DEPARTMENT OF DEFENSE AUTHORIZATION FOR APPROPRIATIONS FOR FISCAL YEAR 2007

TUESDAY, FEBRUARY 7, 2006

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

MILITARY POSTURE

The committee met, pursuant to notice, at 9:30 a.m. in room SD–106, Dirksen Senate Office Building, Senator John Warner (chairman) presiding.

Committee members present: Senators Warner, McCain, Inhofe, Sessions, Collins, Ensign, Talent, Graham, Dole, Cornyn, Thune, Levin, Byrd, Lieberman, Reed, Akaka, Bill Nelson, E. Benjamin Nelson, and Dayton.

Committee staff members present: Charles S. Abell, staff director; Leah C. Brewer, nominations and hearings clerk; and John H. Quirk V, security clerk.

Majority staff members present: William M. Caniano, professional staff member; Regina A. Dubey, research assistant; Ambrose R. Hock, professional staff member; Gregory T. Kiley, professional staff member; Sandra E. Luff, professional staff member; Derek J. Maurer, professional staff member; Elaine A. McCusker, professional staff member; David M. Morriss, counsel; Lucian L. Niemeyer, professional staff member; Stanley R. O'Connor, Jr., professional staff member; Lynn F. Rusten, professional staff member; Robert M. Soofer, professional staff member; Sean G. Stackley, professional staff member; Scott W. Stucky, general counsel; Kristine L. Svinicki, professional staff member; and Diana G. Tabler, professional staff member.

Minority staff members present: Richard D. DeBobes, Democratic staff director; Jonathan D. Clark, minority counsel; Daniel J. Cox, Jr., professional staff member; Madelyn R. Creedon, minority counsel; Gabriella Eisen, research assistant; Richard W. Fieldhouse, professional staff member; Creighton Greene, professional staff member; Bridget W. Higgins, research assistant; Michael J. Kuiken, professional staff member; Gerald J. Leeling, minority counsel; Peter K. Levine, minority counsel; Michael J. McCord, professional staff member; William G.P. Monahan, minority counsel; and Arun A. Seraphin, professional staff member.

Staff assistants present: Micah H. Harris, Jill L. Simodejka, and Pendred K. Wilson.

Committee members' assistants present: Cord Sterling, assistant to Senator Warner; Christopher J. Paul, assistant to Senator McCain; John A. Bonsell, assistant to Senator Inhofe; Arch Galloway II, assistant to Senator Sessions; Mackenzie M. Eaglen, assistant to Senator Collins; D'Arcy Grisier, assistant to Senator Ensign; Lindsey R. Neas, assistant to Senator Talent; Clyde A. Taylor IV, assistant to Senator Chambliss; Meredith Beck, assistant to Senator Graham; Russell J. Thomasson, assistant to Senator Cornyn; Stuart C. Mallory, assistant to Senator Thune; Christine Evans and Erik Raven, assistants to Senator Byrd; Frederick M. Downey, assistant to Senator Lieberman; Elizabeth King, assistant to Senator Reed; Darcie Tokioka, assistant to Senator Akaka; William K. Sutey, assistant to Senator Bill Nelson; Eric Pierce, assistant to Senator Ben Nelson; Kimberly Jackson, assistant to Senator Dayton; and Andrew Shapiro, assistant to Senator Clinton.

OPENING STATEMENT OF SENATOR JOHN WARNER, CHAIRMAN

Chairman WARNER. Good morning, everyone. Before we begin our hearing today, all members wish to acknowledge that not only the United States, but the world notes with sadness the passing of one of our most courageous and distinguished citizens, Coretta Scott King. Two of our colleagues, Senator Kennedy and Senator Clinton, are joining with four Presidents to acknowledge the courage of this great lady. We open our hearing today in recognition of her contributions to freedom and justice, not unlike the goals that our men and women of the Armed Forces are fighting for all over the world.

The committee meets today to receive the annual testimony of the Secretary of Defense and the Chairman of the Joint Chiefs of Staff on the posture of the U.S. Armed Forces and President Bush's defense budget for the fiscal year 2007 and future years. We also recognize our distinguished Chief of Staff of the Army. We are delighted that you joined us this morning, given that it is your leadership, together with that of the Secretary and the Chairman, that will forge the effort to get the major part of this budget, namely the Army, through and accepted by Congress. I wish you well, chief.

We meet today as the Iraqi people are working to form a permanent democratic government in the aftermath of yet another round of historically successful elections. Iraqis have spoken for freedom and democracy, but their voice would not have been heard without the service and sacrifice of the men and women of the Armed Forces of the United States and their coalition partners and the Iraqi security forces (ISF). We extend our profound respect to those who serve and our thoughts and prayers are with their families and particularly those families who are experiencing the loss or the wounding of one of their beloved members.

As we were finishing work on last year's Defense Authorization Bill—it seems like just 6 weeks ago, Senator Levin, is my recollection—I stated that the next 6 months would be the most critical period of the conflict in Iraq. The key to success in Iraq and the eventual phaseout in an orderly way, depending on the ground situation and that of our commanders, of the United States troops

and those of the coalition forces, that is dependent upon the training and equipping and the advising of ISF to a level of military proficiency and courage and dependability such that they can continue assuming a greater and greater responsibility for defending their nation's sovereignty and freedom.

I commend you, Mr. Secretary and your associates, for the success that we have made here of recent in that restructuring of those forces and the training and equipping. Substantial progress is being made and will continue to be made, I am confident.

We need, however, Mr. Secretary, as a part of your presentation this morning your assessment of the operations in Iraq and Afghanistan and an update about our continuing efforts to forge and secure a democratic future for those nations.

This is a time for hope for Iraq and Afghanistan, but difficult work lies ahead in these lands and others in the long war on terror. I noted in this very room just a few days ago, Mr. Secretary, my concern, and it is shared by others, of the increasing level of corruption and criminality in Iraq and the difficulty that our coalition forces are finding in performing military missions in the face of this very significant corruption and criminality that is obscuring so much of the really success that has been made in Iraq. I hope that you will address that issue.

The manpower demands of ongoing stabilization operations along with the requirements to build more agile, deployable forces for the United States is an extreme challenge. You have to do both at the same time. The President's budget request arrives this year at a critical time of change, not just in the global war on terrorism, but here at home as well. The first Quadrennial Defense Review (QDR) fully focused on post-September 11 threats has just been delivered to Congress. I have been reviewing it together with my colleagues, and it seems to me to be a very constructive contribution towards the structuring of our future forces and a guidepost for us to follow.

I commend the President of the United States for his continuing commitment to strengthening our defenses, capabilities, and providing our forces with the resources they need to successfully fulfill their missions. The budget priorities of supporting the global war on terror, restructuring our forces, and our global posture, building joint capabilities for future threats, all this at the same time, and taking care of our troops and their families, are clearly the right emphasis in this budget.

One of the committee's most important duties is to provide oversight over the management of hundreds of billions of dollars the Department spends each year on the acquisition of supplies, services, and equipment. This committee will focus on that under the leadership of Senators McCain, Ensign, Lieberman, and Akaka, who have taken on that, in a bipartisan way to strengthen the situation so as to make certain that our taxpayers' dollars are wisely expended.

The committee is committed to doing all we can to ensure the safety of our soldiers. Taking lessons from recent operations in the war on terrorism, two specific areas. I wish to again commend the Department of Defense (DOD) under your leadership for upgrading a structure under a four-star officer to deal with the improvised explosive devices (IEDs) and to increase substantially that budget.

This committee has communicated our thoughts on that some weeks ago to you, and we see that it has come into fruition now.

Likewise, the unmanned aerial vehicles (UAVs) have made the warfighter a much stronger and agile individual and better informed in the intelligence world. So, this technology is important for our future. Years ago, our committee tried to emphasize the need for the unmanned vehicles, both air and ground and sea, that can be employed in our defense structure.

The shipbuilding budget is of particular concern to the committee. In a hearing before this committee on February 10, 2005, the Chief of Naval Operations (CNO) stated that, given the current rate of ship purchases and production, the Navy could be faced with a decreasing fleet of ships, eventually dropping below 250 major combatants. A fleet of this small size may well jeopardize the Navy's ability to meet its mission requirements and the financial viability of the vital shipbuilding industrial base. I think this budget makes the best move forward in the number of new acquisition of ships available under this budget.

I shall put the balance of my statement in the record because we have a strong attendance here this morning. We are anxious to hear from our distinguished witnesses. I thank you, Mr. Secretary, Mr. Chairman, and General Schoomaker.

[The prepared statement of Senator Warner follows:]

PREPARED STATEMENT BY SENATOR JOHN WARNER

Before we begin, I note that several of our members are not here today. This morning in Georgia, those members—and indeed our entire Nation—are paying their last respects to Corretta Scott King. To quote our President on her passing, "Our Nation lost a beloved, graceful, courageous woman who called America to its founding ideals and carried on a noble dream."

Dr. and Mrs. King were seen not only as leaders of the American civil rights movement, but as symbols of an international struggle against racism, colonialism, and all forms of oppression and discrimination. It is only fitting that we take a moment to remember this great woman here today as our military forces are engaged around the world, similarly dedicated to ending the oppression of peoples.

The committee meets today to receive the annual testimony of the Secretary of Defense and the Chairman of the Joint Chiefs of Staff on the posture of the U.S. Armed Forces and President Bush's defense budget request for fiscal year 2007 and the Future Years Defense Program (FYDP).

Secretary Rumsfeld and Chairman Pace, I welcome you back before the committee and commend you for the outstanding leadership, as a team you both provide our Nation, and our men and women serving in the Department of Defense (DOD) and their families.

We meet today as the Iraqi people are working to form a permanent, democratic government in the aftermath of yet another round of very successful elections—again, in defiance of terrorists and of dire predictions of failure. Iraqis have spoken for freedom and democracy, but their voice would not have been heard without the service and sacrifice of the United States Armed Forces, our coalition partners, and the Iraqi security forces (ISF). We extend our thanks to those who serve, and our thoughts and prayers are with the families and friends of those who have been lost or wounded, defending liberty around the world.

As we were finishing work on last year's Defense Authorization Bill a mere 6 weeks ago, I stated that the next 6 months would be the most critical period of the conflict in Iraq. The key to success in Iraq—and the withdrawal of U.S. troops—is the training and equipping, and advising of ISF to a level of proficiency and dependability that they can begin assuming principal responsibility for defending their sovereignty and freedom. We look forward to your assessment of our operations in Iraq, and also your insights about forging a secure, democratic future for Iraq and Afghanistan.

This is a time of hope for Iraq and Afghanistan, but difficult work lies ahead in these lands and others in this long war on terror. The manpower demands of ongo-

ing stabilization operations, along with the requirements to build more agile, deployable forces for the future, will continue to place considerable stress on the men and women of our Armed Forces and their families. With these competing demands in mind, we consider this year's budget request.

The President's budget request arrives this year at a critical time of change—not just in the global war on terrorism, but here at home, as well. The first Quadrennial Defense Review fully focused on post-September 11 threats has just been delivered to Congress. We will need to carefully analyze and evaluate this document. For the first time in a decade, a Base Realignment and Closure round has been completed. These results now need to be implemented. We must take into consideration these "moving parts," as we review this year's budget request in the coming weeks and months. It is important to ensure that we not only enhance our capability to win today's wars, but that we will retain the strength to deter, and if necessary win, conflicts of the future as well.

The budget request delivered to Congress on February 6 for the DOD is for $439.3 billion, an increase of $19.8 billion over the authorized fiscal year 2006 base budget, and represents the sixth consecutive year of growth in the defense budget. I commend the President for his continuing commitment to improving our defense capabilities and providing our forces with the resources and capabilities they need to successfully fulfill their missions. The budget priorities of supporting the global war on terror, restructuring our forces and our global posture, building joint capabilities for future threats, and taking care of our troops and their families are clearly the right emphasis.

While supportive of the overall request, I have some concerns on which I look forward to working with you and the Department over the coming months.

One of the committee's most important duties is to provide oversight over the management of the hundreds of billions of dollars that the Department spends each year on the acquisition of supplies, services, and equipment—everything from office supplies to weapon systems. We have become aware over the last several years of emerging problems in the acquisition arena and have initiated numerous legislative provisions in an effort to direct the Department towards more sound acquisition practices. We will continue to work with you to explore ways to ensure the Department acts as a good steward of taxpayer dollars.

This committee is committed to doing all we can to ensure the safety of our soldiers. Taking lessons from recent operations in the war on terrorism, two specific areas bear mentioning. The area of counter improvised explosive devices has and will continue to command our attention. Second, recognizing the invaluable contributions unmanned aerial vehicles have made to the warfighter, we need to explore a greater use of this technology—including ground vehicles, ships, and high performance aircraft.

The shipbuilding budget is of particular concern. In a hearing before this committee on February 10, 2005, the Chief of Naval Operations (CNO) stated that given the current rate of ship purchases and production, the Navy could be faced with a decreasing fleet of ships, eventually dropping below 250 major combatant ships. A fleet of this small size may well jeopardize the Navy's ability to meet its mission requirements, and the financial viability of the vital shipbuilding industrial base could easily be threatened. More encouraging was the CNO's recent brief to the committee on December 16, 2005, outlining a naval force structure of 313 ships. I look forward to examining the shipbuilding budget in the fiscal year 2007 budget request and working with the Secretary of the Navy and the CNO to ensure we have a plan that will maintain the United States Navy as the premier naval force.

Finally, Congress has not received the administration's supplemental funding request for fiscal year 2006. Congress included a "bridge" fund of $50.0 billion in the fiscal year 2006 Defense Authorization and Appropriation Acts, but that amount most likely will not be enough to cover the full costs of the war on terror through the fiscal year. It is also clear that many of the costs for the ongoing global war on terrorism are not included as part of the President's fiscal year 2007 budget request. This committee is interested in hearing your views on the need and timing of a fiscal year 2006 supplemental, and how funding for the global war on terrorism fits into the fiscal year 2007 budget request.

I thank you all for your distinguished service and look forward to your testimony.

Chairman WARNER. Senator Levin.

STATEMENT OF SENATOR CARL LEVIN

Senator LEVIN. Mr. Chairman, first let me join you in welcoming our distinguished witnesses this morning. I also join you in prais-

ing the life of Coretta Scott King and in expressing our condolences to the King family. Coretta Scott King helped lead us to a more just Nation and world. We are with our colleagues at that funeral in spirit, although we are here in Washington carrying out our responsibilities this morning.

Today and every day our men and women in uniform are risking their lives representing our Nation around the world. We join together in recognizing and commending them for their work and for what they are doing with such extraordinary bravery and dedication. They have our full support, and we will continue to attempt to provide them with everything that they need to succeed.

The situation in Iraq has reached a pivotal point. The next several months are likely to determine whether Iraq will be engulfed in all-out civil war or move towards nationhood. Negotiations are ongoing for the formation of a new Iraq government, and as soon as the new Iraq parliament is seated it is to appoint a panel to review and recommend changes to the Iraqi constitution, a job to which 4 months have been allotted by that same constitution.

In testimony before this committee on September 29 last year, General George Casey, Commanding General Multinational Force-Iraq, stated that, "We have looked for the constitution to be a national compact and the perception now is that it is not, particularly among the Sunni." Now, most other observers have agreed that the new constitution as it stands is a divisive document. The International Crisis Group, a highly respected, independent, nonprofit, nongovernmental organization, in a report released last September, wrote as follows: "Without a strong U.S.-led initiative to assuage Sunni Arab concerns, the constitution is likely to fuel rather than dampen the insurgency, encourage ethnic and sectarian violence, and hasten the country's violent breakup."

But the message that President Bush has sent is inconsistent with the vital effort to get Iraqis to agree on amendments to their constitution. Instead of urging Iraqis to make modifications in the constitution so as to produce a document which unifies them, the President on December 12 called the Iraqi constitution "a bold constitution that guarantees the rule of law and freedom of assembly and property rights and freedom of speech and the press and women's rights and the right to vote." The President's effusive praise is the wrong message because it lessens the likelihood that the compromises necessary to change the constitution will be made.

The future of Iraq depends on Iraqis making changes in their constitution to assure fair sharing of power and oil resources and adequate protection of minorities.

It is surely true that the United States cannot amend the Iraqi constitution. Only the Iraqis can do that. But, it is also surely true that we have the standing, given the sacrifices our men and women in uniform have made and given the other costs of this war to our Nation, to tell the Iraqis that they need to make that essential step. If they do not, the level of our troop strength will not make much difference; Iraqis will continue to descend into sectarian strife and into civil war.

We need to clearly tell the Iraqi factions: Our willingness to commit further lives and resources to your future depends on your will-

ingness to amend your constitution so that there is a future as an Iraqi nation.

I have no doubt that there will be significant reduction in the number of U.S. forces in Iraq this year. The question is whether the significant reduction will be in the context of the Iraqis having made the political compromises necessary to move forward towards nationhood and the defeat of the insurgency or in the context of the Iraqis having failed to do so, with the insurgency continuing and all-out civil war waiting to break out. The need to address the political situation in Iraq is just one of the many issues that require this committee's attention and oversight, but there are other obviously important issues as well.

Responsible budgeting means making choices and setting priorities. This budget request fails that test. It understates the true cost of our defense program because it does not fully recognize or pay for the cost of ongoing operations of Iraq and Afghanistan in 2007. Funds for those will apparently be requested later this year on an emergency, non-paid-for basis. That is not responsible budgeting. Those costs should be planned on and paid for now. Honest budgeting requires no less.

I am also concerned that maintaining our current troop levels in Iraq is not sustainable over the long term. The grueling operational tempo is wearing down people and wearing out equipment. While reenlistment rates in the Army and Marine Corps are strong and are a credit to the dedication and devotion to duty of our soldiers and marines, some indicators, such as increasing strains on military families, are indicative of a force under stress and give rise to concerns that those reenlistment rates cannot be maintained. There is also clear evidence that the Services are having difficulty in recruiting new first-term soldiers and marines who are critical to a balanced force across all ranks and grades.

There are numerous other issues that require our attention. For instance, in the area of national missile defense, although we have already deployed 10 ground-based midcourse defense interceptors, this operationally configured missile defense system has never had a single successful intercept test. The simple truth is we do not know if the system will work.

Despite this glaring problem and despite the facts that the Department has already obtained funds from Congress for building and deploying 30 interceptors and that the next planned intercept flight test will not occur until the end of this year, the Department is seeking additional funds in this budget request to build and deploy more of these untested and unproven interceptors.

Finally, we have received interim reports from the Under Secretary of Defense for Intelligence regarding the so-called "TALON" reporting system, which is supposed to collect information relating to possible foreign terrorist threats to defense personnel and facilities, and the review underway to ensure that the rules governing the retention of data are followed. The Department has sent us an interim letter informing us that a small percent of reports were submitted that inappropriately dealt with demonstrations and anti-war activity rather than foreign terrorist threats and that the Department of Defense will soon conclude its review of the program to determine precisely what needs to be done to correct its flaws.

It will then issue detailed guidance outlining the proper procedures. The usefulness of congressional oversight has been demonstrated in this matter. I thank our chairman in joining that initiative to make that happen. I would hope that we would have a briefing for members once the review is complete and I would ask, Mr. Chairman, that the interim letter from the Department be made part of the record.

Chairman WARNER. Without objection.

[The information referred to follows:]

OFFICE OF THE UNDER SECRETARY OF DEFENSE
5000 DEFENSE PENTAGON
WASHINGTON, DC 20301-5000

JAN 27 2006

The Honorable Carl Levin
Ranking Member
Committee on Armed Services
United States Senate
Washington, DC 20510-6050

Dear Senator Levin:

In the Under Secretary of Defense for Intelligence letter of December 19, 2005, Dr. Stephen Cambone provided you some context not otherwise reported in an NBC News segment on the Department of Defense (DoD) TALON system. Dr. Cambone also advised that we would thoroughly review the TALON system. That review is nearly completed. I would like to update you on our results:

- DoD field commanders highly value the TALON reporting program as a source of timely information about possible foreign terrorist threats to their personnel and facilities.

The TALON reporting system is much like a capability to document information from a "neighborhood watch" program in which concerned citizens or DoD personnel report suspicious activities they believe may be linked to possible foreign terrorist activities to DoD counterintelligence, law enforcement or intelligence organizations. The focus of the effort was on possible foreign terrorist threats to the DoD and not on U.S. persons in the United States. The information that was reported to DoD security, law enforcement, counterintelligence or intelligence personnel was then briefed to local military command officials and law enforcement as appropriate prior to being sent to the TALON reporting database at the Counterintelligence Field Activity (CIFA) for analysis. CIFA's role in the process is to maintain the database and conduct analysis.

- TALON reporting has led to a number of investigations. Those include terrorism investigations, most often conducted under the purview of the Joint Terrorism Task Forces headed by FBI, and the reporting has identified other criminal activities. The reporting has also disclosed

some patterns that have allowed the Department to focus or change security procedures in order to deter potential terrorist activities.

- Although the TALON reporting system was intended to document suspicious incidents possibly linked to foreign terrorist threats to DoD resources, some came to view the system as a means to report information about demonstrations and anti-base activity that would be of interest to field commanders from a force protection perspective. A very small percentage of these reports were submitted to the TALON/CORNERSTONE database.

- CIFA has removed the TALON reports on demonstrations and anti-base activity from the database. The process to remove other reports that are no longer analytically significant is ongoing. All TALON reports are now reviewed at CIFA upon receipt to ensure compliance with the TALON reporting criteria.

- The DoD organizations involved in the TALON reporting system were following multiple rule sets regarding the collection and retention of this information. The Department will soon issue detailed guidance that clarifies the purpose of the database, the rules governing the collection and retention of the data and more detailed procedures to be followed. The database will then be reviewed again to ensure compliance.

Dr. Cambone also directed that all Department counterintelligence and intelligence personnel receive immediate refresher training concerning the laws, policies and procedures that govern the responsibilities for handling information, especially information related to U.S. persons. The refresher training is underway and should be completed by January 31, 2006.

This review clearly indicates that TALON is an important and valuable tool, and that we have room for improvement. We will continue our analysis of findings from this review to determine precisely what we need to do to improve and will provide you with additional information.

There is nothing more important to the U.S. military than the trust and good will of the American people. The DoD values that trust and good will and consequently views with the greatest concern any potential violation of the strict DoD policy governing the protection of civil liberties. Our new guidance will reflect that concern and protect that trust.

My office continues to be engaged in formal and informal dialogue with members of your staff on this subject. These discussions have been positive and productive. I look forward to an opportunity to brief your committee on these complex and overlapping issues. I have sent a similar letter to the Committee's Chairman, the Honorable John W. Warner.

Sincerely,

Robert W. Rogalski
Deputy Under Secretary of Defense
(Counterintelligence and Security)

cc:
The Honorable Ted Stevens
The Honorable Daniel K. Inouye
The Honorable C.W. "Bill" Young
The Honorable John P. Murtha
The Honorable Duncan Hunter
The Honorable Ike Skelton
The Honorable Pat Roberts
The Honorable John D. Rockefeller IV
The Honorable Peter Hoekstra
The Honorable Jane Harman

Senator LEVIN. Mr. Chairman, we have, as you say, much work to do in our review of the defense program for fiscal year 2007 and in carrying out our oversight responsibilities. Through no fault of yours surely, we barely got our bill passed last year. In fact, I might say, despite your herculean efforts, we barely got our bill passed last year. You deserve, our troops deserve, even more importantly, the total cooperation of everybody involved to avoid a repeat of the unfortunate series of events which so delayed our 2006 Defense Authorization Bill.

I look forward to the testimony of our witnesses this morning and I would ask that my full statement be inserted in the record.

Chairman WARNER. Without objection. Thank you. Thank you very much, Senator Levin.

[The prepared statement of Senator Levin follows:]

PREPARED STATEMENT BY SENATOR CARL LEVIN

Mr. Chairman, I join you in welcoming our witnesses this morning. I also join you in praising the life of Coretta Scott King and expressing our condolences to the King family. I know Senator Kennedy and Senator Clinton and perhaps others are not here today because they are attending Mrs. King's funeral.

Today and every day our men and women in uniform are risking their lives representing our Nation around the world. We join together in recognizing and commending them for the work that they are doing with such extraordinary bravery and dedication. They have our full support, and we will continue to attempt to provide them with everything they need to succeed.

The situation in Iraq has reached a pivotal point—the next several months are likely to determine whether Iraq will be engulfed in all-out civil war or move towards nationhood. Negotiations are ongoing for the formation of a new Iraqi government, and as soon as the new Iraqi Parliament is seated, it is to appoint a panel to review and recommend changes to the Iraqi constitution—a job to which 4 months have been allotted by that same constitution.

In testimony before this committee on September 29 of last year, General George Casey, the Commanding General Multinational Force-Iraq, stated that "We've looked for the constitution to be a national compact, and the perception now is that it's not, particularly among the Sunni." Most other observers have agreed that the new constitution as it stands is a divisive document. The International Crisis Group, a highly respected independent, non-profit, non-governmental organization, in a report released last September wrote: "Without a strong U.S.-led initiative to assuage Sunni Arab concerns, the Constitution is likely to fuel rather than dampen the insurgency, encourage ethnic and sectarian violence, and hasten the country's violent breakup."

But the message President Bush has sent undermines the vital effort to get Iraqis to agree on amendments to their constitution. Instead of urging Iraqis to make modifications in the constitution so as to produce a document which unifies them, the President on December 12 called the Iraq constitution a "bold constitution that guarantees the rule of law and freedom of assembly, and property rights, and freedom of speech and the press, and women's rights, and the right to vote." The President's effusive praise is the wrong message because it lessens the likelihood that the compromises necessary to change the constitution will be made.

The future of Iraq depends on Iraqis making changes in their constitution to assure fair sharing of power and oil resources and adequate protection of minorities. Yet when the President was asked at a recent press conference, "How hard will you push Iraq's competing political parties to get a government and a constitutional compromise?" he responded, "There is an opportunity to amend the constitution." He did not say that he will push them hard. He didn't even say he would urge them to do so. He would only say what is obvious—they have an "opportunity" to do so.

It is surely true that the U.S. can't amend the Iraqi constitution. Only the Iraqis can do that. But it is also surely true that we have the standing, given the sacrifices our men and women in uniform have made and given the other costs of this war to our Nation, to tell the Iraqis that they need to take that essential step. If they don't, the level of our troop strength won't make a difference—Iraqis will continue to descend into civil war. Having a unifying constitution is critical because, as our military leaders have repeatedly told us, there won't be a military success over the insurgency without a political coming together of the major Iraqi groups.

In a resolution with bipartisan support in November, 79 U.S. Senators agreed that: "The administration should tell the leaders of all groups and political parties in Iraq that they need to make the compromises necessary to achieve the broadbased and sustainable political settlement that is essential for defeating the insurgency in Iraq, within the schedule they set for themselves." That language is now incorporated in the National Defense Authorization Act for Fiscal Year 2006.

Failure to heed that congressional advice could contribute to a stalemated negotiation among Iraqi leaders. When the administration repeats the mantra "we'll stay in Iraq as long as we are needed," that open-ended commitment removes pressure on the Iraqis to get their political house in order.

We need to clearly tell the Iraqis factions: "our willingness to commit further lives and resources to your future depends on your willingness to amend your constitution so that there is a future as an Iraqi nation."

I have no doubt that there will be a significant reduction in the number of U.S. forces in Iraq this year. The question is whether the significant reduction will be in the context of the Iraqis having made the political compromises necessary to move forward toward nationhood and the defeat of the insurgency, or in the context of the Iraqis having failed to do so with the insurgency continuing and all-out civil war waiting to break out.

The need to address the political situation in Iraq is just one of the many issues that require this committee's attention and oversight, but there are other important issues as well.

Responsible budgeting means making choices and setting priorities. This budget request fails that test. It understates the true cost of our defense program because it does not fully recognize or pay for the cost of ongoing operations in Iraq and Afghanistan in 2007. Funds for those will apparently be requested later this year on an emergency, non-paid for, basis. That is not responsible budgeting. Those costs should be planned on and paid for now. Honest budgeting requires no less.

I am also very concerned that maintaining our current troop levels in Iraq is not sustainable over the long term. The grueling operational tempo is wearing down people and wearing out equipment. While re-enlistment rates in the Army and Marine Corps are strong—and are a credit to the dedication and devotion to duty of our soldiers and marines—some indicators, such as increasing strains on military families, are indicative of a force under stress and give rise to concerns that those re-enlistment rates cannot be maintained. There is also clear evidence that the Services are having difficulty in recruiting new first-term soldiers and marines who are critical to a balanced force across all ranks and grades.

There are numerous other issues that require our attention. For instance, in the area of national missile defense, although we have already deployed 10 Ground-based Midcourse Defense interceptors, this operationally configured missile defense system has never had a single successful intercept test. The simple truth is that we do not know if the system will work.

Despite this glaring problem, and despite the facts that the Department has already obtained funds from Congress for building and deploying 30 interceptors, and that the next planned intercept flight test will not occur until the end of this year, the Department is seeking additional funds in this budget request to build and deploy more of these untested and unproven interceptors.

Finally, we have received interim reports from the Under Secretary of Defense for Intelligence regarding the so-called TALON reporting system, which is supposed to collect information relating to possible foreign terrorist threats to defense personnel and facilities, and the review underway to ensure that the rules governing the collection and retention of data are followed. The Department has sent us an interim letter informing us that a small percent of reports were submitted that inappropriately dealt with demonstrations and anti-war activity rather than foreign terrorist threats, and that DOD will soon conclude its review of the program to determine precisely what needs to be done to correct its flaws. It will then issue detailed guidance outlining the proper procedures. I would hope we would have a briefing for members once the review is complete. I ask that the interim letter from the Department be made part of the record.

I would also hope, as I previously requested, that the committee will hold a hearing to inquire into Department of Defense's (DOD) and National Security Agency's (NSA) program relating to the surveillance of communications involving U.S. persons. NSA oversight is clearly a responsibility of ours along with the Intelligence and Judiciary Committees. I would also note that while we are spending a huge amount of manpower to subject the communications of apparently thousands of Americans to surveillance, known al Qaeda leaders, including one convicted of helping plan and organize the attack on the destroyer U.S.S. *Cole* in 2000, escaped last Friday for the second time from custody in a Yemen prison. I hope the administration will investigate this fiasco that resulted in the loss of known al Qaeda operatives from custody with the same vigor that it is surveilling Americans.

Mr. Chairman, we have much work to do in our review of the defense program for fiscal year 2007, and in carrying out our oversight responsibilities.

Through no fault of yours surely, we barely got our bill passed last year. You deserve, our troops deserve, the total cooperation of everybody involved to avoid a repeat of the unfortunate series of events, delays which plagued our 2006 bill.

I look forward to the testimony of our witnesses.

Chairman WARNER. Secretary Rumsfeld, delighted to have you.

STATEMENT OF HON. DONALD RUMSFELD, SECRETARY OF DEFENSE; ACCOMPANIED BY GEN. PETER PACE, USMC, CHAIRMAN, JOINT CHIEFS OF STAFF; AND GEN PETE SCHOOMAKER, USA, CHIEF OF STAFF, U.S. ARMY

Secretary RUMSFELD. Thank you. Mr. Chairman, Senator Levin, members of the committee: I would plan to make an abbreviated statement and then ask that my entire statement be placed in the record.

Chairman WARNER. Without objection, the full statement of all witnesses will be included in the record.

Secretary RUMSFELD. Mr. Chairman, this is the first appearance before your committee of General Pace in his new role as Chairman of the Joint Chiefs of Staff. Many of you have come to know Gen-

eral Pace in his earlier roles as the combatant commander for the Southern Command (SOUTHCOM) and then the Vice Chairman of the Joint Chiefs. General Pace understands well the decisions he helps to make will have a profound impact on the men and women in uniform, on the security of our country.

Chairman WARNER. He is a superb choice by the President and yourself, Mr. Secretary.

Secretary RUMSFELD. I thank you, sir. He is doing an outstanding job for our country.

Also with us today is not the comptroller of the Department, who is normally here for this hearing. Instead, because a number of the issues involve the Army, it struck me that it would be appropriate to have the Chief of Staff of the Army, General Pete Schoomaker, join us so that the members of the committee will have an opportunity to talk to him about the issues involving the National Guard, for example, the issues involving stress on the force, and the modernization of the force, the modularization process that is taking place, and the equipping of the force.

This is the sixth consecutive year I have appeared before your committee to discuss the Department's budget. We have met during times of war and at a time when war seemed unlikely. We have met during periods of national unity and in the midst of great controversy and debate over the course that our country has taken. In every instance, the American people expected us to put the defense of this Nation before political or parochial views and concerns. We have tried to do just that in making tough decisions in the Department, the kinds of decisions that we believe our troops merit.

We meet today again as the Nation is engaged in what will be a long struggle, a long war, a conflict that has put our military on a path of continuous change for the past 5 years, a conflict which also is having the effect of transforming the way our forces fight and defend our country.

Not long before Pearl Harbor was attacked on December 7, 1941, the United States had a standing army of some 200,000, putting it somewhere below Romania among the world's militaries. Just a few years earlier, American soldiers had been training with wooden rifles. Almost starting from scratch, America began to field huge armies and stand up armament industries and turned out massive fleets of ships, aircraft, tanks, and equipment of every kind.

When our country was attacked on September 11, we found ourselves in another global conflict, though one that had been started years earlier by our enemies. Fortunately, the process of rethinking and reconfiguring our military for such an eventuality was already somewhat underway. Within 3 months, the Taliban regime and its Al Qaeda guests were routed in a landlocked country several thousand miles away. Within 3 years, the military had removed a dangerous and brutal regime from Iraq and helped to stand up a new democratically elected government that is now fighting terrorists instead of harboring them. This would not have been possible without an historic change in the way the military is arranged and operates.

The urgency of these changes were made all too plain some 53 months ago on that mid-September morning by 19 men carrying tourist visas, boarding passes, and box cutters. Today the enemy,

though under constant pressure and on the defensive, still intends to bring its cult of murder and suicide to our shores and our cities and to those of our closest allies as well.

Last month, bin Laden warned of yet more attacks on America. He has said, "Let every person come forward to fight those Jews and Americans. Their killing is the most important duties and most pressing things."

His top lieutenant Zawahiri warned us last year. He said: "Oh Americans in New York and Washington, the losses you are having in Afghanistan and Iraq are only the losses of the initial clashes."

The enemy cannot win any conventional battles, so they challenge us through nontraditional, asymmetric means, using terror as their weapon of choice. Their goal is to break America's resolve through the deft use of propaganda and carefully plotted attacks to garner headlines. They are willing to employ every means, every lie, every atrocity, every available technology and means of communication, to achieve their ends.

In a few short years they have become experts at manipulating the global media to both inspire and intimidate. They have media committees and handbooks that advise operatives when and how to lie to generate coverage and commentary that damages antiterrorism efforts. They have multiple Web sites that display videos of bombings and beheadings that are shown around the world.

Their priority is to force us to abandon Iraq before the country is ready to defend itself, so they can turn it into a base of operation, as was Afghanistan before September 11. In a letter written by Zawahiri, he spelled out their strategy: "The first stage: expel the Americans from Iraq; the second stage: establish an Islamic authority; the third stage: extend the jihad." Have no doubt, should these fanatics obtain the weapons of mass destruction (WMD) they seek, the survival of our way of life would be at risk.

The enemy would like to define this war as a conflict between Islam and the West, but it is not. It is in fact a war within the Muslim world, between the overwhelming majority of moderates and a much smaller number of violent extremists. The vast majority of Muslims do not share the violent ideology of al Qaeda. They have children and families they care about. They hope for a better future for themselves and their children. They do not want the extremists to win and many are opposing them at every opportunity.

In Iraq, the marginalization of the terrorists on election day last December was due in large part to the growth in the size and the confidence and capability of the ISFs that the chairman mentioned, increasing from 120,000 to 220,000 over the course of last year. Already some 30 U.S. military bases have been returned to Iraqi control or closed altogether.

The 8th Army Iraqi Division recently took over a battle space about the size of Kentucky, the largest such area transferred to date. So far this division has seized nearly 5,000 weapons, confiscated more than 1,000 pounds of explosives, and detained more than 1,000 suspects.

Consider the progress from the enemy's perspective. The terrorists tried to stop the Afghan presidential and parliamentary elections and they failed. They tried to stop the elections for a provisional Iraqi government a year ago and they failed. They tried to

stop the drafting and approval of the new constitution and they failed. They tried to stop the elections last December for a permanent democratic government and they failed again.

Senator Levin mentioned the constitution of the Iraqis. It is not perfect, as he suggested. Nor was ours. Our Constitution still permitted slavery and women could not vote. So it strikes me that they have some work to do, just as we do, and I am encouraged that they will accomplish that work.

It is true that violence, corruption, and criminality continue to pose challenges in Iraq. The chairman mentioned corruption, suggesting it is on the increase. I do not know that it is on the increase. What is on the increase is our awareness of corruption because there are a number of inspectors general out there looking for corruption and finding it and reporting it and there is press of it. There has been historically corruption in that country and it is something that is so corrosive of democracy that I quite agree with you that it is critically important that it be attacked and that the new leadership in that country be measured against their commitment to attacking corruption.

The people of the United States have contributed and sacrificed a great deal helping to set Iraq on the path to democracy. Our finest young men and women in uniform launched a mission of liberation and our outstanding civilian and military leaders represent our Nation there today. In my view, it is clearly up to the Iraqis to seize hold of their country, to seize the opportunity, take responsibility for their own security and for their own affairs. This means assembling a government that respects the interests of all of the ethnic and religious groups in the country and, importantly, a government that is competent and a government that is not simply inclusive of all of those groups, but a government where the people involved, inclusive to be sure, commit to governing from the center and have a program that they agree to and then will go about implementing, that will move the country forward.

If America has the patience and the will to see this noble and necessary mission to completion—and we must—Iraq can emerge as a nation with a representative government, at peace with its neighbors, and one that can become an ally in the global war on terror.

In this long war, the task ahead, to continue to pursue the enemy, bolster our defenses, and enable our friends and allies to manage their own defense, requires us not only to meet today's threats, but to plan for tomorrow's uncertainties. At this time, for example, we are fighting a war against terrorist cells dispersed throughout the world, but we might one day find ourselves facing any number of other challenges as well: a chemical or biological attack in a major American city, a rogue missile launched by a hostile regime, a friendly government overthrown by Islamic radicals, loose nuclear weapons falling into unknown hands.

No nation, no matter how powerful, has the resources and capability to defend everywhere at every moment of the day or night against every conceivable type of technique. The only way to protect the American people, therefore, is to provide our military with as wide a range of options as possible, to focus on developing a range of capabilities, rather than preparing to any one threat.

The major initiatives that have been underway in the Department over the past 5 years have been undertaken with this in mind and they have been informed by operations in Afghanistan, Iraq, and other locations in the global war on terror. This approach, providing more options and developing a wider range of capability, has governed decisions made in developing both the President's budget and the QDR.

The word "transformation" has attracted a good deal of attention, but in many ways it is more accurate to see this process of continuous change as a shift in emphasis or a shift in weight from the practices and the assumptions of the past to the kinds of arrangements necessary for the 21st century. We have shifted, for example, from preparing to fight conventional wars, which we are still prepared to do, to a greater emphasis on fighting unconventional or irregular or asymmetric wars against terrorist cells or enemy guerrillas. To that end, we are more than doubling the budget since fiscal year 2001 for Special Operations Forces, expanding the size and scope, to include a new Marine component. The Special Operations Forces will be the largest they have been in many decades, representing roughly a 50 percent increase in personnel between 2001 and 2011. Increasing skill sets across the force in foreign language and cultural awareness and information technology; and assigning priority to post-conflict and stability operations in the military's overall training and doctrine.

One of the most important shifts underway is the role and importance of intelligence. The U.S. military has long excelled at engaging targets once they have been identified. In the future, we must be better in ascertaining where the enemy is going next, rather than simply where the enemy was. We have to be able to find the enemy and to fix the enemy, as well as to be able to finish. The United States military has enormous capacity to finish and insufficient capacity to find and fix. This means upgrading U.S. intelligence capabilities, both human and technological, and more effectively linking technology to operations in real time in the field.

We are also shifting from the typically American impulse to try to do everything ourselves to helping partners and allies develop their own capacity to better govern and defend themselves. This is particularly important in the global war on terror, where many of our Nation's most dangerous enemies exist within the borders of countries that we are not at war with. The shift is at the heart of the effort in Iraq and Afghanistan, as well as smaller scale train and equip missions in places like the Republic of Georgia and the Philippines.

There are many other important shifts in our posture and thinking: from a peacetime tempo to a wartime sense of urgency, from operating in an era of certainty to one of surprise, from avoiding risk to managing and balancing risks, from confronting other nation states to confronting decentralized terrorist networks, from garrison force defending fixed frontiers to expeditionary forces that can be deployed rapidly anywhere in the world, from having the bulk of personnel in the institutional military, the so-called "tail" to moving troops to the operational side that deploys and fights, the "teeth."

Our Nation's oldest military service is undergoing a remarkable transformation, from being a peacetime Army prepared for a major conventional war against another large military to a consistently more agile and deployable force capable of taking on and sustaining a full range of missions around the globe. General Schoomaker will be commenting in greater detail on the significant changes that are taking place.

I want to comment on several issues that have been raised about the health of the United States Army, however. Some ask, what is the current state of the Army? I would say that we have the most agile, most skilled, most expeditionary Army in history, and that any who use the word "broken" with respect to the Army are incorrect. I hope that the Chief of Staff of the Army will comment on that.

Today's Army has demonstrated its capability, not in garrisons or in training exercises or through statistical readiness formulas, but in the crucible of combat. Think about the many rapid, complex, and dangerous operations the Army now undertakes on a regular basis in Iraq, Afghanistan, and around the globe. They have made the extraordinary so routine that it is sometimes hard for people to notice just how much has changed and how good they have become at what they do.

I will leave the question of the Guard and the Reserve to the chief. The new concept of fully-funded, fully-manned, and fully-equipped Guard brigades, which is what he will explain, particularly the support units, is a development that State and local officials should welcome. By any measure, they will be a vast improvement over the undermanned and underequipped Guard and Reserve units of the past decade.

Mr. Chairman, senior leadership of the Department will be describing a process of continuous change in everything from the way we fight wars to the way we manage personnel, and one may well ask, where is this heading? Imagine a colonel proficient in Arabic, whose knowledge of city management equals his skill in marksmanship, a commander with the flexibility in tactics and options that President Roosevelt entrusted to General Eisenhower, a self-sustaining brigade that surges rapidly from the U.S. to a forward operating facility elsewhere in the world to work with newly-trained allies against terrorist cells that threaten a new democracy. As we imagine that soldier, the commander, the brigade, that facility, we have a notion of what America's transformed Armed Forces might well look like in the years ahead. Changes that will be essential to defeating a range of enemies, changes essential to keeping our Nation safe.

In discussing the budget and the QDR, the tendency will be to talk about numbers, numbers of troops, numbers of weapons, platforms, and the like. But I want to conclude by talking about a different metric that crossed my desk a few months ago. The number is 371. That is the total number of Silver Stars and Service Crosses that have been awarded since September 11 to our Nation's soldiers, sailors, airmen, and marines. Were it not for the exacting standards the military has for these awards, I suspect the numbers would be much higher, given the superb performance of our troops

in places like Fallujah, Ramadi, Kandahar, and other grueling battlefields in this global war on terror.

In a conversation about the war a few weeks ago, I was asked, where are the heroes? In prior wars everyone knew the heroes. Well, there are a great many and they are doing exactly what needs to be done to keep our country safe and to preserve freedom for our children and theirs. I think we could probably all do a better job, the media and the military alike, in telling their stories.

They are volunteers, every one of them, who could be doing something else, certainly something much easier, much safer, better compensated very likely. But they step forward each year to raise their hands and say: Send me. They do so fully aware of the risks and justifiably proud of the noble history they are making.

Mr. Chairman, members of the committee, I thank you for your support of the men and women who wear our country's uniform. I look forward to working with the committee. I am reminded of what President Eisenhower said once about another long struggle, the Cold War, comments that I believe have resonance today. President Eisenhower said, "We face a hostile ideology, global in scope, ruthless in purpose, and insidious in method. To meet it successfully, we must carry forward steadily, surely, and without complaint the burdens of a long and complex struggle, with liberty the stake."

Mr. Chairman, just as we did during the Cold War, what President Kennedy called "a long twilight struggle," we will persevere in the long war we face today and, with the help of Congress and the American people, provide our country with the security it needs and deserves in this new century.

Thank you.

[The prepared statement of Secretary Rumsfeld follows:]

PREPARED STATEMENT BY HON. DONALD H. RUMSFELD

Mr. Chairman, members of the committee: It is appropriate to note that this is my first appearance before this committee with General Pete Pace in his new role as Chairman of the Joint Chiefs of Staff (JCS). Many of you have come to know General Pace and to appreciate his abilities. He understands that the decisions he helps to make have a profound impact on our men and women in uniform and their families. He is doing a fine job for our country.

Also with us is the Chief of Staff of the Army, General Pete Schoomaker. Because so many of the key issues involve the Army, we thought it would be useful to have General Schoomaker here to join in responding to your questions.

This is the sixth consecutive year I've appeared before you to discuss the Department's budget. We've met during times of war, and at a time when war seemed unlikely. We've met during periods of national unity, and in the midst of great controversy and debate over the course recent wars have taken. In every instance, the American people expected us to put the defense of this nation before political or parochial concerns. We have tried to do just that in making the tough decisions that our troops merit and that history will remember.

We meet today—again—as a Nation engaged in what will be a "long war"—a conflict that has put our military on a path of near continuous change for the past 5 years. A conflict which also is having the effect of transforming the way our forces fight and defend the Nation.

Not long before Pearl Harbor was attacked on December 7, 1941, the United States had a standing army of about 200,000, putting us somewhere below Romania among the world's militaries. Just a few years earlier, American soldiers had been training with wooden rifles. Almost starting from scratch, America began to field huge armies and stand up an armaments industry that turned out massive fleets of ships, aircraft, tanks and equipment of every kind.

After Pearl Harbor, there were many setbacks and false starts—think of the losses at Kasserine Pass, the bloody landings at Tarawa and Anzio, and the frus-

trating inability of American tanks to be able to go one on one against German Panzers. Over the following several years, our Nation would learn some tough lessons and marshal the forces necessary to eventually triumph over two fascist empires.

When our country was attacked again on September 11, we found ourselves in another global conflict, though one that had been started years earlier by our enemies. Fortunately, the process of rethinking and reconfiguring our military for such an eventuality was already well underway. Within 3 months, the Taliban regime and its al Qaeda "guests" were routed in a landlocked country several thousand miles away. Within 3 years, our military had removed a dangerous and brutal regime from Iraq and helped to stand up a new democratically elected government that is now fighting terrorists instead of harboring them.

This would not have been possible without an historic change in the way our military is arranged and operates.

Consider that when I first assumed this post more than 30 years ago, America's military establishment was understandably organized, trained and equipped to deter the Soviet Union and to do battle against large armies, navies, and air forces.

When I returned to the Department in 2001, the Armed Forces—though smaller—were in many respects still pretty much organized the same way they were during the Cold War.

The President recognized this and charged the Department with making the changes necessary to adapt to the new circumstances and threats of an uncertain era—an environment where the greatest threats were less likely to come from large armies, navies and air forces, but instead from the evil designs of terrorists and rogue nations.

The urgency of these changes were made all too plain 53 months ago on that mid-September morning, by 19 men carrying visas, boarding passes, and box cutters.

Today, this enemy, though under constant pressure and on the defensive, still intends to bring its cult of murder and suicide to our shores, and our cities—and to those of our closest allies as well.

This "long war" is the central security issue of our time. The ensuing campaigns in Iraq, Afghanistan, and other theaters in the global war on terror have added new impetus and urgency to transformation efforts that were already underway in this Department.

This process of continuous change and adaptation is so critical because of the nature of the enemy we face, one that has left little doubt about its intentions.

Last month, Osama bin Laden warned of yet more attacks on America. He has said:

> "Let every person . . . come forward to fight those Jews and Americans . . . their killing is from the most important duties and most pressing things."

His top lieutenant, Zawahiri, warned us last year:

> "Oh, Americans, in New York and Washington and the losses you are having in Afghanistan and Iraq . . . are only the losses of the initial clashes."

The enemy cannot win any conventional battle, so they challenge us through non-traditional, or asymmetric means, using terror as their weapon of choice. Their goal is to break America's resolve through the deft use of propaganda and carefully plotted attacks that garner headlines.

They are willing to employ every means—every lie, every atrocity, and every available technology and means of communication—to achieve their aims. In a few short years they have become experts at manipulating the global media to both inspire and intimidate. They have media committees and handbooks that advise their operatives when and how to lie—in particular to claim torture when captured—in order to generate coverage and commentary that damages vigorous anti-terrorism efforts. They have multiple Web sites that display videos of bombings and beheadings that are shown around the world.

Their priority is to force us to abandon Iraq before that country is ready to defend itself so they can turn it into a base of operation—as was Afghanistan before September 11.

In a letter written by Zawahiri, he spelled out their strategy:

> "The first stage: expel the Americans from Iraq. The second stage: establish an Islamic authority. The third stage: extend the jihad."

Have no doubt: should these fanatics obtain the weapons of mass destruction they actively seek, the survival of our free way of life would be at risk.

The enemy would like to define this war as a conflict between Islam and the west, but it is not. It is, in fact, a war within the Muslim world between the overwhelming majority of moderates and a much smaller number of violent extremists. The vast

majority of Muslims do not share the violent ideology of al Qaeda. They have children and families they care about. They hope for a better future for themselves and their countries. They do not want the extremists to win. And many are opposing them at every opportunity.

IRAQ

We see this dynamic at work in Iraq. On December 15, it was the brave and decent people of Iraq—Shia, Kurds, Sunnis, and others—who seized the headlines and captured the attention and admiration of the world. Some 12 million Iraqis—about 70 percent of eligible voters—and thousands of candidates came together in a remarkably peaceful and orderly election. The jihadists, Baathist holdouts and criminals who dominate the daily news from Iraq were unable to halt yet another important milestone in that country's remarkable transformation.

Consider that compared to the successful provisional elections held last January, nearly 4 million more Iraqis voted and there were about 80 percent fewer violent attacks. And Sunnis, who had previously boycotted the political process, participated in large numbers, encouraged by their leaders not to make the same mistake again. In the Sunni majority Anbar province, turnout rose from 2 percent in January to 86 percent of registered voters in December.

The marginalization of the terrorists on election day last December was due in large part to the growth in the size, confidence and capability of the Iraqi security forces—increasing from some 120,000 to 220,000 over the course of the year. Already, some 30 U.S. military bases have either been returned to Iraqi control or closed altogether. The 8th Iraqi Army Division recently assumed the operational lead in battle space the size of Kentucky, the largest such area transferred to date. So far, this division has seized nearly 5,000 weapons, confiscated more than 1,000 pounds of explosives and detained more than 1,000 suspects.

Consider the progress from the enemy's perspective:

- They tried to stop the elections for a provisional Iraqi government a year ago—and they failed;
- They tried to stop the drafting and approval of a new Constitution—and they failed; and
- They tried to stop elections last December for a permanent democratic government—and they failed again.

Because of the progress on the security, political, and economic fronts, U.S. military commanders recommended, and the President has directed, that the United States reduce its combat strength in Iraq by about two brigades, from 17 to 15. At the same time, the U.S military will be shifting more to a supporting role, as Iraqi forces take even more of a leading role in securing their own country.

However, as the President has stated, force level decisions will be condition based. They have been and will continue to be determined by an assessment of Iraq's progress on the political, economic, and security fronts.

They will include such factors as:

- The capability and effectiveness of the Iraqi security forces;
- The quality and competence of Iraqi leadership and its organization, particularly in the various ministries; and
- The threat level, which can be affected by the behavior of neighbors like Syria and Iran, who have been notably unhelpful.

Shortly, the Department will provide to Congress a report, Measuring Stability and Security in Iraq, that will describe the progress being made in these areas in more detail.

It is true that violence, corruption, and criminality continue to pose challenges in Iraq. Each has been a part of the fabric of that country for decades and they are unlikely to disappear overnight. But Iraq's liberation and the subsequent political progress have ignited what may turn out to be a momentous shift in the region. One prominent Lebanese politician—and a periodic critic of the U.S.—has called Iraq possibly the "start of a new Arab world" and has compared the progress there to the fall of the Berlin Wall.

The people of the United States have contributed and sacrificed a great deal helping to set Iraq on the path to democracy. Our finest young men and women in uniform launched on a mission of liberation and our most outstanding civilian and military leaders represent our Nation there today.

It is now up to the Iraqis to seize the opportunity and take more responsibility for their own security and their own affairs. This means assembling a government that respects the interests of all the ethnic and religious groups in the country and,

importantly, a competent team with a program to govern from the center, not from the edges.

A word on what has often been referred to as "nation building." The fact of the matter is that only the Iraqi people can build their nation. All that outsiders can do is help to set the conditions that will give them the opportunity to do so. That has been our goal over the past 3 years. But it cannot be an effort without end.

Our objective from the start has been not to create a dependency, but rather to encourage Iraqi independence and capacity by transitioning increasing responsibility to Iraqis—over time—to have them take charge of their security and governance of their country.

If America has the patience and the will to see this noble and necessary mission to completion—and we must—Iraq can emerge as a nation with a representative government, at peace with its neighbors, and one that can become an ally in the global war on terror.

This would be a truly amazing achievement—one that members of our Armed Forces, their families, and future generations of Americans will be able to look back on, decades from now, with great pride.

PREPARING FOR THE UNEXPECTED

In this "long war," the task ahead—to continue to pursue the enemy, bolster our defenses, and enable our friends and allies to manage their own defense—requires us to not only meet today's threats, but to plan for tomorrow's uncertainties.

At this time, for example, we are fighting a war against terrorist cells dispersed throughout the world. But we might one day find ourselves facing any of a number of other scenarios as well:

- An anthrax attack in a major American city;
- A rogue missile launched by a hostile regime;
- A friendly government overthrown by Islamic radicals; or
- Loose nuclear weapons falling into unknown hands.

No nation, no matter how powerful, has the resources or capability to defend everywhere, at every time, against every conceivable type of attack. The only way to protect the American people, therefore, is to provide our military with as wide a range of options as possible—to focus on developing a range of capabilities, rather than preparing to confront any one particular threat.

The way to keep one's balance in a time of war is to consider worst-case scenarios, develop a wide range of tactics, and then plan on being surprised.

The major initiatives that have been underway in the Department over the past 5 years have been undertaken with this in mind. They have been informed by operations in Afghanistan, Iraq, and other locations in the global war on terror.

In Iraq, the lessons learned process began on day one. An embedded team of observers at Central Command, along with strategists in the United States, analyzed successes and setbacks each day, with an eye toward the way we train troops, equip forces, and fight wars in the future—everything from body armor to business practices. Consider one example in an area that has been of concern: up-armored High Utility Mobile Mechanized Vehicles (HMMWVs). In 2001, the entire U.S. Army had 450 up-armored HMMWVs. Today, it has over 11,000.

The concept of adapting to confront a wider range of threats also informed recent changes to U.S. global posture. We surveyed where U.S. forces were stationed abroad and noted that they were more or less where they had been at the height of the Cold War. So we resolved to re-position them for diffuse global threats. Instead of keeping armored divisions garrisoned in Germany to protect against a Soviet invasion, for example, we are moving many troops to bases in the U.S. and establishing more flexible—and less intrusive—forward operating sites that can assist in moving our forces closer to potential future trouble spots.

The latest Base Realignment and Closure round—the largest in the Department's history—is another example. As with the global posture decisions, military and civilian experts made a thorough assessment of DOD's domestic base structure to determine how the Department might eliminate unnecessary duplication and bring the various Services closer together. This in turn should save the taxpayers tens of billions of dollars in future decades—money that can be directed to fighting the war and taking care of the troops and their families.

This approach—providing more options and developing a wider range of capabilities—has governed decisions made in developing both the President's budget and the Quadrennial Defense Review (QDR).

The QDR is a broad assessment of what the Department is doing to confront a wide range of threats and offers guideposts for the changes necessary in the decades ahead.

Military and civilian strategists have devoted thousands of hours to:

- War gaming worst-case scenarios;
- Examining new technologies;
- Consulting with military commanders in the field; and
- Applying the lessons learned from operations in Afghanistan and Iraq, disaster relief after Hurricanes Rita and Katrina, and the rescue and humanitarian efforts in the Southeast Asia tsunami and the Pakistan earthquake.

The QDR is not a budget document, but it has benefited from a change in legislation that required this report and the budget to be submitted at the same time. This permitted some "leading edge" investments suggested in the QDR to be included in the fiscal year 2007 budget, with additional changes to be reflected in next year's budget request.

At $439.3 billion, the President's Department of Defense budget for fiscal year 2007 represents a 7-percent increase from what was enacted last year, and continues the necessary growth begun in 2001. This is a great deal of money, though at about 3.7 percent of gross domestic product (GDP), it represents a much smaller fraction of America's gross domestic product then when I entered Congress during the Kennedy administration. As important as the numbers, are the choices we make and the priorities the President has set to fulfill his oath to protect this and future generations of Americans.

SHIFTING OUR WEIGHT

The word "transformation" has attracted a lot of attention, but in many ways it is more accurate to see this process of continuous analysis and change as a shift of emphasis, or weight, from the practices and assumptions of the past.

We have shifted, for example, from preparing to fight conventional wars—which we are still prepared to do—to a greater emphasis on fighting unconventional, or irregular, or asymmetric, wars against terrorist cells or enemy guerrillas. To that end, we are:

- More than doubling the budget since fiscal year 2001 for Special Operations Forces and expanding its size and scope to include a new Marine Corps component. The Special Operations Forces will be the largest they have been in over 30 years, representing a 50-percent increase in personnel from 2001 to 2011;
- Increasing skill sets across the force in foreign languages, cultural awareness and information technology; and
- Assigning priority to post-conflict and stability operations in the military's overall training and doctrine.

We have also shifted from simply de-conflicting the branches of the Armed Services—essentially keeping them out of each others way on the battlefield—to more fully integrating the Services in ways that complement and leverage each Service's strengths.

Consider the opening phase of Operation Enduring Freedom (OEF)—where Special Forces linked up with CIA operatives and local fighters, called in air strikes from Navy jets and supply drops from Air Force cargo planes. This jointness continued and increased not just in Iraq, but in virtually everything the Department does—whether training, logistics, and administration—at home and abroad.

Not just our military, but our government, is shifting from reacting to crises—as has been the case for much of our country's history—to preventive action to keep problems from becoming crises, and crises from becoming conflicts. For example, the military has undertaken security and development missions in places such as the Horn of Africa to try to keep them from becoming a new haven for terrorist activity—such as Afghanistan became during the 1990s.

One of the most important shifts underway is the role and importance of intelligence. The U.S. military has long excelled at engaging targets once they have been identified. In the future we must better ascertain where the enemy is going next, rather than where the enemy was—to be able to "find" and "fix," as well as be able to "finish." This means upgrading U.S. intelligence capabilities—both human and technological—and more effectively linking intelligence to operations in real time in the field. We are working closely with the Director of the Office of National Intelligence to ensure that we get the maximum integration from our National and military intelligence capabilities.

We are also shifting from the typically American impulse to try to do everything ourselves to helping partners and allies develop their own capacity to better govern and defend themselves. This is particularly important in a global war on terror

where many of our Nation's most dangerous enemies exist within the borders of countries with whom we are not at war. This shift is at the heart of the effort in Iraq and Afghanistan, as well as smaller-scale train and equip missions in places like the Republic of Georgia and The Philippines.

It is abundantly clear that these kinds of complex and unconventional conflicts cannot be the task of any one country, or any one department. Within the executive branch, we are seeking ways to work more closely and seamlessly with partners in the Departments of State, Justice, Treasury, Homeland Security (DHS), and the Central Intelligence Agency (CIA). This means overcoming the legacy of industrial age practices and habits inherited from the Cold War. The Department will seek new, and more flexible authorities in budget, finance, acquisition, and personnel.

There are many other important shifts in our posture and thinking:

- From a peacetime tempo to a wartime sense of urgency;
- From operating in an era of certainty to one of surprise;
- From avoiding risk to managing and balancing risk;
- From confronting other nation states to confronting decentralized terrorists networks;
- From garrison forces defending fixed frontiers to expeditionary forces that can be deployed anywhere;
- From having the bulk of personnel in the institutional military—the so-called "tail"—to moving troops to the operational side that deploys and fights—the "teeth"; and
- From separating people and information in vertical "stove pipes" to sharing data and coordinating operations across organizations, military services, and agencies.

Another thing that has become clear in recent years is that raw numbers and mass do not necessarily equate with capability. Technological advances, including dramatic improvements in satellite communications, information technology, and precision weaponry have allowed our military to generate considerably more combat capability with the same or, in some cases, fewer numbers of people and weapons systems. These advances in the ability to deliver precision firepower quickly and over great distances, have major implications for the way we think about deterrence and defense.

NAVY

Consider that until recently three out of every four ships in the U.S. Navy were not deployable at any given moment because of long maintenance and training cycles—the product of a peacetime culture and mindset.

Today, the percentage of the fleet routinely at sea has increased by more than 50 percent. The Navy can rapidly deploy six Carrier Strike Groups within 30 days and surge up to two additional Groups within 90 days.

By applying advanced research and development, innovative maintenance and training, and a variety of cost savings initiatives, Navy leaders have changed the way our fleet operates and deploys.

The Navy has increased its capacity and readiness in a variety of ways, including:

- Swapping crews by flying them to ships, rather than bringing ships all the way back home and then all the way back to the theater;
- Investing in more spare parts to significantly reduce maintenance down time; and
- Keeping manning at high readiness levels throughout the fleet at all times.

As a result, our ships and Sailors are better-equipped, better trained and more capable—and are able to strike more targets with precision in far less time. As late as 1997, the airplanes aboard a single carrier could engage about 200 targets per day. In the opening phase of Operation Iraqi Freedom (OIF), this capability rose to more than 600 targets per day.

AIR FORCE

We see a similar dynamic at work in the Air Force. Today, one B–2 bomber on one sortie can drop 80 different satellite guided bombs on 80 different target points. During Operation Desert Storm this would have required multiple aircraft on multiple missions. Despite the fact that the first Gulf War was widely associated with the video footage of "smart bombs" hitting their targets, over 90 percent of the munitions dropped in that war were conventional "dumb" bombs.

It is important to note, however, that the Air Force fleet is aging. It is not uncommon for pilots today to find themselves flying planes that are older then they are.

An aging fleet means increased maintenance costs and flight restrictions. It is important that we recapitalize the fleet to retain America's air dominance and strategic flexibility.

ARMY

Our Nation's oldest military service is undergoing a remarkable transformation—from being a peacetime Army preparing for a major conventional war against another large military, to a consistently more agile and deployable force capable of taking on—and sustaining—a full range of missions around the globe.

These operations have placed demands on men and women wearing the Army uniform and their families. Despite having over 1 million soldiers in the Army's active and Reserve components—and over 2.4 million in the military overall—the deployments to Afghanistan and Iraq of a relatively small portion of that total—currently less than 14 percent of the Army and less than 8 percent of the total military—have produced stress on selected parts of the force.

The Army leadership under Secretary Francis Harvey and Army Chief of Staff General Pete Schoomaker took a hard look at this and identified that the real issue was not the total number of people in uniform, but rather the outdated way the force was organized. In particular, there needed to be an increase in the size of what's called "Operational Army"—the available pool of soldiers and deployable units with the skills and capabilities required for today's missions.

The centerpiece of the Army reorganization plan is a shift away from a structure based on large divisions—the "building block" of the Army since World War I—into an Active and Reserve Force configured into 70 more capable combat brigades and more than 200 support brigades—all fully manned and fully equipped. The "modular" brigade combat teams can deploy quickly with enough firepower, logistics, and administrative support to operate on their own. They will be modernized with the Future Combat Systems (FCS)—a network of weapons and sensors. The result of these changes is that a relatively small increase in the size of the Army is producing a dramatic increase—about 30 percent—in the amount of its deployable combat power.

With this restructuring, the Army should be able to maintain, when necessary, a force generation cycle of 2 years at home station for every year an active duty combat brigade is available to deploy abroad. For the Reserve component, the deployment ratio should be 5 years at home to one year deployed if needed.

The Army is also in the process of realigning some 44,000 personnel spaces across the active, Guard, and Reserve elements to have more troops with the skill sets in highest demand. For example, Reserve and National Guard soldiers who are infantry, military police, civil affairs, and engineers have been in high demand during the global war on terror—while those in field artillery, air defense and armor units less so. In addition, 12,000 soldiers formerly assigned to jobs—mostly administrative and facilities support—that could be performed by civilians—are being brought into the operational part of the force.

These "rebalancing" steps will produce a 50-percent increase in infantry capabilities, with similar increases in military police, civil affairs, intelligence, and other critical skills. By enlarging the pool of available people with the needed skills and training, individual soldiers can expect to deploy and mobilize less often, for shorter periods of time, and with more notice and predictability.

Changes to the U.S. global force posture will also bring home 170,000 active duty troops and families home to bases in the United States. Therefore, instead of being rotated every 2 to 3 years to new postings, soldiers will be able to remain with units for up to 7 years. In addition to building greater unit cohesion, this system should greatly reduce the strain on families from moving households and changing schools.

These changes are already resulting in a larger "Operational Army"—by some 40,000 soldiers by the end of the next fiscal year —with more cohesive and combat-ready formations, a more predictable career path for soldiers and their families, and more troops available with the skills needed to fight the challenges we can expect to face.

I want to comment on several issues that have been raised about the health of the United States Army.

First, some ask, what is the current state of the U.S. Army? We have the most agile, most skilled, and most expeditionary Army in history. Those who use words like "broken army" are wrong.

Consider:

- A "broken Army" would not be exceeding, by large margins, the highest re-enlistment goals they've had for 5 years. The 3rd Infantry Division, for

example, which recently returned from its second Iraq deployment in 3 years, met over 130 percent of its retention target;

• A "broken" Army would not have met its recruiting goals the last 8 months despite the strong U.S. job market and the known—and well publicized—dangers and sacrifices of military life. In fact, the number of recruits who signed an enlistment contract almost 25 percent higher than it was at the same point last year.

General Schoomaker points out that he remembers what a "broken" Army looks like when he was a young officer. The Vietnam War had just ended, the All-Volunteer Force was in its infancy, and though we had many fine soldiers and officers, the force was also troubled by multiple problems. The difference between that Army and the professional and motivated force we have today could not be more dramatic.

Many of the criticisms and dire predictions about the Army have come from people who may be well-intentioned, but who nonetheless are proceeding from outdated and inaccurate information.

Today's Army has demonstrated its capability not in garrisons, or in training exercises, or through statistical readiness formulas, but in the crucible of combat.

Think about the many rapid, complex, and dangerous operations that the Army now undertakes on a regular basis in Iraq, Afghanistan and around the globe. They have made the extraordinary so routine that it is sometimes hard for people to notice just how much has changed, and just how good they have become.

A second question that is being asked is: Is the Army "cutting" the size of the Army Guard and Reserve?

The answer is no. The Army is not cutting the Army National Guard or Reserves. That rumor is false.

At the present time the Army National Guard is authorized by law to reach 350,000 soldiers. It is currently manned at approximately 333,000. The Army Reserve is authorized to reach 205,000 troops. It currently has 188,000.

The Army's plan is to fund the Guard and Reserve at their actual current troop strength. In addition, the Department is prepared to increase funding should the Army National Guard or the Army Reserves actually grow past their current levels. Each component will retain the same number of total brigades—106 for the Guard, 58 for the Reserves—as they have today. The reorganization underway will ultimately result in a force that is more agile, fully manned, fully equipped, and with capabilities that will greatly aid its homeland security missions.

A little background on what exactly is underway. In the past, the Army Reserve and National Guard served as a strategic Reserve, to be called on once in a generation or a lifetime for a major war. As a result, they received relatively low priority for funding. Many units may have existed "on paper" but they were not fully manned and lacked sufficient training and equipment.

Today, the Army National Guard and the Army Reserve are shifting to an operational Reserve, to be able to play a key role in homeland security, as required, as well as in support of the global war on terror.

America has come to rely much more on the Army's Reserve components than before. In keeping with these new requirements, the Army, over the past 2 years, has initiated a series of changes—and made additional proposals in this budget—to the way its Reserve components are arranged, manned, and operated—changes that arguably should have started a decade ago.

This shift has also been reflected in the Department's budget priorities. This administration has increased spending on the Guard and Reserves by over 50 percent since 2001, and the Army proposes spending $21 billion on new equipment and modernization for the Guard through fiscal year 2011.

Some changes have had a positive impact already, as demands put on the Guard and Reserve have actually decreased in recent months. Some 160,000 Reserve component soldiers were mobilized and deployed this time last year versus roughly 110,000 today.

Some ask why these changes are being made now, at a time of war?

Well, change is hard at any time, but the changes are essential because we are at war. Indeed, I would suggest that the recent demands on the force—and the threats our country faces in the global war on terror—have made these long overdue changes even more urgently needed. This is a historic opportunity to get it right.

But how, some are asking, will this affect the Guard's ability to respond to an emergency or natural disaster at home?

The Army's proposal does not change the total number of brigades in the Guard, but it does adjust the mix of units in a way that better suits the Guard's unique roles and responsibilities. Specifically, six combat brigades are being converted to six support brigades. These support units include assets such as military police, en-

gineers, and civil affairs—specialties that are increasingly necessary for homeland defense or to respond to natural disasters.

The new concept of fully funded, fully manned, and fully equipped Guard brigades—particularly support units—is a development that state and local officials should welcome. By any measure, they will be a vast improvement over the undermanned, and under-equipped Guard and Reserve units of the past decade.

Guard Equipment and Readiness

Some also ask, if there will be a cut in support for equipment for the National Guard and why the Guard is leaving some of the equipment in Iraq, rather than returning it immediately to units here at home.

First, it is important to remember that the challenge of properly equipping the Army did not start with this war. The Army leadership estimates that they began the global war on terror in 2001 with a $56 billion shortfall across all components of the Army—shortages were particularly acute in the Reserves components.

In years past, there was uneven quality and readiness between different states and different units across the Guard. This was particularly the case with combat brigades. Of the 34 combat brigades, only 15—less than half—were labeled "enhanced," meaning that they were supposed to receive the highest priority for training and resources.

But because of these inherited deficiencies, the Army had to "cross level" people and equipment across the Guard to make deploying units whole—including the so-called "enhanced" brigades.

Once a deployment is completed, it makes little sense to expend enormous resources to move repeatedly heavy equipment back and forth from the Middle East. This is particularly the case for items like up-armored HMMWVs, tanks, or Bradley Fighting Vehicles that have relatively little use at home, but are needed in theater.

Significantly, these deployments and redeployments offer a needed opportunity to reset the Guard units with the skills and equipment the Army will need in the future, instead of simply resetting them with what they had had in the past.

Under the Army's proposal, instead of having 15 Guard combat brigades considered, but not really "enhanced," there will be 28 brigade combat teams that will, in fact, for the first time, be fully manned, trained, and equipped—just like their active duty counterparts.

The process of fully transforming the Army—active and Reserve component alike—will not be all fixed or finished in this or the next fiscal year. It is a process that involves resetting dozens of units and adjusting the specialties and assignments of tens of thousands of soldiers. It is an enormous task and a tough challenge, one that General Schoomaker has compared to tuning an engine while the car is moving.

At any given time a close observer could drop a plumb line in the process and identify any number of deficiencies. That is to be expected.

But as one considers the changes taking place in the Army, it is important to view what is happening not in terms of the immediate moment, but where things are heading—and the U.S. Army is heading toward a properly funded Guard and Reserve fully capable of protecting America at home and abroad.

That is something every American concerned about our Nation's security, as well as the well being of our "citizen soldiers," should welcome and support.

Army End Strength

Nonetheless, many continue to ask, given the pace of deployments and the stress of the force, shouldn't the size of the active Army be increased?

The answer is that we have already increased the size of the active Army by some 12,000, under the emergency authorities granted by Congress, with plans to go up by a total of 30,000 if required. More important, we have increased the size of the warfighting Army—the teeth—and reduced the size of the institutional Army—the tail—in ways that do not require an increase in statutory end strength.

At issue is whether there should be a permanent increase in the statutory end strength—meaning that the U.S. Army would be required by law to maintain tens of thousands of additional troops on the payrolls—regardless of whether the Army leadership thinks that is necessary or desirable—and in the face of the enormous cost that that would build into future budgets at the expense of needed procurement and quality of life for the troops. We do not think that necessary or wise at this time.

PROTECTING THE FORCE

Protecting our troops in combat theaters continues to be the top priority of this Department. We face a thinking and adaptive enemy. The military is aggressively

developing new equipment, technologies and procedures to counter the threats from Improved Explosive Devices and other methods employed by the terrorists to attack coalition troops.

Last year, over 4,400 new, Level 1, factory-built, up-armored HMMWVs, and more than 16,000 add-on armor kits were fielded by the Army in Iraq and Afghanistan.

Almost 700,000 sets of interceptor body armor have been fielded since the beginning of the war, and over 170,000 sets of additional protection for shoulder and upper-arm areas have also been sent to the combat theaters in Iraq and Afghanistan. This protection is the best available in the world, and has saved a great many lives. The Army's goal is 201,000—one for every servicemember and civilian in the U.S Central Command (CENTCOM) area of operations.

HEALTH COSTS

The pattern of imposing new programs and costs on the military—without considering the unintended consequences—is most evident in the area of health care. We all are on notice of this growing problem that threatens the Department's ability to fund its other priorities, and therefore future U.S. military capabilities.

As with the changes underway in the Army, there has been a good deal of confusion and misstatement about what the Department is proposing in regard to health care.

Let me be clear: the United States military provides—and will continue to provide—the best possible care for those who have served our country. But the reality is that the way the current health care system is funded is not sustainable. Mainly as a result of benefits added by Congress, often without hearings, the Department's health care costs have almost doubled over the past 5 years—from $19 billion in 2001 to over $37 billion in fiscal year 2006 ($39 billion in fiscal year 2007). This year's proposed shipbuilding budget, by comparison, is $11 billion.

Using a conservative projection, these health care costs will likely reach $64 billion in fiscal year 2015, an estimated 12 percent of the total Department budget projected for that year. By comparison, health costs were 4.5 percent of the Department's budget back in 1990.

Because the health coverage offered by the Department is so comprehensive, many private employers are dropping their employer coverage for military retirees and directing their employees to rely on TRICARE instead. In fact, several State governments have passed rules that encourage their employees who are military retirees to use TRICARE and not their state health care systems. In effect, the military is increasingly subsidizing the health care costs of private corporations, organizations, and State and local governments. This is a classic example of good intentions leading to unintended, unwelcome, and expensive consequences. Today nearly 60 percent of the Department's inpatient and outpatient expenditures are for retirees and their families, and this percentage is projected to keep rising.

To place the health benefit program on a sound fiscal basis for the long term, the Department is proposing to rebalance the share of costs between retired individuals and the government to approach the levels TRICARE had when the program was initiated by Congress in 1995. Further, we propose that cost shares be indexed so they will be adjusted annually for inflation.

To provide context, in 1995, beneficiaries paid 27 percent of their total health care costs. Today, because there has been no change in TRICARE annual premiums for 11 years, beneficiaries currently pay not 27 percent, but just 12 percent of costs. The proposed plan would ask retirees to pay somewhat more in premiums and for certain co-payments. However, even after adjustments, TRICARE would still be more generous than the best private employer plans. For a single retired junior enlisted servicemember, the average price increase for TRICARE Prime enrollment fees would equate to 26 cents per day by fiscal year 2008, according to one study. For a retired officer's family the change would amount to $2.58 per day.

We also want to explore for new, innovative benefit alternatives such as health savings accounts, which are currently available to other government employees.

A few points should be underscored. Active duty troops and their families—people who rely on military hospitals as their sole provider of health care—will not be affected, except for minimal changes to pharmacy co-payments for family members. Those retirees over age 65 in TRICARE for life are not affected, except for minimal changes to pharmacy co-payments. No one will be forced to leave TRICARE.

The plan being proposed, though undeniably necessary and offered with the best interests of the men and women in uniform in mind, has led to predictable concern. But it is worth repeating: the way the current system is funded is simply not sustainable. Indeed, if current trends continue, health funding pressures will soon cut into budgets for training, equipment, and a range of other investments vital to win-

ning the war on terror and maintaining the quality of life for our troops and their families.

The Chairman, and the Joint Chiefs of Staff and I, unanimously urge Congress to join in taking the necessary steps to ensure that we sustain a superior health benefit for the Armed Forces, their families, and all retirees, and to ensure needed future U.S. military capability and a strong national defense.

HELP FOR WOUNDED TROOPS

One program underway is the newly created support center for severely injured troops and their families. This center augments efforts already underway in the service branches, and has helped thousands of people during a difficult period in their lives.

The Department remains committed to helping those who have risked their lives for their country in every way possible. I never fail to come away enormously impressed and inspired when I meet with the wounded and their courageous families. They are truly remarkable examples of American patriotism and resilience.

IMAGINING THE FUTURE

Mr. Chairman, the leadership of the Department will be describing a process of continuous change in everything from the way we fight wars to the way we manage personnel. Where, one might ask, is this heading?

Imagine:

- A colonel proficient in Arabic whose knowledge of city management equals his skills in marksmanship;
- A commander with the flexibility in tactics and options that President Roosevelt entrusted to General Eisenhower;
- A self-sustaining brigade that surges rapidly from the U.S. to a forward operating facility in Central Asia to work with newly trained allies against terrorist cells that threaten a new democracy;
- A sea-based combat ship with the ability to insert and change its combat payload depending on its mission.

As we imagine that soldier, that commander, that brigade, that facility, and that ship—we have a notion of what America's transformed Armed forces might well look like in the years ahead. Changes that will be essential to defeating a range of enemies—changes essential to keeping our Nation safe.

In discussing the budget and the QDR, the tendency will be to talk about a lot of numbers—numbers of troops, numbers of weapons platforms, and the like.

But I want to conclude by talking about a different metric that crossed my desk in December. That number is 371—the total number of Silver Stars and Service Crosses that had been awarded since September 11 to our Nation's soldiers, sailors, airmen, and marines.

Were it not for the exacting standards the military has for these awards, I suspect the numbers would be much higher, given the superb performance of our troops in places like Fallujah, Ramadi, Kandahar, and other grueling battlefields in the global war on terror.

In a conversation about the war a few weeks ago, I was asked "Where are the heroes?" There are a great many heroes. They are doing exactly what needs to be done to keep our country safe and to preserve freedom for our children and their children. We all could do a better job—media and military alike—in telling their stories.

Let me briefly highlight just one. Suran Sar was born in Cambodia and came to this country at the age of 15, after most of his family was killed by the Khmer Rouge. He became an American citizen and later volunteered to become an American soldier. He fought in the first Gulf War, rose to the rank of Master Sergeant in the Special Forces, and was deployed to Afghanistan after September 11.

On March 2, 2005, his team of 12 landed in their Black Hawk helicopters to inspect some suspicious-looking buildings on a snow capped mountain. They immediately came under fire, and Sergeant Sar chased after one of the gunman. He was hit in the head by an enemy bullet, but kept fighting to help the rest of his team that was still pinned down. They ultimately routed the terrorists, seized several weapons, and secured the site.

For his actions on that day he received the Silver Star, the Army's third highest medal for bravery. He would later tell a reporter:

> "I kind of feel ashamed to accept such a prestigious award because I feel all I'm doing is something that I love to do . . . fighting to serve my country and protecting my guys."

Sergeant Sar is but one of thousands of remarkable people who make up our country's Armed Forces. Some of their accomplishments are known beyond the immediate circle of family and comrades, but most are not.

They are volunteers who could be doing something much easier, safer, and better compensated, but they step forward each year to raise their hand and say, "Send me." They do so fully aware of the risks and are justifiably proud of the noble history they are making.

They have done everything asked of them—and have done it with resilience and courage. We owe it to them—and the country they have sworn to protect—to provide the resources, the capabilities and the innovative institutional culture that will not only win today's wars, but also best position them to win America's wars in the decades ahead.

Thank you for your support of the men and women who wear our Nation's uniform. I look forward to working with this committee as our Nation engages in a "long war." I am reminded of what President Eisenhower once said about another long struggle—the Cold War—comments that seem to have resonance today.

> "We face a hostile ideology—global in scope . . . ruthless in purpose, and insidious in method . . . to meet it successfully we must carry forward steadily, surely, and without complaint the burdens of a prolonged and complex struggle—with liberty the stake."

Mr. Chairman, just as we did during the Cold War—what President Kennedy called a "long twilight struggle"—we will persevere in this "long war" we face today. With the help of Congress, we will provide our country with the security it needs and deserves in this new century.

Chairman WARNER. Thank you, Mr. Secretary, and I join you in saying the quotes of both of those two distinguished Presidents describe the situation that our President is facing up to in every way.

Chairman Pace, we welcome you.

General PACE. Thank you, Mr. Chairman, Senator Levin, members of the committee. It is my great honor and privilege to sit before you today representing the men and women of your Armed Forces and on their behalf to thank you for your strong bipartisan support of all of us who have the honor and privilege to defend this Nation, also to thank them, the men and women who serve in our Armed Forces, for all that they are doing every day to protect us, and especially to thank their families, who serve this country as well as anyone who has ever served in uniform. They wait at home patiently saying their prayers, hoping that their loved one is not injured, and we owe our families a great debt of gratitude.

Over the past year we have participated, the senior military leadership and senior civilian leadership of the Department, in what I think is an unprecedented number of meetings, hours and hours, hundreds and thousands of hours of meeting together, to produce the budget, to produce the QDR, to look at the national military strategy. Based on all those hours of deliberation and analysis, I am very proud and confident to tell you that your military is fully prepared to execute all of the missions in the national military strategy.

I would also tell you that I believe that the budget as presented allows us to prosecute the war on terror, to accelerate transformation, to enhance our joint warfighting, and to increase the quality of life of our servicemembers and their families.

We are involved in a long war, against an enemy that is ruthless, adaptive, and patient, and they are trying to destroy the resolve of the American people through gradual attrition. Iraq is certainly the central battle, the center of gravity, in this war on terrorism, and we have had great progress there and some challenges, as the Secretary has already outlined.

We are fighting this long war for the first time with an All-Volunteer Force—2.4 million Americans, Active, Guard, and Reserve, protecting 300 million Americans. It is important, as you do frequently, not only through the way that you support us in legislation, but in your visits to the field, in your visits to the hospitals, we thank you for the way that you tell your Armed Forces how important their service is to this country.

Sustaining our All-Volunteer Force will be critical in the years ahead. One of the key elements of sustaining that force will be to sustain the health care system. We have a superb health care system that you have provided for us. Over the past 5 years, the cost of that health care system to the Nation has doubled. In 2001 it was $19 billion. In 2006 it will be just over $37 billion, and on its current trend, within the time frame between now and 2015 it will be about $64 billion per year.

There are multiple reasons for this. First, is the simple fact of the increase in the cost of health care. Second, is that private employers are telling their retired military employees to use the military health care system, allowing those private employers to not have to pay the premiums that they would otherwise have to pay for that insurance. We also have some State and local governments doing the same thing, encouraging their military retirees to use the TRICARE system as opposed to the system provided by State and local government.

Another factor is the fact that since 1995 the premiums have not changed for our military forces. The legislation that you all passed in 1995 provided and has continued to provide superior health care at, in 1995, very reasonable cost to the individual member. As part of our deliberations this year at every level in the Department, to include multiple times in discussions with the Joint Chiefs, the Joint Chiefs have unanimously recommended that we re-norm the cost of health care to what you established in your 1995 legislation. Some very important points.

First, Active-Duty troops and their families would not be impacted by this renorming.

Second, retirees over age 65 would not be impacted by this renorming.

Third, the catastrophic cap would not change from its current $3,000 for a family.

We believe that this health care benefit is unique and superb. We want it to continue for all of our members of the Active, retired community, and we believe that re-norming to what you established in 1995 is one way to assist in helping us achieve the goal of long-term sustained health care.

To conclude, I would like to just mention a thought about the way ahead for our country. The war on terrorism will present to your Armed Forces tremendous responsibilities and opportunities. But, as many have said before and I will say today, we cannot and will not win this war on terror alone. This will very much need the collective capacities of all elements of national power that we derive through our interagency coordination and cooperation.

Twenty years ago your Armed Forces faced significant obstacles in being joint and working together. In no small part because you passed the Goldwater-Nichols Act, we are now a truly joint force,

becoming an interdependent force. I believe we need to find ways inside of our government to encourage and reward interagency collaboration, interagency experiences, interagency education, interagency planning. We need the ability to deploy our key interagency experts along side of our military, so that we can do the kinds of work that we need to do overseas quickly and efficiently.

It is my great privilege, as I said, to sit before you today, to be able to thank you for your support, to be able to thank our Armed Forces for what they are doing. I look forward to answering your questions. Thank you, sir.

[The prepared statement of General Pace follows:]

PREPARED STATEMENT BY GEN. PETER PACE, USMC

Chairman Warner, Senator Levin, distinguished members of the committee, it is my pleasure to report to you on the posture of the U.S. Armed Forces. On behalf of all soldiers, sailors, airmen, marines, Department of Defense (DOD) civilians, and our families, thank you for your continued bipartisan support. That support has been exemplified this past year by congressional visits to our troops in Iraq, Afghanistan, and elsewhere around the world; visits to those hospitalized; your funding for operations; your support of transformation and recapitalization initiatives; and the improved pay and benefits you have provided to our servicemembers and their families.

Our successes in the war on terrorism are due in large measure to the dedicated and patriotic sacrifice of our Nation's servicemembers. I want to thank them and their families for all they have done and continue to do to maintain our freedom.

We are in a long war. Our enemy intends to destroy our way of life. They seek to expel American influence from the Middle East, overthrow the existing secular governments of the region, and establish a fundamentalist religious empire on which to base eventual global domination. To accomplish this they intend to defeat the United States and our allies—not militarily, but by targeting our unity and our will. They aim to undermine our resolve by attacking civilians; taking hostages; inflicting casualties on coalition forces; and using propaganda. They believe they can win against the world's most powerful nation because they see us as lacking the moral stamina to persevere in defense of our beliefs.

This is not a struggle between America and Islam. Rather it is a conflict between those who love freedom and a terrorist minority attempting to take power from the majority. Our opponents are loosely networked and transnational. They are ruthless, adaptive, and convinced that they will win. They intend to do so by destroying the resolve of the America people by gradual attrition. They are a patient foe.

For the first time, America's All-Volunteer Force is fighting a long war. Our troops and their families know their Nation truly appreciates their service and values their sacrifice. Sustaining our troops and upholding the resolve of our Nation requires our collective leadership. We must underscore for the American public both the nature and importance of the conflict we are fighting.

We traditionally think of war in conventional terms such as the Second World War during which the average American had a family member serving in combat, and shared their sacrifice on the home front through the rationing of goods. This is not the conflict in which we find ourselves today. Thankfully, the daily life of the average American citizen reflects none of the hardships or shortages we associate with a nation at war.

Unlike past wars, territory conquered and enemy armies destroyed are not apt measures of success. The true metrics are public perception and the resolve of free peoples to determine their own future. Our national commitment to a long-term effort is key in this fight, because the enemy neither expects nor intends to defeat us in the short term.

It is also important to acknowledge that the U.S. military has a significant role to play, but that it will not win this war operating alone. Our interagency partners play vital roles in bringing to bear all the elements of national power to ensure long term success.

To defeat our enemies and protect our Nation, we must simultaneously prevail in the war on terrorism and prepare for the future. The proposed fiscal year 2007 budget ensures we have the ability to conduct a broad spectrum of operations. Major conventional conflict, counterinsurgency, counterterrorism, antiterrorism, stability operations, humanitarian assistance at home and abroad, disaster relief, forward

presence, global deterrence, support to civil authorities, and homeland defense each require the application of tailored forces. The proposed budget funds this wide range of military capabilities, and provides our forces with the superbly trained and equipped men and women we need to defend America and its interests.

As stated in our recently completed biennial review of the National Military Strategy, we are well positioned to accomplish our missions. Our Armed Forces stand ready to defend the homeland, deter conflict, and defeat adversaries. Allies and coalition partners play important roles in meeting these challenges. If an unanticipated contingency should occur, our formidable capabilities and those of our many partners around the world will ensure we prevail.

The Quadrennial Defense Review (QDR) underscores the need to address today's operational requirements and those of tomorrow. It emphasizes the importance of winning the war on terrorism, accelerating transformation, strengthening joint warfighting, and taking care of our most precious resource—our people. The QDR represents a significant effort to understand what capabilities are needed over the next two decades and is part of an ongoing continuum of change for the Nation's Armed forces. In particular, it underscores the value of speed and precision as force multipliers. The QDR reflects an unprecedented level of collaboration and teamwork amongst the senior civilian and military leaders of the Department. Our senior defense leaders will continue this dialogue, and we will develop roadmaps this year to achieve the review's goals for the future.

WIN THE WAR ON TERRORISM

Iraq remains the central front in the war on terrorism. Our mission there is clear. We are fighting to defeat terrorists and to help the Iraqis build a democratic, secure, and economically sound nation—an ally in the war on terrorism. Our ultimate victory in Iraq will profoundly affect the security of the United States, our allies, and the entire globe.

The past year in Iraq has seen significant challenges, but also remarkable successes. This month's Defense Department Report to Congress on "Measuring Stability and Security in Iraq" describes the situation in detail. The steadily growing participation in three national elections in 2005 vividly illustrated the determination of the Iraqi people—Shia, Sunni, and Kurd—to embrace democracy. Entrepreneurial activity has significantly increased. Most importantly, the Iraqi people are increasingly taking greater responsibility for their own security. These successes demonstrate genuine progress and flow directly from the hard work of our troops and interagency partners.

Effective governance, the rule of law, economic growth, and social well-being can only flourish on a strong foundation of security. Over the course of the next year, we will continue to aggressively assist Iraqi security forces to assume greater responsibility for a stable and secure Iraq. Commanders on the ground will continue to make force level recommendations based on conditions not timetables.

The war on terrorism is not restricted to the boundaries of Iraq. We are combating terrorism in Afghanistan, where our forces continue to root out al Qaeda and Taliban in partnership with the Afghan National Army. Likewise, our Provincial Reconstruction Teams, consisting of civilian and military professionals from the U.S. and our Coalition partners, assist Afghans at the local level in building a stable and free society. An indicator of our accomplishments in Afghanistan, as well as a catalyst for continued success, is the North Atlantic Treaty Organization's (NATO) initiative to take on more responsibility for security and development. These international efforts reach beyond Afghan borders and help the region choose stability over conflict.

We are combating terrorism in Southeast Asia. The Abu Sayaf Group in the southern Philippines and al Qaeda's partner Jemaah Islamiyah in Indonesia present these friendly nations unique challenges. We are forging relationships, building capacity, sharing information, and conducting focused training with these valued allies. We are also working with other nations to strengthen maritime security in the Strait of Malacca and other strategic waterways. Our efforts contribute substantively to regional security and freedom of the seas.

In Africa, we continue to partner with regional organizations and individual nations to improve their capacity to combat terrorism, secure borders and coastlines, and reduce ungoverned space. The Combined Joint Task Force-Horn of Africa and the Trans-Sahara Counter-Terrorism Initiative—developed in coordination with the Department of State—improve the ability of countries to foster security and stability within their own borders.

In addition to regional initiatives, an array of coalition and interagency partners continue to work with us globally against the proliferation of Weapons of Mass De-

struction (WMD). Legislation authored over a decade ago for cooperative threat reduction and counterproliferation of WMD anticipated one of today's most serious challenges. We continue that effort. The Proliferation Security Initiative expands international intelligence sharing, coordinated planning, and capabilities integration. Similarly, our ability to execute counterproliferation operations is enhanced by the Weapons of Mass Destruction Maritime Interdiction initiative.

Defense of the homeland itself remains a key mission in the war on terror. Our efforts to defeat employment of WMD by terror groups, as well as a strong response capability should those efforts fail, are critical. Terrorist attacks here at home against the Nation's citizens, its infrastructure, and its leadership must be prevented. Our efforts to date have been successful but constant vigilance is necessary.

We are also confronting the threat of narco-terrorism. Ongoing multilateral operations promote security, improve effective border control, deny safe havens, and impede the ability of narcoterrorists to destabilize societies. Combating drug trafficking has particular importance for strengthening security and democracy in our hemisphere. Engagement with our Latin American neighbors to shape events and forestall crises is vital to protecting democracy for us all.

Strategic communication is a significant component of the war on terror. Terrorists rely upon propaganda to deliver their message and justify their actions and are not constrained by truth. We must counter those efforts. Our actions, policies, and words must reflect and reinforce our strategic goals and national ideals. What we communicate to our friends and foes is at least as important, if not more so, as what we do on the battlefield. We need a more cohesive U.S. Government effort in this area.

In the war on terror, our allies and coalition partners execute key roles in defeating terrorists on and off the battlefield. Their capabilities and regional expertise are complementary to our own. As we move ahead in combating terror, we do so increasingly in combination with other nations who understand the danger terrorism poses to their citizens.

ACCELERATE TRANSFORMATION

As the threats to our Nation evolve, so must the capabilities of our Armed Forces. Transformation today remains vital to the defense of the United States tomorrow. It is a process, not an end state.

Transformation is more than harnessing advanced technology. Transformation includes rethinking our doctrine and operational concepts; adapting professional education and training to meet new challenges; restructuring our organizations and business practices to be more agile and responsive; improving our personnel policies; and reforming our acquisition and budget processes. Nowhere is this more evident than in our effort to increase interagency collaboration. Defeating terrorists requires more than the use of military force. We must harness and synchronize all the instruments of national power to win the war on terrorism.

Advancing a transformational mindset and culture that readily embraces interagency integration begins with our Nation's strategic guidance documents. Interagency collaboration is a theme throughout our National Security Strategy, QDR, National Defense Strategy, National Military Strategy, Joint Strategic Capabilities Plan, Security Cooperation Guidance, and Unified Command Plan.

Nonetheless, we can still do more to enhance interagency effectiveness. Twenty years ago, there were serious institutional obstacles to our armed services operating as a joint team. Today, in no small part due to the 1986 Goldwater-Nichols legislation, the U.S. military is increasingly a true joint force, interoperable and moving towards interdependence.

The Goldwater-Nichols legislation established a system of incentives and requirements to foster Jointness among military officers. We need to find similar ways to encourage interagency expertise. Rewarding interagency work experience, education, and training will facilitate better synergy between departments. Likewise, we need and should reward individuals and agencies that rapidly deploy and sustain civilian expertise in tandem with our military. Shared deliberate and crisis planning capacity among our interagency partners will also improve our Nation's readiness for contingencies.

We are working to better integrate our Nation's diplomatic, military, intelligence, information, and economic instruments to forestall and address crises overseas, and to be ready to deal with catastrophic terrorism, natural disasters, and pandemic disease at home. Defense support to civil authorities is an essential component of protecting the Nation. Hurricanes Katrina and Rita brought this home. The American people expect their Armed Forces to respond in times of crisis. Teamwork among our Armed Forces and Federal, State, and local government agencies—as well as

private and volunteer organizations—is vital to the security of our Nation's citizens. Accordingly, we are preparing now to deal with circumstances that have the potential to overwhelm local government and private institutions. U.S. Northern Command (USNORTHCOM) is expanding its ability to take action swiftly in a variety of incidents, including providing military support to large-scale disaster relief operations and responding to the outbreak of pandemic disease.

While transformation will allow us to better deal with contingencies at home, it will also improve our ability to boost the capacity of other nations to defeat terrorism and stop its spread while contributing to the security and stability of nations. The Army's Joint Center for International Security Force Assistance at Fort Leavenworth and the Marine Corps' Foreign Military Training Units are breaking new ground in this endeavor. Likewise, International Military Education and Training is a proven means of creating friendships that pay long term dividends when international classmates later work alongside U.S. forces in overseas operations. Constraints on our ability to implement this important program warrant review. These and other initiatives are examples of the value of developing capabilities and relationships to help promote security and stability worldwide, potentially precluding a need to commit significant amounts of U.S. resources to stabilize troubled nations abroad.

Our foreign assistance framework was designed to influence and reward behavior during the Cold War. We need a new foreign assistance framework for the war on terrorism to develop the security capabilities of fledging democracies and advance regional stability. The support we provide other countries is essential to helping them police their own land and eradicate terrorist safe havens. Continual assessment of the countries that we assist, and the aid we allot, ensures that we are helping appropriate nations in the right way.

