizers is $509.

Eighty one million taxpayers are nonitemizers. It is clear that if all nonitemizers raised their contributions to the amount given by itemizers, giving would increase greatly. In fact, charitable contributions by nonitemizers increased by 40% or $4 billion from 1985 to 1986, according to Internal Revenue Service data. Nonitemizers were permitted to deduct only 50% of their charitable contributions and they gave $9.5 billion that year. In 1986, they could deduct a full 100% and, according to the IRS, they gave $13.4 billion - an increase of 40%. The message from that experience is apparent. Charitable tax deductions do stimulate substantially increased giving from middle income Americans.

Nonitemizers are low to middle income Americans (65 million have incomes under $30,000 a year) who support services such as the Red Cross and the American Cancer Society. They give to churches and synagogues, environmental organizations, schools, colleges, hospitals, food programs for the homeless, and the Boy Scouts and Girl Scouts. They give to advocacy organizations, health research, the arts, international development, and myriad activities in the public interest that enrich our society and protect its people. Congress should enact legislation that will permit these moderate income Americans to take a deduction for their contributions to charity.

CONGRESS SHOULD ELIMINATE THE CHARITABLE TAX DEDUCTION FROM THE THREE-PERCENT FLOOR ON ITEMIZED DEDUCTIONS

On August 10, 1993, President Bill Clinton signed into law the Omnibus Budget Reconciliation Act of 1993, making the 3% floor on charitable deductions permanent. Congress had included, in its 1990 budget agreement, a 3% floor on itemized tax deductions, including charitable deductions, for families with adjusted gross incomes over $100,000. Adjusted for inflation, the $100,000 amount has been indexed to $114,700 for 1995. Following are reasons why the charitable tax deduction should be dropped from the 3% floor.

- The exact affect that the 3% floor will have on charitable deductions has yet to be determined. However, studies conducted by the IS Research office now indicate that from 1989 through 1993 household giving decreased by 25%.

- Eliminating the charitable deduction from the 3% floor involves relatively little in federal revenue. Of the $2 4 billion in federal revenue raised annually by the 3% floor, only about 10% comes from the charitable deduction according to Price Waterhouse research conducted for INDEPENDENT SECTOR.

- The floor sets a terrible precedent. Once a floor is established on a tax deduction, Congress is almost always inclined to increase it. The floor on the medical deduction is a case in point. Over the years, the floor on the medical deduction increased so much that now taxpayers can deduct only half of what they could twenty years ago. Since 1990, on six different occasions, Congress tried to extend the 3% floor beyond its 1995 expiration date, or make it permanent. With the enactment of the Omnibus Budget Reconciliation Act of 1993, Congress, as we predicted, made permanent the 3% floor.

- The floor is inequitable. If a taxpayer has no mortgage and doesn't live in a jurisdiction with state or local income taxes, the three percent floor has to be subtracted entirely from the taxpayer's charitable contributions deduction.

- The 3% floor on itemized deductions is a complicated, anti-tax simplification provision which requires taxpayers to perform a ten step process to determine whether or not they are subject to the floor.

- Since 1990, 26 states modeling their tax law after the new federal law, have passed the 3% floor, or very similar provisions on itemized tax deductions.

- Individuals with incomes of $100,000 or more contribute substantially to a broad range of charities that provide services to low and middle income individuals. Their total contributions averaged $2,113* annually and of that amount $1,243 went for dinner programs for the homeless, drug abuse counseling, low income housing development, women and minority issues, libraries, adult education, day care centers, foster care services, family counseling, consumer protection, legal aid, crime and delinquency prevention, employment/jobs, public safety, hospices, Boy and Girls Scouts, Camp Fire groups, 4-H clubs, little leagues, civil rights, community and social action, advocacy, community improvement and similar programs.

- The floor on charitable deductions was the fourth major undercutting over the past decade of the very organizations to which government is transferring so much responsibility.

  -- Between 1982 and 1993, government's allocations to its nonprofit partners to fulfill such public services such as job training and maternal and child health, dropped by $47 billion, exclusive of Medicare and Medicaid.

  -- During that same period, Congress cut funding for all federal human service programs of concern to nonprofits by $77 billion, exclusive of Medicare and Medicaid, with the expectation that essential services would be picked up by charities.

  -- Under the Congressional FY 1996 Budget Resolution approved by the House and Senate, federal outlays for file years 1992-2002, nonprofits will lose a cumulative $263 billion in federal funds in the funding of social programs.

  -- The 1986 Tax Act hurt the voluntary sector more than others because of the elimination of the charitable deduction for those who do not itemize their tax returns and the direct correlation between lower tax rates and the size of many people's contributions. As we forewarned in the years immediately following 1986, there was a 50% decline in the prior rate of growth of charitable giving growth.

It makes no sense to tax contributions to groups whose service relates to protection of the environment, health, research, food programs for the homeless, schools and colleges, refugee crisis counseling, youth services, civil rights, hospitals, community and international development, the arts, housing for senior citizens, and the many other activities that enrich our society and protect its people. Congress should eliminate the charitable tax deduction from the 3% floor.

THE IMPORTANCE OF CHARITABLE ORGANIZATIONS TO AMERICA

Nearly one million charitable, educational, religious, health, and social welfare organizations create, nurture, and sustain the values that frame American life. They promote altruism, in a society that reinforces self-interest; community, in a society that reward individual achievement; and pluralism, in a society sometimes threatened with divisiveness. They provoke, challenge, and question. They also teach, mediate, and heal.

Collectively, these organizations represent an increasingly important sector of our society: the independent sector. They function on a not-for-profit basis, entrusted with public purposes and barred by law from private gain. They are exempted from tax on their assets and on income from their public-purpose activities. Those who support them with gifts can deduct those gifts from their own taxable income. Volunteers provide their boards with essential leadership, stewardship and accountability, and play vital roles at all levels.

The independent sector has become a major force in the American economy. In 1990 alone, organizations in this sector received an estimated nearly $123 billion in financial contributions, and volunteer time and energy from nearly 100 million people, as well as income from endowments and revenue-generating activities. That same year, they spent an estimated $389 billion in providing vast and varied services.

Independent sector organizations have played important roles in almost all of American society's major advances -- in human rights, health, knowledge, ecology, creativity, and other fields. As with other institutions in our society -- government, business, the professions -- they are under especially critical scrutiny today. Questioned on what they contribute to the public good, they must be prepared to explain their roles to the public, and give full and frequent accounting of their activities.

At the same time, they must maintain a spirit of diversity and openness that gives them their special character. They must be free to express divergent, even unpopular ideas. And they must not be asked to assume tasks properly performed by government with its vastly greater resources. Only thus can the sector they represent meet the challenge of its independence.

As leaders from other countries are recognizing, organizations of the independent sector reflect and express much of what is best in the American character. They embody and sustain fundamental social, cultural, and spiritual values, including:

Altruism. Independent sector organizations affirm that all human beings have basic moral obligations to look beyond themselves, and to undertake activities for the betterment of other people and other species -- present and future. They further affirm that regard for others must balance the self-regard of the marketplace in a duality that engenders the dialogue and compromise essential to democracy.

Altruism is the most fundamental unifying principle among the diverse organizations of the independent sector. It is the root of their other values: compassion, humility, respect for others, concern for the community, and justice for all.

Pluralism. America's multitudes, with our countless heritages, cultures, political philosophies, and religious beliefs, reflect an unparalleled pluralism. This diversity cradles our society's creative energies, and represents a core value of its life.

For the organizations of the independent sector, encouraging and sustaining pluralism represents a second unifying principle. They affirm that our nation gains strength from respecting differences among its citizens and fostering the free and creative expression of ideas and opinions. Each organization owes its own creation to individuals who acted upon distinct ideas and values.

Some organizations work in areas barred to government: religion in particular. Some speak out in the forum of public discourse, and resist government intrusion lest it suppress dissent. Some spring up swiftly, responding in crises to special human needs. Others provide alternative responses to constant needs.

Community. The principle of community reaches beyond geographic or demographic entities. Communities are groups of individuals who share common values, interests, purposes, or goals. They are critical to our economic, political, social, intellectual, and cultural life. The independent sector itself is a vast community.

Organizations of the independent sector create, nourish, enlarge, and sustain communities. Education equips individuals with the scholarship, discipline, and creativity to contribute effectively to community life. Arts, culture, and the humanities stimulate community self-discovery, self-awareness, and self-definition. They preserve a community's heritage, challenge its assumptions, and refine its perceptions.

Human service, health, and religious groups bring commitment to the community's welfare. They instill compassion for community members in need, and provide the mechanisms to address particular community problems. Human rights, environmental, and public policy

groups teach leadership, consensus-building, and citizen participation skills that ensure community vitality. They empower individuals to lead, and offer them leadership opportunities.

In summary, business and government alone cannot sustain altruism, pluralism, and community - principles fundamental to American society - nor the underlying values of trust, compassion, justice, and moral behavior that bind us together.

The independent sector has become America's linchpin. Business, government, and in fact all Americans have a fundamental stake in preserving and strengthening it.

Washington, DC 20515

Attention: Phillip D. Moseley, Chief of Staff

Dear Committee Members:

I am writing to urge that you include in the next tax bill the provisions of H.R. 757, to establish a program to offset federal income tax refunds to satisfy legally enforceable, past due state tax debts.

Currently, 31 states, including California and the District of Columbia, offset state income tax refunds to satisfy federal income tax debts. The program generates in excess of $50 million a year for the federal treasury. California alone offset $22 million of state income tax refunds for federal tax collections in 1993-94.

Providing statutory authority for a comparable program to offset federal tax refunds to satisfy delinquent state tax debts would generate substantial revenues for the states. It is estimated that such authority could increase revenues for California by $85 million per year, according to estimates by the Franchise Tax Board Economic and Statistical Analysis staff. The program also should increase federal revenues by approximately $8 million over a five-year period, according to the Joint Committee on Taxation, because all income tax states would be expected to participate in the program for offsetting state refunds to meet federal tax obligations.

Offsetting federal revenues for state tax debts would be an effective method of collecting delinquent debts owed the state. I hope this measure is included in the next tax bill before your committee.

Sincerely,

Gerald H. Goldberg
Executive Officer

The Honorable Phillip D. Moseley, Esq.
Chief of Staff
Committee on Ways and Means
United States House of Representatives
1102 Longworth House Office Building
Washington, DC 20215

Dear Mr. Moseley:

I appreciate this opportunity to write in support of H.R. 757 which the Committee is considering for inclusion as one element of the miscellaneous tax bill currently before the Committee. This particular provision would benefit the State of Illinois, as well as the federal government by amending sections 6103 and 6402 of the Internal Revenue Code to allow, inter alia, the Treasury Department to establish an offset program for legally enforceable, past due state tax obligations.

Currently the federal government may levy on state income tax refunds to satisfy delinquent federal tax debts. In 1993 alone, states returned approximately $61 million to the Treasury under their refund offset programs. Permitting federal refunds to be offset for Illinois income tax debts would further existing cooperative efforts in joint IRS/Illinois Department of Revenue tax administration. In addition, offsetting federal refunds for Illinois tax debts will be an effective method of collecting delinquent debts owed to Illinois. The Federation of Tax Administrators estimates that a federal offset program could increase state receipts by about $150 to $200 million annually in the early years and by less as the current inventory of receivables is reduced.

Finally, the Joint Committee has determined that a reciprocal program would increase federal receipts somewhat because the states with an income tax which do not currently do so, may begin to offset for the Treasury in order to participate in this proposed IRS offset.

I urge your staff to communicate our support of H.R. 757 to Chairman Archer and to the other members of the Committee. I will be sharing a copy of this statement with Committee members from Illinois. Thank you for soliciting comments on this important provision.

Very truly yours,

Ken Zehnder

STATE OF IOWA

DEPARTMENT OF REVENUE AND FINANCE
GERALD D. BAIR, DIRECTOR

July 18, 1995

Phillip D. Moseley, Chief of Staff
Committee on Ways and Means
U. S. House of Representatives
1102 Longworth House Office Building
Washington D.C. 20515

Dear Mr. Moseley:

We are writing to urge adoption of provisions which would authorize the offset of federal tax overpayments to satisfy state tax debts introduced in H.R. 757 by Committee members Representative Jacobs and Representative McCrery.

It is our understanding that 31 states already offset state tax overpayments to satisfy delinquent federal tax debts through their own offset compliance programs. These programs generate in excess of $50 million annually to the federal treasury. The IRS lacks the authorizing legislation to include state tax delinquencies in its existing refund offset program. H.R. 757 provides that authorization and lays forth the necessary technical details.

This issue was the subject of a hearing before the Ways and Means Select Revenue Subcommittee in late 1994. At that hearing, the U. S. Treasury Department indicated its support for the concept of reciprocal refund offset. The Joint Committee on Taxation has estimated that the measure will raise federal revenues by $8 million over five years.

Equally notable is the issue of fairness and reciprocity. States for the most part voluntarily include the federal government in their refund offset programs; it is only proper that the federal government do the same for them. Some states have even expressed a willingness to pay for the cost of each offset, even though with minor exceptions they do not charge the federal government.

Most importantly, the state and federal tax authorities work closely together on a wide range of compliance and service activities. This is an efficient, modern approach to effective government and, as such, the refund offset provision is important as a symbol of reciprocity and of a continued good working relationship.

A two-page explanation and history of H.R. 757 is included with this letter for your convenience.

Sincerely,

G. D. Bair
Director

Reciprocal Refund Offset Legislation
H.R. 757, 104th Congress

Current Law

The federal government may levy on – essentially, seize – state income tax refunds to satisfy delinquent federal tax debts. The IRS currently exercises its right to levy on state refunds in 31 states and the District of Columbia, working through those states' refund offset programs. This occurs under a cooperative arrangement between the state tax agency and the IRS district(s).[1] There is no reciprocal authority for the federal government to offset federal income tax refunds to satisfy delinquent state tax debts.

In 1993, states returned about $61 million to the federal government under their refund offset programs; the state offsets generated roughly $25 million to $35 million annually in previous years.[2] States are generally not compensated for these offsets.

The federal government has its own refund offset program. Under IRC § 6402, a specified agency that is owed a past-due, legally enforceable debt can collect it by having the IRS withhold or reduce the debtor's income tax refund if reasonable efforts have been made to collect the debt. Currently these offsets are available for delinquent federal tax debts, past-due child support that offsets public assistance, debts owed other federal agencies (such as student loans and VA housing), and child support owed a parent not receiving ADC, but who has asked for assistance in collecting support.

Federal agencies are charged for each offset, and IRS is permitted to disclose certain taxpayer information to the federal agency requesting the offset.

Reason for Change

Permitting federal refunds to be offset for state income tax debts would further cooperative efforts in joint federal/state tax administration. A number of cooperative efforts are currently underway. To a substantial degree, these efforts are reciprocal in that benefits accrue to both the federal and state governments. These cooperative efforts improve the efficiency of federal-state tax administration, increase compliance with the nation's tax laws, and reduce the burden on taxpayers. Examples of cooperative programs include two-way information exchanges, joint electronic filing of income tax returns, and joint taxpayer service and education programs. Permitting the offset of federal refunds would further this reciprocity and is consistent with the goals of the IRS Strategic Business Plan.

Offsetting federal refunds for state tax debts will be an effective method of collecting delinquent debts owed the states. The Federation of Tax Administrators (FTA) estimates that a federal offset program could increase state receipts by about $150 million to $200 million annually in the early years of a program and by somewhat lesser amounts as the current inventory of receivables is reduced.

---

1 There are 41 states, including the District of Columbia, with a broad-based individual income tax. Included in the 31 states with an offset program for federal tax debts is Alaska, which has no individual income tax. It does, however, have a unique state refund program that works in a similar manner.

2 Recent growth in federal collections appears attributable to technical advancements within the program that make it more efficient and to an increase in the number of states that participate.

A reciprocal program would also be expected to increase federal receipts somewhat because it is anticipated that the remaining income tax states would begin to offset for the federal government in order to participate in the IRS offset (except in any state where the Secretary of Treasury chooses to not have federal debts offset). **The Joint Committee on Taxation has estimated that reciprocal refund offset legislation would benefit the federal government by some $8 million.**

History of Proposal

Rep. Andrew Jacobs (D-Ind.) introduced H.R. 4138 in the 103rd Congress; the bipartisan bill had 20 cosponsors. The House Ways and Means Committee on Select Revenue Measures held a hearing on H.R. 4138 in October, 1994. Treasury formally voiced its support for the proposal and suggested four minor technical adjustments to the language, all of which are believed to have been incorporated into the bill now before the 104th Congress. **Neither during the hearing nor at any other time did the bill encounter opposition.**

Rep. Jacobs along with Rep. McCrery and Rep. Moran introduced the bipartisan H.R. 757 in February, 1995.

Description of Proposal

The proposed legislation would amend IRC § 6402 by adding a new subsection allowing the Secretary of the Treasury to establish an offset program for legally enforceable, past due state tax obligations. To be eligible for the offset, the delinquency must be one that is no longer subject to administrative or legal appeal at the state level. As with other federal agencies, states would be further required to notify taxpayers of the obligation and that such debt will be referred to the IRS for offset if not satisfied in 60 days.

State tax debts would not be satisfied from an offset until all federal tax debts, assigned child support, non-assigned child support and debts due other federal agencies were satisfied.

The Secretary could charge the states for the costs of the offset program in the same manner as other federal agencies are charged.

Once an offset is made, taxpayers could still protest the amount due. The legislation also contains provisions allowing a joint federal refund to be split among both spouses if only one spouse owes the state tax debt. The legislation would also amend IRC § 6103 to permit the disclosure of information regarding the offset to state tax agencies when necessary.

Federation of Tax Administrators
July, 1995

if you would convey my support to the Committee for granting authority to the IRS to offset federal tax refunds for state tax delinquencies in any tax bill which it reports out.

With kindest personal regards and best wishes for your continued good health, happiness and success, I remain,

Most cordially yours,

Louis L. Goldstein

RE: **H.R. 757**

Dear Mr. Moseley:

Harley T. Duncan, Executive Director of the Federation of Tax Administrators, has advised me that the Ways and Means Committee is considering incorporating the proposal of H.R. 757 to allow the Internal Revenue Service to offset federal tax refunds for state tax delinquencies in a list of "miscellaneous tax provisions" to be considered as part of a subsequent tax bill.

As Maryland's chief tax collector, I can assure you that this proposal is extremely important to the administration of Maryland's tax laws. The collection of state taxes through offset is an efficient method of tax collection which eliminates the need for expensive manual procedures. Just as importantly, a federal refund tax offset would permit Maryland and other states to collect taxes from individuals who have left the state, from whom recovery can be made at only at great expense, if at all. Effective collection tools are essential in assuring that the burden of taxation is fairly distributed.

Maryland is one of those states which voluntarily offsets state income tax refunds for the Internal Revenue Service. For your information, I am enclosing a copy of our most recent report of refund offsets. You will note that so far in the current year, we have intercepted 11,746 refunds for the IRS, resulting in a recovery of $3,694,875 for the federal treasury. We would expect comparable results if the IRS were permitted to offset for us. I would very much appreciate it

The Kentucky Revenue Cabinet respectfully submits the following written comments to the House Committee on Ways and Means to express support for the inclusion of H.R. 757 in the next tax bill enacted by Congress:

Currently, Kentucky and 30 other states and the District of Columbia offset state income tax refunds to satisfy federal income tax debts. The program generates roughly $61 million for the federal treasury. In Kentucky alone, the program resulted in $402,266 of federal tax collections in 1993. H.R. 757 represents bipartisan legislation to establish a program to offset federal income tax refunds to satisfy legally enforceable past due state tax debts. Enactment of H.R. 757 would be extremely beneficial to the Commonwealth of Kentucky and to states generally.

The federal government lacks the statutory authority to offset federal tax refunds to satisfy delinquent state debts. H.R. 757 would provide such authority. Such legislation could increase state revenues by $150-$200 million per year for the first few years, until the inventory of delinquent debts is reduced, and at a lesser amount in subsequent years, according to estimates by the Federation of State Administrators. Approximately $3 million of this amount would benefit Kentucky. The program should also increase federal revenues, according to the Joint Committee on Taxation, because all states with income taxes would be expected to participate in the program for offsetting state refunds to meet federal tax obligations.

The proposed legislation would allow the Secretary of the Treasury to establish an offset program for legally enforceable past due state tax obligations similar to that established for debts due other federal agencies. State tax debts would not be satisfied from an offset until all federal tax debts, both types of past due child support, and debts due other federal agencies were satisfied. As with other federal agencies, states would be required to notify taxpayers of the obligation and that such debt will be referred to the IRS for offset if not satisfied in 60 days. The Secretary would be authorized to charge the states for the offset. The proposed legislation would also amend IRC § 6103 to permit the disclosure of information regarding the offset to state agencies when necessary.

Re: Proposed Amendment of Section 6402 -- State Tax Offsets

Dear Phillip:

We understand that the Ways & Means Committee is soliciting comments on the list of miscellaneous tax provisions which are currently pending before the Committee. By this letter we wish to indicate our support of one of those provisions -- H.R. 757 (copy enclosed). As you know, H.R. 757 would amend Section 6402 of the Internal Revenue Code ("Code") by adding "past due, legally enforceable state tax obligations" to the list of liabilities against which federal income tax refunds may be offset. The following discussion summarizes the "reciprocal" Massachusetts practice in this area and the reasons for our support of H.R. 757.

1. Massachusetts offset of state tax refunds by federal income tax liabilities. Since the late 1980's, Massachusetts has followed a systematic program of turning over to the Internal Revenue Service ("Service") refunds due to Massachusetts taxpayers if such taxpayers have outstanding federal income tax liabilities. As explained in Section 3 of the enclosed Administrative Procedure 606, the Service will levy the Massachusetts refund pursuant to Code Section 6331, whereupon the Commonwealth will intercept the refund and, except to the extent that it exceeds the federal liability, turn it over to the

Service. The Service then applies the refund "against the taxpayer's federal liability." Massachusetts pays to the taxpayer any amount remaining from the state refund.

We believe that the Massachusetts program and the similar programs of thirty sister states have played a salutary role in tax administration and enforcement. For example, during 1993 through 1995 Massachusetts alone has forwarded between $2M and $3.3M each year to satisfy outstanding federal tax liabilities. Our understanding is that when the efforts of all of the state programs are taken into account in excess of $50M is collected each year. More importantly, the operation of these programs makes clear to delinquent taxpayers that they cannot "beat the system" by receiving refunds at the state level while simultaneously failing to meet their federal tax obligations.

2 Support of H.R. 757. We fully support H.R. 757 because it will authorize the Service to reciprocate the refund offset programs of the states thereby enhancing administration and enforcement of the state tax laws. Such ongoing federal and state cooperation will become more important in the decades ahead as information system technologies allow the taxing agencies to more efficiently manage and process the massive amounts of documents and information they receive and generate. As the levy process becomes more and more computerized, the efficiency of the state and federal refund offset programs will increase. Again, the end result will be, if H.R. 757 is adopted, that taxpayers will be held accountable by both levels of government for their failure to meet obligations properly due at either level of government.

3. Scope of offset program. While, as stated, we fully support H.R. 757, we would suggest that the scope of the program be slightly modified. Under the present proposal, federal refunds will not be offset against outstanding state tax assessments which are due and owing until the taxpayer has exhausted all judicial review of the underlying liability. The judicial process can require a number of years to run its course; during that time, some taxpayers have refused to pay amounts properly assessed and due and have resisted all collection activities which are properly authorized under the Massachusetts General Laws. The goals of H.R. 757 (collection of outstanding liabilities and promotion of voluntary compliance) would be further enhanced if the language were revised to allow the federal offset once the state tax assessment is properly made and the tax is due and owing. As to Massachusetts, if the taxpayer were to ultimately prevail in the court challenge, any amounts collected via the federal offset would be returned to the taxpayer with interest (short term federal rate plus four percent, compounded daily) from the date of the offset. This approach would conform the federal offset program to the treatment of other amounts garnered by Massachusetts through the usual levy and collection rules. Under the current H.R. 757 language, in contrast, a taxpayer with a due and owing Massachusetts liability could receive federal refunds for a number of years, and ultimately lose the court challenge. The prospects that the federal refunds would still at that point be available to satisfy the state obligation are uncertain at best.

Please do not hesitate to contact our offices at (617)626-3280 if we can provide any further information concerning our view of H.R. 757.

Sincerely yours,

Mitchell Adams
Commissioner of Revenue

ADMINISTRATIVE PROCEDURE 606: REFUND INTERCEPTS

Procedures

606.1. Refund Intercepts for Child Support Enforcement Division

If DOR's Child Support Enforcement (CSE) Division certifies that a taxpayer owes past-due child support, DOR will intercept the taxpayer's refund and apply that amount to the child support debt.

If the taxpayer wishes to contest the validity and/or the amount of the debt, he or she may apply for a hearing with CSE. The request must be made on the Request for Review form enclosed with the Notice of Income Tax Refund Transfer and must be received by CSE within 30 days of the date of the notice. The form should be sent to: Massachusetts Department of Revenue, Child Support Enforcement Division, Tax Refund Intercept Unit, P.O. Box 7063, Boston, MA 02204-7063. In order to appeal successfully, the taxpayer must document either that he or she does not owe past-due child support or that he or she owes less past due child support than was intercepted. This documentation often includes canceled checks or court orders. CSE reviews these documents and informs the taxpayer of the results within 45 days, or within 60 days if a refund on a joint return is at issue and a nondebtor spouse appeal has been filed.

Joint filers cannot avoid having their refund intercepted. However, where a spouse who is liable for past-due child support files jointly, the nondebtor spouse may receive his or her share of the state income tax refund by filing an appeal and substantiating the share of the refund attributable to his or her income. To file an appeal, the nondebtor spouse must submit, along with a completed appeal form, a signed copy of the joint state income tax return and the W-2 forms of both spouses. The appeal form must be received by CSE within 30 days of the date of the Notice of Intercept. Appeal forms are enclosed with the Notice of Intercept or may be obtained by calling (617) 727-4200, ext. 184, in the Boston metropolitan area or 1-800-332-2733 toll-free within Massachusetts.

REFERENCES IN VOLUME 2

G.L. c. 62D

606.2. Refund Intercepts for American Student Assistance

If American Student Assistance (ASA) certifies that a taxpayer is delinquent in the repayment of a student loan, DOR will intercept the taxpayer's refund. ASA will then apply the refund against the taxpayer's education loan delinquency.

If the taxpayer wishes to contest the validity and/or the amount of the debt, he or she may apply for a hearing with ASA. The request must be made in writing and must be received by ASA within 30 days of the mailing date of the Notice of State Income Tax Refund Transfer. Requests for hearings should be sent to: ASA, Attention: Recove. , Department, 330 Stuart St., Boston, MA 02116. Other information may be obtained by calling 1-800-648-6550.

If the refund being transferred is from a jointly filed return, and all or part of the refund is attributable to a spouse against whom no debt is claimed, it is possible that a portion of the refund may be returned. The spouse must request this in writing from ASA within 30 days of the date of the notice of refund transfer.

606.3. Refund Intercepts for Internal Revenue Service

If the Internal Revenue Service (IRS) determines that a taxpayer is delinquent in the payment of federal income taxes, it may, as part of its general levy powers under Section 6331 of the Internal Revenue Code, levy the taxpayer's Massachusetts refund. DOR will intercept the refund and the IRS will apply it in whole or in part against the taxpayer's federal liability.

If the taxpayer wishes to contest the validity and/or amount of the debt, the taxpayer should contact the Internal Revenue Service, P.O. Box 9093, JFK Post Office, Boston, MA 02203, (617) 565-1878. DOR should not be contacted for information about a federal tax liability.

606.4. Refund Intercepts for Massachusetts Department of Employment and Training

If the Massachusetts Department of Employment and Training (DET) certifies that a taxpayer has not repaid an overpayment of unemployment benefits, DOR will intercept the taxpayer's refund. The Massachusetts Department of Employment and Training will apply the refund against the amount of overpayment of benefits.

If the taxpayer wishes to contest the validity and/or the amount of the refund transferred to DET, the taxpayer may request a review in writing within 20 days of the mailing date of the Notice of State Income Tax Refund Transfer. If the taxpayer filed a joint Massachusetts income tax return and all or part of the refund that has been transferred to DET is attributable to the income of a spouse who has not received an overpayment, the spouse may request a review in writing within 20 days of the mailing date of the Notice of State Income Tax Refund Transfer.

Requests for review should be sent to: Department of Employment and Training, Benefit Payment Control, State Income Tax Intercept Unit, 4th Floor, Charles F. Hurley Building, 19 Staniford Street, Boston, MA 02114. Additional information may be obtained by calling DET at (617) 727-8262. DOR should not be contacted for information about a refund transferred to DET.

606.5. Refund Intercepts for Massachusetts Department of Revenue

Massachusetts law allows the Massachusetts Department of Revenue (DOR) to apply taxpayers' overpayments to any outstanding tax liabilities they may have.

If the overpayment being applied to a liability resulted from the filing of a joint Massachusetts Income Tax return and only one joint filer is legally responsible for the debt, the non-debtor spouse may request that DOR refund a portion of the overpayment by filing Form M-8379. Form M-8379 may be filed only if the non-debtor spouse had income, withholding and or estimated tax payments in the year of the overpayment.

Any questions concerning the application of a refund or requests for Form M-8379 should be addressed in writing to: Massachusetts Department of Revenue, P.O. Box 7100, Boston, MA 02204.

Written testimony for Miscellaneous tax provisions heard on July 11, 12, and 13, 1995
Committee on Ways and Means, U.S. House of Representatives

H. Compliance
1. Allow offset of State tax liability with overpayments of Federal tax

As the Committee reviews the numerous individual tax provisions "to clean up the code", we urge the adoption of provisions which would authorize the offset of federal tax overpayments to satisfy state tax debts, as was introduced in H.R. 757 by Representative Jacobs and Representative McCrery.

Minnesota is one of 31 states and the District of Columbia that offsets state income tax refunds to satisfy federal income tax debts. The program generates in excess of $50 million annually for the federal treasury. In our state alone, the program resulted in $3.9 million of federal tax collections in 1994. Our state as well as the other states voluntarily participate in this program and we do not charge any fee to the federal government for doing so. Unfortunately, this offsetting of delinquent tax debts is not reciprocated by the federal government. Currently, the federal government lacks the statutory authority to offset federal tax refunds to satisfy delinquent state tax debts. The adoption of these provisions would provide that statutory authority.

According to estimates by the Federation of Tax Administrators, the offset of federal tax refunds could increase state revenues by $150-$200 million per year at the outset. This increased state revenue would come from those noncomplying taxpayers who have not honored their state tax obligations. This would be a tremendous debt collection tool for the states as it is now for the federal government.

The Minnesota Department of Revenue has actively sought ways to become more efficient in providing quality services in order to achieve our mission of achieving compliance with the tax laws. We have focused on increasing cooperative working relationships among federal, state and local governments as one important way to achieve these goals. By partnering with other government entities we are able to provide a government that works better and costs less.

Some successful joint ventures undertaken by the our agency and the Internal Revenue Service have included:

- Coordinating community-based volunteer tax assistance program that each year prepares federal and state returns for some 60,000 Minnesotans who cannot afford professional tax help.

- Working with the Minnesota Alliance for Children, a network of grassroots organizations and social service agencies, to help eligible low- and moderate-income workers claim the federal Earned Income Credit and the Minnesota Working Family Credit.

- Publishing a free comprehensive guidebook for anyone starting a business in Minnesota, conducting an ongoing series of small business tax workshops, and cosponsoring educational seminars for professional tax preparers.

By adopting this provision, it would help continue the successful partnerships between our state and the Internal Revenue Service that has been developed in order to provide better taxpayer service and a reduction of costs.

We urge the adoption of this provision to allow the offset of state tax liabilities with the federal tax overpayments. This is an important collection tool against delinquent taxpayers as well as a symbol of reciprocity and of a continuing successful partnering between the states and the federal government.

Respectfully submitted by:

Mr. Phillip D. Moseley
Chief of Staff
Committee on Ways and Means
U.S. House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20515

Dear Mr. Moseley:

House Resolution 757, introduced by Representatives Andrew Jacobs, Jim McCrery and Jim Moran in February 1995 is an important piece of legislation for Missouri and deserves your support. This legislation, if passed, would permit the states to recover delinquent state taxes through the offset of federal tax refunds.

Currently, the Internal Revenue Service can "levy on" state income tax refunds to satisfy federal tax debts. Thirty-one states, including Missouri, and the District of Columbia voluntarily allow the IRS to participate in their refund offset programs. The states are generally not compensated for performing these offsets, and in 1993, approximately $61 million in state tax refunds were offset to satisfy federal tax debts. House Resolution 757 would provide reciprocal authority for the states to offset federal tax refund dollars to satisfy state tax debts.

House Resolution 757 would ensure that federal refunds first be applied to federal tax debts, to debts due other federal agencies and to child support obligations. Only the refund remaining after satisfaction of these debts could be applied to the state tax debt. In addition, states would be required to notify taxpayers in writing that their federal refunds could be offset to satisfy the state tax debt. These offsets could only occur after all administrative remedies had been exhausted.

We urge your support of House Resolution 757 as an effective method for collecting delinquent tax debts owed the states. The Federation of Tax Administrators estimates that the states would initially collect as much as $200 million from the federal offset program, and slightly less in succeeding years. The Joint Committee on Taxation also estimates that an additional $9 million in federal revenues would be collected from the offset of state tax refunds in the states that do not currently participate in the IRS offset program.

I strongly encourage your support of this significant legislation. The State of Missouri has for many years, voluntarily and without remuneration, provided debt offset services for the Internal Revenue Service. A reciprocal program would help the Missouri Department of Revenue collect delinquent taxes due the state. If you have any questions about House Resolution 757 or the federal debt offset program, please feel free to contact me.

Sincerely,

Janette M. Lohman

Secretary of Revenue

July 27, 1995

Phillip D. Moseley, Chief of Staff
Committee On Ways & Means
US House of Representatives
1102 Longworth House Office Building
Washington, DC 20515

Dear Mr. Moseley:

I am writing to provide you some background on H.R. 757 which establishes a program to offset federal income tax refunds to satisfy legally enforceable, past due state tax debts. This legislation was introduced by Representative Andrew Jacobs and currently is co-sponsored by Rep. Jim McCrery of Louisiana and Rep. Jim Moran of Virginia. H.R. 757 would be extremely beneficial to the State of Wisconsin and to states generally.

Currently, 31 states and the District of Columbia offset state income tax refunds to satisfy federal income tax debts. The program generates roughly $61 million for the federal treasury. Wisconsin currently does not offset state refunds for the federal government. Among the reasons we do not do so is because the federal government has not offered a reciprocal program.

The federal government lacks the statutory authority to offset federal tax refunds to satisfy delinquent state tax debts. H.R. 757 would provide such authority. Such legislation could increase state revenues by $150-$200 million per year at the outset, according to estimates by the Federation of Tax Administrators, an association of state revenue agencies. The program should also increase federal revenues by approximately $8 million over a five-year period, according to the Joint Committee on Taxation, because all income tax states would be expected to participate in the program for offsetting state refunds to meet federal tax obligations.

The proposed legislation would allow the Secretary of the Treasury to establish an offset program for legally enforceable, past due state tax obligations similar to that established for debts due other federal agencies. State tax debts would not be satisfied from an offset until all federal tax debts, both types of past due child support and debts due other federal agencies were satisfied. As with other federal agencies, states would be required to notify taxpayers of the obligation and that such debt will be referred to the IRS for offset if not satisfied in 60 days. The Secretary would be authorized to charge the states for the offset. The legislation would also amend IRC § 1603 to permit the disclosure of information regarding the offset to state tax agencies when necessary.

Thank you for your kind consideration of this matter. Please feel free to call me if you would like to discuss it further or if I may be of assistance to you on any other matter.

Sincerely,

Mark D. Bugher
Secretary of Revenue

TESTIMONY OF THE AMERICAN LAND TITLE ASSOCIATION AND THE AMERICAN ESCROW ASSOCIATION

I. Present Law

The American Land Title Association* and the American Escrow Association** appreciate the opportunity to comment on the repeal of the information reporting requirement on real estate brokers or reporting persons. Information reporting on real estate transactions under I.R.C. Sec. 6045 (e) has been part of the federal tax law since 1986. In general, under the law, the person handling a real estate closing, such as a title or escrow closing/settlement agent, is required to collect, store, and report:

(a) selected financial information on the transaction including the gross proceeds and, effective in 1992, the real property tax proration amounts, and

(b) the Taxpayer's I.D. number (Taxpayer Identification Number or TIN), on which the income from the sale will be filed with the I.R.S.

Virtually all residential sales and exchanges of real estate are subject to the reporting requirement under current Treasury regulations on IRS prescribed Form 1099-S. The term "reporting" includes filing the information in a prescribed format and manner with the IRS and furnishing a copy of that information to the taxpayer.

As the reporting requirement reaches its ten year point, we believe the law has not shown a sufficient level of usefulness to the government compared to the burdens on individual persons required to report that information on Form 1099-S.

First, we contend that there has been no *in terrorem* effect from 1099-S reporting. Individual taxpayers are not Filing 2119s, on which they are required to report sales of principal residences, with any measurably greater frequency than before the 1099-S requirement was imposed on tax reporting persons. Second, IRS does not appear to use the information provided on Form 1099-S on a widespread basis, and in any case, can obtain the information provided on Form 1099-S by other means.

Limited IRS use should be balanced against industry burdens which include unique problems such as (1) an effective prohibition on cost recovery in some states where insurance rates are regulated, and (2) the burden involved in the cost of paying penalties for incorrect information provided by customers with whom the person filing the return has no continuing customer relationship.

Consequently, we hope the Committee would take positive action and consider repeal of the reporting requirement. The critical elements which support this position follow.

II. Rationale for Reporting Requirement

It is our understanding that a major reason for the justification of the 1099-S reporting requirement when proposed in 1986 was underreporting by individual taxpayers of the proceeds from residential sales of real estate, and therefore the taxable income from those sales. The IRS suspected that a significant number of taxpayers with taxable principal residence sales were not notifying the IRS that they had a taxable gain. Therefore, it was assumed that a significant amount of lost tax revenue was at stake. An additional information reporting provision requiring real estate reporting persons to report real property tax proration amounts to the IRS was added in 1992. These real property tax proration amounts are an adjustment made at the time of a real estate closing, to take into account a net payment made by the buyer to the seller of a property to compensate the seller for real property tax payments already made for the time when the buyer will be in possession of a property. It was originally contended that these amounts were

---

* The American Land Title Association membership is composed of 2,000 title insurance companies, their agents, independent abstracters and attorneys who search, examine, and insure land titles to protect owners and mortgage lenders against losses from defects in titles. These firms and individuals employ nearly 100,000 individuals and operate in every county in the country.

** The American Escrow Association consists of over 5,000 individuals whose principal business activity is handling real estate transactions, in a limited agency role as escrow settlement agents.

not included in the seller's deduction for real property taxes.

It was originally projected that the imposition of all taxpayer compliance reporting in the 1986 Tax Act would total $3.4 billion over a five year period. The increased compliance associated with 1099-S was not included as a separate item in the Committee report, but is some subset of that increase. Real property tax proration revenue was even more minimal.

It is important to note that the primary assumptions made were that the 1099-S reporting requirements would result in an increase in individual taxpayer compliance. Consequently, one would expect that any revenue increase would be reflected in a corresponding increase in the number of Form 2119s filed. All individual taxpayers are supposed to file Form 2119, "Sale of Your Home," with the IRS under requirements pertaining to Sec. 1034 of the I.R.C. The IRS uses the information on Form 2119 to obtain sale information on all home sales not just those involving capital gains. Sec. 1034(j) of the IRC recognizes the IRS need for the information on this form with a special extended statute of limitations period for these sales. Normally, a taxpayer selling a principal residence has two years to "roll over" their sales proceeds tax-free into a new principal residence. Therefore, the IRS generally has a three year period to examine the transaction from the time the transaction is reported by the taxpayer This gives the IRS special protection from missing taxpayer information for these types of sales. Therefore, if the presence of the 1099-S produced a significant degree of increase in the number of Form 2119s filed, a distinct utility to the information return could be seen.

However, based on tax return data, the opposite seems to have occurred. As can be seen in the table below, the number of Forms 2119 filed by individual taxpayers relative to sales, appears to show an erratic pattern, and no measurable increase since enactment of the reporting requirement in 1986.

Historic Data on Form 2119 Filings
(Forms 2119 filed as a percent of actual existing home sales)

1993	1992	1991	1990	1989	1988	1987
41%	36%	40%	43%	n/a	53%	47%

1986	1985	1984	1983	1982	1981
45%	45%	41%	30%	65%	58%

Source: Existing Home Sales, National Association of Realtors

Therefore, we strongly suspect that the amount of revenue actually realized by 1099-S reporting is minimal. We also contend that the IRS has alternative sources for the information generated by the 1099-S. In fact, the IRS actually can obtain the information on gross proceeds provided in the 1099-S through many other means.

III. IRS Use of and Alternative Sources of Information

The IRS will almost always have obvious clues anyway that the sale has occurred before the two-year rollover period has expired. Second, the IRS will not have sufficient transactional information from the 1099-S alone to have any real picture of the overall transactional setting. Thus, the IRS case against the taxpayer will be labor-intensive regardless of the 1099-S filing. Perhaps as a result of these constraints, the IRS also does not appear to use the information provided on the 1099-S on a wide-spread basis.

First, certain obvious changes from one year's tax return to the next, such as change of filing address, can assist the IRS in determining that a real estate sale may have occurred whether or not a Form 1099-S is filed. Second, the IRS can use migration flow data information obtained and collated by the Census Bureau to assess possible sales. Third, although the 1099-S submission has not resulted in increased filing of Form 2119, the IRS can still obtain basic information provided from those forms that are filed.

The IRS may use the information provided on a 1099-S in an individual audit. However, IRS pursuit of cases (encouraging taxpayers to pay taxes on capital gains on home sales) are often labor-intensive for the Service even with the 1099-S information filed. This is because the

1099-S provides only gross proceeds and real property tax proration amount information. If a Form 2119 is not filed with the taxpayer's individual return, the IRS has to fill in a large amount of information to complete the tax picture, particularly to determine the proper tax basis to calculate any gain on the sale. For instance, the current tax basis may well depend on a series of prior home sales by the taxpayer, over a period of many, many years. Further, the taxpayer may have used the rollover treatment previously in many of these sales. Consequently, the IRS will need substantial additional information that must be provided by the taxpayer to effectively use the information provided on Form 1099-S.

In addition, the information reporting requirement provided on real property tax proration amounts on the 1099-S form is a number calculated only for the purpose of the real estate closing. It can not be matched to any number independently calculated or filed with any other public entity, including those that include real property payments. Therefore, it can not even be used by the IRS in any meaningful way.

As noted above, there is no information on the 1099-S providing more than a minimal starting point in determining the tax result. This is unlike the reporting of dividends and interest the reporting of which (e.g., on Forms 1099-INT and -DIV) can be tied directly to dollar amounts set forth (or omitted) on the taxpayer's individual returns. It is also unlike stock and bond sales, reported on Form 1099-B, which, even though no basis information is reported for them either, are likely to be much more numerous and in smaller dollar amounts than real estate sales for any particular year. Thus, the argument that a taxpayer may forget an occasional sale is a compelling point with sale of stocks and bonds, but not with real estate transactions.

IV. Industry Burden

The industry has incurred substantial cost in implementing 1099-S reporting. These costs include not only the cost of reporting, but also the substantial penalty costs that are imposed for incorrect filings.

A real estate reporting person filing Form 1099-S faces numerous regulatory requirements on the format of the information that must be reported to IRS and the manner in which it must be filed. These requirements obviously reflect a need to have information filed in a way compatible with IRS systems. Large companies have implemented separate individual systems to institute 1099-S reporting. Small companies, including practitioners who do only a few closings a year, must of necessity use a tax reporting service to send information to the IRS. Some services charge $35.00 a transaction.

The Technical and Miscellaneous Revenue Act of 1988 (P.L.- 100-647) included a provision (Sec. 1015(e)(2)(A), I.R.C. Sec. 6045(e)(3)), prohibiting a separate charge for the preparation of Form 1099-S in connection with a closing. That law became effective in November, 1988.

The 1988 change has presented significant problems in terms of the real estate closing industry's abilities to absorb these costs. Many states regulate title insurance rates and charges by requiring that they be filed with state insurance commissioners for review and\or approval. These regulations can be very far-reaching, extending not only to premium rates, but to specific fees such as settlement charges. If any fee is to be increased to reflect additional expense, insurers are often required to justify the increase by enumerating included cost factors.

Unfortunately, this rate and charge setting procedure, itself a device for consumer protection, can be readily misinterpreted to infer that the fee for a particular closing service, determined in accordance with applicable regulation, violates the prohibition of Sec. 6045(e)(3) because the cost of compliance with the reporting requirement was an enumerated component in the regulatory review process.

There is now a legal dispute about the precise meaning of Sec. 6045(e)(3). It is being argued that this provision can not be interpreted to allow the cost of real estate reporting to be recovered as one of the items under a combined charge for related services. In Pennsylvania, that inference has already been proffered in an enterprising lawsuit, Burns et al. v. Commonwealth Land Title Insurance Company, et al., D.C. (Eastern District of Pennsylvania), C.A. No 91-1812, where title insurers and agents have been named as defendants. While the existing statutory language of the I.R.C. appears clear on its face, regulated providers of real estate

closing services are facing substantial litigation costs in the absence of language clarifying the intention of Sec. 6045(e)(3).

Though clarification of I.R.C. Sec. 6045(e)(3) regarding the separate charge was agreed to by Congress as Sec. 7616 of the Conference Report on HR 11, the "Revenue Act of 1992," President Bush vetoed the bill. Therefore, the industry is still, to this day, facing litigation costs and is finding it necessary to establish that while 6045(e)(3) prohibits separate charges for 1099-S filings, it does not prohibit combined charges or other means of recovering compliance costs.

With the exception of Sec. 6045(e)(3), we are unaware of any additional instances where private parties believe they have authority to enforce the Internal Revenue Code. We hope that the Committee considers that the current litigation is obviously financially burdensome, and that proliferation of this type of action on a national level, covering the 5 to 7 million annual real estate transactions would present a financially devastating picture. For our industries, this litigation is one precedent-setting instance which supports the need for repeal.

Real estate reporting persons are subject to penalties under Secs. 6721-24 for inaccurate reporting of information to the IRS. As a result of the uniform statutory reforms to the civil penalty system in 1989, the IRS submits 1099-S filers to the same automated regimes for penalties applicable to other information return filers. This penalty regime is applicable even though the 1099-S filer usually has limited contact with the taxpayer in question. A taxpayer may well give a 1099-S filer a social security number that does not match to IRS files. The 1099-S filer thus faces two levels of cost at two separate times. First, the filer must complete and transmit the original 1099-S form. Second, several years later the filer must respond to IRS inquires and penalties for a mismatched taxpayer identification number. In the meantime, has the IRS actually used very many of even just the 1099-S forms filed that had no matching errors to determine whether those taxpayers properly reported the transactions? There is no evidence that such is the case.

These penalties are set at $50.00 per incorrect filing. The penalties imposed by the IRS can be substantial for companies who perform a significant number of closings in the United States, annually approaching several hundred thousand dollars. These companies also have to face the possibility that (1) some individuals may have provided them with incorrect TINS, and (2) there may be some margin of clerical error inherent in the volume of transactions filed.

This assumption that there may be some incorrect TINS, is compounded by the predicament that there is no continuing customer relationship between a closing agent and a seller of real estate. Consequently, our companies often face the dilemma that it may be cheaper to pay a fine to the IRS, as opposed to committing staff time to retrieve warehoused files and attempt to track down the seller of a property to check a TIN.

****

We believe that the Congress should require substantial evidence to justify retaining tax information return requirements which, standing alone, contribute minimally to a tax determination. The major example of this is Form 1099-S. It would seem that some alternative means to the current statutory system could be found to alert taxpayers to the importance of reporting their own real estate transactions and removing the burdens on filers for information that is, at best, of marginal use to the government.

We would be pleased to work with the Committee to arrive at such a different system.

ARCTIC SLOPE REGIONAL CORPORATION

Arctic Slope Regional Corporation ("ASRC") appreciates the opportunity to present this statement for the record pertaining to hearings on miscellaneous tax proposals.

ASRC is the Native Corporation established by the Inupiat Eskimo people of Alaska's North Slope pursuant to the Alaska Native Claims Settlement Act of 1971 ("ANCSA"). ASRC, along with 12 other regional corporations and numerous village corporations created by ANCSA, received title to land and a monetary compensation as settlement for the taking of Native Lands. The corporations were given a mandate to use those lands and money to promote the economic and social betterment of over 7,000 shareholders.

Specifically, ASRC wishes to comment on, and indicate its strong support for, the proposal to provide for taxation of Alaska Natives when payments from Settlement Trusts are actually made to them and not when such Settlement Trusts are created.

ANCSA provided that the corporate vehicle would be the primary entity to implement the goal of settling land and other claims of Alaska Natives. Subsequently, it was determined that other Native-controlled entities might provide increased flexibility and protections to preserve and appropriately disburse the Native assets. Accordingly, the 1987 amendments to ANCSA provided for the establishment of Settlement Trusts "to promote the health, education and welfare of its beneficiaries and preserve the heritage and culture of Natives". By statute, the Settlement Trust cannot operate as a business. While the original transfer of land and cash to Alaska Native Corporations was specified as a non-taxable event under ANCSA, the Settlement Trust provision is silent on the tax treatment of the conveyance of assets to Settlement Trusts.

This opportunity, created by the U.S. Congress, has been effectively thwarted by adverse Internal Revenue Service ("IRS") rulings. The IRS has ruled that if a Native Corporation, which has earnings and profits, conveys assets to a Settlement Trust, its shareholder-beneficiaries will be taxed as if they received a dividend. The IRS rulings require payment of a tax by the shareholder-beneficiaries before (usually several years before) they have actually received a distribution from the Settlement Trust. Put simply, in our case, the IRS is requiring Alaska Natives, with very few resources, to put up money in the form of prepaid tax payments, in order to receive monthly amounts of $125 to help them live in retirement. In reality, Alaska Natives would have to put up several thousand dollars to qualify for the payments and, if they die prematurely, or do not survive through their life expectancy, will never recover even the tax payments they have made.

Attached are case studies compiled to demonstrate the patent unfairness of this position. These case studies are representative of the elders of ASRC. For example, in Case A, if a trust is created this year and a male 62 years of age is a beneficiary, using the assumptions set forth in the paper, he would have to prepay taxes, in 1995, in the amount of $5,094, even though he would not begin to receive benefits until 1998 (when he is 65). It would take him until the year 2001 to recover his prepaid taxes and actually receive a benefit from the fund. And, to indicate how punitive the application of this theory is, if he dies in 1997, he will not have received a cent, yet paid $5,094 in taxes.

We are not rich people. It is conceivable that many potential beneficiaries would have to waive such benefits because they cannot raise the funds necessary to prepay the taxes. This is certainly not the result Congress intended when it passed the Settlement Trust amendments.

Accordingly, we are suggest a simple legislative cure: provide for taxation of the Alaska Natives when trust payments are actually made to them and not when the Settlement Trust is created. There is no revenue loss since this is only a question of the timing of the taxation. Our proposed language is as follows:

> Section 39 of the Alaska Natives Claims Settlement Act (43 U.S.C. §1629(e)) is amended to add the following new paragraph:
>
>> (d) A holder of Settlement Common Stock who is a beneficiary of a Settlement Trust created under this section shall not be subject to taxation with respect to assets conveyed to a Settlement Trust or any income earned by a Settlement Trust until a distribution of assets or income is actually received by such beneficiary.

The above provision would clarify that a Native Corporation's shareholders are not subject to tax under any theory (such as that the shareholders received or constructively received a dividend or a taxable economic benefit) until they have actually received a distribution from the Settlement Trust. The provision's treatment of shareholder tax liability would not adversely affect IRS rulings holding that, with regard to the Native Corporation, the conveyance of assets to the trust is a non-taxable event except for the conveyance of appreciated property and that Settlement Trust grantors will not be treated as owners of Settlement Trusts under Section 675 of the Internal Revenue code if their powers are appropriately limited.

ASRC would like the opportunity to create an Elder's Trust under the protections that the 1987 amendments provide. The burden on our elder shareholders under the current law would be impossible to bear. The Inupiat culture emphasizes the importance of our elders to our future and their contributions to our past. We would like to provide to them a small measure of financial security which was not provided for in their subsistence lifestyle. In conclusion, we hope this committee will see fit to rectify this problem which impacts so negatively on our esteemed elders.

PRACTICAL APPLICATION OF THE INTERNAL REVENUE SERVICE'S SETTLEMENT TRUST RULINGS TO RETIREES

Listed below are four hypothetical illustrations of the tax effect of the Internal Revenue Service's ruling that beneficiaries of a non-grantor trust are immediately liable for taxes on the actuarial estimate of benefits they might receive. These illustrations are based on the following assumptions:

- A non-grantor version of an Elders Trust, receiving the full benefits and protections of the Settlement Trust provision of the Alaska Native Claims Settlement Act, is created in 1995 that provides the same benefits and eligibility criteria as a grantor trust (not having such benefits and protections) that was in fact created by an Alaska Native Corporation.

- The actuarial benefit is calculated using standard life expectancy tables, based on a 1986 DHHS study, which is the most widely accepted table in use in the insurance industry today.

- The marginal tax rate is 28%.

- The discount rate is 5.0%, a number within a reasonable range of the likely return available to a shareholder on a relatively safe, long-term investment.

The computer printouts supporting the four case studies are attached.

The four illustrations reflect the actuarial benefit of the Elders Trust to a male and female at ages 62 and 65 at the time the trust is funded. These case studies are representative of the beneficiaries of the trust at that age. In this Elders Trust, shareholders become eligible for benefits at age 65, but must reach age 65 by 1998. The benefits are $125 per month in the first year of eligibility and increase by 4% a year thereafter.

Case A. Case A concerns a hypothetical male who is age 62 when the trust is created in 1995. He would not become eligible for benefits until 1998. Nonetheless, he would receive an actuarially estimated benefit of $18,000 and pay taxes on that amount of $5,094 in 1995. It would take him until the year 2001 (or seven years) to receive a benefit (in present value terms) equal to the taxes he paid in 1995.

Case B. Case B is the same as Case A except the assumed beneficiary is female. Her life expectancy is longer and thus her actuarial benefit is larger. Her taxes would be $6,333 in 1995 and it would take her until 2002 to recover her taxes.

Case C. Case C is a male, age 65 at the time the program is created. His taxes would be $6,261 in 1995 and it would take him until 1999 to recover his taxes.

Case D. Case D is a female, age 65 at the time the program is created. Her taxes would be $7,682 in 1995 and it would take her until the year 2000 to recover her taxes.

Shareholders who outlive their projected life expectancy will ultimately receive more in the way of benefits than the amount on which they paid taxes. It will take many years, however, for the balance to shift in their favor. In the meantime, these shareholders, most of whom can ill-afford the required taxes, would be forced to advance thousands of dollars to the government in the hope of living long enough to recoup them.

Shareholders who fail to live as long as projected will never receive all of the benefits for which they paid taxes. In addition to being perpetually overtaxed, they will also be forced to pay their excessive taxes well in advance of getting whatever benefits they do receive.

Joint Statement in Support of a Proposed Amendment
to
Section 39 of the Alaska Native Claims Settlement Act (ANSCA)
Submitted by
The Old Harbor Native Corporation and Akhiok-Kaguyak, Inc.
to the Ways & Means Committee of the U.S. House of Representatives
July 27, 1995

The Old Harbor Native Corporation (OHNC) and Akhiok-Kaguyak, Inc. (AKI), both, Native village corporations established under the authority of the Alaska Native Claims Settlement Act (ANCSA), submit these comments for the record and for consideration by the Committee on Ways and Means in support of the Settlement Trust amendment pending before the Committee.

This statement is in response to the request by the Ways and Means Committee of the U.S. House of Representatives for comments on the legislative provision pending before the Committee which would "provide for taxation of Alaska Natives when payments from a settlement Trust are actually made to them and not when the settlement trust is created." Joint Committee on Taxation, *Description of Miscellaneous Tax Proposals* (JCS-19-95) July 10, 1995, Page 45.

The purpose of a Settlement Trust under Section 39 of ANSCA which established a "Settlement Trust Option" for Shareholders of Native corporations incorporated pursuant to the authority of the (ANCSA) is "to promote the health, education and welfare of its beneficiaries and preserve the heritage and culture of Natives."

In a joint submission of an "Analysis and Explanation" by Chairman Morris K. Udall and ranking Republican Member Don Young during the House consideration of the ANSCA amendments legislation, which included the Settlement Trust provisions, the intended purposes of Settlement Trusts were further explained and delineated in the CONGRESSIONAL RECORD on December 2, 1987 (at H 11936-11937):

> "Settlement Trusts are expected to serve two principal functions. They are intended to be permanent, Native-oriented institutions which shall hold and manage, in perpetuity, any historic or culturally significant surface lands, sites, cemeteries, traditional use areas, or monuments, for the benefit of the beneficiary population. It shall manage any other surface lands conveyed or culturally significant assets in like fashion. The Trusts will require income generated from assets conveyed to it, or other sources, to carry out these responsibilities.
>
> "The other prime function relates to the health, education and economic welfare of its beneficiaries. Trusts may receive conveyances of securities, cash, or other assets which it must manage prudently, and passively, in the interests of its beneficiaries, and in conformance with the terms and conditions set forth in the trust instrument and this Act. At the discretion of the trustees, the income generated from these assets, and, if permitted, Trust assets themselves can be used to provide scholarships and other educational benefits. Assets can be used to improve health care delivery or facilities, pay for needed health care and otherwise be devoted to bettering the health of the beneficiary Native community. Finally, the Trust assets may be used to bolster the economic well-being of the beneficiaries. Trust distributions may be used to fight poverty, provide food, shelter and clothing, and serve comparable economic welfare purposes. Additionally, cash distributions of trust income may be made on an across-the-board basis to the beneficiary population as part of the economic welfare function."

Settlement Trusts are a means of carrying out the goals of ANSCA to provide for a just settlement with Alaska Natives and a means of continued economic support through the investment and management of the assets given to the Natives in settlement of their aboriginal

land claims. As contemplated in the provisions which enacted Settlement Trusts, their purpose was not to conduct an active trade or business, but was to provide a secure holding for lands and investments that can be protected for generations to come.

The proposed amendment recognizes the differences that arise in implementing the intent of ANSCA with the Internal Revenue Code (IRC). The amendment provides that the mere transfer of funds to the Settlement Trust will not give rise to any current taxation at the shareholder's last beneficiary level. Under current law, it is possible that distributions or monies set aside in a Settlement Trust could be currently taxable to the shareholders. This would create a situation in which a tax liability existed without any funds being provided to the individual liable for the tax. We believe this result was not intended when Congress enacted the Settlement Trust provisions in 1987. Currently, some Native corporations have the ability of transferring funds to Settlement Trusts without incurring any current tax liability. This is due to the fact that these companies have a deficit in their earnings and profits. Other companies, however, are prohibited from making such a transfer for the benefit of their shareholders because they have an accumulation of earnings and profits already. The enactment of the Settlement Trust provisions was not intended to discriminate against companies that have done what ANSCA envisioned that they should do and generate some economic benefit (earnings) from their lands and other assets for their Native shareholders.

There is a fundamental inequity and deficiency currently as the law is being carried out. As it is now, if Native land entitlement is monetized and the proceeds placed in a Settlement Trust and that corporation had earnings and profits, there would be an immediate tax liability created for each shareholder of the corporation. The effect of this is to severely devalue the lands (and its cash equivalent) which were used in settlement by the people of the United States of aboriginal Native claims. Aside from the patent unfairness of such a result, it was not the intent of the Congress in ANSCA nor in amendments to the Act. This issue has become more relevant and important as more Native corporations, including our own, have begun to look (or have seriously looked) at the Settlement Trust as an option for helping to provide some modest long-term economic benefit to Native Shareholders.

The intent of the amendment is to allow the transfer to a Settlement Trust not to be treated as emanating from the earnings and profits of the corporation. Without this provision, a substantial portion of the assets of a Native Village Corporation will be taxed twice before it has ever generated any income whatsoever for its shareholders: once when it is taxed on any gain realized while the asset was in the corporation and again when these assets are transferred to the Settlement Trust. In addition to the unfairness of such a result and its nature of undermining the goals of ANCSA, if not corrected, the problem addressed by the amendment will continue to frustrate the establishment of and reliance on settlement trusts. Many companies simply will not be able to afford the decrease in corporate/trust assets on a combined basis by creating a tax liability to their shareholders. Accordingly, many Settlement Trusts that could be established for the benefit of current and future generations will not materialize or will not be augmented unless there is some remedy to this flaw in the Settlement Trust is corrected.

It does not appear that there will be any adverse revenue impact from this provision since among other reasons, without the provision successful Native companies will be severely restricted from establishing Settlement Trusts and many will simply never be created. While if such Trusts are established there will be a tax revenue stream generated in perpetuity including the ancillary state and local tax benefit generated by such a permanent fund. In fact, our analysis indicates that with adoption of the amendment the tax revenues over time, will generate federal, state and local tax revenues in excess of those generated if the Settlement Trusts were not created and the funds simply distributed, which is a likely alternative to establishing a Settlement Trust.

In addition to the pending amendment, we urge that language be included which would recognize the reporting difficulties associated with the establishment of Settlement Trusts.

While simple in principle, the actual mechanics of providing the information and reporting in a timely manner to beneficiaries of the Settlement Trust become very complicated.

This complication is further aggravated by the fact that the majority of beneficiaries have had relatively low income levels. Accordingly, their tax returns and their filings have been relatively straightforward. The establishment of Settlement Trusts and the taxation of distributions to these individuals creates a need for timely information, reporting and direction. Additionally, many of the shareholders of Village Corporations in the coastal communities make a living from commercial fishing. As a result they have the ability of avoiding estimated tax payment penalties, providing they file their tax returns by March 1. This, again, creates a very short time frame to file a complete and accurate Trust tax return and distribute information Forms K-1 to a substantial base of beneficiaries. This base can exceed 500 or 1,000 and beyond beneficiaries, depending on the size of a village corporation and the number of such corporations who may establish Settlement Trusts under the law. A regional corporation could well be in excess of 5,000 shareholders/beneficiaries who would be receiving information Forms K-1.

Currently, Section 645 of the IRC provides that trusts must be on a calendar year. By allowing an earlier year-end, Settlement Trusts will be permitted to distribute important tax reporting information to the beneficiaries early and allow for additional time in order to ensure that the beneficiaries have adequate information and assistance in filing correct and complete income tax returns. In this way, the government is assisted by an attempt to avoid reporting discrepancies which can arise when the information is rushed due to year-end time constraints. The revenue impact of this provision should be a positive one since it will enhance the ability of the individual and the government to ensure that reporting is accurate and all taxes are reported and paid in a timely manner. Some income may remain in the Trust for inflation-proofing and to recognize an expanding base of beneficiaries. This net retainage would be subject to tax at the Trust level. A deferral on the recognition of this income of up to three months would provide for a benefit to the Trust only to the extent that the tax on the income in the stub period exceeded the estimated payment responsibilities of the Trust. Since the Trust will not conduct an active trade or business, its investment income is anticipated to be relatively even throughout the year. Accordingly, any deferral should not give rise to a major savings or difference between the taxes due on the income and the estimated taxes required.

Settlement Trusts provide a unique opportunity for Native corporations to help carry out the Congressional intent of ANSCA, by providing a firm and continuing economic base for shareholders/beneficiaries and avoiding one-time distributions to the shareholder community which would deplete the combined corporate/trust funds. Settlement Trusts have a potential of providing a much needed step in achieving continued economic independence for the Native community. The proposed amendment is necessary to encourage the establishment of these Trusts and to perform this function.

The language of the remedial provision submitted to the Committee by Chairman Don Young would cure most of the current deficiency in the settlement trust provision in ANCSA. As indicated earlier, OHNC and AKI urge that a reporting provision be added to enhance the ability of any Settlement Trust that is created to get information to beneficiaries of the Trust prior to the time tax returns are due. This provision, for many of the beneficiaries who live in remote locations in Alaska and many of whom live close to the poverty line, will greatly enhance the ability of the individuals to accurately report any dividend from such Trust, and thereby help ensure full accounting and reporting in a timely manner.

We understand that there are other Alaska Native corporations which are supportive of this Settlement Trust amendment pending before the Committee.

We believe that there may be a better or more appropriate way to correct the problem in the current law. Both OHNC and AKI would look forward to the opportunity to discuss with representatives of the Committee the amendment and ideas about how it might be improved.

Thank you for this opportunity to present comments to the Committee on the amendment to the Alaska Native Claims Settlement Act regarding Settlement Trusts.

Enclosure to Statement by Old Harbor Native Corporation and Akhiok Kaguyak, Inc. on Settlement Trusts to Ways and Means Committee, U.S. House of Representatives

Settlement Trust Amendment to the Alaska Native Claims Settlement Act

Section 39 of the Alaska Native Claims Settlement Act (43 U.S.C.§1629e) is amended to add the following new subsections:

(d) A holder of Settlement Common Stock who is a beneficiary of a Settlement Trust created under this section shall not be subject to taxation with respect to assets conveyed to a Settlement Trust or any income earned by a Settlement Trust until a distribution of assets or income is actually received by such beneficiary.[1]

(e) With regard to Settlement Trusts, the taxable year shall be a permitted year, which, for purposes of this section, shall mean a taxable year ending on September 30, October 31, November 30, or December 31.[2]

---

[1] Language of legislative proposal referenced on page 45 of pamphlet entitled "Description of Miscellaneous Tax Proposals," Joint Committee on Taxation, (JCS-19-95), July 10, 1995.

[2] Supplemental reporting provision to facilitate accurate reporting of Settlement Trust beneficiary income.

'Pass to the Future'

SHAAN-SEET INC.

July 18, 1995

Via Telecopier

The Honorable Bill Archer
Chairman
Committee on Ways and Means
1102 Longworth Office Building
Washington, D.C. 20515 - 6348

Dear Mr. Chairman:

We are writing to provide you testimony upon two of the miscellaneous tax proposals for which public hearings were held on July 11-13, 1995[1]. Although we understand that at the present time oral testimony on these proposals has not been scheduled, we would welcome the chance to testify in person should that opportunity become available. In making this submission, it is our intent that this material be included in the written record of the hearing.

Shaan-Seet, Incorporated is the corporation organized under the Alaska Native Claims Settlement Act[2] for the Alaska natives residing in the Craig, Alaska area. Craig is located on the west side of Prince of Wales Island, which in turn is approximately 100 miles west of Ketchikan, Alaska. There were originally 317 enrollees to Shaan-Seet; in 1993 Congress directed that two more persons be enrolled to Shaan-Seet for a total of 319 enrollees. In view of various transfers of its stock over the years, Shaan-Seet now has approximately 400 shareholders.

---

[1] These proposals were described in the pamphlet issued by the Joint Committee on Taxation, *Description of Miscellaneous Tax Proposals* (JCS-19-95), July 10, 1995. For simplicity, we refer to this in the text simply as the "*Description of Miscellaneous Tax Proposals*".

Shaan-Seet is keenly interested in the both of the Alaska Native proposals set forth at pages 44-46 of the *Description of Miscellaneous Tax Proposals*. It is for this reason that we today submit this testimony. The remaining portions of this letter refer to the proposal on regular ANCSA distributions as "Taxation of ANCSA Distributions" and the proposal relative to Settlement Trusts as "Taxation on Contributions to Settlement Trusts".

Taxation of ANCSA Distributions. One of the principle purposes of the ANCSA legislation was to provide for "the real economic and social needs of Natives"[3] through the establishment of profit-making corporations. Like most Native corporations, Shaan-Seet makes every effort to provide significant economic assistance to its shareholders through regular distributions. The source for these distributions is the cash Shaan-Seet derives from its timber harvest operations. At present, taxation of these distributions is determined by the rules contained in § 301 of the Internal Revenue Code. That is, the distributions are taxable to the extent of current and accumulated earnings and profits; thereafter, further distributions are treated as a return of capital (and hence tax free) to the extent of a given shareholder's basis. Once the shareholder's basis is exceeded, any remaining distributions would be taxable as a capital gain item.

Although we can state these rules relatively simply, their actual application can be extraordinarily complex. This is particularly so given the fact that most ANCSA corporations (including Shaan-Seet) have received their ANCSA lands at various times, and may have a variety of different tax bases in their timber. This in turn may lead to considerably different tax impacts on our shareholders depending on which timber is cut at what times. Also, it is not unusual for Native corporations to eliminate their own taxable income (through carry over NOLs) but nonetheless to be paying taxable distributions (because NOLs do not enter into the calculation of current year earnings and profits).

As you can imagine, many of our shareholders are elderly or unemployed, and the tax impact on them can be substantial even in the lower marginal rate brackets. There is a very real concern, therefore, to minimize the tax impact on our distributions. The result,

[3] Section 2(b) of ANCSA, codified at 43 U.S.C. § 1601(b).

however, is that Shaan-Seet again like most Native corporations, must devote substantial resources each year in attempting to minimize its earnings and profits and in order to reduce taxation on our shareholders. This is expensive, time consuming, and distracts Shaan-Seet from what should be its real focus, developing profitable businesses.

ANCSA was (and is) Indian settlement legislation. The Alaska Natives received land and cash through their corporations in exchange for the settlement of their land claims against the United States. Most other modern day Indian settlement acts[4] have provisions which significantly reduce or eliminate the tax impact from the settlement. The drafters of ANCSA recognized this, and provisions were included which would reduce and/or eliminate taxation relative to the ANCSA settlement[5].

However, ANCSA as drafted did not go far enough ANCSA required Alaska Natives to incorporate to receive the ANCSA settlement, and Alaska Natives had no choice in the matter. As you know, Mr. Chairman, the corporate form carries with it a high potential tax cost in terms of double taxation (once to the corporation, once to the shareholders) and the possibility that distributions will nonetheless be taxable even though the corporation might have no profit. Had the corporate form not been employed, these anomalies would not be present. Shaan-Seet believes that it is a matter of fundamental fairness to reduce, to the greatest extent possible, these anomalies so that the original ANCSA settlement is not indirectly made taxable through a tax on distributions.

With this in mind, Mr. Chairman, Shaan-Seet declares its support for a provision such as that outlined in the *Description of Miscellaneous Tax Proposals* so that ANCSA distributions would not be taxable until such time as a certain minimum amount has been distributed.

Taxation on Contributions to Settlement Trusts. The ANCSA Amendments of 1987[6], amended ANCSA to permit Native Corporations to establish "Settlement Trusts" as an

---

[5] Section 21 of ANCSA, codified at 43 U.S.C. § 1620.

[6] Pub. L. No. 100-241, 101 Stat. 1788 (1988).

alternate vehicle to provide benefits for that Native Corporation's shareholders. As envisioned by the ANCSA Amendments, the Native Corporation would transfer assets directly to the Settlement Trust, and the Settlement Trust would thereafter provide benefits to the shareholders. One of the important driving forces behind the Settlement Trust provisions was that it would permit the shareholders to receive benefits[7] through the trust that they might not have been legally able to receive through the corporate form. Importantly, the enabling legislation[8] permits Settlement Trusts to last for a very long period of time, without regard to the rule against perpetuities, thereby enabling a Native corporation to use a Settlement Trust to provide for future generations of shareholders.

Unfortunately in a series of rulings[9] the IRS has repeatedly taken the position that transfers by a Native corporation into a settlement provide an indirect current benefit to the Native corporation's shareholders even though no cash is currently distributed. The result is the worst of all tax nightmares: possible "phantom" income. Put differently, the IRS ruling posture means that a distribution to the shareholders is being made at the time of the contribution to the trust. Leaving aside the horrendous effect of a phantom distribution of this sort, this problem is even more complex in that the IRS takes the position that the amount of the phantom income is to be determined based on all the events and circumstances which surround the beneficial interests in the trust. Thus, not only is the phantom income a problem, but it is not possible to say with any certain what the current economic value is for a given transfer into a settlement trust.

The result has been to leave transfers into settlement trusts in a somewhat uncertain area, especially for those corporations which have been highly successful and

---

[7] E.g., educational benefits. This is because educational benefits would not necessarily be actually provided to all corporate shareholders on a pro rata basis, thereby potentially violating the rule that all corporate shareholders must be treated equally.

[8] Section 39(b)(4), codified at 43 U.S.C. § 1629e(b)(4).

[9] Private Letter Ruling (PLR) 9516023 (January 17, 1995); PLR 9516022 (January 17, 1995); PLR 9502011 (September 29, 1994); PLR 943302 (May 19, 1994); PLR 9329026 (April 28, 1993); and PLR 9326019 (March 31, 1993). The IRS has also issued three other PLRs involving the same settlement trust, but these PLRs did not reach the deemed distribution issue: PLR 8947054 (November 24, 1989), as modified by PLR 9119037 (February 8, 1991) and PLR 9452019 (September 28, 1994).

therefore may have significant earnings and profits.[10] For all these reasons, Mr. Chairman, Shaan-Seet believes it is critical that Congress pass legislation which clarifies Congressional intent that contributions to a settlement trust do not produce disguised income to the shareholders/beneficiaries.

Summary

Thank you, Mr. Chairman, for the opportunity to provide you this testimony. Again, Shaan-Seet would very much appreciate the opportunity to present oral testimony upon these important tax issues for the Alaska Native community. Shaan-Seet's designated contact persons upon this legislation are Paul A. Lingley, Jr., and Thomas Abel. Their address and telephone number are Main Street, PO Box 690, Craig, Alaska, 99921 and (907)826-3251.

Please do not hesitate to contact us if we can provide further information.

Sincerely,

SHAAN-SEET, INCORPORATED

Thomas H. Abel

Re: **Miscellaneous Tax Proposals**
July 11 - 13, 1995 Public Hearings

Dear Mr. Chairman:

We are writing to provide you testimony upon one of the miscellaneous tax proposals for which public hearings were held on July 11-13, 1995[1]. Although we understand that at the present time oral testimony on these proposals has not been scheduled, we would welcome the chance to testify in person should that opportunity become available. In making this submission, it is our intent that this material be included in the written record of the hearing.

ABOUT SHEE ATIKA

---

[1] These proposals were described in the pamphlet issued by the Joint Committee on Taxation, *Description of Miscellaneous Tax Proposals* (JCS-19-95), July 10, 1995. For simplicity, we refer to this in the text simply as the "*Description of Miscellaneous Tax Proposals*".

Shee Atika, Incorporated is the corporation organized under the Alaska Native Claims Settlement Act[2] for the Alaska natives residing in the Sitka, Alaska area. Sitka is located on the west side of Baranof Island, which in turn is approximately 100 miles southwest of Juneau, Alaska. There were originally approximately 1850 enrollees to Shee Atika. In view of various transfers of its stock over the years, Shee Atika now has approximately 2300 shareholders.

THE PROPOSED LEGISLATION

Shee Atika understands that the Congress is considering a proposal under which neither contributions to nor earnings of "settlement trusts" established under ANCSA will be taxable to the trust's beneficiaries until actual distributions are made to those beneficiaries. Specifically, our comments are directed at language which we understand to have been proposed by Congressman Don Young of Alaska in his letter to you dated March 10, 1995. Congressman Young's proposal would amend section 39 of ANCSA (which authorizes Native corporations to create settlement trusts) to add a new subsection (d), as follows:

> *"(d) A holder of Settlement Common Stock who is a beneficiary of a Settlement Trust created under this section shall not be subject to taxation with respect to assets conveyed to a Settlement Trust or any income earned by a Settlement Trust until a distribution of assets or income is actually received by such beneficiary."*

Shee Atika is keenly interested in seeing this provision adopted, and it is for this reason that we today submit this testimony. We note further that the *Description of Miscellaneous Tax Proposals*, supra, at page 46, contains language regarding this same topic, i.e., not taxing settlement trust beneficiaries until amounts are actually distributed to them. Our testimony today assumes that the proposal set forth in the *Description of*

---

[2] Pub. L. No. 92-203, 85 Stat. 688 (December 18, 1971), codified at 43 U.S.C. § 1601 *et seq*. We refer in this letter to this Act as "ANSCA".

Miscellaneous Tax Proposals is the same as the proposal put forth by Congressman Young. If it is not, we wish there to be no mistake that Shee Atika wishes to see Congressman Young's proposal adopted rather than some other proposal[3].

OVERVIEW

One of the principle purposes of the ANCSA legislation was to provide for "the real economic and social needs of Natives"[4] through the establishment of profit-making corporations. Like most Native corporations, Shee Atika makes every effort to provide significant economic assistance to its shareholders through regular distributions.

The ANCSA Amendments of 1987[5], amended ANCSA to permit Native Corporations to establish "Settlement Trusts" as an alternate vehicle to provide benefits for that Native Corporation's shareholders. As envisioned by the ANCSA Amendments, the Native Corporation would transfer assets directly to the Settlement Trust, and the Settlement Trust would thereafter provide benefits to the shareholders. Importantly, the enabling legislation[6] permits Settlement Trusts to provide benefits for a very long period of time, without regard to the usual rule against perpetuities.[7] This enables a Native

---

[3] It is unclear to us in reading the proposal set forth in the *Description of Miscellaneous Tax Proposals* whether the solution therein described for the settlement trust tax problem is simply that a minimum amount can be distributed by an ANCSA corporation to its shareholders free of tax. We do not today comment upon this later proposal other than to indicate that we do not think it adequately addresses the problem we outline in our testimony relative to the taxation of the beneficiaries of settlement trusts. For this reason, we have focused on the specific language proposed by Congressman Young in his March 10 letter to you which we have quoted above

[4] Section 2(b) of ANCSA, codified at 43 U.S.C. § 1601(b).

[5] Pub. L. No. 100-241, 101 Stat. 1788 (1988).

[6] Section 39(b)(4), codified at 43 U.S.C. § 1629e(b)(4).

[7] The rule against perpetuities is a doctrine for English common also present in the law of most U.S. States that a trust cannot last longer than a certain period. This period is usually expressed in terms of a "life in being at the creation of trust, plus twenty-one years." But for the

corporation to use a Settlement Trust to provide for future generations of shareholders. Moreover, Settlement Trusts are especially desirable in that the assets of the Settlement Trust are insulated from the creditors of both the shareholder/beneficiaries and the corporation itself[8]. The enabling legislation also expressly prohibits a Settlement Trust from operating a business[9]. The assets which may be placed in a Settlement Trust include land received as a part of the ANCSA settlement.[10] This is especially significant given the intense regard the Native people have for their land.

The combination of all these provisions makes the Settlement Trust a particularly viable method to hold long term assets (such as ANCSA land) and to provide a safe, secure source of distributions for Native shareholders into the indefinite future.

ABOUT SHEE ATIKA'S SETTLEMENT TRUST

In 1993, Shee Atika's shareholders voted to establish a Settlement Trust which would distribute at least 75% of its annual net cash income pro rata to Shee Atika's shareholders[11]. In May, 1993, after the Internal Revenue Service issued a private ruling

ANCSA provision cited above, the rule would be a significant impediment to multi-generational trusts.

[8] Section 39(c)(5), codified at 43 U.S.C. § 1629e(c)(5).

[9] Section 39(b)(1)(A), codified at 43 U.S.C. § 1629e(b)(1)(A).

[10] Section 39(b)(1)(B), codified at 43 U.S.C. § 1629e(b)(1)(B). See also House Explanatory Statement, 133 Cong. Rec. H. 11933, reprinted in 1988-5 U.S. Code Cong. & Admin. News 3269, 3307 (1988). However, neither the "subsurface estate in land" nor "timber resources subject to [ANCSA] section 7(i)" may be conveyed to a settlement trust. See Section 39(a)(2), codified at 43 U.S.C. § 1629e(a)(2) (no subsurface estate) and Section 39(c)(2), codified at 43 U.S.C. § 1629e(c)(2) (no 7(i) timber). We refer generally to the land which was conveyed under ANCSA to the Native corporations as "ANCSA land".

[11] Prior to the year 2000, the 25% of annual net cash income which is not distributed is added to principal to grow the Settlement Trust. Beginning in the year 2000, the Trustees

to Shee Atika[12], Shee Atika placed approximately $24 million in the Settlement Trust. Later in 1993, Shee Atika placed a further $6 million in the Settlement Trust. Thus the initial contributions totaled $30 million, or about $15,000 per original Shee Atika shareholder. Semi-annual distributions of the net income began in 1994. The source for these distributions is the cash income Shee Atika derives from passive investment in stocks, bonds and other securities. None of Shee Atika's ANCSA land has to date been placed in the Settlement Trust.

IRS RULING POSITION

Although the private letter ruling Shee Atika received (see note 12 above) was generally favorable, it held that any contributions by Shee Atika into the Settlement Trust were deemed distributions to Shee Atika's shareholders. The stated rationale was that the shareholders were receiving an economic benefit from the transfer, even though the shareholders were not receiving cash directly and had no election to receive cash.[13] The ruling also indicated that because a distribution was deemed to occur to Shee Atika's shareholders, § 311(b) of the Tax Code would require gain recognition to the extent the property being contributed was appreciated at the time of transfer.

Although Shee Atika did not (and does not) agree with this ruling position by the IRS, Shee Atika had anticipated the negative ruling on this point and timed the contributions into the Settlement Trust to occur in a year (1993) in which Shee Atika did not anticipate much in the way of earnings and profits.[14] The result is that for Shee Atika,

---

of the Settlement Trust may choose, on a year by year basis, to also distribute some or this 25% of annual net cash income. Income not distributed in such years would be compounded.

[12] Private Letter Ruling ("PLR") 9329026 (April 28, 1993);

[13] See Sproull v. Commissioner, 16 T.C. 244 (1951), aff'd, 194 F.2d 541 (6th Cir. 1952); Rev. Rul. 67-203, 1967-1 C.B. 105.

[14] At present, taxation of distributions to Native corporation shareholders is determined by the rules contained in § 301 of the Internal Revenue Code. That is, the distributions are taxable to the extent of current and accumulated earnings and profits; thereafter, further distributions are treated as a return of capital (and hence tax free) to the

the initial contributions into the Settlement Trust did not produce taxable income to the shareholders.

However, because the Service's ruling position required Shee Atika to treat the contributions as a deemed distribution to our shareholders, albeit a non taxable one, Shee Atika had to provide Form 1099s to each of its shareholders reporting a "distribution" of approximately $15,000 in 1993 due solely to the contribution to the Settlement Trust. To say that this confused our shareholders is a massive understatement. We received numerous calls from our shareholders wanting to know what had happened to the $15,000 they never received.

The ruling to Shee Atika that contributions into a Settlement Trust are deemed distributions to Shee Atika's shareholders and potential § 311(b) gain recognition events is not unique, since the IRS has taken these positions in a series of rulings[15]. The result is the worst of all tax nightmares: possible "phantom" income to both the Native corporation and its shareholders. Leaving aside the disastrous effect of income without actual realized cash to pay the tax, this problem is made even more complex in that the amount of phantom income is to be determined based on all the events and circumstances which surround the beneficial interests in the trust. Thus, not only is the existence phantom income a problem, but also the amount of that phantom income, since it is not possible to say with any certainty what the current economic value is for a given transfer into a settlement trust.

---

extent of a given shareholder's basis. Once the shareholder's basis is exceeded, any remaining distributions would be taxable as a capital gain item.

[15] Private Letter Ruling (PLR) 9516023 (January 17, 1995); PLR 9516022 (January 17, 1995); PLR 9502011 (September 29, 1994); PLR 943302 (May 19, 1994); PLR 9329026 (April 28, 1993); and PLR 9326019 (March 31, 1993). The IRS has also issued three other PLRs involving the same settlement trust, but these PLRs did not reach the deemed distribution issue: PLR 8947054 (November 24, 1989), as modified by PLR 9119037 (February 8, 1991) and PLR 9452019 (September 28, 1994).

To say the least, the IRS ruling position that contributions into Settlement Trusts are deemed distributions to the Native corporations shareholders casts a chilling effect on any future decision by Shee Atika to make future contributions into the Settlement Trust.[16]. In all likelihood, Shee Atika will now have positive earnings and profits which would cause such a future deemed distribution to become taxable to our shareholders. As you can imagine, many of our shareholders are elderly or unemployed, and the tax impact on them can be substantial even in the lower marginal rate brackets. There is a very real concern, therefore, to minimize the tax impact on our real cash distributions, let alone "deemed distributions" when the shareholders receive nothing. The result is that although Shee Atika has available cash and ANCSA land which it would at least consider placing into the Settlement Trust, it is unlikely Shee Atika would do so now given the difficulties which follow from the Service's deemed distribution ruling posture.

Not only does the Service's ruling position cast a chilling effect on potential contributions by Shee Atika of cash into its Settlement Trust, but also, upon contributions of land into the Settlement Trust. The valuation of land is potentially subject to a major disagreement between the taxpayer and the IRS, and this factor alone makes an in kind contribution of ANCSA land an uncertain proposition at best given the need to report a value for the contribution as a deemed distribution upon the annual Forms 1099 sent to shareholders. Moreover, if the ANCSA land is appreciated at the time of the contribution to the Settlement Trust, the application of § 311(b) of the Tax Code will require the contributing Native corporation to recognize gain on the appreciated ANCSA land deemed distributed. This gain, in turn, adds to any existing corporate earnings and profits, thereby severely compounding the overall tax problem. The end result, of course, is that few if any ANCSA corporations (including Shee Atika) can afford to place their ANCSA land in a Settlement Trust despite the clear Congressional intent that they be able to do so.

---

[16] Shee Atika understands that the ruling posture has also served as a deterrent to other Native corporations which would like to establish a Settlement Trust, but have substantial earnings and profits which would render the "deemed distribution" taxable to their shareholders, producing phantom income unless those corporations wish to risk a fight with the IRS.

THE PROPOSAL GIVES EFFECT TO ANCSA

On the other hand, if the law were amended to permit contributions into a Settlement Trust without those contributions constituting deemed distributions to Shee Atika's shareholders, further contributions of cash and ANCSA land would be an option Shee Atika would consider seriously. We have to believe that when Congress enacted legislation providing for Settlement Trusts that Congress wished to encourage rather than discourage their use. Yet the present ruling posture of the Service effectively discourages use of Settlement Trusts by imposing the potential for a very high tax cost on its establishment.

ANCSA was (and is) Indian settlement legislation. The Alaska Natives received land and cash through their corporations in exchange for the settlement of their land claims against the United States. Most other modern day Indian settlement acts[17] have provisions which significantly reduce or eliminate the tax impact from the settlement. The drafters of ANCSA recognized this, and provisions were included which would reduce and/or eliminate taxation relative to the ANCSA settlement[18]. At a bottom line, placing former corporate assets into a Settlement Trust to provide for ongoing pro rata distributions is functionally akin to a restructuring of the Native corporation. If the initial ANCSA settlement was to be accomplished tax free, does not it follow that a restructuring of that same Native corporation should also be tax free if it leaves no new cash in the pockets of the Native shareholders?

It is worth remembering, too, Mr. Chairman, that ANCSA required Alaska Natives to incorporate to receive the ANCSA settlement, and Alaska Natives had no choice in the matter. As you know, Mr. Chairman, the corporate form carries with it a high potential

---

[17] See, e.g., Maine Indian Claims Settlement Act of 1980, codified at 25 U.S.C. § 1729; the Rhode Island Indian Claims Settlement Act, codified at 25 U.S.C. § 1716; and the Connecticut Indian Claims Settlement Act, codified at 25 U.S.C. § 1754.

[18] Section 21 of ANCSA, codified at 43 U.S.C. § 1620.

tax cost in terms of double taxation (once to the corporation, once to the shareholders) and the possibility that distributions will nonetheless be taxable even though the corporation might have no profit. Had the corporate form not been employed, these anomalies would not be present. Shee Atika believes that it is a matter of fundamental fairness to reduce, to the greatest extent possible, these anomalies so that the original ANCSA settlement is not indirectly made taxable through a tax on phantom distributions.

For all these reasons, Mr. Chairman, Shee Atika believes it is critical that Congress pass legislation which clarifies Congressional intent that contributions to a settlement trust (whether or cash, ANCSA land, or other assets) do not produce disguised income to the shareholder/beneficiaries. Instead, taxation would be deferred until such time as distributions are actually made to the shareholder/beneficiaries.

Summary

Thank you, Mr. Chairman, for the opportunity to provide you this testimony. Again, Shee Atika would very much appreciate the opportunity to present oral testimony upon these important tax issues for the Alaska Native community. Shee Atika's designated contact person upon this legislation is James P. Senna. His address and telephone number are Suite 201, 200 Katlian Street, Sitka, Alaska, 99835 and (907)747-3534.

Please do not hesitate to contact us if we can provide further information.

Sincerely,

SHEE ATIKA, INCORPORATED

James P. Senna
President/CEO

STATEMENT BY HONORABLE DON YOUNG
REGARDING
SETTLEMENT TRUSTS
before the
U.S. HOUSE OF REPRESENTATIVES
COMMITTEE ON WAYS AND MEANS
JULY 11, 12, 13, 1995

Mr. Chairman and Members of the Committee, thank you for the opportunity to record my strong support for a proposal which would provide for appropriate and equitable taxation of Alaska Settlement Trusts.

In 1987 amendments to the Alaska Native Claims Settlement Act of 1971 ("ANCSA"), the Congress created Settlement Trusts, non-business entities intended "to promote the health, education and welfare of its beneficiaries and preserve the heritage and culture of natives". Subsequently, several Alaska Native Corporations, created under ANCSA, established Settlement Trusts to provide for minimum retirement assistance payments to their elders and other such trusts to promote the general welfare of the Native community.

What started out as a rather simple proposition, promoted by the Congress in its legislation -- to provide a protected source separate from the corporate entity, to assist Alaska Natives -- has now become a complex and bewildering situation. This stems from a rather bizarre Internal Revenue Service ("IRS") interpretation calling for the immediate taxation to potential beneficiaries when these trusts are established, as opposed to when funds are actually received by the beneficiaries.

In one case, the IRS is requiring Alaska Natives, with very few resources, to put up money in the form of prepaid tax payments, in order to receive monthly amounts of $125 to help them live in retirement. If they die prematurely, they may never recover the amount of the taxes paid. In other cases, Alaska Native Corporations are reluctant to follow the Congressional mandate "to promote the health, education and welfare...and preserve the heritage and culture of Natives", because of the threat of confiscatory taxation by the IRS.

It is my understanding that even the IRS administrators are uncomfortable with this situation and do not feel they can resolve the problem themselves. **Therefore, I suggest that legislation be enacted to clarify that the beneficiaries of such trusts should be taxed when they actually receive payments and not when the trusts are created.** The taxes will still be collected, but on a normal, regularized basis.

I hope you will hear the pleas of the Alaska Native community and help us apply some common sense to the taxation of these benefits -- exact a tax when the benefits are received. Thank you for your consideration.

Suggested language to correct this problem is attached.

PROVISION

Section 39 of Alaska Native Claims Settlement Act (43 U.S.C. §1629(e)) is amended to add the following new paragraph:

(d) A holder of Settlement Common Stock who is a beneficiary of a Settlement Trust created under this section shall not be subject to taxation with respect to assets conveyed to a Settlement Trust or any income earned by a Settlement Trust until a distribution of assets or income is actually received by such beneficiary.

EXPLANATION

The Alaska Native Claims Settlement Act of 1971 ("ANCSA") provided that the corporate vehicle would be the primary entity to implement the goal of settling land and other claims of Alaska Natives. Subsequently, it was determined that other Native-controlled entities might provide increased flexibility and protections to preserve and appropriately disburse the Native assets. Accordingly, the 1987 amendments to ANCSA provided for the establishment of Settlement Trusts "to promote the health, education and welfare of its beneficiaries and preserve the heritage and culture of Natives".

This opportunity has been effectively thwarted by adverse Internal Revenue Service ("IRS") rulings. The IRS has ruled that if a Native Corporation conveys assets to a Settlement Trust, its shareholder-beneficiaries will be taxed as if they received a dividend. The IRS rulings require payment of a tax by the shareholder-beneficiaries before (usually several years before) they have actually received a distribution from the Settlement Trust.

The above provision would clarify that a Native Corporation's shareholders are not subject to tax under any theory (such as that the shareholders received or constructively received a dividend or a taxable economic benefit) until they have actually received a distribution from the Settlement Trust. The provision's treatment of shareholder tax liability would not adversely affect IRS rulings holding that, with regard to the Native Corporation, the conveyance of assets to the trust is a non-taxable event except for the conveyance of appreciated property and that Settlement Trust grantors will not be treated as owners of Settlement Trusts under IRC section 675 if their powers are appropriately limited.

STATEMENT BY HONORABLE DON YOUNG
REGARDING
TAX TREATMENT OF CERTAIN DISTRIBUTIONS
OF ALASKA NATIVE CORPORATIONS
before the
U.S. HOUSE OF REPRESENTATIVES
COMMITTEE ON WAYS AND MEANS
JULY 11, 12, 13, 1995

GENERALLY

Mr. Chairman and members of the Committee, I am seeking the Committee's approval of an amendment to the Internal Revenue Code that will allow shareholders of Alaska Native Corporations to have distributions of cash proceeds from the sale of Alaska Native Claim Settlement Act (ANCSA) assets treated as a return of capital and not a taxable dividend. Proceeds eligible for this treatment will not exceed the basis of the asset. In 1992, Congress included such an amendment in H.R. 11 which was vetoed by President Bush.

PURPOSE OF AMENDMENT

The purpose of this amendment is to allow Alaska Natives to receive the value of their ANCSA settlement prior to realizing any tax consequences due to the existence of current and accumulated earnings and profits. This will not exempt the Alaska Natives from taxation of profit and gain but simply defer taxation until their rightful ANCSA settlement has been received.

BACKGROUND

In ANCSA, Congress provided that the federal government would provide the Alaska Natives with 44 million acres of land and approximately $1 billion in cash in exchange for the extinguishment of the Natives' aboriginal claims. While each Native was entitled to an equal share of the settlement, individual cash and land allocations was impractical. Therefore, the Natives were directed under the Act to form Native corporations in order to facilitate the transfer of the land and cash from the federal government. Section 21 of the Act explicitly states that the transfers are not taxable to the Native corporations.

The Act also explicitly states that distributions by the Native corporations of the cash portion of the settlement are not taxable to the Native shareholders. It does not, however, address the tax consequences of distributions of the proceeds from the sale of the resources on the land portion of the settlement. This statutory silence has caused, and continues to cause, considerable problems for Alaska Native corporation shareholders and needs to be resolved.

REASON FOR ACTION

In order to fulfill the intent of ANCSA that Alaska Natives should receive the full value of the settlement amount agreed to in exchange for the extinguishment of their aboriginal rights, clarification is needed to allow for the distribution of the proceeds from ANCSA resource sales without the Natives being subject to dividend treatment.

This would not affect the taxability of profits or gain. It would only defer such a taxable event until sale proceeds have been distributed up to an amount not to exceed the basis of the assets. Subjecting the proceed distributions to normal dividend treatment delays the Alaska Natives receipt of their ANCSA settlement.

This proposal is in no way related to the sales of net operating losses by Alaska Native corporations. As evidence of this, the proposal eliminates from the proposed tax treatment amounts directly or indirectly attributable to net operating loss sale transactions.

ANCSA was enacted in 1971. The massive bureaucratic undertaking of making land selections and transfers has taken years and in some cases remains incomplete. The Alaska Natives have endured the bureaucratic delays involved with ANCSA and should not have this delay compounded by the application of dividend treatment to certain distributions.

HISTORY OF CONGRESSIONAL ACTION

Alaska Natives have been seeking tax clarification to this shareholder distribution issue since 1988.

In 1992, the Ways and Means Committee and the House approved an amendment (H.R. 5658, 102nd Congress) to H.R. 11, sponsored by Messrs. Young and McDermott, that provided the necessary clarification. This amendment was accepted by the Senate in conference and would have become law had President Bush not vetoed the bill.

Alaska Natives believe the action of the 102nd Congress validated their claim despite the legislative vehicle being vetoed. They hope to bring this matter to its rightful conclusion in the 104th Congress as the Ways and Means Committee considers miscellaneous tax reform proposals.

DETAILED EXPLANATION OF PROPOSAL

The proposal would treat an amount of distributions by an Alaska Native corporation to its shareholders or their descendants as distributions that are not out of earning and profits, in cases where such distributions would otherwise, under Section 316 of the Internal Revenue Code of 1986, be treated as dividends.

The amount of distributions granted this treatment would be limited to an amount equal to the lesser of (1) the amount of cash received by the corporation (or its wholly owned subsidiary) on or before

December 31, 1994 from the sale by the corporation (or by such subsidiary) of any natural deposits or timber received by the corporation pursuant to ANCSA, or (2) the aggregate bases (as determined pursuant to section 21(c) of ANCSA) of such natural deposits or timber sold on or before December 31, 1994; in each case adjusted as described below.

For purposes of these computations, basis and cash attributable to natural deposits or timber that were sold in a "special purpose sale" are excluded. Such a sale is one in which a loss was recognized and which was made under an agreement entered into (1) after October 22, 1986 and on or before April 26, 1988, or (2) after April 26, 1988, if the loss incurred thereon was used in a contract referred to in section 5021(b) of the Technical and Miscellaneous Revenue Act of 1988. Also, any amount realized directly or indirectly for the use of losses or credits of the Native corporation is excluded.

The proposal would apply to any distributions after the date of enactment of ANCSA. However, the proposal does not include any special rules that would reopen any closed tax year or extend the statute of limitations for any taxpayer to permit claims for credit or refund. Nevertheless, all distributions made by Native corporations since the enactment of ANCSA are counted toward the maximum amount of distributions treated under this provision.

A draft copy of the proposed amendment is attached.

DRAFT: NOT YET INTRODUCED

104th CONGRESS
1st SESSION H.R. _____

To provide for the tax treatment of certain distributions made by Alaska Native corporations and for other purposes.

IN THE HOUSE OF REPRESENTATIVES OF THE UNITED STATES

_________, 1995

Mr. Young of Alaska introduced the following bill; which was read twice and referred to the Committee on Ways and Means.

A BILL

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION. 1. TAX TREATMENT OF CERTAIN DISTRIBUTIONS MADE BY ALASKA NATIVE CORPORATIONS.

(a) IN GENERAL. --- For purposes of the Internal Revenue Code of 1986, any qualified distribution made by a Native Corporation shall be treated as a distribution not made out of earnings and profits.

(b) QUALIFIED DISTRIBUTION.--- For purposes of this section---

(1) IN GENERAL.--- Except as otherwise provided in this subsection, the term 'qualified distribution' means any distribution to a Native (as defined in section 3 of the Alaska Native Claims Settlement Act) or descendant of a Native (as so defined)--

(A) which is made after the date of the enactment of the Alaska Native

Claims Settlement Act, and

(B) which, but for this section, would have been treated as a dividend under chapter 1 of such Code.

(2) LIMITATION.--- The aggregate amount of distributions made by any Native Corporation which may be treated as qualified distributions shall not exceed the lesser of ---

(A) the aggregate amount received in cash by such Corporation on or before December 31, 1994, from the sale of any depletable property received by such Corporation pursuant to the Alaska Native Claims Settlement Act, or

(B) the aggregate bases (as determined pursuant to section 21(c) of such Act) of depletable property received by such Corporation pursuant to such Act and sold on or before December 31, 1994, reduced by the aggregate bases of any depletable property sold in a sale referred to in subsection (c)(2)(B).

(c) ADJUSTMENTS TO AMOUNT REALIZED.--- For purposes of subsection (b)(2)(A)---

(1) there shall be taken into account any amount of cash received by the Corporation indirectly through another corporation all the stock of which is owned directly by such Corporation, but

(2) the following amounts shall be disregarded:

(A) Any amount realized directly or indirectly by the Corporation for the use of losses or credits of such Corporation or of a corporation all of the stock of which is owned directly by such Corporation where such use would not have been allowable without regard to section 60(b)(5) of the Tax Reform Act of 1984 (as amended by section 1804(e)(4) of the Tax Reform Act of 1986, and repealed by section 5021 of the Technical and Miscellaneous Revenue Act of 1988).

(B) Any amount realized directly or indirectly by the Corporation from a special purpose sale of any depletable property where the loss incurred on such sale was used in a manner which would not have been allowable, but for such section 60(b)(5), and such Corporation realized directly or indirectly any consideration for such use.

(d) SPECIAL PURPOSE SALE.--- For purposes of subsection (c), the term "special purpose sale" means a sale in which a loss was recognized and which was made under an agreement which was entered into either (1) after October 22, 1986, and on or before April 26, 1988, or (2) after April 26, 1988, if the loss incurred thereon was used in a contract referred to in section 5021 (b) of the Technical and Miscellaneous Revenue Act of 1988.

(e) NATIVE CORPORATION.--- For purposes of this section, the term "Native Corporation" has the meaning given such term by section 3 of the Alaska Native Claims Settlement Act as amended.

(f) DEPLETABLE PROPERTY.--- For purposes of this section, the term "depletable property" means any property of a character subject to the allowance for depletion under section 611 of the Internal Revenue Code of 1986.

(g) CLOSED TAX YEARS.--- This provision does not reopen any taxpayer's closed tax year or extend the statute of limitations for any taxpayer to permit claims for credit or refund.

Statement on Capital Loss Carryforward Extension
Before the
Committee on Ways and Means
July 11, 1995

Mr. Chairman and Members of the Committee, I am Donald Alexander. I am a partner in the law firm of Akin, Gump, Strauss, Hauer & Feld, LLP. I am testifying on behalf of the a group of over 50 corporations supporting Congressional action to extend the capital loss carryforward period from the current five years to fifteen years. A list of these companies accompanies my statement. We would propose that the legislative change apply to losses expiring in taxable years ending after December 31, 1995. Thus, the proposal would not operate retroactively to resurrect losses which have expired in prior years.

This change would merely conform the period over which a corporation may deduct the capital losses which it has incurred to the period over which a corporation may deduct net operating losses. It is supportable on the basis of fairness, simplicity, and economic policy.

Present Law

Corporations may deduct capital losses only against capital gains. If a corporation's capital losses exceed its capital gains in any year, it may carry the excess back against capital gains incurred in the previous three years, or forward against capital gains it may incur in the following five years. If capital losses cannot be deducted within this period, the deduction is lost forever.

Taxpayers other than corporations have an unlimited number of years to deduct their capital losses against any gains they may realize in the future.

The Internal Revenue Code currently provides a much more generous rule for ordinary ("net operating") losses. Both corporate and other taxpayers may carry ordinary losses back for three years and forward for fifteen years.

Historical Background

The Internal Revenue Code has not always provided this discrepancy in treatment. Prior to 1976, the carryforward period for both net operating and capital losses was set at five years. In 1976, the carryforward period for net operating losses was extended to seven years, and, in 1981, to fifteen years. The carryforward period for capital losses has remained unchanged at five years.

The reason for the changes in the net operating loss carryforward period enacted in 1976 and 1981 is simply that corporations, as a result of economic conditions existing at the time, had net operating losses that would have expired absent extension of the carryforward period. Anyone who can recall the economic conditions of that era will certainly understand the desire of Congress to ameliorate the harshness of the short carryforward period for net operating losses. The legislative history does not indicate that expiring capital losses were causing a similar problem at the time.

It should also be noted that there is nothing in the legislative history to indicate that, in extending the carryforward period for net operating losses, Congress was making a decision that there was a policy justification for distinguishing between ordinary and capital losses. Indeed, in 1969, the issue of whether a difference in carryback rules was justifiable was explicitly addressed. The Senate Finance Committee report accompanying the Tax Reform Act of 1969 explicitly noted:

The committee sees no reason why capital losses should be treated any differently in this respect in the case of corporations than net operating losses.[1]

Present Law Overstates Income

It is very important to focus on the purpose served by the capital and net operating loss carryforward periods. Unlike certain provisions in the Internal Revenue Code, the carryforward provisions were not enacted to provide an incentive or to encourage a particular activity.

The carryforward periods exist simply to ameliorate the hardship created by an artificial tax accounting principle that the Government has applied for its own convenience: the annual income tax return. Certainly, any number of economists would agree that business and economic cycles do not always coincide with a twelve-month period. The extension of the net operating loss carryforward period from five to fifteen years was simply a recognition that businesses needed a longer period to deduct ordinary losses if the income tax was to tax true economic income.

The same issue arises today with an inappropriately short capital loss carryforward period. When corporations restructure to meet changing business conditions, they often will sell their under-performing assets and keep assets in the businesses in which they have had more success. They are, therefore, more likely to generate capital losses than gains. If the Internal Revenue Code does not allow a corporation to deduct capital losses--actual reductions in wealth--simply because a corporation does not have sufficient capital gain to offset those losses,[the Government has overstated that corporation's income. The Government is taxing income that does not exist.

The limitation in present law that allows a deduction of corporate capital losses only against capital gain emphasizes the nature of the problem. Most corporations are in the business of generating ordinary income, not capital gain. It stands to reason that it will take a corporation a longer period to generate sufficient capital gain to offset a major loss from, for example, a failed business venture, than to generate sufficient ordinary income to offset a large operating loss. Yet, the carryforward period for corporate capital losses is merely one-third the period provided for net operating losses. This makes no sense from a policy perspective.

The Supreme Court's *Arkansas Best* decision in 1988 exacerbated this problem by substantially broadening the scope of capital losses in corporate business transactions. This decision has made it even more essential that the disparity between the treatment of capital loss carryforwards and ordinary loss carryforwards be removed.

Disincentive Effect

The short carryforward period in present law creates an unnecessary disincentive for corporations to risk capital investments which create new jobs. We might hope that every investment will ultimately be successful. Unfortunately, reality teaches us that this is simply not the case. The fact that economic losses incurred as a result of a capital investment may be offset only against capital gain and must be offset within five years inevitably is taken into consideration before a corporation makes an investment and serves as a deterrent to investments that otherwise would occur.

The Five-Year Limitation Provides an Incentive to Uneconomic Behavior

Even if a corporation has appreciated assets that may be sold to offset capital losses, the short capital loss carryforward period creates an uneconomic incentive for a corporation to sell assets which they otherwise would retain, merely to avoid losing a tax deduction for real economic losses

[1] S. Rep. No. 91-552, 91st Cong., 1st Sess. 197-98.

they have incurred. It is not in the national interest to force corporations to sell capital assets, such as subsidiaries they are managing profitably and well, merely to assure that they can deduct real economic losses within an artificially limited time period.

The Limitation Places Some Corporations at a Competitive Disadvantage

It may also be of interest to the Committee that the short capital loss carryforward period operates to disadvantage U.S. corporations vis a vis their multinational competitors. For example, Canada taxes only 75 percent of capital gains and allows and provides for carryforward of 75 percent of capital losses over an unlimited period of years. The U.K. and Germany also allow an unlimited carryforward period for capital losses.

Conclusion

The *Tax Relief Act of 1995* which this committee considered and approved earlier this year provides a capital gains rate cut as part of a package to lower taxes on investment that creates jobs. We applaud your focus on the importance of encouraging capital investment.

However, we hope you will now take the opportunity to correct an additional limitation on capital investment--the limitation on the carryforward of corporate capital losses.

In many cases, this limitation effectively disallows the deduction of corporate capital losses, while leaving subject to tax future corporate capital gains which may arise. This treatment has no basis in sound public policy. Lengthening the corporate capital loss carryforward period from five years to fifteen years is an appropriate and responsible way to remedy this problem in a way that is consistent with the treatment accorded corporate net operating losses.

Miscellaneous Tax Reform Proposals
July 11-12, 1995

Written Statement
of
Price Waterhouse LLP

Relating to a Proposal to Clarify the "Hot Interest" Corporate Underpayment Rules

Price Waterhouse LLP (Price Waterhouse) appreciates the opportunity to submit this written statement concerning a proposal to rationalize the large corporate underpayment rules of Section 6621(c) in carryover situations. Price Waterhouse strongly supports this proposal, and urges its enactment as early as possible. Many taxpayers feel the current application of the large corporate underpayment rules is arbitrary, particularly where the events creating the additional liability are unrelated to the events triggering the additional interest charges. Adoption of the proposal would address the concern in cases where the adjustment creating additional interest and the event triggering the additional interest charge are not even in the same taxable year.

Current Law

Generally, the interest rate on corporate underpayments is the Federal short-term interest rate plus 3 percentage points (sec. 6621(a)(2)). The interest rate on "large corporate underpayments" (those over $100,000) is increased to the Federal short-term rate plus 5 percentage points (the "hot interest rate") for the period beginning 30 days after a letter of proposed deficiency (a/k/a a "30-day letter") or a statutory notice of deficiency has been sent. If the proposed deficiency is paid within 30 days, hot interest does not apply. However, if the notice is not paid until the 31st day or later, the year is permanently established as a hot interest year. All current and future underpayments in excess of $100,000 for that taxable year will then be subject to the higher, hot interest rate, whether or not the underpayment is related to the event triggering hot interest charges.

A similar rule applies to underpayments of tax that are not subject to the deficiency procedures, e.g., amounts attributable to mathematical or clerical errors appearing on a return, and employment taxes. If such an underpayment is not paid within 30 days from the date of any letter or notice notifying the taxpayer of the assessment or proposed assessment of the tax, the year is permanently established as a hot interest year and all current and future underpayments in excess of $100,000 for that taxable year will be subject to the higher, hot interest rate.

Problems with Current Law

Under current law, any failure to pay any deficiency in full results in the year to which the deficiency applies becoming a "hot interest" year. Once this occurs, any future deficiency in excess of $100,000 is subject to the higher, hot interest rate, even if paid in full within 30 days from the date it is first proposed by the IRS. This applies without regard to whether such deficiency is related to the original deficiency that established the "hot interest" trigger. The result is a rule which is arbitrary in its application.

The hot interest rules provide a significant incentive to the prompt payment of deficiencies. Unfortunately, this incentive is reduced once a year is established as a "hot interest year" since that status will continue whether or not the next deficiency is timely paid.

These problems are particularly acute in cases where the tax deficiency for one taxable year arises as the result of the reduction by the IRS of a net operating loss or other carryback arising in a different taxable year. In these cases, hot interest could apply from the date that an unrelated deficiency notice was issued for the carryback year.

Example of Carryback Problem Under Section 6621(c)
This problem is illustrated in the following example.

The first deficiency: A calendar-year corporation timely files its 1992 tax return on March 15, 1993. On October 1, 1993, a 30-day notice is received for the 1992 return. The taxpayer pays the proposed deficiency on November 15, 1993. As the proposed deficiency was not paid in full within 30 days, the 31st day after the issuance of the notice is the "applicable date" for the 1992 tax year. Any underpayment in excess of $100,000 after that date is subject to hot interest. The normal rate of interest applies to the additional tax liability from the due date of the 1992 return -- March 15, 1993 -- through October 30, 1993, and hot interest runs from October 31, 1993 until it is paid on November 15, 1993.

The claim for refund on an NOL: The tax return for 1995 shows an NOL that is carried back against the 1992 year. The taxpayer files a tentative carryback adjustment on March 1, 1996, and the refund is received on April 1, 1996.

The second deficiency: In 1998, an IRS exam of the 1995 tax return determines that the 1995 loss was excessive and should be reduced by half. The IRS issues a 30-day notice proposing a deficiency in the carryback year -- 1992 -- thus reducing the amount of the refund to which the taxpayer is entitled. The notice is dated February 1, 1998, and the taxpayer pays the deficiency within 30 days of receipt.

Interest runs on the proposed deficiency created by the carryback adjustment from the original due date for the tax return of the year the NOL arose -- March 15, 1996 -- until the date the proposed deficiency is paid. The key issue is the date upon which hot interest begins to apply. Since March 15, 1996 falls after the applicable date already established for any deficiencies stemming from the 1992 tax return, the entire amount of interest on the latest deficiency is hot interest. This higher rate of interest applies retroactively to March 15, 1996, despite the fact that the original 30-day letter had been paid in 1993, the second 30-day letter was not dated until February 1, 1998, and the second 30-day letter is paid in full within 30 days of receipt.

Proposed Change

The proposal provides an exception to the large corporate underpayment rules that prevents changes to the return for one tax year from automatically triggering the higher interest rate in other tax years for which an applicable or trigger date has otherwise been established. The exception would provide that, with regard to such deficiencies, the applicable date would be the date of the letter or notice of the deficiency created by the change to the return. As with other letters or notices, this letter or notice could be disregarded if an amount equal to the amount shown as due on the letter or notice is paid within 30 days.

Changes to a return for this purpose would include amendments to returns, adjustments on examination, as well as other changes. The exception would be available wherever changes to a return result in a deficiency in another taxable period. This would include the carryover of losses and credits, as well as correlative adjustments to any item of income, expense, credit or tax.

Application of Proposed Change Relating to Carrybacks

Utilizing the example above, adoption of the proposed change would yield the following:

The first deficiency: A calendar-year corporation timely files its 1992 tax return on March 15, 1993. On October 1, 1993, a 30-day notice is received for the 1992 return. The taxpayer pays the proposed deficiency on November 15, 1993. As the proposed deficiency was not paid in full within 30 days, the 31st day after the issuance of the notice is the "applicable

date" for the 1992 tax year. The normal rate of interest applies to the additional tax liability from the due date of the 1992 return -- March 15, 1993 -- through October 30, 1993, and hot interest runs from October 31, 1993 until it is paid on November 15, 1993.

The claim for refund on an NOL: The tax return for 1995 shows an NOL that is carried back against the 1992 year. The taxpayer files a tentative carryback adjustment on March 1, 1996, and the refund is received on April 1, 1996.

The second deficiency: In 1998, an IRS exam of the 1995 tax return determines that the 1995 loss was excessive and should be reduced by half. The IRS issues a 30-day notice proposing a deficiency in the carryback year -- 1992 -- thus reducing the amount of the refund to which the taxpayer is entitled. The notice is dated February 1, 1998, and the taxpayer pays the deficiency within 30 days of receipt.

Interest runs on the proposed deficiency created by the carryback adjustment from the original due date for the tax return of the year the NOL arose -- March 15, 1996 -- until the date the proposed deficiency is paid. However, since the proposed deficiency is satisfied within the required 30 day period, none of the interest is hot interest.

Conclusion

Under current law, there is no causal connection between the subsequently determined deficiency and the triggering of hot interest with respect to the deficiency in certain instances. We believe this result is inconsistent with the legislative history of the hot interest rules and extremely unfair to taxpayers who are acting in good faith to resolve disputes with the IRS on a timely basis. Price Waterhouse, therefore, urges that the committee favorably consider the proposed change to the hot interest rules at the earliest possible date.

STATEMENT OF THE UNITED STATES TELEPHONE ASSOCIATION

SUBMITTED TO THE HOUSE COMMITTEE ON WAYS AND MEANS

JULY 27, 1995

The normalization provisions of the Tax Code have protected capital formation incentives for investors in public utility property for a quarter of a century. This protection is necessary because of the interplay between income tax provisions and utility rate-making practices.

In the 1980's, the IRS repeatedly ruled that consolidated tax adjustments violated the normalization requirements. The utility industry relied on those rulings. With the rulings withdrawn and the Treasury regulation project on this issue closed, the prognosis for consolidated tax adjustments in regulatory proceedings is uncertain. This is an important issue for the members of the USTA The consolidated tax adjustment has been raised in our regulatory jurisdictions in the past but was not adopted, partly because of the interpretations offered by the IRS rulings. The current state of the law leaves telephone companies exposed to regulatory actions that could damage business investment decisions. This situation undermines the tax policy underlying the normalization provisions - that of offering equal access to capital formation incentives for regulated and non-regulated businesses alike.

To understand how consolidated tax adjustments arise and why they are inconsistent with the fundamental policy reasons for normalization, it may be helpful to discuss the elements of rate-of-return ratemaking.

In traditional ratemaking, regulators attempt to design rates so that consumers receive affordable services while utilities receive a return of their costs, including a reasonable return on invested capital.

The ratemaking process is not an exact science, nor is it automatic. Before a rate case arises, a filing must be made by either the utility commission or an affected utility. Once the rate case begins, all elements are the subject of intense scrutiny.

The first step in a rate case is developing a test period. The test period may be historical, future, or a blend of both. The utility's authorized revenues (which ultimately translate into customer rates) are based on financial data for the test period.

The authorized revenues are based on a "ratemaking formula." This formula adds an "earnings requirement" to other costs of providing utility services. The earnings requirement is the product of the investment in the utility plant and an authorized rate of return. Thus, the ratemaking formula permits the utility an opportunity to recover its costs, including a reasonable rate of return on invested capital.

As mentioned above, however, rates are also designed to ensure that customers receive affordable services. Traditional ratemaking protects customers by making sure no element of the ratemaking formula results in excess charges. In determining the earnings requirement, a utility commission will examine the plant investment. No investment related to non-regulated business is to be included. Further, investments viewed as imprudent will be excluded. In determining a proper rate of return to apply, a utility commission will review a utility's capital structure and will impute a different structure if the ratio of debt to equity is considered unreasonable. Further, the permitted return on equity is the subject of significant controversy. The permitted return is generally viewed as the yield that would attract capital from equity investors. However, commissions generally authorize only that return deemed appropriate for a low-risk equity investment - often discounting the overall corporate cost of equity to ensure that utility customers are not burdened with a risk premium related to non-utility operations.

In assessing the utility's costs, a commission carefully reviews all items to ensure that they are directly related to the provision of utility services and are reasonable in amount. Amounts related to non-utility businesses are simply disallowed, as are costs considered unreasonable, imprudent, or excessive.

Among the costs a utility may recover are income taxes assessed on utility operations. Thus, taxes are an important factor in determining utility rates. This is where normalization

comes into play. Because Congress wished to preserve the tax benefits of accelerated depreciation for the equity investor, normalization denied those benefits to any utility if the benefit was used to reduce authorized revenues and passed directly through to customers. Instead, the benefit is provided to customers as they are charged the related depreciation expense.

Any excess tax benefit is appropriately treated as a reduction in the cost of utility plant and equipment in computing the utility's authorized earnings.

Like adjustments for the tax benefit of accelerated depreciation on utility plant, the consolidated tax adjustment compromises tax attributes intended for equity investors. This adjustment results when a utility commission determines the income tax element of the ratemaking formula by taking into account the effects of the utility's ability to join in consolidated filings with other companies. If tax loss affiliates join in the consolidated filing, a consolidated tax adjustment could be used to reduce utility rates by the tax effects related to affiliate losses.

As discussed above, all aspects of non-regulated operations are treated as distinct and separate from regulated operations in the ratemaking process. Any investment in non-utility businesses is transparent to the utility customer, as is any capital cost associated with increased risk from non-utility businesses and any costs incurred in that business. The rate-making process protects the utility customer from bearing any burdens associated with non-utility investments. It is the utility shareholder that bears the risk of those investments. To the extent tax incentives accrue from the acceptance of that risk, those incentives require as much protection as is afforded to the utility investment. The normalization provision of the Code should provide that protection by attaching penalties to ratemaking activities that impinge upon the intended economic effects of tax law.

In assessing the applicability of normalization provisions to consolidated tax adjustments, we must consider the end result of this adjustment. A consolidated tax adjustment results in a windfall to utility customers for the tax attributes of businesses for which they bear no risk. The utility shareholder alone bears this risk and, thus, earns the right to any related tax benefits. Further, if a regulator incorporates a consolidated tax adjustment, the result is decreased revenues for the utility business at the same time as affiliated non-regulated entities are reporting tax losses. This will magnify the negative impacts on federal tax revenues, with no attendant economic stimulus.

The bottom line is that regulators could reduce a utility's rates when its non-utility affiliates report tax losses, but utilities would have to request rate increases when their affiliates became profitable. Without increased rates, the utility would have to accept ever-decreasing yields on utility investments. Further, if a utility cannot obtain increased rates the ratepayer's windfall is perpetuated. The utility investor would need to report continued tax losses to maintain a fair return on its utility investment. Yet that return is maintained only by the sacrifice of tax benefits specifically ordained by Congress - exactly the result proscribed by the concept of normalization.

By reducing the effective return a utility investor can earn, a consolidated tax adjustment discourages both non-regulated investments and investments in utility property. This is contrary to the intent of normalization provisions and is particularly critical to the telecommunications industry today as it invests heavily in the development of an advanced information infrastructure. This investment activity is aimed at the deployment of sophisticated communication networks that will have a dramatic impact on American lives. An advanced communications network can promote national goals in the areas of health care, education, and the environment while furthering a healthy economy at home and U.S. competitiveness abroad. The communications network has become a critical tool around which new business opportunities will develop. Studies indicate that between 50% and 60% of all U.S. jobs involve information processing, goods or services. In fact, 90% of jobs created during the last decade were information related. Educational opportunities are unlocked for students at all economic and social levels as the network places untold resources at the fingertips of students and teachers. The economically disadvantaged, the small business, and the entrepreneur are connected to resources that were previously available only to the wealthy and large enterprises. Telecommuting is expanding, reducing the load on American highways and the pollutants in the air. Increasing informational needs put pressure on an aging telecommuting network. Meeting these needs will require significant investment in equipment and network capabilities. Tax incentives can encourage this investment by reducing its cost. Normalization is a tax policy means of protecting these

incentives and should be available to discourage consolidated tax adjustments as well as to protect capital formation incentives with respect to utility property.

For a tax incentive to be effective it must motivate an investor to accept an economic risk. It does this by providing an economic benefit. Thus, to achieve the desired response, a tax incentive should appeal to a taxpaying entity. Utility holding companies are taxpaying entities and they respond to the incentives provided by Congress in the appropriate manner: by investing funds into productive sectors of the economy. In each business decision, these companies accept the risks of their investments. Acceptance of these risks is required, as a matter of tax policy, to obtain the tax benefits provided by law. When those risks involve capital investment, normalization has preserved tax benefits for the utility investor. It is inconceivable that there would be no comparable protection for similar tax benefits incurred by non-regulated affiliates of utility companies.

Normalization was enacted to preserve capital formation incentives of the Code, to promote equity in the tax treatment of regulated and non-regulated businesses, and to avoid depletion of federal tax revenues because of ratemaking practices that flow through tax benefits. If consolidated tax savings are generated by accelerated depreciation deductions of non-utility property and those savings are passed to ratepayers in the form of rate reductions, capital formation incentives for non-regulated businesses are compromised. Other tax incentives are also compromised, as is the ability of the investor to recognize a tax reduction to mitigate the effects of a true economic loss. Companies not affiliated with public utilities face no such danger. Further, consolidated tax adjustments depress federal tax revenues and provide no compensating economic benefit. Thus, the consolidated tax adjustment violates the purposes for which normalization was incorporated into tax law.

Finally, consolidated tax adjustment impinges upon the purposes for a consolidated filing privilege in an area where this privilege is totally consistent with the intent of the normalization provisions. The consolidated return regulations were developed to promote equity between similarly situated business operations, differentiated only by the choice of legal structures. Permitting a consolidated tax adjustment in any form limits the effectiveness of the consolidation privilege for the utility investor.

These tax policy matters should be addressed by federal tax policy makers. They will not be addressed by state regulatory bodies. These bodies are motivated by many factors: universal service, low rates, political and social pressures, and ethical considerations. However, state regulators are <u>not</u> concerned with assuring that the policies underlying federal tax laws are achieved. That simply is not part of their agenda. For this reason, we urge you to consider this issue very seriously.

**WRITTEN STATEMENT OF EDWARD L. WINN, III
GENERAL COUNSEL TO THE ASSOCIATION OF
PROGRESSIVE RENTAL ORGANIZATIONS
BEFORE THE COMMITTEE ON WAYS AND MEANS
UNITED STATES HOUSE OF REPRESENTATIVES**

Submitted July 21, 1995

Mr. Chairman and distinguished members of the Committee:

My name is Edward L. Winn, III. I am General Counsel for the Association of Progressive Rental Organizations (APRO) the national trade association which represents the rental-purchase industry. I am submitting this testimony on behalf of the association in support of Item 50 of the Joint Committee on Taxation Staff Description (JCS-19-95) of Miscellaneous Tax Proposals issued July 10, 1995, which would establish a 3-year recovery period for property subject to certain rental-purchase agreements. Members of the association could be affected by this change in the law, and support the change as a fairer, more equitable method of depreciating rental property than current IRS interpretations of the law.

Mr. Wayne Chambers, a rental-purchase merchant and former president of the association, in both written and oral testimony before this Committee on January 26, 1995, outlined some of the difficulties the industry has been having with IRS interpretations of the law. In many respects, my written testimony today will complement the testimony of Mr. Chambers, a copy of which I am attaching to this testimony.

Briefly, the rental-purchase industry, made up of some 7,500 outlets nationwide in all 50 states, engages in the business of renting household durable goods to consumers, in the following categories: TVs, 16%; VCRs, 9%; stereos, 8%; appliances, 22%; furniture, 31%; miscellaneous, 14%.[1] Consumers rent these items a week at a time or a month at a time. At the end of the initial rental period, usually a week or a month, the consumer has a choice -- rent for another week or month by making another rental payment or return the merchandise with no further obligation whatsoever. Other choices include purchasing the merchandise at a discounted price, or trading up or down for different merchandise by negotiating a new deal with the merchant.

The consumer is never obligated to make another payment and there is no debt associated with the transaction. The consumer can terminate the transaction at any time. If, however, the consumer renews the agreement for a prescribed number of weeks or months in a row, ownership typically transfers to the consumer automatically without payment of any additional consideration. Rental-purchase merchants do not conduct credit checks on potential customers, nor do they require a deposit. A rental-purchase merchant is willing to allow a piece of merchandise whose wholesale cost is $300 to $500 to go out into a consumer's home for a single rental payment of perhaps $15 to $20.

The maximum number of renewal periods specified in a rental-purchase agreement is generally 12 to 24 months depending upon the type, age and condition of the property. Most new property will be rented for 18 to 24 months. As the units age, the rental ownership term will be shortened for subsequent rental customers, down to 12 months or even shorter periods. Industry statistics consistently have shown that only 25-30% of rental-purchase transactions result in title transferring to the consumer. Most consumers rent property for a while, 3-4 months, and then return it. When the property is returned, rental-purchase merchants repair and refurbish the merchandise and rent it out again to another consumer on a new rental-purchase agreement, again on a weekly or a monthly basis.

An item of rental property will typically generate revenue for a rental-purchase merchant on and off for 21 to 24 months. During some of that time it will sit in idle

---

[1] Association of Progressive Rental Organizations Statistical Survey, 1994.

inventory. Most often, within two years of life in the rental-purchase merchants store, the unit will leave inventory. The consumer who is renting it will rent long enough to obtain ownership or, the merchant will sell the property off the floor, or less often, the unit will be stolen. After an item has been rented to 2, 3 or 4 different consumers, obsolescence and wear and tear make disposal of the property necessary. A certain percentage of the rental merchandise will become unrentable and must be scrapped. Accordingly, because of consumers' obtaining ownership of these used units, the destruction or theft of rental-purchase property and the abandonment of unrentable property, in most rental companies, the income stream rarely exceeds two (2) years.

For internal financial reporting purposes, nearly all rental-purchase merchants, 90% or more, use either income forecasting, 24 month straight-line, 21 month straight-line or 18 month straight-line to depreciate their rental merchandise. Recent association surveys demonstrate that as many as 80% of the companies in the industry are currently using income forecasting or some straight-line variation of income forecasting to depreciate rental merchandise for tax purposes. Of the choices available, income forecasting has been viewed by rental-purchase merchants as the most accurate means of matching revenues to expenses. Under true income forecasting, rental merchandise is only depreciated when it is generating income. In periods of time when it is idle and not generating income, no depreciation is taken.

The issue of whether income forecasting is an appropriate method of depreciation for the industry was challenged by the IRS and decided last December in a tax court case, ABC Rentals of San Antonio, Inc. v. Commn'r., TC Memo 1994-601 (December 7, 1994). In that case the tax court ruled that income forecasting was not an appropriate method of depreciation for the rental-purchase industry. The tax court ruled that revenues were predictable with some precision by the rental purchase entity and, accordingly, there was no need for the taxpayer to use income forecasting. The ABC case is currently on appeal in the Fifth Circuit.

The taxpayer in the ABC case was using the "fixed denominator" method of calculating depreciation under income forecasting. The tax years in question were 1987 and 1988. Since then, the industry has developed more accurate methods of calculating depreciation using income forecasting, namely the "floating denominator" method of depreciation which recalculates the predicted revenue remaining on a unit for each time it is returned to the store. Many rental-purchase merchants are persuaded that the facts in the ABC case are distinguishable from how they are currently depreciating their rental merchandise and, therefore, many dealers have elected not to follow the tax court ruling and, instead, are continuing to use income forecasting. Therefore, the industry feels that if the Congress allows 3 year MACRS depreciation for the rental-purchase industry, given how most of the industry is currently calculating depreciation, there will be some revenue increase in taxes paid by rental-purchase companies which will move from depreciating rental merchandise over roughly a two-year period under income forecasting to a three-year period under the new law. Nonetheless, the industry, in order not to have to continue to litigate the issue of the appropriate depreciation method of rental merchandise, supports the 3 years MACRS category as fair given the choices that currently exist in the Code.

It is clear to rental-purchase merchants that requiring them to use 5-year MACRS depreciation is simply unfair. It causes a significant mismatch between income generated by an item of rental property and the cost of producing that income. The result is an unfair acceleration of income due to the postponement of depreciation until the unit leaves inventory. The increased tax works a special hardship on small companies which are the mainstay of the association (80% of association members own 5 or fewer stores).

Mr. Chambers' previous testimony provided an illustration comparing income forecasting to 5 year MACRS. The illustration below compares 3 year MACRS, 5 year MACRS and income forecasting. The chart assumes that rental income remains the same, two-thirds being received in year one and the balance in year two. Three year MACRS is a

closer match of revenues to expenses than 5 year MACRS and has wide-spread industry support.

	Percentage of Income Received	Percentage of Cost Recovered Using Income Forecasting	Percentage of Cost Recovered Under 5-Year MACRS	Percentage of Cost Recovered Under 3-Year MACRS
Year One	66 2/3%	66 2/3%	20%	33 1/3%
Year Two	33 1/3%	33 1/3%	80%	66 2/3%

The proposal to allow the rental-purchase industry to depreciate its rental merchandise over a three year class life would result in fair taxation to the industry. It would reduce the economic costs to the industry of the unjustified deferral of cost recovery deductions until the end of the rental dealers' income stream if the industry were forced to use 5-year MACRS on property that only lasts for 2 years. In addition, this recognization of depreciation method applicable specifically to rental-purchase transactions by the Congress would be consistent with 42 states which have recognized rental-purchase agreements as leases.

Thank you for the opportunity to submit this testimony on this most important issue to the rental-purchase industry.

STATEMENT OF WAYNE E. CHAMBERS
of the
ASSOCIATION OF PROGRESSIVE RENTAL ORGANIZATIONS
before the
COMMITTEE ON WAYS AND MEANS
UNITED STATES HOUSE OF REPRESENTATIVES

January 26, 1995

Mr. Chairman and distinguished Members of the Committee:

My name is Wayne Chambers. I own and operate a rental-purchase business. I am also a director of the Association of Progressive Rental Organizations ("A•PRO"), which is a nonprofit national trade association representing the rental-purchase industry. The rental-purchase industry is comprised of hundreds of businesses that rent household durable goods to consumers on a short term basis. A•PRO represents nearly 500 of the businesses in the industry, most of which are small companies.

I am pleased to present to this Committee A•PRO's and my views regarding the principles of neutral cost recovery set forth in H.R. 9, the *"Job Creation and Wage Enhancement Act."* In particular, I want to discuss a cost recovery problem currently faced by the rental-purchase industry that should be addressed in connection with the proposed legislation.

By indexing depreciation against inflation, the proposed legislation promises to reduce the economic costs of the deferral of depreciation deductions. The economic costs to the rental-purchase industry of the deferral of depreciation deductions may well eliminate jobs and could even put some companies out of business. Inflation, however, is only one factor contributing to such economic costs. For the rental-purchase industry, unjustified economic costs of much greater magnitude are created by an IRS interpretation of tax rules (upheld in one case by the Tax Court) that would mandate cost recovery of rented property over five years (or longer). Under the IRS interpretation, rental-purchase property would be depreciable over a five year class life, even though the income stream generated by that property rarely exceeds two years. This postponement of cost recovery deductions cannot be justified on any theory of matching income with related deductions.

Description of Rental-purchase Industry

The rental-purchase industry is a young industry comprised of more than 7,500 stores throughout the 50 states that currently employ approximately 50,000 persons and are estimated to generate more than $4.5 billion of revenue per year. The typical rental-purchase dealer is a small company or sole proprietorship that has very limited capacity to

finance its inventory with borrowed funds. Most of them have virtually no capacity to finance the additional tax liability attributable to the postponement of cost recovery deductions.

Rental-purchase businesses rent household durable goods -- such as furniture, TVs, stereos, VCRs, refrigerators, washers and dryers -- to consumers on a short term basis. Virtually all of the industry's customers are individuals who obtain the property for personal household use. While customers enter rental-purchase transactions for a broad variety of reasons, many customers enter the transactions becaue (i) they have only a temporary need for the property, (ii) they want no continuing payment obligations, or (iii) for a variety of reasons, they are not sufficiently creditworthy to purchase the item on a credit sale basis. Thus, the rental-purchase industry occupies an important niche among suppliers of household goods.

Rental-purchase transactions are designed to provide flexibility to customers by permitting them to obtain immediate use of the property on a week-to-week or month-to-month basis without incurring financial obligations beyond the one-week or one-month term of the agreement. Because the customer has no obligation to continue making rental payments, rental-purchase dealers do not conduct credit checks or require a deposit. The customer makes one rental payment on the date he enters a rental-purchase agreement and has no obligation to make any additional payments. The typical rental-purchase agreement has an initial term of one week or one month. Although a customer has the option to renew the agreement for an additional term of one week or one month, the customer has no obligation to renew the agreement. The customer can elect at any time to return the property (or have the dealer pick up the property) without any further obligation.

If the customer elects to renew a rental agreement for an item of property for the maximum number of rental periods stated in the agreement, title to the property is transferred to the customer. The maximum number of renewal periods stated in the agreement usually covers a period of 12 to 24 months, depending on the type, age and condition of the property. The customer also can purchase the property before the end of the maximum number of rental periods by paying an amount stated in the agreement. The purchase option price generally equals a stated percentage (usually ranging from 50% to 80%) of the payments that would be made during the remainder of all possible renewal periods stated in the agreement.

Industry experience shows that only 25 to 30 percent of all rental-purchase agreements result in the customer ultimately obtaining title to the property. On average, a customer will make rental payments and maintain possession of an item of rental property for approximately 12 to 14 weeks after which the customer returns the property to the dealer. An item of property typically is rented to three or four different customers before a customer obtains title or the dealer abandons the property. Moreover, rental-purchase dealers often experience theft of 10 percent or more of their inventory per year.

Rental Income Stream

The average stream of income from an item of rental property is approximately 21 to 24 months. After an item of property has been rented to two or three different customers and subsequently returned to the store, obsolescence and wear and tear force the rental-purchase dealer to reduce the rental amount and/or the maximum possible number of renewal periods. As a result, the third or fourth customer is more likely to renew the rental-purchase agreement enough times to acquire ownership of the used property. Moreover, because renters tend to treat property with less care than owners, the used property often becomes unrentable and must be abandoned by the rental-purchase dealer. Thus, because of customer payouts and the destruction or theft of rental-purchase property, on the average a dealer's income stream from an item of property does not exceed two years.

Cost Recovery

Income Forecast. Members of the industry generally have depreciated rental-purchase property using the income forecast method.[1] Under this method, a rental-purchase dealer's depreciation deductions are closely matched with the income stream generated by the rental property. Using the income forecast method, the annual depreciation deduction is determined by multiplying (i) the adjusted basis of an item of property by (ii) a fraction, the numerator of which equals the amount of rent received during the year under all agreements relating to such property, and the denominator of which equals the total estimated rent that will be received over the remaining life of the property. For example, if rent in the amount of $50 is received during the year from an item of property, and the item of property had been expected to generate a total of $150 over its remaining life, then the depreciation deduction for the year using the income forecast method equals one-third (50/150) of the adjusted basis of the property.

Five-Year MACRS. Late last year, the U.S. Tax Court held that a particular rental-purchase dealer could not use the income forecast method. ABC Rentals of San Antonio Inc. v. Commissioner, T.C. Memo 1994-601 (December 7, 1994). Despite its finding that the rental property on average remained in the taxpayer's inventory only 21.6 months, the Tax Court indicated that the rental-purchase dealer was required to depreciate its rental property under Section 168 of the Code using a MACRS class life of five years.[2] The Tax

---

[1] Section 168(f)(1) of the Internal Revenue Code allows a taxpayer to elect out of the Modified Accelerated Cost Recovery System ("MACRS") depreciation rules and properly use a method not expressed in terms of years. The income forecast method is such a method.

[2] For purposes of computing the alternative minimum tax, such rent-to-own property generally would be depreciable using a MACRS class life of nine years.

Court held that the income-forecast method could be used only for property that is "similar in character" to motion picture and television films and sound recordings.

Economic Harm from Deferral of Depreciation

If rental-purchase property is required to be depreciated using a five-year class life there will be a significant mismatch between the income stream generated by an item of rental property and the costs of producing that income. Such a mismatch will result in income from that property being taxed more quickly than it should be, to the economic disadvantage of the dealer. While the income stream from an item of rental property in general is spread over a 21 to 24 month period, the use of a five-year recovery period under MACRS defers most of a dealer's cost recovery until the last year the dealer uses the item of property in its rental inventory. The postponement of the rental-purchase dealer's cost recovery deduction is a significant economic loss based on the time value of money. The loss reduces the dollar amount available to a rental-purchase dealer to reinvest in new rental inventory items. The economic harm is particularly acute because most rental-purchase dealers are small companies or sole proprietorships that have very limited capacity to finance their inventory with borrowed funds. Thus, the postponement of cost recovery deductions will effectively reduce the volume of their business.

As an illustration, assume that a dealer acquires an item of rental property and places it in service on January 1 of Year One and depreciates the property using five-year MACRS (using the applicable half-year convention and the double declining balance method). Assume that a customer ultimately obtains title to the property as of June 30 of Year Two. In this example, 66⅔% of the dealer's rental income from the property is recognized in Year One, and 33⅓% of the rental income is recognized in Year Two. Using five-year MACRS, the dealer recovers only 20% of the costs of the property in Year One as a depreciation deduction, and recovers 80% of the costs in Year Two.[3]

	Percentage of Income [illegible]	Percentage of Cost Recovered Using Income Forecast	Percentage of Cost Recovered Under 5-Year MACRS	% of cost recovered under 3-year MACRS
Year One	66 2/3%	66 2/3%	20%	
Year Two	33 1/3%	33 1/3%	80%	

---

[3] To the extent the dealer places property in service later in Year One, the mismatch is less dramatic, but nonetheless significant.

This mismatch between the timing of a dealer's income and cost recovery deductions causes an economic distortion. The dealer's taxable income and tax liability during the first year of the life of an item of rental property are unfairly overstated. Although the dealer's taxable income and tax liability during subsequent years is understated, the dealer bears the economic burden of the time value of the front-loaded tax liability.

Recommendation

A•PRO urges Congress to enact legislation expressly authorizing the application of the income forecast method for depreciating rental-purchase property. The tax law should reflect the actual business conditions in, and practices of, the industry. To require the MACRS depreciation period of five years results in a mismatching of revenue and costs in the rental-purchase industry. By reflecting depreciation for the periods that the property is actually leased, the income forecast method properly matches costs and revenue and more clearly reflects income.

Alternative Recommendation

In the alternative, A•PRO urges Congress to enact legislation authorizing the depreciation of rental-purchase property over a three-year class life under MACRS. Although three-year MACRS would not match a rental dealer's income with its depreciation costs as closely as the income forecast method, a three-year class life would provide a closer match (and a clearer reflection of income) than a five-year class life under MACRS.

* * *

Legislation expressly providing for depreciation of rental-purchase property under the income forecast method (or over a three-year class life) would reduce the economic costs to the rental-purchase industry of the unjustified deferral of cost recovery deductions until the end of a rental dealer's income stream. Moreover, consistent with statues in 38 states recognizing rental-purchase agreements as valid leases, such legislation would expressly confirm that rental-purchase agreements are true leases for tax purposes. Without such legislation, the economic costs to the rental-purchase industry of the unjustified postponement of cost recovery deductions will unnecessarily paralyze these small businesses, causing some to close.

Thank you for the opportunity to present my statement on this important issue.

Re: Miscellaneous Tax Reforms

Dear Mr. Moseley:

This letter is submitted on behalf of the National Association of Music Merchants (NAMM) for inclusion in the printed record of public hearings held July 11-12, 1995 dealing with miscellaneous tax reforms.

By way of background, NAMM is an international organization which represents more than 4,500 retailers and manufacturers of musical instruments and related equipment. In addition to selling musical instruments, many of NAMM's retailer members rent instruments and equipment, typically to the parents of school-age children. These parents want their children to experience the positive effects of music education, but may be reluctant to make a financial commitment for the purchase of an instrument until they are satisfied that their child will, in fact, like the instrument chosen.

Thus, many of NAMM's members engage in the rental of instruments with a purchase option. The initial rental period is usually of short duration, generally between 3-6 months (coinciding with a school semester); the customer is given the opportunity to either return the instrument at the end of the initial period, or continue the rental until sufficient payments have been made to acquire ownership.

One of the proposals considered at the Committee's hearings on miscellaneous tax reforms would provide a three-year recovery period for property subject to a "qualified rental-purchase agreement." As described, a "qualified rental-purchase agreement" is an agreement that provides (1) for the rental of tangible personal property for an initial period of four months or less, (2) for the renewal of the agreement at the option of the renter for a

period of four months or less, (3) that the renter is not obligated to renew the agreement and may terminate at the end of the rental period, and (4) that the renter may at its option acquire ownership of the property either (a) at a stated amount based on the agreement (if required by law) at the end of the rental term, or (b) at a specific price or formula if acquired during such term. Under present law, such property generally has a five-year recovery period.

NAMM strongly endorses adoption of this proposal, with one amendment.

NAMM believes that reducing the period for cost recovery from five years to three years is a positive step, since the shorter period more closely approximates the maximum period during which rental payments must be made before ownership is acquired.

However, NAMM believes that, should the Committee include this provision in any tax reform legislation it reports, the definition of "qualified rental-purchase agreement" should be changed to include those agreements which have initial periods of six months or less, as contrasted with four months or less.

Our reasoning is based on the existence of two approaches toward the regulation of these agreements. The federal Consumer Leasing Act (15 U.S.C. §1667) provides a series of disclosures applicable to rentals with an initial period of more than four months, regardless of whether a purchase option is offered. Since the Act was passed in 1976, some 42 states have adopted specific statutes regulating disclosures which must be made in rental-purchase agreements with an initial period of four months or less, where a purchase option is present. Thus, NAMM members and others who wish to rental tangible personal property may freely choose which disclosure scheme they wish to follow.

Because the contemplated definition of a "qualified rental-purchase agreement" appears to comply with the definition used in the 42 state laws, its adoption at the federal level as part of the Internal Revenue Code would have the effect of forcing NAMM members and others to opt for the state regulatory scheme, which in some states is unduly burdensome for rental dealers.

Changing the rental period to six months or less in the Committee's proposed definition of "qualified rental-purchase agreement" would preserve the dealer's option to select one of two regulatory scheme, while at the same time assuring that the intent of the proposed tax reform is met, i.e., to limit its application to short-term rental transactions which have a purchase option.

We would be happy to meet with you or a designated Committee staff member to discuss this issue should you desire.

Sincerely,

James M. Goldberg

WRITTEN STATEMENT

OF

THE NATIONAL ASSOCIATION OF INDUSTRIAL AND OFFICE PROPERTIES

ON THE DEPRECIATION OF LEASEHOLD IMPROVEMENTS

BEFORE THE HOUSE OF REPRESENTATIVES

COMMITTEE ON WAYS AND MEANS

JULY 12, 1995

The National Association of Industrial and Office Properties, (NAIOP), welcomes the opportunity to submit views of the commercial real estate industry regarding the cost recovery period associated with leasehold improvements. NAIOP is a professional Association comprised of over 5000 members engaged in owning, managing and developing industrial, office and other commercial related properties in the United States and internationally. Our members include not only the nation's leading developers, but also architects, brokers, engineers, financial planners, insurance companies, master planners and many other related real estate trades.

The 39-Year Depreciation Period of Nonresidential Structures and Tenant Improvements

Leasehold improvements typically include the interior elements that office, retail and other real estate lessees require in order to operate their businesses. While the exterior of a building may only require periodic upgrades, the interior components of most rental properties are reconfigured on a regular basis to meet the needs of new and existing tenants.

Current law forbids tenants and landlords form amortizing leasehold improvement costs over their useful life—the expected term of the lease (five-to-ten years). Instead, they must be recovered over the Tax Code's determined depreciable life of the structure--39 years.

The economic results of these depreciation rules can be absolutely absurd when applied to a landlord that must manage a large mix of tenants. This is because most improvements have no value beyond a specific tenant and the term of their lease. Simply stated, improvements are made to meet a tenant's business specifications. When a tenant leaves, the space must be built-out all over again to satisfy the new lessee.

The origin of this problem can be traced back to 1981. Prior to this time, real property was depreciated using a component method. Different depreciation schedules were used to write-off the basic building structure, electrical wiring, HVAC, and so forth. Leasehold improvements were generally written off over the life of the lease on the space.

In 1981, however, component depreciation was repealed and replaced by a simplified system where the entire building and all improvements were written off over a single recovery period. Because that recovery period was 15 years, this did not pose a real problem for leasehold improvements.

But beginning in 1982 and continuing for the next 11 years, the recovery period for commercial property was gradually extended to 18 years, then to 19 years, then to 20, 31-1/2, and finally to the current 39 year depreciation period. There was no return, however, to a shorten write-off period for leasehold improvements. Essentially, we now have pre-1981 treatment for building, but post-1981 treatment of build-out expenses.

Quite frankly, the 39-year depreciable life of non-residential structures is a non-economic injunction on the real estate industry and does not reflect the realistic, useful life of a structure or, particularly, its components. The Tax Code's long-standing principle of deriving true net income by matching expenses on an investment over the same period of time the investment earns income is arbitrarily denied to property owners.

Furthermore, this current policy hinders urban renewal and construction job opportunities as improvements are delayed or simply not undertaken. Where they are taken, the costs are passed on

to the tenant which artificially inflates market rental-rates and impedes the ability of small businesses to penetrate many business districts.

Additionally, the policy inhibits the infusion and use of technological advancements being made towards more energy efficient and environmentally friendly building elements. Its seems a shame that the very communities that the government is trying to assist, by attempting to eliminate burdensome federal laws and regulations, are subject to taxation that has no alignment whatsoever with economic reality. That reality is, tenant improvements are made for a tenant, not the building, and when the tenant vacates the building, that space will need to be reconfigured. The expenses that property owners repeatedly incur on behalf of maintaining their businesses should be matched with the useful life of their investment.

Shaw/Rangel Legislation

Because of the incredible timetable of the first 100 days of the 104th Congress, the tax provisions of the House-passed legislation had to be limited to items contained in the original "Contract With America." This, unfortunately, did not allow the House-passed bill to include legislation introduced by representatives Shaw and Rangel (H.R. 1171) that would correct the flaw in the tax treatment of leasehold improvement expenses. While a provision was included in the House-passed tax bill that clarifies that building owners can "close-out" these accounts once improvements are discarded, legislation is still needed to correct the underlying problem.

Simply stated, H.R. 1171 would enable building owners to match more closely the expenses incurred to construct leasehold improvements with the income these improvements generate under their leases. The would reduce the time period for writing off these expenses to 10 years to roughly approximate the average commercial lease.

Summary

As a result of today's flawed depreciation rules, the after-tax cost of reconfiguring, or building out, office retail or other commercial space to accommodate new tenants or modernizing work places is artificially high. This is because building owners are unable to fully deduct the economic costs expended on leasehold improvements over the period in which the improvements actually generate income.

The current policy also hinders urban reinvestment and construction job opportunities as improvements are delayed or not undertaken at all. Especially given the absence of new building construction in many markets, opportunities for the Nation's seven million construction and building trade workers for the remainder of the decade will largely be tied to the renovation and rehabilitation of existing commercial space.

Moreover, a widespread shift to more energy-efficient, environmentally sound building elements is discouraged by the current tax system because of their typically higher expenses.

Fortunately, the House Ways and Means Committee was able to include in the House passed tax bill a provision easing the absurd depreciation section of our tax laws. Accordingly, if leasehold improvements find their way to the dumpster at the end of a lease term, a building owner could write off or "close out" the remaining balance in this depreciation account the same year. This simple change makes sense, and it is necessary to prevent an even greater penalty on building owners.

The greater goal, however, is to reduce the write-off period for these expenses to match economic reality. Enactment H.R. 1171 will lead to a healthier and more efficient real estate economy.

The National Association of Industrial and Office Properties is encouraged by the tax proposals making headway in both Houses of Congress and are pleased to provide any input that will continue your endeavor to establish a more judicious, and economically oriented tax system.

TESTIMONY OF BERNARD J. VAUGHAN
FLEXI-VAN LEASING, INC.

Mr. Chairman, thank you very much for the opportunity to testify before the Ways and Means Committee regarding needed legislative clarification of the tax treatment of intermodal containers.

Mr. Chairman, twice in the past this Committee has endorsed the proposed clarification concerning the tax treatment of intermodal containers which is the subject of this testimony. Moreover, both times this Committee acted on a bipartisan basis. First, in 1990, this Committee favorably reported out H.R. 5017, "The Intermodal Container Tax Clarification Act of 1990", of which Mr. Matsui was a lead sponsor. Congress adjourned before final action could be taken on that bill. As a consequence, once again, in 1992, the Ways and Means Committee favorably reported the clarification (H.R. 5674), which then became part of H.R. 11 (The Revenue Act of 1992). Unfortunately, because President Bush vetoed H.R. 11, this Committee, for the third time, is faced with the task of drafting legislation to provide needed clarification to the tax treatment of intermodal containers.

The proposal now before the Committee, like those which it previously approved, seeks to prevent a substantial retroactive change in the ability of U.S. companies to claim the investment tax credit and accelerated depreciation on the intermodal cargo containers which they lease to shipping companies and businesses. The proposal specifically is intended to overrule Revenue Ruling 90-9 with respect to containers placed in service by U.S. container lessors prior to January 1, 1990.

From its original enactment in 1962 until its general repeal in 1986, the investment tax credit generally was not allowed for property used predominantly outside of the United States. However, exceptions to this rule were provided for certain categories of assets used to transport people or property to and from this country. These exceptions sanctioned the predominant foreign use of transportation-related property as part of the credit's general purpose to improve our competitive position in the world economy. One of these exceptions applied to containers used in the transportation of property to and from the United States.

Prior to 1990, there were no Treasury regulations or rulings interpreting the exception for containers, even though that provision had been law for more than 25 years. Consequently, container owners relied on a common sense reading of the statute and the apparent Congressional intent regarding the container provision when determining both how the credit applied to their containers and whether containers qualified for the related accelerated depreciation. Significantly, for more than 20 years, the audit practice of the Internal Revenue Service ("I.R.S.")was to confirm the general availability of credits and deductions claimed by two groups of container owners, U.S. shipping companies and U.S. container leasing companies. Moreover, for lessors, the container credit was by far the largest item on each tax return and was reviewed by I.R.S. audit agents in numerous audits. Over the years, the I.R.S. also issued liberal interpretations of other transportation-related exceptions which further confirmed the lessors' understanding of the container exception.

Beginning in 1984, I.R.S agents chose to ignore some 20 years of administrative practice and radically altered their audit practices with respect to container lessors by disallowing the credit for containers because the lessors could not prove that each container touched the United States each year. In 1990, this approach was formally published in Revenue Ruling 90-9, which required all container owners who claimed an investment tax credit and related accelerated depreciation to demonstrate on a container-by-container basis that a "substantial" portion of a particular container's activity during the taxable year is in the "direct" transportation of property to or from the United States. "Substantial" is not defined or described in the ruling, so taxpayers have no basis on which to argue that they have met the ruling's requirement. The ruling defines "direct" transportation as involving only those trips that begin and end in the United States; trips between foreign ports are not taken into account, even if the property inside

the container may eventually come to the United States. The conceptual framework of Revenue Ruling 90-9 had no foundation in the law it sought to apply: neither of the terms "substantial" and "direct" was used in the statute or regulations, and neither had any support in the legislative history. Moreover, the ruling was applied retroactively.