It is not enough for us to be successful in responding to today's challenges. We need to shape the future with like-minded allies and partners. An essential element of this process is the transformation of our Global Posture. We are implementing a new Global Posture for defeating terrorism, deterring conflict, and bolstering the security of both established and nascent democratic states. This realignment will better position us to shape the future. This is well illustrated in U.S. European Command's (USEUCOM) reorientation of its forces from Cold War-era basing to an expeditionary forward presence that supports our friends and helps deny havens for our foes.

In addition to transforming our conventional force posture, while maintaining a reliable nuclear force, we are shifting from our Cold War strategic deterrence to a New Triad with broadened focus on conventional long range strike. Prompt global conventional strike capabilities are required in the war on terror as well as in future contingencies. In parallel with our efforts to develop a conventional long range strike capability, we are improving our missile defenses and national command capability. Your support for these efforts will turn our traditional triad into a strategic deterrence capability relevant to tomorrow's challenges.

Finally, as we transform our warfighting forces, the Department will do the same for the acquisition and budget processes that provide material resources for our troops. Transforming the way capabilities are developed, fielded, and integrated enhances our capacity to execute a wide range of missions.

STRENGTHEN JOINT WARFIGHTING

The U.S. Armed Forces' capacity to operate as an integrated joint team is one of America's chief advantages on the battlefield. By jointly employing our armed services we leverage their complementary capabilities as a team.

We can and should go beyond our current level of jointness. Strengthening our joint warfighting ability enables us to make strides forward in the war on terrorism. It also accelerates transformation. To maximize our operational performance, we will transition from an interoperable force into an interdependent force. While doing this, we must maintain the expertise, culture, and traditions of the Services from which our military competence flows.

Joint Professional Military Education (JPME) of our military and civilian professionals provides the foundation of our force. We intend to better integrate our interagency and international partners in these successful education programs. In addition, our Joint Exercise Program provides valuable training for the Combatant Commanders' Joint and multi-national forces. At home, we are working with the Homeland Security Council and the Department of Homeland Security (DHS) to establish a national security exercise program to help prepare senior leaders across the Federal Government to confront crises more effectively.

In strengthening joint warfighting, we continue to review, develop, and disseminate doctrine and operating concepts. The Joint Chiefs in consultation with the combatant commanders ensure that our doctrine and concepts provide a solid foundation for warfighting. Those same concepts and doctrine also help shape the strategic guidance which drives operational execution.

Our education and training, as well as our doctrine and operational concepts, are kept relevant by capturing lessons gained from experience. Our professional development and organizational agility is significantly enhanced by lessons learned from the war on terrorism, and other operations, including disaster relief at home and abroad.

As seen in deployments to the Asian Tsunami, Hurricane Katrina, and the Pakistan earthquake, our standing, rapidly deployable Joint Task Force (JTF) headquarters dramatically improve our operational responsiveness. To enhance this capability, we will organize, man, train, and equip selected three-star and two-star Service headquarters to rapidly deploy as JTF headquarters.

We are adapting our organizational structure to better exploit the intelligence we collect. The creation of Joint Intelligence Operations Centers at our combatant commands increases support to units in the field. In addition, the Joint Functional Component Command—Intelligence, Surveillance and Reconnaissance, set up this year under the leadership of U.S. Strategic Command, deconflicts competing demands by coordinating the allocation of intelligence collection assets. These initiatives bring the analytical firepower of the Intelligence Community to bear for our troops on the ground, in the air, and on the sea.

We are also harnessing technological developments to enable faster sharing of data among agencies, but we cannot rely solely upon technology. Intelligence collection, analysis, fusion, and dissemination depend upon our intelligence professionals. Human intelligence is a vital enabler for collecting, understanding, and communicating information on threats and contingencies. Service programs for recruiting, training, and retaining key intelligence specialties have been refined to ensure we meet the increasing demand for intelligence personnel.

We continue to examine how best to recapitalize and invest in our Intelligence, Surveillance, and Reconnaissance capabilities. Sensor platforms that collect across multiple mediums are one approach. High altitude, long loiter unmanned aerial vehicles are another. Space based platforms should focus on surveillance capabilities that we cannot readily replicate elsewhere.

In addition to benefiting our surveillance, space based platforms also play a central role in communications. Our deployed forces' strategic, operational, and tactical connectivity depends on the use of global, high bandwidth communications currently only available via satellites. As the gap between operational demands and military satellite communications capacity grows, we will continue to rely upon commercial vendors for the foreseeable future. We are also exploring alternatives to space-based communications.

Networked ground, air, and maritime communications systems are the means with which the U.S. Armed Forces share information and work together as a team. New joint acquisition strategies to replace Service-unique communications systems will advance our communications capacity across the electromagnetic spectrum. Common secure networks with allies will further increase coalition capability. In addition, the exponentially increasing importance of cyberspace requires that we increase our efforts to operate effectively both offensively and defensively throughout the information domain.

In the realm of logistics, we are actively working to leverage our unmatched capabilities. The Joint Staff, the Services, the U.S. Transportation Command, and the Defense Logistics Agency work together to meet the personnel, equipment, and materiel needs of our combatant commanders. However, both the challenge of adapting to changing operational requirements and the demand to increase efficiencies require that we continue to enhance our logistics capabilities. Along these lines, we are working to improve unity of effort, domain-wide visibility, and rapid and precise logistics response.

Reconstituting the force presents real challenges. Our weapons systems and vehicles have experienced extensive use in Iraq and Afghanistan. Supplemental appropriations have helped us repair and refit during combat operations, nonetheless, we have more work ahead to ensure our forces remain combat-ready. Your support for resetting the future force is critical.

As we reset, the combat power of our Total Force is being increased. By moving the Reserve component from a strategic Reserve to an operational Reserve, we ensure it will be accessible, ready, and responsive. The Services have already rebalanced approximately 70,000 positions within or between the Active and Reserve components. We plan to rebalance an additional 55,000 military personnel by the

end of the decade and also continue converting selected military positions to civilian billets. This revised Total Force structure will provide us with greater combat capability and leverage the complementary strengths of our Active, Reserve, and civilian workforces.

IMPROVE THE QUALITY OF LIFE OF OUR SERVICEMEMBERS AND OUR FAMILIES

Taking care of our people is fundamental to the ethos of the American Armed Forces. Our men and women in uniform are our most precious resource. We must continue to ensure their welfare and that of the families who support them. The most advanced ship, aircraft, or weapon system is of limited value without motivated and well-trained people. Our experiences in Iraq and Afghanistan remind us that the Nation's security rests in the capable hands of the individual soldier, sailor, airman, and marine.

Quality of life, of course, transcends material considerations. Our young men and women join the armed services to patriotically and selflessly serve something larger than themselves. They serve with pride, and their families willingly bear the burden of sacrifice, because they believe they make a difference.

A clear indication that our personnel in uniform understand the importance of their service and appreciate the quality of life that we provide them is their decision to stay in our Armed Forces. Our retention levels are over 100 percent of Service goals. To underscore the point that our men and women serve because they know they are making a difference, units that have deployed multiple times to combat have seen the highest rates of retention. We are also seeing success in our recruiting.

We are grateful to the administration and to Congress for closing the pay gap between the private sector and the military, as well for vastly improving military housing and enabling our family members to enjoy a good standard of housing if they choose to live in the local community.

To our families, protecting our troops in combat is the most important measure of quality of life. Since April 2004, all Defense Department personnel in Iraq, both military and civilian, have been provided Interceptor Body Armor. However, as the threat has changed, we have continually improved body armor to ensure our troops have the latest and the best possible protection. Our latest improvements defeat armor piercing rounds and include shoulder armor and side plates.

In addition to body armor, armored vehicles are important to force protection. Thanks to your support we have had great success increasing production and fielding up-armored Humvees to protect our troops. Nearly all the approximately 40,000 tactical wheeled vehicles in the U.S. Central Command area of responsibility now have armor protection. We will continue to adapt as the threat evolves.

Improvised Explosive Devices illustrate the asymmetric challenges we will face in the future. The Joint Improvised Explosive Device Defeat Organization spearheads our effort to meet that threat. With the development and testing of technologies, tactics, techniques, and procedures we are learning to defeat the tactics of our adversaries and increasing the survivability of our servicemembers. Our transformational work with private industry to experiment with emerging technologies promises to break new ground in this vital endeavor. Thank you for helping us provide the best possible protective equipment for our troops.

Taking care of our troops and their families also means taking care of our wounded. During World War II, Korea, Vietnam, and Operation Desert Storm 24 to 30 percent of Americans injured in combat eventually died from their wounds. Today, due to tremendous improvements in our military medical system, nine of ten troops wounded in Iraq and Afghanistan survive. This dramatic improvement is the direct result of the hard work of our forward surgical teams and combat support hospitals, and the rapid evacuation of the seriously wounded to higher level care facilities in the United States. In Vietnam, it took 45 days on average to return wounded back to the United States. It now takes 4 days or less.

Our remarkable medical professionals return to duty over half of our wounded in less than 72 hours. Advances in medicine, technology, and rehabilitation techniques enable us to provide much better care for those more seriously wounded. We make every attempt to bring willing servicemembers back to duty—or return them to society empowered to continue to make a difference. Congressional funding for this effort is greatly appreciated. In particular, thank you for your support for our two new Advanced Amputee Training Centers—at Walter Reed Army Medical Center, here in our Nation's capital, and Brooke Army Medical Center at Fort Sam Houston, Texas.

CONCLUSION

I testify before you today with tremendous pride in the bravery, sacrifice, and performance of today's Armed Forces. Around the world, in every climate, and often far from home and family, America's men and women in uniform are making a difference. They do so willingly and unflinchingly—volunteers all. Their valor and heroism are awe inspiring and they serve this Nation superbly, as have so many who have gone before them. It is an honor to serve alongside them.

The past year saw the U.S. Armed Forces engaged in combat in Iraq and Afghanistan while we also provided humanitarian assistance to victims of the Asian tsunami, hurricanes along the U.S. Gulf Coast, and the earthquake in Pakistan. There are likely equal challenges and opportunities ahead for the U.S. Armed Forces in 2006. The imperatives to defend our homeland, defeat global terrorism, and transform for the future remain. With your continuing support, our military stands ready for the challenges and opportunities ahead.

Thank you for your unwavering support in time of war.

Chairman WARNER. Thank you, Mr. Chairman. My first question will be to the Secretary eventually on that very issue of the interagency cooperation that you have raised.

General Schoomaker, report on your Army, sir.

General SCHOOMAKER. Sir, good morning. I would be glad to. Good morning, Mr. Chairman, Senator Levin, and distinguished members of the committee. It is a pleasure to be with you today and I appreciate this opportunity to join Secretary Rumsfeld and General Pace, our Chairman, during their hearing to represent our Army, our soldiers, and our families who are serving so well today our Nation.

I would like to make a brief statement that covers really three things: where we were when all of this started on September 11, what we have been doing, and where we are going. Then I will be glad to get into any detail you would like during questioning, but with the reminder that next week I will be testifying with Secretary Harvey on the specific details of our Army and we will jointly issue a posture statement to the committee at that time for the record.

First of all, where we were. We went through a decade in the 1990s where the Army's portion of the peace dividend was about $100 billion in our investment accounts. Of course, we reduced our Army across the Active, Guard, and Reserve by a half a million soldiers. We started September 11 with a $56 billion shortfall in equipment across our Army, Active, Guard, and Reserve. That was $56 billion if you replaced it in kind; if you modernized it and replaced it, $68 billion roughly. Of course, these are our best estimates.

We also started with an Army that was largely structured for the Cold War we had just finished. Although it was a little smaller, it was still largely structured that way. What we found was that we had a significant amount of overstructure, which meant that we had more spaces, more jobs in the Army, than we had people or end strength to fill. This was particularly true in our Reserve components, who served as strategic Reserves during the Cold War.

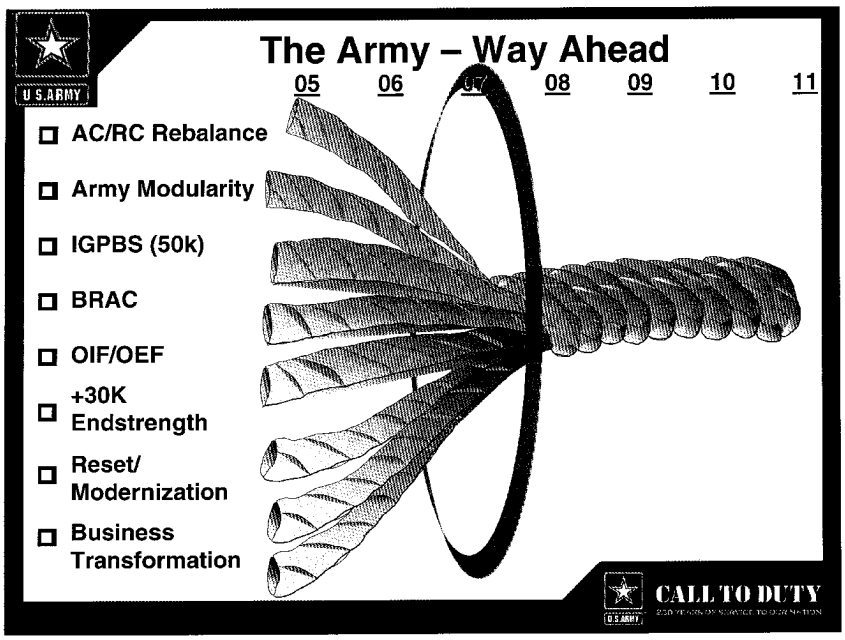
We had a considerable imbalance between our Active component and our Reserve component. We have testified many times and I know you have heard from both the Guard and Reserve leadership that the Guard and Reserve were equipped at a lesser level than was the Active Force. Part of the very good reason for that was the Active Force also had holes in it, it had some disparity in terms

of its modernization, and therefore the equipment that was cascaded to the Reserve components was not equal to what had been fielded to the Active Force. We had some challenges in readiness, in our training, and in our equipage for deployment in that force.

We then get into this global war on terror and what is now known as the long war. I agree that it will be a long war, and it will be a redefinition of the paradigm that we have lived with through certainly most of my career and I would say much of my father's career of 30 years. We are now in the business of, as an Army and, quite frankly, as a joint force, learning and adapting to the world which we are entering. The 21st century is going to be far more dangerous and far more complex than what we have experienced in the past, and it is going to require a whole different set of dance steps, so to speak, to be able to operate in a way that we will need to.

We must take advantage of the momentum that we are having during this long war as we get the resources from you that you have been so good in giving us to not only fight the long war as we reset ourselves, as we consume this equipment and set ourselves forward. We must use this momentum with an eye to the future, not an eye to the past. We must use these resources to set ourselves forward the way we want to be and not the way we were when we started.

So it is tremendously complex and there is a tremendous amount of responsibility on it, but that is what we are learning as we go forward. Where we are going is growing both capability and capacity across our force. I agree with General Pace. We are moving from a largely service-centric force to one that was interoperable, to one that then became joint in a sense of the classical term of "jointness," towards one now that is interdependent, where we can rely upon other aspects of the joint force to provide a synergistic effect on any one of the components.



I think, as you take a look at the way that we are currently fighting the global war on terror, that there are ample examples of how we are now working better and better together, leveraging each other's capabilities, passing them off to each other, and able to be much more agile than we have been in the past.

But, we have also found that we lack capacity in certain areas. Certainly one of the areas that we find ourselves stressed more than others is in the combat service support and transportation, military police (MPs), civil affairs, these kinds of capabilities that are important, not only for duties here at home in the domestic scene, but also in the away game as we do the things that we do in Iraq, Afghanistan, and elsewhere.

Additionally, we are attempting to accelerate our modernization because, quite frankly, without the Future Combat System (FCS) spinouts that we have and without pushing through the FCS, we will spend almost 4 decades without a new start in the United States Army on equipment, on modernization. This is something we cannot go into the future and allow to happen, and, of course, we are rebalancing across the Active, Guard, and Reserve.

While I make this last statement, if you could put that rope chart up very quickly.

[The chart referred to follows:]

While they are doing that, I will just make one other statement here. We are moving our Reserve components from Strategic Reserve to an Operational Reserve. This means that we must give more predictability to Reserve components. We must count on them in their readiness. They must be identical to the kind of capability and they must deliver with a great deal of readiness.

Now, I want to talk about this notion of a broken force. Up here on this rope chart I have is a picture of all of the things that we are doing during the period that is of most interest to us today, 2006 and the budget that has just been submitted for 2007. I think if you take a look at that you will see that Operation Iraqi Freedom and Operation Enduring Freedom (OEF) is the fifth bullet down. But, your Army is involved in all of these other activities that are major activities during this period. We are balancing the Active component and Reserve component.

This notion that we are cutting the National Guard and Reserves is false. We are maintaining the end strength of the National Guard and we are maintaining the end strength of the Reserves, but we are rebalancing them both, just like we are rebalancing the Army, to do things that are more useful, have a better capability for the kinds of things that we are moving toward.

As a matter of fact, you will notice that the Active component is building to 42 brigades instead of 43, like I said before. That 43rd brigade turned into special forces, five special forces battalions, a Ranger battalion's worth of companies, aviation battalion for special operations, and we are doubling the civil affairs companies that are in the Reserve component. So all of that is still within the Army end strength, but it is being rebalanced to things we need.

We are building a modular force, the second bullet down. That means we will be able to plug and play across the force, regardless of component, and that we do not have to scrape together across the country half-filled units or partially filled units to create a whole one, like we have had to do in the past.

The third bullet down, Integrated Global Presence and Basing System (IGPBS), that is our global posture that we are taking, moving units and capabilities from all over the world and reposturing in a way that is more relevant to the strategic agility that will be required for the 21st century and the kinds of requirements that we are going to have.

That is associated with the next one down, which is Base Realignment and Closure (BRAC). Major moves in BRAC for the Army. In fact, we are the preponderance of any of it of the BRAC process.

OEF, the 30,000 additional overstrength that you have authorized us and provided supplemental funding for; our reset and modernization I have talked to; and finally, the major business transformations that we are going through to move many spaces that were otherwise outside of the operational force of the Army and growing the actual operational strength of the Army inside the Army by 40,000.

So, when you talk about an Army having stresses on it, yes, we are busy. Yes, there is stress from being busy. But this is not a broken Army. I will just say it one more time. I have mentioned it to many people. Any of us that have been around the Armed Forces for the last 25, 30 years had experience in a force that I would call bordered on being broken, if it was not broken. Most of you might remember the Armed Forces post-Vietnam, where we had major problems in discipline, major problems in readiness, major problems across the board.

The United States Army is not broken. Neither is the Marine Corps, the Navy, nor the Air Force. I can speak for the Army. We are meeting our recruiting goals. We are at our eighth month in a row now that we have made those across the force, and we are reenlisting in record numbers. I just left the 3rd Infantry Division in Baghdad prior to their return over the holidays. The 3rd Infantry Division, on their second 1-year tour in Iraq, made 136 percent of their reenlistment goal. Talking to those soldiers, they are proud of what they have done and they are going to be with us.

I thank you for the opportunity to say these words today. I would be glad to get into more detail and we certainly will be prepared to go in extraordinary detail at our Army posture hearing. I look forward to answering any questions you may have.

Thanks very much for your support.

Chairman WARNER. Thank you very much, General.

We will now proceed to a round of questions, 6 minutes for each member.

Mr. Secretary, the QDR stated the following, and I quote it directly: "The Department of Defense cannot meet today's complex changes alone. Success requires unified statecraft, the ability of the U.S. Government to bring to bear all elements of national power."

That is a very profound and perceptive and I believe, regrettably, accurate statement. I say regrettably because it has been the judg-

ment of this Senator that the DOD has done its work through the heroic service of the men and women of the Armed Forces and continues to do it, but we are not getting, as the Chairman said, the collective capacities that was your quote, Mr. Chairman, of the other elements of our Government to bring to bear to conclude this conflict and perform the mission and bring our forces back.

In my own discussions with young people coming back from Iraq, they talk about we apprehend the lawbreakers, the insurgents, we turn them over to their law enforcement. There are no jails, there are no judges, there is no way to administer justice, and all too often they are back on the streets.

Jobs. Jobs is the root cause in all probability for this, I believe, exponential rise in criminal activity and the graft.

We have failed to bring together all the resources necessary, and it is not fully—by no means the responsibility of the military—to restore the oil industry. They are sitting on, what, the second largest reserve of oil in the world. Your former colleague, Deputy Secretary of Defense Paul Wolfowitz, said at one time that he felt that that industry would be able to begin to bear the brunt of the costs that the American taxpayers and others are bearing today. Oil production is slipping.

The producing of the necessary potable water, the health situation, it is just not matching the efforts of the military, and it is going to obscure the gains that have been made. We cannot allow that to happen, given the courageous and the loss of life and the casualties and the sacrifice by the families and the contributions of the American taxpayer.

I call on you at this point in time. This is your time to make your public judgment of it. Do you agree or disagree with my view that we are not pulling together all elements of our government with equal force as is the men and women of the Armed Forces?

Secretary RUMSFELD. Mr. Chairman, you and General Pace have of course elevated this issue, which is a critically important one, as you have said. You have to begin with the beginning, and the beginning is that we are still organized in the executive branch and in Congress with committees and subcommittees basically the way we were in the last century, with the exception of the new Department of Homeland Security (DHS) and a few other things.

There has not been a Goldwater-Nichols for the United States Government, just to put it simply. As a result, the working together is improving in my personal view every month and every year. On the other hand, the DOD has a culture of deployments. They are used to it. They sign up for it. That is part of the way they are. That is their expectation level. The other departments do not have a culture of being deployed and therefore, if the task is a military one, we can do that. If the task then becomes one of creating a justice system in a country or border patrols or customs, the things that are different, off line from the Defense Department's major responsibilities, the task is more difficult because we need to try to find people, whether our country or from other countries, who can help out.

Remember the Bonn process in Afghanistan put lead countries in charge, and it said that Germany would be in charge of the police and the U.K. would be in charge of narcotics and the U.S. would

be in charge of training the military, and the police would be the Germans, and the border patrol the Germans; somebody else, the Italians, civil justice. They were not able to deploy the kinds of numbers of people into Afghanistan to do those to the extent that the military can deploy people into Afghanistan to do their job.

Now, it is a big task. I would go to something Senator Levin said. On the other hand, other countries are not likely to nation-build a country. The people of Iraq and Afghanistan in the last analysis are going to be the ones who are going to build their country. What we need to do is to create an environment where they can do that and allow them to do that, encourage them to do that, assist them in doing that, but not do it for them. If you do it for people, you end up creating a dependency.

You mentioned the infrastructure. The infrastructure in Iraq is decrepit. It is fragile from decades of underinvestment. It is going to take decades for them to get the infrastructure back where a modern country would have it. Anyone who expects it can be done in 15 minutes or a year or 3 years or 5 years, I think just does not appreciate the extent to which the underinvestment has created the fragility of these systems.

It is going to take patience. In the last analysis the Iraqi people are going to have to rebuild that country and it is our job to do what we have been doing, to help create an environment where they can do that, to launch them on the path to democracy, to train up their forces so that they can provide security while the building process takes place in the years ahead by the Iraqi people.

Chairman WARNER. Mr. Secretary, the message that has been employed by this administration is that we can bring our forces home as soon as we train the Iraqi military and other infrastructure of security. However, you better add another component, and it is of equal weight, and that is we cannot really pull out unless those people can pull together that government in such a way and put into the ministries people with strong backbones, not subject to secular pulls, but will perform those missions in such a way that all of the rest of the components of a sovereign nation can come together with the confluence of the security forces.

I am sure that you quietly speak with our President on this issue and the Chief of Staff. We have to redouble our efforts in this area.

Now, just for a few seconds, you brought this up in your direct testimony, Chairman Pace. Do you have anything you wish to add to this discussion?

General PACE. Sir, thank you. We have a world-class Department of State and a world-class Department of Treasury, so I would not want my comments to be in any way considered disparaging to them. They are great Americans, doing a great job.

Our system simply at this point in time, just like our system for the military 20 years ago, is not designed to encourage or reward tours of duty between various departments of our government or to reward joint, interagency education, or to facilitate and reward those who would want to volunteer or be assigned on deployments. We have an opportunity to increase our efficiency as a government by seeking ways to do that.

Chairman WARNER. General, those are nice words, but we have been at this thing over 2 years now. I am not trying to put people

on report for past actions. I am looking towards the future. We have to have a redirection of a full emphasis on this, equal to what we are doing militarily in the retraining program of the security forces.

Senator Levin.

Senator LEVIN. First, let me fully agree with what the chairman has said. It is absolutely essential that there be a national government created in Iraq. We know they are working on trying to put together such a government now. It is essential those ministries reflect the nation and not sectarian groups. We have our work cut out for us. More importantly, more accurately, they have their work cut out for us.

But, we have to put the pressure on them to achieve these goals. We have the right to do so. We have made the sacrifices which give us that right. Even though they are the only ones who can make the decisions, we have to keep the pressure on them to make those decisions to make their government a truly national one, reflective of the nation and not just a bunch of different sectarian groups.

Mr. Secretary, you said relative to my comments that they need to amend their constitution in order to share power more equitably and to share their resources more equitably and to bring in all the major factions, including the Sunni Arabs, that, well, it took us a long time to end slavery and to provide for women's rights. I think that sends the wrong message to them. It took us much too long to do those things. They do not have that time.

The analogy that you have utilized just simply is off the mark. It is not a useful analogy for a number of reasons. First of all, when our Constitution was formed each of the States signed onto the Constitution with its imperfections. In Iraq, one major group has not signed onto this constitution and a number of provinces where that group is in the majority have not signed onto the constitution. So it is going to take amendments to the constitution in order to bring all the factions onboard. The constitution itself provides for a 4-month period for changes to be recommended to the constitution. I think the analogy is wrong historically since all of our States signed onto that Constitution, a situation which does not exist in Iraq today.

Second, the failures and internal contradictions of our Constitution led to a Civil War and 600,000 casualties and generations of bitterness. We should be using our hard-found wisdom in that regard to impress upon the Iraqis that they might avoid a similar civil war and a similar fate if they will make those compromises now rather than later or think they can make them later.

Your analogy is off the mark for a third reason. It takes the Iraqis off the hook and I think that is a fundamental mistake. Our commanders, our military leaders in the field, have repeatedly told us that there will not be a military success over the insurgency without a political coming together of the major Iraqi groups. General Casey specifically said that the constitution turned out in the eyes of one of those major groups not to be a national document and that the Sunni Arab vote against the constitution could actually lead to a worsening political situation rather than a better one.

My first question is: Do you agree with our uniformed leaders that there will not be a military success over the insurgency without a political coming together of the major Iraqi groups?

Secretary RUMSFELD. There is no question about it. I would add, however, that the reality is the Iraqi people overall did vote for the constitution. You are quite right, the Sunnis voted in large measure against it. But there is an agreement, an understanding, as I am aware, that there will be discussions and some sort of an entity appointed to consider amendments to the constitution. Everyone agrees that is a good thing. Everyone agrees it is critical that the Sunnis come onboard. Nothing I said was inconsistent with that.

Senator LEVIN. There was an amendment which was adopted in the Senate with bipartisan support. Seventy-nine U.S. Senators said the following: "The administration should tell the leaders of all groups and political parties in Iraq" key words there, "should tell the leaders of all groups and political parties in Iraq that they need to make the compromises necessary to achieve the broad-based and sustainable political settlement that is essential for defeating the insurgency in Iraq within the schedule they set for themselves."

Secretary RUMSFELD. Everyone agrees with that.

Senator LEVIN. Has the administration told the leaders? Not said simply, you have an opportunity, which is so far all the administration has said, which is obvious. They have an opportunity to do that. The question is will the administration tell the leaders in Iraq of all the factions that it is essential that they make the compromises necessary in order to achieve that broad-based sustainable political settlement? Will you say that to them?

Secretary RUMSFELD. It has been said to them.

Senator LEVIN. By whom?

Secretary RUMSFELD. Oh, I am sure by the ambassador and by General Casey, and certainly by me when I visited with these people.

Senator LEVIN. That is good news.

Secretary RUMSFELD. Everyone agrees that it will require acceptance on the part of the elements in that country for the country to succeed, for the security situation to improve. We all agree with that. The way you get acceptance is having a national compact, an understanding on the part of all the participants, that they have a voice and a stake in the success of that activity. That means you simply have to reach out and see that the Sunnis are included in a way that is reasonable to everybody, including them.

Senator LEVIN. Mr. Secretary, I have tried now for 6 months, and my colleagues probably get tired of hearing me say this, but I am glad to hear you say that. I hope the President says publicly to the factions in Iraq that it is essential they make constitutional compromises to share power and share resources, so that the Sunnis come on board. That is the only way to bring a nation about and it is the only way to defeat the insurgency.

We cannot write those provisions for them, but we can tell them it is essential that they write them. I am glad to hear you say today that you have told them that it is essential that they make those constitutional changes, that our ambassador has told them that. I would love to hear the President say that rather than much more qualified, cautious words like they have an opportunity to do

that. There is a big difference between the two. One carries hopefully a message that that constitution is flawed, it will not do the job, it will not help bring them together to defeat the insurgency. The other one is a message of, hey, we are with you regardless of what you do, we are there for an unlimited period of time. That it seems to me is a flawed message and not one that is likely to produce those changes in the constitution, those compromises that need to be made.

We are talking about power sharing, resource sharing here, and those are difficult compromises. The only hope we have of defeating that insurgency is if they will put their house in order politically. I am glad to hear you say that you have carried that message to them because it is the most important single message that can be delivered to them.

Chairman WARNER. Thank you, Senator Levin.

Senator McCain.

Senator MCCAIN. Thank you very much, Mr. Chairman.

I thank the witnesses for being here today. I agree, General Schoomaker, that this is the best Army in history. I also think it is important to note that members of this committee do not operate in a vacuum. We talk to a lot of people in the military, retired as well as others, and most of them tell us that the Army and Guard are under great strain because of these continued commitments. Many of us have felt that a larger Army and a larger Marine Corps would have relieved some of these strains.

On Iraq, it is a three-legged stool here. One is the military equation, which I believe we are making significant progress. There are many areas of Iraq which are very secure and progress is being made.

The other obviously is the political leg of the stool, which I met with a number of Iraqi leaders a couple of weeks ago and they are optimistic about reaching an agreement which will include the Sunni as part of the government, and that is very encouraging news, although it is going to be extremely difficult. Great credit goes to our ambassador in Iraq, who is doing an outstanding job.

The third leg, the news is not so good. Mr. Secretary, you said it would take a long time to restore their economy. I agree. Your former deputy testified before this committee that Iraqi oil revenues would pay for the war. Unfortunately, oil revenues now are less than what they were before we invaded Iraq. If that is not fixed, if that is not fixed, we are in significant difficulty, and we all recognize that is a matter of security.

Mr. Secretary, the issue I want to raise with you is part of a larger debate that is taking place here in the Senate and in Congress, and that is the issue of trying to restore the authority and responsibility of the authorizing committees. A lot of the attention is on earmarks. A lot of the attention is on emergency supplementals.

As I count it, this year you will be submitting your seventh emergency supplemental of some $50 billion, we are told, coming to a total of some $400 billion in the last 5 years to 4 years that are emergency supplementals.

I do not know how you call it an emergency any more when we know that we are going to have costs for a number of years associ-

ated with the Iraq war. So what it effectively is, is an end run around the authorization process, going directly to the appropriations committees. For example, in last year's emergency request I counted $5 billion in unauthorized earmarks.

It has to stop. Your requests have to be included in the normal budget process, in the normal authorization and appropriations process, because we all know and can estimate that the war in Iraq and Afghanistan is going to cost a certain amount of money. So to continuously come up here with an emergency, which we all fully anticipate, although maybe not the exact numbers, and not go through the authorizing process, is something that has become unacceptable and it has to stop.

Now, Mr. Secretary, are you going to continue to do business by coming up here with emergency supplementals which thoroughly bypass the entire authorizing process, which is supposed to be the way the Congress of the United States operates?

Secretary RUMSFELD. Senator, this is an issue that the senior leadership of Congress works out with the President and the Office of Management and Budget (OMB). From my standpoint, I could do it either way. Indeed, we tried to do it by estimating what the Afghanistan war costs would be and proposed an amount of money and gave a theory as to how it might be reasonably appropriate. The Senate and the House rejected that several years back and asked us to fund the war in supplementals.

From my standpoint the criticism was a fair one. The criticism was that the theory we propounded for funding the Afghan war aftermath was not solid fact, and of course it was not. It was what we expected or what we guessed or what we thought and what we could speculate. People said: Do not do that; come in when you have information and ask for a supplemental.

Now, I understand the problem for the authorizing committee. There is no question but that once it goes into a supplemental it goes straight. Maybe there is a way to change the rules of Congress so that the authorizing committee gets a look at a supplemental as well as a basic budget. I do not know what the answer is. We could do it either way.

Senator MCCAIN. If we could start out with the administration making a budget request that includes funding fully anticipated for conduct of the war on Iraq, then that would be a good beginning and would give us some added influence in this battle, and it is going to be a big battle, with the process that now has become corrupted here in Congress.

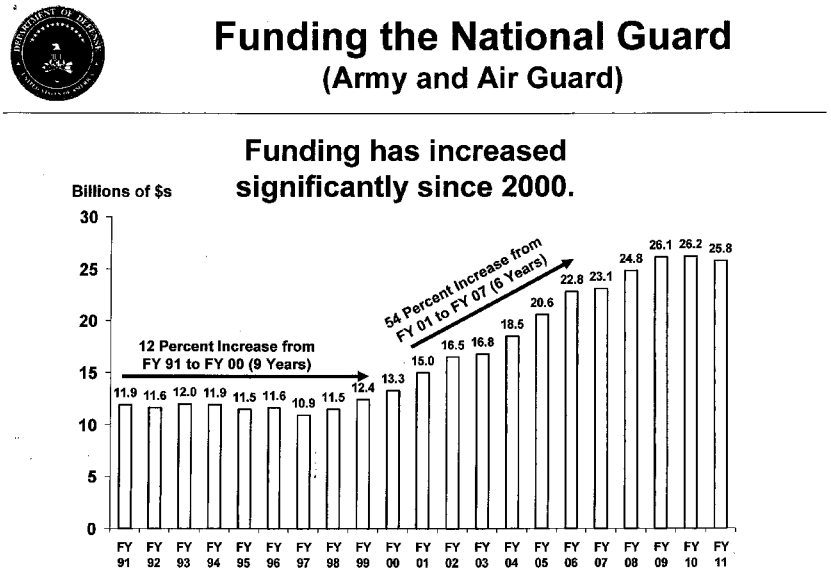
General Pace, I am hearing from a lot of people in the Guard that they do not like this plan for the reorganization of the Guard. Have you talked to the adjutants general (TAGs) in the various States about this issue? Or should I be directing that question at Secretary Rumsfeld?

General PACE. Sir, happy to take a shot at it. I have personally talked to the leaders who are from the Guard and Reserve who are part of my staff and through them have gotten information from the TAGs. I have not met personally with the TAGs. I know that the Army yesterday, for example, had a conference call on which they had all 50 States on the phone call. I am told by General Cody it lasted about 2 hours. I know there was a conference about a

week or so ago where the TAGs were all in town and the Army met with them and they talked in great detail.

What I do know is that the plan that the Army has to be able to provide 28 fully manned, fully trained, fully equipped brigade combat teams in the National Guard is a huge improvement over where we were several years ago, when we had 15 of what we called enhanced brigades, but even their equipment was not up to the standards that it needs to be. The total number of brigades that the Guard has today and will retain stays at 106 and the total number of brigades that are fully manned, trained, and equipped in the combat role will be 28. That will allow us then to have a very solid base of fully trained, manned, and equipped folks.

Senator MCCAIN. I strongly suggest, Mr. Secretary, close consultation with TAGs. We are getting initial negative feedback, and obviously it is important to have these very trusted individuals onboard in any reorganization plan.



I thank the witnesses.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator McCain. I concur in your observation.

Secretary RUMSFELD. Thank you, Senator. There is a chart that you might want to put up if you have it here, the National Guard funding.

[The chart referred to follows:]

I agree with you completely. We have to stay in close touch with them. This is the funding. Pete, you may want to describe it.

General SCHOOMAKER. Sure, if I could. In fact, if I could help answer part of your question. The answer is that we met with all of

the TAGs last week, and there were some objections to some of the plans that we had, and we listened to those objections and we are making adjustments and working with them on it.

Yesterday the Vice Chief of Staff of the Army, as General Pace said, was on a meeting with the chiefs of staff of the governors where we worked through the whole thing. We are working very carefully, and their concerns are really local concerns about the impact at the local level, at the armory level. We are working with them to make it as neutral as possible as we do this transformation and rebalancing of the Guard. I believe we will get there and I think that we are starting to get some very good traction.

If you look at the chart that Secretary Rumsfeld asked to put up, it will give you some idea of the increase in funding for the National Guard to meet some of the traditional complaints they have had. In fact, the Army Guard is being funded across this next POM at about four times the rate that it was in 1999.

Senator MCCAIN. General Schoomaker, in all due respect, we have 40 percent of the Guard over in Iraq. I mean, 40 percent of our forces are in Iraq, deployed and working there. Of course the funding has to go up. In 1999 none of them were deployed anywhere, in all due respect.

General SCHOOMAKER. This is not supplemental funding. This is funding inside of our program.

Senator MCCAIN. That has nothing to do with their deployments overseas?

General SCHOOMAKER. It has to do with making them whole and rebalancing them, providing them equipment that is equivalent to the equipment in the Active Force, and to doing exactly what I said.

Senator MCCAIN. Replace the equipment that they are wearing out in deployments?

General SCHOOMAKER. Some of that is happening with supplemental funding, but I am talking about fundamental investment in making them whole. We are moving their helicopter fielding, modern helicopter fielding, 5 years to the left in this program, which is a huge investment that is historic.

So we are listening, and we are very proud of what the Guard and Reserve has done and contributed to our whole Army, because we are working as one Army.

Senator MCCAIN. So are we.

General SCHOOMAKER. Yes, sir, I know you are. It is through your help that we are able to do this. So we are getting past communicating past each other. We are listening and we are talking to everybody we can talk to, to get this right.

Senator MCCAIN. Thank you very much, General.

Thank you.

Chairman WARNER. Thank you, Senator McCain.

This committee will very assuredly listen to the Guard and Reserve representatives in the course of our review of this budget.

Senator Byrd.

Senator BYRD. Thank you, Mr. Chairman.

Mr. Secretary, the President's 2007 budget request for defense is $439.3 billion. That is $439 for every minute since Jesus Christ was born. This does not include $50 billion for an emergency bridge

fund tacked onto the budget for the Iraq war for next year or an estimated $70 billion in supplemental funding that the President intends to request for the wars in Iraq and Afghanistan. When these costs are included, the defense budget balloons to nearly $560 billion, well over half a trillion dollars.

This is a mind-boggling sum of money for defense. The American taxpayers deserve to know whether this is in fact money well spent. I stand second to none in my support of and in my gratitude to America's military forces. Our soldiers, sailors, marines, and airmen are the finest in the world. All Americans owe them a debt of gratitude for their service to our country.

But, we owe them something more. We owe them a forward-looking defense policy that includes a definitive strategy for transitioning U.S. troops out of Iraq sooner rather than later. We owe them not only megamillion dollar missiles and tanks and airplanes, but also basic body armor and detection devices to protect them from the deadly nickel-and-dime IEDs of the Iraqi insurgency. We owe them a military health care system and a veterans benefits program that serves them as well as they have served the Nation.

Amid all the buzzwords, like "the long war," "military transformation," and "capabilities-based planning," this budget falls short of the mark of making the needed investments in the people who serve in our Armed Forces. We here in Washington can never afford to lose sight of the fact that our military is made up of people.

General Schoomaker, let me shift to the center of the world. This morning's Charleston, West Virginia, Gazette has a story about a soldier who was wounded in Iraq and medically discharged from the Army. According to this report, upon his separation the Army presented him with a bill for $700 for the body armor that was destroyed when he was wounded. Lieutenant William Rebrook gathered up the money from his friends and paid the bill.

General Schoomaker, how can it be that the Army is charging wounded soldiers for replacing damaged body armor? Rebrook, of course, scrounged up the cash from his Army buddies and returned home to Charleston last Friday. Let us hear what he has to say: "I last saw the body armor when it was pulled off my bleeding body while I was being evacuated in a helicopter," Rebrook said. "They took it off me and burned it."

But no one documented that he lost his kevlar body armor during battle, he said. No one wrote down that the armor had apparently been incinerated as a biohazard.

General Pace, Mr. Secretary, or General Schoomaker, how can it be that the Army is charging wounded soldiers for replacing damaged body armor? Is this standard practice?

General SCHOOMAKER. That is a very unusual story. I do not deny that it is not in the newspaper, but we will be glad to follow up. I have no idea why we would ever do something like that. We have issued over 700,000 sets of body armor, the very best that exists in the world. Every soldier has it. We certainly have procedures that account for battle loss, and I just find it a highly unusual story. But, we will certainly follow up and correct it if there is any truth to it.

Senator BYRD. Will you also supply this committee with the answers to my questions?

General SCHOOMAKER. Yes, sir, I would be glad to.

[The information referred to follows:]

UNITED STATES ARMY
THE CHIEF OF STAFF
FEB 0 9 2006

The Honorable Robert C. Byrd
United States Senate
Washington, DC 20510-4801

Dear Senator Byrd:

This replies to your question during testimony on February 7, 2006, on behalf of Lieutenant William E. Rebrook IV, concerning reimbursement for missing equipment. The Army will reimburse Lieutenant Rebrook the appropriate amount for his government issued equipment due to combat loss once the investigation is complete.

I understand from 1st Cavalry Division officials that, when Lieutenant Rebrook departed Fort Hood and the Army, he decided to pay for approximately twenty items of equipment that were unaccounted for, including his Outer Tactical Vest which had been destroyed when he was injured in Iraq. Lieutenant Rebrook decided to pay for all the missing items instead of initiating the paperwork that would have relieved him from accountability of the Outer Tactical Vest and possibly several other items that were properly documented as combat losses.

The 1st Cavalry Division has been in contact with Lieutenant Rebrook regarding this matter and has made the resolution of it a high priority. The unit is continuing to process a Financial Liability Investigation of Property Loss to properly account for the discrepancies. We expect that this investigation will relieve Lieutenant Rebrook of the financial responsibility for the equipment he paid for that was damaged or destroyed in combat. The command will complete its portion of the Financial Liability Investigation of Property Loss by the end of this week. Lieutenant Rebrook will then have the opportunity to respond to any findings of financial responsibility for any of the other missing items.

Please be assured that this issue has my attention and is being monitored closely by the command leadership. We will let you know when this matter has been resolved.

Sincerely,

Peter J. Schoomaker
General, United States Army

Senator BYRD. Will you supply me with the answers to my questions? That will not be hard to do. Would you do that?

General SCHOOMAKER. Provide the committee with the answers to your questions?

Senator BYRD. Sir?

General SCHOOMAKER. I am sorry, I am not understanding you. Provide the committee with the answers to your questions?

Senator BYRD. Provide the committee with the answers, and also come and see me and let me know what the answers are, too.

General SCHOOMAKER. Absolutely, be glad to, sir.

Senator BYRD. I do not sound like I have my mouth full of turnips now, do I?

General SCHOOMAKER. No, sir. It is my problem. I have Army-provided hearing aids. They are supposedly the best in the world.

Senator BYRD. I do not use hearing aids.

How can it be that the Defense Department—she says my time has expired?

Chairman WARNER. You can complete your question.

Senator BYRD. I thank the Chairman.

How can it be that the Defense Department, which is requesting $439 billion in this budget, has to resort to dunning a wounded soldier for $700 to replace a piece of body armor? General Schoomaker, will you look into Lieutenant Rebrook's case to see what can be done about this?

General SCHOOMAKER. Sir, absolutely.

Senator BYRD. Will you supply this committee with the answers?

General SCHOOMAKER. I will.

Senator BYRD. Will you supply me with the answers?

General SCHOOMAKER. I will.

Senator BYRD. Bless your heart. Thank you. Thank you.

Mr. Chairman, my time is up.

Chairman WARNER. Thank you, Senator Byrd. Those responses should be in writing, because all members of the committee will want to have personal knowledge of that response.

Senator Inhofe.

Senator INHOFE. General Schoomaker, do you know of any policy whereby damaged body armor from combat is charged to the individual?

General SCHOOMAKER. Sir, I know of my policy, other than if, obviously, a soldier abuses equipment or loses or damages it as a result of negligence, obviously we have policies to recoup that. But, this does not sound like such a case.

Senator INHOFE. Yes, I understand that. Let me get on with the questions here.

First of all, I am going to resurrect a question I have not asked in a long time because I saw a statement that was made in the QDR concerning media. This morning at the breakfast, General Schoomaker, you made a comment about the opening of that health center in Iraq, where all the media was involved, 40-some members of the Iraqi media showed up, not one showed up from the United States, from the American media over there.

I know that is true because I have been over there. I made my tenth trip to the area of responsibility (AOR) and every time I come back it is with more stories, great heroic stories that I hear from these guys, and of great accomplishments that we are making. They talk about in the Sunni Triangle. You mentioned this morn-

ing, General Schoomaker, that the eastern half of Baghdad is now secured by the Iraqis, not by the Americans. What you did not mention is that the general in charge of that is General Madhi, who was, General Pace, the brigade commander in Fallujah for Saddam Hussein, who hated Americans. I was over there when they started the embedded training with the marines, and he learned to love the Americans so much that he told me that when they rotated the marines out he cried. In fact, he renamed the Fallujah Iraqi security forces the "Fallujah Marines." Now that same general is over there in the eastern half of Baghdad. We do not have any of our boots in the eastern half of Baghdad providing security.

These great success stories like that just seem to go unnoticed. I was glad when General Jordisada actually came to my office in Tulsa during the break and gave me all the details, which are now coming out public, and he has now shared those with General Maples and with the Intelligence Committees of both the House and the Senate, that in fact the WMDs, which I consider to be the phoniest issue in the characterization of this war, they were there, we knew they were there. He also has information now as to where they were transported in Syria and even the names of the pilots and some of the telephone numbers. So that, thank God, is going to be a dead issue.

What we should be concentrating on is the real reason. Here we had a guy with a bloody regime, torturing thousands and thousands of people. We had terrorist training camps in Salman Pak, Ramadi, Samarrah, and other places that are now out of business. So that is the real issue over there.

Now, we have talked about the various troops and some of the things that they said, like Lieutenant Colonel Tim Ryan, who made the statement—it is a lengthy statement that I read before in these hearings. The last sentence is: "Many members of the media covering the war in Iraq are aiding and abetting the enemy." Having been over there and watched this, I believe that is the case.

Now, it seems to me that we are winning the war and losing the Public Relations (PR) war. The QDR accurately states that we need to effectively communicate U.S. actions. Now, I would ask you, Secretary Rumsfeld, is there anything specific that we are doing to try to communicate the truth back here?

Secretary RUMSFELD. The DOD has public affairs activities where they try to explain and discuss and elaborate on what the DOD is doing in every respect. In terms of trying to communicate back to the United States from Iraq, we have battlefield commanders who at least once a week are there discussing what is going on.

One of the most effective things is what you point out, is the 138,000 men and women over there in uniform who are emailing back and telling the truth about what they see. That is a powerful force in this country.

Senator INHOFE. That too, and Fuzzy Webster bringing back the 3rd I.D. after two tours over there and a 133 to 136 percent retention. These are success stories.

Let me get into another thing real quick because our time is so limited here. The Senator from West Virginia talked a lot about the

exorbitant amount of money that is being appropriated for our Nation's defense. You might remember, Mr. Secretary, years ago in your first appearance before this committee I asked you the question, in terms of a percentage of the gross domestic product (GDP) that is spent on defense, where do you think it should be. At that time, it was after the drawdown of the 1990s. It got down to 2.9 percent.

Your response to me was—and I am going from memory now, and I do not know how your memory has served you so well, because you came right up with it—that in the last 100 years it has averaged 5.7 percent of GDP for a 100-year period, and that was averaging war times and peace times. You said something to the effect somewhere around 5 percent.

Last year when we talked about it, you said maybe 4.5 to 6 percent. Is that still a general range where you think some day we may be and we should be?

Secretary RUMSFELD. Certainly if you think about it, when I came to Washington in 1957 and served in the 1960s in Congress in the Kennedy and Eisenhower period, it was 10 percent of GDP. When I was Secretary of Defense 30 years ago, it was about 5 percent. Today it is about 3.6 or 3.7 percent. So, it is not a large fraction of the GDP, and certainly this country is perfectly capable of spending whatever it is we need to provide for the security of the American people.

We also have an obligation to see that we spend the money efficiently and effectively, and we are trying very hard to get more bang for the buck.

Senator INHOFE. Thank you, Mr. Secretary. I could not agree more with you. Going through the 1990s, if you take just a static line and apply inflation to it, we actually went down by $412 billion, if you take the amount that the President had requested. Since the Bush administration went in, it has been above that line by $334 billion, plus that amount which is in the supplementals, but still not getting anywhere near. We are right now at 3.8 percent.

I just hope that we would be able to relook at this and say, what are we really supposed to be doing up here in terms of defending America? That is the number one thing we are supposed to do.

I would ask you, General Schoomaker, and you, General Pace, that in the event that we went back up to, let us say, 4.5 percent, that would be an additional $80 billion, what do you two think we should do with that if that were the case? My time expired a while ago. Thank you.

Chairman WARNER. Thank you very much, Senator.

Senator INHOFE. That is for the record.

[The information referred to follows:]

General SCHOOMAKER. The Army will use all available resources to meet its title 10 responsibilities to support four overarching, interrelated strategies:

a. Provide relevant and ready land power for the 21st century security environment;

b. Train and equip soldiers to serve as warriors and growing adaptive leaders;

c. Sustain an All-Volunteer Force composed of highly competent soldiers that are provided an equally high quality of life; and

d. Provide infrastructure and support to enable the force to fulfill its strategic roles and missions.

General PACE. A topline increase of any amount would provide additional funds no resource joint warfighting capabilities necessary to win the global war on terrorism, accelerate transformation of our legacy systems, and improve the quality of life of our servicemembers and their families. Of particular consideration, due to the extensive use our weapons systems and vehicles have experienced in Iraq and Afghanistan, additional funding would accelerate the repair and refit of our equipment to ensure that our forces remain combat-ready.

Chairman WARNER. Senator Lieberman.

Senator LIEBERMAN. Thanks, Mr. Chairman.

Mr. Secretary and Generals, thanks very much for your testimony. General Schoomaker, I do want to say first that I looked at that National Guard chart and I asked Senator Reed if he could read all the small print. He said to me that if I could you would immediately take me into the Special Operations Forces. I cannot, but I got the basic point.

I want to make three points quickly before I ask a question. The first, I cannot resist getting into the constitutional debate, the Iraqi constitutional debate. While it is not a perfect document, it is a remarkable accomplishment when one considers the context: three major groups in Iraq, one group, the Sunnis, dominant for decades, dominant not only in terms of their own status, but suppressing, brutally suppressing, the other two groups.

We, the coalition forces, overthrow Saddam and they enter into a constitution-writing process, which ends up with a product which is really ultimately much more unifying than divisive. In the context of that particular part of the world, an extraordinary, in fact historic, document.

It isn't perfect, and the Sunnis are particularly unhappy because they think there ought to be more power at the center, there ought not to be as much federalism, power to the provinces, as there is. Also, they are troubled by the allocation of resources or revenue from oil. Two legitimate concerns. But, now there is a promise that they will negotiate on it, all three parties will.

I agree with Senator Levin and everybody else, the involvement of the Sunnis is critical to the success of the military operation, because history tells us that insurgencies, terrorist insurgencies, do not go on if there is not popular support, and the Sunni insurgency will inevitably be weakened as the Sunnis come more into government.

I am heartened also by the fact that, as Senator McCain said, the Kurds and the Shias have agreed that the Sunnis will play a significant, at least proportionate, role in the new government, that is proportionate to the 20 percent vote that they got. So, there is work to be done. I do think that the constitution, considering the history there, is a remarkable step forward.

Second, on the discussion that you started out, General Pace, very important—Senator Warner took you up on it—about the nonmilitary aspects of our involvement there and that they will ultimately determine how we do as much as our military success because, Lord knows, we know that the enemy can inflict damage, but they never can beat us. We are making real significant progress training the ISF.

In this regard, I must say, though it does not relate to the three of you, that I was very troubled by the suggestions from the administration that there would not be increases recommended in reconstruction funding for the Iraqi economy. Look, you can cut and run economically as well as you can militarily. There is so much on the line for our investment in the economy, as the chairman has said, our investment in the capability of their ministries—yes, our allies in the Arab world and throughout ought to be giving more money. The fact is, we took a lot of the money we appropriated from this Congress for reconstruction and put it into security, understandably. A lot of it, unfortunately, according to the special inspector general, was stolen.

We cannot stop funding that non-military part of our involvement. We need more of it and I hope the supplemental will include it.

Third, the DOD budget has gone up, and the newspapers and the media overnight and today highlight that as the most significant increase in the Bush administration recommendation. We are at war and it would be bizarre and irresponsible if it did not go up. It is a hot war. People are dying, people are trying to kill us, not only our soldiers in the field, but us right here at home.

My gripe is not about the increase in the military budget. I worry that some parts of the budget we are actually not funding enough in the DOD. But also, because we have not asked the American taxpayers, particularly those of higher income, to do a little more, to pay a little more to support the country that allows them to earn the money they do in time of war, we are forcing the Department, both in the budget and in the QDR, to make resource-constrained, budget-constrained decisions. Incidentally, in the budget the President has given us, very badly underfunding a host of non-military parts of our budget: Medicare, education, et cetera, et cetera. That is an argument for another time and day.

But, that is my preface to ask this question. The budget you have put before us makes some significant and very positive increases in our preparations for what might be called irregular or nontraditional war—the increases in funding for special operations, for unmanned surveillance planes, et cetera. Combining that with the basic status quo increases in the weapons systems that we are funding, you are asking us to fund, that are more conventional and traditional, it seems to me puts us in an untenable position over the years ahead.

I hear this from a lot of people who analyze the budget, that unless we either increase defense spending dramatically in the next 5 years or we cut some programs, we are not going to be able to afford the budget that you put before us. I want to ask you to respond, if you would, to that question.

Secretary RUMSFELD. Every year the budget looks out 4 or 5, 6 years, and every year the adjustments are made as to what those years would look like. This is true, obviously, in business, just as it is with respect to a government budget, because the world changes, things happen, programs that are in a forward year defense plan do not work out and they stop because the technology is not there or something. Things that were not in there at all come on the scene and are injected into it. Predator unmanned aircraft,

for example, was still experimental. Now we have a sizable amount of money in there for Predator aircraft.

So, there is always going to be changes. It is hard to predict as to what will happen, but I personally have for years been aware that there has always been a bow wave, as they describe that big bite that it looks like is coming at us. Every bow wave has always been manageable. Everyone has always been able to deal with it.

Furthermore, we are undertaking a series of efficiencies in the Department that are giving us added capability. The number of ships in the Navy has gone down. We have almost doubled the number of days that ships are deployed, with the lower number of ships. I looked at a chart the other day from Buz Moseley, General Moseley, the Chief of Staff of the Air Force, and it showed the number of wings coming down and it showed the number of targets that are able to be tackled in a given day going up dramatically. The lethality and the ability to put power on a target in the Army, the Navy, the Air Force, and the Marine Corps today is vastly different from before.

We are shifting our weight over into the combat military as opposed to the institutional military. We are moving military people out of civilian jobs into military jobs, where they belong. There is a great many things happening, a lot of moving parts. But, the capabilities of the four Services, I think, are significantly increasing.

Senator LIEBERMAN. My time is up, but I would just say I hear you, and I remain concerned that we are not going to be able to fund the increases that you have quite correctly asked for to support our ability to face the irregular, nontraditional enemy we have and still support the conventional systems that we need. We have really got to have some enormous increases in our procurement effectiveness or we have to spend more money for defense to be able to afford all that you are asking for and I believe we need. In fact, I think we are underfunding the number of ships in the Navy and there is not enough money for long-range strike for the Air Force, and I am one of those who believes that we actually do need more people in the Army. I believe that we are only reducing the number for budget reasons and in the normal course if you had enough money you would keep the numbers higher because of the tremendous stress on the force.

I thank you for the answer.

Thank you, Mr. Chairman.

Secretary RUMSFELD. Senator, a powerful example. If you have 12 carrier battle groups and 6 years ago you were able to have 3 deployed and the ability to surge 2 out of 12, the rest are in drydock, the rest are refitting, the rest the crews are in training, the rest they are steaming back and forth going to or from the AOR. Today, with 11 carrier battle groups functional, we have 6 deployed and a surge of one. That is because of sea swaps: flying people out to their ships and not having to steam them back and forth.

It is because of keeping repairs and maintenance and the ability to get them moving faster. It is an expensive, a carrier battle group is an enormously expensive thing. Yet, to only have 3 plus 2 surge when you have 12 of them is not an efficient use of them. God bless Gordon England and Vern Clark, Admiral Clark as CNO, and Mike Mullen, the new CNO. They are now, I believe it is correct to say,

at six deployed and a surge capability of one, which is impressive and vastly more capable for our country, and not at an increased cost.

Senator LIEBERMAN. I thank you. Look, this is an important discussion, critical to our military future, and I look forward to continuing it with the Service Chiefs and the Secretaries as they come before us.

Thanks very much, Mr. Chairman.

Chairman WARNER. Thank you very much, Senator Lieberman.

Senator Collins.

Senator COLLINS. Thank you, Mr. Chairman.

General Schoomaker, I remain so concerned about the strain on the National Guard, and I know that you recently met with the TAGs to discuss deployment of troops. But, I want to follow up on the conversation that you had with Senator McCain. I want to use my home State of Maine as an example.

Of the 2,000 members of Maine's Army National Guard, more than 1,600 have been deployed to either Afghanistan or Iraq. Of the approximately 400 troops remaining, more than 100 were identified just this past weekend for mobilization and the official alert order is expected within the month. That leaves fewer than 300 Maine Army National Guard soldiers remaining who are available for active duty service without violating the policy that restricts the total aggregate time a Guard member may be placed on active duty involuntarily to 24 months.

Maine's adjutant general has recently said to the press that Maine is going to be out of the fight in another year; we are simply not going to have any more soldiers that are available.

Now, during the past few years, as many as 40 percent of all the forces in Iraq were members of the Guard and Reserve. Today the number, I am told by the Army Liaison Office, is about 30 percent. But, it is still a significant component of our forces in Iraq.

If the experience of the Maine Army National Guard is typical, it appears that we are quickly approaching a wall where we will run out of Guard members with time left on their mobilization clocks.

Now, of course all of us hope that conditions will improve in Iraq and we will be able to draw down our forces. If the conditions do not improve, the heavy reliance on the Guard and Reserve is cause for concern. How do you intend to ensure that there are a sufficient number of troops available without further stressing the Guard and seeking a change in the 24-month rule.

General SCHOOMAKER. There is a lot to that question. Let me see if I can hit a couple. First of all, I am not sure that is a typical description across the force, but I will certainly look at it, at Maine, and find out exactly what the numbers are and what you are talking about.

Second, I would say that one of the reasons we surged National Guard presence over the last year, year and a half, was to provide time for us to restructure and modularize the Active Force. In other words, we deployed 10 National Guard brigades into Iraq over the last 18 months, buying time for us to modularize 101st Airborne Division and their four brigades, the 3rd Infantry Division, the 4th I.D., which now by the way, are in Iraq in a modular

formation, covering a lot more territory with a lot more modern organization.

We bought time, using the National Guard to do that. Now we must get the National Guard modularized, organized, and equipped and the way we want. We have an Army campaign plan that goes out over several years, that goes out over this program, this year and next year to have some of the highest levels of activities in this, and we are moving towards a predictable rotational model that will provide us 18 and 19 brigades from across the entire Army. I am talking about brigade combat teams now, that we can sustain our level of operation within the rules that we have.

The last thing I would say is the policies that you are talking about are internal policies. These policies are not in law. They are management policies the DOD set. We are trying to manage our Reserve components on a predictable and manageable level that basically deploys them, gives them about five times the amount of dwell time as it does deployment time. We want to deploy them on a one in six model. One year gone let us say, or for every month gone, 5 months back; a year out, 5 years back, that is the direction in which we are moving.

So, kind of in summary, I will look at and provide you an answer for your specific State, but it does not sound typical of where we are.

General PACE. Senator, if I may add to what General Schoomaker has already said. Across the 800,000-man Guard and Reserve, to date we have mobilized about 50 percent. You are rightly so proud of what the soldiers from your State have done. You are also right that when we first went into combat about 40 percent of the total force was Guard and Reserve. It is 30 percent now. The force that is deploying over the next year, from March of this year to March of next year, will be about 19 percent Guard and Reserve.

The size of the force is coming down and the need for contribution from the Guard and Reserve is coming down. In addition, that 50 percent of the Guard and Reserve that has not yet been mobilized, we are looking at 2 or 3 years. In the possibility that we may need to sustain today's level of forces, we are identifying those individuals whose training and skill set need to be changed so that they can do a military police function, for example, instead of artillery.

We are looking out as far as we can. But overall, what General Schoomaker has indicated, the Guard and Reserve has not only served us exceptionally well in combat, but they have also allowed the regular Army to modularize in a way that provides us much more combat capability on the Active side so we will have to rely less on the Guard and Reserve.

[The information referred to follows:]

Currently, there are 1,996 soldiers assigned to the Army National Guard. Of these soldiers, there are 307 soldiers currently mobilized in support of current military actions (Operation Iraqi Freedom/Operation Enduring Freedom/global war on terrorism/continental United States support).

Since September 11, 2001, 1,430 Maine Army National Guard soldiers have been mobilized and returned from Active-Duty. This does not include the 307 soldiers currently mobilized. Of the 1,430 soldiers mobilized, 3 have completed all 730 days of their mobilization time. Forty-eight have between 545 and 729 days of mobilization

time. Six hundred twenty-four have between 365 and 544 days, and 34 have between 180 and 365 days of mobilization time. There are 51 soldiers with less than 180 days mobilization time. There are 750 Maine Army National Guard soldiers with no mobilization time at all. Currently, there are no Maine Army National Guard soldiers officially alerted.

The apparent discrepancies with the numbers are due to various reasons. The most common reason is the turnover of soldiers since September 11. There are soldiers that were mobilized during Operation Iraqi Freedom I and Operation Iraqi Freedom II that are no longer in the Maine Army National Guard. They would also have new recruits and transfers in the Maine Army National Guard that were not there 3 years ago.

Senator COLLINS. Thank you.

Chairman WARNER. Thank you very much, Senator Collins. We are all concerned about that in our States likewise and I am glad you brought that up.

Senator Reed.

Senator REED. Thank you very much, Mr. Chairman. First let me associate myself with your remarks about the need to deploy our whole spectrum of national power rather than just military power. I returned from a trip just about 3 weeks ago from Iraq and that was my conclusion, which I also shared with the Chairman.

General Schoomaker, can you give me an idea of the total today in dollars of the recap and reset figures that you are looking at, the equipment you know you have to repair?

General SCHOOMAKER. Steady state, it is about $4 billion annually for reset.

Senator REED. For how long?

General SCHOOMAKER. As I have testified before, we anticipate that will be 2 years beyond the end of whenever this level of operation terminates.

Senator REED. Ten years, 20 years? I mean, that is pretty imprecise. Let me ask another question. What is the total amount of money for recapitalization? You must know that. How much are you going to have to spend to recapitalize the force today?

General SCHOOMAKER. As I said, we started with about a $56 billion hole. To totally modernize it is about $68 billion. Part of what we do when we reset is chip away at that recapitalization. Some of it is in the base budget, we are actually initially capitalizing the force. So it is about that magnitude.

Senator REED. We are talking about $60 billion, roughly?

General SCHOOMAKER. Roughly.

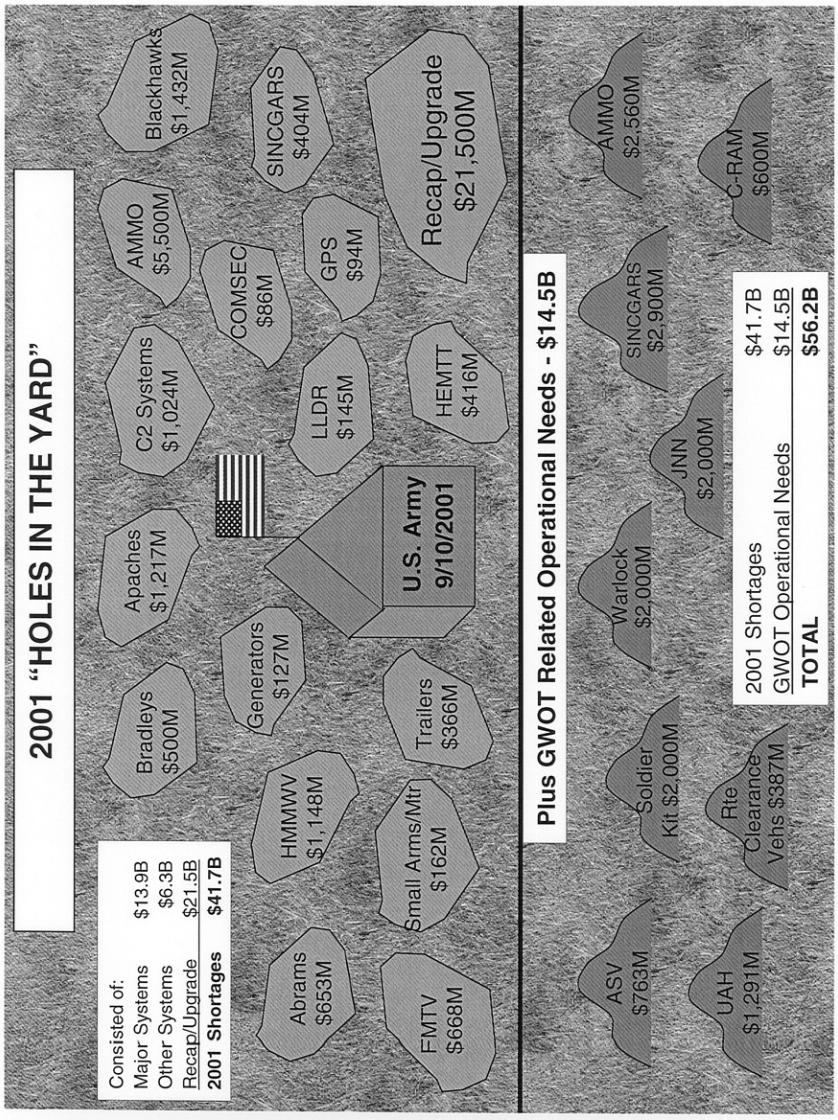
Senator REED. $60 billion. How much of that do you have in the current budget, the budget the President sent up yesterday?

General SCHOOMAKER. I will have to give you that for the record.

[The information referred to follows:]

In the Army's fiscal year 2007 budget, approximately $4 billion is programmed for recapitalization and depot maintenance. This funding includes $2.5 billion for procurement upgrades, $0.3 billion for operations and maintenance funded recapitalization, and $1.2 billion for depot maintenance.

Senator REED. Fine. Some of it will be in supplementals?



General SCHOOMAKER. About $4 billion annually of that is in the supplemental.

Senator REED. So at a $4 billion rate, $60 billion, my math is not that good, but that is around 15 years?

General SCHOOMAKER. If you are talking purely supplemental. But because we have increased our investment account in our base

budget, we are making our biggest moves not in the resetting of equipment that has been consumed, but in actually—in fact, I think if I could—where is the "Holes in the Yard" chart, the first chart?

[The chart referred to follows:]

Secretary RUMSFELD. I think there may be a little confusion between the word "reset" for resetting the force when they come back and "recapitalization" of the force because of the procurement holiday. It is not clear to me which you were talking about.

General SCHOOMAKER. I am talking to both. We are recapitalizing the force that has deployed and is returning and resetting it, replacing equipment lost or worn out in combat, with supplemental funding, because it is consumed in the war, and in our base budget we are capitalizing the force.

I use this chart right here, and I know you cannot see those numbers, but below there is about $14.5 billion of supplemental funding that were unprogrammed, unknowns, since September 11 that you have provided. Above there is the $41 billion worth of a lack of capitalization that was inside the actual base budget. It is that kind of a relationship that we are managing.

Senator REED. My concern is more of the total amount of resources that you claim today you need to either rehabilitate the equipment from service, active service, or to improve the equipment, recapitalize it.

General SCHOOMAKER. That is correct.

Senator REED. That totals about $60 billion, both?

General SCHOOMAKER. Let me back up and let us approach it this way. I have testified before you today that we need about $3 billion a year for the additional manpower that we are bringing on active duty. We need $5 billion a year to modularize the Army, which is the piece you are talking about, to capitalize the new structure in the Army, and $4 billion a year to reset the Army that has been consumed as a result of operations.

Some of that has to do with depot costs, some of that has to do with actual hardware that is being replaced on the deal. So if you talk about just the capitalization part, it is about $9 billion a year currently that is spread between the base budget and the supplemental.

Senator REED. You claim that you will need this supplemental funding every year that we are engaged in Iraq plus 2 years?

General SCHOOMAKER. As long as we are at this level of operations we will continue to have to do it, not unlike we did in Operations Desert Shield/Desert Storm.

Senator REED. Just a point. This is confusing and I think when you come up for the next hearing hopefully we can make it clearer. But, it goes to the point I think Senator McCain made. We know these costs are already accrued. We know we cannot avoid fixing this equipment, changing the force. To the extent that we are going to rely for X years forward plus 2 on supplementals, it is probably in this environment not the best budget strategy, and it begs the question, why do we not put this, these numbers at least, into the budget?

General SCHOOMAKER. Senator Reed, the numbers that I just gave you for the past 2 years, 2005 and 2006, were in supplemental funding. This year we moved the $5 billion, in the 2007 budget, for Army modularity, moves inside the Army's budget. The supplemental funding for resetting the force is going to be dependent upon the amount of the force that we deploy and the rate at which we operate and consume equipment and have to reset it.

Senator REED. Let me ask another question, stop-loss. How many soldiers are subject to stop-loss today, General?

General SCHOOMAKER. I will have to give you that for the record. It is typically several thousand.

[The information referred to follows:]

For the month of January 2006, the number of soldiers affected by stop-loss was: Active-Duty 8,826; Army Reserve 2,238; and Army National Guard 2,250; for a total of 13,314. This figure fluctuates monthly based on deployed strength and length of individual enlistment contracts.

Senator REED. Several thousand. It goes to the issue of retention, recruitment, personnel strength. How long do you think we have to maintain a stop-loss policy that prevents soldiers from leaving when their enlisted term is up?

General SCHOOMAKER. I think we will get better at that as we get the Army fully into the predictable force rotation model. The reason we are having to use stop-loss today is because we have to stabilize the forces at a time prior to their deployment and hold them stable through their deployment. We typically stop-loss at a preset time ahead of their deployment so that the soldiers that we train up with that unit deploy stay with the unit during their deployment.

Senator REED. Mr. Secretary, in September 2004 General Curran testified that, after his inspection was completed, that the DOD Inspector General (IG) was investigating the issue of ghost detainees. A year later, September 29, 2005, I asked you about the status of that investigation and you indicated to me, and I think probably fairly, that you did not have any information at that time and you would get back to me.

Subsequently, our inquiries have led us to the conclusion that no such investigation is taking place. Have you directed that no investigation take place or have you directed that the investigation be suspended or are you directing that the investigation go forward, but it is just taking an awfully long time, now almost a year and a half?

Secretary RUMSFELD. Certainly I have not directed that anything be stopped or not go forward at all. My impression is that there was only one investigation that was still open. Do you recall, General Pace?

General PACE. No, sir.

Secretary RUMSFELD. But, I will be happy to look at that this afternoon and give you a call this afternoon.

Senator REED. I appreciate that, Mr. Secretary, because again I understand that this is a complicated, difficult, and sensitive issue, but I think it is now almost 5 months since our last exchange and the information we have tried to obtain from your staff in the DOD.

Secretary RUMSFELD. You used the phrase "ghost detainees." We do not have any ghost detainees.

Senator REED. There are reports General Curran was looking at several years ago that prisoners were being kept in Iraq without proper registration under the Geneva Conventions.

Secretary RUMSFELD. Oh, okay.

Senator REED. In fact, there are newspaper reports that some prisoners were moved out of the country, moved back into the country, in a collaboration between the DOD and the Central Intelligence Agency (CIA). I specifically asked General Curran because this is a very important issue. He indicated after his exhaustive in-

vestigation that the task had been passed on or appreciated by the DOD IG.

I asked you 5 months ago and I received the answer that I read, which is basically: I will get back to you. Subsequent to that, we have asked the DOD and it does not appear that there is any active investigation going on. If that is the case, then I think we should make it clear and also give the rationale why this issue is not being fully investigated.

Chairman WARNER. Perhaps the Secretary can take this for the record if you wish.

Secretary RUMSFELD. I am told by staff that it is the CIA IG that is doing an investigation on this that is outstanding. I will get back to you with the facts this afternoon.

Senator REED. I appreciate that. But again, the impression I received from General Curran in open testimony was that this was part of his task to look into the operations of Defense personnel and that task was being taken over by DOD IG.

I would also suggest, since this was apparently some type of joint operation, that a CIA investigation might be looking at their operatives, but I wonder who is looking at DOD personnel.

Secretary RUMSFELD. We will find out.

Senator REED. Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator.

Senator Ensign.

Senator ENSIGN. Thank you, Mr. Chairman.

General Schoomaker, could you comment on the recent study by the Institute for Defense Analyses (IDA)? I do not think anybody has brought that up. It has to do with the Army's transformation into the brigade combat teams. The study indicates that the number of maneuver battalions would be 20 percent below the number that was available in 2003. The study points out that there would be an increase of almost 11.5 percent at headquarters level while reducing the number of troops in the field.

When we get reports like that, that seem contradictory to what you are saying, it is important to at least bring them up so that you will have an opportunity to address some of the things that were mentioned in the report.

General SCHOOMAKER. I am not familiar with that report, but what you are saying does not sound logical to me. We have restructured the modular brigade combat team to—we used to have three battalions of three companies. We now have two battalions of four companies. So we have gone from nine maneuver companies to eight, but we have increased by 30 percent the number of brigades we have created.

When you go down to the maneuver company level—and what is not counted in that is the fact that each brigade also has a Reconnaissance, Surveillance, and Target Acquisition (RSTA) squadron, which is a cavalry-like squadron, of three maneuver units. So, you have actually moved the number of maneuver units from in the previous configuration from 9 to now 11, and you have increased the number of brigades. So any way you cut it there is more combat power available, plus it is more relevant combat power to the century we are in. We do not want to structure the way we were during the Cold War period.

So it sounds incomplete to me. I am sure the IDA does good work and so I would have to look at it and see.

Senator ENSIGN. I would appreciate if you could get back to me on your analysis of the report and some of the claims that they are making. It does not seem to be complementary to some of the things that you are trying to do. It is important when we have a credible source like that out there that is saying something that is not so complementary at least to see what your analysis is and see if we are going in the right direction.

General SCHOOMAKER. I want to assure you that we have looked at a number of different possibilities and we have modeled them, and we have brought the very best people we can together with the most experienced, to include a lot of critics, and have come up with what we believe is the best course of action across the board. It is not perfect, but it is more appropriate to the century and the kind of challenges we are going to have in the future. It is clearly different than what we were organized to do in the past.

But I remind you again that in the past we were also less whole than the formations that we are building today. So all the way around, I am very confident that we are on the right path.

Senator ENSIGN. Mr. Secretary, if you could address the way Congress does some parts of our funding for the military. Sometimes the military wants something, a certain product, that is made in a Member of Congress's district and they fight to get that into the military budget instead of fulfilling exactly what the military needs. The whole earmarking process is obviously what I am referring to.

Could you address the amount of money you think goes as part of that earmarking process? Do you have any idea? Have you looked at the amount of money that would actually be more efficiently used by the military, by the DOD?

Secretary RUMSFELD. Senator, I think the debate is over your phrase "more efficiently." Under article I of the Constitution, obviously, Congress has the right to appropriate funds and they can decide those things they wish to do. The President proposes what he thinks is best and then there is a debate and a discussion and a compromise and something happens in Congress between the two houses. Then it goes to the President and he either signs it or does not.

My recollection, and I could be wrong, General Pace may have a better memory, is that in the last year something like $10 or $12 billion has been taken out of other parts of the budget that we proposed and some $10 or $11 billion has been put into things that Members of Congress have proposed.

Now, to characterize that as less efficient it was not what we proposed, but in some instances Congress has inserted things into the budget that have led to capabilities that were important. In other instances, Congress has required that we continue doing things that we think we should not continue doing. It is a debate, it is an issue.

Are those numbers about right?

General PACE. Yes.

Senator ENSIGN. The reason that I bring that up is because there is always going to be the give-and-take and I understand that, but

I guess one of the things that disturbs me is when Members of Congress have put their own districts before the national interest, and we do see that sometimes. We see that with pieces of equipment.

It was brought to my attention just on one example, but I have many others on one piece of equipment that happened to have been made in the State of Nevada. That is the only reason it was brought to my attention, and it was the same type of product made by a different company in another State. The military wanted the product from the State of Nevada, but somebody a little more senior on an appropriations committee was representing a district where the inferior product was made and the military ended up getting that inferior product.

That is the kind of thing that we have to take a look at and try to clean up around here. We have to put the interests of our warfighter out there before we put the interest of our own congressional districts or our States.

Secretary RUMSFELD. Thank you.

Chairman WARNER. Senator, I certainly concur in those observations.

Senator Dayton.

Senator DAYTON. Thank you, Mr. Chairman.

Mr. Secretary, I certainly agree with what you said about our military, not only not being not broken, but also, I think your quote, battle-hardened and an enormously capable force. I was just 2 weeks ago in Camp Shelby, Mississippi, with over 2,600 Minnesota National Guard men and women who were training down there. They told me they are receiving the equipment they need, some of it on a just-in-time basis, but they have received it. They were told that they are now probably the best trained and equipped force in the Army, so that is to the credit of the training they have received. I want to pass that on and I think that is a real tribute to all of you and to them as well.

I think what we are trying to get at here is the sustainability of this level of effort in what you, Mr. Secretary, and the President have described as the "long war." I also think you are correct, and my memory is at least the same, that you did try to fund the ongoing military operations in Iraq and Afghanistan through the regular budget process and were rebuffed in that attempt, and that is what led to these continuing supplemental requests.

I also agree with Senator Levin that method obscures the present and the future costs of our overall military effort as it is likely to be continued in those theaters of war. I refer to others that have said that the 5-year budget that has been presented understates some of the weapons systems and the health care, and also underfunds some of the critical objectives.

Mr. Chairman, I would hope that we can be a beacon of truthfulness in present and future budgeting in this whole operation, which involves both the executive and legislative branches in some of these games and gimmicks to obscure the real costs of the various things that we want to do: cutting taxes, making tax cuts permanent, along with whatever—and since the military and the homeland security are what are driving the spending side of the discretionary part of the budget, if we understate these future costs

or, as Senator Inhofe pointed out and I concur, if we need to increase by some $50 to $80 billion a year to actually fund these, all these necessary programs, as well as continue our ongoing military operations around the world, if we understate by that order of magnitude we are talking about a huge difference. Conversely, if we do state it accurately I think we are going to inject a much-needed note of reality into the desire to continue these tax cuts, as Senator Lieberman pointed out.

I just hope we can factor these predictable continuing operations. Some of the questions about the Guard we can get to next week, as General Schoomaker said, about the costs. I see that there are 17,000 positions and we are going to need amending the budget to reflect that switch according to General Stanton. I do not know if that is included in this.

I hope we can get these numbers squared away, Mr. Chairman, so that we can be honest with ourselves, with the American people, with our colleagues, about what we do need to do, because we do need to do, in my opinion, everything that has been outlined here and we need to do it as well as possible. I hope you will assist us in that effort.

General Pace, I wondered if you could just be a little bit more specific about what constitutes your phrase "renorming" the health care? Specifically, does that mean that there will be additional costs for the individual Active-Duty soldiers, the National Guard men and women, reservists?

General PACE. No, sir. Thank you. There is zero impact on Active-Duty. The impact would be on retired under the age of 65. The Joint Chiefs' recommendation was that we take the legislation as enacted in 1995 and the cost to the individual in 1995 and renorm that to 2006–2007 numbers to be able to sustain for the foreseeable future the tremendous capacity and benefit that it provides to both active and retired, sir.

Senator DAYTON. I would agree with you about the value of that, the fact that they deserve the best. They certainly earn it, and their families as well. I think also in terms of retention of our forces. I know with the National Guard men and women, their families, that availability of top-notch health care is really vital, and also to private sector employers in terms of hiring National Guard men and women.

I hope those costs, again, are accurately reflected looking forward, because that is a huge factor. If we understate those and we fool ourselves, we do a disservice again to the whole enterprise.

Yesterday in the Post former Defense Secretary Melvin Laird claimed the QDR reduces the Guard and Reserves overall by more than 45,000 members, and it appears to be a polite way of starting downsizing. Could one of you, Mr. Secretary or Generals, comment on whether that is accurate or not?

General SCHOOMAKER. That is totally inaccurate. The National Guard's end strength remains the same, 350,000.

Senator DAYTON. At the end of the QDR timetable?

General SCHOOMAKER. It has not impacted them at all.

Senator DAYTON. All right.

General SCHOOMAKER. I will be glad to get into the other numbers for the record or in a separate session.

[The information referred to follows:]

We are not reducing the number of Reserve component soldiers in uniform. To date, the National Guard has only been able to recruit to a level of 334,000 and the Army Reserve 189,000 soldiers, both of which are below the authorized end strengths of 350,000 and 205,000 respectively. However, since December 2004, we have increased the number of Army National Guard recruiters by over 1,100, and the number of Army Reserve recruiters by almost 800, as well as providing funds for recruiting costs and advertising in the fiscal year 2007 budget to assist the Reserve components in meeting their recruiting goals. Finally, the Army will still program for up to 350,000 National Guard soldiers and 205,000 for the U.S. Army Reserve.

Senator DAYTON. I think that concludes mine. I yield back my time. Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator Dayton.

General Schoomaker, yesterday you will recall that we had this very productive meeting with the Secretary of Defense and I raised that question about the end strength of 350,000 versus the actual status today, which is about 335,000? What is it?

General SCHOOMAKER. Yes, sir, it is 333,000, 334,000.

Chairman WARNER. Right. Congress wants to authorize, keep that 350,000, but you are only asking for the funding to go to 335,000 and try and escrow a fund to go from 335,000 to 350,000 if you can access the balance of those individuals. I cannot take up a Senator's time here, but we need to go back and clarify that and perhaps in the course of this testimony we can.

General SCHOOMAKER. Sir, as I stated yesterday, we want them to recruit to 350,000, too. If they do, they will be funded to that. There is no sense in funding what is not there. We can use that money to do other things and accelerate what we are doing.

Chairman WARNER. Understood.

Senator Talent.

Senator TALENT. Thank you, Mr. Chairman.

I appreciate you all being here yet again and continue to respect your leadership. You have always, Mr. Secretary, had a plan. It has always been plausible. You have stuck to it and defended it. I have not agreed with everything all the time, but I appreciate that leadership over the years.

I am going to pick up on what Senator Reed, Senator Lieberman, Senator Dayton, and to some degree Senator Inhofe were talking about, although without getting into overall fiscal policy for the government, because one of my concerns is that the tax reductions are driving the economic growth without which we cannot do any of this.

So, let me just go back to the issue of the top line over the next few years and go over a little history. For the first 4 years under your leadership, the administration sustained real, if modest, increases in the defense budgets as against inflation, and I think—I was concerned at the time that they may not have been enough because of the procurement holiday in the 1990s, for which you are not responsible, the increased personnel costs, they have gone from $92 billion in fiscal year 1999 to $109 billion today without end strength going up, and increased strain due to the war and mission creep.

I am sort of with Senator Inhofe that we need as a Nation to commit to increasing the percentage of GDP that we spend on defense. It is historically at a pretty low level.

Now, the last 2 budget years, at the end of the budget cycles the OMB has demanded from you $62 billion in reductions over the Future Years Defense Plan (FYDP). That was not based on your analysis of your needs and I think it was contradictory to the longstanding analysis that you had had. I think it has already either contributed to or resulted in reducing the number of *Virginia*-class subs we are planning on buying, DDX, LPD–17. We have an F–22 restructure that I think is at least partly due to that; now a proposed 45,000 decrease in Air Force personnel; and the Guard and Reserve reductions which may occur if they do not recruit up to the authorized strength.

Yet, as I figure it you still have $50 billion delta to cover over 4 years from 2008 to fiscal year 2011 as a result of those two OMB directives, $50 billion less than what 2 years ago you had projected you would need according to the consistent plan that you developed from the time you took over, and this is going to occur when that next generation of platforms is coming on line.

I have a concern. I want to ask you in your professional judgment whether we can reduce over the next 4 years by that $50 billion and also buy DDX, buy Joint Strike Fighter (JSF), buy F–22, design this new cargo tanker, meet the increases in health care costs that you are projecting, reset the force, which you talked about before, General, reverse the negative wedges in military construction (MILCON) which I see in the budget, and then any other unexpected contingencies?

Can you do that, will you be going further out on a margin of risk than you are comfortable doing? I say this—I think we all have a basic level of confidence that the men and women in America's military will under any circumstances complete the mission that we assign them. But the question is can we follow through with those $50 billion in reductions over the next 4 years without going further out on a margin of safety than you in your professional judgment would prefer to go?

Secretary RUMSFELD. Senator, this is a critically important question and all I can say is this: that the senior leadership in the Department, military and civilian, spent the better part of the year balancing risks, and there are always risks. There is present investment versus future investment. There is hardware investment versus research and development (R&D) types of things and the investment in the force, the personnel, to make sure you can attract and retain the people you need. They spent a lot of time, as General Pace said, hundreds of hours and they came out with a QDR that sets a course that they believe and we believe and I believe is the correct one.

The current top-line proposals were taken into account in that. The Joint Chiefs then proceeded to analyze a whole host of different scenarios and contingency plans and make judgments about them, and the conclusions are expressed in the QDR and in our forward year defense plan. Would everyone always like more? You bet, that is just realistic.

But, all of us have been around this business for a good many years now and there has always been a big so-called bow wave out there that you look like you cannot fund, and in fact it always becomes manageable. A little pain once in a while. You have to give up something, but that is true in any budgeting exercise. I feel pretty good about the budget we are presenting. I feel pretty good about the forward year defense plan. I do not know what the nature of the world will be out there and it may very well require changes.

Someone handed me a note saying during World War II we were spending 38 percent of GDP, Korea 14 percent, Vietnam 9 percent, during the Reagan buildup 6.2 percent, post-Cold War drawdown 4.8 percent, today 3.7 percent. So it is a relatively modest portion of the GDP that is invested in defense, and I guess it is a matter of balancing risks and making judgments.

Senator TALENT. I appreciate that and that is very fair. I think what is also fair to say is that all of us sitting up here and you have to have a level of concern that at some point maybe we can do it, maybe we cannot or maybe we are further out on that margin than we want. When we consider the level of additional safety and security that we could get just by sticking to where you were 2 years ago, and when you consider how much depends on the reality and perception of American power in the world, you certainly begin to see the case being made for buying that extra piece of insurance at such a low cost.

But, I appreciate your fair answer, Mr. Secretary.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you very much, Senator.

Senator Bill Nelson.

Senator BILL NELSON. Thank you, Mr. Chairman.

Good morning, gentlemen. I want to take just the opportunity to thank you, Mr. Secretary, for stepping up to the plate before Christmas, responding to the chairman and the ranking member, who had requested your policy position, at my request, regarding the testing and training area in the Gulf of Mexico off of Florida. We have this battle Senator Martinez and I fight ever day of the oil industry wanting to drill off of Florida's coast. Of course, we will fight that battle on the substance.

One of the overlooked key essential elements is the protection of the interests of the United States military in one of the largest testing and training areas, where you have virtually all of the Gulf of Mexico that is restricted space off of the State of Florida.

In your letter, and this is what I wanted to thank you publicly for, you basically said this line that DOD set up in 1981, called the Military Mission Line, longitude 86–41 north-south, comes basically off of Fort Walton Beach, Eglin Air Force Base, and it goes straight south. Your words in the letter were something to the effect, anything east of that line where there would be oil drilling it would be incompatible, was your words, with the mission of the military in the training and the testing.

Now, that having said, I wanted to thank you. I want you just to know that Senator Martinez and I in trying to pass legislation that will put this into permanent protection, for the next 5-year period we have given you an additional 25-mile cushion to the west,

so that in the course of the next 5 years should you decide that because of the weapons systems that you are testing that you need more space than the line that was set up in the early 1980s, that it would be available to you. Then after 5 years, if you decided that you did not need that area, then you could relinquish that additional 25-mile buffer.

I am not asking anything. I just want to tell about the battles that we are doing up here and what was the reason for the legislation that Senator Martinez and I filed.

Secretary RUMSFELD. Thank you very much.

Senator BILL NELSON. Furthermore, I would just echo some of the comments of my colleagues and tell you that comments that we are receiving from our National Guards are not the kind of comments that have been presented here, and comments that we are getting from our Governors are comments that are of considerable concern.

It may be one thing in a State where the National Guard is not considered so essential to the public welfare as is our State of Florida, where the National Guard is now recognized as someone that can move in in the aftermath of a hurricane and establish order pretty quick. It is interesting that the Florida Guard arrived about 4 days after Katrina into New Orleans. Remember, they are battle-hardened with regard to hurricanes because we had four hurricanes within a 6-week period the previous year, which is 2004. They know how to move in, establish order, assist the local government, set up supply lines, and get things in by truck and helicopter, if needed.

But, in what you are proposing, we are hearing everything from the cutting out of possibly 1,000, 2,000, 3,000 of our Guard. They are talking about removing our only airlift capability battalion in our Guard, which is the helicopter. That is about 300 people, but it is 22 helicopters that are essential to our mission in the aftermath of a hurricane, not even to speak of the value that the Guard is, as you all recognize.

The Florida Guard was in Iraq, first in. They were actually in Iraq before the war started. They were in western Iraq with Special Operations Forces. That is how good they are.

So as you evaluate that, I want you to understand the pushback that you are getting from us because of what we are hearing back from our people and from our Governors.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you.

Secretary RUMSFELD. Senator, I have been over this with General Pace and General Schoomaker and Secretary Harvey many times, and I would like General Schoomaker to comment, but from everything I have been told I am persuaded that the program that has been laid out will provide a Guard and Reserve that will be fully manned and fully equipped and, as the rebalancing of skill sets takes place within the Reserve component and between the Active and the Reserve components, the Guard will have the kinds of capabilities that will be vastly more useful to a governor and to a State in a domestic disaster of some kind than exist today. The long drought in the Guard with respect to the best equipment will end, and they will be equipped appropriately. That I cannot prom-

ise anything, but I would think it is almost certain that the Governors and TAGs will be very pleased with the program that has been put forward and the investment that has been committed.

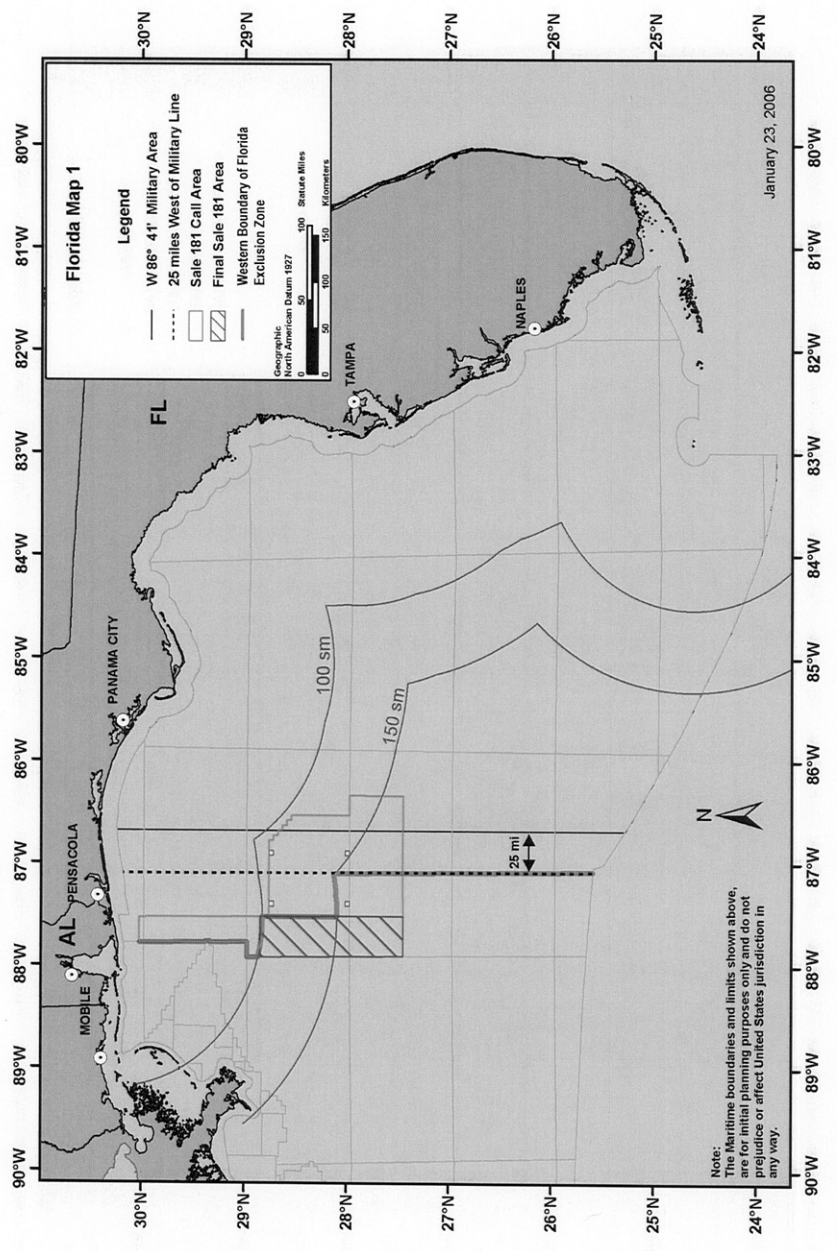
General Schoomaker.

General SCHOOMAKER. Sir, I will say what I said again. Number one, we are listening to the Governors, the TAGs, to the National Guard, and we are going to reconcile all discomfort that we can in the plan.

Senator BILL NELSON. I heard what you said, General, in your opening comments and I appreciate that. You need to hear what we are hearing.

General SCHOOMAKER. Yes, sir, and I know what you are hearing, and we are listening to everybody that is doing it. The kinds of things that you are talking about wanting we are accelerating into the force and increasing the density of the things that you need to do exactly what you just said. We are accelerating helicopter fielding in the force, and more modern helicopters. We are accelerating engineering capability. We are accelerating security forces, like MPs and these kinds of things. Plus we are making whole the combat forces, and we have had this conversation before about the underequipping of your brigades in Florida and how we have to do better with that. We are addressing that.

I believe we need to continue the dialogue. I think we need to listen to everybody. We are committed to making it better, to making it right, and making it whole, to having a force that minimizes the impact to any State or to any local area. We are going to try to work this very carefully.



I will just say it one more time: We are not going to cut the National Guard.

Chairman WARNER. Thank you very much, Senator Nelson.

Senator BILL NELSON. Mr. Chairman, would you put the map of the Gulf of Mexico off of Florida in the record on the line, the Military Mission Line, that Senator Martinez and I have drawn and the 25-mile buffer?

Chairman WARNER. We will do that, and we thank you, General, because I think you are leaving the clear impression before this committee that you are listening to the Guard and if they come up with ideas that you feel are enhancing to your own studies you will accept them. Thank you.

[The information referred to follows:]

Chairman WARNER. Senator Dole.

Senator DOLE. Thank you, Mr. Chairman.

Let me say first of all that I have the greatest respect and profound admiration for the gentlemen who are seated before us this morning and for the men and women that they lead. You represent

all that is best in America: service before self, patriotism, and leadership. I want to thank you for your service.

I also want to underscore what has been said with regard to National Guard issues, and I am pleased that there is going to be continuing consultation and dialogue with the Governors and TAGs because I too have been hearing a great deal about concerns that do need to be more fully addressed.

Now, I want to ask a couple of more specific questions. Mr. Secretary, a 2005 Department of Veterans Affairs (VA) study was published in the New England Journal of Medicine recently and it showed that more than 26 percent of Afghanistan and Iraq combat veterans treated at VA hospitals were diagnosed with mental disorders. Many have reported symptoms of depression, anxiety, or post-traumatic stress disorder. We have the best-trained, best-equipped troops in the world, but are we falling short when it comes to mental health services when they return home?

This is especially important to me because, obviously, representing North Carolina, we have so many troops from bases in North Carolina who have seen combat on the ground. What are we doing to ensure that when our troops come home they have professional counseling that is readily available and that they know how and where to seek that type of counseling?