Whatever the merits of the approach adopted by the Revenue Ruling, it constituted a dramatic change from established practices. That shift is objectionable--and unjustifiable--for numerous reasons.

First, it is fundamentally unfair for the I.R.S. to retroactively interpret--and modify--the statutory container exception in this manner: in the 20-year period following enactment of the credit, container lessors never had any indication that their records were inadequate to support their claiming the credit and related deductions, despite numerous audits. The I.R.S. had opportunities to issue regulations or rulings on the container exception, but did not provide these or any other form of public notice of new administrative requirements. Indeed, in 1981, the I.R.S. undertook a project to provide guidance on the container exception, yet a year later, after meetings with container leasing industry representatives, ended the project without any apparent revisions to existing practices. That decision by the I.R.S. should not be overlooked: in short, the I.R.S. specifically scrutinized industry practices with respect to claiming the credit and related accelerated depreciation and with respect to record keeping and chose not to require any changes.

Second, the I.R.S. interpretation is inconsistent with judicial precedents which have liberally interpreted the investment tax credit provisions and rejected administrative attempts to narrow its application. This interpretive approach of the courts, which is also reflected in I.R.S. interpretations of other transportation-related exceptions which accompany the container provision, reflects the courts' reading of Congressional intent.

Third, as Treasury and the I.R.S. apparently have recognized in this case, such a major change in interpretive policy is a tax policy decision that requires careful review by the I.R.S. and Treasury, followed by publication in a national policy statement which permits appropriate public comment, such as through proposed regulations. Only through such a national pronouncement can all affected taxpayers be fairly put on notice that such a change has occurred. Any such major change of policy should be prospective only and should include complete relief under section 7805(b) of the Internal Revenue Code.

Fourth, any change in interpretive policy by the I.R.S. with respect to the container exception should balance the I.R.S.'s strict, and in our view incorrect, reading of the statute against the need for a practical and reasonable resolution of the controversy. It is clear that Congress did not contemplate that the I.R.S. would interpret the container exception in a manner which would make it virtually impossible, as a practical matter, to utilize the benefits of the provision. The Revenue Ruling would require lessors to document retroactively the daily movements of individual containers. Providing such documents prospectively will be difficult enough, given that container lessors now typically manage fleets in excess of 200,000 containers that are used in carrying goods for lessees who are not under the control of the lessors. But retroactively providing such documents simply is impossible. Lessors keep detailed records about their containers, but they cannot maintain records regarding container movements when they are not in control of the containers. Lessee documents, to the extent they have not already been disposed of for prior years, focus on shipments of cargo, not on the specific containers, and often are not in computerized form or otherwise accessible and retrievable. Indeed, the cost of attempting to obtain detailed records from lessees to reconstruct the itinerary of a particular container in all likelihood would exceed the value of the credit or other tax benefits.

The Revenue Ruling applied to open taxable years, which generally included all of the 1980s for the leasing companies. That is a long period, but the lessors' exposure is

even greater because the ruling also applied to containers placed in service in closed taxable years but which generated credit carryovers to open years. This extended the Ruling's effect back as far as 1974.

If container lessors were on notice of the I.R.S. position through the issuance of a ruling or regulation on this issue 25 years ago, they could have taken appropriate steps to qualify for the credit or to challenge the I.R.S. interpretation in a timely manner. In any event, they could have set leasing rates and information requirements based on the costs of complying with the interpretation. Particularly in light of prior administrative practices over more than two decades, the retroactive imposition of a restrictive interpretation is unreasonable and unjustified.

As an alternative to the substantive and record keeping requirements of the Revenue Ruling, a safe harbor was provided in Revenue Procedure 90-10, published at the same time as the Revenue Ruling. It is interesting to read the portion of the Revenue Procedure which confirms that the Revenue Ruling's record keeping requirements are unfair, noting that a safe harbor is necessary because separate tracing of containers is too costly and difficult given the numbers of containers and the fact that lessees have physical control over the containers or the records relating to the containers.

Moreover, the safe harbor effectively allows only a portion of the credits at issue for prior years. For 1981 and later years, the allowance is only 50 percent. This is neither an adequate nor a fair solution to the retroactive problem posed by the Revenue Ruling. Industry statistics made available to the I.R.S. prior to the issuance of the ruling showed that, during every relevant year, the United States was the leading country for containerized exports and imports. Given those statistics, it should have been presumed that containers traveled in due course to or from the United States simply because of the prominence of the United States in world trade in general and container traffic in particular. Instead, the practical effect of the IRS position is that, if a taxpayer believes it is entitled to more than a 50 percent allowance, the taxpayer is required to document retroactively every container trip taken during every year in the recapture period, in order to meet an undefined "substantial" use test in the ruling. I believe that this position is clearly inconsistent with the language and the intent of the statute relating to containers.

For several years prior to the issuance of Revenue Ruling 90-9, taxpayers engaged in discussions with the I.R.S. about this issue in an effort to achieve an administrative result which would fairly resolve the controversy. More recently, the issues presented by Revenue Ruling 90-9 have led to considerable litigation. Unfortunately, neither negotiation nor litigation has proven constructive in the absence of Congressional clarification of its intent. A legislative resolution is now essential to prevent the unfair retroactive impact of the I.R.S. revenue ruling. Therefore, I respectfully urge the Ways and Means Committee to support the prompt enactment of the proposal now before the Committee.

Mr. Chairman, for your reference, set forth below is a more technical analysis of current law, the proposed clarification, and the issues they present.

Current Law

Prior to its repeal by the Tax Reform Act of 1986, the regular investment tax credit generally was not available for property which was used predominantly outside the United States. An exception to the predominant foreign use rule was provided in former Code section 48(a)(2)(B)(v) for "any container of a United States person which is used in the transportation of property to and from the United States." (Similar transportation-related exceptions also were provided for aircraft, railroad rolling stock, vessels, and motor vehicles.) Property of the type described in the container exception also was eligible for the most favorable accelerated depreciation. To better reflect the continued application of the container exception under the depreciation rules, the container

exception (and the other transportation-related exception to the predominant foreign use rule) were move to Code section 168(g)(4) by deadwood provisions of the Revenue Reconciliation Act of 1990.

For more than 25 years following the enactment of the investment tax credit in 1962, there were no regulations or rulings interpreting the container exception. Taxpayers and audit agents applied the container provision with minimal controversy.

In 1990, the I.R.S. published the first formal interpretation of the container exception in Revenue Ruling 90-9, which allows the credit and accelerated depreciation deductions only if a taxpayer can document on a container-by-container basis that a substantial portion of a particular container's activity during the taxable year is in the direct transportation of property to or from the United States. In the absence of such documentation, a taxpayer would be required to use a less favorable depreciation method applicable to tangible personal property used predominantly outside the United States. Revenue Ruling 90-9 states that "direct transportation" consists of the transportation of property by the container with the United States as the origin or terminus of the trip for the container and the property. Revenue Ruling 90-9 applies retroactively.

Revenue Procedure 90-10, which was published contemporaneously with Revenue Ruling 90-9, provided a "safe harbor" option for those who could not comply with the new record keeping requirements imposed by the ruling. Specifically, Revenue Procedure 90-10 allowed a taxpayer to make an irrevocable election to use certain specified percentages to determine the aggregate basis of intermodal cargo containers placed in service in 1974 and all subsequent years that would be deemed used in the direct transportation of property to or from the United States, and thus would be eligible for the investment tax credit and related accelerated depreciation. The election was available regardless of whether the taxpayer maintained sufficient records to trace the usage of cargo containers.

Several cases relating to the application of section 48(a)(2)(B)(v) are pending in the United States Tax Court as a result of the issuance of Revenue Ruling 90-9. On January 11, 1995 the Tax Court issued an opinion in Norfolk Southern Corp. et al. v. Commissioner, 104 T.C. No. 1, in which the court stated that the meaning of the phrase "used in the transportation of property" was an issue "of first impression" and that "[i]t appears that Congress did not explicitly consider the extent of contact with the United States a container must have to satisfy the container exception."

In the absence of express guidance from Congress, the Tax Court in Norfolk adopted an "actual use" test that requires "one contact with the United States" during the year a container is placed in service (regardless of when or where the container is placed in service during the year), plus proof of actual transportation of property to or from the United States at least once each year thereafter during the recapture period. That test is not set forth in the legislative history of section 48(a)(2)(B)(v) or in the Treasury regulations adopted under that section. Moreover, it differs from the respective tests urged upon the Tax Court by the taxpayer and the Commissioner in Norfolk.

The decision in Norfolk is likely to be appealed, possibly by both the taxpayer and the Commissioner. Other cases pending in the Tax Court, once decided, are appealable to various different Courts of Appeals, raising the possibility of years of litigation and inconsistent opinions from various courts in order to resolve this issue. It is thus particularly appropriate for this issue to be resolved by the Congress at this time.

Reasons For Change

Revenue Ruling 90-9 imposes a highly restrictive interpretation of the container provision which is not set forth in the regulations or legislative history of the provision

and necessitates detailed record-keeping requirements on a retroactive basis. In addition, it represents a substantial change from more than 20 years of I.R.S. audit practice. Retroactive application of the revenue ruling would be substantially unfair given the probable impossibility of developing the required records from prior years. The revenue procedure's alternative "safe harbor" allowing 50 percent of claimed credits for prior years is unfair and has not provided an adequate basis for an industry-wide settlement of this controversy.

To prevent a significant retroactive change in policy and the continued expense of protracted litigation, a statutory standard is necessary for application of the container provision in prior years.

Proposed Change

The proposal now before the Committee would provide a statutory standard for determining the eligibility of leased intermodal cargo containers for the investment tax credit and accelerated depreciation deductions. This standard would apply retroactively to leased containers placed in service before January 1, 1990, thereby overruling the I.R.S.'sinterpretation in Revenue Ruling 90-9.

The proposal would describe a particular category of leased containers which qualifies for the credit and deductions under the container exception. (Containers that would be treated under the proposed legislation as being described in the container exception also must satisfy any other applicable requirements for eligibility under the credit and depreciation rules.) The proposed legislation would explicitly provide that it is not intended to create any inference regarding how the container exception applies to other categories of containers that are not described in the proposed legislation, such as containers owned by shipping companies or shippers, or containers placed in service after 1989. The container exception would continue to apply to those other categories of containers without regard to the proposed change.

Under the proposal, an intermodal cargo container owned by a United States company and placed in service before January 1, 1990 would qualify for the credit and related deductions if it is subject to a "qualifying lease", is being repaired for subsequent lease, is being moved for purposes of leasing or being available for lease, or is otherwise being held for lease.

Statutory Standard

In general, a "qualifying lease" is any lease or sublease to a "container user" that has "one or more trade routes that contact the United States." For this purpose, a "container user" is a person in the business of using containers to ship or transport cargo for other persons (such as a steamship company) or a person that uses a container to ship or transport its own cargo (such as a manufacturer which packs goods for export or import in containers).

A container user is considered to have "one or more trade routes that contact the United States" if at any time during the taxable year the person either own, operates, or charters any vessel that receives or delivers any container in the United States, or uses any container to ship cargo to or from the United States. Proof of U.S. trade routes may be established by published schedules, *The Container Yearbook*, U.S. port and customs records, records of vessel owners or operators, or any other public documents or private records.

A qualifying lease also includes any "short-term" lease to a container user. This includes a lease, or any sublease, for a stated term of which does not exceed 50 percent of the depreciation "class life" of the container. It also includes any lease agreement (such as daily or "per diem" leases or, master lease agreements) that does not require the lessee or sublessee to use or hold a particular container for a specified term. This

definition of a short-term lease or sublease denies the benefit of the proposed change to any container leased on a long-term basis to a container user that does not have a U.S. trade route.

Effective Date

In general, the proposed change would apply the statutory standard to containers that were placed in service before January 1, 1990. Such containers must have been placed in service either in a taxable year for which the audit adjustment or refund period has not closed or in a closed taxable year from which an investment credit was carried forward to an open year. This is intended to assure that the statutory standard will govern all controversies concerning pre-1990 containers, in lieu of the Revenue Ruling, except where the relevant statue of limitations has expired. Thus, for example, where the statute of limitations otherwise precludes a refund claim, the proposal cannot be used as a basis for making such claim. Similarly, the proposed legislative change may not be used as the basis for a refund claim with respect to matters that are the subject of closing agreements entered into pursuant to Code section 7121.

In closing, Mr. Chairman, I believe it is useful to recall just what this Committee sought to achieve when it years ago provided for the tax treatment of intermodal containers. Above all else, it sought to promote international trade and foster the growth of foreign markets for American products. To a lesser degree, this Committee sought to foster the growth of a strong domestic intermodal container industry. On both counts, this Committee's policies have been extraordinarily successful: over the past generation, international trade and American exports have grown exponentially, and the American container industry is preeminent in global shipping, a distinction, unfortunately, that no other American shipping-related industry likely may claim. The proposal now before this Committee seeks merely to affirm that the intent of this Committee be honored, and that the gains this Committee's policies have engendered not be jeopardized.

Mr. Chairman, this concludes my testimony. Again, thank you very much for the opportunity to testify. I very much look forward to working with the Committee to resolve the issues relating to the tax treatment of intermodal containers.

Statement of

Harris N. Miller
President
The Information Technology Association of America

Comments for the Record
In Connection with Hearings on Miscellaneous Tax Reforms
on
Exempting the Acquisition of Software and Software Services Businesses
From 15-Year Intangibles Amortization

July 11 and July 12, 1995

On behalf of the Information Technology Association of America ("ITAA"), I would like to compliment Chairman Archer and the Committee on Ways and Means for addressing many ways to simplify and improve the current tax laws at the same time the Committee continues to pursue alternatives for fundamental reform of the nation's tax system.

The Information Technology Association of America is the leading trade association for our nation's computer software and services industry. ITAA's more than 6,700 direct and affiliated member companies provide business application and systems software for mainframe, midrange, and personal computers; custom and contract software programming services; information systems integration services; and information processing services.

We support enactment of a proposal to exempt acquisition of software and software services businesses from 15-year intangibles amortization. Such a change will clearly improve the current tax laws regarding amortization of intangibles. Under this proposal, a portion of the intangibles acquired from certain computer software businesses would be exempt from 15-year amortization currently required by Code section 197. While this change would not protect all software services acquisitions from 15-year amortization, it is a step in the right direction. It does not interfere with the objectives of the original intangibles legislation to simplify the rules regarding the amortization of intangibles and eliminate controversies arising under prior law with respect to the useful life of an intangible and the allocation of purchase price among acquired intangibles.

A 15-year amortization period for computer software bears no reasonable relationship to its useful life. Since 1969, the Internal Revenue Service has recognized that computer software has a life expectancy of five years or less. In addition, with the passage of Code section 167(f)(1) in the Omnibus Budget Reconciliation Act of 1993, Congress recognized the limited useful life of computer software by mandating a 36-month amortization period for software acquired outside of the acquisition of a trade or business (or a substantial portion thereof) and for software that is publicly available, has not been substantially modified, and is subject to a nonexclusive license.

It is clear that software technology is evolving rapidly. The evolution is primarily in response to advances in technology, customer demands, and changes in law and regulation. For example, the popular spreadsheet program "1-2-3" from Lotus Development Corporation was introduced in 1983. Since then, there have been eight new versions of the program, with the latest being released in 1994. Likewise, Microsoft Corporation's word processing program, "Word," was introduced in 1983 and has since seen nine new versions. Even the complex mainframe software used to power sophisticated banking or airline reservation systems is upgraded and enhanced frequently due to advances in both software and hardware technology. At a typical software services company, the computers at the large information processing centers may be upgraded as often as every 18 months, meaning that the software must also be changed and upgraded. Thus, a 15-year amortization period for the purchase of such software bears no relationship whatsoever to the economic useful life of the acquired software.

The acquisition of computer software by one computer software or computer services company from another company that has developed or produced such software is often the most cost-effective and timely means of acquiring software technology. By definition, the primary asset of a software company is computer software. These companies typically have few other intangible assets to be acquired that may warrant a 15-year amortization period, such as goodwill. In situations where the primary asset(s) acquired are computer software, it is unreasonable for software to be assigned the arbitrary 15-year amortization period just because it is acquired in a transaction or series of transactions constituting the acquisition of a trade or business or a substantial portion thereof. The 15-year amortization period mandated by current Code section 197 effectively increases the cost of such software by more than 10 and by as much as 17 percent. This increase in business acquisition costs reduces the demand for companies that develop innovative software products and makes it more expensive for U.S. companies to acquire, integrate, and market U.S. software products and services. The proposal recognizes the limited useful life of software acquired in a business acquisition, while eliminating the need to allocate purchase price among acquired intangibles.

Finally, even though the U.S. is the recognized world leader in software technology, virtually all of our major trading partners, including Canada, France, Germany, Japan, and the United Kingdom, have acknowledged the limited useful life of computer software by allowing the amortization of software acquisition costs over five years or less. If the U.S. continues to impose a 15-year amortization period on business acquisitions of software by U.S. firms, foreign competitors bidding for U.S. software companies will have a significant advantage over U.S. bidders. This could lead to the export of the ownership of U.S. software technology and may even encourage U.S. firms to acquire software through foreign subsidiaries in order to reduce the competitive advantage of foreign firms.

Passage of the current proposal to exempt software and software services businesses from 15-year intangibles amortization will not completely resolve the problem with respect to acquisition of software services companies. However, it will constitute significant progress toward the removal of an undue burden on the acquisition of computer software companies and will in many instances allow acquired computer software to be amortized over a period that bears a reasonable relationship to its economic useful life.

Hearing before the
Committee on Ways and Means
U.S. House of Representatives

on

Miscellaneous Tax Reforms

July 11-12, 1995

Written Statement
of
The Section 197 Software Coalition

Introduction

The "Section 197 Software Coalition," a group of microcomputer software development companies, appreciates the opportunity to submit this written statement concerning a proposal that would exempt the acquisition of certain software and software services businesses from the 15-year amortization rules under section 197.

The Coalition's members -- Borland International, Inc., Microsoft Corporation, Novell, Inc., and Oracle Corporation -- support this proposal as a complement to the exclusion under section 197(e)(3)(A)(ii) for computer software not acquired in connection with the acquisition of a trade or business. Coalition members strongly advocated this exclusion for "stand-alone" software acquisitions when Congress drafted section 197 as part of the Omnibus Budget Reconciliation Act of 1993. Both the section 197(e)(3)(A)(ii) exclusion and the proposed exclusion now before the committee recognize that the actual economic life of computer software is significantly shorter than the 15-year amortization period generally required under section 197.

The Coalition is awaiting guidance from the IRS and Treasury interpreting the section 197 statute and the exclusions from 15-year amortization. It is imperative that these regulations maintain -- and not narrow -- the scope of the exclusion for stand-alone software acquisitions as envisioned under section 197(e)(3)(A)(ii). The Coalition also wishes to observe that legislative consideration of additional exclusions from section 197 in no way should bear on the development of these regulations.

The "50/50" proposal

The proposal before the committee as part of these hearings addresses situations where a taxpayer purchases a "qualified software business." For such acquisitions, 50 percent of the intangibles value would be amortized over a 15-year period and 50 percent would be treated as computer software that is not a section 197 intangible and amortized over a 3-year period.

The proposal, like the general approach of section 197, aims for "rough justice." For example, it would not attempt to provide more favorable treatment where the ratio of software value to total intangibles value in a qualified acquisition may be higher than 50

percent. Nevertheless, the proposal clearly would provide a more equitable result than current law.

The proposal defines a "qualified software business" (as described in a pamphlet prepared by the staff of the Joint Committee on Taxation) as follows:

> A qualified software business would be any entity that is engaged in the active conduct of the trade or business of developing, manufacturing, or producing computer software and that meets certain other tests. At least 50 percent of the ordinary gross income of the entity, if any, for the taxable year immediately preceding the acquisition must be income allocable to such trade or business. In addition, either (i) the sum of the deductions allowable under section 172 [sic][1], 174 and 195 for the taxable year immediately preceding the acquisition that are properly allocable to such trade or business must be at least 25 percent of the average ordinary gross income of such entity, or (ii) the average of such deductions for the 5-taxable year period (or shorter period of existence if the entity has not been in existence 5 years) ending with the taxable year immediately preceding the year of the acquisition must be at least 25 percent of the average ordinary gross income of the entity for such period.
>
> If an entity has never generated ordinary gross income, these requirements would be treated as met if 75 percent of the total expenditures of such entity for the taxable year immediately preceding the acquisition are directly or indirectly allocable to developing, manufacturing or producing computer software.[2]

It should be noted that this definition would not encompass all purchases of businesses that may be involved in software development. The tests defining a "qualified software business" are derived from current-law section 543(d), which governs the treatment of active business computer software royalties for purposes of determining personal holding company income. Software-related acquisitions that do not meet these tests, but that rise to the level of a "trade or business" under section 1060[3], will continue to be subject to the general section 197 rules.

Recognizing that section 197 relief for computer software is necessary even in situations involving the acquisition of a trade or business, the proposal carves out a class of business purchases from the general rules. Congress in 1993 drew a similar conclusion, but provided relief for a certain limited class of software assets rather than a class of businesses. The 1993 Act allows for 36-month amortization for computer software acquired in conjunction with a trade or business acquisition that is (1) readily available

---

[1]It would appear that this reference should be to section 162. (See section 543(d)(4)(A)(i)).

[2]Staff of the Joint Committee on Taxation, "Description of Miscellaneous Tax Proposals," Comm. Print JCS-19-95 (July 1995).

[3]Intangibles purchased as part of the acquisition of a "trade or business," as defined under section 1060, generally are subject to 15-year amortization under section 197. The 50/50 proposal would not change the definition of "trade or business" for purposes of section 197.

for purchase by the general public; (2) subject to a non-exclusive license; and (3) not substantially modified. The effect of the proposal would be to provide broader amortization relief.

Section 197 exclusion for "stand-alone" software acquisitions

The proposal before the committee would not affect a separate exclusion from section 197 for stand-alone acquisitions of computer software. Section 197(e)(3)(A)(ii) provides for a 36-month amortization period for software that is "not acquired in a transaction (or series of related transactions) involving the acquisition of assets constituting a trade or business or substantial portion thereof."

The scope of this important exclusion will be interpreted in section 197 regulations now being developed by the IRS and Treasury. The IRS in June 1994 issued an "advance" notice of proposed rulemaking specifically requested input from the public on the section 197(e)(3)(A)(ii) exclusion. The Coalition, as well as a number of other taxpayer groups, provided written comments urging that the regulations not narrow the scope of the stand-alone software exclusion envisioned by Congress in 1993.

Conclusion

The Coalition generally supports the goals of the proposal before the committee to exempt the acquisition of certain software and software services businesses from the 15-year amortization rules under section 197. Like the exclusion from section 197 for stand-alone acquisitions of computer software, the proposal recognizes that the actual economic life of software is substantially shorter than 15 years. The Coalition stresses that the possibility of Congressional action on the 50/50 proposal should not influence the development of regulations on the stand-alone software exclusion, and that it is vitally important that the regulations maintain the scope of the exclusion envisioned by Congress in 1993.

Statement of John Engler
Governor of Michigan
U.S. House of Representatives
Committee on Ways and Means
Hearings on Miscellaneous Tax Reforms.
July 11-13, 1995

For the past several years, Michigan has instituted major reforms to move families from welfare dependency to self-sufficiency. A major cornerstone of Michigan's welfare reform initiative, "To Strengthen Michigan Families," (TSMF) is rewarding work for families who receive public assistance.

The Earned Income Tax Credit (EITC) is a powerful tool to encourage work and increase the ability of parents to care for their children. However, in many cases, eligible families don't know they are eligible for the credit and don't file a return to claim the EITC. In addition, far too many low-income workers are not able to take advantage of the option to receive their EITC in each paycheck. Instead, they receive the credit for the full year when filing their taxes. For working poor families, the advance EITC offers them a more immediate reward for their efforts and provides financial benefits to them throughout the year.

I strongly urge this Committee to approve the provision offered by Representative Dave Camp, which would allow states to advance the EITC. In Michigan, by providing increased incentives to work and setting clear, self-sufficiency expectations for AFDC recipients, the percent of working AFDC families in Michigan increased from 15.7% in September 1992 (the month before TSMF began) to 29.4% in June 1995. Michigan's reforms saved taxpayers over $100 million in the first 2 years.

I believe that Michigan and many other states can do even better in increasing work among low-income families, and advancing the EITC by states will help achieve that goal. In Michigan, the process of the state advancing the EITC is straightforward. Working welfare clients already report their earnings to the states. At the request of the client, the Michigan Department of Social Services would calculate the appropriate advance EITC based on their earnings, and provide the advance in their check. The amount of the EITC would be highlighted to drive home to clients that work pays. The amount of the advance EITC would be forwarded by the state to the Internal Revenue Service. Clients would reconcile their EITC at the year's end by filing a tax return.

The process is simple, and the potential benefits enormous. By approving the provision offered by Representative Camp, Michigan and many other states will be on the way to making work pay for low-income families. I urge the Committee to act immediately.

College Savings Plans Network

STATEMENT IN SUPPORT OF EXCLUSION FOR EDUCATION SAVINGS PLANS
HEARING ON MISCELLANEOUS REVENUE ISSUES
COMMITTEE ON WAYS AND MEANS
U.S. HOUSE OF REPRESENTATIVES
JULY 12, 1995

Ohio Tuition Trust Authority, Barbara Jennings, Director
Alabama Prepaid Affordable College Tuition Program, Brenda Emfinger, Director
Alaska Advance College Tuition Program, Jim Lynch, Director
Florida Prepaid College Program, William Montjoy, Director
Kentucky Educational Savings Plan Trust, Jo Carol Ellis, Administrator
Louisiana Office of Student Financial Aid, Jack Guinn, Director
Massachusetts Education Finance Authority, Peter Mazareas, Director
Pennsylvania Tuition Account Program, Joseph Rice, Director
University of Wyoming, State Treasurer Stan Smith, Director

Mr. Chairman and members of the Committee, these comments are being submitted by the membership of the College Savings Plan Network, a national association which has been created under the auspices of the National Association of State Treasurers to represent the common interests of state-operated college savings plans.

Majority of States Have an Active Interest

Our Network represents approximately sixteen states, each offering some form of college savings plan. State-issued college savings bond offerings are the most prevalent activity, but educational savings account plans and prepaid tuition plans are rapidly growing in number. There are currently eight states with operating prepaid tuition programs -- Alabama, Alaska, Florida, Massachusetts, Michigan, Ohio, Pennsylvania, and Wyoming -- with two other states that are soon to be operational -- Texas and Virginia. These state-operated prepaid programs currently represent well over 400,000 prepaid tuition accounts.

Two states have created educational savings account programs -- Kentucky and Louisiana -- and four other states have passed legislation to create some form of college savings plan, but are not yet operational -- Arkansas, Indiana, Mississippi and Oklahoma.

There are an additional eighteen states that have contacted our Network and actively expressed interest in creating and offering some form of college savings plan for their citizenry. These include: Arizona, California, Colorado, Idaho, Illinois, Maryland, Minnesota, Missouri, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Tennessee, Vermont, and West Virginia.

Sound Public Purpose Served

College savings plans around the country seek to provide important assurances about the future:

1) that higher education remains affordable and accessible to a large portion of the population;

2) that an increasing number of children have greater opportunities to go to college and pursue postsecondary education, and, in turn, create a better-educated population; and

3) that, by encouraging early savings by middle-income families, as an alternative to reliance on borrowing, and, by encouraging public policy that provides reasonable incentives for such saving, limited state and federal financial aid dollars will be better utilized to maximize access to higher education.

Variety of Plans, All with Common Elements

Although each state's college savings plan may have its own unique features to correspond to the interests and needs of that state, our Network has defined six elements to be common to a state-operated college savings plan:

1) statutorily created;

2) administered by the state and/or governed by a Board appointed by the state and comprised of state officials and others;

3) administered by state personnel with strict financial and program accountability requirements;

4) limited to prescribed investment policies and standards;

5) open to all citizens of the state; and

6) savings dedicated to the provision of higher education, with prescribed limitations governing the return of savings or prepayments only in the event of such circumstances as death, permanent disability, or the failure of the beneficiary to meet entrance requirements. If the beneficiary chooses not to go on for higher education, a refund with applicable penalty would be allowed.

The full faith and credit would not be required.

The Network believes these same definitional criteria should qualify these plans for federal tax exemptions that will maximize incentives for early college savings and keep state-operated plans as affordable and accessible as possible.

Specific Tax Amendments Required

The Network respectfully requests that the Internal Revenue Code be amended as follows to resolve three specific tax issues related to college savings programs:

1) Clearly specify that state-operated college savings account programs and prepaid tuition programs that meet defined standards are exercising essential government functions and, as such, the income earned by such plans is not subject to tax.

2) Provide that the student (beneficiary) shall not be taxed on the value of the tuition benefits received in excess of the amount saved or prepaid, if the value is used to pay an institution of higher education for qualified educational expenses. Any earnings not used for educational purposes shall be taxed at the rate of the refund recipient, usually either the beneficiary or the purchase (The Internal Revenue Service has ruled to the contrary in a private letter ruling to Michigan).

3) Provide that parents, family members, and friends (prepaid purchaser or contributor to savings) that create college savings accounts or prepaid tuition accounts shall not be subject to gift tax on amounts paid into a college savings program (Again, the IRS has ruled to the contrary in a private letter ruling to Michigan).

Support for Proposed Legislation

The College Savings Plan Network strongly supports and endorses the thrust of the legislative proposals of both Congressman English of Pennsylvania and Senator Mitch McConnell of Kentucky. Congressman English's legislation focuses more on tax reform for prepaid tuition programs and Senator McConnell's bill currently focuses on educational savings trust accounts, because they are appropriately representing the interests of the type of college savings plan being offered in each of their respective states.

Our Network encourages the Committee to consider these college savings-related tax issues with a comprehensive perspective that will be inclusive of the multiple types and designs of state-operated programs that have been and will continue to be created to best fit the needs and circumstances of each individual state.

In Conclusion

In a recent Gallup Poll, consumers indicated that their two greatest financial concerns were paying off their mortgages and paying for their children's college education. Most parents do not save and those that do save are starting to save too late. Many do not save because they believe savings will only limit financial aid eligibility in the future. They perceive greater incentive to borrow than save to cover college expenses.

The College Savings Plan Network urges the Committee to amend current tax law to help encourage families to plan, prepare, and save rather than rely totally on student loans to educate their children.

Thank you for providing this opportunity to comment.

TESTIMONY OF GARY L. MULLER
UNITED FIDELITY LIFE INSURANCE COMPANY

Mr. Chairman and Members of the Committee, thank you very much for this opportunity to present to you and to the Congress, once again, an idea which would permit American families to better utilize their own financial resources to finance their children's higher education expenses.

Mr. Chairman my name is Gary L. Muller. I am chief operating officer for United Fidelity Life Insurance Co. of Kansas City, Missouri. The purpose of my testimony is to advocate that Congress, as it has in the past, adopt legislation to permit penalty free withdrawals from annuities for higher education expenses.

This Committee has endorsed the merits of just such legislation in the 102nd Congress, when, with strong bipartisan support, it adopted legislation identical to that which I am addressing today. Moreover, the provision subsequently was passed by both the full House and the Senate. Unfortunately, for reasons wholly unrelated to this proposal, the legislative vehicle in which this provision was included, H.R. 11, ultimately was vetoed by President Bush. However, as I know the Members of this Committee realize, the need to ease the tremendous financial burden on families who send their children to college has grown more pressing.

As this Committee has recognized before, permitting penalty free withdrawals from annuities for higher education expenses is a substantial step towards meeting that goal without interposing any government bureaucracy or incurring the expense of direct subsidies. In the past, we called the idea the "Higher Education Savings Plan" ("HESP"). It still fits today. In essence, HESP would work by amending the Internal Revenue Code of 1986 (the "Code") to promote savings for qualified higher education expenses.

I don't have to tell you of the soaring costs of higher education.

Right now, the cost of sending a child to a private university for four years now averages more than $65,000. The cost of a four-year public university education averages about $23,000. The Department of Education now estimates that the total cost to attend a private university will continue to escalate over the next decade to about $200,000, and $60,000 for a public university.

I believe that two statistics, in particular, underscore the immediate need for legislation to permit Americans to pay for their children's higher education.

- Beginning in the early 1980s, college costs have increased at a rate nearly twice that of the cost of living. Since the mid-1980s, this trend has been most pronounced among four-year private institutions, with costs escalating at a rate of roughly 8.5% annually. In comparison, tuition costs as public schools increased by about 5.4% annually.

- These increases constitute a larger and larger share of overall family income. During the 1980s, the cost of a four-year private institution rose from 16.5% of the median family income to about 22.1% of that income. During the same period, the cost of four year public institutions rose form 4.1% to 4.8% of the median family income.

There is, of course, no dispute about the importance of ensuring that quality higher education remain affordable in the middle income families of America. As usual, Abraham Lincoln, 16th President of the United States, said it best in an 1832 public address:

> Upon the subject of education . . . I can only say that I view it as the most important subject which we as a people can be engaged in.

President Clinton, much to his credit, is as attuned to this issue as any of his predecessors. He recognizes that our ability to compete in the global marketplace is

dependent almost entirely upon the skills and educational achievement of our work force. Accordingly, he has insisted, correctly, that the upcoming Budget Reconciliation package include means to keep income families meet their educational expenses. Mr. Chairman, I respectively submit that the proposal passed by the Congress in 1992 properly should be a component of any reforms to the tax treatment of educational expenditures.

There is absolutely no question that saving after tax dollars sufficient to cover these higher educational costs will be very difficult for most, if not all, middle-income parents. Therefore, it is essential that middle-income taxpayers be afforded some relief under the tax code to enable them to meet these mounting costs.

Under the HESP legislation, the text of which is appended to this testimony, such assistance would be made available by providing that when a taxpayer purchases a predesignated annuity for the child to cover qualified higher education costs, the withdrawal of funds from the annuity to pay such education costs would be exempt from the 10 percent penalty for premature distributions from annuity contracts under Internal Revenue Code section 782(q). Safeguards would be provided by requiring that the annuity be designated for education costs at the time of purchase. Qualified higher education costs are defined to include only undergraduate expenses incurred at institutions of higher education. Finally, under the terms of the plan, the annuity premium payments to cover the education costs would not count against the first tax annual exclusion.

Other Code sections provide direct benefits to taxpayers' financing the cost of higher education. Section 135 allows income from U.S. savings bonds to be excluded from income under certain circumstances if the income is used to pay educational costs. Section 2503 generally allows an unlimited gift tax annual exclusion for gifts which pay higher education costs. HESP provides a mechanism to directly address the needs of middle income taxpayers facing higher education costs of their children will be financially overwhelming.

A few years ago, as we visited Members of Congress on this great plan, accompanying me was Digger Phelps, the winningest basketball coach in Notre Dame history. And while certainly a popular, well-known sports figure, Coach Phelps holds an equally impressive record off the court. Every player who has competed for four years under Coach Phelps earned his degree. And in his 20 years as a collegiate coach, he also developed a reputation as a concerned, outspoken educator.

He once was asked if he felt that more government funds would solve the education problems. He replied:

> I don't know if the government is ever going to fund education. I do think the government is going to have to decide on one game plan for education. The problem is that state governments have 50 different game plans and obviously, none of them are working. I think funding is going to have to come from the private sector; corporate America is going to have to become more involved. I believe we need more tax breaks on areas of education, both on a family and corporate level. Whether it's financing teacher education or financing student education. I look at education as a choice. I don't think everyone has to be an electrical engineer, because we also need electricians. So I think we need to come up with one solid plan.

Well, one may not agree with everything Coach Phelps focused on but he certainly recognized the need for our Higher Educations Savings Plan.

The President, the Congress, and educational leaders are well aware that we have a crisis in education.

Obviously, I do not mean to suggest that HESP will, by itself, solve those problems. Other, more fundamental steps must be taken with respect to curricula, faculty, funding, and community commitment. But HESP is a part of the solution. It is an effective means of provide some help in addressing one of the most troubling developments in higher education: the dramatically escalating costs.

No, it's not a "new math" idea, thank goodness. No, it doesn't guarantee that all future graduates will be brilliant. No, all the Higher Education Savings Plan accomplishes is to lend a helping hand for American families to meet the constantly rising costs of higher education. And it does so with virtually no additional bureaucracy and a very modest revenue impact. For those reasons, Mr. Chairman, I urge this Committee, and the 104th Congress, to enact the Higher Education Savings Plan this session.

Mr. Chairman, thank you again for allowing me the opportunity to testify before this Committee.

EXHIBIT

SEC. 202. PENALTY FREE WITHDRAWALS FROM ANNUITIES FOR HIGHER EDUCATION EXPENSES.

(a) IN GENERAL.--Paragraph (2) of section 72(q) of the Internal Revenue Code of 1986 (relating to 10-percent penalty for premature distributions from annuity contracts) is amended by striking "or" at the end of subparagraph (I), by striking the period at the end of subparagraph (J) and inserting ", or", and by inserting after subparagraph (J) the following new subparagraph:

"(K) which is a qualified higher education expense distribution (as defined in paragraph (4))."

(b) QUALIFIED HIGHER EDUCATION EXPENSE DISTRIBUTION.--Subsection (q) of section 72 of such Code is amended by adding at the end thereof the following new paragraph:

"(4) QUALIFIED HIGHER EDUCATION EXPENSE DISTRIBUTION.--

"(A) IN GENERAL.--For purposes of paragraph (2)(K), the term 'qualified higher education expense distribution' means any distribution from a designated higher education expense annuity to the taxpayer if such distribution is used within 90 days of the date of the distribution to pay qualified tuition and related expenses (as defined in section 117(b)) required for the enrollment or attendance of such taxpayer, the taxpayer's spouse, or a child (as defined in section 151(c)(3)) or grandchild of such taxpayer at an eligible educational institution (as defined in section 135(c)(3)); except that such expenses shall be reduced by any amount excluded from gross income under section 135 by reason of such expenses.

"(B) DESIGNATED HIGHER EDUCATION EXPENSE ANNUITY.--

"(i) IN GENERAL.--The term 'designated higher education expense annuity' means any annuity purchased after December 31, 1992, and designated for purposes of this paragraph by the purchase at the time of purchase as an annuity to which this paragraph applies.

"(ii) CERTAIN ANNUITIES RECEIVED IN AN EXCHANGE NOT ELIGIBLE.--Such term shall not include any annuity acquired in an exchange to which section 1035 applies unless the annuity given up by the taxpayer in the exchange was a designated higher education expense annuity."

(c) GIFT TAX TREATMENT.--Subsection (e) of section 2503 of such Code is amended by adding at the end thereof the following new paragraph:

"(3) TREATMENT OF PREMIUMS PAID UNDER DESIGNATED HIGHER EDUCATION EXPENSE ANNUITIES.--

"(A) IN GENERAL.--Any premium paid for a designated higher education expense annuity shall not be treated as a transfer of property by gift for purposes of this chapter.

"(B) RECAPTURE RULES.--If any premium paid by any person for a designated higher education expense annuity is not treated as a taxable gift solely by reason of subparagraph (A)--

"(i) LIFETIME DISTRIBUTIONS NOT USED FOR EDUCATIONAL PURPOSES.--Any disqualified lifetime distribution from the portion of any annuity attributable to such premium shall be treated as a transfer by fit by such person.

"(ii) INCLUSION IN GROSS ESTATE.--The gross estate of such person shall include the value (as of the date of the decedent's death or applicable valuation date set forth in section 2032) of the portion of any annuity attributable to such premium.

"(C) DISQUALIFIED LIFETIME DISTRIBUTION.--For purposes of subparagraph (B), the term 'disqualified lifetime distribution' means any distribution which is not a qualified higher education distribution and which is made during the life of the person referred to in subparagraph (B) to or for the benefit of another person.

"(D) OTHER DEFINITIONS.--For purposes of this paragraph, the terms 'designated higher education expense annuity' and 'qualified higher education expense distribution' have the respective meanings given such terms by section 72(q)(4)."

(d) EFFECTIVE DATE.--The amendments made by this section shall take effect on January 1, 1996.

STATEMENT OF NATIONAL COMMITTEE TO PRESERVE SOCIAL SECURITY AND MEDICARE

On behalf of the six million members and supporters of the National Committee to Preserve Social Security and Medicare, we wish to submit for the record of the Miscellaneous Tax Proposals hearing some general comments on the suggested employment tax proposals listed on page three of Ways and Means Committee Advisory No. FC-8. We are particularly concerned with proposals which would exempt employment from Social Security coverage or which would directly or indirectly relieve employers from payment of the employer share of FICA taxes.

The National Committee supports universal Social Security coverage. In keeping with that stand, we oppose proposals to exempt additional categories of workers, broaden existing exemptions or exempt certain minimum salaries from payment of FICA taxes. Seasonal employees of children's camps and workers on fishing boats are cases in point. Social Security is not just a retirement program. Social Security offers significant disability and life insurance protection which, in early work years, are far more important to young workers than are retirement benefits to be paid in the distant future. No young workers or part-time workers should be denied this protection. Part-time and part-year workers especially need their work to be covered by Social Security so that they will earn the work credits they need for fully or recently insured status—without which they have no right to benefits.

Just as the National Committee believes in universality of Social Security coverage, it believes in universality of the employer tax burden. It is our position that every employer, regardless of the type of industry, should bear the same responsibility for FICA taxes on all employee earnings up to the maximum taxable wage base.

Section 13443 of the Budget Reconciliation Act of 1993 altered this equality by relieving a major segment of the food and beverage industry of responsibility for FICA taxes—not by cancelling the FICA tax itself, but by granting an offsetting tax credit for employer FICA taxes paid on employee tip income in excess of the minimum wage. The credit was limited to eat-in establishments and carried an estimate of a $1 billion, five year revenue loss to the U. S. Treasury.

Two proposals referenced in Committee Advisory No. FC-8 would further amend the restaurateur tax credit provision. One would alter the effective date and the other would extend the tip income FICA tax credit provision to all food and beverage industry employers. The National Committee opposes both proposals.

Exempting food and beverage industry employers of this tax obligation on a segment employee earnings while requiring all other employers to pay FICA taxes on all earnings up to the taxable wage base is unfair. Food and beverage employers should be treated no differently than other tip industry employers and tip industry employers should be treated no differently than wage-only employers.

It seems incongruous that this Committee would consider reducing the Earned Income Tax Credit to the working poor while expanding an FICA tax credit to a profitable industry. Rather than adding to the revenue loss by backdating the effective date of the 1993 amendment or by exempting the balance of the food and beverage industry from a fair share of taxes, we urge this committee to repeal of Section 13443 of the Budget Reconciliation Act of 1993. The seven year $1.4 billion savings will make an important contribution to efforts to balance the Federal budget by 2002.

STATEMENT FOR THE RECORD OF:

CONGRESSMAN PETER G. TORKILDSEN

COMMITTEE ON WAYS AND MEANS

REGARDING THE TAX STATUS OF FISHERMEN

July 11, 1995

Mr. Chairman,

I am submitting this statement to express the urgency to amend Section 3121 (b) (20) of the Internal Revenue Code. While the current problem does not affect a large number of my constituents, it does affect many in Massachusetts. As you know, in 1988 the IRS adopted a new interpretation as to whether the service performed by individuals on certain small fishing vessels constituted employment for the purposes of that section of the code. This new interpretation was retroactive and the IRS insisted that boat owners should have been withholding taxes for their crew all along. The IRS claimed that these fishermen were responsible for over $11 million in back taxes.

In the past, many boat owners were advised by the IRS that crew members could be treated as self employed, and were responsible for their own taxes. These fishermen were in total compliance with IRS regulations as they understood them. The Internal Revenue Service's new interpretation of these regulations has created many new and unnecessary financial obstacles for an industry which is already crippled by overfishing and over-regulation. The New England fishing fleet has been confronted with the closure of Georges Bank, once one of the richest fishing grounds in the world. Many fishing families are struggling to make ends meet. Additional financial burdens from the IRS, which are inconsistent with the original intent of Congress, are not necessary or welcomed.

In May of this year, I along with others from the Massachusetts delegation sent a letter to you expressing our concerns over the Internal Revenue Service's interpretation of this section of the code. In the letter we stressed that Congress has twice passed legislation which would have solved this problem for fishermen. Unfortunately, the fishing provision never became law because the two different tax bills which included the provision were vetoed by the President for unrelated reasons.

Mr. Chairman, now it is time to tell the IRS to get off the backs of fishing families. I ask for your support in amending Section 3121(b)(20) of the Internal Revenue Code to provide a fair and equitable solution for this unfortunate federal bureaucratic problem.

Fax 202/289-3185

July 26, 1995

The Honorable Bill Archer
Chairman, Committee on Ways and Means
U.S. House of Representatives
1102 Longworth House Office Building
Washington, DC 20515

Dear Chairman Archer:

The American Hotel and Motel Association (AH&MA) is a federation of state and local lodging associations representing over 10,000 properties. The lodging industry employs over 1.5 million people and has annual sales exceeding $60 billion. Our association represents all of the major lodging chains and also contains a significant number of smaller properties. On behalf of our member properties we offer the following comments for inclusion in the record of the hearing held by your committee on July 12 and 13, 1995 on miscellaneous tax reform. First, we support the view of the Chairman that there should be no deficit increase as a result of any tax reform proposal and further, we encourage the committee to avoid past practices of allowing an industry to target some other industry or some segment of its own industry to obtain desired tax relief. Specifically, we offer the following comments on provisions before your committee.

Extend FICA tip credit to all employees who receive tips.
Effective date of FICA credit.

The focus of the discussion on the FICA tip credit extension is to add additional categories of tipped employee for food and beverage establishments for example off-premises delivery personnel. We believe, however, in light of the recent attention and promised future attention of the IRS on other industries where tipping is customary, that any extension of the deductibility of FICA on tips should cover all taxpayers who pay FICA on tips and not just focus on additional employees for one category of taxpayer. Such an approach would avoid future inequities for employers of non food and beverage tipped employees who may find themselves paying increased levels of FICA on tips of their employees as a result of IRS attention.

With regard to the effective date of the FICA tip credit we believe there is ample evidence that the intent of Congress was to cover all tips paid after December 31, 1993 regardless of when services were performed. It is unfortunate that subsequent Congressional action is needed to counteract Treasury regulations which misinterpret the law, but in light of Treasury's insistence on their point of view it appears necessary. Since the original revenue estimates contemplated the correction now deemed necessary, this item should be treated as having no budget impact.

Finally, we would refer the committee to earlier comments we have filed with this committee on the issue of targeted jobs tax credit, social security earning limit increase and capital gains changes. As consideration goes forward on appropriate tax revision under the budget process we renew the comments contained in our earlier testimony and are prepared to offer more detailed comments as potential tax revisions are narrowed.

Sincerely,

James E. Gaffigan

NATIONAL RESTAURANT ASSOCIATION

TESTIMONY OF

ELAINE Z. GRAHAM, SENIOR DIRECTOR OF GOVERNMENT AFFAIRS

CLARIFICATION OF THE FICA TAX-ON-TIPS TAX CREDIT

JULY 27, 1995

Mr. Chairman, on behalf of the National Restaurant Association -- the leading trade association for the nation's 739,000 foodservice establishments -- we want to express our strong support for clarifying the FICA tax-on-tips tax credit's application to FICA taxes paid on unreported tips.

The IRS has issued regulations pertaining to the Section 45(B) tax credit which do not conform to the statutory language enacted in 1993. The National Restaurant Association strongly encourages the Committee to correct this problem as a part of the forthcoming Miscellaneous Revenue bill.

OBRA 93 included a provision authorizing an income tax credit for FICA taxes paid on tips in excess of the minimum wage. This provision was patterned after the original legislation: H.R. 1141 introduced by former Representatives Mike Andrews and Don Sundquist, and S. 573, introduced by Senator John Breaux.

On December 23, 1993 the IRS issued regulations which significantly altered how the credit is applied. The IRS chose to implement the credit so that it applies only to "taxes paid on tips reported" after January 1, 1994. This is contrary to the statutory language which states the credit should apply to "taxes paid" after the effective date. The statutory language is consistent with federal laws regarding tipping.

Under the Fair Labor Standards Act, all tips belong to the employee. The employer is neither authorized nor allowed to report tips on behalf of an employee. However, the Internal Revenue Code holds an employer liable for the payment of FICA taxes on unreported as well as reported tips. Thus, there are instances when an employer is made to pay additional FICA taxes because their employees underreported their tips. The IRS assesses no penalty in such cases, and the statutory language provides a tax credit when this occurs. This is consistent with the original legislation and consistent with Section 3121(q) of the IRC which deems FICA taxes as due "on the date on which notice and demand for such taxes is made to the employer" by the IRS.

By not allowing the tax credit in such cases, the IRS regulations could have a significant negative impact on restaurants who undergo IRS audits and are made to pay additional FICA taxes because their employees underreported their tips. For this reason, the National Restaurant Association is strongly opposed to the temporary regulations.

The IRS based its interpretation on the belief that Congress did not intend for the credit to apply to additional FICA taxes paid **even if the payment was due to employees not reporting the full amount of their tips**. The IRS has adhered to their interpretation despite the fact that the authors of the original bill along with over 100 Senators and Representatives wrote Treasury Secretary Bentsen stating that the FICA credit legislation was written exactly the way Congress intended, and the IRS is mistaken when interpreting the statute in any other manner.

Given the consistency of the Section 45(b) tax credit with related provisions of the Internal Revenue Code and the strong Congressional support for the statutory language, we encourage the Committee to clarify the language in Section 45(b) to further amplify the credit's availability for those restaurants who are made to pay additional FICA taxes due to employee underreporting of tip income.

Mr. Chairman, we appreciate your consideration of our views on this important issue.

PIZZA HUT / 14841 DALLAS PKY / DALLAS, TX 75240-2100 / PHONE (214) 338-77CC

STATEMENT BY LARRY H. WHITT
VICE PRESIDENT GOVERNMENT AND COMMUNITY AFFAIRS
PIZZA HUT, INC.

COMMITTEE ON WAYS AND MEANS HEARING
ON MISCELLANEOUS TAX PROVISIONS
(EMPLOYMENT TAXES ITEM 3)

IN SUPPORT OF CORRECTION OF FICA TIP
CREDIT AS APPLIED TO TIPS FOR OFF-PREMISE
DELIVERY OF FOOD AND BEVERAGES

JULY 11, 1995

On behalf of Pizza Hut, Inc., and other restaurant employers that provide delivery-only service or both delivery and on-premise food and beverage service, I urge Congress to amend Section 45 (B) of the Internal Revenue Code. As written, Section 45 (B) is an inequitable, counter-productive and complicated provision that currently creates a myriad of accounting problems for some restaurants, discriminates against those restaurants that engage in delivery, and places them at a competitive disadvantage with restaurants that provide only on-premise sales.

The Omnibus Budget Reconciliation Act of 1993 created a business tax credit to give restaurants a dollar-for-dollar reduction in federal income

taxes for the FICA taxes they pay on employee tips in excess of the minimum wage. The tax credit applies to federal income taxes for 1994 and after, and can be taken only for FICA taxes paid on tips earned by employees who serve food and beverages for on-premise consumption in establishments where tipping is customary. When making these changes in 1993, the tax writers drafted such changes in a manner which excludes the use of FICA tip credit by those restaurant employers whose employees receive tips from customers through off-premise sales.

As a result of this anomaly in the tax code, tips for one class of employee must be treated differently than tips given to another class of employee. In some instances, the same employee may receive tips from customers in both the restaurant and from off-premise delivery sales creating an accounting morass. Treating these groups differently not only causes accounting problems but discriminates against those employers who have a delivery business. The law should be applied equally to all food service employers who have tipped employees, not just those who serve food and beverages for on-premise consumption.

July 11, 1995

The Honorable Bill Archer
1236 Longworth House Office Building
Washington, DC 20510

Dear Mr. Chairman:

I am writing to urge the House Ways and Means Committee to consider the extension of the FICA tip credit to all persons who receive tips in the food and beverage service industry. Currently, tips earned off-premises by delivery personnel are not taken into account under the credit for employer social security tax.

I introduced a bill in September 1993 which would have amended the Internal Revenue Code to include tips received for providing food or beverage outside the employer's establishment. It does not make sense that there are two sets of laws for restaurant employees that work in the establishment and those employees that work in the delivery business. Because of the imbalance in the tax credit, those businesses without a delivery service are afforded an unfair competitive advantage over those which provide delivery service.

We need to level the tax playing field for the food and beverage service industry. I strongly recommend the Committee votes to extend the FICA tip credit to include delivery service personnel.

Sincerely,

Jim Talent

Congressman Jim Talent

STATEMENT BY THE INDEPENDENT BAKERS ASSOCIATION

IN SUPPORT OF THE PROPOSAL TO CLARIFY THE EMPLOYMENT

TAX STATUS OF DISTRIBUTORS OF BAKERY PRODUCTS

Hearings on Miscellaneous Tax Proposals
House Ways and Means Committee
July 11-12, 1995

Mr. Chairman and Members of the Committee:

I appreciate the opportunity to present the views of the Independent Bakers Association and the bakery industry on a proposal to amend IRC § 3121(d)(3)(A) relating to the employment tax status of bakery distributors. The Independent Bakers Association is a national trade association of over 400 small- to medium-sized, mostly family-owned, wholesale bakeries and allied industry trades.

Description of the Issue

The issue we bring before the Committee is whether bakery distributors should be classified by statute as employees for employment tax purposes even though they may be treated as independent contractors for income tax purposes. Our proposal (which is attached to this statement as Exhibit 1) would delete the phrase "bakery products," from section 3121(d)(3)(A) of the Code. Section 3121(d)(3)(A) presently provides that certain driver-distributors, including bakery distributors, will under certain circumstances be treated as employees for employment tax purposes.[1/]

We believe it is important to clarify for the Committee what this proposal will and will not do. The proposal under consideration today does not seek to classify bakery distributors as independent contractors. Neither does it seek to change in any way the common law test by which individuals are classified as either employees or independent contractors. The proposal would simply eliminate the irrebuttable presumption that bakery distributors are employees for employment tax purposes and would place them on the same footing with other individuals by making

---

[1/]Section 3121(d)(3)(A) provides:
(d) EMPLOYEE.--For purposes of this chapter, the term "employee" means--
(1) ...; or
(2) ...; or
(3) any individual (other than an individual who is an employee under paragraph (1) or (2)) who performs services for remuneration for any person--
(A) as an agent-driver or commission-driver engaged in distributing meat products, vegetable products, bakery products, beverages (other than milk), or laundry or dry-cleaning services, for his principal;
(B) ...;
(C) ...; or
(D) ...;
if the contract of service contemplates that substantially all of such services are to be performed personally by such individual; except that an individual shall not be included in the term "employee" under the provisions of this paragraph if such individual has a substantial investment in facilities used in connection with the performance of such services (other than in facilities for transportation), or if the services are in the nature of a single transaction not part of a continuing relationship with the person for whom the services are performed; or
(4) ....

distributors subject to the same common law test for employment status as everyone else.

Section 3121(d)(3)(A) overrides the normal, common law test for employment status; thus, even though a bakery distributor would be treated as an independent contractor for income tax purposes, if that person falls under section 3121(d)(3)(A), he or she will nevertheless be considered an employee for employment tax purpose.[2] We contend that this treatment as statutory employees is completely inappropriate in view of existing relationships between bakeries and distributors of bakery products. Classifying bakery distributors as statutory employees is disruptive of sound business arrangements, is technically unworkable and serves no identifiable tax or retirement policy goal. Current law discriminates against driver-distributors by creating an irrebuttable presumption that they are employees for employment tax purposes even though they may be independent contractors for income tax purposes.

History of the Statutory Employee Provision

Section 3121(d)(3)(A) was enacted in 1950, at a time when the combined FICA tax rate for employees was higher than the tax on self-employed individuals.[3] Section 3121(d)(3)(A) was enacted as remedial legislation. Congress concluded that "the usual common-law rules for determining the employer-employee relationship [fell] short of covering certain individuals who should be taxed at the employee rate under the old-age, survivors, and disability insurance program."[4] Congress apparently concluded that it was important to secure for driver-distributors the higher Social Security benefits that would accrue to them as a result of the higher tax rates.

While originally drafted to apply to house-to-house sales persons, the language eventually enacted referred to individuals distributing certain goods and services, such as bakery, meat, vegetable and beverage products, and laundry and dry cleaning services.[5] The statute excepted from its coverage individuals who had a substantial investment in facilities used in connection with the performance of such services (other than in facilities for transportation).[6]

It is apparent that the world has changed dramatically from the time the statute was enacted in 1950. Door-to-door deliveries of bread, milk and cakes have generally long since gone the way of the dinosaur.[7] Today, local wholesale bakeries

---

[2]Section 3121(d)(3)(A) classifies certain driver-distributors as employees for employment tax purposes. It was made applicable to the unemployment tax in 1972. It has no application or effect on their classification for income tax purposes.

[3]In 1950, the combined FICA tax rate for employees was 4% while the tax on self-employed individuals was 2.5%. The "combined" FICA tax rate for employees is the sum of the equal taxes paid by employers and employees on wages paid to the employee.

[4]*See* Senate Report 1669, 81st Cong., 2d Sess. 144 (1950).

[5]Indeed, the legislative history of the statute is replete with references to house-to-house sales.

[6]The statute also provides an additional exception in a case where the contract does not contemplate that substantially all of such services shall be performed personally by such individual.

[7]Throughout the 1940s and 1950s, bakeries were essentially local operations. Bread and layer cakes were baked daily and delivered to the homes of customers. These products were typically sold by individuals who used delivery vehicles to cover certain neighborhoods or routes. The vehicles used may or may not have (continued...)

have typically disappeared, having been consolidated into regional and national concerns. Bakery products are no longer sold door-to-door. Instead, these products are often distributed by individuals owning their own territories, who purchase their products directly from the bakeries, and who distribute the products to commercial customers (such as retailers and restaurants) for resale.

Just as important is the change in the respective rates of tax for employees and self-employed individuals. As previously discussed, the combined FICA tax rate for employees in 1950 was 4 percent while the tax rate on self-employed individuals was 2.25 percent. In 1984, these tax rates were equalized.[8] Today, both the self-employed tax rate and the combined FICA tax rate stand at 15.3 percent. Therefore, the primary reason for the enactment of the statutory employee rule -- the higher tax rate for employees and the higher benefits derived from that higher tax rate -- no longer exists. Section 3121(d)(3)(A) is an anachronism in today's world.

<u>Why Is The Statutory Employee Issue Important Today?</u>

Some members of the Committee may wonder why this issue is so critical in 1995 when the statute has been in effect since 1950. The answer is simple. For many years the bakery industry considered section 3121(d)(3)(A) inapplicable to most distributors. This position was supported by various rulings from the Internal Revenue Service dating back to the early 1950s. It was not until 1991, when the Internal Revenue Service issued GCM 39853 reversing its long\held position, that the industry's view was called into question.

As previously discussed, the statute provides an exception where the individual has a "substantial investment in facilities." Throughout the years, many bakery distributors have purchased their territories from the bakeries or from the previous owners of the territory. The distributor's ownership of the territory has been consistently interpreted as a substantial investment in facilities, thus exempting the distributor from the statutory employee provision.[9]

This interpretation of the substantial facilities exception was never, to anyone's knowledge, challenged by the Internal Revenue Service on audit. Indeed, in 1985, the Internal Revenue Service concluded in a technical advice memorandum that investment in a territory constituted a substantial investment in facilities.[10] It was not until that technical advice memorandum was withdrawn in 1988 and the IRS, in 1991, released General Counsel Memorandum 39853 that the issue became one of concern to the bakery industry.

GCM 39853 takes the position that the term "facilities" in section 3121(d)(3)(A) does not include distribution rights, such as a territory. There is serious doubt that the GCM is correct. Its reasoning is suspect, its logic weak and its timing (31 years after the statute was passed) is suspect. It is the

---

[7](...continued)
been owned by the individuals. Similarly, meat and vegetable products were sold off of vehicles making house-to-house deliveries. Milk was also delivered house-to-house, although dairy products were excepted from the final version of the bill without explanation. Finally, laundry services were typically provided on a house-to-house basis.

[8]<u>See</u> Social Security Amendments of 1983, P.L. 98-21 section 123.

[9]It should be noted that many distributors have substantial investment in equipment in addition to their investment in their routes or territories.

[10]<u>See</u> TAM 8607001.

near-unanimous opinion of tax advisors to the bakery industry that the position taken in the GCM would not prevail in court if the issue were litigated. Nevertheless, many bakeries currently under audit are being forced to concede the issue because they lack the resources to litigate. This has created tremendous uncertainty in the bakery industry which, in turn, makes legislative action to clarify the issue imperative.

Effect on the Bakery Industry

1. Technical Problems

Application of the statutory employee rules to bakery distributors would create numerous technical difficulties. First, the distributor would be required to compute his or her income two different ways -- once as an employee and once as a self-employed individual -- since certain expenses are deductible for self-employed individuals but not for employees. The absurdity of requiring two sets of books for the same person, especially a small business person, is self-evident.

Second, if the bakery is required to treat the distributor as an employee, what amount does the bakery report to the distributor and to the IRS as wages paid? Bakeries sell their products to distributors. The distributor then resells the product to retailers or other wholesalers. The bakery has no information about the profit the distributor has made. The distributors income is the profit made from this resale. If the bakery were to report the price paid by the distributor for the product, that would grossly overstate the amount of income actually earned by the distributor since it would totally fail to take into account the purchase cost of the products and any of the distributor's expenses (such as fuel, marketing costs, wages paid to the distributor's employees, etc.), as well as any discounts or allowances given to the distributor's customers directly by the distributor.

The distributor system, as it has evolved through the years, bears no resemblance whatsoever to a wage-based compensation system. The industry would be forced to completely restructure itself in order to comply in any meaningful way with the statutory employee rule. The costs of this restructuring would be wholly disproportionate to the benefit (if any) derived.

Finally, classification of distributors as statutory employees is particularly confusing in light of the fact that many distributors have their own employees. In particular, distributors with large, heavily populated or prosperous territories may have several employees of their own and operate in corporate form. It has not been made clear how a corporation can be an employee!

Many questions arise as to how the employees of the distributor are to be treated. A few of those questions include: (1) Will they be considered employees of the distributor or the bakery? (2) If the latter, how will that affect their treatment by the bakery for income tax purposes. (3) What about benefit plans maintained by the bakery? Are these employees of the distributor eligible for benefit plans maintained by the bakery? (4) If they are not treated as employees of the bakery, how are their wages treated for purposes of computing the FICA tax on the distributor's income. If the distributor were an independent contractor, their wages would be deductible in computing self-employment income. But that is not true if the distributor is an employee. This means that the distributor will pay (and have withheld) FICA tax on amounts the distributor pays in wages to his or her employee. Without question, this is the wrong outcome. Yet it would be required if the statutory employee rule applies.

The result is even more egregious under the Omnibus Budget Reconciliation Act of 1993. Before passage of the Act, there was a cap on the wages or self-employment income subject to

FICA or self-employment tax.[11] Section 13207 of the Act repealed the cap on amounts subject to the hospital insurance portion of the employment tax (now equal to 2.9 percent) beginning in 1994.

For example, assume that a distributor employs 2 employees at an average annual wage of $20,000 ($40,000 total). If the distributor were considered an independent contractor, the wages paid to the employees would be deducted in computing the distributor's income subject to self-employment tax. On the other hand, if the distributor were considered a statutory employee, the wages paid by the distributor to its employees would not be deductible. Thus, the distributor and the bakery would each pay, <u>on behalf of the distributor</u>, FICA tax of 1.45 percent on the $40,000 of wages the distributor paid to its employees. At the same time, the distributor and the employees would each pay FICA tax of 1.45 percent on the same amount <u>on behalf of the employees</u>. The $40,000 in wages would be double taxed!

It is not difficult to see that application of the statutory employee rule to bakery distributors creates bizarre results. Without any policy rationale remaining to support its existence, this potential for bizarre results is a compelling reason to eliminate the rule.

2. <u>Effect on Entrepreneurship</u>

The eventual outcome of applying the statutory employee rule to the bakery industry is likely to be a complete restructuring of the industry. A part of that restructuring will no doubt be a severe cutback on the use of independent bakery distributors. Such a result would be truly unfortunate in view of the benefits that both the bakeries and the distributors have gained from the use of independent distributors.

Application of the statutory employee rule would deny an entrepreneurial opportunity to those individuals desiring to operate a wholesale distributorship business. Independent wholesalers have significant opportunities to develop a successful distributorship and earn profits substantially greater than the salaries that would be paid to employees. In addition, if the distributor owns his or her distribution rights, the distributor has the opportunity to build the value of the distributorship that he or she may eventually sell for a greater profit. All these incentives are lost, however, if the distributor cannot be an independent wholesaler.

Moreover, application of the statutory employee rule to existing ownership arrangements would substantially undermine the value of the distributorships already in place. The value of these existing arrangements was premised on an assumption of independent contractor status. Application of the statutory employee rule would severely lower those values to the detriment of the distributors owning distribution rights.

<u>Compliance Initiative</u>

Our proposal includes not just an amendment repealing the statutory employee rule. We recognize the concern of some that some compliance problems may arise as a result of classifying some independent distributors as independent contractors. Therefore, we have included in our proposal a reporting requirement that would apply to all bakeries using independent distributors.

Our proposal would add new Code section 6041B. Section 6041B would require, in general, that bakeries with direct sales to independent distributors for resale report to the IRS the

---

[11]For 1993, the caps were 57,600 for the OASDI portion of the tax and 135,000 for the HI portion of the tax.

amount of such sales. This added reporting requirement would provide the IRS with information it needed to ensure that independent distributors were reporting correctly. Since the reporting requirement would apply for both SECA and income tax purposes, its beneficial effect would be far broader than the statutory employee rule. While the revenue effect of the combined proposal has not yet been completed, we believe the reporting requirement could actually raise revenue in excess of the revenue lost by the repeal of the statutory employee rule.

Conclusion

It is understandable that Congress would seek to prevent abuses in the employment tax system that can occur from classification of an individual as an independent contractor rather than an employee. However, the bakery distributor system is not riddled with those abuses. Even if the system were, however, application of the statutory employee rule is clearly the wrong answer to the problem. Indeed, its application would create far more problems than it would solve. For all the reasons stated above, we urge the Committee to endorse the proposal of the Independent Bakers Association to repeal the rule with respect to bakery distributors.

Thank you very much, Mr. Chairman.

Written Statement

of

The Association of Christian Schools International

John C. Holmes, Ed. D.
Director for Government Affairs

Concerning

H. R. 1492

Submitted to the

**Committee on Ways and Means,
U. S. House of Representatives
The Honorable Bill Archer, Chairman**

July 11, 1995

Mr. Chairman and Members of the Committee on Ways and Means:

The Association of Christian Schools International is grateful that you have chosen to include Representative Phil Crane's bill, H. R. 1492 in your Committee's consideration of appropriate miscellaneous legislation. H. R. 1492 would restore equity of treatment of lay-board religious schools with other religious schools which come under the Federal Unemployment Tax Act (FUTA).

The Association of Christian Schools International is the largest association of evangelical Christian schools in the nation with over three thousand one hundred schools and colleges here. We now serve 732,000 students world-wide. All ACSI schools follow a policy of racial non-discrimination. This policy is reaffirmed in writing on an annual basis when our member schools renew their membership. It was my privilege to testify about this issue before the Subcommittee on Select Revenue Measures with Congressman Charles Rangel as Chairman on September 8, 1993, in the 103rd Congress. ACSI continues its plea that the unfair treatment and inequity within the tax code concerning about fifteen percent (15%) of our member Christian schools and nearly all of the Jewish Day Schools that are represented by Agudath Israel of America must be rectified.

Approximately one out of five religious schools in America is not owned or affiliated with a particular church or synagogue. The elementary and secondary schools we seek to exempt from mandatory participation in the Federal Unemployment Tax Act are as pervasively religious as a church or synagogue owned or affiliated schools would be. They are denied equal treatment, without anyone even suggesting that they are not pervasively religious, because they lack formal church affiliation and are governed by boards of religious laymen.

Because of this distinction, without difference, this small portion of religious schools in America has been forced to participate in FUTA. On their own, the fifty states could make participation in state unemployment laws mandatory. However, an overwhelming majority of states choose to mirror the federal statute, which exempts church and synagogue related or affiliated elementary and secondary religious schools. Congressman Crane's H. R. 1492, would offer the same choice of voluntary participation in FUTA to lay-board religious schools and alleviate the inequity faced by these schools because of the technicality of control. To predicate treatment of religious schools which are essentially the same on the legal niceties of control is to elevate form over substance. Surely it is the religious character of such schools which should be determinative, not something as potentially artificial as the definition of who is in control. For religious schools, their existence as a community of faith is far more important than their organizational structure, whether or not they are owned or affiliated with another religious body.

In a lay board religious school, the teachers are the same as a church school; the chapel services are the same; the curriculum is the same; the Bible classes are the same--everything except the relationship with the church is the same. But the lay board religious schools, which were considered too religious to be eligible for participation in various federal and state funding sources, are no longer exempt from mandatory participation in federal unemployment tax. This is a triumph of form over substance.

Each of the states has slightly different ways of handling unemployment tax, but approximately 46 states largely mirror the federal code. The wording of Congressman Crane's "The Fair Treatment of Lay Board Religious Schools" (H.R. 1492) asks no more or less than what private religious schools that are operated or affiliated with a church or synagogue now have by virtue of Section 3309 (b)(1) of the Internal Revenue Code of 1986, which relates to exemption. Back when the exemption section was enacted, Congress exempted employees who worked for churches and religious organizations operated by churches. Subsequently, in 1981 in St. Martin Evangelical Lutheran Church v. South Dakota, the U. S. Supreme Court ruled that the exemption extended to elementary and secondary schools that churches operate.

Any religious elementary or secondary school that would receive exemption as a result of this measure would have already established the fact with the Internal Revenue Service that it "operated primarily for religious purposes, which is described in section 501(c)(3), and which is exempt from tax under section 501(a)."

Lay-board religious schools provide excellent education and moral training for American young people with a caring environment where students can achieve academically. My own doctoral research in Los Angeles on why black, Hispanic and white parents chose to send their children to evangelical Christian schools attests to this fact. Parents of all ethnic backgrounds chose to re-enroll their children because of the caring environment that they found in evangelical Christian schools.

We believe that Congress failed to exempt lay-board controlled religious schools from FUTA because these schools are not numerous, and Congress was simply unaware of the difference in the technicalities of affiliation from other religious schools. This oversight was not intentional discrimination on Congress' part, merely inadvertent. Back in 1988, an identical amendment to H. R. 1492 was sponsored by Senator Strom Thurmond. The amendment was unanimously adopted by the Senate during consideration of the tax technical corrections bill. Unfortunately, the amendment was dropped in conference. We do not know why. Amendment No. 3443 (in the 100th Congress) was viewed by the Joint Committee on Taxation as revenue neutral. The Joint Committee on Taxation said the "net budget effect of this bill would be a gain of less than $5 million in the fiscal year. . .and a negligible effect each year thereafter." *(Congressional Record, 100th Congress, S14861-2)* Thus, there is no fiscal burden to the government to provide tax equity and simple justice, not to mention equal protection of the laws.

Groups that whole heartedly support H.R. 1492:

Agudath Israel of America
American Association of Christian Schools
Association of Christian Schools International
Coalitions for America
Concerned Women for America
Marian [Catholic] Secondary Schools Association
National Association of Evangelicals
Traditional Values Coalition

We urge the Committee on Ways and Means to carefully consider this remedial measure. Its passage would help lay-board religious schools that are helping American children succeed morally, spiritually and academically. Religious schools look forward to your support of this small, but important piece of tax equity legislation.

WRITTEN STATEMENT OF STANLEY W. ROSENKRANZ OF SHEAR, NEWMAN, HAHN & ROSENKRANZ, P.A., GENERAL COUNSEL TO FLORIDA CLINICAL PRACTICE ASSOCIATION, INC., A FLORIDA NOT FOR PROFIT CORPORATION AND SPECIAL COUNSEL TO THE UNIVERSITY OF FLORIDA AGENCY FUNDS AND THE UNIVERSITY OF SOUTH FLORIDA COLLEGE OF MEDICINE'S FACULTY PRACTICE PLAN SUBMITTED IN SUPPORT OF A PROPOSED AMENDMENT TO SECTION 125(a) OF P.L. 98-21 (THE "PROPOSED LEGISLATION")

PROPOSED LEGISLATION

Section 3121(s) of the Internal Revenue Code of 1986, as amended (the "Code") speaks to "FICA responsibility" when two or more related corporations concurrently employ the same individual compensated through a common paymaster which is one of such corporations. Section 125(a) of Public Law 98-21 (the "Special Act"), under certain circumstances, treats as related corporations for purposes of that Code section, a state university which employs health professionals at a medical school and a faculty practice plan which employs faculty members of such medical school.

The Proposed Legislation would amend the Special Act as follows:

"Sec. 125(a) of P.L. 98-21, TREATMENT OF CERTAIN FACULTY PRACTICE PLANS OR UNIVERSITY ACCOUNTS.

"(a) General Rule -- For purposes of subsection (s) of Section 3121 of the Internal Revenue Code of 1954 (relating to concurrent employment by 2 or more employers) --

"(1) the following entities shall be deemed to be related corporations that concurrently employ the same individual:

"(A) a State university which employs health professionals as faculty members at a Health Science Center that includes a College of Medicine, and one or more of the following: a College of Dentistry, a College of Public Health, a College of Nursing, a College of Veterinary Medicine, a College of Health Related Professions, or a College of Pharmacy, and either

"(B) a faculty practice plan described in section 501(c)(3) of such Code and exempt from tax under section 501(a) of such Code --

"(i) which employs faculty members of such medical school, and

"(ii) 30 percent or more of the employees of which are concurrently employed by such medical school; or

"(C) an agency account of a State university which is described in (a)(1)(A) of this section and from which there is distributed to faculty members of any of the colleges described in (a)(1)(A) of this section, payments forming a part of the compensation the State, or such State university, as the case may be, agreed to cause to be paid any such faculty member, and

"(2) remuneration which is disbursed by either:

(A) such faculty practice plan to a health professional employed by both of the respective entities referred to in paragraph 1(A) and (B) of this section; or

(B) such agency account to a faculty member of any of the Colleges described in (a)(1)(A) of this section

shall be deemed to have been actually disbursed by the State, or such State university, as the case may be, as a common paymaster and not to have been actually disbursed by such faculty practice plan or agency account, as the case may be.

"(b) Effective Date --"

An alternative to the Proposed Legislation is to amend Section 3121 of the Internal Revenue Code of 1986, as amended, by adding a subsection (t) (the "Alternate Proposed Legislation"). The Alternate Proposed Legislation would amend Section 3121 of the Internal Revenue Code of 1986, as amended, as follows:

"(t) Concurrent compensation paid by two or more entities pursuant to a single contract of employment.

(1) In general -- For purposes of Sections 3102, 3111, and 3121(a)(1), if qualified compensation is paid to a qualified health professional, then, with respect to the qualified compensation, the total amount of taxes imposed under Sections 3101 and 3111 and the definition of wages in Section 3121 shall be determined as though said qualified health professional has only one employer and that such employer was the qualified institution.

(2) Definitions

(a) Qualified Compensation -- compensation paid pursuant to a single contract of employment to a qualified health professional by both a qualified institution and a qualified co-payor.

(b) Qualified Co-Payor

1. an agency account of a qualified institution from which there is distributed to qualified health professionals, payments forming a part of the compensation which, pursuant to a single contract of employment, a qualified institution agreed to cause to be paid the respective qualified health professionals.

(c) Qualified Health Professional -- a faculty member of a qualified institution.

(d) Qualified Institution -- a state or state university that operates a health science center that includes a College of Medicine and one or more of the following: a College of Dentistry, a College of Public Health, a College of Nursing, a College of Veterinary Medicine, a College of Pharmacy or a College of Health Related Professions.

(3) Operating Rules

(a) Qualified Institution - when otherwise reporting as required by Section 6011 or paying taxes in the manner prescribed by Section 6302 or, in either instance, pursuant to the Secretary's regulations, the qualified

institution shall report the payment of the qualified compensation as if it were the sole payor of such amount,

(b) *Qualified Co-Payor*

1. *Periodic - within two (2) days after the end of each of its pay periods, a qualified co-payor shall remit to the qualified institution cash in an amount equal to the sum derived when (i) an amount equal to the amount of tax imposed by Section 3111 which, if it were to be treated as a separate employer, the qualified co-payor would have owed by reason of having paid, during said calendar quarter, qualified compensation to each of the qualified health professionals, is added to (ii) an amount equal to the amount of tax withheld by the qualified co-payor, during said calendar quarter, pursuant to Section 3102, by reason of its having paid qualified compensation to each of the qualified health professionals.*

2. *Quarterly -- within ten (10) days after the end of each calendar quarter, a qualified co-payor shall provide the qualified institution which, along with it, paid qualified compensation, information as to*

   a. *the amount of taxable social security wages paid by the qualified co-payor in such calendar quarter; and*

   b. *the amount of taxable Medicare wages paid by the qualified co-payor in such calendar quarter.*

3. *Annually -- within ten (10) days after the end of each calendar year, a qualified co-payor shall provide the qualified institution with a list of each qualified health professional to whom it paid qualified compensation during said calendar year, which list shall include:*

   a. *the name, address, zip code and employee identification number of each such qualified health professional to whom it paid qualified compensation during said calendar year;*

   b. *the respective gross wages paid by the qualified co-payor to each qualified health professional to whom it paid qualified compensation during said calendar year;*

   c. *the respective social security wages paid by the qualified co-payor to each qualified health professional to whom it paid qualified compensation during said calendar year;*

d. the respective Medicare wages paid by the qualified co-payor to each qualified health professional to whom it paid qualified compensation during said calendar year;

e. the respective amount of tax deducted from each qualified health professional's qualified compensation during said calendar year;

f. the amount paid by the qualified co-payor to the qualified institution pursuant to Section 3(a)(iii)(x).

(c) Underpayments; Overpayments -- In connection with taxes imposed under Sections 3101 (and withheld under Section 3102) and 3111 by reason of payment of qualified compensation

1. Underpayment - the liability for any underpayment shall be deemed the joint and several liability of the qualified institution and qualified co-payor; and

2. Overpayment - the right to receive any overpayment shall be deemed to be the qualified institution's."

The need for either the Proposed Legislation or the Alternate Proposed Legislation emanates from the unique manner in which compensation is paid certain members of the respective faculties at the University of Florida (the "University") Health Science Center in Gainesville, Florida and at the University of South Florida in Tampa, Florida ("USF").

Based on our informal survey of medical schools, it would appear that the revenue impact of either the Proposed Legislation or the Alternate Proposed Legislation would be limited in scope. More particularly, the revenue impact should be limited to the employer's share of FICA that would otherwise be paid by the agency funds at the University of Florida and the University of South Florida. Assuming (i) a constant FICA tax rate and (ii) no dramatic increase in faculty compensation, it is estimated the annual revenue impact would be approximately $1.6 million. These dollars would otherwise be available to support (i) the respective medical colleges' academic and research activities and (ii) the delivery of health care services to indigent and underfunded patients.

FACTUAL BACKGROUND

As an integral part of their respective University teaching or research activities, or both, members of the respective faculties of the University's College of Medicine, College of Dentistry and College of Health Related Professions (singularly, a "College" and collectively, the "Colleges") generate patient fees (collectively, the "Fees"). The same would hold true for faculty members of USF's College of Medicine.

Pursuant to rules of the Board of Regents of the State of Florida (the "Board"), each such faculty member, as a condition of employment by the respective colleges, agreed that all Fees generated by his/her faculty activities will belong to and be deposited into the practice plan created by his/her respective

College. There is no employment relationship between any faculty member and any practice plan.

The Florida Clinical Practice Association, Inc., a Florida Not for Profit Corporation, which is exempt under section 501(c)(3) of the Code (the "FCPA"), is the repository of all patient fees generated by clinical activities of any member of the faculty of the University's College of Medicine. From time to time, subsequent to collection of the Fees by the FCPA or any other practice plan, a substantial portion of such plan's monies are deposited into an identifiable account within the University of Florida agency funds (the "University Fund"). The latter, itself, is merely a statutorily authorized bank account outside of the State Treasury. The FCPA also collects a portion of the patient fees generated by the activities of faculty members of the University's College of Health Related Professions, all of which fees it deposits in the University Fund. The University's College of Dentistry effects a direct collection of fees generated by its faculty members. All of such fees are deposited into the University Fund.

The monies in the respective practice plans are used to support (i) the educational and research activities of the respective Colleges and (ii) the delivery of health care services to indigent and to underfunded patients. Indeed, the FCPA, the University's College of Medicine's practice plan, provides approximately fifty-two percent of that College's entire budget.

Additionally, on a continuing basis, the assets of a particular practice plan are the means by which a significant capital project can be undertaken by the University. As an example, the FCPA's gross revenues are the main source of security for the bonds from the sale of which emanated the capital to build and equip an academic research building at the University's Health Science Center.

Each faculty member is employed by his/her respective College pursuant to a single contract of employment. Pursuant to pertinent rules of the Board, the compensation provided for in such contract is approved annually by (i) the Dean of the respective College, (ii) the University's Vice President for Health Affairs, and (iii) the President of the University. Pursuant to the single contract of employment, each faculty member is compensated for services rendered in his/her role as a teacher for both his/her teaching duties and for health care services provided individuals concomitant to those teaching responsibilities. For a substantial portion of the pertinent faculty members, payment of total compensation is effected in the form of two documents: a warrant from the State Treasury and a check from the University Fund. The pertinent compensation payments from the University Fund represent a procedure of paying such faculty member's compensation with both State and University Fund provided monies.

As noted, a faculty member is employed by the University pursuant to a single contract of employment. For this reason, the Special Act, which contemplates a duality of employers, is of no benefit in this situation. Accordingly, by reason of such compensation payments, the State and the University Fund, for its respective component of such member's compensation, <u>each</u> issues a Form W-2 to each faculty member whose total compensation is fixed and paid as indicated in the first and last sentences of the prior paragraph, respectively. The State and the University Fund have separate federal taxpayer identification numbers. Utilizing its own respective taxpayer identification number, the State and the University Fund each also files a Form 941.

The State, by reason of its "Section 218 Agreement", pays employer FICA taxes and withholds employee FICA taxes on that portion of the wages paid directly by the State to each affected

faculty member. In effecting compensation payments on behalf of each of the Colleges, the University Fund, as required by the Internal Revenue Service, also pays employer FICA taxes and withholds employee FICA taxes as if it were an employer and as if the State had not caused FICA payments to be made. (This situation is presently the subject of a controversy between the University Fund and the Internal Revenue Service.) Such is the case despite the fact neither the State, the University, any of the Colleges nor the University Fund deem the University Fund, a mere bank account, a separate employer. Indeed, an appellate court in Florida has held that such a fund is not an employer. See, Bryant v. Duval County Hospital Authority, et al, 459 So. 2d 1154 (Fla. Dist. Ct. of App, 1984).

The essence of the matter before the House Ways and Means Committee's Subcommittee on Select Revenues is the payment of "Double FICA" by respective agency accounts at the University of Florida (Gainesville, Florida) and the University of South Florida (Tampa, Florida). The situation is caused by the inability (i) of the agency funds to utilize Section 125(a) of Public Law 98-21 because neither is a practice plan and an employer and (ii) of the Comptroller of the State of Florida (a constitutional officer) to agree to effect payment of faculty compensation in a manner that would obviate the need for legislation. At a meeting with a member of the staff of the House Ways and Means Committee's Subcommittee on Social Security, amplification of point (ii) was requested.

As the agency accounts, particularly the University of Florida Agency Fund, attempted to prevent the "double FICA" situation, an obvious solution presented itself. In lieu of multiple sources effecting payment of the compensation due under a faculty member's single contract of employment, such payment would be effected solely through the Office of the Comptroller of the State of Florida (the "Comptroller").

In an attempt to effect such an arrangement, negotiations over a protracted period of time were carried on with top officials of the Comptroller's Office. In addition to members of the staff of one of the involved universities, as well as assorted legal counsel, the meetings were attended by either the Chancellor of Florida's State University System (the "Chancellor") or one of the Vice Chancellors.

No mutually satisfactory agreement could be reached with the Comptroller. Among the many concerns expressed and vigorously discussed were the following:

1. When, if at all, would the money transferred to the Comptroller by the respective Agency Fund become "state funds"? What legal ramifications would result?

   If the funds were to be deemed "state funds", the thought was that a marked actuarial adjustment under the Florida Retirement System would be required. Having just recently suffered the economic consequences ($6 to $7 million) of such a re-adjustment, the University of Florida College of Medicine was less than enthusiastic concerning such a possibility.

2. Non-academic intrusion into the academic decision making process.

   The question is particularly pertinent in the State of Florida. Historically, the State's university system has been subjected to the micro management proclivities of both the legislative and executive branches of State government. At the University of Florida, faculty practice plan

funds represent approximately fifty-two percent (52%) of its College of Medicine's budget, while at the University of South Florida, fifty-five per cent (55%) of its College of Medicine's budget. Given such facts, the Chancellor, along with the Academic leadership, felt it most important to ensure academic control and oversight by mandating funds be placed in an agency account, thereby, in turn, assuring continued University oversight.

3. Loss of flexibility in connection with fixing the compensation of clinical faculty. At a time when the health care system is undergoing tremendous change, particularly as regards physician compensation, the prospect of such loss of flexibility was of grave concern. The health care delivery system environment mandated, it was felt, affording a College of Medicine increased flexibility as to the compensation to be paid to members of its clinical faculty staff. It was thought that this important flexibility element would be markedly compromised if funds were deposited with the Comptroller.

At the termination of these negotiations, the Chancellor concluded that it was not possible to frame a solution that adequately addressed the concerns of each of the involved parties. Accordingly, it was impossible to arrange for compensation to be paid from one source.

AUTHORITIES

In other situations, such duality of the source of compensation has not prevented a result similar to the result that either the Proposed Legislation or the Alternate Proposed Legislation would provide. For example, the Regulations promulgated under Section 218 of the Social Security Act indicate that

> "(W)here an individual in any calendar year performs covered services as an employee of a State and as an employee of one or more political subdivisions of the State, or as an employee of more than one political subdivision; and the State provides all the funds for the payment of the amounts which are the equivalent to the taxes imposed on the employer under FICA on the individual's remuneration for services; and no political subdivision reimburses the State for paying those amounts; the State's agreement or modification of an agreement may provide that the State's liability for the contributions on that individual's remuneration shall be computed as though the individual had performed services for only one political subdivision. The State may then total the individual's covered wages from all these governmental employers and compute contributions based on that total, subject to the wage limitations in Section 404.1047." See Regulation Section 404.1256.

The University Fund, of course, being a mere bank account, cannot be considered a political subdivision for purposes of the foregoing.

Acceptance of the dual source of funds concept is also suggested by Code Section 3121(u)(2)(D) which specifically states that all agencies and instrumentalities of a single state shall be treated as a single employer. This language manifests recognition that where an employee of a state performs services for more than one agency or instrumentality of that state then such service will be viewed as services for a single employer.

This section recognizes the singularity of the employment relationship and limits the state's liability to a single wage base for each of its employees for all agencies and instrumentalities.

A similar view that dual sources of funds, by themselves, should not prevent the existence of a single employer is also suggested by the legislative intent indicated in the Senate Bill Report for the Special Act. That law amended Code section 3121(b) and (s) to include a provision applicable when a state university employs health care professionals at a medical school and a tax-exempt faculty practice plan employs a significant percentage of those same physicians. Given such a situation, the Special Act mandates that the disbursements by the faculty practice plan are to be deemed to be actually disbursed by the university. Thus, the singularity of the employment relationship is clearly recognized and is deemed to require a single calculation of the wage base. In short, the Special Act provides that remuneration disbursed by the faculty practice plan to a health professional employed both by the plan and the university, will be deemed "to have been actually disbursed by such university as a common paymaster and not to have been actually disbursed by such faculty practice plan." Result: one FICA tax payment, in a situation in which there is clearly two separate employers. This is to be distinguished from the University's situation which involves one employer hiring each of its faculty members pursuant to a single contract of employment and compensating such faculty members from two sources.

That the existence of two paying entities could give rise to a situation involving two taxpayer identification numbers should be of no significance. A review of Private Letter Rulings makes it at once apparent that such a situation is not unknown to the Internal Revenue Service. Private Letter Ruling 6609164800A (the "Letter Ruling"), for instance, contemplated a situation involving two separate corporations, A and B, each having its own taxpayer (employer) identification number, which operated under a joint contract. Under the contract, all employees performed duties for both corporations. Only Corporation A, however, filed employment tax returns.

Addressing the question as to which corporation had the responsibility for filing such returns, the IRS determined that the two entities were truly distinct employers and therefore, each should file Forms 941 and 940. However, for those years which corporation B, had failed to collect, report and pay FICA employee tax, it was relieved of doing so, since corporation A had already reported and paid the requisite amounts. In order to satisfy the IRS, corporation B simply attached a supporting statement to its employment tax returns, setting forth the entire factual situation, that is, that FICA taxes had previously been paid by corporation A.

Rev. Rul. 57-22, 1957-1 C.B. 569 (the "Revenue Ruling") also suggests Internal Revenue Service familiarity with dual payor situations. Factually, the Revenue Ruling was concerned with a cooperative agreement between a federal agency and a state for the investigation of the water resources of the state.

Under the terms of the agreement, each party paid a certain amount of the expenses of the project. The agreement also provided that the field and office work pertaining to the investigation was to be under the direction of the federal agency. The state, however, agreed to carry the individuals on its payroll and to make payment to them for their services.

The individuals involved in the project, worked for, took orders from and were under the control and direction of the federal agency. The state payroll claim, however, was made up by the federal agency and approved by an officer of the state.

Moreover, the state did not select, or have any voice in the selection of, the individuals performing the services. For FICA purposes, the Revenue Ruling held that, based upon the applicable common law rules for determining an employer-employee relationship, the individuals were employees of the federal agency.

SUMMARY:

As a result of effecting their respective contractually obligated teaching or research activities concomitant with patient care activities, or both, members of the respective faculties of the Colleges generate Fees. The Fees belong to and are deposited into the practice plan created by a particular faculty member's respective College. From time to time, a particular practice plan pays a substantial portion of the Fees to the University Fund, a statutorily authorized bank account outside of the State Treasury.

For services rendered in his/her role as a teacher and in the health care services provided as incident to those teaching responsibilities, each faculty member is compensated pursuant to a single contract of employment. Generally, payment of such compensation is effected in the form of two documents: a warrant from the State Treasury and a check from the University Fund.

An obvious solution to the "double FICA" situation -- i.e., all payments to be effected solely through the Comptroller -- was not available, because no mutual satisfactory agreement could be reached with the Comptroller. His office's concerns revolved around questions such as (i) when, if at all, would the money transferred to the Comptroller by each of the agency funds, become "state funds" and (ii) what would be the legal ramifications of such monies becoming state funds, such as requiring unacceptable levels of actuarial adjustments in Florida State Retirement System contributions. For their part, the respective agency funds were concerned about (i) non-academic intrusion into the academic decision making process and (ii) loss of flexibility in connection with fixing faculty compensation.

The State and the University Fund each possesses a taxpayer identification number. Each withholds the maximum FICA on the compensation paid by it; albeit, neither deems the University Fund either an employer for purposes of FICA or an entity required to withhold and pay over FICA taxes. Rather, given the existence of separate taxpayer identification numbers, the dual paying over and withholding was utilized solely to insure the Treasury Department that each faculty member's total compensation had been properly recognized for FICA purposes.

The Employment Tax Regulations list a number of factors to be looked to in determining whether an "employer-employee" relationship exists. Treas. Regs. §31.3401(c)-1(b). None are present in the instant situation. Manifestly, there is but one employer -- the State of Florida.

The concept of multiple sources of payment and one employer is not unique. See Regulation Section 404.1256, Code section 3121(u)(2)(D), Senate Bill Report for Section 125(a) of Public Law 98-21, April 20, 1983, PLR 6609164800A, and Rev. Rul. 57-22, 1957-1 C.B. 569. There being one employer, the University Fund should be exempted from FICA responsibility to the extent the State has carried out such responsibility.

Statement
of the
National Technical Services Association
submitted to the
Committee on Ways & Means
U. S. House of Representatives
for the
July 11, 1995
Hearings Record

"Oversight Hearings on Miscellaneous Tax Reforms"

I. The Issues

Mr. Chairman and members of the Committee, the National Technical Services Association (NTSA) appreciates this opportunity to comment on certain tax revenue and simplification proposals reviewed by your committee on July 11, 1995. We focus our comments on § 1706 of the Tax Reform Act of 1986, § 530 of the Revenue Act of 1978, and other worker classification proposals before your committee.

Two weeks ago, your committee reviewed a proposal to repeal § 1706. We submit that until § 530 is materially narrowed, and new employment classification guidelines are forwarded by Congress, § 1706 should not be repealed. It has restored some rationality to the worker classification issue in the technical services industry and there should be no retreat from that gain except in the case of a fresh start for all industry.

How Congress approaches the issue of worker classification in the future is a key issue which does need to be resolved. Central to any discussion involving § 1706 is first, the establishment of clear employment classification guidelines and second, striking balance between IRS enforcement, taxpayer protections, and other laws which are predicated on elements of the common law test. We note that a number of bills have recently been introduced to simplify the classification of workers for federal income tax purposes. We favor such simplification, note that the pending bills seem to favor independent contractor classification, and caution that these efforts should not favor one classification over another.

II. About NTSA

NTSA is a non-profit organization which exists to promote the legal, legislative, regulatory, strategic business development, and continuous process improvement interests of member firms. NTSA members supply a wide range of design, drafting, engineering, project management, computer programming, systems analysis, staff augmentation, and technical publication services, for profit, to industry and government clients. Members number among their clients most major American corporations, thousands of small industrial companies, government agencies, and colleges and universities across the United States. Our 200 corporate members operate 800 technical services offices, employ more than 280,000 technical personnel, and generate between $6 - $9 billion annually in sales of technical staffing and other support services.

III. NTSA Member Concerns

When the IRS, applying the common law test, has addressed the issue of worker classification in the technical services industry, the IRS has consistently been of the view that the personnel are employees of the technical services firms for purposes of federal income, social security, and unemployment tax withholding.

While NTSA has never advocated a preference for one classification over another, we have repeatedly noted that the protections afforded under § 530 had the effect of fostering and encouraging misclassification of workers in our industry through a combination of

two effects. First, § 530 is frequently perceived as giving the "OK" to independent contractor classification almost as a matter of choice. Second, by limiting IRS' rule-making authority, § 530 reinforces the perception that § 530 gives carte blanche to companies and workers to choose independent contractor status if so desired. One effect feeds on the other.

In its discussion of the motivation for Congressional enactment of § 1706 which concerns technical service workers, the Treasury stated:

> "Section 530 affects different taxpayers differently, depending on whether they satisfy the conditions for relief contained therein. In particular, some taxpayers that have consistently misclassified their employees as independent contractors are entitled to relief under § 530, while other taxpayers in the same industry (that, for example, have take more conservative position on classification issues) are not, because they cannot satisfy the consistency requirements of the Section."[1]

The uneven playing field arising out of § 530 was the stimulus for NTSA's support of enactment of § 1706.[2] Section 1706 removed the protections offered under § 530 for firms which supply technical services. This limited exception applies only to multi-party business transactions which involve 1) firms which supply or broker the services of technical personnel, 2) technical personnel, and 3) the clients that benefit from the services of the technical personnel.[3]

Section 1706 does not change the common law rules for classifying workers as employees or independent contractors, nor does it change the employment status of anyone covered by the provision. It simply permits the IRS to interpret and enforce the underlying rules for technical services workers without regard to § 530. Remember, an employer is only entitled to § 530 relief it has, in fact, misclassified its employees as independent contractors.

The Consistency that § 1706 brought to the tax treatment of workers within the technical services industry has worked. Organizations like NTSA have communicated the tax laws effectively to their members. As a result, companies in the technical services industry have benefited due to the issuance of industry-specific classification guidelines, treated their employees in accordance with the law, and, we believe, greater awareness and tax compliance has been achieved.

IV. Policy Recommendations for the 104th Congress

Repealing § 1706 is not the answer. Simply codifying § 530 is not the answer either. That law was designed merely to maintain a status quo for a short period of time -- it was a "time-out" call intended to keep things as they were until new rules were crafted. Its safe harbors and consistency requirements were never intended as policy judgments which would endure far into the future. Clearly, Congress could not have intended to reward the "consistent" conduct of a company that aggressively misclassified its workers as independent contractors over the inconsistent conduct of a company which in good faith searched for the correct approach amidst shifting rules. Moreover, a rule that treats companies in the same industry differently based on how long a company has been in existence or based on a company's past practice is patently unfair.

A. Amend § 530 "Prior Audit Rule"

NTSA recognizes that § 1706 repeal language is present in the Misclassification of Employees Act, HR 510. If passed, this bill would institute a limited scope taxpayer amnesty program concurrent with amending § 530. Under this bill, the list of reasonable bases for treating a worker as an independent contractor would be modified to incorporate a much more contemporary application of the "prior audit" rule.[4]

NTSA would likely support repeal of §1706 if such action were concurrent with amending the prior audit rule to make it specific to "employment classification compliance checks or audits" conducted within a reasonable time frame.

1 See Taxation of Technical Services Personnel: Section 1706 of the Tax Reform Act of 1986, U.S. Treasury Department, March 1991, pp. 32-33.

2 P.L. 99-514, § 1706, 100 Stat. 2095, 2781 (1986).

3 Rev. Rul. 87-41, 1987-1 C.B. 296.

4 See for example, HR 510 legislative summary "an IRS audit conducted solely for employment tax purposes within three years before the period in question, which audit includes an examination for employment tax purposes of workers holding substantially similar positions to the worker in question, and following which audit the employer is notified in writing by the IRS that the employer has classified the workers correctly and the IRS notification is not revoked before the period in question; or..."

B. Establish Independent Contractor and Employee Classification Safe Harbors

NTSA continues to urge Congress to provide significant guidance by setting forth a limited number of factors which employers, individual taxpayers, and the IRS may use to make worker classification determinations. These factors should be based on common law and expressed as safe harbors.

Taxpayers who fall within one of these "safe harbors" would be assured that they would not be subjected to large retroactive penalties should the employment status of their workers be questioned. Likewise, NTSA believes that if a worker disputes the classification, the worker should be able to request a ruling from the IRS based on the broader application of the 20 common law factors. This request would be made through a version of the current Form SS-8 procedure.[5]

NTSA has reviewed, with great interest, the provisions offered under the Independent Contractor Tax Simplification Act of 1995, HR 1972. Under this bill, the 20 common law factors would be replaced -- for purposes of determining who is not an employee -- by a new set of criteria which, if met, would allow any employer or individual to determine "electively" whom among their labor force to class as employees and whom to class as independent contractors. There would be no requirement for consistent worker status treatment. There would be no "service recipient" tax liability as long as 1099's are properly filed, a qualifying written contract exists, and the "service supplier" meets one of 5 safe harbor requirements.

While H.R. 1972 and similar proposals represent a new, creative approach to the issue of worker classification, we suggest that, in the end, simplification can be achieved without introducing a whole new set of independent contractor criteria.

For example, we believe that worker classification objectivity would be equally achievable by simply structuring new safe harbors around key elements of the present common law test. Such safe harbors might specify that:

1) A worker is an independent contractor if:

- the worker works for several bona fide customers at any one time and, subject to agreed upon due dates, schedules the order in which the work is done; and
- the worker performs substantially all of the work at the worker's place of business, which is not furnished by the customer, or if it is furnished by the customer, for which the worker pays fair market rent; and
- the worker bears the economic risk of the business because the worker's remuneration is directly based upon output or deliverables and not upon the number of hours which the worker works.

2) A worker is an employee if:

- substantially all of the work performed by the worker is done during regular business hours at one company's (or that company's customer's) place of business; or
- the company schedules the hours (including instituting flex-time scheduling) the worker is to work; or
- the worker is paid by the hour, week or month for time worked; and
- payment for work done for one company, directly or indirectly, is the worker's sole or major source of income for the worker's services.

V. Other Considerations for Congress

The application of worker classification standards, whether in their current form, or as may be amended, however, currently focus on tax related questions. For example, under H.R. 1972, a worker may be classified as an independent contractor for tax purposes but would remain an employee under the criteria set forth in the Fair Labor Standards Act,

[5] See "Statement of the National Technical Services Association," Hearing before the Commerce, Consumer, and Monetary Affairs Subcommittee of the Committee on Government Operations House of Representatives, 101st Cong., 1st Sess., June 8, 1993.

Title VII of the Civil Rights Act, the Americans with Disabilities Act, the Family and Medical Leave Act and various state unemployment and workers' compensation laws. This dichotomy would occur because most of these laws also are principled upon elements of the common law test. When considering the adoption of a new independent contractor test, we believe the effect such a new test will have on other bodies of law must also be considered.

VI. Summary Remarks

Until § 530 is materially narrowed, and new employment classification guidelines are forwarded by Congress, § 1706 should not be repealed. It has restored some rationality to the worker classification issue in the technical services industry and there should be no retreat from that gain except in the case of a fresh start for all industry. As new worker classification proposals are forwarded, we urge Congress to consider the effects these proposals will have on the administration of other laws as well. Congress must weigh its fiscal and employment policy objectives with the understanding that a worker classified as an independent contractor for tax purposes might later successfully challenge a failure to pay premium overtime or make a claim for an uninsured work-related injury. This anomalous but very real result can only lead to more confusion and may be compounded if new employment classification standards vary materially from the present common law test.

We look forward to working with your committee and staff on these important policy issues and would be happy to furnish further supporting information.

Respectfully submitted,

Laura Mackail

TESTIMONY OF DENNIS WEST, PRESIDENT
EASTSIDE COMMUNITY INVESTMENTS, INC.
26 NORTH ARSENAL, INDIANAPOLIS, INDIANA 46201

UNITED STATES HOUSE OF REPRESENTATIVES
COMMITTEE ON WAYS AND MEANS
HEARINGS ON MISC. TAX PROPOSALS
JULY 11, 12, AND 13, 1995

Mr. Chairman and members of the subcommittee, my name is Dennis West and I am the President of Eastside Community Investments, Inc. a private not for profit community based development corporation. (CDC). In the Spring of 1992, I testified before the Ways and Means Committee with respect to the proposed enterprise zone legislation. My testimony addressed the need for federal policy that encouraged capital formation strategies in poor communities. In my statement, I encouraged the Committee to utilize the expertise of community development corporations (CDCs), like ECI, as the vehicles to increase private investment in poor communities with the goal of developing both the human and the economic assets in our communities. Congressman Andy Jacobs, who represents the Tenth District Indiana where ECI is based, fashioned this concept into legislation, the Community Development Corporation Tax Credit, which was eventually passed as part of the 1993 Omnibus Reconciliation Act. The law created a program which mirrors the Low Income Housing Tax Credit in structure, but is intended to stimulate those CDC ventures which are aimed at job creation and economic development.

I am honored to be testifying again before the Ways and Means Committee in support of the CDC Tax Credit and to encourage the Committee to expand the credit and allow more CDCs to participate in this program. ECI is part of a CDC movement which numbers about 2,200 groups scattered across America and which are working to bring value, build capital and revitalize some of our most distressed places.

I am offering this testimony to you as someone who has significant perspectives on the work of community economic development, creating public and private partnerships, and the use of tax incentives to foster corporate and individual investment. I have been President of ECI for eleven years, while I have lived in the community which ECI serves for the past fifteen years. ECI has used its ability to attract capital to put together one of the most comprehensive efforts of community revitalization in the Country (see Exhibit A). ECI has created thirteen limited partnerships, using the low income housing tax credit, historic preservation tax credits and the targeted jobs tax credit. This work is testimony to public-private partnership and the transforming power which occurs when corporate America becomes the partner to community and government to address poverty.

I would like to provide the Committee with some background information on Community Development Corporations (CDCs), an industry that has been growing steadily in this country since 1980, and their development activities in low income urban neighborhoods and poor rural communities. CDCs are locally based and controlled non-profit organizations committed to the social and economic revival of their communities.

According to a recent survey by the National Congress for Community Economic Development (NCCED), the national trade association of organizations engaged in the economic revitalization of poor communities, there are between 2,000 and 2,200 CDCs operating around the country. According to the survey, 63% of these CDCs serve urban areas, while 19% serve rural communities and 15% serve mixed urban-rural communities. These CDCs have produced approximately 40,000 units of affordable housing, developed 23 million square feet of commercial / industrial space, created 67,400 full time jobs (not including jobs due to construction activities) and lent over $200 million to business enterprises in their communities.

CDCs take a comprehensive approach to community development combining economic development activities and affordable housing construction with a wide ranges of community building activities, ranging from job training, community organizing, small business lending and technical assistance, teen counseling and senior care. CDCs develop their work agenda in response to the many needs of distressed communities.

CDCs have proven their capacity to attract private investment into their target areas. In many cases, CDCs undertake projects that the private sector has passed up because of stronger markets elsewhere and the risks associated with doing business in low income communities. CDCs have creatively used Federal funds to leverage private investment capital in their development activities benefiting poor communities and individuals. For instance, a recent survey of rural CDCs utilizing funds from USDA's Intermediary Relending Program (IRP) showed that, on average, CDCs leveraged $7 of additional investment for every federal IRP dollar invested in a business deal.

The Low Income Housing Tax Credit authorized by Congress in 1988 is a good example of a tool which is being used to attract private investment to projects which otherwise would not have been done. In particular, the Credit has been responsible for ECI's development of over 300 units of housing in seven real estate syndications. The result has been over $10 million dollars invested by individuals and corporations into the revitalization of what was once the worst housing stock in our community. The impact on neighborhood stability created by the return to productive use has been enormous. Over 80% of ECI's tenants renew their leases annually; we hope that this is reducing turnover in the local schools as well.

CDCs have also used the Community Economic Development grants program administered by the Office of Community Services of the Department of Health and Human Services to great effect in improving vacant or underutilized buildings and creating jobs for residents. On average, CDCs leverage $2 dollars of private sector funds for each $1 of Federal funds.

Why this incentive and why now?

The CDC Tax Credit has provided a new tool for CDCs to use in attracting private investment capital to poor urban and rural communities for use in economic development activities. The Community Development Corporation Tax Credit, as authorized in the 1993 Omnibus Budget Reconciliation Act, granted the Department of Housing and Urban Development (HUD) the authority to designate twenty CDCs as eligible to market and utilize a tax credit as a tool to encourage private investment in the development activities of CDCs in designated poor communities. The program grants eligible CDCs the authority to accept up to $2 million in contributions from private individual and business investors who in turn would receive a five percent tax credit for their qualified cash contributions each year for a ten year period.

In June of 1994, HUD designated twenty CDCs to participate in the CDC Tax Credit. Twelve of the CDCs chosen serve urban communities, while eight are based in rural areas. The list of designated CDCs is attached to this testimony as Exhibit B. At present, most of the selected CDCs are marketing the credit to a range of investors in hopes of having secured commitments within the next year.

Though ECI was not one of the twenty CDCs chosen in 1994, I am here to testify in support of expanding the tax credit and making it available to additional communities around the country. In a time when Federal funds are being trimmed back, it is essential that flexible tools like the CDC Tax Credit be available to organizations like Eastside Community Investments to encourage private investment in our communities.

I want to take this opportunity to tell you more about the near eastside community in Indianapolis which is served by ECI. This community, where I work and live, has unemployment which traditionally doubles the local City rate. There are approximately 28,000 persons residing in about 10,000 households. Another significant factor is the relative youth of this area - about 32% of the population are under age 18. However, the issue we face and what is so critical to economic progress is the lack of education and marketable skills which exists. Our community

has 46% of its adults who lack a high school education and, while we have less than 3% of the County population, we have 12% of its caseload for Aid For Dependent Children. This creates a paradox. On one level, we daily see the tremendous capacity of our friends and neighbors to take their gifts, talents and skills and create enterprises and opportunity. Our work in microenterprise is confirmation of this fact. But on the other had, we see the limits which our neighbors face when lack of skills and formal education stifle their ability to move beyond low income and low skill employment.

The problem comes as we look at the cost of living, even in a poor community. Average rent in our community is $350 per month. The average level of public assistance for a family of three is $288 per month. By the same token, holding a low skill low wage job will probably result in a net take home pay of around $600 per month. Neither the public assistance wage, nor the low skill wage is providing enough income to make a budget that can work, particularly if the households are headed by a single parent. Overall, one third of the families in our community are living in poverty. One in four families is single parent headed.

For our community and many like it to move beyond poverty, we must create opportunity which means the ability to secure more education and skill sets which can be marketed in the larger economy. In order to transform our community, families need the ability to generate more income and build assets. Supporting economic development ventures is a challenge. When ECI decided to develop a project to improve the quality, reliability and quantity of child care, we needed fifteen funding sources to fully fund the project's capital and two year operating expenses. We imported money from California, Illinois, Kentucky, Maryland, Michigan, New York and Washington D.C. to put the project together. Soliciting and securing money from so many sources depletes the energy and likelihood for many groups to embark on ventures which are experimental. Having a venture fund pool available to seed start up expenses or to make loans to the day care entrepreneurs would have greatly facilitated the process.

This past year we have demonstrated that when economic opportunity is offered families participate. ECI has provided 5,000 hours of construction training and 3,000 hours of child care training to 57 students in our YouthBuild program. The YouthBuild program sent twelve of these students to receive their high school diplomas this June. Our microenterprise program is attracting twice as many people to its orientation as classes can accommodate (30 participants in an 11 week course). Also this past year we caused over 70 families to grow assets, either as homeowners, owners of business, possessors of individual development accounts or home ownership development accounts. At the same time, an ECI enterprise, Shelter Systems, has brought steady employment to ten community residents who will also have the chance to apprentice in the Carpenter's Union and achieve journeyman status in four years. These efforts, modest as they are, are growing. They are also fostering new ways for a community and its residents to see itself.

The CDC Tax Credit would be used by ECI to support equity investments in local business ventures which would continue to support the training and employment of low income, low skilled individuals. In addition, ECI would use the CDC Tax Credits to attract investment to the Opportunity Factory, a training program of computer skills, self assessment, educational skills and communications skills which will focus attention on elevating worker's ability to participate in the private economy.

We should expect that for the next decade that we will have labor shortages. Those shortages are a demographic phenomena caused by the baby bust which followed the baby boom. There will be a significant outcry from businesses which are striving to find workers who have the social skills, a work ethic, and the personal stability necessary to be productive. This phenomena means that we must engage every able bodied American into helping to produce for our economic well-being.

Encouraging and guiding people to economic participation is something which CDCs are doing well. They have important contributions to offer in order to intermediate between the residents of their communities and the opportunities of work force participation. This role in intermediation is something which the tax credit will make possible.

My purpose in offering this testimony is to request that you expand the Community Development Corporation Tax Credit which was authorized as part of the Omnibus Budget Reconciliation Act of 1993. This demonstration has shown that it can work. In south Dallas, Texas Instruments invested in a venture which is bringing 250 quality jobs to benefit a community characterized by high unemployment and significant poverty. This shows that the result which Congress intended - to offer a product for partnership to extend new opportunities in the private sector - can, in fact, work.

I also ask that the Committee consider making the following changes to the CDC Tax Credit in an effort to perfect what ECI and many other urban and rural CDCs feel is an important new development tool.

First, I encourage the Committee to consider extending the credit to apply to twenty additional CDCs. As I mentioned earlier in my testimony, there are more than 2,200 CDCs operating around the country and only 20 are currently able to take advantage of this tax credit. Expanding the number of eligible CDCs by 20 would allow twice as many communities to benefit from the program while at the same time managing the growth of a new development tool.

Secondly, I encourage the Committee to increase the amount of the tax credit each CDC can raise from $2 to $4 million and retroactively apply this higher limit to CDCs that were selected to receive tax credits in 1994. Since the CDC Tax Credit is new to both CDCs as well as their potential investors, it is not surprising that most of the CDCs designated by HUD last year have not yet reached their $2 million investment goal. However, the designated CDCs currently marketing the credit see the potential to secure significant investments over time.

Thirdly, in an attempt to make the tax credit more user friendly for rural CDCs, I urge the Committee to craft technical changes to the current statute that deal with the difficulties some rural CDCs have had with the geographical constraints associated with the tax credit. In other words, establish alternative criteria for a "rural operating area" that would reflect the fact that many rural CDCs operated statewide and serve "pockets of poverty" that are scattered throughout a region - not concentrated in a specific neighborhood.

In addition, a number of the CDCs are interested in shortening the period in which an investor can take advantage of the credit. CDCs currently trying to market the credit and attract investors feel that the credit would be more attractive to investors if the ten year return on the credit were shortened to perhaps five years or less.

The tragedy of poverty in urban America can grasp and hold the attention of the private sector in this environment. The violence, stress, transience and homelessness which permeate our poorest communities requires community attention and community solutions. We have seen the results of public-private partnerships which utilize the Low Income Housing Tax Credit. This tool which Congress created has demonstrated that mobilizing private capital will create jobs and opportunity the way that it has in Dallas. We ask your help to provide this incentive to twenty more communities across America to mobilize private capital into the business of good jobs and economic opportunities in the places where it is most needed.

EXHIBIT A

EASTSIDE COMMUNITY INVESTMENTS, INC.
Production 1976-1995

Investments in Land

- Developed a 40 acre industrial park at Rural & I-70. Home to 32 businesses;
- Developed 14 units of new construction (through 1995) in conjunction with the Career Education Center Builders and students of Arsenal Technical High School;
- Developed Byrne Court, a 50 unit housing for the elderly and handicapped;
- Annually (since 1990) conduct tree planting, urban reforestation and landscaping projects utilizing volunteers. The project, known as "Just Say Grow," includes a seedling nursery; the 500th tree was planted in 1994.
- Developed Ohio Street Townhomes, a 20 unit building.

Investments in Buildings

- Bought, rehabilitated and sold 238 units which had been boarded and vacant;
- Bought, rehabilitated and rent 172 units which had been boarded and vacant;
- Conducted self help rehabilitation assistance for 800 families;
- Bought a closed public school and converted it into a 24 unit apartment building, Whittier Place Apartments;
- Renovated the Brookside Building, providing 24 units of housing, ten dedicated to mentally disabled homeless, and 8,000 s.f. of commercial space;
- Annually (since 1986) conduct Caulk of the Town, a weatherization project which engages 1,000 volunteers to weatherize units and provide minor home repairs;
- Renovated the former Holy Cross Church Parish House into a 15 unit apartment building, Providence Place.
- Renovated the former St. Philip Neri church Parish House into a 13 unit apartment building for the elderly and 5,000 s.f. commercial space for a day care center, Guerin Place.
- Developing 10.1 acres and 3 buildings with 164,000 s.f. of manufacturing spacefor new uses, the New East Industrial Center.
- Perform full service property management for over 350 rental units in five center city neighborhoods.

Investments in People

- Developed the cottage industry of child care into a cooperative of nine family day care businesses;
- Developed 21 units of transitional housing for families who had been victims of domestic violence;
- Conduct(since 1992) classes to teach the development of business plans leading to investments by ECI, through the Eastside Community Fund Microloan Program.
- Developed the ECI YouthBuild Program, a work and education program which assists young people who have dropped out of school and who have parenting responsibility to invest in their future economic self-sufficiency; job training in 2 career tracks, annually for 30 youth.
- Developed a Special Needs Housing Program to establish permanent housing for 16 adults with chronic mental illness in conjunction with 8 caregiver families; provide job coaching.
- Assists individuals to build assets through Individual Development Accounts (IDAs), restricted, leveraged savings accounts.
- Assists individuals to build assets through Home Ownership Development Accounts (HODAs), restricted, leveraged savings accounts to assist tenants to become homeowners.

Investments in Industry

- Invested over $1,000,000 through a Small Business Investment Company, Circle Ventures;
- Established the Eastside Community Fund (capitalized at $800,000), which is investing in small businesses.
- Established Arsenal Construction Corporation to provide general contracting, and construction management.
- Established Shelter Systems, LLC to manufacture wall panels and roof trusses in order to provide training and employment opportunities.

TESTIMONY OF AMERICAN INSTITUTE OF ARCHITECTS

July 27, 1995

The Hon. Bill Archer
Chairman
U.S. House Committee on Ways and Means
Washington, DC 20510

Dear Mr. Chairman:

The undersigned organizations request that our views on the proposed "Commercial Revitalization Tax Credit Act" be included in the record of hearings on miscellaneous tax provisions. Senator Kay Bailey Hutchison has introduced this measure as S 743, and since the hearings were held, Representative Phil English has announced his intent to submit a companion bill in the House.

We believe that this legislation would fill a significant gap in the range of tools now available to states and localities for economic revitalization. The legislation would provide qualified taxpayers with a choice of two tax credits: 1) 20 percent of creditable expenses, which may be taken all at once or carried forward or backward, or 2) five percent/per year for ten years. Creditable expenses would be the costs of commercial new development, expansion and rehabilitation in areas specifically designated for revitalization by federal, state, or local governments. Such expenses would include design services and construction costs, along with a portion of environmental clean-up, land acquisition, and demolition costs. A maximum of $10 million in credits per project is allowed.

The proposed tax credit program would operate like the highly successful Low-Income Housing Tax Credit, enacted in 1986. Its cost would be $1.5 billion in available tax credits over five years, beginning in calendar year 1996 at $100 million and rising to $200 million in 1997, and to $400 million in each of years 1998-2000.

According to Kermit Baker, the economist for the American Institute of Architects, based on the experience of the Low-Income Housing Tax Credit, the proposed commercial revitalization tax credit could generate as much as $5.5 billion in construction and related industry wages, plus another $6 billion in commercial activity, of which about $4 billion would go for wages with as much as $500 million in federal, state, or local taxes.

We believe that this legislation has numerous advantages: 1) It is modeled on a known, proven program--the Low-Income Housing Tax Credits. 2) It fills a gap in available revitalization incentives. 3) There would be little federal beaurocracy. 4) The total amount of credits is fixed, so the total cost is known. 4) It will reduce the risk of investment in distressed communities, thereby encouraging new and enhanced business activity. 5) It relies on state/local/partnerships. 6) It will work for a wide range of retail, industrial, health care, and other facilities. 7) It is based on the principle of pay for performance, and can be claimed only after the investment is made, the project completed, and the assets remain in use. 8) Most importantly, the measure will generate new jobs, tax revenues, higher property values, and a better quality of life for areas that have known only decline.

We hope that your committee will favorably consider this measure for inclusion in any omnibus tax legislation that it will report during this Congress. If you have any questions, please call Al Eisenberg, Director of Federal Legislative Affairs for the American Institute of Architects, at 202/626-7384.

Sincerely,

American Association of Enterprise Zones
International Downtown Association

National Conference of Mayors

TESTIMONY OF WILLIAM A. POLF
COLUMBIA UNIVERSITY

My name is Dr. William A. Polf and I am the Deputy Vice President for External Relations and Strategic Programs at the Health Sciences Division of Columbia University. My testimony focuses on the potential for the recently enacted empowerment zone legislation to attract biotechnology companies to economically distressed areas.

Columbia University is currently developing the Audubon Biomedical Science and Technology Park within the New York City Empowerment Zone. Audubon combines three crucial functions. The Park is expected to become a major center for public and private biomedical research. It will also serve as a mechanism for technology transfer by offering facilities and programs which translate university-based scientific discoveries into commercial products. Finally, the project will foster local economic development by creating new businesses and jobs in the inner city.

The development of the Audubon Park is a key component of the New York empowerment zone strategy. There are five research and technology related buildings planned for this site. The first building, the Audubon Business and Technology Center, was recently completed and has 60,000 square feet of core and shell laboratory space for established and new biotech companies and 10,000 square feet of general level space for retail firms. The Center is the first university-related incubator facility designed to stimulate the growth of the biotechnology industry in New York. Approximately 40 percent of the lab space will be set aside for start-up companies. Audubon Center management will help tenants locate financial and venture capital sources, provide market and product analysis, help prepare business plans, assist in dealing with licensing and regulatory matters, and help recruit and train technical personnel. The Center also will provide general business assistance to entrepreneurs interested in starting a biotechnology or other business in the Washington Heights/Inwood neighborhood. Construction has also been started on the second building, the Center for Disease Prevention. When all five facilities planned for the Audubon Park are developed, nearly 2500 new jobs will be created including scientific, research, laboratory, clerical, administrative, retail, and building operations and support.

The success of our project depends in large part on our ability to persuade start-up biotechnology companies to move within the empowerment zone. One of the major incentives adopted by Congress to attract companies to these areas was the employment tax credit. Under this provision, qualified businesses may receive up to a 20 percent credit for the first $15,000 in wages paid to individuals who live and work within these zones. Policy analysts have viewed the employment tax credit as one of the best mechanisms for stimulating new job opportunities in these zones. The limited tax incentives can only be earned by creating jobs in the zone for residents of the zone. However, the tax credit is not an effective incentive for most start-up technology companies. These companies are precisely the types of firms that have the greatest potenual for transforming some of our core cities. Small technology-based businesses are the fastest growing sector of the economy. They are often backed by venture capital and rarely earn taxable income during their early research and development phases. Consequently, the existing credit has little value and does not encourage these firms to locate in the empowerment zones, as was originally intended.

This problem is not limited to New York. There is a major medical/research center located in or adjacent to almost all of the empowerment or enhanced enterprise zones. Examples include: Johns Hopkins and the University of Maryland Medical Centers in Baltimore; Cleveland Clinic and Case Western Medical School in Cleveland; Wayne State Medical Center in Detroit; University of Missouri Medical Center in Kansas City; and the University of Illinois Medical School in Chicago. However, all of these cities face the same problem. While there is enormous potential for creating technology and biotechnology related jobs, significant incentives are needed to convince new start-up firms to locate in these depressed areas.

For these reasons, we would like the Committee to adopt a technical correction that would permit a C corporation to transfer all, but not less than all, of its Empowerment Zone Employment Credit to the holders of its common stock. With this amendment, the employment credit will be an attractive incentive for investors even if the start-up technology or biotechnology firm is not expected to generate any income during its early years. This

modification would ensure that the credit has the maximum intended impact in generating jobs. Draft changes to the tax code that would accomplish this objective are set out below:

Empowerment Zones

Permitting C Corporations to Transfer Employment Credits to Shareholders

A. Amend Subparagraph (2)(B) of Section 38(c) by changing "For purposes of this paragraph," to "For purposes of this paragraph and of paragraph (3)."

B. Renumber paragraph (3) of Section 38(c) as paragraph (4) and insert new paragraph (3).

(3) Empowerment Zone Employment Credit may be Passed Through to Shareholders:

(A) In General. - A C corporation may elect to transfer all, but not less than all, of its Empowerment Zone Employment Credit for a calendar year to the holders of its common stock.

(B) Election. - A corporation electing to transfer its Empowerment Zone Employment Credit to its shareholders shall do so by including a written election (in the form prescribed by the Secretary) in its timely (including extensions) filed return for the taxable year with or within which the calendar year ends. Such corporation shall inform each shareholder (in writing in the manner prescribed by the Secretary) as to the amount of Empowerment Zone Employment Credit to which the shareholder is entitled.

(C) Shareholders to Whom the Credit is Transferred. - Any transferred Empowerment Zone Employment Credit shall be apportioned among those persons who are shareholders of the transferor on the last day of the transferor's taxable year. If the transferor corporation has more than one class of common stock, the credit shall be apportioned among the classes in proportion to the aggregate value of each class.

(D) Taxable Year for Applying the Transferred Credit. - A shareholder who is the transferee of a corporation's Empowerment Zone Employment Credit shall treat the transferred credit as a current credit for the transferor's taxable year with or within which the transferor's taxable year to which the credit related ends.

We believe that these changes will make a significant difference in the potential value of the credit and will add an important element to the package of incentives needed to attract new firms and create new jobs in these severely depressed areas.

We appreciate the opportunity to submit our testimony to the Committee.

Statement for the Hearing Record
House Committee on Ways and Means
Hearing on Miscellaneous Tax Reform Provisions
Submitted by Local Initiatives Support Corporation
New York, New York
July 27, 1995

We welcome the opportunity to express our views on the proposed "Commercial Revitalization Tax Credit", and request that they be included in the record of hearings conducted July 11,12 and 13 on miscellaneous tax reform provisions. Congressman Phil English intends to introduce this measure as a bill in the near future. Since the hearings, we understand that Representative Jose Serrano has introduced the measure as H.R. 2097. A companion bill, S. 743, was previously introduced by Senator Kay Bailey Hutchison.

Local Initiatives Support Corporation (LISC) strongly supports the proposal for a Commercial Revitalization Tax Credit (CRTC). We believe the CRTC would make a tremendous contribution to the economic development of distressed low-income urban and suburban neighborhoods and rural areas.

LISC is the nation's largest non-profit supporter of grass-roots low-income community development corporations (CDCs). In 15 years, LISC has raised $1.7 billion from the private sector to help CDCs rebuild communities with 57,000 homes and 9.6 million square feet of commercial facilities.

Through our work, we have come to appreciate how neighborhood residents can join together to take responsibility for revitalizing their communities, with the active participation of the private and public sectors. CDCs have attracted broad support because their work is grounded in mainstream American values: self-help, community, partnership, investment, local decision making, and tangible results. In a time of widespread pessimism that anything constructive can be done in our toughest communities, CDCs offer real proof that visible, sustainable progress is within our grasp.

Over the past several years, most of the attention in community development has focused on housing. This has been extremely valuable in stabilizing the population and physical condition of neighborhoods, meeting a pressing need for affordable shelter, developing community leadership and demonstrating to justly skeptical observers that tangible results can be achieved and sustained.

But housing is just a first step. We all know that investment in economic development is needed to connect isolated communities to the mainstream, move welfare recipients into work, and make neighborhoods good places to raise families and do business. To address one part of this agenda, LISC last year established The Retail Initiative, an unprecedented $24 million equity pool that will invest in inner-city supermarkets and shopping centers developed by CDCs. The investors include some of America's most sophisticated companies, including Bankers Trust, Bank of America, First Interstate Bancorp, Home Savings of America, GE Capital, Great Western Bank, J.P. Morgan, Metropolitan Life Foundation, Philadelphia Board of Pensions and The Prudential. These supermarkets will bring low-cost food, jobs, physical revitalization, and a new sense of hope to the inner-city. We recognize that private financing can carry most of the costs, but there will still be some modest gap that only the government can fill. Until now, the federal government has not had the right tools for this kind of job.

We believe that the Commercial Revitalization Tax Credit has the potential to be one of the most important of these tools. It is targeted to the communities that need it most. It is flexible enough to accommodate a range of retail, industrial and other facilities from the inner city to rural areas as diverse as the Colonias, Appalachia, the Mississippi Delta, and Alaska. It stimulates investment, and does not offer an operating subsidy to which a business could become

addicted. It marshals the business discipline and investment rigor of the private sector. It is performance based, so tax incentives will support only successful ventures. It operates through state government with a minimum of federal bureaucracy. And it encourages community residents themselves to lead the revival of their own home towns.

The CRTC is a bold and innovative idea, but is based on the solid foundation of the Low Income Housing Tax Credit and the Historic Preservation Tax Credit. These credits have been enormously successful. The LIHTC is now responsible for 60% of all multi-family housing starts and virtually all new affordable multi-family housing. We at LISC have used the LIHTC to attract $1:2 billion in corporate equity investment to CDC housing. LISC's National Equity Fund has generated more investment based on the LIHTC than any other organization, even though we invest exclusively in housing sponsored by CDCs.

We believe that a Commercial Revitalization Tax Credit could achieve similar results in stimulating economic development in distressed communities. A major obstacle to attracting and retaining businesses in distressed low income communities, is a lack of investment capital for business facilities such as shopping centers, supermarkets, industrial facilities, and community centers, all of which provide job creating economic activity and services, and are essential to stable, healthy communities. The CRTC proposal builds upon the Enterprise Zone strategy of tax incentives to encourage investment in targeted communities.

While tax incentives and direct spending programs can achieve some of the same objectives, they are not interchangeable. The private sector role tends to be greater when tax incentives are the policy instrument. Many private investors shy away from direct government spending programs but respond well to tax incentives because they involve less bureaucracy and red tape. Only a handful of federal employees oversees the Low Income Housing Tax Credit, which got off to the fastest start ever for a federal low-income housing program., In addition, tax incentives can be structured on a pay-for-performance basis. If public benefits are not sustained, tax subsidies can be recaptured through the IRS. Finally, because tax incentives stimulate equity investments and are subject to recapture if projects fail, owners have a much greater stake in the project's success. This means investments will be chosen carefully and protected aggressively.

Three categories of investors could be attracted to invest in distressed communities through a CRTC.

The first category is socially motivated corporate investment funds. Several public purpose organizations, including LISC, The Enterprise Foundation, state governments and local civic groups have used the Low Income Housing Tax Credit to attract major corporations as investors in low-income housing. The corporations receive a competitive rate of return and have the opportunity to participate in a public/private/community partnership to address serious low-income community problems. The CRTC offers a similar opportunity. We do not, however, anticipate the emergence of a tax syndication process geared to individuals, because of passive activity restrictions, the higher risks associated with nonresidential development, and the lack of any real precedent for marketing socially motivated nonresidential investments to individual investors.

The second category of investor includes companies locating in distressed communities, such as major supermarket chains and manufacturers. Such companies would build facilities for their own use and claim the credits themselves. These investments would create jobs and stimulate additional economic activity.

The third category of investors includes existing small-scale property owners. The CRTC would provide them with an incentive to make capital improvements and claim the credit.

Our experience with the LIHTC leads us to believe that the CRTC has tremendous potential for success. We appreciate this opportunity to submit our views to the Committee. We would be happy to answer any questions that you might have. Please feel free to contact Benson F. Roberts, Vice President for Policy, at (202)785-2908.

Statement by the
Independent Petroleum Association of America
before the
Committee on Ways and Means
United States House of Representatives
July 11, 1995

MR. CHAIRMAN AND MEMBERS OF THE COMMITTEE:

The Independent Petroleum Association of America would like to report on the state of the domestic oil and natural gas producing industry and to urge prompt congressional action to help this industry survive. Domestic independent oil and gas producers are facing what could very well turn out to be their most difficult challenge. Since mid-October, 1993, oil prices have fallen by more than 25 percent, and the industry has lost another 17,900 jobs this year alone. Hundreds of thousands of U.S. oil wells are on the brink of economic ruin. The very existence of the oil industry in many states is threatened with extinction.

The domestic oil and natural gas industry entered this current economic downturn without the internal financial wherewithal to sustain operations on the basis of "boom time" cash reserves, as had been the case in past. Rather than the bust and boom cycle of the past, this time the oil price crash comes after nearly seven years of relatively low prices for both oil and gas. The years which followed the 1986 price collapse have cost this industry more than 450,000 jobs, have seen the drilling rig count set new lows year after year and settle in at levels barely half that of the average drilling rate of the previous twenty years. We have seen domestic oil production drop by nearly two million barrels per day. During that same time, natural gas prices fell to their lowest levels since the 1970s, and natural gas reserve replacement fell significantly below historic trends. The industry, with notable exceptions, has not been drilling and replacing the reserves it is producing. Consolidation, acquisition and mergers have become a primary means for independents to acquire new reserves and to survive the lean times. Many of the multinational oil corporations are shifting a larger share of the exploration and production budgets overseas. Now, on top of the dismal statistics of the late 1980s and early 1990s comes the current oil price crisis.

There is a dire need for urgent congressional action if the U.S. is to maintain the existing level of domestic natural gas and oil production, especially from economically marginal wells. There is, likewise, a need to encourage investment in new drilling in this country. Without changes in U.S. energy, environmental and tax policy, we are gravely concerned that our nation will grow, on an accelerated basis, ever more dependent on imported crude oil as more domestic wells are plugged and abandoned, their resources lost forever, and as investment in new exploration and development in the U.S. is further reduced.

NATIONAL SECURITY. Our domestic natural gas and oil wells are a national security asset. Every barrel of oil and every cubic foot of natural gas produced in the United States creates wealth, jobs and tax revenues at every level of government. Unfortunately, our nation is at risk of losing a substantial share of its ability to domestically produce the country's primary sources of energy -- oil and natural gas, which account for about 65 percent of total energy consumption in the United States.

On Friday, March 11, 1994 the IPAA and dozens of companies and other industry organizations filed a petition under Section 232 of the Trade Expansion Act, requesting that the Clinton Administration immediately begin an investigation to determine the impact of crude oil and petroleum product imports on the national security of the United States. That law gives the president the authority to adjust imports, and we have asked the president to seriously consider that option. At the very least, we expect the president to come up with a comprehensive plan to preserve this vital industry which plays such an important role in maintaining the national security of the world's greatest superpower.

IMPORT DEPENDENCE CLIMBS. Consumption of natural gas and crude oil in the United States, by all official estimates, will continue to rise well into the future. Last year, our petroleum demand was almost 18 million barrels per day, and 50.8% of this demand was supplied by foreign oil imports. That's a new record, exceeding the 50% of demand in 1993, the previous peak year for oil imports.

There are substantial domestic natural gas and oil resources that, if developed, can significantly reduce future foreign oil imports. However, these resources will not be discovered and developed so long as this country sits idly by while every other nation with energy resource potential provides inducements for oil and natural gas investments. On a worldwide basis, the U.S. energy tax policy is simply not competitive, and needs to be changed.

Regulatory policies in the United States are also crippling new investments and driving up the cost of doing business in the United States. There is a greater risk here in the United States of having one's energy investment "confiscated" by the government--especially if it is on public lands offshore--than in any other part of the world.

Independent producers, who currently produce about 66 percent of domestic natural gas and about 40 percent of domestic oil, are eager for economic conditions which would allow them to increase domestic supplies of natural gas and oil. This will not happen unless our government takes action on several fronts.

MARGINAL WELLS. The nation operated slightly less than 850,000 oil and natural gas wells in 1993, according to *World Oil*. Slightly more than 580,000 of those wells are oil wells, and of that total, nearly 78 percent of the nation's oil wells are stripper wells, with an average production per well in 1993 of 2.1 barrels per day. Most of these wells are now uneconomic, operating at a loss.

These marginal wells--defined in the tax code as those wells that daily produce less than 15 barrels of oil (or the natural gas equivalent) or which produce heavy oil--are essential to our domestic energy supply. They provide approximately 19 percent of domestic oil in 1993 production in the lower 48 states.

Although many of these wells are uneconomic, producers have continued to operate them in hopes of higher prices in the future. But economic reality is beginning to set in, and many of these producing properties are being shut in, plugged and abandoned before the mineral deposit has been fully recovered. Stripper oil wells, which represent over 13% of domestic proved reserves, have been abandoned at a rate of over 17,000 wells per year for each of the past 10 years. That abandonment rate could double or triple this year. Once these wells are abandoned their production and proved reserves are permanently lost, and our foreign energy dependency grows.

If we are to maintain this production, Congress must enact measures that improve the economics of investment in marginal wells. The world marketplace is not going to do it for us. Indeed, OPEC nations probably would relish seeing this segment of our domestic energy supplies wiped out. It will help improve economic clout and help restore their dominance of world oil markets. OPEC will be the beneficiary of the status quo, and make no mistake about it.

To the contrary, the greatest beneficiaries of tax policy changes affecting marginal wells will be states not traditionally viewed as "oil producing states." There are more than 450,000 domestic stripper oil wells in the country. Oklahoma, well known as an oil producing state, has over 70,000 of these wells. But the remaining 381,000 producing stripper wells exist in 27 other states, including New York (3,629 stripper wells), California (22,063 stripper wells), Illinois (31,838 stripper wells) and Kentucky (20,019 stripper wells).

DOMESTIC DRILLING. Just as we must preserve the productive capacity of existing wells, the nation must also encourage investment in drilling for new wells. In 1994, drilling for domestic natural gas and crude oil hit the lowest level since records were kept beginning in the

1940s, and 1993 was only slightly better. It is not inconceivable that a new record low for drilling could be set this year.

NATURAL GAS DRILLING. Tax policy changes to encourage new drilling are needed and will create jobs in all geographic regions of the country. The industry needs to increase drilling levels, especially for natural gas, to meet growing demand. Over half of the natural gas we used this year came from wells drilled in the last five years or less. If we are to use more natural gas, a primary objective of recent energy reforms and the announced energy policy of the Clinton Administration, then the country needs to drill new gas wells. The IPAA believes that a production based credit is the best way to achieve new gas drilling. It has a record of proven success.

Equally important, the production-based credit will give a signal to domestic producers that their industry's contributions are viewed as necessary to achieve the administration's goals of greater economic growth and energy security. It will also signal that the health of the domestic oil and gas industry is important to this Congress and the Clinton Administration.

A NEW WAY OF THINKING. The U.S. oil and natural gas industry is undergoing a revolutionary change, a change that requires a new way of thinking. This new way of thinking must reflect the new economic realities that are shaping the independent oil and gas industry in America today. It calls for a new relationship between the government and the private sector. It is not a wild guess on our part to say that most independent producers loath to ask for more government involvement in their industry. There is a perception that government involvement has meant higher taxes, restricted access to public lands, and greater, more costly, and often unnecessary regulation.

Yet, we recognize that governments are very much involved in this industry worldwide. In fact, nationally owned oil companies control 87.2 percent of total world oil reserves, two-thirds of which are in the Middle East. These 20 nation/companies produce nearly 6 of every ten barrels of oil. Those same governments want a greater share of the world oil market, and the way they will get it is by driving marginal production out of the marketplace. Time is on their side. Meanwhile, here at home, it is becoming increasingly clear that the marginal barrel in this so-called "free world market" is the high-cost U.S. production. That is the oil that is being forced out of the marketplace. And this trend will continue unless our government, too, gets involved.

TECHNOLOGY AND RESOURCE POTENTIAL. We have an advantage here in America. As Fortune Magazine recently observed: "American oil men are on the cutting edge of developing technologies that drive down the expense of finding and producing oil." That's true. Recent technological innovations that have revolutionized exploration, drilling and production processes also have greatly expanded our knowledge of America's vast potential for domestic supplies of natural gas and oil. There is an abundant natural gas and oil resource base in the United States, but to unlock that potential requires our nation to re-think the old ways, to seize change and the opportunity it brings.

According to geologists and petroleum engineers who participated in a recent IPAA oil and gas resource survey, America has abundant potential resources. Their resource estimates (including proved reserves) indicate that the United States has total potential supplies of 204 billion barrels of oil and 1,295 trillion cubic feet (TCF) of natural gas--a resource/production ratio of 62 years for oil and 68 years for natural gas. Nearly half of the resources lie in new exploratory development, and half in existing fields.

But these American resources--the reserves of the future--will by and large be found and developed in small increments. It is the nature of our geology in the United States that we have vast amount of reserves held in these small increments or jack rabbit fields. Although certain trends (particularly the deep, unexplored portions of several major basins) contain potential for the discovery of giant gas fields, new fields will be generally less than 100 billion cubic feet (BCF) of gas. Often they are as small as 10 BCF of gas or less. Development of reserves in existing fields or geological trends likewise will be in small increments, with additions of 1 to 2 BCF of gas for each well drilled. To keep drilling costs down in the search

for these smaller reserves, independents are turning increasingly to new seismic and computerized technologies. Ironically, under the tax code a producer would probably be better off economically using the dry hole method of searching for these new resources.

Before the recent price collapse, independent producers were aggressively going after this resource base, scoring impressive successes using new geological concepts, innovative drilling techniques and computerized seismic technology. In the process, these entrepreneurs are creating jobs and new economic wealth--and discovering new oil and natural gas resources--in some 40 major production areas in 20 states.

The IPAA's resource base study entitled, The Promise of Oil and Gas in America, natural gas and oil plays/trends with significant discoveries or developments since 1986 were analyzed. The survey resulted in 56 cases of significant discoveries or developments in 16 states, providing just a sample of significant events, not necessarily the largest reserve additions during the period. This sample does form a good cross-section of how productive E&P activity is undertaken. Some important themes are evident:

- New reservoirs were often found with new technology--mostly improved seismic and 3D seismic data, and better drilling and completion technology.
- However, the most important development is improved geological concepts. In many cases, old seismic tests "condemned" a large area or a trend; improved vision, based on better gas-finding ideas was necessary to successfully find and develop reserves. Pay zones with anomalous responses may have been bypassed, but can now be recognized. Wells without reservoir rock may represent local anomalies rather than regional truths.
- Drilling technology was also critical to the success of many projects. This includes proper fracturing techniques, mud systems, economical drilling, and better logging and evaluation methods.
- Reservoir characterization was critical to most infill drilling projects. A solid understanding of the hydrocarbon reservoir is replacing "blind" spacing reduction in improving field recoveries.
- Major hindrances to development in urban areas, besides high costs and low prices, include difficulties with log evaluation, and wetlands/environmental regulations.

THE FRONTIER WILDCARDS. In addition, the report highlights the fact that the United States has an immense hydrocarbon frontier consisting of basins which have not produced gas or oil yet; areas of producing basins which have not been adequately tested; deeper parts of producing basins, or downdip of known production; and unrecognized or "unconventional" reservoirs.

Overall, some fifty basins or portions of basins in 38 states are judged by the IPAA Task Force to have possibly significant potential for future reserve addition. This is not meant to be exhaustive nor predictive, but does indicate the scope of potential activity. In addition, one should take into consideration the "stumble factor." It has been said that more oil or gas was found on wrong geology than right geology. Major new plays have often resulted from chance encounters on the way to a dry deep objective.

Our resource base report shows that independent producers can meet our country's need for natural gas for many years to come, through intelligent and efficient exploration and development. But these needs can only be met through drilling. To convert the resource into reserves and production on the time scale needed by the American economy will require a significant increase of industry effort and increased coordination between various segments of the industry including the service industry. It will require the ability to form sufficient capital to mobilize the rigs and create these jobs. And it will require a partnership with government to make the resource base accessible.

THE ROLE OF THE INDEPENDENT. Independents are ideally suited to find and develop the resource base in the United States. There has been a fundamental change in the domestic

industry. It used to be that independents were the primary "wildcatters" in the business, drilling over 85 percent of the exploratory wells. Although they have always been the principle natural gas producers, producing over 66 percent of the natural gas and 50 percent of the oil, they used to make the deals, find the natural gas and oil and then sell the proven property to a major company to develop using the capital to invest in the next new wildcat. Today, not only are the independents finding the resource but they are also the main purchasers of the proven properties for the first time in our history. This trend will continue with more properties (some estimate in the neighborhood of $10 to $15 billion worth) are transferred into the hands of independents who are skilled at recovering reserves in the ground at the lowest cost.

INDEPENDENTS OFFSHORE. To further underscore the fundamental change in the domestic industry, is the role now being played by the independent in production offshore the United States. Over 28 percent of our supply of natural gas is produced offshore. The independents have won 51.5% of the 3,551 offshore federal leases issued from 1988 through March 1993. In addition, independents have drilled 85.1% of all wells on tracts leased since 1988, recorded 120 of 129 discoveries and installed 48 of 52 offshore structures. Of the 70 recently leased tracts with production, independents operate 66. Even in this more difficult and expensive environment, the independent is the key domestic player.

Independent producers have smaller staffs, lower overhead costs, and can act aggressively and move quickly to capitalize on new opportunities and adjust to meet these new challenges. The successful independent has developed his own niche, becoming the world's leading expert in a certain geological trend or technology. They use these advantages to reduce finding costs and increase success rates. The domestic industry provides high-tech jobs which are generally better paying than other industry's on the whole.

The Twenty-First Century holds great promise for a renaissance in the entrepreneurial spirit that founded America's natural gas and oil industry near Titusville, Pennsylvania in 1859. To fulfill that promise, the private sector, the government and the American public must change the way they look at the industry and recognize the expanding and, indeed, dominant role that independent producers have particularly in the natural gas industry's present and future in this country.

THE ROLE OF THE AMERICAN GOVERNMENT. Independents will lead the domestic natural gas and oil industry into the future. But, if there is to be a domestic industry, American leaders must decide that it is a priority and then act on that priority. While there is great promise, the domestic industry today is facing perhaps its greatest threat yet. This is a very serious situation and the very survival of the oil industry in many states is at risk; the domestic oil and natural gas industry will survive, but it could be greatly reduced in size and capability. As a nation we cannot afford to lose this fight.

The IPAA has also begun a comprehensive public education program focusing on the public schools, the capital markets, the national media and on shoring up our grassroots in the oil patch. A number of state associations have shown the way, with the Oklahoma Independent Petroleum Association leading the pack, with their own state program. For the last two years, the IPAA has sponsored a Wildcatter's Week in Washington, erecting a drilling rig in front of the Capital and the Washington Monument and putting together displays highlighting the role of domestic production. We are starting a national environmental stewardship program where independent producers will be highlighted, focusing public attention on all the good we do. We know that public leaders must have public support for an initiative of the scope we believe is necessary to prevent the collapse of the domestic industry.

We are also grateful for the tremendous leadership that members of this Committee have shown, organizing a bipartisan coalition of concerned members of Congress, and getting more than a hundred of your colleagues to join in urging the President to meet with you to discuss policy options to address the crisis in the domestic industry. The IPAA supports that effort and is proud to participate to the fullest extent.

The IPAA recommendations are summarized below:

- Price is everything. Imports need to be adjusted directly through a floor price and import fee for oil or indirectly by increasing domestic production through tax incentives. The primary goal should be to maintain our vital existing marginal production as well as to encourage new drilling. The IPAA believes that a domestic production credit for oil and gas triggered by the fall in oil or gas prices should be enacted that focuses the greatest help on the high-risk, high cost wells. Additional percentage depletion relief would also be of great assistance to the independents. In addition, allowing for expensing of all geological and geophysical expenses would encourage the new high tech methods of exploration and production and adjusting the enhanced oil recovery credit to assist in advanced oil recovery would also help greatly. In addition, to assist marginal wells, IPAA joins the National Stripper Well Association in recommending that the Department of Energy establish an emergency program to purchase stripper well production for the strategic petroleum reserve.

- Reform regulation and improve compliance technologies. Increasingly stringent environmental compliance requirements are severely limiting industry's ability to meet the nation's demands for oil and gas. The cost of complying with government regulations are simply going through the roof. Relieving those burdens on the domestic industry doesn't take a big legislative program. It takes common sense. More cost-effective methods for adequately protecting the environment while permitting E&P are required. This can be done by establishing regularity requirements that are scientifically based on the site-specific risks; making the costs of compliance commensurate with the risks posed; and developing lower cost compliance technologies and practices.

- Access to technology and access to the resource base is important to independents because that is our future. Projects like the Petroleum Technology Transfer Council--a joint effort between IPAA, all the state and regional producer organizations, the service industry, and other resource organizations in and out of government to provide access to the latest information about technology through workshops and computerized data resource stations--need support from the private sector and the Department of Energy to become a reality.

- Access to the resource base is critical. The U.S. has a tremendous "promise of oil and gas". Approximately 20% of our oil production and 33% of our natural gas production is found on federal lands. However, we can only realize that resource if we have the capital and if the government allows us access through reasonable leasing policies. The federal government owns a total of 650 million acres of land in the United States, 28% of all American land area. A substantial portion of the nation's recoverable reserves and potential petroleum resources underlie the public lands. In 1983, over 167 million acres of federal and Indian lands, 23% of the total, were covered by oil and gas leases issued under the supervision of the Department of the Interior. The amount of acreage under lease has dropped drastically to only about 66 million acres in 1990, just 9% of all federal and Indian lands. As I shared with you earlier Independents are increasingly becoming the dominant player on federal lands as well in the U.S. Last year we formed the Public Lands Coordinating Committee with RMOGA, IPAMS, AAPL and others to better advocate our shared positions on these issues. This coordination has been particularly important in the last six months as we are facing a large number of new legislative and regulatory policy initiatives by the Department of Interior that adversely affect natural gas and oil exploration, production and transportation on federal lands. These initiatives include the notice of proposed rule-making on the OPA '90 which appears to require proof of financial responsibility of $150 million (up from $35 million) for operators of "offshore facilities." The IPAA is hopeful that on this issue at least we can work through our problems in cooperation with the Administration and Congress, although we believe that legislative changes may be necessary.

THE PRIVATE SECTOR. There is still a great need for a partnership between our government with our industry. Independent producers still need to convince others to move away from initiatives that would still damage us. Additionally, a new way of has evolved in the private sector of the natural gas side of the industry. This is so important to independents because we produce over 66 percent of the natural gas produced in this country. With FERC Order 636 in place, it has allowed the natural gas industry to build bridges like never before. Most of the players in the natural gas industry have finally realized how much they need each other if they are going to realize the promise that natural gas hold for America's future. With the formation of the Natural Gas Council, the leaders of the natural gas business meet regularly to discuss--to communicate--about problems both real and perceived to growing the market for natural gas. They talk about helping each other on exploration, production, transportation and marketing issues. They are working together to improve reliability through emergency planning and improved information and technology. They are teaming together to meet regulatory (including environmental) challenges. The new way of thinking about independents as a team is permanent and, while not universal in the industry, is moving in that direction. There is a new relationship and understanding between the local gas distribution companies and the producers about problems producers are facing in forming capital and how they need to work on them together.

In summary, independents are looking beyond the old way of doing things and are embracing a new way of thinking. A new way of thinking about our American resource base, about the use of new tools and technology, about encouraging a partnership with our government and other parts of the private sector. We don't believe the American oil industry is lost, but we do face a struggle if they are to preserve anywhere near its present size and ability. If we are to realize the great promise of the future, we must fight to hold on to the resource base we now have, as well as encouraging new drilling in order to preserve the industry's infrastructure during this period of extraordinarily low prices.

The committee's examination of specific aspects of the tax code is a welcome opportunity to discuss specific changes which impact the future of the domestic oil and natural gas industry. Here are our recommendations with regard to specific proposals before the committee:

Allowing the section 29 credit to be claimed against the AMT

We believe that the full repeal of the Alternative Minimum Tax, such as would be accomplished by the House-passed bill, H.R. 1215, is the best solution for eliminating the problems and distortions caused by the tax. The AMT is a counterproductive part of the tax law that restricts business investment, placing severe impediments on capital intensive industries. Removing barriers to investment, such as the inability to claim regular tax credits against the AMT, including the section 29 credit, should be made fully applicable against AMT liability.

Determination of independent oil and gas producer status

IPAA supports the provision dealing with the determination of independent oil and gas producer status. Currently, the tax code classifies a number of gas companies as integrated oil and gas producers because of their regulated retail sales. As a result of rapid change in the natural gas industry due to deregulation, some independent natural gas producers have fallen prey to the technical definition of independent producer in the tax code, written primarily with the oil producer in mind. This technical change would make the tax laws better comport with the actual practices of the natural gas industry.

Allowing geological and geophysical costs to be expensed in the year incurred

The oil and natural gas industry derives 2/3 of its investment capital from company funds and other industry partners. This forces independents to constantly reinvest their capital into new drilling expenditures in order to replenish their depleting resources base. Allowing geological and geophysical costs to be recovered immediately, rather than amortizing them over a period of years, allows independents the access to capital which they desperately need in order to continue drilling. For many producers on the economic margin, the ability to recover their G&G expenses immediately is critical in utilizing the high tech tools which the industry needs in order to survive.

TAX TREATMENT OF G&G COSTS. Since 1950, the IRS has ruled that some G&G costs are not deductible as ordinary and necessary business expenses, but are inherently capital in nature and must be added to the cost of property acquired or retained on the basis of data obtained from an exploration project. The current policy discourages the use of today's technology for exploration purposes and should be changed.

SUBMITTED FOR RECORD ONLY

WRITTEN TESTIMONY OF ROSEBUD SYNCOAL PARTNERSHIP

SUBMITTED TO THE SUBCOMMITTEE ON OVERSIGHT

OF THE COMMITTEE ON WAYS AND MEANS

HEARING DATE JULY 11-13, 1995

WRITTEN SUBMISSION: JULY 27, 1995

Chairman Archer, members of the Committee, Rosebud SynCoal Partnership is pleased to have the opportunity to submit testimony concerning the Production Tax Credit for Nonconventional Fuels (Section 29) and a possible extension of this credit. Rosebud SynCoal strongly supports a continuation of the Section 29 tax credit.