Secretary RUMSFELD. Thank you, Senator. Your State does indeed have a great many military personnel, Active and Guard and Reserve, and they do a superb job.

If you take the health care broadly from the war zone, it is better today than it has ever been. The lives that are being saved are just amazing. You have all seen that out there. The treatment when they return back to the United States and the rehabilitation process while they are still within the military handling, both from a physical health and mental health standpoint, is extensive and in my view, from everything I have been told, thorough.

There is a passover where some people then leave the Service, but get connected to the VA, and they have done a great deal to try to make sure that that passover takes place in a manner that is in the best interest of the soldiers. I do not have the data at my fingertips with respect to the VA, the information that they accumulate on the troops. Do you, General Schoomaker? Do you want to comment on it at all?

General SCHOOMAKER. Sir, I do not have the specific details of it, but I will tell you that this process starts with our reintegration process early in the return from deployment, and there is increased recognition that the mental health side of this—in other words, that we have to address more than just the physical health of the soldier. We have to work on the reintegration of the soldier, sailor, airman, or marine back with their family upon return, and there has to be encouragement to seek out and to use the help that is available. All of the indicators are—and I would be glad to get you some statistics—in the Army that we are having increased usage of counseling and mental health counselors and other follow-up kinds of services while on Active-Duty, and then of course post-Active-Duty there is this handoff to the VA, et cetera, as we go.

My view is the trend is positive. It probably will need to continue to improve, but I believe that we have done very positive things

over the last several years in recognition of this problem and it is paying off for us.

General PACE. Senator, if I might add?

Senator DOLE. Yes.

General PACE. We do have pre-deployment screening. We have post-deployment screening. We have 3- to 6-month follow-up after the post-deployment. Equally important I think is the focus on the families, because there are reintegration problems with the families, and there are some terrific organizations now that have been stood up both inside the military, but also through just groups that want to help, that allow us to provide the screening and assistance not only to the active duty member, but to the families if needed.

[The information referred to follows:]

We cannot comment on Department of Veterans Affairs (VA) workload for post traumatic stress disorder (PTSD) or research on the prevalence of combat stress disorders among VA patients. Army surveys of soldiers deployed during Operation Iraqi Freedom indicate approximately 15–17 percent will experience PTSD and nearly 23 percent will experience other behavioral health problems.

The Army's Deployment Cycle Support Program is designed to help soldiers and their families cope with the stress of deployment as well as the reintegration process and are briefed on what stressors to expect upon homecoming, the common symptoms of post-deployment stress disorder, ways to ameliorate these symptoms, how to recognize when further professional help is needed, and how to access treatment services.

All soldiers redeploying from overseas are required to complete a post deployment health assessment before leaving theater to screen for PTSD, major depression, concerns about family issues, and concerns about drug and alcohol abuse. The health care provider reviews the form, interviews the soldier as required, and refers the soldier to a behavioral health care specialist as required. The Army is currently implementing an expanded Post-Deployment Health Reassessment of global health with a specific emphasis on mental health. This assessment is performed 90 to 180 days after redeployment.

The Military OneSource Program offers 24/7/365 telephonic support and referral for six or more confidential counseling sessions for soldiers and their family members. Military OneSource is not designed to offer psychotherapy, but does maintain lists of military and civilian mental health providers as a referral resource for soldiers and families.

Despite these screening and outreach programs, we remain concerned about shortages of mental health professionals in civilian communities. We continue to work closely with the TRICARE management activity and TRICARE regional offices to ensure we have a robust network of mental health providers to care for our soldiers and their families.

Senator DOLE. Thank you.

General Pace, in your submitted testimony you point out that during World War II, Korea, Vietnam, and Operation Desert Storm, 24 to 30 percent of Americans who were injured in combat eventually died from their wounds. Today, 9 of 10 troops wounded in Iraq and Afghanistan survive. What advances in battlefield medicine are responsible for this vast improvement in the survival rate and, more importantly, where can we do more and what funding are you requesting to further improve battlefield medicine for our injured troops?

General PACE. Thank you for pointing that out, Senator. We have an incredible professional medical team that is part of our Armed Forces. The biggest thing we have is exceptionally well-trained doctors, nurses, corpsmen, and medics. Those who provide inside that first golden hour the medical treatment on the battlefield to get the injured person to a waiting helicopter, to get them

to the hospital in country, that allows them to stabilize that patient.

Examples: In Vietnam it took on average about 45 days, 40 to 45 days, to get a wounded soldier or marine back home. Today it takes less than 4 days from the time they are wounded to the time they are in the world-class facilities that we have here at home. In the process, they stop at a world-class facility in a place like Balad in Iraq and in Landstuhl in Germany.

Those precious hours of getting to the expert medical doctors that we have on scene both forward and here in country make all the difference in the world.

I do not know the exact figures that we have requested on the medical side of the house, but I do know that our medical professionals continue to seek every possible advantage in saving lives.

Senator DOLE. Thank you.

Mr. Secretary, the QDR has identified the importance, of course, of Special Operations Forces. We will be increasing Army Special Forces by one-third, augmenting our Navy Sea/Air/Land teams. I was particularly pleased that four of the five components of the newly formed Marine Special Operations Command (MARSOC) will be based at Camp Lejeune, North Carolina.

How do you envision MARSOC operating within the current special forces command structure and how will it be funded?

Secretary RUMSFELD. Do you want to go ahead?

General PACE. I would be happy to, sir.

Thank you, Senator. There are several elements of the MARSOC. One will be the one that will be stood up in February as the command itself forms, February of this year, and that will be the companies that are formed to help train other countries' militaries to do their job. The other part will be the 2,400 marines who will be trained to special operations-level skills, who will deploy with our Marine Expeditionary Units aboard amphibious ships, and while they are aboard those ships will be part of the special operations chain of command. They will be inside the Marine Corps structure, but they will be working specifically for General Brown, Special Operations Command, through the theater commander, and through the theater commander's special operations commander.

The Marine Corps will have the ability to do more training of indigenous personnel, but also to be able to reinforce the very capable Special Operations Forces that our country has been fortunate to have for several decades now.

Senator DOLE. Thank you very much.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator.

Senator Akaka.

Senator AKAKA. Thank you very much, Mr. Chairman.

Mr. Secretary, I want to wish you well this year in all that you do. Mr. Secretary, the DOD has made a commitment to investing in new equipment and technology for the forces. I am concerned that this will come at the expense of maintaining technology currently in use. Can you assure me that expenditure of funds necessary for DOD's planned technology transformation will not undercut efforts to implement sustainable corrosion prevention policy

which is necessary for the upkeep of military equipment and infrastructure?

Secretary RUMSFELD. I think we can, Senator. All of the senior people in the Department, military and civilian, spent an enormous number of hours balancing the investment proposals and we believe we have found a proper balance where we maintain the capabilities we have, where we invest in our personnel and being able to attract and retain the people we need, investing in the research and development necessary to advance the force in the future, but at the same time assuring that we have both the ability to deter and defend from a conventional standpoint and to deter and defend, to the extent that is possible, against asymmetric or irregular warfare challenges.

No one can say with perfect certainty that we have done it exactly the right way and my guess is next year you will find we will make changes in the forward year defense plan because we will have learned more and the experiences we will have had will have informed us in a way that will enable us to have a better insight.

Senator AKAKA. Mr. Secretary, you have argued that the Armed Forces must adapt and change in order to win a long and irregular war outside of the scope of conventional warfare. At the same time, recent successful operations in Afghanistan, Kosovo, and Iraq have demonstrated the effectiveness of conventional warfare tactics. Given the high costs associated with transformation, would not routine modernization and systems maintenance be sufficient to maintain the superiority of America's defense for many years?

Secretary RUMSFELD. Our answer would be no, that first of all, the cost of failing to be able to deter and defend against whatever challenges come up, the cost to the country would be enormous. Second, all one has to do, it seems to me, is to compare the challenges we face today to the challenges of the Cold War. In the Cold War there was the Soviet Union. It was large, it was expansive, it was purposeful. We could understand it, look at it, see it, know where the armies, navies, and air forces were.

Today the challenges are quite different. They are networks, they are people operating viciously against us and against our friends and allies around the world, sometimes in countries that we are not at war with, sometimes at the seams between countries, that make the task very complex. We simply have to shift our weight from being able to finish a task by capturing or killing a target and shift it over towards being able to do a better job of finding the targets and fixing them in a way that enables us to use that knowledge to finish properly.

I think just hanging onto what we have would leave us with an imbalance in the ability to finish and too light on the ability to find and fix.

General PACE. If I might add, Senator. We have taken over the course of this last year the process for the 2007 budget plus the forward year defense plan plus the QDR and the force that will be available to the Nation over the next 20 years, and then done a large number of iterations of war games that take war plans from today, war plans that we believe we will have in the near future, possible threats from the future, and mixed and matched those in the most difficult way we could, thinking through the most difficult

scenario for the Marine Corps, the most difficult scenario for the Army, et cetera, and wargamed against that, and in every case this process that we have been through and the program that is being laid out has been sufficient to take care of any potential adversary we can envision on the horizon.

Senator AKAKA. Mr. Secretary, in its December 2004 report the GAO reported that key practices for successful transformation of the Armed Forces include leadership that sets the direction and assigns accountability for results. Mr. Secretary, can you tell me what, if any, formal mechanisms have been or will be put into place to ensure that clear and consistent priorities are set amongst the key organizations involved in the transformation, and that the appropriate resources are allocated to these priorities?

Secretary RUMSFELD. Senator, one of the outcomes of the QDR was to establish a set of tasks and priorities. The Deputy Secretary of Defense, Gordon England, is assigning a series of tasks for people to monitor, to try to determine the pace at which the execution is taking place and the success or lack of success that is being achieved in tracking those priorities that came out of the QDR.

So there is a process in place. Needless to say, that does not guarantee that it will work or that everything will happen the way one would want. But we are serious about it and a great deal of time was put into it. I know that, working with General Pace, the Deputy Secretary believes that they have put in place a process that is appropriate.

Chairman WARNER. Thank you very much, Senator.

Senator AKAKA. Thank you very much, Mr. Chairman.

Chairman WARNER. Colleagues, I have committed to the Secretary to see that he has other engagements beginning at 1 o'clock. So we are going to be able to finish if everybody will stay within their times, and we will have Senator Sessions at this time.

Senator SESSIONS. Thank you, Mr. Chairman. I would like to join with you on this day to express my sympathy to the family of Coretta Scott King and to recognize her contribution to making our country a better place. She is a native of Barry County, Alabama, and was with Dr. King and Rosa Parks at the bus boycott that was really the event that began to alter the legalized discrimination that existed in our country, and we are all better for her life, and we respect her and would note that today.

General Pace, I have just been thinking about that remarkable statistic that you or General Schoomaker mentioned, that the 3rd Infantry Division is at a 131 percent reenlistment rate, far above their goals and far above what we would normally see. I think some of that, from my experience, is the concern and leadership provided by the officers, who seem to be so committed to their soldiers in extraordinary ways. I know the Marines likewise and the other Services have, too.

The highest numbers come from the units who have served in Iraq and have come back from a tour in Iraq or Afghanistan. Would you share some thoughts on what it is that having our young soldiers feel good about their service and choosing to reenlist?

General PACE. Sir, thank you for the opportunity. First of all, they are proud of what they are doing. They feel good about 27 mil-

lion free Afghan people and 27, give or take, million free Iraqis and the opportunity to serve our country and to provide freedom for our own country. They know that what they are doing is important because they have been doing it. They are on the ground. They see for themselves.

They also appreciate very much the collective leadership of this country, both inside and outside the DOD. When Members of Congress provide the kind of resources you do, that is a very loud message. When you go visit them in the field and listen to their stories and come back and take action, when you visit them in the hospitals, when leaders at every level in uniform and in civilian clothes in the Department do the things that we should be doing to take care of them, that sends a very loud message.

It is true not only for the troops who are serving currently in Iraq and Afghanistan. I had the privilege of being in Korea last Friday for the change of command. I had the opportunity to go to a tank gunnery range in Korea, and 29 soldiers from 2nd Infantry Division were waiting for me to reenlist them. We did it in a platoon formation. It was fabulous—first term reenlistments, second, and third.

The fact that they value their own service to the country and, equally important, that the country tells them how important their service is is a huge plus in their decisions to stay.

Senator SESSIONS. I think you are close to that. I think that you are close to the truth on that, because we certainly have utilized them, we certainly have asked them to go into harm's way, we certainly have asked them to serve under difficult circumstances. They are not coming back whining and complaining. They are reenlisting. It is really remarkable, and I do believe that from the leadership on down to the lowest recruit they seem to be excited about their mission, and that is something that we can take pride in.

General PACE. Sir, I forgot one very important factor. Please excuse me, if I can add it because it is important. That is the families of these servicemembers. They are serving this country, and when a servicemember comes home and their family tells that servicemember they are proud of them for what they are doing, they support what they are doing, they are willing to continue to support them in the future, that makes all the difference in the world.

So we reenlist families, not just soldiers, sir.

Senator SESSIONS. It would be shame on us if we break faith with these young people. They have given their all. They put their life on their line. Many of them have lost their lives and been injured. I do hear them say their number one concern is Congress, that we might somehow screw up what they have sacrificed to achieve, and I think it is a challenge to all of us, I really do.

I would like to follow up a little on the Chairman's comments. Secretary Rumsfeld, you understand your role. First, let me say how much I appreciate your leadership. You come to this Secretary of Defense job at this critical point in history with unprecedented experience in government and as a former Secretary of Defense, and you have challenged this Department repeatedly. We are not only fighting successfully a war, we are also transforming the military at the same time.

But, we are asking you questions about the government of Iraq. We are asking you questions about oil production and turning on the water and creating a new government and the constitution and all those things. I know you are not going to be critical, but is it not true that this is a sovereign nation that has been created and that our formalized relationships are now through the ambassador and through the State Department, and the military is a supporting part of that, a critically supportive part of that? How is that relationship going and are there are any things that we could do to enhance it?

Secretary RUMSFELD. Senator, thank you very much. I do not think the relationship could be any better between the ambassador and General Casey, between the embassy team and the military team, Multinational Force. They are together continuously. When we have National Security Council meetings or principals meetings, they are almost always both sitting there together next to each other.

It is critically important that we be well-linked in Washington for this task because it does require all elements of national power. It is also critically important that they be well-linked in the field and they are, and it is going exceedingly well, I believe.

Senator SESSIONS. I would just conclude by noting that I know General Bowen, our Adjutant General, will not hesitate to express his views on what is best for America and our Guard. General Schoomaker, I appreciate your listening to that. I do believe you are committed to seeing that it is better and more strongly supported than ever, and I do think that is important.

My time has expired.

Chairman WARNER. Thank you, Senator, for that strong endorsement of our military.

Senator Thune.

Senator THUNE. Thank you, Mr. Chairman.

I wanted to again thank our witnesses today, our panelists, for their extraordinary service to the country, and also associate myself with some of the comments that have been made earlier by some of my colleagues about the importance of making the necessary investment to keep America strong. We need to ensure that you have all the resources at your disposal to complete the missions that this country asks you and the young men and women who serve under you to complete. I believe as well that I would much rather see us investing in technology as we look at the future and the challenges that we are going to face around the planet, and you look at Iran and hot spots in Asia. We just flat have to make sure that this country is prepared for any of those challenges. Militarily, we are looked to around the world as the leader and the expectations are high, and if we do not have that as a priority, if we do not make the necessary commitment we need for the defense of this country and to the military people who serve it, everything else we do around here, is conversation. It is just that important. I would associate myself with many of the comments that have been made about investment and also about the fine work that our troops are doing.

In that vein, I guess I have a couple of questions with respect to the future and the completion of the QDR and looking at some

of the observations that are contained there. There are some platforms as we look down the road that put us in a position where we are investing more in technology. I would much rather invest in technology than in American lives.

One of the things that the fiscal year 2007 budget will focus on is expanding missile defense to protect the United States against intercontinental and theater ballistic missiles. I guess I would be curious to know what the developmental status is of the airborne laser (ABL). It is a platform that I had an opportunity to look at out at Edwards Air Force Base.

General PACE. Sir, the ABL program now has been made into a program, proof of concept to take it out to where it can function to do its job, see then what size that is and what the cost is, and then determine the proper way forward. But, the current program will take the laser to the point where it can do its mission and then determine from there what we should do next.

Senator THUNE. One of the other questions I had with respect to maintaining America's military superiority is, I think, investing in air dominance and in global strike capabilities. I am curious to know what your views are about the role that the B–1 bomber will play in performing that mission and ability to fly long ranges, the flexible payload that it possesses. That is something obviously I have a particular interest in because of my State, but I am also in a more global way interested in long-range strike and what some of the priorities there are going forward. So, Mr. Secretary or General Pace, anybody who would like to comment on that?

Secretary RUMSFELD. The B–1 bomber is considered a key part of our air dominance and there to my recollection have not been significant proposals made to adjust it in any way. So, we look forward to having it continue as a critical part of the Air Force and of the joint warfighting capability of the Department.

Senator THUNE. Thank you, Mr. Chairman, and I yield back the balance of my time.

Chairman WARNER. Thank you very much.

We will now have Senator Cornyn.

Senator CORNYN. Thank you, Mr. Chairman.

Gentlemen, thank you for sticking in here with us. We are almost through. One of the priority areas of the QDR was defending the homeland in depth. My question really relates to how the Federal Government integrates its efforts to protect the homeland through the interaction of the DHS and the DOD. Recently we had an episode in Texas where there were some reports of border incursions by, it was initially thought or suspected to be members of the Mexican military. That matter is still being investigated. It appears that it could well be drug cartels operating along the border region. We are looking into it and we do not want to jump to any conclusions about it until we have the facts.

But, as a result, I called General Riojas down at Joint Task Force North, and also placed a call to Admiral Keating at Northern Command (NORTHCOM), so I could understand how we were using our national assets, whether they are within the DOD or DHS, to make sure that we protect ourselves along the border. I am sure you will agree with me that the terrorist threat that we have in the world today will exploit vulnerabilities where they find

them, including our porous border, which is a matter obviously of grave concern.

So I wonder, Secretary Rumsfeld, if you would share with us your thoughts on DOD's supporting role to the lead role played by the DHS. Also, give us some reassurance and perhaps the American people some reassurance that we are using all of the assets that we have available to us to defend the homeland, including to secure our border and protect ourselves against any threats that may come at us.

Secretary RUMSFELD. Thank you, Senator. The QDR process over the past year worked closely with the DHS, recognizing that defense of the homeland is a critical responsibility of the Government of the United States. As you pointed out, the DOD has a mixed role. We have the responsibility for the Operation Noble Eagle activities with respect to the air and we have responsibilities that we coordinate with the Coast Guard with respect to varying distances on the coasts. The DHS, of course, has the borders and from time to time the DOD has been asked to assist in support of various things, but it is only in support. The last, most recent one happened to be on the Canadian border, as I recall, where we were asked to provide some capabilities for a specific activity and did so.

Another example might be the Hurricane Katrina, where I guess the National Guard had something like 50,000 people in a relatively short period of time available and the Active Forces had 22,000 available in a relatively short period of time, at the request of the Government. We do have a lot of capabilities that are available, but in almost every instance it is in support of one other department or agency.

Senator CORNYN. In relaying to you the reports that I have read about and heard of the source or the reasons or the people responsible for the incursion, I did not want to suggest that I have reached any conclusion or that we really know what the reason is. In that vein, I would say that the reports I am getting is that our cooperation, mil-to-mil cooperation with Mexico, is improving, and I think that is very reassuring news.

Let me just, before I close here on one final note, just congratulate you and really applaud the Department for setting up the Joint IED Defeat Organization and committing additional resources to this threat. It is absolutely critical that we continue to do everything that is within our capacity to defeat the use of IEDs. We all know the sort of ravages that it has resulted in and the lives and the injuries sustained by our men and women in uniform.

Finally, let me just say that I want to congratulate the Joint Chiefs, General Pace, you and the other chiefs, for a letter that you wrote on January 31, 2006, to the Washington Post condemning a cartoon that had been run in the Post which depicted a military person with amputations. They used a bad attempt at humor, but one that really trivialized, I believe, the sacrifices being made by our men and women in uniform. We are a country that believes strongly in the freedom of the press, but I think we believe just as strongly in the importance of identifying as in bad taste and even a demoralizing sort of use, attempt to use humor that such a cartoon depicted.

I want to say that we believe in the freedom of the press, but we believe that we ought to defend the integrity of our military and particularly the reputations of those men and women who have sacrificed so much so that we can be free. Thank you for standing up for them and standing up for all of us in the process.

Chairman WARNER. Thank you very much, Senator.

Mr. Secretary, I am delighted the Senator brought up the DHS. All reports that we received are that you have an excellent working relationship with that department and the men and women of the Armed Forces, the American people should know, are standing by to support, as you carefully underlined. The National Guards of the several States, the other entities in the several States, we have 52 highly-trained teams under your jurisdiction to respond, one in each State, should there be a WMD or other type of weapon used that requires special equipment.

NORTHCOM, I visited with the Admiral here this past week—as you say, out in Colorado is constantly looking at the entire Nation, the lower 48 as well as Hawaii and Alaska, to monitor any incursions or other threats to this country. Quite a considerable amount of your assets were utilized to secure the Nation's Capitol for the State of the Union and other major events. Quietly you are backing them up. I really want to credit your Department for that, because the American people are gravely concerned about the security here in our Nation.

Senator Graham.

Senator GRAHAM. Thank you, Mr. Chairman.

I would like to associate myself with Senator Sessions' comments in this regard, that the military has performed above and beyond the call of duty. If you really wanted to help your country as a young person and you are wondering, what could I do with my life to make a difference, join the military. Now is the time to stand up to the forces of evil and wear the country's uniform. I assure you, you will get more out of it than you gave. I would like to associate myself with that idea, that those that are serving really are making a difference.

Mr. Secretary, thank you for sending over the nomination of General Jack Rives to be the Judge Advocate General (JAG) of the Air Force. I think I got it today. I know him. He is a great officer. It has been held up for different reasons for a while, but it is coming over. I want to thank you and the Secretary of the Air Force for sending him over to be the new JAG of the Air Force.

Senator Sessions said something too that was very important: Shame on us if we let the troops down, as far as funding, as far as support. This budget is robust and these are robust times, so I am completely supportive of what you are wanting to do.

I want to acknowledge something that has happened with my ranking member and my chairman, about a problem that I think we need to look at as to whether or not we are letting the troops down. The chairman has expressed concerns about a two-star general—I think it is General Geoffrey Miller—invoking his Article 31 rights when he was called to a courtmartial to testify in a case involving two enlisted personnel who are being accused of abusing prisoners through the use of military dogs.

I have been concerned about this for a very long time. General Miller was the former Deputy Commanding General for Detention Operations for Iraq. He was sent to the region I think at the request of General Sanchez to try to get a hand on the insurgency and get good intelligence. I can understand that.

Colonel Pappas was the commander of the prison, and there are two stories out there that cannot be reconciled in my opinion. One story is that Colonel Pappas was told by General Miller how to use the dogs in interrogation to get useful information. General Miller says he only mentioned the dogs in terms of perimeter security.

We have two enlisted people facing courtmartial. How that story is resolved matters, and the legal proceedings are going to go forward and it is up to the military legal system to handle these matters at that level. I think it is important for this committee, because General Miller came before our committee to testify, that we get to the bottom of what happened. Shame on us if we allow a story to go forward that is not true and the two dog handlers are paying the price.

I look forward to those hearings.

Chairman WARNER. Senator, I have indicated to you, in consultation with the ranking member, that this committee stands by to address that issue at such time as it is the judgment that we will not in any way interfere with the normal course of the Uniform Code of Military Justice (UCMJ) in addressing this question.

Senator GRAHAM. I want to congratulate both you and the ranking member for having that attitude. There will come a day. It is not now, but there will come a day.

Senator LEVIN. If the Senator would just yield so I could add my support for his point. The lack of accountability for those above the enlisted levels here has been stunning, unacceptable. The inconsistencies have been unacceptable. I commend Senator Graham and the chairman of the committee for their determination that there be some justice brought to bear here and that there not be an injustice perpetrated on enlisted personnel in any way in these courtmartials. They should have access to all the information which can help their case. That is what they are entitled to. That is what our system of justice is all about.

I just want to commend you, Senator Graham, and our chairman for the statements that you have made and, as the chairman knows, I am taking on a responsibility of conducting some additional factfinding also in this area. I think it is important for the reason you give, Senator.

Senator GRAHAM. Thank you both.

Now, Mr. Secretary, I have a lot of confidence in the legal system in the military, by the way, a tremendous amount of confidence. I want people who have heard my comments not to believe for a moment that I do not think these people will be treated well. We have good lawyers, we have good prosecutors, good defense attorneys, and we have fair-minded juries. But, we do need to get to the bottom of an inconsistency.

The growth of military health care. This is a great budget, but, Mr. Secretary, I want to compliment you on bringing reform to the table. These are not pleasant topics to talk about. I will soon one day, if I can get 3 more good years, be retired, and when I get to

60, if I ever live that long, I will be eligible for my Reserve retirement. I am sure that, of all the people you will pay as reservists, I will probably deserve it the least, but I am going to take it.

But, what I am willing to do as a reservist one day is to contribute a little bit more when it comes to my health care, because you are having to choose between health care premiums, guns, bullets, airplanes, and ships. The TRICARE system that our chairman helped design is a wonderful military health care delivery system. The Guard and Reserve now have an opportunity to be part of it. That is a long-overdue reform. I appreciate what we have been able to do together on that front.

To my colleagues who are worried about budgets, the premiums for those under-65 retired community have not changed since the inception of the program. The military health care budget is doubling every 10 years. It will be 12 percent of the entire military expenditure soon.

Mr. Secretary, Secretary England, and others have come over to my office, and I want to applaud you and thank you for putting on the table some new ways of looking at military health care and, quite frankly, some new choices.

Could you comment on what you think is necessary for us as an institution to get a handle on the growth of military health care?

Secretary RUMSFELD. Senator, thank you, and thank you for your personal interest and support in finding ways to see that the health care costs that are imposed on the budget are brought under control.

The facts you cited are correct. There is one other fact that is an interesting one and that is that currently the taxpayers are spending about $84 billion, if you look, for military health present and past, if you combine the amount that goes to the Treasury, the amount that goes to the VA, and the amount we are currently spending. That is an enormous sum of money.

We have a terrific health care system and we want to keep it. The only way we can keep it is to put it on a basis that is sustainable. The chairman has taken the lead in the Department, along with Dr. Chu, and, as you know well, has taken this matter to the members of the Joint Chiefs of Staff on a number of occasions, and they have unanimously supported the proposals that have been fashioned, which we believe are fair and equitable and will in fact put it on a sustainable basis.

Senator GRAHAM. I stand ready to help, and think big. One day maybe the VA should handle retiree health care and we should have a military health care footprint for the Active Forces. Think big.

Chairman WARNER. Thank you very much, Senator, for monitoring that and the number of personnel issues that you have taken a leadership role on, on behalf of the men and women and their families.

Senator Levin?

Senator LEVIN. Just a few questions because I know that 1 o'clock is soon here.

We have had some numbers that were given to us a few months ago as to the number of Iraqi army battalions, as to how they were rated, how many were rated at level one, how many at level two,

level one being operating independently, level two being able to take the lead with coalition support. What is the current number of level two Iraqi battalions if you could tell us, General?

General PACE. Sir, level two Iraqi battalions today are 60. For clarification, as a rifle battalion commander myself in 1983 to 1985, if I were to grade myself and my battalion on that scale, I would have been level two.

Senator LEVIN. And level one?

General PACE. Level one is one.

Senator LEVIN. Still one, okay.

In the New York Times a couple days ago there was a report that, while there is a decline in the number of attacks on coalition and Iraqi military units, that sectarian violence has risen sharply in recent months, particularly in mixed Sunni-Shiite neighborhoods, where people are being expelled from their homes or killed. According to the Iraq national security adviser and the chairman of the joint Iraqi-American committee planning for the transition to Iraqi military control—it also includes, this committee, our ambassador and General Casey—quote, according to now the Iraqi security adviser: "The Americans do not want to intervene in stopping sectarian violence."

What is our policy on that? Mr. Secretary, you can answer it, or General, whoever can tell us that.

Secretary RUMSFELD. I will start. Commanders on the ground have a great deal of discretion and the circumstance on the ground varies dramatically in different parts of Iraq. It requires making judgment calls. I would submit I doubt if there is an overall policy that is rigid because of the differing circumstances on the ground.

Needless to say, our commanders are concerned when there is violence and to the extent they can, they contribute to a situation where the violence does not exist.

I think that the people in that country have had arguments and difficulties and differences among tribes and militias for a great many years, and thinking that it is all suddenly going to end or that there is some way for a coalition set of forces to make it end I think is unlikely. I am impressed, however, that there have been people who have been predicting that there would be civil war and sectarian violence of a major nature and it has not happened. We have been very fortunate. The people have gone through this period, this political period, and made judgments that everyone would lose if that were to deteriorate into that circumstance.

We did have a policy in Afghanistan where we avoided using U.S. and coalition forces to go directly against warlords if they were engaged in various types of activities and solved it politically.

Senator LEVIN. I will just end with my thanks for your assurance on the Guard issue in terms of consultation and funding. I think that is important to all of us and all of our States, and your assurances are helpful in that regard. We thank you for them, General.

General PACE. To your last question, if I may, Senator, also just one additional point. That is, our commanders on the ground also strive to have the ISF and the Iraqi police deal with Iraqis on Iraqi problems. So although it is not a standing policy, as best we can, where the capacity exists, we prefer to have the Iraqis deal with it.

Senator LEVIN. Are those integrated Iraqi forces or are they mainly sectarian-dominated forces?

General PACE. Sir, they are getting better integrated. They are not as well integrated as they should be, and everyone in the Iraqi leadership understands and is vetting right now former Iraq, mostly Sunni, majors and below, to be able to get a better mix of Kurd, Shia, and Sunni inside the organizations.

Senator LEVIN. Thank you.

Secretary RUMSFELD. The Ministry of Defense (MOD) forces are much more integrated than the Ministry of the Interior (MOI) forces, because the MOI forces are for the most part recruited locally, the police and the like.

Chairman WARNER. Senator Lieberman.

Senator LIEBERMAN. Thanks very much, Mr. Chairman. One question and I do want to ask that, I have a statement on the budget generally, that it be included in the record.

Chairman WARNER. Without objection.

[The prepared statement of Senator Lieberman follows:]

PREPARED STATEMENT BY SENATOR JOSEPH I. LIEBERMAN

Good morning and thank you for attending. This hearing begins our examination of our Nation's military strategy for today and tomorrow and how well the budget request offers a defense program to support that strategy. I want to thank Senators Warner and Levin for holding this hearing which gives us the opportunity to ask questions about the 2007 defense budget, the Quadrennial Defense Review (QDR), and the continuing operations in Iraq. Our purpose must be to guarantee that the men and women of our armed services have the resources and support they need to protect the United States and the American people, who live in an all too dangerous world. Good morning to Secretary Rumsfeld, General Pace, and General Schoomaker. I appreciate all the hard work you have done to ensure our Nation's security.

I believe that 2006 is an extremely important year for our military. It is imperative that coalition forces make significant progress in securing and stabilizing Iraq. In order to do that, the military must receive the necessary support in both equipment and personnel to get the job done. We must also look forward in our planning with the assumption that our military will not return to a comfortable conventional warfare posture. Instead, we must be ready to defeat the kind of threats that have confronted us for the past 15 years. I am concerned that the decisions represented in the budget and the QDR do not adequately consider the extent and duration of operations to defeat these threats.

We must evaluate what defense programs will help us transition from a traditional fighting force into a military that can respond to nonconventional threats, as well as conventional ones, and sustain that response, for years if necessary. We must discuss many of these programs and where they fit into our future military.

Given the new strategic threat environment described in the QDR, I want to focus on the adequate size of land forces we need to meet these demands. Our soldiers in the Army are the most technologically advanced in the history of our Nation and this budget will help them become even more so. We are doing them a disservice if we do not make sure we have enough brigades to both deploy and support troop rotation for extended periods of time, and to be able to do so in more than one place, if necessary. We also must maintain the institutional Army—the training, support, and educational part of the Army that has made our combat units so successful. We cannot outsource these vital, core institutional functions and remain as good as we are.

The 2007 budget also calls for a reduction in the authorized end strength of the National Guard, which is a decision that seems to reflect the tight fiscal environment rather than the military's operational demands. I must ask the obvious, yet difficult question: if we are transitioning from a traditional force to a military more responsive to irregular and potentially catastrophic threats, then why have all the traditional weapons systems remained in the budget, in many cases receiving an increase in funding, while funding for personnel has been reduced?

I am also concerned about the size of our Navy, particularly in light of the aggressive development of submarines by other nations—such as China. If we wait until

2012 to increase our sub production to two a year, we will fall beneath the number of boats needed to satisfy the Navy's force structure requirement and to remain the world's dominant undersea warfare force in the future.

Although the QDR recognizes the need for increased long-range strike capability by 2018, I do not find any funding in the 2007 budget request for this. There continues to be a lot of money for short-range strike capability. Even if we start now, which we aren't, I doubt it is possible to field the land based bomber part of this capability by 2018 as the QDR calls for. That is 11 years from now, and we normally take 15 or more years to field such a program.

The bottom line is that I see critical discontinuities between the strategic threats outlined in the QDR, and the resource decisions allocated in the 2007 defense budget. Our military must continue to transform from a conventional to an irregular and conventional fighting force, and we must increase and shift our resources to achieve this goal. We are engaged in a "long war" against terrorism. It is imperative that our choices reflect that new strategic reality.

Senator LIEBERMAN. Thank you.

Mr. Secretary, we talked before about the money available and the possible efficiencies that can be obtained internally to free up some more funding for programs. I was pleased that the QDR recognizes the acquisition process, the procurement process, as a problem area, and uses the term it is hampered by "inefficient business practices," and agrees that there is a lack of confidence.

Senator McCain and I in the Airland Subcommittee focused on this in the last year or so, and the full committee has, too. In the QDR there is not a specific plan of action as to how to deal with this. I wanted first to say that I think it would be great if we could work executive/legislative together to see if we can really stretch to achieve some reforms in procurement as soon as possible, because, needless to say, the average acquisition time I think is now 15 years. That is from the conception to the development of a weapon system. That adds costs and means that we do not get the systems as soon as we could.

I wanted to just extend that hand to you, and also ask if you have any specific thoughts about what course of action we might take together to save some money on procurement.

Secretary RUMSFELD. Senator, it is a very big concern of ours in the Department. Gordon England, the deputy, is devoting a lot of his time to the subject. I would be happy to accept your invitation and work closely with you and your committee and Senator McCain.

Since 30 years ago, the time it takes in the procurement cycle, the acquisition cycle, has about doubled.

Senator LIEBERMAN. Yes.

Secretary RUMSFELD. During that period, Moore's Law has been at work and technologies have in fact every 18 months doubled their power and changed at a much more rapid pace. One would have thought just the opposite, instead of elongating the acquisition process. Time is money. It is hurting.

Partly, I think there was a pattern in terms of costs, a pattern of using lower costs in hopefulness. We came in and said, look, it has been consistently wrong, it has always been more, and we took some different cost accounting approaches and have been trying to use a higher level of cost which we hope would be more realistic. I think that is proving out.

Under Secretary of Defense Ken Krieg is working closely with the deputy and we will be happy to connect with you.

Senator LIEBERMAN. Excellent. Thank you very much. Thanks to you, and to you, General Pace, General Schoomaker, for your testimony and your service every day.

Chairman WARNER. Thank you very much.

Mr. Secretary, I am just going to ask a short question here. The JSF seems to have received strong support in the budget, which is very important. That is a key weapons system that we have expended a great deal of effort to bring about and it has the appearance of being an effective system.

We do take notice of the budget, which a decision has been made not to pursue a second engine. That has, understandably, raised concern among the eight nations that are partners in that program. Could you describe first the procedures that were followed in such consultation as was done with those partners, and your own views as to that decision?

I believe you are the first military-trained aviator ever to be Secretary of Defense. Would that be right?

Secretary RUMSFELD. You got me.

Chairman WARNER. I did a little research. I think you are.

Secretary RUMSFELD. Is that right?

Chairman WARNER. So, you are eminently qualified to answer to this question.

Secretary RUMSFELD. I am not so sure of that. I feel like a broken-down ex-Navy pilot, that is all.

Chairman WARNER. You are not broken down. We can recall you. [Laughter.]

Secretary RUMSFELD. The original plan had been to have a backup engine for the JSF and it was in the program. We have a wide number of partners, as your question suggested. The decision was made, and there has been extensive consultation with others. Some are very happy about it because it saves money, about $1.8 billion by discontinuing it. Others are not happy about it.

But, the senior leadership in the Department looked at it. They made a recommendation to me. I found it persuasive. The history suggests that we will be fine with a single engine as opposed to the engine with a backup and we are going forward on that basis. It has been true with other programs that a single engine has worked out, and to the extent there are difficulties you can manage your way through them.

It is the right decision and we appreciate the cooperation of all of our partners around the world who are participating in the JSF program.

Chairman WARNER. Mr. Secretary, we have just received that information here in the committee yesterday with the delivery of the budget. We have a responsibility, particularly because of the international aspects of that program, and particularly Great Britain, who has been our most steadfast partner in the Iraqi coalition forces. It is deserving of the careful attention by the committee, and I think you appreciate and understand that.

Secretary RUMSFELD. I appreciate that. My recollection is that U.K. industry is participating in other aspects of that program. Is that not right?

General PACE. Yes.

Secretary RUMSFELD. There are a couple of things, Mr. Chairman, if I could clarify.

Chairman WARNER. Yes, if you want to wrap up.

Secretary RUMSFELD. One involves the questions by Senator Reed that had to do with a possibility of a DOD IG looking into so-called ghost detainees. We have checked with the office and we are told that it is the CIA IG that is doing that and the Director of the Defense Intelligence Agency (DIA) will be meeting with Senator Reed this afternoon.

I want to say, I appreciate the previous exchange with Senator Graham on the question of accountability over the treatment of detainees, and I just want to make sure that the record is clear. There have been something like 251 individuals that have been held accountable for detainee mistreatment. There have been 87 courtmartials and 91 nonjudicial punishments. There has been extensive functioning of the UCMJ.

Chairman WARNER. He was particularly concerned—and you and I have been associated with the DOD for a very long time and I cannot recall a flag or a general officer invoking this privilege, which he has the right under the UCMJ. But it does bring to mind that the heart and the soul of the officer corps and the noncommissioned officers is something that is always entrusted to the current Secretary of Defense and the current Joint Chiefs, and particularly the Chairman. I discussed this issue privately with the Chairman yesterday and received assurances that the Department is going to look into this situation, as will this committee because this individual did testify under oath before the Committee of the Armed Services.

Lastly, the record should note that we all are mindful of what is taking place in the world today by reason of extraordinary protests occasioned by certain actions by the Danish media. Hopefully, that will not further spread. But should it occur in Iraq, it would be my expectation that the ISF would have the primary mission for such containment as the government of Iraq felt is necessary. Could you just give us that assurance?

Secretary RUMSFELD. That certainly would be one's first choice. The qualification to that of course is that there are locations where the ISF are in the lead and there are other locations where coalition forces are, and it would be really dependent on the circumstances on the ground. But to the extent that the MOI forces could handle it, that are located well across the country, that would be the preference.

Chairman WARNER. I certainly hope that is the case.

Senator LEVIN. Would the Secretary provide for the record the list of all of the actions which have been taken relative to detainee abuse cases? You gave us the total. If you could just give us for the record the names of the people who were involved in those, it would be helpful.

Secretary RUMSFELD. We will certainly do that.

[The information referred to follows:]

As of December 10, 2006, the 106 military members provided below were courtmartialed for detainee related offenses.

[Deleted.]

Chairman WARNER. Mr. Secretary and Chairman Pace and Chief of Staff of the Army, we have had a very fine hearing today, quite an important and constructive and indeed very courteous and respectful exchange of views and information here. I join all others on this committee in commending you for your leadership given to this great Nation, and particularly the men and women and their families of the Armed Forces.

This hearing is now concluded.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

BIOMETRICS

1. Senator WARNER. Secretary Rumsfeld, the effective employment of an integrated and coordinated biometrics system is a key component in efforts to track, locate, and detain terrorists in Iraq or anywhere in the world they seek to travel. I understand the Department is collecting biometric information from individuals detained in Iraq and from forensic investigations of improvised explosive device (IED) attacks. How is this information shared with relevant components within the Department?

Secretary RUMSFELD. The Department of Defense (DOD) Automated Biometric Identification System (ABIS) is the central DOD repository for detainee biometric data. ABIS also receives latent fingerprint files derived from forensic investigations through various sources. The ABIS is modeled after the highly successful Federal Bureau of Investigation (FBI) system, the Integrated Automated Fingerprint Identification System (IAFIS). Within the Department, ABIS shares match results with the original source and with relevant entities from the Intelligence Community (IC), detainee operations, and interagency partners.

All DOD match results on detainees, enemy combatants, and local (host nation or third country) employees are forwarded to the National Ground Intelligence Center (NGIC) in Charlottesville, Virginia, for processing, intelligence analysis, exploitation, and production. The results are made available via Biometric Intelligence Analysis Reports, which are posted to a classified Web site and e-mailed to intelligence consumers.

The NGIC Counter IED Targeting Program and Weapons Intelligence Teams (WIT) collect forensic evidence, including biometrics, on the battlefield. The WIT are trained in basic evidence collection and basic latent print collection, consistent with environmental and operational limitations. There are currently 13 teams deployed in Iraq. They have been active there since December 2004.

The NGIC augments the Combined Explosive Exploitation Cell-Iraq (CEXC-Iraq) to support IED forensic collection of latent finger prints and DNA from material that would not otherwise be collected or exploited. CEXC-Iraq has been active since December 2004 and is the most sophisticated forensics lab in the Iraqi theater of operations. The growing visibility and value of this program resulted in a similar capability being implemented in CEXC-Afghanistan in March 2006.

Latent prints and forensics evidence collected either by CEXC or WIT are sent to facilities in the United States for processing and matching. In-country personnel electronically submit the top 5 percent of latent prints to Certified Latent Print Examiners at the DOD Biometrics Fusion Center (BFC) in Clarksburg, West Virginia. Those prints are formatted, submitted, and stored in both ABIS and IAFIS. Results are submitted back to the NGIC, U.S. Central Command Intelligence, and several other agencies. The highest priority cases are completed within a day of their receipt by the BFC. The Department of Homeland Security (DHS) has access to DOD latent prints through IAFIS.

The remaining latent prints and physical evidence are packaged and physically shipped to the FBI Terrorist Explosive Device Analytical Center (TEDAC) in Quantico, Virginia. TEDAC forensically exploits physical evidence for additional latent prints as well as the entire suite of forensic evidence, such as DNA, hairs, fibers, etc. These remaining and additional latent prints are searched through the FBI's IAFIS and shared with the BFC for ABIS searching. Due to lengthy shipping times and manual transfer processes from IAFIS to ABIS, the process of obtaining a latent print identification from ABIS can take up to a month.

Finally, the BFC, in conjunction with the Naval Criminal Investigative Service, developed a pilot project for a forward deployed forensic collection lab. The facility became operational at Camp Fallujah, Iraq on January 28, 2006. It processes bio-

metric evidence, electronically formats it, and sends the fingerprints directly to latent experts at the DOD BFC for immediate processing. The evidence is then submitted to the DOD ABIS for matching. Over 100 latent prints have been received and processed using this new capability.

2. Senator WARNER. Secretary Rumsfeld, is the biometric data collected in theater connected to, or shared with, the Department of Justice (DOJ), the Department of State, and the DHS?

Secretary RUMSFELD. The DOD established the DOD ABIS in July 2004 as an automated means to share biometric information in the interagency environment. The ABIS is the DOD central repository of fingerprint data files on non-United States persons of interest and primary interface with the FBI IAFIS. As the preferred portal to interagency sharing of biometric information, ABIS normally receives persons of interest, including detainees, biometric data from theaters of operations worldwide the data is then entered into the database and an automated comparison is performed. Fingerprint file matches to candidate terrorists are then shared with the FBI Criminal Justice Information Services Division. Other U.S. Government entities then may access DOD match data through the FBI IAFIS.

In order to speed and automate the interagency data-sharing process and reduce the time delay between data collection and data sharing, representatives from the DOJ and DHS met with representatives from the DOD Executive Agent for Biometrics, the Office of the Assistant Secretary of Defense for Homeland Defense and the Deputy Assistant Secretary of Defense for Detainee Affairs to agree on the rapid exchange of fingerprint files on persons of interest from the DOD ABIS data base. By the end of February 2006 over 320,000 files had been shared with DOJ and DHS.

3. Senator WARNER. Secretary Rumsfeld, if a detainee were to escape from custody, would our current system of screening people prevent him from entering the country using a forged name?

Secretary RUMSFELD. The current watch list process that would stop such a scenario from happening is being refined. The DOD National Detainee Reporting Center (NDRC) submits all detainee information to include biometrics to the DOD Biometric Fusion Center, which in turn sends information to other U.S. Government intelligence agencies. NDRC also submits detainee information (excluding biometrics) to the Joint Intelligence Task Force for Combating Terrorism (JITF–CT). JITF–CT also has read-only access to the NDRC database on detainees in Iraq, which includes detainee status (e.g. in camp, released, repatriated, or escaped). Consistent with a Secretary of Defense directive, the JITF–CT passes certain information to the National Counterterrorism Center (NCTC), which prepares terrorist watch lists that are distributed throughout the government.

Through the State Department visa issuance process, a person applies through the State Department name check system (CLASS). In addition, the State Department utilizes fingerprints and the US-VISIT database (IDENT) for their Bio Visa and Border Crossing Card programs. US-VISIT obtains their database information from an extract provided by the FBI IAFIS.

4. Senator WARNER. Secretary Rumsfeld, what is the Department's policy on the development, integration, and use of biometrics technology?

Secretary RUMSFELD. DOD recognizes biometrics as a key enabling technology for combating asymmetric threats. All efforts to develop, integrate, and use biometrics are emphasized. Presently, considerable focus is being applied to institutionalizing the biometric capabilities of the DOD through programs and process development. Additionally, DOD is actively involved in national and international biometric standards bodies to ensure seamless integration of biometric capabilities with other information technology aspects of the Department. DOD serves as the U.S. Government lead for biometrics standards development through the National Science and Technology Council.

The global war on terrorism is redefining combat capabilities required for networks and data sharing boundaries. Specific activities the DOD has identified to incorporate the development, integration, and use of biometrics technology include credentialing, management of a person's privileges and entitlements, authentication of a person's identity, dynamic decisionmaking for authorization to access information, privacy protection, and forensic data collection and analysis.

DOD will also be assessing which biometric modalities, such as iris scans, voice prints, and facial recognition, to invest in to enable current and future mission success in the global war on terrorism.

5. Senator WARNER. Secretary Rumsfeld, what resources are included in the fiscal year 2007 budget to facilitate sharing of terrorist information with other departments as outlined by Homeland Security Presidential Directive?

Secretary RUMSFELD. The DOD continues to support in the fiscal year 2007 budget the DOD BFC in Clarksburg, West Virginia, the DOD Biometrics Management Office in Arlington, Virginia, the Program Manager, Biometrics at Fort Belvoir, Virginia, the NGIC in Charlottesville, Virginia, the DOD ABIS, the Biometric Automated Toolset, and the Biometric Identification System for Access. These resources all play a significant role in facilitating the sharing of terrorist biometric information.

QUESTIONS SUBMITTED BY SENATOR JOHN MCCAIN

EMERGENCY SUPPLEMENTAL SPENDING

6. Senator MCCAIN. Secretary Rumsfeld, a major issue in the congressional debate on funding continuing military operations and reconstruction in Iraq and Afghanistan is whether military and peacekeeping operations should be funded with supplemental requests or via the regular authorization and appropriation process. Last year, I urged you, as well as several of my colleagues on the Senate Armed Services Committee (SASC), to include the costs of current and future operations in Iraq and Afghanistan in the DOD's regular appropriations, arguing that these are now ongoing operations that should be planned for and funded in the annual defense budget. It is a responsibility, not a privilege, that the SASC exercises oversight in the normal authorization process at the beginning of the budget debate. During the last 2 years the SASC has provided for limited authorization in bridge supplemental requests in the defense authorization bill. The DOD assesses the incremental cost of Operation Iraqi Freedom (OIF) at approximately $4.4 billion a month and Operation Enduring Freedom (OEF) in Afghanistan at $800 million a month. As General Pace has appropriately stated in his testimony "[w]e are in a long war." Do you intend to use supplemental appropriations as the vehicle to fund this long war?

Secretary RUMSFELD. The President, not the Secretary of Defense, determines how to fund requirements such as DOD incremental costs for war. For fiscal year 2007, the President decided to include $50 billion in his budget request as an emergency allowance (estimated future emergency funding for the global war on terror) or bridge fund to finance the military war efforts through part of fiscal year 2007. Once fiscal year 2007 begins and the Department can estimate what its total fiscal year 2007 funding requirements for the war are likely to be, the President will decide how to finance these requirements. At that time, the President may decide how he will request war-related funding for fiscal year 2008.

ACQUISITION REFORM

7. Senator MCCAIN. Secretary Rumsfeld, according to the Quadrennial Defense Review (QDR), the DOD is focused on bringing capabilities to the joint force more rapidly, by fashioning a more effective acquisition system and associated set of processes. The Center for Strategic and International Studies (CSIS) provided two reports on "Beyond Goldwater-Nichols," referring to the 1986 legislation which reorganized the DOD into its current organization. In its reports, CSIS emphasized the need to include the combatant commanders (COCOMs) in the acquisition process. CSIS also made recommendations to increase the role of the Service Chiefs in the acquisition process as a means to increase Service responsibility into the system. How will the COCOMs be integrated into the requirements and budgeting process?

Secretary RUMSFELD. We recognize and value the importance of COCOM participation and influence in the Department's requirements and budgeting processes and are taking steps not only to strengthen existing means available for that participation but creating new ones as well. Central to this is a COCOM's Integrated Priority List (IPL). The IPL details a COCOM's highest priority requirements across functional lines and defines shortfalls in key programs. In the past, the IPL was a fiscally unconstrained list but now includes detailed capability trade-off recommendations to inform funding choices. Moreover, the Joint Forces Command (JFCOM) has assumed a more prominent and proactive role in rationalizing and integrating capabilities across all unified and specified commands.

The Joint Staff also sponsors periodic visits to the COCOMs to engage in direct discussions on requirements and budget issues. They have begun to expand the participation in these discussions to a much broader set of participants from Office of the Secretary of Defense (OSD) as well. Now, representatives from Program Anal-

ysis and Evaluation (PA&E), Comptroller, Policy and Acquisition, Technology and Logistics (AT&L) among others are there to discuss COCOMs' specific issues relating to programming, budgeting, and acquisition. Also, Senior Leadership Conferences are held throughout the year at junctures aligned with the budget process and provide COCOMs similar opportunities to participate directly in formulating programs and budgets.

8. Senator MCCAIN. General Schoomaker, the Service Chiefs already have influence over the requirements and budgeting processes. What are your thoughts regarding the increased role of Service Chiefs in the acquisition process?

General SCHOOMAKER. Under well-established public law, responsibility for the Headquarters, Department of the Army acquisition function resides solely in the Assistant Secretary of the Army for Acquisition, Logistics, and Technology, and the Department's acquisition process is ably executed by the dedicated Acquisition Corps professionals who work under his supervision. The Chief of Staff of the Army and other Army Staff principals have a crucial lead role with respect to certain closely related activities such as requirements generation and validation, resource allocation, testing, and determination of fielding priorities. While I always am receptive to exploring ways in which the Department can improve and streamline its processes, I am of the opinion that the Department is well-served by the current delineation of responsibilities.

9. Senator MCCAIN. Secretary Rumsfeld and General Pace, procurement reform will continue to be a priority for the SASC/Airland Subcommittee. A recent Government Accountability Office (GAO) report examined 20 Air Force and Army contracts and found that, over 4 years, $8+ billion was overpaid in incentive fees to defense contractors. Are the program offices receiving proper oversight from within the DOD?

Secretary RUMSFELD. The Department generally agreed with the report findings that the application of award and incentive fee arrangements needs improvement. We are looking to make those improvements. We are committed to reviewing our policy and oversight structures on Award and Incentive Fee Contracts and expect to issue a comprehensive update on the proper use of award and incentive fees by March 31, 2006. A key to proper use of award and incentive fees contracts is training of the acquisition workforce, and we will work with Defense Acquisition University to ensure this topic is included in the curriculum.

General PACE. Historically, some program officers have not received proper oversight within the DOD. I share your concern that the Department needs to more effectively use contract award and incentive fees as an enhancement tool for achieving desired acquisition outcomes. Oversight efforts need to be constantly reviewed and improved. The Under Secretary of Defense for Acquisition, Technology, and Logistics is formally addressing desired outcomes and the role award fees play in acquisition strategy via a policy memorandum in the coming months. I support Secretary Krieg's efforts to define the necessary oversight and the process for effectively administering contract management across the Department.

10. Senator MCCAIN. General Pace, reports have described the Boeing 767 tanker deal as the most corrupt acquisition deal in more than 35 years. A key finding in the Department of Defense Inspector General (DOD IG) report was that the Joint Requirements Oversight Council (JROC) process failed to recognize that an Air Force officer (LTC Lepanta) lied to the JROC (a $30 billion misrepresentation) on whether the tanker operational requirements document (ORD) was tailored to the Boeing 767. This officer's action makes a mockery of the joint requirements process and highlights the importance of the JROC process to be above reproach. What steps are you prepared to take to ensure that this does not happen again?

General PACE. When creating the Joint Capabilities Integration and Development System (JCIDS), we recognized the lack of an independent assessment on programs coming before the JROC. To address this shortfall, the Functional Capabilities Boards (FCBs) were created. The FCBs are co-chaired by a Joint Flag Officer and a senior representative from the OSD with a permanently assigned staff and representation from the Services, combatant commands, and OSD. The FCBs assess each program that comes before the JROC, providing an independent assessment and recommendation that identifies key issues for the JROC. This independent assessment process is helping us avoid future issues like those experienced with the tanker ORD. We are continually identifying ways to improve the effectiveness of the JCIDS/JROC process in making program decisions and will press ahead to implement changes as necessary.

11. Senator MCCAIN. General Pace, can you assure this committee that you will do everything possible to promote the ideal of integrity within the military and civilian members of the Department?

General PACE. I will do everything possible to promote the ideal of integrity with our military and civilian personnel. Integrity and ethics are fundamental tenets of our military, and you have my assurance that I will continue to promote these traits throughout our military.

SPECIFIC GUIDANCE FOR IMPLEMENTING THE MCCAIN AMENDMENT

12. Senator MCCAIN. Secretary Rumsfeld and General Pace, Deputy Secretary England has issued a high-level memo directing the implementation of the detainee legislation that became law this winter. This memo is less than a page in length, and merely restates the provisions—that the Army Field Manual (FM) shall become the uniform standard for interrogation, and that cruel, inhumane, and degrading treatment is barred. What specific guidance has been given to soldiers, military police, interrogators, translators, intelligence officers, medical personnel, etc. at Guantanamo and throughout Iraq and Afghanistan?

Secretary RUMSFELD. DOD Directive 3115.09, DOD Intelligence Interrogations, Detainee Debriefings, and Tactical Questioning, was issued on November 3, 2005. It consolidates and codifies existing departmental policies, including the requirement for humane treatment during all intelligence interrogations, detainee debriefings, or tactical questioning to gain intelligence from captured or detained personnel. It further assigns responsibilities for intelligence interrogations, detainee debriefings, tactical questioning, and supporting activities conducted by DOD personnel.

The U.S. Army Training and Doctrine Command has added additional blocks of instructions on the Geneva Conventions and Law of War to all programs of instruction. The U.S. Army Intelligence Center and School (USAICS) has updated their interrogation training program of instruction to ensure all training is in full compliance with the Army FM (FM 34–52) and emphasized legal, policy and regulatory requirements for human treatment of all detainees, as well as prohibitions against cruel, inhumane, and degrading treatment in the conduct of interrogation operations. USAICS' mobile training teams have deployed to provide reinforcement training to both deployed forces and "next deploying" units throughout the United States.

General PACE. The Deputy Secretary of Defense issued a memorandum on 30 December 2005 that addressed the McCain Amendment. First, this memorandum clearly reiterated the McCain Amendment provision that no person in the custody or control of the DOD or under detention in a DOD facility shall be subject to any treatment or interrogation approach or technique that is not authorized by and listed in the United States Army FM on Intelligence Interrogation. Second, this memorandum directed that U.S. Armed Forces in the war on terrorism had the continuing obligation to ensure that no person in the custody or under the control of the DOD, regardless of nationality or physical location, was subjected to cruel, inhuman, or degrading treatment.

13. Senator MCCAIN. Secretary Rumsfeld and General Pace, have these individuals received directives with instructions?

Secretary RUMSFELD. The Under Secretary of Defense issued DODD 3115.09, DOD Intelligence Interrogation, Detainee Debriefings, and Tactical Questioning on November 3, 2005. It consolidates and codifies existing departmental policies, including the requirement for humane treatment during all intelligence interrogations, detainee debriefings, or tactical questioning to gain intelligence from captured or detained personnel. It further assigns responsibilities for intelligence interrogations, detainee debriefings, tactical questioning, and supporting activities conducted by DOD personnel. USD(I) is also updating DODD 2310, the DOD Detainee Program. This directive revises policy and responsibilities within the DOD for a Detainee Program to ensure compliance with the laws and policies of the United States, the law of war, including the Geneva Convention of 1949. A memorandum on Medical Program Principles and Procedures for the Protection and Treatment of Detainees in the Custody of the Armed Forces of the United States was also issued. The memorandum reaffirmed the historic responsibility of all health care personnel of the Armed Forces (to include physicians, nurses, and all other medical personnel including contractor personnel) to protect and treat, in the context of a professional treatment relationship and established principles of medical practice, all detainees in the custody of the Armed Forces during armed conflict.

General PACE. The McCain amendment limited all interrogations to the Army FM on Intelligence Interrogation, currently embodied in FM 34–52, and prohibited the cruel, inhuman, and degrading treatment or punishment of detainees. FM 34–52 and DOD Directive 3115.09 provide sufficient guidance regarding detainee interrogations. The President's 7 February 2002 memorandum directed that all detainees in the war on terrorism be treated humanely. Accordingly, and consistent with the President's memorandum, U.S. forces shall continue to ensure that no person in the custody or under the control of the DOD, regardless of nationality or physical location, are subjected to cruel, inhuman, or degrading treatment or punishment.

14. Senator MCCAIN. Secretary Rumsfeld and General Pace, has the Department developed regulations to implement the legislation?

Secretary RUMSFELD. Army Regulation 350–1, Army Training and Leader Development, February 13, 2006, provides specific regulatory guidance concerning Law of War training and integration of detainee operations training into other appropriate training events.

General PACE. The McCain amendment limited all interrogations to the Army FM on Intelligence Interrogation, currently embodied in FM 34–52, and prohibited the cruel, inhuman, and degrading treatment or punishment of detainees: FM 34–52 and DOD Directive 3115.09 provide sufficient guidance regarding detainee interrogations. The President's 7 February 2002 memorandum directed that all detainees in the war on terrorism be treated humanely. Accordingly, and consistent with the President's memorandum, U.S. forces shall continue to ensure that no person in the custody or under the control of the DOD, regardless of nationality or physical location, are subjected to cruel, inhuman, or degrading treatment or punishment.

15. Senator MCCAIN. Secretary Rumsfeld and General Pace, how are the new rules being communicated down the chain of command?

Secretary RUMSFELD. The new rules are being communicated through the Directives, Army Regulations, and FMs. The U.S. Army Intelligence Center and School is also training commanders and leaders, plus soldiers, airmen, sailors, and marines on the new rules through mobile training teams. U.S. Army Training and Doctrine Command has added additional blocks of instructions on the Geneva Convention and Law of War to all programs of instruction. All interrogators conducting interrogation operations receive Geneva Convention training every 90 days.

General PACE. As noted previously, the Deputy Secretary of Defense issued a memorandum on 30 December 2005 that addressed the requirements of the McCain amendment. This memorandum was sent directly to all COCOMs for immediate implementation.

CRUEL, INHUMANE, AND DEGRADING TREATMENT

16. Senator MCCAIN. Secretary Rumsfeld and General Pace, in the Judiciary Committee last week, Attorney General Alberto Gonzales was asked whether the newly-passed prohibition on cruel, inhumane, and degrading treatment unconstitutionally interferes with the President's power as Commander in Chief. The Attorney General responded that he could not answer that question, because "we have not done that analysis." What is your current operative understanding of the law we passed?

Secretary RUMSFELD. DOD personnel are required to comply with the law. The Deputy Secretary of Defense issued a Department-wide memorandum on December 30, 2005, regarding the requirements of the Detainee Treatment Act of 2005. The Deputy Secretary noted that the President's February 7, 2002, direction that all persons detained by the U.S. Armed Forces in the war on terrorism shall be treated humanely remains in effect. He further directed that, consistent with the President's guidance, DOD shall continue to ensure that no person in the custody or under the physical control of the DOD, regardless of nationality or physical location, shall be subject to cruel, inhuman, or degrading treatment or punishment, as provided in U.S. law.

General PACE. No individual in the custody or under the physical control of the U.S. Armed Forces, regardless of nationality or physical location, shall be subject to cruel, inhuman, or degrading treatment or punishment. The term "cruel, inhuman, and degrading" treatment or punishment means the cruel, unusual, and inhuman treatment or punishment prohibited by the 5th, 8th, and 14th Amendments to the Constitution of the United States, as defined in the United States Reservations, Declarations, and Understandings to the United Nations Convention Against Torture and Other Forms of Cruel, Inhuman, or Degrading Treatment or Punishment done at New York, 10 December 1984.

17. Senator MCCAIN. Secretary Rumsfeld and General Pace, are DOD employees prohibited from engaging in cruel, inhumane, and degrading treatment in all cases, even if ordered otherwise—even if ordered otherwise by the President?

Secretary RUMSFELD. As I previously stated, DOD personnel are required to comply with the law. The President's February 7, 2002, direction regarding the humane treatment of detainees under DOD control is clear. The Deputy Secretary of Defense issued further guidance on December 30, 2005, that DOD personnel will comply with the requirements of the Detainee Treatment Act of 2005.

General PACE. The President's 7 February 2002 memorandum directed that all detainees in the war on terrorism be treated humanely. Accordingly, and consistent with the President's memorandum, U.S. forces shall continue to ensure that no person in the custody or under the control of the DOD, regardless of nationality or physical location, are subjected to cruel, inhuman, or degrading treatment or punishment. Comments regarding hypothetical questions concerning the authority of the President to issue orders are more appropriately addressed to the White House.

PRESIDENT'S SIGNING STATEMENT

18. Senator MCCAIN. Secretary Rumsfeld and General Pace, when the President signed the legislation, he issued a statement indicating that he would construe it "in a manner consistent with the constitutional authority of the President to supervise the unitary executive branch and as Commander in Chief and consistent with the constitutional limitations on the judicial power. . ." What does this mean for Department interrogation and detention operations?

Secretary RUMSFELD. The Deputy Secretary of Defense issued Department-wide guidance on December 30, 2005, concerning the requirements of the Detainee Treatment Act of 2005. The Deputy Secretary directed that pursuant to the act, "effective immediately, and until further notice, no person in the custody or under the effective control of the DOD or under detention in a DOD facility shall be subject to any treatment or interrogation approach or technique that is not authorized by and listed in United States Army FM 34–52, "Intelligence Interrogation," September 28, 1992.

General PACE. While I do not believe it is appropriate for me to speculate as to the President's intended meaning of his signing statement, I will emphatically state that interrogation and detention operations conducted by U.S. Armed Forces will strictly adhere to the requirements of the Detainee Treatment Act of 2005 and other laws that prohibit cruel, inhuman, and degrading treatment or punishment of persons under our custody or control.

19. Senator MCCAIN. Secretary Rumsfeld and General Pace, in your understanding, does this mean that the President could authorize an exemption to the legislative prohibitions?

Secretary RUMSFELD. The DOD is complying and will continue to comply with the requirements of the law, including the requirements of the Detainee Treatment Act of 2005.

General PACE. I do not believe it is appropriate for me to comment on the separation of powers issues that are raised by this question concerning whether the President could properly authorize an exemption to the Detainee Treatment Act of 2005. Again, I express my strongest commitment to you that the U.S. Armed Forces will adhere to the requirements of the Detainee Treatment Act of 2005 and other laws, regulations, and guidance that clearly prohibit cruel, inhuman, and degrading treatment or punishment of all persons under our custody and control.

20. Senator MCCAIN. Secretary Rumsfeld and General Pace, is there any circumstance in which a Department employee could legally engage in cruel, inhumane, or degrading treatment?

Secretary RUMSFELD. I am not aware of such a circumstance.

General PACE. It is my firm view that no member of the U.S. Armed Forces could lawfully engage in cruel, inhuman, or degrading treatment of persons under our custody or control.

MILLER TAKING FIFTH

21. Senator MCCAIN. General Pace, MAJ GEN Geoffrey Miller, who ran Guantanamo from October 2002 to March 2004 and helped set up operations at Abu Ghraib, has asserted his Fifth Amendment, Article 31 right against self-incrimination in two court martial cases involving the use of dogs during interrogations. I do

not contest General Miller's right under the Constitution, but would you agree that he also has a duty as an officer, especially a general officer, to take responsibility for his actions and orders?

General PACE. All officers, regardless of rank, must take responsibility for their actions. Similarly, all officers must be held accountable if their conduct does not meet expected standards. I expect all general officers to always give truthful answers, but that in no way obligates them to forego the rights afforded under the U.S. Constitution and the Uniform Code of Military Justice.

22. Senator MCCAIN. General Pace, do you believe, given everything we know now, only low-level personnel were responsible for detainee abuse at Abu Ghraib, Guantanamo Bay, in Afghanistan, and elsewhere?

General PACE. The U.S. military continues to treat allegations of abuse seriously, and the DOD has taken appropriate action against those found to have committed abuse against detainees. More than 466 criminal investigations have been conducted and more than 100 individuals have been held accountable for alleged detainee abuses.

END STRENGTH

23. Senator MCCAIN. General Pace and General Schoomaker, please rate the current levels of retention and recruitment for the total force. Have the Active and Reserve components met their goals for the year, and what is the outlook with regard to achieving future levels specified in the QDR?

General PACE. Recruitment and retention for the total force is presently on track. Across the board, our professional recruiters and retention experts are doing an outstanding job in assessing and retaining the forces we need to continue to be successful in the war on terrorism. Due to their great efforts and the support of Congress, we anticipate being able to meet the end strength levels specified in the QDR.

I am pleased to report that through February 2006 all Active Services have met or exceeded their recruitment goals. In fact, the Army has met or exceeded its goal for 9 consecutive months.

Our Reserve component recruiters, while extremely effective, have not shared the same level of success across the board. Four of six of these components are meeting or exceeding their goals, but we continue to experience some challenges with the Navy Reserve and Air National Guard. Although their recruiting production is lower than desired, this is mitigated by the fact that both of these components are at or near their prescribed end strengths for fiscal year 2006. With the continued support of Congress, we are aggressively working to meet recruiting goals in these areas. The Navy has recently transferred oversight of its Reserve component recruiting efforts to its Active component, and the Air National Guard is adding 100 new recruiters and is considering instituting a referral program similar to that of the Army National Guard (ARNG).

Retention is an area where the Services (both Active and Reserve) are experiencing success. All Active Services have exceeded their retention goals through the month of January. Additionally, through the first quarter, fiscal year 2006, the overall retention rates in the Reserve components are ahead of those of the same period in fiscal year 2005. We anticipate mission accomplishment in retention in both the Active and Reserve Forces in fiscal year 2006. This is mostly because the troops are proud of what they are doing. They feel good about the millions of free Afghan and Iraqi people and the opportunity to serve our country. They know what they are doing is important—they see it firsthand. This dedication and job satisfaction is exemplified in the 3rd Infantry Division, which recently returned from OIF, achieved 136 percent of their retention goals while in theater.

General SCHOOMAKER. The current recruiting and retention environment remains challenging. The Army is working to achieve all three components' fiscal year 2006 recruiting and retention goals. All three components have achieved their recruiting missions to date and are confident they will also meet their retention missions. Worldwide deployments and an improving economy directly affect recruiting and potentially affect retention. All components closely monitor leading indicators, including historic recruiting and reenlistment rates, retirement trends, first-term attrition, and DOD and Army attitudinal surveys across both areas to ensure we achieve total success. Moreover, all components are employing positive levers including increased enlistment bonuses, force stabilization policy initiatives, updates to the reenlistment bonus program, targeted specialty pays, and policy updates to positively influence the Army's recruiting and retention programs. These efforts will continue to be a

challenge and the Army continues to reshape its resourcing priorities to meet that challenge.

Given current success in meeting retention and recruiting goals and the availability of policies and tools to enhance continued success, we believe that the Army is well-positioned to achieve its target fiscal year 2011 QDR strengths.

24. Senator MCCAIN. General Pace and General Schoomaker, what are your greatest recruitment and retention problems and how do you intend to resolve them?

General PACE. Superbly trained, well-equipped, and highly dedicated Americans have always been our Nation's ultimate advantage. Our ability to assess and retain these outstanding servicemembers is vital to our success in the long war. I am pleased to report that we are currently enjoying success in both recruiting and retention in the Active and Reserve components. However, we also understand that we cannot be satisfied today at the expense of tomorrow, so we will continue to closely monitor the progress of all recruiting and retention programs and are poised to meet challenges as they occur.

Our primary concern is to ensure the Active Army is able to maintain the momentum that it has established in achieving recruiting objectives for the past 8 months. We are cautiously optimistic and are preparing now for the summer months because continued success will take a lot of hard work and effort, especially in today's challenging market. We are grateful for the tools that Congress has provided to us (such as increased recruiting bonuses and raising the maximum enlistment age) because they are proving to be valuable to our recruiting and retention efforts. However, these tools can carry us only so far. To compete with an improving economy, in an era when the main influencers of our youth (parents, teachers, etc.) are not inclined to recommend military service, it will take the entire Department and our Nation's senior leaders pulling together collectively to ensure the American people understand and appreciate the critical importance of service to our Nation.

General SCHOOMAKER. The current recruiting environment remains a challenge. The global war on terror and a strengthening economy continue to impact military recruiting. Increased private-sector competition, an upward trend in those pursuing higher education, and negative trends in centers of influence recommending military service are contributing to an erosion of recruiter productivity and could create significant challenges in fiscal year 2006 and beyond. With congressional assistance, the Army is aggressively adjusting its resources to meet these challenges. The key issue remains to attract high quality men and women to serve as soldiers and meet future manning requirements. We are working to overcome the market effects of increased alternatives to youth and a decreasing propensity to enlist, by increasing incentives, developing new programs, and reducing attrition. We must remember that this is not an Army issue alone, but a national issue.

In fiscal year 2006, the Active Army retention mission is 64,200. We are ahead of last year's pace. We remain confident that we will achieve all assigned retention goals. Thus far, the Active Army has achieved 108 percent of the year-to-date mission, while the Army Reserve has achieved 96 percent of the year-to-date mission, and the ARNG has achieved 103 percent of their year-to-date mission.

25. Senator MCCAIN. General Pace and General Schoomaker, the QDR reduces the authorized level of Army Guard and Reserve from 350,000 to 333,000—a 17,000 man reduction. Why would we reduce this authorization while we are engaged in operations in Afghanistan and Iraq, both of which require significant levels of Army and Reserve personnel?

General PACE. The President's budget submission reduces the force size to 333,000 because the Army believes that it can retain and recruit to this amount. If the Army Guard/Reserve recruit/retains to above 333,000, the Service will have the authorization for the increase and will fund the increase in the Army budget. Through its modularization efforts, the Army is not reducing the size of the ARNG. In fact, the total number of brigades will remain at 106. The plan is that the Army has to be able to provide 28 fully-manned, fully-trained, fully-equipped brigade combat teams (BTCs) in the National Guard, which will be a huge improvement over where we were several years ago when we had 15 of what were called "enhanced brigades."

General SCHOOMAKER. Army is not reducing the size of the ARNG; the total number of brigades remains at 106. The Army will fund the ARNG up to its authorized end strength of 350,000. Prior to the 2005 QDR, the Army had developed a plan for 34 combat brigades and 72 support brigades in the ARNG and 43 combat brigades and 75 support brigades in the Active component. This provided up to 20 combat brigades for steady state operations. The QDR showed a lower requirement for combat brigades but a greater requirement for brigades able to respond more imme-

diately to meet homeland defense/civil support. Therefore, we elected to increase the ARNG domestic capability by rebalancing six BCTs and one Combat Aviation Brigade to seven support brigades—four multi-functional brigades and three engineer brigades. These seven brigades provide engineer, communications, transportation, logistical, chemical, and medical capabilities critical to homeland defense and civil support.

26. Senator MCCAIN. General Pace and General Schoomaker, should we not be seeking to increase these authorizations, as well as taking other steps that would increase Army end strength?

General PACE. Thanks to you and the other members of this committee and the support of Congress, the authorized temporary increases already approved for the Army and Marine Corps will ensure we have adequate end strength to meet the needs of the Nation.

General SCHOOMAKER. The Army is building the Active component force structure under a 30,000 temporary end strength increase above the 482,400 program. Under the Secretary of the Army's End Strength Plan, the operational force will undergo transformation while at the same time deploying to meeting force commitments. Additionally, the institutional force will undergo restructuring between fiscal year 2007 and fiscal year 2011. Therefore, the temporary end strength increase is required to ensure effective capabilities are provided as the Army transforms both its operational and institutional force structure.

27. Senator MCCAIN. General Schoomaker, please explain why the Army has utilized stop-loss on more than 50,000 soldiers while simultaneously planning to draw down the Reserve component by 17,000 soldiers.

General SCHOOMAKER. Stop-loss policy is not about numbers but is a temporary measure that does not permanently affect the Army end strength. It has not been a planning element in determining potential cuts in authorized troop strength for the Active Army or the Reserve components. We have consistently stated since the onset of the global war on terror that the Army focus, indeed the charge, of Army deployments is to deliver to the COCOM trained and ready units, not individuals. Random and continuing unit losses caused by individually oriented separation, retirement, and replacement policies have the potential to adversely impact training, cohesion, stability, and readiness in the deploying units. Stop-loss is a means that effectively sustains a force, which has trained together, to remain a cohesive element throughout the unit's deployment. Our commitment to pursue the global war on terror and provide our warfighters with the cohesive, trained, and ready forces necessary to decisively defeat the enemy, requires us to continue the Army's stop-loss program to attain the above goals. Consequently, any proposal to reduce Reserve component end strength or reduce the Reserve component participation in Operations Iraqi and Enduring Freedom will not in and of itself determine the level of stop-loss we will need to honor our contract with the American people to fight and win our Nation's wars.

The size of future troop rotations will in large measure determine the levels of stop-loss needed. Army leadership fully understands that by executing stop-loss, the policy has, to some degree, disrupted the lives of soldiers and their families. To minimize the impact of stop-loss on our soldiers, the program only affects soldiers assigned at the unit's mobilization/deployment date minus 90 days, continues through the demobilization/redeployment date, plus a maximum of 90 days. Consequently, since reaching large scale application, the average monthly number of soldiers affected by stop-loss is approximately 13,000. It is also noted that many of the soldiers who were initially retained beyond their stop-loss obligation have voluntarily elected to remain in the military and reenlisted or extended. While it is not palatable to some, our ability to retain these fine soldiers and their expertise is contributing immeasurably to our continued success in the war on terror.

IRAQ

28. Senator MCCAIN. Secretary Rumsfeld, General Pace, and General Schoomaker, to build a truly national Iraqi army, I believe it is necessary to build units of mixed ethnicities and religions (Shia, Sunni, Kurds)—not simply an army comprising homogenous units. How far have we gone toward the goal of building mixed units so far, and what steps are we taking to accelerate it?

Secretary RUMSFELD, General PACE, and General SCHOOMAKER. We agree it is important to build Iraqi units that are representative of the diverse ethnic and religious fabric of Iraq. In order to achieve this, the Ministry of Defense (MOD) is mak-

ing a focused effort to recruit personnel from across the spectrum of Iraqi society, in accordance with the new Iraqi constitution that guarantees equal opportunities for all Iraqis. Mobile recruiting missions focused in areas such as the Euphrates River Valley have mitigated a lack of recruiting centers in largely Sunni areas. It is important to note that although these efforts are ensuring that current recruiting efforts are aimed at creating a representative force, this does not mean that all units are fully representative of the national ethnic composition. Indeed, some cross-leveling is being done, but it is not practical to achieve uniform balance across all 10 divisions at this time. Iraq's limited banking system requires soldiers to take their money home each month. The longer distances soldiers must travel increases unit attrition. We are mindful of this as we cross-level these soldiers. MOD policy strictly prohibits unit commanders from hiring their own personnel and clearly requires enlisted and commissioned personnel to attend national training schools to receive certification of their rank and duty specialty.

29. Senator MCCAIN. Secretary Rumsfeld, General Pace, and General Schoomaker, why does the Department persist in rotating senior officers in and out of Iraq, even after they have gained hard-won experience and expertise during their time there?

Secretary RUMSFELD and General PACE. Senior leader continuity and combat proven experience are two significant factors that are considered in virtually every decision made with regard to the rotation of personnel. In some cases, these factors are sometimes mitigated with the inherent advantage of having commanders deploy with the units they have trained and led; thereby knowing their capabilities to a far greater degree. We keep our senior leaders in Iraq for a relatively long period of time. Recently, General Casey's tour in Iraq was extended as well as General Abizaid's as Commander, U.S. Central Command (CENTCOM). LTG Chiraelli has returned to Iraq as a corps commander, and LtGen Odierno will also be returning after serving a tour as my Assistant Chairman of the Joint Chiefs of Staff.

General SCHOOMAKER. Leaders train with their units for combat and deploy with those same units. The 12 months (sometimes more) spent in combat are preceded by a proportionate amount of time preparing the unit and followed by a proportionate amount of time refitting the unit for its next mission/deployment. This 24–36 month process must be viewed in relation to the 12-month combat tour. The positive effectiveness, cohesion, and morale of our units are the direct result of this process. Our most senior leaders (three- and four-stars) are routinely spending more than 12 months and are often capitalizing on their experiences from a previous tour. We routinely consult with General Abizaid to ensure he has the senior leaders he requires to achieve mission success.

30. Senator MCCAIN. Secretary Rumsfeld, General Pace, and General Schoomaker, the Department continues to assert that there will likely be significant U.S. troop withdrawals in 2006. Given that there appears to be no drop in the violence plaguing that country, why would we continue to make that assertion?

Secretary RUMSFELD, General PACE, and General SCHOOMAKER. There are several reasons why we are optimistic about U.S. troop withdrawals in 2006. The first is the substantial progress being made in the operational capability of Iraqi security forces (ISF). The President of the United States recently authorized an adjustment to the U.S. force posture in Iraq, decreasing the number of combat brigades from 17 to 15, a reduction of about 7,000 troops. This decision was based on several indicators of progress but primarily on the growing capability of the ISF. The number of Iraqi units able to take the lead in counterinsurgency operations continues to increase. Forty-three Iraqi army battalions now control their own battle space. Second, reductions in coalition forces are based on the conditions unique to their specific area of operation. The majority of attacks occur in only 4 of the 18 provinces. Multi-National Force-Iraq assessments determine when areas are ready for security transition. Third, reducing our visible military presence may diminish the perception of occupation that many Iraqis hold. This may remove some of the motivation behind the continuing violence and popular support for the insurgency.

31. Senator MCCAIN. Secretary Rumsfeld, General Pace, and General Schoomaker, why would we not combine the growing size of the Iraqi National Army with coalition forces to combat the violence, working to make it subside, and only then look at possibly reducing our presence?

Secretary RUMSFELD. Iraqis are taking control of security for their country. They have asked us to assist them in securing Iraq and training and equipping their forces.

In some places, the Iraqi National Army is already capable of taking responsibility for its own battlespace. Other locations require the combined efforts of coali-

tion and ISF. As Iraqi units assume greater responsibilities, our commanders assess whether our forces are needed for other missions or whether they may return home.

General PACE and General SCHOOMAKER. We are conducting combined Iraqi Army and Coalition operations to combat the enemy. Since October 2005, over 50 percent of all combat operations conducted in Iraq have been combined. Enemy activity is mainly occurring in 4 of Iraq's 18 provinces. We conduct the majority of our operations to neutralize the insurgency in these areas. However, an increase in total number of combat forces will not directly translate into a reduction of violence or cause the insurgency to subside. In the areas where the levels of violence are negligible, we are reducing our presence without having an adverse effect on security and stability. These small reductions of our military presence may reduce the feelings of occupation that some Iraqis have, and thus remove the motivation for some of the Iraqis to continue the violence in their areas.

32. Senator MCCAIN. Secretary Rumsfeld, General Pace, and General Schoomaker, there have been reports that large numbers of Iraqi troops are deserting and that there is corruption among the troops. In one report, only half of an entire unit was actually present in an operation. In some places, Iraqi troops have gotten caught with bomb-making materials or allowed insurgents to attack U.S. convoys by looking the other way. These activities are fueling distrust for Iraqi soldiers. What is being done to fix these problems and how do we ensure that it will not happen in the future?

Secretary RUMSFELD. I have not heard reports of large-scale desertion among the ISF. We do observe low levels of absenteeism. General Pace and General Schoomaker are in a better position to discuss how we track the rate of absenteeism and the response to ISF absentees.

In general, our confidence in the ISF is increasing as the ISF become more capable of taking responsibility for Iraq's security. Nevertheless, fighting insurgent penetration and corruption will be a long-term effort. Coalition forces already partner with ISF units to provide expertise and leadership training. As these efforts continue at the unit level, it is also important that Iraq develop institutions capable of vetting and managing their security forces. We will continue to assist the Iraqi government in building effective Interior and Defense ministries to maintain loyal, professional forces that do not tolerate corruption.

General PACE and General SCHOOMAKER. I am not being told that large numbers of Iraqi army troops are in fact deserting. Absenteeism in the Iraqi military is dependent upon where a unit falls in its training and employment life cycle. During individual and collective training, some recruits determine that the life of a soldier is not for them and leave, while others fail to meet training course standards and are dismissed. Approximately 15 percent attrition is the norm for initial training. When a unit is fully trained and employed in combat operations, some soldiers find that they do not like the particular location, or they find that the danger of the counterinsurgency is too much for them. In either event, Iraqi army policy is that soldiers who leave are dropped from the rolls within a week and are prohibited from ever rejoining the ISF. What remains is a unit that is confident in its leaders and in its ability to fight. Although deployments to combat sometimes cause absentee spikes of 5–8 percent, soldiers in units in this final stage of development are unlikely to leave the service; absent without leave (AWOL) rates are typically about 1–4 percent for most divisions. As more and more ISF are generated, absenteeism has become less of a problem. Unit corruption is mitigated through the daily interaction provided by Coalition Military Transition Teams (MiTTs) embedded with every Iraqi battalion, brigade, and division, as well as partnership with coalition units. The MiTTs and partnership programs provide mentorship and expertise critical for development of Iraqi leadership that adheres to the rule of law and does not tolerate corruption in its ranks.

33. Senator MCCAIN. Secretary Rumsfeld, General Pace, and General Schoomaker, how is this going to affect transfer of command to the Iraqis and how do we guarantee that once the transfer occurs, they will be able to prevent corruption themselves?

Secretary RUMSFELD. In addition to training and equipping the ISF, we are working with the Iraqi government to build Defense and Interior ministries capable of taking responsibility for the substantial security forces now being created. Part of that responsibility involves investigating reports of corruption and taking appropriate steps to correct any problems that may be found. We and our coalition partners cannot guarantee an end to corruption, but we will continue to work with the Iraqis to develop the institutions capable of fighting corruption.

General PACE and General SCHOOMAKER. Unit absenteeism and corruption are not affecting the transfer of battle space responsibility to the Iraqi army. Forty-three Iraqi army battalions now control their own battle space. Generating operational units that can assume battle space is only part of the challenge facing the Iraqi MOD; it must also develop the ability to operate and sustain Iraqi forces independently. Efforts to build such capabilities within the MOD have been hampered by assassination or intimidation of employees, corruption, and the relative inexperience of key civilian leaders. In the face of such challenges, the MOD needs to strengthen its capabilities across the board—in areas such as payroll, material readiness, contracting, and construction. Multi-National Security Transition Command-Iraq is now expanding upon previous efforts to help the MOD implement the processes that will allow the ministry to sustain and support its fielded forces.

34. Senator MCCAIN. General Schoomaker, I understand there are small soldier-teams supervising and training Iraqi forces. What feedback do you have from them regarding the capabilities of Iraqi troops?

General SCHOOMAKER. Yes, there are military and police transition teams which focus on training, coaching, and mentoring the Iraqi MOD forces and the Iraqi MOI police forces. Feedback from the teams has been very positive. While challenges exist based on the rapid growth and deployment of these forces, the Iraqis have performed remarkably well in combat operations. There are numerous reports of successes in combat and counterinsurgency operations to capture key targets and terrorists including members of the leadership of Abu Al Zarqawi's al Qaeda in Iraq organization. Well planned and executed Iraqi-led raids have significantly contributed to the counterinsurgency fight. The Iraqi National Police have also undertaken numerous successful hostage rescue operations.

The Transition Team Headquarters elements report work remains to be done fostering improvements in the Iraqi MOD and MOI forces. The main effort continues on sustaining operations on a long-term basis. The MOI forces must also transition from military and counterinsurgency to civil law enforcement operations. Efforts must continue with the focus on leadership training of junior officers and the generation and training of noncommissioned officers. Training must continue with Iraqi forces emphasizing military and civil operations conducted in accordance with the appropriate rules of law.

35. Senator MCCAIN. General Schoomaker, how would you rate the success of these teams?

General SCHOOMAKER. The military and police transition teams have been the major factor improving the readiness and capabilities of ISF over the last 2 years. These improvements have transformed many Iraqi units from untrained forces into combat-capable units which are fighting and winning the counterinsurgency battle. The majority of units are able to perform operations alongside coalition forces. There are also a growing number of units capable of planning and conducting combat and counterinsurgency operations with limited or no coalition support. Efforts continue with the goal of moving the Iraqi forces toward more independent operations.

These transition teams must continue to expand on their successes to develop cohesive forces which can sustain themselves independently in combat, counter-insurgency, and civil policing operations.

COST OF OPERATIONS IN WAR ON TERROR

36. Senator MCCAIN. Secretary Rumsfeld, since September 11, the Congressional Research Service (CRS) estimates that the administration has allocated more than $360 billion for military operations and reconstruction in Iraq and Afghanistan, a number that includes "emergency" and "bridge" funding. DOD's currently spending about $7 billion per month in Iraq and Afghanistan. DOD has not provided an overall explanation of the administration of these funds by specific operation or by mission. Last year, the GAO found that DOD had "lost visibility" on more than $7 billion appropriated for the war on terror. Furthermore, it is clear that regular budget and war-related spending are not properly segregated. It would be an understatement to say that Congress's visibility into war spending has been obscured. How will you ensure accurate and transparent accounting in the future?

Secretary RUMSFELD. The DOD has a comprehensive and detailed cost reporting system that reports obligations by operation, by component, by month, and by fiscal year. The system is managed by the Defense Finance and Accounting Service (DFAS) and generates reports monthly.

The reporting system has captured the DOD costs of the war on terrorism going back to September 11, 2001, separately showing what was spent in Operation Iraqi Freedom, Operation Enduring Freedom (mostly Afghanistan), and Operation Noble Eagle to defend the United States. These costs are collected from DOD locations worldwide. Costs are structured in a commodity and functional categorization breakdown enabling insight into the activities being supported. Examples of the cost categories include: Reserve component mobilization, special pays, aircraft and vehicle procurement, etc.

The cost information is reported routinely to Congress, the GAO, the CBO, and the OMB.

There are ongoing efforts inside the Department to refine the systems and categories that we are using to track the cost of war. The GAO staff is aware that the Services are implementing improvements in the reporting of costs. We are committed to financial stewardship and are working tirelessly to perfect that task.

AFGHANISTAN

37. Senator MCCAIN. General Pace and General Schoomaker, there has been a spike in violence in Afghanistan in recent months, with insurgents there applying lessons learned from Iraq. What new steps are we taking to combat this threat?

General PACE and General SCHOOMAKER. Yes, there has been an increase in the use of IEDs and suicide bombers in Afghanistan. This trend may be attributable to a variety of reasons. First, coalition forces have had success in killing insurgents that fight with other weapons and methods. Second, IED and suicide attacks appear to demonstrate relevancy and momentum to the insurgency support network. For a low financial and manpower investment, anti-coalition forces use IEDs and suicide attacks to achieve highly visible, widely reported effects. Third, a very mild Afghan winter may be allowing greater activity than in past years.

Steps we are taking to combat these threats include:

- Creating the Joint IED Defeat organization that is focusing our counter-IED efforts in Afghanistan and Iraq. [Deleted.]
- Active patrolling of the border areas and interdiction of enablers coming from Pakistan.
- Engagement with Pakistan to increase pressure on the Pakistan side of the border. President Karzai's recent visit with President Musharraf included provision of information on Taliban operatives in Pakistan.
- Leveraging a tri-partite structure (U.S.-Afghanistan-Pakistan) to facilitate IED working group exchanges.
- Information operations to expose the atrocities against the Afghan people and encourage popular rejection of the insurgents. We are seeing an increase in IED reporting by locals and public pronouncements by mullahs and local leaders against the IED and suicide tactics.

[Deleted.]

FUTURE COMBAT SYSTEMS

38. Senator MCCAIN. General Pace and General Schoomaker, the DOD's Selected Acquisition Report (SAR), dated November 15, 2005, revised the Future Combat Systems (FCS) program costs from $98.9 billion to $161.4 billion. This increase is due to a "program restructure" and adds 4 years to the development schedule. Many of the technologies required to field FCS are not yet mature and I fully expect requirements creep to add more dollar signs to the program. What is the Army doing to rein in the runaway cost of this program?

General PACE. You are correct that program restructuring (in 2004) resulted in the November 2005 adjustment to the Acquisition Program Baseline. That change actually accelerated the delivery of selected FCS capabilities to our forces in "spin-outs" planned every 2 years from 2010–2014. The restructure also restored 4 deferred systems to the planned 18 core systems, delaying the first full FCS brigade by the 4 years as you indicated in your question. The growth in FCS program costs is directly attributable to the programmatic changes in the 2004 restructure and is not classified as a cost overrun as reviewed by the Department.

The JROC has reviewed the FCS program's ORD every year since May 2003. The result of all this activity validates that FCS Operational Requirements are stable, while refining the level of detail to assist the program as it translates requirements into engineering-level specifications. Of note, the program is presently undergoing a JROC review and the FCS program has added the congressionally-mandated key performance parameters for force protection and survivability.

The FCS program restructure took into consideration the maturity of critical technology development. Those technologies deemed mature were grouped into FCS Spin-Out 1, to be delivered in 2010. In total, the FCS program is tracking 49 critical technologies and is on schedule to mature all technologies by the System-of-Systems Preliminary Design Review scheduled for August 2008. The current FCS program has adequate risk management measures in place, and the technology development approach is consistent with DOD acquisition policy.

General SCHOOMAKER. The cost growth was directly attributable to the programmatic nature of the 2004 restructure decision. Most of the growth (except the "Revised/Updated Estimates") was externally driven and not within the PM's control. It was not classified as a cost overrun as reviewed by the OSD.

Acquisition programs are required to estimate their costs in base-year or constant dollars. Many individuals not associated with the program have misunderstood the comparative cost growth and the cost estimate conversion factors between the December 2004 SAR and the recently submitted November 2005 SAR.

By law, the FCS program submits its SAR annually (February). The recently submitted SAR was a quarterly exception SAR to comply with reporting requirements of 10 U.S.C., §2432. The reporting requirement was directed by the Office of the Secretary of Defense for Acquisition and Technology (OSD/AT&L) with concurrence from the Army on October 21, 2005. The December 2004 SAR discussed in text, the restructured FCS program, but the actual cost and schedule parameters were not changed because an approved Acquisition Program Baseline (APB) reflecting the restructured program had not yet been approved by the Milestone Decision Authority (reflected 2003 Milestone B Decision baseline data). This guidance from OSD was also noted in the December 2004 SAR. The current APB on which the 2005 SAR is based was approved by the Defense Acquisition Executive on November 2, 2005.

Cost growth occurs when a funded, definitized scope of work increases. Increases to costs can also occur when scope is added to provide more capability. The FCS program increases predominantly fell into the latter category. The program restructuring restored four deferred systems to the current 18 core systems and accelerated the delivery of selected FCS capabilities to the Current Force (spin outs), while delaying the first full FCS brigade by 4 years. The adding of capability resulted in RDTE growth of 48 percent (based on fiscal year 2003 constant dollars (C$)) broken down as follows:

- Previously Deferred Systems - 18 percent,
- Additional Technology/Reliability Maturation & Experimentation - 6 percent,
- Spin Out Requirements - 4 percent,
- Program Extension - 17 percent, and
- Revised/Updated Estimates - 3 percent.

Similarly, the procurement estimates also increased by 55 percent (based on fiscal year 2003 C$) as a result of the program restructuring as follows:

- Previously Deferred Systems - 18 percent,
- Platform Qty Adjustments - 17 percent,
- Platforms Content (Capability Enhancement, e.g. APS on all) - 11 percent,
- Updated Estimates - 7 percent, and
- Extended Production (1.5 vs. 2 BCTs per year) - 2 percent.

39. Senator MCCAIN. General Pace and General Schoomaker, has the FCS program made changes to reflect lessons learned in Iraq and Afghanistan?

General PACE. Yes, the FCS program has evolved to reflect lessons learned in Iraq and Afghanistan. In fact, the FCS program restructure in November 2005 was, in part, brought about because of the desire to get better technology into the hands of our forces engaged in the current fight.

The first FCS Spin-Out will field four different systems to the current force formations that, based on our experiences in Iraq and Afghanistan, will greatly enhance the combat effectiveness and force protection of our military. Those fielded systems include two different versions of unattended ground sensors and a non-line-of-sight launch system. In addition, FCS will deliver an intelligent munitions system that is compliant with the 2004 national land mine policy.

General SCHOOMAKER. Lessons learned in Iraq and Afghanistan are incorporated in the development of the FCS BCT. The most important lesson learned from Afghanistan and Iraq was the need to get emerging technology into the hands of our soldiers sooner and the Army is accomplishing this through the FCS Spin-Out Program. The program will spin-out unmanned systems, precision munitions, emerging network capabilities, and other technologies to support the force. Additionally, les-

sons from our Heavy and Stryker BCTs in Afghanistan and Iraq validated the requirement for a rapidly deployable, expeditionary force with a full spectrum capability, which the FCS BCT provides. These operations reinforce the criticality of: unmanned systems, like the PackBot and Unmanned Aerial Vehicles, to increase soldier survivability; improved countermine capabilities to counter IEDs; Active Protection Systems (APS) to counter a wide variety of threats including rocket propelled grenades; reconnaissance at all levels of command within the BCT; and a fully integrated network to provide increased battlefield awareness down to the platoon level.

40. Senator MCCAIN. General Schoomaker, the Department states that it is "refocusing America's forces and capabilities for the future," and that it must transition "from major conventional combat campaigns to multiple irregular warfare operations." How does FCS contribute to conducting irregular warfare operations?

General SCHOOMAKER. Irregular warfare is the broad spectrum of operations and activities conducted by military or paramilitary forces. It is normally of long duration, against adversaries who deliberately seek to avoid accepted rules in the conduct of war. It includes, but is not limited to, unconventional warfare, guerrilla warfare, counter-guerrilla warfare, subversion, sabotage, intelligence activities, and unconventional assisted recovery and normally requires the support of the population. FCS BCTs are optimally configured for irregular warfare where information is the premium asset. FCS BCTs provide the capability to conduct distributed operations to keep the enemy dispersed and unable to connect with population, monitor vast territory with aerial and ground sensors to deny irregular forces freedom of movement, employ distributed precision to minimize damage and limit support, employ unmanned air and ground sensors to increase soldier survivability and protect the force from ambushes and raids, and establish a smaller footprint that is less invasive to population and reduces the number of soft logistical targets.

ARMY FORCE STRUCTURE

41. Senator MCCAIN. Secretary Rumsfeld, General Pace, and General Schoomaker, the 2006 QDR directed that the Army continue to rebalance capabilities by creating modular brigades in all three Army components, including 42 BCTs in the Active component and 28 BCTs in the ARNG. This action represents a reduction of one Active component combat brigade and six ARNG brigades from last year's plan. At that time, the Army asserted that 43 Active component combat brigades and the 34 ARNG combat brigades would ensure the Army could maintain a 17 brigade force deployed with Active component brigades having 2 years between rotations and the ARNG combat brigades having 5 years between rotations. Has the QDR taken into consideration the ARNG's State mission, especially homeland defense and disaster relief?

Secretary RUMSFELD and General PACE. The QDR has taken into account the State missions of the National Guard, to include homeland defense and disaster relief. We are initially funding three key programs that enhance the National Guard's capabilities in these areas. First, the National Guard is fielding 55 WMD civil support teams, one in each State, territory, and the District of Columbia. These teams have 22 members each and will provide critical communications links, assessment of WMD attack damage, and consequence management support to local, State, and Federal agencies. Second, the National Guard is building 12 enhanced response force packages to respond to chemical, biological, radiological, nuclear, and high-yield explosive attacks. These units will be trained to find and evacuate victims in WMD-contaminated environments, decontaminate casualties and patients, and provide medical treatment. Finally, the National Guard is creating a Joint Force Headquarters in each State to improve command and control capabilities for emergencies and major public events.

Regarding combat brigades, the Army's programmed modular force is sufficient for the missions we will face. With a base force of 42 Active and 28 National Guard combat brigades, the Army will be able to maintain 18–19 BCTs available for mission requirements on a 6-in-3-year basis in the Active Army and on a 1-in-6-year basis in the National Guard. Additionally, these combat brigades will be bolstered by a more robust force of 75 Active, 78 National Guard, and 58 Army Reserve support brigades.

General SCHOOMAKER. Options to rebalance forces and capabilities in the QDR were assessed in light of State and territorial employment of the National Guard. As a result of the Review's recommendations, ARNG forces will be more ready and relevant for expeditionary operations overseas, and homeland defense and disaster relief at home. Specifically, ARNG forces will have more capabilities that are of im-

mediate value to Governors for operations at home, such as medical, transportation, and engineering.

DOD PRIORITIES

42. Senator MCCAIN. Secretary Rumsfeld, General Pace, and General Schoomaker, the President's budget request for fiscal year 2007 expands funding for new weapons systems like the F/A–22, which runs at a quarter billion dollars per copy, the DDX destroyer that, when the costs of R&D are factored in will cost $10 billion per ship, and the Army's FCS, recently been estimated to cost $160 billion. A recent briefing from Deputy Assistant Secretary of Defense Nadaner indicates that the DOD recognizes the challenges of nation building, which is now referred to as "stability operations." Individual servicemembers face the greatest challenges when conducting stability missions and are asked to engage in both combat and peacekeeping operations, sometime simultaneously. I would like to know whether the DOD's focus on technological improvement is having a detrimental effect on the improvement of human skills. In an environment where soldiers are being asked to find and kill the enemy without killing civilians, speak foreign languages, understand alien cultures, and build nations, I hazard that more emphasis should be directed at producing capable soldiers rather than visionary weapons. I invite your thoughts on this issue, and would like to know what specific actions the Army and Marine Corps have/are taking to improve the individual soldier/marine's skill set and capabilities.

Secretary RUMSFELD. The QDR establishes exactly the vector for the emphasis on producing capable soldiers that you describe. Operationalizing the Defense Strategy with the emphasis on defeating terrorist networks, preventing the acquisition or use of WMD, shaping the choices of countries at strategic crossroads, and defending the homeland defense requires continuation of many initiatives already underway that the Army and Marine Corps will address in greater detail. The QDR reorientation of the capabilities of ground forces and special operations forces highlights the need to understand foreign languages and cultures. Conducting counterinsurgency campaigns requires the continued rebalancing of all three components of the Army by creating modular brigades as well as the Marine Corps' increase in infantry and reconnaissance capacity. Technological improvement is not having a detrimental impact on the human skills and in fact the QDR specifically emphasizes the essential human skills you identify.

General PACE. Our primary focus today is to prevail in the war on terrorism. We will succeed while continuing to look toward future operational requirements vital to the defense of the United States. Our efforts to transform for future challenges, strengthen joint warfighting capabilities, and improve servicemember quality of life will improve our capacity to defend our Nation both today and in the future.

We are always cognizant of the fact that our soldiers, sailors, airmen, and marines are our most important, most valued assets. Success in today's irregular warfare arena requires us to gain and maintain new warfighting skills, including enhanced abilities to speak foreign languages, and understand and use knowledge of foreign cultures to our operational advantage. The focus of our efforts is to ensure that U.S. military personnel can navigate the human terrain as easily as they can navigate physical terrain.

Soldiers and marines are provided with home-station, pre-deployment, and in-theater training targeted to region, culture, language, and operational scenarios. To be better prepared for combat, soldiers and marines receive advanced training in marksmanship and live-fire convoy procedures. Current training draws from recent combat experience and emphasizes warrior tasks and battle drills to enhance survivability. Training exercises feature nongovernmental organizations, contractors, media, coalition role players, and hundreds of civilians on the battlefield. The successes of soldiers and marines to date include continuous pre-deployment training focused on OIF and OEF, training exercises, training of foreign military training units, curriculum development in training, and professional military education schools from entry-level through advanced PME, providing language familiarization and counterinsurgency training for operating forces deploying to OIF/OEF, advisor teams, and military transition teams.

Coordination to develop regionally focused programs continues among the U.S. Army TRADOC, U.S. Navy OPNAV, and CFFC, Marine Corps Combat Development Command, Air Force Air Combat Command, U.S. Naval Academy, and other military and civilian institutions.

General SCHOOMAKER. Army training has been redesigned to provide soldiers and units with increased capabilities and skills relevant to current and future operations. The Army focuses individual training on 39 Warrior Tasks, grouped into

Shoot, Move, Communicate, Fight, and Joint Urban Operations, and nine Battle Drills (39/9). To be combat ready, every soldier, regardless of specialty and experience, must be proficient in these skills. The Warrior Leader Course for junior Noncommissioned Officers (NCOs) has expanded its situational awareness training exercise to 96 hours, giving soldiers more field time to practice troop-leading procedures, work on mission planning, and execute the mission to standard, followed by a thorough after-action review. Basic and advanced NCO training in all of its progressive phases also builds on the 39/9 to teach leadership as it applies to current operating environments (COEs), including replicating forward operating bases, live-fire convoy exercises, and reaction to IEDs. The Sergeants Major Academy provides a common core built around the 39/9 with emphasis on convoy operations, detainee operations, cultural awareness, and joint operations.

The Officer Education System (OES) also focuses on the 39/9 and now includes a 6-week field leadership course attended by lieutenants from all branches followed by their functional courses. Another change is the resident intermediate level education for all Active-Duty majors that prepares them for a full spectrum operations in a joint, interagency, intergovernmental and multinational environment. Advanced civil schooling opportunities have expanded by 200 per year in disciplines such as cultural awareness, regional knowledge, foreign language, governance, diplomacy, national security, and social sciences. This program will develop critical intellectual skills while providing long-term retention of quality officers. Cultural awareness has been incorporated into every phase of the Army's professional military educational system. Formal language training has also been increased and modified to include languages relevant to current and potential operations. On-line language training (26 languages) is available to all Army personnel.

Our premier training facilities, two dirt Combat Training Centers that replicate the realistic operational environments of Iraq and Afghanistan, are where we blend our 39/9 and OES/NCOES changes together with unit/collective training at the brigade/battalion/company level with real-time challenges.

Simulators and other training devices such as the Engagement Skills Trainer, Laser Marksmanship Training System, and Visual Combat Convoy Trainer address soldier skills under situations and conditions relevant to today's combat. In addition, upgraded ranges help to improve soldier skills with advanced technologies (that help in evaluating and promoting soldier and unit weapons proficiency) and actual urban terrain that also reflects the COEs.

QUESTIONS SUBMITTED BY SENATOR JEFF SESSIONS

GLOBAL STRIKE

43. Senator SESSIONS. General Pace, on page 10 of your testimony, you note that "prompt global conventional strike capabilities are required in the war on terror as well as in future contingencies." What specific capabilities are needed?

General PACE. Modified (conventional) ballistic missiles are required to rapidly strike targets whose known locations change relatively quickly over time and/or are located in distant and limited access areas. The capability to prosecute such targets anywhere in the world, at any time, with conventional ballistic missiles in less than 1 hour will enhance our ability to most effectively fight the war on terrorism. The ability to strike these targets is also predicated on objective, accurate target aim point derivation provided by emerging, advanced ISR capabilities. Future contingencies will most likely involve disparate, small, highly lethal, and mobile targets. The need to rapidly deliver non-nuclear kinetic weapons to any location in the world where such a response is appropriate will become increasingly important.

44. Senator SESSIONS. General Pace, under what scenarios do you imagine their usefulness?

General PACE. Prompt global conventional strike capabilities will be useful in any scenario where a rapid, non-nuclear kinetic response is either the most appropriate and/or most tactically survivable option to strike a target. These targets may include, but are not limited to, WMD and their delivery systems, including mobile systems, hard and deeply buried facilities associated with WMD, strategic targets embedded in urban areas, and terrorist nodes or networks in any location. The only way to deliver a kinetic strike globally in less than an hour with current technology is to send it through space using a long-range ballistic missile. In the war on terrorism, and in potential future contingencies, critical targets may be fleeting or located in areas not readily accessible by current non-nuclear means. Conventional ballistic missiles will effectively address those targeting requirements.

45. Senator SESSIONS. General Pace, explain why existing weapons, such as air- and sea-launched cruise missiles and long-range bombers cannot accomplish the global strike mission.

General PACE. Existing weapons can and do accomplish a large portion of the current conventional global strike mission. However, long-range bombers and cruise missiles each have limitations.

The response time for bombers may be too long to adequately prosecute a target whose known location is fleeting. Also, long-range bombers may require extensive support, including air refueling en route to distant targets and suppression of enemy air defenses to effectively penetrate the most sophisticated enemy airspace.

Air- and sea-launched cruise missiles, while accurate and fairly prompt, may not have sufficient speed and range capabilities to successfully engage fleeting targets or targets in locations that preclude the use of long-range bombers.

The prompt global conventional strike capabilities afforded by development and fielding of conventional ballistic missiles will effectively address targeting requirements not readily satisfied by long-range bombers and air- and sea-launched cruise missiles.

QUESTIONS SUBMITTED BY SENATOR SAXBY CHAMBLISS

STATUS OF THE C/KC–130J CONTRACT

46. Senator CHAMBLISS. Secretary Rumsfeld, please provide the status of the conversion of the C/KC–130J multiyear contract from a FAR Part 12 to a FAR Part 15 contract.

Secretary RUMSFELD. The Air Force and Lockheed Martin executed an undefinitized contractual action (UCA) on February 10, 2006. The UCA continues the multiyear contract, subject to the standard terms and conditions for a traditional contract under Part 15 of the Federal Acquisition Regulation (FAR), including the clauses requiring compliance with the Truth in Negotiations Act. The UCA sets forth the Government's commitment to evaluate a FAR deviation to permit recoupment of deferred independent research and development costs for the C–130J aircraft. That evaluation is ongoing. The UCA is based on ceiling prices that are equal to the commercial contract prices, but are subject to downward or upward negotiation following submission of detailed cost or pricing data that will be certified when negotiations are completed. The Air Force avoided contract termination costs through use of the UCA. Final negotiations are scheduled to be completed by October 2006.

47. Senator CHAMBLISS. Secretary Rumsfeld, it is my understanding that OSD/AT&L is the proper authority within DOD to review and certify that a contract meets the requirements of a FAR Part 15 contract. Please provide OSD/AT&L's assessment of what the Department has done and is doing to convert the C/KC–130J multiyear contract to a FAR 15 compliant contract.

Secretary RUMSFELD. The Under Secretary of Defense (Acquisition, Technology, and Logistics) (USD/AT&L)) is responsible for oversight of major defense acquisition programs. The Air Force is responsible for ensuring that the C–130J contract complies with statutory and policy direction, including the requirement, in section 135 of the National Defense Authorization Act for Fiscal Year 2006, that "C–130J and KC–130J aircraft procured after fiscal year 2005 be procured through a contract under Part 15 of the FAR." In his oversight role, the USD/AT&L has been kept informed of progress in meeting the requirements of section 135. Our assessment is that the Air Force has taken appropriate action to convert the C–130J multiyear contract from a commercial contract to a contract that includes the terms and conditions normally found in a contract negotiated under Part 15 of the FAR. Most importantly, the contractor must comply with the Truth in Negotiations Act in submitting certified cost or pricing data to support the Air Force's negotiation of the price of the contract.

48. Senator CHAMBLISS. Secretary Rumsfeld, please provide the DOD IG's assessment of what the Department has done and is doing to convert the C/KC–130J multiyear contract to a FAR 15 compliant contract.

Secretary RUMSFELD. The Air Force proceeded with the conversion of the C/KC–130J contract until November 2005 when my staff determined that the conversion would not result in a FAR Part 15 type contract for aircraft that were already under contract. The Air Force strategy called for adding FAR Part 15 terms and conditions to the existing contract that would apply to any future contract price adjustments.

On November 29, 2005, I notified staff of the Senate Armed Services Airland Subcommittee that the Air Force did not intend to obtain certified cost or pricing data for the aircraft under contract or negotiate new prices. On December 1, 2005, Kenneth Miller, Air Force Deputy Assistant Secretary for Acquisition Governance and Transparency, met with the subcommittee staff and agreed with this assessment. Subsequent to this meeting, the Air Force agreed that the restructure should include pricing as well as terms and conditions for all 37 aircraft on the existing contract that had not yet been delivered. On February 7, 2006, former Acting Secretary of the Air Force, Michael Dominguez, indicated to Senator McCain that his understanding of what it meant to convert the contract to FAR Part 15 had been significantly different than what Senator McCain expected. On February 10, 2006, the Air Force executed an undefinitized contract modification for fiscal years 2006 through 2008 aircraft procurements that will allow for repricing. The Air Force's current target date for completion of actions is October 2006.

The new contract modification signed by the Air Force puts in place a framework to make the conversion to FAR Part 15. We cannot make a final assessment of the success of the conversion to FAR Part 15 until the additional processes for the definitization of the contract have been completed.

49. Senator CHAMBLISS. Secretary Rumsfeld, please provide the DOD General Counsel's assessment regarding whether the Department's plan and actions to convert the C/KC–130J multiyear contract to a FAR 15 compliant contract meets the requirements of the National Defense Authorization Act for Fiscal Year 2006 (Public Law No: 109–163).

Secretary RUMSFELD. The Acting General Counsel of the DOD provides the following assessment:

> "I have determined that the Department has complied with section 135 of the National Defense Authorization Act for Fiscal Year 2006, which requires that C–130J and KC–130J aircraft procured after fiscal year 2005 . . . be procured through a contract under part 15 of the Federal Acquisition Regulation. . . The Air Force has informed me that it executed an UCA with Lockheed Martin on February 10, 2006. With respect to C–130J and KC–130J aircraft in program years 2006 through 2008 under the current multiyear contract, the UCA incorporates the standard terms and conditions applicable to a contract negotiated under Part 15 of the FAR. Among these are clauses that subject the contractor to the requirements of the Truth in Negotiations Act. The Air Force expects that the negotiation of final, revised prices for program years 2006 through 2008 under the multiyear contract will be complete by October 2006. I conclude that this arrangement satisfies the requirements of section 135."

H.R.1815

National Defense Authorization Act for Fiscal Year 2006 (Enrolled as Agreed to or Passed by Both House and Senate)

SEC. 135. PROCUREMENT OF C-130J/KC-130J AIRCRAFT AFTER FISCAL YEAR 2005.

Any C-130J/KC-130J aircraft procured after fiscal year 2005 (including C-130J/KC-130J aircraft procured through a multiyear contract continuing in force from a fiscal year before fiscal year 2006) shall be procured through a contract under part 15 of the Federal Acquisition Regulation (FAR), relating to acquisition of items by negotiated contract (48 CFR 15.000 et seq.), rather than through a contract under part 12 of the Federal Acquisition Regulation, relating to acquisition of commercial items (48 CFR 12.000 et seq.).

QUESTION SUBMITTED BY SENATOR ELIZABETH DOLE

COMBATING THE DRUG TRADE IN AFGHANISTAN

50. Senator DOLE. Secretary Rumsfeld, the drug trade in Afghanistan remains a serious concern. Heroin trafficking makes up a large portion of that country's GDP, and money from this illicit trade is falling into the hands of warlords and the Taliban, to the point that this drug trade is a profound threat to the survival of this new democracy. The Senate version of the Defense Authorization Bill contained a provision that would have authorized "the use of U.S. bases of operation or training facilities to facilitate the conduct of counterdrug activities in Afghanistan." However, the Conference Report did not contain this provision.

What is the DOD currently doing to help combat the drug trade in Afghanistan, and are additional authorities and monies needed? Some, for example, have proposed making counternarcotics a higher priority for CENTCOM's core mission in Afghanistan.

Secretary RUMSFELD. DOD is deeply committed to helping build Afghanistan's capacity to combat the drug trade. This capacity will allow the Afghans to conduct effective narcotics law enforcement operations, control their border, and reduce the illicit narcotics leaving and drug processing chemicals entering the country. With this increased security capacity, the Afghan government will control areas that are currently threatened by drug traffickers, insurgents, and the Taliban.

With the funds provided for drug interdiction and counterdrug activities, the Department pursues the programs below designed to complement the efforts of the Departments of State and Justice to provide for security and police forces throughout Afghanistan:

(1) Providing training, logistics support, infrastructure, and transportation for the Afghan National Interdiction Unit (NIU) and its associated Drug Enforcement Administration's (DEA) Foreign Deployed Advisory Support Team (FAST).

(a) The DOD has provided training for 128 NIU personnel and 5 DEA FAST teams and will provide additional training in 2006. On behalf of the NIU, the Department has procured weapons, ammunition, radios, and night vision devices and is constructing a base of operations and training facility.

(b) The Department is building a helicopter unit to support Afghan NIU and DEA FAST teams. Ten MI–17 helicopters have been acquired and equipped, and Afghan pilots and crews are training at Fort Bliss, Texas. 16 MI–17 pilots and crew have completed training at Fort Bliss. Another 12 MI–17 pilots are currently undergoing training. The Department is constructing a aviation facility at the Kabul International Airport for maintenance support functions and forward operating bases at key points within Afghanistan to support NIU and the Counternarcotics Police of Afghanistan field operations.

(2) Information sharing. The Department established a Counternarcotics Intelligence Fusion Center (IFC) in Kabul to support Afghan, U.S., and U.K. narcotics enforcement operations. The Department also built the U.K. and U.S. Interagency Operations Coordination Center (IOCC) in Kabul and is participating in development of a U.K. and U.S. Joint Narcotics Analysis Center (JNAC) in London that will be responsible for establishing a strategic picture of drug trafficking operations and flow in and out of Afghanistan. These centers provide the capability to coordinate all counternarcotics operations within Afghanistan while feeding and benefiting from a strategic approach to counternarcotics.

(3) Helping build Afghan border control capacity. The Department is helping to train and equip Afghan border police and providing infrastructure from which countersmuggling operations can be based. The Department is constructing several border crossing points in Afghanistan and refurbished several border strong points along the Afghan/Pakistan border. The Department is providing scanners to assist searches at border crossing points and random checkpoints throughout the country.

(4) The Department is currently on a joint DOD, DEA, and State plan to expand the Counternarcotics Police of Afghanistan. This will build a greater capacity to the Afghan forces to counter narcoterrorism forces. The Department is fielding a complete communications system for the Afghan Border Police to facilitate command and control of the outlying stations by the main headquarters. Additionally, the Department provided more than 12,000 9mm pistols and associated ammunition to the Afghan Border Police.

(5) Supporting the Afghan Special Narcotics Force (ASNF). The Department has supported the ASNF, an interdiction force, with a refurbished MI–17 helicopter, pilot and crew training, and specialized equipment. The Department is also constructing a forward operating base for the ASNF at Kandahar.

(6) Regional counternarcotics support. The Department operates CN support programs involving Uzbekistan, Pakistan, Tajikistan, Turkmenistan, Oman, Kyrgyzstan, Kazakhstan, and the Horn of Africa. All will receive some DOD counternarcotics support in the form of communications systems, patrol boats, sensors, vehicles, training, equipment, and related infrastructure.

The authorities and monies to sustain these programs have been included in the DOD fiscal year 2006 Emergency Supplemental Request.

QUESTIONS SUBMITTED BY SENATOR JOHN CORNYN

INFORMATION ASSURANCE

51. Senator CORNYN. Secretary Rumsfeld, protection of military networks, information, and communications is critical to our safety and operations. The DOD IG noted in a recent report that the Department does not yet have a comprehensive enterprise-wide inventory of information systems and that "Without a complete inventory of DOD major information systems, answers to questions from OMB or Congress on major information systems may not be accurate and information assurance is at risk because there is little assurance that all systems are adequately protected." What is the status of the Department's efforts to inventory information systems?

Secretary RUMSFELD. The inventory of major information systems under the control of the Department is as accurate as possible considering the dynamic environment and sheer number of systems deployed across the DOD enterprise. The Department is continuing the effort to complete a comprehensive enterprise-wide inventory, including mission support systems.

52. Senator CORNYN. Secretary Rumsfeld, what is your guidance to commanders on the importance of protecting information and networks?

Secretary RUMSFELD. The protection of information and networks is fundamental to ensuring the success of our network-centric, distributed forces. As the DOD transforms its people, processes, and military forces towards a network-centric environment, the protection of the information and networks that support that transformation becomes increasingly important. Most cyber attacks are used by the adversary as an inexpensive means of leveling the battlefield. The Department has issued the Transformation Planning Guidance that states:

> "Assuring information systems in the face of attack and conducting effective and discriminate offensive information operations will deny the adversary hope of exploiting a new dimension of the battlespace as a low-cost and powerful asymmetric option while providing us an unwarned strike capability that contributes to a broad, simultaneous, and overwhelming range of effects that increases the likelihood of rapid collapse of an adversary's will to fight."

The protection of our information and networks and an interoperable force are critical to information assurance. Both issues are addressed in a variety of initiatives set out under the QDR. As part of the initiatives, the DOD Chief Information Officer (CIO) has undertaken an effort to train and certify all key DOD personnel who manage and operate our networks.

The Department's Information Assurance (IA) policy framework provides overarching guidance for protecting information and networks. The capstone DODD 8500.1, Information Assurance, was issued in October 2002. DODI 8500.2, Information Assurance Implementation, was issued in February 2003. Additional directives include guidance on computer network defense, certification, and accreditation of all DOD systems, and training and certification of the IA workforce. The DOD IA Strategic Plan serves as an IA planning and management guide for the combatant commands, Services, and defense agencies. It establishes the Department's IA goals, sets out strategic objectives for IA, and provides a consistent approach to assuring information across the DOD enterprise.

For day-to-day operations, the Commander, U.S. Strategic Command, is charged with assessing and responding to cyber threats through the subordinate Commander Joint Task Force-Global Network Operations (JTF–GNO). JTF–GNO provides guidance to all commanders on the current cyber threat and directs actions to counter the threat.

53. Senator CORNYN. Secretary Rumsfeld, what ongoing activities are you pursuing to ensure that information security practices are followed throughout the Department?

Secretary RUMSFELD. The DOD has developed an IA policy framework that provides overarching IA guidance for protecting information and networks. The capstone DODD 8500.1, Information Assurance, was issued in October 2002. DODI 8500.2, Information Assurance Implementation, was issued in February 2003. Additional subordinate directives include guidance on computer network defense, certification, and accreditation of all DOD systems, and training and certification of the IA workforce. These policies and instructions are continually reviewed, updated, and promulgated to the DOD components.

As part of the Federal Information Security Management Act (FISMA) reporting requirements, DOD Component CIOs annually verify the certification and accreditation status of their information systems. Those systems with security deficiencies must have an IT Security Plan of Action and Milestones (POA&M) to track and correct deficiencies. Also, as part of the FISMA process, the DOD IG conducts an independent audit of a subset of the DOD information systems.

Each year the Department conducts a Computer Network Defense (CND) assessment and shares the assessment results with the components to highlight where progress has been made from year to year and to identify areas that need attention. Also, in conjunction with the Director, Operational Test and Evaluation, IA is integrated into DOD exercises. Further, the National Security Agency and the Defense Information Systems Agency (DISA) perform network penetration and readiness assessments.

To mitigate the effects of network vulnerabilities and ensure DOD has an effective defensive posture against cyber attacks, the Department established the DOD IA and CND Enterprise Solutions Steering Group. Under the leadership of U.S. Strategic Command (STRATCOM), the steering group plans, coordinates, acquires, and implements enterprise CND solutions designed to stop, contain, and/or mitigate the effects of system and network attacks and vulnerabilities. Actions include a combination of procedural and technical capabilities implemented across the enterprise. Some examples of enterprise-wide solutions include automated vulnerability scanning and remediation tools that permit system administrators to scan and report compliance with DOD vulnerability patch policies and push patches to remote machines.

The Department is committed to implementing a robust Public-Key Infrastructure (PKI). In December 2005, the Joint Task Force-Global Network Operations (JTF–GNO) directed the DOD components to implement and report on the status of the use of PKI for system logon. The use of PKI cryptographic logon inhibits adversaries from remotely accessing Department systems.

Another ongoing activity being taken by the CIO and the JTF–GNO is the implementation of Ports, Protocols, and Services management and port closures. These efforts close unused ports, stop the use of vulnerable computer communication protocols that could easily allow hackers to access our systems, and to reduce the risk of potentially malicious traffic entering and leaving the Global Information Grid (GIG).

For day-to-day operations, the Commander, STRATCOM, is charged with assessing and responding to cyber threats through the JTF–GNO. JTF–GNO provides guidance to all commanders on the current cyber threat and actions to counter the threat. Recent JTF–GNO actions include the following:

- In November 2005, the JTF–GNO directed a DOD-wide Network Stand-Down Day to conduct computer network defense refresher training to all DOD users. JTF–GNO required DOD elements to confirm all accounts and users were required to change passwords or their accounts were locked.
- Under the Enhanced Inspection Program, DOD scans DOD networks to discover networks in violation of DOD policies and then directs actions to mitigate any problems.

Lastly, the Department has made IA a key component of our acquisition review process to ensure the integration of IA activities in systems development.

QUESTION SUBMITTED BY SENATOR CARL LEVIN

QDR RISK ASSESSMENT

54. Senator LEVIN. General Pace, the law requires the QDR to identify "(A) the budget plan that would be required to provide sufficient resources to execute successfully the full range of missions called for in that National Defense Strategy at a low to medium risk," and "(B) any additional resources (beyond those programmed in the current Future Years Defense Program) required to achieve such a level of risk." The law also requires the Secretary in consultation with the Chairman to as-

sess the risk and to define the nature and magnitude of the political, strategic, and military risks associated with executing the missions called for under the National Defense Strategy. Finally, the law requires the Chairman to prepare and submit to the Secretary the Chairman's assessment of the review, including the Chairman's assessment of risk.

Your assessment of the risk states that "this review has carefully balanced those areas where risk might best be taken in order to provide the needed resources for areas requiring new or additional investment" but it does not state what the level of risk is, nor does it identify the nature and magnitude of the political, strategic, and military risks associated with executing the missions called for under the National Defense Strategy.

Please provide your assessment of the level of risk, and identify the nature and magnitude of the political, strategic, and military risks involved.

General PACE. As title 10 requires, the QDR identifies a plan that will allow us to accomplish the full range of missions called for in the National Defense Strategy at a "low-to-moderate" level of risk.

As I mention in my assessment of the QDR, any attempt to predict the nature of the future security environment is difficult. Therefore, the QDR recommends investing toward a fully transformed force that will be best prepared to meet the political, strategic, and military challenges we may face over the next 20 years.

Today, the Armed Forces of the United States stand fully capable of accomplishing all the objectives of the National Defense Strategy. We must prevail now in the war on terrorism while we also prepare for the future. The recommendations of the QDR will allow us to accomplish these vital goals.

QUESTIONS SUBMITTED BY SENATOR EDWARD M. KENNEDY

UNIVERSITY RESEARCH INITIATIVE PROGRAMS

55. Senator KENNEDY. Secretary Rumsfeld, the fiscal year 2007 budget request calls for a combined $249.4 million in the Service University Research Initiatives (URI) programs. This program invests in university research projects in areas such as nanotechnology, robotics, and artificial intelligence that create the transformational technologies and military capabilities, and train the next generation of scientists, engineers, and technology entrepreneurs in defense technology disciplines.

In constant dollars, this is below the total fiscal year 2004 request for this important program. As a result, you are required to submit a report to Congress on the effect of this funding reduction on defense technology and research capabilities, as described in the National Defense Authorization Act for Fiscal Year 2004 Conference Report. This requirement was developed by Congress for fear that this program—which had been managed directly by the Office of the Secretary—would lose its funding support when it was transferred to the individual Services and had to compete with their priorities. Apparently this has occurred, since even though the DOD topline continues to increase—the important URI program loses ground to inflation.

What is the reason for the reduced request relative to 2004 in URI?

Secretary RUMSFELD. While it is true that the fiscal year 2007 budget request for the URI program is less than that requested in fiscal year 2004, the Department's request seeks a total of $249.4 million for URI, evidencing continued support for this program. The funding level requested for this program is the result of the very difficult choices that the Department must make in order to balance total program priorities.

56. Senator KENNEDY. Secretary Rumsfeld, what is the status of the development of the required report to Congress on this issue?

Secretary RUMSFELD. The required report is being finalized and should be provided to Congress in April 2006.

COUNTERTERRORISM STUDY

57. Senator KENNEDY. General Pace, on February 5, The New York Times reported that your staff has completed a counterterrorism study. According to the Times, the report orders the DOD to undertake a broad campaign to find and attack or neutralize terrorist leaders, their havens, financial networks, methods of communication, and ability to move around the globe, but to be mindful that their military

actions can have a negative impact on the fight against terror. Will you provide a copy of this report to the SASC?

General PACE. The study referred to in the Times is actually the National Military Strategic Plan for the war on terrorism (NMSP–WOT). We have provided copies of the NMSP–WOT to the SASC.

58. Senator KENNEDY. General Pace, what are military actions that can have a negative attack on terror operations?

General PACE. While any military actions can have negative effects, our offensive operations against terrorists present the greatest risk. For example, any time we use lethal force, enter private residences, or detain enemy combatants there is a risk of negative effects. Prior to conducting these operations, commanders balance the gains they intend to achieve with potentially negative second order effects and then determine if the mission is worth conducting. I continue to be impressed by our leaders and servicemembers who routinely show patience and ingenuity in their approach to operations to minimize collateral effects yet still accomplish their mission.

59. Senator KENNEDY. General Pace, how does the report recommend that our government balance the line between fighting terrorism and undertaking military operations that back fire and contribute to more terrorism?

General PACE. This is an excellent question and strikes at the very heart of the complex nature of the war on terrorism. To address this challenge, the NMSP–WOT gives clear direction to our commanders:

> "The way we conduct operations—choosing whether, when, where, and how—can affect ideological support for terrorism. Knowledge of indigenous population's culture and religious sensitivities and understanding of how the enemy uses the U.S. military's actions against us should inform the way the U.S. military operates. The U.S. military prefers to work in a supporting role where indigenous forces are capable of leading operations. Where effects can be achieved by means other than direct U.S. military actions, the U.S. Government may seek to do so. Where U.S. military involvement is necessary, military planners should build efforts into the operation to reduce potential negative effects. At the same time, we must, by our military actions, convey the sense that our power cannot be defeated and that, under the right circumstances, we are willing to use it. This will require careful balancing. The conduct of military operations should avoid undercutting the credibility and legitimacy of moderate authorities opposed to the extremists, while defeating extremists' ability to spread their ideology."

PROTECTION OF THE UNITED NATIONS

60. Senator KENNEDY. General Pace, in December 2005 the United States and the United Nations (U.N.) signed an agreement concerning the protection of the U.N. presence in Iraq by the Multinational Force. Obviously, we all have an interest in a robust international presence in Iraq. The Secretary General of the U.N. has said that expansion of the U.N. presence into places like Basra or Irbil depends on obtaining dedicated air support. I understand, however, that we will not provide it. Why not? Shouldn't we be facilitating the U.N.'s efforts to expand its presence into Basra or Irbil?

General PACE. U.N. mission requirements have been and will continue to be met in Iraq. Dedicating aircraft would be an inefficient use of resources and would likely result in less actual support to the U.N. All U.N. missions are prioritized as either elevated or high (rather than medium or routine). Between February and October 2005, the U.N. requested 73 UH–60 helicopter missions, none of which were refused. U.N. mission support rates (MSR) are consistently higher than other requests (100 percent vs. 92 percent average MSR for elevated requests, and 80 percent vs. 75 percent average MSR for high priority requests). Some missions are delayed due to inclement weather or aircraft maintenance issues, but these situations would be the same (weather) or exacerbated (maintenance, due to a significantly smaller aircraft pool) with dedicated aircraft. The Joint Staff, through the interagency Coalition Working Group, has worked diligently to facilitate the U.N.'s expansion in Iraq. We have equipped Fijian Personnel Security Details for U.N. principals. We have recruited coalition partners (Georgia in Baghdad, Romania in Basra, and Korea in Irbil) specifically to provide security for the U.N., and have provided equipment enhancements as needed to best accomplish this mission. Understanding the U.N.'s preference for dedicated aircraft, we are working to identify another nation willing

to fill this request, while Multi-National Force-Iraq continues to provide airlift support.

GULF WAR PRISONERS OF WAR

61. Senator KENNEDY. General Pace, Business Week has recently reported that Iraqi debts with foreign commercial corporations are being settled by issuance of new Iraqi bonds secured by Iraqi oil revenues. ["A Landmark Debt Deal for Iraq," Business Week online Jan. 12, 2006.] Do you believe that the commercial debts of French and Korean corporations should be put ahead of the debt of honor owed to American prisoners of war (POWs) brutally tortured by Iraq during the 1991 Gulf War?

General PACE. Iraq is a sovereign country. As Chairman of the Joint Chiefs of Staff, I do not have a lot of visibility into bond issues and Iraqi foreign debt. I was appalled upon hearing about the brutal treatment of our prisoners of war during Operation Desert Storm.

62. Senator KENNEDY. General Pace, why is the administration encouraging settlement of these debts through issuance of Iraqi bonds while it is continuing in court on the side of Saddam Hussein and Iraq to absolve them of liability for the torture of our American POWs?

General PACE. As mentioned in a previous answer, I find Iraq's treatment of our POWs deployable, but policy associated with the assurance of Iraq's bonds is well outside of my lane.

63. Senator KENNEDY. General Pace, twice during the period of ongoing torture of American POWs by Iraq during the Gulf War the Senate of the United States unanimously put Iraq on notice that it would be held accountable for the torture of American POWs. (See the Senate Resolutions of January 23 and January 31 of 1991.) More recently, on three occasions in reference to the case brought by American Gulf War POWs brutally tortured by Iraq during that war, the Senate unanimously accepted resolutions of support for the legal rights of these tortured American POWs against Iraq. (See S. Amdt. 1836 of Oct. 14, 2003; S. Amdt. 2194 of Nov. 17, 2003, and S. Amdt. 3307 of June 7, 2004.) These resolutions were passed by a unanimous Senate to ensure that United States actions will in every way seek to deter the torture of American POWs. Will you work to ensure that the DOD supports the efforts of the American Gulf War POWs and urge the Justice Department to end their litigation in court against our own POWs which is being pursued in order to effectively absolve Iraq of liability for their torture?

General PACE. As the Chairman, I will provide my best military advice in all matters relating to the safety and welfare of American servicemembers, to include those who were or may be held as POWs or listed as MIAs.

64. Senator KENNEDY. General Pace, Article 131 of the Third Geneva Convention [the POW Convention] mandates that no party may "absolve" a torturing state of "any liability" for the torture of POWs. In the aftermath of the Abu Ghraib affair the President said that the United States will fully adhere to the Geneva Conventions. Further, at the urging of the Joint Chiefs, and for the purpose of protecting future American POWs held by the enemy, the President, in his February 7, 2002, Executive order, directed that the "United States will hold states . . . who gain control of United States personnel responsible for treating such personnel humanely and consistent with applicable law." In light of this Article 131 Treaty obligation and repeated Presidential statements indicating support for it, by what legal authority are officials in the DOD encouraging the DOJ to spend taxpayer dollars to litigate in court against American POWs brutally tortured by Iraq during the Gulf War to seek to effectively absolve Iraq of liability for their torture?

General PACE. DOD relationships with the DOJ regarding pending litigation are more appropriately addressed by the Departments of Defense and Justice.

65. Senator KENNEDY. General Pace, will you intervene to ensure that henceforth the DOD will support the POWs effort to hold Iraq accountable?

General PACE. I remain committed to ensuring that all U.S. POWs from all past, present, and future conflicts are treated humanely and in accordance with relevant international law. As the Chairman, I will provide my best military advice in all matters relating to the safety and welfare of American servicemembers to include those who were or may be held as POWs or listed as MIAs.

JOINT STRIKE FIGHTER

66. Senator KENNEDY. Secretary Rumsfeld, during your testimony you implied that the cancellation of the Joint Strike Fighter (JSF) alternative engine had been addressed with the partner nations. In view of the importance of our international partners to this program, as well as the larger war on terrorism, can you clarify which partner nations were consulted on the alternate engine cancellation and what position they took regarding the cancellations.

Secretary RUMSFELD. First, let me clarify that we did not consult with the JSF partners during our budget deliberations. As a rule, we do not discuss predecisional information outside of the DOD until we have submitted a President's budget. The JSF partners realize that program decisions must be weighed against what is best for the Department as a whole. As I mentioned in my testimony, the Department's senior leadership looked at many aspects of the JSF alternate engine, and their recommendation was that further investment in the alternate engine was not in the best interests of the JSF program, nor the larger defense budget. All of the partner nations are aware of the decision to cancel the alternate engine program and most view this as a U.S. decision. The partners are as interested as we are in doing the right thing from a cost perspective. Industrial participation among the partner countries is an important part of the program, and something that we are continually addressing as the program matures.

67. Senator KENNEDY. Secretary Rumsfeld, in addition, can you provide the committee with the analysis that was conducted to justify the cancellation of the alternate engine program, including the risks and cost/benefit analysis?

Secretary RUMSFELD. The DOD has concluded that maintaining a second engine supplier for the JSF would not be cost-effective. This conclusion is based on data on engine cost and reliability, which show that:

- Maintaining two engine suppliers would not reduce overall procurement costs.
- Jet engine reliability has improved significantly over the past 30 years, and introducing a second supplier would not lead to dramatic improvements in reliability.
- Maintaining two engine suppliers would not significantly reduce operations and support (O&S) costs and could actually increase those costs over the life of the program when compared to costs with a single supplier.

Maintaining a second engine supplier for the JSF would incur additional development costs (at least $2 billion from fiscal year 2007 to fiscal year 2014), while potentially increasing the costs of procurement and future maintenance. Procurement costs could increase because, with two suppliers, each firm would produce a smaller number of engines. Smaller production runs can increase procurement costs because they reduce the advantages of "learning curve" effects (whereby costs decrease as a company produces more units) and of "rate effects" (whereby fixed costs are spread over the total number of units produced). Historical evidence from the Air Force "Great Engine War" and the Navy F404 engine program shows that competitions have tended to increase engine procurement costs.

Supporters of the alternate JSF engine have asserted that competition would generate significant long-term O&S cost savings, and that these savings would outweigh the higher development and procurement costs. However, O&S costs would likely be higher in several areas with two engine suppliers. For example, most of the parts of the JSF engines—produced by Pratt & Whitney (P&W) and General Electric (GE)—are not interchangeable; the fans, turbines, combustors, and compressors are unique. Maintaining two types of engines would require the establishment of two separate pipelines in the fleet and at the depots for spares, training, maintenance, repairs, and enhancements.

The debate on an alternative engine for the JSF is often viewed through the prism of the Great Engine War of the 1970s and 1980s, during which the establishment of a second engine supplier markedly improved engine reliability. Engine technology and testing techniques in use today are substantially different from those of the early 1970s. Fighter engines are now designed, manufactured, and tested to be reliable from the start. In particular, the number of test hours and cycles logged in engine development programs have increased markedly since the 1970s, and safety and reliability metrics are much improved as well. Reliability and cost have been key factors throughout the JSF's development. In fact, in the early days of the JSF program, all participants in the competition selected the P&W engine—a derivative of the P&W F119 engine used in the F–22—because they deemed it to have the lowest technical and cost risk.

In summary, historical cost comparisons and current analyses indicate that savings in life-cycle costs would not offset the investment cost of developing two engine suppliers for the JSF.

Background

The original JSF program did not make provision for a second engine supplier, consistent with the F–22 and F/A–18E/F programs. There was opportunity for competition between engine suppliers early on in the JSF program (in the concept development and risk reduction phase), but all three competitors (Boeing, Lockheed Martin, and McDonnell Douglas) selected the P&W F119. The competitors selected the P&W engine over the GE engine because it appeared to be the better option for minimizing technical and cost risk.

After a few years of supplemental funding from Congress for the alternate engine program, the National Defense Authorization Act for Fiscal Year 1998 called for the development of a second engine for the JSF. In August 2005, a $2.4 billion contract was officially awarded to GE to complete the development of the engine. Including the $336 million in PB06 for 2006, approximately $1.2 billion has been invested in the alternate engine program to date.

The Difficulty in Recouping Investment Costs

To achieve a net cost savings, competition between two engine suppliers must generate cost savings that exceed the investment needed to establish a second engine supplier. Excluding the sunk costs of developing the JSF second engine, competition would have to reduce procurement and/or operations and support (O&S) costs by $2 billion in order to generate net savings. At issue is whether—given all the factors that drive costs up or down—splitting the buy between two suppliers will reduce costs by such a large amount.

While competition can provide some production cost benefit, splitting a given production quantity between two contractors can have the net effect of increasing production costs. This is due to a reduced advantage from "learning curve" effects (whereby costs decrease as a company produces more units) and from "rate effects" (whereby fixed costs are spread over production units). The discussion below on the Air Force's Great Engine War and the Navy's F/A–18 engine competition experience indicates that competition does not, on balance, lower production costs.

DOD did two major studies on engine competition in 1998 and 2002 that assessed the percentage reduction in procurement costs needed to recoup the cost of developing an alternate engine for JSF. The study indicated at least 16–22 percent procurement savings from competition would be necessary to recover the development cost and make up for the cost penalty in the production learning curve from having two suppliers. Excluding sunk development costs to date, DOD would have to achieve procurement savings on the order of 10–12 percent to recover the remaining $2.0 billion in development costs for the GE engine.

Some advocates of the alternative engine indicate that competition would mainly generate savings in the O&S accounts over the long term. O&S savings are much more difficult to assess than production savings; however, we know several areas where O&S costs will be higher with two engine suppliers than with one. Most of the parts in the GE and P&W engines are unique, including the fans, turbines, combustors, and compressors. Supporting two types of engines would involve establishing two separate spares pipelines in the fleet and at the depots, providing additional training and tools for fleet maintainers, creating two separate depot capabilities (thereby increasing non-recurring costs and recurring unit repair costs since each repair line would handle fewer units) and making future modifications for growth, reliability improvements, safety enhancements, and obsolescence management on two different engines.

The main way to drive down O&S costs via competition is to significantly increase engine reliability. A key issue is whether we expect the primary engine, the P&W F135, to have reliability problems. The other issue is whether DOD could achieve reliability improvements at less cost by paying for reliability improvements in the P&W engine compared to establishing a second supplier. These issues are addressed in the paper below.

Empirical Record

This section will address our historical experience with engine competition since the 1970s. The section will discuss the two most widely known examples—the competition between P&W and GE for Air Force F–15 and F–16 engines and for Navy F/A–18 engines. This review will look at the extent to which we achieved savings in procurement and O&S and, in the case of the Air Force example, the similarities and differences in engine technology/reliability two or three decades ago compared to today.

The Great Engine War

The most well known example of competition in aircraft engine procurement is the Great Engine War, which began in the 1970s as the Air Force and Navy were searching for more reliable power plants for the F–15, F–16, and F–14 aircraft. There have been numerous comparisons of JSF engine competition to the Great Engine War; at issue is whether these comparisons are appropriate.

There is little disagreement that the competition created by the Great Engine War resulted in critical improvements in engine performance and reliability; however, there are significant differences between the circumstances of the Great Engine War and where we are today. In order to make accurate comparisons, it is first necessary to understand the context of the Great Engine War and how the lessons learned from that era may or may not apply to current issues.

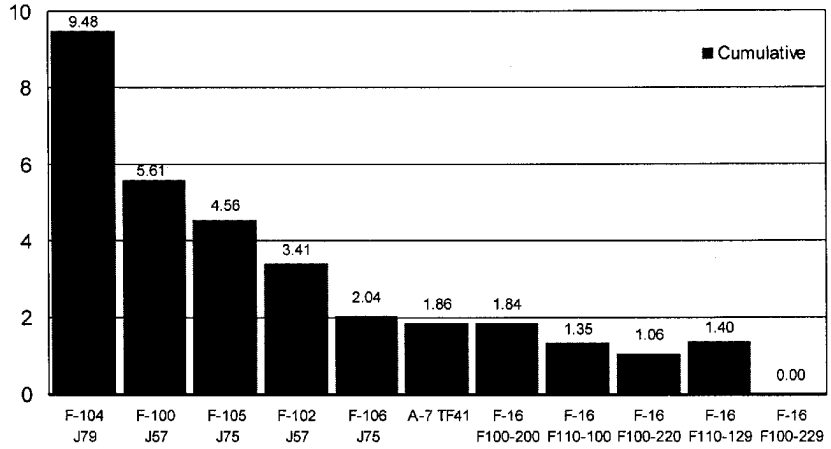
In the early 1970s the Services were eager to field the next generation of fighter aircraft to counter the Soviet air threat. In their rush to outperform the Soviets, a premium was placed on performance and power requirements (thrust to weight) rather than reliability and durability metrics. The Air Force's stated order of priority in fielding the new engine was: "thrust, weight, everything else." The P&W F100 was selected for the F–15 and the F–16 based on considerable advances P&W had achieved in thrust and weight. Although this engine was initially well received by the Air Force, it soon developed stall problems and turbine failures due to the extreme maneuvering levels achieved by these new air frames.

In the rush to field new engines, P&W powerplants for the F–15 and F–16 were only tested for 150 hours on the test-stand and 50 hours in the aircraft before going into production. Although these early tests extensively stressed time at high Mach numbers to guard against stress failures, they did not address the significant factors related to throttle movement. Gradually engineers began to better understand the durability issues associated with engine cycles, which are defined as the movement from the idle position to maximum power and then to an idle or intermediate position. They discovered that engine cycles are profoundly more important than just the accumulation of hours in evaluating engine life.

When the P&W F100 engine performance problems became apparent, the Air Force believed P&W was financially responsible for fixing them. P&W thought the Air Force should pay, since Pratt had provided the Air Force with the engine it requested. In his book "The Air Force and the Great Engine War," Robert Drewes writes:

> "Pratt was right in arguing the Air Force got what it asked for. The F100 was a superb propulsion system when it worked. All the concerns about durability to withstand thermal cycles, for example, were unspecified in the original F100 contract. Furthermore, incessant pressure to meet the IOC allowed little or no time to perfect the engine. Strictly speaking, Pratt was justified to some extent in holding out for more money before acting on various improvement programs." [1]

The Air Force redirected government funds to improve the P&W engine while pursuing an alternate engine source with GE, thereby kicking off the Great Engine War.



To avoid a repeat of the reliability issues experienced with the P&W F100, the Air Force Scientific Advisory Board proposed that engine usage be carefully defined at the beginning of engine development, thereby increasing the importance of reliability relative to thrust and weight. GE used a combination of corporate, Air Force, and congressional funds to develop a derivative of their F101 engine used to power the B–1. In contrast to P&W, GE designed their new engine, which eventually became the F110, to stringent durability and reliability specifications. These design criteria gave GE a distinct reliability advantage over P&W as the competition commenced.

As indicated above, at the time of the Great Engine War DOD's emphasis was not on reliability and testing. However, despite the initial concerns with the F100, it was still more reliable than engines developed for the 1950s and 1960s vintage aircraft such as the F–104 and F–100. Figure 1–1 addresses the trend in engine safety and reliability over the past several decades. With more stringent design specifications and expanded durability testing, DOD has achieved impressive improvements in engine reliability.

---

Figure 1-1. Single Engine Safety and Reliability (Class A engine related flight mishaps per 100k engine flight hours in single engine aircraft)

Source: US Air Force

In contrast to the focus on thrust and weight in 1970s fighter engines, reliability was a major factor in the selection of the P&W engine for JSF and continues to be a critical factor in the test program. Compared to the 200 engine test hours of the 1970s, the P&W engine in the JSF program has already amassed nearly 5,000 test-stand hours incorporating Accelerated Mission Test (AMT) profiles. These AMT profiles are designed to stress the engine cycles rather than just log operating time. This topic will be discussed in more detail later in this paper.

Another important point about the Great Engine War is the nature of anticipated savings from competition. The Air Force never estimated any procurement cost benefit from competition. In fact, the Air Force Analysis of Alternative Procurements for Fighter Engines assessed that a split buy would actually cost the government more than a single supplier (Table 1–1).

Table 1-1. Air Force Analysis of Alternative Procurements for Fighter Engines

Contract Award	Cost to Government $B(83)	Savings relative to a split award	
		Amount	Percent
		Six annual purchases	
Split	17.32	....	....
All to PW	16.39	0.93	5.3
All to GE	16.25	1.07	6.2
		One purchase followed by five annual purchases	
Split	16.90	....	....
All to PW	15.99	0.91	5.4
All to GE	15.74	1.16	6.9

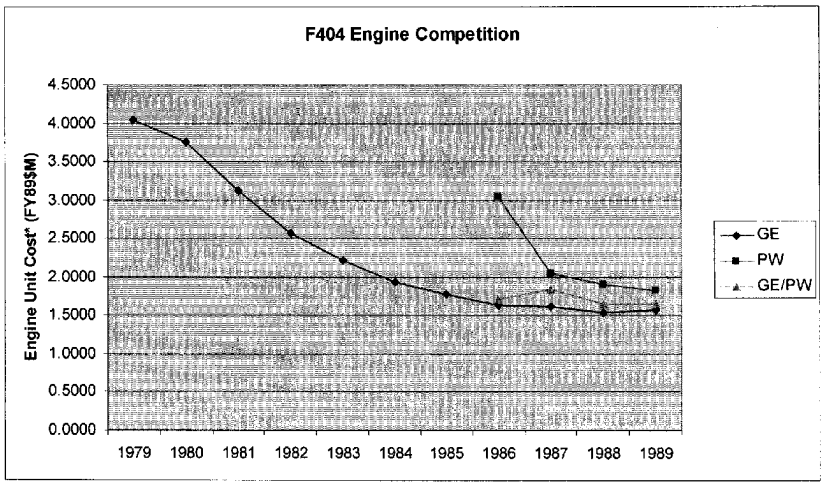
Source: Defense Department Authorization and Oversight, Hearings on H.R. 5167 before the Committee on Armed Services, 98 Cong. 2 sess. (GPO, 1984),pt. 2, p. 255.

The Air Force did not expect to achieve procurement savings from competition but did anticipate large savings in maintenance costs. With more reliable engines they estimated they could save $1 billion by reducing one maintenance man-hour per flying hour. In testimony to Congress, the Air Force stated "we have verified our pro-

jection of $2 billion to $3 billion savings," over the estimated cost of $19.4 billion for the unimproved F100.[2] This projection amounts to a 10–15 percent savings over the life of the program.

The above figures are Air Force estimates prior to the competition. We do not have empirical data on the actual savings the Air Force achieved through improved engine reliability, but we do know that one key assumption underlying the estimate was not realized. The Air Force projected a buy of 2,942 engines for the F–15 and F–16 aircraft, but actually only purchased about half that many engines, thus reducing the cost benefit (the Air Force never purchased the GE engine for the twin-engine F–15 and purchased only 1,560 aircraft/spares for the single-engine F–16). Furthermore, these Air Force estimates did not account for the GE F110 development costs.

Finally, while it is clear that competition resulted in more reliable engines from both the P&W and GE in the Great Engine War, it is possible that the same maintenance savings could have been achieved with less up front investment by simply fixing the original P&W F100 engine.



USN F/A–18 F404 Competition

In the 1980s Navy Secretary John Lehman was a big proponent of competition. Secretary Lehman introduced the Second Source Program to reduce procurement costs through competition. One of the programs selected for competition was the F/A–18 F404 engine. The Navy wanted to drive down the cost of the engine, improve contractor responsiveness, and allay concerns over a single supplier for their new strike fighter aircraft. Similar to the Air Force in the Great Engine War, the Navy anticipated a very large engine buy.

The Navy chose P&W to develop a copy of GE's F404 engine in a "Leader-Follower" arrangement. Once the program started, however, it became apparent that relying on one manufacturer was less costly than a split-buy agreement between P&W and GE. Figure 1–2 shows actual engine procurement costs before and during the competition.

In 1989, the new Secretary of the Navy, Lawrence Garrett, canceled the competition under the belief that eliminating P&W as a second supplier and relying solely on GE would save the government $176 million over the remaining 6 years of F404 procurement. The program did not in fact realize this savings because the U.S. Government had to pay P&W $156 million for a contract settlement.

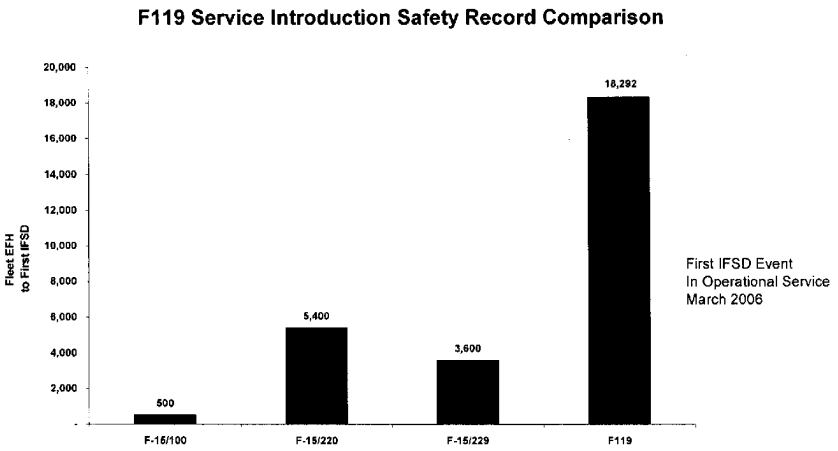
Figure 1-2. F404 Engine Unit Cost comparison. Average unit cost increased with second supplier. Competition cancelled in 1989.

[2] Defense Department Authorization and Oversight, Hearings on H.R. 5167, pt. 2, pp. 255, 225.

Reliability and the Impact on O&S Costs

Engine reliability improvements can reduce O&S costs by reducing maintenance hours and decreasing the frequency of replacing parts and subsystems. At issue is whether we expect engine competition to achieve significant reliability improvements beyond the gains already realized from technology and testing advancements over the past several decades. Also unclear is whether we could achieve greater reliability at lower cost by investing in the primary engine rather than creating a second engine supplier.

Over the past 30 years, engine testing and design validation philosophy have evolved to the point that the Services have changed their key engine metric from hours to Total Accumulated Cycles (TACs). Thus, engine removals and maintenance actions are now often triggered on TACs, as opposed to hours. In addition to AMT mission execution, which primarily tests for Low Cycle Fatigue (LCF) effects, High Cycle Fatigue (HCF) testing has been incorporated to expose failure modes associated with high frequency/low amplitude effects. The combination of AMT and HCF testing has become the standard for testing propulsion systems to their limits to ensure a safe and reliable product.



Some have argued that the twin-engine F–22's fighter mission and high-altitude flight regimes are significantly different than the single-engine strike-fighter mission and low-altitude flight regimes of the JSF and therefore should not be used as a reference to compare engine performance and reliability. Actually, the AMT profiles used on both these engines account for differences in operating regimes and altitudes, to include circumstances above and beyond the normal operating limits. These ground test AMT profiles now include conditions that simulate RAM air, low altitude/high mach number, and high altitude flight regimes.

We expect the JSF's P&W F135 engine to achieve comparable reliability performance as the F–22 F119 engine because they have a similar core and were developed using similar techniques. The engine core is the power module containing the high pressure compressor, the combustor, and the high pressure turbine. The core represents about 50 percent of the overall engine, but it is typically one of the most expensive parts to design due to the stresses placed on critical elements operating at extreme temperatures and pressures.

By most any measure, the P&W F135 engine and its predecessor, the Fl19 in the F–22, are performing very well so far. A key safety metric pertinent to twin engine fighters, such as the F–22, is measured by in-flight shut downs (IFSD). As shown in Figure 1–3, the F119 fares considerably better than all models of the F100, the safest fighter engine in the USAF inventory today, by achieving over 18,000 engine flight hours (EFH) before experiencing an in-flight shut down. This is nearly six times greater than the most recent F100 model (F100–PW–229).

The predecessor to the P&W F135 engine also fares well using other reliability metrics. Shop visit rate is the number of times the engine must be removed for maintenance over a given interval (a lower shop visit rate results in a higher number of flight hours between engine removal). Since becoming operational, the F119 shop visit rate has decreased to 1.4 visits per 1,000 engine flight hours (EFH)—a 67-percent improvement when compared to the F–16's F100–PW–229 engine at the same time in its life cycle. The F119 is currently demonstrating a mean time between engine removal of nearly 740 hours versus a goal of around 400 hours.

Figure 1-3. Number of Fleet Engine Flight Hours (EFH) prior to First In-Flight Shut Down (IFSD)

We recognize that fighter aircraft can develop engine related problems later in their service life. For example, the durability problems discovered in the F/A–18's GE F404 engine did not emerge until the aircraft had been in service for over a decade. This was well past the operational engine maturity milestone of 200,000 engine flight hours and several years after P&W had ceased production as a second supplier of F404 engines. Although this was a serious issue at the time, it neither grounded the fleet nor required a second supplier to rectify the problem.

If DOD is faced with engine reliability problems in the future, the most practical option will likely be to fix or improve the capability of the primary engine rather than incurring the high investment cost of creating a second supplier of engines. Considering the current proven reliability, fixing any problems with the original engine may cost far less than developing and producing a second engine—which might develop its own unique problems.

Other Factors Affecting Savings from Competition

There were several misconceptions about cost savings achieved through competition in recent Senate hearings and in the GAO report, "Tactical Aircraft: DOD's Cancellation of the Joint Strike Fighter Alternate Engine Program Was Not Based on a Comprehensive Analysis." One inaccuracy is that competition would drive down the price of spare engines and engine replacement parts. As mentioned earlier, although both the P&W and GE engines are designed to have identical external interfaces to the aircraft, the two internal designs are significantly different. These two different sets of engine spares and replacement parts are not purchased in a competitive environment, since, for example, DOD would not buy spares made by P&W to support the GE engine nor buy GE spares for P&W engines. Therefore, we do not expect competition to appreciably affect the price of engine spare parts or follow-on engine equivalents.

Another factor that would further reduce competition savings is the possibility that one or more Services would opt for a single supplier rather than two. For example, due to the relatively small quantity of JSF engines required by the Navy, it would likely be more cost effective to buy from a single source than support duplicate efforts for two engines. In addition to a more costly shore establishment of two support and maintenance infrastructures, there is little space available on an aircraft carrier to support an additional engine shop.

Also, aircraft weight tends to grow over time due to modifications and upgraded systems. Any increase in aircraft weight requires increased thrust (or "growth"). At this time, neither engine has room for additional growth without a significant investment. The JSF Program Office has estimated that if standard aircraft weight growth is applied to the short take-off and vertical landing variant, it will cost approximately $1.4 billion to increase the thrust in the engine and lift system ($700 million for the F135 engine/$700 million for lift system). If the JSF program had

two engine suppliers, any future engine growth investments must be doubled, thereby increasing cost and further offsetting any savings achieved through reliability improvements.

Conclusion

In summary, the question of whether to fund a second supplier for JSF engines is a difficult decision, but the Department believes the facts and the logic of the case weigh towards a single supplier—especially given the range of risks we must mitigate across the entire DOD program. Investing substantial amounts of money to create JSF engine competition that is unlikely to result in net cost savings is not an effective use of taxpayer dollars.

QUESTIONS SUBMITTED BY SENATOR JOSEPH I. LIEBERMAN

EDUCATION IN A CONFLICT ENVIRONMENT

68. Senator LIEBERMAN. Secretary Rumsfeld, we often talk about military transformation in terms of equipment and technology. In addition to these areas, I am also concerned about whether the military is keeping up with the more demanding educational requirements of an increasingly complicated combat environment. From our experiences in Iraq and Afghanistan, we know that our military must be more analytical, adept, and intuitive. They must have cultural training which enables them to interact on the ground to control the populations in question. This training must go beyond linguistics instruction, and help prepare our soldiers for interacting with indigenous populations. The QDR states that the military must create a "new breed of warrior" that can take on the responsibilities of a special operations commando in fighting terrorists and insurgents. However, it is unclear how the military is planning to achieve this additional capability beyond more language training. In the Services today, there is less time given to officers for graduate study, and military fellowships have been cut. The importance of learning has increased, but I fear we've become a military that is too busy to learn because we have fewer people doing more. I am particularly concerned that people and time devoted to training and education have been reduced in order to add more people to combat units and still reduce end strength. This should not be an "either/or" decision. Furthermore, offering more opportunities for education can also help sustain the volunteer force. Do you agree with my assessment of this problem?

Secretary RUMSFELD. We agree with your assessment that we need to provide increased opportunities for training and education in order to provide the warrior who can operate effectively in the asymmetric and complex battlefield. We have made the necessary policy changes at the Department and Service level to ensure that we offer training and educational learning opportunities for cultural and regional awareness not only for our language specialists but also the entire force.

One example of this effort is the Defense Language Transformation Roadmap which outlines 43 action items that upon completion will ensure that foreign language capabilities and regional expertise are developed, maintained, and employed as strategic assets in current and future military operations.

The Roadmap, which was published in February 2005, specifically requires the incorporation of regional area content in language training, professional military education and development, and pre-deployment training. The Services are moving forward in this area.

A second example is in DOD Directive 3000.05 "Military Support for Stability, Security, Transition, and Reconstruction Operations." This Directive establishes guidance on stability operations and addresses the need for skills such as regional area expertise. The Roadmap directs this courseware be developed and incorporated into Professional Military Education (PME) at all levels.

DOD views cultural and regional awareness education and training as a part of Irregular Warfare. We are in the process of publishing a roadmap to implement the changes proposed in the QDR. We are continuing to gather lessons learned from current operations and incorporate them into new joint doctrine.

Doctrine drives PME curriculum. Prior to doctrine being published, new and emerging operational concepts are incorporated so that our education and training programs are timely and relevant. We have increased education at our major level, so that 100 percent of Army majors must attend Command and General Staff College. The Army is also increasing by 200 per year the advanced civil degree program opportunities for company grade officers so that 1,000 officers at a time are in the program.

We have also, through the QDR process, increased the emphasis on language programs at the military academies—which include regional studies. The QDR also has

provided a mechanism for funding scholarships so that cadets/midshipmen can acquire language skills prior to commissioning.

Across the board, the Services support education at all levels. To this end, the Services have not decreased any graduate education or military fellowship opportunities. In fact, the Air Force and Navy have increased their programs. The Air Force currently has 51 personnel participating in a fellowship program; an increase from 44 in 2002–2003. The graduate study programs increased from 672 quotas in 2002 to 1,000 in 2007. The Navy has also increased graduate education opportunities and within the 2007 President's budget provided for further growth of about 44 quotas for resident study at the Naval Postgraduate School and about 21 quotas at the Senior War Colleges.

69. Senator LIEBERMAN. Secretary Rumsfeld, in what ways are the "educational deficits" addressed in the current QDR and the fiscal year 2007 budget?

Secretary RUMSFELD. We don't believe we have "educational deficits" but are planning, organizing, and training in response to the type of irregular warfare that we expect to face this century. The fiscal year 2007 budget provides us with substantial funding to enhance our efforts to focus on language training prior to accession and to ensure that funding necessary to ensure current and relevant pre-deployment training is provided to all members prior to deployment. Specifically, the QDR provides education and training in the following areas:

- National Security Education Program: Funding will create three magnet K–12 pipelines, establish five new university programs, and enhance immersion opportunities in immediate investment and strategic languages as part of the National Language Initiative.
- Service Academy Language Training: Funding enhancements to the Service Academy (USMA, USNA, and USAFA) programs. The funding redirects the Service Academies language programs to focus on immediate investment and strategic stronghold languages and to enhance immersion programs, semester abroad opportunities, and interacademy foreign exchanges.
- Reserve Officer Training Corps (ROTC) Language Training: Allows us to award 3-year grants to 50 ROTC schools to promote the development of language programs in languages of strategic importance to DOD.
- Pre-deployment Training: Supports Defense Language Institute Foreign Language Center (DLIFLC) development of country/language familiarization packages and operationally focused language instruction modules to build distance learning capability and off-the-shelf modules.
- DLIFLC Technology Enhancements: DLIFLC will provide and manage contracts for satellite communications for distance learning and associate technology.

SCIENCE AND TECHNOLOGY

70. Senator LIEBERMAN. Secretary Rumsfeld, DOD's request for innovative science and technology (S&T) programs that will shape our future military is $11.1 billion. This is a decrease of $2.3 billion from the 2006 appropriated level. It also represents 2.5 percent of the total defense budget, falling short of the 3 percent goal for S&T investment set by the Defense Science Board. Do you feel like you are investing enough in S&T programs to support the development of the new capabilities that we need to meet future threats?

Secretary RUMSFELD. The S&T funding in the fiscal year 2007 President's budget reflects a robust program that continues to explore new technologies and applications while conducting current military operations and the global war on terrorism. This request begins funding away from traditional into transformational technologies to address future threats, consistent with the QDR and National Security Strategy.

The fiscal year 2007 S&T budget request is 3 percent higher than last year's request, in real terms, and our S&T investment has grown over 23 percent—almost $2.5 billion—over the past 6 years. In addition, the fiscal year 2007 S&T budget represents the largest request, in constant dollars, since the initiation of the current budget process in 1962.

FORCE TRANSFORMATION

71. Senator LIEBERMAN. Secretary Rumsfeld, the DOD created the Office of Force Transformation (OFT) to help evaluate and implement proposals for military transformation. Currently, OFT reports directly to you. A replacement for the former di-

rector, retired Navy Vice Admiral Arthur Cebrowksi, has not been named. A report conducted by the Defense Science Board (DSB) suggested in 2005 that OFT might not prove necessary in the future. Can you provide us with an update on the status of OFT and tell us about its short- and long-term objectives?

Secretary RUMSFELD. First, the DSB Summer Study "Transformation: A Progress Assessment," contains no recommendation concerning OFT and certainly makes no judgment regarding its future. OFT continues to do the kind of work it was established to undertake, and that is to operate ahead of Department policy, identifying areas or gaps in emerging capabilities that the Department will not get to on its own, and creating new knowledge. The office operates at the intersection of unarticulated needs and non-consensual change, and remains committed to doing so, even in the absence of a follow-on director. Unlike most organizations that focus exclusively on either research or technology, OFT is unique in that it is both a THINK and a DO tank.

OFT has experienced much success in its brief existence, catalyzing Department efforts in such diverse areas as Operationally Responsive Space with its TACSAT initiative; exploring new ground with the innovative suite of lethal and non-lethal capabilities integrated into the Sheriff vehicle; and OFT's Stiletto boat is pushing new boundaries in hydrodynamics understanding and shipbuilding business models. These concept-technology pairings, tied to robust operational experimentation, are critical enablers for acquisition in the Information Age.

In addition, the office has launched nearly two dozen analytically rigorous case studies across the spectrum of Network Centric operations, providing Department leaders with hard evidence on the battlefield value derived from investments in information technology. Since cultural change is a critical element of transformation, OFT has created a series of "Transformation Chairs" at major institutions engaged in professional military education like the Army War College, U.S. Naval Academy, and Air University. These chairs constitute a distributed network and forum for championing new research ideas across the Services education system.

For the future, OFT is investigating new concepts in directed and redirected energy, which the office firmly believes will fundamentally change the character of warfare; is exploring the national security implications and departmental impact of emerging pandemic diseases; and is launching an in-depth seminar series on energy to identify alternative paths the Department can take regarding conservation, efficiencies, and reuse.

72. Senator LIEBERMAN. Secretary Rumsfeld, does OFT have the appropriate level of funding and staffing to adequately promote transformation in the military?

Secretary RUMSFELD. Yes. With a staff of never more than 17 action officers, OFT has worked with other elements within the DOD to produce or achieve the following:

1. A new concept of "operationally responsive space" that promises to make rapidly deployable satellites with tailored payloads (TACSATs) an organic capability for Joint Force Commanders. Working with PACOM, the Naval Research Laboratory, and private industry, OFT has created a new "paradigm" for the military use of space.

2. A DOD-wide architecture for the development of a range of small satellites for use by future Joint Force Commanders. Central to this architecture is a modular bus that will allow satellite developers to combine standard components to create "tailored" satellites. The development of the modular bus is essential to the effort to make space assets and forces operationally responsive.

3. An experimental M-hull warship ("Stiletto") that has proven it can: (a) move at high speeds without subjecting its crew and passengers to the shock of plowing through waves and surf; (b) carry a high payload for its size and weight; and (c) fit easily into the sort of network of sensors and platforms that is the basis of distributed military operations.

4. A prototype urban warfare vehicle (the Full-Spectrum Effects Platform (F–SEP)) that successfully integrates lethal and non-lethal technologies to broaden the range of options available to a commander in an urban environment. The ability of OFT and its development partners to create the concept for this vehicle and then rapidly turn the concept into an effective system has demonstrated the potential of a new and innovative approach to defense acquisition.

5. A conceptual framework for network centric warfare that has been adopted throughout DOD.

6. A network of "transformation chairs" established in professional military schools to promote the cultural change that is at the heart of trans-

formation. These chairs are supported by carefully crafted case studies, simulations, and other academic materials.

7. Participation as the only regular representatives of the Secretary of Defense in joint concept development and experimentation (JCD&E). OFT has worked persistently and successfully with JFCOM, for example, to involve the staffs of the COCOMs in joint wargames.

8. A Naval Force Structure study requested by Congress. The strategic and operational implications of that study will be explored in a series of exercises with the Navy starting this April.

OFT has achieved these and other goals within its total budget.

SUBMARINE PRODUCTION

73. Senator LIEBERMAN. General Pace, the QDR recommends that submarine production remain at one boat a year until 2012, when production will accelerate to two boats a year. At this point, China's submarine force is on the road to matching the United States in size and capability. But their building rate is exceeding ours. Furthermore, the Chinese are building submarines that are quieter and more elusive. The latest Navy force structure plan calls for maintaining approximately 50 attack submarines. But if we wait until 2012 to accelerate to two ships a year, we will fall below the force structure level of 50 boats. It seems that our plans for submarines are determined by a constrained Navy ship building plan instead of the strategic requirements we are facing. Why is procurement for submarines remaining at the one boat per year level?

General PACE. The QDR involved a thorough review of our submarine force structure requirements and determined that a production rate of one boat per year through 2012 is an acceptable level of risk. We understand the QDR is a point-in-time document in a very dynamic process, so we will continually assess our total force capabilities against both the current and future threats to our national interests. While submarines remain a key element of the total force, they are not the only component of our anti-submarine warfare (ASW) capabilities. With the help of Congress, the Department has invested significant resources in ASW platforms, sensors, and training so our overall capability in this challenging warfighting area continues to keep pace with the threat.

74. Senator LIEBERMAN. General Pace, what is the strategic impact if we fall below 50 submarines?

General PACE. The QDR looked at shipbuilding programs, taking into account both quantity and quality in assessing overall capability and strategic risk. The multi-mission *Virginia* class submarines being built today provide significantly improved capabilities in littoral warfare and special operations over previous fast attack submarines. Balancing these improved capabilities against the Navy's submarine force structure requirements, the QDR determined that future force structure from the proposed building rates resulted in an acceptable level of risk. The Department will continually assess our total force capabilities against both the current and future threats to our national interests.

75. Senator LIEBERMAN. General Pace, if we wait until 2012 to increase production, can our industrial base in submarine production sustain itself?

General PACE. The Department continues to closely monitor the health of the entire shipbuilding industry and we are confident that the industrial base can continue to function effectively at the programmed submarine construction rates. The support of Congress for the *Virginia* class multiyear procurements, for example, allowed the Navy and submarine builders to achieve efficiencies in current submarine production that would not otherwise be possible. These efficiencies keep the submarine industrial base healthy and able to flex to increased production in the future.

JOINT EXPERIMENTATION

76. Senator LIEBERMAN. General Pace, joint experimentation is an integral part of the military transformation effort. We need scientific experimentation of joint warfighting to determine the effectiveness of the endeavors. The 2002 joint exercise, the Millennium Challenge, helped determine the military's progress in joint tactics and technologies. Joint experimentation promotes efficiency and ultimately saves us resources in the future. I am concerned that the funding for joint experimentation has been reduced in the fiscal year 2007 budget. In particular, the Navy has suf-

fered large cuts in advanced technology development and joint experimentation. Can you provide me with the rationale for this reduction?

General PACE. USJFCOM's joint experimentation funding in the past has been provided through the U.S. Navy. The joint experimentation funding has not been reduced but, per the guidance from the National Defense Authorization Act for Fiscal Year 2005, the funding line has been shifted from a Navy account to a Defense-wide account with Office of the Secretary of Defense for Acquisition, Technology, and Logistics providing oversight.

77. Senator LIEBERMAN. General Pace, why was the Navy targeted for this budget decision?

General PACE. The Navy was not targeted for a budget cut in this area; rather USJFCOM funding was simply relocated. Beginning in fiscal year 2007, the funding for USJFCOM joint experimentation will no longer reside under the Navy's research, development, testing, and evaluation accounts. The funding line will be shifted to a Defense-wide account instead.

QUESTIONS SUBMITTED BY SENATOR JACK REED

SCIENCE AND TECHNOLOGY AND DEFENSE LABS IN THE QDR

78. Senator REED. Secretary Rumsfeld, I note that the QDR generally discusses the role that technology has played in transforming our military and creating new capabilities—for example in the ability to rapidly share information on the battlefield. However, I am disappointed that the document does not provide any specific guidance for the Department to shape its investments in this critical area—either in terms of funding targets, areas of emphasis, strategies for future investments, or new roles for our defense laboratories in accelerating the technological transformation of the Department. Why weren't any of these areas, or related research and technology issues, discussed in more detail in the QDR?

Secretary RUMSFELD. The QDR reaffirms the vector for rapidly sharing information on the battlefield. The details of funding targets, specific areas of emphasis, and roles and responsibilities for accelerating technological transformation are more appropriately found in the Strategic Planning Guide and the Joint Program Guidance that will be published this spring. These documents will provide the guidance and detail you highlight.

SPECIAL OPERATIONS SCIENCE AND TECHNOLOGY BUDGET

79. Senator REED. Secretary Rumsfeld, the 2007 budget you are proposing reduces Special Operations Command's (SOCOM) S&T program by nearly 50 percent relative to 2006 appropriated levels, down to $95 million. The 2007 request is also below the original 2006 budget request. Given the important role that SOCOM is playing in current operations and the expanded capabilities that our special operators are deriving from new technologies, what was the justification for this reduction?

Secretary RUMSFELD. Given the competing demands across the Department, the fiscal year 2007 President's budget request represents a balance among near- and long-term priorities. The SOCOM S&T request is properly prioritized and represents a balanced investment among near-term requirements and planning to meet future threats.

80. Senator REED. Secretary Rumsfeld, what areas of research and technology development of particular interest to SOCOM are underfunded due to this decrease?

Secretary RUMSFELD. There are no underfunded efforts. The budget is properly balanced and prioritized.

BIOMETRICS

81. Senator REED. Secretary Rumsfeld, I understand that the Army is acting as the Executive Agent for DOD biometrics, in regard to biometric technologies being used to fight the war on terror. I also understand that other efforts are being undertaken by the Intelligence Community, defense agencies, and the other Services. What are we doing to ensure our biometric efforts are not overlapping, are not disconnected, and are not falling into confusion of where the responsibility rests?

Secretary RUMSFELD. DOD biometrics participates in national-level forums for information sharing and interoperability and is the recognized leader in the formula-

tion of national and international biometrics standards. The Biometrics Community of Interest (COI), composed of representatives from across the government, meets quarterly to deal with biometric issues and requirements. The COI is supported by Standards, Requirements, Policy, and Information Sharing Working Groups. A Biometrics Advisory Council (BAC) is being established with senior members from across the government. The BAC will provide a forum to bring the right people and perspectives together to provide insight and assist the Executive Agent in making decisions regarding biometric issues. We have conducted data calls throughout DOD to ensure that we are aware of current biometric capabilities and requirements. DOD biometrics is also drafting policy that will specify and document responsibilities regarding biometrics throughout the DOD. Finally, we are undertaking several short-duration studies to develop a vision for DOD biometrics and assess how best to organize the DOD to support United States Government identity management efforts and DOD global war on terror missions.

82. Senator REED. Secretary Rumsfeld, what is the total investment being requested in this budget for biometrics technology development, procurement, and operation?

Secretary RUMSFELD. The total Executive Agent investment for biometrics in fiscal year 2007 is $14.5 million (Research, Development, Test, and Evaluation Appropriation), $1.4 million (Other Procurement, Army Appropriation) and $11.8 million (Operations and Maintenance, Army Appropriation). The Army Intelligence investment for intelligence related R&D is $4 million, $13 million for Operations Maintenance, Army and $8 million for Other Procurement, Army. The U.S. Army Intelligence and Security Command has requested $80 million (Operations and Maintenance, Army Appropriation) for Contractor Analysis ($50 million), Contractor Forensics ($10 million), and Software and Equipment ($20 million).

83. Senator REED. Secretary Rumsfeld, the Chief of Staff of the Army is the Executive Agent for DOD biometrics with responsibility delegated to the Army Chief Information Officer (G–6). What are the relative investments being made by Army Intelligence (G–2) and the Army CIO (G–6) on the biometric programs and how are their efforts coordinated?

Secretary RUMSFELD. The Secretary of the Army is the Executive Agent for DOD. The Army Chief Information Officer (G–6) is closely partnered with Army Intelligence (G–2) in order to share biometric match results and subsequently perform intelligence analysis and exploitation. The G–2 provides leadership on in-theater biometric collection and matching, and synchronizes these capability developments with the G–6 and its biometric futures capability.

The DOD ABIS is the central DOD repository for detainee biometric data. ABIS also receives latent fingerprint files derived from forensic investigations through various sources. The ABIS is modeled after the highly successful FBI system, the IAFIS. Within the Department, ABIS shares match results with the original source and with relevant entities from the Intelligence Community, detainee operations, and interagency partners.

The Army NGIC is developing the Biometrics Intelligence Resource (BIR), which will be an automated system that ingests biometric signatures and associated intelligence collected from DOD biometric sensors for the purpose of positive identification and tracking of individuals. The BIR will serve as a central repository for biometric information and related intelligence collected by DOD sensor systems. Army G–2, in conjunction with the U.S. Army Intelligence Center and Fort Huachuca Language and Technology Office fielded the Biometrics Automated Toolset (BAT), which was initially developed under the Human Intelligence and Counterintelligence Support Tools Advanced Concept Technology Demonstration. BAT is a multimodal biometric system that collects fingerprints, iris images, and facial photos. It is a self-contained biometrics searching/matching tool which enrolls, identifies, and tracks persons of interest, and builds "digital dossiers" including interrogation reports, intelligence reports, related records, incident reports, and relationships.

The Biometric Identification System for Access (BISA) system is installed at 10 sites in Iraq. BISA is a nonportable system designed to enhance force protection by establishing a biometric identity record and issuing an access credential for the non-U.S. workforce at U.S. military facilities in Iraq. BISA enrollments are transmitted to the DOD ABIS, located in Clarksburg, West Virginia, where they are compared to previously collected biometric records and other name-based data. After this comparison, if no disqualifying information is discovered, a biometric access card is issued and used to verify that the person presenting it for access to U.S. facilities in Iraq is entitled to access.

The Army Office of the Provost Marshal General (OPMG) is the DOD statutory and regulatory official responsible for administering and operating programs related to enemy prisoners of war (EPW), civilian internees (CI), and detained persons (DP). The OPMG is the sponsor of the Detainee Reporting System (DRS), which enrolls EPW, CI, and DP and assigns them with the official Internment Serial Number (ISN). DRS transmits enrollment data (ISN, biographic data, and fingerprints) through the National Detainee Reporting Center for inclusion in the DOD ABIS.

As we continue to improve and expand our collection capabilities overseas, we are also working to enhance our ability to store and exploit the collected data within an enterprise environment that includes other government entities, such as the FBI. Innovative new enhancements to the DOD ABIS are being developed to promote government interoperability, increase throughput, and expand the capacity of the system. In the future, the ABIS will be able to conduct searches on individuals through the combined use of fingerprints, photographs, and iris information. The BFC continues to search for viable commercial products to provide the DOD with the most advanced and capable systems available.

ROBUST NUCLEAR EARTH PENETRATOR STUDY

84. Senator REED. Secretary Rumsfeld, Congress moved the $4.0 million in Department of Energy (DOE) funds that had been requested for fiscal year 2006 for the Robust Nuclear Earth Penetrator (RNEP) to DOD to conduct a penetrator study that could support either a conventional or a nuclear earth penetrator. It is important that DOD clearly identify its plan for the $4.0 million available in fiscal year 2006 and any additional funds requested for fiscal year 2007. The concern is that the DOD funds will be used to support the RNEP feasibility study. DOE has no funds for the RNEP in either the fiscal year 2006 appropriation or the fiscal year 2007 request. DOD has no funds specifically designated for the RNEP in its fiscal year 2007 budget request. Will any DOD fiscal year 2006 funds or fiscal year 2007 funds be used to support the feasibility study for the RNEP?

Secretary RUMSFELD. No. The RNEP study was terminated. While the Department supported the completion of this joint DOD-DOE study, Congress did not support it. We will use the fiscal year 2006 funds provided by Congress to conduct a penetrator sled test experiment in fiscal year 2006 at Holloman Air Force Base, New Mexico.

CONVENTIONAL WARHEADS ON THE TRIDENT D–5 SEA-LAUNCHED BALLISTIC MISSILE

85. Senator REED. Secretary Rumsfeld, as part of the effort to achieve a prompt global strike capability within 24 months, the Navy has proposed to put conventional warheads on some Trident D–5 sea-launched ballistic missiles (D–5 SLBM) on Trident submarines. There are many issues associated with this plan including serious concerns about distinguishing between a nuclear D–5 and a conventional D–5, command and control issues, treaty issues, and cost. In addition, a U.S. decision to use ballistic missiles to deliver non-nuclear warheads could provide countries of concern a cover story for suspect nuclear weapons and ballistic missile programs. A debate on the issue with you would probably not be productive, but it would be useful to highlight concerns about the proposal and obtain all analysis conducted to address the issues.

The Department has proposed putting conventional warheads on Trident D–5 sea-launched ballistic missiles. This is a troubling proposal that has numerous associated issues. Could you please provide all studies and analyses that have been conducted addressing or discussing the issues associated with this proposal?

Secretary RUMSFELD. The following studies and analyses are related to conventional warheads on some Trident D–5 sea-launched ballistic missiles:

(1) The Quadrennial Defense Review Report, February 2006

(2) The Strategic Capabilities Assessment, April 2005

(3) U.S. Strategic Command, Conventional Kinetic Options for Global Deterrence, September 2005

(4) Ballistic Missile "Overflight"—An Assessment of the Issues, Prepared for U.S. Space Command, December 2004

86. Senator REED. Secretary Rumsfeld, could you also provide a list of ongoing, not yet completed, studies and any additional studies that are planned or will have to be completed?

Secretary RUMSFELD. A prompt global strike analysis of alternatives is ongoing under the leadership of U.S. Air Force Space Command.

87. Senator REED. Secretary Rumsfeld, will Congress be receiving a reprogramming request to begin work on conventionally armed D–5 missiles in fiscal year 2006?

Secretary RUMSFELD. At this time the Department has not initiated a reprogramming of funds for fiscal year 2006 funds to support work on conventionally armed D–5 missiles.

88. Senator REED. Secretary Rumsfeld, has any money already been spent in support of conventionally armed D–5 missiles, and if yes, on what specific activities was the money spent?

Secretary RUMSFELD. The Department is using funds appropriated for studies and concept development to explore a range of prompt global strike options, including the Conventional Trident Modification (CTM). However, there has not been any expenditure of funds for CTM-unique development, hardware, or software.

STRATEGIC ARMS REDUCTION TREATY

89. Senator REED. Secretary Rumsfeld and General Pace, the Strategic Arms Reduction Treaty (START) I will expire in 2009. In order to extend the treaty a party to the treaty must notify the other in 2008. There is debate in the administration as to whether the treaty should be extended. The Intelligence Community is interested in seeing this treaty extended as it provides a wealth of knowledge into the Russian strategic forces, but DOD may not be as enthusiastic about extending the treaty. At a minimum the administration should begin to study the pros and cons of extending the treaty. Has the DOD initiated or are there any plans to initiate any studies to assess the benefits of extending the START I, which expires in 2009?

Secretary RUMSFELD. START provisions require the parties to meet no later than 4 December 2008 to consider whether the treaty will be extended. Extension of START in accordance with its terms requires the agreement of all five parties to the treaty (Russian Federation, Ukraine, Belarus, Kazakhstan, and the United States). The administration is considering possible options, but has not yet reached a decision on how to proceed with respect to START.

General PACE. The Cold War era START, with its many intrusive inspections and verifications measures, is outdated. The United States needs forces posture flexibility to meet emerging threats and to execute the war on terrorism. START provisions require the parties to meet no later than 4 December 2008 to consider whether the treaty will be extended. Extension of START in accordance with its own terms would require the agreement of all five parties to the treaty (Russia, Ukraine, Belarus, Kazakhstan, and the United States). The DOD is engaged in a review process concerning the direction for the post-START dialogue with the Parties to the START. A post-START dialogue should more closely match the security needs of the United States in the 21st century and be based upon trust and transparency.

NUCLEAR WEAPONS

90. Senator REED. Secretary Rumsfeld and General Pace, will any nuclear warheads be retired in fiscal year 2007?

Secretary RUMSFELD and General PACE. Yes. The Joint DOD and DOE Requirements and Planning Document, approved by the Nuclear Weapons Council, includes warhead retirements in fiscal year 2007.

91. Senator REED. Secretary Rumsfeld and General Pace, will the W–62 warhead be dismantled, and if so, when will the process begin?

Secretary RUMSFELD and General PACE. Yes. The Defense Threat Reduction Agency's Stockpile Executive Summary shows that W–62 warheads were dismantled in the third and fourth quarter of fiscal year 2005. The National Nuclear Security Administration's Nuclear Weapons Production and Planning Directive 2006–0 indicates that W–62 warheads are scheduled for dismantlement from fiscal year 2006 through fiscal year 2010.

92. Senator REED. Secretary Rumsfeld and General Pace, will the last phase of the W–76 life extension program transition to a Reliable Replacement Warhead (RRW)?

Secretary RUMSFELD. The goal of the RRW program is to assure, over the long term, the Nation's ability to sustain the nuclear stockpile with replacement warheads that provide the same military capabilities as the warheads they replace. RRW will serve as a complement to, and potentially a more cost effective and reli-

able long-term replacement for, the current Stockpile Life Extension Programs. As part of a larger transformation strategy, all existing legacy warheads will be studied for the feasibility of their replacement over the next 25 to 30 years in lieu of life extension. The ongoing RRW program is specifically examining the potential to replace a portion of W–76 warheads on Submarine Launched Ballistic Missiles. Since the RRW feasibility study is ongoing and scheduled to be completed in November 2006, it is too early to decide on the exact impact that a RRW will have on the W–76 life extension program.

General PACE. It is too early to decide the exact impact that a RRW will have on the W–76 life extension program. The Nuclear Weapons Council formed a joint Project Officers Group, co-chaired by the Navy and the Air Force, to study the feasibility of a RRW. This study is scheduled to be completed in November 2006.

QUESTIONS SUBMITTED BY SENATOR DANIEL K. AKAKA

FORCE TRANSFORMATION

93. Senator AKAKA. Secretary Rumsfeld, in its December 2004 report, the GAO reported that key practices for successful transformation of the Armed Forces include leadership that sets the direction and assigns accountability for results. Can you tell me what, if any, formal mechanisms have been, or will be, put into place to ensure that clear and consistent priorities are set amongst the key organizations involved in the transformation and that the appropriate resources are allocated to these priorities?

Secretary RUMSFELD. There are several formal mechanisms for making sure that there are clear and consistent priorities and that appropriate resources are allocated to them. First among them is the "Transformation Planning Guidance" (TPG) promulgated by myself in April 2003. The TPG set out a number of transformation goals and assigned responsibilities to elements of the DOD for the attainment of those goals.

For example, the TPG directed OFT to prepare a Strategic Transformation Appraisal (STA) annually for myself based upon information provided by the Services and JFCOM in their "transformation roadmaps." OFT has completed three Strategic Transformation Appraisals. More importantly, the Services have responded to the requirement that they prepare "transformation roadmaps" by creating documents that have strengthened their own planning processes. In addition, the new Business Transformation Agency (BTA) is now working closely with OFT on the next iterations of the TPG and STA in order to show I have the connections between business transformation and force transformation.

I have also directed the Services, the Joint Staff, Joint Forces Command, the combatant commands, and the OSD staff to cooperate in the development of a "family" of operating and functional concepts that will place planning for the future on a strong conceptual foundation. This is part of my effort to move away from "threat-based" planning and toward "capabilities-based" planning. It has not been easy for DOD's components to agree on the specifics of several of the more challenging joint operating concepts, but the effort by all those involved to fulfill my guidance has produced a vigorous ongoing discussion that has highlighted operational-level risks and opportunities that would otherwise have been neglected.

Once concepts have been approved, they are "tested" in wargames, simulations, and exercises, some of which are joint and the rest of which are paid for and managed by the separate Services. These JFCOM-sponsored and Service-sponsored "experiments" have already helped significantly to clarify the challenges that will face U.S. forces in the future. Recent "experiments" have influenced both the revision of warfighting concepts and plans for future "experiments." The goal of OFT is to support an ongoing cycle of concept development and experimentation that will keep the armed services ahead conceptually of any likely opponent.

The concepts, once validated through exercises and the analysis of "lessons learned" from actual operations, will lead logically to clusters of capabilities that the Services will convert into programs and budgets. Last May, I directed DOD's components to use the Joint Capability Area categories and terminology approved by the Joint Staff in force planning and budgeting for the next FYDP (fiscal year 2008–fiscal year 2013). OSD/PA&E will work with the Service staffs to make sure that their POMs use this terminology and reflect the capabilities needed for "transformation."

NAVY QDR PLANS

94. Senator AKAKA. General Pace, according to the recently released 2006 QDR, the Navy plans to adjust its force posture and basing to provide at least six operationally available and sustainable carriers and 60 percent of its submarines in the Pacific to support engagement, presence, and deterrence. With this in mind, what are the DOD's plans regarding future forward homeporting in Hawaii?

General PACE. The Navy continues to review current and alternate carrier ports. The existing nuclear-powered carrier capable homeports—Norfolk, San Diego, Bremerton/Everett—will continue to have carriers commensurate with existing support infrastructure. In addition, Yokosuka, Japan, will transition to a nuclear-powered capable homeport when *George Washington* replaces *Kitty Hawk* in 2008. The Navy has been examining the role that Mayport, Pearl Harbor, and Guam will play with the all-nuclear carrier fleet. Pearl Harbor and Guam are both currently capable of hosting nuclear-powered carriers; these ports will continue to play a vital role in Pacific Theater strategic objectives. However, significant unfunded investment is necessary ($3.12 billion estimate), including basing an air wing in Hawaii to enable homeporting a carrier in Pearl Harbor.

As for submarines in the Pacific, the Navy currently utilizes support facilities and infrastructure in San Diego, Pearl Harbor, and Guam. Currently, there are 17 attack submarines homeported in Hawaii. Over the next few years, Navy's force posture will include several submarine decommissionings, commissionings, and fleet transfers that will affect ships homeported in Pearl Harbor. By 2020, there will be 15 *Los Angeles* class and 3 *Virginia* class submarines stationed in Hawaii out of an overall force structure of 48 attack submarines (37 percent).

ARMY NATIONAL GUARD REDUCTION

95. Senator AKAKA. General Schoomaker, the President's budget proposal for fiscal year 2007 reduced the ARNG's combat brigade structure by 18 percent. This reduction will affect brigades in every State including the 29th BCT in Hawaii which recently returned from a year tour in Iraq. While I have received assurances from you and Secretary Rumsfeld that the ARNG will not be reduced, is it not a reduction if the ARNG, which I have been informed has 34 BCTs, is restructured to have 28 BCTs? If not, please explain why it is not a reduction.

General SCHOOMAKER. Army is not reducing the size of the ARNG; the total number of brigades remains at 106. The Army will fund the ARNG up to its authorized end strength of 350,000. Prior to the 2005 QDR, the Army had developed a plan for 34 combat brigades and 72 support brigades in the ARNG and 43 combat brigades and 75 support brigades in the Active component. This provided up to 20 combat brigades for steady state operations. The QDR showed a lower requirement for combat brigades but a greater requirement for brigades able to respond more immediately to meet homeland defense/civil support. Therefore, we elected to increase the ARNG domestic capability by rebalancing six BCTs and one Combat Aviation Brigade to seven support brigades, four multi-functional brigades, and three engineer brigades. These seven brigades provide engineer, communications, transportation, logistical, chemical, and medical capabilities critical to homeland defense and civil support.

QUESTIONS SUBMITTED BY SENATOR BILL NELSON

FUNDING OF NAVY FLEET

96. Senator BILL NELSON. Secretary Rumsfeld, last year, the Commander of U.S. Pacific Command, Admiral William Fallon, told Congress that China's military buildup is "unprecedented and proceeding quite rapidly." More recently, the QDR directs the Navy to assume a "greater presence" in the western Pacific by adding at least one aircraft carrier and five nuclear submarines over the next decade. Given the current and potential growth of tension in the Pacific, and our continuing commitments in Central Asia, the geo-strategic risk associated with a reduction in the size of our carrier fleet is unjustified and unacceptable. DOD and Navy leadership argue that new operating practices in the Fleet Response Plan (FRP) mitigate the risks. However, a recent RAND study (American Carrier Airpower at the Dawn of a New Century, RAND, 2005) for the Navy notes that, "FRP was conceived and formulated on the core premise that the Service would retain its longstanding post-Cold-War force structure of 12 deployable carriers and 10 active air wings."

Consistent with this assessment of current and future threats and requirements, Congress enacted legislation signed by the President that requires a minimum 12-carrier naval force structure in law. The Defense Department's budget request for fiscal year 2007 does not include funding necessary to meet this requirement. We appreciate that the law may have been enacted so late in your budget estimate process that the fiscal year 2007 budget request does not fully fund this requirement. What is the funding shortfall in your fiscal year 2007 budget request that will be necessary to ensure that the Nation has the 12 operational carriers required in law?

Secretary RUMSFELD. The Department is asking Congress to amend the law so that the carrier fleet can be sized to the QDR's recommendation for 11 operational aircraft carriers. Therefore, the President's budget for fiscal year 2007 reflects the operation of 11 carriers.

The Department has not determined what funding would be needed to maintain and operate the U.S.S. *John F. Kennedy* beyond fiscal year 2006. The Department is submitting legislation to ask Congress to amend the law to allow the Department to operate 11 operational carriers as recommended by the recently completed QDR.

97. Senator BILL NELSON. Secretary Rumsfeld, what is your plan to find or request the funds necessary to meet this requirement?

Secretary RUMSFELD. We are asking Congress to amend the law so that the Department can reduce the fleet to the recently validated carrier fleet of 11.

98. Senator BILL NELSON. Secretary Rumsfeld, will you include the necessary funding to sustain a 12-carrier fleet in either a budget amendment and/or a supplemental appropriations request?

Secretary RUMSFELD. We are asking Congress to amend the law and allow the Department to retain 11 carriers as recommended by the QDR.

QUESTIONS SUBMITTED BY SENATOR E. BENJAMIN NELSON

GLOBAL INFORMATION GRID BANDWIDTH EXPANSION

99. Senator BEN NELSON. Secretary Rumsfeld, it is my understanding that the Global Information Grid Bandwidth Expansion (GIG–BE) program was initiated prior to the war on terror, the establishment of Northern Command (NORTHCOM), and the 2005 BRAC recommendations. Does the current selection of sites currently connected to the GIG–BE provide for all the current and emerging needs of the DOD or was the total number of sites controlled by available funding?