Rosebud SynCoal Partnership (Rosebud) is a general partnership between Scoria, Inc. an indirect subsidiary of Northern States Power Company, and Western SynCoal, a wholly owned subsidiary of Western Energy Company (WECO), an indirect subsidiary of The Montana Power Company. Rosebud owns and operates a 300,000 ton-per-year clean-coal demonstration facility at Colstrip, Montana. The SynCoal® product from that facility is eligible for the Section 29 tax credit.

Rosebud advocates a two-year extension of the "placed in service," "binding contract," and "production" deadlines in Code Section 29(g). Rosebud further believes that such an extension should be limited annually to the first one million tons of solid nonconventional fuels produced and sold from a qualifying facility at any one location and that these tax credits should not be negated by the application of Alternate Minimum Tax. A two-year extension of Section 29 and allowing the credits to offset AMT liability, together with a one (1) million tpy per facility per site cap, would allow vialbe technology developers the opportunity to demonstrate the technical scale-up potential to commercial scale of the involved technologies. This proposed cap is also large enough to allow for the capacity necessary to demonstrate market acceptance of the alternate fuel.

Rosebud believes that Congress created the Section 29 tax credit to recognize and help manage the substantial risk during the precommercial development stages of alternative energy projects. However, once commercialization is achieved the necessity for tax credits diminishes. Our experience and research suggest that nonconventional solid fuels from coal can be competitive with other fuels when those facilities can operate at two to three million tons-per-year of product produced and sold. A two-year extension of Section 29, and allowing the credits to offset AMT liability, together with a one million tpy cap would allow several promising technologies the opportunity to advance to the threshold of economic commercialization and is consistent with the original purposes of the Tax Credit for Nonconventional Fuels.

The federal budget issues currently facing our country make the fiscal impacts of any proposed extension a critical aspect of the legislative process. A limitation based upon production and sale quantity efficiently targets the incentive at a level appropriate to support technology development, while preventing abuse of this incentive as a tax shelter. Additionally, this approach leverages the incremental new public investment represented by the incentive against billions of dollars in prior strategic investments which have been made by both the public and private sectors under programs such as the Clean Coal Technology Program.

Rosebud and WECO have a long history in the development of alternative solid fuels. In the late 1960's and early 1970's, WECO conducted research into improving the

quality of low rank coals. Significant technical problems with this early work soon became apparent and WECO was unable to develop the technologies.

By the early 1980's, WECO became aware of a concept advanced by Mountain States Energy (MSE), the company that for many years operated the Department of Energy's (DOE's) Magneto Hydro Dynamics(MHD) research facility in Butte, Montana. WECO and MSE conducted bench tests on a process to remove moisture and sulfur that were promising enough to warrant the construction of a pilot plant. WECO built and operated a 130 lb/hr pilot plant in Butte. Results from the pilot plant led WECO to submit a proposal to the DOE in Round 1 of the Clean Coal Technology Program.

In June of 1990, negotiations between WECO and DOE concluded with the commitment to build and operate a $69 million, 300,000 tpy demonstration project at Colstrip, Montana. WECO then formed a partnership with Northern States Power that led to the formation of Rosebud. Construction began in December of 1990 with the demonstration operational phase beginning in April of 1992. The plant was declared to be in-service in August 1993.

The experience gained from bringing forth a new energy product from the concept stage to the threshold of market acceptance has given WECO and Rosebud valuable perspectives on the evaluation of new technologies. We also have gained an appreciation of the importance and the role of federal tax incentives and the time necessary to develop technology and markets for new products.

New energy technologies must go through several stages of development to prove viability. Bench scale tests of technological concepts must be followed by construction and operation of larger pilot plant facilities which, if successful, are then followed by even larger demonstration phases before commercial operations are possible. Attempts to shortcut these steps lead to unacceptable technical risk and increase the probability of failure. Some companies have attempted to shortcut the development process with devastating results.

Technology development activities require long lead times for planning, permitting, financing, construction and startup. Rosebud's experience has shown that a generous allowance of time is necessary to resolve the many unforeseeable issues that confront all technology developments. For example, Rosebud's demonstration plant took 15 months to shake out after initial startup and no amount of expenditures could have resolved these issues much sooner. The universal experience of all coal based alternative fuel developers has been that it has taken more effort and time than originally anticipated. As a result these technologies have not matured yet and as such are not able to compete with conventional fuels in today's market place. However, these technologies have made great strides in recent years and are on the cusp of economic viability, only lacking one further generation of development. Once this is accomplished, no further incentives should be necessary.

Following a measured development program increases the likelihood of success and mitigates risk. Federal tax credits play a role in the development of new technologies by mitigating market risk and allowing the private sector to fund and develop these technologies.

IRS has complicated Rosebud's developmental activities when they recently withdrew the private letter ruling qualifying Rosebud's current facility and took nearly a year to rule on two private letter ruling requests for the next generation developments. IRS did subsequently issue the requested rulings and has reinstated the withdrawn letter ruling. However, these actions have significantly increased the perceived project risk for next generation developments that are crucial to the ultimate commercialization of these technologies.

The attached development schedule is aggressive and shows why an extension of the inservice date and binding contract dates are necessary for continuing technology development.

Rosebud's plant is now operating at well over design capacity at high availabilities; however, the market has been slow to accept the new product.

Rosebud's experience has shown that once a new technology has successfully made the jump to small scale demonstration, market acceptance is critical to promote the technology's development to a commercial level. Utility and industrial fuel customers are concerned about reliable supply. In our case, their fuel needs are typically severely mismatched with the relatively small production capacity represented by an initial demonstration scale operation, such as our 300,000 tons per year facility.

This mismatch makes long-term commitments from the customers that are needed to support these facilities or next generation facilities nearly impossible because of the perceived physical supply risk being absorbed by the customer. However, without committed customers, these facilities cannot be financed or operated which, in turn, results in stagnation of the technology development. That is why the continuation of the Section 29 tax credits is so important.

If the Section 29 tax credit is extended by the 4th quarter of 1995, Rosebud plans to build two (2) next generation SynCoal production facilities, approximately 500,000 tons per year each. These facilities would allow Rosebud to scale up the technology to a scale of 3 to 5 times greater than the throughput design of our existing demonstration process reactors. This design threshold is intended to allow demonstration of static fluid bed reactor technology at one scale less than that required for full scale commercial deployment, but large enough to secure commercial fuel contracts with customers.

The specific projects are: 1) an expansion of the Colstrip, Montana demonstration site and 2) a plant integrated into Minnkota Power's M.R. Young power plant site near Center, North Dakota. These next generation projects would employ different aspects of the specific knowledge gained at the Colstrip demonstration project, providing efficient opportunities to advance the technology. These advances would allow further opportunities to gain the additional knowledge and experience necessary to ultimately commercialize this technology. At the same time these projects would result in construction investments totaling nearly $80 million, increasing the tax base, directly and indirectly they would provide approximately 400 new permanent jobs and increase economic activity by about $30 million per year.

The development activities of alternative fuel producers like Rosebud provide opportunities for the United States to take better economic advantage of our existing industrial and utility infrastructure while displacing imported foreign energy sources. These projects would produce value added products from low quality domestic feedstocks. They would continue the significant progress made in reducing environmentally threatening emissions while efficiently using our most abundant energy resource--coal.

When the United States Congress enacted Code Section 29 in 1980, it did so to encourage the domestic production of alternative fuel sources to decrease our dependence on the use of imported energy. In 1980 petroleum imports were 6365 Mbbl/day or 37.3 percent of our total petroleum use. By 1994, petroleum imports had grown to 8017 Mbbl/day or 45.5 percent of our total petroleum use. The projections for 1995 indicate that 53 percent of our petroleum needs will be met by imports. The original purpose for Section 29 is even more pressing today as the United States is demonstrating increased dependence on imported oil.

Nonconventional fuels like SynCoal® have shown a direct ability to displace petroleum products in both utility and industrial applications. SynCoal® has been used in place of natural gas and propane in direct fired kiln operations and has shown an ability to deslag utility boilers more effectively than fuel oil.

The U.S. Congress enacted Code section 29 in 1980 to encourage the domestic production of alternative fuel sources to decrease our dependence on the use of imported energy. Section 29 provides an incentive for the production and sale of fuels from designated non-conventional sources. The Senate Finance Report accompanying the enactment of Code section 29 stated that:

> The Committee believes that a tax credit for the production of energy from alternative sources will encourage the development of these resources by decreasing the cost of their production relative to the price of imported oil.
>
> **These alternative energy sources typically involve new technologies and some subsidy is needed to encourage these industries to develop to the stage where they can be competitive with conventional fuels.** Information gained from the initial efforts at producing these energy sources will be of benefit to the entire economy.[1]

Based on this legislative history, Rosebud believes that Congress originally intended to limit the credit to noncommercial scale production facilities. We submit that this original intent was proper and it forms the basis of our recommendation for a limited, targeted extension of Section 29.

Section 29 is a performance based incentive that only can be realized upon the sale of the nonconventional fuel product produced from the qualified facility. The taxpayer bears all technology and production risks and only receives the incentive after establishing its technical and operating capability and actually consummates a sale of the alternate fuels product. This structure minimizes the public's risk of providing incentives that do not provide the desired beneficial effects especially when limited to the production levels that support logical technology development.

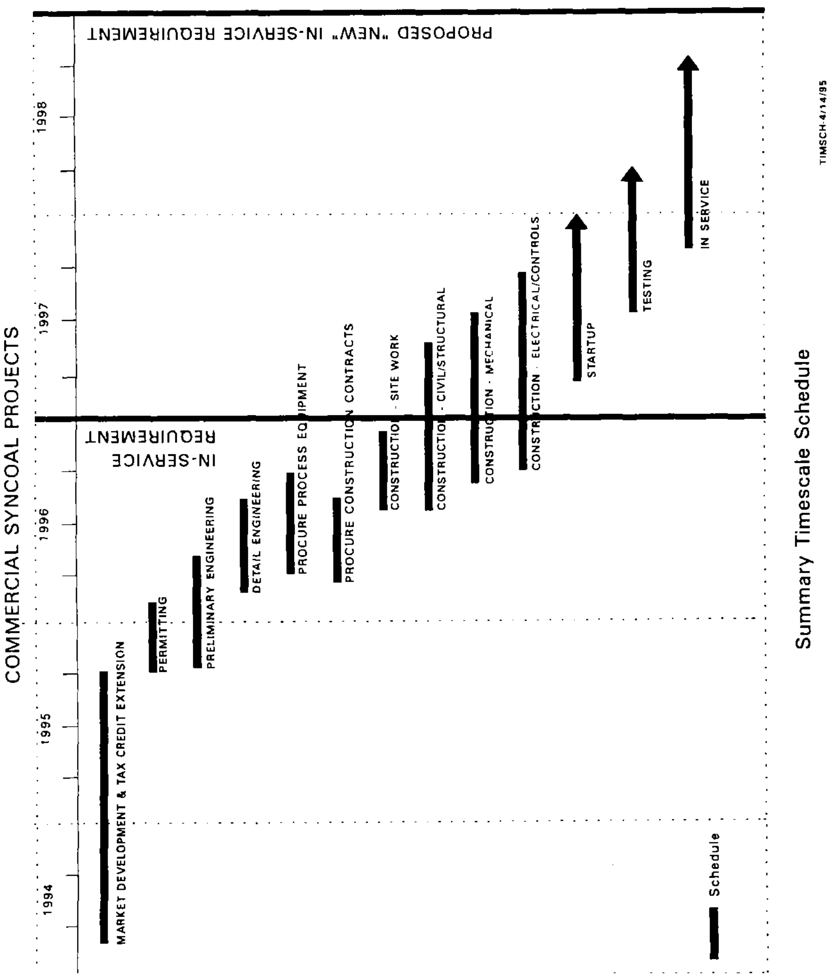
An extension of Section 29 would provide important benefits for the United States. As mentioned previously, the evolution of a viable nonconventional fuels industry would contribute to the energy security of our nation. Additional benefits include further environmental and energy technology development that would assist in achieving compliance with Clean Air Act requirements, while providing additional employment for US workers. The successful development of a domestic nonconventional fuel industry would also lead to technology transfer in the international marketplace. Such endeavors would improve our trade deficits with other nations.

Rosebud believes there are important and compelling reasons to extend Code Section 29 and would urge this Committee and Congress to look favorably on a limited, targeted extension.

---

[1] S. Rept. No. 96-394, 96th Cong., 1st Sess. 87 (1979), 1980-3 C.B. 131, 205 (emphasis added).

COMMERCIAL PLANT TIME FRAME



Statement of Morley Chase, President
Tenby, Inc. d/b/a Chase Production Company
on Extending the Section 29 Credit for Qualified
Fuels Produced from Tar Sands

My name is Morley Chase. I am submitting this statement as President of our family owned company, Tenby, Inc. which does business through Chase Production Company and Oxnard Refinery. Our family holds approximately 500 acres located in southern California along with the mineral interest associated with that property which is part of the Vaca Tar Sands. We are engaged in the business of attempting to produce oil economically from a tar sands reservoir located below the surface of this property.

In 1980 the Crude Oil Windfall Profit Tax Act was signed into law. That measure included an "Alternative Fuel Production Credit" for qualified fuels, including oil produced from tar sands. The credit was designed to encourage the production of more expensive alternative fuels which compete for market share against conventionally produced oil. This was to be achieved by initially establishing a floor price and providing a tax credit only as the cost of oil dropped below a floor of $29.50 per barrel (adjusted annually for inflation). Producers of oil from tar sands could only benefit from the credit as oil prices declined below the statutory floor, as adjusted, and only if they actually produced oil eligible for the credit.

Shortly after this tax credit was enacted disputes regarding eligibility for the credit became routine as the IRS questioned whether producers qualified for claimed Section 29 credits. The IRS was unwilling to adopt a definition of eligible oil produced from tar sands based solely on the physical characteristics of such deposits and has instead maintained that for a producer to be eligible for the credit, the oil produced from tar sands must occur as a result of the use of new technologies to extract such oil and cannot be the result of conventional oil production methods.

To make certain that our production qualified for this credit, we submitted a ruling request to the IRS asking for a determination that the oil produced by Chase Production Company from the Vaca Tar Sands qualified for the Section 29 credit based on the extremely viscous nature and other physical characteristics of the oil produced or, in the alternative, on the basis of the unique, non-conventional methods employed by us to recover this oil. On December 28, 1990, the IRS issued a private letter ruling confirming our eligibility for the Section 29 credit.

However, the IRS District Office in Los Angeles was not immediately prepared to recognize that determination for purposes of income tax audits in progress for credits claimed in prior years. Not until July of 1992 was the IRS District office finally willing to agree that Tenby, Inc. and members of the Chase family were entitled to the Section 29 credits claimed in prior years. Shortly after this determination, on December 31, 1992, the credit expired for oil produced from wells drilled after that date.

As a consequence of the lengthy process involved and uncertainty about securing final confirmation that the oil produced from our tar sands deposits would be eligible for the Section 29 credit, it was neither prudent nor practical for us to invest significant additional capital in drilling new wells. We had already invested more than ten years of effort and over $9,000,000 before we could finally be certain that our oil, which is extremely heavy and viscous and priced substantially below light Texas crude could be produced with even minimal assurance that our investment might be economically justified.

As a result, the Section 29 Credit enacted in 1980 has yielded very little in the way of increased oil production from tar sands for the benefit of consumers to date and has been of no significant benefit to us as producers and investors in the effort to produce oil from tar sands.

Today there are more than 500 million barrels of proven reserves of oil yet to be recovered from the tar sands deposits that make up the Oxnard Project in the Vaca Tar Sands. An optimistic forecast estimates there may be as much as 800 million barrels of oil in this field. Unless more time can be provided for the drilling of additional wells from which production will be eligible for the Section 29 credit, we and the other owners of tar sands deposits will be unable to pursue oil production on an economic basis. In our own case, we are prepared to invest up to an additional $27,000,000 to drill more wells that will result in significant additional domestic oil production.

Without assurance of the availability of the Section 29 credit, planned drilling, production and refining that otherwise would take place will continue to be too risky to be undertaken and financed by conventional lenders. If we are to maintain a real domestic oil industry with the capacity to produce the necessary supply of oil to meet the needs of individuals and businesses located in this country, it is essential that the Section 29 credit as well as a broad array of other incentives for domestic oil production be maintained.

Moreover, favorable action on the proposed modification of the Section 29 credit becomes even more compelling when it is recognized that the direct expenditures for the production, refining and distribution of additional oil extracted from tar sands will produce additional Federal income tax revenues from the producers, refiners and distributors of this oil as well as from the individuals employed by these entities at wage levels above those such individuals may be receiving currently. And, payments for oil produced outside the U.S. would decrease, thereby reducing our balance of payments deficit as a greater percentage of domestic oil needs are met by added production in the U.S.

It must also be noted that for the Section 29 credit to be of benefit to individuals and businesses claiming the credit, the law must be modified to permit these credits to be claimed against the AMT.

Thank you for this opportunity to present the views of a beleaguered, small family owned business induced by stated government energy and tax policy to make substantial energy investments without ever receiving any significant benefit from that investment. We hope the Committee and the entire Congress will recognize that we and other small producers have been precluded, as a result of unduly lengthy government administrative review and inaction, from realizing any significant economic benefit from our good faith efforts to produce more oil. Consequently, we submit this statement to strongly urge the Committee on Ways and Means to act favorably on the proposal to extend the time period for drilling additional wells from which oil produced from tar sands will be eligible for the Section 29 credit and to permit such credits to offset the AMT.

STATEMENT OF
TECO ENERGY, INC.
ON MODIFICATION OF SECTION 29 TAX CREDIT

HEARING ON MISCELLANEOUS REVENUE ISSUES

COMMITTEE ON WAYS AND MEANS
U.S. HOUSE OF REPRESENTATIVES

JULY 11, 1995

Mr. Chairman and members of the committee, TECO Energy, Inc. has previously testified to the committee about a change that is needed in the section 29 tax credit -- the tax credit for the production of nonconventional fuel -- to enable our company to avoid costly and unnecessary red tape. Our suggested amendment has been thoroughly examined by the committee staff and by the Joint Tax Committee staff. We once again strongly urge the committee to approve it as soon as possible.

The problem addressed by our proposal is a rule in section 29 requiring the producer of nonconventional fuel to sell the fuel to an unrelated person in order to be eligible for the credit. The legislative history gives no indication of the purpose for this rule (and, in fact, the new section 45 credit that applies to electricity produced from certain renewable sources contains no rule requiring the taxpayer to purchase the fuel from an unrelated person).

Our company is building a state-of-the-art coal gasification facility in Polk County, Florida. When completed, the facility will turn high-sulfur coal into clean-burning synthetic gas, which we will use on site to generate electricity. The facility will be one of the first of its kind in the country.

It is important to us that the synthetic gas produced in our new facility qualify for the section 29 credit; the facility will implement technologies that have not yet been proven commercially, and the credit will help compensate for the risks inherent in those technologies. Unfortunately, in view of the unrelated person sale rule, we will have to adopt an unnatural, costly, ownership structure for the new facility to qualify for the credit. Specifically, we will have to interject an unrelated person between the gas production and the electricity generation. We can do that either by selling the gasifier or by selling the generation capacity. We would probably create a joint venture with another company to accomplish such a sale.

This is purely and simply unnecessary red tape. There is no conceivable reason why the tax code should make us adopt this sort of ownership structure to preserve the credit. Thus, we (and other companies) have suggested that Congress eliminate the unrelated person sale rule, at least in cases where the taxpayer uses the fuel on site for the generation of electricity for sale to unrelated persons. The Treasury Department has previously testified that the administration did not oppose the elimination of the unrelated person sale rule.

The important thing to keep in mind is that the issue is not whether the credit is available; the issue is simply what steps a taxpayer must go through to claim it. We will be producing a fuel that will qualify for the credit; the question is whether we will have to adopt an unnatural ownership structure at the same time.

Mr. Chairman, our proposal is a concrete example of how the tax code could be streamlined to eliminate unnecessary burdens on taxpayers. We urge the committee to adopt the amendment.

JULY 27, 1995

**STATEMENT ON
BEHALF OF THE WILLIAMS COMPANIES, INC.**

**SUBMITTED BY
J. ROGER MENTZ & LINDA E. CARLISLE
WHITE & CASE
WASHINGTON, D.C.**

**TO THE
U.S. HOUSE OF REPRESENTATIVES
COMMITTEE ON WAYS AND MEANS**

**FOR HEARINGS ON
MISCELLANEOUS TAX REFORM PROPOSALS
JULY 11 & 12, 1995**

**REGARDING
THE SECTION 29 NONCONVENTIONAL FUELS CREDIT &
THE NEW UNDERGROUND COAL GASIFICATION TECHNOLOGY**

Mr. Chairman and Members of the Committee:

The Williams Companies, Inc. ("Williams"), a publicly-held energy, transportation and telecommunications company based in Oklahoma, proposes to commercialize technology to produce a synthetic gaseous fuel from underground coal in a safe and ecologically sound process. The underground coal gasification process will convert coal that cannot be mined using conventional technology into gaseous synthetic fuel through a chemical reaction occurring beneath the earth's surface in the coal seam itself. Because the coal is not mined, there is no damaging strip-mining of the earth's surface and no miners are subject to the dangers of working below the earth. Since coal is converted into energy underground, the pollution usually associated with coal combustion is greatly reduced. Thus, this process should produce significant environmental and safety benefits, and, if successful, would make possible the development of America's coal deposits that today are unrecoverable.

Section 29 of the Internal Revenue Code provides that a synthetic gas produced from coal will qualify for a ten year production credit if the "facility" for producing such gas is constructed pursuant to a binding contract in effect before January 1, 1996 and is placed in service before January 1, 1997. The Internal Revenue Service ("IRS"), however, has ruled that in the case of underground coal gasification, the "facility" required to be placed in service includes the underground chamber of coal or "module" in which the gas is produced. For reasons explained below, it is not realistic to construct modules for ten years in advance, thus this interpretation effectively denies underground coal gasification the full ten year credit envisioned by Congress and it disadvantages this technology relative to other Section 29 projects, particularly above ground coal gasification projects.

Accordingly, Williams requests clarification by Congress that for purposes of an underground coal gasification project, the term "facility," shall be defined so as not to exclude modules developed after January 1, 1997, provided the modules are developed from the coal resource defined in the mine permit application approved for the project prior to January 1, 1997.

Description of a UCG Facility

Underground coal gasification technology utilizing steeply dipping coal seam formations enables coal formations unrecoverable by conventional mining methods to be mined. To accomplish this objective, an underground coal gasification facility is constructed to convert coal into synthetic gas by reacting steam and oxygen with the underground coal. The process is initiated at

temperatures of near 3000° Fahrenheit and a pressure of 160 pounds per square inch. The process converts solid carbon (coal) into gaseous chemical mixtures which are significantly different than the solid carbon. The gas produced can be used as a fuel or as feedstock for conversion to end products such as ammonia, diesel fuel, naptha, kerosene, electric power, steam, natural gas or methanol. The gas produced will have an estimated energy content of 360,000 BTUs per 1,000 standard cubic feet of gas.

The coal gasification process requires the use of underground reactors called "modules" and surface equipment. The surface equipment generally consists of gathering pipelines, cyclone separators, gas outlet manifolds, miscellaneous valves, header and miscellaneous piping, and an administration building.

Each module consists of three types of shafts which extend to a depth of approximately 1500 feet below the earth's surface. Two types of shafts are used to inject steam and oxygen into the underground reactor. The third type of shaft transports the gas from the underground reactor to the surface. Steam and oxygen are pumped through the injection shafts after the coal formation has been ignited at the bottom of the reactor. Thus, the reaction occurs underground in the coal seam itself.

As the module burns, coal from the upper sections of the formation continuously falls into the underground reactor within the module. The fire within the module burns until the coal seam has been consumed up to about 400 feet from the surface, at which time the module is extinguished. At this point the module itself is burned out.

In a given project, a sufficient number of modules would be developed and burned simultaneously in order to achieve the project's desired production rate. As the original set of modules neared the end of its useful life, a second set would be prepared and ignited in order to maintain the project's output. The life of a module or set of modules would vary depending on project-specific factors, but one and one-half years would be typical.

All replacement modules cannot be drilled prior to the start of the project. Not only would the economics of pre-drilling modules be prohibitive, but also there are engineering, environmental and regulatory reasons why modules can only be prepared a certain time in advance of their use. Also, the shafts cannot be allowed to go unused for a period of years and maintain their integrity. As the project goes forward, and the nature of the coal resource being developed is better understood, modules could possibly be created more efficiently and with less risk of environmental problems.

Finally, the regulatory approvals are generally obtained in stages as the project progresses. For all of these reasons, it is unlikely that more than two sets of modules, representing three years of fuel, could be prepared prior to the facility's commencement of operations.

Underground Coal Gasification is Analogous to Above Ground Coal Gasification Facilities

The synthetic gas produced from an underground coal gasification facility is the same as that produced from an above ground coal gasification facility, where coal is mined and combusted in an above ground reactor. Underground coal gasification is a more efficient and environmentally safer method of producing synthetic gas than above ground gasification, because the environmental and safety problems associated with the mining and burning of coal above ground are avoided.

Congressional Action Necessary

The synthetic gas produced from coal gasification facilities is a qualified fuel under the terms of Section 29. However, the IRS has ruled that in the case of underground coal gasification, the "facility" that must be placed in service prior to the January 1, 1997 deadline includes the individual modules.

The practical impact of this ruling is to deny the Congressionally-enacted incentive provided in Section 29 of the Code to underground coal gasification projects. In enacting Section 29, Congress intended, by the plain meaning of the language, that a facility producing a qualifying fuel and meeting the placed-in-service requirements should receive the benefit of the credit for ten years. Yet in the case of underground coal gasification, if a project is placed in service just prior to the deadline, it can only receive the credit for three years, for it is only practical to have three years of modules ready to operate at the time of start-up. Congress could not have intended this result.

The impact of the IRS ruling is to disfavor underground coal gasification technology as compared to other Section 29 facilities, particularly above ground coal gasification. If an above ground gasification facility and an underground gasification facility were both placed in service on December 1, 1996, for example, the above ground facility would receive the credit for all of the gas produced for the next ten years even though most of the coal would be mined well after the in-service deadline. As noted above, however, the underground facility would only receive the credit for three years, even though the product produced is exactly the same. Surely Congress did not intend for different tax treatment to be provided to an underground coal gasification facility as compared to above ground gasification.

Conclusion

Use of the underground coal gasification technology involves significant commercial risk. The IRS interpretation creates further risk because of uncertainty with respect to the extent to which the gas produced from the new underground coal gasification technology will be eligible for the Section 29 credit. It is doubtful that the new technology would be deployed with both the commercial and tax risks. In order to eliminate the tax risk caused by the IRS's interpretation of the Section 29 credit, and to place underground coal gasification on a parity with above-ground coal gasification where all the synthetic gas qualifies for the Section 29 credit as long as the facility is operating before January 1, 1997, we urge that the following clarification of Section 29 be included in this year's tax legislation:

Clarification amending Section 29(d) "Other definitions and special rules."

> "(9) **Underground Coal Gasification Facility.** When producing solid, liquid or gaseous synthetic fuels from coal pursuant to underground coal gasification, a facility shall be the gathering lines, surface equipment, and other assets needed to produce a qualified fuel from an underground coal resource described in a permit to mine application which has been approved before January 1, 1997 in accordance with the Surface Mining Control and Reclamation Act of 1977, as amended.

Statement of the Shell Oil Company

Shell applauds the clarification found in H.R. 379. Oil from tar sands is an abundant domestic resource but which is difficult to refine into products such as gasoline and jet fuel. For this reason, oil from tar sands does not command as high a price in the marketplace as conventional crude oils such as West Texas Intermediate. Additionally, oil from tar sands is physically and economically more difficult to produce than such conventional crude oils.

Section 29 of the tax code was enacted to encourage the production of domestic energy sources when the average price of domestic crude oil production falls below certain trigger prices. The credit is not available when the average price of domestic production is above a trigger price. The congressionally stated aim of section 29 is to reduce the cost of these domestic energy sources relative to the cost of imported oil against which they compete.

For over fifteen years, the IRS has published no guidance upon which the public can rely as to what constitutes oil from tar sands for purposes of the section 29 credit. The IRS has taken the position that some taxpayer's production constitutes oil from tar sands while others' production do not constitute oil from tar sands on a case by case basis. However, the method by which the determination is made is vague and inadministrable. Additionally, the IRS' informal method of classifying oil from tar sands can create competitive disadvantages and penalize pioneers in the application of production technologies. For example, the IRS' informal method of determining whether a producer has oil from tar sands can result in a situation where two taxpayers unquestionably produce oil from the same reservoir and one will be treated as producing oil from tar sands and the other will be treated as not producing oil from tar sands. Moreover, an examination of the IRS' publication "The Statistics of Income" shows that the IRS' informal position has resulted in the credit not achieving the results expected by Congress as witnessed by the legislative history to the enactment of the predecessor to section 29. All of the uncertainty and the potential competitive disadvantage which surrounds the IRS' informal position has resulted in protracted litigation which not only makes the production of oil from tar sands more expensive, but could further frustrate the intent of the credit as it applies to oil from tar sands.

Enactment of H.R. 379 would clarify the application of section 29 as it applies to oil from tar sands to allow the credit to apply as originally intended. The extension of the time for the application of the credit is reasonable in view of a decade and a half of uncertainty surrounding the economics of producing oil from tar sands.

TESTIMONY OF ENSERCH CORPORATION
DALLAS, TEXAS

ENSERCH Corporation, of Dallas, Texas, with a solid business foundation spanning 85 years, has operations in gas and oil exploration and production, natural gas liquids processing, natural gas transmission and distribution and electric power generation.

ENSERCH has a direct interest in these hearings which are addressing a number of miscellaneous revenue issues. In particular, ENSERCH supports the independent producer proposal which we believe would simplify the Tax Code, provide fairness for taxpayers, ease the burden of tax compliance and stimulate natural gas E&P.

Currently the Tax Code Section 613A(d)(2) limits the scope of the independent producer exception. A taxpayer will be considered an integrated producer if the taxpayer sells natural gas or oil (domestically) through a retail outlet operated by the taxpayer or related person. ENSERCH, as with any gas company with local utility affiliates, is denied independent producer status due to our utility sales.

The Committee is considering a proposal that would permit the gross receipts from retail sales of natural gas by a utility that is a related party to be disregarded in determining whether a taxpayer is a retailer. ENSERCH supports this proposal since it would enable a producer to gain independent producer status, regardless of the amount of retail sales by the related utility.

Code Section 613A was added by the Tax Reform Act of 1975 as a reaction to increases in energy prices brought on by the foreign oil embargo. The legislative history suggests that Congress distinguished between majors and independents in that Act because the "25 large oil companies," who had reaped big profits from foreign oil price increases, did not need tax incentives. The intent was to disallow certain benefits to the major oil companies, who raise substantial capital through their gasoline marketing operations. Unlike retail sales of the majors, the retail sales of gas companies are subject to state regulation. Thus producers with gas distribution companies, such as ENSERCH, are unable to look to their retail sales as a source of substantial capital for domestic E&P operations.

Natural gas companies would not be treated equal to similarly situated taxpayers within the same industry if denied the independent producer status. Companies who sell gas and oil to an affiliate who produces electricity for resale at retail are designated as independent producers. It is certain that Congress did not intend to favor electric utilities over gas utilities.

It would also be contradictory with the U.S. energy and environmental policy to continue to discriminate against producers with retail natural gas sales. The 1990 Clean Air Amendments and the energy bill rely heavily on the expanded use of domestic natural gas to help clean up the environment and reduce dependence on foreign oil.

In summary, ENSERCH strongly supports the independent producer proposal. In addition to promoting tax simplification, fairness and investment, this proposal would enable natural gas to play a more critical role in the long-term economic health and security of the U.S. Natural gas can be utilized to help the nation attain cleaner air, energy efficiency, domestic energy security, more jobs and technological development.

STATEMENT OF LEIGHTON STEWARD
ON BEHALF OF
THE LOUISIANA LAND & EXPLORATION COMPANY

Before The Committee on Ways and Means Regarding Miscellaneous Tax Reforms Scheduled for hearings on July 11-13, 1995.

My name is Leighton Steward. I am the Chairman, President and Chief Executive Officer of The Louisiana Land & Exploration Company ("LL&E"). I appreciate the opportunity to present LL&E's views to the Committee with respect to a proposal to amend Section 613A of the Internal Revenue Code (the "Code") that appears on the Committee's listed measures as item numbered 2 of the provisions related to energy.

In general, Section 613A of the Code permits independent producers of oil and natural gas to continue to deduct intangible drilling costs and obtain percentage depletion on a portion of their production. To distinguish independent producers from the large integrated oil companies, the section disqualifies producers who have more than a significant amount of retail sales or refinery production. These producers with refining operations, otherwise qualified, are denied independent producer status if their refinery runs "on any day during the taxable year" exceed 50,000 barrels. This means they cannot claim percentage depletion or deduct 100% of their intangible drilling costs under Section 291 of the Code.

LL&E is engaged in the conduct of exploration and production activities in the United States and certain foreign areas. In 1975, LL&E built a 30,000 barrels per day refinery in Mobile, Alabama, at a cost of $19 million. In 1980, an expansion was begun to increase capacity to 74,500 BPD at a cost of $85 million. Due to the tax penalties in Section 291 enacted in 1982 that would accrue to independent producers if they exceed the 50,000 BPD limit, LL&E has restricted refinery runs in the last 6 years, (including 1995) to under 50,000 BPD. During that same period, LL&E has been forced to make expenditures to remain competitive and to comply with regulatory requirements, including approximately $2.0 million for a waste water treatment plant (which also added $300,000 per year in operating costs), $6 million for diesel desulfurization, $4 million for reducing gasoline RVP, and $1 million for other projects such as storm water management and NESHAPs compliance. In addition to the capital and operating cost of these units, the refinery has had to add 16 employees to operate the units and 6 more to comply with other EPA/OSHA standards imposed on the industry. This is one of the reasons why we have begun exploring options on selling the refinery.

Producers such as LL&E with refining capacity just above the 50,000 BPD limit must decide at the start of each tax year whether the marketplace will justify forgoing the tax benefits associated with independent producer status for potentially higher earnings that would accrue from refining runs in excess of 50,000 BPD barrels on any day in the taxable year. Because of today's narrow margins in the refining industry, LL&.E has been forced to maintain its refinery's production below 50,000 BPD -- that is, at a level that is significantly below the refinery's optimal level of production.

We submit that the 50,000 BPD limit in Section 613A represents bad tax, economic, energy and environmental policies.

The limitation is bad tax policy because it forces producers/refiners to make uneconomic choices based not on market needs but on tax considerations. It is bad economic policy because tax decisions override efficient economic use of refinery assets. It is bad energy policy because it acts as a disincentive to refining during a period when this nation faces a shortage of refining capacity. It is bad environmental policy because it prevents producers/refiners from using the economies of scale to produce the additional revenues necessary to pay for the rapidly expanding costs of compliance with our environmental laws.

The proposal before the Committee would require that two changes be made in Section 613A(d)(4). LL&E recommends that "75,000" BPD be substituted for the current law "50,000" BPD and that the 75,000 BPD limit is to be determined on the basis of the average refinery runs during the taxable year rather than on a day-to-day basis. LL&E strongly urges the Congress to enact such a proposal.

The 50,000 BPD any day limit is outdated. The Section 613A independent producer exemption is designed to distinguish between independent, relatively small, oil and gas producers and major integrated industry giants who actually engage not only in production but in refining and marketing, as well These major corporations generally operate refineries with capacities in excess of 150,000 barrels. The 50,000 BPD test, which was adopted in 1975 when Section 613A was enacted, no longer reflects the true nature of the domestic refinery industry.

In this context, three years ago, the Small Business Administration ("SBA") adopted a final rule revising its size standard for the petroleum refining industry by increasing the capacity limit from 50,000 to 75,000 BPD. In taking this action, the SBA made the following observations (57 Fed. Reg. 18810, May 1, 1992):

> Since the current size standard was established in 1975, the number of small refiners as well as their share of the industry's refining capacity have steadily diminished. Since 1975, most refineries with less than a 10,000 BPD refining capacity and almost half of the refineries with between 10,000 BPD and 50,000 BPD capacity are no longer operating. During this 16-year period the trend has been an increase in refineries with over 100,000 BPD refining capacity. In 1975 small refiners accounted for 7.8 percent of the U.S. refining capacity while by 1989, this share had decreased to 6.7 percent. New environmental compliance requirements may further diminish the small business share of industry capacity. A heavy investment is expected to be needed to change refining processing equipment and some small firms may not be able to meet the investment requirements.

The very factors cited by the SBA, the diminishing size of the small refinery segment of the industry and the increased costs of operations and investment required to comply with environmental laws, also favor providing the incentives under Section 613A of the Code to independent producers who operate refineries with capacities of up to 75,000 BPD. Such an amendment would simply recognize the changes that have taken place in the refining industry over the past 20 years.

One final comment. Under current law a producer/refiner loses its independent producer status under Section 613A if on any day during the taxable year production runs exceed 50,000 BPD. As a result, small refineries must be operated at a lower level than 50,000 BPD so as not to inadvertently exceed the limit. These precautions plus the necessary and unscheduled shut downs for maintenance and repairs, mean that the average daily refinery production runs will be significantly below that 50,000 barrels. For that reason LL&E strongly recommends the enactment of an amendment of Section 613A to provide that the BPD limit be applied on a yearly average BPD basis. Such a standard would protect producers/refiners from inadvertent loss of independent producer status and would permit them to operate their small refineries more efficiently and in accord with market demands.

I appreciate the opportunity to present the views of LL&E to the Committee and urge the adoption of the proposal contained in item 2 of the energy section of the hearing list to amend Section 613A(d)(4) of the Code by increasing the BPD limit to 75,000 by using daily refinery runs for the year to measure qualification.

Written Comments of
MDU Resources Group, Inc.
to the Committee on Ways and Means
U.S. House of Representatives
Regarding
the Determination of Independent
Oil and Gas Producer Status

MDU Resources Group, Inc. (MDU) is a multidimensional natural resources company having its principal offices in Bismarck, North Dakota. Montana-Dakota Utilities Co., the public utility division of the company, provides natural gas and electricity to customers in parts of North and South Dakota, Montana and Wyoming. The company, through a wholly-owned subsidiary, owns Williston Basin Interstate Pipeline Company, Knife River Coal Mining Company, the Fidelity Oil Group and Prairielands Energy Marketing, Inc. MDU appreciates the opportunity to submit this written statement in connection with the Committee's consideration of miscellaneous tax reform proposals that were the subject of hearings on July 11 and 12, 1995. MDU supports the proposal to expand the definition of independent oil and gas producer status for percentage depletion purposes. However, the proposal should be modified to allow a taxpayer to elect current law treatment in order to preserve certain tax benefits which would otherwise be unintentionally eliminated by the proposal.

BACKGROUND

A. Current Law

1. Percentage Depletion

Section 611 of the Code provides taxpayers with a deduction for the depletion of certain natural resources. The extent to which depletion is allowed is generally limited to the taxpayer's adjusted basis in the depletable property. Code section 613A(c), however, allows certain independent producers of oil and gas to take advantage of percentage depletion (the independent producer exception).[1] Percentage depletion provides taxpayers with a deduction to the extent of a specified percentage of the annual gross income generated by the depletable property. The deduction for percentage depletion constitutes a permanent tax benefit; it is not limited to the basis of the depletable property. In essence, as long as a depletable property is productive, an independent oil and gas producer may take advantage of the percentage depletion deduction.[2]

Code section 613A(d)(2) limits the scope of the independent producer exception. Specifically, independent oil and gas producers engaged in certain retailing or refining activities cannot take advantage of percentage depletion. A taxpayer meets the retailer exception and is considered an integrated producer if (1) the taxpayer sells oil or natural gas (domestically) through a retail outlet operated by the taxpayer or a related person, and (2) the combined annual gross receipts from the sale of such oil or natural gas exceed $5 million.

---

1. Prior to the enactment of the Tax Reform Act of 1975 (Act), oil and gas producers were generally eligible for the percentage depletion allowance. Code section 613A, which eliminated percentage depletion with respect to integrated producers, was added by the Act in reaction to the windfall profits reaped by the 25 largest oil companies as a result of increases in foreign oil prices.

2. There is a 1000 barrel per day limitation on the amount of percentage depletion claimed by independent producers. The daily barrel limitation must be applied to the production of all entities related to the independent producer. Only the production barrels eligible for percentage depletion, however, need to be considered for each of the entities. For example, in calculating the limitation, an independent producer need not include the production barrels of a sister corporation required to use cost depletion for its entire production run.

In determining whether oil or gas sold "through a related party" would disqualify an independent producer from taking the percentage depletion allowance, Revenue Ruling 85-12 provided that:

> [w]here none of a producer's production is sold through a related retailer, the producer does not lose the benefit of the [Code] section 613A(c) exemption if an owner of 5 percent or more of its stock is a retailer because the producer does not benefit from the retailer's retail sale of oil and gas.

In other words, if an otherwise independent producer does not own or benefit from any gas or oil production which is directly or indirectly sold through a related party (for retail sale to customers), the producer will not be disqualified under the retailer exception. On balance, Revenue Ruling 85-12 allowed gas systems to avoid or lessen the impact of the retailer exception by establishing a separate subsidiary which sells none of its own production through a related utility company.

2. Current Deduction of Intangible Drilling Costs (IDCs)

In addition to qualifying a taxpayer for the percentage depletion allowance, independent producer status allows a taxpayer to deduct currently 100 percent of any intangible drilling costs (IDCs) it incurs. Integrated producers can deduct only 70 percent of IDCs in the year incurred and must amortize the balance over a five year period.

B. The Proposal

The proposal modifies the manner in which a natural gas production company's independent producer status is determined for percentage depletion purposes and for IDCs. MDU's specific concerns are that the proposal would permit retail sales of natural gas by a regulated public utility company to be disregarded in determining whether a related natural gas production company is a retailer for percentage depletion purposes. Accordingly, a natural gas production company would not be precluded from claiming percentage depletion merely because it was owned by a utility which made retail sales in excess of $5 million per year.

DISCUSSION

Due to its current corporate framework, premised on the guidance provided by the Service in Revenue Ruling 85-12, MDU would be negatively affected by the proposal. MDU's corporate structure currently allows one of its oil and gas subsidiaries to qualify for the independent producer exception and thereby claim a Federal income tax deduction for percentage depletion. MDU has relied upon the guidance provided by Revenue Ruling 85-12 for purposes of the expansion of its oil and gas activities. The effect of the proposal would be to qualify certain other MDU subsidiaries as independent producers, but in doing so, would thereby significantly reduce the percentage depletion tax benefits realized by MDU.

Although MDU understands the need to change the definition of the term "independent producer," MDU does not believe that such change should come at the expense of taxpayers that have gone to considerable effort to appropriately structure their oil and gas expansion efforts based upon the guidance provided by the Internal Revenue Service in Revenue Ruling 85-12. Accordingly, MDU suggests that any legislative proposal consider and rectify the impact of such an unintentional adverse change on taxpayers.

PROPOSED AMENDMENT

In order to preserve tax benefits currently available, MDU would amend the proposal to include an election out of the expanded definition of independent producer. In other words, while the general rule under the proposal would be to disregard incidental sales of natural gas to related public utility companies, MDU believes taxpayers should have the option of electing current law treatment and thus preserve the tax benefits gained as a result of their business structure.

MDU's suggested "election out" option will not affect the purpose behind changing the definition of the term independent producer. It will, however, ensure that taxpayers, like MDU, who have invested significant amounts of time and money to structure their operations in order to be eligible for independent producer status do not, as a result of legislation intended to be beneficial, lose the benefits of such efforts. MDU went to considerable effort to position itself to obtain independent producer status in order to obtain what MDU anticipated would be long-term benefits. MDU's return on its investment will be significantly reduced if the benefits associated with MDU's current structure are diminished as a result of a change intended to encourage domestic exploration and production and to distinguish the natural gas utilities from the major oil companies.

Placid Refining Company

1601 Elm St., Ste. 3900
Dallas, Texas 75201

Mr. Phillip D. Moseley
Chief of Staff
Committee on Ways and Means
U.S. House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20515

Re: Hearing on Miscellaneous Tax Reforms
July 11, 12, 13, 1995

Dear Mr. Moseley:

Placid Refining Company ("Placid") is the operator and 64% owner of a 50,000 barrel per day rated refinery in Port Allen, West Baton Rouge Parish, Louisiana. Placid operates the refinery on behalf of itself and two other owners. The various owners of Placid and the refinery are independent producers of oil and gas in the United States. Because of their ownership in the refinery they are subject to losing their independent producer status should Placid operate the refinery above 50,000 barrels per day on any one day of a tax year (the "any one day provision"). This loss of independent producer status would damage the various refinery owners causing them the loss of their percentage depletion allowance on oil and gas produced up to the first 1,000 barrels per day, and requiring them to capitalize and depreciate 30% of their intangible drilling costs ("IDC") rather than being able to expense 100% of the IDC.

The drastic consequences of operating the Port Allen refinery above 50,000 barrels on any one day forces Placid to operate the refinery at approximately 48,500 barrels per day, which it feels is the safe level required to avoid triggering the "any one day provision." This is a loss of 3% of its capacity because of the "any one day provision." In addition, Placid, although rated at 50,000 barrels per day, could operate the facility without significant capital investment at approximately 52,000 barrels per day. Thus, the present provisions of Section 613 A (d) (4) effectively impose a statutory inefficiency of nearly 7% of Placid's capacity and a corresponding loss of revenue to Placid and taxable income to the federal government. Moreover, with the "any one day provision," Placid cannot make up for volumes lost when the refinery is down for turnaround or maintenance requirements. If the "any one day provision" was changed to "yearly average," Placid could operate the refinery much closer to its 50,000 barrel per day capacity

Placid, as a small refiner, is being increasingly squeezed by the ever escalating costs of compliance with government regulations, especially the environmental and safety regulations, while lacking the ability to optimize the capacity and efficiency of the refinery and its people because of the arbitrarily set provisions and definitions of 613 A (d) (4). It should be noted that Placid must comply with all of the same environmental and safety regulations required of the larger refineries running 100,000, 200,000 or 400,000 barrels per day. However, the cost of this compliance is significantly greater on a per barrel basis for Placid than the larger refineries because of the economics of scale attributable to its capacity. Consequently, Placid is at a disadvantage in the market place unless it has the ability to make full use of its assets or even moderately expand its capacity, without penalty, as most of Placid's larger competitors have been doing.

The 50,000 barrel per day limit set in 1974 seems to have been arbitrarily chosen without any significant basis or reason for its selection. But notwithstanding the reasons for limiting the size of a small refiner to 50,000 barrels per day, the limit is currently inconsistent with other regulatory definitions such as those set by the Small Business Administration ("SBA"), which after due consideration, effective May 1, 1992, revised its definition of a small refiner for the petroleum refining industry, Standard Industrial Classification ("SIC") Code 2911, from 50,000 barrels per day to 75,000 barrels per day. This increase allows refiners up to 75,000 barrels per day to qualify as a small business for various SBA programs. The MMS also accepts the SBA definition of a small refiner (75,000 BPD or less) in considering the administration of its Royalty-in-Kind oil marketing program.

Placid, even though it is a small refiner, is the largest employer in West Baton Rouge Parish, Louisiana, employing approximately 210 people, whose incomes , in turn, support other businesses and industries in the area. Placid is also a major consumer of goods and services provided by many local area vendors. In addition, it is the largest tax payor in the parish and supports many of the parish activities. The SBA, in its review of the definition of a small refiner, stated that approximately one-half of the refineries with a capacity of between 10,000 and 50,000 barrels per day have ceased to exist since 1975. With the refinery business being very competitive, costs on the rise, and refinery margins being very slim, Placid may very well become part of this statistic in the future if it is not allowed to operate at its optimal efficiency.

Placid requests that Section 613 A (d) (4) be amended to increase the volume from 50,000 to 75,000 barrels per day and from the "any one day provision" to the "average during the taxable year." This change would allow Placid the ability to be more competitive and make operational and expansion decisions based on true economics and efficiency standards without unduly penalizing its owners. It would also allow Placid the ability to increase its own taxable income and to continue to provide employment to hundreds of citizens in the state of Louisiana. .

Very truly yours,

PLACID REFINING COMPANY

Daniel R. Robinson
President

TESTIMONY OF SAFETY-KLEEN CORP.
ELGIN, ILLINOIS

Re-refining of Used Engine Oil

Safety-Kleen's Role in Managing Wastes

Safety-Kleen is the world's leading recycler of automotive and industrial hazardous and non-hazardous waste fluids. The Company processes and reclaims more than 200 million gallons of contaminated fluid each year from approximately 400,000 customers. The Company believes that only through proper handling can the hazardous waste portion of the world's wastes be safely managed to ensure the preservation of human health and the environment.

Safety-Kleen is exceptionally proud that the vast majority of its customer base is made up of small businesses, where jobs are being created and the economy is having its greatest current successes. Safety-Kleen's unique US distribution system includes a network of 160 branches to collect wastes, 9 solvent Recycle Centers, one used oil processing facility and one used oil re-refinery to recycle, reclaim, or re-refine these wastes. Through these facilities, the Company provides services to customer locations throughout the United States.

The Company collects used lubricating oil from 64,000 customer locations in the US. These customers consist of car dealers, oil change outlets, gas stations, automotive garages and many other small businesses. In addition, Safety-Kleen provides service to many of the nation's largest companies.

In short, **Safety-Kleen teams effectively with small business**, removing what used to be environmental and human health concerns and allowing those small businesses to do what they do best--serve their customers and the economy.

Safety-Kleen's two used oil re-refineries in East Chicago, Indiana and Ontario, Canada processed approximately 112 million gallons of used oil during 1994. Since the majority of Safety-Kleen's customers are small businesses, the Company plays an additional key role beyond simply picking up used oil and other wastes. Safety-Kleen provides, as a matter of course, comprehensive and up-to-date information on the often complex environmental regulations and procedures with which its customers need to comply.

The used Oil Issue

According USEPA figures, approximately 1.4 billion gallons of used oil are generated annually. Only about half of this amount is collected for recycling. Of the used oil collected, approximately 85% is burned as fuel and 15% is re-refined into base stock for re-use.

The adverse effects on the environment of improper disposal of used oil are as startling as they are well documented. One gallon of stray oil can render one

million gallons of water undrinkable. Additionally, used oil frequently contains elevated concentrations of toxic metals, such as lead, which are picked up from contact with engine parts during use.

In response to the potential environmental damage posed by the improper management of used oil, the USEPA promulgated used oil management standards in March, 1993, aimed at ensuring that used oil is managed in a manner that is fully protective of human health and the environment. The used oil management standards appear in title 40 of the Code of Federal Regulations (CFR) part 279.

Although these regulations focus on proper management, they also recognize the value of used oil as a resource that can and should be re-used, either through re-refining into lube stock or through burning as a fuel in appropriate units. Thus, the used oil management standards assume that used oil will be recycled, and are written in a manner to encourage collection and reuse.

Benefits of Re-refining

Officials with the USEPA, as well as significant elements of the environmental community, have stated that re-refining is the preferred option for the recycling of used oil. Re-refining is considered by many to be a "higher use" than burning as fuel for energy recovery. Oil can be re-refined and re-used an unlimited number of times with no loss of quality, essentially renewing a resource once thought to be non-renewable. **Used oil is a home-grown, renewable resource and can be a significant component in America's efforts to be energy independent.** A state of the art re-refinery, such as Safety-Kleen's East Chicago facility, is capable of handling almost any used oil stream and converting it into quality lube stocks equivalent in all respects to virgin material.

Only two gallons of used oil are required to produce one gallon of lubricating oil, whereas, approximately 13 gallons of crude oil are required to produce one gallon of virgin lubricating oil. Thus, re-refining of used oil plays a role in reducing dependence on foreign energy sources and fossil fuels, both in regard to feedstocks used to produce lubricants and to energy requirements for the re-refining process.

The Re-refining Process

Safety-Kleen's re-refineries use advanced technology (this film evaporation and hydrotreatment, which is the most evolved form of re-refining). This process provides the highest quality lube stock and produces the least amount of waste. In addition to the primary product, lube stock, the re-refining process also produces other useful products, such as asphalt extender, which is used in the manufacture of shingles and asphalt for roadways.

Re-refining compliments the oil industry, in that it addresses the disposal side of "cradle to grave". Many oil companies actively support re-use and recommend Safety-Kleen as the preferred provider of re-refining and recycling processes.

Safety-Kleen's re-refineries have pioneered many of the more innovative techniques used in re-refining. The promise of this new technology has led Safety-Kleen to invest in excess of $75,000,000 in property, plant and equipment at the East Chicago, Indiana plant.

Re-refining has the additional benefit of generally decreasing superfund liability across the board.

The Used Oil Industry

Safety-Kleen and Evergreen Oil, Inc. of Newark, California produce the vast majority of re-refined oil in the United States. The US began re-refining and leads the world in this area. It is a home grown industry. Re-refined oil makes up about 15% of the total oil recycled in the country. At this time, the majority of used oil collected in the United States is processed for use as fuel by approximately 200 processing facilities. Both Safety-Kleen and Evergreen operate state-of-the-art re-refineries capable of producing quality lube stock that meets applicable industry standards for lubricants. Despite existing re-refiners success in producing quality products, the capital investment required to build or upgrade existing facilities into state-of-the-art re-refineries, coupled with slim profit margins, have generally discouraged entry into re-refining by other businesses.

In addition to raising the quality and the reputation of re-refined oil, Safety-Kleen's used oil collection and management procedures, which are modeled after the procedures it uses to manage hazardous waste, are the most stringent in the US and have set a standard for environmental protection for the rest of the industry.

Quality of Re-refined Oil

Re-refining technology has made major advances over the past 15 years. The successful adaptation of refining technologies such as hydrotreating, a process which removes or destroys contaminants such as chlorinated compounds, allows production of re-refined lube stock that meets or exceeds the standards set of lube stock refined from virgin oil.

Safety-Kleen has received International Standards Organization (ISO) 9002 accreditations for both its East Chicago and Breslau, Ontario, re-refineries. The Company's high-quality lube stock is blended, either by Safety-Kleen or by independent compounders-blenders or major oil companies, into a wide range of products. Safety-Kleen's own brand of engine oil made with re-refined lube stock is America's Choice, which is sold at Wal-Mart stores and other retailers.

Improvements in the quality of re-refined oil have led to increased market acceptance and interest. Several of the major oil companies are marketing their own brands of engine oil blended from re-refined lube stock produced by Safety-Kleen or Evergreen. Additionally, re-refined oil meeting the International Lubricant Standardization and Approval Committee's (ILSAC) GF-1 specifications received another important acknowledgment of its quality. The American Automobile Manufacturers' Association has stated that any oil, including re-refined motor oil, displaying the American Petroleum Institute's certification mark "starburst symbol" is suitable for use by its members, Chrysler Corporation, Ford Motor Company and General Motors.

Both the US government and a number of state governments are seeking to increase the market for re-refined oil by encouraging their own agencies to buy it through procurement preference guidelines. The USEPA's Office of Solid Waste, Municipal and Industrial Waste Recycling Section, in 1988 designated re-refined oil as an item that agencies should purchase after careful review of its quality. Re-refined oil was also designated for preferential procurement by operating units (the Park Service, GSA, etc.) of the Federal Government in Executive Order 12873 on *Federal Acquisition, Recycling and Waste Prevention* issued by President Clinton on October 20, 1993.

Additionally, in 1994, Safety-Kleen received the prestigious "Green Seal" certification for its re-refined engine lubricants. Green Seal, an independent, non-profit organization, awards its certification to products found to cause significantly less harm to the environment than other, similar products.

Economics

Entry into the re-refining business has been expensive for Safety-Kleen. Factors that hinder entry into the business include high capital costs required to produce quality lube stocks, and the extensive and complex requirements covering regulatory compliance, operating permits and waste water discharges.

To incentivize re-refining through tax reform would offer benefits on many levels and encourage more recycling while capturing more used oil in a management system rather than having it escape into the environment. The Company showed no return on investment in the oil re-refining business from the initial entry in 1987 until 1994, when a small profit was made.

Since the price of lube stock is tied to the price of virgin crude, which has been relatively low over the past few years, profit margins are slim. The capital investment in the re-refineries and the cost of operating the Company's collection system represent fixed costs that cannot be adjusted downward.

Conclusion

Beyond the obvious benefits to small businesses nationwide and to the environment, government and industry endorsement of high quality re-refined lube stocks, such as those produced by Safety-Kleen, underscores the importance of recycling used oil through re-refining. Because of the cost structure of the industry, however, re-refiners face stiff obstacles in order to produce re-refined products.

The process and promise of re-refining includes benefits to the environment as well as decrease reliance on imports. The hundreds of millions of gallons of used oil that have thus far been re-refined represent conservation of an important resource and protection of both US waterways and groundwater from improper disposal.

Re-refiners, who necessarily operate on a smaller scale than the major oil companies, are directly affected by the price of crude oil without the economies of scale of the major oil companies. Additionally, re-refiners must compete for used oil in the marketplace with used oil processors, or those organizations which convert used oil into fuels of various types. These oil processors naturally have lower levels of capital investment at a lower cost structure.

Thus the extra costs associated with collecting and re-refining used oil are conceptually comparable to the costs associated with extracting crude oil from difficult-to-access deposits, or "non-conventional sources" and should be afforded comparable tax incentives.

In summary, we believe that a tax incentive as discussed here would have significant multiple benefits for the country; including helping America's increasingly important small business community, helping to keep the environment clean for us and future generations, and assisting an industry that can play an important role in helping America achieve true energy independence.

STATEMENT OF K. MARTIN WORTHY
BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS
JULY 11-13, 1995

My name is K. Martin Worthy. I am a lawyer in the firm of Hopkins & Sutter in Washington, D.C. and have practiced tax law for more than 35 years. I was Chief Counsel for the IRS for three years and have been Chairman of the Tax Section of the American Bar Association.

I am presenting this statement in support of legislation which would correct a serious inequity which has resulted in the *retroactive* application of federal gift tax. The amendment relates to disclaimers of property interests originally created before 1958.

It has been accepted for over fifty years that a disclaimer or renunciation refusing to accept a gift or transfer by will is not itself a transfer subject to gift tax if the disclaimer is valid and properly made. Although until 1976 the Internal Revenue Code ("Code") contained no provisions governing the gift tax effect of disclaimers, in 1958 the Treasury published a Regulation recognizing this court-established principle. Section 2518 of the Code (the disclaimer provision first adopted in 1976) applies only to disclaimers of interests created after 1976, so that disclaimers of earlier interests, including all the interests covered by the proposed amendment, are governed solely by the 1958 Regulation and case law.

I represent the Estate of Mrs. Helen W. Halbach, who died while a resident of New Jersey in 1972. Mrs. Halbach's disclaimer is one that would be covered by the proposed amendment. I believe the following chronology of our case will demonstrate the unfairness of the situation both for Mrs. Halbach's estate specifically and generally, for other disclaimants who meet the requirements of the proposed legislation.

Mrs. Halbach's father died in 1937, and by his will established a trust with the income to be paid to Mrs. Halbach's mother for life, with the remainder to be divided later equally between Mrs. Halbach and her sister in the event of their survival of their mother. Thus, Mrs. Halbach's interest was wholly contingent and would not vest or become possessory in any sense until after her mother's death.

Mrs. Halbach's mother died on April 14, 1970, and Mrs. Halbach, four days later, executed a document in which she irrevocably renounced and disclaimed all her right, title and interest in the one-half share of the trust to which she would otherwise have been entitled. The bank administering the trust thereupon brought an action in the New Jersey courts to determine the effect of the disclaimer, and the Chancery court of New Jersey, in a carefully developed opinion (274 A.2d 614), held in late 1970 that the disclaimer, having been executed promptly after the death of the life tenant, was effective to prevent any passage of title to Mrs. Halbach. The Court thus required distribution of the half interest in the trust, to which Mrs. Halbach would otherwise have been entitled, just as if Mrs. Halbach had not survived. Significantly, the Court noted not only that this was the accepted law of New Jersey, but also that the Court had been unable to turn up any court decision anywhere that to be effective a remainderman's renunciation must occur (as the Internal Revenue Service would later contend) within a reasonable time after learning that a remainder interest had been *created*. Thus, the Court concluded that it was sufficient if renunciation occurred within a reasonable time after ***termination*** of any preceding life interest.

As I will discuss, Mrs. Halbach had no reason to believe, when she executed her disclaimer in 1970, that she had in any way made a transfer of property subject to gift tax. However, by reason of the Supreme Court's 1982 decision in Jewett v. Commissioner and the failure of Congress in enacting section 2518 to deal specifically with disclaimers of interests created before 1976, Mrs. Halbach's estate is faced with a gift tax on the value of the trust interest which she disclaimed in 1970, just as if she had accepted it and then later voluntarily transferred it to persons of her own choosing.

Before the 1958 Regulation the U.S. Courts of Appeals had made it clear that a disclaimer which was valid and effective under state law did not result in a taxable gift. (These and other authorities are discussed more fully in the attached "Technical Analysis.") Although there was some variance in state disclaimer statutes and some states had no disclaimer statutes at all, it was clear from the authorities (such as Page on Wills) that as a general rule a disclaimer of an interest was valid under state law if it was unequivocal, made without prior acceptance, and made within a reasonable time. Furthermore -- just as later held by the New Jersey court in connection with Mrs. Halbach's disclaimer -- in the case of an interest which did not take effect in immediate possession, a disclaimer did not have to be made before the termination of the preceding interest to meet the "reasonable time" requirement.

In the Jewett case, however, the Supreme Court held that, under the 1958 Regulation, a disclaimer after 1958 of a pre-1976 interest (*i.e.*, one created before the effective date of section 2518 of the Code) will be recognized as free from gift tax only if the disclaimer is made shortly after the disclaimant obtains knowledge of the ***creation of such interest*** rather than after knowledge of ***its vesting***, as the courts had previously held. Under this interpretation future interests must have been disclaimed soon after their creation, no matter how unlikely or contingent the possibility that anything would ever be received. This interpretation of the 1958 Regulation is clearly contrary to accepted case law before 1958 (and contrary to what many justifiably understood the law still to be even after the Regulation was promulgated in 1958 and until well after Mrs. Halbach executed her disclaimer in 1970). Accordingly, application of the Supreme Court's decision to Mrs. Halbach and other holders of pre-1958 contingent interests is very unfair. Under existing case law before the Jewett decision in 1982, they had no reason to disclaim a pre-1958 contingent interest until after they obtained knowledge that the interest had vested, even if they had knowledge of the existence of the interest from its creation. Yet the 1958 Regulation, as interpreted by the Supreme Court in Jewett, gave such holders no opportunity to disclaim their pre-1958 interests without gift tax, since it ***was already too late to do so when the Regulation was promulgated.***

It should be emphasized that Mrs. Halbach had no reason to know at the time of her disclaimer in 1970 that the IRS would claim that such disclaimer was subject to gift tax. The Supreme Court acknowledged in its opinion in Jewett that it was not entirely clear even after 1958 whether the Regulation required that the disclaimer be made upon creation of a contingent remainder interest or upon subsequent vesting on death of the life tenant.

(1) In fact, the position taken by the IRS in the Jewett litigation with respect to the meaning of the 1958 Regulation is specifically inconsistent with the Service's interpretation of such Regulation in Private Letter Ruling 6612201590A, which was issued by the Service prior to Mrs. Halbach's disclaimer ***in 1970***. We have been unable to find why this ruling was not called to the Supreme Court's attention in Jewett, and the Court, in making its conclusion, mistakenly found that "the Commissioner's interpretation of the regulation has been consistent over the years" and concluded that it was therefore "entitled to respect."

(2) In truth, as acknowledged by counsel for the Commissioner of Internal Revenue in oral argument on December 1, 1981, it was not until litigation in the Tax Court in ***1972*** that the Service first publicly stated that it interpreted the Regulation as it now does, as requiring the holder of a future contingent interest to disclaim shortly after knowledge of its creation rather than after knowledge of the termination of the preceding interest.

(3) That the taxpayer knew or should have known that the Regulation meant what the Service now claims it means was certainly not obvious to the United States Court of Appeals for the Eighth Circuit as late as ***1973***, when it held that the interpretation now claimed by the Internal Revenue Service and the Treasury Department was incorrect. Keinath v. Commissioner, 480 F.2d 57.

> The Eighth Circuit reaffirmed this view in 1980 in Cottrell v. Commissioner, 628 F.2d 1127, holding that Mrs. Halbach's sister's disclaimer of her identical interest in the same trust at the same time was not subject to gift tax. Mrs. Halbach and other disclaimants were simply operating within the law in effect at the time of their disclaimers -- the law as interpreted in the Keinath and Cottrell cases.

The proposed amendment would correct the injustice of the Supreme Court decision in the Jewett case, for both estate and gift tax purposes, by providing that a disclaimer of a pre-1958 interest will be treated as satisfying all requirements of the Regulation if made before May 22, 1972 and within a reasonable time after the preceding interest terminates and the disclaimant's interest vests. The May 22, 1972 date is the date of the Tax Court's decision in Keinath, the case in which the Service first publicly stated its contention that, when the Regulation was issued in 1958, it was already too late to disclaim an existing contingent interest. Thus, the proposed amendment is limited to those who were treated most unfairly by the effect of the Jewett decision -- holders of such interests who disclaimed before the IRS first made its interpretation public in May 1972.

The amendment would allow a grace period of one year after enactment of the provision for making a refund claim with respect to each of the specified disclaimers, regardless of the statute of limitations or finality of any prior decision.

In the past the Treasury Department has opposed a similar legislative proposal because it was to be "retroactive." It is ironic that they put so much emphasis on retroactivity of the proposed legislation and do not express the same concern about the retroactivity of the Government's interpretation of the 1958 Regulation, first announced in 1972, saying that Mrs. Halbach, whose contingent remainder interest was created in 1937, should have ***made her disclaimer 21 years before the 1958 Regulation imposing the new test was issued.*** Surely, the *ex post facto* nature of this Regulation, retroactively changing the rules, without any grace period, as to when a pre-1958 contingent interest may be disclaimed without gift tax, cries out for Congressional redress.

Treasury has also opposed a similar amendment on the ground that the rule for disclaimer of post-1975 interests under section 2518 is consistent with the Jewett interpretation of the 1958 Regulation for pre-1976 interests, that timeliness for both is gauged from the time the interest is created. However, the legislative history of the 1976 Act (which adopted section 2518) indicates to the contrary that Congress believed that the Court of Appeals in the Keinath case stated the proper interpretation of the rule for pre-1976 interests. *See*, H. Rept. 94-1380, 66, 1976-3 C.B. 800.

In conclusion, it is our contention that it is only fair and equitable for this Congress to provide relief to taxpayers who in good faith relied on existing case law and never had an opportunity to make a timely disclaimer of their pre-1958 contingent interests, as the Supreme Court has interpreted the requirements of the 1958 Regulation.

Congressional relief from the imposition of the Federal gift tax on the disclaimer of pre-1958 interests is particularly appealing in the instant case under a "basic fairness" test, since my client made the identical disclaimer at the same time as her sister who has been relieved from such gift tax by the Eighth Circuit.

TECHNICAL ANALYSIS AND BACKGROUND CONCERNING PROPOSAL ON THE TAX TREATMENT OF DISCLAIMERS OF CERTAIN REMAINDER INTERESTS

I. BACKGROUND

As noted above, although until 1976 the Internal Revenue Code of 1954 ("the Code") contained no provisions governing the gift tax effect of disclaimers, in 1958 the Treasury published a Regulation recognizing this court-established principle. However, even under the Regulation, the effectiveness of a disclaimer for federal tax purposes varied according to applicable state law. By the 1970's it had become apparent to members of the tax bar and others that a uniform definition of disclaimers would be desirable for federal tax purposes. *See*, H. Rept. No. 94-1380, 66, 1976-3 C.B. 735, 800.

In response to the movement for a uniform disclaimer rule, Congress enacted new section 2518 of the Code in the Tax Reform Act of 1976. That section generally requires that a "qualified disclaimer" for federal estate and gift tax purposes, i.e., a disclaimer that does net constitute a taxable gift, be made (a) in writing, (b) before acceptance of the interest being disclaimed or any of its benefits, and (c) within 9 months after the later of the date on which the transfer creating the interest is made or the day on which the disclaimant attains age 21. Section 2518 was subsequently amended in 1978 and 1981 to perfect and clarify the uniform rule.

Under present law section 2518 applies only to disclaimers of interests created after December 31, 1976. Thus, the broad class of disclaimants of interests in trusts created before 1958 remains subject to the law in effect before section 2518 was enacted, irrespective of when the interests become possessory and when the disclaimers are made -- even 40 or 50 or more years from now.

II. REASONS FOR PROPOSED AMENDMENT

In Jewett v. Commissioner, 102 S. Ct. 1082 (1982), the Supreme Court of the United States, interpreting section 25.2511-1(c), Gift Tax Regs., held that a disclaimer after 1958 of an interest created before 1977 will be recognized as free from federal gift tax only if it is made shortly after the initial transfer from which the interest sought to be disclaimed eventually emerged. Under this interpretation, future interests must have been disclaimed soon after their creation, no matter how unlikely or contingent the possibility that anything would ever be received. Such an approach is contrary to the view, widely held before the Supreme Court decided Jewett, that the 1958 Regulation permits a tax-free disclaimer within a reasonable time after the death of the preceding life tenant, i.e. after the disclaimed interest becomes present and possessory. Moreover, as interpreted by the Supreme Court, the Regulation represents a sharp departure from the law in effect prior to 1958 under which the effect of such a disclaimer was generally governed solely by State law. Thus, the application of the Supreme Court's decision to holders of interests created before 1958 is very unfair; they had no reason to disclaim before that time and never had an opportunity to disclaim without gift tax -- even "within a reasonable time" -- after the Regulation was promulgated.

Law Before 1958

Prior to the 1958 Regulation there were few cases involving the federal estate and gift tax effect of disclaimers. Nevertheless those few cases made clear that disclaimers which were valid and effective under state law did not result in a taxable gift.

In 1933, the Sixth Circuit decided Brown v. Routzahn, 63 F.2d 914, cert. den. 290 U.S. 641 (1933). In Brown decedent's wife died in 1912 and left decedent one-third of all her property. An April 1920, before any distribution was made, decedent filed with the

proper probate court a renunciation of his right to the third of the estate, and the court, ordering distribution to the remaining heirs, recognized the renunciation. However, at decedent's death the Commissioner contended that the value of the renounced property should be included in decedent's estate for federal estate tax purposes as a transfer made in contemplation of death.

In analyzing the issue, the Court of Appeals began from the "obvious" premise that unless the decedent accepted the gift of one-third of his wife's estate or became owner of such interest before April 1920, there could be no transfer of such interest in contemplation of death within the meaning of the tax statute. The court looked to state law and found that under Ohio law a rejection of a gift by will made any time before distribution would be valid and that decedent therefore had never become owner of the property involved. Accordingly, the court concluded that his renunciation of the property could not be a taxable transfer for federal tax purposes.

There was no indication by the Internal Revenue Service of its intent not to follow the Brown decision. No other decision bearing significantly upon the issue arose until 1952, when the Eighth Circuit decided Hardenbergh v. Commissioner, 198 F.2d 63, cert. den. 344 U.S. 836 (1952). In Hardenbergh the taxpayers attempted to renounce their interest in the estate of a decedent who had died intestate, and the Internal Revenue Service claimed that the disclaimer constituted a taxable gift. The Eighth Circuit found that immediately upon the death of the decedent title to the disclaimants' interests had vested in them by operation of Minnesota law which neither disclaimant had the power to prevent, with the result that their subsequent disclaimers constituted transfers of such interests for federal gift tax purposes. Thus Hardenbergh reinforced the principle that validity of a disclaimer under state law controlled for federal estate and gift tax purposes. Indeed, Hardenbergh cited Brown with approval with respect to disclaimers of testamentary gifts, carefully distinguishing Brown on the basis of the testate/intestate law difference. 198 F.2d at 66.

A number of commentators during this period recognized the principle that state law controlled in determining the tax effect of disclaimers. *See, e.g.*, Ekman, "Can A Transferee Avoid Gift or Estate Tax Liability by Renouncing A 'Transfer By Operation of Law,'" 11 N.Y.U. Inst. on Fed. Tax'n 527, 532-534 (1953); Sayles, "Renunciations -- Estate and Gift Tax Problems," 1953 S. Cal. Tax Inst. 531, 536-539. There was some variance in state disclaimer statutes, and some states, in fact, had no disclaimer statute at all. Nevertheless, as a general rule a disclaimer of an interest was valid under state law if it was unequivocal, made without previous acceptance, and made within a reasonable time. 6 Bowe-Parker, Page on Wills § 49.9, 49.1, 49.8 (1962); 96 C.J.S. § 1151(b), 1151(a) (1957). In the case of an interest which did not take effect in immediate possession, a disclaimer did not have to be made before the termination of the preceding interest to meet the "reasonable time" requirement. See 6 Bowe-Parker, Page on Wills § 49.8 (1962). *Also see*, Estate of Page, 74 A.2d 614, 615-616 (N.J. Super. 1970).

A review of these cases and commentary reveals that prior to 1958 nothing in federal estate or gift tax law would require the holder of a remainder interest created by will to disclaim immediately upon the creation of the interest. Generally under state law the holder could wait until a reasonable time after the termination of the preceding interest, and the decided cases indicated that federal tax consequences of the disclaimer were controlled by state law. Against this historical background, section 25.2511-1(c), Gift Tax Regs., was issued in final form on November 15, 1958.

The 1958 Regulation

Section 25.2511-1(c), Gift Tax Regs., which has not been changed since it was promulgated in final form in 1958, provides in pertinent part as follows:

"Where the law governing the administration of the decedent's estate gives a beneficiary, heir, or next-of-kin a right to completely and unqualifiedly

refuse to accept ownership of property transferred from a decedent (whether the transfer is effected by the decedent's will or by the law of descent and distribution of intestate property), ***a refusal to accept ownership does not constitute the making of a gift if the refusal is made within a reasonable time after knowledge of the existence of the transfer. The refusal must be unequivocable*** [sic] ***and effective under the local law. There can be no refusal of ownership of property after its acceptance.*** Where the local law does not permit such a refusal, any disposition by the beneficiary, heir or next-of-kin whereby ownership is transferred gratuitously to another constitutes the making of a gift by the beneficiary, heir or next-of-kin. In any case where a refusal is purported to relate to only a part of the property, the determination of whether or not there has been a complete and unqualified refusal to accept ownership will depend on all of the facts and circumstances in each particular case, taking into account the recognition and effectiveness of such a purported refusal under the local law. In the absence of facts to the contrary, if a person fails to refuse to accept a transfer to him of ownership of a decedent's property within a reasonable time after learning of the existence of the transfer, he will be presumed to have accepted the property. In illustration, if Blackacre was devised to A under the decedent's will (which also provided that all lapsed legacies and devises shall go to B, the residuary beneficiary), and under the local law A could refuse to accept ownership in which case title would be considered as never having passed to A, A's refusal to accept Blackacre within a reasonable time of learning of the devise will not constitute the making of a gift by A to B. However, if a decedent who owned Greenacre died intestate with C and D as his only heirs, and under local law the heir of an intestate cannot by refusal to accept, prevent himself from becoming an owner of intestate property, any gratuitous disposition by C (by whatever term it is known) whereby he gives up his ownership of a portion of Greenacre and D acquires the whole thereof constitutes the making of a gift by C to D." Emphasis added.

This version of the Regulation is somewhat different from a draft initially proposed on January 3, 1957, which required a renunciation to be made "within a reasonable time after knowledge of the existence of the ***interest***" (emphasis added), rather than after knowledge of the existence of the "***transfer***," as provided in the final Regulation. The word "interest" would clearly include a contingent remainder even though the creation of that remainder by will did not effect a "transfer" to the disclaimant. Thus, under the Regulation as originally proposed, the holder of a future interest would only have had a reasonable time after the creation of the interest in which to disclaim and would not have been permitted to wait until the interest became present and possessory by transfer of the property to him.