Secretary RUMSFELD. The GIG–BE sites were prioritized and validated by the Joint Staff. The GIG–BE sites were updated after the global war on terror began and NORTHCOM was established. New network requirements to expand the number of GIG–BE sites will be met by connecting key Defense Information System Network (DISN) nodes to GIG–BE nodes using leased telecommunication services. Forums exist for Services and agencies to submit their requests to the Capabilities Validation Working Group (CVWG), a subgroup that supports the DISN Customer Forum.

100. Senator BEN NELSON. Secretary Rumsfeld, are there additional sites needing connection to the GIG–BE, as an outcome of the establishment of NORTHCOM?

Secretary RUMSFELD. At present, we are not aware of additional sites needing connection to the Global Information Grid (GIG) as a result of the establishment of U.S. NORTHCOM. There are processes in place that allow Services and agencies to submit requests for connection to the GIG. Services and agencies may submit their requests to the CVWG, a subgroup that supports the DISN Customer Forum (DCF) requests that are validated by the CVWG are then submitted to the DISN Rates Management Council, which is made up of flag officers from each of the Services and meets semi-annually.

101. Senator BEN NELSON. Secretary Rumsfeld, are there additional sites, as a result of base realignment (or other developments), which are now becoming critical, and which should be connected to the GIG–BE?

Secretary RUMSFELD. At present, we are not aware of additional sites needing connection to the GIG as a result of the BRAC process. There are processes in place for Services and agencies to submit requests for connection to the GIG. Services and agencies may submit their requests to the CVWG, a subgroup that supports the DISN DCF. Requests that are validated by the CVWG are then submitted to the DISN Rates Management Council, which is made up of flag officers from each of

the Services and meets semi-annually. Additional sites will be considered as part of ongoing reviews and incorporated into DISN expansion efforts.

102. Senator BEN NELSON. Secretary Rumsfeld, some sites, originally identified and planned for connection to the GIG–BE, for reasons of budget or mission have not yet been connected to the GIG–BE. Should those sites be reviewed for connection in the future to the GIG–BE? If not, how will they be served and how will missions be affected?

Secretary RUMSFELD. For those sites that were not included in the original GIG–BE upgrade, there will be ongoing reviews, within the DOD process, to determine future capability needs. All sites that did not receive GIG–BE upgrades will continue to use DISN services to fulfill mission requirements.

103. Senator BEN NELSON. Secretary Rumsfeld, the QDR identifies the need for DOD to assist domestic agencies in the event of disaster, such as the Hurricanes Katrina and Rita disasters of last year. Does the GIG–BE have connectivity to necessary civilian agencies, such as the DHS?

Secretary RUMSFELD. The GIG–BE program was intended and designed for DOD installations requiring long-term and continuous high bandwidth communications; the program also was to provide enhanced senior leader command and control, decisionmaking, and operations and intelligence capabilities. The GIG–BE provides the DOD with the capability to connect with necessary civilian agencies, such as the DHS.

104. Senator BEN NELSON. Secretary Rumsfeld, is there sufficient diversification in the network to ensure reliable backup connectivity?

Secretary RUMSFELD. Yes, there is sufficient diversification for the overall network.

105. Senator BEN NELSON. Secretary Rumsfeld, is there funding in the 2007 budget request for additional GIG–BE sites?

Secretary RUMSFELD. No. The fiscal year 2007 budget request reflects the sustainment of the entire DISN to include the GIG–BE segments, and the leased connection of key DISN nodes to GIG–BE.

SERVICE GOALS FOR GIG–BE CONNECTIVITY

106. Senator BEN NELSON. Secretary Rumsfeld, there are indications that the individual Services have additional sites which they would like to have connected to the GIG–BE. Please describe the process by which Services or COCOMs can requisition and establish such connections.

Secretary RUMSFELD. A process has been developed for Services and COCOMs to submit requests for connection to the GIG–BE network. Services and agencies may submit their requests to the CVWG, a subgroup that supports the DISN Customer Forum. Requests that are validated by the Working Group are then submitted to the DISN Rates Management Council, which is comprised of flag officers from each of the Services for final approval. Using this process, the approved list of key DISN bases is updated annually.

107. Senator BEN NELSON. Secretary Rumsfeld, does DOD regard this as a matter for the individual Services or will there be a Department-wide directive?

Secretary RUMSFELD. A Department-wide process has been established with the full participation of the Services, to oversee GIG connectivity implementation. Services and agencies may submit their requests to the CVWG, a subgroup that supports the DISN Customer Forum. Requests that are validated by the working group are then submitted to the DISN Rates Management Council, which is comprised of flag officers from each of the Services for final approval. Using this process, the approved list of key DISN bases is updated annually.

QUESTIONS SUBMITTED BY SENATOR EVAN BAYH

JOINT STRIKE FIGHTER

108. Senator BAYH. Secretary Rumsfeld, with respect to the F–136 alternate engine program for the JSF, do you think it's a good idea for us to be dependent on sole source suppliers for critical future technologies in a program this large and with so many international partners?

Secretary RUMSFELD. The concepts of sole source suppliers has been applied over many product lines. The Department depends on sole suppliers for several large programs and understands the risks involved with sole-source dependence. Both the F/A–18E/F and the F–22 depend on sole engines sources. The Department regards this sole source dependency as an acceptable risk for both us and our international partners.

109. Senator BAYH. Secretary Rumsfeld, has not the history of U.S. systems and weapons development and procurement since the mid-1970s demonstrated the importance of competition in terms of cost and supply?

Secretary RUMSFELD. Please see the answer to question 67 for this response.

110. Senator BAYH. Secretary Rumsfeld, do you expect the British Government to react negatively to the decision to terminate the F–136 alternative engine program?

Secretary RUMSFELD. It is reasonable to expect the British Government to express their concern over the decision to terminate the F–136 alternative engine program and possible reduction of industrial participation by Rolls-Royce. The Department is confident that the British Government will also recognize that this decision is important in keeping affordability a corner stone of the JSF program and is the right decision for all of the JSF partners. Rolls-Royce remains an integral and critical element of the JSF program, fully responsible for delivering the lift fan assembly for all Short Take Off and Vertical Landing engines. The Department continues to focus on JSF best-value industrial participation with all international partners.

111. Senator BAYH. Secretary Rumsfeld, do you believe this may impact the number of British-procured JSFs?

Secretary RUMSFELD. The Department does not believe the decision to cancel the F136 engine will have any impact on the number of JSFs the British Government procures. We are confident that canceling the F136 engine is an important step in ensuring the affordability of the aircraft the British Government is scheduled to buy. From an industrial perspective, Rolls-Royce remains an integral and critical element of the JSF program, fully responsible for delivering the lift fan assembly for all short take-off and vertical landing engines.

112. Senator BAYH. Secretary Rumsfeld, will a lower overall number of aircraft purchased drive up the cost-per-unit of the JSF?

Secretary RUMSFELD. If fewer JSF are purchased, the smaller production runs can increase procurement costs because they reduce the advantages of "learning curve" effects (whereby costs decrease as a company produces more units) and of "rate effects" (whereby fixed costs are spread over the total number of units produced).

QUESTIONS SUBMITTED BY SENATOR HILLARY RODHAM CLINTON

SMALL BUSINESS INNOVATIVE RESEARCH

113. Senator CLINTON. Secretary Rumsfeld, are you requesting any funds to establish a formal Small Business Innovative Research (SBIR) Phase III program which would serve to transition successful programs out of Phase II SBIR programs into formal acquisition programs?

Secretary RUMSFELD. The fiscal year 2007 budget does not contain a specific request for funds to aid in the transition of SBIR Phase II projects to Phase III and into formal acquisition programs. Title 15, section 638, specifically calls for SBIR Phase III, in which applications of SBIR-funded research are further developed, to be funded by non-SBIR funds. It is the administration's position that beyond Phase II, firms funded via SBIR must compete with the broader supply markets—including large and small firms—to win business. The reason for this is simple: the Department wants the very best equipment and materiel resources for our warfighter, regardless of the source, to maximize the benefits from full and open competition.

Nevertheless, it is important that our early-stage investments, such as SBIR which funds technical feasibility and prototype demonstration of new technologies, are targeted to maximize the potential to transition to meet a technology need. To do this, we ensure that all SBIR projects are fully integrated into the DOD R&D investment strategy and roadmaps to acquisition, as documented in the DOD Basic Research Plan, Defense Technology Area Plan, and Joint Warfighting Science and Technology Plan.

114. Senator CLINTON. Secretary Rumsfeld, what programs exist in this request to help small businesses transition their technologies out of the SBIR program?

Secretary RUMSFELD. The fiscal year 2007 budget does not contain a specific request for programs to aid in the transition of SBIR-funded projects exclusively. However, the budget contains several programs designed to facilitate the transition of technology—both SBIR-funded and non-SBIR-funded—through further development, testing, or evaluation:

- The Technology Transition Initiative (TTI) accelerates the transition of mature technologies from DOD Science and Technology (S&T) into DOD acquisition programs of record. This year, approximately 20 percent of the TTI projects selected for funding leveraged SBIR efforts.
- The Defense Acquisition Challenge Program (DACP) increases the introduction of innovative and cost-saving technologies into DOD acquisition programs. From fiscal year 2003–2005, approximately 70 percent of the DACP projects were awarded to small and medium enterprises.
- Section 108(b)(2) of the Defense Production Act stipulates that the President shall accord a strong preference for small businesses in providing any assistance under the act. To better position small businesses to receive title III projects, the title III program has begun a process whereby SBIR Phase II topics are developed that directly correspond to future planned title III activities.
- An essential part of each Advanced Concept Technology Demonstration (ACTD) and Joint Capabilities Technology Demonstration (JCTD) is identifying the best-of-breed technologies that will contribute to solution of the warfighting problem or need. This best-of-breed analysis of alternatives reviews SBIR solutions that may support the desired capability. In addition, capability needs for which no acceptable technical solution exists are often submitted as SBIR topic areas.

FUEL CELLS AND ALTERNATIVE ENERGY TECHNOLOGIES

115. Senator CLINTON. Secretary Rumsfeld, a few years ago, the Department established energy and power technologies, including fuel cells, batteries, hybrid engines, and other research initiatives as one of its three major S&T thrust areas. Unfortunately, this emphasis was not matched by significant funding increases for these types of efforts, which could serve to improve the efficiency of military vehicles or develop new systems to power the many information technologies, computer networks, sensors, and radios we plan to deploy with our next generation defense systems. What is your planned investment in 2007 for research on energy and power technologies?

Secretary RUMSFELD. The Energy and Power Technology Initiative (EPTI) focuses on electric power component technologies in the areas of power generation, energy storage and power control and distribution which includes many technologies in support of hybrid electric vehicles. Since fiscal year 2003, the Department's investment in applied research and advanced technology has grown from approximately $90 million to more than $240 million in fiscal year 2006. The fiscal year 2007 budget request includes more than $270 million for energy and power technologies within the Department. The fiscal year 2007 investment is predominately in the areas of power generation (fuel cells, superconductivity technology, and other novel power technology) and control and distribution (silicon carbide materials, power electronics, and thermal management).

116. Senator CLINTON. Secretary Rumsfeld, how are these investments coordinated among the Services and defense agencies?

Secretary RUMSFELD. The Department's investments in fuel cells, batteries, hybrids, and other alternative energy technologies are coordinated at several levels. First, there is the EPTI which is managed by the Office of the Director, Defense Research and Engineering. The EPTI provides oversight and coordination across the Services in three major electric power component technology areas: (generation, storage and distribution, and control). Next, there is the Interagency Advanced Power Group (IAPG) which includes NASA and the DOE. The IAPG is a venue for free information exchange among government researchers and program managers. There are also numerous technology specific work groups and technical conferences. Some of the work groups include the Tri-Service Capacitor Technologies Working Group, the Interagency Hydrogen and Fuel Cell R&D Work Group, and the Power Sources Work Group of the DOD Fuze Integrated Product Team. There are also recurring technical meetings including the Army-led Power Sources Conference, the

Navy-led Electrochemical Power Sources R&D Symposium, and the DOD Logistics Fuel Processing Conference.

[Whereupon, at 1:13 p.m., the committee adjourned.]

DEPARTMENT OF DEFENSE AUTHORIZATION FOR APPROPRIATIONS FOR FISCAL YEAR 2007

TUESDAY, FEBRUARY 14, 2006

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

ARMY POSTURE

The committee met, pursuant to notice, at 2:40 p.m. in room SR–325, the Caucus Room, Russell Senate Office Building, Senator John Warner (chairman) presiding.

Committee members present: Senators Warner, Inhofe, Thune, Levin, Kennedy, Lieberman, Reed, Akaka, Dayton, and Clinton.

Committee staff members present: Charles S. Abell, staff director; Leah C. Brewer, nominations and hearings clerk; and John H. Quirk V, security clerk.

Majority staff members present: William M. Caniano, professional staff member; Regina A. Dubey, professional staff member; Ambrose R. Hock, professional staff member; Gregory T. Kiley, professional staff member; Sandra E. Luff, professional staff member; Derek J. Maurer, professional staff member; David M. Morriss, counsel; Lucian L. Niemeyer, professional staff member; Stanley R. O'Connor, Jr., professional staff member; Sean G. Stackley, professional staff member; Scott W. Stucky, general counsel; Diana G. Tabler, professional staff member; and Richard F. Walsh, counsel.

Minority staff members present: Richard D. DeBobes, Democratic staff director; Jonathan D. Clark, minority counsel; Daniel J. Cox, Jr., professional staff member; Gabriella Eisen, research assistant; Evelyn N. Farkas, professional staff member; Bridget W. Higgins, research assistant; Gerald J. Leeling, minority counsel; Peter K. Levine, minority counsel; and Michael J. McCord, professional staff member.

Staff assistants present: Micah H. Harris, Jill L. Simodejka, and Pendred K. Wilson.

Committee members' assistants present: Christopher J. Paul, assistant to Senator McCain; John A. Bonsell, assistant to Senator Inhofe; Arch Galloway II, assistant to Senator Sessions; Mackenzie M. Eaglen, assistant to Senator Collins; Stuart C. Mallory, assistant to Senator Thune; Mieke Y. Eoyang, assistant to Senator Kennedy; Frederick M. Downey, assistant to Senator Lieberman; Elizabeth King, assistant to Senator Reed; Darcie Tokioka, assistant to

Senator Akaka; and Kimberly Jackson, assistant to Senator Dayton.

OPENING STATEMENT OF SENATOR JOHN WARNER, CHAIRMAN

Chairman WARNER. Good afternoon. Mr. Secretary, General Schoomaker, we welcome you and your associates here today. We tender our apologies for the quick cancellation this morning. We were in through the evening. I had actually made other arrangements to try and continue this hearing through the morning session, but in consultations with my colleague here, Senator Levin, we thought it would serve the purposes best if we pull together and give the Army a full court press here this afternoon, and we are going to do that.

Given that we have a number of members here and we want to get underway, and I gave a very complete opening statement in connection with the appearance of the Secretary of Defense, at which time General Schoomaker was present, I will forgo my opening statement at this time such that we can get right into the purpose for your being here.

We always—and it is not just a matter of rote; it is a matter of utmost sincerity—open all of our hearings of this committee with a very special recognition to the men and women of the Armed Forces, wherever they are serving in the world, and most particularly those who are serving in Iraq and Afghanistan, and the families who have lost their loved ones and are caring for those that somehow have survived the battles and are home in rehabilitation. We are very proud of them, and this Nation stands steadfast behind the men and women of the Armed Forces.

We also recognize that the United States Army is bearing a major, if not the principal, responsibility in this conflict, together with the Marine Corps, and that you have some very special needs, Secretary Harvey, and we are prepared to entertain those special requirements and needs. You have made considerable progress in the goals that you set forth together with the Chief of Staff for reorganization in the Army. We want to be supportive of that.

We are happy to recognize General Blum of the National Guard, who is here today. Again, the Guard, acting with our Reserve Forces, did a magnificent job in the Katrina operation. All through the hearings I have been present and I have purposely asked time and time again the questions about that problem, and the troops that came out. Everybody acknowledged appreciation for what they did, Guard, Reserve, and Active-Duty troops.

[The prepared statement of Senator Warner follows:]

PREPARED STATEMENT BY SENATOR JOHN WARNER

The committee meets today to receive the testimony of the Secretary of the Army and the Chief of the Army on the posture of the U.S. Armed Forces and President Bush's defense budget request for the Army for fiscal year 2007.

We welcome Secretary Harvey and General Schoomaker and we extend our profound respect to those who serve. Our thoughts and prayers are with their families, and particularly those families who are experiencing the loss or the wounding of one of their beloved members.

I stated at last year's posture hearing with the Secretary of Defense and the Chairman of the Joint Chiefs of Staff, that the next 6 months would be the most critical period of the conflict in Iraq. I must say again, the key to success in Iraq

and the eventual phase-out in an orderly way, depending on the ground situation and that of our commanders, of the United States troops and those of the coalition forces—that is dependent upon the training and the equipping and the advising of Iraqi security forces to a level of military proficiency and courage and dependability such that they can continue assuming a greater and greater responsibility for defending their nation's sovereignty and freedom.

The President's budget request delivered to Congress on 6 February included a request of $111.8 billion for the Department of the Army, an increase of almost $12.0 billion over the fiscal year 2006 level. These figures do not include the $32.3 billion appropriated for the Army in the fiscal year 2006 bridge supplemental. By way of comparison, the Army requested $70.8 billion in fiscal year 2001. The $111.8 billion represents an increase of 56 percent over the fiscal year 2001 request. I commend the President for his continuing commitment to improving our defense capabilities and providing our forces with the resources and capabilities they need to successfully fulfill their missions. The budget priorities of supporting the global war on terror, restructuring our forces and our global posture, building joint capabilities for future threats, and taking care of our troops and their families are clearly the right emphasis.

I applaud the Army's initiative to provide the necessary resources to fully man, equip, and train the Army National Guard so that they can transition from a strategic reserve to an operational reserve. Over the past weeks, we have heard varying accounts regarding the changes the Army has made to their plan to restructure the Guard. I share my colleagues' concern that we may not be providing the forces necessary for the Guard to accomplish their State missions.

This committee is committed to doing all we can to ensure the safety of our soldiers. Taking lessons from recent operations in the war on terrorism, two specific areas bear mentioning. The area of counter improvised explosive devices (IEDs) has and will continue to command our attention. I am disappointed to note that your department did not specifically identify funding for research and development of IED countermeasures in the fiscal year 2007 request. While I recognize that overall responsibility for the Joint IED Defeat Office has transitioned to the Department of Defense, I still think it's important that the military Services program for the long term research and development of measures to defeat IEDs. This is not a problem that will go away once we leave Iraq.

While I commend the Army's decision to robustly fund the Future Combat Systems (FCS) program—$3.7 billion in fiscal year 2007—I challenge the Army to explain why this program cannot "spin out" FCS technologies to Army forces deployed in Iraq and Afghanistan sooner. The unmanned systems under development in the FCS program could provide immediate capabilities to our deployed forces.

Secretary Harvey and General Schoomaker, again let me thank you for appearing before this committee today and we look forward to your testimony.

Senator Levin.

Chairman WARNER. So with that, Senator Levin, if you have a few comments, we will then go to our witnesses.

STATEMENT OF SENATOR CARL LEVIN

Senator LEVIN. Mr. Chairman, I will follow your lead and put my statement in the record, just to have a very few moments of comments at the beginning. Also, immediately following my prepared statement, I will insert the prepared statement of Senator Daniel K. Akaka.

First let me welcome Secretary Harvey and General Schoomaker and your colleagues, your guests, our guests to this hearing this afternoon. We want to thank you for your service to our Nation, to our soldiers, to the families that support them and us.

Five years ago, there were many critics who were questioning the role of the ground combat power and the relevance of the Army for the 21st century. It is safe to say that the events of the last 5 years have put to rest any such questions. The ability to directly confront and defeat an enemy ground force, to seize and hold ground, and then to restore peace and stability can only be done by putting boots on the ground, as the Army has so ably demonstrated.

The Army has shouldered the bulk of the responsibilities in Iraq and Afghanistan, has suffered by far the greatest number of killed and wounded. The soldiers of the Army, volunteers all, have served unselfishly and with great bravery, dedication, and distinction. All Americans, no matter what their opinions as to whether or how the war in Iraq should have been waged, are unified in their gratitude to the soldiers of the Army and their families and are committed to see that they are supported in all respects.

So, Secretary Harvey and General Schoomaker, please pass on to the officers, enlisted men and women, civilians, and family members of the Army the great regard in which they are held by all of us in Congress and the reassurance from all of us that, working with you and the rest of the Army, we are determined to give them the training, the equipment, the quality of life, and the support of the families to allow them to continue to serve this Nation so well.

Mr. Chairman, I will put the balance of my statement in the record.

[The prepared statement of Senator Levin follows:]

PREPARED STATEMENT BY SENATOR CARL LEVIN

Thank you, Mr. Chairman. I too would like to welcome Secretary Harvey and General Schoomaker and to thank them for their service to the Nation and to our soldiers and their families.

Five years ago there were many critics who were questioning the role of ground combat power and the relevance of the Army for the 21st century. It is safe to say that the events of the last 5 years have put to rest any such questions. The ability to directly confront and defeat an enemy ground force, to seize and hold ground, and then to restore peace and stability can only be done by "putting boots on the ground," as the Army has so ably demonstrated. The Army has shouldered the bulk of the responsibilities in Iraq and Afghanistan, and has suffered by far the greatest number killed and wounded. The soldiers of the Army—volunteers all—have served unselfishly with great bravery, dedication, and distinction. All Americans, no matter what their opinions as to whether or how the war on Iraq should have been waged, are unified in their gratitude to the soldiers of the Army and their families, and are committed to see that they are supported in all respects.

Secretary Harvey, General Schoomaker, please pass on to the officers, enlisted men, civilians, and family members of the Army the great regard in which they are held by the Congress of the United States, and the reassurance from the Congress of the United States that, working with you and the rest of the Army leadership, we are determined to give them the training, the equipment, and the quality of life to allow them to continue to serve this Nation so well.

Hearings are essential elements in Congress' exercise of its oversight responsibilities toward the Department of Defense (DOD) and the Services. Sometimes it might seem that only the negative is stressed and seldom the positive. The story of the Army over the last 5 years is, on the whole, a positive one. Where there are negatives, they are more likely to be sins of omission rather than sins of commission. There is no doubt that the Army failed early on to adequately prioritize the allocation of resources toward force protection measures. Our troops paid heavily because of the lack of sufficient body armor, truck armor, and aviation survivability equipment. In retrospect, we all should have recognized and acted to address the shortfalls before our troops went into harm's way. But all of us since have spared no effort, and no amount of resources, to correct early failures. Not only have we addressed, and continue to address the armor issue, but DOD, the Army, and Congress are doing the same to combat the ever-increasing lethality of the improvised explosive device (IED) threat. We in Congress stand ready to provide you whatever you need to address that problem.

I continue to believe that maintaining current troop levels in Iraq is simply not sustainable over the long term. The grueling operational tempo is wearing down people and wearing out equipment. Equipment usage rates, with consequent wear and tear, are in some cases 10 times that of planned peacetime usage. While reenlistment rates in the Army are strong—and are a credit to the dedication and devotion to duty of our soldiers—some indicators, such as increasing strains on military families, are indicative of a force under stress and give rise to concerns that those

reenlistment rates cannot be maintained. There is certainly clear evidence that the Army is having difficulty in recruiting new first-term soldiers who are critical to a balanced force across all ranks and grades, and if reenlistment rates fall, to replacing those veterans who will be leaving. History also gives one pause. Although the majority of the enlisted soldiers who served in Vietnam were draftees who served one tour and returned to civilian life, the officers and noncommissioned officers (NCO) were professionals who, in many cases, served multiple tours. This was particularly true of the NCO corps, which after several years of multiple tours came close to disintegrating. It took at least a decade to rebuild the NCO "backbone" of the Army. We cannot afford to let that happen again.

While the overall relevance of the Army in the 21st century should no longer be in question, there are still serious questions that must be addressed. At our hearing last week, General Schoomaker testified adamantly that the Army was not broken. I agree, but such respected organizations as RAND and the Center for Strategic and Budgetary Assessment (CSBA) have sounded the alarm that the Army is what RAND called "stretched thin," or what CSBA called " the thin green line." Both analyses question whether the Army is large enough and properly organized to sustain such high levels of deployments while maintaining ready units for other possible contingencies. The Army has acknowledged that its Active-Duty units have had less than 2 years, and in some cases less than a year, between Iraq or Afghanistan rotations.

Under Secretary Harvey's and General Schoomaker's leadership, the Army has been addressing the stress of frequent unit rotations by restructuring its brigades in the Active and Reserve components to make them more "modular" (with more standardized organizational designs and fewer number of different designs) and therefore more readily able to be mixed and matched as the situation would dictate, and at the same time, increasing the number of brigade combat in the Active Army.

When the Army began its modularity program, it made a strong argument that additional brigades were necessary for its force generation process to ensure that it could maintain an 18-brigade force deployed—the size of the current Iraq and Afghanistan commitment—and still ensure that Active brigades would only be deployed 1 year in 3, and Guard and Reserve brigades would only be deployed 1 year in 6. Now we now learn that the Active Army will only grow by nine brigade combat teams, one less than planned, and six less than tentatively considered. The Army National Guard will be manned, trained, and equipped for six less brigade combat teams.

I believe that the Army has made the right decision with respect to its decision to fully man, train, and equip these units to the higher states of readiness required of an expeditionary Army and an operational vice strategic Reserve. I support reasonable reductions in unnecessary force structure to apply freed-up resources to that task. However, I am concerned that this new force structure may make it more difficult for the Army to meet its force generation goals and, barring a more rapid draw down from Iraq, may not be sufficient to significantly reduce the stress on deployed and deploying forces. It would also seem to increase the risk that the Army may not be able to respond as needed to other contingencies in support of the national military strategy.

I am also concerned about the apparent failure of the Army leadership to consult with the leaders of the Reserve components prior to this new restructure decision. We cannot afford to once again experience the rancor and mistrust between the Army and the Army National Guard that flourished so vehemently 9 years ago, and which was largely overcome by the close cooperation between the components as both recognized and respected the contributions of each other to fighting the current war. I urge, and expect, the leaders of both components to work together to do what is best for the Army, and for the Nation.

There is still much confusion as to what each side has agreed to, and committed to, with respect to Reserve component force structure allocations and end strength. There is even more confusion as to what this current budget funds, what the Future Years Defense Program provides, and what shortfalls and unfunded requirements still exist in that regard. I hope that this hearing will clear up that confusion.

The President's budget request for the Army is 12 percent higher than last year's. That is good news. Some of that increase is a result of including the cost of the Army modularity program in the base budget where it belongs vice the supplemental appropriations request of past years. I hope this hearing addresses any known shortfalls in resources for modularity and for reset. With the details of the administration's expected supplemental budget request unknown, it is not clear whether it will cover the Army's estimated fiscal year 2006 $13.5 billion requirement for reset—the repair, recapitalization, and replacement of equipment of units redeploying from Iraq and Afghanistan. Also, the Army's estimate of an additional

$20 billion requirement for reset in fiscal years 2007–2011 assumes that units begin withdrawing in the summer of 2006 and complete that withdrawal within 2 years, and it includes no projected battle losses. Surely there will be more battle losses, and should the withdrawal assumption prove wrong, the programmed cost of reset will certainly have to be adjusted upwards.

The continued high operational tempo may ultimately put the modernization of our military forces at risk. General Schoomaker has consistently said that the Army will need supplemental funding for at least 2 years after "the end of the current emergency" to reset its units in order to be ready for subsequent deployments. Last year, this committee was able to protect the Army's top modernization priority—the Future Combat Systems—from potentially damaging legislation. But should supplemental funding levels remain at such high levels, that program, as well as the modernization priorities of the other Services, will undoubtedly come under increased funding pressure. We do not want to be forced to choose current readiness at the expense of future readiness.

I look forward to the testimony of our witnesses.

[The prepared statement of Senator Akaka follows:]

PREPARED STATEMENT BY SENATOR DANIEL K. AKAKA

I wish to thank Chairman Warner for holding this important hearing. I also thank Secretary Harvey and General Schoomaker for your leadership and for being here with us today. I want to begin by acknowledging the brave men and women currently serving in the Army, Army Reserve, and Army National Guard and those veterans who have served in the past. We thank you for your dedication and service to your country. I would also like to thank the families of our Nation's soldiers both past and present for the many daily sacrifices they make. I am committed to ensuring that the members of our armed services receive the best training, equipment, and support that our Government can provide. I am also committed to ensuring that their families are assured a good quality of life by our Government and look forward to hearing the testimony of our witnesses.

Chairman WARNER. I thank my colleague.

All right, Secretary Harvey.

STATEMENT OF HON. FRANCES J. HARVEY, SECRETARY OF THE ARMY; ACCOMPANIED BY GEN PETER J. SCHOOMAKER, USA, CHIEF OF STAFF, UNITED STATES ARMY; AND LTG STEVEN BLUM, U.S. ARMY NATIONAL GUARD

Secretary HARVEY. Good afternoon, Mr. Chairman, Senator Levin, distinguished members of the committee. General Schoomaker and I appreciate this opportunity to be here this afternoon and to offer testimony on the posture of the United States Army.

America's Army is the world's preeminent land power, with a quality force of over 1 million soldiers, supported by nearly 240,000 Department of Army civilians, an Army of Active, Guard, and Reserve soldiers, deployed, forward stationed overseas or securing the homeland, soldiers from every State, soldiers from every corner of this country, serving the people of the United States with incredible honor and distinction.

We provided the committee the 2006 Army Posture Statement as our written statement and I would like to take this opportunity to briefly highlight some of the Army's key initiatives and programs. General Schoomaker will also make an oral statement at the conclusion of my remarks.

I know that this committee, like me, appreciates the insight and unique perspective that General Schoomaker provides from his distinguished career of service to our Nation as a soldier. The soldier remains the centerpiece of America's Army. General Schoomaker

will introduce to you three of those soldiers here with us today during his remarks.

The 2006 Army Posture Statement is a succinct summary of the Army plan which addresses the challenges of today while preparing us for those we will face tomorrow. The Army plan is a comprehensive, fully integrated strategic and operational plan which provides the road map to first build a more capable and relevant Army for the 21st century through transformation and modernization and, second, sustain the full range of Army's current commitments, particularly fighting and winning the global war on terror.

On September 11, the Army's operational capabilities lacked the breadth and depth for the long war. We appreciate the continuing support of Congress as the Army shifts its center of gravity to provide a broader portfolio of operational capabilities to meet the complex challenges of the 21st century security environment, particularly irregular, asymmetric warfare.

For example, we have already completed the first 2 years of converting the operational Army to a modular, brigade-based combat force. Our objective is 70 brigade combat teams (BCTs) and 211 support brigades. This is an increase of 46 percent in the number of BCTs over the current force. To date we have completed the conversion or activation of 19 BCTs to the modular design, or approximately 27 percent towards the objective of 70 BCTs. In addition, we have started the conversion or activation of another 18.

Even though the modular force effort is not complete, it has already increased our operational capabilities and established the foundation for a rotational force generation model which is structured, predictable, and provides more combat-ready units while reducing stress on the force.

In order to sustain the current missions and continue to posture for future commitments, the Army needs the full support of Congress for the Army plan and the Army's request for the 2007 Presidential budget. Additionally, beyond the importance of maintaining full funding for the modular force transformation, the chief and I also want to emphasize the importance of fully funding the Future Combat Systems (FCS) program. This is a key modernization program for the Army and is really the first major modernization effort in over 4 decades.

Although the word "future" is in the program title, this is not a program that only exists on Powerpoint slides. FCS is becoming a reality today and spinouts of FCS technology into our current modular force will begin in 2008. Simply put, the FCS program is the fastest and surest way to modernize the Army. Furthermore, it is the only way to effectively modernize the Army in an integrated manner.

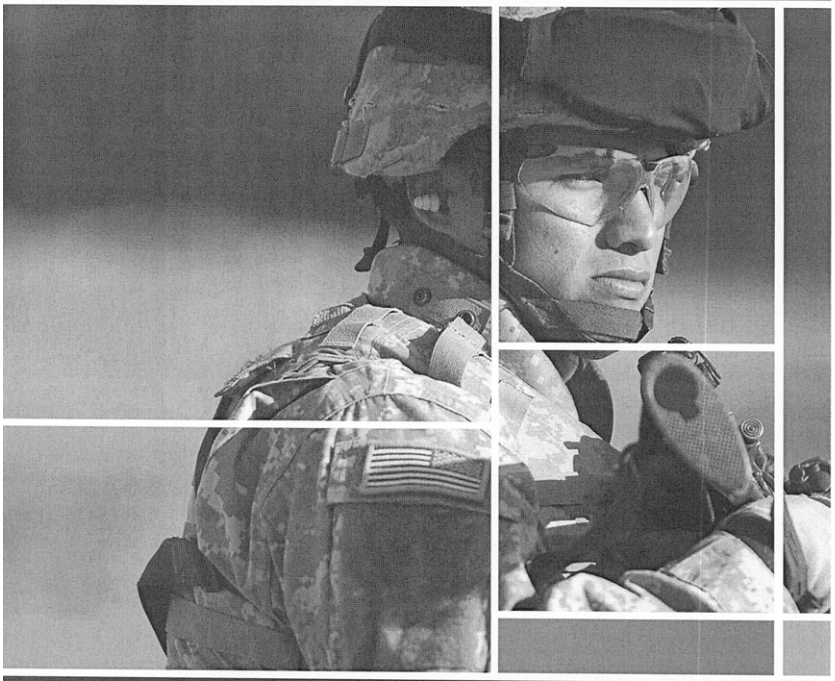
The FCS program and the modular force initiative, in conjunction with the full spectrum of other programs in the areas of research and development (R&D), acquisition, training, advanced techniques, tactics and procedures, leadership development, business transformation, as well as the growth of the operational Army, will ensure that our overall capability to conduct both traditional and nontraditional operations, including the global war on terror, will continuously and methodically increase and improve as we go forward in the uncertain and unpredictable 21st century.

We also need to draw your attention to the importance of our efforts with your support to sustain the All-Volunteer Force, including recruiting, retention, and providing a quality of life for our soldiers and their families that match the quality of their service. This is the first time in our modern history that the Nation has tested the concept of an All-Volunteer Force in a prolonged war. Full funding and support of Army programs in this way is critical to sustain the finest Army in the world.

Finally, I want to emphasize that the Army plan is a total plan to transform the entire Army, Active, Guard, and Reserve. 2005 reaffirmed to the people of the United States that we are truly an Army of One. Simply put, the Army could not perform full-spectrum operations without the tremendous contribution of the Army Guard and Reserve.

For example, last year the Army National Guard had 10 BCTs and a division headquarters serving in Iraq, Afghanistan, and the Balkans for at least a portion of the year. Despite this overseas commitment, the National Guard was still capable of responding with 42,000 soldiers in little over a week to support Hurricane Katrina relief operations. I might add that there were still tens of thousands more National Guard and Army Reserve soldiers available if needed.

Based on the insights of September 11, homeland defense operations, hurricane recovery operations, and lessons learned from the global war on terror, the Army plan shifts the focus of the Reserve component from a strategic Reserve to an operational force and rebalances the Reserve component's force structure to the operational skills they need for the 21st century security environment.



For example, in the current plan the Army National Guard will continue to maintain a total of 106 brigades, which are beginning to be transformed to the same modular design as the active Army. However, we are changing the organizational mix of BCTs and support brigades based on the capabilities needed to conduct both their national defense as well as their State missions. In essence, the Army National Guard and the Army Reserve are transforming and modernizing from an underresourced standby force to fully equipped, manned, and trained operational ready units.

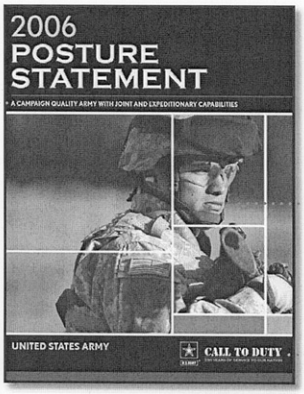
Let me close and give General Schoomaker an opportunity to address the committee by saying that I remain confident that, with the continued strong support of Congress, America's Army can accomplish its mission and reach our strategic goal of being relevant and ready both today and tomorrow. Thank you, Mr. Chairman.

[The prepared statement of Secretary Harvey follows:]

2006 POSTURE STATEMENT

A CAMPAIGN QUALITY ARMY WITH JOINT AND EXPEDITIONARY CAPABILITIES

UNITED STATES ARMY



U.S.ARMY

CALL TO DUTY

230 YEARS OF SERVICE TO OUR NATION

About the Cover

Soldiers are the Army. This idea is foremost in our thinking. It is the Soldier – well trained, equipped, and led – who serves as the ultimate expression of the capabilities the Army provides to the Joint Force and the Nation. Living and personifying the ideals of the Warrior Ethos, our Soldiers are on duty, around the world and at home, to protect the Nation and the society they serve. For these reasons, Soldiers are our Centerpiece. *This is why we proudly feature a Soldier on this cover.*

Our Army is organized, manned, trained, and equipped to conduct sustained campaigns on land, as part of joint, interagency, and coalition formations, to achieve national strategic objectives. We are also uniquely suited to conduct expeditionary operations – requiring rapid deployment of our forces to remote, austere theaters of war and conduct operations immediately upon arrival. Our transformation and modernization efforts are focused to improve our capabilities in each of these settings. To meet the needs of the Nation and adapt to the challenges our Soldiers will face, we must continue to improve these capabilities. *This is why we feature this statement on this cover.*

Our Soldiers continue to answer the ***Call to Duty***, as they have done for over 230 years. The most potent weapon in the long struggle against terror will be our brave men and women in uniform. These Americans represent the finest the Nation has to offer. Those who honor and assist our Soldiers also answer the ***Call to Duty***. To recognize the importance of service to the Nation, Call to Duty is the theme of this year's Posture Statement. *This is why we feature* ***Call to Duty*** *on this cover.*

A Statement on the Posture of the United States Army 2006

by

The Honorable Francis J. Harvey and **General Peter J. Schoomaker**

Presented to

The Committees and Subcommittees of the

UNITED STATES SENATE and the **HOUSE OF REPRESENTATIVES**

2nd SESSION, 109th CONGRESS

The annual Army Posture Statement is an unclassified summary of Army roles, missions, accomplishments, plans, and programs.

The Posture Statement is designed to reinforce the testimony presented by the Secretary of the Army and the Chief of Staff, Army, that addresses the resources and support required by the Department of the Army to accomplish its mission during Fiscal Year 2007.

This Posture Statement serves a broad audience as a basic reference on the state of the Army.

This document is available on the Army website at *http://www.army.mil/aps/06*.

The Posture Statement is a product of the Office of the Chief of Staff, U.S. Army, Executive Office of the Headquarters Staff Group.

Email: EOHStaffGroup@hqda.army.mil

February 10, 2006

We have the confidence of the Nation as we continue to engage in a long struggle against global terrorism and the conditions that give it life and sustain it. Over a half-million active and reserve Soldiers have served overseas in the war on terrorism. More than 600,000 Soldiers are on active duty today. Almost half of them are deployed, serving in 120 countries worldwide in defense of U.S. interests.

While fighting, we are preparing Soldiers and leaders for the challenges that they will face. We continue to transform, to modernize, and to realign our global force posture. Our Army continues to evolve from a force dependent on divisions to deter and to wage war against traditional adversaries, to a force dependent on modular brigades, specially designed for the full range of non-traditional adversaries and challenges it will face.

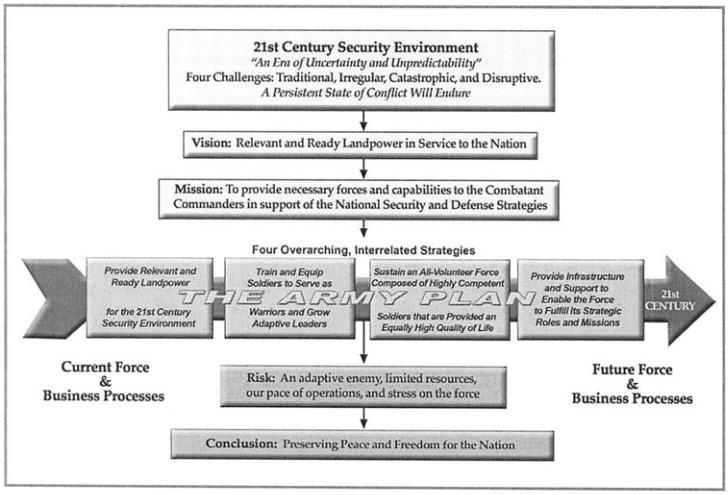
With the support of the President, the Congress, and the Secretary of Defense, we have developed and resourced a fully integrated plan to best serve the Nation, to deal with the challenges we will face today and tomorrow, and to sustain our volunteer Soldiers in this time of war.

To execute this plan, we are depending upon continued Congressional leadership in three areas:

- Obtaining legislative authorities to assure predictable access to our Army National Guard and Army Reserve Soldiers who have become, by necessity, our operational rather than our strategic reserve;
- Expediting wartime acquisition processes needed to equip and protect our Soldiers; and
- Of greatest importance, maintaining the support of the American people whom we serve.

To continue to meet the needs of the Combatant Commanders and the Nation, the Army will require the full support of the resources requested in the base budget and in supplemental appropriations.

Peter J. Schoomaker
General, United States Army
Chief of Staff



Francis J. Harvey
Secretary of the Army

Purpose and Organization of the 2006 Army Posture Statement

The 2006 Army Posture Statement describes how the Army is executing The Army Plan to meet the challenges of today and to be better prepared for those we will face tomorrow. Focusing on the Soldier, our centerpiece, the Posture Statement summarizes key implications of the 21st century security environment. This discussion provides the context to examine the Army Vision to accomplish our enduring, constitutionally-derived mission.

The Army Plan consists of four overarching, interrelated strategies, focusing on people, forces, training and infrastructure. We explain our initiatives, accomplishments, and compelling needs as they relate to each of these strategies. We describe transformation, not as an end in itself; but rather, how it has helped us to accomplish our mission and to realize our vision.

We conclude with a discussion of risk to underscore our compelling needs.

This Posture Statement is designed to serve as a primary portal to learn about the Army. A listing of helpful Army-related websites and a glossary of acronyms are also provided.

The Army Posture Statement can also be found on the Web at http://www.army.mil/aps/06. The electronic version of the document provides a series of addenda and hyperlinked boxes addressing key items of interest to enhance readability and to make additional information available to support diverse user interests. These items of interest are indicated in blue type throughout the document.

2006 Army Posture Statement Executive Summary

Soldiers are making enormous contributions and sacrifices while serving at the forefront of a long struggle of continuous, evolving conflict. Their presence has enabled historic elections in Afghanistan and Iraq, and is setting the conditions for democratic institutions to take hold. Our Soldiers are also preventing attacks on our Nation and responding to natural disasters at home and abroad, while sustaining the full range of America's global commitments. At the same time, to be ready for the challenges we face today and tomorrow, we are accelerating our plan to transform and modernize.

We are executing The Army Plan to accomplish our mission and to realize our vision: *to remain the preeminent landpower on Earth – the ultimate instrument of national resolve – that is both ready to meet and relevant to the challenges of the dangerous and complex 21st century security environment.* Our plan consists of four overarching, interrelated strategies (Figure 1).

This fully integrated plan is driving change at an unprecedented pace. We are becoming a more powerful, more flexible, and more deployable force with a broad set of capabilities to deal with the full spectrum of challenges we will face. Our improvements will enable our Soldiers to sustain the full range of global commitments which extend beyond today's current theaters of war. We are improving our ability to operate with joint and coalition partners and to perform nontraditional operations. We are also developing better ways to manage increasing demands for forces and relieve stress on Soldiers, their families, and civilian workers to sustain our All-Volunteer force.

Four key ideas underpin our planning:

- First, we remain committed to producing units that are ready for the challenges they will face and to overcoming years of underfunding prior to the events of 9-11. We have received unprecedented support to "buy back" much needed capability. We cannot, however, fool ourselves by maintaining large numbers of forces on paper that, in reality, lack the people, equipment, training, and support needed to accomplish the missions that they will be assigned. We are determined to support our Soldiers and their families with an improved quality of life that matches the high quality of service they perform for America.
- Second, we recognize that intellectual change precedes physical change. For this reason, we are developing qualities in our leaders, our people, and our forces to enable them to respond effectively to what they will face. We describe the leaders we are creating as "pentathletes," whose versatility and athleticism – qualities that reflect the essence of our Army – will enable them to learn and adapt in ambiguous situations in a constantly evolving environment. We have undertaken a major review of how we train, educate, assign, and develop our military and civilian leaders to ensure that our Soldiers are well-led and well-supported as they deal with complexity and uncertainty for the foreseeable future.
- Third, reinforced by the American military experience of the 20th century, we believe that our Soldiers' effectiveness depends upon a national commitment to recruit, train, and support them properly. This commitment must be underwritten by consistent investment in their equipment and infrastructure. We remain acutely aware of fiscal constraints; however, our duty to do what is right for our Soldiers, their families, and the Nation remains firm and unwavering.
- Fourth, we remember our position at the start of the long struggle in which we are engaged. After years of insufficient modernization investments, many of our units were under-equipped and not immediately ready for deployment, especially in our reserve units. To meet Combatant Commanders' wartime needs, we pooled equipment from across the force to equip those Soldiers deploying into harm's way. This increased risk in other capabilities, as seen in the Army National Guard during our national response to Hurricanes Katrina and Rita. With help from the President, the Congress, and the Department of Defense through supplemental appropriations, we have addressed many of our equipment shortfalls. We still have much to accomplish to ensure force readiness and to mitigate risk.

To sustain the current mission, posture for future commitments, and maintain risk at acceptable wartime levels, the Army needs:

- Full funding of the Army request in the 2007 President's Budget and special consideration, in light of wartime demands, for avoiding any reductions to the Army's budget and program. In addition, supplemental funding is required for combat and contingency operations and to continue to reset, repair, recapitalize, and replace battle losses of equipment for several years beyond major deployments. Supplemental funding is needed to overcome the stress on equipment resulting from sustained combat operations in harsh environments. These resources will ensure that the Army is fully manned, trained, and equipped to achieve victory in the war on terrorism. These resources will also enable the Army to maintain the momentum of key programs, while accelerating transformation.
- Funding to increase Army capabilities and overall capacity as well as support for the legislative authorities and programs needed to assure access to our reserve components – who, by necessity, have become an operational vice a strategic reserve. We must achieve a proper balance of capabilities and skills among our active and reserve forces and continue to build high-quality units to increase capability and ease the strain on our deployed Soldiers.
- Support and funding to achieve critical recruiting and retention goals needed to grow operational forces. Meeting these goals for our active and reserve Soldiers sustains the quality and effectiveness of our All-Volunteer force.
- Funding for the Future Combat Systems (FCS) program – to enhance current force capabilities today with "spin outs" of available technology – and accelerate more than 300 other modernization programs. Our most critical investment program, FCS will be the Army's first major modernization in over 30 years and will better prepare and protect Soldiers for current and future threats. These capabilities will directly benefit our active and reserve components, all U.S. ground forces, and our allies that support ground campaigns.
- Full funding to maintain momentum in building a rotational pool of 70 Brigade Combat Teams (BCTs) and more than 200 modular Support Brigades and headquarters. Already well under way, our transformation to become a fully modular force is preparing our Soldiers to conduct sustained operations of the type we see today. In addition, our transformation is increasing the depth and breadth of our capabilities to prepare our Soldiers for tomorrow's challenges, particularly as we evolve to maintain overseas presence with rotational units.

- Full funding for Army installations and support to execute a carefully synchronized plan to achieve a new global basing posture, while fulfilling the requirements of the National Military Strategy. This plan will make full use of the resources currently apportioned and projected to be recouped through consolidation and closings. Unanticipated costs associated with environmental remediation, renovation, construction, and other areas, may require additional resources in future years (a situation that will require continuous reevaluation). Full funding and continued support for Army installations and quality-of-life programs is required to sustain the All-Volunteer force, now being tested for the first time in a prolonged war.
- Support for funding and authorities for Army Business Transformation initiatives to achieve targeted efficiencies through management reform, Institutional Army adaptation, and reengineered business practices. These initiatives will free human and financial resources for more compelling operational needs and accelerate other aspects of our transformation.

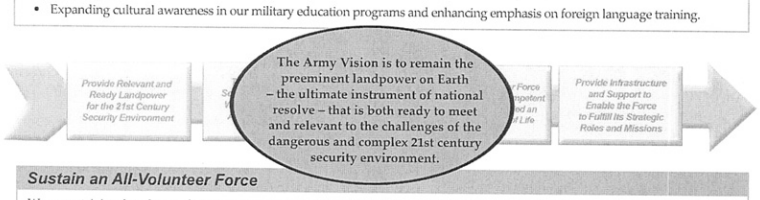
A complete, detailed list of our Compelling Needs for 2007 is provided in Figure 2.

2007 will be a pivotal year for the Army. We will continue to conduct operations while transforming the force, its global infrastructure, and all of our supporting business processes. The resources provided to the Army in 2007 and beyond will enable the Army to maintain the momentum of key programs, while accelerating aspects of our transformation. Moreover, this funding will determine our ability to continue to accomplish our mission and to be postured to meet future commitments.

UNITED STATES ARMY

Four Overarching, Interrelated Strategies

Provide Relevant and Ready Landpower



We are improving our capabilities to prevail in the war on terrorism and sustain all of our global commitments. While fighting, we are:

- Maintaining the momentum of our transformation and modernization.
  - Transforming to create an active and reserve component pool of 70 modular Brigade Combat Teams, reinforced by over 200 modular Support Brigades.
  - Modernizing – for the first time in decades – to field Future Combat Systems and other advanced technologies.
- Building a modular force in which brigades – not divisions – can "plug into" joint and coalition task forces in expeditionary and campaign settings.
- Improving readiness to deal with irregular, catastrophic, disruptive, and traditional challenges.
- Building depth (*more*) and breadth (*more kinds*) of capability to ensure Soldiers and units can adapt to these challenges.
  - Building *more* brigades to increase strategic flexibility and relieve stress on Soldiers and equipment.
  - Developing *more kinds* of capability by making our brigades more powerful, versatile, deployable, and relevant to new challenges.
- Creating improvements in: Sustaining the Force, Actionable Intelligence, Stability Operations, Homeland Defense, Operating in Complex Environments, Facing Irregular Challenges, Battle Command, and more.
- Ensuring that every investment in our current force benefits our future force.

Train and Equip Soldiers and Grow Adaptive Leaders

We are preparing our Soldiers for the rigors of war and leaders to serve as multi-skilled pentathletes amidst complexity and uncertainty. We are:

- Producing Soldiers armed with the values, skills, and mindset to serve as competent, resilient warriors.
- Reinforcing our commitment to our shared Warrior Ethos among all of our Soldiers and civilians.
- Enhancing our education and training programs – at our home stations, our Combat Training Centers, and across our institutional training base.
- Leveraging lessons learned in combat, countering insurgents, promoting stability, and supporting reconstruction.
- Continuing to build the best capabilities possible – by providing the best possible weapons, sensors, and protection for our Soldiers.
- Expanding cultural awareness in our military education programs and enhancing emphasis on foreign language training.

Sustain an All-Volunteer Force

We are sustaining the volunteer force now being tested for the first time in modern history in a long war. We are:

- Honoring our commitment to the versatile young Americans that we depend on by caring for them and their families.
- Enhancing numerous programs – housing, education, health care, and more – to improve how we support our Soldiers and their families.
- Promoting a sense of belonging – to units and communities – that builds readiness, cohesion, and reduces uncertainty.
- Executing a full range of initiatives and incentives to recruit and retain Soldiers with the right aptitude and attitude.
- Working to match the quality of life that our Soldiers enjoy to the quality of service they provide to the Nation.

Provide Infrastructure and Support

We are providing infrastructure and support to ensure the Army is able to execute its mission. We are:

- Investing in our bases that house and deploy our Soldiers, depots, arsenals, and the information network that connects them.
- Adjusting our global footprint to be better positioned for the challenges of the 21st century and the long war on terrorism.
- Consolidating our activities to become more effective (to do our job better) and more efficient (with best use of resources).
- Reengineering the Army's business processes to free human and financial resources for more compelling operational needs.
- Reducing cycle time, overhead, and cost in every aspect of what we do.

FIGURE 1

Compelling Needs

Provide Relevant and Ready Landpower

- Resource the Army's requirements for resetting more than 50 brigades consisting of over 350,000 pieces of equipment, including: 615 aircraft; 7,000 combat vehicles; and 30,000 wheeled vehicles.
- Support the Army's effort in 2007 to grow our operational forces to 355,000 Soldiers (increase of 40,000 Soldiers), and restructure both the Institutional and Operational Army to achieve a proper balance of capabilities across our active and reserve components to meet global commitments now and in the future.
- Fully fund continuous modernization of the current force through the Future Combat Systems program and key supporting programs, including increasing Soldier protection, sustaining development of advanced technologies, and developing the Joint Network Node and LandWarNet to ensure the Army remains the preeminent landpower on earth.
- Sustain momentum in force transformation through modular conversions planned in 2007 – three active component and seven reserve component Brigade Combat Teams, 13 active component and five reserve component Support Brigades, headquarters, and theater commands – to increase the depth and breadth of our capabilities to ensure the Army has relevant combat power for the 21st century.

Train and Equip Soldiers and Grow Adaptive Leaders

- Support and funding to implement the findings of the Review of Education, Training, and Assignments for Leaders, examining all pertinent policies and programs with a view to creating military and civilian "pentathletes" able to lead effectively amidst the complexity and uncertainty of the 21st century security environment.
- Continue to support Army initiatives to sustain Soldier, leader, and unit training development and improve stability for Soldiers and their families.
- Continue to support the Rapid Fielding Initiative to complete the goal of equipping all operational forces (active and reserve component) by September 2007.
- Maintain funding support for equipment modernization programs that speed state-of-the-art force protection systems and weapons to our Soldiers in the field.

Full funding of the Army request in the 2007 President's Budget and special consideration, in light of wartime demands, for avoiding any reductions to the Army's budget and program. In addition, supplemental funding is required for combat and contingency operations and to continue to reset, repair, recapitalize and replace battle losses of equipment for several years beyond major deployments. These resources will ensure that the Army is fully staffed, trained, and equipped to achieve victory in the war on terrorism. These resources will also enable the Army to maintain the momentum of key programs, while accelerating transformation.

Sustain an All-Volunteer Force

- Support and funding to achieve critical recruiting and retention goals. Meeting these goals for all components will ensure the quality of our All-Volunteer force:
  - Achieve an active component recruiting goal of 80,000 and retention goal of 64,200; an Army National Guard recruiting goal of 70,000 and retention goal of 34,900; and an Army Reserve recruiting goal of 36,500 and retention goal of 16,900.
  - Continue support of Army initiatives to improve predictability and stability for Soldiers and their families in both the active and reserve components.
- Full funding and support for quality-of-life programs to sustain the All-Volunteer force, now being tested for the first time in a prolonged war.
  - Support housing initiatives to provide quality housing for Soldiers and families at installations impacted by Base Realignment and Closure and the Integrated Global Presence and Basing Strategy.
  - Support the transformation of family programs to benefit families in all components regardless of physical location, leveraging resources available in local communities.

Provide Infrastructure and Support

- Full funding for Army installations and support to execute a carefully synchronized plan to achieve a new global basing posture, while fulfilling the requirements of the National Military Strategy. This plan will make full use of the resources currently apportioned and projected to be recouped through consolidation and closings. Unanticipated costs associated with environmental remediation, renovation, construction, and other areas, may require additional resources in future years (a situation that will require continuous reevaluation).
  - Support Army efforts to synchronize Integrated Global Presence and Basing Strategy, Base Realignment and Closure, and stationing of modular forces.
  - Support funding to achieve a 67-year facilities recapitalization rate.
  - Maintain support for 2007 military construction requirements in accordance with the Army modular force initiative, Base Realignment and Closure, Integrated Global Presence and Basing Strategy, and other Department of Defense guidance.
- Support for funding and authorities for Army Business Transformation initiatives to achieve targeted efficiencies through management reform, Institutional Army adaptation, and reengineered business practices. These initiatives will free human and financial resources for more compelling operational needs.

21st Century Security Environment: An Era of Uncertainty and Unpredictability

In the four years since the terrorist attacks on the Nation, the international security environment has changed dramatically. As a result, military commitments and especially the demand for Soldiers have increased both at home and abroad. With the support of the President, the Congress, and the Secretary of Defense, we have increased our capabilities to deal with the challenges we are facing today and accelerated our preparation for those we will face tomorrow.

Complex Security Challenges

The National Defense Strategy identifies an array of traditional, irregular, catastrophic, and disruptive challenges that pose threats to the Nation (Figure 3). These threats are becoming increasingly complex. We no longer face only conventional armies who operate within clearly established political boundaries. In addition, we will face enemies that employ irregular tactics, terror, and asymmetric warfare. These enemies will be increasingly transnational and dispersed.

Fueled by ideologies that oppose our Nation's bedrock values, al-Qaeda and other enemies are committed to reducing American global presence and to destroying our society. They have publicly stated their goal: to gain control in the Islamic world by establishing a unified caliphate, stretching from North Africa to Indonesia.

We are engaged in a long struggle against adversaries who are ruthless and unconstrained in achieving their ends. Our previous conceptions of security, deterrence, intelligence, and warning do not adequately address the threats we now face. To defeat our adversaries, who will be neither deterred by nuclear or conventional weapons nor defeated in battles with decisive outcomes, we must remain vigilant in employing all forms of national and international power – diplomatic, informational, military, and economic – in a concerted, integrated manner.

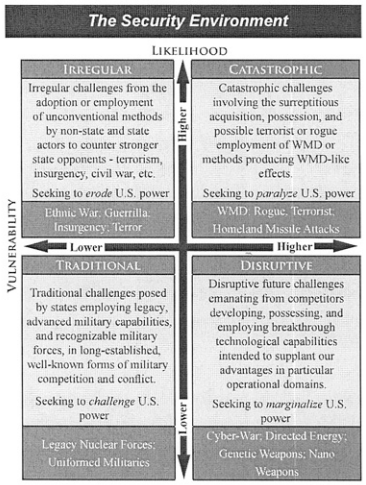

FIGURE 3

Increasing Complexity

The security environment in which our Soldiers will operate is characterized by challenges and uncertainties, including:

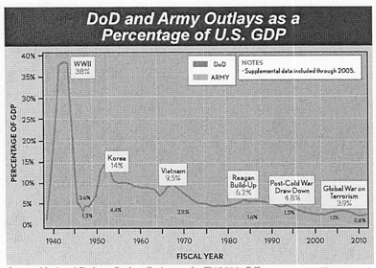
- Progress in the war on terrorism;
- The pace of democratic reform in the Middle East and elsewhere, especially in fledgling democracies such as Iraq, Afghanistan and the emerging Palestinian State;
- The ability of existing governments to perform traditional state functions and deny safe haven to terrorist groups;
- Progress in controlling the proliferation of weapons of mass destruction to state and non-state actors; and
- Decisions in four major areas:
  - Defense priorities amidst growing fiscal pressures;

- Roles and missions of the Armed Forces as defined in the Quadrennial Defense Review;
- Role of the Armed Forces in defense support to civil authorities; and
- Pace of implementation of Base Realignment and Closure (BRAC) legislation and Integrated Global Presence and Basing Strategy (IGPBS) plans.

Competing Fiscal Priorities

The Army will remain engaged around the globe, while operating in a constrained fiscal environment. This will continue to limit the resources available to accomplish our missions.

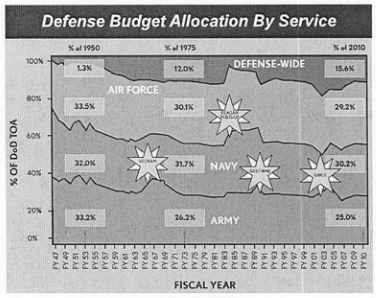
National Budget Trends



The Office of the Secretary of Defense, Comptroller, projects 2007 Defense spending will be 3.9 percent of Gross Domestic Product (GDP), continuing a downward trend (Figure 4). Defense resources have not kept pace with growth in GDP.

Defense Budget Trends

The allocation of Defense resources has changed over time (Figure 5) in response to the focus and demands of the National Military Strategy. Today, despite providing the bulk of the forces for the war on terrorism, the Army receives the smallest share of programmed resources. Increasing pressure to reduce the federal deficit, coupled with rising fuel, health care, and other costs, may impact the resources appropriated to accomplish Army missions.



Army Budget Trends

The bulk of the Army's funds are committed to sustaining people, maintaining vital infrastructure, and preparing equipment for combat deployment. As a result, our ability to fund investment accounts is extremely limited (Figure 6). This creates a perennial tension between current and future demands.

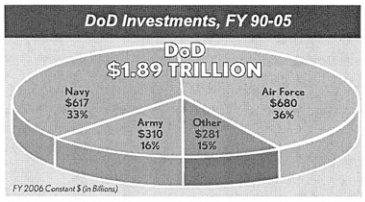
FIGURE 5



Source: National Defense Budget Estimates for FY 2006, Office of the Under Secretary of Defense (Comptroller), April 2005.

FIGURE 6

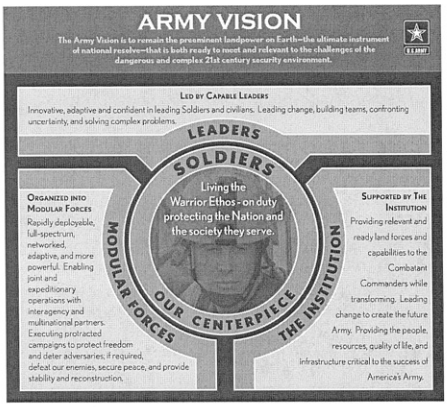
Investment Trends

Since 1990, the Army's share of investment dollars has been considerably smaller than that of the other Departments (Figure 7). Consequently, the Army has been unable to invest in the capabilities to sustain a rising operational tempo and to prepare for emerging threats. Supplemental authority has enabled the Army to "buy back" crucial capability to meet the operational demands of the war on terrorism and to improve our ability to sustain the full scope of our global commitments.

Source: National Defense Budget Estimates for FY 2006, Office of the Under Secretary of Defense (Comptroller), April 2005. FIGURE 7

Implications for the Army

The implications of the evolving security environment are clear.



- The Nation will continue to be engaged in a long struggle of continuous, evolving conflict that, as in Afghanistan and Iraq today, will manifest itself in complex, traditional, and irregular challenges to include cyberspace attack. These struggles will be waged by Soldiers who will be expected to perform difficult tasks and create decisive outcomes to accomplish the objectives of the National Military Strategy.
- Our Soldiers must be prepared to deal with the full spectrum of threats. As described in the Army's capstone concept for the future force, they must be able to operate effectively as part of joint, interagency, and coalition teams. Therefore, we must continue to improve the strategic responsiveness of our forces and our generating base through improvements in:
  - strategic agility;
  - joint interdependence;
  - speed;
  - survivability;
  - lethality;
  - sustainability;
  - networks to improve situational awareness and command of forces; and
  - information assurance and network security
- Our Soldiers and units must be prepared to operate with little to no warning. We will no longer have the luxury of partially manning, equipping, or training a unit and relying on significant warning time to mobilize, train, and prepare to deploy. Rather, the units we have designated to be available for deployment will need their full complement of Soldiers, equipment, and training to be ready for immediate deployment from our power projection infrastructure.

Failure to invest in Soldiers to build the right capabilities – by improving our doctrine, organizations, training, materiel, leaders, people, and facilities – will increase risk for the Army, the Joint Team, and our Nation. Building the capabilities required to hedge against the uncertainty of tomorrow will require prudent investments today. These investments must be sustained at predictable, consistent levels over time. Investing in defense capabilities in this manner would reflect a significant departure from historic patterns of spending, which have increased America's vulnerability prior to each of the major conflicts of the 20th century.

The Army Vision: Relevant and Ready Landpower in Service to the Nation

The challenges posed by the 21st century security environment drive our vision of the force we must

become to continue to accomplish our mission. The Nation has entrusted us to preserve peace, maintain freedom, and defend democracy. We have performed this role for more than 230 years. Today, because of the actions of our Soldiers and our record of accomplishment, the American people regard the Army as one of the Nation's most respected institutions. We will maintain this trust.

Mission: Providing Forces and Capabilities

The Army exists to serve the American people, to protect vital national interests, and to fulfill national military responsibilities. Our mission is enduring: to provide necessary forces and capabilities to the Combatant Commanders in support of the National Security and Defense Strategies. The Army is also charged with providing logistics and support to enable the other Services to accomplish their missions. The Army organizes, trains, and equips Soldiers who, as vital members of their units, conduct prompt, sustained combat on land as well as stability operations, when required.

Accomplishing the Mission Today: Sustaining Global Commitments

The Army continues to provide Combatant Commanders with a wide range of capabilities to prevail in the war on terrorism and to sustain our global commitments. These capabilities include support to civil authorities in response to threats and crises at home. Our worldwide commitments extend far beyond Iraq and Afghanistan. Today, approximately 600,000 Soldiers are on active duty (currently 487,000 active component, 72,000 Army National Guard and 41,000 Army Reserve), with 245,000 Soldiers serving worldwide in 120 countries (Figure 8). More than 1,700 Army civilians serve side-by-side with them in the field. Our Soldiers and civilians perform a variety of missions vital to America's national defense. Here at home, more than 13,000 Soldiers are on duty specifically fulfilling critical missions to support the Global War on Terrorism.

The Army's operational pace remains high, sustaining obligations and continuing trends established during the post-Cold War era. In addition to Iraq and Afghanistan, our forward presence continues to preserve peace on the Korean Peninsula, the Sinai, the Balkans, and numerous other places of strategic importance.

Whenever and wherever needed, Soldiers continue to answer the Call to Duty. During this past year, Soldiers supported civil authorities during a variety of disaster relief and recovery missions. More than 42,000 National Guard Soldiers; 7,300 active component Soldiers; and 3,500 Army civilians assisted citizens in Louisiana, Mississippi, Texas, and Florida after Hurricanes Katrina and Rita. Active and reserve aviation units flew thousands of helicopter sorties. These pilots and crews saved countless lives while distributing food, water, and other supplies. Working closely with state and federal agencies, the Army Corps of Engineers provided emergency support and is now

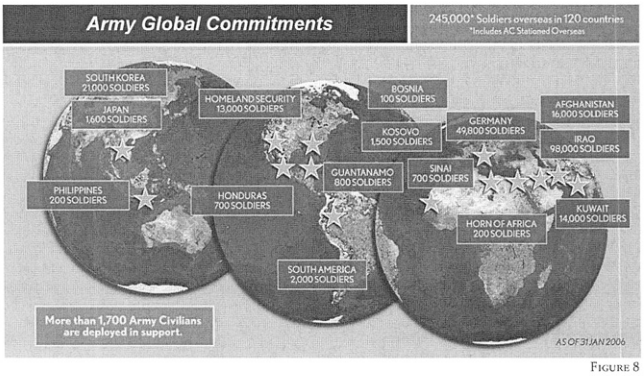


FIGURE 8

executing more than $4 billion worth of projects to support recovery. Soldiers also provided relief for earthquake survivors in Pakistan. At home and abroad, on a daily basis, our Soldiers and civilians are doing critical work in service to our country.

In the four years since September 11, our National Guard has mobilized more than 329,000 Soldiers for both state and federal missions. On any given day, the Army National Guard provides vital capabilities in virtually every mission area. As of January 2006, more than 72,000 Soldiers from the National Guard are mobilized. Besides their commitments in Iraq and Afghanistan, National Guard Soldiers are protecting the homeland by securing borders, protecting key infrastructure, and securing special events such as the Super Bowl. They also support other missions of U.S. Northern Command. They are preserving peace in the Sinai and in the Balkans. They are also establishing the conditions for continued progress in Iraq and Afghanistan.

Since September 11, the Army Reserve has mobilized over 143,000 Soldiers who, together with their fellow active and National Guard Soldiers, have enabled the Army to accomplish its mission at home and abroad. The Army Reserve provides vital capabilities across a diverse range of mission areas. As of January 2006, more than 41,000 Army Reserve Soldiers serve on active duty. The Army Reserve's 98th and 80th Divisions (Institutional Training) deployed to Iraq and Afghanistan to support U.S. Central Command's training of security forces.

Major Decisions in 2005

During 2005, the Army made four key decisions to accelerate change needed to win today and to continue to prepare for tomorrow's challenges.

- **Accelerated the Fielding of the Future Force.** In April 2005, the Army announced refinements of its plan – The Army Plan – to transition continuously from the current force to the future force to realize the Army Vision. This plan guides our efforts to transform the Army into a modular force, while continuing to modernize by fielding Future Combat Systems (FCS) and other technologies. We are leveraging recent combat experiences to train and educate our Soldiers and leaders and provide the campaign and expeditionary capabilities needed to deal with future challenges.
- **Restructured the FCS Program.** In April 2005, the Army restructured the FCS program for two reasons: (1) to improve contractual

arrangements with industry and provide a better framework to manage the cost and schedule aspects of this vital program; and (2) to further leverage FCS technologies as quickly as feasible to improve our Soldiers' ability to fight and to protect themselves. By improving control and oversight, these new arrangements are paying dividends now.

- **Established the Business Transformation Initiatives.** In February 2005, the Army decided to implement an Army-wide Business Transformation initiative. (We are reviewing all of our business, resourcing, management, and acquisition processes to become more effective, improve quality, reduce cycle time, and achieve cost reductions.) To do so, we are applying the *Lean Six Sigma* methodology. Just as we are leveraging the lessons of war to improve fighting effectiveness, we are applying relevant corporate best practices to improve our business processes and make best use of our financial, human, and materiel resources. Other key aspects of Business Transformation include: Information Management Systems Portfolio Management, Institutional Army Adaptation, and Business Initiative Councils.
- **Adopted the Army Force Generation (ARFORGEN) Model.** The Army began to implement the ARFORGEN model to ensure all units are fully ready for deployment. This model will establish and coordinate cycles of readiness and training for all active and reserve units. To sustain our ability to execute the National Military Strategy, this model schedules deployment windows for our units while balancing the requirements associated with transforming, modernizing, implementing a new global stationing plan, and other mission demands.

The Army Plan to Enable Mission Accomplishment

We are executing The Army Plan, consisting of four overarching, interrelated strategies, to enable mission accomplishment and to achieve the Army Vision over time. This plan accelerates the redesign of the forces, support structures, and headquarters that are accomplishing our mission today. This plan also guides our initiatives to provide the Combatant Commanders the assets to protect the Nation today and tomorrow.

The Army is:

- Providing relevant and ready landpower for the 21st century security environment;
- Training and equipping Soldiers to serve as warriors and growing adaptive leaders;
- Sustaining an All-Volunteer force composed of highly competent Soldiers that are provided an equally high quality of life; and
- Providing infrastructure and support to enable the force to fulfill its strategic roles and missions.

We are transforming to create a future force with a broad set of capabilities to enable our Soldiers to address strategic problems the Nation will face (See Figure 9).

The benefits of our approach are clearly evident in the attitudes and levels of commitment we see in our Soldiers, as well as the attributes of our combat formations, the forces that sustain them, and the facilities and business processes that generate them from their home stations. The combined effects of transformation, modernization, innovation, and improvement – reinforced by positive change in the attitudes and behaviors that create the culture of our service – are helping us to become the force the Nation will need to safeguard its peace and freedom in the 21st century.

Examples of Unique Army Capabilities to Support Joint, Combined, and Interagency Operations

Countering Terrorism

- Assist friends, allies, or partners to conduct military operations by providing logistics, command and control, intelligence, protection, and other support to the Joint Force.
- Train military and security forces to counter extremist, radical, or insurgent elements.
- Provide ground forces (conventional and special operations) to sustain large-scale counter-terror and counter-insurgency operations.
- Rapidly deploy substantial numbers of ground forces from strategic distances to meet Combatant Commanders' requirements for counter-terror or combat operations.
- Conduct extended stability operations.

Defending the Homeland

- Detect and prevent hostile actions against the homeland through the presence of the National Guard and the Army Reserve within states and communities.
- Support civil authorities in consequence management, disaster relief, and other roles including: reinforcing public safety and providing logistics, transportation, communications, utilities management, engineering, and other services.

Shaping Choices of Countries at Crossroads

- In support of Combatant Commanders, establish relationships with foreign leaders, forces, and people through: security cooperation, training, humanitarian and civil assistance, medical, engineering, exercises, and other national and international programs.
- Seize control and defend key facilities or terrain to preclude actions by potential adversaries.
- Conduct expeditionary operations to deter, destroy, or defeat potential adversaries.
- Conduct extended campaigns to deter or prevent potential adversaries from engaging in protracted conflict with joint or U.S.-led coalitions of forces.

Preventing Acquisition of Weapons of Mass Destruction by State and Non-State Actors

- Conduct irregular or unconventional warfare in support of the Joint Force.
- Deny sanctuary and safe haven for terrorist groups.
- Assist the forces of other nations to conduct operations against adversaries seeking to possess or transfer control of weapons of mass destruction.

While the problems we face will evolve, Soldiers' "boots on the ground" will remain vital to our solutions.

Source: Strategic Problems drawn from 2006 Quadrennial Defense Review, Office of the Secretary of Defense, February 2006.

Figure 9

The Army Plan is continuously improving our ability to operate as part of the Joint Team, while ensuring our ability to dominate in any environment against current, emerging, and unforeseen threats. We believe that every dollar spent to build capability for our current force is an investment in our future force. Our initiatives are guiding our efforts to:

- Grow innovative, adaptive Soldiers and leaders through training and education programs that build on recent combat experiences and leverage the Training Transformation Program;
- Adapt the doctrine which guides how we fight, how we sustain our forces, and how we train Soldiers;
- Create far more capable, strategically deployable brigades that are designed to receive new technologies and equipment as soon as they become available;
- Increase Soldier and unit effectiveness and protection; and
- Apply better business practices to free resources to use for our most pressing operational requirements.

Our ongoing intellectual and cultural transformation is dramatically improving how our leaders, Soldiers, civilian workforce, and families are adapting to the reality of protracted conflict. This transformation is reinforcing the commitment to continuous improvement that has taken hold across the Army.

Provide Relevant and Ready Landpower for the 21st Century Security Environment

To support current global operations and prevail in the war on terrorism, we are increasing the quality and the effectiveness of our essential fighting units, the Brigade Combat Teams (BCTs). We are forming a rotational pool of 70 BCTs that will allow us to sustain global commitments, surge forces for unforeseen contingencies, and reduce stress on Soldiers and equipment. We are

also creating the right mix of Support Brigades to ensure that our Soldiers receive the logistical, engineering, intelligence, protection, aviation, and communications capabilities they will need to support the Combatant Commanders.

We are rebalancing the force by placing the right Soldiers with the right skills into our jobs and organizations in greatest demand. At the same time, we are stabilizing Soldiers, to keep them with their units longer, to improve teamwork and reduce stress on families caused by frequent moves between posts. We are maintaining momentum in transforming and modernizing our formations – through modular conversion, pursuit of future combat systems, and fielding other advanced technologies. These complementary initiatives will ensure that our Soldiers are well prepared to operate in campaign and expeditionary settings with our joint and coalition partners.

Support Current Global Operations with Relevant and Ready Landpower

To sustain a steadily increasing demand for military forces, we are building a modular force centered on BCTs. Our modular conversion across the active and reserve components is designed to meet the demands of the current war, sustain other global commitments, establish the organizational structure needed to accelerate modernization, and support a new global basing posture that will rely more heavily on rotational presence.

Our plan will create a rotational pool of 70 BCTs: 42 in the active component and 28 in the Army National Guard. These BCTs will be organized into one of three standard designs: Infantry, Heavy, or Stryker. We will support these BCTs with more than 200 active and reserve Support Brigades. These Support Brigades will enable the BCTs to accomplish a broad range of missions. They will also provide essential capabilities to support civil authorities in homeland defense missions, including consequence management and disaster relief.

Our Support Brigades are organized into two categories: Multi-functional Support Brigades and Functional Support Brigades. The multi-

Accomplishments

Since 9-11

- Soldiers helped to overthrow two terrorist regimes, rescue two nations from oppression, and to liberate over 50 million people.
- More than 144,000 Army Reserve Soldiers, 329,000 National Guard Soldiers, and 498,000 active component Soldiers supported Combatant Commanders in Iraq, Afghanistan, Guantanamo Bay, the Balkans, the Sinai, and elsewhere.
- 120,000 National Guard Soldiers and 31,000 Army Reserve Soldiers, along with active component Soldiers, helped secure the homeland through key asset security, special events security such as the Super Bowl, airport security, and Air Force Base security augmentation.
- Began 37 of the 70 planned Brigade Combat Team modular conversions; 18 of these 37 conversions completed.
- Doubled depot output in just three years to refurbish and reset vehicles and equipment for future deployments.
- Extended the life of more than 4,000 HMMWVs and 1,200 aircraft through the reset program.

2005

- Soldiers and coalition forces secured vital elections in Iraq and Afghanistan where millions voted.
- Two training divisions plus 4½ Brigade Combat Teams worth of officer and noncommissioned officer leadership trained Iraqi and Afghan security forces.
- Soldiers trained and equipped 88,000 Iraqi Security Forces during 2005, increasing their ranks to 224,000 in 136 battalions.
- Soldiers deployed to South Asia and Southwest Asia to provide tsunami and earthquake relief.
- More than 42,000 National Guard Soldiers; 7,300 active component Soldiers; and 3,500 Army civilians; complemented with Army Reserve aviation and transportation units, provided hurricane relief support (including Katrina and Rita).
- Deployed advanced systems to share information and improve situational understanding and command of forces for four divisions and three Brigade Combat Teams in Iraq and Afghanistan.
- Equipped most deploying units with the Joint Network Node to enhance command of forces.
- Advanced $2.2 billion contract for production of 368 Armed Reconnaissance Helicopters – the Army's first new manned helicopter acquisition since 1983.

functional brigades will perform operational roles including: Combat Aviation, Combat Support (Maneuver Enhancement), Sustainment, Fires, and Battlefield Surveillance. The functional brigades will perform broad support roles on a theater-wide basis including: Air Defense, Engineer, Explosive Ordnance Disposal, Military Police, Signal, and others.

Like our theater commands, our corps and division-level operational command posts and headquarters, Support Brigades will also be converted to modular designs. They will be trained, manned, and equipped to work directly for each of these headquarters without augmentation of people or equipment.

We are also improving the readiness of our reserve forces that are making vital contributions on a daily basis – and have transitioned from a strategic to an operational reserve as our global commitments have increased. We are working to improve our access to these forces to support our strategic requirements. Access will be enabled by reducing reserve component overstructure and managing reserve Soldiers in ways that will improve assigned strength in each of our units, while increasing opportunities for education and special skills training. These improvements, coupled with modular conversion, will improve the Army's overall ability to provide ready forces and capabilities to the Combatant Commanders and to civil authorities in a timely manner.

In addition, to make best use of our resources, we are both rebalancing and redistributing our forces. We are rebalancing to create the right mix of units in high demand, and Soldiers with critical and high demand skills in each of our active and reserve components. At the same time, we are redistributing Soldiers to create the right mix between our operational forces and our institutional structures.

- To assure timely access to the right types of units and Soldiers, we are rebalancing skills within our three components. We have determined the types of units and skills that are in greatest demand in today's environment – including infantry, engineer, military police, military intelligence, Special Forces, chemical, civil affairs, and psychological operations units – and have identified over 100,000 positions to rebalance. We have accomplished more than half of this rebalancing and project to be completed by 2011.
- To sustain increased global commitments, we are also increasing, or "growing," the Operational Army in the active component. Our goal is to grow the Operational Army by 40,000 Soldiers by 2008 (from the 2004 baseline of 315,000) to bring our active component operational force total to 355,000 Soldiers. This change will be enabled by military-to-civilian conversions and better management of our Individuals Account.

The combined effect of rebalancing, redistributing, and growing the Operational Army is increasing our overall effectiveness. We are improving our ability to provide trained Soldiers in cohesive formations to the Combatant Commanders and to support civil authorities, while reducing stress on Soldiers and families.

To support global operations while transforming, we are preparing our forces for war – or resetting them – as quickly and efficiently as we can. Our reset program is restoring units returning from

war to required levels of readiness to prepare them for future missions. As we reset our units, we are simultaneously converting them to their new modular designs. We have reset more than 20 major units. Many of these units have already returned to theaters of war in their new configurations.

The Army Plan introduces a new readiness model, ARFORGEN, to manage the force and ensure the ability to support demands for Army forces. ARFORGEN sequences activities for all active and reserve Army units to include:

- Reset;
- Modular conversion;
- Modernization;
- Manning adjustments;
- Soldier and leader training and education programs;
- Unit training;
- Employment; and
- Stationing decisions.

To sustain global commitments, we will transition units through a progression of three sequential readiness pools: *Reset and Train, Ready* (eligible for deployment and exercises), and *Available* (immediately available for world-wide employment). This model establishes a plan for scheduled deployment on an Army-wide basis. Through semi-annual synchronization conferences, we will organize our forces into three Expeditionary Force Packages:

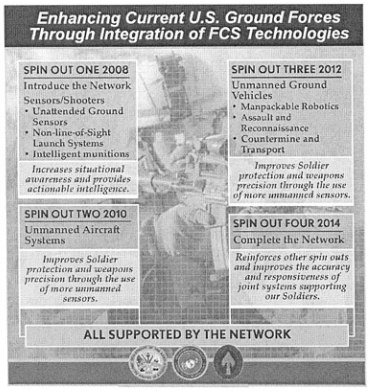
- Ready Expeditionary Forces that are training and preparing for potential future missions;
- Contingency Expeditionary Forces that are ready for employment or exercises but not yet deployed; and
- Deployment Expeditionary Forces that are executing assigned missions.

Our goal is to be able to generate a continuous output of trained and ready forces that will support one operational deployment in three years for the active component, and one operational deployment in six years for the reserve component. At lower levels of demand, this model may allow the Army to support one operational deployment in four years for active forces. This new model establishes the basis to bring all units to a full state of readiness – with people, equipment, and training – before they are scheduled to deploy. It allows the Army to accomplish the following critical objectives:

- Reduce uncertainty for Soldiers, families, and the communities that support installations;
- Improve availability of forces for Combatant Commanders;
- Generate a continuous force of 18-19 BCTs, along with all required Support Brigades; and
- Surge up to an additional 15-19 BCTs in response to crises.

Build a Campaign-Quality Modular Force with Joint and Expeditionary Capabilities for Today and Tomorrow

The war on terrorism and the changing paradigm for maintaining forward presence have created both the necessity and the opportunity to accelerate change from the current to the future force. Our conversion to a modular force – one that is carefully balanced between active and reserve component BCTs, Support Brigades, and division and corps-level operational command posts – is well under way. This conversion is transforming the Army into a more lethal, flexible, deployable, and sustainable force. It is enabling us to shift the center of gravity



of our capabilities (previously focused primarily on traditional challenges) to better address the full spectrum of traditional, irregular, disruptive, and catastrophic challenges.

The combination of transformation to build a modular Army and continuous modernization, to field Future Combat Systems (FCS) and other advanced technologies, is methodically producing the future force.

FCS is our primary modernization program and most critical investment. This program will pioneer the next generation of warfighting capabilities which will improve Soldiers' ability to find and fight their enemies. FCS includes a new class of manned and unmanned air and ground vehicles, interconnected by a modern network to better support and sustain Soldiers.

The program is currently in the developmental phase. The first unit fully equipped with manned ground vehicles is projected to achieve initial capability by 2014 (and will be able to fight by 2017). When we complete our intended fielding plan in 2025, new manned ground vehicles will replace 40 to 50-year old tactical vehicles designed in the 1970s to defeat Cold War enemies.

A significant contribution of FCS is that it will immediately place advanced technologies into the hands of our Soldiers that will increase their capability and provide greater protection. By integrating advanced technologies into our formations in four "spin outs" that will occur in roughly two-year increments, we will strengthen our current forces in distinct ways:

- The first "spin out," on track for delivery in 2008, will introduce Unattended Ground Sensors, Non-Line-of-Sight Launch Systems, the Intelligent Munitions System, and the Network. These capabilities will enhance Soldiers' understanding of their situation in dynamic, battlefield conditions by promoting a common perspective of enemy and friendly locations on digital maps. This improvement will greatly increase the area that Soldiers can influence and control. The Network will also provide Soldiers with more timely Actionable Intelligence.
- The second and third "spin outs," are currently on track for 2010 and 2012 respectively and will introduce new types of unmanned aircraft systems and ground vehicles for our Soldiers. These technologies will enable Soldiers to employ greater numbers of sensors to see and find their enemies first. These "spin outs" will also enable robotic reconnaissance of dangerous areas, mines, and booby traps. Together, they will increase Soldier protection and enhance the precision of their weapons.
- The fourth "spin out" will complete the Network, currently on track for 2014. When completed, this improvement will reinforce the comprehensive efforts now under way to improve the accuracy and responsiveness of the joint weapons systems designed to support Soldiers.

When whole BCTs are fielded with the full complement of FCS systems, these units will be able to generate significantly more capability. These FCS-equipped BCTs will contain more fighting

vehicles and more infantry squads than the units we field today. They will be able to generate more capability and control more area with significantly fewer Soldiers than today. They will require less fuel, supplies, and other logistical support.

These new capabilities will directly benefit all U.S. ground forces, including the Marine Corps and the Special Operations Forces from all Services. They will fundamentally alter how we deploy, employ, and sustain our ground forces. These capabilities will improve our capability to put "boots on the ground," to stabilize contested zones, and to support joint and interagency teams.

The future force comprises more than just FCS-equipped, modular BCTs. It includes all of the improvements in strategic agility and efficiencies that will result from implementing BRAC and IGPBS decisions. These decisions will enable the repositioning of forces to better respond to emerging challenges. We will also be able to execute much of our enduring overseas presence mission with units that deploy from the United States for overseas duty, during rotational windows scheduled and managed as part of the ARFORGEN model.

For both rotational duties and for contingencies, our units will rely on pre-positioned equipment. To increase both strategic agility and efficiency, we are modernizing our pre-positioned equipment sets. We are also reducing the number of variants of our heavy combat vehicle fleet from four to two. This initiative will promote standardization, reduce the number of systems that we must train active and reserve Soldiers to operate, and reduce maintenance costs.

Our commitment to being a learning, adaptive organization is evident in our efforts to apply lessons learned from our operations both at home and abroad. We are working to develop a future force that is better able to fight as part of joint and coalition formations in either protracted campaigns or in expeditionary operations and to serve the Nation – by examining how to best accomplish traditional and nontraditional missions through five major areas of focus:

Compelling Needs

- Full funding of the Army request in the 2007 President's Budget, plus the requisite supplemental funding for combat operations to ensure Soldiers are fully trained and equipped in the most expeditious manner to enhance current force readiness and to achieve victory in the long war.
- Resource the Army's requirements for resetting over 50 brigades consisting of over 350,000 pieces of equipment including: 615 aircraft; 7,000 combat vehicles; and 30,000 wheeled vehicles.
- Support the Army's effort in 2007 to grow our operational forces to 355,000 Soldiers (increase of 40,000 Soldiers), and restructure both the Institutional and Operational Army across the active and reserve components to meet global commitments now and in the future.
- Fully fund continuous modernization of the current force through the Future Combat Systems Program and key supporting programs, including increasing Soldier protection, sustaining development of advanced technologies, developing the Joint Network Node, LandWarNet, and rebalancing active and reserve component units and skills to ensure the Army remains the preeminent landpower on earth.
- Sustain momentum in force transformation through modular conversions planned in 2007 – three active component and seven reserve component Brigade Combat Teams, 13 active component and five reserve component supporting brigades, headquarters and support units – to ensure the Operational Army has relevant combat power for the 21st century.

- Sustain the Force enables modular Army logistics units to better anticipate requirements and provide rapid and precise capability to Army, joint, and multinational partners. We are improving theater-wide distribution systems

Soldiers responding to Hurricane Katrina

and visibility of all of the assets and resources, both deployed and in-transit, needed to support military operations.

- Actionable Intelligence is providing Soldiers and leaders with expanded situational understanding by distributing intelligence with more speed and accuracy, while providing the means to improve understanding of different languages and cultures.
- Improve Capabilities for Stability Operations is improving our understanding of how to stabilize areas of operation and support security, transition, and reconstruction operations while continuing to conduct combat operations.
- Improve Contributions to Homeland Defense is focusing on balancing capabilities in the Active and Reserve Components to ensure the right capabilities are available to address expanded homeland defense requirements and broadening the options available to civil authorities.
- Increase Army Capabilities to Dominate in Complex Environments is focusing on finding innovative solutions to challenges posed by operations in urban, mountainous, cavernous, and jungle environments while expanding Soldier ability and protection, and enhancing cultural awareness, regional familiarity, and language skills.

The combination of transformation and modernization, reinforced by initiatives of this type, and continued improvements in training Soldiers, developing leaders, and improving facilities is producing relevant and ready landpower for the 21st century.

Supporting Initiatives (Addendum C): The areas of focus discussed above are reinforced by six initiatives:

- Develop Operational Capabilities in LandWarNet
- Execute Major Acquisition Programs
- Restructure Army Aviation
- Enhance Joint Interdependence
- Stabilize Soldiers and Units to Enhance Cohesion and Predictability
- Leverage Science and Technology

Train and Equip Soldiers to Serve as Warriors and Grow Adaptive Leaders

The Army Vision centers on producing Soldiers armed with the values, combat skills, and mindset that enable them to serve as competent, disciplined warriors who reflect our shared ethos. Our training programs, at our home stations, our Combat Training Centers, and across our institutional training base are leveraging our combat experiences to grow adaptive leaders who are highly skilled, resilient, able to thrive in rapidly changing environments, and ready to operate with our joint, interagency, and multinational partners. We are committed to continuing to equip our Soldiers with the best capabilities, weapons, and protection our Nation can provide – leveraging our national strength to reduce risk to our Soldiers.

Reinforce our Centerpiece: Soldiers as Warriors

Our Soldiers continue to serve magnificently as we enter the fourth year of the war on terrorism. They believe in their mission, the Soldier's Creed, and the Warrior Ethos. As evidenced by their service, they remain committed to something far bigger than themselves.

In Iraq and Afghanistan, our Soldiers are consistently defeating the enemies of freedom.

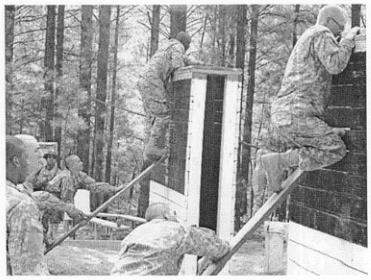
Accomplishments

Since 9-11

- Adapted Combat Training Center training scenarios to match expected threats and provided enhanced training challenges to develop adaptive leaders.
- More than half of the observer/controllers at our Combat Training Centers have experience in Iraq or Afghanistan.
- Greatly improved individual Soldier protection. Today every Soldier in Iraq and Afghanistan is issued improved body armor.
- Continued to meet Combatant Commander requirements to up-armor the vehicle fleet. To date, over 37,000 light, medium and heavy tactical wheeled vehicles have been fielded.
- Equipped 49 Brigade Combat Teams and nearly 500,000 Soldiers with state-of-the-art equipment through the Rapid Fielding Initiative.

2005

- Instituted the Combat Action Badge to recognize those Soldiers who directly engage or who are engaged by the enemy.
- Implemented standard 39 Warrior Tasks and Nine Battle Drills to initial military training for Soldiers of all military occupational specialties.
- Expanded training base capacity from 405,000 to 454,000 seats to enable growth in combat forces.
- Began implementation of new Officer Education System, including Basic Officer Leader Course and Intermediate Level Education.
- Used our experience gained in Iraq and Afghanistan to adapt our training bases and Combat Training Centers to provide enhanced training on marksmanship, fighting in urban areas, live fire convoy training, IED awareness, and working with non-English speaking allies.
- Increased ammunition production more than 400 percent to 1.5 billion small arms rounds per year to adequately train Soldiers and meet operational needs.
- Participated in the Joint Task Force that developed technical solutions and provided critical training for ground forces to detect and defeat Improvised Explosive Devices.
- Began development of a new Civilian Education System.



They have created the conditions to permit free, democratic elections and to reconstruct vital infrastructure and institutions. Like the American Soldiers of generations past, today's warriors are distinguishing themselves with tremendous acts of courage and valor in places such as Baghdad, Samarra, An Najaf, Fallujah, Tal Afar, Mosul, and Khandahar.

Our Soldiers understand the Army's values and personify our ethos, demonstrated most poignantly by their willingness to sacrifice all so that others may live in peace and freedom. Our Nation must remain equally committed to them by providing the capabilities and support they need to succeed in their mission.

Train Soldiers

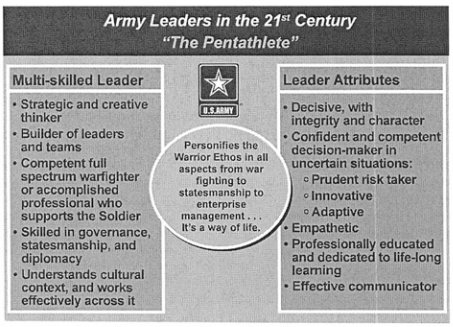
Our continued commitment to innovative training and education led us to enhance the rigor and relevance of Initial Military Training for new enlisted Soldiers and officers. Today, every Soldier, regardless of specialty, becomes a *warrior first*. To be better prepared for combat, all recruits receive advanced training in marksmanship and live-fire convoy procedures. Current training draws from recent combat experience and emphasizes 39 Warrior Tasks and Nine Battle Drills previously required only of infantry Soldiers.

Our commitment to medical training and readiness has resulted in the highest survivability rate in military history. Every Soldier in combat carries

a new blood-clotting bandage and a new one-handed tourniquet. Many are certified as combat lifesavers through extensive training. These capabilities combine with highly-trained combat medics, tremendous improvements in medical evacuation, and world-class field medicine to save lives every day.

We are strong believers in life-long learning. We are using information technology to enhance Soldier and leader education in a time of war. Soldiers participate in more than 1,500 online courses to improve job proficiency and to work toward civilian degrees. Our Army Knowledge Online websites average more than one million visits per day, allowing Soldiers and leaders to collaborate and to share information regarding the lessons learned from combat and from training.

Enhance the Combat Training Centers



Just as we have transformed individual Soldier training, our unit training has evolved to better reflect the complexity of modern battlefields. We have invested in our Combat Training Centers to replicate the complex environments – terrain, social, language, and culture – in which our Soldiers are fighting. Using these world-class training facilities, every unit conducts a Mission Rehearsal Exercise before deploying to combat. These exercises feature nongovernmental organizations, contractors, media, coalition role players, and hundreds of civilians on the battlefield. Similarly, our Battle Command Training Program uses state-of-the-art simulation techniques to replicate the realities of combat. This program trains deploying division, corps, and task force staffs who will serve as joint or coalition task force operational headquarters and includes information operations and other joint missions they might support or execute in the future.

We are continuously improving training by providing a mix of live, virtual, and constructive training events. This cost-effective approach, which uses state-of-the-art simulation tools, improves Soldier and unit capabilities and links home station training to the joint team. The rigor that we are adding to our Soldier, unit, and joint-level training, is reducing risk for our Soldiers by improving our pre-deployment preparation.

Grow Adaptive Leaders

The complexity of the 21st century security environment requires more of Army leaders at all levels. As we have seen in Iraq, Afghanistan, Korea, Europe, across the Americas, and in peace enforcement operations around the world, the actions of individual Soldiers and leaders can have strategic consequences. To be effective today and tomorrow, we are growing a new breed of leader — one more akin to a pentathlete who is able to rapidly transition between complex tasks with relative ease.

The future environment will demand that Army leaders at all levels be multi-skilled, innovative, agile, and versatile. Therefore, we are continuing to evolve our training and education systems to grow adaptive civilian and military leaders who are comfortable in leading during times of change and uncertainty.

Recognizing that intellectual change precedes physical change, we chartered a task force to Review Education, Training and Assignments for Leaders. This task force, now six months under way, is drawing upon the ideas and experiences of the finest leaders inside and outside of the Army. The task force will recommend changes to assess and improve all Army education, training, and assignment processes to produce pentathletes.

Unlike World War I and World War II, when the Army closed the Army War College, we have improved our leader education programs while at war. At the Army War College and in all of our schools, training centers, and doctrine development positions, we are placing recently returned veterans into key positions to enhance the relevance of the education and training we provide. We are also moving to fully implement a new Basic Officer Leader Course (BOLC). Consistent with our *warrior first* approach, this tough, standardized, small-unit leadership experience is ensuring that all junior officers, in all of our branches, master the skills they will need to lead in combat. We are executing similar improvements in all of our officer and noncommissioned officer education programs. Our civilian development program is enhanced through our Civilian Education System.

Equip Our Soldiers

Protecting our Soldiers continues to be our highest priority. With great support from the Congress, the Department of Defense, and the President, we have delivered more than 37,000 up-armored vehicles to meet Combatant Commander requirements. Additionally, we continue to contribute to the Joint Organization established to defeat our adversaries' use of improvised explosive devices. (Figure 10)

We are also exploiting the value of the Rapid Equipping Force (REF) to better protect our Soldiers. REF works in partnership with industry, academic, and military leaders to support Soldier needs as quickly as possible. It provides field commanders with readily employable solutions to enhance lethality and survivability. Often using off-the-shelf and developmental technologies, REF is enabling us to remain ahead of an adaptive enemy and to save Soldiers' lives. Examples of last year's successes include the deployment of digital translators, vehicle scanning systems, and robots able to inspect possible improvised explosive devices.

A similar program to increase Soldier capabilities is the Rapid Fielding Initiative (RFI). RFI has equipped nearly 500,000 Soldiers since its inception. RFI accelerates the fielding of commercial, off-the-shelf

Equipping Our Soldiers: Soldier Protection Programs in Iraq and Afghanistan

AREA	WHERE WE WERE SEPTEMBER 2003	WHERE WE WERE JANUARY 2005	WHERE WE WERE JANUARY 2006
Body Armor	Estimated 10 percent of Soldiers in Iraq equipped	All Soldiers and DoD civilians in theater equipped; plus 60,000 Deltoid Axillary Protectors issued	All Soldiers and DoD civilians in theater equipped; total of 693,000 Body Armor sets fielded; plus 173,000 Deltoid Axillary Protector sets issued
Up-Armored HMMWVs	500 Up-Armored HMMWVs in Iraq and Afghanistan	More than 6,400 Up-Armored HMMWVs in Iraq and Afghanistan	More than 11,100 Up-Armored HMMWVs in Iraq and Afghanistan
Tactical Wheeled Vehicle Add-on-Armor Kit	Contingency mission only	More than 18,000 vehicles in theater have Add-on-Armor kits	More than 37,500 vehicles in theater have Add-on-Armor kits
Armored Security Vehicle (ASV)	No ASVs in theater	Resurrected a terminated program; 82 ASVs in theater	194 ASVs in theater
Bradley Reactive Armor Tile (Brat)	140 sets delivered; acceleration plan in execution	592 sets delivered	790 sets delivered; acceleration plan in execution
Counter-IED Device	Minimal capability in theater	1,496 systems in theater	More than 23,000 systems in theater
Tactical and Small Unmanned Aircraft Systems	Two systems deployed to theater	128 systems in theater	155 systems in theater
Aircraft Survivability Equipment (ASE)	No fixed-wing ASE; in process of upgrading Blackhawk and Chinook aircraft with basic ASE	All theater aircraft upgraded with basic ASE	All theater rotary wing aircraft to be upgraded with Latest Common Missile Warning System
Buffalo	No systems deployed in theater	No systems deployed in theater	44 systems deployed

FIGURE 10

Compelling Needs

- Support and funding to implement the findings of the Review of Education, Training, and Assignments for Leaders, examining all pertinent policies and programs with a view to creating military and civilian "pentathletes" able to lead effectively amidst the complexity and uncertainty of the 21st century security environment.
- Continue to support Army initiatives to sustain Soldier, leader, and unit training development and provide stability for Soldiers and their families.
- Continue to support the Rapid Fielding Initiative to complete the goal of equipping all operational forces (active and reserve component) by September 2007.
- Maintain funding support for equipment modernization programs that speed state-of-the-art force protection systems and weapons to our Soldiers in the field.

systems to produce state-of-the-art capabilities. RFI provides a specific set of equipment to every Soldier, and a set of additional items to Soldiers assigned to BCTs. The Training and Doctrine Command is using combat lessons learned to maintain the currency of the items we supply. We plan to complete fielding these items to all operational forces by September 2007.

Supporting Initiatives (Addendum C): The areas of focus described above are reinforced by three supporting initiatives:

- Support Joint Improvised Explosive Device Defeat Organization (JIEDDO)
- Expand Cultural Awareness and Language Capabilities
- Develop Joint Training Capabilities

Sustain an All-Volunteer Force Composed of Highly Competent Soldiers That Are Provided an Equally High Quality of Life

We owe our success to the versatile young Americans who answer the Call to Duty. This is the first time in our modern history that the Nation has tested the concept of an All-Volunteer force during a prolonged war. We are executing a full range of initiatives and incentives to recruit and retain high caliber citizens to man our active, reserve and civilian ranks. Caring for Soldiers and Army families through tangible quality of life programs provides a sense of belonging and sustains motivation for continued service. Improving Soldier and family housing reflects our commitment to providing a quality of life that matches the quality of our Soldiers' service to the Nation.

Recruit and Retain the All-Volunteer Force

We have maintained our All-Volunteer Army by recruiting dedicated, high-quality Soldiers and then retaining them well beyond their initial obligations. While the recruiting environment for America's young men and women is competitive, we will not compromise standards as we temporarily increase the size of the Army by 30,000 Soldiers. Our recruiting goal this year exceeds 186,000 Soldiers for all three components. This annual

goal compares to about 140,000 recruits for all of the other Services combined.

Accomplishments

Since 9-11

- Exceeded combined active and reserve retention goal each year.
- Built over 24,000 barracks spaces and modernized over 9,000 existing spaces through the Barracks Modernization Program.
- Privatized 59,500 sets of quarters at 26 different installations through the Residential Communities Initiative to improve family housing.
- Continued to provide returning Soldiers state-of-the-art health care as they return from theater.
- Established a Well–Being framework to integrate, resource, and measure quality-of-life programs for Soldiers and families.

2005

- Achieved 106 percent of the combined active and reserve retention goal.
- Increased recruiting and retention incentives programs.
- Assisted Family Support and Readiness Groups from company to division-level. Developed Virtual Family Readiness Groups.
- Implemented the U.S. Army Wounded Warrior Program (formerly Disabled Soldier Support System) to synchronize Army programs that care for severely disabled Soldiers.
- Established a community-based Child and Youth Services Program for child care, youth development, and school transition to support 160,000 Army Reserve youths.
- Implemented a $250 million Barracks Improvement Program to upgrade sub-standard Soldier barracks.

Last year was a challenging recruiting year. However, we finished strongly, exceeding the monthly goals for the last four months by more than 400 Soldiers per month in the active component. This trend continued into the new recruiting year in all three components. To achieve success this year, we have expanded advertising, increased the number of recruiters, and augmented numerous incentive programs. We recently initiated a new program, Unity of Effort, to recruit former members of the Armed Forces. This program features enlistment bonuses and, in many cases, reinstatement of previous rank. We are optimistic that our efforts, reinforced by Congress and the Nation's support, will result in meeting our recruiting goals for this year.

The Army is retaining Soldiers at tremendously high levels. Since 2002, while fighting the war on terrorism, we have surpassed our combined Army retention goals each year. In 2005, we exceeded our goal by more than six percent. We reenlist two out of every three eligible Soldiers who reach the end of their term of service during a given year. We are particularly proud that one out of every two first-term Soldiers decide to reenlist. In a time of war and a high operational pace, we believe this achievement is indicative of the high quality of leadership that our Soldiers experience in their units. Our Soldiers value the tradition of service to the Nation and appreciate the opportunity to contribute in a meaningful way.

The continued support of spouses, parents, veterans, and the employers of our reserve component Soldiers plays a huge role in recruiting and retaining the All-Volunteer force. This support has a direct effect on the pride and morale of each of our Soldiers. In May 2005, to recognize the role and contributions of key influencers in our society, we established the Freedom Team Salute Program. To date, we have received requests to commend almost one million spouses, parents, veterans, and civilian employers.

Care for Soldiers and Army Families

We continue to work to assure Soldiers and their families that they will be taken care of and all their needs will be met. Caring for families plays a vital role in sustaining a national commitment to serve and requires both the attention of leaders and the application of resources.

Army Well-Being programs provide leaders a variety of ways to care for Soldiers and their families. We have integrated numerous quality-of-life functions into a comprehensive well-being framework that enables us to focus resources, measure success, and address the needs of an Army at war. Our objective is to sustain the fighting strength of our Army while providing for the individual needs of Soldiers and families.

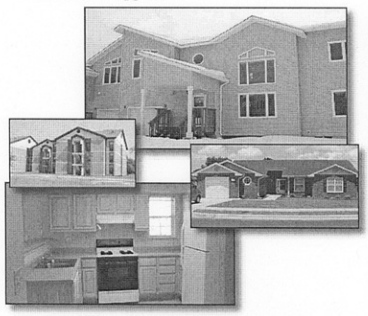
To assist Family Support and Readiness Groups at all levels, we have developed Virtual Family Readiness Groups. We have expanded child care programs on installations and in communities that have deployed Army National Guard and Army Reserve units. The Army Reserve established a Child and Youth Services Program to facilitate access to child care, youth development, and student support. The new Deployment Cycle Support Program helps families to understand and cope with the stress of deployments. Our Army Spouse Employment Partnership program has placed over 11,000 spouses in positions with major corporations and State and Federal agencies. We are currently working on a school transition program to help families and communities affected by BRAC decisions. These are just a few of the many ways that we care for Soldiers and families.

Health care is another critical aspect of caring for our Soldiers and their families. The Army provides world-class health care for 3.5 million beneficiaries, on the battlefield and at hospitals and clinics worldwide. To honor our obligation to care for Soldiers and families, we continually look for ways to improve health and well-being. The U.S. Army Wounded Warrior Program, formerly known as the Disabled Soldier Support System, provides sustained care for our severely wounded Soldiers. This program provides continuous and comprehensive transition and support services for our Soldiers until they are returned to duty or for up to five years after medical retirement. This program exemplifies our commitment to honor the Soldier's Creed by "never leaving a fallen comrade."

Improve Soldier and Family Housing

We are committed to providing quality housing for our Soldiers. Housing for single and married Soldiers has been improved significantly as a result of the Barracks Modernization Program and Residential Communities Initiative (RCI).

To improve substandard living conditions across our installations, we committed $250 million to an immediate Barracks Improvement Program. As part of a longer-term Barracks Modernization Program, we will have funded 85 percent of our barracks modernization by the end of this year. We have programmed funding through 2009 to modernize our remaining barracks spaces. In addition, 45 percent of barracks for our recruits at our training centers will be modernized by 2011. Using vital supplemental funding, we also initiated



a program to modernize the barracks used by Army Reserve and Army National Guard Soldiers during their annual training.

Through RCI, we are providing better family housing for our Soldiers by privatizing 82,000 homes at 42 installations. This program leverages private investment capital to improve housing at a much faster rate than traditional methods of financing and contracting for military construction. When completed in 2010, over 90 percent of Army housing in the United States will have been privatized. We have also constructed more than 3,600 family homes and renovated 6,300 existing homes using traditional military construction.

Improved housing, in barracks and quarters, provides Soldiers and families with a quality of life that recognizes their service to the Nation. These programs have a positive, enduring effect on Soldiers' morale, and contribute immeasurably to our ability to sustain our volunteer force.

Supporting Initiatives (Addendum C): The above areas of focus are reinforced by the following three supporting initiatives:

- **Continue** Army One Source
- **Establish** Multi-Component Family Network
- **Execute** Child and Youth Services School Transition Support

Compelling Needs

- Support and funding to achieve critical recruiting and retention goals. Meeting these goals for all components will ensure the quality of our All-Volunteer force.
  - Achieve an active component recruiting goal of 80,000 and retention goal of 64,200; an Army National Guard recruiting goal of 70,000 and retention goal of 34,900; and an Army Reserve recruiting goal of 36,500 and retention goal of 16,900.
  - Continue support of Army initiatives to provide predictability and stability for Soldiers and their families in both the active and reserve components.
- Full funding and support for quality-of-life programs to sustain the All-Volunteer force, now being tested for the first time in a prolonged war.
  - Support housing initiatives to provide quality housing for Soldiers and families at installations impacted by Base Realignment and Closure and the Integrated Global Presence and Basing Strategy.

Provide Infrastructure and Support to Enable the Force to Fulfill Its Strategic Roles and Missions

The infrastructure that the Army maintains plays a vital role in supporting the Joint Force. We are adjusting our global footprint to improve readiness at each of our installations. To free resources for more compelling operational needs, we are reengineering every one of our business processes. At the same time, we are completely transforming our infrastructure, consisting of installations, depots, and arsenals – and the information network that connects them – to reflect the deployment requirements and global commitments of the 21st century security environment, while becoming dramatically more efficient.

Accomplishments

Since 9-11

- Created the Installation Management Agency to unify the business structure of Army installations and to create uniformly high standards of quality for Soldiers and their families.
- Developed a strategic stationing plan that synchronizes decisions of Base Realignment and Closure, Integrated Global Presence and Basing Strategy, Army Modular Force initiative, and the demands and realities of the Global War on Terrorism.
- Optimized Power Projection Platforms to mobilize and deploy over 500,000 Soldiers to support the Global War on Terrorism.

2005*

- Awarded the General Fund Enterprise Business System contract to enhance the management of financial resources.
- Planned and implemented an Army-wide Business Transformation initiative based on the *Lean Six Sigma* methodology to reduce the cost of the business side of the Army.
- Identified and began initial implementation of substantial structural changes to the institutional base of the Army.
- Implemented a strategic management system to measure Army performance and ensure optimum allocation of resources.

** Several continue into 2006*

Adjust Global Footprint to Create "Flagships of Readiness"

The Army is moving units and transforming posts through an effort that we call "Stationing." In 2007, we will reposition major elements of our operational force (Figure 11). At the same time, we will establish the environmental foundation and initiate the renovation and construction needed to reposition schoolhouses, headquarters, and other support activities. Our stationing effort will posture our forces, logistics activities, and power projection infrastructure to respond to the demands of a complex, uncertain future as efficiently and effectively as possible.

We have produced a plan that integrates BRAC decisions, the IGPBS plan, and the Modular Force initiative. This plan allows us to divest Cold War era infrastructure and create the infrastructure required for the foreseeable future. We are consolidating activities by leveraging information technology and advances in supply chain management. We are also completely reengineering our business processes to eliminate waste.

This consolidation will yield tremendous savings over time. Our plan reduces overhead costs by streamlining the installation staffs, contract support, and infrastructure that will support units and activities at their new locations. We are exploiting this opportunity to become more efficient and more effective as we implement our stationing plan.

Stationing involves more than merely opening, closing, or realigning functions. It requires balancing military, economic, and strategic

Major Stationing Moves in 2007

- 1st Brigade, 1st Armored Division moves from Germany to Fort Bliss.
- 212th Fires Brigade moves from Fort Sill to Fort Bliss.
- 17th Fires Brigade moves from Fort Sill to Fort Lewis.
- Stryker Brigade Combat Team 7 activates at Fort Lewis.
- Battlefield Surveillance Brigades activate at Fort Hood and at Fort Bragg.
- Support Brigades (Maneuver Enhancement) activate at Fort Irwin and Fort Polk.

FIGURE 11

necessities to determine the scope and timing of closures, consolidations, construction, renovation, unit activations, and unit deactivations. We have scheduled all of these activities to occur in ways that will enhance the flow of forces to and from current global commitments.

Our stationing plan and requirements for funding, construction, renovation, and environmental remediation are guided by a set of key goals:

- Use existing infrastructure to reduce cost and excess capacity;
- Minimize use of temporary facilities; and
- Place priority on barracks, housing, motor pools, ranges, and training facilities to ensure that our Soldiers are properly prepared for the challenges they will face.

While positioning the Army to better respond to the 21st century security environment, we are simultaneously working to ensure that our Soldiers and families enjoy the benefits of installations that are truly "Flagships of Readiness."

The quality of our installations remains critical to accomplishing our mission. Our depots, training bases, and home stations enable the Army to:

- Build, train, deploy, and sustain our operational forces;
- Reset and regenerate combat power of returning forces for future missions;
- Provide homes, health care, essential support, and much of the quality of life that our Soldiers and families enjoy; and
- Provide the workplace for our civilian workforce of more than 230,000 people that is performing an increasingly important role in accomplishing the Army's wartime mission.

Since 2001, the Army has made tremendous progress in enhancing training and generating combat power in time of war. Despite improvements, the Army still requires significant resources to overcome years of insufficient investments in its installations and infrastructure. We are committed to reducing our facilities recapitalization rate to meet the

Department of Defense 67-year goal. If resourced, our stationing plan will produce installations better able to train and prepare our forces for future missions. Our plan will also provide a quality of life that our Soldiers and families deserve, and help to sustain the All-Volunteer force.

Implement Business Transformation Initiatives

We are fundamentally changing how the Army conducts business. Our goal is to streamline or eliminate redundant operations to free financial and human resources to redirect to our core warfighting missions. We are:

- Improving our processes to repair equipment and reset our forces;
- Reengineering our manufacturing and administrative processes;
- Outsourcing, where it makes sense;
- Seeking to make best use of economies of scale in all of our contracted services;
- Applying information technology to improve support and eliminate functions where possible; and
- Achieving cost savings in software and hardware while pursuing enterprise-level solutions in our networking practices.

Compelling Needs

- Support to execute a carefully synchronized plan to achieve a new global basing posture while fulfilling the requirements of the National Military Strategy. The requirements of this plan (for renovation, construction, environmental remediation and other costs) will exceed the resources currently apportioned for base realignment and projected to be recouped through consolidation and closure.
  - Support Army efforts to synchronize Integrated Global Presence and Basing Strategy, Base Realignment and Closure, and stationing of modular units.
  - Support funding to achieve a 67-year facilities recapitalization rate.
  - Maintain support for 2007 military construction requirements in accordance with the Army Modular Force initiative, Base Realignment and Closure, Integrated Global Presence and Basing Strategy, and other Department of Defense guidance.
- Support for funding and authorities for Army Business Transformation initiatives to achieve targeted efficiencies through management reform, Institutional Army adaptation, and reengineered business practices. These initiatives will free human and financial resources for more compelling operational needs.

Across the Army, we are reengineering all of our business processes to achieve greater efficiency, improve quality, decrease cycle time, and reduce cost. The method we are using, *Lean Six Sigma*, has already produced a marked improvement in manufacturing and repair processes at all of our depots within the Army Materiel Command. Once fully implemented across the Army, with full adherence to labor laws and other administrative requirements, we will replicate these successes across the Army in all our activities.

Develop the LandWarNet Institutional Infrastructure

We are investing in information technology at our installations and reserve component facilities to lay the foundation for fielding LandWarNet. The Army's portion of the Global Information Grid, LandWarNet compromises both infrastructure and services. It moves information through a seamless network to better support our combat forces and the institutional structures that generate them. Our information technology infrastructure will enable operational forces to "reach back" for data, such as repair part visibility, intelligence and other support, and innovations such as telemedicine. This same technology is improving our ability to manage business.

Supporting Initiatives (Addendum C): The areas of focus discussed above are reinforced by three supporting initiatives:

- Execute Base Realignment and Closure
- Improve Global Force Posture
- Improve Medical Infrastructure

Balancing Risk: The Tension Between Current and Future Demands

The Army has always experienced a tension between current and future demands, perhaps more now than ever before. Consistent investment in current and future readiness is needed to:

- Ensure that the size and mix of our components and capabilities are in balance;

- Enhance our global posture, agility, and readiness to conduct expeditionary operations on short-notice; and
- Organize, man, train, and equip our Soldiers to win today and tomorrow.

Meeting Today's Demands While Preparing for Tomorrow

The Army has adapted to fight the war on terrorism following a decade of insufficient modernization investments. At the start of combat operations, many of our units were under-equipped and not immediately ready for deployment, especially in our reserve components.

To meet Combatant Commander requirements, we had to aggregate equipment from across the force to fully equip those Soldiers deploying into harm's way. As a result, we significantly reduced the readiness of many units to prepare others for combat.

This readiness decision was especially evident in the Army National Guard during our national response to hurricanes Katrina and Rita. With help from the President, the Congress, and the Department of Defense via supplemental appropriations, we have been provided the means to address many of our equipment shortfalls and readiness requirements, yet we still have much to accomplish.

To manage risk within acceptable levels during wartime, the Army requires:

- Full funding of the Army request in the 2007 President's Budget and special consideration, in light of wartime demands, for avoiding any reductions to the Army's budget and program. In addition, supplemental funding is required for combat and contingency operations and to continue to reset, repair, recapitalize, and replace battle losses of equipment for several years beyond major deployments. Supplemental funding is needed to overcome the stress on equipment resulting from sustained combat operations in harsh environments. These resources will ensure that the Army is

Army Actions to Mitigate Risk in 2005

Operational Risk

- Funded our reset program to repair over 7,000 tracked and wheeled vehicles and over 550 helicopters;
- Completed the modular conversion of 11 Brigade Combat Teams, including one Stryker brigade that will deploy this year; and
- Implemented the ARFORGEN model to allow the Army to sustain a commitment of up to 18-19 Brigade Combat Teams with the ability to surge an additional 15-19 Brigade Combat Teams on short notice.

Future Challenges Risk

- All tactical vehicles in Iraq and Afghanistan that operate away from forward operating bases have up-armored or add-on armor protection. Nearly 2,400 tactical wheeled vehicles do not have missions off of forward operating bases and are not armored; and
- Restructured the Future Combat Systems program to "spin out" advanced technologies to Soldiers as they become available, rather than waiting for total system fielding.

Force Management Risk

- Continued modular force conversions, enlarging the pool of available units to reduce the stress on the force;
- Continued military-to-civilian conversion to free up Soldier positions from the Institutional Army to the Operational Army;
- As a component of the ARFORGEN, initiated lifecycle management of 11 Brigade Combat Teams to keep Soldiers in units longer, improve unit readiness and cohesion, and provide greater predictability for Soldiers and their families; and
- Created a stationing plan to better posture the force for deployments and other global commitments.

Institutional Risk

- Implemented business transformation initiatives to improve how the Army does business and consequently reduce cost;
- Awarded the General Fund Enterprise Business System contract to allow better financial management;
- Created a stationing plan to improve strategic responsiveness and invest in our most critical installations; and
- Invested in LandWarNet to improve each installation's ability to manage information and better support operational forces.

fully manned, trained, and equipped to achieve victory in the war on terrorism. These resources will also enable the Army to maintain the momentum of key programs, while accelerating transformation.

- Funding to increase Army capabilities and overall capacity as well as support for the legislative authorities and programs needed to assure access to our reserve components – who, by necessity, have become an operational vice a strategic reserve. We must achieve a proper balance of capabilities and skills among our active and reserve forces and continue to build high-quality units to increase capability and ease the strain on our deployed Soldiers.
- Support and funding to achieve critical recruiting and retention goals needed to grow our operational forces. Meeting these goals for our active and reserve Soldiers sustains the quality and effectiveness of our All-Volunteer force.
- Funding for the FCS program – to enhance current force capabilities today with "spin outs" of available technology – and accelerate more than 300 other modernization programs. Our most critical investment program, FCS will be the Army's first major modernization in over 30 years and will better prepare and protect Soldiers for current and future threats. These capabilities will directly benefit our active and reserve components, all U.S. ground forces, and our allies that support ground campaigns.
- Full funding to maintain momentum in building a rotational pool of 70 BCTs and more than 200 modular Support Brigades and headquarters. Already well under way, our transformation to become a fully modular force is preparing our Soldiers to conduct sustained operations of the type we see today. In addition, our transformation is increasing the depth and breadth of our capabilities to prepare our Soldiers for tomorrow's challenges, particularly as we evolve to maintain overseas presence with rotational units.
- Full funding for Army installations and support to execute a carefully synchronized plan to achieve a new global basing posture, while fulfilling the requirements of the National Military Strategy. This plan will make full use of the resources currently apportioned and projected to be recouped through consolidation and closings. Unanticipated costs associated with environmental remediation, renovation, construction, and other areas, may require additional resources in future years (a situation that will require continuous reevaluation). Full funding and continued support for Army installations and quality-of-life programs is required to sustain the All-Volunteer force, now being tested for the first time in a prolonged war.
- Support for funding and authorities for Army Business Transformation initiatives to achieve targeted efficiencies through management reform, Institutional Army adaptation and reengineered business practices. These initiatives will free human and financial resources for more compelling operational needs and accelerate other aspects of our transformation.

The Army is committed to producing units that are ready for the challenges they will face tomorrow and to overcoming years of underfunding prior to the events of 9-11. We have received unprecedented

support to "buy back" much needed capability. We cannot, however, fool ourselves by maintaining large numbers of forces on paper that, in reality, lack the people, equipment, training, and support needed to accomplish the missions they will be assigned. We are determined to support our Soldiers and their families with an improved quality of life that matches the quality of the service they perform for America.

Building the capabilities required to hedge against the uncertainty of tomorrow will require prudent investments today. These investments must be sustained at predictable, consistent levels over time – a departure from historic patterns of spending which have increased our Nation's vulnerability at the outset of each of the major conflicts of the 20th century. As George Washington stated, "To be prepared for war is one of the most effective means of preserving peace." Consistency in funding, even as the war on terrorism ebbs and flows, is absolutely essential to the Army's ability to preserve peace and freedom for the Nation.

Preserving Peace and Freedom for the Nation

Guided by the Army Vision, we are accomplishing our mission today while building the future force – of Soldiers, leaders, modular forces and institutional support structures – to do so tomorrow.

We remain resolute in our determination to preserve peace and freedom for America. To identify, learn, and adapt to new challenges, we continue to focus on tough questions that will remain at the center of the defense debate:

- What are the strategic requirements of the 21st century? What decisions must we make now to fulfill our Title 10 obligation to ensure the Army, as part of the Nation's Armed Forces, is best prepared to defend U.S. interests in the face of traditional, irregular, catastrophic and disruptive challenges?
- How can we best prepare our leaders to become multi-skilled "pentathletes" able to operate confidently and successfully amidst the challenges and uncertainties we will face?
- Are joint land forces (Army, Marines, and Special Operations Forces) properly sized, structured, trained, and oriented to provide the capabilities needed to perform the missions that the Nation will require?
- What additional actions are required to ensure that our forces are organized, trained, manned, and equipped to be relevant to, and ready for, the challenges they will face?
- How do we ensure that our physical infrastructure (installations, depots, arsenals, and the network that connects them) best supports our mission? How do we balance our resources to: provide quality of life to sustain our volunteer force; maintain deployment facilities (air, ground, sea, rail, cargo, and other facilities) to support Combatant Commanders' timelines; and establish a training base to prepare our Soldiers and units for the challenges they will face?
- How can we best leverage the human and financial resources we have been provided to ensure that we remain the world's preeminent landpower – ready to meet and relevant to, in capabilities and mindset, the challenges we will face?
- What will be the impact of protracted conflict on the All-Volunteer force? What combination of quality of life, compensation, incentives, service options, and other tools will be required to recruit, retain, and sustain the concept of the All-Volunteer force for the future?

With the support of the President, the Congress, and the Department of Defense, we are developing the capabilities and the capacity to sustain our global commitments and to prevail in the war on terrorism. We need your continued support to meet the needs of the Combatant Commanders and our Soldiers, who answer the Call to Duty by volunteering to serve the Nation in this time of war.

Chairman WARNER. Thank you, Mr. Secretary, for a very powerful statement.

General Schoomaker, I wish to ask you once again to recite, as you did with the hearing with the Secretary of Defense, your personal observation about the state of the Army today compared to the Army that you came into during the Vietnam era. I think that sets a very profound tenor for the situation before us today.

General SCHOOMAKER. Mr. Chairman, Senator Levin, distinguished members of the committee: Good afternoon. Mr. Chairman, I would be glad to do that in the most succinct way I can. We were severely challenged, if not broken, in the post-Vietnam Army. Al-

though it was filled with great people, we were challenged in almost every dimension. This Army today, although we are challenged and we are busy, our tempo of operations (OPTEMPO) is very high. Some would call us stretched. This is not a broken Army. This is a very strong Army, the best that I have been in in my entire service and, quite frankly, observing my father's three decades of service, I do not remember one as a kid that was as good as this Army the way it is.

Sir, I would like to recognize some other senior leaders that are present today, important parts of our Army. First of all, Lieutenant General Steve Blum of the Army National Guard and his sidekick, Lieutenant General Vaughn, who are sitting right to my right rear; and Lieutenant General Ron Helmly, U.S. Army Reserve. Of course, these are very important leaders in the Army. I just wanted to recognize the fact that they are present today and with us.

Last week when I spoke, I talked about where we were, where we are, and where we are going. I am sure we will get into more of that during the testimony here. But today we have with us our posture statement, that I hope is at your position. I know that we are submitting this for the record, if we could, as part of our official testimony.

Chairman WARNER. Without objection, all of your statements in entirety, together with other items that you wish to have put in the record, will be done.

General SCHOOMAKER. Thank you, sir. I would just reference during the time that we are here, if you would take a look at page 2 some time. I will be referring to that because it shows you some figures there and some charts about the history of where we have been that backs up some of the things I said previously, to include the fact that we had about $100 billion in lack of investment over the previous decade in the United States Army that we are now trying to overcome.

I made the statement that we started the current operations following September 11, 2001, at some $56 billion in the hole in equipment. You can see there in those three charts on page 2, actually figures 4, 5, and 6, a graphic history of the kinds of things that were occurring and what our traditional fiscal representation has been for the Army.

Of particular note, you might notice that on the bar chart at the very bottom the gold band shows you the relatively small percentage of our total budget that goes towards the investment accounts. The United States Army typically has been funded at about 16.5 percent of the Department of Defense (DOD) on our equipment procurement, et cetera. So when I take all of this in context, I think it supports what I said and have testified to.

We are on the right path, there is no question about it, and I believe that we have presented a very balanced force structure that is consistent with the level of resourcing we have. If we were to have more resources I would accelerate what we are doing. I would not necessarily grow it bigger. I think this is an important point. I think what we have done is achieved a sense of balance across the specialties, the capabilities, and the capacities in the Army that are relevant to the 21st century and I believe that we must continue on that path.

So, having said that, what I would like to now do before I conclude my oral statement, I would like to introduce three soldiers. As you have heard me say many times, I cannot tell you what a privilege it is to be associated with the men and women of the United States Army, those in uniform and those civilians and their families that support us.

Today we have three soldiers, one each from the Guard, the Reserve, and the Active component, and I would like to introduce them one at a time, tell you just a little bit something about them. The first is Sergeant First Class Judith Quiroz on my far left. Sergeant Quiroz is with the U.S. Army Reserve and her specialty is personnel. She deployed during 2003 from January to December to both Kuwait and Baghdad, where she served as Noncomissioned Officer in Charge (NCOIC) in the personnel business supporting our soldiers over there in a very important function. She was recognized with two Army commendation medals for her period of service during Operation Iraqi Freedom (OIF) and she now resides in Hanover, Maryland, here in the local area. So I am very proud of Sergeant Quiroz and her associates from the Army Reserve. Thank you, Sergeant Quiroz.

Second, I would like to introduce Specialist David Yancey. Specialist Yancey is from the Army National Guard, from Mississippi as a matter of fact, the 155th, Dixie Thunder. He was deployed from January 2005 to 29 March 2005, when he was wounded. He and three of his compatriots were struck by an improvised explosive device (IED). He suffered a broken left femur, a severed artery in his leg, a collapsed lung, a closed head injury, a damaged spleen, rib fractures, and a T1 fracture. According to Specialist Yancey: "These actions have changed my life, but I am driving on with new goals and a new career as an American soldier would."

He is currently under our Operation Warfighter program and he is seeking employment in the U.S. Postal Service and I am sure that he will be as fine an employee in the Postal Service as he has been a soldier. We are very proud of him. Thanks.

Chairman WARNER. We wish you well. We are hoping that you will meet this new challenge with the same vigor that you performed your military duties, sir. Well done.

General SCHOOMAKER. He also wears the Combat Action Badge, which is something that our soldiers wear very proudly who have engaged in direct ground combat.

Our third soldier is from the Active component, Staff Sergeant Wesley Holt. Sergeant Holt is an infantryman, served in a Stryker brigade for a year, comes out of Fort Lewis, Washington. He was with what has gotten a certain amount of fame, the Deuce-Four out of the 1st Brigade, 25th Infantry Division, Fort Lewis. They were up in Mosul.

He received a Silver Star for action on 29 December 2004 when he displayed extraordinary heroism while under heavy fire and personally was responsible for saving over 40 men's lives during that action. To give you an example of the kind of Army we have today, during his time in Iraq Staff Sergeant Holt's platoon accounted for over 100 enemy killed and over 15 high-value targets captured, and his platoon was awarded 22 Purple Hearts—this is a platoon of

roughly 40 people—22 Purple Hearts, 3 Silver Stars, 4 Bronze Stars with V, and 19 Army Commendation Medals with V for valor.

He reenlisted in Iraq and was recently selected to become an aviation warrant officer in the United States Army. So we are very proud of him as well.

Chairman WARNER. You are an inspiration to all men and women of the Armed Forces. Well done, sir.

General SCHOOMAKER. Sir, with that introduction, I stand with the Secretary, prepared to answer your questions.

Chairman WARNER. We thank you very much.

We will go into a round of 6 minutes on the first, and hopefully we will have a second and a third if necessary.

Always foremost in our minds here on the committee again is the care for our wounded. Nearly 16,000 men and women have been injured or wounded in the war, and with advances in medical care soldiers have lived that otherwise would not have in earlier conflicts. Please describe for the committee, Mr. Secretary, the programs in this budget that will support our wounded soldiers, and are there other programs or other legislative things that Congress can do to support you as Secretary and the others in the Army to care for those individuals and their families?

Secretary HARVEY. Thank you, Mr. Chairman. As you may know, we have a program called the Army Wounded Warrior Program, which is primarily aimed at taking care of our wounded soldiers in the sense of ensuring that they get the proper medical attention and once they leave the Army that continues, and also, importantly, that they get a good job in the government or in the private sector. To that end, we have partnered with four other Cabinet Departments—Homeland Security, Labor, Transportation, and Veterans Administration—and also through our Army Career and Alumni Program (ACAP), we have identified 70 employers who have signed up to hire disabled soldiers. So that and our own internal programs, one of which we call Always a Soldier, another transition to Army civilian.

So I think at this time we have a comprehensive set of programs to help our wounded warriors, they continue to receive the medical treatment they need to fully recover from their injuries and wounds, and also to help them transition back to their communities and get a very good, well-paying job. So I think we initiated that program a couple of years ago. We initially called it the Disabled Soldier Support Program, and we have changed it at the request of the wounded soldiers to the Army Wounded Warrior Program.

So I think at this time we have a solid programmatic base to help them to do that.

Chairman WARNER. A few years ago this committee put into the authorization bill legislation to enable the Service secretaries to retain those who had experienced wounds, yet had recovered to the point where they could continue to serve in uniform. Has that worked out successfully and do you need any additional authority? Because I find and each of us on this committee have found when you visit the wounded, so many of them are anxious to return to active service and continue to wear the uniform and perform their duties.

Secretary HARVEY. Thank you, Mr. Chairman. You have provided the authorities we need. I know personally, I know the chief personally, when we go up to Walter Reed—I was there just yesterday, but a couple of weeks ago I met Staff Sergeant Rummell Bradley, who is a double amputee and a remarkable young man of courage, who personally asked me to stay in the Army. I said: "You just give me your name and number and when you are ready and you are recovered we will ensure that you stay in the Army."

There are a number of examples like that. So I think we have the authority we need. The Always a Soldier Program is a program in our Army Materiel Command that offers either military or civilian jobs to wounded soldiers. So I think we are in good shape. Thanks for that question.

Chairman WARNER. Let us recognize really the extraordinary chapter in the history of our military. That was not the case when you and I served in different positions during the war in Vietnam, General. But it is today.

Do you have anything to add on this subject?

General SCHOOMAKER. Sir, I think in almost every dimension that we are doing very well. I subscribe to what the Secretary just said. I will remind you that over time soldiers make different decisions about their future once wounded. I believe that leaving the options open and encouraging soldiers to reach as far as they can reach is very important for them, very healthy and helpful, and then of course they will make decisions based upon how they recuperate physically.

But I do believe that it is worth saying—for instance, Sergeant Yancey back here. Some of you may recall we had some discussions about tourniquets at one time. Sergeant Yancey is alive today because of the one-handed tourniquet that we fielded, the tourniquet that a lot of people said we did not have.

Chairman WARNER. I remember it well.

General SCHOOMAKER. I suggested that we had solved that problem.

I might also tell you that the 91 Whiskey program, which is the combat medic and our combat lifesaver program, has paid extraordinary dividends to us. The fact that we are now having less than 10 percent of our soldiers wounded die of those wounds is historically just a wonderful story, the fact that we are able to do that.

Chairman WARNER. We are going to get into the questions on that eventually here, about the equipping.

General SCHOOMAKER. Yes, sir.

Chairman WARNER. But to both the Secretary and you, General: Under the President's budget, the Department does not intend—I repeat, does not intend—to seek a permanent increase in end strength for the Active-Duty Army. In fact, the Army is funding the Army Reserve and National Guard to levels which are 5,000 and 17,000 lower respectively from the end strength levels authorized in fiscal year 2006.

Can you address those two issues and how hopefully it is your professional judgment that this will not cause a decrement in the combat capabilities of the Army and the Reserve?

Secretary HARVEY. Let me address the Active component. We have a plan for the Active component that will increase the size of

the operational Army by 40,000, keeping in mind that the Active Army is really divided into three parts: the operational Army—that is the Army that fights the war—the institutional Army, as we like to call it, which generates the force; and then the overhead account, which we refer to as Trainees, Transients, Holdees, and Students (TTHS).

So we have a master plan starting in the fiscal year 2004 baseline of 482.4, which we will grow the operational Army from 315,355. Then, following that, a little bit later, we will convert through military to civilian conversions a number of military positions in the institutional force to civilians. So that when you do all the arithmetic, in fiscal year 2011 our plan is to end up at 482.4, but with a much bigger operational Army, that is the Army that fights the war.

In terms of the Guard and Reserve, our approach is to, in the last few years we have had difficulty in meeting the congressionally-mandated end strength. We are currently at 334,000 versus 350,000 in the Guard and about 188,000 versus 205,000 in the Reserves. So our plan is to fund the Guard to whatever troop strength, I should call them, they can achieve. So if they achieve anywhere between and up to 350, we will plan to find it.

For fiscal year 2007, we thought it was the prudent and responsible thing to do just to fund them going into the budget at a troop strength of 333,000, where they were, they have been on the average for about the last 14 to 15 months. So again, signs are right now that they'll be able to grow, but this is a tough recruiting market and we are prepared to reprogram and fund them to whatever level they will achieve.

Chairman WARNER. In our meeting with the Secretary of Defense we discussed this issue. There may be some technical budgeting problems there, but we will work with you to achieve those goals.

Secretary HARVEY. We appreciate that.

Chairman WARNER. General, do you have anything to add to that, sir?

General SCHOOMAKER. Three very quick points. We have no intention to cut the Guard and Reserve, and we have made that point very clear; and we have the flexibility, second point to fund it, with your help, to the levels that we need. The third thing is that we are balancing this Army across these components in a way that is necessary to balance them, and my view is that we are on the right path in that regard.

Chairman WARNER. Thank you.

I would like at this time to ask the Chief of the National Guard, General Blum, to comment on this question and such views as you might have as to the status of the Guard in the coming fiscal year. We can hear you very clearly. That voice carries.

General BLUM. Mr. Chairman, the National Guard supports the principles outlined by the Secretary of the Army and the Chief of Staff of the Army. We see nothing but advantage to the Nation to have its Army, both Active, Guard, and Reserve, fully manned, fully equipped, and adequately resourced for the challenges of the future.

As you pointed out, we are working together with the Army to bring that great theme and message in line with the realities of the

bookkeeping. We are working very closely with Congress on that at this time.

Chairman WARNER. Thank you.

Do either of the Reserve officers care to add anything? [No response.]

Fine. Thank you very much.

Senator Levin.

Senator LEVIN. Just on that last point, last year we authorized the Guard 350,000 and the actual strength that it reached was 333,000. Since you are willing and determined that you would fund it up to 350,000 should they be able to recruit that many, what is the reason not to put the same authorization in this year as last year at 350? What is the harm that is done to the budget?

Secretary HARVEY. Just that we have to give it back or underspend. This is at a level that I think goes back into I believe at least calendar year 2004, where we have been at this range, plus or minus, on the average 333,000. We just thought from a management standpoint that it is prudent to budget at a troop strength that has some history to it rather than the 350 and if necessary ask to reprogram the funds to make up for it. So it was just a management approach to funding the actuals rather than some number that we have not met for some period of time.

Chairman WARNER. Not to—I will give you the time.

Senator LEVIN. That is okay.

Chairman WARNER. We are working on an escrow concept with your team now whereby the funds could be placed in escrow as a challenge to both the Guard and the Reserve, and indeed the Active, to move up to their full statutory end strengths. So I am confident this will work.

Secretary HARVEY. We appreciate that, Mr. Chairman. I think that is a very good approach and if we need it we have it. If we do not, it is a prudent use of taxpayers' money.

Chairman WARNER. Thank you, Senator.

Senator LEVIN. That is fine. This approach which you have just outlined and the chairman has just mentioned is agreeable, as I understand it, to both you and the Guard? You have reached basically an agreement in terms of what you are recommending basically to us, is that right?

Secretary HARVEY. Yes.

Senator LEVIN. General Blum?

General BLUM. Senator Levin, I trust General Schoomaker with my life——

Chairman WARNER. General, I think you should just borrow the Secretary's microphone to make sure that this message is carried to the press and others.

General BLUM. Mr. Chairman, Senator Levin, members of the committee: I trust these gentlemen with my life. If they say they are going to resource us at a force structure allowance of 348,000 and up to an end strength of 350,000, I have to take them at their word. How they are going to do that has to be worked out, but I trust that it will be worked out.

Senator LEVIN. That is fine.

General Schoomaker, I should have called on you first. I take it you are satisfied, comfortable that this agreement makes sense for the Army, including the Guard?

General SCHOOMAKER. Sir, I do. Let me throw in my explanation here. First of all, all of us want to have the Guard and the Reserve at their end strength. All of us want to have the Guard and Reserve, under the principles we have agreed to, fully resourced and manned. That is where we want to go. But we do not need idle money. We have to accelerate what we are doing.

So, in 2006 we have funded to the levels that you are talking about. We have all the way to the end of this year to determine whether or not we are on the path to reach it, and we have a lot of time in 2007 to make a determination how to adjust to the realities. So we are committed and on the record that what we want is—there is no intent to cut anything. We are looking forward to having this fully resourced.

I might add one more thing. Our insurance policy across the Army is the additional 30,000 soldiers that you have authorized using supplemental money that we can grow to, and that is yet to be determined out, probably out in 2009, somewhere like that, whether or not more of that will be needed to be kept. So although we have a plan to stay within the end strength structure that we have, we do have options, and we are running a parallel program to recruit these soldiers with the resources that you have given us. So you might know how difficult that has been. We have been at it now 2 years and we have grown about 10,000 to 12,000 soldiers.

Senator LEVIN. Thank you, General.

Secretary, in your introduction to your posture statement you say that you are depending on congressional leadership for, "obtaining legislative authorities to assure predictable access to our Army National Guard and Army Reserve soldiers who have become by necessity our operational rather than our strategic Reserve." What legislative authorities do you need?

Secretary HARVEY. I think there is going to be a proposal coming over—it should be part of the 2007 budget—to ask to extend the Presidential Reserve Call-up (PRC), from its current in-statute, 270 days. We want to be able to do that up to a year. That is one of the proposals that we want.

Also, part of that, I think we do need some legislative authority to ask people who join high demand units to voluntarily agree to be available for more than the 37 days a year, so that we—for example, civil affairs, the shore people, the people that open up ports and so forth, have the ability to train them, because they are very high demand, low density, units and that we have enough time to get them ready for their particular mission.

Senator LEVIN. Thank you.

General, the budget proposes to increase some TRICARE premiums and deductibles for working age military retirees. Do you support those proposals and why do you think they are necessary?

General SCHOOMAKER. Sir, I support what the Chairman testified to last week in the hearing, that he represents consensus on the part of the chiefs that we believe this has to be balanced back to the proportion that it was in 1995. It has never been adjusted since then in the copay payments. We believe that these adjustments are

relatively minor, given the problem that we face. I understand there are other proposals working to deal with this extraordinary growth that is in the defense health care program. But it is a serious problem that we are going to have to face soon.

Senator LEVIN. My time is up. Thank you.

Senator INHOFE [presiding]. Thank you, Senator Levin.

First of all, let me say to both of you how much I appreciate your coming to our Army Caucus. Senator Akaka and I started that Army Caucus some time ago and it has really focused the attention on where it should be. Our needs change so often and it was great of both of you to be there.

Now, you have heard me say this before, but as you look at the big picture, 6 years ago we asked Secretary Rumsfeld where should we be. When I look at what is happening in all the Services, where they are giving up here and giving up here and trying to predict so that we will be prepared for any kind of asymmetrical threat that should come along, it is reminiscent of the old days when we were ready for just about anything out there.

I think it goes back to the overall defense funding. We have talked about the fact that during the entire century of the 20th century the percentage of GDP was 5.7 percent. That was both at times of war and peace. During the Eisenhower presidency it was up to 10 percent. In the early 1990s it was at 6.1 percent. Now, after the drawdown of the 1990s it got down to 2.9 percent and now at 3.8 percent.

I go through all of these because I think at some time we are going to have to be addressing this in terms of what the real needs are. Now, on page 6 of your report, which I was looking through, it talks about the investment—let me get it right here—the investment accounts. Now, the investment accounts from 1990 to 1995 for the Army were only 16 percent of the total, compared to the Navy having 33 percent and the Air Force 35 percent.

Now, so you have two problems. First of all, we are unfunded as a military. We are underfunded, I should say. Second, in terms of the investment accounts, which gives us the capability of modernizing, it is at 16 percent. I asked John Bonsell of my staff to go back and get me what it was between 2000 and 2005. It was still 16 percent. So your plight has not gotten any better over that period of time.

I guess I would just have to ask you, in the event that you did have something closer to what the others have or have a higher percentage, what would be the first thing, Secretary Harvey, that you would need that you think perhaps should be funded now that is not funded now? What would it be? Would it be force strength, modernization, advancing in the FCS program? What would it be?

Secretary HARVEY. Thanks for the question, Senator. The chief and I have done a lot of talking about that and I think developed a strategy that says that we feel coming out of the QDR and the operational assessments right now that the force structure that we have in terms of the 70 BCTs, supported by the robust FCS program, and I might note a very excellent Army aviation program, are adequate for us to meet the threats of the 21st century.

Having said that, we can certainly accelerate that effort. So if we were to do anything with additional funding, we would accelerate

the conversion to the Army modular force. Technology development, systems development, I do not think permit you to accelerate the FCS program. I think we have a balanced program right now in terms of balancing risks against technology against systems development.

Because of the foresight of the chief and others, we restructured the aviation program a couple of years ago under the chief's leadership. We feel that we have a very robust program in terms of the next generation of Blackhawk, upgrading the Chinooks, upgrading the Apaches, and two new helicopters in terms of the Army Reconnaissance Helicopter and the Light Utility Helicopter.

So I think we look across that. We have doubled or tripled the size of the ammo accounts. We are requesting, because of the war, supplementals and reset and recapitalization of upwards to $10 billion. So I think we feel good, at least I do, and the chief and I talk about it a lot, about the force structure in all components, the modernization program centered around FCS, and our ability to recap and reset the force. But we could do it quicker.

Senator INHOFE. Before getting a response from General Schoomaker, let me just put it a little bit different way. I had Air Force General Schwartz of the United States Transportation Command (USTRANSCOM) in my office yesterday and we were talking about some problems that the Air Force has. He was talking about the blend of lift vehicles, where are the C–17s, what is the right level for that, what is going to happen to our C–5s, and then of course the new C–27s, some of the two-engine varieties, and the C–130Js, and all of that.

I said that these are decisions that are tough to make because you do not know what kind of a threat is going to be out there. If we knew that we would have all of the above. But if you think you have it bad, look at the Army.

I think you said it just now, General, in your opening statement. You said it has been four decades since we have had really major modernization programs. I think it would be worthwhile for you to use the same example you used during the Army Caucus a couple of days ago in terms of—one of the frailties that we have in terms of our equipment, the cannon, the fact that we are still operating with the Paladin. I remember telling this committee a couple of years ago about the Paladin, that it is World War II technology. You have to get out and swab the breach after every shot.

Now, compare that in terms of capability and of crew, if you would, please, with the Non-Line-of Sight Cannon (NLOS–C), the lead security for the FCS?

General SCHOOMAKER. Sir, I would be glad to. I would like to put it in context. What you mentioned a minute ago was on page 2 of the posture statement. It shows the charts and it shows the history of what you talked about, percentage of GDP over time, the Army's percentage of the pie, et cetera. The big issue that we have today before us is the fact that much of our recapitalization and reset is in supplemental funding. Now, we have moved in the 2007 budget about $5 billion for modularity inside the base budget and we have about the standard $2.5 billion for recapitalization and about $1.5 billion for depot.

But what we have the opportunity to do here is to accelerate and fix the Army that you are talking about because of the war that we are in and the capacity that is running. One of the things that we would like to see come in sooner is things like the NLOS–C. The NLOS–C has a two-man crew. One gun can fire six rounds in the air and they will impact the ground simultaneously on the target. That is what right now it takes a six-gun battery with one round each, each gun with a six-man crew, plus a Fire Direction Center (FDC). So two people are doing about 40 people's work with precision with the NLOS–C. Those are the kinds of capabilities that allow us now to move.

If we move into the FCS level technology, we will take 900 people out of the BCT, but we will double the amount of infantry that is in squads inside of that.

Senator INHOFE. That is the example that I wanted you to use. When you stop and think about it, there are now five countries, including South Africa, that make a better cannon than we have. I just do not think that is acceptable. So I appreciate the fact that you are rushing into this and that we are going to be modernizing.

Senator Reed.

Senator REED. Thank you very much, Mr. Chairman.

Thank you, Mr. Secretary, General Schoomaker. General Schoomaker, last week when you appeared before the committee I asked you what the reset-recap course of the Army was and you replied $4 billion per year over the next 6 years. On Friday my staff and the staff of the committee received a briefing, the Army equip and reset update. This is one of the charts that was included in—I think you have a copy of it. I have also had a chance to talk with some of your staff about these numbers.

First, let me clear up the definitions as I understand them. "Reset" is made up of three components: repair, replacement, and recapitalization. I believe, General, that you only spoke about repair and replacement last week and did not include recapitalization. If you just look at repair and replacement, that is $24 billion over 6 years. But recapitalization is an additional $12 billion over that time. As I understand it, this is only with respect to equipment that is in the inventory being used. This is not modularity, this is not new equipment you are buying. This is equipment we must repair.

Second, you said reset costs about $4 billion a year, but if you look at this chart the cost incurred this year in 2006 is $13.47 billion. Next in the chart the reset and recap costs start to drop significantly over the 5-year projection. But this chart assumes that beginning in July of this year we start to draw down our forces and by December 2008 we literally have no forces left in Iraq. I think we would all like to see that happen, but I think you have to ask seriously, is that a realistic assumption to make about the conduct of operations in Iraq?

Now, let me just get a few points clear so that we can have a discussion. First, General, the $13.47 billion is the total recap, reset obligation this year, the amount of money that we need; is that correct?

General SCHOOMAKER. I think first of all let me concede that I was talking in a much narrower band than what you have de-

scribed, and I agree with you. I would also increase your band to include force protection, because there are many things that we have had to bring into the Army that we did not have prior to September 11 as a result of our experiences, and you know what many of these are: up-armoring vehicles, jammers, and this kind of stuff.

Senator REED. Yes, sir.

General SCHOOMAKER. So I think when you expand the definition, which I think is properly proper, your figures are much closer to the mark.

We also have a bow wave in this, based upon things that have been pushed forward from previous years. You know that it was just recently that we started getting procurement money for reset in our supplemental funding. So that is part of that problem, too, in terms of what we can deal with.

Senator REED. The number is accurate this year?

General SCHOOMAKER. I believe it is in the ballpark.

Secretary HARVEY. Can I add something, Senator? The baseline number that we have in our plan for fiscal year 2006 now, for fiscal year 2006, is a total of, in round numbers, $15 billion, of which $12 billion is in the supplemental and $3 billion is in the base. Remember, we also have to——

Senator REED. Mr. Secretary, that $3 billion in the base is the steady state——

Secretary HARVEY. Yes, right.

Senator REED.—numbers that we have had in practically every budget going back over the last decade.

Secretary HARVEY. Right.

Senator REED. We are really talking about roughly $12 to $13 billion of recap, reset, that is a result of activities, Iraq, Afghanistan. All of that is in the supplemental. There is nothing in the budget.

Secretary HARVEY. Yes, $12 billion.

Senator REED. $12 billion, and the assumption underlying these projections, though, is that we will begin a significant drawdown this summer and that we will, for all intents and purposes, be out of Iraq by 2008.

Secretary HARVEY. I do not think—this is a plan put together by the Army equipment campaign. I think they made certain assumptions that may or may not come to fruition.

Senator REED. That is my point, I believe. If these assumptions do not come to fruition, the annual cost of reset and recap is closer to $12 billion than $4 billion.

Secretary HARVEY. I think you appreciate, Senator, that this is not an easy number to come up with. Besides the number of people in theater, it also depends on their OPTEMPO and whether or not they participate and perform the same operations that they did a year ago. So I think this is probably a reasonably good planning number. I would expect that with the standup of the Iraqi Security Forces for this number to come down.

Senator REED. Was this the planning guidance given to you by the DOD, that you would begin the withdrawal this summer and be completed by 2008?

Secretary HARVEY. No, no. This is an Army equipment campaign exercise based on assumptions.

Senator REED. Mr. Secretary, we have been at this now, and General Schoomaker, since March 2003. We have never seen these numbers go down. They seem to go up. I also understand that under the policy you cannot anticipate the loss of equipment, the battle loss of equipment. That has been happening. So those numbers are not even in here.

Secretary HARVEY. The battle loss is in here.

Senator REED. Going forward?

Secretary HARVEY. Well, at least this year the battle loss numbers are in here.

Senator REED. But going forward there is no, as I understand it, anticipation of battle loss until it is actually accrued, if you will? That is a strange term to use for this type of calculation. But more than that, there is also here an assumption that no equipment will be left behind for the Iraqi forces. Is that a correct assumption also?

General SCHOOMAKER. I do not believe that—I think these are unknowns, and I believe that, if I could——

Senator REED. Yes, sir.

General SCHOOMAKER.—because I may be misunderstanding you, but I think that we had this conversation when the Secretary of Defense was here, that the supplemental is to be used for war-related costs, much of which is unpredictable. We did not predict early on that we would have the number of electronic jammers that we have. We did not predict we would have as many up-armored vehicles as we have, nor did we have a good prediction about what our battle losses would be. So in many respects this is a rolling number, and I do not know of any assumptions——

Senator REED. General, I think an alternate way to look at it is that you are assuming away the problem. You have accrued $13 billion in recap and reset funds this year. You think you will have $10 billion next year, even though you are beginning to redeploy your forces according to your assumptions. These are absolutely unrealistic numbers, the notion that this is simply going to conclude at $36 billion, that we are going to be out of there in 2 years; and that is what I object to, sending budgets up here that underestimate, deliberately underestimate in my view, what you can reasonably anticipate in terms of the costs of reset and reequip.

General SCHOOMAKER. I do not know what the 2007 supplemental numbers are that have been sent up here, whether you have seen them. But that will answer part of your question.

Secretary HARVEY. We really have not sent up a 2007 supplemental, Senator. We have not sent it up yet. We have sent—the 2006 will be—I think as a result, when you passed the 2006 base budget you gave us a so-called bridge supplemental of, I think our part was $30 billion, and we call it a title 9 bridge supplemental. But we will submit the entire supplemental. It is still being worked through the Office of the Secretary of Defense (OSD) and the Office of Management and Budget (OMB) as we speak. So the final numbers on the 2006 supplemental are not yet finalized. We will then after that begin formulating the 2007.

But I think there is a degree of unknowableness here and we try to react to it.

Senator REED. My time has expired. Mr. Secretary, we all understand this is a projection. I do not think it is a terribly realistic one. If you incur at least $12 billion, $10 billion a year and you do not assume, as you just indicated that you are going to have a significant withdrawal of forces over the next several years, you cannot assume away at least that much cost. Perhaps it is a little less. Maybe it is just $9 billion. But it does not trail out to effectively zero in 2008, 2009, 2010, and 2011.

I think unless we have realistic assumptions—in fact, frankly, I think we would be in better position if you were giving us the worst case or the medium case, rather than what looks to be like a very saccharin best case.

Secretary HARVEY. Well, again, as I said, this is—a lot of this is unknowable at the present time and it depends on force levels, which you know have gone down somewhat. It also depends on the level of engagement of the troops in theater, which has gone down. So we try to do our best job in putting this, plugging this into our equipment campaign, because we need to give our depots, we need to give our suppliers, some planning numbers. These are, believe me, in the out years are very rough planning numbers, and the number I think that you can say has a lot degree of surety is what will come over in the 2006 supplemental. The 2007 has not been formulated.

General SCHOOMAKER. Sir, before we close this, for the record, I would just like to make sure that I am clear. Number one, I do not subscribe to the assumptions. I have never heard those assumptions, nor have I planned against them, what you have said. That I would say—

Senator REED. Can I ask you what assumptions you are planning against, sir?

General SCHOOMAKER. We are planning to provide the current level of effort, as we have briefed before, because we do not know. It is going to be determined by the combatant commander on the ground.

Second, you do not know the supplemental figures, nor do I know the supplemental figures that will be pushed for 2007. But we have stated what we believe to be our true requirement. It is not in our best interest to understate this requirement because we must get this Army balanced and resourced and make up for the situation that I have described here in the past.

The last thing I will say is that we have to think, on the basis of the Army, because of the way that we are supported by supplemental funding, to think about this in tandem. We cannot think about it separately. So any war-related costs that we have, reset, recapitalization, combat losses, force protection, all the rest of it, we are articulating to OSD and it is going forward in the appropriate way.

Chairman WARNER [presiding]. Thank you very much, Senator. We appreciate that.

Senator Dayton.

Senator DAYTON. Thank you, Mr. Chairman.

I want to recognize and appreciate the remarks of Senator Inhofe regarding the NLOS–C and recognize the leadership that he provided in that measure.

General Schoomaker, you said last week in your testimony before this committee that you are trying to manage our Reserve components on a predictable and manageable level that basically deploys them and gives them about five times the amount of dwell time as it does deployment time. My understanding is the Army's initial force structure design calls for reducing the number of Guard BCTs from 34 to 28, the number of division headquarters from 8 to 6. You stated earlier today that you are talking about 106 brigades total for the National Guard. How is that reduction going to affect this deployment rotation and what is the rebalancing going on then with the Guard if you keep the same number of brigades overall and going from 34 to 28 combat?

General SCHOOMAKER. I think it is a great question. Active, we are building from 33 not completely resourced active brigades to 42, and we are building 75 support units of action fully resourced. It is in the support units of action that we are most stressed. In the National Guard, we are building from—remember the National Guard had 34 brigades on paper, 15 of them called enhanced brigades that were more enhanced than the 34 but not as well off, equipment, et cetera, as the Active brigades. I prefer to say that we are going from 15 enhanced brigades to 28 fully resourced brigades, plus we are building—the residual is 78 support units of action in National Guard, fully manned, fully equipped, fully resourced, and within their 350,000 end strength we are building a TTHS account, which is the transients, trainees, holdees, and students account, that allows us now to get them the requisite training and education like their Active-Duty counterparts, without degrading the units from which the soldiers come.

In the U.S. Army Reserve we are doing exactly the same thing: 58 support brigades, fully resourced, with a TTHS account that allows them to do the same thing. We believe that what we are building to is the best equipped, best trained, best resourced Army, Active, Guard and Reserve, that we have ever had. That is why it is important for us to do it this way.

We have this window of opportunity, as I have said, with this extraordinary level of activity that we have going on with the war effort and the funding that you have supported us with to get this right. But this window will not last forever, and that is why there is the sense of urgency about getting it done. I hope that helps put it into context.

Senator DAYTON. Very much so. Thank you.

One of the reasons that we are in this recurring discussion about the Guard is because at least some of the adjutants general (TAGs), some of the Governors, I believe, felt that they were not fully apprised of your at least preliminary intentions. How are you going to, each of you, involve TAGs and the Governors, for that matter, but especially TAGs, in this shaping of the force and making sure that, on some of these things like the recruiting, the end strength, and the like, they are involved and engaged and aware of what the plans are?

Secretary HARVEY. A couple of weeks ago, or 2 to 3 weeks ago, we had a 2 to 3-hour meeting. General Blum brought all the TAGs in from all over the United States and we had a meeting to further roll out the force structure and answer their questions.

Senator DAYTON. Mr. Secretary, at that point they were, at least I had heard from my adjutant general, pretty concerned based on the rumors or preliminary information. I guess that that's exactly what I would like to see how are we going to avoid.

Secretary HARVEY. The intention of that meeting was exactly that, Senator, to make sure they were fully informed, as the chief said, of the details of the plan in terms of growing the number of brigades from 15 to 28.

I might add that we also showed them that we are standing up an additional type of support brigade called the combat support brigade, which has functionality in it which we think that has great applicability to their State missions. In the combat support brigade we have engineers, military police officers (MPs), we have air defense, chemical, civil affairs, functions like that, which help us in overseas deployment, but also have great applicability to State missions, and also stood up a number—we increased those by 40 percent and we increased the number of engineer brigades, strictly engineer brigades, by 60 percent. We revealed all those force structure changes.

Senator DAYTON. General?

General SCHOOMAKER. If I could just make one statement here. I will take responsibility for this. It was not handled as well as it should have been and I will accept responsibility.

Senator DAYTON. Thank you for that. Can we trust that there is a commitment now to engage them on an ongoing basis?

General SCHOOMAKER. We are now listening and in a very real way we have the leadership that is interfacing with the States. We are working to make sure that we meet the local demands, the State demands, and the National demands in a way that is as good for all of us as we can make it.

Senator DAYTON. That is good enough for me. Thank you.

Just for my information, when we are talking about the difference between 333,000 and 350,000, approximately how much money is that on an annual basis? What kind of differential are we talking about here? Maybe you can give me an answer to that in writing afterwards.

Secretary HARVEY. I think it is a couple billion. Could we add that to the record?

Senator DAYTON. Sure, just let me know.

Secretary HARVEY. We will add that to the record.

[The information referred to follows:]

FUNDING FOR POTENTIAL END STRENGTH

The table below outlines funding necessary to resource the Army National Guard (ARNG) at an end strength of 350,000 provided mobilizations continue as anticipated, approximately 40,000 mobilized annually. The National Guard Personnel, Army and Medicare-Retired contribution, Army is specifically needed to pay the additional 17,100 ARNG soldiers and provide the required Defense Health Program funding. Additional funding is needed in operations and maintenance and military construction to continue providing the necessary support to these soldiers. Current negotiations are ongoing regarding equipment/investment (procurement) restoral, and the total dollar amount depends on the final outcome of force structure adjustments.

It is important to note that current funding levels in fiscal years 2008–2011 will only support an ARNG end strength of 324,000 not 333,000.

[In millions of dollars]

	Fiscal Year					
	2007	2008	2009	2010	2011	2007–2011
NGPA	$188.8	$536.1	$554.7	$567.1	$579.9	$2,426.6
Medicare—ret HFC (NGPM)	62.4	66.4	70.7	75.3	80.1	354.9
OMNG	219.6	252.1	292.8	323.8	332.1	1,420.4
MCNG	0.0	80.3	30.6	88.7	42.6	242.1
ARNG specific procurement	318.0	111.5	0.0	106.6	413.2	949.3
Total	$788.8	$1,046.4	$948.9	$1,161.5	$1,447.8	$5,393.3

ARNG funded end strength: Fiscal Year 2006-350,000, Fiscal Year 2007-333,000, Fiscal Year 2008-324,000.

Senator DAYTON. Mr. Secretary, last week the Secretary of Defense indicated on a chart that there was, I guess I call it the international Base Realignment and Closure (BRAC), the consolidation of the deployment of our forces, which I believe are in over 130 countries around the world. It seems that part of the strain on our forces is the need to continue to deploy to that number of countries, which is in part what we have from the past rather than what we are trying to do for the present.

Is that process both in terms of bases and personnel deployed internationally going as far advanced as the domestic BRAC and reconsolidation?

Secretary HARVEY. We call that Integrated Global Positioning Basing Study. You have to discriminate between forward stationed overseas and deployed. When they are deployed they are not forward stationed. What our master plan is, which includes the BRAC recommendations and approvals, this Integrated Global Rebasing, and the standup that General Schoomaker mentioned of the nine additional brigades. That ensemble together represents our restationing plan.

In particular, we are bringing approximately 47,000 troops back from Germany and Korea. That is the major restationing and that amounts to, as I said, about 47,000.

Senator DAYTON. Is that considered to be the end point or is that——

Secretary HARVEY. Yes.

Senator DAYTON. My time has expired.

Secretary HARVEY. No, that is the end point.

Senator DAYTON. Thank you, Mr. Chairman.

Chairman WARNER. Thank you very much, Senator.

Senator Clinton, followed by Senator Kennedy.

Senator CLINTON. Thank you very much, Mr. Chairman, and I would like to thank both of our witnesses for your service and your efforts on behalf of an Army which is bearing the brunt of our operations in Iraq and Afghanistan.

I would like to focus on two issues with both of you, body armor and pay problems of wounded soldiers. Secretary Harvey, on January 9, 2006, I sent you a letter regarding recent press reports that revealed a study by the Armed Forces medical examiner suggested that more extensive armor could have saved the lives of more than 80 percent of the marines killed by upper body wounds in Iraq between 2003 and 2005. I ask unanimous consent that my letter to Secretary Harvey and his response be included in the record.

Chairman WARNER. Without objection.

[The information referred to follows:]

HILLARY RODHAM CLINTON
NEW YORK
SENATOR

RUSSELL SENATE OFFICE BUILDING
SUITE 476
WASHINGTON, DC 20510-3204
202-224-4451

COMMITTEES:
ARMED SERVICES
ENVIRONMENT AND PUBLIC WORKS
HEALTH, EDUCATION, LABOR, AND PENSIONS
SPECIAL COMMITTEE ON AGING

United States Senate
WASHINGTON, DC 20510-3204

January 9, 2006

The Honorable Francis J. Harvey
Secretary
Department of the Army
The Pentagon
Washington, D.C. 20310

Dear Mr. Secretary:

In light of the latest revelations on body armor vulnerabilities, I urge the Army to make every effort to provide additional body armor in the most expeditious manner possible to our troops serving in Iraq and Afghanistan.

Recent press reports have revealed that a study by the Armed Forces Medical Examiner suggest that more extensive armor, since 2003, could have saved the lives of more than 80 percent of the Marines killed by upper body wounds in Iraq between 2003 and 2005. The study concluded that greater body armor protection could have saved lives in Iraq. Indeed the number of lives lost to inadequate body armor could reach the hundreds if Army deaths attributable to inadequate armor not included in this survey are counted as well.

According to these press reports, the Army is still deciding what body armor plates to purchase. With every day the Army delays the decision of which additional body armor to procure, we put more of our men and women at risk. Now is not the time to allow the bureaucratic process of Army procurement to interfere with providing the best equipment to our troops serving in harm's way.

In addition, I would like my staff to be briefed on the study by the Armed Forces Medical Examiner that has not yet been made public.

Our soldiers make up the best fighting force in the world. We owe them nothing less than our fullest efforts in providing them the best gear now.

I look forward to your prompt response. Thank you for your consideration.

Sincerely yours,

Hillary Rodham Clinton

Hillary Rodham Clinton

SECRETARY OF THE ARMY
WASHINGTON

JAN 17 2006

The Honorable Hillary Rodham Clinton
United States Senate
Washington, D.C. 20510

Dear Senator Clinton:

Thank you for your letter regarding body armor, and your support for providing such equipment to our Soldiers "in the most expeditious manner possible." Nothing is more important to the Army, or to me, than protecting our Soldiers.

Since the start of hostilities in Iraq, the Army has made several significant improvements to Soldier body armor to address existing and future threats.

The basic body armor in use today is Interceptor Body Army (IBA), which includes an Outer Tactical Vest (OTV) and Small Arms Protective Inserts (SAPI) ballistic plates. This protection has been very effective and has saved thousands of Soldier's lives. In March 2003 the Army had roughly 32,000 complete sets of IBA. By April of 2004, all Soldiers in Iraq and Afghanistan had IBA. Today we have provided over 700,000 sets of IBA to Soldiers, more than enough for every Soldier in the Iraq and Afghanistan Areas of Responsibility (AORs) and the majority of the operational Army at large.

Our Soldier protection efforts did not stop there. We immediately started to develop an enhanced version of body armor because improved material and manufacturing technology were mature enough. The development was initiated in response to an anticipated threat. In a matter of a few months, the Army designed, fully tested and began fielding Enhanced SAPI (ESAPI) which provides increased ballistic protection from more lethal ammunition types. In less than six months the Army developed, tested and fielded over 90,000 sets and we expect to complete the Theater fielding requirement of 201,000 sets by March 2006.

The Army continues to work closely with the Office of the Armed Forces Medical Examiner, deployed healthcare providers, and operational commanders to ensure Soldiers have the best available protective equipment that does not hinder their mission effectiveness. As new requirements are identified, the Army has worked to meet them expeditiously. For example, the Army has provided 173,000 sets of deltoid axillary protectors – enough for every Soldier stationed in the AORs – which provide enhanced protection for the shoulders and side areas.

Last September, after Army commanders in the two AORs identified the need for additional body armor protection in the form of side plates, the Army quickly developed, tested, evaluated and began procurement of new side plates based on Enhanced SAPI

technology. The initial test and evaluation is complete and the Army will begin production and fielding in February 2006 with an initial production of 3,000 sets per month and production quickly ramps up to 30,000 sets per month.

Further, while I cannot comment on the recent reports regarding the effectiveness of the United States Marine Corps (USMC) body armor, an initial assessment of Army hostile fire casualty reports in 2005 indicates that few, if any deaths were the result of gunshot wounds to the side. It is difficult to make a similar estimate from IED/shrapnel injuries/deaths because there are often numerous wounds from this type of attack. Notwithstanding this analysis, we believe it is important to quickly field these side plates because of the adaptive nature of the enemy.

The bottom line is that we continuously develop improvements across the spectrum of our war fighting capabilities, quickly and comprehensively test the improved equipment and field that equipment without delay. Unfortunately, even though we provide our Soldiers with the best equipment available, armor alone will not protect them from all of the threats posed by the insurgents in Iraq. That is why the Army is constantly working to update tactics, techniques, and procedures (TTP) to ensure our Soldiers have the situational awareness and combat effectiveness they need to engage the enemy. Further, in our efforts to provide Soldiers with the maximum amount of body armor protection, we need to be careful that we do not overburden, overweigh or overly-restrict their movement to the point that they risk becoming unable to respond effectively and efficiently to these insurgents.

The men and women of our all-volunteer Army are the best trained and equipped fighting force in the world, and we will continue to strive to ensure they remain so.

As always, we are willing to have the appropriate Army personnel come and brief you and your staff on the facts surrounding body armor and other force protection issues.

Sincerely,

Francis J. Harvey

Senator CLINTON. In your response you stated that the Army began development of new side plates based on enhanced small arms protective inserts last September after Army commanders in Iraq and Afghanistan identified the need for additional body armor protection. When did commanders in the two areas of responsibility first learn of the need for additional body armor? Was that also in September?

Secretary HARVEY. Senator, I do not think I really have firsthand knowledge of when they discovered that. I can just tell you that these, we call them Operational Needs Statements (ONS), come

from theater, and the request for a side plate came in September. Our materiel people went immediately to work on that, designed the side plate and how to attach it to the Interceptor body armor, tested it in ballistic tests and other tests, and certainly tried to minimize the weight, and then put it into production in a matter of less than 4 months.

So it is in production and the first 5,000 will be delivered this month and we want to get to a rate of 20,000.

I think I also mentioned in the letter that this is up to the commander in theater whether to use it. We really cannot order him to use it. It is up to circumstances and missions and so forth. Our job is to make it available. So we will quickly, I think, be able to make those side plates available. It is an additional 5 pounds, Chief, I think? So they now, with the side plates, have 31 pounds of armor on, which, as you may have read in the paper, is not universally accepted by our soldiers.

Senator CLINTON. I am well aware of that. I think that the challenge is to provide it and, where appropriate and commanders feel that it should be worn that is part of the command decision. Where it is optional, at least it is available so that soldiers can make a decision based on their own assessment.

But what concerns me—and this is a point that I would like to zero in on—according to the Marine Corps, the Marines identified the body armor requirement in June 2005. One of our hopes through the emphasis on jointness, going back to Goldwater-Nichols, is that information will be shared among the Services, that decisions about procurement can be expedited, because clearly if marines are finding from their commanders that this might be necessary, then a few months later we hear that the Army is doing the same—and I just hope we can get a little more coordination on some of these issues going forward in the future that pertain to the protection of our force.

Secretary HARVEY. We were aware of that Marine Corps study. It was performed by the Army.

Senator CLINTON. That is what I thought. But here is why I raise it. According to an article on February 12 in the L.A. Times, there is a similar disparity existing between the Army and the Marine Corps on plans to employ the Joint Improvised Explosive Device Neutralizer (JIN). According to this article, the Marines have decided to deploy the JIN prototypes while the Army claims the device needs further study.

Perhaps you and the General could just explain to me, why do we see this disparity in the way that our commanders, Army and Marines, in the field are reacting to the need to neutralize IEDs, and is there a process where we can better coordinate this? It is the same young American body out there doing the job we sent that young man or woman to do. Is there some reason why the Army would be delaying a decision on that while the Marines felt satisfied that they could go ahead with it?

Secretary HARVEY. I think, Senator, there is some confusion on this issue. I am familiar with the JIN. We developed it at the request of theater. Multi-National Corps-Iraq (MNC–I) disapproved deployment for operational assessment pending the development of what we call tactics, techniques, and procedures. I cannot speak for

the Marines, but we provided, at their request, a prototype, actually 12 prototypes, and MNC–I ruled that until these tactics, techniques, and procedures are developed that they believed it was not ready for deployment yet.

The next step is to do this operational assessment in theater. I do not really know the details of why, but it is again up to the theater and it is up to the theater commanders to say that they believe that this device is safe and it is effective. I cannot speak for the Marines, but it is my understanding that until MNC–I says you can do it, it is not the Army's decision. We provide it and they have to develop its use, train the soldiers how to use it, and ensure that, for example, it does not result in an accident—it defeats an IED, but a soldier rolls over and there is an accident or there is a death involved.

So I do not think it is as straightforward as it seems and my understanding is until the MNC–I signs off it will not be deployed either by the Army or the Marines.

Senator CLINTON. Obviously one of our great concerns on this committee has been the enemy's capacity to innovate with respect to explosive devices, and I would hope that we are putting any effort on our part on a fast track, that we are not in any way getting bogged down in bureaucracy about procedures, that we are out there in appropriate circumstances, with appropriate supervision, trying to test these devices that we think can neutralize it.

General, did you want to add to that?

General SCHOOMAKER. If you would permit me, I think I might be able to add something to it as well. First of all, over 2 years ago the Army on our own initiative started the Joint IED Task Force, and we were doing that within our own resources. More than a year ago, we went forward and I personally talked to Secretary Wolfowitz and asked that OSD help us provide some top cover and expand the resources that we would have, not just money, but access into places, industry, and into the scientific laboratories, et cetera, that would help us with this.

Now we have this thing with General-retired Monty Meigs at the head of it and it is quite expansive. This Joint IED Defeat Organization is in fact a joint clearinghouse for these kinds of issues. It does not mean that the Services have to comply with the recommendations that come out of there, but it certainly is a way to bring things together.

Going back to the Army and Marine Corps, we are working closely together. In fact, we are probably working more jointly together than any other Services are with the Army, although we have improved considerably across the board. The Marine Corps is fighting in different places. They fight with different tactics, techniques, and procedures than we do and they are on a totally different scale. They are also not as heavily armored as the Army is. So they make decisions based upon how they operate that may be different than the way we would go about doing it. Certainly the scale at which they would field things makes it a little bit different than when we talk about fielding them on the scale that we are.

So that is not to say that this was the right decision, and I do not know all the ins and outs of the particular issue that you have, but I do know where the clearinghouse is and where we are having

these conversations and this is certainly something we should look into and find out what the circumstances. I hope that helps clarify.

Secretary HARVEY. Senator, I might also add that in round numbers Congress has been very generous in support of the Joint IED Task Force. This year there is $3.5 billion devoted to this. We are about to field the next generation countermeasure IED, which is another advance in technology. We continue to improve the armor of our vehicles. So we have a holistic approach. We continue to develop tactics, techniques, and procedures. We continue to look up the food chain, so to speak. There is a wholesale part to these IEDs, the wholesale and the distribution. We have a whole spectrum of initiatives, both technology and tactics, that we are fielding and, as the chief said, a very able four-star retired General Monty Meigs came back and felt so strongly about it he volunteered to head the organization.

So I think in terms of fundamentals we have everything in place, and I can tell you from my personal experience that our institutional Army takes this very seriously. We are soldier-focused and bureaucracy is set aside because we have to get it to the theater as quickly as possible, but it has to be reliable. It cannot be a false sense of security.

Senator CLINTON. Thank you. My time is up.

Chairman WARNER. Thank you. Senator, if I might observe, through many years that I have been privileged to be associated with the military, I have observed, particularly as a former marine myself, where the commandant and other senior officers felt that certain equipment which was available to both the Army and the Marine Corps would be more desirable for the Marines. I remember specifically in Korea there was a boot that, fortunately, the Marines selected which protected from frostbite and it is documented to be far superior to the Army boot, and they had to play catch-up.

But I do not think it is mismanagement. It is to give some discretion, some measure of discretion, to the two most valuable ground combat units in the world, the Army and the Marine Corps, to select for themselves.

I am glad, Secretary Harvey, you brought in a recitation for this record about General Meigs coming back on Active-Duty and the elevation and the increase of that joint organization. I think it has quadrupled almost.

Secretary HARVEY. It has, at least.

Chairman WARNER. In terms of budget.

Secretary HARVEY. Yes.

Chairman WARNER. So every possible attention is being given to this IED problem. But I thank the Senator from New York because body armor and the protection of our troops has been one of your hallmarks and specialties.

Senator Kennedy.

Senator KENNEDY. Thank you. Thank you very much, Mr. Chairman.

Just to continue along on this line, I will tell you why many of us are concerned about the sense of urgency on these issues, because we remember, General Schoomaker, that 3 years ago when we talked about up-armoring the Humvees you said you would look

into it, and 2 years ago before the committee you said that, I am confident we are doing everything we can to move more up-armored Humvees and other armored vehicles into theater. Yet, nearly a year later soldiers were still digging through dumpsters to find armor for their vehicles.

The Pentagon now in the time that I have been—since we have been in Iraq, has changed their estimate and the requirement for up-armored Humvees nine times, nine times. So do you expect them to go up again?

General SCHOOMAKER. First of all, sir, the demand is placed upon us from the theater, not in the Pentagon. We now—

Senator KENNEDY. Wait. The theater, not the Pentagon. Well, who makes the judgment out in the theater? Who is responsible, then?

General SCHOOMAKER. The commanders, and General Casey at this particular time is the commander that levies the requirement about what they want. This is not to denigrate them at all. This has been a learning process. So they have upped several times, maybe nine times—maybe you are correct—the——

Senator KENNEDY. Nine times, it is nine times.

General SCHOOMAKER.—numbers of Humvees that are required and, by the way, all of the other armored wheeled vehicles that we have provided, which now is over 20,000, maybe more. Additionally, we have added additional tanks and Bradleys, Strykers, and other kinds of vehicles over there to also be part of the equation.

So it is a dynamic situation, one in which we continually work to fill, and I agree with you it is frustrating because we seem to be shooting behind the ducks all the time. We are trying to get——

Senator KENNEDY. I am not sure that is a good analogy today, but in any event, moving on. [Laughter.]

General SCHOOMAKER. I think you are referring to quail hunting, not ducks.

Senator KENNEDY. That is all right.

It is difficult for us, particularly when we have heard from those who have served over there where they have not had the Humvees. We have lost 42 brave men and women in my own State of Massachusetts. Up to probably the last three or four deaths, we were having about a third that had been killed because they did not have the up-armored Humvees. Now that has moved, the up-armoring has moved along, but it has taken a long time, a long time.

I think the idea that the responsibility is from the local commanders that we have not had the up-armored Humvees and it has taken this long a period of time should not be terribly satisfactory. It should not be terribly satisfactory, I would not think, to you or to the others, since we have changed that number nine times. As I understand it, you are going to change it again. Am I correct?

General SCHOOMAKER. It could be. There is no excuse in this. The reality is this. We started the war with less than 500 up-armored Humvees. The Army and the Marine Corps and everybody else never had a plan nor an idea that we would ever up-armor this many wheeled vehicles.

We also started the war manufacturing only about 1,200 sets of body armor a month, as opposed to the 25,000. It goes back to the level of resourcing that we have had over the last decade or more,

$100 billion worth of shortfall, and those are some of the areas where risk was taken. Now all of a sudden, we have a requirement to up-armor everything and for everybody to wear this stuff and it is chasing a requirement that in my view will continue to migrate, and we are going to continue to have to either anticipate it and overproduce, which I believe we have in body armor, or come up with other solutions to this situation that we have.

Senator KENNEDY. The point is now, are you changing your estimate in terms of the up-armoring the Humvees now? Are you going to request additional numbers?

Secretary HARVEY. Senator, our plan is to continue to produce the level 1 Humvees. We now have 11,000 in theater.

Senator KENNEDY. Are you increasing the production rate?

Secretary HARVEY. Yes, we are. In 2003, it was at 30. Now it is at 700 and it is on its way to 1,100 a month. So we are increasing it over the next 6 months to 1,100.

Senator KENNEDY. The reason we make it is because the Government Accountability Office (GAO)—this is not just—this is the GAO last year criticized for not having a strategy to end the equipment shortfalls. I mean, this is not just a member of the committee. This is the GAO. I do not want to take the time, but this is a part of the reason that many of us are concerned, whether we are going to miss the opportunity again with this new vehicle that Senator Clinton—the JIN vehicle, whether we are going to be back here now, hopefully not, in another year, 2 years, and 3 years and have someone that is going to say, look, I am going to take a look at it, I am confident we are doing everything we can to move it forward.

But does General Votel agree that this should not be deployed, I would ask Secretary Harvey or General Schoomaker, who has been involved in this program?

Secretary HARVEY. I do not think that is General Votel's decision. That is a theater decision, whether the training materials are there, whether the tactics have been developed. General Votel would, say, provide it from a technical point of view.

Senator KENNEDY. Well, what would he say, since he was in charge, as I understand——

Secretary HARVEY. I think you would have to—I would not know.

Senator KENNEDY. Well, do you think it would be worthwhile finding out?

General SCHOOMAKER. We can provide it for the record.

Senator KENNEDY. Yes.

[The information referred to follows:]

JOINT IMPROVISED EXPLOSIVE DEVICE DEFEAT ORGANIZATION (JIEDDO) FIELDING OF JIN

Senator Kennedy, we have asked the Director, JIEDDO, to respond to your concerns.

General SCHOOMAKER. But I believe we are mixed here, because I believe what Senator Clinton was talking about was a robot, a robotic vehicle that is not manned.

Senator KENNEDY. That is right. It is called JIN, the Joint IED Neutralizer.

General SCHOOMAKER. It is not in the same category as up-armored Humvees.

Senator KENNEDY. No, I am moving. What I was pointing out is that we were awfully slow in getting the up-armor and we do not want that to happen in this case here. We have, as I understand—this has been tested, supported by Secretary Wolfowitz and General Votel, who believe that this can provide a very dramatic and important additional security against IEDs for the men and women in the field. Since he was, as I understand, the program manager out there and been very positive, I would have thought it would be useful for someone to talk to him whether he thinks it should be deployed as well.

General SCHOOMAKER. Sir, we certainly should if that is his opinion. That is not what I understand and we will have to check.

Senator KENNEDY. Well, Secretary——

Secretary HARVEY. We can do it, but again the final decision is not from the acquisition community; it is from the operational community.

Senator KENNEDY. My time is up. Do you have the resources available if they ask for it?

Secretary HARVEY. Absolutely. If it pans out to be as effective as it is intended to be, we have the resources. We can reprogram resources. As I said before, I think the total budget is $3.5 billion for IED-related technologies and systems development and production.

Senator KENNEDY. Thank you, Mr. Chairman.

Chairman WARNER. Thank you very much, Senator Kennedy.

Senator Lieberman.

Senator LIEBERMAN. Thank you very much, Mr. Chairman.

Mr. Secretary, General, thank you very much for your testimony, for your service every day and, through you, to the men and women of the United States Army, for the extraordinary job they are doing for us everywhere that we ask them to protect our security in a very wide range of missions. I cannot—I agree with every superlative that has been used this afternoon to describe the Army today. I have seen it myself as I have had the honor to go around the world and see them, particularly in war zones.

The quality of our soldiers I think is extremely high and is not at all a problem. The problem that I want to talk about and a concern that I have is whether we have enough soldiers, whether we are giving you and them enough personnel support to carry out the multiple missions that we have given to the Army.

The Army is not broken in my opinion. I appreciate actually your term, General Schoomaker, because I think it says it more accurately. It is stretched. We are asking you to do an awful lot. My fear is that if we do not give you more Army end strength and fill it, it is never going to break, but the stretching is going to develop some cracks that we do not want to see in this great Army of ours, particularly because we are asking you in a modern context to do a lot more than just engage the enemy in combat. You are performing an extraordinary range of peacekeeping, humanitarian, civil, political, in the best sense of interacting with the local population, missions.

So here are the facts. The QDR recommends that the Army decrease its size. Right now there are approximately 500,000 Active

soldiers in the Army, which incidentally is down from about, as you well know, 800,000 at the end of the Cold War. So the Army has taken some hits and, to put it another way, given back during the so-called peace dividend years.

The QDR suggests that this number now should decrease by about another 20,000, to about 482,000, by fiscal year 2011. We are in a war. By everybody's description, it is going to be a long war. I myself can find no instance in our Nation's history where we reduced the size of our Army in the middle of a war, and we may well be just at the beginning of this war.

My question is—and I want to straight-out express my concern, my own concern about what happened here, that you are operating in a budget-limited environment and you have an understandable commitment to the development of the FCS, which I support, have as long as I have been on this committee and been chair or ranking on the Airland Subcommittee, and once you do that you are just not left with enough resources. Something has to give, so the number of personnel has given.

I think that is an unfair position to put the Army in, not only you as the leaders of it, but all of the soldiers who are in it because it puts more stress on each of them.

So my question really is a general one: What is the rationale for decreasing Army end strength at this point in time, which is wartime?

Secretary HARVEY. Let me respond to that and then General Schoomaker can chime in. Just by way of background, Senator, the Army is really—let us talk about the Active Army. It really consists of three parts. It consists of the operational Army, which provides the warfighting mission; it is the institutional Army that generates the force—the Army Materiel Command, Training and Doctrine Command, commands like that—and then this overhead account that we call the TTHS account.

If you look at those together, in fiscal year 2004 we had 482,400 and the operational Army was 315,000. Our plan is to grow that operational Army by 40,000 over the—actually by fiscal year 2008, so that we go from 315 to 355. In parallel with that, we start to decrease the size of the institutional Army through military to civilian conversion, which is looking—and we have identified 22,000 positions thus far where we think that we could put a civilian in and then that position could be filled and transferred over to the operational Army.

But the timing of all that does not work out. So in the interim we want to build to about 512,000 as the operational Army goes from 315, and I might note today it is at 330, so we have added 15,000 people to the operational Army. We have also brought the institutional Army down by about 5,000. So we are starting to have one grow and one come down, with the net result in fiscal year 2011 to hold it at 482.4.

But we are really growing that part of the Army that fights the war in terms of its end strength, which we think is most important.

Senator LIEBERMAN. I must say that is the first time I have heard that explanation.

Secretary HARVEY. I can come over and give you more detail on it.

Senator LIEBERMAN. I would like to go over it in more detail. So if I hear you right, based on the changes you are making, you are actually saying that you are going to increase the so-called boots on the ground.

Secretary HARVEY. That is exactly right. We are going to more efficiently manage through this military to civilian conversion the institutional side.

Let me also say that operational capability is a function clearly of end strength, but it is also a function of the quality of the soldier, it is also a function of the quality, quantity, and technology of the weapons and information system. It is also a function of the caliber of the leadership, the degree of training, the efficiency and effectiveness of the tactics, techniques, and procedures. All those elements go into the operational capability, also the number of units. So if you look at what I just described as really the operational capability of a unit and then the number of units we are growing from 33 to 42.

So besides the end strength, we are increasing the overall operational capability from other dimensions and, as you mentioned—and we appreciate your support of the FCS—that is going to make, as the chief—I do not know if you were in the room when the chief talked about that two people in the future are going to do the job of 40 people because of the technology of the weapons system, and this is the NLOS–C.

So all those factors come into play.

Senator LIEBERMAN. But you agree that at some point, notwithstanding the force multiplier effect that technology can have, that at some point——

Secretary HARVEY. You need a minimum of boots on the ground, absolutely.

Senator LIEBERMAN. If I could just go back to that. The FCS. You need boots on the ground.

Secretary HARVEY. Absolutely.

General SCHOOMAKER. The brigade will be 900 people smaller because of technology, but it will in fact have twice as many infantrymen in squads than the current brigade has. That is how powerful the deal is.

Here is the other piece, why what Secretary Harvey is talking about here is so important. Growing the operational Army is what is important and we have to do it within the resources that we have, because you have given us the authority to grow the Army by another 30,000 to 40,000 soldiers and you have given us the money to do it, and we have been doing it for 2 years, but we have only grown a little over 10,000 soldiers.

You could authorize us to have another 2 million in the Army and it will not make it any bigger because of the challenge of recruiting. We are recruiting 170,000-plus soldiers every year, Active, Guard, and Reserve. That is the size of the entire United States Marine Corps. That is what we are recruiting every year. So it is academic about what you authorize because we are already recruiting the end strength——

Senator LIEBERMAN. You have touched on a real problem. My time is up, but obviously one of my concerns is that because the Army is stretched and we are asking a lot of those on Active-Duty

now, it becomes a less attractive alternative for people in terms of signing up.

General SCHOOMAKER. I have a different problem than that. Only 3 out of 10 males between the age of 17 and 24 can qualify to be in the United States Army today.

Senator LIEBERMAN. Right.

General SCHOOMAKER. That is a serious problem. About 15 percent of that population that qualifies is providing about 49 percent of our recruits right now to the United States Army. So this is the business side of this that really makes this a very tough kind of conversation. That is why the way we are approaching this, by growing the boots on the ground piece of the Army inside of our resources, is so important. That is why our modernization is so important, so that we can leverage that in a way.

This is the first time this Nation has been in a protracted war with an All-Volunteer Force and the fundamental problem we have in restructuring our Guard, Reserve, and Active Forces is that in many respects the force structure was still structured for the Cold War and was expected to be filled out by what we used to have, which is draftees, which we do not have any more. So we have to fundamentally change the equation here. That is why this program is so important.

Senator LIEBERMAN. My time is really up, but I would like to continue this discussion, because I think there are a lot of people on this committee in both parties who want to make sure that, for resource reasons, you are not—of course we are not going to add two million, but you are not being limited in personnel in a way that is going to compromise the effectiveness of the Army.

Secretary HARVEY. Let me say on the good news side that for the last 8 months we have met our recruiting goals, and February looks good, and the Guard has done very well. They have recruited their goals for the last 4 months. So it is a challenge every day, but we are doing much better and we are gaining confidence.

Senator LIEBERMAN. Bless you.

Thank you.

Chairman WARNER. Thank you, Senator.

I will now begin the second round. You do mention the recruiting goals, but I was aware of the fact that you are falling short in some of your officer requirements, captains and majors; am I not correct in that?

Secretary HARVEY. No. I will tell you, Senator, if I could talk to that, in terms of company-grade officers, our attrition rate of company-grade officers is around 8.3 percent and if you look at historically back over the last 5 years you will find that we have averaged—the average attrition rate is just about 8 percent, maybe it is a little higher, 8.5 percent. It dipped after 2001 and then went back to its historic levels.

But the attrition is only one component, of course, because coming in is the accession or the recruitment or the graduation in this case of officers out of our various and sundry schools. If you look at over the last 5 years the number of company grade officers has actually increased by about 10 percent.

Chairman WARNER. Let me just interrupt. Members of this committee and other members of Congress are very careful in ana-

lyzing the media and so forth. This question was prompted by an article in yesterday's Washington Post. Have you read it?

Secretary HARVEY. Yes.

Chairman WARNER. Do you say that it is inaccurate, then?

Secretary HARVEY. Yes, because—I can submit numbers for the record, but let me roughly say that——

Chairman WARNER. We must press on. Would you kindly provide for the record——

Secretary HARVEY. I will, I will.

Chairman WARNER.—your recitation of fact which you feel has an accuracy that is lacking.

Secretary HARVEY. In terms of company-grade officers.

[The information referred to follows:]

NUMBER OF COMPANY GRADE OFFICERS

The Active Army is not short company grade officers in the aggregate. There is, however, a shortage of some of the more senior captains needed to fill positions where more experience is desired. The current authorizations and operating strength is as follows:

	Authorized	Operating Strength
Lieutenants 01/02	10,019	11,843
Captain/03	20,482	21,375

The operating strength does not include officers assigned to the Trainee, Transient, Holdee, and Student account.

Chairman WARNER. I thank you.

I would now go to the next question, which bears on this same issue, and that is the women, its importance and ever-growing importance in the military Services. What is the Army's current practice with regard to the assignment of women as it relates to their assignments bringing them into areas where there is combat? We, I think all of us, recognize today it is almost a 360-degree zone of combat certainly in Iraq, maybe to a lesser extent in Afghanistan.

Secretary HARVEY. Let me just comment on——

Chairman WARNER. So what is your policy today and how do you handle that?

Secretary HARVEY. The policy, of course, is a well-established policy that goes back to 1992.

Chairman WARNER. I think it is 1994, section 5.401.

Secretary HARVEY. Actually the co-location component I think went even earlier than that. But there are two components to the policy for the Army and that is assigning women to units below the brigade that perform direct combat, direct ground combat; we exclude women from those units in our design of the Army modular force. Those units, those skills that perform direct ground combat, are infantry, armor, combat engineers, special forces, et cetera. They are excluded from that.

Now, in terms of co-location, we have designed the BCT that we have talked about and we code positions in forward support companies and other companies so that no women will co-locate with a unit performing direct ground combat. So from an organizational point of view, our designs—and I am confident in this—are totally,

totally consistent and compliant with DOD policy and they have been since I have been involved in it over the last several years.

Chairman WARNER. I just want to make sure that women are given opportunities——

Secretary HARVEY. They are.

Chairman WARNER.—at no cost to their careers.

Secretary HARVEY. They are.

Chairman WARNER. But we recognize there are certain limitations.

Secretary HARVEY. We comply totally to the policies of the DOD.

Chairman WARNER. That is fine.

General, do you have anything further to add on that? Do you see any pushback from the women? They are at risk, we recognize that. Even though these statutory and code provisions, we must recognize they are at risk.

General SCHOOMAKER. Sir, the policy is as stated and that is what we are organizing, training, and equipping to do. But as you pointed out, the battlefield is a 360 battlefield. We have to train every soldier to be able to survive and not be a liability on the battlefield and we are.

Chairman WARNER. That is understood.

General SCHOOMAKER. Should a female soldier become engaged in direct ground combat as a result of a 360 battlefield, we want them to be well-trained and equipped to do so, and that is what we are doing.

Chairman WARNER. Understood. Now, what about the aviation units, gentlemen—either of you can take that—which are often in direct support of those combat units? We have a number of women in aviation billets.

General SCHOOMAKER. The same policy applies, sir. They do not have a direct ground combat role, nor do they co-locate during the point of direct ground combat.

Chairman WARNER. So the helo support going in for a ground unit is then restricted to males flying those?

General SCHOOMAKER. There are females flying——

Chairman WARNER. That is right. In other words, I think your doctrine recognizes that females can fly in on those missions with direct support of those who are engaged in combat; would that be correct?

Secretary HARVEY. Yes, and that is not considered by the policy to be direct ground combat.