On its face, this difference between the proposed and final regulations suggests that the final Regulation was a rejection of the requirement of the proposed regulation that a disclaimer of a contingent interest be made within a reasonable time after its creation rather than a reasonable time after it became possessory. However, in its Jewett opinion the Supreme Court considered the change in language and concluded, based on a Memorandum from the Commissioner of Internal Revenue to the Secretary of the Treasury, dated October 1, 1958, that the reason for the change was unrelated to the issue of when a future interest must be disclaimed. With respect to the disclaimer Regulation, the Memorandum provides in part as follows:

"In what was intended to be the application of the rules in Brown v. Routzahn (1933) 63 F.2d 914, cert. denied 290 U.S. 641, and Hardenbergh v. Commissioner (1952) 198 F.2d 63, cert. denied 344 U.S. 836, it was stated that where title to the property did not vest in the beneficiary or heir immediately upon the decedent's death, the renunciation of the property did not constitute the making of a gift, but that, where title vested in the beneficiary or heir immediately upon the decedent's death, the act of the beneficiary or heir in giving up what passed to him from the decedent

> constituted the making of a gift. . . . Protests on these provisions were received. After reviewing these protests, we have reconsidered our position and now believe that the proper distinction between these two court cases turns on the question of whether under the applicable State law a beneficiary of heir can or cannot refuse to accept ownership of the property which passed from the decedent. Accordingly, we have revised paragraph (c) of section 25.2511-1 to reflect this change of position." XIII Tax Notes 203, July 27, 1981.

Two things are apparent: (1) Even if it is assumed that the drafters of the final Regulation were not intentionally trying to state a different rule for contingent interests than set forth in the proposed regulation, this would not have been apparent to holders of contingent interests at the time, since the Memorandum was not made public until June 15, 1981. (2) The Memorandum clearly indicates that the drafters were trying to soften the inflexibility of the proposed rules and to provide, instead, that state law would apply in every situation. And, as previously noted, under the law applicable in most states, in the case of an interest which did not take effect in immediate possession, a disclaimer did not have to be made before the termination of the preceding interest to meet the "reasonable time" requirement.

It was not immediately apparent that the 1958 Regulation was intended to make a change in the Treasury position as to when a valid disclaimer must occur. Although it specified three requirements not mentioned in Brown -- that a disclaimer be unequivocal, that it be made before acceptance of the interest, and that it be made within a reasonable time of knowledge of the existence of the transfer, the Eighth Circuit subsequently observed that the conditions in the Regulation were "but a codification of common law principles applicable to the doctrine of disclaimers." Keinath v. Commissioner, 480 F.2d 57, 61 (1973).

What taxpayers and the tax bar did not then know was that the IRS would eventually introduce a new concept by contending that when it said a taxpayer must disclaim within a reasonable time after "the transfer," it meant in the case of a contingent interest, a reasonable time after creation of the interest rather than a reasonable time after the interest became possessory. It was in litigation of Keinath v. Commissioner in the Tax Court in 1972, that the Service first publicly took the position that the Regulation required the holder of a future interest to disclaim shortly after the interest was created rather than after the termination of the preceding interest. *See* statement of counsel for the Commissioner of Internal Revenue in oral argument before the U.S. Supreme Court in Jewett v. Commissioner, No. 80-1614, 44-45 (December 1, 1981). This position of the Service was inconsistent with the Brown case, which the Memorandum indicates was intended to be embodied in the Regulation, and contrary to the general principle of state law that disclaimers could be made after termination of the preceding life interest.

It now further appears that the position the IRS took in Keinath was also inconsistent with its own position in an earlier private letter ruling (6612201590A) dated December 20, 1966. (Although private rulings were confidential at that time, since 1976 they have been released to the public, and this particular ruling was made open to public inspection on August 28, 1978.) In that ruling the IRS held that a taxpayer's proposed disclaimer of a contingent interest in a trust created 33 years earlier would not be taxable as a gift. The taxpayer had a present possessory interest in a portion of the trust from its creation, and on the death of other life tenants without "issue" the taxpayer became eligible for additional fractional income interests. The Service ruled that if the taxpayer executed a disclaimer "within a 'reasonable time' from the time that she first received notice [by reason of a court decision that the income interest had vested in her] of her right to the additional income interest," the requirements of the Regulation would be satisfied and no gift tax would be due. Because the taxpayer already held another interest in the trust from which she had received income for nearly 30 years, she had obviously long been aware of the creation of the trust 33 years earlier and of her contingent interests in the additional shares in the event of survivorship. Thus, the above quoted language of the ruling means that she had a

However, what is important here is that the interests to which the proposed legislation would apply were created before 1958, not that it was disclaimed after 1958. The Regulation did not provide a grace period for disclaimers after it was promulgated, and as Jewett reads the Regulation, at that point it was already too late. Thus, holders of pre-1958 interests were unfairly and unjustifiably prevented from ever disclaiming without incurring a gift tax. Congress recognized this very transition problem when it made the rules of section 2518 applicable only to disclaimers of interests created after 1976. *See*, section 2009(e) of the Tax Reform Act of 1976, P.L. 94-455, 90 Stat. 1520.

The proposed amendment would correct the unfair effect of Jewett on holders of pre-1958 future interests by providing that their disclaimers will be treated as meeting all requirements of the Regulation if made before May 22, 1972 and within a reasonable time of vesting of the interest. As the discussion above shows, the equities weigh heavily in favor of such relief.

PROPOSED STATUTORY LANGUAGE

SEC. ________ Transitional Rule for Pre-May 22, 1972* Disclaimers of Property Interests Created by Gifts, Devises or Bequests Made before Promulgation of Regulations on November 15, 1958.

With respect to an interest in property created by a gift, devise, or bequest made before November 15, 1958, a disclaimer by a person of such interest (in whole or in part) shall not be treated as a transfer for purposes of chapters 11 and 12 of subtitle B of the Internal Revenue Code and shall be deemed to satisfy all the requirements set forth in Treasury Regulation Section 25.2511-1(c) as in effect at the time the disclaimer was made, if such disclaimer was made in writing before May 22, 1972, and no later than a reasonable time after the termination of all interests in such property prior to the disclaimed interest. This section shall apply notwithstanding any law or rule of law (including but not limited to section 7481 of the Internal Revenue Code of 1986 as amended) concerning the finality of court decisions or other determinations, barring multiple suits on one cause of action, or limiting the time when a claim or suit for refund of tax may be brought, provided that the benefit of this section is claimed within one year of the date of enactment of this Act.

(...continued)
is difficult to understand if, in fact, the Regulation required disclaimer in 1939 when the disclaimed interest was created.

*[This is the date the Tax Court decided Keinath v. Commissioner, 58 T.C. 352, in which the Internal Revenue Service for the first time publicly took the position that the 1958 Regulation required a disclaimer of a contingent interest to be made shortly after creation of the interest, rather than vesting.]

reasonable period from the time she received notice that her additional contingent income interest had vested or become possessory, even though that interest had been created 33 years earlier.

Although this private letter ruling was public when the Jewett case was briefed and argued before the Supreme Court, the Court was apparently not made aware of the inconsistent interpretation of the Regulation made by the IRS In fact, the Court expressly noted in upholding the Commissioner's interpretation of the Regulation that the Service had been consistent in its interpretations over the years (102 S.Ct 1090) -- which is simply not so.[1]

Conclusion

This examination of the federal gift tax law on disclaimers before and after 1958 demonstrates that under the Brown and Hardenbergh cases the validity of the disclaimer under state law determined the federal gift tax result. Thus, before 1958 the holder of a contingent remainder had no reason to disclaim prior to the death of the preceding life tenant.

After the promulgation of the 1958 Regulation it was not apparent that there had been any change in the law. First of all, the deletion of language from the proposed regulation which required disclaimer "within a reasonable time after knowledge of the existence of the ***interest***" suggested that a disclaimer could be delayed until indefeasible vesting. Furthermore, the October 1, 1958, Memorandum from the Commissioner to the Secretary of the Treasury shows that the drafters of the Regulation were trying to follow the existing law of the Brown and Hardenbergh cases. In addition, the IRS itself, in Private Ruling 6612201590A, issued December 20, 1966, ruled that a disclaimer of a contingent future interest would satisfy the Regulation if made after notice that the interest had vested and become possessory. Indeed, it was not until litigation of the Keinath case in the Tax Court in 1972, after Mrs. Halbach's 1970 disclaimer, that the IRS first publicly took the position that a defeasible future interest must be disclaimed shortly after its creation.

Despite these indications of the meaning of the Regulation, the Supreme Court in Jewett adopted the Commissioner's current contrary interpretation.[2] Thus, under the Supreme Court's interpretation, the IRS, by promulgating the 1958 Regulation, changed the rules for a taxpayer owning an interest created before 1958 in the middle of the game, contrary to any reasonable notion of justice or fair play.

In rejecting a similar unfairness argument by the taxpayer in Jewett, the Court noted that the 1958 Regulation was made well in advance of the disclaimers in that case.[3]

---

[1]Even though section 6110(j) (3) of the Code provides that private rulings ordinarily "may not be used or cited as precedent," the Supreme Court -- in refusing to accept the government's interpretation of a long-standing regulation in Rowan Companies, Inc. v. United States, 101 S. Ct. 2288, 2296, n. 17 (1981) -- has said that private rulings may be cited as evidence that the Internal Revenue Service has taken a position inconsistent with its present contentions as to the meaning of the law and regulations.

[2]One commentator has criticized the Court's construction of the Regulation as "visibly flawed." Jewett v. Commissioner: Unforseen Crisis of Disclaimers, 14 Loy. L. Rev. 167, 186 (1982). *See also*, M. Wolfson, "Disclaimers -- A Device Whose Time Has Come?," 41 N.Y.U. Inst. on Fed. Tax'n 43-1, 43-23 to 43-27 (1983).

[3]The Court made the puzzling comment that the taxpayer's argument would have more appeal if the disclaimer had been made immediately after the adoption of the 1958 Regulation, rather than 14 years later. 102 S.Ct. 1090, n. 20. The logic of this statement

STATEMENT BY
SENATOR JOHN H. CHAFEE
AT THE HOUSE COMMITTEE ON WAYS AND MEANS HEARING ON MISCELLANEOUS TAX REFORMS
ON S. 910, A PROPOSAL TO EXEMPT CERTAIN LAND SUBJECT TO A PERMANENT LAND CONSERVATION EASEMENT FROM THE ESTATE TAX
July 11 and 12, 1995

Mr. Chairman:

I am pleased to have this opportunity to provide my views on S. 910, the American Farm and Ranch Protection Act of 1995, which I introduced along with Senator Baucus earlier this year. This is companion legislation to H.R. 864, introduced in the House by Congressmen Houghton and Payne and cosponsored by 12 other Members of the Committee on Ways and Means.

A serious environmental problem facing the country today is the loss of open space to development. All across the country, farms, ranches, forests and wetlands are forced to give way to the pressures for new office buildings, shopping malls and housing developments.

America is losing over four square miles of land to development every day. In Rhode Island, over eleven thousand acres of farmland have been lost to development since 1974. In many instances, this is simply the natural outgrowth of urbanization of our society. Other times it is the direct result of improper planning at the state and local levels.

But frequently, the pressure comes from the need to raise funds to pay estate taxes. For those families where undeveloped land represents a significant portion of the estate's total value, the need to pay the tax creates powerful pressure to develop or sell off part or all of the land or to liquidate the timber resources on the land. Because land is appraised by the Internal Revenue Service according to its "highest and best use," which is often its development value, the effect of the tax is to make retention of undeveloped land difficult.

In addition, our current estate tax results in complicated valuation disputes between the donor's estate and the Internal Revenue Service. In many cases, the additional costs incurred as a result of these disagreements may cause a potential donor of a conservation easement to decide not to make the contribution.

Open spaces improve the quality of life for Americans throughout this great nation and provide important habitat for fish and wildlife. The question we face as policy makers is how to conserve this valuable resource during a time of significant budget constraints.

Mr. Chairman, I think we need to restructure the nation's estate tax laws to encourage private property owners to conserve environmentally significant land. The American Farm and Ranch Protection Act does this by providing an estate tax exemption for the value of land subject to a permanent conservation easement.

Re: H.R. 1099, Generation-Skipping Tax Amendment

Mr. Chairman:

Congressman Houghton, Brewster, Jacobs & Shaw, joined by a bi-partisan coalition comprising 19 members of the Ways & Means Committee and a total of 26 overall have introduced a Bill of great importance to our organization and all charities throughout the U.S. The measure, H.R. 1099, seeks to correct an anomaly in the predeceased parent exclusion to the generation skipping transfer tax which currently results in the unintended over-taxation of assets placed in charitable trusts. It corrects an unintended tax on collateral descendants, as well.

Due to the oversight in current law, a grandparent may bestow a gift upon his or her parentless grandchild and eliminate the generation skipping transfer tax on the gift through the predeceased parent exclusion. However, should such a grandparent wish to create a charitable lead trust (which makes annual payments to a charity for a term of years and subsequently distributes the remaining property to members of the donor's family, thus benefiting charitable organizations as well as the parentless grandchild) distribution of the assets to the same grandchild would be fully subject to generation skipping transfer tax.

H.R. 1099 would correct this oversight, affording charitable trusts in these circumstances, the same tax treatment which the predeceased parent exclusion already provides for a direct, outright gift from the donor to the deceased children's children. The Treasury Department has taken a "do not oppose" position on this noncontroversial change, clear recognition that the policy goals which led Congress to enact the predeceased parent exclusion, apply equally to direct gifts and distributions from charitable lead trusts.

We have joined the ranks of over 200 charities throughout the U.S. who feel that enactment of H.R. 1099 would encourage charitable giving and improve a current tax regimen which unintentionally frustrates the reasonable expectations of those Americans who sought to support worthy charities in addition to providing for their families.

We are very pleased to see the issues presented by H.R. 1099 listed among the subjects which would be considered in these hearings. These issues are very important to us and we urge the Committee to approve these changes. We request that this letter be accepted as our Statement and be made a part of the record of these hearings.

Sincerely,

Robert D. Mitchell, III
Chief Development Officer

This bill is similar to legislation that was introduced last year in both the House and Senate. The principles involved in this bill have been endorsed by the Piedmont Environmental Council, The National Audubon Society, the American Farm Bureau, the Land Trust Alliance, and the National Trust for Historic Preservation.

In order to target the incentives provided in this legislation to those areas that are truly at risk for development, the bill is limited to land that falls within a 50-mile radius of a metropolitan area, a national park or a national wilderness area.

Conservation easements, which are entirely voluntary, are agreements negotiated by landowners in which a restriction upon the future use of land is imposed in order to conserve those aspects of the land that are publicly significant. To qualify for the estate tax exemption under this bill, such easements must be perpetual and must be made to preserve open space, to protect the natural habitat of fish, wildlife or plants, to meet a governmental conservation policy, or to preserve an historically important land area.

Mr. Chairman, thank you for the opportunity to offer my views on this legislation to the Ways and Means Committee.

Indiana University Foundation

Bloomington

Committee on Ways and Means
Hearings on Miscellaneous Revenue Issues
July 11-13, 1995

Statement of Leslie E. Vidra
General Counsel
Indiana University Foundation
Bloomington, Indiana

Re: H. R. 1099, Generation Skipping Tax

July 10, 1995

Mr. Chairman:

We at the Indiana University Foundation are charged with supplementing the public financial support of Indiana University with private contributions from friends of the University to see the University maintain the highest possible level of excellence in public education. As you may know, our reliance on these private contributions increases from year to year.

H.R. 1099, introduced by Congressmen Houghton, Brewster, Jacobs and Shaw, seeks to correct some apparent oversights in the structure of a small portion of the Generation Skipping Transfer Tax. One of the flaws penalizes donors who set up charitable trusts in situations where a child of theirs has predeceased them. This, of course, acts as a disincentive for setting up these trusts in those situations. Furthermore, donors who are survived only by grandnieces and grandnephews, a situation which often leads to generous charitable contributions, are also penalized, we think unintentionally. This situation is corrected by H.R. 1099, as well.

Because it is so important to us not to have unintentional hindrances to the University's private financial support, we were pleased to learn that the Committee has included this measure among the issues to be considered in its current hearings. We ask that this letter be accepted as a Statement in support of this measure and that it be made apart of the record of these hearings.

Sincerely,

Leslie Vidra

Re: H. R. 1099; Generation-Skipping Tax Amendment

Mr. Chairman:

I am Bernard N. Frank, member of the law firm Lewis, Rice & Fingersh, St. Louis, Missouri. I am also a member of the National Committee on Planned Giving (NCPG), an organization of some 7,500 members mostly consisting of persons who are employees of charitable organizations across the country working in assistance to their organizations in securing gifts from private individuals. I submit this statement on behalf of myself, the NCPG and certain clients of our firm. I note that over 200 universities, hospitals, museums, religious organizations, social service agencies and the like have expressed their support for the adoption of the measure now being considered.

I am grateful for the opportunity to join the support of this measure making two minor amendments to the Generation-Skipping Transfer (GST) tax; these changes are currently contained in H.R. 1099. The amendments would further the stated policy of the GST tax and improve the consistency and equity of the application of the tax by correcting unintended impact.

Provision is made in the current law for a person with a deceased parent to be "moved-up" to that parent's generation level for the purpose of determining whether a generation skipping transfer is made. Because this "move-up" feature is limited to <u>direct</u> gifts to <u>lineal</u> descendants only, several anomalies creating death tax rates of up to 80% can occur which are not necessary to carry out the policy of the GST tax.

For example, no move-up is allowed for distributions to a grandchild from certain types of trusts.

Trusts including charitable beneficiaries are one type of trust that gets no move-up.

Certain trusts which might be used to prevent the ownership fragmentation of family owned businesses or farms also get no move-up. An example here might be a transferor who puts his or her farm into a revocable trust for the benefit of his descendants, per stirpes, until such time as the youngest beneficiary reaches 35 years of age. Suppose at the time of the transferor's death he had 1 son surviving and 1 daughter deceased. Suppose further that the deceased daughter had 2 children age 30 and 28 who worked on the farm with their uncle. When the trust terminates under current law there will be a GST tax approximating 55% of the value of their inheritance due immediately upon distribution of the farm interests to the deceased daughter's 2 children. There will be no GST tax due on the share distributed to the son. Keep in mind that the regular

estate tax would have been paid on the value of the whole farm when the transferor died, perhaps at the top 55% rate. The GST tax is due from the daughter's 2 children in addition, approximating a total tax as high as 80% on this illiquid asset--a typically impossible tax burden forcing the sale of all or part of the farm. The illiquidity of the situation is nothing new to estate taxes, but the problem is magnified by the extra GST tax in a situation not necessary to carry out the policies of the GST tax. This example assumes, of course, that the transferor has already used up his lifetime GST exemption.

Another inequity under current law is that childless individuals who by virtue of the order of death of their siblings and their siblings' offspring leave their property to a grandniece or grandnephew, who might be their only living relative, also do not get the benefit of move-up.

I refer to the document called "Correction of Certain Minor Defects in the Generation Skipping Transfer (GST) Tax" (July 26, 1995 revision) attached for a more complete explanation of this measure. In addition, reference is made to the testimony of Jeffrey N. Pennell, Richard H. Clarke Professor of Law, Director, Graduate LL.M. Program in Taxation, Emory University School of Law, and James H. Lockhart, Vice President and General Counsel, The Baptist Foundation of Oklahoma, given on September 23, 1993, before the Subcommittee on Select Revenue Measures, Committee on Ways and Means.

Assistant Secretary of the Treasury Samuels testified at the same hearing before the Subcommittee on Select Revenue Measures that the Department of the Treasury was not opposed to the measure inasmuch as the amendments are consistent with the policy of the GST law.

The description of H. R. 1099 by the Joint Committee on Taxation for purposes of this hearing contains an example which says that under this bill a grandchild who receives a trust distribution will be moved up if his or her parent died prior to the death of the transferor's spouse in certain situations. This would be the case if the spouse were the beneficiary of what is known as a QTIP trust whereby the spouse would be treated as the transferor, under other parts of the tax law, upon the spouse's death. However, H. R. 1099 requires, for move-up, that the parent be deceased at the time when the final estate or gift tax is assessed against the transferor by reason of his or her making the trust transfers. For the sake of clarity, in what I think is the typical siuation, contrary to the Joint Committee on Taxation explanation, H. R. 1099 would require, for move-up, that the child die prior to the death of the transferor, not the transferor's spouse.

H.R. 1099, filed on March 1, 1995, is currently co-sponsored by a bipartisan group of 19 Members of the Ways and Means Committee along with several other Members. You may recall, Mr. Chairman, that you were among the cosponsors of this measure as contained in H.R. 4326 in the last session.

The revenue impact of the measure has been estimated by the Joint Tax Committee to be the loss of a modest $19 million over the next five years.

Again, I appreciate the opportunity to share my views with the Committee.

Correction of Certain Minor Defects in the Generation Skipping Transfer (GST) Tax (H.R. 1099)

• **Purpose of the GST tax** - To prevent avoidance of estate or gift tax by means of a transfer that "skips" a generation, that is, by a gift or bequest of property to a beneficiary who is more than one generation below (younger than) the transferor. If the GST tax applies, the combined transfer tax rate (GST tax plus the estate or gift tax) can reach almost 80 percent

• H.R 1099 corrects two minor defects in the GST tax.[1] Although the tax (Code §§ 2601-2663) is complicated, the two changes proposed by H.R. 1099 are very straight forward.

• The first proposed change would **extend the present law "predeceased parent exception" to collateral heirs.**

> **Present law** - An outright gift or bequest by a grandparent to a grandchild will not trigger the GST tax (even though the transfer "skips" the predeceased parent's generation), if the grandchild's parent (the grandparent's child) is deceased. (Section 2612(c)(2) permits the grandchild to "move up" a generational level.) This relief provision in present law is known as the "predeceased parent exception" or the "move-up exception." Presumably, it is based on the absence of any estate or gift tax avoidance motive when the parent is predeceased.
>
> The predeceased parent exception is not available in the case of a collateral heir (grandniece or grandnephew) in analogous circumstances. It appears that relief for collateral heirs simply was overlooked in 1986, when the predeceased parent exception was adopted.
>
> **Proposed change** - Extend the present law "predeceased parent exception" to a transfer to a collateral heir (a grandniece or grandnephew) if (a) the grandniece's or grandnephew's parent (the transferor's niece or nephew) is deceased and (b) the transferor has no living lineal descendant (child, grandchild, etc.).[2]
>
> **Rationale** - Just as in the case of a grandchild whose parent is deceased, the transfer to a collateral heir could not have been intended to "skip" a generation in order to avoid estate or gift tax when the grandniece's or grandnephew's parent is deceased.

• The second proposed change would **extend the new predeceased parent exception to distributions from trusts.**

> **Present law** - The predeceased parent exception applies to an outright transfer of property to a grandchild, but not to a distribution to the grandchild from a trust. Since Congress specifically decided in 1986 to make the application of the GST tax uniform regardless of how property is transferred

---

[1] Predecessor bills (H.R. 4326 and S. 2445) were introduced in the 103d Congress during 1994.

[2] See Code § 2651(e)(1)(B) as proposed to be added by H.R. 1099, § 1(a) (predeceased collateral heirs are covered by the reference to "such individual's parent who is a lineal descendant of the parent of the transferor" and Code § 2651(e)(2) (limitation on application of subsection to collateral heirs).

(outright or in trust),[3] it appears that in drafting the predeceased parent exception, the distinction between outright gifts or bequests and distributions from trusts was overlooked.

Proposed change - Apply the new predeceased parent exception (which under H.R. 1099 will cover both lineal and collateral heirs) to trust distributions,[4] provided the parent was deceased at the time the trust assets were last subject to estate or gift tax (generally, at the time the trust becomes irrevocable).

Rationale - Treat trust distributions in the same manner as outright transfers. By treating them differently, present law limits the legitimate use of trusts in estate planning, including trusts that are established to distribute income to one or more tax-exempt charitable organizations.[5]

• Present law discourages donors with predeceased heirs from establishing charitable lead trusts, and certain other charitable trusts, because of a potential GST tax liability calculated at a 55 percent rate at the time trust assets are distributed to the donor's family members plus a prior estate or gift tax liability imposed at the time of the original transfer to the trust.[6] For this reason, H.R. 1099 is supported by more than 150 charities located throughout the United States.

• Present law also jeopardizes the use of trusts in other situations when they otherwise might be advisable. For example, when a trust might appropriately be used to avoid fragmenting the ownership of a farm or small business, its use imposes an undue risk of a needless GST tax. Worse yet, the tax may be imposed accidentally in the case of a revocable trust that is not properly monitored during the grantor's life before it becomes irrevocable just because the grantor's descendants happen to die in an unusual order before the grantor's death.

• In 1993, the Treasury Department testified that it did not oppose this legislation. The Treasury stated "The policies that underlie * * * [the predeceased parent exception] generally would support the proposed expansions to cover collateral heirs and to apply the rule to taxable terminations and taxable distributions [from trusts] as well as direct skips [outright transfers]."[7]

---

[3] See H.R. Rep. No. 426, relating to the Tax Reform Act of 1985 (the House predecessor to the Tax Reform Act of 1986), 99th Cong., 1st Sess. at 824 (1985).

[4] The reference in proposed Code § 2651(e)(1)(B) to "the transfer from which such interest is established or derived" covers trust distributions, or using GST tax terminology, "taxable distributions" and "taxable terminations."

[5] For example, in a so-called charitable lead trust, the donor requires the income of the trust to be paid to one or more charitable organizations for a specific period of time and, thereafter, provides that the trust principal is to be distributed to a noncharitable beneficiary -- typically a family member.

[6] A typical case might involve a donor whose child has died leaving a grandchild, or a donor with no lineal descendants (children or grandchildren), whose nieces and nephews have died and who wishes to benefit grandnieces or grandnephews. In either case, if the donor establishes a trust to provide an interim income interest to a charity, under present law, a GST tax will be due upon termination of the trust.

[7] Statement of Assistant Secretary Samuels before the Ways and Means Select Revenue Measures Subcommittee, pp. 6-7 (September 21, 1993).

• The problems which H.R. 1099 seeks to correct also have been raised by the Real Property, Probate, and Trust Law Section of the American Bar Association and The American College of Trust and Estate Counsel.

• Revenue effect - The Joint Committee on Taxation has estimated the revenue loss attributable to the changes to the GST tax that are contained in H.R. 1099 at $4 million per year or $19 million over 5 years (1996-2000).

UNIVERSITY OF

14 July 1995

Committee on Ways and Means
Hearings on Miscellaneous Revenue Issues
July 11-13, 1995

Statement of D. K. Hess
Vice President, Administration
University of Rochester
Rochester, New York 14627-0024

The Honorable Bill Archer
Chairman, Committee on Ways & Means
1236 Longworth House Office Bldg.
Washington, DC 20515-4307

Dear Congressman Archer:

The bill filed in the current session by Congressmen Houghton, Brewster, Jacobs and Shaw as H.R. 1099 contains an important, noncontroversial amendment to the predeceased parent exclusion (sometimes called the "move-up") in the generation skipping tax laws. It is critical because it removes an unintentional obstacle to charitable giving in certain trust situations and other situations involving childless individuals.

It is realized that this is a small issue compared to the major matters which occupy the concerns of Congress and the country at this time. Yet this issue is significant to the charities and individual family members who fall into the scenario which could generate up to an 80 percent death tax in those particular situations. Fortunately, this would appear not to be an everyday occurrence.

This matter is important to us and we are pleased that your Committee has included it among the issues being considered at these hearings. Thank you for the opportunity to comment and request that this letter be accepted for inclusion in the record of these hearings.

Sincerely,

D.K. Hess

WRITTEN STATEMENT OF GENE BRACEWELL

REGARDING REQUIRED NOTICES TO CHARITABLE BENEFICIARIES OF CHARITABLE REMAINDER TRUSTS

I. CORPORATE INTEREST OF WITNESS AND DESCRIPTION OF ITS PUBLIC SERVICE

Shriners Hospitals for Crippled Children is a public charity providing wholly free hospital and medical treatment for children in twenty specialty hospitals located in the United States, including three burn units and 17 orthopaedic hospitals. All of our facilities are available to any child whose parents cannot meet the costs of treatment without substantial hardship, regardless of the child's race, color, creed or sex. There is never a charge to a patient, a parent of a patient or a third party (such as government, or private insurance or a public welfare plan) for any inpatient or outpatient care. Shriners Hospitals meets its operating, research and capital expenditures budget from earnings on its substantial endowment and from charitable contributions from the general public. Shriners Hospitals' budget is $320,000,000 for 1995.

Shriners Hospitals is the beneficiary of over 1800 new estates per year. Almost ninety percent are outright bequests with the remainder being partial interest bequests. In 1994, about $135 million was received from decedents' estates as partial or final distributions, or as distributions from fully matured charitable remainder trusts. Income from investments (including capital gains) in 1994 was $310 million. Administrative costs (including fund-raising costs) approximate 2% of contributions; they are less than 1% of our total revenue.

II. SUMMARY OF SHRINERS HOSPITALS PROPOSAL

In the Committee's press release (FC-8), reference was simply made to proposed legislation which authorized notice to charitable remainder beneficiaries. In the Joint Committee's descriptions of the proposal,[1] an earlier draft of the notice proposal is described, which after our careful review and evaluation, is more cumbersome than H.R. 32. The earliest version (H.R. 5636 102d Cong.) was later pared down (H.R. 771, 103d Cong.) and is now H.R. 32 (104th Cong.). Part of the refinement was to take into account concerns expressed during debate on the measure in 1992. See, Cong. Rec. July 27, 1992 (H 6630-31, daily ed.). If the Committee chooses to go forward on this salutary legislation, we strongly urge that H.R. 32 be used as the starting point because it is a simpler, more expedient approach to the problem the legislation needs to address.

The principal purpose of the notice legislation is to ensure that charitable beneficiaries of charitable remainder trusts are made aware of their financial stake in these trusts on a timely and sufficient basis. The proposal has a notice requirement imposed on a fiduciary of an estate funding such a trust and an annual reporting requirement imposed on the trustee of a funded charitable remainder trust.

We have been party to numerous deferred gifts where we were not timely notified of our stake in an estate which passed to a charitable remainder trust, and funds were lost due to negligence or maladministration. Other charitable institutions have similar stories of comparable losses. It all comes down to the plain fact that all too often a charity is informed of its interest in a remainder trust only after the last life beneficiary dies, years after its funding. Absent any timely notice of current financial condition a charitable remainderman cannot hold a fiduciary accountable for non-feasance, misfeasance or malfeasance during the years of secrecy.

III. REASONS FOR ENACTMENT OF A SIMPLIFIED NOTICE AND REPORTING RULE

Charitable remainder trusts and other "split-interest" gifts represent an important source of funding for all charities. The National Audubon Society estimates that charitable remainder and other deferred gifts represent about 25% of the total contributions it receives. Many of Independent Sector's members -- especially universities, hospitals, social welfare organizations and religious groups -- derive a substantial part of their endowments from split interest gifts. Shriners Hospitals is a beneficiary of about 1000 pre- and post 1969 charitable remainder trusts.

Charitable remainder trusts ("CRTs") owe their popularity to their convenience and tax advantages. It enables a donor, in a single instrument, to make a sizeable charitable contribution, and at the same time, provide for the support of family members during their lifetimes.

The Internal Revenue Service recently disclosed that more than 47,000 CRTs filed federal tax returns on IRS Form 5227 during 1992. IRS data show that about 3,000 new CRTs are created and funded annually. Although the aggregate value of assets held in all funded trusts cannot be readily determined from IRS records, Shriners Hospitals believes that more than $10 billion is held in such trusts, excluding pooled income funds. One sampling of 15 bank and trust companies revealed that they serve as trustee for 3,125 CRTs with aggregate assets in excess of $725 million.[2] The Council for Aid to Education estimates that the amount of deferred gifts (principally CRTs) to some 1,100 private educational institutions totaled $670 million -- more than 10% of all gifts by individuals to such institutions during 1992.[3] A recent sample of newly created lifetime gifts to charitable remainder trusts indicates that for 1992, the average CRT gift was about $260,000 per trust.[4] This same report indicates that the total value (deductible and non-deductible) of the gifts to these trusts exceeded $150,000,000 for the charitable institutions surveyed. Ibid. Lastly, and of importance here, is that less than 20 percent of all funded trusts have professionals as fiduciaries, meaning that the donor, family members, or third parties, controlled the bulk of these split interest trusts. Ibid.

Despite the importance of CRTs to charities, 48 states do not require the charitable remaindermen to be notified of the commencement of probate proceedings or of trust transactions (such as asset sales) that may vitally affect charities' interests.

Two states have statutes specifically requiring notice to charities in circumstances where the executor and trustee are the same person: California and New York.[5] Several states have no relevant notice provision or provide expressly that notice is either not required or must only be given to the trustee of the charitable remainder trust, and not the individual beneficiary.[6] Thus, most state laws do not specifically address the question of notice to CRT beneficiaries. Rather, they provide generally that the executor or probate court must furnish notice of probate proceedings to "devisees" or "devisees and legatees,"[7] to beneficiaries "named in the will,"[8] or to "interested persons."[9] As is clear from a decision of the Wyoming Supreme Court,[10] it is anybody's guess whether a state court would construe the latter terms to include charitable remaindermen. Some states require that the attorney general[11] or other governmental agency[12] be notified of transactions affecting CRTs, but such officials, in practice, rarely communicate notice to charities directly.

Shriners Hospitals for Crippled Children, and other charitable institutions, believe that providing notice to charitable remainder beneficiaries of their interests in trusts, and in decedent's estates -- particularly at the commencement of probate proceedings -- would materially increase the value of property that charities ultimately receive from CRTs. In their experience, it is common for trustees of CRTs also to serve as executors of the corresponding estates, making potential conflicts of interest more likely. Under the current patchwork of state-law notice provisions, such CRTs are often administered for years -- even decades -- without the charitable remainderman even knowing of the trust's existence. Only after all income beneficiaries die, do trustees of CRTs typically inform charitable remaindermen of their vested remainder interest. By then, the passage of time will often have made it impracticable for a charity to

challenge trustee investment actions or certain discretionary payments made, or trustee, attorney or agency fee payments taken or other transactions that may have affected it adversely.[13]

The failure of states to prescribe any notice under its law affects the United States in its regulatory capacity. Prior to 1969, there were opportunities for abuse in making split-interest gifts to charity, enabling donors to unjustly claim tax deductions vastly in excess of the amounts charities ultimately realized. Congress responded by enacting Code sections 664 and 2055(e)(2), restricting charitable deductions for remainder interests to statutorily-defined types of trusts: annuity trusts and unitrusts.

These two provisions were designed to ensure a direct relationship between the contribution deduction claimed and the charitable benefit eventually received by the donee. It precludes a charitable deduction where "it is not probable that the gift will be ultimately received by the charity," for example, where the charity "has only a contingent remainder interest." H.R. Rep. 91-413 (Pt. 1), 91st Cong., 1st Sess., 58-59 (1969). It also prevents donors from "obtain[ing] a charitable contribution deduction for a gift of a remainder interest in trust to a charity . . . substantially in excess of the amount the charity may ultimately receive," e.g., where the trustee has discretionary power to invade corpus for the life tenant's benefit. S. Rep. 91-552, 91st Cong., 1st Sess., at 87 (1969).

Besides mandating changes to the form of governing instruments, Congress in 1969 enacted new penalty taxes aimed at deterring misfeasance by (among others) fiduciaries of CRTs. Under Code Section 4947(a)(2), the actuarial share of a charitable remainderman is subject to the same protections against self-dealing (IRC Section 4941), jeopardizing investments (IRC Section 4944), and taxable expenditures (IRC Section 4945) that apply to private foundations. Transactions in an estate destined for charity are also subject to penalty taxes if the fiduciary fails to comply with the Code's regulatory requirements. Rockefeller v. United States, 718 F.2d 290 (8th Cir. 1983) cert. den., 466 U.S. 962 (1984).

IRC Chapter 42 reflects Congress' strong policy that gifts destined to charity through CRTs not be frittered away through improper actions by fiduciaries. Wholly apart from cases of fiduciary malfeasance, moreover, Congress' objectives will be frustrated whenever the value of a CRT's assets is needlessly reduced below its value when the trust was created. The donor's estate tax deduction is keyed to the value of property transferred to the CRT. If the value of a CRT's property subsequently declines -- e.g., because trust assets are sold at improvidently low prices -- the amount ultimately received by charity will be reduced, and the legislative subsidy represented by the tax deduction is wasted.

The resources of the IRS are limited, and charitable remainder trusts (or private foundations) are at the very bottom of the Commissioner's list of enforcement priorities. There are no IRS audits planned in FY 95 for charitable remainder trusts (about 47,000), an audit coverage of zero percent (0%). Even if it was able to do so, the IRS could not possibly detect all cases of abuse or maladministration. Given these facts, the best prophylactic against devaluation of a charity's interest is oversight by the charity itself. If interested charities are immediately and constantly involved in monitoring monies held for them in trust - the enforcement burden of the IRS will be lightened and the objectives of Congress more fully realized.

IV. COMMON LAW REQUIRES FULL FINANCIAL DISCLOSURE; NO INVASION OF DONOR'S RIGHT TO OR EXPECTATION OF PRIVACY

We have found no common law right of privacy in trusts, especially charitable trusts. The opposite is true. Shriners Hospitals surveyed the common law of trusts and found no authority which prevents a vested remainderman from demanding, and receiving, an accounting from a fiduciary respecting assets under its care.

> ". . . prevailing American jurisprudence holds that a vested remainderman has

> standing to compel a trustee to account for his management of trust assets " Shriners Hospitals for Crippled Children v. Smith, 385 S.E.2d 617, at 618 (Va. 1989)

In support for its conclusion, the Virginia Supreme Court cited Restatement (Second) of Trusts Sec. 172; Bogert, Trusts and Trustees, (2d Ed.) §142 Scott and Fratcher, Law of Trusts, §143 (4th Ed. 1987).

Giving a donor his or her federal tax benefits implicitly gives the charitable remainderman an interest in assuring that the qualified trust is operated consistent with the subsidies derived by the private parties from the status of the remainderman. A trustee which attempts secrecy violates his trust; a donor that demands secrecy disserves the very person he sought to benefit:

> "That the settlor has created a trust and thus required that the beneficiary enjoy his property interest indirectly does not imply that the beneficiary is to be kept in ignorance of the trust, the nature of the trust property and the details of its administration. If the beneficiary is to hold the trustee to proper standards of care and honesty and to obtain the benefits to which the instrument and doctrines of equity entitle him, he must know of what the trust property consists and how it is being managed." Bogert, Trusts and Trustees, 2d Ed., §961.

What does the common law already require the trustee to disclose to the beneficiaries? Case law requires disclosure of -

1. Opinions of counsel (Scott, §173).
2. Papers relating to any possible self dealing by the fiduciaries or entities under their control before, during or after funding of the trust (Scott, §170); In Re Green Charitable Trust, 431 N.W. 2d 492 (Mich. 1988).
3. Papers relating to all amounts and sources of trust earnings, and allocation of income, expenditures, asset gains, asset losses, to individual beneficiaries and remaindermen (Bogert, §961).
4. Papers relating to tracing title to property administered by the Trustee (Bogert, §961).
5. Papers relating to the source and status of all trust investments (Marcellus v. First Trust and Deposit Co., 52 N.E.2d 907 (NY 1943).
6. Papers relating to compensation paid the fiduciaries, their lawyers and their agents (Cosden v. Mercantile Safe Deposit, 398 A.2d 460 (Md. 1979), cert. den., 444 U.S. 941 (1979). Shriners Hospitals v. Robbins, 450 So.2d 798 (Ala. 1984).
7. The visitation and touching of the physical property (tangible or intangible, real or personal) (Bogert, §961).
8. All books of account (Bogert, §961, Scott, §173, Restatement (Second) Law of Trust, §173).

Except for contingent beneficiaries, there is simply no case law approving a fiduciary keeping any secrets from a beneficiary, even in the face of a trust clause which relieves a trustee of disclosure, since it may be contrary to public policy to allow enforcement of a non-disclosure clause absent

very special circumstances. Matter of Estate of Hearst, 67 Cal. App. 3d 777 (Calif. 1977). Under existing law, a charitable remainderman, if it knows of its interest in an estate or charitable remainder trust, is authorized to obtain the federal tax return and tax return information from the Internal Revenue Service. See, IRC Section 6103(e)(1)(E)(ii) and (F). Despite this authorization, IRS has no published procedures explaining how affected persons should attempt access to otherwise confidential information.

The governing instrument of a qualified remainder trust contains numerous duties owed by the fiduciary to the remainderman, implicitly granting the remainderman the right to ascertain the fiduciary's faithful discharge of his duties. Parenthetically, the use of the charitable deduction, the income tax exemption, and the implicit shield from the grantor trust rules create a substantial debt owed by the donor to the charity. For these tax opportunities, donors must pay for their tax benefits by giving remaindermen options for oversight (of course, the income beneficiaries have that already).

Existing regulations require the trustee to pay out the correct annuity or unitrust amounts to the income beneficiary and underpayments and overpayments must be corrected.[14] The regulations require catch-up payments to be paid arising out of deferrals of the payment of a testamentary unitrust or annuity amount; payments must be made at fixed intervals; valuation of assets must be made; and, a governing instrument must impose limits on transactions with donors, fiduciaries and other disqualified persons. (Id). In addition, there may be contingencies which, if certain acts or events occur, accelerate the remainder, and cause the income beneficiary to forfeit its interest. Cf. IRC Section 664(f). If a fiduciary fails to adhere to the various governing instrument rules, the exempt status of the trust is jeopardized, putting all income and assets at risk.[15]

We would be remiss in not recognizing the role of state courts in authorizing and enhancing the rights of trust beneficiaries. However, a beneficiary needs to know about a trust before it can begin to use its state statutory or common law rights and a federal law giving notice is an inexpensive enforcement opportunity justified by the initial and continuing federal tax subsidies. The proposed legislation grants no new rights; provides no new rules on what is due a trust beneficiary; and burdens the trustee in only a de minimis, but compensable, way to accomplish a salutary result. We find no weight of state law, nor any well articulated reason, to preclude timely and complete disclosure of the information called for by H.R. 32.

V. CONFORMITY OF H.R. 32 TO SIMPLIFICATION CRITERIA

1. H.R. 32 satisfies the Ways and Means Committee test for simplification. The proposal would reduce, and not increase, compliance and administrative costs of the Internal Revenue Service. The proposed legislation will make available to charitable remainder beneficiaries, on a timely basis, the information they need to monitor and audit the administration of such trusts for charitable purposes. As a result, audit and review by the Internal Revenue Service will only be required to find Chapter 42 violations usually reported on IRS Form 4720, a confidential tax return.

2. The proposal would preserve under lying policy objectives of current law and not create or reopen opportunities for abusive tax planning. The proposed legislation would dramatically further the basic purpose of the charitable remainder regulatory provisions of IRC Sec. 4947(a)(2), viz, to ensure that charities receive the full financial benefits of the subsidized charitable remainder gift.

3. The proposal avoids significant shifting of tax burdens among taxpayers. It would not cause any dislocations whatsoever because no new burden is involved. The fiduciary of a CRT must now prepare tax returns and information returns for the IRS and by furnishing notice, or even a copy of a tax return, to the remainderman is a de minimis, and compensable, chore.

4. The simplification our proposal would achieve outweighs the instability resulting from making any statutory changes, as opposed to permitting statutory repose. The proposed legislation is necessary to maintain the basic integrity of the charitable remainder deduction scheme in the federal tax code. Without the legislation, a portion of the over $10 billion in assets in such trusts may never be received by the beneficiaries because of fiduciary misfeasance or nonfeasance, acting without any oversight or accountability whatsoever.

5. Revenue effects of the proposal would comport with current revenue and budgetary constraints. The proposed legislation would not decrease federal tax revenues but may increase revenues.

Shriners Hospitals for Crippled Children earnestly supports tax simplification and provisions directly affecting charitable institutions. H.R. 32, either as written, or as modified, furthers the Ways and Means Committee's simplification desires and authorizes charitable institutions to be watchdogs of gifts and bequests held by fiduciaries for them. Mr. Gibbons' bill is efficient, since it costs Government nothing; it is simple because it reduces paperwork; and, it is an effective way for beneficiaries to patrol and protect tax subsidized monies.

8. E.g., Wyo. Stat. Ann. Section 2-7-205 (1989)

9. E.g., Neb. Rev. Stat. Section 30-222 (1985); Va. Code Ann. Section 64-1-82 (1986); W.Va. Code Section 41-5-5 (1982); Wis. Stat Ann. Section 879.03 (1989).

10. Shriners Hospitals for Crippled Children v. First Security Bank of Utah, et. al., 770 P.2d 1100 (Wyo 1989), cert. den 496 U.S. 905 (1990).

11. E.g., N.J. Civ. Prac. Rul. 4:80-8 (1989); Or. Rev. Stat. Ann. Section 128.720 (1984); R.I. Gen. Laws Section 18-9-13 (1988); Tex. Prob. Code Ann. Section 123.001 (1987).

12. E.g., Va. Code Ann. Section 55-29 (1986) (trustee of CRT must make annual accounting to county or city commissioner); Va. Stat Ann Tit 14, Section 2501 (1974) (same to probate court). But see, Shriners Hospitals for Crippled Children v. Smith, 385 S.E 2d 617 (Va. 1989) where the Shriners (as a remainderman) had to sue a trustee for accounting information, incurring the fiduciary's own substantial legal fees to defend his improvident acts.

13. On March 31, 1982, the Tax Court decided Boeshore v. Comm'r, 78 T.C. 523 (1982). Until our tax counsel read the decision in a commercial tax service, we had no idea that we were a remainder beneficiary of the decedent's estate or that estate (and trust) funds were being expended in tax litigation. Although the decedent died May 28, 1976, we learned of our financial interest from a person other than the fiduciary (our lawyer) six years later.

14. See, Rev. Rul. 72-395, 1972-2 C.B. 340 and Rev. Rul. 88-81, 1988-2 C.B. 127.

15. Because Congress allows reformation of unqualified transfers, early notice to charity by an estate may assist it in achieving certain tax savings. See, IRC Sec. 2055(e)(3).

TESTIMONY OF W. GENE BURDEN
STATE OF ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Introduction

My name is Gene Burden. I am the Commissioner of Environmental Conservation for the State of Alaska. Prior to my appointment by Governor Knowles in December 1994 I served as Senior Vice President of Marketing and Operations for Tesoro Alaska Petroleum Company, Anchorage, Alaska. I thank you for the opportunity to describe the affects in Alaska of a current IRS requirement to add dye to tax exempt diesel fuel.

My testimony is based on my ten plus years of experience with Tesoro and my familiarity with the Alaska petroleum refining, marketing, and distribution businesses.

The Origin of the Problem

The Omnibus Reconciliation Act of 1993 included provisions requiring segregation of diesel fuel used for taxable purposes (generally "on road" use by vehicles) and nontaxable purposes such as power generation, home heating, commercial fishing, and other stationary uses.

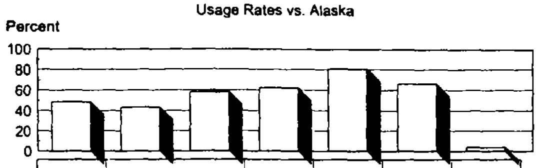
Alaska's reliance on diesel for nontaxable uses is unique

Alaska has four refineries that produce and market diesel fuel. Alaska's sparse population, enormous geography, limited distribution channels, and lack of demand for taxable diesel fuel present challenges that have been compounded by the requirement for diesel dyeing.

Road systems do not link the entire state. Approximately 65% of the state's communities are served solely by barge lines with only 35% served by the federal aid highway system. Alaskans rely on diesel fuel for home heating, power generation, commercial fishing, operation of construction equipment, and for on road vehicles; however, contrary to the rest of the country less than 4% of the diesel consumed in Alaska is used for taxable purposes. (The state's largest refiner indicates that less than 2.5% of its diesel is used for taxable purposes.) One distributor who supplies fuel to predominantly marine customers estimates that less than 1% of its sales go for taxable purposes. This means that Alaska distributors and refiners are dyeing from 96% to 99+% of their diesel fuel to satisfy IRS requirements to segregate the remainder.

The significance of Alaska's usage rate versus the rest of the country is illustrated in the following table which describes U.S. "on road" use and then a projection of taxable use by petroleum districts.

Comparison of U.S. and Regional Taxable Diesel
Usage Rates vs. Alaska



U.S. (Note 1)	PAD 1 (Note 2)	PAD 2	PAD 3	PAD 4	PAD 5 (Note 3)	Alaska
48.8	43.5	58.4	62.3	80.7	66.5	4.0

Note 1: U.S. data obtained for "on-road" use only. Source: National Petroleum News, June 1995 page 64.
Note 2: Petroleum District data ("PAD") derived from Petroleum Supply Monthly, April 1995. The fuel reported for non-road use was subtracted from total diesel sales generating a slightly different projection but still illustrating the range of the relationships between use in Alaska.
Note 3: PAD 5 includes Alaska, Arizona, California, Hawaii, Nevada, Oregon, and Washington.

Note: The 4% rate in Alaska is probably high as the state's largest refiner indicated sales of around 2% and a smaller refiner indicated less than 1%. Some suppliers dye over 99% of their fuel to comply with the requirements aimed at the less than 1 % that is taxable.

<u>IRS'S Objective is to Eliminate Illegal Sale of Nontaxed Diesel</u>

The opportunity to divert nontaxed diesel for taxable on-road uses has been recognized as a problem in a number of areas in the U.S. I recall that during the initial effort to obtain an exemption, a calculation was made of the tax increase expected from these requirements. I recall that the figure was reached by taking the quantity of illegal sales assumed by IRS to occur in the U.S. and make a similar assumption for Alaska. This generated a projected $500,000 in federal revenues that could be expected to be recouped; however there are a number of factors to suggest that the actual loss in Alaska is probably substantially below the national average. These factors include:

☑ Alaska's diesel fuel is exempted from the low sulfur requirements of the Clean Air Act because such a small percentage of vehicles use diesel and because of the significant costs associated with converting existing refineries to produce the fuel. As a result, the diesel produced in Alaska is not a candidate to enter the trade in other states.

☑ Transportation costs and storage limitations further insulate Alaska from organized schemes to avoid the federal tax for on-road diesel use.

☑ In addition, Alaska fuel distributors collected the federal tax for on-road diesel for many years prior to the dye requirement and there has been no indication of any significant abuses. The taxes will continue to be collected whether the dye is used or not thanks, in part to

an already existing compliance program for the taxable fuel facilitated by a Certificate of Use form that each distributor must obtain from each customer.

The Costs to Alaska Far Exceed Increased Revenues From Dyeing the Fuel

I conducted a telephone poll of the three largest Alaska refiners (Mapco, Tesoro, and Petro Star) on July 10-11, 1995 to obtain an update on costs associated with this requirement. One of the companies has installed injection systems at a cost of $125,000 and annual operating costs of over $100,000 plus the cost of dye which was not immediately available. One of the refiners indicated annual expenditures for the dye alone exceed $750,000 and that there are costs associated with personnel for the mixing procedures and associated accounting which were characterized as substantial.[1] Another refiner that presently splash blends the dye indicated concerns that new IRS regulations were going to mandate installation of expensive injection systems. Based on these discussions, a conservative estimate of annual costs to administer this program exceed $ 1 Million. In areas where only clear "taxable diesel" is available, purchasers intending to use the fuel for nontaxable purposes must file for a refund. This has prompted concern about the costs of floating these dollars.

There are reports that the added cost of dyeing diesel fuel is less than 1/2 cent per gallon. This may be true in the rest of the United States; however, one refiner/distributor indicates the cost should be based on the gallons sold as taxable that are not dyed. If that is done in Alaska there is a cost of as high as 11 cents for every gallon of taxable diesel sold. The end result is that the Alaska consumer pays those costs. The magnitude of the issue is illustrated by the Alaskan based Petro Marine services which sold over 75,000,000 gallons last year with only 600,000 gallons taxable -- well less than 1%. In Petro Marine's case approximately 74.4 Million gallons had to be dyed so they could sell 0.6 million clear taxable diesel.

There are other "costs" to Alaskans in addition to the imbalance of dollar costs versus tax revenues expected. There are inadequate storage tanks in Alaska to accommodate both taxable and nontaxable diesel fuel. In many rural locations, the communities rely on annual barge deliveries of diesel fuel.

The present regulations do not require, and the refineries do not inject dye into barges. This leaves the distributors with the choice of injecting dye at remote transfer points or charging tax on all sales. The splash dyeing of barge loads of diesel present unique Alaska challenges to the distributors and actually pose potential health and safety threats to their employees. The addition of the dye occurs on the vessel's deck and exposes employees to risk during the process, particularly in the range of weather extremes that occur in the areas served. There have also been concerns expressed about the safety of employees from exposure to the caustic dye handled during these blending exercises.

---

[1] This figure is consistent with Mapco's projections of expenses in an April 18, 1994 letter to Senator Murkowski that included a prediction that the dye expenses alone would cost three times as much as any increase in tax income.

One small refiner reported storage problems arising when volumes are inadvertently dyed. This again points to the lack of justification for construction of duplicate storage tanks when 96% to 98+% of the diesel is sold for tax-exempt purposes.

Diesel fuel for pleasure boats is taxed but not for fishing vessels. Virtually every marina in Alaska relies on common tankage, making segregation impossible absent significant investments for injection systems at every marina.

The current requirements for dyeing 96% to 99% of the diesel fuel in Alaska seems to fly in the face of reason. The irony was noted by an article in the Anchorage Daily News that quoted a local Alaska IRS agent. The gentleman, responding to the issue of the lack of storage tanks for both taxable and nontaxable diesel, said one component of the diesel tax funds the removal of leaking underground fuel tanks around the country. The agent said, "It serves one purpose, but defeats another (increasing demand for more tanks)." [2]

Thank you for the opportunity to provide my comments to the committee.

Anchorage Daily News, January 7, 1994

STATEMENT OF THE

AMERICAN BUS ASSOCIATION

ON H.R. 1947,

MISCELLANEOUS FUEL TAX CORRECTIONS ACT OF 1995

JULY 12, 1995

The American Bus Association appreciates this opportunity to submit a statement in support of H.R. 1947, the Miscellaneous Fuel Tax Corrections Act of 1995, and wishes to express its thanks to the Ways and Means Committee for looking at these and other excise tax issues. We are particularly interested in Section 4 of H.R. 1947 which is meant to correct what we understand are unintended problems for the intercity bus industry.

ABA is the trade association of the intercity bus industry with more than 700 bus and tour company members in the United States and Canada. Most of these companies are small businesses, many of which are family-owned. They operate regular route, charter and tour, airport express, special operations, and contract services. The ABA membership also includes another 2,300 travel and tourism organizations and suppliers of bus products and services who work in partnership with the North American

motorcoach industry.

Intercity bus companies are liable for only a portion of the federal diesel fuel tax. Prior to 1988, they paid the entire amount of the tax and had to file for a rebate for the amount for which they were not liable. Congress recognized the cash flow problem this was causing these small businesses and rectified it, effective in 1988, by collecting only the portion of the tax that was owed, affording the bus companies an exemption from the rest of it.

This system worked well for the bus companies until the Omnibus Budget and Reconciliation Act of 1993 made all of its changes relative to diesel fuel. Such actions were necessary, we were told, in order to "fix" an estimated billion dollar a year evasion of taxes from the Highway Trust Fund. Ironically, although the intercity bus industry never was accused of being any part of the evasion, it is this industry that is suffering from the solution to the problem.

Two provisions of the "fix"--changing the collection point of the tax and requiring tax-free, low sulfur diesel fuel to be dyed red--have resulted in a tremendous burden on the intercity bus

industry. The situation as it now exists in the industry is as follows:

The point of collection of the tax is at the terminal rack. Clear diesel carries the full 24.4 cents per gallon tax when it is dispensed at that point; red-dyed fuel carries no tax. OBRA '93 provides that fuel vendors may purchase clear diesel for farmers and state and local governments (who are totally exempt from federal diesel fuel tax), pay the full tax at the rack, sell it to their customers with no tax, and collect their refund (for the tax they paid) from the Internal Revenue Service expeditiously.

Vendors, who are willing to help, are not allowed to do this for intercity bus operators. Where does that leave these bus operators now?

By removing the need for state and local governments to use red-dyed diesel, Congress inadvertently removed the incentive for petroleum manufacturers to make it. The amount that intercity bus operators use is very small compared to that used by state and local governments, which include the nation's public transit systems and all other government vehicles powered by diesel fuel.

Because the bulk of the market has been eliminated from the purchase of dyed fuel, this fuel is a very rare commodity. Most of the petroleum companies are not offering it, and the bus industry understands and accepts that. However, it causes a major problem.

In lieu of red-dyed diesel fuel, the bus operators buy the clear diesel. Because the tax comes with the fuel, so to speak, they must pay the full 24.4 cents per gallon federal diesel fuel tax and then apply quarterly to the IRS for their refund, usually 17.4 cents per gallon, but in some cases all 24.4 cents. There is no expedited rate of return for the intercity bus operators and, in some cases, companies are owed thousands of dollars for months on end. At the very least, since the filings only are made quarterly, the bus companies are floating a permanent, interest-free loan to the government. This is causing them to encounter large cash flow problems because their operating capital is not being returned to them in a timely fashion. Many of ABA's members have told us of their difficulties and we have tried to relate them to the Congress and the IRS. Several months ago, we were notified by one company that it had received no refunds at all, not even from the first quarter of 1994, and it was owed a total of $350,000. This is a huge amount of money for

one independent, privately-owned bus company to be owed by the government.

In order to fix these problems, the intercity bus operators need to be treated like state and local governments and farmers for the purpose of purchasing diesel fuel. Section 4 of H.R. 1947, which modifies the IRS code, is intended to do this, and we applaud this effort. Vendors (otherwise known as marketers, jobbers, distributors) would buy the clear fuel, pay the full tax, get their refund from the government, and the intercity operators would pay the government the tax that they owe--which is what they were doing prior to OBRA '93. When a vendor does not do this for the operators and when the operators buy fuel on the road at the fully-taxed rate, they would continue to file with the IRS for their return.

For all of the reasons stated above, the American Bus Association supports the enactment of H.R. 1947, introduced by Congressman Jim McCrery and cosponsored by Congressmen Wally Herger and Andy Jacobs, in order to solve the problems and inequities now in place.

TESTIMONY OF MICHAEL SCIULLA
BOAT OWNERS ASSOCIATION OF THE UNITED STATES
BOAT/U.S.

I am Michael Sciulla, Vice President of Boat Owners Association of The United States. With over 500,000 members, BOAT/U.S. is the nation's largest organization of recreational boat owners in the country. I appreciate the opportunity to provide testimony for the record regarding the fuel problems now being experienced by recreational boat owners due to the Omnibus Budget Reconciliation Act of 1993 and the diesel fuel regulations issued by the Treasury Department on November 30, 1993.

As you know, the 1993 Act levied a 24.4 cents per gallon tax on diesel fuel used only by recreational boat owners. To collect this tax, the Treasury Department issued regulations mandating that diesel fuel be dyed - red for non-taxed commercial marine use and clear for taxed recreational use. An unintended consequence of these regulations is that fuel availability problems have arisen throughout the country where many "mom and pop" fuel retailers - who only have one diesel tank and pump - have been forced to choose between selling to commercial or to recreational boats.

We have received reports from recreational boaters over the past 18 months that clear "taxed" diesel fuel is now either difficult to obtain or entirely unavailable for miles along major stretches of our waterways. This is especially true in those areas where recreational boating and commercial fishing co-exist. Since fishing vessels generally purchase hundreds, if not thousands of gallons at a time every day, in comparison to the occasional 10 to 300 gallons for a recreational boat, the market has simply dried up for clear diesel fuel in these areas.

For example, there is no clear diesel fuel available along the entire 300-mile

stretch of the Intracoastal Canal, a major transit route, between Gulfport, Mississippi and Galveston, Texas. Clear fuel may be obtained at Vermillion Bay and Lake Charles, but these locations require side trips of at least a two-hour duration. Further south in Venice, La. there is only one marina carrying clear fuel. "This has created a monopoly on this fuel and the marina can charge any price it wants for taxed fuel," reports a diesel boat owner.

In New England, Taylor Marine Corp. reports that they sell the only diesel fuel in a 20-mile stretch between Plymouth Harbor and Scituate Harbor, Massachusetts. Since 80% of their business is commercial, they will no longer sell to recreational boats. In Rhode Island, O'Neill Oil Service of Peace Dale reports that since they sell most of their fuel to commercial boats they no longer serve recreational vessels. Along Maine's coast, many fuel docks, except those near major urban areas, cater solely to the commercial fishing trade.

On Florida's Gulf Coast, Yankeetown Boat Company no longer sells diesel fuel to recreational boaters forcing customers to travel 75 miles to Tampa Bay. In Crystal River, all fuel retailers have chosen to service the commercial trade. Recreational boaters must travel 50 miles to Tarpon Springs for clear fuel.

On the West Coast, the fuel docks at Santa Cruz and Port San Luis, California no longer sell clear fuel and in Monterey, Breakwater Cove Marina, which used to sell fuel to boats cruising south, reports that recreational boats must now travel 90 miles to obtain clear diesel fuel.

In Astoria, Oregon, the owner of a 32-foot powerboat reports that he must now travel one and one-half hours up the Columbia River to Cathlamet in Washington

state in order to obtain clear diesel fuel. There were five facilities in Astoria where he could purchase diesel fuel prior to the imposition of this federal dyeing scheme. "Cruisers come to our marina for extended visits each summer. They will avoid our city now that they can't get fuel for their boats. Furthermore, if I wanted to sell my boat in the area, who would buy it now," he asks.

It is not, however, simply a matter of inconvenience when a recreational boat owner is turned away by a diesel fuel retailer. It can be a serious safety issue. Unlike the highways where there is diesel fuel on almost every other corner, diesel fuel docks on our waterways may be located hours, if not days apart. The owner of a truck or automobile running out of diesel fuel may lose some time. The skipper of a boat running out of fuel in bad weather conditions or at night can lose his life.

Not only are these regulations making it difficult or impossible for recreational boaters to find fuel, but many family-owned marina's have suffered significant business losses. For example, a marina in New Bern, North Carolina has one tank and pump. The operator reports that by choosing to sell clear fuel to recreational boaters he is, in effect, being forced by the government to give up all of his commercial fuel customers. The reverse holds true for the Holiday Harbor Marina in Pensacola, Florida which used to sell nearly 40% of their fuel to recreational customers and now only sells to commercial boats.

Installing an additional fuel tank and pump is just not a viable option for

most small marine fuel retailers due to prohibitive costs and environmental regulations.

According to J.R. Wynne of PetroPac, Ft. Lauderdale, Florida, the cost of installing a second fuel tank and dispensing equipment, including the monitoring devices and alarms which are required for environmental protection, could cost a marine fuel retailer from $12,000 to $100,000 depending largely on whether an above ground or inground tank is installed.

Given these costs, it is highly unlikely that a marine fuel retailer, whose primary business is serving commercial vessels, will make the added investment necessary to provide clear "taxed" diesel fuel to recreational boats. Simply put, it would just take too long to recoup the expense.

It is clear to us that it was never the intent of Congress to cause this potential safety problem and to create this hardship for consumers, many of whom have considerable investments in their diesel-powered boats, or to force small "family" businesses to lose business. Since the Treasury Department maintains that existing law affords it very little flexibility in interpreting how the diesel tax should be collected from recreational boats, we urge you to include the provisions of H.R. 1956, sponsored by Congressman Clay Shaw, in the next tax bill considered by this committee.

H.R. 1956 would 1) require the Treasury Department to assess the effectiveness of various procedures for collecting excise taxes on diesel fuel used by recreational boaters and report to Congress within 18 months the results of

the study, including any recommendations; 2) suspend collection of the tax for two years while the Treasury Department conducts this study and; 3) re-institute the tax and the current collection procedure at the end of this two-year moratorium if Congress has not enacted legislation to create a new collection procedure.

The other option would be to simply eliminate the tax on recreational diesel fuel. As you know, this tax is due to expire in four years - at the end of this decade. It was initially conceived of as a temporary retail tax by Congress in order to raise revenues to offset the repeal of the infamous "luxury" tax on boats. As you may recall, that tax did not hurt the so-called "rich". They simply stopped buying boats. Instead, hundreds of thousands of boat builders and their employees lost their jobs before the tax was repealed.

The elimination of the tax would involve very modest revenues. According to a 1992 report by Price Waterhouse for the U.S. Fish and Wildlife Service, recreational boats consume less than one percent of all fuel sold and diesel fuel used by the nation's 400,000 diesel boat owners amounts to only five percent of this amount, or about 46.6 million gallons. A tax of 24.4 cents per gallon should be generating about $11,370,000 per year. I am at a total loss to understand how "offsets" as high as $40 million per year have been estimated by the Joint Committee on Taxation.

On behalf of the thousands of BOAT/U.S. members who own diesel-powered boats, I would like to thank you for the opportunity to present our concerns.

The Honorable Bill Archer
Chairman
Committee on Ways and Means
United States House of Representatives
1102 Longworth Office Building
Washington, D.C. 20515 - 6348

Dear Mr. Chairman:

We are writing to provide you testimony upon two of the miscellaneous tax proposals for which public hearings were held on July 11-13, 1995[1]. Although we understand that at the present time oral testimony on these proposals has not been scheduled, we would welcome the chance to testify in person should that opportunity become available. In making this submission, it is our intent that this material be included in the written record of the hearing.

Western Pioneer, Inc. ("Western Pioneer") is a Washington corporation providing bulk fuel sales and delivery to various locations throughout the Alaska bush. We operate under the trade name of "Delta Western Fuels", and accordingly, we refer to ourselves in this letter as "Delta Western". Delta Western is keenly interested in the proposal set forth at page 111 of the *Description of Miscellaneous Tax Proposals* relative to exempting diesel fuel sold in Alaska from the requirement that non taxable fuel be dyed. It is for this reason that we today submit this testimony.

The locations at which Delta Western sells diesel fuel throughout the Alaska bush are remote and have relatively few inhabitants. Most of the diesel fuel we sell is non taxable because it is used for heating rather than highway transportantion. The volume of

---

[1] These proposals were described in the pamphlet issued by the Joint Committee on Taxation, *Description of Miscellaneous Tax Proposals* (JCS-19-95), July 10, 1995. For simplicity, we refer to this in the text simply as the "*Description of Miscellaneous Tax Proposals*".

diesel fuel (as well as other fuels) which are sold at any one bush location is usually quite small. Often, there is inadequate infrastructure (primarily tanks and piping) to keep non taxable (i.e., dyed diesel) fuel physically segregated from the taxable (i.e., undyed fuel). While means do exist to try to deal with these problems (such as a dye injector system), the capital costs of such improvements are relatively large in relation to the margin on our sales. This makes it unfeasible to use the dye injector system. In some cases, the remote village or other customer itself will own the tank and infrastructure, not Delta Western, again making it unfeasible to add the system since their finances are usually precarious.

Moreover, even if the costs of the capital improvement could ultimately be justified, those costs would have to then be recovered from the ultimate end users of the diesel fuel. Since many of the bush residents exist on a subsistence basis off the land, these customers could not bear the added costs.

We do not wish to belabor the point, Mr. Chairman. The Alaska bush is a unique and beautiful place which cannot be fully comprehended unless one has spent time there. For this reason, Delta Western supports the proposal to exempt diesel fuel being sold in Alaska for non taxable uses from the dyeing requirement.

Thank you, Mr. Chairman, for the opportunity to provide you this testimony. Again, Delta Western would very much appreciate the opportunity to present oral testimony upon the diesel dyeing issue. Delta Western's designated contact persons upon this legislation is Thomas A. Crandall, Chief Financial Officer. His address and telephone number are 4601 Shilshole Avenue N.W., P.O. Box 70438, Seattle, WA 98107-0438 and (206) 781-4714. Please do not hesitate to contact us if we can provide further information.

Sincerely,

The Honorable Bill Archer
Chairman
Committee on Ways and Means
1104 Longworth House Office Building
Washington, D.C. 20515

Dear Mr. Chairman:

We are writing to ask you to include the provisions of **H.R. 1821, The 1995 Marine Diesel Tax Reform Act** in the miscellaneous tax bill the House Committee on Ways and Means is preparing to markup later this summer.

As you know, Section 13242 of the 1993 Omnibus Reconciliation Act requires that diesel fuel which is sold for use in a recreational boat must be non-dyed, clear diesel fuel, and that a Federal excise tax be added at the refinery level.

Clear, taxable fuel may be offered for sale to recreational boaters, while dyed non-taxable diesel fuel is offered for sale to commercial boaters. In effect, this provision forces commercial vendors of marine diesel fuel to either dispense two types of diesel fuel which must be stored in separate tanks, often at the unnecessary and excessively burdensome cost of building an additional tank, or to offer only one type of diesel fuel, usually the dyed, which is not available for sale to recreational boaters.

While this tax provision was meant to ensure that recreational boaters paid their fair share of marine diesel fuel taxes, it has instead created a disastrous situation where many recreational boaters cannot find clear, non-dyed taxable fuel for their use. This provision often forces boaters to travel long, often perilous distances at sea, in the search for diesel fuel.

H.R. 1821 would amend this marine diesel fuel tax provision to allow all boaters, both commercial and recreational, to purchase dyed diesel fuel and pay applicable taxes at the pump. H.R. 1821 would make it easier for fuel vendors to offer taxable fuel for sale while making it easier and safer for recreational boaters to purchase this fuel. The greater availability of dyed diesel fuel could even lead to an increase in revenues to the Treasury. Commercial boaters would remain exempted from this tax.

This problem is not specific to one particular district or state. Boaters nationwide are suffering from the unavailability of diesel fuel at local marinas. By supporting this legislation as a provision of your tax bill you will be ensuring safe and fair access to diesel fuel for all boaters. Thank you for your consideration of this important matter. We look forward to hearing from you.

Sincerely,

Sam Farr

July 13, 1995

The Honorable Bill Archer
Chairman
Ways and Means Committee
1102 Longworth House Office Building
U.S. House of Representatives
Washington, D.C. 20515

Dear Mr. Chairman:

I am writing to express the support of Greyhound Lines, Inc. for H.R. 1947, the "Miscellaneous Fuel Tax Corrections Act of 1995", sponsored by Congressman McCrery and cosponsored by Congressmen Herger and Jacobs. Section 4 of H.R. 1947 is intended to put intercity buses in the same category as transit buses for purposes of payment procedures for fuel used in a "nontaxable use". This would remove a serious cash flow problem for intercity buses that was inadvertently created by the red dyed fuel requirements imposed by the Omnibus Budget and Reconciliation Act of 1993.

Intercity bus companies are partially exempt from the federal fuel tax. Prior to 1988, intercity bus companies had to pay the entire federal fuel tax and then seek a refund. Recognizing the cash flow burden that this represented to private operators trying to provide a public service without operating subsidies, Congress in 1988 specifically provided that "no tax shall be imposed" on intercity bus operators except to the extent that the tax is not refundable because of the nonapplicability of the exemption. 26 U.S.C. sec. 4093. Given the months long refund procedures of the IRS, this provision provided a cash flow lifeline for many intercity bus companies.

In the Omnibus Budget and Reconciliation Act of 1993, Congress enacted a set of fuel tax dyeing provisions that have had the unintended effect of negating that provision and putting intercity bus operators back where they were prior to 1988, that is, having to pay the full tax and then file for a refund.

Specifically, Congress crafted a new section 4082, which required that all diesel fuel destined for a nontaxable use be dyed pursuant to IRS regulations. Only such dyed fuel could be purchased at the terminal rack without payment of the full tax. In new section 4082(b)(3), Congress defined intercity bus usage as a "nontaxable use", thus clearly recognizing that intercity bus companies should continue to be able to pay only that part of the tax from which they were not exempt.

Congress intended that dyed fuel would be available to nontaxable users; however, it is now clear that red dyed fuel, which intercity bus operators must use, is not available and is not likely to become available. This has caused a serious cash flow problem for Greyhound. Greyhound's quarterly refunds since the enactment of OBRA 93 have averaged approximately $1.5 million. The last refund that Greyhound received was for the second quarter of 1994. Greyhound gets no interest during the period that the refund requests are being processed.

Thus, assuming that the IRS continues to take 9-12 months to process refunds, OBRA 93 is causing Greyhound to make a continuous interest free loan to the IRS of between $4.5 and $6 million. Greyhound simply cannot afford this. We, along with other intercity bus companies, are providing the only form of low cost, intercity public transportation to over 5000 communities nationwide and are doing so without operating subsidies. Greyhound emerged from Chapter XI reorganization in late 1991 and at the end of 1994 went through an economic restructuring that narrowly averted another bankruptcy filing. If Greyhound is to continue to provide the nationwide public service that it now provides, it must avoid financial penalties such as that inadvertently imposed by OBRA 93.

There are several reasons for the unavailability of red dyed fuel, the most important being another provision in OBRA 93. That provision, new section 6427(l)(5)(A), empowers vendors to sell farmers and state and local governments clear fuel tax free and then to file for an expedited refund for the tax that the vendor paid at the terminal rack.

In light of this provision and the fact that state and local governments are the main potential users of red dyed fuel, producers and vendors are simply not going to the expense of purchasing the equipment to supply red dyed fuel. Thus, intercity bus operators cannot get red dyed fuel from their suppliers and are left in the unintended position of having to buy clear fuel, pay the full amount of the tax and then file for a refund.

Another development that has prevented intercity bus companies from using red dyed fuel is that a number of states including Montana, Indiana, Wisconsin, Nebraska, and North Carolina have adopted laws or regulations prohibiting any entity but state and local governments from using red dyed fuel. Thus, even if red dyed fuel were widely available, Greyhound and other intercity bus companies could not use it in these states without being in violation of state law.

To cure this anomaly and to put intercity bus operators back in the position that Congress intended them to have, section 6427 should be modified to include intercity bus operators in the group entitled to use clear fuel without paying fuel tax to the extent that they are exempt. Section 4 of H.R. 1947 is intended to accomplish that result. Pursuant to that provision, vendors would file for an expedited refund for the tax that they paid on fuel

sold to intercity bus operators following the same procedure that they use for state and local governments. Intercity bus operators would remain responsible for separately paying the 7.4¢ per gallon fuel tax, which is the portion of the fuel tax from which they are not exempt. Of course, intercity bus companies must retain the right to file for a refund when purchasing from a vendor who is unable or unwilling to use the vendor refund procedures.

There should not be any revenue effect from such an amendment since the rate of tax owed by intercity bus operators is not changed and the amendment simply provides a mechanism to accomplish what Congress intended in OBRA 93, that is, to enable intercity bus operators to continue to pay only that part of the federal fuel tax from which they are not exempt.

For these reasons, Greyhound respectfully urges the adoption of H.R. 1947. Thank you for your consideration of this request. We would greatly appreciate it if this letter could be included in the record of the hearings that the Committee has been conducting this week on miscellaneous matters.

Sincerely yours,

Theodore Knappen

STATEMENT BY JACQUE JOHNSON, DIRECTOR
FEDERAL GOVERNMENT RELATIONS
NATIONAL MARINE MANUFACTURERS ASSOCIATION

SUBMITTED TO THE COMMITTEE ON WAYS AND MEANS
OF THE U.S. HOUSE OF REPRESENTATIVES
REGARDING THE CURRENT SCHEME FOR COLLECTING
THE EXCISE TAX ON DIESEL FUEL
USED IN RECREATIONAL BOATS

On behalf of the members of the National Marine Manufacturers Association (NMMA), I want to bring to the Committee's attention the significant unintended problems created for marina operators and recreational boaters by the current diesel fuel tax scheme. These problems are national in scope and affect every area of the country with significant boating activity. The Chairman and Members of the Committee deserve much credit for considering ways to improve the federal diesel fuel excise tax law, and we are grateful for the opportunity to present our views on this serious and continuing problem.

NMMA is the nation's leading trade association representing over 1600 members that manufacture recreational boats, engines, and related products. Many members also own and operate marinas that sell diesel fuel. Our members range from small proprietorships to Fortune 500 companies.

We offer the following comments regarding the current scheme for collecting the excise tax on diesel fuel used in recreational boats and the legislative solutions proposed to address the problems created by the current scheme:

DESCRIPTION OF THE CURRENT SCHEME

The current scheme for the collection of the excise tax on diesel fuel used by recreational boaters resulted from provisions of the Omnibus Reconciliation Act of 1993. These provisions (1) moved the point of collection of the diesel fuel excise tax to the point at which the diesel fuel is removed from registered terminal facilities, (2) repealed the exemption from the federal excise tax on diesel fuel for recreational motorboat use, and (3) prohibited a fuel retailer from selling or holding for sale dyed (untaxed) diesel fuel for a taxable use, even if the retailer intended to collect the tax from taxable customers, such as recreational boaters, and remit it to the Internal Revenue Service.