Chairman WARNER. All right. It is plenty dangerous for sure.

Secretary HARVEY. Yes.

Chairman WARNER. They have performed magnificently.

Secretary HARVEY. Absolutely.

Chairman WARNER. We are receiving here in Congress from our constituents some concern about the next of kin receiving timely information about their family members in the Armed Forces, and indeed about the cause and circumstances of death and injury. You have directed, Mr. Secretary, my understanding, a review of Army procedures in this regard. What have been your findings on that and how can we ensure that families get accurate information as soon as is possible with regard to their loved ones?

Secretary HARVEY. It is a very important issue to me, Senator. As you say, I was made aware of, going back to last summer, some incidents where we did not meet the expectations of the families. It is a handful of incidents and in my estimation it is too many. The objective here is 100 percent execution. So I started and asked the inspector general to conduct an end-to-end review of our casualty reporting, notification, and assistance process.

Chairman WARNER. So you are really moving out on this situation——

Secretary HARVEY. Yes.

Chairman WARNER.—to improve it as best you can?

Secretary HARVEY. Right.

Chairman WARNER. My last question then would be to General Blum. Now, I provided you a letter written with 77 Senators having signed that letter, regarding the Guard and Reserve, with Senator Leahy and Senator Bond, neither on this committee, but nevertheless with this committee participated to some extent in signing that letter. Do you have any comments on that letter at this time, General Blum?

General BLUM. Yes, sir, I do.

Chairman WARNER. Would you take the microphone, please. What I would ask is just give us a quick summary of your views and then provide me and the ranking member with your response in detail to that letter.

General BLUM. Yes, sir, I would. Mr. Chairman, first let me say I welcome the strong and unswerving support of this body——

Chairman WARNER. You have it, you bet.

General BLUM.—for our citizen soldiers. The two issues of concern here, for the interest of time, were reconciling the Army's message of 350,000 end strength, if we can grow to that and resourcing it, with a force structure allowance of 348,000, which they have reaffirmed and reassured all of us again today they are committed to. I told you the faith and confidence I have in the Army leadership and the degree that I am willing to trust them. They have admitted openly today that we could have done this better and we have fixed that and moved on. I cannot change what happened, but we are moving forward in a collaborative manner. The adjutants general are absolutely helping cobble together the solution for the force structure, and that is the conversion of six combat brigades to six brigades that are even more relevant for future warfare and even more useful to the Guard.

Chairman WARNER. If you would provide an answer then for the record going into some detail.

General BLUM. Yes, sir.

[The information referred to follows:]

DEPARTMENTS OF THE ARMY AND THE AIR FORCE
NATIONAL GUARD BUREAU
1411 JEFFERSON DAVIS HIGHWAY
ARLINGTON, VA 22202-3231

April 7, 2006

Chief, National Guard Bureau

The Honorable John W. Warner
Chairman
Senate Armed Services Committee
Washington , DC 20510

Dear Senator Warner:

During the Senate Armed Services Committee hearing on February 14, you asked me to provide my views on issues raised by Senator Bond and Senator Leahy in their letters to Secretary Rumsfeld and your Committee.

First, I want to address the concern that the End Strength of the Army National Guard is going to be reduced. The Army National Guard's End Strength should continue to be authorized by Congress at 350,000. The Department of Defense FY07 budget as submitted in February proposed an End Strength of 333,000 for the Army National Guard. Over the last several weeks the leadership of the Army National Guard raised concerns that 333,000 was too severe a reduction. The Department of the Army listened to those concerns and agreed to leave the End Strength of the Army National Guard at 350,000 and fund the End Strength that the Army National Guard can achieve by FY07. I have assurance from the Army leadership that they will make funding adjustments as our End Strength increases to 350,000. I have no reason to doubt their commitment to funding the End Strength of the Army National Guard.

The second concern the Senators raised is the issue of restructuring the Army National Guard without significant input from the Army National Guard leadership. Although we were not initially consulted, that is behind us and we are now part of a collaborative effort to achieve the right capabilities for the Total Army. As a result, the Headquarters of the Department of the Army agreed to a 348,000 Force Structure Allowance through FY 10. Starting in FY 11, we plan to resource our Force Structure Allowance at 342,000. The 8,000 space difference is dedicated to an account for non-deployable troops such as trainees, transients, holdees, and students in order to improve the readiness of our units. What remains at issue is the mix of capabilities required to support both State and Federal missions.

The Army originally planned to reduce the Army National Guard by six Brigade Combat Teams, two Division Headquarters, and one Combat Aviation Brigade. As the result of meetings between the Army leadership and the Army National Guard leadership, the Army no longer plans to eliminate the two division headquarters and is still considering its options regarding the Combat Aviation Brigade. It is important to note that the Combat Aviation Brigade is a highly versatile Combat Support and Combat Service Support asset that, if lost, would cause some States to be without aviation assets due to the reorganization that would naturally occur. The number of brigade combat teams within the 106 brigades of the Army National Guard remains at issue.

To resolve this issue, the Army is working a couple of initiatives. First, the Army is moving forward to properly model homeland defense as a subset of the National Military Strategy. The results will be reflected in a better resourced force during the next Total Army Analysis. Second, the Army is working with the Adjutants General of the United States in a collaborative effort to determine the right capabilities for the Army National Guard. The Adjutants General Association of the United States is meeting with the Headquarters of the Department of the Army through an Adjutants General Force Structure General Officer Steering Committee. This Steering Committee of 15 to 20 Adjutants General representing all 54 States and Territories is absolutely essential in order for us to achieve the right mix of capabilities that the States need to execute both their State and Federal missions. I am optimistic that the right solution will be reached.

At the same time, I am working with the leadership of the Air Force so they are aware of the important homeland defense mission the Air National Guard performs for the Nation. I am also calling their attention to the wisdom of including the States in these sorts of programmatic decisions.

As we work through the coming period of changes in our force structure, Citizen-Soldiers and Airmen will continue to be grateful for your enthusiastic support and stewardship of the National Guard.

Sincerely, V/R

H Steven Blum

H Steven Blum
Lieutenant General, US Army
Chief, National Guard Bureau

Chairman WARNER. Lastly, it is not included in that letter, but as you well know the Guard has a responsibility to their governors and the State adjutants general. In this reorganization, is that carefully protected, that mission of every State Guard?

General BLUM. I think it is not only carefully protected, but it is actually enhanced. That is as clear as I can make it. I truly believe in the rebalancing effort and I believe in doing it collaboratively with the adjutants general the States will actually build State plans that will be aggregated at my level, and I will work with the Army to ensure that what those formations used to be become something even more useful to this Nation.

Sir, the last piece to this letter is the most significant and that is the understanding of the cost of doing what we are talking about approximates about $800 million in 2007, and I have the assurance and commitment of the Army leadership that even while the current budget submission does not reflect exactly that and it shows a shortfall or a taking away of that money for an earlier plan, that will be restored, and the two gentlemen at this table have committed to me and I am sure would commit to you to do that.

Chairman WARNER. Thank you very much, General.

Do you have any further comment on that letter?

Secretary HARVEY. No, I do not.

Chairman WARNER. Thank you.

General Schoomaker?

General SCHOOMAKER. No.

Chairman WARNER. If not, Senator Levin.

Senator LEVIN. First let me commend all of you in terms of addressing this Guard issue in a way that is understandable to the members of the military, the members of the Guard. They perform

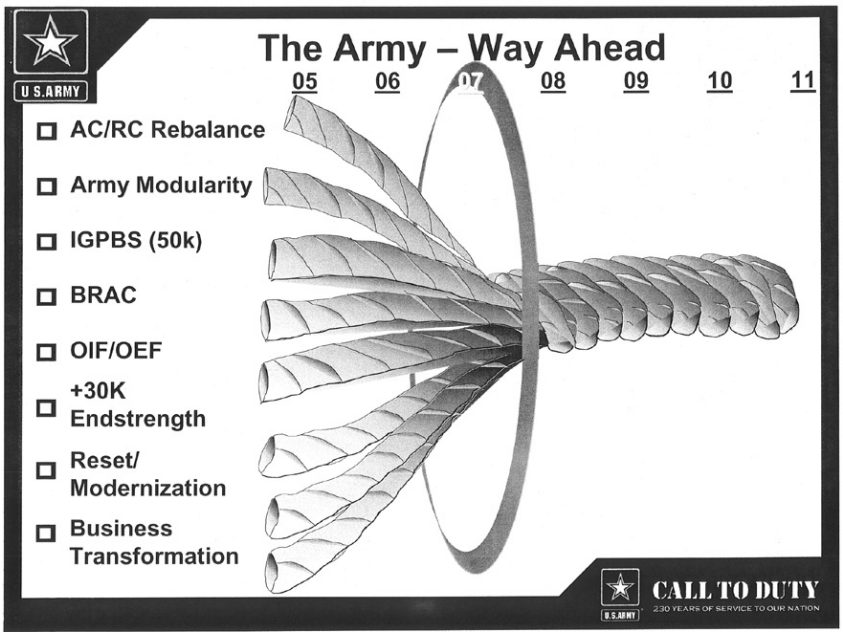
an extraordinarily important service. We want to make sure that their needs are met. We also want to make sure that some of the reforms which the leadership of the Army are talking about to fully man those units and to restructure those units so that they can meet the newer threats, that those leadership efforts are also supported, and I think you have done a good job of coming together here to try to work this out, and I commend you for it.

Secretary HARVEY. Thank you, Senator.

Senator LEVIN. General Schoomaker, a couple of respected organizations, RAND and the Center for Strategic and Budgetary Assessment, two respected organizations, have sounded the alarm that the Army is what RAND called "stretched thin" or what the Center for Strategic and Budgetary Assessment called "the thin green line." Both analyses question whether the Army is large enough and organized in a way to sustain such high levels of deployments, to sustain high levels of deployments, while maintaining ready units for other possible contingencies.

The Army has stated that its Active-Duty units have had less than 2 years and in some cases less than 1 year between Iraq and Afghanistan rotations.

Can you comment on those two organizations' reports that the Army is stretched thin, as RAND and as the Center for Strategic and Budgetary Assessments have reported?



General SCHOOMAKER. Sir, I have not read either of those reports in detail, but I can comment to what you just characterized. I would tell you that our Army is as busy as it has ever been. But I think we are performing, our Army is performing, in an extraordinary way, and I think the fact that our reenlistment is as it is and the fact that all of the things we are doing are happening to the standards that they are happening is a good testament.

Put that rope chart up if you could real quick.

You have seen this before, but I want to show it to you one more time.

Do it as quick as you can, please. [Chart.]

[The information referred to follows:]

This is not just Iraq and Afghanistan that are at issue here. You have seen this chart as we do it. These are all of the things that we are doing in 2006 and 2007 in the Army. We are balancing the Active Component/Reserve Component (AC/RC), as we have been talking about here. We are modularizing the Army. We are restructuring ourself globally. We are going through BRAC. There is the war. We are growing. We are resetting and modernizing, and we have major business transformation going on.

So when people talk about the Army being stretched, all of this stuff is going on, and the reason it is going on is because we want to make this Army capable and have the capacity that is resident within its potential to deal with the future at this level of operation without the kind of stress we have. We have to go through these labor pains to get there. We just have to do it. I have testified before this committee, now this is the third year. I said we dumped the toy box out on the floor and it is ugly, and we are getting the puzzle pieces back together.

So I cannot deny that the Army is busy, but I do not know a better solution than what we are doing to get through it.

Senator LEVIN. General, I think it would be useful if you would take the time when you have a moment, which is not often, I know, to take a look at those studies and give us any additional comments that you might have.

General SCHOOMAKER. We have people doing that, sir.

Secretary HARVEY. Senator, if I might add something here. What I use as a barometer about the health of the Army or the reaction to stress on the Army is the retention rate, and the retention rate last year was at an all-time high. We retained 69,500, which was

10 percent over goal, which then that goal was 15 percent over the prior year. We are ahead so far this year of last year.

I think the real telling statistic was the retention rate in the 3rd Infantry Division that was just completing, has just completed its second deployment to Iraq. They are now back, and they exceeded their retention goal by 36 percent. So I think that says that the Army, the operational Army, although very busy and very active, is reacting favorably to it.

I think that is the best indicator of whether we are stretched, strained, or whatever term you want to use.

Senator LEVIN. It is something I think we all want to keep our eye on and to have you keep your eyes on.

Secretary HARVEY. Absolutely.

Senator LEVIN. The retention rate is extraordinary. It is a real positive statement about the feelings, the morale, inside of the military. We are having some problems, I gather, with acquisition rates, at least from time to time. So it may be—the stress factor may be having an impact there rather than on retention. But it is something we obviously are concerned about and we are hopeful it does not create a problem down the road.

Readiness reports seem to show some problems in training and readiness. It may be affected by equipment being deployed or being refurbished and thus unavailable for training. Can you comment on that, either one of you?

General SCHOOMAKER. Where you will find no readiness problems is in the soldiers that are in harm's way and in the next group of soldiers, the units that are going forward to be in harm's way. Where you will find where we have taken risk is in the units that have returned and are resetting. That is how we have to manage it. There is no way of getting around it.

But as we build because of the resources that you are providing us, we will rectify that and we will have a fully populated force generation model that will be historically high in its ability to provide ready units.

Senator LEVIN. Going back to recruiting just for one moment, Secretary, is it true that we are accepting more category 4 recruits now and non-high school graduates? We have raised the enlistment age, I believe, recently from age 34 to age 39, and I believe that that is accurate. But we also have these reports that the Army is accepting a greater number of recruits without high school diplomas.

Can you comment on that?

Secretary HARVEY. The rules are or the standards are a high school diploma or equivalent, and we have not changed that rule.

In regards to the category 4s, last summer we discussed and I requested the rationale behind the following, which is why is the DOD standard 4 percent and the Army's 2 percent? Why are we not complying to the same standards as the rest of the DOD was given? Quite frankly, I did not get a very good answer. The only answer I got was that 12 percent of the command sergeants major in the Army today scored in category 4. So our top Noncommissioned Officers (NCOs), we like to say our leaders, our NCO leaders, the envy of the armies of the world, 12 percent of them scored category 4 on this test.

General SCHOOMAKER. That is when they entered the Army.

Secretary HARVEY. When they entered the Army.

General SCHOOMAKER. Not now.

Secretary HARVEY. So I concluded that, one, that we should use the DOD standard and, as I say, I am quite honored and proud to be head of an Army with such high quality NCOs. So there was no reason for us to do that. Let us keep in mind as you read some of these reports that our goals, our annual goals, it is like a sales or profit. We can take the people in during the course of the year as long as we end up at 4 percent of the, in this case, 71,000. So we know exactly the number. It is 2,873 category 4s. We now have accessed about 1,900 or so. At the end of the year it will be less, it will be 4 percent or less, and that is the DOD standard. Again, high school degree or high school equivalent GED.

That, by the way, is one of the reasons that only 30 percent of eligible males in this age group qualify for the Army, because it is kind of disconcerting, but there is a lot of young men today that do not have high school degrees.

Senator LEVIN. Thank you.

Chairman WARNER. Thank you, Senator. That is a very important point you raised, Senator, and I am glad you that you cleared up the record on that.

Senator LEVIN. It means also the Army is one hell of a great school.

Secretary HARVEY. A builder of character, too.

Chairman WARNER. It makes available, as you point out, for those who entered the Army with some minimal types of qualifications, category 4, and took it upon themselves to educate—avail themselves of all the opportunities for education such that they rose through the ranks, and they would not have risen had they not acquired that. Is that correct, chief?

General SCHOOMAKER. Yes, sir, and almost 100 percent of them have at least a bachelor's degree.

Chairman WARNER. Very interesting.

Secretary HARVEY. We have some Ph.D.s, E–9 Ph.D.s and master's degrees. They are quite a group of young men and women.

Chairman WARNER. Thank you.

Senator Lieberman.

Senator LIEBERMAN. Thanks. Thanks very much, Mr. Chairman.

I will just come back briefly to our discussion, and I do want to continue it as we go on because I think this is so important. I am going to quote from an article, "Inside the Pentagon," January 26, 2006, and it cites a study done by the Institute for Defense Analyses (IDA), which is one of the federally supported research centers, which, as it says here, "has found an Army plan to reorganize its forces into BCTs will reduce net fighting capability rather than strengthen it, contrary to the Service's vision."

It says: "To increase brigades without boosting overall manpower of the Service, officials say they must strip each brigade of one maneuver battalion, composed of infantry troops or heavy arms. Army leaders say they can field just two such battalions per brigade rather than the traditional three. The move results in a net loss of 40 maneuver battalions," according to this analysis.

It also goes on to say—I am going to ask you to respond to this—"The current Army plan for fielding 43 Active-Duty, two-BCTs does not provide the optimum allocation of scarce Army manpower resources. Yet the Army plan reduces the number of maneuver battalions," it says, "by 20 percent below the number available in 2003." The organization describes maneuver capability as "fundamental to the Army mission of controlling terrain," so the cut in maneuver forces, IDA says, "translates to a 20 percent decrease in the Service's ability to control terrain."

I presume you are familiar with this study?

Secretary HARVEY. I am, Senator.

Chairman WARNER. It is part of what alarmed me. Just to state, this was requested, again, by the Defense Department.

Secretary HARVEY. I will comment. Let me just give you some numbers and I will ask General Schoomaker because he can tell you about the capabilities. I think that the study missed the mark because you have to go to the company level and not to the battalion level, and we are actually increasing the number of companies in the modular force from three to four.

So when you do all the arithmetic—and then I will turn it over to General Schoomaker—before, what we call the pre-modular force, had 323 companies. The modular force has 532 companies. So, with all due respect, this study is not accurate and it is companies that really perform the maneuver, and to get into the maneuver battalions and the Reconnaissance, Surveillance, and Target Acquisition (RSTA) battalions I am going to ask General Schoomaker, who knows this subject extremely well.

Senator LIEBERMAN. General?

General SCHOOMAKER. I would characterize it this way. The BCTs are not brigades. In the past, what we had were brigades which needed augmentation to become task organized. So the Secretary is exactly right, the place that you fight and where you hold ground is at the company level, platoon level, and we have increased the numbers there.

But what we have done is take the brigade and we have enhanced its headquarters so that it now can operate in a joint environment. It has tremendous bandwidth, it has all kinds of capability of bringing intelligence down all the way down to the battalion and company level, national level intelligence. We have put inside of that BCT its own artillery battalion, which it never had before. We have put inside of it its own forward support battalion, which it never had before. We put inside that brigade MPs, we put a RSTA brigade in there, the military intelligence, the analysts, the civil affairs, engineers. All of this is now inside of these brigades that are very capable, because that is the world we are now in. We are not in lining up against the Soviets.

Now, the other thing we put in there is four companies per battalion, whereas before we had three. We have also added a RSTA squadron of three company-size elements. So the reality is if you want to count maneuver elements there is actually 11 now inside of a brigade instead of 9 in the old way.

But the real power is not just in that. So what I would say is this. If somebody told me that a three-battalion brigade is better than a two, I would agree with them. If they said four was better

than three, I would agree with them. But the modular force allows us to build those. It allows us to put more battalions, and our span of control will allow us to do that. If you go to Iraq today, you will find divisions and brigades commanding far more units than what they typically would have in our organization.

So I will not say that the report is inaccurate. I will tell you they are measuring things in a context that is not relevant, as relevant today as it used to be. What we are doing today is giving us the kinds of capabilities and the capacity to meet the future challenge. If we want to argue past, we would have different answers. But that is where I stand on it. I just disagree with that type of analysis.

Senator LIEBERMAN. You have made that very clear.

General SCHOOMAKER. Yes, sir.

Senator LIEBERMAN. Thank you, General.

Let me go to one last question, which is I liked the term in the QDR that the military needs a new breed of warrior, who can display proficiency in both irregular and traditional combat. These new warriors will be—and I quote again—"largely self-sustaining because they will understand foreign cultures and societies." This is a whole new range. Talk about skill levels and training.

I want to ask you about the Army's educational plans that are related to the force transformation. I was pleased to see in the budget that there is a significant additional emphasis, increased emphasis, on linguistic training and that is excellent. It looks to me—and you correct me if I am reading it wrong—that the 2007 budget request for educational benefits is lower than this current year's level. I want to ask you, if that is true, whether you can meet the education goals that the QDR sets out for the new breed of warrior?

General SCHOOMAKER. I do not know how it could be lower. I would have to look at that. First of all, we have increased education at our major level, captains and majors, to 100 percent now of our majors must attend intermediate level education, which is command general staff college level, 100 percent.

We are increasing by 200 a year the advanced civil degree program opportunities for company-grade officers, where we will build to about 1,000 degree completion or advanced civil degree program issues where we are encouraging cultural studies, language, and these kinds of things for what we are doing.

We are also now increasing the amount of these studies at both the military academy for those cadets as well as Reserve Officers Training Corps (ROTC) for scholarship cadets on that. We are building out at Leavenworth and elsewhere things like, with General Petraeus, where we are coordinating with the Counter-insurgency (COIN) Academy that they have in theater and capturing all these lessons learned, so that we are now training across all of our NCO and officer education systems the lessons learned that we have had and inculcating them in designated blocks of instruction in every military school we have, to include our basic NCO schools.

So some of that may be called training, but the majority of that in my view is education, and it is a major move that we are making in the right direction.

Secretary HARVEY. Can I just add something, because the chief and I did something last year that I think we are both proud of, and that is we spent a lot of time defining the leader, the military and civilian leader we need for the 21st century. We call that leader a pentathlete, a multi-skilled individual, has the skills that you talked about, among others, and has five major attributes. That is why we called it the pentathlete.

So we have a template for leadership and we also have chartered a task force to tell us—to review the combination of education, training, and assignment that gives us that leader. So we are looking forward to the output of that, chief, later in the spring.

Senator LIEBERMAN. Thank you both. I am over in my time. I think what I would like to do is send you a written question just with a comparison of the budget levels and ask you if you are sure you have enough in there to meet the educational goals that you have for the Army.

Secretary HARVEY. Sure, we will do that, Senator.

Senator LIEBERMAN. Thank you.

Secretary HARVEY. Thank you.

Senator LIEBERMAN. Thank you, Mr. Chairman.

Chairman WARNER. Thank you very much, Senator.

Senator Clinton.

Senator CLINTON. Thank you, Mr. Chairman.

Secretary Harvey, when you testified last year before this committee I asked you about reports of payroll problems for wounded soldiers, a problem that came to my attention because of the pay problems of Specialist Robert Loria, a wounded soldier from New York, who was billed for travel and expenses that he should not have owed.

After I had written you a letter last year inquiring as to the extent of the pay problems of wounded soldiers, Vice Chief of Staff Cody sent me a letter saying that the Army had identified 129 wounded soldiers with payment and debt issues and that the Army was conducting follow-up audits. In your testimony last year you said, "I hope that I am up here next year and you are going to say, I have not heard of anything for the last 3 or 4 months." Unfortunately, that is not exactly the case.

In response to an ABC News Nightline investigation last month, an Army spokesman, using Army figures, said that more than 5,500 soldiers withdrawn from combat on the basis of medical issues have later experienced payroll problems. I am deeply concerned about this. The information that has come to me includes a recent report about the soldier who had received serious shrapnel wounds in Iraq being billed $700 to cover the cost of his body armor that had been removed as he was medically evacuated, which comes on top of a news report in October that the Army had found more than 330 soldiers who were wounded and then faced with military debt and the Army had begun the process of forgiving debts claimed from 99 of these, and a press report revealed that the Army has granted more than 600 requests by soldiers for debt forgiveness totaling more than $600,000.

Now, after last year's hearing I did ask that I be kept apprised of the status of the audits of wounded soldiers and I was given a commitment that you made to give me a comprehensive response

and to keep me informed. My staff and I followed up on this issue several times, asking for answers to questions that I posed last year. Yet I have to confess I learned about the number of wounded soldiers with pay problems through the press.

Now, after these latest reports, earlier this month on February 9, I sent you another letter about the treatment of pay and debt issues, and I ask unanimous consent that my letter to Secretary Harvey be included in the record.

Chairman WARNER. Without objection.

ARMED SERVICES
ENVIRONMENT AND PUBLIC WORKS
HEALTH, EDUCATION, LABOR, AND PENSIONS
SPECIAL COMMITTEE ON AGING

United States Senate
WASHINGTON, DC 20510-3204

February 9, 2006

The Honorable Francis J. Harvey
Secretary
Department of the Army
The Pentagon
Washington, D.C. 20310

Dear Mr. Secretary:

I write to follow up on my earlier inquiries regarding wounded soldier pay issues. A recent television news report indicates that, according to the Army's own figures, more than 5,500 soldiers withdrawn from combat on the basis of medical issues have later experienced payroll problems. A recent article reports that the Army required a soldier who had received serious shrapnel wounds in Iraq to pay $700 to cover the cost of his body armor that had been removed as he was being medically evacuated. This comes on top of a news report in October 2005 that the Army had found more than 330 soldiers who were wounded and then faced with military debt, and the Army had begun the process of forgiving debts claimed from 99 of these soldiers. A press report has also revealed that the Army has granted more than 600 requests by soldiers for debt forgiveness, totaling more than $600,000, in cases in which the request was made on the basis that the debt has been wrongly charged.

As you know, I have focused on the pay problems of wounded soldiers on the Senate Armed Services Committee. As you may recall, I worked with the Army to resolve pay issues for one of my constituents, Specialist Robert Loria. Soon after these issues were resolved, I wrote to you in order to raise several concerns about wounded soldier pay issues that might affect SPC Loria but went beyond his case as well. I also raised the issue during a Senate Armed Services Committee hearing at which Vice Chief of Staff General Richard Cody testified. In response, General Cody wrote to me in February 2005 informing me that the Army had identified 129 wounded soldiers who had been billed in error and whose debts would be forgiven, and had established an audit team to recommend solutions.

Just prior to a March 2005 committee hearing at which you testified, I also received a letter from Army Deputy Chief of Staff G-1 Lieutenant General F. L. Hagenbeck. His letter informed me that the Army was coordinating with the Defense Finance and Accounting Service (DFAS) on corporate changes needed to protect wounded soldiers from payroll problems; that DFAS had established a team to systematize the process of gathering wounded soldiers' information in a central location; and that DFAS intended to provide oversight of support finance office decisions at DFAS Indianapolis.

When you testified in March 2005 before the committee, I asked you for more information:

- I asked whether the figure of 129 soldiers reflected soldiers at Fort Hood, or more broadly throughout the Army.
- I asked whether the Army planned to audit the treatment of all wounded soldiers to determine whether they had experienced pay problems.
- I asked the Army to provide the committee with the status of all audits of pay problems of wounded soldiers and an update on all soldiers identified as having such problems.

At the March hearing, you said you hoped that when you testified next year, we would not have heard of any problems for several months. In a subsequent Army briefing, my staff was told that no other problems were identified.

Therefore, the recent press report that more than 5,500 soldiers withdrawn from combat on the basis of medical issues have later experienced payroll issues is troubling, as is the reported number of instances of wounded soldiers experiencing pay problems and meriting debt forgiveness. I am certain you agree the Army should make a special effort to avoid placing wounded soldiers in the position of having to resolve payroll problems or to request debt forgiveness, and that it is essential there be no delay in implementing lessons learned.

Based on these reports, I would like an expedited briefing which would focus on:

- how many wounded soldiers have been affected by these pay problems to date;
- what safeguards are now in place to prevent the Army from mistakenly overpaying wounded soldiers and from wrongfully claiming debts;
- what oversight is being conducted of the debt forgiveness process to ensure fair results for wounded soldiers are reached; what assistance currently is being provided to wounded soldiers in making these requests;
- what benchmarks have been established to measure progress in correcting the pay problems; and what ongoing review the Army is conducting of its efforts to improve the system.

I would also like to know what steps we in the Senate can take this year to aid the Army in its effort to better serve the payroll needs of its wounded soldiers.

I know that the Army cares deeply about its soldiers and would like to make sure that wounded and disabled soldiers do not face bureaucratic complications after they have given so much on behalf of our Nation.

I look forward to your prompt response. If you have any questions, please contact Andrew Shapiro in my office at 202-224-5553.

Sincerely yours,

Hillary Rodham Clinton

Hillary Rodham Clinton

Senator CLINTON. I know that the Army has arranged a briefing with my office on this issue. However, Mr. Secretary, I would like this year a detailed response in writing from you regarding each of the issues raised in my letter of February 9 and during last year's hearing. Now, these include how many wounded soldiers have been affected by the pay problems, what safeguards are now in place to prevent the Army from mistakenly overpaying wounded soldiers and then trying to claim debts, and also asking for other payments that are not well founded, what oversight is being conducted of the debt forgiveness process and what assistance is being provided to soldiers making the requests, and finally what benchmarks have been established to measure progress in correcting these pay problems.

Obviously, I know you share my concern that this is something that we should have zero tolerance for, that there should be every effort made to prevent these problems. If they do occur, they should be rare and they should be handled expeditiously.

So I look forward to your prompt response to these questions that concern me this year, as they did last year.

Secretary HARVEY. I share your concerns and we took your request seriously. I apologize for not getting back to you. It was an oversight. But we have made progress since you brought that up

at your hearing in terms of auditing. There is something like 10,000-plus wounded in action and another 48,000 which we call disease, non-battle injury. The Army has audited—I am looking here—24,000 of these accounts, of which 21,000 were termed to be correct, 11,000 are now in further research, and 2 percent were found in error.

I think we have made progress. We are not quite there yet. We have also arranged for the Defense Finance and Accounting Service (DFAS) to develop a database which links medical and finance records, and also we have deployed to the Army medical centers these support teams to have face to face, instead of calling a number that you have a person there that you can resolve this with.

So I think, Senator, we have made progress on this issue. It is important that this be solved 100 percent. I also see that there has been $1.2 million in debt cancellation and waivers for 1,200, 1,300 soldiers. So progress has been made. We will get you a detailed report in response to your letter.

Let me also add, in regard to that soldier, Lieutenant Rebrook, from West Virginia. Actually, when we heard of that we looked into it in detail and it ended up that he actually volunteered to give the money back, and then it was discovered that he had actually lost his Interceptor body armor in battle but did not tell anybody.

So I think what happened was he got a little frustrated with the time it takes to reconcile. He had a number of pieces of equipment missing. Some he lost because of his injury. He said: Oh, the hell with it, I will just pay it. Then when we discovered it we gave him the money back for those things. So it was kind of a mess-up, but we did not charge him. He actually volunteered to pay it in order not to go through this reconciliation process. He is getting out of the Army. So I think we made him whole.

[The information referred to follows:]

This is an issue that is also of great concern to us. The Army and the Defense Finance and Accounting Service (DFAS) have implemented a number of short-term corrective actions, while continuing to move toward longer-term improvements. The ultimate solution is to integrate fully personnel and pay systems to ensure that changes in a soldier's status which impact pay, such as evacuation from theater or hospitalization, are simultaneously updated in personnel accountability and pay records. The Department is developing the Defense Integrated Military Human Resources System to meet this need.

The Army and the DFAS are making progress on addressing the causes of pay and debt problems for our wounded soldiers. DFAS has developed a database that links information from various medical systems to help ensure the medical status of soldiers is considered when pay entitlements are initiated, stopped, or adjusted. Additionally, we are stationing dedicated personnel at Army medical centers to audit pay accounts of wounded soldiers and to take appropriate action as pay problems occur. The Army and DFAS continue to seek out adverse pay problems and work together to develop initiatives that will ensure our wounded soldiers are not negatively impacted by pay problems.

The support of your committee and Congress has been essential to our ability to provide wounded soldiers with the financial support they need. In particular, the new Traumatic Soldier Group Life Insurance program established by Congress helps soldiers transition into new careers, either in the Army or in the public or private sectors. This program, in conjunction with several key provisions contained in the National Defense Authorization Act (NDAA) for Fiscal Year 2006, will provide more assistance to soldiers during periods of hospitalization, reduce the possibility of overpayment on entitlements, and give the Army greater capability to provide fair and timely relief of debts when appropriate.

As of February 10, 2006, DFAS identified 59,463 soldiers who, since October 2001, received medical treatment above the battalion aid station level while deployed

(10,810 wounded in action (WIA) and 48,653 disease/non-battle injury). Audits have been initiated for 25,152 of these pay accounts, of which 21,743 (86 percent) were determined to be correct. The remaining soldiers' pay problems required further research (12 percent) or were determined to be in error (2 percent). The Army has provided debt cancellations and waivers totaling $1,320,166 for 1,309 soldiers.

We also reviewed 331 debts for wounded soldiers who subsequently separated between 2001 and 2005. Of these debts, 204 have been waived. Of the remaining cases, 3 were denied in full or part (i.e. AWOL time), 27 were previously waived or cleared without waiver, and 97 were not eligible for waiver (i.e. unearned bonus). This last group was turned over to the Army Wounded Warrior (AW2) program for possible submission to the Army Board of Correction of Military Records. Of the 97 not eligible for waiver; eight were seriously WIA soldiers being assisted by AW2.

The report of 5,500 soldiers withdrawn from combat for medical problems who later experienced payroll problems is incorrect. As ABC Nightline was told at the time, this represented the total population of soldiers in our audits whose automated payroll records required additional research to ensure that they were paid correctly (i.e. newly wounded or further verification of supporting information).

During 2005, DFAS developed a database to receive information from multiple medical systems, compare that information to the pay system, and initiate actions to correct or adjust entitlements. This enables finance units to identify wounded soldiers and provide them face-to-face finance support. Immediate collection of debts is suspended, and assistance is provided to the soldier to cancel or waive the debt as appropriate. We are auditing the pay accounts of all 59,463 wounded soldiers to ensure that they have been paid correctly and that, as applicable, debts are submitted for waiver or cancellation. DFAS has organized six tiger teams and deployed them to the major medical treatment facilities to assist local finance offices in supporting the current patient population, as well as in auditing accounts of previous patients. DFAS also has a central WIA team working audits.

The major challenge to fair application of debt forgiveness has legislative restrictions. Congress corrected this problem in the NDAA for Fiscal Year 2006 by broadening the scope of the existing debt remission law. The two primary mechanisms under the law to forgive debt are waiver or remission. Waivers are restricted to erroneous payments and are adjudicated under the auspices of the DOD General Counsel. Appeal procedures are included in the waiver process. Remissions were previously restricted to uncollected debts of enlisted soldiers while on Active-Duty and are adjudicated by the Army Human Resources Command (HRC) and can be granted for virtually any type of debt based on fairness or hardship. The 2006 NDAA broadened remission to include officers, soldiers no longer on Active-Duty and previously collected debts. As a general rule, remission requests for WIA soldiers, which fell within the scope of the existing law, have been processed in one business day by HRC. As part of the overall program for assisting WIA soldiers, finance offices supporting medical treatment facilities are currently required to assist these soldiers in applying for any pay due (i.e. dependent travel voucher) or for waiver/remission of bona fide debts. In many cases, we have initiated debt waiver processing on the soldier's behalf without the soldier being aware of the action.

The Army and DFAS are tracking the total population of soldiers who received medical treatment in the theater above the battalion aid station level since October 2001. Responsibility for each soldier's pay account is assigned to a specific finance office and the progress of auditing each account is tracked for each entity. Weekly reports of the number of accounts reviewed and their status are compiled and provided to the senior leadership in the Army finance and medical communities as well as to DFAS. Updates are given to both Army and DOD personnel/pay councils at the assistant secretary and deputy under secretary level. In addition, the Army is tracking the timeliness and accuracy of pay for all soldiers. Our goal is to audit all 59,463 wounded-soldier accounts no later than October 1, 2006.

Senator CLINTON. Thank you, Mr. Secretary.

Finally, I want to add my voice to the previous comments by my colleagues about the Army's budget proposal regarding the National Guard. But I have a slightly different concern to add to theirs. Aside from the question of end strength, there is a question of funding the force structure that the Guard needs. As you may know, the 42nd Infantry National Guard Division, the so-called Rainbow Division, headquartered in New York, recently returned from Iraq. I thank you very much, Secretary, for noting on January

18 that the 42nd Infantry Division completed the first deployment of a Guard divisional headquarters since the Korean War.

Secretary HARVEY. I did fly to Fort Drum to meet them.

Senator CLINTON. I thank you for that, because we were very proud. I saw some of them when I was in Iraq last year and we are just extraordinarily proud. As you put it very well, the Army could not perform full spectrum operations without the Guard and Reserve's tremendous contribution.

I am now concerned about the potential impact of force structure changes on the Guard, and in particular on the survival of this very 42nd Infantry National Guard Division that we are not only proud of but want to see stay intact. The idea that you could send a National Guard division to battle in its entirety, that it would fulfill its responsibilities with great distinction, is one that I think says a lot about what the force structure of the Guard can be.

So could you just tell us briefly what the Army's plans are regarding the Guard's force structure?

Secretary HARVEY. In terms of force structure, I think General Blum said it correctly. Our plan is 350,000 end strength and 348,000 in force structure. So that is the current plan which we are operating to. Again, I cannot agree with you more that the 42nd I.D. under the command of Major General Joseph J. Taluto, who is now TAG in New York, he is an outstanding soldier and leader, they did a great job. We again cannot do it without them.

General SCHOOMAKER. Senator Clinton, if I could. You have all kinds of reasons to be proud of the 42nd and Joe Taluto was a hell of a leader. But I think that inside that story lies the essence of our dilemma, and that is how many States did it take to make that division headquarters whole and that division whole?

Secretary HARVEY. Is it 20?

General SCHOOMAKER. 18 States.

Secretary HARVEY. 18 States contributed to the 42nd.

General SCHOOMAKER. So we have to have more whole structure than that, and we want the 42nd and every other division and every brigade in our entire Army to be whole when we call them up and to be fully resourced, et cetera. So the fact that we had to infuse that many States, plus we put Active and Reserve officers and NCOs inside of that structure to make it whole, and that we trained it to the level that they performed at such an extraordinary level over there, is a testament to the Army, but it is also a little story in itself about what we have to fix, and that is the path that we are on. We are committed to make it right.

That does not detract anything from the 42nd because we are proud of them, but it does talk about what the problem is that we are trying to solve here.

Senator CLINTON. Thank you.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you very much, Senator.

Just one comment. Senator Clinton is always discussing the plight of people who have problems and I am glad you do that, Senator. But I was particularly struck by the young man who had been wounded and in the course of taking care of him medically his body armor got separated from him and then he had to be charged for it.

General, at the last hearing you said that you would look into that. Perhaps this is the appropriate time to make the statements into the record. I will say that I saw a television broadcast and the young man involved got up and expressed pride in the Army and the fact that he felt it was a misunderstanding. He did not have any recrimination at all against the Army.

General SCHOOMAKER. Sir, I think that is fair to say. First of all, we are very proud of that young lieutenant and he was wounded in the line of duty. It was not his body armor at risk at all. It was the vest that holds his armor and it was approximately 20 other items that he was short.

So he got, as the Secretary said, involved in the reconciliation process, the bureaucracy frustrated him, and so he decided to pay for it. So what we have now done is gone back and reconstructed. We are accounting for those things that were battle losses. For those things that were not battle losses that he lost, he may end up paying for them. But the fact of the matter is it was just frustration with the bureaucracy. I believe it is reconciled, and he has been very—we are proud of him and he has spoken about the Army very well.

Chairman WARNER. I share that pride and I do hope that—because families were struggling to get cash. Apparently they only required cash. All those little details. You are on top of that, General, and let us just make sure it does not happen again.

Senator Levin, do you have any concluding comments?

Senator LEVIN. Just other than Senator Clinton's sensitivity to the individual cases, again, maybe there ought to be a little box on these reconciliation forms that says: If this form frustrates you and you are giving up filling it out, check this box, send it in, and then we will work with you, or something. I mean, of all the people who should not be frustrated in filling out a form, it is these folks, it seems to me.

General SCHOOMAKER. Sir, I agree. There are 21 other cases in that same division and all of them are being worked with now.

Senator LEVIN. Put a little box there.

Chairman WARNER. All right.

General SCHOOMAKER. Does that count for the chief of staff of the Army when he has to fill out forms too? [Laughter.]

Secretary HARVEY. Wait until you have to turn your stuff in, General. [Laughter.]

Chairman WARNER. General, we thank you for bringing these three outstanding noncommissioned officers up here to participate in these hearings. I thank each of you and commend again each of you for your service to country. You are exemplary and you are an inspiration to all of your colleagues, wherever they are throughout the world.

Secretary Harvey, let me give you a pretty good rating, for this is your first full hearing; is that correct?

Secretary HARVEY. No, you remember last year——

Chairman WARNER. I remember we had a little——

Secretary HARVEY. I was an intern in training then.

Chairman WARNER. Well, you have the con now, and I can tell by the tenor of your voice and the manner in which you delivered your responses that you are enjoying the work.

Secretary HARVEY. I am.

Chairman WARNER. In full swing.

Secretary HARVEY. It is an honor to serve and it is an honor to be with my partner over there and have the opportunity to have for the first time in a long time a fully equipped, fully manned, fully trained, fully resourced Army. That is what we are all about, the chief and I.

Chairman WARNER. Wait a minute. Are we fully equipped? Just a minute here.

Secretary HARVEY. Not yet.

Chairman WARNER. It seems to me you just sent some bills up to me.

Secretary HARVEY. I am talking about the end state.

Chairman WARNER. All right, well, the end state is a number of years out there.

Secretary HARVEY. You have it.

Chairman WARNER. As an old lawyer, I would like to cross-examine you on that answer.

General, we thank you for your willingness to come back from civilian life and forego some of the other pay and pleasures of that civilian life to once again proudly wear the Army green. People really look up to you.

General SCHOOMAKER. Thank you, sir. It is a pleasure to be here.

Chairman WARNER. Thank you very much. That will conclude this hearing. It was a very splendid hearing. I commend you all. We are adjourned.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

ARMY FORCE GENERATION

1. Senator WARNER. General Schoomaker, last year, the Army asserted that 43 Active component combat brigades and the 34 Army National Guard (ARNG) combat brigades would ensure the Army could maintain a 17 brigade force deployed with Active component brigades having 2 years between rotations and the ARNG combat brigades having 5 years between rotations. Now, we understand the Army intends to employ a force structure that includes 42 Active component combat brigades and 28 ARNG combat brigades. How will fewer combat brigades impact the anticipated "dwell" time in-between Army rotations?

General SCHOOMAKER. Prior to the Quadrennial Defense Review (QDR) 2006, the Army had developed a plan for 34 combat brigades and 72 support brigades in the ARNG and 43 combat brigades and 75 support brigades in the Active component. This provided up to 20 combat brigades for steady state operations. Based on analysis associated with the QDR 2006, the Army determined the need to be able to supply 18 to 19 combat brigades in steady state operations and surge another 18 to 19 combat brigades to respond to major combat operations. As a result, the Army is restructuring to form a rotational pool of 70 Brigade Combat Teams (BCTs) and 211 supporting brigades of various types among the three components. This rebalancing is necessary to reduce stress on the Active and Reserve components, achieve the Army goal of structuring the Active component to execute the first 30 days of expeditionary operational requirements, improve the responsiveness of the overall force to achieve national security strategy goals, improve the readiness and deployability of units, and initiate the process of building predictable deployment cycles for Army forces of one rotation every 3 years for the Active component and one rotation every 6 years for the Reserve component. Through these efforts, the Army will provide a sustained deployment posture of modular, trained, ready, cohesive, and rapidly deployable and employable Army forces in predictable patterns to meet requirements for continuous full-spectrum operations while retaining the capability to surge combat power for major combat operations.

QUADRENNIAL DEFENSE REVIEW

2. Senator WARNER. Secretary Harvey and General Schoomaker, some would say that the QDR process, from 1993 until now, has utterly failed to do what it was intended to do: provide a link among strategy, force-planning, and defense budgeting. It appears that the QDR process itself has become another bureaucratic exercise diverting valuable resources to produce studies that defend the status quo. Do you believe it's time to scrap the QDR process? If so, what would you replace the QDR process with? If not, what can be done to improve the QDR process?

Secretary HARVEY and General SCHOOMAKER. The QDR is a valuable process that provides the opportunity for the Secretary of Defense to periodically realign strategy, plans, programs, policies, priorities, and resources. While the Department has only conducted three such comprehensive reviews since 1997, our experience suggests that the QDR process is most relevant during the first term of a new administration when major change is most likely. That said, the quadrennial requirement seems about right. Even in the second term of an administration, the QDR provides an opportunity for the Department's leadership to reconsider previous decisions in light of a rapidly changing strategic landscape.

A QDR in the first year of a new administration is critically important, but cannot develop momentum until the Secretary of Defense has the bulk of his leadership team in place, which typically does not occur until several months after the President's inauguration. For that reason, it makes sense to extend the QDR period until the President's next budget is submitted to Congress. Second term QDRs can typically be completed in a shorter period of time or a more comprehensive assessment can be conducted. The Secretary of Defense makes this decision based on relooking the strategy or realigning resources. The external, parallel review conducted by the 1997 National Defense Panel proved its worth. However, such an independent review should probably be conducted in the year prior to the QDR so that the panel's findings and recommendations can inform the Secretary of Defense. Finally, we have probably reached the point where Defense-centric reviews are less relevant than those that more fully encompass all agencies involved in the national security process. A quadrennial security review may be more helpful in the long run, but it will certainly be more complex as the number of players and issues expand. It warrants our consideration.

ACQUISITION REFORM

3. Senator WARNER. Secretary Harvey and General Schoomaker, according to the QDR report issued on February 3, the Department of Defense (DOD) is focusing on bringing the needed capabilities to the joint force more rapidly, by fashioning a more effective acquisition system and associated set of processes. One of the recommendations is to integrate the combatant commanders (COCOMs) more fully into the acquisition process. What are your thoughts regarding the increased role of COCOMs in the acquisition process?

Secretary HARVEY and General SCHOOMAKER. We recognize and value the importance of COCOM participation and influence in the Department's requirements and budgeting processes, and we are taking steps to strengthen existing means available for that participation and creating new ones as well. Central to this is a COCOM's Integrated Priority List (IPL). The IPL details a COCOM's highest priority requirements across functional lines and defines shortfalls in key programs. In the past, the IPL was a fiscally unconstrained list but now includes detailed capability tradeoff recommendations to inform funding choices. Moreover, the Joint Forces Command (JFCOM) has assumed a more prominent and proactive role in rationalizing and integrating capabilities across all unified and specified commands.

The Joint Staff also sponsors periodic visits to the COCOMs to engage in direct discussions on requirements and budget issues. They have begun to expand the participation in these discussions to a much broader set of participants from OSD as well. Now, representatives from OSD PA&E, Comptroller, Policy and AT&L, among others, are there to discuss COCOMs' specific issues relating to programming, budgeting and acquisition. Also, senior leadership conferences are held throughout the year at junctures aligned with the budget process and provide COCOMs similar opportunities to participate directly in formulating programs and budgets.

4. Senator WARNER. Secretary Harvey and General Schoomaker, what are your recommendations of how the Department should develop and address joint requirements?

Secretary HARVEY and General SCHOOMAKER. The Army is fully committed to implementation of the Department's Joint Capabilities Integration and Development

System (JCIDS) to identify and address the capabilities the joint warfighter will need for the future. The JCIDS process is constantly being improved to strengthen the linkage between Service force modernization efforts and a central vision for future military operations captured in the family of joint operational concepts. We support the Chairman's efforts, through the JROC, to incorporate the operational needs of the COCOMs' into the joint force development dialog. This collaboration is essential for the generation of DOD's land warfare capabilities. The Army continues parallel efforts to improve the integration of the doctrinal, training, organizational, and materiel components of military capability in order to optimize the warfighting capabilities delivered by the Army to the Joint Force Commanders.

MAJOR GENERAL MILLER

5. Senator WARNER. Secretary Harvey and General Schoomaker, the prisoner abuse issue has burdened our Nation and our military for a few years now. The impact of this scandal tarnished the otherwise sterling performance of our military. Congress and the President took important steps to make a clear statement on the way ahead by prohibiting torture and abuse. The DOD and the Army have initiated many corrective actions. However, last month Major General Geoffrey D. Miller, a central figure in the U.S. detainee abuse scandal, invoked his right not to incriminate himself in court-martial proceedings against two soldiers accused of using dogs to intimidate prisoners at the Abu Ghraib prison in Iraq. In my years of association with the U.S. military, I cannot recall a similar situation. Nonetheless, this is clearly a right he has under the Uniformed Code of Military Justice (UCMJ). Still, he testified under oath before this committee (May 2004) and, as I indicated to Secretary Rumsfeld and General Pace last week, I want this committee to have appropriate time to review this matter at a time that is right. Do I have assurances from both of you that this committee will be afforded the opportunity to review this matter fully at the right time and to call Major General Miller before the committee and give him the opportunity to testify?

Secretary HARVEY and General SCHOOMAKER. Yes.

INTERCEPTOR BODY ARMOR SIDE ARMOR

6. Senator WARNER. General Schoomaker, since combat operations began in Afghanistan in 2001, there has been a need to improve individual protection for our troops on the battlefield. As requirements emerged, the Army has responded in several ways, for example, by accelerating production of the new Interceptor Body Armor (IBA) to replace the older, less capable, Kevlar body armor for military and civilian personnel in the combat zone. The Army is currently in the process of buying side plates to improve the overall effectiveness of the IBA. Do you believe the Army's programs to protect its soldiers adequately address the requirements for its personnel in combat zones?

General SCHOOMAKER. Yes, the Army's programs more than adequately address the requirements for providing individual protection in combat zones. IBA remains the best military body armor in the world, and every soldier in harm's way has a set. Each enhancement in individual soldier protection is closely coordinated with COCOMs and rapidly produced by the U.S. industrial base.

For example in February 2005, as a result of commanders' feedback from the field, the Army discontinued procurement of Small Arms Protective Inserts (SAPI) and began procuring Enhanced SAPI (ESAPI). ESAPI provides even more ballistic protection. The industrial base immediately retooled to begin manufacturing the more capable ESAPI. Production ramped-up from a cold start in March 2005 to over 25,000 sets of ESAPI per month by October 2005 using six vendors. This accelerated procurement fulfilled the theater requirement on February 1, 2006, just 10 months after the decision was made to begin production.

Another enhancement to the IBA ensemble was the Deltoid Auxiliary Protector (DAP). The DAP protects the shoulder and armpit regions of the soldier with the same level of ballistic protection as the outer tactical vest, a component of IBA. The DAP prototype was initially developed by soldiers in Iraq in June 2004. The Army expeditiously designed and placed DAP into production by September 2004. In 12 months, the Army fielded over 172,000 sets of DAP, enough for every soldier and DOD civilian deployed in Iraq and Afghanistan.

The latest improvement to IBA is the Enhanced Side Ballistic Inserts (ESBI) or side plates. On September 27, 2005, the Army approved an Operational Needs Statement for 230,000 sets of ESBI. The Army immediately initiated a rapid development process to establish a specification, design a prototype, test and provide an

ESAPI level side plate that will fully integrate into the current IBA ensemble. The first deliveries to theater began in January 2006, 4 months after inception of the concept. The total theater requirement will be met by December 2006.

7. Senator WARNER. General Schoomaker, is there any way you can accelerate the program?

General SCHOOMAKER. We constantly examine means to accelerate production. The Army has accelerated every component or enhancement to the IBA ensemble. For example, the Army awarded the ESBIs, or side plates, contract in January 2006 to meet the theater requirement. Deliveries to theater began January 31, 2006. Critical needs for committed forces will be satisfied no later than April 2006, or sooner, through all available means. The total theater side plate requirement will be met by December 2006.

EQUIPPING THE IRAQIS

8. Senator WARNER. Secretary Harvey and General Schoomaker, as the President has indicated, our capacity to transfer security responsibilities to the Iraqis will rely on the ability of Iraqi forces to stand up and assume control over their nation's security and law enforcement. I have been concerned that the Iraqi security forces (ISF) and policemen are not adequately equipped to perform their missions effectively. The quality of the weapons and equipment we provide to the Iraqis must be of the caliber that contributes to the discipline, confidence, and morale of the Iraqis we are training. Will you provide an update on the Department's plans and progress towards improving the quality of the equipment we provide to the ISF?

Secretary HARVEY and General SCHOOMAKER. The Army is aware of the necessity to fully enable ISF to conduct their security missions. The Multi-National Security Transition Command—Iraq (MNSTC–I) has the mission to train and equip ISF. Funding was provided to MNSTC–I that facilitates that mission, to include the procurement of required equipment. Although MNSTC–I does not report through the Army on the status of this effort, many of their equipment requirements and resourcing solutions have involved, or have been visible to, the Army. As an example, MNSTC–I has approached the Army's Tank-automotive and Armaments Command (TACOM) and requested procurement of equipment for the ISF, and TACOM has awarded contracts in support of that effort. MNSTC–I is also exploring the possibility of obtaining individual soldier equipment from the Defense Reutilization Marketing Offices (DRMO), and the Army staff has been advising them on current and projected availability of equipment, such as older versions of the Army's Kevlar helmet that are no longer being used but are still fully functional. The Army has also provided MNSTC–I with information regarding older sets of body armor that exist in depot or in DRMO facilities.

Most recently, MNSTC–I provided the Joint Staff with a list of required equipment that they believe may be excess to Service requirements, thereby allowing MNSTC–I to obtain it for relatively minor costs (i.e., refurbishment, transportation). The list mainly consists of light trucks, container handling equipment, and generator sets. The Army is still working through this request but believes some of the equipment may become available as a result of operating base consolidation which would free up selected government-owned, contractor-operated equipment.

9. Senator WARNER. Secretary Harvey and General Schoomaker, will this be addressed in the Iraq supplemental?

Secretary HARVEY and General SCHOOMAKER. No, not at this time. The Army does not plan to request supplemental monies for equipment transfers to the ISF because as of this date, we have not been directed to transfer any equipment to them. We cannot speak to whether or not you will see a request for funding for the Iraqi Army from another U.S. Government organization.

10. Senator WARNER. Secretary Harvey and General Schoomaker, will you be requiring any additional authorities from Congress to facilitate this important requirement?

Secretary HARVEY and General SCHOOMAKER. The Army believes sufficient authorities are in place.

ARMY NATIONAL GUARD FORCE STRUCTURE

11. Senator WARNER. Secretary Harvey and General Schoomaker, the Army, supported by the QDR, has modified its plan to increase the number of combat brigades

in the Active and Reserve component. The Army will increase the Active component force structure to 42 combat brigades and will increase the ARNG force structure to 28 combat brigades. This action represents a reduction of one Active component combat brigade and six ARNG brigades from previous plans. Do you believe that the QDR has taken into consideration the ARNG's State mission, especially homeland defense and disaster relief?

Secretary HARVEY and General SCHOOMAKER. The Army is increasing its capacity to ensure that the right capabilities are available to support current global operations, prevail in the war on terrorism, and conduct expanded homeland defense requirements while broadening the options available to civil authorities. This effort is essential to having the kinds of current and future capabilities and forces needed across the Army for sustaining the long war. Based on analysis associated with the 2006 QDR, the Army determined the need to be able to supply 18 to 19 combat brigades in steady state operations. As a result, the Army is rebalancing and restructuring to form a rotational pool of 70 BCTs and 211 supporting brigades of various types among the three components. The collaborative efforts of the Army staff, the Chief of the National Guard Bureau, the Director of the ARNG, the Chief of the Army Reserve, and The Adjutants General Association of the United States Force Structure Committee will determine the appropriate force structure for the ARNG that can best support the Army's efforts to win the global war on terrorism while meeting the demands of our ongoing defense support to civil authorities.

JOINT IMPROVISED EXPLOSIVE DEVICE DEFEAT OFFICE

12. Senator WARNER. General Schoomaker, in October 2003, the Army created the Improvised Explosive Device (IED) Task Force in recognition of the growing IED threat. The task force has gone through numerous reorganizations and is now the Joint Improvised Explosive Device Defeat Office (JIEDDO). I am concerned that the Department is growing another bureaucracy that will not quickly meet Army and Marine Corps requirements to counter the IED problem. How do you ensure that the JIEDDO can respond quickly to the needs of our deployed soldiers and marines?

General SCHOOMAKER. I have asked the Director, JIEDDO to respond to your concerns.

13. Senator WARNER. General Schoomaker, what are you doing to ensure that the office is looking at all solutions, both technical and nontechnical, to address the IED issue?

General SCHOOMAKER. I have asked the Director, JIEDDO to respond to your concerns.

AIRCRAFT SURVIVABILITY EQUIPMENT

14. Senator WARNER. General Schoomaker, helicopters are particularly vulnerable to surface fire and manportable missiles. In fact, the Army had three helicopters shot down in a 10-day period in January 2006. The Army has made aircraft survivability equipment (ASE) a high priority and has taken actions to have modern ASE delivered to the Central Command (CENTCOM) area of operations for installation on Army helicopters. What is the status of the installation of this ASE equipment?

General SCHOOMAKER. Installation of the Common Missile Warning System (CMWS), a component of the Advanced Threat Infrared Countermeasure System (ATIRCM), has been underway since a Chinook helicopter was shot down in November 2003. As of the end of this February, over 540 Army aircraft had been modified with the "A-kits" needed to prepare the aircraft to accept the CMWS equipment (B-kits), and over 273 of those aircraft had CMWS B-kits installed. These numbers are constantly increasing as installations continue and the prime contractor (BAE Systems, Nashua, NH) continues to ramp up CMWS B-kit production. By the end of March 2006, all Army aircraft deploying to Operation Iraqi Freedom (OIF)/Operation Enduring Freedom (OEF) 05/07 will have been modified to accept CMWS. Current projections are for all deployed aircraft to be CMWS-equipped and operational by the end of September 2006.

15. Senator WARNER. General Schoomaker, are these upgrades fully funded for both Active and Reserve component aircraft?

General SCHOOMAKER. CMWS is fully funded for all deploying Active and Reserve component aircraft.

16. Senator WARNER. General Schoomaker, are you satisfied with the Army's and Marine Corps' initiative in providing ASE for aircraft in the CENTCOM area of operations?

General SCHOOMAKER. I am confident that both the Army and the Marine Corps are working diligently to provide our soldiers and marines with the best ASE available for our respective aircraft. Upgrading ASE equipment for our operating aviation fleet remains a top priority for the Army.

REBALANCING THE FORCE

17. Senator WARNER. General Schoomaker, to sustain the operating forces required for the long war against terrorism, the Services are rebalancing some of their force structure—for example, retraining artillerymen for military police duties. How important is this effort?

General SCHOOMAKER. The Army is involved in the most dramatic restructuring of forces since World War II. The centerpiece is modular transformation and an increase in the Army's operational force with the building of BCTs and associated multi-functional and functional support brigades. As part of that effort, the Army has addressed rebalance across all three components (Active, ARNG, and Reserve) in a concerted effort to create the right mix of units in high demand and to develop soldiers with critical and high demand skills. To assure timely access to force capabilities, we continuously review our force structure to determine the types of units and skills that are in greatest demand in today's environment—including infantry, engineer, military police (MP), military intelligence, Special Forces, chemical, civil affairs, and psychological operations units. Between fiscal years 2004–2011 we have programmed rebalance of over 100,000 positions to address early deployer requirements in the Active component, manning shortfalls across all three components, and the elimination of overstructure in the Reserve components to establish personnel training accounts in both the ARNG and the Army Reserve. We also rely on temporary in-lieu-of sourcing as well, within all three components to meet current operational demands. The Army requires forces for major combat operations, field artillery for example, that are not in as high of demand in stability, security, transition, and reconstruction operations. As such, the Army uses innovative techniques, such as deploying artillery units to execute security tasks doctrinally performed by MP units, to support the COCOM's current operational demands. These rebalancing and in-lieu of sourcing efforts are critical in increasing our capabilities to support the long war, while reducing stress on soldiers and their families.

18. Senator WARNER. General Schoomaker, what can you tell us about how that program is progressing?

General SCHOOMAKER. We have accomplished over half of this effort and project completion by 2011. Transformation to the Army Modular Force is a journey that is addressing our capabilities of today without forsaking tomorrow's fight. This continuous reevaluation of the demands of today's long war also reflects the agility of the Army's institution to adapt its units, personnel, and systems to produce trained and ready units. Until the Army fully achieves modular transformation across the Service, the Army will continue to use innovative techniques, such as in-lieu-of sourcing, to fill the gaps between available force structure and COCOM's needs. Units selected to perform these unique in-theater missions are identified as early as feasible in their operational readiness cycle in order to allow commanders to task organize and train to the theater specific mission essential tasks. As the Army continues the modularity effort, these sorts of missions will become less and less frequent.

LIGHT CARGO AIRCRAFT

19. Senator WARNER. Secretary Harvey and General Schoomaker, we are aware that the Army is prepared to release a request for proposals (RFP) for acquiring a fixed-wing light cargo aircraft (LCA) as a replacement for its aging fleet of C–23 Sherpa aircraft. We are also aware that the Air Force may be interested in pursuing a joint procurement of an aircraft that would meet the requirements of both Services. Would you please share with us the current status of this joint effort to procure a LCA, including the number of aircraft to be procured, and any concerns that you might have regarding the Services' roles and missions for this aircraft?

Secretary HARVEY and General SCHOOMAKER. The Office of the Secretary of Defense (OSD), Defense Acquisition Executive approved the joint Future Cargo Aircraft (FCA)/LCA Acquisition Strategy Report on March 17, 2006. The RFP was re-

leased later the same day. The Services will now move forward towards a Milestone C decision by the end of the year. The Army plans to replace its aging C–23, C–26, and a portion of the C–12 fleet commensurate with fielding the FCA.

There is no argument or "turf war" going on between the Army and the Air Force over roles and missions. When it comes to intratheater airlift, specifically at the strategic and operational levels, no one in the world can match the U.S. Air Force's ability to move large volumes of personnel, supplies, and equipment around the globe.

The FCA is a complementary system that fills a gap at the tactical (as opposed to operational or strategic) level. That gap is intratheater airlift—movement of time sensitive, mission critical resupply and key personnel transport from the initial staging base or port of debarkation (POD) to the BCT; what we like to describe as the last tactical mile in the end-to-end distribution system. These BCTs are often deployed to austere locations across the noncontiguous battlefield. Today we are mitigating the risk associated with this gap through employment of a combination of tactical wheeled vehicle convoys, CH–47 helicopters and through the use of our smaller, less capable, cargo and utility aircraft such as the C–23, C–12, and C–26. The FCA will enable the Army to lighten the heavy burden placed on our CH–47 (Chinook) helicopter fleet so they can focus on supporting division level and modular brigade force structure warfighting requirements. Furthermore, the FCA will reduce the risk to soldiers' lives associated with convoy operations and forward arming and refueling points required to support extended CH–47 long-haul cargo operations.

Regarding the topic of intratheater lift, you are correct we have been working with the Air Force for the past couple years on the FCA program. In fact, the Air Force recently recognized the value a LCA could provide to the modern asymmetrical battlefield and in support of natural disasters. As a result, on 17 November 2005 the Air Force published a Stage 1, Initial Capabilities Document (ICD) for Intratheater Light Aircraft which began their initial development of the Air Force LCA requirements.

The Army's Analysis of Alternatives (AoA), dated 18 July 2005 identified the Army's low risk requirement for 145 FCA. On 8 February 2006, the Army and Air Force agreed that the quantity identified in the Army AoA would be referred to as the "Initial Joint Requirement" and that the Army would procure 75 FCA and the Air Force will procure the remainder of the initial joint requirement. The Army and Air Force, in coordination with the Joint Staff, plan to conduct a follow-on Joint AoA over the next year or two to define the broader, full-joint force requirement or FCA/LCA fleet end-state for the two Services.

We are currently in the process of establishing a FCA/LCA Joint Program Office (JPO) that will become effective 1 October 2006, with the Army in the lead agency. The Services anticipate a JPO charter will be approved by the Services' Acquisition Executives prior to the Army reaching Milestone C on the FCA program. The Army still plans to begin fielding FCA to its aviation force in fiscal year 2008. The USAF will follow with the fielding of the LCA approximately 2 years later.

Over the past 90 days, the Services have crafted a Joint Memorandum of Agreement (MOA), which articulates the way ahead for the convergence of the Army FCA and Air Force LCA programs into a single Joint Cargo Aircraft (JCA) program. We anticipate that agreement will be approved by 1 May 2006. The draft MOA outlines the roles, missions, command and control relationships, and the path forward for merging testing, training, sustainment, and maintenance requirements of the JCA. We also know that the JCA will be a common airframe.

WOMEN IN COMBAT

20. Senator WARNER. Secretary Harvey and General Schoomaker, section 541 of the National Defense Authorization Act for Fiscal Year 2006 codified the DOD policy that has been in effect since October 1, 1994, which excludes women from assignment to units or positions—below the brigade level—whose primary mission is to engage in direct ground combat. That provision also required the Secretary of Defense to review current and future implementation of the women in combat policy, and to closely examine personnel policies associated with creating the Army's new modular combat units to ensure compliance with the ground combat exclusion rule. Are the Army's current policies for assignment of women consistent with the DOD rules that have been in effect since 1994 and which are now codified in section 541?

Secretary HARVEY and General SCHOOMAKER. The Army's movement to modular units poses no conflict with the assignment of women set in current policy. Women have and will continue to be an integral part of our Army team as they perform

exceptionally well in specialties and positions open to them in accordance with the DOD Direct Ground Combat Assignment Rule.

21. Senator WARNER. Secretary Harvey and General Schoomaker, will the full report reviewing the Army's current and future assignment policies be provided to Congress by the deadline of March 31, 2006?

Secretary HARVEY and General SCHOOMAKER. Our understanding is that the DOD plans to provide an initial reply to Congress by the end of this month; a final report that provides a comprehensive report which thoroughly examines the current policies on the assignment of women and analyzes implications of these policies for the future will be provided at a later date.

22. Senator WARNER. Secretary Harvey and General Schoomaker, does the Army intend to seek changes to the current policy excluding women from assignment to units whose primary mission is to engage in direct ground combat?

Secretary HARVEY and General SCHOOMAKER. No, after a careful review of the policy in 2005, we decided not to change the Army's policy that dictates the assignment of women soldiers. If, in the future, the Army determines that there is a need to seek a change to the policy, the Army will comply with all notification requirements in title 10, USC 652.

23. Senator WARNER. Secretary Harvey and General Schoomaker, what is the Army's policy on assignment of women to forward support companies, whose mission is to support units engaged in ground combat?

Secretary HARVEY and General SCHOOMAKER. Currently, women are assigned to units called Forward Support Companies, which are organic to the Brigade Support Battalions subordinate to the new BCT Unit of Action. These companies do not have a mission of direct ground combat but provide logistics support to maneuver units that are in direct ground combat.

24. Senator WARNER. Secretary Harvey and General Schoomaker, if women are assigned for forward support companies that are collocated with, or attached to, units that have a ground combat mission, how is such assignment consistent with current law and the 1994 policy?

Secretary HARVEY and General SCHOOMAKER. Forward support companies are not required to routinely collocate with units that have a direct ground combat mission. Accordingly, the assignment of women to forward support companies does not violate the DOD policy.

QUESTIONS SUBMITTED BY SENATOR JOHN MCCAIN

FUTURE COMBAT SYSTEMS

25. Senator MCCAIN. Secretary Harvey, in the 2006 Defense Authorization Law, Congress instructed the Pentagon to report on every program that costs at least 50 percent more than initial projections. The provision was designed to tie programs to their original cost estimates, rather than updated cost and schedule baselines. The Pentagon has been allowed to change its baseline without invoking the penalty. For example, the Army's Boeing-led Future Combat Systems (FCS) program hasn't triggered an official breach despite a $161 billion cost estimate that is more than double its original baseline estimate. What plans do you have in place to ensure programs are held to their original baseline figures instead of allowing the current practice of rebaselining?

Secretary HARVEY. While the Army's implementation plans for this new amendment depend partly on the guidance from the Office of the Secretary of Defense, the Army's intent is to be in full, timely compliance with the law. Oversight of the program baselines will continue through milestone decision reviews and program executive officer (PEO) updates to the Army Acquisition Executive. Deviation reports using the new criteria outlined in the amendment will be reported using current processes and procedures.

While this amendment does not prohibit the rebaselining of programs, it does hold program managers accountable to the original baseline estimate. By keeping the original estimate as a data point in Selected Acquisition Reports (SAR), the entire DOD acquisition chain is sensitive to the cost growth of the entire program. This is an improvement of the current practice of rebaselining which does not retain the original baseline estimate in official reports.

With respect to the FCS program, the $161 billion figure cited in the question represents the total acquisition cost in then-year dollars, and was reported in the November 2005 SAR. The comparable original baseline figure is $92.2 billion, a 75-percent increase. When calculated using base-year dollars so that the rate of inflation (which is beyond a program manager's control) does not influence the result, the overall increase is 54 percent (from November 2005 SAR: SAR development baseline of $77.8 billion; acquisition program baseline objective of $120.15 billion).

26. Senator MCCAIN. Secretary Harvey, please fully describe why the FCS program has increased $600 million in this year's budget request and why the overall projected cost has nearly doubled while slipping in schedule.

Secretary HARVEY. There are multiple ways of interpreting the first portion of this question and it is not readily apparent to the Program Management Office how the $600 million figure was computed. The Army respectfully requests clarification of the $600 million to ensure that we provide an accurate response.

When comparing program costs, it is necessary to do so in constant base year dollars so that the impact of inflation does not skew the results. According to the November 2005 SAR and using program base year (2003) constant dollars, FCS research, development, test, and evaluation (RDT&E) costs have increased by approximately 48 percent and procurement costs by approximately 57 percent. While these are significant increases, it represents approximately half of the stated increase. RDT&E costs increased 18 percent due to the addition of previously deferred systems, 6 percent due to additional experimentation and technology/reliability maturation, 4 percent due to the additional efforts to spin out FCS capabilities to the current force, 17 percent due to the 4-year RDT&E schedule extension, and 3 percent due to updates in program cost estimates. The procurement costs increased 19 percent due to the addition of previously deferred systems, 18 percent due to changes in the FCS BCT organization (i.e., platform quantities), 11 percent due to platform capability enhancements, 2 percent due to the lengthened procurement schedule (i.e., procuring one and one half vs. two BCTs per year), and 7 percent due to updates in program cost estimates.

27. Senator MCCAIN. Secretary Harvey, what safeguards are in place to ensure taxpayer dollars are spent wisely?

Secretary HARVEY. The FCS System Development and Demonstration (SDD) Federal Acquisition Regulation (FAR)-based letter contract awarded in September 2005 (the letter contract is on schedule to be definitized on March 28, 2006), imposes more control and oversight over the LSI and its subcontractors than the Other Transaction Agreement. The FCS SDD FAR-based letter contract includes clauses that require compliance with the Procurement Integrity Act (PIA), Truth in Negotiations Act (TINA), and Cost Accounting Standards (CAS) requirements. The contract also allow government auditors access to contractor accounting records and requires that the contractor has an Earned Value Management System in place with regular reporting to the government. Moreover, the FAR-based letter contract and the resultant definitized contract restructure the fee arrangement to afford the Army greater control in controlling costs, performance, and schedule. These clauses reinforce the fiscal integrity of the contract negotiation and management process. Additionally, the Defense Contract Management Agency has the authority to administer certain contractor functions such as billing oversight, approving contractor management and management information systems, and quality control. The Program Management Office for FCS will utilize all available contract and program management tools to closely monitor the technical, cost, and schedule achievements of the program and make program adjustments as necessary to ensure the taxpayer's dollars are safeguarded.

ACQUISITION REFORM

28. Senator MCCAIN. Secretary Harvey and General Schoomaker, one of the recommendations of the recently released Defense Acquisition Program Assessment (DAPA) report, is to establish a dedicated four-star acquisition systems command at the Service level, which would report to the Service Chief and Senior Acquisition Executive of the military department. I would like to hear your thoughts regarding the recommendations of the DAPA panel, especially on the recommendation to create Service acquisition commands.

Secretary HARVEY and General SCHOOMAKER. The DAPA panel made the overall important finding that government-induced instability in the overall acquisition process ("Big A") creates a situation where senior leaders in the DOD and Congress

cannot anticipate the outcome of programs measured by cost, schedule, and performance. The report correctly attributes the majority of this instability to the capabilities determination and resourcing processes.

The DAPA report made a series of recommendations most of which are worth further investigation and perhaps implementation. The recommendation to create a Service Acquisition Command is not unlike what the Army had prior to 2001 where a number of program managers were under the Army Materiel Command. We moved to the current structure of all PEOs) and Program/Product/Project Managers (PMs) directly under the Army Acquisition Executive (AAE) to ensure that there was one focal point for Army acquisition and ensure that PMs were responsible and accountable as life cycle managers of their assigned programs. The current structure is in full compliance with the "two-level rule" as outlined in National Security Directive 219 dated April 1, 1986, and also ensures that the acquisition chain of command (i.e. accountability) is not diluted through a four-star acquisition command, but rather flows directly from the AAE to the PEOs and PMs.

29. Senator MCCAIN. Secretary Harvey and General Schoomaker, the Service Chiefs already have control of the budgets and requirements generation process. How will adding the Service Chiefs into the acquisition process improve the process?

Secretary HARVEY and General SCHOOMAKER. Under well-established public law, responsibility for the Headquarters, Department of the Army acquisition function resides solely in the Assistant Secretary of the Army for Acquisition, Logistics, and Technology, and the Department's acquisition process is ably executed by the dedicated Acquisition Corps professionals who work under his supervision. The Chief of Staff, Army and other Army Staff principals have a crucial lead role with respect to certain closely related activities such as requirements generation and validation, resource allocation, testing, and determination of fielding priorities. While always being receptive to exploring ways in which the Department can improve and streamline its processes, the Department is well-served by the current delineation of responsibilities.

30. Senator MCCAIN. Secretary Harvey and General Schoomaker, the report of the QDR stated that the DOD is focusing on bringing the needed capabilities to the joint force more rapidly, by fashioning a more effective acquisition system and associated set of processes. One of the recommendations is to integrate the COCOMs more fully into the acquisition process. What are your thoughts regarding the increased role of COCOMs in the acquisition process?

Secretary HARVEY and General SCHOOMAKER. We recognize and value the importance of COCOM participation and influence in the Department's requirements and budgeting processes and are taking steps to strengthen existing means available for that participation, and creating new ones as well. Central to this is a COCOM's IPL. The IPL details a COCOM's highest priority requirements across functional lines and defines shortfalls in key programs. In the past, the IPL was a fiscally unconstrained list but now includes detailed capability trade-off recommendations to inform funding choices. Moreover, the JFCOM has assumed a more prominent and proactive role in rationalizing and integrating capabilities across all unified and specified commands.

The Joint Staff also sponsors periodic visits to the COCOMs to engage in direct discussions on requirements and budget issues. They have begun to expand the participation in these discussions to a much broader set of participants from OSD as well. Now, representatives from OSD PA&E, Comptroller, Policy, and AT&L, among others, are there to discuss COCOM-specific issues relating to programming, budgeting, and acquisition. Also, senior leadership conferences are held throughout the year at junctures aligned with the budget process and provide the COCOMs similar opportunities to participate directly in formulating programs and budgets.

31. Senator MCCAIN. Secretary Harvey and General Schoomaker, what are your recommendations of how the Department should develop and address joint requirements?

Secretary HARVEY and General SCHOOMAKER. See response to question number 4.

EMERGENCY SUPPLEMENTAL SPENDING

32. Senator MCCAIN. Secretary Harvey, a major issue in the congressional debate on funding continuing military operations and reconstruction in Iraq and Afghanistan is whether military and peacekeeping operations should be funded with supplemental requests or via the regular authorization and appropriation process. Last

year, I urged the DOD and my colleagues on the Senate Armed Services Committee (SASC) to include the costs of current and future operations in Iraq and Afghanistan in the DOD's regular appropriations, arguing that these are now ongoing operations that should be planned for and funded in the annual defense budget.

It is a responsibility, not a privilege, that the SASC exercises oversight in the normal authorization process at the beginning of the budget debate. During the last 2 years the SASC has provided for limited authorization in bridge supplemental requests in the National Defense Authorization Bill. The DOD assesses the incremental cost of OIF at approximately $4.4 billion a month and OEF in Afghanistan at $800 million a month. As General Pace has appropriately stated in his testimony, "[w]e are in a long war." Do you think supplemental appropriations are the best vehicle for the Army for funding this long war?

Secretary HARVEY. Yes, as long as the theater of war remains a volatile environment and requirements are not predictable over the long term. With a stable environment and predictable costs, the Army would support funding in the base program.

END STRENGTH

33. Senator MCCAIN. Secretary Harvey, please rate the current levels of retention and recruitment for the total force. Have the Active and Reserve components met their goals for the year, and what is the outlook with regard to achieving future levels specified in the QDR?

Secretary HARVEY. The current recruiting and retention environment remains challenging. The Army is working to achieve all three components' fiscal year 2006 recruiting and retention goals. All three components have achieved their recruiting missions to date and are confident they will also meet their retention missions. Worldwide deployments and an improving economy directly affect recruiting and potentially affect retention. All components closely monitor leading indicators including historic recruiting and reenlistment rates, retirement trends, first-term attrition, and DOD and Army attitudinal surveys across both areas to ensure we achieve total success. Moreover, all components are employing positive levers including increased enlistment bonuses, force stabilization policy initiatives, updates to the reenlistment bonus program, targeted specialty pays, and policy updates to positively influence the Army's recruiting and retention programs. These efforts will continue to be a challenge and the Army continues to reshape its resourcing priorities to meet that challenge.

34. Senator MCCAIN. Secretary Harvey, what are your greatest recruitment and retention problems and how do you intend to resolve them?

Secretary HARVEY. The current recruiting environment remains a challenge. The global war on terror and a strengthening economy continue to impact military recruiting. Increased private-sector competition, an upward trend in those pursuing higher education, and negative trends in centers of influence recommending military service are contributing to an erosion of recruiter productivity and could create significant challenges in the fiscal year 2006 and beyond. With congressional help the Army is aggressively adjusting its resources to meet these challenges. The key issue remains to attract high quality men and women to serve as soldiers and meet future manning requirements. We are working to overcome the market effects of increased alternatives to youth and a decreasing propensity to enlist by increasing incentives, developing new programs, and reducing attrition. We must remember that this is not an Army issue alone but a national issue. While the Army retention mission is challenging, all components are confident they will meet their annual retention mission. Worldwide deployments and an improving economy potentially affect retention. All components closely monitor leading indicators including historic reenlistment rates, retirement trends, first-term attrition, Army Research Institute surveys, and mobilization/demobilization surveys to ensure we achieve total success. Moreover, all components are employing positive levers including force stabilization policy initiatives, updates to the reenlistment bonus program, targeted specialty pays, and policy updates to positively influence the retention program. Ultimately, we expect to achieve the Active Army, ARNG, and United States Army Reserve fiscal year 2006 retention missions.

35. Senator MCCAIN. General Schoomaker, the QDR reduces the authorized level of Army Guard and Reserve from 350,000 to 333,000—a 17,000 man reduction. Why would we reduce this authorization while we are engaged in operations in Afghani-

stan and Iraq, both of which require significant levels of Army and Reserve personnel?

General SCHOOMAKER.Prior to QDR 2006, the Army had developed a plan for 43 combat brigades and 75 support brigades in the Active component, 34 combat brigades and 72 support brigades in the ARNG, and 58 support brigades in the USAR. This provided up to 20 combat brigades with associated multi-functional and functional support brigades for steady state operations around the world. Additionally, the Army was rebalancing structure in the ARNG and USAR to establish transient, trainee, holdee, and student (TTHS) accounts of 8,000 and 20,500, respectively. QDR 2006 showed a lower requirement for combat brigades, but a greater requirement for brigades able to respond more immediately to meet defense support to civil authorities. Although consideration was made to reduce the ARNG Force Structure Allowance (FSA) to 324,000 with an additional 9,000 in the TTHS account during the QDR 2006, the decision at the end of the TAA 08–13 Force Program Review was to implement the Army End Strength Plan for the ARNG that builds toward an FSA of 342,000 with a TTHS of 8,000 by fiscal year 2011. This includes a total of 106 brigades within the ARNG whose mix of capabilities are being reworked collaboratively between the Army staff, the Chief of the National Guard Bureau, the Director of the ARNG, the Chief of the Army Reserve, and The Adjutants General Association of the United States Force Structure Committee. The right mix of capabilities within the 106 ARNG brigades will help the Army meet global war on terrorism demands while providing enhanced options to our civil authorities. Our goal is to build ARNG brigades that are fully manned, equipped, and trained to meet the full spectrum of operations, both in the United States and overseas.

36. Senator MCCAIN. General Schoomaker, should we not be seeking to increase these authorizations, as well as taking other steps that would increase Army end strength?

General SCHOOMAKER. No, we have not determined a need to increase Army end strength at this time. To sustain increased global commitments we are building the Active component (AC) force structure under a 30,000 temporary end strength increase above the 482,400 program. At the same time, we are restructuring our Reserve component forces within their authorized end strengths of 350,000 for the ARNG and 205,000 for the U.S. Army Reserve (USAR). Our goal is to grow the operational Army to 790,000 (to 355,000 soldiers within the AC, 306,500 soldiers within the ARNG, and 128,500 within the USAR). This growth reflects a 40,000 increase in the AC over the fiscal year 2004 baseline of 315,000 based on restructuring of its institutional force with planned military-to-civilian conversions and changes in the management of the individuals account. This growth in the Army's operational force also reflects the restructuring in the ARNG to build a Force Structure Allowance (FSA) of 342,000 with an individuals' account of 8,000 and the restructuring in the USAR to build an FSA of 184,500 with an individuals' account of 20,500. The combined effect of rebalancing skills to reduce stress in high demand capabilities within all of our three components, redistributing soldiers to create the right mix between our operational forces and our institutional structures, and growing our operational Army will increase our overall effectiveness.

37. Senator MCCAIN. Secretary Harvey, in today's Baltimore Sun it is reported that the Army is lowering its standards in order to make its recruiting goals. The report states that the Army is granting special recruiting waivers in order to admit individuals with past criminal misconduct or alcohol and illegal drug problems. Please tell me we are not allowing criminals into our ranks at the same time we are planning to cut our Reserve Forces and telling our honorable citizen-soldiers we no longer need them. What long-term problems do you foresee due to this course of action?

Secretary HARVEY. The Army is not granting special waivers or allowing criminals into its ranks. The Army has a sound process for conducting waivers that allows our citizens who have overcome mistakes, made earlier in their lives, to serve their country. The Army continues to use a strict waivers review process in which requests must be reviewed and a disposition rendered by the Recruiting Battalion Commander (a Lieutenant Colonel) or the Commanding General, U.S. Army Recruiting Command, depending on the level of the offense. After a thorough review, waivers are approved or disapproved based on their merits and the whole person concept. No consideration is given to percentages of waivers, constraints, or recruiting goals during this process. Drug dependence and alcoholism are permanent disqualifications from entry in the United States Army. The Army realizes the military service is not an alternative to the criminal justice system and should not be viewed as an alternative source of rehabilitation. The Army established a waivers process

to ensure potential soldiers who are qualified for entry are provided an opportunity to serve.

38. Senator MCCAIN. Secretary Harvey, I have long said that American forces are undermanned in Iraq. Other worldwide deployments and disaster relief missions here at home continue to tax the Service. Yet the Army seeks to reduce its authorized end strength. Please explain your rationale.

Secretary HARVEY. First, the force requirements in Iraq are established by the COCOM. The Army has been evaluating force requirements within the End Strength Plan approved in August 2005. Under this plan, Army end strength will be 482,400 in the Active component, 350,000 in the ARNG and 205,000 in the USAR. Within this total end strength of 1,037,400, the Army has an Operational Force of 790,000 across all three components. The Active component operational force will grow 40,000 to 355,000, due primarily to a plan to rebalance the Institutional Force (down from 104,000 to 75,000) and the TTHS account (down from 63,000 to 52,400). Within the ARNG, elimination of 33,500 of overstructure provides an operational force of 306,500 and establishes, for the first time, a TTHS account of 8,000. The USAR eliminated overstructure of 31,500 to provide an operational force of 128,500 and establish, also for the first time, a 20,500 TTHS account. The Army optimized this operational force by rebalancing capabilities across all three components, eliminating overstructure, and improving training readiness with the establishment of TTHS accounts in the Reserve components to ensure ready and predictable access to the right force at the right time to meet all worldwide requirements.

39. Senator MCCAIN. General Schoomaker, please explain why the Army has utilized stop-loss on more than 50,000 soldiers while simultaneously planning to draw down the Reserve component by 17,000 soldiers.

General SCHOOMAKER. Stop-loss policy is not about numbers but is a temporary measure that does not permanently affect the Army end strength and has not been a planning element in determining any potential cuts in authorized troop strength for the Active Army or the Reserve components. We have consistently stated since the onset of the global war on terrorism that the Army focus, indeed the charge, of Army deployments is to deliver to the COCOM trained and ready units, not individuals. RANDom and continuing unit losses caused by individually oriented separation, retirement, and replacement policies have the potential to adversely impact training, cohesion, stability, and readiness in the deploying units. Stop-loss is a means that effectively sustains a force, which has trained together, to remain a cohesive element throughout the unit's deployment. Our commitment to pursue the global war on terror and provide our warfighters with the cohesive, trained, and ready forces necessary to decisively defeat the enemy requires us to continue the Army's stop-loss program to attain the above goals. Consequently, any proposal to reduce Reserve component end strength or reduce the Reserve component participation in Operations Iraqi and Enduring Freedom will not in and of itself determine the level of stop-loss we will need to honor our contract with the American people to fight and win our Nation's wars.

The size of future troop rotations will in large measure determine the levels of stop-loss needed. The Army leadership fully understands that by executing stop-loss, the policy has to some degree disrupted the lives of soldiers and their families. To minimize the impact of stop-loss on our soldiers, the program only affects soldiers assigned at the unit's mobilization/deployment date minus 90 days, continues through the demobilization/redeployment date, plus a maximum of 90 days. Consequently, since reaching large scale application, the average monthly number of soldiers affected by stop-loss is approximately 13,000. It is also noted that many of the soldiers who were initially retained beyond their obligation by stop-loss have voluntarily elected to remain in the military and have reenlisted or extended. While it is not palatable to some, our ability to retain these fine soldiers and their expertise is contributing immeasurably to our continued success in the war on terrorism.

40. Senator MCCAIN. Secretary Harvey, there have been lengthy discussions about force reductions to the National Guard bringing them to an end strength of 333,000. I understand the Army Reserve is also facing a reduction from 205,000 to 188,000. Over 60 percent of the total Army's medical assets and 98 percent of its civil affairs assets are in the Army Reserve—both critical to stabilizing and nation-building; will the Army Reserve be funded to a level supporting an end strength of 205,000 or 188,000?

Secretary HARVEY. The Army is not reducing the size of the Army Reserve. The Army plans to program the Army Reserve to an end strength of 205,000 with a force

structure of about 184,500 and a TTHS account of 20,500. The Army plans to fund the Army Reserve up to 205,000, offset for historical participation, projected mobilization levels, and projected strength shortfalls.

ARMY POSTURE

41. Senator MCCAIN. General Schoomaker, the QDR stresses the need for "stabilization operations," which we used to call "nation building." To conduct such operations, our soldiers need considerable culture, mediation, and language skills. What specific steps has the Army taken to improve the individual soldier's abilities in these areas?

General SCHOOMAKER. Army training has been redesigned to provide soldiers and units with increased capabilities and skills relevant to current and future operations. The Army focuses individual training on 39 Warrior Tasks, grouped into Shoot, Move, Communicate, Fight, and Joint Urban Operations, and nine Battle Drills (39/9). To be combat ready every soldier, regardless of specialty, experience, or component, must be proficient in these skills. The Warrior Leader Course for junior Noncommissioned Officers (NCO) has expanded its situational awareness training exercise to 96 hours, giving soldiers more field time to practice troop-leading procedures, work on mission planning, and execute the mission to standard, followed by a thorough after-action review. Basic and Advanced NCO training in all of its progressive phases also builds on the 39/9 to teach leadership as it applies to Current Operating Environments (COE), including replicating Forward Operating Bases, live-fire convoy exercises, and reaction to IEDs. The Sergeants Major Academy provides a common core built around the 39/9 with emphasis on convoy operations, detainee operations, cultural awareness, and Joint Operations.

The Officer Education System (OES) also focuses on the 39/9 and now includes a 6-week field leadership course attended by lieutenants from all branches and components followed by their functional courses. Another change is resident Intermediate Level Education for all Active-Duty majors that prepares them for full spectrum operations in a Joint, Interagency, Intergovernmental, and Multinational environment. Advanced civil schooling opportunities have expanded by 200 per year in disciplines such as cultural awareness, regional knowledge, foreign language, governance, diplomacy, national security, and social sciences. This program will develop critical intellectual skills while providing long-term retention of quality officers. Cultural awareness has been incorporated into every phase of the Army's professional military educational system. Formal language training has also been increased and modified to include languages relevant to current and potential operations. Online language training (26 languages) is available to all Army personnel.

Our premier training facilities, two dirt Combat Training Centers that replicate the realistic operational environments of Iraq and Afghanistan, are where we blend our 39/9 and OES/NCOES changes together with unit/collective training at the Brigade/Battalion/Company level with real-time challenges.

Simulators and other training devices such as the Engagement Skills Trainer, Laser Marksmanship Training System, and Visual Combat Convoy Trainer address soldier skills under situations and conditions relevant to today's combat. In addition, upgraded ranges help to improve soldier skills with advanced technologies (that help in evaluating and promoting soldier and unit weapons proficiency) and actual urban terrain that also reflects the COE.

EVOLVING THREATS IN AFGHANISTAN

42. Senator MCCAIN. General Schoomaker, yesterday, February 13, four soldiers died in an IED attack in Afghanistan. There has been a spike in violence in Afghanistan in recent months, with insurgents there applying lessons learned from Iraq. What new steps are we taking to combat this threat?

Secretary HARVEY and General SCHOOMAKER. I have asked the Director, JIEDDO to respond to your concerns.

MODULARITY AND RESET FUNDING

43. Senator MCCAIN. Secretary Harvey and General Schoomaker, I understand the DOD has allocated $5 billion per year for modularity beginning with the fiscal year 2007 budget request. I think it's about time DOD funded modularity in the base budget rather than through supplementals. I understand that the Army will be requesting additional modularity funding in the upcoming supplemental request.

Can you tell us the amount of the request and will the requests include funding for National Guard equipment?

Secretary HARVEY and General SCHOOMAKER. The Army requested a total of $5.0 billion in fiscal year 2006 supplemental funds to support the transition to the modular force. This request is broken into two components. The fiscal year 2006 supplemental currently being considered by Congress contains $4.1 billion for our modular forces. Additionally, the Army received $900 million in supplemental funding with the fiscal year 2006 Title IX Bridge to support the modular force. The $900 million we received in Title IX and the $4.1 billion Congress is currently considering totals to $5 billion. Fiscal year 2006 supplemental funds contain a total of $2.2 billion for National Guard equipment. Of this amount, $1.5 billion supports the conversion of National Guard units to the modular force. The National Guard received $200 million in the fiscal year 2006 Title IX Bridge in support of modularity with $1.3 billion remaining in the current submission.

44. Senator MCCAIN. Secretary Harvey and General Schoomaker, how much of the $5 billion added to the Army by the Department for modularity is funded from within the Department of the Army?

Secretary HARVEY and General SCHOOMAKER. The Army programmed $6.6 billion for the Army modular force in fiscal year 2007. This amount includes the $5 billion the Department provided and an additional $1.6 billion the Army internally programmed to transform to a modular force. The funding the Department provided in fiscal year 2007 is programmed for equipment in support of the Army modular force. The remaining $1.6 billion programmed is primarily for equipment procurement but also provides funding for operations and maintenance.

45. Senator MCCAIN. Secretary Harvey and General Schoomaker, is the Army reset fully funded?

Secretary HARVEY and General SCHOOMAKER. The fiscal year 2006 supplemental request will be released by the President shortly, and will include over $8.5 billion for reset of Army equipment across all three components: Active, Guard, and Reserve. This will meet our highest priority needs to repair or replace damaged and worn equipment. If additional funds should be made available, we would be able to accelerate our reset efforts.

Reset costs for future years will be dependent on the level of commitment in theater, the activity level in theater, and the amount of equipment required each year because it is damaged or excessively worn. Unless one of these factors significantly changes, the Army expects the requirement to be $10–$13 billion per year through the period of conflict and 2 years beyond.

ARMY ACQUISITION

46. Senator MCCAIN. Secretary Harvey, the Government Accountability Office (GAO) reports that, since the Joint Tactical Radio System program entered systems development in 2002, the contractor has overrun cost estimates by $93 million—nearly 28 percent above what was planned. Although the program attempted to stabilize costs by adding approximately $200 million to the contract in January 2004, costs continued to grow steadily thereafter. In addition, the contractor has increasingly fallen behind schedule and has had to devote more resources than originally planned. In January 2005, the prime contractor estimated that the total costs for the "cluster" one development would be $531 million more than what was originally budgeted, reaching about $898 million at completion. However, according to program officials, since contract award, the prime contractor has not demonstrated strong cost estimating and cost management techniques, and it is difficult to estimate with any confidence what the overall program is likely to cost. What specific steps are you taking to ensure that future Army acquisition programs are both realistic in scope and affordable?

Secretary HARVEY. Implementation of Section 801 of the National Defense Authorization Act for Fiscal Year 2006, Public Law 109–163, will assist in ensuring that future Army acquisition programs are both realistic in scope and affordable. This requires certain certifications by the milestone decision authority (MDA) before program initiation at Milestone B. With this certification, the MDA attests that the:

1. technology is ready;
2. program is highly likely to accomplish its intended mission;
3. program is affordable and an analysis of alternatives has been completed;
4. JROC has accomplished its statutory duties; and

5. program complies with all relevant policies, regulations, and directives.

MAJOR GENERAL MILLER

47. Senator MCCAIN. General Schoomaker, Major General Geoffrey Miller, who ran Guantanamo from October 2002 to March 2004 and helped set up operations at Abu Ghraib, has asserted his Fifth Amendment, Article 31 right against self-incrimination in two court-martial cases involving the use of dogs during interrogations. I do not contest General Miller's right under the Constitution, but would you agree that he also has a duty as an officer, especially a general officer, to take responsibility for his actions and orders?

General SCHOOMAKER. The evidentiary portion of one of the two courts-martial in which General Miller declined a defense interview has concluded. While available to testify, General Miller was not called as a witness by either the defense or the government. The second court-martial is scheduled to convene on May 22, 2006. On March 28, 2006, General Miller met with the defense counsel in the second court-martial and answered all questions posed to him. If General Miller's testimony is determined to be relevant at that trial, as with any soldier, General Miller will be required to appear.

The Department of the Army Inspector General (DAIG) independently investigated the allegations made against General Miller concerning detainee operations. After a thorough and impartial evaluation of the evidence, the DAIG determined the allegations to be unsubstantiated. After multiple reviews, the DAIG report of investigation has been approved by the Army leadership. Most recently, on March 28, 2006, General Miller again met with the DAIG and answered their questions under oath.

48. Senator MCCAIN. Secretary Harvey and General Schoomaker, do you believe, given everything we know now, only low-level personnel were responsible for detainee abuse at Abu Ghraib, Guantanamo Bay, in Afghanistan, and elsewhere?

Secretary HARVEY and General SCHOOMAKER. The Army investigates allegations of detainee abuse without regard to the rank or position of those alleged to be involved. Our professional investigators go where the evidence leads. When the evidence indicates wrongdoing, commanders take appropriate action under the Uniform Code of Military Justice and established policy and regulations.

The U.S. Army Criminal Investigation Command has conducted over 600 investigations into allegations regarding detainee operations. The investigations include allegations reported both inside and outside detention facilities. Thus far, allegations have resulted in adverse actions (including courts-martial, non-judicial punishment, and adverse administrative actions) against over 250 soldiers. Approximately 17 percent of the adverse actions have been brought against commissioned officers, who, as a category, make up about 13 percent of the force in theater.

The Army has conducted numerous separate investigations, inspections, and reviews concerning detainee operations. Each report has established that abuses did not result from promulgated interrogation policies and procedures and were not directed, sanctioned, or encouraged by senior leadership. The Army will continue to investigate aggressively all allegations of detainee abuse and continue to hold those who commit misconduct accountable for their actions.

SPECIFIC GUIDANCE FOR IMPLEMENTING MCCAIN AMENDMENT

49. Senator MCCAIN. Secretary Harvey and General Schoomaker, Deputy Secretary England has issued a high-level memo directing the implementation of the detainee legislation that became law this winter. This memo is less than a page in length, and merely restates the provisions—that the Army Field Manual shall become the uniform standard for interrogation, and that cruel, inhumane, and degrading treatment is barred. What specific guidance has been given to soldiers, military police, interrogators, translators, intelligence officers, medical personnel, etc., at Guantanamo and throughout Iraq and Afghanistan?