PROBLEMS CAUSED BY THE CURRENT SCHEME

The current scheme for the collection of the excise tax on diesel fuel used by recreational boaters has created very serious unintended consequences for marine fuel retailers, such as marina operators, and recreational boat users. Marina operators have been forced to choose either (1) to incur the significant costs and regulatory burdens of having separate fuel storage tanks from which to pump untaxed (dyed) and taxed (undyed) diesel fuel or (2) to pump only one type of diesel fuel (either dyed or undyed). Many marina operators can only afford to maintain one fuel storage tank and have chosen to sell only untaxed (dyed) diesel fuel to commercial boaters.

Under the current scheme, recreational boaters are not allowed to purchase the untaxed (dyed) diesel fuel carried as the only diesel fuel by many marina operators; therefore, diesel fuel has become unavailable to recreational boaters along major stretches of the nation's waterways. With fuel unavailable, there is a serious threat that boaters may run out of fuel and become stranded before they are able to find a marina that sells taxed (undyed) diesel fuel. Indeed, the Committee has received testimony that many recreational boaters have had to travel for hours and longer to find a marina selling taxed (undyed) diesel fuel.

In addition to the loss of revenue which results from not being able to sell fuel to the recreational boaters, there is another significant unintended consequence of the dyeing scheme to marina operators, who are mostly small business people. It also affects their non-fuel sales activities.

Often when recreational boaters stop to purchase fuel at a marina, they will also purchase incidental items, such as groceries and boating and fishing related products. Additionally, recreational boaters on longer voyages may rent transient slips from marinas. According to our member operators this aspect of their business can contribute up to a third of their revenue. When recreational boaters bypass marinas who can not accommodate their fuel needs, those marinas are denied the opportunity to engage in essential activities often critical to their continued profitability and even commercial existence.

LEGISLATIVE SOLUTIONS PROPOSED

We support H.R. 1956 introduced by Representative Clay Shaw earlier this month. This bill addresses the problems created by the current scheme in a practical manner by:

- Having the Treasury Department, in consultation with the affected industries, assess the effectiveness of various procedures for collecting excise taxes on diesel fuel sold for use, or used, in recreational boats and report to Congress within 18 months the results of the study, including any recommendations.

- Suspending collection of the tax for two years while the Treasury Department conducts this study.

- Re-instituting the current collection procedure at the end of the two-year suspension period if Congress has not enacted legislation to create a new collection procedure.

There are other legislative proposals that have been introduced that are intended to address the problems with the current collection scheme. These proposals would require marina operators to ascertain the taxable status of each diesel fuel purchaser. For a number of reasons, we believe that solution could unintentionally create as many problems as it seeks to eliminate. That type of collection scheme, along with others, is included within the scope of the study which would be required under H.R. 1956.

NMMA believes that the only way to completely address this issue and avoid adopting a solution fraught with unintended problems is to suspend the collection of the tax while the Treasury studies the issue. This approach would make diesel fuel available once again to recreational boaters while at the same time requiring a complete study of the problem before adopting a solution.

CONCLUSION

We believe that legislation is necessary immediately to ensure that diesel fuel is available to recreational boaters across the country. H.R. 1956 would ultimately lead to improved collection of the diesel fuel tax, prevent a potentially serious safety hazard to recreational boaters, and improve the economic viability of many marina operators. Therefore, we respectfully ask that the Committee move H.R. 1956 forward as expeditiously as possible so that it can be enacted into law prior to the end of the 1995 boating season.

NEW ENGLAND FUEL INSTITUTE

Phone: (617) 924-1000 ▪ Fax: (617) 924-1022

The New England Fuel Institute ("NEFI") hereby submits these comments and proposals to the House Committee on Ways and Means as it considers the Miscellaneous Tax Provisions. NEFI is an association of more than 1300 home heating oil marketers located throughout the six New England states. Most of NEFI's members are small businesses operated by the same family for three or four generations.

NEFI supports the current diesel fuel excise tax structure that places the point of collection at the terminal rack (loading platform) adopted as part of the Omnibus Budget Reconciliation Act of 1993 (P.L. 103-66). The program has clearly resulted in a reduction in tax evasion. However, because on-highway diesel fuel and home heating oil are essentially the same product, the Internal Revenue Service ("IRS") regulations implementing the Act have created unintended problems for legitimate businesses trying to comply with the law. NEFI respectfully requests that Congress seek a greater balance between the benefits of measures designed to minimize evasion and the undue burden such measures often impose on small home heating oil marketers.

I. Current Law

As indicated, diesel fuel and home heating oil are essentially the same refined petroleum product. Tax is imposed based on the use of the product. In general, diesel fuel sold for on-highway use is sold undyed and is subject to tax at the rate of 24.4 cents per gallon. Diesel fuel sold for such off-highway uses as heating, farming or construction, or for use by a state or local government must be dyed red at a precise specified concentration; failure to comply with the dye concentration, even if the dye is plainly visible, can subject marketers to substantial penalties. Dyed diesel fuel is sold without the imposition of tax.

II. Discussion and Proposals

A. Operational Problems

The 1993 Act has created new operation problems for home heating oil marketers that they never faced before. First, if a marketer accidentally adds dyed fuel to a tank of undyed, tax-paid fuel, the marketer is forced to sell the entire mixture only for tax-exempt purposes. He is not able to obtain a refund or credit for the tax paid as part of his purchase price from his supplier at the terminal rack. Second, if a marketer spills tax-paid diesel fuel, even though he can document the amount of fuel lost, he cannot obtain a refund or credit.

Such problems did not occur before 1993. At that time there was no color distinction between diesel fuel used for different purposes; therefore, there was no such thing as an accidental mixture; all of the fuel was the same. In addition, home heating oil marketers purchased diesel fuel at the terminal without the imposition of tax; the tax was imposed farther down the distribution chain, when the fuel was delivered and its purpose could be determined. Prior to 1993, if a marketer spilled oil, he could not recover for the lost product, but because no tax had yet been imposed, he experienced no loss of the taxes paid.

Such operational problems create serious financial losses, which significantly reduce the ability of small businesses to obtain adequate supplies of heating oil to meet customer demand during the winter season. Thus, customers are often lost to much larger companies, and they are difficult to get back.

Recommendation:

Accordingly, NEFI urges Congress to provide home heating oil marketers with a refund or credit for these operational losses.

B. Ultimate Vendor

At times a home heating oil marketer will purchase a truckload of undyed, tax-paid diesel fuel for sale to a customer using the fuel on-highway. Unfortunately, the customer may not take all of the truck load, and the marketer, who has no storage, may have nowhere to put the fuel oil. Thus, he may be forced to sell the remaining tax-paid fuel to homeowners located near his on-highway customer.

Homeowners are tax-exempt users, they do not want to buy tax-paid fuel and seek their own refunds, as permitted under current law. The process is too complicated and the amounts are too small. Therefore, the marketer must sell the product without passing along the tax and absorb the loss. Under the Internal Revenue Code, only the homeowner is entitled to the refund.

Recommendation:

Thus, to minimize this type of operating loss, the marketer should be able to sell the fuel without passing along the tax and seek an expedited refund as the "ultimate vendor." Marketers are already permitted to follow this procedure for sales of tax-paid diesel fuel sold to other tax-exempt users -- farmers and state and local governments. There is no justification for distinguishing between different tax-exempt consumers.

C. Kerosene

1. Current Law

Under current law, kerosene is classified as an "aviation fuel" and is taxed accordingly. This classification is based on the fact that more than 90 percent of all kerosene in the United States is used for aviation purposes. If kerosene is blended into diesel fuel/home heating oil to prevent the fuel from congealing, it becomes either diesel fuel subject to tax or home heating oil which is tax-exempt and must be dyed.

NEFI strongly believes that kerosene should remain classified as "aviation fuel." The Department of the Treasury believes that the classification of kerosene as an "aviation fuel" creates an opportunity for tax evasion. NEFI questions whether there is evidence of significant evasion resulting from the current classification. Many of the same opportunities for evasion have existed for years, and it has never been a problem.

2. Treasury Proposal

Treasury has proposed reclassifying kerosene as "diesel fuel" and subjecting it to the tax and dye requirements. If kerosene is sold undyed, the tax is imposed when it leaves the terminal rack. If kerosene is dyed red when it leaves the terminal, it is exempt from tax. The Treasury proposal would also address (1) kerosene destined for aviation use, and (2) sales of undyed kerosene to a consumer for use as heating oil. In the latter case, the marketer would buy the undyed fuel tax-paid, sell the fuel without passing on the tax and as the "ultimate vendor" would obtain a 20 day refund for the tax paid as part of his purchase price from the terminal.

3. Limited Storage

Storage space is severely limited at most terminal facilities. Facilities in the Northeast and elsewhere typically handle diesel fuel, kerosene/jet fuel and gasoline. With the numerous segregation requirements resulting from the rules for reformulated gasoline and high and low sulfur fuel oil, there is little tankage available. Thus, a terminal that sells kerosene will most likely keep only one tank for this product. It will be undyed to provide flexibility. If the kerosene is sold undyed it will be taxed. If it is purchased for heating, it most likely would be splash blended with dye (the dye is added manually) and no tax would be imposed. However, the marketer buying from the terminal may buy undyed, tax-paid kerosene and use it in two ways:

1. He may sell the undyed fuel directly to a trailer park consumer or other end-user; or

2. He may blend the undyed, tax-paid kerosene into dyed diesel fuel to prevent congealing.

In either instance, the marketer should be able to obtain the 20 day refund.

Recommendation:

NEFI believes that Congress should maintain the current classification of kerosene as an "aviation fuel." However, if Congress adopts the Treasury proposal, it is essential that a home heating oil marketer be able to obtain the expedited 20-day refund in either instance -- when the marketer sells the undyed fuel directly or when it is blended into dyed home heating oil.

D. Dye Concentration

Section 6714 of the Internal Revenue Codes provides that, if a person willfully alters the strength or composition of the dye in diesel fuel, he is subject to a penalty of $10 per gallon. This provision may not be limited to a marketer who dilutes the dye concentration with the intent of evading the tax. Indeed, it may also apply to a marketer who adds kerosene (a less viscous product) to dyed diesel fuel to keep the diesel from gelling at very low temperatures (i.e. minus 20 or 30 degrees Fahrenheit). By adding the kerosene, the marketer dilutes the dye; however, even if the dilution is not significant, it is blended intentionally.

IRS Notice 94-21 permits the blending of kerosene into dyed diesel fuel so long as the dye concentration is not diminished. As a practical matter, small independent home heating oil marketers do not have the capability to add more of the costly dye to the diesel-kerosene mixture. This procedure can only be performed at the more sophisticated terminal facilities. Therefore, it is inappropriate to expose small home heating oil marketers to the potential liability of $10 per gallon when they have no intent of evading the excise tax, and they do not do so.

Many assume that this problem will be alleviated if kerosene is reclassified as "diesel fuel;" they believe that only dyed kerosene would be added to dyed diesel fuel and thus, there would be no dilution of the dye concentration. However, that is not the case. As explained above, storage tank space is very limited at terminals; thus, it would be unlikely for terminals to store both dyed and undyed kerosene at their facilities. In all probability, they would maintain only one tank -- containing undyed kerosene. Thus, marketers buying from a terminal are

still likely to be forced to add undyed kerosene (tax-paid) to dyed home heating oil (diesel fuel). Under these circumstances, the marketer should be able to (1) obtain a refund for the tax included in the purchase price of the kerosene, and (2) market the diesel fuel with dye concentration that ensures simply that the dye is visible.

Recommendation:

Accordingly, NEFI recommends that the dye concentration level be the same as that established by the regulations of the Environmental Protection Agency -- the dye must be visible within the fuel.

III. Conclusion

The New England Fuel Institute commends the Congress for its consideration of changes to the diesel fuel excise tax structure. In sum, NEFI recommends:

(1) providing refunds for limited types of operational problems;

(2) providing expedited refunds for home heating oil marketers selling undyed, tax-paid diesel fuel to homeowners and other tax-exempt users;

(3) retention of the current classification of kerosene as an "aviation fuel;" and

(4) modification of the standard applicable to the dye concentration in tax-exempt diesel fuel.

Adoption of these recommendations would permit legitimate businesses to continue to operate and maintain economic viability; and moreover, would not diminish current efforts to minimize evasion.

Thank you.

Statement of
Mayor George Ahmaogak
North Slope Borough, Alaska
Before the
United States House of Representatives
Committee on Ways & Means

July 27, 1995

I am George N. Ahmaogak, Sr., Mayor of the North Slope Borough in the State of Alaska. The Borough is a political subdivision of Alaska, and encompasses approximately 89,000 square miles of the northernmost region of the State. The vast majority of our Borough's population are Inupiat whose ancestors have inhabited the area for generations, surviving the harsh climate primarily through subsistence hunting. The combination of the Inupiat lifestyle, harsh climate, and extremely remote situation of the villages make the Borough's infrastructure quite unique.

I submit this testimony in support of an exemption for Alaska from the diesel fuel dyeing requirements set forth by the IRS under the Omnibus Budget Reconciliation Act of 1993. The requirements are designed to help the Department of Treasury recapture millions of dollars in taxes which have been evaded nationwide by failing to distinguish taxable diesel from non-taxable diesel. However, more than 96% of the diesel used in Alaska is non-taxable, and State regulations are already in place to deter fraud with respect to the remaining taxable diesel. The IRS requirements, therefore, not only fall short of fulfilling their purpose on the North Slope -- they place an incredible and unnecessary monetary burden on consumers and business men and women who provide diesel to the Slope.

Both the storage and dyeing requirements of the IRS regulations are incompatible with the conditions and infrastructure on the North Slope. In many of the diesel facilities that currently provide for small communities, taxable and nontaxable diesel share storage space, enabling consumers to obtain fuel for all of their needs. These facilities can not afford separate storage facilities, and ultimately consumer choices would be severely limited.

The dye requirements, in addition to being prohibitively expensive, would pose an unecessary occupational hazard to workers. I am particularly concerned about a practice used to dye fuel in barges that involves the use of hazardous chemicals, called "splash dyeing." Splash dyeing would threaten the health and safety of workers when applied under the often-harsh maritime conditions off Alaska's North Slope.

The State of Alaska, because such a small percentage of its vehicles use diesel, has already been exempted from the low sulfur diesel dying rule required by the Clean Air Act. We ask Congress to recognize a similar situation here and grant the State of Alaska an exemption.

In closing, let me thank you for this opportunity to present the views of the people on the North Slope who rely on diesel fuel for many day-to-day activities. Our community, like the rest of Alaska, needs this exemption very much.

NKHA
NATIONAL KEROSENE
HEATER ASSOCIATION, INC.

March 21, 1994

CC:DOM:CORP:T:R (PS-52-93)
Internal Revenue Service
Room 528 HAND DELIVERED
Washington, D.C. 20024

Re: Diesel Fuel Excise Tax Proposed Regulations - Comments in Opposition to Dyeing Kerosene Blue

Dear Sir or Madam:

These comments by the National Kerosene Heater Association ("NKHA") are submitted in response to the notice published in the Federal Register on November 30, 1993 by which the Internal Revenue Service ("IRS") issued temporary regulations governing the diesel fuel excise tax and attendant registration requirements. The NKHA wishes to respond specifically to the IRS request for comments concerning the treatment of kerosene after June 30, 1994.

The NKHA is a not-for-profit association of manufacturers and national marketers of the "new generation" of portable kerosene heaters complying with the 647 standard of Underwriters Laboratories (hereinafter "UL-647") in the United States. These portable kerosene heaters use 1-K kerosene, which represents a significant volume in the home heating market. NKHA serves as a central clearing house and information resource for its members and the public concerning kerosene heaters. The purposes of the NKHA are to encourage maximum safety and efficiency for kerosene heaters marketed and used in the United States through product safety standards, regulatory requirements, and public education promoting safe use.

I. PORTABLE KEROSENE HEATER USAGE

Since 1976 nearly 22 million portable kerosene heaters have been sold in the United States and NKHA estimates that 15 million of these units are still in use. By turning back the thermostat of their oil, gas, or electric central heating system and heating only an occupied room, consumers save an estimated 4.5% for each degree of thermostat set back. For a 10 degree setback from 70 to 60 degrees, consumers save up to 40% on their annual heating bill. **An average savings of $500 each winter for 15 million kerosene heater owners results in total annual consumer savings of approximately $7 billion.** For most consumers this $500 savings is not generating additional income which could be taxed, but is essential to make ends meet.

Perhaps even more importantly, during the winter of 1994, many millions of Americans were totally without power for periods exceeding thirty (30) days, and would not have had any heat but for the portable kerosene heaters. In winters such as these, and in the increasing number of natural disasters, portable kerosene heaters may have actually saved the lives of many Americans.

II. PRODUCT SAFETY CONCERNS RELATED TO DYEING KEROSENE BLUE

The principal concerns of NKHA concerning the treatment of kerosene after June 30, 1994 are focused on the impact a requirement that kerosene be dyed blue might have on the safe use of portable kerosene heaters. NKHA contends that any proposal to dye kerosene blue will have a major negative impact endangering the lives and health of consumers in the following ways:

A. **The costs of the dyeing and fuel segregation requirements may cause fuel suppliers to abandon the distribution of 1-k kerosene, reduce its availability in the marketplace, and cause consumers to use gasoline jeopardizing their lives and safety.**

In 1982, the U.S. Consumer Product Safety Commission (hereinafter CPSC) initiated a major "priority project" investigating the safety of new generation kerosene heaters. The stated purpose of that project was to "comprehensively address" any risk of injury which might be associated with the product. Investigations of fire safety and air quality issues costing CPSC over $900,000 and parallel studies by the industry placed the total cost of the cooperative effort in the millions of dollars. Product design changes were voluntarily implemented industry-wide under an NKHA Board Resolution within a 9 month period, followed by an upgrade in the U.L. 647 standard. In its final 2500 page report, however, the CPSC staff concluded **"the single most important element in the safety of modern portable kerosene heaters is the pattern of consumer use."**

As one of the first investigations, CPSC asked the Department of Energy to conduct a nationwide survey on the availability of 1-K kerosene. That report concluded that there was an adequate supply of 1-K kerosene in the marketplace. The report was requested, however, because the CPSC was concerned about the safety consequences of fuel with a high sulfur content or a total absence of kerosene in any one area of the marketplace. If there had been any areas of the country where there was a shortage, there was a safety concern that consumers would turn to gasoline or some other volatile fuel exposing them to a fatal risk of injury.

Unlike kerosene, which has a flash point of +130 degrees F, gasoline produces flammable vapors at room temperature (it vaporizes at -45 degrees F) and creates a serious fire hazard and explosion risk to any consumer using the product. Tragically, gasoline fires often result in multiple fatalities. The depth of the concern about this issue by both the NKHA and the CPSC is best illustrated in the 1994 joint press release issued to warn consumers about the dangers of gasoline usage attached hereto as Exhibit A. Note that the very first message urges consumers to look for a "water-clear" 1-K kerosene. Also attached hereto as Exhibit B is a letter from CPSC to the IRS submitted previously documenting the safety concerns associated with a dyeing requirement.

Although much of the kerosene distribution is dedicated to 1-K kerosene, a portion of the market is supplied by jobbers who carry a high quality Jet-A which also meets the 1-K specification. As discussed later in these comments this amount of fuel is significant nationwide, but for some jobbers it represents relatively low volume and low profitability. This low return on the small volume is not sufficient for some suppliers to justify separate storage if it must be dyed blue. Our discussions with some of these fuel suppliers have led NKHA to believe that a number of them may abandon the distribution of 1-K kerosene. **For this reason, it is critical to consumer safety that 1-K kerosene continue to be classified as an aviation fuel consistent with current FAA requirements, which require that aviation fuel be sold undyed.**

In time it is possible that the fuel jobbers dedicated to a larger volumes of the 1-K kerosene will expand their distribution to meet the market need. In the short run NKHA is concerned that there may be markets this winter in which consumers could resort to gasoline usage, despite the warnings because of their dire need to heat their homes with scant economic resources, and no other alternatives.

B. **Dyeing kerosene blue could cause jobber or retailer confusion with blue "aviation gas" in the distribution channel.**

Unlike Jet-A sold for use in most commercial jets, which is kerosene, aviation gas for propeller driven aircraft is a volatile

fuel with a very low flash point. Aviation gas presents all the same risks of fire and explosion to portable kerosene heater users as gasoline used in highway vehicles. NKHA conversations with jobbers have led us to believe that there is a possibility that a kerosene dyed blue could lead to confusion at the terminal rack with aviation gas which is also dyed blue. We do not know the extent of distribution of this fuel nationwide, but every jobber with whom NKHA spoke acknowledged this risk. Unless there are adequate safeguards in place, the possibility of a grave risk to the lives of consumers from such confusion is very real.

C. **Dyeing kerosene blue could also cause confusion in fuel distribution channels and misfueling by consumers who have been told for over a decade to purchase only "water clear 1-K" kerosene.**

To prevent consumer misuse of kerosene heaters and misfueling with volatile fuels, the NKHA has over the last decade produced and distributed an ongoing consumer educational effort which has involved media tours in major markets, radio and television public service announcements, point of sale posters and literature to product and fuel retailers, a consumer education slide tape developed for the fire service, product labelling and "Important Safety Information" brochures packaged with each product, and other public relations initiatives. In 1983, these NKHA efforts won an "Award for Achievements in Product Safety" from the National Safety Council, and we believe these programs reached millions of Americans and educated them to look for a "water clear" 1-K kerosene.

A central message in every facet of this educational effort was that the consumer should purchase only "water clear 1-K kerosene." Changing the message would not only be costly, there will be no clear message to send to consumers. As stated later in these comments, we have reason to believe that some refiners will continue to distribute a "taxable" water clear 1-K, while others might distribute a kerosene dyed blue. The requirements of the Environmental Protection Agency are designed to convey to the consumer that a "blue" fuel is a "high sulfur" and undesirable fuel. This situation will contribute greatly to the possibility of consumer confusion and misfueling, especially when aggravated by the desperation often imposed by a very cold winter.

D. **Inadvertent or intentional blending of high sulfur heating fuel dyed blue with a blue dyed kerosene in the fuel distribution channels may produce indoor air emissions harmful to consumers using kerosene heaters.**

For almost a decade the NKHA has continued its work with the CPSC to establish an indoor air quality standard for heater emissions as a part of the UL-647 standard. Most of the work is being done through a task force of Underwriters Laboratories composed of industry, consumer and environmental representatives. Quality fuel adhering to very tight specifications is essential to the success of this effort.

The 1-K standard promulgated by the American Society for Testing and Materials (hereinafter "ASTM") requires that kerosene contain a sulfur content of no more than .04%. See Exhibit C attached hereto. The ASTM standard is set at this level to keep the indoor emission of sulfur dioxide from a kerosene heater within acceptable levels. To meet this specification, most refiners must produce sulfur levels well below .04% because of the possibility that the fuel will be contaminated during its transportation and storage through the jobber network. Often this requires segregated transportation and storage.

NKHA conversations with fuel suppliers seem to indicate that most will seek to put all "blue" fuels in segregated storage. This situation could easily lead to a contamination of any 1-K kerosene with some of the higher sulfur heating oils. When used in a kerosene heater these fuels also emit unacceptable and harmful levels of carbon monoxide and sulphur dioxide. The consumer would have no way of knowing whether the fuel purchased was acceptable from an indoor air quality standpoint.

NKHA contends that requiring all kerosene to be dyed blue would pose a significantly increased risk of consumer exposure to unsafe indoor air quality. In addition to avoiding any dyeing requirement for kerosene, NKHA urges the IRS to take whatever steps are necessary to prevent such fuel contamination or confusion by proposing a certification program for kerosene marketers.

E. A dyeing requirement would be contrary to the "water clear" requirement imposed by law in twenty three (23) states, and in the absence of clear preemption of the IRS regulations, further reduce the supply of safe 1-K kerosene in many of these states.

The ASTM standard D 3699-90 setting forth the kerosene standard specification imposes a "water clear" standard in its D 156 requirement for a sabolt color of +16. See Exhibit C. The National Conference of Weights & Measures of the National Institute of Standards & Technology has issued a "Model Method of Sale" incorporating this requirement and have sent it to their affiliated offices in each of the states. According to a study conducted by NKHA in 1986, this "water clear" standard has been adopted as a state law requirement by twenty three (23) states. The sale of a kerosene dyed blue would be prohibited in these states unless the proposed IRS regulations were to clearly preempt these state law requirements. In the absence of clear preemption, which might be achieved only by further Congressional action, the availability of a safe 1-K kerosene could be jeopardized in many of these states.

III. NKHA ESTIMATES OF THE ANNUAL VOLUME OF KEROSENE USAGE FOR PORTABLE KEROSENE HEATERS DEMONSTRATES THAT ANY POTENTIAL EVASION OF TAX BY BLENDING 1-K KEROSENE WITH TAXABLE ON-ROAD DIESEL IS MINIMAL AND CANNOT JUSTIFY DYEING KEROSENE BLUE IN THE FACE OF PRODUCT SAFETY CONCERNS.

The NKHA estimates that since 1980, approximately twenty two million (22,000,000) portable kerosene heaters have been sold in the United States. Of these heaters sold, approximately fifteen million (15,000,000) are still in use. In 1981, NKHA conducted a survey of actual consumer usage patterns in connection with the air quality study conducted by the CPSC. This study determined that consumers use portable kerosene heaters approximately eight hours each day. To reach a national average usage, we can conservatively assume an average heating season of four (4) months and that heaters are used only twenty (20) days out of the month. Since one gallon of kerosene will burn in the average kerosene heater approximately ten (10) hours, the total number of gallons of kerosene used is fifteen million (15,000,000) X sixty four (64) gallons per consumer household per season or nine hundred million (900,000,000) gallons per season.

Even if the assumptions about the number of portable heaters in use were high, the usage rate is low for winters such as that experienced in 1994 where consumers were without power in some areas continuously for over a month. Further, these projections do not include the vented kerosene systems being sold in ever increasing numbers.

This annual gallonage projection exceeds the estimates of kerosene fuel usage for home heating for 1991 of four hundred ninety one million (491,000,000) gallons by the Department of Energy, but reflects a reasonable estimate of consumer usage. The discrepancy in the numbers can be explained we believe by the volume of 1-K kerosene which is refined for aviation use, and reported as such, but significant portions of which are sold into the open jobber market for portable heater usage.

The Department of Energy estimated home heating usage of kerosene at six hundred eighteen million (618,000,000) gallons in 1989, and seven hundred seventy million (770,000,000) gallons in 1988. Subtracting these numbers from the NKHA average of nine hundred million (900,000,000) gallons suggests that the amount of aviation fuel sold for kerosene heater usage is approximately one hundred thirty million (130,000,000) gallons to four hundred eight million (408,000,000) gallons annually.

This volume of estimated annual usage should be even higher during the winter of 1994, because of the widespread power outages which lasted for extensive periods of time in many parts of the country. This estimate also demonstrates that the extent of blending of 1-K kerosene and taxable on-road diesel is minimal in the marketplace. There is no justifiable reason therefore to impose a dyeing requirement in the face of the grave product safety risk which such a requirement poses to consumers.

IV. COSTS ASSOCIATED WITH ANY REQUIREMENT THAT KEROSENE BE DYED BLUE WOULD BE PROHIBITIVE TO CONSUMERS

The NKHA contends that the protection against tax evasion afforded by a requirement that kerosene be dyed blue is outweighed by the grave risks to the health and safety of consumers. Even if the IRS were to determine to the contrary, however, the costs to consumers associated with such a requirement would be prohibitive.

A. Fuel dyeing of kerosene and its costly segregation requirements may cause certain refiners or fuel jobbers to keep the kerosene "clear," treat it as taxable increasing its price, and pass the LUST Trust Fund Taxes on to consumers despite the legislative exemption.

NKHA discussions with fuel suppliers have led us to be concerned that the low volume and profitability of 1-K kerosene for some refiners and suppliers will compel them to use any number of methods to avoid segregated storage, even if it means treating the fuel as taxable. Consequently, despite the exemption, the dyeing requirement could cause a price increase of 24.4 cents per gallon to consumers. Such a tax would eliminate the utility of portable kerosene heaters for those consumers who need them most.

For many consumers at lower income levels these heaters are the only source of heat, and the imposition of any additional cost would put the use of the product out of economic reach. The stark reality of this situation is that many families will not be able to afford to heat their homes. Other consumers who use the heaters during power outages and the increasing number of natural disasters will be unable to afford the additional costs of keeping an emergency kerosene supply and lose this potentially lifesaving source of heat.

B. The increased product safety risk imposed by a kerosene dyeing requirement may require a reassessment of the certification and standards of Underwriters Laboratories and the NKHA at an astronomical cost to consumers and could result in a prohibition of all kerosene heaters under the laws of at least thirteen (13) states.

If the IRS were to impose a dyeing requirement on 1-K kerosene, the NKHA and perhaps Underwriters Laboratories ("UL") would be forced to perform an extensive review of the product safety concerns set forth herein. A fuel availability study to ascertain the volumes of 1-K kerosene being sold in the marketplace, and the consumer surveys to ascertain the potential indoor air quality risk of confusion with other blue fuels would be prohibitive.

If for any reason either NKHA or UL were to determine that they could no longer certify the portable kerosene heaters, the model legislation promoted by the NKHA in effect in thirteen (13) states which requires compliance with UL and in some states NKHA standards would ban the sale of the products. Although it is theoretically possible to hire another independent testing laboratory to certify to U.L. Standards, the standard itself might have to be reevaluated and perhaps withdrawn in the face of the unavailability of 1-K kerosene in major portions of the marketplace. The product safety risk would continue for those fifteen million (15,000,000) consumers who still have the heaters and would use them when needed in a cold winter, but could not obtain safe 1-K kerosene fuel.

C. **<u>If the certification standards were not withdrawn, the costs of modifying the standards, and altering the instruction manuals, advertising and all associated materials, and product warning labels to reflect a blue kerosene would require major price increases to consumers.</u>**

If the IRS were to impose a requirement that kerosene be dyed blue and certifications were not withdrawn, all product labelling, instruction manuals, advertising and promotional materials would have to be changed to eliminate the "water clear" terminology. Studies would have to be made to determine the extent of 1-K kerosene fuel in the marketplace, and the appropriate warnings which might be required to deal with the increased risks. The costs of such an effort would be passed on to consumers, most of whom use portable kerosene heaters because they cannot afford central heat or other alternatives. It is possible that such price increases could place the product out of reach for the very Americans who need it most.

V. **<u>THE IRS SHOULD CONSIDER IMPOSING REGISTRATION AND CERTIFICATION REQUIREMENTS FOR MARKETERS OF KEROSENE FOR HOME HEATING USE.</u>**

The discussions NKHA has held with fuel suppliers nationwide has given us concern about the number of additional storage requirements being imposed as a result of these and other regulations. Even if the dyeing requirement is not imposed, there are other requirements placing at its limits the ability of refiners and jobbers to provide segregated storage. Consequently, NKHA urges the IRS to consider proposing and adopting a registration and certification of kerosene marketers for home heating use. Such a program could provide some protection against future blending of 1-K kerosene if the IRS continues to believe tax evasion in that manner may be a concern. The program could also require certain other contractual obligations concerning the transportation and segregation and storage of kerosene similar to those required in the certification conducted by the NKHA for a number of years.

These contractual obligations could help to prevent contamination as well as prevent or minimize dispensing of the fuel into on-road use. By imposing these contractual requirements at all points in the distribution system down to the level of retail sale as a condition of certification, the IRS will also be helping to assure the safety of consumers using 1-K kerosene. If the IRS is unable to provide this more extensive certification, the NKHA offers its services and a willingness to initiate such a program as a loss prevention program working cooperatively with the IRS.

<u>V. CONCLUSION</u>

The NKHA contends that the IRS should continue the exclusion of kerosene from the definition of diesel fuel in the temporary regulations or any final regulations which may be adopted after June 30, 1994. To avoid critical shortages of safe fuel in the marketplace, 1-K kerosene must continue to be treated as an aviation fuel, which consistent with FAA requirements is undyed. This action would enhance the safety of consumers using portable kerosene heaters by exempting kerosene from the diesel excise tax and dyeing program and permit the continued sale and distribution of 1-K kerosene as "water clear" tax exempt fuel.

Respectfully Submitted,

Harold Smith

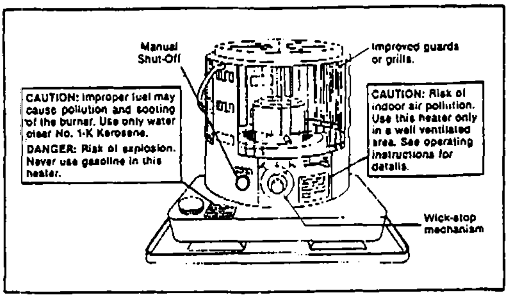
Consumer Product SAFETY ALERT

From the U.S. Consumer Product Safety Commission, Washington, D.C. 20207

CPSC and NKHA Stress Kerosene Heater Safety



If you are using a kerosene heater, the U.S. Consumer Product Safety Commission and the National Kerosene Heater Association advise you to follow these suggestions in order to minimize the risk of fire and potential health effects from indoor air pollution.

--Use only water-clear 1-K grade kerosene. **Never use gasoline.** Gasoline is not the same as kerosene. Even small amounts of gasoline or other volatile fuels or solvents mixed with kerosene can substantially increase the risk of a fire or an explosion.

--Always store kerosene in a separate container intended for kerosene, not in a gasoline can or a can that has contained gasoline. This helps you avoid using contaminated fuel or the wrong fuel by mistake. Kerosene containers are usually blue; gasoline containers are usually red.

--When purchasing kerosene at the pump, make sure to use the kerosene pump, not the gasoline pump. Some service stations have separate islands for kerosene. Some oil companies have also established quality control programs to minimize the chances of gasoline contamination of kerosene.

--1-K grade kerosene should be purchased from a dealer who can certify that what is being sold is 1-K. State-operated and private sector certification programs that ensure the quality of kerosene are established in some states. Grades other than 1-K can lead to a release of more pollutants in your home, posing a possible health risk. Different grades of kerosene can look the

same so it is important that the dealer certify that the product sold is 1-K grade kerosene.

--Never refuel the heater inside the home. Fill the tank outdoors, away from combustible materials, and only after the heater has been turned off and allowed to cool down. Do not refuel the heater when it is hot or is in operation. Do not fill the fuel tank above the "full" mark. The space above the "full" mark is to allow the fuel room to expand without causing leakage when the heater is operating.

--In case of flare-up or if uncontrolled flaming occurs, do not attempt to move or carry the heater. This can make the fire worse. If the heater is equipped with a manual shut-off switch, activate the switch to turn off the heater. If this does not extinguish the fire, leave the house immediately and call the fire department. As an added reminder and precaution, install at least one smoke detector near each sleeping area or on each level of the house.

--Reduce your exposure to indoor air pollutants by properly operating and maintaining your portable kerosene heater. Although portable kerosene heaters are very efficient in the burning of fuel to produce heat, low levels of certain pollutants such as carbon monoxide and nitrogen dioxide are produced. Exposure to low levels of these pollutants may be harmful, especially to individuals with chronic respiratory or circulatory health problems. To assure that you and family members are not exposed to significant levels of these pollutants, you should follow carefully the following rules of safe operation:

--Operate your heater in a room with a door open to the rest of the house.

--If you must operate your heater in a room with the door closed to the rest of the house, open an outside window approximately an inch to permit fresh air to effectively dilute the pollutants below a level of concern.

--Always operate your heater according to the manufacturer's instructions, making sure that the wick is set at the proper level as instructed by the manufacturer.

--Keep the wick in your heater clean and in good operating condition by following the cleaning and maintenance procedures recommended by the manufacturer.

--Keep an outside window opened approximately an inch to insure adequate fresh air infiltration. This is true regardless of whether you use a kerosene heater or some other conventional method of heating, if your home is relatively new and tight, or if it is older but has been winterized to reduce air infiltration from the outside.

U.S. CONSUMER PRODUCT SAFETY COMMISSION
WASHINGTON, D.C. 20207

Frank Boland
Internal Revenue Service
P.O. Box 7604
Ben Franklin Station
Room 5228
CC:DOM:CORP:T:R (PS-52-93)
Washington, D.C. 20044

OCT 15 1993

Dear Mr. Boland:

The U.S. Consumer Product Safety Commission (CPSC) is an independent regulatory agency whose mission is to protect the public against unreasonable risks of injury associated with consumer products, provide consumers with information on the safe use of products, assist consumers in evaluating the comparative safety of consumer products, develop uniform safety standards for consumer products, and promote research and investigation into the causes and prevention of product-related deaths, illnesses, and injuries. The CPSC has jurisdiction over residential combustion appliances that utilize various fuels.

The CPSC staff offers the following comments on the Advance Notice of Proposed Rulemaking concerning the dyeing of diesel fuel destined for a nontaxable use ("Diesel Fuel Excise Tax", Federal Register, August 26, 1993, Vol 58, No. 164, page 45081).

For over a decade, the CPSC staff has strongly encouraged the use of water-clear, 1-K kerosene for residential kerosene heaters in order to avoid the release of more indoor air pollutants into a home or prevent the possiblity of fire or explosion from the use of improper fuel. The staff urges the Internal Revenue Service to take the necessary steps to ensure the continued availability of water-clear, 1-K kerosene to consumers for use in their heaters.

The staff raises the general concern about the use of dyes or markers in fuels without prior testing to determine the effect on emissions. Burning dyed fuels or fuels with markers may result in emissions that are detrimental to the health of the public.

The CPSC staff urges the Internal Revenue Service to consider all possible ramifications to the use of dyes or markers in fuels that are tax exempt.

Sincerely,

Lori E. Saltzman
Project Manager for
Indoor Air Quality

EXHIBIT C

Designation: D 3699 – 90

Standard Specification for Kerosine[1]

This standard is issued under the fixed designation D 3699; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense. Consult the DoD Index of Specifications and Standards for the specific year of issue which has been adopted by the Department of Defense.

1. Scope

1.1 This specification covers two grades of kerosine suitable for use in critical kerosine burner applications:

1.1.1 *No. 1-K*—A special low-sulfur grade kerosine suitable for use in nonflue-connected kerosine burner appliances and for use in wick-fed illuminating lamps.

1.1.2 *No. 2-K*—A regular grade kerosine suitable for use in flue-connected burner appliances and for use in wick-fed illuminating lamps.

1.2 This specification is intended for use in purchasing, as a reference for industry and governmental standardization, and as a source of technical information.

1.3 This specification, unless otherwise provided by agreement between the purchaser and the supplier, prescribes the required properties of kerosine at the time and place of custody transfer.

1.4 The values stated in SI units are to be regarded as the standard. The values stated in inch-pounds units are for information only.

NOTE 1—Nothing in this specification shall preclude observance of federal, state, or local regulations which may be more restrictive.

NOTE 2—The generation and dissipation of static electricity can create problems in the handling of kerosines. For more information on the subject, see Guide D 4865.

TABLE 1 Detailed Requirements for Kerosine

Property	ASTM Test[A] Method	Limit[B]
Flash Point °C (°F), min	D 56	38 (100)
Distillation temperature °C (°F)	D 86	
10 % volume recovered, max		205 (401)
Final boiling point, max		300 (572)
Kinematic viscosity, mm²/s[C] at 40°C (104°F)	D 445	
min		1.0
max		1.9
Sulfur, % mass	D 1266	
No. 1-K, max		0.04
No. 2-K, max		0.30
Mercaptan sulfur, % mass, max[D]	D 3227	0.003
Copper strip corrosion rating max., 3 h at 100°C (212°F)	D 130	No. 3
Freezing point, °C (°F), max	D 2386	−30 (−22)
Burning quality, min	D 187	pass (see 4.2)
Saybolt color, min	D 156	+16

[A] The test methods indicated are the approved referee methods. Other acceptable methods are indicated in Section 2. The table values stated in SI units are to regarded as standard. Values in parentheses are for information only.

[B] To meet special operating conditions, modifications of individual limiting requirements, except sulfur, may be agreed upon among purchaser, seller and manufacturer.

[C] 1 mm²/s = 1 cSt.

[D] The mercaptan sulfur determination may be waived if the fuel is considered sweet by the Doctor Test described in section 6.1.10 of Specification D 235.

STATEMENT BY EDWIN L. HARPER
ASSOCIATION OF AMERICAN RAILROADS
ELIMINATION OF THE 1.25 CENT-PER-GALLON DEFICIT REDUCTION FUELS TAX
before the
UNITED STATES HOUSE OF REPRESENTATIVES
COMMITTEE ON WAYS AND MEANS
July 11, 1995

Mr. Chairman and members of the committee, I am Edwin L. Harper, president and chief executive officer of the Association of American Railroads. I appreciate this opportunity to address a threatened tax inequity against the nation's freight railroads. Unless Congress acts before October 1, 1995, the railroads will be singled out as the only transportation mode paying the 1.25 cents-per-gallon deficit reduction fuel tax. It is simply discriminatory to require railroads to pay 1.25 cents more per gallon towards deficit reduction than their major competitors. To avoid putting the railroads at a competitive disadvantage, the Association of American Railroads respectfully urges that all modes of transportation contribute equally to deficit reduction. This can be done fairly and with no revenue impact.

I. UNDER CURRENT LAW BOTH RAILROADS AND THEIR MAJOR COMPETITORS CONTRIBUTE EQUALLY TO DEFICIT REDUCTION.

Prior to 1990, the sole purpose of the transportation fuels tax was to finance the Highway Trust Fund. Therefore, railroads (like other non-highway users) did not pay this tax. The 1990 Reconciliation Act extended the fuel tax beyond its historical role as a highway user fee, by introducing a 2.5 cents-per-gallon deficit reduction tax on transportation fuels.

The original 2.5 cent tax was payable by most transportation modes into the general fund of the Treasury. The 1993 Reconciliation Act imposed an additional 4.3 cents-per gallon deficit reduction rate on all transportation modes. At present and until October 1, 1995, both railroads and trucks pay a combined deficit reduction rate of 6.8 (4.3 plus 2.5) cents-per-gallon of transportation fuel.

II. UNLESS CONGRESS ACTS BEFORE OCTOBER 1, 1995, RAILROADS WILL BE PLACED AT A DISADVANTAGE, BECAUSE THEY WILL BE REQUIRED TO PAY MORE TOWARDS DEFICIT REDUCTION THAN THEIR COMPETITORS.

Under the 1993 Reconciliation Act, the 2.5-cents tax paid by highway users will be redirected into the Highway Trust Fund instead of being dedicated to deficit reduction. Thus, on October 1, 1995, railroads will be left as the only payers of the original deficit reduction tax at a rate of 1.25 cents-per-gallon. Highway users will pay only 4.3 cents-per-gallon into the Treasury's general fund, while railroads will pay 5.55 (4.3 plus 1.25) cents-per-gallon for deficit reduction. Unless the deficit reduction rate levied on the railroads is reduced to the level of its competitors, the railroad industry will be subjected to tax discrimination as shown:

Transport-Mode	Current Tax Per-Gallon	October 1, 1995 Tax Per Gallon
Railroads	6.8 cents	5.55 cents
Trucking	6.8 cents	4.3 cents
Inland Water	4.3 cents	4.3 cents

III. EITHER THE DEFICIT REDUCTION FUEL TAX IMPOSED ON RAILROADS SHOULD BE REPEALED OR ALL MODES SHOULD BE ASSESSED A LOWER TAX RATE TO RESTORE BALANCE.

Tax equity begins with recognition of the differences between railroads and their competitors on infrastructure funding. The Highway Trust Fund, funded by highway user taxes, provides the financing for the construction and maintenance of the public roads used by trucks. The railroad industry operates over its own privately funded rights-of-way, with respect to which the industry pays significant property taxes and interest on debt. Moreover, because the railroads do not enjoy, require, or want a trust fund, the diversion of the excise tax paid by trucks into the Highway Trust Fund should be balanced by the repeal of the fuel tax paid by railroads.

If, on the other hand, a fuel tax is deemed appropriate for deficit reduction, all transporters should be required to make equal contributions. This can be done without creating a revenue shortfall. First, if airlines are excluded from paying fuel taxes, a .028 cent-per-gallon tax on fuel used by the same transporters, including railroads, subject to the 1993 deficit reduction tax would raise enough revenue to eliminate the 1.25-cent discriminatory tax on railroads. This proposal would allow fuel taxes paid by the other modes to be directed into their respective trust funds in a revenue neutral manner, with all modes contributing equally to deficit reduction

Alternatively, if airlines begin to pay the 4.3 cents per-gallon fuel tax effective October 1, 1995, the railroad tax could be decreased from 5.55 cents to 4.3 cents. This reduction would equalize fuel taxes at 4.3 cents for all modes, and bring in revenues of $472 million ($527 million from airlines less the $45 million reduction on railroads).

House Ways and Means Committee
Hearings on Miscellaneous Tax Reforms

Statement Submitted by:
The National Ready Mixed Concrete Association
Julie Renjilian Luther, Government Affairs Representative
900 Spring Street
Silver Spring, Maryland 20910
(301) 587-1400 ext. 129
(301) 587-9419 fax

THE NATIONAL READY MIXED CONCRETE ASSOCIATION (NRMCA)

The National Ready Mixed Concrete Association (NRMCA) is a national trade association representing producers of ready mixed concrete and those companies that provide materials and support to the industry. Our membership of approximately 1,300 companies is located throughout the United States and is bound by a common goal of increasing growth and professionalism in the ready mixed concrete industry. Ready mixed concrete is one of the premier construction materials of the 20th century used for roads, bridges, and commercial and residential buildings of all kinds.

NRMCA is engaged in a number of activities to advance the interests of our membership and contribute to the quality of the nation's infrastructure and living standards. These include: providing technical support to improve safety, health and environmental control programs; creating engineering, research and marketing programs to improve the quality and use of ready mixed concrete; contributing to the work of technical and professional societies; and representing our industry before all branches of the federal government, as well as public and private organizations whose work affects the ready mixed concrete industry.

ISSUE: EXCISE TAXES, # 5

Exempt from excise tax motor fuels used in highway engines to power non-highway equipment mounted on trucks.

Under current IRS rules, ready mixed concrete producers are paying federal fuel taxes on the fuel they use to turn their concrete mixer drums. This is despite a specified exemption from federal fuel taxes for off-highway use (see Section 6421 of the Internal Revenue Code). Since ready mixed concrete trucks do travel over the road part of the time, but do not have a separate motor to turn the concrete mixer drum, they do not qualify for the "off-road" exemption from federal fuel taxes under current interpretations by the Internal Revenue Service (IRS). The current IRS regulations, which were originally written over thirty years ago, allow a credit for

fuel used in special equipment only when a separate engine powers the equipment. The regulations disallow a credit in cases where only one engine or motor is used to fuel both the propulsion of the highway vehicle and the special equipment. This distinction was made when the regulations were originally written because at that time there was no reliable method of substantiating non-highway consumption. However, modern technology has made this rationale obsolete because the amount of fuel used for propulsion of the vehicle (on-road) versus that used in powering special equipment (off-road) can now be accurately substantiated.

This issue is extremely important to ready mixed concrete producers, as many producers estimate approximately 30 percent of their fuel is used off-road (and they currently receive no rebate for their off-road consumption). Ready mixed concrete producers are being unfairly penalized by the federal government due to their unique circumstance of having to mix and agitate their product while traveling to the site where they dispatch their product. As a matter of fairness and equity, ready mixed concrete producers -- and other taxpayers who use only one engine for both on and off-road fuel use but can substantiate the amount used for each purpose -- should not be treated any differently than taxpayers who have a separate engine to operate their special equipment.

The original statutory framework allows a credit for <u>any</u> properly substantiated non-highway use. Therefore, the revenue impact of correcting this inequity in the current regulations should be minimal, since it is a matter of statutory interpretation rather than a change in the underlying intent of the original statute.

Several states -- including Georgia, Kansas, Kentucky, Michigan, Missouri, Ohio, Oklahoma, Virginia, West Virginia, and Wisconsin (to name a few) -- currently allow some form of rebate for fuel used to turn a concrete mixer drum. NRMCA hopes that the 104th Congress will ensure that such a rebate is secured on the federal level as well. While ready mixed concrete producers are happy to pay their fair share to maintain the roads they travel upon, they deserve the same consideration as farmers and others who are exempt for the fuel they use for off-road purposes.

House Ways and Means Committee
Hearings on Miscellaneous Tax Reforms
July 11-13, 1995

Statement Submitted By:

The National Tank Truck Carriers, Inc.
Clifford J. Harvison, President
2000 Mill Road
Alexandria, VA 22314
(703) 838-1960
fax (703) 684-5753

NATIONAL TANK TRUCK CARRIERS, INC.

Background

The National Tank Truck Carrier Association ("NTTC") represents and promotes the interests of the highway bulk transportation community. The bulk transportation community includes truck companies that convey cargo that is transported in a large tank (e.g., gasoline, diesel fuel, soda, natural gas, etc.). Tank truck carriers are a vital part of the nation's economy and specifically the nation's trucking industry.

Tank trucks, once they have arrived at their destination, generally off-load their cargo in two separate ways. In the first instance, the truck uses gravity to unloads its cargo. There is no mechanical apparatus employed. This is by far the most common form of delivery. In this case, no fuel is expended on special equipment, and no fuel tax credit is claimed for "off-highway" business use in operating special equipment.

The second, less common, method is the use of a pump that would off-load the cargo from the tank and into a storage facility at the destination port. This pump is special equipment that is powered by the tank truck's engine through a device commonly called "power take-off." Fuel is used to power the special equipment and this use is "off-highway" business use that should be available for the off-highway fuel tax credit.

Clarification of the "Off-Highway" Fuel Excise Tax Credit

Section 6421 of the Internal Revenue Code of 1986 provides a fuel tax credit for "off-highway business use." As defined in the statute, this term means "any use" by a person in a trade or business "otherwise than as a fuel in a highway vehicle." This broad statutory grant does not include any artificial impediments that restrict access to the tax credit. However, the Treasury regulations interpreting the statute, which were originally written over 30 years ago, only allow a credit for vehicles that are equipped with two engines -- one engine that is used to power the special equipment and another to power the vehicle itself. This may have been done for administrative convenience years ago because of a lack of technology capable of substantiating off-highway usage. However, technology is now available to accurately reflect fuel used for the dual purposes of propulsion (on-highway) and for powering special equipment (off-highway). Thus, these regulations no longer reflect the original intent of the legislation to provide a credit for "any" off-highway use.

There is no question that if users of special equipment outfitted their highway vehicles with a separate motor, they would qualify for the credit. The only question is whether they should be penalized by being denied a tax credit for having vehicles that contain a single, efficient motor used for dual purposes, especially if the engine is computerized or can otherwise accurately monitor "off-highway" fuel usage. Common sense dictates that there is no practical reason for this single/double motor standard and it should be erased.

Proposal: Excise Taxes #5
Exempt from Excise Tax Motor Fuels Used in Highway Engines to Power Non-Highway Equipment Mounted on Trucks

This proposal would clarify and modify the existing tax statute to allow a tax credit under §6421 of the Internal Revenue Code for fuel used in highway vehicles with a single motor and an accessory unit to power special equipment which is fueled from the same tank used to propel the vehicle.

The policy justifications which disallow the credit to be substantiated in vehicles containing a single engine (i.e., administrative convenience) have been outdated by modern technology. Computerized engines can now determine and accurately substantiate the amount of fuel used for propulsion of the vehicle (on-highway use) or in powering special equipment (off-highway use). As a matter of fairness and equity, taxpayers who use only one engine should not be treated any differently than taxpayers who have two separate engines to operate their special equipment. The original statutory framework allows a credit for "any" properly substantiated non-highway use.

By allowing taxpayers with single engine vehicles to have the same right to reclaim their money as taxpayers with double engines, Congress would ensure that many small businesses across our nation are given the opportunity to get credit for taxes that they have unnecessarily paid to the Treasury. Without this clarification, these regulations will continue to frustrate the many small businesses and other vehicle operators throughout the country for whom this credit was created to accommodate.

COMMENTS FOR THE RECORD REGARDING THE PROPOSAL TO EXEMPT FROM EXCISE TAX MOTOR FUELS USED IN HIGHWAY ENGINES TO POWER NON-HIGHWAY EQUIPMENT MOUNTED TO TRUCKS

House Ways and Means Committee

Statement Submitted by:
Western Waste Industries
Kosti Shirvanian, President & Chairman of the Board
21061 South Western Avenue
Torrance, California 90501
(310) 222-8705
(310) 212-7092 fax

Re: Support for HR 2014

Honorable Members:

Western Waste is a leading solid waste management company providing collection, recycling, compacting and disposal services in six states. We operate various trucks in our operations, some of which operate completely off the nation's highways ("off-road vehicles"), while others operate both on the nation's highways and off of them ("on-road vehicles").

Western Waste's primary customers are small businesses and municipal contracts. We are dedicated to the concept of environmental protection. New technologies are sought which not only benefit the environment, but provide for more efficient and economical collection, recycling and disposal of refuse.

Exempt from excise tax motor fuels used in highway engines to power non-highway equipment mounted to trucks.

Western Waste supports the proposed change to exempt from excise tax motor fuels used in highway engines to power non-highway equipment mounted to trucks included in the Joint Committee on Taxation, description of miscellaneous tax proposals, "JCS-19-95", July 10, 1995, Page 113. In addition, Western Waste supports HR 2014, billed to provide such an exemption, introduced by Representative Wally Herger (R-CA) on July 11, 1995.

Under current Internal Revenue Service (IRS) rules, fuel used in waste management trucks (rubbish trucks) is being charged federal fuel taxes on the portion of the fuel used in the on-road vehicles which is utilized in operating the "power take-off" (PTO) unit mounted on each vehicle; the PTO equipment performs refuse industry tasks, including raising and emptying containers, compacting refuse and ejecting refuse.

Since rubbish trucks travel over the road, but do not have a separate motor to power the non-highway equipment, they do not qualify for the "off-road" exemption from federal fuel taxes under current interpretations by the IRS. The IRS regulations, which were originally written over 30 years ago, allow a credit for fuel used in special equipment only when a separate engine powers the equipment. The regulations disallow a credit in cases where only one engine or motor is used to fuel both the propulsion of the highway vehicle and the special equipment. This distinction was made when the regulations were originally written because at that time there was no reliable method of substantiating non-highway consumption and it would be an administrative inconvenience. Today these regulations are outdated because rubbish trucks cannot operate efficiently with two motors, moreover, on-board computers and other equipment can accurately monitor fuel consumption.

The measurement of the amount of fuel consumed in the non-propulsion operations of a one-motor vehicle is easily handled by modern technology. The technology in a small PC today is as great as the technology the United States was using to send a man to the moon 30 years ago when the regulations were written.

Fairness and equity says that Western Waste -- and any other taxpayer who uses only one engine for both on and off-road fuel use, but can substantiate the amount used for each purpose -- should not be treated any differently than taxpayers who have a separate engine to operate their special equipment to life and compact waste as the trucks go from customer to customer.

Looking as far back as the Revenue Act of 1934, one can see that it has always been Congress' intent to tax only the fuel used for the propulsion of vehicles over the public highway and allow for a credit for <u>any</u> properly substantiated non-highway use. In 1953, the IRS, in a very significant ruling, ruled that the retail diesel fuel tax applied only to fuel utilized in the propulsion of cement mixer trucks, and not to the fuel consumed in operating the power take-off units. A copy of that ruling letter, as published in the 1954 P-H Tax Service, 76,436, is attached hereto for the convenience of Congress. Nine years later the IRS regulations penalized trucks with one motor purely for administrative convenience

Modern technology has been recognized by most states. The principal states that Western Waste does business in: California, Florida and Texas, provide a statutory credit of 22%, 35% and 30%, respectively, with California allowing more than 22% if one can substantiate the usage through testing.

The revenue impact of correcting this inequity in the current regulations should be minimal, since it is a matter of statutory interpretation rather than a charge in the underlying intent of the original statute. The 1993 changes in diesel fuel tax collection point, dyeing and refunds has been estimated to have increased receipts by perhaps as much as $1 billion. This correction would have an impact of less than $50 million and could be fixed at a lesser amount by using a statutory percentage, similar to many states, as a controlling factor.

The main policy argument in favor of this bill is consistency. Excise taxes on diesel fuel are dedicated primarily to the Highway Trust fund which helps sustain our nation's valuable highway network. Fuel taxes serve to support the highway network by collecting highway funds from people who use the highways. In recognition of the purpose of fuel taxes, Congress has generally exempted non-highway uses of diesel fuel. Exemptions are granted to vehicles that do not use public roads, Section 6421(a), farm equipment, Section 4041(f)(1), fishing boats, Section 6421(e)(2)(B), and heating oil, Section 4041(a)(1). HR 2014 is needed to correct an aberration in the law that fails to recognize the non-highway use of diesel fuel to operate power takeoff equipment.

Western Waste hopes that the 104th Congress will ensure that a credit is secured on the federal level. The waste haulers of America have always been willing to pay their fair share to maintain the roads they travel upon, however, it is inequitable and discriminatory to not consider and exempt the fuel they use for off-road purposes.

Therefore, I respectfully request your support of HR 2014. If you have any questions or require further information, please don't hesitate to contact myself or Chuck Jelloian at (310) 222-8705.

Thank you for your consideration of this important matter.

cc: Chuck Jelloian

dated December 20, 1952, which is hereby superseded.

The functions herein transferred may be delegated by the Commissioner to subordinates in the Internal Revenue Service in such manner as he shall from time to time direct. [Treasury Department Order 150-32, Nov. 18, 1953.]

SPECIAL RULING

[¶ 76,436] Diesel fuel tax not applicable to liquid used in separate diesel engine which heats and rotates concrete transit-mix drum [See also ¶ 39,245].—

This is in reply to your letter of May 20, 1953, requesting information with respect to the Federal excise tax imposed on diesel fuel.

It appears that your client is engaged in the manufacture of concrete transit mix. This product is partially manufactured on the client's premises and then transported by a truck equipped with rotating drums which complete the manufacturing of the concrete while en route to the customer. Diesel oil is used as a fuel for the operation of the trucks as well as a fuel for heating and power for rotating the drums on the truck. You request advice with respect to the taxibility of diesel oil used under the following circumstances:

1. Diesel-powered trucks which use diesel oil as a fuel and contain no machinery.

2. Diesel-powered trucks which use diesel oil as power and which carry a transit-mix drum, contents of which are being processed into concrete by use of a diesel-powered engine.

3. Trucks which are powered by gasoline engines, which have a transit-mix drum (as described in 2) which is powered by a diesel engine.

Section 2450 of the Internal Revenue Code [¶ 39,246], effective as of November 1, 1951, imposes a tax of 2 cents a gallon upon any liquid (other than any product taxable under section 3412), sold by any person to an owner, lessee, or other operator of a diesel-powered highway vehicle for use as a fuel in such vehicle, or (2) used by any person as a fuel in a diesel-powered highway vehicle unless there was a taxable sale of such liquid under clause (1).

Under the provision of section 324.21(b) of Regulations 119 [¶ 39,247-D], the sale of a taxable liquid to an owner, lessee, or other operator of a diesel-powered highway vehicle shall be considered a taxable sale of such liquid (1) where the liquid is delivered by the vendor into the supply tank of the vehicle, or (2) where not so delivered, the vendee indicates in writing to the vendor prior to or at the time of the sale that the entire quantity of the liquid covered by the sale is for use by him as a fuel in a diesel-powered highway vehicle. If such a written statement is not furnished by the vendee, he shall be liable for the tax on that quantity of the liquid which is used by him as a fuel in a diesel-powered highway vehicle or which is sold by him in a taxable transaction. In such case he will be required to report and pay such tax liability to the district director of internal revenue for the district in which is located his principal place of business.

In view of the foregoing, tax is applicable to all sales of diesel fuel where the fuel is delivered by the supplier into the supply tanks of diesel-powered highway trucks referred to in question No. 1.

With respect to your question No. 2, all sales of diesel fuel by the supplier to your client for use as fuel for the propulsion of the diesel-powered trucks equipped with transit-mix drums are properly subject to tax. However, if the truck is equipped with one engine which furnishes the power for propelling the truck and rotating the drum, a credit or refund may be obtained for the tax paid on the quantity of diesel fuel used in the operation of the drum. Thus, if your client can establish that a quantity of the liquid was used otherwise than as a fuel in diesel-powered highway vehicles the supplier may under the provisions of section 2452(a) of the Internal Revenue Code [¶ 39,246-B] take a credit for such tax paid by him against the tax shown to be due on a subsequent return or he may file a claim on Form 843. The claim for credit or refund must be supported by evidence showing that the supplier has repaid the amount of the tax to your client or has obtained the latter's consent to the credit or refund of the tax involved to him. If the truck has two engines, one for the propulsion of the truck and one for rotating the drum, tax will be applicable only to the diesel fuel used for the propulsion of the truck.

With respect to question No. 3, no tax will be applicable to diesel fuel used in the diesel engine to operate the transit-mix drum with which trucks powered by gasoline engines are equipped. [Letter dated July 27, 1953, and signed R. J. Bopp, Chief, Excise Tax Ruling Branch.]

TESTIMONY OF ALTERNATIVE TRANSPORTATION FUELS INC.

Alternative Transportation Fuels Inc. ("ATFI") is pleased to submit the following comments regarding a proposal on alternative fuels in the "Miscellaneous Tax Reforms" under consideration by the Committee. ATFI is a new company, established in 1992, to develop a comprehensive alternative transportation fuels business for its parent company, Skelgas, Inc. of Oak Brook, Illinois. Skelgas has been a distributor of propane throughout the U.S. Midwest since the early 1920's. Affiliated companies are leaders in the alternative fuels business in Canada and Mexico, with a current network of more than 2,000 public refueling stations. Although ATFI intends to market a variety of alternative fuels, the Company believes that propane, in particular, has many attractive characteristics as a readily available, clean burning, domestically-sourced transportation fuel. (See Appendix.)

I. Background

ATFI believes that the motor fuels excise tax code for too long unfairly taxed some alternative fuels at a higher rate of tax than gasoline -- the fuel with which they must compete in the marketplace -- and is a significant barrier to the increased use of clean, domestic transportation fuels. This unfair disadvantage and distortion of market economics occurs because tax is charged on fuels such as propane and liquified natural gas ("LNG") at the same rate per gallon as gasoline, although they have a lower energy content per gallon. Therefore, propane, for example, pays an effective rate of 24.9¢/gasoline equivalent gallon or 6.6¢/gasoline equivalent gallon more than gasoline. This situation, which has continued for many years, is described in a Congressional Research Service ("CRS") report issued in March, 1994.[1/] The current effective tax rates, according to CRS are summarized in the following table.

Fuels	Current Rates	
	Tax Rate (cents per gallon)	Effective Rate (Gasoline Equivalent cents per gallon)
Gasoline	18.3[2/]	18.3
Propane	18.3	24.9
CNG	4.3[3/]	5.6
LNG	18.3	28.2
Methanol	11.4	23.0
Ethanol	13.0	19.7

In addition to the obvious market distortions resulting from this tax, it imposes a significant burden on both large and small companies which have already chosen propane as their transportation fuel. For example, Skelgas, a relatively small company, uses propane in 450 of its 461 vehicles and, as a

---

1/ CRS Report for Congress, "Impact of Highway Fuel Taxes on Alternative Fuel Vehicle Economics," David E. Gushee, Senior Fellow in Environmental Policy, Environment and Natural Resources Policy Division, March 16, 1994.

2/ Gasoline pays an additional .1 cent per gallon to compensate for leaking underground storage tanks (the "LUST" tax); most alternative fuels do not pay the LUST tax, so it has been excluded from the equivalency calculation.

3/ The tax on compressed natural gas ("CNG") is 48.54 cents/MCF, determined at standard temperature and pressure. *See* note 5.

result, paid an estimated Federal tax penalty of $72,000 on its fuel use during 1994.

II. Proposed Remedy

ATFI recommends that the tax code be amended to establish the maximum rate of tax which can be charged on an alternative transportation fuel at the energy equivalent rate to gasoline. Based on the current gasoline excise tax of 18.3¢/gallon (without payment of the LUST tax), this recommendation would establish the maximum rate of tax on each fuel as outlined in the following table.[4]

Fuel	Maximum Tax Rate Cents/Gallon	Equivalent Tax Rate Cents/Gasoline Gallon
Gasoline	18.3	18.3
Propane	13.56	18.3
CNG	4.3 [5]	5.6
LNG	11.96	18.3
Methanol	9.06	18.3
Ethanol	12.12	18.3

ATFI does not recommend changing the actual rate of tax on CNG, which is lower than the recommended maximum rate for other fuels.

III. Other Comments

ATFI believes that strong arguments can be made that propane, LNG and CNG should all be taxed at the same lower tax rate (5.6 cents). All three are derived primarily from the same source (domestic natural gas production), contain the same constituents (methane, ethane and propane), share the same applications (heat and power), and have the same inherently clean-burning chemical characteristics. All three can play a significant role in the nation's transportation future.

A strong argument can also be made that greater equity should be created in the taxation rates among alternative fuels and that some encouragement should be provided to this young industry for a few years to help it reach a self-sustaining size. For example, the CRS, in its 1994 report, recommended taxing all alternative fuels at 12¢/gasoline gallon, providing a small reduction in the tax rate to permit greater market penetration.[6] In addition, the President's Federal Fleet Conversion Task Force recommended that Congress significantly reduce or eliminate Federal excise taxes on all alternative transportation fuels. The Task Force noted that in some cases excise taxes on alternative fuels are higher than the tax rate on gasoline and recommended that this discrepancy be eliminated as soon as possible to achieve tax parity.[7]

4/ *Supra* note 1.

5/ Compressed natural gas, or CNG was not taxed as a transportation fuel until adoption of the Omnibus Budget Reconciliation Act of 1993. At that time, a tax of 48.54 cents per MCF was established which is equivalent to 5.6¢/gasoline gallon.

6/ *Supra* note 1.

7/ *First Interim Report of the Federal Fleet Conversion Task Force*, August, 1993, at pp. 36 and 37.

The Committee may wish to consider either now, or at some future time, further actions to create greater equity, and offset the significant tax penalties paid in the past.

IV. Conclusion

The Committee should, as a minimum, take action during its consideration of proposed "Miscellaneous Tax Reforms" to ensure permanently that the rate of tax on any alternative fuel never exceeds the gasoline equivalent rate. This action would remove the unfair penalty which now exists and move towards more equitable tax rates among alternative fuels. In so doing, it would remove the single greatest impediment to the increased use of alternative fuels in the United States.

ATFI believes that this action will increase the use of clean, domestic alternative fuels by the nation's business fleets. In particular, ATFI believes that elimination of inequity in the tax code could ultimately result in the use of several million propane vehicles (up from an estimated 350,000 today). The infrastructure and technology already exist. Supply is ample and can be expanded by increasing extraction from domestic natural gas to produce sufficient low-cost propane for these vehicles, as well as all of the nation's other propane requirements.

Thank you.

Attachment

APPENDIX

BENEFITS OF PROPANE

Propane, which is derived primarily from domestic natural gas, has for many years been the nation's most widely used alternative fuel. Unlike gasoline, propane is environmentally friendly and clean burning, with the lowest greenhouse emissions of any currently viable fuel. Propane is used as a safe, reliable energy source throughout the world in homes, farms and businesses, as well as for transportation. For several reasons, propane can most readily be used by fleets and motorists.

First, there is widespread availability of propane through an established infrastructure. There are already at least 3,500 retail refueling outlets across the country, providing drivers with the security that they will be able to obtain fuel wherever they go. Moreover, a propane dispensing pump can be installed at an existing service station inexpensively and quickly.

Second, the cost of converting an automobile to propane is relatively low, about $2,000; in contrast, conversion of an automobile to compressed natural gas ("CNG") is approximately double that amount. Moreover, it is anticipated that the cost for a propane-fueled vehicle could, as more are produced, become only $700 or $800 more than a conventional gasoline-fueled automobile.

Third, propane is an inexpensive fuel. Excluding Federal and State taxes, the retail price of a gallon of propane can be less than 50 cents. Thus, consumer savings from the purchase of propane can be very significant, particularly for vehicles with high fuel consumption.

Fourth, the long driving range provided by propane provides additional convenience and security. In general, a gallon of propane will take an automobile about 75% as far as a gallon of gasoline. To compensate for the lower energy content, propane-fueled vehicles usually have a slightly larger fuel tank. Thus, they provide drivers with the <u>same</u> driving range as a gasoline-fueled car. Automobiles fueled with most other alternative fuels suffer significant reductions in driving range.

Fifth, there is more than adequate supply of propane to meet current and projected demand. Over 90% of the U.S. requirements are met with domestic production, primarily as a co-product of natural gas extraction. Most of the remaining propane supply comes from Canada. Moreover, sufficient volumes of additional propane can be recovered from natural gas production to meet probable new demand in the transportation fuel market. Established pipeline, storage and terminal facilities are used to transport and distribute propane; these facilities would require only incremental expansion to meet the rising demand of the automotive market.

As a result of these factors, approximately 350,000 vehicles operate on propane today in the United States and about 4 million, worldwide.

Liquid Carbonic Industries Corporation
800 Jorie Blvd
Oak Brook, Illinois 60521

July 26, 1995

Phillip D. Moseley, Chief of Staff
Committee on Ways and Means
U.S. House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20515

Re: **WRITTEN STATEMENT IN LIEU OF PERSONAL APPEARANCE**

**Hearing on Miscellaneous Tax Reforms, July 13, 1995
Excise Taxes - adjust certain fuels tax rates for Btu equivalency to gasoline, Item 6, pp.114-115**

Dear Mr. Moseley:

In lieu of a personal appearance at the above-referenced hearing, Liquid Carbonic Industries Corporation respectfully submits the following comments on the excise tax proposal before the Committee regarding the change in excise tax rates on liquefied natural gas (LNG) to reflect its Btu equivalence to gasoline.

Introduction

Liquid Carbonic Industries Corporation is the world's largest supplier of carbon dioxide in its various forms. Liquid Carbonic also produces, processes and markets a wide variety of other industrial and specialty gases, including oxygen, nitrogen, argon, hydrogen, acetylene, carbon monoxide, liquefied natural gas, and nitrous oxide. Liquid Carbonic also assembles and sells industrial gas-related equipment. Its customers included commercial manufacturers, research facilities, federal, state and municipal governments, as well as private customers.

In recent years, Liquid Carbonic has intensively focused on the production and development of liquefied natural gas. As you are aware, natural gas has been selected as a clean alternative fuel by the U.S. Department of Energy, and is supported by the Clean Air Act Amendment and the Energy Policy Act. Under these Acts, federal, state and municipal agencies are required to reduce vehicle emissions by shifting to the use of alternative fuels.

Liquefied Natural Gas (LNG)

Natural gas can be stored in a variety of ways. It can be stored in a compressed form or as a liquid. Compressed natural gas is commonly referred to as "CNG," while liquefied natural gas is commonly referred to as "LNG." Both forms have virtually identical chemical compositions, and are composed primarily of methane, CH_4. Due to the large ratio of storage volume of liquid to gas (620:1), storage of natural gas in the liquid state is very efficient, as it allows for the storage of a much greater amount of natural gas in a given volume of storage.

CNG is obtained by compressing pipeline natural gas, or by revaporizing LNG. LNG is obtained by compressing, and also

cooling pipeline natural gas to a cryogenic temperature of approximately -260° Fahrenheit.

Vehicles which utilize natural gas fuels are referred to as natural gas vehicles ("NGV's"). NGV's are not new to the federal arena, and were first addressed by Congress in the Methane Research Development and Demonstration Act of 1980. NGV projects are currently underway in most major modes of transportation, including municipal mass transit systems, over-the-road truck fleets, the rail industry, and maritime tankers and commercial vessels. The natural gas vehicle industry is currently making significant developmental advancements, and is in production today, with users of NGV's increasing daily.

Prior to its use in NGV's, LNG must be revaporized before introduction into the engine via the fuel system. Thus, LNG is simply a temporary storage state for the easy transport and storage of natural gas. When used in an internal combustion engine, natural gas must be utilized in its gaseous form. Consequently, at the time the natural gas fuel is introduced into a combustion chamber of an engine, the natural gas fuel, either LNG or CNG, is in a gaseous state.

Taxation of LNG

As a transportation fuel, methane is subject to the fuel excise taxes of Subchapter B on special fuels. Pursuant to the Omnibus Budget Reconciliation Act of 1993, the Internal Revenue Code (IRC) section 4041 imposes a tax on CNG at a rate of 48.54 cents per MCF (1,000 cubic feet), which is based on the respective Btu content of CNG. This corresponds to approximately 5.89 cents per gallon of gasoline equivalent.

There is no definition or mention of LNG anywhere in the Internal Revenue Code. Due to its storage state as a cryogenic liquid, LNG could fall by default into the language of IRC section 4041(a)(2), which imposes the highway fuel excise taxes on "other liquid fuels" used in motor vehicle transportation. The rate of tax imposed is the sum of the Highway Trust Fund Financing Rate (currently 11.5 cents per gallon, 14 cents per gallon after September 30, 1995), and the Deficit Reduction Rate in effect under IRC section 4081 (4.3 cents per gallon) at the time of such sale or use. In addition, the Revenue Reconciliation Act of 1993 imposes an additional excise tax on transportation fuels that are subject to the Leaking Underground Storage Tank Trust Fund excise tax. Absent clarification, if LNG is found to be taxed as an "other liquid" under IRC section 4041, the effective rate of tax would be as high as 20.1 cents per gallon equivalence, a disparity of 14.21 cents when compared to the tax on CNG, which is the same fuel (methane).

Thus, there exists an inconsistency between the taxation of different forms of methane sold for use in a NGV. If stored on board a vehicle in a compressed state, methane is taxed at a rate of approximately 5.89 cents (for a gasoline gallon equivalent), but if stored on board a vehicle in a liquefied state, methane could be subject to tax at a rate of 20.1

cents per gasoline gallon equivalent. This was not the intention of the drafters of IRC Section 4041(a)(2), as LNG was not a commercially viable fuel at the time this section was passed, and was not contemplated as an "other liquid fuel." LNG has only recently been considered as a serious alternative fuel for motor vehicle use.

Proposal to Adjust Excise Tax Rates to Btu Equivalency to Gasoline

The proposal before you seeks to adjust certain fuels tax rates for Btu equivalency to gasoline. This would provide a uniform method of measurement for these fuels by utilizing the Btu equivalency to gasoline as the base for excise taxation.

Three alternative proposals have been advanced for the taxation of certain special motor fuels. The first would exempt LNG from the Highway Trust Fund component of the special motor fuels excise tax, and adjust the rate of the deficit reduction component of the tax to reflect LNG Btu's equivalence to CNG. This would result in a rate of tax of LNG of approximately 6.23 cents per Btu equivalence to gasoline.

The second alternative would continue to impose tax as under current law, but would reduce the aggregate tax rates on propane, methanol, LNG and CNG to reflect their Btu equivalence to gasoline. This would result in a rate of tax of approximately 13.6 cents per Btu equivalence to gasoline for propane, approximately 9.2 cents per methanol, approximately 12.2 cents per ethanol, approximately 12.0 cents per LNG, and approximately 5.89 cents for CNG.

The third alternative would adjust only the propane tax rate to a rate based on propane's Btu equivalence to gasoline.

We applaud the efforts of the Propane Vehicle Council, and agree that there is an immediate need to provide a uniform standard of measurement among certain special motor fuels, particularly alternative motor fuels which serve the goals of the Clean Air Act. However, we believe that this proposal is incomplete as to its treatment of LNG.

While the first alternative will result in the same rate of tax for LNG as CNG on a Btu basis, there still exists a need for specific recognition of LNG for transportation purposes in the Internal Revenue Code.

From the perspective of competitiveness and equity, LNG should be taxed at the same rate as CNG, as the two fuels have virtually identical chemical compositions, and are utilized by a motor vehicle's engine in a gaseous form. To subject one compressed form of natural gas to a higher rate of taxation simply due to the artificial and temporary storage state of the substance defies logic. As stated earlier, regardless of storage form, all natural gas, when used as a fuel in the engine of a NGV, will be utilized in a gaseous (vapor) state.

In comments submitted for proposed rulemaking project PS-66-93, clarification was requested from the Department of the

Treasury that LNG is compressed natural gas for transportation purposes and therefore should be taxed at the same rate as CNG. As of yet, no guidance has been received, and the industry standard is to collect and remit excise tax on LNG at the CNG rate.

Conclusion

It is illogical to tax LNG at a different rate than CNG when both forms of natural gas are consumed in NGV's. LNG is stored at greater than atmospheric pressure and is simply cooled to reach a condensed state. The state in which natural gas is stored in a vehicle, as either CNG or LNG, is irrelevant to the operation of the vehicle, as all vehicles fueled with natural gas actually utilize it in its gaseous state.

This submission is not requesting a reduction or elimination of federal excise taxes. Rather, a request is made to resolve the tax uncertainty, and possible disparity, that surrounds the use of LNG and CNG for transportation purposes. There are no rational reasons or policy goals to necessitate inconsistent taxation of the same fuel.

The market for LNG is expanding as companies and individuals strive to meet the requirements of the Clean Air Act Amendments of 1990 and the Energy Policy Act of 1992. Natural gas provides a clean, domestically abundant motor fuel, and the expansion of the LNG market would be beneficial to the United States economy with increased jobs and production facilities. LNG is a viable and feasible fuel today, and is currently being used on our roadways.

Our customers and other potential users of LNG need to definitively know the tax liability associated with the use of natural gas fuels.

Respectfully submitted,

LIQUID CARBONIC
INDUSTRIES CORPORATION

Lynn A. Kopnick
Tax Counsel

TESTIMONY OF NATIONAL PROPANE GAS ASSOCIATION

Mr. Chairman:

The National Propane Gas Association (NPGA) respectfully submits for your consideration the following testimony in support of a technical proposal to achieve tax equity for propane and other alternative fuels.

NPGA is the national trade association of the LP-Gas industry with a membership of 3,500, including 37 affiliated state and regional associations representing members in all 50 states. Although the single largest group of NPGA members is retail marketers of propane gas, the membership includes propane producers, transporters and wholesalers, as well as manufacturers and distributors of associated equipment, containers and appliances.

Propane gas is used in over 18 million installations nationwide for home and commercial heating and cooking, in agriculture, in industrial processing, and as a clean air alternative engine fuel for both over-the-road vehicles and industrial lift trucks (forklifts). By 1993 estimates, sales of propane gas in the U.S. for motor fuel account for about 3.5% of the 500 million gallons of propane sold in this country.

While it may be considered an "alternative" fuel by some, it is certainly not new. Propane gas has powered motor engines for decades. In fact, over 350,000 vehicles in the U.S. and over 4 million worldwide operate on clean-burning propane gas today. Of all the alternative motor fuels, propane gas has one of the most extensive refueling infrastructures in place today. There are thousands of propane refueling stations in operation; some 3,500 of these are retail operations. So, the current motor fuel tax rate affects many more users of propane gas than users of other alternative fuels.

Unfortunately, these fuel users have borne an undue tax burden for years. The problem is that the fuels are all taxed on a per gallon basis. When you compare all the fuels on a common energy content basis, they very widely. For instance, propane gas has approximately 75% the energy content of gasoline. The current motor fuel tax for both propane gas and gasoline is 18.3 cents per gallon. (Gasoline actually pays another one tenth of a cent per gallon into the leaking underground storage tank fund) On an energy equivalency basis, propane users pay an effective rate of 24.9 cents per gallon. The current propane excise tax rate, then, is actually in excess of the rate imposed on gasoline.

Consumers and fleet operators log thousands of mile per year in their propane powered vehicles. These motorist effectively pay anywhere from $100 to $200 or more per year in excise taxes due to the tax inequity. Congress's tax policy has failed to recognize the energy content differences among the alternative fuels compared to gasoline and imposes a very unfair tax structure on the very same fuels it encourages through its energy policy.

Through the Clean Air Act of 1990, the Energy Policy Act of 1992 and Executive Order 12844, Congress and the Administration have recognized the important role alternative fuels like propane gas can play to clean our nation's air and reduce our oil dependence. The NPGA supports structuring the motor fuels excise tax rate for alternative fuels based on energy content, so no alternative fuel will be taxed at a higher rate than gasoline, as propane is today.

Mr. Chairman, we support the position put forth by the Propane Vehicle Council who has been working with the Committee on this issue and ask you to include this alternative fuels tax equity provision in the miscellaneous tax reform bill. Thank you for your consideration.

STATEMENT OF THE

NATURAL GAS VEHICLE COALITION

The NGV Coalition is a national organization of over 280 members, including vehicle manufacturers; NGV component manufacturers; natural gas distribution, transmission, and production companies; natural gas development organizations; environmental and non-profit advocacy organizations; state and local government agencies; and fleet operators. The NGV Coalition is dedicated to developing long-term markets for NGVs and building an NGV infrastructure, including the installation of fueling stations, manufacturing NGVs, developing consensus industry standards, and providing training.

II. Summary

The Omnibus Budget Reconciliation Act of 1993 required for the first time that natural gas distributors of transportation fuels collect excise taxes. The Committee is currently considering various proposals to modify the collection of excise taxes, along with other miscellaneous revenue issues. Thus, the NGV Coalition and its member companies have a direct and substantial interest in these hearings.

The NGV Coalition supports the Committee's initiative to review the application of excise taxes to alternative fuels. U.S. tax policy should be consistent with the goal of promoting the use of alternative transportation fuels. Congress, therefore, should move to repeal the existing excise taxes on alternative fuels. Repeal would encourage the use of natural gas, an environmentally clean-burning fuel, enhance the national policy of creating a market for alternative fuel vehicles to reduce our reliance on imported oil, and remove the inequities and burden of administering the tax.

III. Comments

Justification for Repeal of Federal Excise Tax on Natural Gas Used As a Vehicular Fuel

The continued dominance of petroleum fuels in the transportation fuels market poses significant economic and environmental consequences.[1] Exempting natural gas (liquefied and compressed) from the current excise taxes will stimulate economic growth, creating new jobs in the energy market, and improve the environment, as the importation and consumption of oil is displaced in the transportation fuels market. Natural gas is a clean, efficient, domestic energy resource that when used as a vehicular fuel significantly reduces emissions of harmful pollutants. Over 90 percent of the natural gas used in the U.S. is produced in America. Government incentives are necessary to overcome the country's entrenched reliance on liquid fuels, such as gasoline and diesel. Incentives, such as tax exemptions, not disincentives, therefore, should be put in place to overcome the institutional impediments that have kept alternative fuels from competing in the transportation fuels market.

Growing reliance on foreign oil imports is a significant drain on the U.S. economy, altering our balance of payments with trading partners and undermining the viability of the domestic oil and gas industry. Last year, payments to overseas oil exporters totaled $49.7 billion. Economic figures released in July indicate that May's record breaking import deficit figures were in large measure due to a 17 percent jump in petroleum imports. Future disruptions in oil supplies could have a devastating impact on our economy if effective measures to offset the growing demand for foreign oil are not put in place. The economic damage caused by the last two oil embargoes is estimated to have cost in the trillions of dollars. The National Petroleum Council's report, entitled "Factors Affecting the U.S. Oil and Gas Outlook" estimates that the previous oil embargoes reduced GNP by 3.5%, increased unemployment by 2%, increased interest rates by 2% to 3%, resulting in over $1.5 trillion dollars of loss to the U.S.

---

[1]See Congressional Research Service, Library of Congress, The External Costs of Oil in Transportation (June 1992). A mid-range estimate prepared by the CRS in 1992 concluded that the minimum external cost of continuing to use oil for U.S. transportation is in the range of $10 to $20 billion per year; externalities are costs imposed by the use of a product but not internalized in its price.

economy. See, e.g., Task Force on Strategic Energy Research & Development, "Energy R&D: Shaping Our Nation's Future in a Competitive World" IX (June 1995) ("The cost of U.S. vulnerability to oil price shocks are significant. The cumulative losses to the U.S. economy of the oil price shocks of the 1970's and 1980's, combined with related U.S. economic policies of that period, are now estimated to have been in the trillions of dollars.")

For the first time ever, the U.S. is importing more oil than it produces. The Energy Information Administration projects that U.S. reliance on oil imports will continue to grow with imports accounting for well over 60 percent of U.S. demand by the year 2010. Under low oil price assumptions, that number could grow to as high as 75 percent. The import figures are particularly alarming considering that oil imports today are much higher than at any time preceding the past two oil embargoes; they also highlight the fact that energy policy measures adopted since the 1970's have been unable to alter the trend toward greater reliance on foreign oil.

The surge in oil imports is primarily a result of the transportation sector's increased demand for oil and declining U.S. oil production. The transportation sector is almost entirely dependent on petroleum motor fuels. In 1993, Americans consumed more than 117 billion gallons of gasoline. Each year Americans drive more miles, increasing the demand for gasoline; in 1992, passenger cars in the U.S. alone traveled 1.6 trillion miles. Meanwhile, improvements in fuel efficiency peaked in 1990 and have been flat ever since. Efforts to require further improvements in fuel efficiency are not likely to succeed. In 1992, Congress estimated that U.S. automobiles and trucks "consume[d] a volume of fuel equalling . . . one-seventh of the entire world's oil production." House Report No. 102 - 474(I), 136, 106 Stat. 1959. The Energy Information Administration projects that the transportation sector alone will require 14.1 million barrels of oil per day by 2010. EIA, "Annual Energy Outlook 1994" (Jan. 1994). At that time, the transportation sector will be consuming 7 million more barrels per day of oil than U.S. domestic production is capable of delivering. Id.

Concerns over rising oil imports and the oil embargo of 1973 led congressional leaders to look for avenues to increase alternative fuel use. In 1978, Congress enacted the Energy Tax Act (P.L. No. 95-618) providing alternative fuels with special treatment. The Congressional Research Service (CRS) reports that "[t]he underlying rationale for the [Tax Act] was the perceived failures in the energy markets in allocating resources efficiently and fairly, in coping with the 1973 oil embargo, and in adjusting to the sharp increases in energy prices, the shortages, and the associated adverse economic and social problems." CRS Report for Congress, "Disparate Impacts of Federal and State Highway Taxes on Alternative Motor Fuels," 93-330E (March 1993). Since 1978, numerous congressional measures have increased or altered the tax treatment of alternative fuels.

Efforts to encourage alternative fuel use, unfortunately, have not been uniformly applied, and today, certain alternative fuels are taxed at rates higher than gasoline (on an energy equivalent basis). Measures to stimulate market demand for alternative fuels, even those taxed at lower rates than gasoline, have only been marginally effective due in part to the limited interest of U.S. automakers in producing alternative fuel vehicles and to slumping oil prices during the early 1980's. Passage of the Clean Air Act Amendments of 1990 and the Energy Policy Act of 1992 has renewed much interest in alternative fuels. This year, U.S. automakers are offering a variety of alternative fuel vehicles, including passenger, truck and heavy duty applications. Fleet operators, however, will unlikely be willing to acquire these vehicles, which are priced higher than comparable gasoline vehicles, unless they are assured lower fuel prices. Exempting alternative fuels from the current excise tax could provide an important incentive necessary to encourage fleet operators to buy these vehicles.

Alternative fuels should be exempted from the existing motor fuels excise tax until they are firmly established in the marketplace. Providing alternative fuels with an exemption is a simple, straightforward method of encouraging the use of AFVs. The revenue impact of delaying the imposition of the motor fuels excise tax on natural gas vehicles is minimal. Assuming that eligible NGVs on the road today pay excise tax at the rate of 5.9 cents per gallon

equivalent, the total revenue generated from NGVs is less than $600,000[2] or **0.003 percent** of the total $20 billion in revenues generated by the highway trust funds each year. Continuing to impose the excise tax on alternative fuels, however, will diminish penetration of AFVs into the transportation fuels market. To the individual customer the added cost associated with the excise tax can be significant in determining whether they purchase natural gas.

Impeding growth in the NGV market will also result in foregone revenue from an increase in employment associated with the alternative fuels industry. The number of workers in the domestic oil industry has been steadily declining over the past several decades. While some portion of that job loss is attributable to efficiency improvements, a large portion of the decline is simply a result of decreased production levels. Domestic crude production, for example, has declined nearly 21 percent from 1980 to 1993. The number of workers employed in the petroleum refining industry has declined more than 25 percent over the same period.

In contrast, employment in the natural gas production and distribution industries has not experienced the dramatic declines seen in the oil industry. Employment in the natural gas production and distribution industry was at 162,000 in 1993, compared with 168,000 in 1980. It is reasonable to expect that with measurable increases in natural gas markets, employment will also increase, though not on a one-for-one basis. And unlike oil, the vast majority of the natural gas we consume in the coming decades will continue to come from America.

Regulatory Burden of Collecting the Tax

Exacerbating the barriers that exist to increased market penetration is the burden imposed of collecting the tax. Since the natural gas vehicles industry is still in its infancy, there are no guidelines to follow for collecting the tax. Tracking sales of natural gas for vehicular use is much more complex than tracking sales of gasoline. Unlike gasoline distributors, distributors of natural gas sell their product to a variety of customers for a variety of uses. Furthermore, there is no uniform way of complying with the tax regulations. Currently, different state IRS offices are dictating different methods of collecting and reporting.

Despite the fact that distribution of gasoline and natural gas are not similar, natural gas distributors are expected to collect excise taxes in the same manner as the gasoline industry. With respect to natural gas, the gas distributor must first segment the volume of gas being used as a transportation fuel (since the storage system for gasoline is not available/feasible for natural gas) and then the seller must distinguish exempt from non-exempt users before collecting the taxes. In the end, the cost of administering this burdensome collection process does not just justify the revenues generated.

IV. Conclusion

The NGV Coalition supports repeal of the current federal excise tax on natural gas as a transportation fuel (CNG and LNG). The tax is burdensome for the companies responsible for collection. In addition, it is inequitable to impose higher tax rates on natural gas or any other alternative fuel than imposed on gasoline. Increasing the use of alternative fuels will provide significant economic and environmental advantages. Tax policies, therefore, should encourage their use. We propose that Congress exempt alternative fuels until such time as several alternatives to gasoline become competitive in the transportation fuels market.

---

[2]For purposes of computing these figures, 40,000 NGVs are assumed to be in-use; most of these are light duty vehicles. If these vehicles consume 500 gallons of fuel per year and half of these vehicles are exempt from the excise tax, imposition of the excise tax on the fuel used by these vehicles should generate approximately $590,000 annually. Much of the fuel used by these NGVs is exempt from the excise tax because these NGVs are operated by municipalities, state agencies or transit authorities.

TESTIMONY OF PROPANE VEHICLE COUNCIL

The Propane Vehicle Council ("PVC") hereby submits comments to the Committee on Ways and Means on a technical proposal to achieve tax equity for propane and other alternative fuels. The PVC believes that this minor amendment to the Federal tax code will result in a substantial increase in the demand for alternative fuels.

PVC was established in early 1994 to advance propane's future as a clean, safe and superior-performing alternative transportation fuel. The Council works to remove legislative and regulatory barriers and to increase awareness of propane's advantages as a transportation fuel among government officials, the auto industry and consumers. It also undertakes projects to encourage the development, demonstration and marketing of propane-related technologies and propane-powered vehicles.

Working together with the National Propane Gas Association, PVC is composed of a wide variety of stakeholders with a significant interest in the transportation fuel market for propane. Members include propane marketers, propane producers and pipeline operators, equipment manufacturers and distributors, vehicle and engine manufacturers, and associates.

I. Introduction

A. Current Federal Policy

Both Congress and the President have recognized the importance and role that alternative transportation fuels can play in reducing oil imports, improving air quality and providing domestic jobs. The Clean Air Act Amendments of 1990, the Energy Policy Act of 1992, and Executive Order 12844 all reflect the commitment of the Federal Government to the promotion of alternative transportation fuels. Accordingly, U.S. Government policies, including tax policy, should be consistent, and should support efforts, at all levels of government, to encourage the use of such fuels.

B. Disadvantages Created by Taxes

Taxes, both state and federal, are the primary impediment to the use of alternative fuels. Such taxes have a widely disparate impact, primarily because motor fuels are taxed on a gallonage basis, without regard to fuel energy content. Federal taxes for alternative fuels, when based on a common energy content, vary widely and are in excess of the rate imposed on gasoline. Propane is particularly disadvantaged, paying 24.9 cents per gallon (when based on a common fuel energy content), compared to the 18.3[1/] cents per gallon paid by gasoline. These disparities have been fully documented in several studies by the Congressional Research Service.[2/] Simply put, an owner of a typical propane-fueled fleet vehicle, for example, would pay an additional $100 to $200 per year to operate such a vehicle solely as a result of the inequity and disproportionate tax imposed.

1/ Gasoline pays an additional .1 cent per gallon tax (a total of 18.4 cents per gallon). This extra payment is used to compensate for leaking underground storage tanks (the "LUST" tax); propane does not pay the LUST tax, so the .1 cent per gallon has not been included in the calculation.

2/ See "Disparate Impacts of Federal and State Highway Taxes on Alternative Motor Fuels" issued on March 12, 1993, revised on December 17, 1993, and "Impact of Highway Fuel Taxes on Alternative Fuel Vehicle Economics" issued March 16, 1994.

In 1993, the Federal Fleet Conversion Task Force[3/] prepared a comprehensive report and plan for accelerating the commercialization, production and market acceptance of alternative fuels and alternative fuel vehicles. The report is balanced and fuel neutral; it advocates increasing the use of alternative fuels but permits the market, not regulation, to determine which fuels are better suited for achieving this goal. It analyzes specific problems and recommends viable solutions.

A major problem addressed by the report is the disadvantage created by Federal and state excise tax structures. Accordingly, it recommends the following:

> Significantly reduce or eliminate where possible Federal and State excise taxes on all alternative transportation fuels. In some cases, excise taxes on alternative fuels are higher than the rate on gasoline. Also, some alternative fuels are taxed at much higher rates than others on an energy content basis. This discrepancy should be eliminated as soon as possible and tax parity achieved at the Federal, State and local levels. Excise tax reduction or elimination on all alternative fuels would be an equitable and effective means of stimulating demand and creating new infrastructure;

II. Benefits of Propane

Propane, which is derived primarily from domestic natural gas, has for many years been the nation's most widely used alternative fuel. Unlike gasoline, propane is environmentally friendly and clean burning, with the lowest greenhouse emissions of any currently viable fuel. Propane is used as a safe, reliable energy source throughout the world in homes, farms and businesses, as well as for transportation. For several reasons, propane can most readily be used by fleets and motorists.

First, there is widespread availability of propane through an established infrastructure. There are already at least 3,500 retail refueling outlets across the country, providing drivers with the security that they will be able to obtain fuel wherever they go. Moreover, a propane dispensing pump can be installed at an existing service station inexpensively and quickly.

Second, the cost of converting an automobile to propane is relatively low, about $2,000; in contrast, conversion of an automobile to compressed natural gas ("CNG") is approximately double that amount. Moreover, it is anticipated that the cost for a propane-fueled vehicle could, as more are produced, become only $700 or $800 more than a conventional gasoline-fueled automobile.

Third, propane is an inexpensive fuel. Excluding Federal and State taxes, the retail price of a gallon of propane can be less than 50 cents. Thus, consumer savings from the purchase of propane can be very significant, particularly for vehicles with high fuel consumption.

Fourth, the long driving range provided by propane provides additional convenience and security. In general, a gallon of

---

3/ Members include representatives from Federal and state governments, all segments of the alternative fuels industry, automobile manufacturers, fleet managers and other users or potential users of alternative vehicles and fuels, and environmentalists.

propane will take an automobile about 75% as far as a gallon of gasoline. To compensate for the lower energy content, propane-fueled vehicles usually have a slightly larger fuel tank. Thus, they provide drivers with the same driving range as a gasoline-fueled car. Automobiles fueled with most other alternative fuels suffer significant reductions in driving range.

Fifth, there is more than adequate supply of propane to meet current and projected demand. Over 90% of the U.S. requirements are met with domestic production, primarily as a co-product of natural gas extraction. Most of the remaining propane supply comes from Canada. Moreover, sufficient volumes of additional propane can be recovered from natural gas production to meet probable new demand in the transportation fuel market. Established pipeline, storage and terminalling facilities are used to transport and distribute propane; these facilities would require only incremental expansion to meet the rising demand of the automotive market.

As a result of these factors, approximately 350,000 vehicles operate on propane today in the United States and about 4 million, worldwide.

III. Unfair Tax Structure

A. Problem

The Federal excise tax imposed on propane used as a motor fuel has, for a decade, been unfair and excessive. The cause is twofold:

1. Congress failed to recognize that the energy content of a gallon of propane is about 75% that of gasoline. Therefore, what appeared to be a fair approach -- imposing the same tax on propane as on gasoline -- is actually very unfair. Propane pays one of the highest rates of Federal tax of any alternative fuel. There is simply no justification for subjecting the most promising alternative transportation fuel to the most inequitable tax treatment.

2. In recent years, a number of steps have been taken to encourage the use of other alternative fuels. For example, until October, 1993, compressed natural gas was subject to no Federal excise tax. Both methanol and ethanol have been given some tax reduction or subsidy. The propane industry, composed of more than 3,000 small, family-owned businesses, has not, until now, participated in the tax legislative process as actively as other fuel industries.

B. Proposed Solution

1. Tax Parity

Greater tax equity will encourage the use of alternative transportation fuels; such a step will assure that the objectives of the Clean Air Act and the Energy Policy Act -- a cleaner environment and reduction in the nation's dependence on oil imports -- are achieved. Moreover, the tax rate imposed on the various alternative fuels should be structured so that it is never more than the tax rate imposed on gasoline -- the very fuel Congress mandated alternative fuels to displace.

2. Modest Incentive

In addition to equalizing the tax rate with the tax on gasoline on an energy equivalency basis, Congress should consider another component of tax equity -- providing a modest incentive to such fuels for a limited period of time to encourage market penetration. The alternative fuels industry is relatively new

and in the early stages of development. Thus, a modest incentive for a few years would help its "start-up." The tax rate could be set at 12 cents per gallon on an energy equivalency basis on all alternative transportation fuels <u>except</u> CNG. Thus, it would equalize the rate of tax on propane, methanol, ethanol and LNG at a gasoline equivalency of 12 cents per gallon and would retain the current rate of tax on CNG at 5.6 cents. The reasonableness of this proposed rate is confirmed by the <u>Congressional Research Services</u> study on the impact of federal highway fuel taxes on alternative fuel vehicle economics. That report recommended a rate of 12.0 cents per gallon to promote greater tax equity for alternative transportation fuels. Moreover, a modest incentive would, to some degree, compensate for propane's "overpayment" of taxes in the past.

However, the PVC fully recognizes the fiscal restraints under which the Congress is currently operating. Thus, while it believes a modest incentive would be very helpful to the industry, tax parity -- tax imposed at a rate which reflects the energy content of the fuel -- is the most important measure.

The following chart shows the (1) current per gallon tax and its effective tax rate due to differences in energy content of the fuels and (2) proposed rates if fuels were taxed on an energy equivalency basis with gasoline.

Fuels	Current Rates		Proposed Tax Parity
	Tax Rate (cents per gallon)	Effective Rate (Gasoline Equivalent cents per gallon)	Tax Rate (cents per gallon)
Gasoline	18.3[4/]	18.3	18.3
Propane	18.3	24.9	13.56
CNG	4.3[5/]	5.6	5.6
Methanol	11.4	23.0	9.06
Ethanol	13.0	19.7	12.12
LNG	18.3	28.2	11.96

This adjustment would assure greater tax parity and would eliminate the current disincentive to use cleaner fuels created by the tax code.

Changes in the tax code are the single most effective means of encouraging the use of alternative fuels because (1) vehicles which consume the most fuel (often the greatest polluters) would receive the greatest incentive to convert to other fuels; and (2) experience in many other countries has demonstrated that fuel tax equity can dramatically increase alternative fuel vehicles penetration (<u>e.g.</u>, Netherlands - 15%, Italy - 5%., and Canada - 3%).

IV. <u>Revenue Estimates</u>

The PVC has met with representatives of the Joint Committee on Taxation and has provided detailed information on cost

---

<u>4/</u> Gasoline pays an additional .1 cent per gallon to compensate for leaking underground storage tanks (the "LUST" tax); most alternative fuels do not pay the LUST tax, so it has been excluded from the equivalency calculation.

<u>5/</u> The tax on CNG is 48.54 cents/MCF, determined at standard temperature and pressure.

estimates for this proposal. Based on a complex industry model, taking into account fuel use profiles for the vehicle fleet, fuel costs, vehicle costs and taxes, it predicts the most economic vehicle/fuel selection for various consumer groups. Pursuant to the computations derived from this model, PVC estimates that if the tax on all alternative fuels, except CNG, were adjusted simply to the same energy equivalent rate as gasoline (18.3 cents per gallon), the revenue impact over 5 years would be a revenue gain of $7.5 million.[6/] The tax on CNG would be maintained at its current incentive rate of 5.6 cents per gasoline equivalent gallon. As a result, the Committee can see that a minor adjustment to promote tax equity will allow the market to make more economic decisions about alternative fuel vehicles and alternative fuels.

V. Conclusion

Congress neither intended to discourage the use of propane or other alternative fuels nor place them at a competitive disadvantage. Both the Congress and the Administration have repeatedly expressed the intent to encourage such fuels and maintain "fuel neutrality" in their alternative fuel policies. Accordingly, good tax policy dictates, at the very least, equalizing the tax rate on an energy equivalency basis on all alternative transportation fuels except CNG. Such a measure would ensure that the Congressional policy to encourage the use of alternative fuels is consistently and effectively implemented. Congress should eliminate the unintended contradiction between the nation's energy security and environmental policy and its tax policy. It is estimated that close to one million alternative fuel vehicles could be placed in operation by the year 2005 as a direct result of the proposed tax change -- computing the tax rate for alternative fuels on a gasoline gallon equivalency.[7/]

Finally, Congress should amend the tax code to ensure that the Federal excise tax rate imposed on the various alternative fuels never exceeds the tax rate imposed on gasoline. In this way, Congress will create, at a minimum, tax equity and will allow the market to determine which transportation fuels will be used.

Thank you very much.

6/ As a result of the tax change, there would be an overall increase in the number of alternative fuel vehicles on the road. However, the mix of vehicles would change slightly, with a greater number operating on alternative fuels that are taxed at a higher rate.

7/ If a modest incentive were provided, about 1.4 million alternative fuel vehicles would be on the road by 2005.

Philip Mosley
Chief of Staff
Committee on Ways and Means
1102 Longworth House Office Building
Washington, D.C. 20515

Dear Mr. Mosley,

My name is Jack Olsta. I am the owner of The Jack Olsta Company, Huntsville, Texas. On behalf of NTDA, I am honored to present the following testimony for the Ways and Means Committee Hearing. National Trailer Dealers Association is a nationwide trade group composed of 241 small businesses serving the transportation industry in 48 states.

Moving the point of collection of the trailer excise tax from retail sale to manufacture level is of utmost importance to our industry. From our perspective we are forced to manage and remit to the IRS large sums of money with potentially severe penalties should we err in our procedures. In addition there are inconsistencies within our industry regarding the application of F.E.T. for such items as tires and freight costs. Both these items leave us liable for unwanted and undeserved penalties within a non-profit portion of our business. We are at risk without reward.

From the perspective of the Federal Goverment I believe the system could be simplified by having the point of collection returned to the manufacturer. This would enhance efficient revenue collection as well as save many audit field hours.

I ask as a Texas businessman and member of the National Trailer Dealers Association consideration in changing the F.E.T. back to the manufacturer.

Sincerely,

Jack Olsta

Jack Olsta

Huntsville, TX 77340

National Trailer Dealers Association is aggressively attacking the F.E.T. issue. We are a growing national trade group of 241 small businesses serving the transportation industry in forty-eight states. We have now joined ranks with National Used Truck Association, National Auto Dealers Association and National Truck Dealers Association. All the above associations are actively working to change F.E.T. collection.

Among the tax issues being considered by the House Ways and Means Committee is one dealing with "moving the point of collection of the heavy truck excise tax from retail sale to manufacture. and clarify (ing) activities which constitute taxable manufacture of existing trucks." National Trailer Dealers Association asks that the discussion be broadened to include terminating the collection of trailer excise taxes at the retail level and reinstating them at the manufacturing level. The Surface Transportation Assistance Act of 1982 could be amended to accomplish this goal.

Although our industry supported this change in 1982 we were unaware of the problems that it would cause. Many of our members have been unable to sell their dealerships because of the F.E.T. liability. Many trailer manufacturers provide no tire pricing guide. The inconsistencies regarding application of F.E.T. for tires and freight are left in the hands and discretion of the I.R.S. agent auditing the company. While dealers across the nation are acting as collection agents for the I.R.S., we have no clear rules governing this collection.

Rather than educating our dealers many I.R.S. agents seem content to attack them. For Example, National Trailer Dealers Association established a fair market tire guide upon request from the dealers. As an industry we believe there should be some uniform formula that we can apply. One East Coast agent has decided our guide is not valid. Large fines have been levied against our members. The agents' suggested formula is very complicated. The same set of tires when put on five different trailers can have a value difference of $1,000.00 on a set of eight. Common sense seems to dictate a set of tires manufactured by Company A of the same size and model should have the same value for excise tax purposes regardless which trailer manufacturer mounts the tire on their equipment. This is just one example of the confusion in our industry regarding this tax.

The I.R.S. says the tax would have to be raised if trailer excise tax goes back to the manufacturer. Why?

1.) When rules were adopted for the leasing of trailers and excise tax due, the I.R.S. ruled there was no constructive markup for trailers although on trucks a percentage markup was applied.

2.) Won't the I.R.S. have a cost savings in less audits of points of collection and paperwork flow with twice monthly receipts, quarterly and yearly filings? Two hundred manufacturers who they still must audit versus two thousand dealers?

3.) When the tax was changed in 1982, it was increased from 10% to 12% due to a projected loss of revenue. What has changed? If anything the value of equipment has increased dramatically.

National Trailer Dealers have many more examples of the potential for fraud and the arbitrary nature of this tax as presently administered. The liability and paperwork dealers of trailers absorb while trying to comply with a tax which has so many potential loop holes, creates an uneven playing field.

On behalf of the members of National Trailer Dealers, the Board of Directors of NTDA ask for your consideration in amending the Surface Transportation Act of 1982. We must return the excise tax back to the manufacturer to protect small business, provide efficient tax collection, eliminate paperwork, and maximize revenues for the federal goverment.

NATIONAL TRUCK EQUIPMENT ASSOCIATION

Celebrating 30 Years of Service
1964 – 1994

July 27, 1995

Mr. Philip Mosley
Chief of Staff
Committee on Ways and Means
1102 Longworth House Office Building
Washington, D.C. 20515

Dear Mr. Mosley:

I am writing on behalf of the National Truck Equipment Association (NTEA). The NTEA is very interested in two particular miscellaneous tax proposals that are currently under consideration by the Committee and were subject to debate at the July 11-13 hearings. The two proposals of interest are found in section #7 of the Description of Miscellaneous Tax Proposals as prepared by the staff of the Joint Committee on Taxation. These proposals both concern modifications to the retail truck excise tax (I.R.C. § 4051). We would appreciate if these comments could be submitted for the record of the hearing and the Committee's consideration.

The National Truck Equipment Association represents approximately 1,500 businesses, most of them small and family owned, throughout the nation who distribute and manufacture commercial truck bodies and equipment. These bodies and equipment are installed by NTEA members on trucks or truck chassis produced by companies such as Ford, GM, Navistar, etc. . . to create a completed truck. The vehicles produced by our members would include dump trucks, tow trucks, snow removal equipment, fire trucks, ambulances, beverage delivery trucks and a host of other specialty, single unit, work-related trucks. The NTEA estimates that our membership is responsible for production of over 80% of the vehicles sold in this single unit, work related truck category.

Many of the bodies sold by NTEA members are subject to the 12 percent excise tax imposed on the sale of truck

bodies and chassis that are not suitable for use with vehicles having a gross vehicle weight (GVW) of 33,000 pounds or less. NTEA distributor members typically make their sales directly to end-users or to truck dealers. Although NTEA manufacturer members most frequently sell to their distributors, many of these companies also make direct sales to end-users.

Since the NTEA represents companies that fall on both sides of the retail/manufacturer issue, as an association, we are not taking a position for or against the proposal to move the tax from the first retail sale back to the manufacturer's sale. As an interested and well informed party to the debate, however, we would like to point out a number of areas that the Committee should consider when they look at possibly changing the point of collection of this tax.

Most manufacturer level sales of truck bodies are wholesale sales of inventory to distributors. If the point of collection is changed, the existing 12 percent rate will presumably need to be increased, assuming revenue neutrality is the Committee's goal. Although retail sales by truck body manufacturers are now subject to a four percent "presumed mark-up percentage," a good deal of analysis would be needed to determine a fair and equitable rate hike.

More troublesome than the issue of collection point for the retail truck excise tax is the lack of objective standards on the part of the IRS when determining whether a body or chassis is taxable. This lack of objectivity creates a situation where one seller, who may be willing to risk an audit on a questionable transaction and does not choose to charge the excise tax, is able to gain a 12 percent competitive edge over another seller who views the transaction more conservatively for tax purposes. Unfortunately, the IRS has not issued many rulings that provide objective means of applying the tax or that create safe harbors.

We have attached two documents to this letter which will help you better understand the difficulties faced by small businesses who have to comply with these tax regulations. The first is simply a document containing a variety of situations faced by the small businesses who deal with the truck excise tax. The second document is a background paper on the truck excise tax itself and provides a very good, although brief, overview of current tax applicability.

If you choose to proceed with these tax proposals or any other possible changes to the truck excise tax we would be very interested in working with you. Please feel free to contact me at (202) 628-2010.

Sincerely,

Mike Kast

DISCUSSION POINTS

ON

ISSUES PRESENTED BY THE RETAIL EXCISE TAX ON TRUCK, TRAILER AND SEMITRAILER BODIES AND CHASSIS AND TRACTORS UNDER I.R.C. § 4051-53

I. Lack of Objective Standards. In theory, any particular truck body or chassis is always taxable or always nontaxable, regardless of who the retail seller is or where the retail seller is located. For this to actually occur, there needs to be an objective basis for determining whether a body or chassis is taxable. Currently, such objective standards do not exist.

A. Suitable for Use -- The Code currently excludes from the 12 percent tax those truck bodies and chassis that are "suitable for use" with vehicles rated 33,000 pounds Gross Vehicle Weight (GVW) or less. Neither the regulations issued under I.R.C. § 4051 nor the rulings issued by the Service provide any objective basis for ascertaining "suitability" for use. The reference in the regulations to "commercial and practical fitness" for use with vehicles rated below the taxable threshold is completely subjective.

For Instance:

1. Is a body that is mounted 10 percent of the time on vehicle rated 33,000 lbs. GVW or less "suitable for use" with vehicles rated 33,000 lbs. GVW or less? 5 percent of the time?

2. If a retail seller sells only two 22-foot platform bodies in a given period, and those bodies are both mounted on vehicles rated over 33,000 lbs. GVW, are those bodies taxable even if such bodies can be and routinely are mounted by others on vehicles rated 33,000 lbs. GVW or less? Is the retailer required to show evidence as to the sales of third parties?

3. Should regional differences in the application of trucks affect taxability of an article? The same truck body used to haul high density, bulk commodities in rural areas may be used to haul high cube, low weight consumer goods in urban areas.

B. Gross Vehicle Weight -- The Code, regulations and revenue rulings state that gross vehicle weight ("GVW") -- maximum loaded weight of a vehicle -- must be assigned by the retail seller to each taxable article it sells. Per IRS rulings, the GVW is determined by reference to axle capacity and placement and strength of the chassis frame. The determination of GVW is done by chassis manufacturers based on extensive track and simulation testing, as well as subjective factors such as expected vehicle life. Every chassis can be reasonably rated over a range of GVW values. On the other hand, bodies, taken alone, do not have a GVW, i.e., a body is not a vehicle in any sense.

1. How can retail sellers who modify chassis, as is often required by the marketplace, be expected to

increase the GVW of that chassis, when the chassis manufacturers treat the methodology of establishing the GVW as a trade secret? Such an analysis would be technologically and financially infeasible for any individual retailer.

2. Given that there often is no obvious difference between a chassis rated 32,000 lbs. GVW and a chassis rated 34,000 lbs. GVW, and that the IRS has no objective methodology for calculating GVW, how can retail seller be held accountable for tax determinations based on GVW?

C. Uncertainty Results in Conservative Companies Giving Up a 12% Edge -- Because the "suitable for use" and GVW concepts are so subjective, those companies willing to bear audit risk get a 12 percent price advantage. Companies that treat "gray area" articles as taxable lose sales to the aggressive and unscrupulous.

II. Imposition of the Tax on End-Users Creates Inequities. Modifications of customer-owned truck bodies/chassis result in the excise tax being imposed on the customer, not the modifier. This often leads to tax avoidance and nonproductive restructuring of transactions.

A. The deduction for the value of used components can be utilized by a customer, but generally cannot be utilized by a used vehicle dealer. Thus, if a dealer buys a used truck, converts it into a tractor and sells it, the full retail price of the tractor is taxable (less usual deductions). If a customer buys the used truck from a dealer and then takes it to a truck equipment distributor to be modified into a tractor, only the cost of the modification would be taxable. The used truck owner, not the modifier, would be responsible for filing a tax return and paying the tax. Few end-users understand the tax or that they must file a return (Form 720), resulting in revenue loss to the Service.

III. Provisions that are Vague, Unworkable or Ill-Advised. The retail truck excise tax has numerous provisions that make little sense and should be reevaluated.

A. Re-sale Certificates -- Sales by a manufacturer to its dealers are treated as taxable "retail sales" unless the manufacturer first obtains a written resale certificate stating that the articles will be resold. Failure to meet this administrative requirement results in wholesale transactions being taxed, contrary to the Congressional intent that only retail sales be taxed.

B. Four Percent Mark-up Percentage -- Retail sales by manufacturers and importers of new truck bodies and chassis and new tractors are subject to a four percent presumed markup percentage on the theory that direct sales by manufacturers are discounted fleet sales. In the truck body industry, manufacturers frequently sell direct in transactions that do not involve fleets or discounts. Nonfleet transactions (e.g., sales of less than 5 units to a single customer) should not be marked-up.

C. <u>Installation Charges</u> -- The deduction for installation charges is extremely vague and has never been clarified by a revenue ruling.

D. <u>Off-Road Vehicles</u> -- The IRS regulations concerning what types of vehicles constitute nontaxable nonhighway vehicles are extremely vague. The IRS has reversed two previously issued private letter rulings in the recent past creating even greater uncertainty.

E. <u>Imports</u> -- Importers of used vehicles now must pay tax on their sales unless they can show that the truck body or chassis in question was previously taxed in the United States or was sold tax-free in the United States in an exempt sale. It is usually impossible for the importer to obtain sufficient facts about the vehicle to determine if this is the case.

F. <u>Demonstrators</u> -- Demonstrator vehicles are subject to tax when put into service as a demonstrator. Demonstrator vehicles sold within a year should be taxed upon sale (at the lowest retail price charged by the seller for the same model vehicle new).

AN OVERVIEW OF FEDERAL EXCISE TAX ISSUES THAT AFFECT TRUCK EQUIPMENT MANUFACTURERS AND DISTRIBUTORS

By Mark H. Sidman, Esq.

The federal excise tax (FET) on retail sales of truck, trailer and semitrailer bodies and chassis, and on retail sales of tractors, is set forth in the Internal Revenue Code at sections 4051-53. Other relevant sections of the Internal Revenue Code include sections 4216 (determination of price), 4221 (tax-exempt sales) and 4222 (tax-exempt sales registration).

The temporary regulations, adopted largely in 1983, are found principally at Treas. Reg. § 145.4051 and Treas. Reg. § 145.4052. This outline is a distillation of the critical FET concepts that must be understood in order to apply the tax correctly. It is strongly recommended that the person responsible for FET in your organization review all of the relevant statutory and regulatory materials, as well as the Excise Tax Quarterly published by the NTEA, in order to become familiar with the nuances of the law and the regulatory and judicial interpretations of the law that evolve over time.

I. TRANSACTIONS THAT MAY BE SUBJECT TO FET.

A. Sale of a body alone to an end-user, whether or not installed on a chassis.
Sale of a chassis alone to an end-user, whether or not a body is installed on it.
Sale of a body and chassis.
Sale of a tractor.

**NOTE: It is possible in a sale of a completed vehicle that the chassis is taxable and the body is nontaxable, or vice versa (*see* section III, below). Treas. Reg. § 145.4051-1(a)(4).

B. Sale of a body, chassis or completed vehicle or tractor to a entity that will lease the article on a short-term basis (*i.e.*, for less than one year).

NOTE: Sale of an otherwise taxable article can be made tax-free **only if (1) the seller **obtains a certificate** from the buyer stating it will resell or long-term lease (i.e., one year or more) prior to any other use, or (2) the sale qualifies as a tax-exempt sale and all **registration requirements are met** (see section II.F., below).

C. Lease of a body, chassis or completed vehicle or trailer to an end-user, unless tax was paid upon acquisition of the article in question (i.e., if lessor manufactured the article in question or provided the certificate referred to in section I.B., above, and the lessor's acquisition transaction was not subject to FET).

D. Installation of parts and accessories under the so-called "**six-month rule**" if (1) the parts and accessories are installed on a taxable body or chassis first placed in service within six months of the installation, (ii) the aggregate price of parts and accessories installed on the body or chassis after its sale (including installation) exceeds $200, and (iii) the parts and accessories are not replacement parts or accessories. I.R.C. § 4051(b).

NOTE: The **customer is primarily liable for the tax under the six-month rule; the **installer has secondary liability**. I.R.C. § 4051(b).

E. Use of a taxable article following its manufacture, production or importation, and prior to its first retail sale.

NOTE: Use of vehicle as a demonstrator triggers FET, and the owner must pay tax as if the vehicle was sold. IRS Letter Ruling 8447092.

F. NOTE: **FET applies to the sale of a replacement body,** if the body meets the taxable threshold (see section III, below).

G. NOTE: **FET applies to sales of used bodies and chassis** that have been "**further manufactured**" by the seller (see section V, below). HOWEVER, further manufacture of a **customer-owned** article results in a tax liability for the owner, not the modifier.

H. NOTE: Parts and accessories are taxable when sold or in connection with a taxable body, chassis or tractor.

II. TRANSACTIONS THAT ARE NOT SUBJECT TO FET.

A. Sales of parts or accessories are not taxable, unless made on or in connection with the sale of taxable body, chassis or tractor. NOTE: Articles that have been ruled to be the "load" of a vehicle are not treated as parts and accessories and would not be subject to FET even when sold on or in connection with a taxable body or chassis. See Treas. Reg. § 145.4051-1(c). Examples include air conditioning equipment, aerial platforms, and cranes designed for purposes other than loading or unloading the vehicles on which they are mounted.

B. Sales of truck bodies and chassis that are suitable for use with vehicles of 33,000 lbs. GVW or less. (See section III, below).

C. Sales of trailer and semitrailer bodies and chassis that are suitable for use with trailers or semitrailers of 26,000 lbs or less (see section III, below).

D. Further manufacture of customer-owned articles (see section V, below).

**NOTE: Such transactions may result in FET payable by the customer of the vehicle, but not by the modifier.

E. Modifications that involve "mere combination" (see section V, below).

F. Sales to entities qualified to engage in tax-exempt transactions:

- state or local governments; sales for export; nonprofit educational organizations; sales for supplies for vessels or aircraft; sales to further manufacturers. I.R.C. § 4052(d); § 4221.

- seller must register for tax-free sales under I.R.C. § 4222. File IRS Form 637 and obtain Certificate of Registry.

- seller must advise buyer in writing that (1) articles in question normally are taxable, and (2) articles are being furnished pursuant to an exemption certificate or equivalent. Treas. Reg.

§ 48.4221-1(b)(5). NOTE: Sales to exporters require proof of subsequent exportation within six months. See Treas. Reg. § 48.4221-3.

- **buyer must provide tax-free sales registration number** (or, in the case of exporters, suppliers of vessels or aircraft, and state or local governments, an exemption certificate may be used in lieu of registration).

G. Sales of nonhighway vehicles (see section IV, below).

H. Sales of specifically exempted articles: camper coaches for self-propelled homes; feed, seed and fertilizer bodies; house trailers; ambulances and hearses; concrete mixers; trash containers; rail trailers and rail vans. I.R.C. § 4053.

III. SUITABLE FOR USE TEST

A. ****NOTE:** If a **body model** is a "suitable for" use with a vehicle of 33,000 lbs. GVW or less or a trailer or semitrailer of 26,000 lbs. GVW or less, **that model body is nontaxable in all sales, regardless of whether it is incorporated into a vehicle that exceeds the GVW threshold in any particular case.**

B. The IRS regulations provide that a body or chassis is suitable for use with a vehicle below the taxable GVW threshold if it has (1) **"commercial fitness"** for such use (i.e., it is priced appropriately for such use), and (2) **"practicable fitness"** for such use (i.e., it is reasonable from an engineering perspective for such use). Treas. Reg. § 145.4051-1(a)(4).

C. **BEST TEST OF COMMERCIAL AND PRACTICAL FITNESS: Prior sales of such article for use in vehicles below the taxable threshold. IRS Technical Advice Memorandum 8746001.

- evidence of **your own prior sales.**
- evidence of **prior sales of others.**
- in audit situation, **documentation is critical.**

D. **WHAT PERCENTAGE OF USE EQUALS SUITABLE FOR USE? IRS says "a significant number." Technical Advice Memorandum 8746001.

- No clear guidance, but based on informal conversations with IRS, 30% to 40% use below threshold certainly should justify treating body as nontaxable; good argument that percentage could be **much lower** so long as sample is substantial and use is reasonable.

E. Chassis: IRS does not apply a suitable for use test; instead, **compute GVW based solely on frame strength, axle capacity and axle placement.** Rev. Rul. 85-196, as modified by Rev. Rul. 86-43, and clarified by Rev. Rul. 86-38.

NOTE: For sales on and after October 1, 1986, GVW **cannot be reduced for FET purposes on account of readily attachable components** (e.g., springs, brakes, rims and tires).

IV. NONHIGHWAY VEHICLES

A. FET does not apply to bodies and chassis incorporated into **nonhighway vehicles.**

B. IRS has **two tests** for nonhighway vehicles:

1. A self-propelled vehicle or trailer or semitrailer, is not a highway vehicle if (i) it consists of a chassis to which there has been permenently attached machinery or equipment to perform a construction, manufacturing, processing, farming, mining, drilling, timbering or similar operation if the equipment is unrelated to transportation on or off-highway, (ii) the chassis has specially designed to serve only as a mobile mount (and power source where applicable) for the equipment or machinery, and (iii) by reason of such design, it could not serve some other function without substantial structural modification. Treas. Reg. § 48.4061(a)-1(d)(2)(i).

2. A self-propelled vehicle, or trailer or semitrailer, is not a highway vehicle if (i) it is specially designed for the primary function of

transporting a particular type of load other than over the public highway in connection with construction, manufacturing, processing, farming, mining, drilling, timbering or similar operation, and (ii) by reason of its special design, the use of such vehicle to transport such loan over the public highways is substantially limited or impaired. Factors considered in determining limitation or impairment for on-highway use: reduced speed; overweight, overheight or overwidth; need for special permit; other relevant considerations. Treas. Reg. § 48.4061(a)-1(d)(2)(ii).

V. FURTHER MANUFACTURING

A. **Further manufacturing will result in the liability for a modifier **only** with respect to articles to which the **modifier holds title.**

- ° If distributor takes a trade-in, further manufactures it into a taxable article and then sells, leases or uses it, FET will be triggered.

B. Further manufacturing of customer-owned articles may result in tax liability for the customer, but not for the modifier. [NOTE: Installation of parts and accessories on customer-owned vehicles may result in secondary liability for installer under the six-month rule. See section I.D., above].

C. Further manufacturing occurs when modifications **substantially improve** or change the articles transportation function or result in a **"different article."** Rev. Rul. 82-157.

D. Examples of further manufacturing:

- ° Stretch 40-ft trailers to 45-ft. Rev. Rul 83-149.
- ° Conversion of truck into tractor. Rev. Rul. 60-155.
- ° Substantial restoration of semitrailers, including fabrication of body. Rev. Rul. 63-128
- ° Insulation of body shells. Rev. Rul. 64-335.

- Installation of tag-axle or pusher-axle. Rev. Rul. 75-129.

NOTE: Repairs are not treated as further manufacturing, unless the repairs are so substantial as to turn an article that has no function as a body or chassis into a functional body or chassis.

NOTE: The IRS recently ruled that Rev. Rul. 69-419, in which restoration of milk tank bodies was held to be further manufacture if the cost of materials and labor exceeded 25 percent of the retail selling price of the restored bodies, does not apply across-the-board. Therefore, it is possible to exceed the 25 percent threshold and not be ruled to be a further manufacturer. See IRS Letter Ruling 8620003.

E. Modifications that are "mere combination" under I.R.C. § 4052(c) are not treated as further manufacturing and do not trigger FET. Installation of the following items are treated as "mere combination":

- coupling devices, including fifth wheels
- wrecker cranes
- loading and unloading equipment (including cranes, hoists, winches and power liftgates)
- aerial ladders or towers
- snow or ice control equipments
- spreaders
- sleeper cabs
- cab shields
- wood or metal floors

F. **NOTE: Special price rules apply to further manufacturing (see section VI, below).

VI. TAXABLE PRICE

A. Taxable price includes **total consideration** paid for taxable articles in question. NOTE: Be sure to provide justifiable allocation of purchase price between body and chassis if one component is taxable and the other is not.

B. Deductions from sales price for FET computation.

- state or D.C. sales tax

- **cost of transportation or delivery** from seller's place of business to the purchaser. NOTE: On distributor sales in which the goods are shipped directly from the manufacturer to the customer, delivery charges can be deducted only to the extent they exceed the charge that would have been imposed to deliver the goods from the manufacturer's facility to the distributor. Rev. Rul 86-68.

- **Fair market value of tires.** NOTE: If the retailer makes separate sales of the tires in question, it must use its lowest established retail price for such tires as its fair market value of the tires. If the retailer does not make separate sales of such tires, and therefore has no established price, the retailer may use the tire manufacturer's predetermined price list, which is published in accordance with Federal Trade Commission rules under 16 C.F.R. § 228.16 in connection with advertisement of tire warranties. If the tire manufacturer for the tire in question has not published a predetermined price list, the retailer may rely on the predetermined price list price for a competitive tire of comparable size with appropriate adjustment for the difference in the cost of the two tires (i.e., the ratio of the fair market value to the seller's cost should be the same for both tires). Rev. Rul. 86-93.

- **installation charges,** which must be reasonable and supportable. See Rev. Rul. 87, 1953-1; Rev. Rul. 57-253. The IRS has provided very little guidance in this area, and sellers should be sure to document carefully all deductions for installation. NOTE: installation charges cannot

be deducted in the sale of a complete vehicle that has a taxable body and chassis.

C. **NOTE: Leases and direct sales -- for new truck bodies and chassis and new tractors, on and after October 1, 1987, the sale price for FET purposes on long-term leases and sales direct from a manufacturer must be marked up by four percent (4%) (the so-called "presumed markup percentage").

D. Tax triggered by use of taxable article following its manufacture or importation is based on lowest established retail price if the taxpayer sells such articles in the ordinary course of business. If a person manufacturers and uses a taxable article that it does not sell, the taxable price equals the cost of the parts and accessories, plus 150% of the labor costs (including overhead). Rev. Rul. 86-130 (ruling addressing glider kits, which should have general application).

E. If a distributor further manufactures a customer's vehicle, the customer must pay tax based on the cost to the customer (exclusive of used components supplied by the customer for their intended purpose). Rev. Rul. 86-130.

Truck Trailer Manufacturers Association

1020 PRINCESS STREET ALEXANDRIA, VA. 22314

RICHARD P. BOWLING
PRESIDENT

(703) 549-3010
FAX: 1-703-549-3014

July 21, 1995

Phillip D. Moseley
Chief of Staff
Committee on Ways & Means
United States. House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20515

Dear Mr. Moseley:

The following statement is submitted on behalf of the Truck Trailer Manufacturers Association specifically relating to the proposal to move the 12% Federal Excise Tax on heavy trucks and trailers from the first retail sale to the sale by the manufacturer.

TTMA is an international organization serving the manufacturers of heavy duty truck trailers. Our member companies build all types of commercial trailers and our associate members are the suppliers of components and material for trailer manufacturing. TTMA trailer manufacturing companies account for approximately 90% of United States trailer production.

Changing the incidence of excise tax on heavy trucks and trailers from the first retail sale back to the sale by a manufacturer raises a number of questions which are not addressed in the Joint Committee on Taxation's Description of Miscellaneous Tax Proposals on page 115.

For example, when the tax was at the manufacturer's level prior to April 1, 1983, the threshold was 10,001 pounds. The current threshold on trailers and semitrailers is 26,001 pounds. Also, the current tax rate is 12% on the first retail sale but prior to April 1, 1983 the tax rate was 10% at the manufacturer's level.

If it is the Committee's intent to maintain revenue neutrality on tax code changes then we believe that the issues noted above should be the subject of separate hearings so that all interested and affected parties might have the opportunity to present their views.

We would be pleased to furnish any additional information which the Committee might desire.

Sincerely,

Richard P. Bowling
President

RPB/lw

TESTIMONY OF FORD N. KYES
ASSOCIATION OF AIR MEDICAL SERVICES

Statement of the Impact of
the Federal Aviation Excise Tax on Air Ambulances

Each year a large number of people living in rural or remote areas suffer serious injuries or illnesses. Fortunately, doctors have access to specially equipped and staffed air ambulances which provide transportation to trauma, burn, cardiac or other acute care facilities. The speed of the transport and the quality of care the patients receive ensures recovery.

Unfortunately, these patients discover that they are treated as airline passengers for tax purposes and a 10 percent "ticket tax" is added to the aviation cost of their transport. The Federal government raises only $5 million a year from taxing trauma patients, but the added health care cost to individuals and administrative burden on the provider can be enough to "break the camel's back."

This statement will address the impact of the Federal aviation excise tax on critically ill or injured patients, access to rural health care and air medical services.

Background

The Association of Air Medical Services (AAMS) comprises hospital, public agency and private sector operators of air ambulances. These air ambulances, both fixed-wing and helicopter, transport more than 175,000 patients annually. Their availability supports the concept of regionalized health care and compensates for the large number of hospital closures.

An air ambulance is a specially equipped and medically staffed rotor- or fixed-wing aircraft used to transport critically ill or injured patients to a higher level of care. Almost every county in the country either has an air medical program located there or is supported by one. The growth and role of air medical services cannot be overstated.

Present law assesses a 10 percent excise tax on domestic commercial air transportation of individuals. Certain emergency medical transportation flights are currently exempt from the tax (air ambulances which do not utilize facilities or services eligible for assistance under the Airport and Airway Development Act of 1970, have a certified takeoff weight of less than 6,000 pounds or are not operated on an established [scheduled] line are exempt from the tax). Those air medical flights which are not exempt are primarily fixed-wing or centrally-located helicopter air ambulances in very rural or remote locations.

Congress last addressed this portion of the Internal Revenue Code in 1987. However, the regionalization of health care, which drives efficiency, and the large number of hospital closures have increased the use of fixed-wing or centrally-located rotor wing air ambulances. Now we have inconsistent tax treatment of similar patients simply because they live in rural or remote areas. Simply put, some patients are covered by the tax while others are not.

Congressman Wally Herger from California has introduced a bill, H.R. 635, that would correct this problem. It has received extensive bi-partisan support from Members of the House Ways and Means Committee. In addition to the support of the Association of Air Medical Services, H.R. 635 has also been endorsed by the National Association of EMS Physicians, the American College of Emergency Physicians, Helicopter Association International and the National Air Transport Association. A similar bill in the Senate, S. 358, introduced by Senators Howell Heflin and Trent Lott, has also received broad support.

Evolution of Air Medical Transport

Air medical transportation has evolved to provide rapid access and transportation to critically ill or injured patients over large geographic regions. Throughout the 1980's, air ambulance systems pioneered the concept of regionalized emergency care while augmenting and enhancing existing community based ground ambulance systems. Rapid access combined with critical care during transport to tertiary centers has directly contributed to improved outcomes for critically ill patients.

The air ambulance was first used for medical transportation during the Korean War. The decreased mortality rate of 2.4 percent in Korea, compared to 5.8 percent in World War II, has been attributed in part to the concept of direct transportation from the battlefield to a mobile army surgical hospital. Further reduction in overall mortality occurred during the Vietnam War, despite the use of more advanced weapons with more destructive power. The Huey helicopter in Vietnam was larger than those used in Korea and could carry an advanced life support (ALS) crew. The medical crews in Vietnam were trained in advanced life support and started intravenous lines in the field.

Rapid medical transport was slowly integrated into the civilian environment in the early 1960's. St. Anthony's Hospital in Denver instituted the first continuously operating civilian hospital-based helicopter program in 1972. Since that beginning over twenty years ago, civilian air medical transport has grown significantly. As of June 1995, there are over 300 rotory- and fixed-wing air medical programs in operation.

Recent years have seen the proliferation of fixed-wing air ambulances as a result of health care regionalization and hospital closures. The geographic distances between rural and community hospitals and acute care facilities have grown dramatically. Due to their greater range, fixed-wing air ambulances are particularly well equipped to perform this role. Fixed-wing air ambulances also have greater all weather capability and can provide medical transportation in many instances where helicopters are prevented from flying. Generally, fixed-wing aircraft have additional capability due to their larger space which allow for greater medical staffing and equipment flexibility. Since the regionalization and hospital closure trend will continue, the growing reliance on fixed-wing air ambulances is also likely to continue.

Improved Access Through the Use of Air Medical Transport

Many rural communities cannot maintain the specialized services and facilities required for critically ill and injured patients. Data from the American Hospital Association show that 940 hospitals permanently closed between 1980 and 1993. Of this total, 675 were community hospitals. The state of Texas had 124 community hospital closures, almost twice the number of any other state during the same period. Air medical transport has a proven record of offsetting many of these closures.

Air medical transport often represents the only access patients in rural communities have to advanced life support (ALS) care. Rural and wilderness areas are often medically-underserved by even basic-level emergency ambulance support. These aircraft carry clinical services and equipment to the patient for the initiation of sophisticated medical care specific to the patient's needs before the patient arrives at the destination hospital. This care is provided under the direction of specialists in emergency medicine and intensive care. In this manner, the aircraft fill the inevitable gap left by rural hospital closures. Patients directly benefit from the equipment and advanced clinical capabilities they receive early on.

The effective transport time to get the critically ill or injured person to definitive care is drastically reduced by air medical transport. Trauma patients and cardiac patients, both of which are time-sensitive medical conditions, have significantly benefited through accessing sophisticated care during the "golden hour" via air medical transport. Thus, the aircraft and their medical teams complement and most often exceed the clinical capabilities of rural health care facilities.

Federal Aviation Excise Tax Has Negative Impact

Air ambulance flights are reimbursed by Medicare, Medicaid, CHAMPUS, state programs, hospitals, insurance plans and individuals. Since air ambulances are reimbursed for providing this service, they are considered charter operators, and are therefore required to pay the 10 percent tax for aviation services imposed by IRS Code Section 4261. Certain emergency medical transportation flights are currently exempt from the tax (air ambulances which do not utilize facilities or services eligible for assistance under the Airport and Airway Development Act of 1970, have a certified takeoff weight of less than 6,000 pounds or are not operated on an established [scheduled] line are exempt from the tax). Air ambulances which do not meet the exemption are generally fixed-wing or centrally located, airport-based rotor-wing.

Revenues raised by the Federal aviation excise tax required by IRS Code Section 4261 are contributed to the Airport and Airway Trust Fund. Trust fund revenues finance airport improvement grants, facilities and equipment, research, and a portion of operations. The Joint Tax Committee has estimated that air ambulances contribute $6 million annually to the Airport and Airway Trust Fund, which totaled nearly $6.3 billion during fiscal year 1994. Furthermore, it is estimated by the Congressional Budget Office that $1 million of the $6 million contributed by air ambulances each year are paid by other Federal government health programs such as Medicare which results in a net impact on the Federal government of $5 million annually. In addition, state health plans are also subject to the tax resulting in further negative impact on government health costs.

Even though the total portion of tax revenue generated by air ambulances is small compared to airlines -- with approximately 45,000 covered air medical transports compared to 500 million commercial and charter passengers -- the financial burden on patients and their health care providers is significant.

Furthermore, since as many as half of all flights are reimbursed from government programs such as Medicare, Medicaid, CHAMPUS and state plans, the tax revenue generated is often simply one government agency paying a tax to another with an air ambulance program acting as tax collector. Even though airlines pass this tax on to their paying customers, an air ambulance tax is passed on to the payor regardless of whether or not that payor is another government program such as Medicare.

Conclusion

The current language treats patients on fixed-wing and many helicopter air ambulances as if they were passengers on commercial flights which require them to pay the Federal aviation excise tax.

- When this law was passed the intent was surely not to further tax patients who are critically ill or injured

- Since as much as one-third of all health care expenditures are from government health programs (Federal and state), nearly 1/3 of the excise tax contributions are coming from one government agency or another (this is a tax that the government is largely paying itself)

- Air medical transport is a resource to ensure access in rural areas to emergency and trauma care. The administrative burden and cost of the excise tax is an unnecessary impediment

- The total cost to the Federal government is small (Joint Tax Committee states air ambulances will contribute about $6 million in FY 1996. The Congressional Budget Office is conducting an analysis of the cost to Federal programs paying the tax. This is estimated to be $1 million annually, resulting in a net reduction in revenue of only $5 million)

Congress is encouraged to adopt the language in the Herger bill. It will make the tax treatment of air ambulance patients consistent, allow for the continued development of regionalized health care, off-set many hospital closures and have an almost insignificant impact on Federal revenues.

Thank you for your consideration of this important issue.

TESTIMONY SUBMITTED FOR THE RECORD BY REP. JIM MCDERMOTT (D-WA) IN SUPPORT OF H.R. 1138.

COMMITTEE ON WAYS AND MEANS HEARINGS OF MISCELLANEOUS TAX REFORMS JULY 11, 1995

Chairman Archer and Members of the Committee:

Thank you for holding these hearings. I am submitting this testimony in support of H.R. 1138, legislation I introduced with Rep. Jennifer Dunn (R-WA) which will roll back the Harbor Maintenance Tax (HMT) and provide truth in budgeting. This legislation is very important to me and the people of Seattle. The HMT raises much more money than is needed for harbor maintenance and the Harbor Maintenance Trust Fund contains a huge surplus which is hurting our ports and being used to reduce the size of the federal deficit. The current high tax rate raises the cost of U.S. exports and encourages shippers to divert cargo to Canadian ports where no such tax is collected. The HMT rate should be rolled back or reduced so that it raises only 100% of the costs of harbor maintenance.

The Water Resources Development Act of 1986 established a HMT of 0.04 percent of cargo value to pay for 40 percent of the harbor maintenance activities of the Army Corps of Engineers. In 1990, the Bush Administration proposed raising the tax rate to 0.125 percent of cargo value to pay for 100 percent of harbor maintenance work (0.115 percent) and certain extraneous activities (0.01 percent) of the National Oceanic and Atmospheric Administration (NOAA). The 1990 budget agreement approved the full tax rate increase but rejected the diversion of the trust funds to NOAA.

Harbor Maintenance Trust Fund revenues have increased much faster than expenditures as a result of increased trade, stricter enforcement of the tax, fairly constant Corps harbor maintenance appropriations and the artificially high HMT rate. The surplus in the trust fund grew from $120.6 million at the end of FY 1992 to $302.3 million at the end of FY 1993 to $451.4 million at the end of FY 1994. The Administration projects that the trust fund surplus will grow to $644.3 million by the end of FY 1995 and $802.9 million by the end of FY 1996.

In FY 1994, the Harbor Maintenance Trust Fund distributed $497.1 million for harbor maintenance activities by the Army Corps of Engineers, but collected $646.2 million, or 130% of expenditures. With the additional funds for enforcement of the HMT included in the implementing legislation for GATT, the trust fund surplus may grow even faster in the coming years.

This growing surplus is especially disturbing because of the way the HMT harms the competitiveness of U.S. exports in the international marketplace and diverts cargo to Canadian (and potentially Mexican) ports where no such tax is collected. For example, on all import containers coming into the Port of Seattle, the HMT adds an average cost of $108 per container, taxes which a shipper does not have to pay if he routes the cargo through a Canadian port.

The HMT is especially burdensome to U.S. ports in the Pacific Northwest, Great Lakes region and the Northeast which compete directly with nearby Canadian ports. The burden is even greater for northern ports like Seattle, Tacoma and Boston that need very little harbor maintenance. The Ports of Seattle and Tacoma estimate that their shippers annually pay OVER $50 million in harbor maintenance taxes while the ports receive LESS THAN $1 million annually in harbor maintenance -- this amounts to less than two cents back on the dollar!

The growing trust fund surplus may also violate Article II of the GATT which only permits "fees or other charges," on trade which are "commensurate with the cost of services rendered." Several European nations have expressed concern to the U.S. government about this possible GATT violation.

This legislation would roll back the HMT as follows:

1.) Reduce the harbor maintenance tax rate by 0.02 percentage points in three successive years to 0.65 percent of cargo value; and

2.) Provide that in any year thereafter that begins with a Harbor Maintenance Trust Fund balance of under $100 million, the HMT rate will be increased by 0.01 percentage point, and that, in any year that begins with a trust fund balance of <u>over</u> $100 million, the tax rate will be decreased by 0.01 percentage point.

This method will ensure that the Harbor Maintenance Trust Fund will always have a positive, but <u>medium-sized</u>, balance. The trigger provision would probably not come into play for 6 - 8 years. The Hazardous Substance Superfund and the Oil Spill Liability Trust Funds operate with similar triggers.

A rollback of the Harbor Maintenance Tax is supported by many shippers, carriers and ports involved in international trade. This legislation would be a modest step to control the growing surplus in the Harbor Maintenance Trust Fund and check the deleterious effects of the Harbor Maintenance Tax.

STATEMENT OF J. VERNON HINELY
CHAIRMAN AND CHIEF EXECUTIVE OFFICER
CARBONIC INDUSTRIES CORPORATION
on the
ELIMINATION OF THE UNINTENDED TAX SUBSIDY FOR CARBON DIOXIDE PRODUCED AS A BY-PRODUCT OF ETHANOL
submitted to the
HOUSE COMMITTEE ON WAYS AND MEANS
for the record of the hearings on Miscellaneous Tax Reforms
July 11-12, 1995

The Congress never intended to subsidize the production of carbon dioxide, yet that is exactly what has occurred as a result of the Gas tax exemption for ethanol and related provisions of the Internal Revenue Code. I and others in the carbon dioxide industry strongly urge, as a matter of fundamental fairness, the enactment of legislation to "back out" the cost advantage that ethanol producers obtain when they co-generate CO2 for sale in the retail market. These tax subsidies should be reduced, because a federal subsidy is unnecessary to the extent current law already enables ethanol producers to supplement their revenues by selling CO2 at retail.

I. THE CARBON DIOXIDE INDUSTRY MATURED WITHOUT THE AID OF FEDERAL SUBSIDIES

A mature (half billion dollar a year) CO2 market developed in this country without the benefit of federal government subsidies. Refined CO2 has countless commercial applications, including food preservation, beverage carbonation, water treatment, and firefighting. Because there are few natural CO2 gas wells, the primary source of CO2 is as an industrial by-product, particularly from ammonia production and petroleum refining.

CO2 is a gas that is found naturally in our atmosphere. The commercial production of CO2 begins with CO2 in a gaseous state; liquid CO2 is produced by cooling and compressing carbon dioxide gas under high pressures. Below -69.9 degrees Fahrenheit, liquid CO2 freezes to form a solid (known commonly as "dry ice").

It is uneconomic to transport crude CO2 gas, even over a distance as short as a quarter of a mile. For this reason, CO2 refining operations[1] are located at the source -- that is, a CO2 company's recovery and processing equipment must be connected to an unrelated supplier's industrial plant. The economics of transporting raw CO2 also explains why there is no national wholesale market for this commodity; instead, there are overlapping regional wholesale markets.

The aggregate wholesale market is a "seller's market," characterized by sharp competition for reliable streams of CO2 of sufficient purity and volume. Not surprisingly, longterm "take or pay" supply contracts are prevalent. The typical CO2 supply contract has a term of 15 years and calls for a fixed price.

II. THE ETHANOL MARKET AS WE KNOW IT TODAY WOULD NOT EXIST BUT FOR FEDERAL TAX SUBSIDIES.[2]

Ethanol is an alcohol that may be produced from a variety of feedstocks, although about 95 percent of current ethanol production is derived from corn. Beginning in 1978, the Congress enacted five tax incentives to encourage the use of ethanol in gasoline and

---

[1] A merchant liquid carbon dioxide plant consists of filtration, compression, and refrigeration equipment with related controls, instrumentation, and storage.

[2] The market information in this section was drawn from a recent analysis of the Federal tax incentives for ethanol: Alcohol Fuels Tax Incentives and EPAs Renewable Oxygenate Requirement, by Salvatore Lazzari, Specialist in Public Finance, Economics Division, Congressional Research Service, The Library of Congress (94-785 E) October 7, 1994.

diesel: (a) exemptions from the motor fuels excise taxes on gasoline and diesel (generally referred to as the "Gas tax"); (b) a blender's tax credit; (c) a small ethanol producers tax credit; (d) tax deductions for clean-fuel burning vehicles; and (5) the alternative fuels production tax credit. Since the enactment of the first Gas tax exemption, the ethanol fuels market has expanded from a few million gallons per year prior to 1978 to over a billion gallons per year today.[3]

A. The Gas Tax Exemption Has Been The Most Effective Federal Tax Incentive In Stimulating Ethanol Production.

The Gas tax is imposed at the rate of 18.4 cents per gallon on gasoline and 24.4 cents per gallon on diesel used in highway motor vehicles. 11.5 cents of the 18.4 cents rate (17.5 cents of the diesel tax rate) finances the Highway Trust Fund.[4] While the Gas tax has always had an expiration date (and is currently scheduled to expire on October 1, 1999) it has always been extended before expiration.

1. **The Internal Revenue Code Provides For Three Tiers Of Exemptions, Depending On The Percentage Of Ethanol Per Gallon Of Gasoline.**

Gasohol -- blends of gasoline and ethanol that are at least 10 percent ethanol -- is exempt from 5.4 cents of the 18.4 cents Gas tax; thus, gasohol is taxed at only 13 cents per gallon. Mixtures of gasoline and ethanol that are at least 7.7 percent ethanol are exempt from 4.16 cents of the Gas tax, and mixtures that are 5.7 percent ethanol are exempt from 3.08 cents of the Gas tax. Straight alcohol fuels also qualify for Gas tax exemptions. Ethanol that qualifies for the Gas tax exemption must meet two definitional requirements. First, the ethanol cannot be derived from petroleum, natural gas, or coal (including peat). Secondly, the ethanol must be at least 190 proof (or, 95 percent pure alcohol, determined without regard to any denaturants). The Gas tax exemptions for ethanol expire after September 30, 2000.[5]

2. **The Economic Benefit Of The Gas Tax Exemption Goes To Ethanol Producers.**

The Gas tax is levied -- and the exemption is claimed -- at the time gasoline is removed from a "terminal" (a gasoline storage and distribution facility that is supplied by pipeline or vessel). Although the owner of the gasoline (e.g., a major oil company) is liable for the Gas tax, it is the ethanol producer that receives the economic benefit of the Gas tax exemption. This is so because ethanol producers set their prices to be equal to the Federal tax subsidy plus the current price of unleaded gasoline[6]. Further, it is the invoice supplied by the ethanol producer that the Internal Revenue Service ("IRS") relies on in determining whether taxpayers that claimed Gas tax exemptions have complied with the definitional requirements as to source and proof of ethanol.

Note that the IRS's acceptance of an ethanol producer's invoice as proof of compliance with source and purity requirements is not misplaced. Because ethanol

---

[3] Further Administrative actions by the Environmental Protection Agency ("EPA") and Internal Revenue Service ("IRS") artificially increase the demand for ethanol. First, the EPA interpreted the Clean Air Act as giving it discretion to require that a portion of required oxygenates be derived from renewable resources, and mandated 30 percent; the U.S. Court of Appeals for the District of Columbia, however, struck down this rule on April 28, 1995. The EPA requirement effectively mandated the use of ethanol, as the technology for producing the alternative -- methanol from biomass -- is experimental and uneconomic at present; if the court case is not appealed, the case would not prevent refiners from using etanol voluntarily. Secondly, the IRS has ruled that ETBE (Ethyl Tertiary Butyl Ether, a compound --not an alcohol-- resulting from a chemical reaction between ethanol and isobutylene) qualifies for the blenders tax credit noted above.

[4] The other components of the 18.4 and 24.4 cents tax rates are a 6.8 cents Deficit Reduction rate and a .1 cent Leaking Underground Storage Tank ("LUST") rate.

[5] Regarding the difference between the dates of expiration of the Gas Tax and the exemptions, the exemptions have always been drafted to expire after the Gas Tax

[6] See page 5 of the 1994 CRS analysis cited in note 2, above.

producers are makers of alcohol, they are closely monitored by the Bureau of Alcohol, Tobacco, and Firearms ("ATF"). Thus, the IRS can be fairly confident that an ethanol producer will have few (if any) opportunities to engage in noncompliance.

B. Ethanol Tax Credits Are Available In Lieu Of the Gas Tax exemption.

The "Blenders" credit is 54 cents per gallon of ethanol that is used in a mixture of alcohol and gasoline and sold as a fuel or used by the blender in its trade or business as a fuel. A separate 10 cents per gallon credit is provided for small ethanol producers (defined as one with ethanol production capacity of not more than 30 million gallons per year). A 54 cents per gallon credit is also available for straight ethanol. While the Gas tax exemption reduces revenues to the Highway Trust Fund, the ethanol credits reduce general revenues.

The alcohol fuel credits are designed to provide the same economic benefit as the 5.4 cents Gas tax exemption. Generally, a taxpayer has the choice of the credit or the exemption, but not both.[7] Taxpayers prefer the Gas tax exemption over the income tax credit, primarily because the exemption provides an immediate tax benefit while the credit is not claimed ~~until an~~ income tax return is filed (and is useful only to the extent of tax liability). Further, the exemption is more profitable, because the amount of credit is subject to tax and so the after-tax benefit is reduced to 35 cents per gallon (a 54 cents credit minus the 54 cents included in income and taxed at the 35-percent corporate income tax rate).

C. The Ethanol Industry Is Now Using Its Government Subsidized Cost Advantage to Compete In The Retail CO2 Market.[8]

Fermentation of grain in an ethanol plant generates CO2: 6.8 pounds of CO2 are produced per gallon of ethanol.[9] Utilizing their enormous capacity to generate CO2, ethanol producers are competing directly with traditional CO2 companies selling at retail [10] The vast quantities of CO2 available to ethanol producers is a direct but unintended consequence of the Federal tax subsidies for ethanol. Because ethanol producers source their raw CO2 from themselves at virtually no cost,[11] they enjoy a competitive edge over traditional CO2 companies that purchase and refine CO2 without the benefit of a Federal tax subsidy.

III. A FEDERAL TAX SUBSIDY IS UNNECESSARY TO THE EXTENT CURRENT LAW ALREADY ENABLES ETHANOL PRODUCERS TO SUPPLEMENT THEIR REVENUES BY SELLING CO2 AT RETAIL.

A. Groundwork For A Corrective Amendment Was Laid During The Last Congress.

The unintended effect of ethanol subsidies on the CO2 industry was the subject of a hearing during the last Congress where I testified before another subcommittee of the Ways and Means Committee.[12] Further, the staff of the Joint Committee on Taxation ("Joint Tax") did some preliminary work on estimating the revenue that could be raised by backing out the unintended tax subsidy for ethanol-based CO2. The proposal

---

[7] A mixture that is more than 10 percent ethanol is eligible for both the exemption and the credit, but in such a case the credit is reduced by the amount of the exemption.