Secretary HARVEY and General SCHOOMAKER. DOD Directive 3115.09, DOD Intelligence Interrogations, Detainee Debriefings, and Tactical Questioning, was issued on November 3, 2005. It consolidates and codifies existing departmental policies, including the requirement for humane treatment during all intelligence interrogations, detainee debriefings, or tactical questioning to gain intelligence from captured or detained personnel. It further assigns responsibilities for intelligence interrogations, detainee debriefings, tactical questioning, and supporting activities conducted by DOD personnel.

The U.S. Army Training and Doctrine Command added additional blocks of instructions on the Geneva Convention and Law of War to all programs of instruction.

The U.S. Army Intelligence Center and School (USAICS) has updated their interrogation training program of instruction to ensure all training is in full compliance with the Army Field Manual (FM 34–52) and emphasized legal, policy, and regulatory requirements for humane treatment of all detainees, as well as prohibitions against cruel, inhumane, and degrading treatment in the conduct of interrogation operations. USAICS' mobile training teams have deployed to provide reinforcement training to both deployed forces and "next deploying" units throughout the United States.

50. Senator MCCAIN. Secretary Harvey and General Schoomaker, have these individuals received directives with instructions?

Secretary HARVEY and General SCHOOMAKER. The Under Secretary of Defense issued DODD 3115.09, DOD Intelligence Interrogation, Detainee Debriefings, and Tactical Questioning on November 3, 2005. It consolidates and codifies existing departmental policies, including the requirement for humane treatment during all intelligence interrogations, detainee debriefings, or tactical questioning to gain intelligence from captured or detained personnel. It further assigns responsibilities for intelligence interrogations, detainee debriefings, tactical questioning, and supporting activities conducted by DOD personnel. USD(I) is also updating DODD 2310, the DOD Detainee Program. This directive revises policy and responsibilities within the DOD for a Detainee Program to ensure compliance with the laws and policies of the United States, the law of war, including the Geneva Convention of 1949. A memorandum on Medical Program Principles and Procedures for the Protection and Treatment of Detainees in the Custody of the Armed Forces of the United States was also issued. The memorandum reaffirmed the historic responsibility of all health care personnel of the Armed Forces (to include physicians, nurses, and all other medical personnel including contractor personnel) to protect and treat, in the context of a professional treatment relationship and established principles of medical practice, all detainees in the custody of the Armed Forces during armed conflict.

51. Senator MCCAIN. Secretary Harvey and General Schoomaker, has the Department developed regulations to implement the legislation?

Secretary HARVEY and General SCHOOMAKER. Army Regulation 350–1, Army Training and Leader Development, February 13, 2006, provides specific regulatory guidance concerning Law of War training and integration of detainee operations training into other appropriate training events.

52. Senator MCCAIN. Secretary Harvey and General Schoomaker, how are the new rules being communicated down the chain of command?

Secretary HARVEY and General SCHOOMAKER. The new rules are being communicated through the directives, Army regulations, and field manuals. The U.S. Army Intelligence Center and School is also training commanders and leaders, plus soldiers, airmen, sailors, and marines on the new rules through mobile training teams. U.S. Army Training and Doctrine Command has added additional blocks of instructions on the Geneva Convention and Law of War to all programs of instruction. All interrogators conducting interrogation operations receive Geneva Convention training every 90 days.

JUSTICE DEPARTMENT ANALYSIS OF CRUEL, INHUMANE, AND DEGRADING PROHIBITION

53. Senator MCCAIN. Secretary Harvey and General Schoomaker, in the Senate Judiciary Committee last week, Attorney General Alberto Gonzales was asked whether the newly-passed prohibition on cruel, inhumane, and degrading treatment unconstitutionally interferes with the President's power as Commander in Chief. The Attorney General responded that he could not answer that question, because "we have not done that analysis." What is your current, operative understanding of the law we passed?

Secretary HARVEY and General SCHOOMAKER. That part of the Detainee Treatment Act of 2005 relating to cruel, inhuman, or degrading treatment or punishment provides that "no individual in the custody or under the physical control of the United States Government, regardless of nationality or physical location, shall be subject to cruel, inhuman, or degrading treatment or punishment." The Act defines the term cruel, inhuman, or degrading treatment or punishment as the "cruel, unusual, and inhumane treatment or punishment prohibited by the Fifth, Eighth, and Fourteenth Amendments to the Constitution of the United States, as defined in the

United States Reservations, Declarations and Understandings to the United Nations Convention Against Torture and Other Forms of Cruel, Inhuman or Degrading Treatment or Punishment done at New York, December 10, 1984."

54. Senator MCCAIN. Secretary Harvey and General Schoomaker, are DOD employees prohibited from engaging in cruel, inhumane, and degrading treatment in all cases, even if ordered otherwise—even if ordered otherwise by the President?

Secretary HARVEY and General SCHOOMAKER. Questions regarding the impact of such hypothetical action are more appropriate for response by DOD. However, I note that current DOD policy which was published by the Deputy Secretary of Defense following passage of the Detainee Treatment Act of 2005 and which applies to soldiers and Army civilian employees, requires that they "ensure that no person in the custody or under the physical control of the DOD, regardless of nationality or physical location, shall be subject to cruel, inhuman, or degrading treatment or punishment."

PRESIDENT'S SIGNING STATEMENT

55. Senator MCCAIN. Secretary Harvey and General Schoomaker, when the President signed the defense bill, he issued a statement indicating that he would construe it "in a manner consistent with the constitutional authority of the President to supervise the unitary executive branch and as Commander in Chief and consistent with the constitutional limitations on the judicial power. . ." In your understanding, does this mean that the President could authorize an exemption to the legislative prohibitions?

Secretary HARVEY and General SCHOOMAKER. Questions regarding the impact of such hypothetical action are more appropriate for response by DOD.

56. Senator MCCAIN. Secretary Harvey and General Schoomaker, is there any circumstance in which a Department employee could legally engage in cruel, inhumane, or degrading treatment?

Secretary HARVEY and General SCHOOMAKER. Current DOD policy and the Detainee Treatment Act of 2005 prohibit cruel, inhuman, or degrading treatment, as that term is defined in the statute. Questions regarding the impact of such hypothetical action are more appropriate for response by DOD.

OFFICER TRAINING

57. Senator MCCAIN. Secretary Harvey, I understand the Army Reserve is the executive agent of the Reserve component's Officer Basic Course (OBC). With the National Guard currently authorized to recruit to the 350,000 end strength, I anticipate there will be an increase in the number of OBC seats required for these new officers. Has this program been sufficiently funded to accommodate the influx of new officers needing initial military education? If not, what plan do you have to ensure that new officers brought into the system are provided seats or funding to get them into OBC rapidly?

Secretary HARVEY. There are 2,285 Reserve component (RC) soldiers scheduled to attend the OBC in fiscal year 2007 (1,125 soldier mission for ARNG and 1,160 soldier mission for Army Reserve). Fiscal year 2007 OBC resources currently support 847 seats for the RC with $23.1 million in Reserve Personnel, Army (RPA) appropriation funding. Additional seats are required to support the current shortage of company grade officers and the influx of new officers for the RC. Fiscal year 2007 current estimated shortfall for OBC is $39.2 million. Both the ARNG and the Army Reserve have shortages in Company Grade officers which impact deploying units.

Any additional increase in OBC seats supporting an ARNG officer influx above the projected 1,125 ARNG mission would increase the estimated shortfall.

QUESTIONS SUBMITTED BY SENATOR JEFF SESSIONS

OPERATION AND MAINTENANCE ACCOUNT CUTS

58. Senator SESSIONS. Secretary Harvey, the various cuts to the Army's operation and maintenance accounts (OMA) are, if you haven't been briefed, about to have a significant impact at installation and depot level across any number of programs. While I appreciate the rationale behind the recently announced 1 percent Government-wide cut (which impacted Army operation and maintenance by -$238.98 million), I also realize that if equally distributed this particular cut will have a minor

impact on most installations/depots. What concerns me, however, is the cumulative impact OMA cuts are having on Army Materiel Command and the Assistant Secretary of the Army for Acquisition, Logistics, and Technology (ASALT) accounts and programs at this time. Hence, I would like an explanation to the following: What is the base OMA requirement and the current level of Army wide OMA installation funding particularly at my three Alabama Army installations?

Secretary HARVEY. The OMA requirements for installation base support is $12.4 billion. The current level of funding is $8.8 billion, or 71 percent of requirements. For Fort Rucker, Anniston Army Depot, and Redstone Arsenal, the requirement is $256.1 million. The current level of funding for these installations is $180.7 million or 71 percent of requirements.

59. Senator SESSIONS. Secretary Harvey, what is the cumulative impact of current and projected OMA cuts directed at ASALT PMs and your PEOs? Has anyone analyzed the cuts across the various mission areas to see the cumulative damage?

Secretary HARVEY. Over the past few years the Army has encountered many challenging issues regarding funding requirements for our PEOs and PMs. We have been forced to make tough tradeoffs to maintain support for the war, while concurrently trying to modernize our weapon systems. The Army has realigned funding to meet operational priorities and has undertaken Lean Six Sigma, implemented other efficiencies initiatives, and I deferred or suspended low priority requirements to garner resources to offset some of our shortfalls. Although there is no cumulative assessment of the OMA cuts, we carefully monitor key readiness indicators in area such as sustainment, operational tempo, and force protection to identify emerging issues requiring fiscal adjustments. Balancing our worldwide commitments has not been easy and the Army appreciates the assistance it has received from Congress through base and supplemental funding.

60. Senator SESSIONS. Secretary Harvey, what is the managerial rationale behind these cuts to ASALT ground and aviation programs when the Army is at war and Congress continues to fund the Army at extraordinarily high levels?

Secretary HARVEY. The Army has made a careful assessment of its capabilities prior to recommending program cuts. As the Army transforms to a modular force, the resulting force structure changes have precipitated adjustments to some key programs. The Army has assumed some risk with the ground systems but has realized slight growth in aviation as part of the aviation modernization strategy. The Army has realigned funding to meet operational priorities and has implemented other efficiencies initiatives and deferred or suspended low priority requirements to garner resources to offset some of our shortfalls. However, the leadership focus remains on fielding and sustaining full spectrum capabilities that are self-contained to provide increased flexibility and force availability.

61. Senator SESSIONS. Secretary Harvey, what is the current shortfall in Installation Management Agency (IMA) funding to installations in Alabama?

Secretary HARVEY. The current fiscal year 2006 OMA shortfall for Alabama installations is $75.4 million. However, fiscal year 2006 funding levels are preliminary. Installations may receive additional funding during the year of execution.

62. Senator SESSIONS. Secretary Harvey, most importantly, what is your strategy to restore the required level of OMA funding to our installations since we discussed little today at the posture hearing suggesting that the senior Army leadership is unaware that many Army and specifically Alabama installation and depot employees face termination in the near-term as a result of the shortages which exist in the aforementioned OMA installation and depot accounts?

Secretary HARVEY. The Army leadership is committed to its program of Installations as Flagships of Readiness. To that end, the Army is working to increase base support funding to ensure quality of life for soldiers, while maintaining a high rate of readiness for our power projection platforms. The Army has recently undertaken an ambitious effort to realign funds on the order of $1.3 billion to support our installations. Additionally, $400 million of supplemental reset dollars was recently released to the Army Materiel Command of which the Anniston Army Depot (ANAD) received $50 million The ANAD funds will support several programs to include the M88 Recovery Vehicles, Ml13 Family of Vehicles, M992 Field Artillery Ammunition Supply Vehicles (FAASV), M9 Armored Combat Earthmover (ACE) Vehicles, and various small arms programs. Additionally, funds continue to be provided to ANAD in support of the Abrams M1A1 AIM XXI Program on a month-to-month basis to prevent production breaks at General Dynamics Land Systems (GDLS) and the potential lay-off of over 100 GDLS employees. Actions continue within the Army to

identify required resources to fund these requirements in the coming months. Because of potential funding/workload fluctuations part of the Army's strategy has been to hire term, temporary, and contractor personnel when appropriate along with the judicious use of overtime to allow the depot workforce to be responsive to these types of adjustments. To date, all reductions associated with OMA decrements have been against contractor positions. One hundred forty-seven contractor personnel at Redstone Arsenal, Alabama have or will be released by March 31, 2006. There have been no reductions in force taken against Department of the Army civilians either at ANAD or Redstone as a result of insufficient funding or workload, and none are currently planned.

DISABLED SOLDIER SUPPORT

63. Senator SESSIONS. Secretary Harvey, last year Army Vice Chief of Staff General Dick Cody appeared before our committee and discussed a program called Disabled Soldier Support System (DS3) which was to provide severely wounded soldiers and their families with an advocacy system and followup personal support as they return to civilian life or Active-Duty.

Since that time the Army has changed the name to the Army Wounded Warrior Program (AW2), providing the same support system as DS3. Though I would tell you I neither think we are going as fast as we should to capture all eligible soldiers into AW2 nor are we being as comprehensive in our outreach to them.

In addition to AW2, I note with pleasure that the Army has also created a mentorship program—Army Knowledge Online (AKO) Mentorship Community and the Freedom Team Salute (FTS). In fact, I witnessed your acknowledgment of our colleagues—Senators Akaka and Inhofe last week at our caucus breakfast.

These are good additions to AW2, but I think the Army needs to better link our local communities in this effort. Would you support a grassroots mentorship and job creation program like that proposed by a group of citizens in Huntsville, Alabama which was directly linked to your AW2 program with the expressed mission of committing to the long term career development for veterans and their spouses?

Secretary HARVEY. As you mentioned, the Huntsville/Redstone Arsenal (Alabama) "Still Serving Veterans" organization is an excellent example of a specific community's desire to stand with and support our Nation's most severely wounded warriors and their families. AW2 has had the great honor to assist in similar grassroots efforts in both the private and Federal sectors.

We applaud the efforts of each of these communities and employers across the Nation and their deep desire to help the Nation's severely wounded veterans and look forward to working with them in this honorable task in the future.

AW2 is committed to fulfilling that portion of the Warrior Ethos which states "Never leave a fallen comrade" and ensuring that our severely wounded soldiers and their families receive the care, support, and assistance they rightly deserve. We understand and advocate that a soldier's successful reintegration into their community cannot be complete without the involvement of that community.

AW2 is prepared to support initiatives at any level, the caveat being that any effort needs to be appropriately vetted and clearly demonstrate to be in the best interests of soldiers and families. Organizations closely linked to AUSA or VA approved Veterans Service Organizations are such examples. Obviously, AW2 would not support organizations who demonstrate questionable practices or are prohibited from doing business with the Army or DOD, or organizations that give the perception that they take advantage of soldiers.

AW2 has requested in its fiscal year 2006 budget $375,000 for transition and employment assistance specialists who are assisting soldiers that are leaving the Army through the Walter Reed Army Medical Center (WRAMC) transition center. These specialists provide outplacement services (connecting AW2 soldiers with employers and working to get them hired). Additionally, soldiers receive hands on support and work closely with the WRAMC Army Career and Alumni Program.

AW2 continues to work closely with the community of San Ramon, California, and their Sentinels of Freedom program. This program provides an AW2 soldier with a 4-year scholarship, an apartment, vehicle, employment training, and most importantly the involvement of the community. The Sentinels of Freedom are preparing to offer this package to a second AW2 soldier within the coming months.

Numerous Federal agencies have used specific hiring authorities to extend Federal employment opportunities to AW2 soldiers. Within the Department of the Army, AW2 has supported the efforts of the Army Materiel Command, TRADOC, and the Missile Defense Command in either retaining soldiers on Active Duty or proving Federal employment to medically retired AW2 soldiers. The Veteran's Ad-

ministration has hired medically retired AW2 soldiers into full time Federal civilian employment. AW2 continues to work closely with the Department of Transportation's "American Hero Support Program" to provide employment to AW2 soldiers primarily at State departments of transportation.

AW2 is currently working with the Disney Corporation to develop an internship program titled "Casting for Heroes". This program is working closely with AW2 to place former soldiers in numerous positions within the Walt Disney parks and resorts.

64. Senator SESSIONS. Secretary Harvey, one such organization has emerged called Still Serving Veterans (SSV). I hope you will embrace what they offer and tie their efforts to AW2 as an extension of your vision. Together we can and will help our young veterans and their families with a quality of life they deserve. Will you visit with them when you visit Redstone Arsenal the next time?

Secretary HARVEY. I met with the SSV organization during a recent trip to Redstone Arsenal in March 2005. As you have mentioned, the SSV organization is an excellent example of a specific community's desire to stand with and support our Nation's most severely wounded warriors and their families. I was impressed by their dedication and commitment to helping these soldiers, and commended them for their work. As a result, during the annual Civilian Aide to the Secretary of the Army (CASA) Conference in April, I directed the CASAs to establish similar programs around the country in their States.

QUESTIONS SUBMITTED BY SENATOR JOHN THUNE

FUTURE CARGO AIRCRAFT

65. Senator THUNE. Secretary Harvey, it is clear from the Army's 2006 posture statement that the Army is undergoing a transformation which will make it a more flexible and more powerful force. Part of being flexible is having the ability to move men and supplies in theater. What role does the Army wish to play in the development of the new FCA?

Secretary HARVEY. As part of the Comanche reinvestment strategy the Army chose to pursue a replacement FCA to replace its aging C–23, C–26s, and C–12 aircraft. The FCA program was briefed to Congress on 7 April 2005.

For more than 2 years the Army has been in the process of pursuing a FCA. The FCA has been vetted through the Joint Capabilities Integration and Development System (JCIDS) process and the Army has a Joint Requirements Oversight Council (JROC) approved Initial Capabilities Document (ICD) JROCM 061–05, dated 21 March 2005, and a Capabilities Development Document (CDD) JROCM 303–05. All of these requirements were vetted with the other Services, specifically the Air Force. Since the Key West accords, DOD policy has consistently authorized the Army to procure and provide aircraft to meet its tactical intratheater lift requirements within Army organic force structure/lift assets. The Army is not trying to replace the Air Force or compete with their roles and missions; but the Air Force does not perform missions in the tactical spectrum down to what we call "the last tactical mile". Historically, tactical wheeled vehicles and helicopters have performed that role. Based on the modularity of BCTs, the distributed non-linear battlefield, combined with the logistics concept of support changing to a push system, the Army needs additional intratheater tactical lift capability. The Air Force agrees with this Army identified gap. This gap is the movement of "time sensitive, mission critical resupply and key personnel transport" from the initial staging base or port of debarkation to the BCT.

The Army anticipates being the lead agency in a FCA/LCA Joint Program Office (JPO) that will become effective 1 October 2006. The Services anticipate a JPO Charter will be approved by the Service's Acquisition Executives prior to the Army reaching Milestone C on the FCA program. The Army still plans to begin fielding FCA/LCA to its aviation force in fiscal year 2008. The USAF will follow with the fielding of the FCA/LCA approximately 2 years later.

66. Senator THUNE. Secretary Harvey, how many do you need at your disposal?

Secretary HARVEY. The Army's Analysis of Alternatives (AoA) defined a low risk requirement of 145 FCA. On 8 February 2006, the Army and Air Force agreed that the quantity identified in the Army AoA of 145 would be referred to as the "Initial Joint Requirement" and that the Army would procure 75 FCA and the Air Force will procure the remainder of the initial joint requirement. The Army and Air Force in coordination with the Joint Staff plan to conduct a follow-on joint AoA over the

next year or two to define the broader, full joint force requirement or fleet end-state for the Services.

67. Senator THUNE. Secretary Harvey, does the Army want to train pilots to fly these aircraft and if so, will this mission remain in the National Guard like the current C–23 and C–12 missions?

Secretary HARVEY. The current strategy calls for the manufacturer to initially conduct aircrew training. As the system enters full rate production, further evaluation will be given to the training strategy in light of the program's joint nature. The Services have also agreed to conduct a business case analysis as part of the joint training strategy determination that will identify the most feasible, affordable, and effective strategy for training aircrew members. Currently, the Army plans to field the FCA exclusively to the Reserve component (ARNG and Army Reserve).

RECRUITING

68. Senator THUNE. General Schoomaker, first quarter recruiting numbers for the Army in fiscal year 2006 were good news. In the first quarter, the Army recruited 11,511 for the Active-Duty; 5,740 for the Reserve; and 13,466 for the Army Guard. What steps is the Army taking to ensure it can continue meeting its recruiting requirements through fiscal year 2006 and what do you believe is the reason for this initial success after missing the recruiting goal in fiscal year 2005?

General SCHOOMAKER. The current recruiting environment remains very challenging. The global war on terror and a strengthening economy continue to impact military recruiting. Increased private sector competition, an upward trend in those pursuing higher education, and negative trends in centers of influence recommending military service are contributing to an erosion of recruiter productivity.

The Army has been successful in its year-to-date recruiting efforts due to resources committed in fiscal year 2005 and the Army's continuing efforts to shape its fiscal year 2006 Recruiting Action Plan early. Future recruiting success has also been made possible with the aid of Congress and its passage of the National Defense Authorization Act (NDAA) for Fiscal Year 2006, authorizing several critical initiatives. These include increasing the maximum enlistment bonus from $20,000 to $40,000 for the Regular Army and from $10,000 to $20,000 for the Reserve components, authorizing a pilot $1,000 referral bonus program for all three Army components, increasing the maximum enlistment age to 42 (current Army policy is limited at 40 for all three components), increasing the maximum term of service from 6 to 8 years, and providing temporary recruiting incentives authority for new programs for all three Army components.

To provide early success in fiscal year 2006, the Army has increased the number of recruiters and adopted the DOD standards for the trainability indicators (ASVAB Test Score Categories). The key issue remains to attract high quality men and women to serve as soldiers and meet future manning requirements. We are working to overcome the market effects by increasing incentives, developing new programs, and reducing attrition. We must remember that this is not just an Army issue, but a national issue.

QUESTIONS SUBMITTED BY SENATOR EDWARD M. KENNEDY

TACTICS, TECHNIQUES, AND PROCEDURES

69. Senator KENNEDY. General Schoomaker, during the hearing you indicated that the Multi National Coalition—Iraq Commander had requested the Joint IED Neutralizer (JIN) not be deployed to Iraq pending development of tactics, techniques, and procedures. What is the status of the Army's development of these tactics, techniques, and procedures (TTPs)? When do you anticipate having these TTPs sufficiently developed to allow deployment of the JIN?

General SCHOOMAKER. I have asked the Director, JIEDDO, to respond to your concerns.

70. Senator KENNEDY. General Schoomaker, how can the process be improved so we can more rapidly deploy equipment that has been developed and procured on an accelerated timeline?

General SCHOOMAKER. I have asked the Director, JIEDDO, to respond to your concerns.

71. Senator KENNEDY. General Schoomaker, for urgently needed capabilities to save the lives of servicemembers, shouldn't we develop the TTPs in parallel with fielding the capability?

General SCHOOMAKER. I have asked the Director, JIEDDO, to respond to your concerns.

72. Senator KENNEDY. General Schoomaker, will you provide the military utility statement for the JIN system to the committee?

General SCHOOMAKER. I have asked the Director, JIEDDO, to respond to your concerns.

REPAIR, REPLACEMENT, AND RECAPITALIZATION COSTS

73-75. Senator KENNEDY. Secretary Harvey and General Schoomaker, during the hearing we discussed an Army handout that showed a bill of $36 billion to repair, replace, and recapitalize the force. Notwithstanding the assumptions of this handout on when the drawdown would begin, or how long it would last, this is a sizable sum of money. To put this in perspective, can you provide the committee information on how many tracked and wheeled vehicles have been placed out of service due to battle damage in Iraq?

What is the Army's plan to repair or replace these vehicles?

How long do you anticipate this to take and how much do you expect it to cost?

Secretary HARVEY and General SCHOOMAKER. Regarding "repair," the Army uses battlefield damage assessment and repair (BDAR) procedures to return disabled equipment rapidly to combat or to enable the equipment to self-recover. BDAR is the commander's responsibility and is accomplished by the operator and crew. Equipment that is damaged beyond the commander's capability to repair becomes a battle loss to the commander and must be evacuated out of the tactical engagement area for repair. Depending on the extent of damage, the equipment may be repaired at a field maintenance unit or at a sustainment maintenance activity such as a forward repair activity, an installation maintenance activity or a depot. A commander's losses are immediately replaced with other assets. We do not track battle losses repaired at the operational level.

A piece of equipment that cannot be repaired or is uneconomical to repair at any level becomes a battle loss to the Army and is dropped from the Army's inventory. These items are replaced through procurement. As a result of OIF and OEF, Army losses of tracked and wheeled vehicles include: 18 Abrams tanks, 74 Bradleys, 22 Strykers, and 915 High Mobility Multipurpose Wheeled Vehicles (HMMWVs). Replacing the 18 Abrams tanks costs approximately $90 million; replacing 74 Bradleys costs approximately $176 million; and replacing 22 Stryker vehicles costs about $44 million. Replacement time for these systems is approximately 18–24 months, since they require long-lead items for production. Replacements for HMMWV losses are projected at $198 million. Since replacing battle losses is our first priority for distribution of the ongoing HMMWV production, these systems are generally replaced immediately.

EQUIPMENT SHORTFALLS

76. Senator KENNEDY. Secretary Harvey and General Schoomaker, GAO criticized the Pentagon last year for not having a strategy to end equipment shortfalls. Do you have a strategy for identifying force protection requirements and developing solutions to fill the gaps?

Secretary HARVEY and General SCHOOMAKER. Our overarching strategy is to foster an adaptive culture and maintain the agility in our systems/processes necessary to keep pace with a thinking enemy. We must recognize that when our forces are successful in achieving superiority against an enemy's preferred tactics and weapons, we will be confronted with new combinations. Army organizations have partnered to rapidly develop, assess, and field solutions to capability gaps identified by force commanders.

Army organizations such as the Rapid Equipping Force and Asymmetric Warfare Group work directly with the deployed forces to collect intelligence on threat capabilities and begin the development of either doctrinal or materiel countermeasures. Collaboration with the JIEDDO provides focused support to warfighting commanders for this critical component of force protection. The U.S. Army Armament Research, Development and Engineering Center and the U.S. Army Test and Evaluation Command have streamlined technical development and operational assessment processes to ensure rapid integration of solutions into the forces in contact.

The U.S. Army Training and Doctrine Command (TRADOC) leads Army-wide integration of these force protection solutions by incorporating successful tactics and materiel into the training base as well as ongoing assessments focused on development of protection capabilities for the future force.

77. Senator KENNEDY. Secretary Harvey and General Schoomaker, what actions have you taken to anticipate threats and force protection needs more effectively?

Secretary HARVEY and General SCHOOMAKER. The Army is striving to foster an adaptive culture and maintain the agility in our systems/processes necessary to keep pace with a thinking enemy. We recognize that it is impossible to anticipate, or resource to, all possible contingencies. We also know that when our troops are successful in achieving superiority against an enemy's preferred tactics and weapons, we will be confronted with new combinations. Our goal is to be able to react to the changing threats quickly and thus force the enemy into increasingly less effective modes of operation.

Increased communication between deployed forces and the institutional Army is critical to improving our ability to react to the changing threat environment. We have instituted regular video-teleconferences and key leader visits forward to ensure that field commanders have access to air concerns and share insights with the senior decisionmakers. Additionally, TRADOC, the U.S. Army Materiel Command, Corps of Engineers, the U.S. Army Intelligence Support Command, and other support organizations have established liaison elements in theater with reachback capability to pull information forward and focus home station analysis and mission support planning.

78. Senator KENNEDY. Secretary Harvey and General Schoomaker, what is the Army process for evaluating battle damaged vehicles to determine design weaknesses or opportunities for improvement to prevent future losses?

Secretary HARVEY and General SCHOOMAKER. [Deleted.]

79. Senator KENNEDY. Secretary Harvey and General Schoomaker, how many of these vehicles were damaged or destroyed by IEDs?

Secretary HARVEY and General SCHOOMAKER. [Deleted.]

80. Senator KENNEDY. Secretary Harvey and General Schoomaker, what should we do to improve their survivability?

Secretary HARVEY and General SCHOOMAKER. [Deleted.]

SOLDIER BENEFITS

81. Senator KENNEDY. Secretary Harvey and General Schoomaker, during the hearing there was considerable discussion about strain on the Army and the potential need for increased end strength. At one point you responded that even if the Army increased end strength, it would be difficult to achieve in view of recruiting challenges. If this is the case, then isn't it in our interest to make our best efforts to retain the force, particularly the mid-grade NCOs and officers so critical to leading the soldiers?

Secretary HARVEY and General SCHOOMAKER. The Army is retaining soldiers at exceptionally high levels. Since 2002, we have exceeded our total Army retention goals every year, culminating with 106 percent of our combined (AC, USAR, and ARNG) overall Army goal in 2005. In a time of war, and with the pace of current operations, this is a significant indicator of the quality of leadership within our ranks, the fact that soldiers believe in what they are doing and value the traditions of service to the Nation. Moreover, all components are employing positive levers including force stabilization policy initiatives, updates to the reenlistment bonus program, targeted specialty pays, and policy updates to positively influence the retention of our soldiers, especially the midgrade noncommissioned officers.

Active component officer retention has taken on renewed interest not because of an increase in officer loss rates, but because of a significant force structure growth. As a result of the new structure, the Army is short roughly 3,500 Active component officers, primarily senior captains and majors. Since it takes 10-years to promote an officer to major, we are confronted with the challenge of retaining more officers than we've done in the past.

The Reserve component is also experiencing shortage of officers. To date, we are experiencing a shortage of roughly 11,000 captains. This isn't because of force structure changes, but instead is a result of many years where our officers haven't been

completing the necessary civilian (e.g. baccalaureate degree) or military education (completion of their basic course).

The Army is being proactive and we are working several initiatives to retain more of our best and brightest officers. These initiatives include higher promotion rates, earlier promotion pin-on points, expanded graduate school opportunities, branch and posting for Active service, and establishment of an officer critical skills retention bonus. In addition, we are implementing better management programs for encouraging officers to complete their civilian and military education.

82. Senator KENNEDY. Secretary Harvey and General Schoomaker, in that case, it would seem that we would want to maintain the benefits that Congress has worked, in a bipartisan manner, to establish. If we want to retain these leaders, why isn't it appropriate to increase the TRICARE cost-share for some retirees?

Secretary HARVEY and General SCHOOMAKER. Congress' and the DOD's decision to make no upward adjustments in beneficiary out-of-pocket costs for over 11 years was very helpful to military families. We believe now is the time to begin to act in order to preserve the comprehensiveness of the military health benefit for all categories of beneficiaries into the future. The DOD designed the proposed cost-shares to ensure no out-of-pocket increases for soldiers, minimal changes in pharmacy copayments for Active-Duty family members, and to renorm retiree cost-shares to 1995 levels. Further, the DOD agreed that we should tier retiree cost-shares so junior enlisted retirees do not have to pay the same cost-shares as officers. Delaying these adjustments will only force more extreme increases in the future and have the potential to consume a larger portion of the budget that is needed for modernization and readiness programs.

83. Senator KENNEDY. Secretary Harvey and General Schoomaker, don't you think the soldiers who are making career decisions will see a change in their retirement benefits as breaking the faith with them?

Secretary HARVEY and General SCHOOMAKER. A recent survey by the U.S. Army Research Institute (ARI) suggests that retirement benefits and the continuation of benefits may affect retention. Of the top six reasons for enlisted soldiers thinking of, or planning on, leaving the Army before retirement, number six was retirement benefits. While the report indicates retirement benefits as a factor that may affect retention, we have no detailed data that quantifies the impact of changes in TRICARE costshares on retention. The conclusion seems logical based upon this and anecdotal evidence that suggests retirement benefits are important to retention and any perceived erosion in benefits could, in fact, negatively impact retention. To mitigate the negative impacts these changes may have on retention, we have to do a good job of educating soldiers and retirees on the need for these changes. We believe we can overcome the negative impacts of these proposals by demonstrating that TRICARE will remain a superb health benefit for all soldiers, Active and retired, and their families. Even after these changes, TRICARE will remain a very affordable healthcare option for retirees. Without these changes we risk an erosion of the Department's ability to invest in readiness, modernization, and training due to increased healthcare costs.

RECRUIT QUALIFICATION

84. Senator KENNEDY. General Schoomaker, in your testimony, you mentioned that only 30 percent of the age cohort for recruiting is eligible to join the Army. The Army has a variety of qualifications for new enlistees. Which qualifications are most commonly lacking in the other 70 percent?

General SCHOOMAKER. It is estimated that the 17–24 year old recruiting market is 32.1 million of which 30 percent are fully eligible and 15 percent are eligible with waiver. Of the remaining 55 percent, 11.2 million (35 percent) are disqualified for moral, dependent, and/or overweight reasons and 6.4 million (20 percent) are disqualified for medical reasons.

ARMY LABORATORY PERSONNEL

85. Senator KENNEDY. Secretary Harvey, Army research labs (like the Natick Soldier Center) are making great contributions to the development of new technologies and capabilities that we are currently fielding in Iraq and Afghanistan. Systems like new body armor, up-armored vehicles, robots, and sensors are all growing from research done by government scientists in defense labs.

Congress has tried to support the laboratories by granting them the authority to develop unique, flexible personnel systems that allow them to successfully compete with high tech industries for talented scientists and engineers. These are known as laboratory personnel demonstration programs and have been considered highly successful.

I am concerned that the implementation of the National Security Personnel System (NSPS) on these laboratories may adversely affect the labs' ability to keep the best possible workforce.

Have you asked your lab directors for their views on the possible implementation of NSPS on the laboratories and how it will affect their ability to perform their critical missions?

Secretary HARVEY. Yes, we have held two meetings with our laboratory directors to obtain their views and to consider their comments/questions on the NSPS. The NSPS PEOs participated in these sessions and they were well received by Army laboratory directors. There has been an open dialogue with Army laboratory directors and their representatives and the Office of the Assistant Secretary for Acquisition, Logistics, and Technology regarding their views of the impact of NSPS implementation. While the details of NSPS implementation are not yet finalized, we are hopeful that the NSPS will incorporate many of the flexibilities and authorities currently enjoyed by our laboratory demonstrations. Section 9902(c) of title 5, U.S.C. provides that the NSPS will apply to the designated DOD STRLs on or after October 1, 2008, only to the extent that the Secretary of Defense determines that the flexibilities provided by NSPS are greater than those under the STRL demonstration project authority. The Natick Soldier Center, although not currently designated as a demonstration laboratory, has recently made application for that status. In the end, we want all of our laboratories to continue to be able to recruit and retain the best possible scientific and technical workforce possible, whether as a continuing laboratory demonstration or as a part of the NSPS.

86. Senator KENNEDY. Secretary Harvey, have you done a comparative analysis for the Army on whether the NSPS system or the current lab personnel demonstration program systems provides the labs with more flexibility in attracting and retaining the finest possible workforce?

Secretary HARVEY. The Army has not completed a separate, formal comparative analysis between NSPS and laboratory demonstration systems. Rather, the Army has participated in the Secretary of Defense's effort in response to Section 1107 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108–375), that required the development of a plan for a comparative evaluation of the flexibilities of the authorities provided to the Secretary of Defense for STRLs and for NSPS. The section 1107 report has been coordinated with the Army and jointly developed by the Under Secretary of Defense (Acquisition, Technology, and Logistics) and the Under Secretary of Defense (Personnel and Readiness). The report is in coordination within the DOD and it is expected to be released shortly.

As background, the Army, along with the Office of the Secretary of Defense (OSD) and the other components, has worked closely with NSPS authorities since 2003. The Army ensured STRLs and acquisition demonstration participation in the NSPS planning and design. For example, OSD led cross-component workgroups in 2003 to identify "best practices" from the demonstration experiences. The results of this effort were also used to help frame the OSD NSPS legislative language that was approved in the National Defense Authorization Act for Fiscal Year 2004. Since that time, Army has worked closely with the STRLs, acquisition communities, and NSPS program office in developing the DOD NSPS regulations, implementing issuances, and supplementing Army policies. Every authority (e.g. pay for performance, pay banding, staffing, and compensation considerations) that the demonstration projects include has been thoroughly analyzed, discussed, and considered in the design of NSPS.

87. Senator KENNEDY. Secretary Harvey, when you complete that analysis, will you share the results with Congress?

Secretary HARVEY. Yes. The section 1107 report will be given to Congress after the coordination within the DOD is complete. The comparative analysis and evaluation described in the pending section 1107 plan to support the Secretary of Defense determination is currently planned for 2008, but it is an event-driven process. Once the Secretary's determination is made, Congress will be provided a copy of the results of the evaluation.

QUESTIONS SUBMITTED BY SENATOR JOSEPH I. LIEBERMAN

RECRUITING

88. Senator LIEBERMAN. Secretary Harvey and General Schoomaker, by my count, 2005 was the Army's worst year for recruiting since 1999. Last year, the Army fell short of its goal by about 6,600 new recruits. You have stated that the Army is not having a recruiting crisis, since it has met its goals for the last 7 months. However, the Army has backloaded its recruiting targets to rely heavily upon the third and fourth quarters of the year. Although it makes sense to focus recruiting in the summer months, this shift also adds high risks if recruiting in the summer months does not materialize. I am concerned because in the past, higher retention rates have made up the recruiting shortfalls, but reenlistment rates have sagged recently as well. Concerning this issue, I have several questions about recruitment and retention I would like to ask: Can you give me exact numbers of monthly recruiting targets and tell me how the Army is progressing towards its full-year goal of recruiting 80,000 new soldiers? How does the number of recruits enlisted so far compare to this time last year?

Secretary HARVEY and General SCHOOMAKER. Monthly recruiting targets for fiscal year 2006 are as follows: October is 4,700, November is 5,600, December is 700, January is 8,100, February is 6,000, March is 5,200, April is 5,400, May is 5,400, June is 8,600, July is 10,450, August is 10,050, and September is 9,800. The total mission is 80,000.

As of the end of January 2006, the Army was at 104 percent of its year-to-date recruiting target. At the same time in fiscal year 2005, the Army had recruited 22,305 new recruits as compared to 19,859 in fiscal year 2006. However, the increased production is most evident in the number of contracts written, which includes soldiers who have reported for duty and those who are still waiting to ship later in the year. As of the end of January 2006, the Army had written 5,500 more contracts than at the same time in fiscal year 2005. This is a 28 percent increase due to the increased number of recruiters, higher incentives, new initiatives, and improved marketing/advertising. Therefore, even though the number of accessions is fewer than at this time last year, the Army is better postured to achieve its mission of 80,000 new recruits than we were at this time last year.

89. Senator LIEBERMAN. Secretary Harvey and General Schoomaker, is the Army experiencing an erosion of the percentage of soldiers reenlisting?

Secretary HARVEY and General SCHOOMAKER. The Army is retaining soldiers at exceptionally high levels. Since 2002, we have exceeded our total Army retention goals every year, culminating with 106 percent of our combined (AC, USAR, and ARNG) overall Army goal in 2005. In a time of war and with the pace of current operations, this is a significant indicator of the quality of leadership within our ranks, the fact that soldiers believe in what they are doing and value the traditions of service to the Nation. The Active Army retained 69,512 soldiers in fiscal year 2005, finishing the year at 108 percent of mission, up from 107 percent in fiscal year 2004. The Army Reserve finished fiscal year 2005 at 102 percent, up from 99 percent in fiscal year 2004, and the ARNG finished fiscal year 2005 at 104 percent, up from 99 percent in fiscal year 2004. All components are employing positive levers including force stabilization policy initiatives, updates to reenlistment bonus programs, targeted specialty pays, and policy updates to positively influence the retention program. Ultimately, we expect to achieve fiscal year 2006 retention success in the Active Army, the ARNG, and the United States Army Reserve. Thus far, the Active Army has achieved 109 percent of the year-to-date mission, while the Army Reserve has achieved 91 percent of the year-to-date mission and the ARNG has achieved 106 percent of their year-to-date mission.

90. Senator LIEBERMAN. Secretary Harvey and General Schoomaker, do you agree with the conclusions of a RAND Corporation study, released in December 2005, which found that personnel shortages have led to an unwieldy "operations tempo" and job burnout?

Secretary HARVEY and General SCHOOMAKER. While the Army is deploying thousands of soldiers every year, there are certain specialties that are experiencing a higher personnel deployment tempo than others based on increased demands for those specialties in theater combined with shortages in the inventory. The Army monitors soldiers through the use of surveys and has concluded the number and frequency of deployments and time away from family, to include long garrison work hours, is the number one factor impacting retention. Although many soldiers choose not to reenlist for the reasons cited above, the Army's overall retention rate remains

high. Since 2002, we have exceeded our total Army retention goals every year, culminating with 106 percent of our combined (AC, USAR, and ARNG) overall Army goal in 2005. The Active Army retained 69,512 soldiers in fiscal year 2005, finishing the year 108 percent of mission. The Army Reserve finished the year 102 percent of mission and the ARNG finished at 104 percent of mission. All three components are on track for fiscal year 2006 mission accomplishment.

PROMOTION/RETENTION CORRELATION

91. Senator LIEBERMAN. Secretary Harvey and General Schoomaker, in 2005, the Army promoted 97 percent of all eligible captains to the rank of major. This percentage is up from the historical average of 70 percent to 80 percent. The Army also promoted 86 percent of eligible majors to the rank of lieutenant colonel last year, in comparison to the historical average of 65 percent to 75 percent. I know that the Army has taken great pride in the competitiveness of its promotions. Although our servicemen and women are the best and brightest in the history of the Army, I am concerned that the higher rates of promotion are partially a response to the higher numbers of officers who are resigning from the Army and the need to create more combat units without an overall expansion. For example, lieutenants and captains left the Army in 2005 at a rate of 8.6 percent, up from 6.3 percent in 2004. The rate of exit in 2005 for lieutenant colonels was 13.7 percent, the highest in a decade. Is the increased promotion rate a reflection of the fact that many of our officers, when faced with a third year-long combat tour in Iraq, are deciding not to stay?

Secretary HARVEY and General SCHOOMAKER. Company grade loss rates (lieutenant and captain) for fiscal year 2005 was 8.55 percent, slightly below the Army average of 8.64 percent (fiscal years 1996–2004). First quarter, fiscal year 2006 company grade loss rates were 8.4 percent. Immediately following September 11, 2001, company grade loss rates were at historical lows: 7.08 percent and 6.29 percent respectively. The 3 years prior to September 11, 2001, company grade loss rates averaged 9.8 percent.

The average loss rate for the past 10 years for colonel, lieutenant colonel, and major was 16.93 percent, 11.67 percent, and 7.4 percent respectively. The fiscal year 2005 loss rates for colonel, lieutenant colonel, and major were 17.9 percent, 13.7 percent, and 7.0 percent, respectively. Like the company grade loss rates following September 11, 2001, the loss rates for field grade officers dropped significantly. Current loss rates for these grades are back in line with pre-September 11, 2001, rates.

The overall authorizations for the Active component category have increased by over 3,500 officers. This has increased requirements for promotion. While current promotion rates are higher than the historical average, officers who are not deemed fully qualified by the board members are not selected for promotion.

RECRUITING PRACTICES TARGETED AT HISPANICS

92. Senator LIEBERMAN. Secretary Harvey and General Schoomaker, as the cochair of the Senate Democratic Hispanic Task Force, I'd like to ask a few questions about the Army's efforts to increase the recruitment of Latinos. I believe that the Army's dedication to increasing the numbers of Hispanics in the Army's Active-Duty Force is important, since Hispanics historically have been underrepresented in our military. To achieve the goal of recruiting more Hispanics into our Armed Forces, I am concerned about press reports which call into question the tactics recruiters are using with Hispanics. Although recruiters do not lie to potential recruits and their families, there are complaints that they may not tell the entire story or avoid explaining the intricacies of the process. Furthermore, there is concern that Hispanics in the military do not ascend into leadership positions. Currently, Hispanics only comprise 4.7 percent of the military's officer corps, although they make up 10.8 percent of the Army's Active-Duty Force. Can you comment on your recruiting practices targeted at Hispanics?

Secretary HARVEY and General SCHOOMAKER. As America becomes more diverse, the Army is working hard to keep pace and offer opportunities for everyone. The Army is working hard to increase the number of Hispanic recruits. The Army, during this fiscal year, added more than $10 million to its recruiting budget this year for advertising aimed at Hispanic audiences. The Army is running ads in Spanish and English in publications with high Hispanic readership, as well as running ads on several major Spanish-speaking television networks in the United States and Puerto Rico.

The Army also participates in conferences of major Hispanic professional and cultural organizations. We give presentations and set up booths so interested individ-

uals can meet with Hispanic servicemembers and learn about opportunities in the Army. Additionally, the Army participates in the annual conferences of such organizations as the League of United Latin American Citizens, the Hispanic Engineering National Achievement Awards Convention, the United Council of LaRaza, and the Mexican American Engineers Society.

93. Senator LIEBERMAN. Secretary Harvey and General Schoomaker, to what extent has the Army investigated allegations of misconduct in the recruiting process?

Secretary HARVEY and General SCHOOMAKER. We take all allegations of recruiter impropriety seriously, and despite violations from time to time, recruiters continue to uphold Army values and understand the importance of recruiting with integrity. The United States Army Recruiting Command (USAREC) conducts these investigations in order to maintain a force of recruiters who recruit with honesty and integrity every day. USAREC investigates each allegation, and takes appropriate actions based on the result of the investigation. Historically, data shows that USAREC identifies and reports over 80 percent of allegations through its checks and balances.

It is unfortunate that some recruiters occasionally take shortcuts in order to help some young people answer the call to duty. The USAREC philosophy is to achieve our recruiting mission by recruiting everyday with honesty and integrity.

There are 6,484 Active Army recruiters, 1,863 Army Reserve recruiters, and 5,047 ARNG recruiters in cities and towns across America. The vast majority of them embody the Army values of loyalty, duty, respect, selfless service, honor, integrity, and personal courage.

94. Senator LIEBERMAN. Secretary Harvey and General Schoomaker, what were the findings of such investigations?

Secretary HARVEY and General SCHOOMAKER. At the conclusion of a thorough investigation into each allegation by an investigating officer and a legal review by a judge advocate or civilian attorney advisor, a commander makes the factual decision to substantiate or unsubstantiate the allegation. The commander reviews each investigative file individually and decides if a particular allegation is proven by a preponderance of the evidence. The commander takes into consideration rebuttal statements submitted by the respondent, the investigating officer's recommendation, and the recommendation of the reviewing judge advocate or civilian attorney-advisor. Either a brigade commander or the commanding general makes the decision to substantiate or unsubstantiate an allegation. Once this decision is made, the deciding commander determines an appropriate disposition on a case-by-case basis. USAREC regulations and policies differentiate cases requiring commanding general action from those the brigade commanders can act upon.

In fiscal year 2005, there were 835 allegations received. Of these, 825 are closed with 123 (14.9 percent) closed as substantiated. There were 364 recruiting personnel who received some form of admonishment and 42 recruiters relieved based upon these allegations. To put this in perspective, 0.20 percent of the recruiting force was relieved for allegations of recruiting impropriety.

95. Senator LIEBERMAN. Secretary Harvey and General Schoomaker, what is being done in the Army to encourage Hispanics to move into leadership roles within the Army?

Secretary HARVEY and General SCHOOMAKER. The Army's Equal Opportunity (EO) policy does not target one ethnicity over any other. Conversely, the Army seeks the best and most qualified personnel for each and every position.

QUESTIONS SUBMITTED BY SENATOR JACK REED

ARMY SCIENCE AND TECHNOLOGY PROGRAMS

96. Senator REED. Secretary Harvey, the Army's request for science and technology (S&T) programs is actually down by $16 million with respect to last year's request, as well as down over $1.3 billion with respect to the 2006 enacted level. How is this reduction consistent with the need to continue the Army's transformation?

Secretary HARVEY. With the Army fully engaged in the global war on terror, we are consistently challenged to satisfy the resource demands to sustain current operations while simultaneously maintaining our S&T investments in the most important technologies to enable capabilities for the future modular force. While the fiscal year 2007 request is very slightly below last year's request (less than 1 percent), we believe that our request for $1.7 billion in S&T funding represents a significant

investment that is focused on satisfying priority needs of the future modular force while presenting opportunities to spiral new technologies into the current force.

97. Senator REED. Secretary Harvey, what areas of S&T are underfunded as a result of this request?

Secretary HARVEY. The Army S&T program is adequately funded consistent with ability to mature technologies synchronized with acquisition program funding to accept new technology into current programs in development or sustainment.

98. Senator REED. Secretary Harvey, what areas of S&T have been reduced in investment with respect to the 2006 request and why were these areas reduced?

Secretary HARVEY. The appearance of reduced investment in S&T funding for selected programs often reflects accomplishing desired maturation and transition of technology. Examples from 2006 include the successful completion of a major S&T program, compact kinetic energy missile and the successful transition of non line-of-sight launch system (NLOS–LS) technologies to the NLOS–LS SDD phase of this acquisition program.

99. Senator REED. Secretary Harvey, please provide a prioritized list of unfunded S&T opportunities that can be used as the committee considers the fiscal year 2007 budget request.

Secretary HARVEY. Although the Army S&T program is adequately funded, if Congress were to provide additional S&T funds, we would pursue additional research in the areas of: 1) alternatives to current approaches for increased tactical wheeled vehicle survivability; 2) advanced tracking and fire control for mobile counter rockets and mortar systems; 3) additional novel warhead interceptor concepts for active protection against kinetic energy munitions; and 4) alternative battery chemistries to increase the energy density and reduce weight.

PROMOTION RATES

100. Senator REED. Secretary Harvey, I am concerned with reports of junior officer attrition with simultaneous officer promotion rates significantly greater than historical averages. Last year 97 percent of eligible captains were promoted to major. With promotion rates there is no process of ensuring only the best officers are promoted. How is the Army ensuring only qualified officers are being promoted?

Secretary HARVEY. The Secretary of the Army, in his instructions to the promotion board, directs that the board select officers who will make the greatest contribution to our Army in the years ahead. In all cases the board satisfies itself that an officer is qualified professionally and morally, has demonstrated integrity, is physically fit, and is capable of performing the duties expected of an officer with his or her career field and skill qualifications in the next higher grade. While current promotion rates are higher than the historical average, officers who are not deemed fully qualified by the board members are not selected for promotion.

BIOMETRICS

101. Senator REED. General Schoomaker, I understand that you are the Executive Agent for DOD biometrics with responsibility delegated to the Army Chief Information Officer. Biometrics technologies will play a key role in developing new tools to defeat terrorists. What are you requesting in the fiscal year 2007 budget for research, development, procurement, and operation of biometric technologies?

General SCHOOMAKER. The Secretary of the Army is the Executive Agent for DOD biometrics, with responsibility delegated to the Army Chief Information Officer (G–6). The total Army funding request in fiscal year 2007 for biometrics and intelligence analysis support to biometrics is $132.7 million. The total Executive Agent investment for biometrics technology development request in fiscal year 2007 is $14.5 million (research, development, test, and evaluation appropriation), procurement $1.4 million (other procurement, Army appropriation) and operations $11.8 million (operations and maintenance Army appropriation). The Army G–2 investment for intelligence related research and development is $4 million, $13 million for operations maintenance Army and $8 million for other procurement, Army. The U.S. Army Intelligence and Security Command requested $80 million: operations and maintenance Army appropriation for contractor analysis $50 million; contractor forensics $10 million; and software and equipment $20 million.

SPECIAL OPERATIONS FORCES—CIVIL AFFAIRS

102. Senator REED. General Schoomaker, it is my understanding that one element of the QDR-based plan for the Army is to move Reserve Civil Affairs (CA) components from Special Operations Command (SOCOM) and put them under the command of regular Army units.

However, I understand that some special operators are concerned that conventional Army officers commanding these CA components may not understand their special capabilities. This could have a negative impact on Reserve CA professional advancement and readiness, as conventional officers would write their fitness reports, and might assign them conventional duties instead of taking advantage of their unique skills. There is also concern about whether they would be equipped to the same standard as Active-Duty CA.

Can you confirm that Reserve CA units will be placed under conventional Army commands? If so, how would you prevent this from having the negative impacts I mentioned that are feared by some special operators?

General SCHOOMAKER. One of the recommendations identified in the QDR is for the Army to rebalance the CA and psychological operations (PSYOP) forces. To accomplish this, the Army is growing the size of the CA and PSYOP forces by more than 3,700 positions in order to provide a greater depth of capability for both Special Operations Forces (SOF) and conventional forces. We are also realigning the USAR CA and PSYOP forces from U.S. Army Special Operations Command to the U.S. Army Reserve Command to better support the modular conventional force organizations at all levels. Based on the level of support required, the Army Force Generation model will be used to identify and align the appropriate USAR unit with a conventional force organization prior to operational deployment. This allows the CA and PSYOP units to train with and fully integrate into the supported unit. By integrating CA and PSYOP into the supported unit early, those soldiers will also become adept at including the civil-military aspect into all of their operations from mission planning through execution. The Active component CA and PSYOP units will primarily support SOF units and missions. This realignment provides the correct force mix and enhances CA and PSYOP support to the full spectrum of Army missions.

103. Senator REED. General Schoomaker, would SOCOM continue to equip Reserve CA units or would these units have to compete with all the other Army specialties or units for equipment? If so, would they be equipped to the same standard as Active-Duty CA under SOCOM?

General SCHOOMAKER. The Army will continue equipping Reserve CA units in accordance with Army resourcing priorities in support of the Army Campaign Plan and Army force generation requirements. We will transfer the funding stream for equipping Reserve CA units from the U.S. Army Special Operations Command to the U.S. Forces Command. The Army will transform CA units into two types that are designed and equipped to fully integrate, communicate, and operate with the forces they support. Active CA units will be designed to support unconventional forces, and Reserve CA units will be designed to support conventional forces. Reserve and Active CA units will receive the same level of modernization for common equipment. Reserve CA units will not receive equipment that is unique to supporting unconventional forces because their mission design will not require it.

QUESTIONS SUBMITTED BY SENATOR DANIEL K. AKAKA

CORROSION CONTROL

104. Senator AKAKA. Secretary Harvey, I am concerned that the expenditures necessary to develop the Army's FCS is diverting funds necessary to adequately maintain equipment currently in use, particularly with regard to corrosion control. Many of these advanced technologies will not be available for several years but the Army needs reliable equipment, today, in order to properly conduct its current operations. Will you commit to providing all necessary funding for the Army's current corrosion control program?

Secretary HARVEY. The Army will use corrosion prevention technologies (CPTs) in fiscal year 2007 and beyond, to protect tactical vehicles, aircraft and missile and armaments systems and support equipment. Promising technology categories include clear water rinse systems, cable connector covers to extend the life of wiring harnesses, nondestructive testing to identify hidden corrosion while it is inexpensive to repair, and preventive maintenance treatments to increase corrosion resistance of tactical vehicles and support equipment. Approximately 11,000 tactical vehicles

were completed in fiscal year 2005 and approximately 800 aircraft (one-third of Army's fleet) have undergone corrosion prevention during reset.

The Army's largest investment is in standardized processes to control corrosion at the Corrosion Control Centers. These centers are installed at a cost of approximately $2 million. Baseline operations costs are projected at $1.5 million per site ($0.5 million for facilities and $1.0 million for equipment applications) per year. Fixed facilities currently exist at Schofield Barracks, Hawaii; Fort Hood, Texas; Fort Polk, Louisiana; and Fort Bragg, North Carolina. Mobile application facilities exist at eight additional sites. Corrosion prevention treatments are also applied during reset and depot maintenance at Army depots and contractor sites. Discussions have been held to establish more Corrosion Control Centers.

GAO reports have shown that the return on investment/cost avoidance for corrosion prevention efforts is at least 4 to 1. The Army's CPT efforts will ensure that the Army efficiently meets the equipment readiness goals needed to sustain current and future contingency operations.

WASTE PREVENTION

105. Senator AKAKA. Secretary Harvey, the Army is requesting funding and authorities for Army business transformation initiatives which, you argue, will free human and financial resources for more compelling operation needs. Can you tell me specifically how these initiatives will address the issue of award and incentive fees being paid out to contractors who have not met their performance goals?

Secretary HARVEY. In light of the recent GAO report addressing the payment of award and incentive fees, the Department has issued a new policy memorandum dated March 29, 2006, Award Fee Contracts (FAR 16, DFARS 215, and DFARS 216). The recently issued guidance was a direct result of several of the recommendations from the GAO. Specifically, 1) award fees should be linked to identifiable interim outcomes, discrete events or milestones; 2) award fees must be commensurate with contractor performance; and 3) rollover of award fees should be used on an exception basis and adherence to strict guidance govern their usage. This new policy will apply to all contracts incorporating award and/or incentive fees clauses including any contracts supporting the various business transformation initiatives pursued by the Army.

106. Senator AKAKA. Secretary Harvey, what can you commit to doing right now in order to prevent further waste of taxpayer dollars?

Secretary HARVEY. As an immediate step, I have ordered the largest deployment of Lean Six Sigma ever attempted. This effort is underway with training, education, and process selection. Projects will be both centrally sponsored for crosscutting initiatives as well as command specific; a combined top-down and bottom-up approach to accelerate the transformational effect. The result will be reduced cost and cycle time while increasing quality, production, and reliability.

On a more systemic basis, our business transformation initiatives include Continuous Process Improvement using the Lean Six Sigma methodology, Business Situational Awareness, Organizational Analysis and Design, and Professional Development.

Business Situational Awareness is the product of timely and accurate information to support policy and resource allocation systems. These enterprise information solutions will provide Army leaders clarity on systems and processes where today it is difficult to observe.

Organizational Analysis and Design examines functions and structure of organizations, then redesigns and realigns organizational elements as necessary to accomplish the mission/work assigned. This analysis, design, and alignment will reduce redundancies and ensure organizations can effectively and efficiently fulfill the needs of our warfighters.

Professional Development of Army leaders is critical to successful business transformation and the Army is examining ways to broaden the education, training, and experience of our officers and civilians to meet the complex challenges of leading the Army business enterprise. This initiative area will help educate and develop leaders of Army enterprises so that they are fully prepared for the challenges of leading the Army's complex business organizations.

To ensure these efforts are successful and to highlight their importance, I have appointed Michael Kirby to lead this endeavor as the Deputy Under Secretary of the Army for Business Transformation.

RESERVE DEPLOYMENTS

107. Senator AKAKA. Secretary Harvey, according to the Army's 2006 posture statement one of your goals is to implement a strategy of one operational deployment in 6 years for the Reserve component. Do you anticipate that these deployments will extend beyond the 24 consecutive months currently authorized by law for the involuntary activation of members under partial mobilization?

Secretary HARVEY. No, deployments under the Army Force Generation model would not exceed the limits of existing law. The Army Force Generation is a training and readiness model that would generate a continuous output of trained and ready forces that will support one operational deployment in 6 years for the Reserve component. The model does not change the length of operational tours.

108. Senator AKAKA. Secretary Harvey, what support services will be available to the family members of reservists who are on extended employment keeping in mind that they may not live within close proximity to any military facilities?

Secretary HARVEY. The Army Reserve is constantly evaluating the programs that support our soldiers' families. Several initiatives and partnering ventures reflect Army Reserve leadership and family programs.

The Army Reserve has 141 family programs employees providing services to Reserve component soldiers and their families. They are responsible for monthly contact with unit leaders and our family readiness groups (FRO). Some of the family programs are:

- Army Family Team Building (AFTB) is designed to provide skills and knowledge for living within the unique framework of Army life. This training improves personal and family preparedness; which in turn, enhances overall Army readiness.
- Operation READY (Resources for Educating About Deployment and You) curriculum is a series of training modules, videotapes, and resource books published for the Army as a resource for staff in training Army families who are affected by deployments.
- Army Reserve Family Programs web portal provides service and vital information around the clock from anywhere in the world. It is a one-stop site for information and referral to military and community resources. The portal contains up-to-date information on benefits and entitlements, news and new programs. There are links to information from free financial planning, nearest locations for identification card issuance/renewal, DOD healthcare, the Red Cross, and Military OneSource. Military OneSource is available 24-hours a day, 7-days a week, toll-free 1–800–464–8107.

We continue to capitalize on technology that's readily available in the soldier's home, or from the local library, a family member's work, or Internet cafes located in the neighborhood. A new Army-wide initiative, known as the virtual FRO, designed to support and improve how information is passed to families when soldiers are deployed, was launched October 1, 2005, on the Internet. The virtual FRO is designed to replicate the major components of an FRO but in a virtual context.

There are several initiatives underway in the Army Reserve to provide premium support our Children and Youth Services. Some of the projects they are participating in are as follows:

- Community-based child care enables families to access an array of child care options regardless of physical location. Child care fees are reduced up to 25 percent of the participating family's local rate.
- Operation Military Kids focuses children of mobilized parents. It will include building community networks of support and creating broader understanding of the challenges of military life and separation throughout the communities and States. Operation Military Kids teams in various States will be trained in understanding military culture.
- Operation Proud Parents raises the quality standards at selected Boys and Girls Clubs of America (B&GCA).
- Operation Child Care is a nation-wide initiative to provide short-term "respite and reunion child care" for children of servicemembers returning from OIF and OEF during R&R leave. Care is coordinated through the National Child Care Resource and Referral Association.
- Families who live near a military installation can participate in Operation: Military Child Care. This initiative provides installation based child care available during soldiers' R&R leave. This allows families a "night out" and day-time opportunities to attend to personal business.

The National Military Family Association's Operation Purple offers summer camps around the country. The camps were made possible by a grant from Sears as part of the Sears American Dream Campaign. The program allowed youth from all branches of service to interact and learn from each other in an effort to help deal with deployment-related stress.

The Military Child Education Coalition has designed training for educators of military children. The training focuses on the issues that Army Reserve and National Guard youth face when a parent is mobilized and deployed. The training will be piloted in Texas starting in October. Additionally, several States have requested information and are developing their own training modules.

I cannot talk about family readiness without mentioning our Army Reserve Strong Bonds workshops (marriage enrichment weekends) for soldiers and their spouses after deployment. All Regional Readiness Commands and Direct Reporting Commands receive funding through the office of the command chaplain to host their own events. Additionally, chaplains are available to soldiers and their families for counseling and support.

We continue to look for ways to maintain a broad based approach to ensure our family members are cared for with a variety of opportunities while their soldiers are deployed.

109. Senator AKAKA. Secretary Harvey, what impact do you believe these extended deployments of members of the ARNG, in particular, will have on a State's ability to respond to natural disasters or civil disorders?

Secretary HARVEY. The main mission of the National Guard is homeland defense. The President, Governors, Congress, and the Secretary of Defense have clearly insisted that the Guard be fully prepared to engage in homeland defense and to support homeland security missions while simultaneously engaged in combat overseas; in fact, they insist that the National Guard be more accessible than they have ever been in the past. Congress further enhanced the Guard's domestic homeland defense and security mission capability in the National Defense Authorization Act for Fiscal Year 2005, by amending title 32 of the U.S. Code to authorize the funding of homeland defense activities by the National Guard, upon approval of the Secretary of Defense. The National Guard is committed to the Governors—the State Commanders in Chief—that each State will have sufficient capabilities under their control to meet their needs to respond to natural disasters or civil disorders. Those capabilities include key assets for command, control, and immediate response—the Joint Force Headquarters, Civil Support Teams, rapid reaction forces, medical, aviation, decontamination, and engineering units.

BUDGET REDUCTION IMPACT ON ARMY NATIONAL GUARD

110. Senator AKAKA. Secretary Harvey, it is my understanding that the Army was asked to reduce its budget by $11 billion. Is this correct, and how much of the reduction can be associated to the National Guard?

Secretary HARVEY. That is correct. Up to 48 percent of the reduction or $5.4 billion of the total Army reduction of $11 billion is associated with the ARNG. This reduction cuts both ARNG end strength and force structure. Force structure is reduced by six BCTs (four heavy and two light), one combat aviation brigade, and two division headquarters. It reduces end strength by 17,100, down to 332,900. This end strength reduction includes 906 Army Guard and Reserve (AGR) full-time personnel and 1,777 military technicians. The fiscal years 2008–2011 funding reductions exceed the end strength cut of 17,100, which equates to a reduction of 23,000 soldiers, reducing the funded end strength to 324,000 in fiscal years 2008–2011. The Army is reexamining these reductions and has committed to full funding of the ARNG up to an end strength of 350,000. To do this, the Army is evaluating options to restore funding in fiscal years 2007–2011 through the ongoing budget and program objective memorandum cycles.

111. Senator AKAKA. General Schoomaker, you assert that one of the significant contributions of the Army's FCS is that it will immediately place advanced technologies into use through the use of "spin outs" in roughly 2-year increments. How does the Army plan to minimize the risks of this sort of spiral development such as development cost over-runs and schedule push-backs due to unknowns in latter stage requirements?

General SCHOOMAKER. The management structure for the spin out activities significantly mitigates the risks in that it incorporates a disciplined systems engineering process to ensure that spin out technologies are managed according to an ap-

proved acquisition strategy and baseline. These technologies are being brought to maturity in conjunction with the FCS program and are subject to the FCS program risk management process. FCS has established a robust and intensively managed risk program that proactively and aggressively identifies, assesses, and monitors risks. Mitigation plans for addressing and controlling identified risks are developed as part of this process. Risks are closely monitored through a variety of program management tools such as regular risk reviews, program status reviews, EVMS reports, "graybeard" panels, experiments, demonstrations, etc. In order to provide an appropriate level of management visibility for spin outs, two Project Management Offices have been established, one within PM FCS to manage the integration readiness of spin out technologies and another within PEO Ground Combat Systems to manage the introduction of these capabilities into existing vehicle fleets. These two organizations are already working very closely to facilitate a seamless process of technology maturation, interface development, production, and fielding.

One of the primary issues to be addressed in this process is to determine whether the identified spin out technologies are mature and suitable for insertion into the current force. We may very well determine that some technologies are not mature to the point where they can be fielded to the force in the established 2-year increments. Immature technologies would continue to be developed within the core FCS program and readied either for a later current force insertion or a later spin out increment. Systems are developed, tested, designed, evaluated, and integrated through a series of bench, field and simulated experiments and tests. As an additional risk mitigation measure, we will use the Evaluation BCT to train, test, and learn how to use the candidate spin out technologies in an operational environment. This coordinated and comprehensive management approach inherently mitigates the cost and schedule risk to the Army.

QUESTIONS SUBMITTED BY SENATOR E. BENJAMIN NELSON

BODY ARMOR

112. Senator BEN NELSON. General Schoomaker, in the Army posture statement on page 16, there is a chart that shows where the Army stands on properly equipping soldiers with body armor. As of January 2006, the posture statement reads that "all soldiers and DOD civilians in theater are equipped; total of 693,000 body armor sets are fielded; plus 173,000 Deltoid Axillary Protector sets issued". Can the Army state then that every soldier in Iraq and Afghanistan is properly equipped with the right body armor?

General SCHOOMAKER. Yes, the Army can state that every soldier in Iraq and Afghanistan is properly equipped with the right body armor. The posture statement was correct at the time and the Army has continued to field enhancements to the body armor ensemble. As of February 14, 2006, the Army has fielded a total 754,345 sets of body armor and 172,860 sets of the Deltoid Axillary Protector. The Army also began fielding side plates on January 31, 2006. The Army expects to field 230,000 sets of side plates in theater by December 2006.

113. Senator BEN NELSON. General Schoomaker, is it also true that every soldier who is scheduled to leave for Iraq or Afghanistan is properly equipped with body armor?

General SCHOOMAKER. All deploying soldiers are properly equipped with a set of body armor prior to deployment.

114. Senator BEN NELSON. General Schoomaker, do you hear from any commanders or soldiers in Iraq or Afghanistan that there are still soldiers who are not properly equipped with body armor? After all, it was just over a year ago that the phrase "hillbilly armor" was used to describe the scavenging of parts for supplemental body armor.

General SCHOOMAKER. No, we do not hear from commanders or soldiers in Iraq or Afghanistan that there are still soldiers not properly equipped with body armor. Every commander at every level knows that we do not deploy soldiers into harm's way without a complete set of body armor. This has been a success story for the Army, and as new technology becomes available, the Army is rapidly testing, developing, and fielding IBA enhancements to our soldiers.

115. Senator BEN NELSON. General Schoomaker, have all parents, family members, and others who may have purchased additional body armor for their loved ones who are serving in Iraq or Afghanistan been reimbursed by the Army? Section

332 of the National Defense Authorization Bill for Fiscal Year 2006 states that this authority expires on April 1, 2006.

General SCHOOMAKER. Since November 2005, soldiers have been filing claims seeking reimbursement for qualifying items that they purchased themselves or that were purchased on their behalf. As these claims are received and processed, the Department of the Army has been making prompt reimbursement payments to these soldiers to the fullest extent permitted under the National Defense Authorization Act and the DOD's implementing guidance. All soldiers who have filed, and in the future file qualifying reimbursement claims, will be reimbursed by the Army.

Under the DOD guidance, soldiers may file their claims for reimbursement anytime up until October 3, 2006. The April 1, 2006, date referenced in the question is the purchase deadline date for which private purchases may qualify for reimbursement, not the date on which the authority to provide reimbursement expires, as suggested by the question. The authority to make reimbursement payments will continue until all claims filed by October 3, 2006, are finally processed.

116. Senator BEN NELSON. General Schoomaker, is there anything else, in terms of personal protection, which our soldiers are lacking that this committee could provide? For instance, are any soldiers lacking the best helmets to protect against high concussion head injuries from bomb blasts to vehicles?

General SCHOOMAKER. No, the Army's programs more than adequately address the requirements for providing individual protection in combat zones. Force protection is the Army's number 1 priority. We are currently pure fleeting operational forces with Enhanced Small Arms Protective Inserts, Deltoid Axillary Protectors, and side plates to complete every IDA ensemble. Force protection items are also fielded to deploying forces under the Rapid Fielding Initiative (RFI) program, to include the Advanced Combat Helmet.

From a philosophical standpoint, the equipment we have today is better than what we had yesterday, and what we will have tomorrow will be better than what we are fielding to today's soldiers. We face an evolving enemy who is absolutely committed to taking us on at any vulnerability that he can identify. We will continue to improve force protection relentlessly. I am convinced that what we have today is the state-of-the-art. This continuous evolution of the force protection that we provide our soldiers is absolutely essential.

QUESTIONS SUBMITTED BY SENATOR MARK DAYTON

IMPACT OF BRIGADE REDUCTIONS

117. Senator DAYTON. General Schoomaker, how is the reduction of ARNG combat brigades from 34 to 28 going to affect operational tempo or rate of deployment, for the remaining combat brigades?

General SCHOOMAKER. The rebalancing the Army is undertaking is aimed at reducing stress on both Active and Reserve components, improving the responsiveness of the overall force to achieve National Security Strategy goals, and improving the readiness and deployability of units. These efforts will ultimately ensure predictable deployment cycles for Army forces of one rotation every 3 years for the Active component and one rotation every 6 years for the Reserve component.

FUNDING FOR POTENTIAL END STRENGTH

118. Senator DAYTON. Secretary Harvey, the administration has pledged to fund an end strength of up to 350,000 in the ARNG. If the National Guard fulfills its recruitment and retention goals and achieves an end strength of 350,000, up from its current 333,000, how much money, on an annual basis, will be required to fund this difference in personnel?

Secretary HARVEY. The table below outlines funding necessary to resource the ARNG at an end strength of 350,000 provided mobilizations continue as anticipated, approximately 40,000 mobilized annually. The National Guard Personnel, Army and Medicare-Retired contribution, Army is specifically needed to pay the additional 17,100 ARNG soldiers and provide the required Defense Health Program funding. Additional funding is needed in operations and maintenance and military construction to continue providing the necessary support to the soldiers. Current negotiations are ongoing regarding equipment/investment (procurement) restoral, and the total dollar amount depends on the final outcome of force structure adjustments.

It is important to note that current funding levels in fiscal years 2008–2011 will only support an ARNG end strength of 324,000 not 333,000.

[In millions of dollars]

	Fiscal Year					
	2007	2008	2009	2010	2011	2007–2011
NGPA	$188.8	$536.1	$554.7	$567.1	$579.9	$2,426.6
Medicare—ret. HFC (NGPM)	62.4	66.4	70.7	75.3	80.1	354.9
OMNG	219.6	252.1	292.8	323.8	332.1	1,420.4
MCNG	0.0	80.3	30.6	88.7	42.6	242.1
ARNG specific Procurement	318.0	111.5	0.0	106.6	413.2	949.3
Total	$788.8	$1,046.4	$948.9	$1,161.5	$1,447.8	$5,393.3

ARNG funded end strength: fiscal year 2006-350,000, fiscal year 2007-333,000, fiscal year 2008-324,000.

[Whereupon, at 4:58 p.m., the committee adjourned.]

DEPARTMENT OF DEFENSE AUTHORIZATION FOR APPROPRIATIONS FOR FISCAL YEAR 2007

THURSDAY, FEBRUARY 16, 2006

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

PRIORITIES AND PLANS FOR THE ATOMIC ENERGY DEFENSE ACTIVITIES OF THE DEPARTMENT OF ENERGY AND TO REVIEW THE FISCAL YEAR 2007 PRESIDENT'S BUDGET REQUEST FOR ATOMIC ENERGY DEFENSE ACTIVITIES OF THE DEPARTMENT OF ENERGY AND THE NATIONAL NUCLEAR SECURITY ADMINISTRATION

The committee met, pursuant to notice, at 9:34 a.m., in room SD–106, Dirksen Senate Office Building, Senator John Warner (chairman) presiding.

Committee members present: Senators Warner, Sessions, Talent, Graham, Cornyn, Thune, Levin, Reed, and Clinton.

Committee staff members present: Charles S. Abell, staff director; Leah C. Brewer, nominations and hearings clerk; and John H. Quirk V, security clerk.

Majority staff members present: Lynn F. Rusten, professional staff member; Kristine L. Svinicki, professional staff member; and Richard F. Walsh, counsel.

Minority staff members present: Richard D. DeBobes, Democratic staff director; Madelyn R. Creedon, minority counsel; Bridget W. Higgins, research assistant, and Gerald J. Leeling, minority counsel.

Staff assistants present: Jessica L. Kingston, Benjamin L. Rubin, and Jill L. Simodejka.

Committee members' assistants present: Jeremy Shull, assistant to Senator Inhofe; Arch Galloway II, assistant to Senator Sessions; Russell J. Thomasson, assistant to Senator Cornyn; Stuart C. Mallory, assistant to Senator Thune; Elizabeth King, assistant to Senator Reed; and William K. Sutey, assistant to Senator Bill Nelson.

OPENING STATEMENT OF SENATOR JOHN WARNER, CHAIRMAN

Chairman WARNER. Good morning, Mr. Secretary. We understand that you have a commitment with the President down at the White House so we are going to make it possible for you to make

those commitments, and I will ask unanimous consent myself to include my statement in the record as stated in full. But, we are pleased to see you this morning, and I do recollect the last time you were here, a year ago, or thereabouts, you had been in the office 2 weeks, so this morning we expect you to be fully up to speed.

Secretary BODMAN. I was here a year ago, sir. I think your recollection is accurate. Two weeks is about right, and I hope you'll find me up to speed, sir.

Chairman WARNER. I'll cover some of the points in my opening statement.

[The prepared statement of Chairman Warner follows:]

PREPARED STATEMENT BY SENATOR JOHN WARNER

The committee meets this morning to receive testimony from Secretary of Energy Samuel Bodman on his plans and priorities for the Department of Energy's (DOE) national security programs. The committee will also receive testimony on the President's budget request for the atomic energy defense activities of the DOE and the National Nuclear Security Administration for fiscal year 2007.

I welcome our distinguished witness, the Secretary of Energy. Last year at this time, when you appeared before the committee, you had been "on the job" as Secretary less than 2 weeks. As you now realize, the challenges of the job you hold are formidable. I would like to take a few minutes to highlight some of these challenges that are of particular concern to me.

One of the most solemn responsibilities you have as Secretary of Energy, in conjunction with the Secretary of Defense, is to certify to the President of the United States on an annual basis that the nuclear weapons stockpile of this Nation is reliable, safe, and secure. Currently, the DOE relies on the science-based Stockpile Stewardship program to maintain the credibility of our nuclear weapons stockpile, without underground nuclear testing.

Congress looks to you to ensure that this program remains on track, and to request the funds you need to get the job done. We also look to you to tell us if any significant problems arise with respect to the safety and reliability of the stockpile that would require a resumption of live testing. Your assurance, along with that of the Secretary of Defense, that the stockpile remains safe, secure, and reliable is critical to the national security interests of our country.

To further support the goal of a reliable stockpile, DOE has undertaken a feasibility study of what has been termed the "Reliable Replacement Warhead." This study—being conducted at the direction of Congress and in consultation with the Department of Defense will, when completed, represent this Nation's foremost thinking on how to sustain our nuclear deterrent into the future with a high level of technical confidence and at an affordable cost. I encourage you, Mr. Secretary, to address your objectives for this study during your testimony this morning.

Another significant challenge for the DOE is the Environmental Management program, which is tasked with the cleanup of our defense nuclear sites. Although DOE expects to have completed cleanup at 87 of the 114 sites under the program by the end of fiscal year 2006, many of the most complex and costly sites remain. I encourage you, Mr. Secretary, to address how DOE is working to complete the remaining environmental cleanup work on schedule and on budget.

Finally, I look forward to hearing from you about DOE's current programs and future plans to advance the President's nuclear nonproliferation agenda. I note that the DOE's fiscal year 2007 request of $1.7 billion for defense nuclear nonproliferation represents a 7-percent increase over last year's request. This clearly reflects the high priority the President places on countering the threat of proliferation of weapons of mass destruction, as well as the DOE's growing role in that effort.

In particular, I hope you will update us on the status and plans for the mixed oxide (MOX) plutonium disposition program in Russia and in the United States—a program which has experienced significant schedule delays and rising costs; on implementation of the Global Threat Reduction Initiative; and on the other major programs focused on eliminating excess nuclear materials in the former Soviet Union and around the globe, and reducing the potential that such material could get into the hands of terrorists.

Mr. Bodman, we thank you for your continued service to the Nation as the Secretary of Energy. We look forward to your testimony.

Chairman WARNER. Senator Levin.

STATEMENT OF SENATOR CARL LEVIN

Senator LEVIN. Mr. Chairman, I'll also reserve most of my points for questions as well and put my statement in the record. I just want to welcome Secretary Bodman. I do wish, however, that you would, Mr. Secretary, in your opening comments, address at least a couple of issues. One is the recommendations that were made I think 8 months ago by the Department of Energy (DOE) Advisory Board that did a comprehensive study conducted at the request of Congress to make recommendations to improve and consolidate the nuclear weapons complex. If you could comment on the status of those recommendations.

Also, if you would address the issue of the DOE Advisory Board, which is now being disbanded apparently by you and abolished. Something similar happened to an advisory board at the National Nuclear Security Administration (NNSA) a few years back, so we have this pattern which is troubling where we have these controversial, technically complex issues without these outside balanced advisory boards, in both cases involving the DOE.

If you could address that in your opening statement, and I'll save the rest of my opening statement comments and weave those into my questions.

[The prepared statement of Senator Levin follows:]

PREPARED STATEMENT BY SENATOR CARL LEVIN

Good morning Mr. Secretary. It is a pleasure to welcome you to the Senate Armed Services Committee this morning. We look forward to discussing with you the many complex and controversial issues that fall within the purview of the Department of Energy (DOE).

Approximately two thirds of the Department's budget is funded in the defense accounts and thus falls within the oversight and authorization jurisdiction of this committee.

You have been Secretary of Energy for just a year and this is the first budget request for the Department that you have developed. This morning I look forward to hearing your views on the DOE, its budget proposals, and the problems and successes that you have identified in the Department over the past year.

Key defense-funded programs in the Department are the Environmental Cleanup, Restoration, and Waste Management programs; the Nuclear Weapons programs; and the Nonproliferation programs.

As part of the Department's fiscal year 2007 budget request, you introduced a new proposal that cuts across all of the DOE programs. This new proposal, the Global Nuclear Energy Partnership, is described in the budget material as "a comprehensive strategy to increase U.S. and global energy security, encourage clean development around the world, reduce the risk of nuclear proliferation, and improve the environment." Three key elements of this proposal are: (1) increased use of nuclear power reactors; (2) reprocessing of spent nuclear fuel; and (3) establishment of a global nuclear fuel services program that would provide nuclear reactor fuel and take back spent nuclear fuel. This is a controversial and complex proposal, with significant nuclear proliferation ramifications, which we need to understand fully.

The Quadrennial Defense Review and the 2001 Nuclear Posture Review both discuss the notion of "responsive infrastructures." I hope you will discuss what is a responsive nuclear weapons infrastructure, and is the Department moving to put this infrastructure in place.

A series of recommendations for improving and consolidating the nuclear weapons complex, thus presumably making it more responsive, were included in a comprehensive study, conducted at the request of Congress, by the DOE Advisory Board. Apparently there has been no action to implement the study, even though it was completed more than 8 months ago. I hope you will address that study's recommendations so we can understand any reviews that you are conducting or participating in, in response to or to implement the Advisory Board study.

Also, I hope you will explain to this committee why you have disbanded and abolished the Department of Energy Advisory Board. Several years ago the National

Nuclear Security Administration also disbanded its advisory board. This is a troubling trend for an agency that deals with so many controversial and technically complex issues. I am interested in the rationale for your action and why the DOE doesn't need advisory boards.

I also look forward to your discussion of the nuclear weapons stockpile stewardship program, the environmental programs and the nonproliferation programs of the Department.

Again, thank you Mr. Secretary for appearing before the committee today.

Chairman WARNER. Senator Sessions, do you have a comment or two you'd like to make?

Senator SESSIONS. I have a statement, but if you prefer I'll just hold that off as you have. I'm concerned about where we are in some of these matters. A good portion of this budgetary item will require the Strategic Forces Subcommittee.

Chairman WARNER. Senator Reed, would you likewise withhold opening remarks?

Senator REED. Yes, sir.

Chairman WARNER. Secretary, please begin. We have a vote. I think it is at 10:30. Thank you.

STATEMENT OF HON. SAMUEL W. BODMAN, SECRETARY OF ENERGY

Secretary BODMAN. Thank you, Mr. Chairman, Senator Levin, I'm very pleased to be here this morning to talk to you about the administration's priorities for nuclear weapons, threat reduction programs, and the DOE's environmental cleanup program. All this is spelled out in detail in my written testimony.

I want to just take a couple of minutes to share some of the highlights. First, our budget request supports the NNSA's three fundamental national security missions. These are first to assure the safety and reliability of the U.S. nuclear weapons stockpile while at the same time transforming that stockpile and the infrastructure that supports it.

Second, to reduce the threat posed by nuclear proliferation and third, to provide reliable and safe nuclear reactor propulsion systems for the United States Navy. To pursue these missions the budget proposals total $9.3 billion in fiscal year 2007. This supports the requirements of the Stockpile Stewardship Program consistent with the administration's Nuclear Posture Review (NPR) and the revised stockpile plan submitted to Congress in June 2004.

Approximately $1.4 billion in fiscal year 2007 is requested for the directed stockpile work with regard to the integrity of our facilities, information systems, and infrastructure. The budget also requests $665 million to fund the requirements of the design basis threat.

To support the Department's effort to contain and roll back the proliferation of dangerous materials, as well as technology and know-how, the budget proposal is $1.7 million for nuclear nonproliferation and threat reduction programs.

In addition to funding the national security missions of the NNSA, our budget seeks to fulfill our environmental commitments with a request of $5.8 billion to clean up legacy waste sites that were involved in the development of nuclear chemistry and physics.

We recently announced the completion of cleanup at Rocky Flats in Colorado with the reform of our nuclear weapons plant located just outside of Denver. In fiscal year 2006, DOE will also complete

the environmental cleanup of the Fernald and Columbus sites in Ohio, the Sandia National Laboratory in New Mexico, and several smaller sites as well. There is a lot more, Mr. Chairman, that I could go into, but I'm sure we will get into the details that are of interest to the Senators.

Before I close, I would like to mention a couple of things about the balance of the Energy Department program. In the President's State of the Union address, he announced two initiatives, the American Competitive Initiative and the Advanced Energy Initiative, which aimed to ensure that America remains at the forefront of an increasingly competitive world by pursuing transformational new technologies, and by increasing investment in clean energy sources that will transform our transportation sector. In fact, this should have an impact on our whole society.

As part of the Advanced Energy Initiative our budget request includes $250 million to begin investments in the Global Nuclear Energy Partnership, which may be of interest to this committee. This is a groundbreaking new international effort to expand safe, emissions-free nuclear power while enhancing our ability to keep nuclear technology and material out of the hands of those who would seek to misuse it.

If I may, sir, before concluding, address Senator Levin's questions. The Secretary of Energy Advisory Board (SEAB) report to improve the nuclear weapons complex is something that we take very seriously. It's the so-called Overskei report, I believe you're referring to, named after the Chairman, or at least that's what we have come to call it. The NNSA is working on a very comprehensive response to it. Many of the things recommended in there are efforts that are already ongoing; for example, the new type of warhead that we are trying to design, the so-called reliable replacement warhead, is one of those items.

There are other issues where we will see very large expenses in terms of trying to consolidate all of our highly enriched uranium and other special nuclear materials in one site, so that I think will be a problem. We will have a complete report, comprehensive report for you, I would think within the next couple of months.

Second, the SEAB, the decision regarding SEAB, that's more a reflection of me, frankly. I tend to operate with fewer specific advisors and more people who were there on the payroll doing the work. I have talked to the Chairman of SEAB and I have explained to him that I don't have a regular series of things that I would like them to do, but I feel quite confident that the Chairman, the Vice Chairman, and other members of the committee will be very happy to be responsive if we have specific matters that we need to take up, and we can simply reform it. I just do not want to feel, frankly, the pressure that I was feeling to identify areas to put them to work.

It's a very diverse group, and something that I felt was in the best interest of the Department, so that's a decision that I made. Mr. Chairman, I'd be happy to take questions.

[The prepared statement of Secretary Bodman follows:]

PREPARED STATEMENT BY HON. SAMUEL W. BODMAN

Chairman Warner, Senator Levin, and members of the committee, thank you for the opportunity to appear before you today to discuss the administration's priorities for nuclear weapons, threat reduction programs, and Department of Energy's (DOE) environmental cleanup program.

ADVANCING AMERICA'S NATIONAL SECURITY

Let me first address national security programs under the National Nuclear Security Administration (NNSA). NNSA's fiscal year 2007 budget request supports three fundamental national security missions:

- assure that the U.S. has a safe, secure, reliable and effective nuclear weapons stockpile while at the same time transforming that stockpile and the infrastructure that supports it;
- reduce the threat posed by nuclear proliferation; and
- provide reliable and safe nuclear reactor propulsion systems for the U.S. Navy.

NUCLEAR WEAPONS PROGRAMS

The Department is committed to ensuring the long-term reliability, safety, and security of the Nation's nuclear deterrent. Stockpile stewardship is working; the stockpile remains safe and reliable. This assessment is based not on nuclear tests, but on cutting-edge scientific and engineering experiments and analysis, including extensive laboratory and flight tests of warhead components and subsystems. Each year, we are gaining a more complete understanding of the complex physical processes underlying the performance of our aging nuclear stockpile.

To assure our ability to maintain essential military capabilities over the long term, however, and to enable deeper cuts in the stockpile through reduction of Reserve warheads, we must make progress towards a truly responsive nuclear weapons infrastructure, as called for in the Nuclear Posture Review (NPR). The Department is moving down the path towards realizing its vision for a transformed nuclear weapon stockpile and infrastructure which are enabled by its Reliable Replacement Warhead Program and its initiative for a responsive infrastructure.

Success in realizing this vision for transformation will enable us to achieve over the long term a smaller stockpile, one that is safer and more secure, one that offers a reduced likelihood that we will ever again need to conduct an underground nuclear test, one that reduces NNSA and Department of Defense (DOD) ownership costs for nuclear forces, and one that enables a much more responsive nuclear infrastructure. Most importantly, this effort can go far to ensure a credible deterrent for the 21st century that will reduce the likelihood we will ever have to employ our nuclear capabilities in defense of the Nation.

The NPR, and follow-on assessments, have resulted in a number of conceptual breakthroughs in our thinking about nuclear forces, breakthroughs that have enabled concrete first steps in the transformation of those forces and associated capabilities. Very importantly, the NPR articulated the critical role of the defense research and development (R&D) and manufacturing base, of which a responsive nuclear weapons infrastructure is a key element, in the New Triad of strategic capabilities. We have worked closely with DOD to identify initial steps on the path to a responsive nuclear weapons infrastructure.

What do we mean by "responsive nuclear weapons infrastructure" and what is it that we want it to do? By "responsive" we refer to the resilience of the nuclear enterprise to unanticipated events or emerging threats, and the ability to anticipate innovations by an adversary and to counter them before our deterrent is degraded. Unanticipated events could include complete failure of a deployed warhead type or the need to respond to new and emerging geopolitical threats. The elements of a responsive infrastructure include the people, the science and technology base, and the facilities and equipment to support a right-sized nuclear weapons enterprise. But, more than that, it involves a transformation in engineering and production practices that will enable us to respond rapidly and flexibly to emerging needs. Specifically, a responsive infrastructure must provide capabilities, on appropriate timescales and in support of DOD requirements, to:

- Dismantle warheads;
- Ensure needed warheads are available to augment the operationally deployed force;
- Identify, understand, and fix stockpile problems;
- Design, develop, certify, and begin production of refurbished or replacement warheads;

- Maintain capability to design, develop, and begin production of new or adapted warheads, if required;
- Produce required quantities of warheads; and
- Sustain underground nuclear test readiness.

The combination of the Reliable Replacement Warhead (RRW) and a responsive infrastructure—each enabled by the other—may genuinely be transformational. The reduced stockpile the President approved in 2004 still retains a significant number of non-deployed weapons as a hedge against technical problems or geopolitical changes. As we began to implement the concepts of the NPR, however, we and DOD recognized that if we could devise a truly responsive infrastructure, we could eliminate many of these hedge weapons. Once we demonstrate that we can produce warheads on a timescale in which geopolitical threats could emerge, we would no longer need to retain extra warheads to hedge against unexpected geopolitical changes. Once we can respond in a timely way to technical problems in the stockpile, we may no longer need to retain extra warheads as a hedge against such problems.

As we and the DOD take the first steps down this path, we clearly recognize that the "enabler" for transformation is our concept for RRW. The RRW would relax Cold War design constraints that maximized yield to weight ratios and, thereby, allow us to design replacement components that are easier to manufacture, are safer and more secure, eliminate environmentally dangerous materials, and increase design margins, thus ensuring long-term confidence in reliability and a correspondingly reduced chance we will ever need to resort to nuclear testing. This provides enormous leverage for a more efficient and responsive infrastructure.

Transformation will, of course, take time. We are starting now with improving business and operating practices, both in the Federal workforce and across the nuclear weapons complex, and through restoring and modernizing key production capabilities. Full infrastructure changes, however, may take a couple of decades.

But let me take you forward 20 or 25 years when the administration's emerging vision for the nuclear weapons enterprise of the future has come to fruition. The deployed stockpile—almost certainly considerably smaller than today's plans call for—has largely been transformed. RRWs have relaxed warhead design constraints imposed on Cold War systems. As a result, they are more easily manufactured at fewer facilities with safer and more environmentally benign materials. These replacement warheads have the same military characteristics, are carried on the same types of delivery systems, and hold at risk the same targets as the warheads they replaced, but they have been re-designed for reliability, security, and ease of maintenance. Confidence in the stockpile remains high, without nuclear testing, because the RRW design offers substantially increased performance margins and because of our deeper understanding of nuclear phenomena enabled by the stockpile stewardship program and the R&D tools that come with it.

By 2030, according to our vision, the deployed stockpile will be backed up by a much smaller non-deployed stockpile than today. The United States has met the responsive infrastructure objective that for a relatively minor problem, we are able to repair warheads and begin to redeploy them within 1 year. The elimination of dangerous and toxic materials like conventional high explosives and beryllium has made this possible and obviated the need for large numbers of spare warheads to hedge against reliability problems.

The world in 2030 will not have gotten more predictable than it is today. We still will worry about a hedge against geopolitical changes and attempts by others to instigate an arms race. But that hedge is no longer in aging and obsolete spare warheads but in the responsive infrastructure. Once again we have met the goal established in 2004 of being able to produce sufficient additional warheads well within the time of plausible geopolitical change.

The 2030 responsive infrastructure will provide capabilities, if required, to produce weapons with different or modified military capabilities if required. The weapons design community that was revitalized by the RRW program will be able to adapt an existing weapon within 18 months and design, develop, and begin production of a new design within 3–4 years of a decision to enter engineering development—goals that were established in 2004. Thus, if Congress and the President direct, we will be able to respond quickly to changing military requirements.

Security remains important in our future world. But the transformed infrastructure has been designed with security in mind. More importantly, new, intrinsic features built into the growing number of RRWs have improved both safety and security. In short, the vision I am setting forth is of a world where a smaller, safer, more secure and more reliable stockpile is backed up by a robust industrial and design capability to respond to changing technical, geopolitical or military requirements.

This isn't the only plausible future of course. But it is one we should strive for. It offers the best hope of achieving the President's vision of the smallest stockpile

consistent with our Nation's security. It provides a hedge against an inherently uncertain future. That's why we are embracing this vision of transformation. We should not underestimate the challenge of transforming the enterprise, but it is clearly the right path for us to take.

Progress on Stockpile and Infrastructure Transformation

Let me return to today and describe recent progress on transformation:

- Last year, the DOD and DOE jointly initiated an RRW competition in which two independent design teams from our nuclear weapons laboratories—Lawrence Livermore National Laboratory (LLNL) and Los Alamos National Laboratory (LANL) both in partnership with Sandia—are exploring RRW options. A competition of this sort has not taken place in over 20 years, and the process is providing a unique opportunity to train the next generation of nuclear weapons designers and engineers. Both teams are confident that their designs will meet established requirements and be certifiable and producible without nuclear testing. The program is on schedule—preliminary designs will be provided this March. After that, an intensive, in-depth peer process will lead to selection of a preferred option that will be considered for engineering development.
- An intensive effort is also underway to establish our detailed vision for the future nuclear weapons complex, and to identify pathways leading to that vision. As part of this effort, we have reviewed the recommendations from the Secretary of Energy Advisory Board (SEAB) Nuclear Weapons Complex Infrastructure Task Force (NWCITF) report, and the recommendations of other advisory bodies including the Defense Science Board. The major challenge is to find a transition path to the future that is both affordable and feasible while continuing to meet the near-term needs of the current stockpile. We will report in more detail on this effort later this spring.
- Transformation does not apply only to people, scientific tools and facilities. Today's business practices—for example, the paper work and procedures by which we authorize potentially hazardous activities at our labs and plants—are unwieldy and have had a major impact on our ability to carry out certain programmatic work at our sites. We must improve the way we manage risk including rigorous analysis of the costs and benefits associated with the methods and means of ensuring safe and secure nuclear operations.

Other accomplishments that will facilitate near term support to the nuclear stockpile include:

- We have restored tritium production with the irradiation of special fuel rods in a Tennessee Valley Authority (TVA) reactor, and anticipate that we will have a tritium extraction facility online in fiscal year 2007 in time to meet the tritium needs of our stockpile.
- We have restored uranium purification capabilities at our Y–12 plant, and are modernizing other capabilities, so that we can meet demanding schedules of warhead refurbishment programs, including, significantly, the B61 and W76 life extension programs which are scheduled to begin production in 2006 and 2007 respectively.
- We are on track to deliver a certified W88 pit to the stockpile in 2007. We were disappointed, however, that Congress declined to fund planning for a modern pit production facility in fiscal year 2006. As a result, we did not seek funding for this facility in fiscal year 2007, although we remain convinced that increased pit production capacity is essential to our long-term evolution to a more responsive nuclear weapons infrastructure. In coming months, we will work with Congress to identify an agreed approach to fund long-term pit production capacity. In the meantime, we plan to increase the Los Alamos pit manufacturing capacity to 30–40 pits per year by the end of fiscal year 2012. This production rate, however, will be insufficient to meet our assessed long-term pit production needs.
- We have taken steps to recruit and retain a strong workforce with the right skills for the focused mission.
- We are devoting substantial resources to restoring facilities that have suffered from years of deferred maintenance.

Nuclear Weapons Program Budget Breakdown

The fiscal year 2007 request supports the requirements of the Stockpile Stewardship Program consistent with the administration's NPR and the revised stockpile plan submitted to Congress in June 2004. Our request places a high priority on accomplishing the near-term workload and supporting technologies for the stockpile

along with the long-term science and technology investments to ensure the capability and capacity to support ongoing missions.

Over $1.4 billion in fiscal year 2007 is requested for the Directed Stockpile Work that will ensure that the Nation's nuclear weapons stockpile is safe, secure and reliable.

The NNSA is accelerating efforts for warhead dismantlement and consolidation of special nuclear materials across the nuclear weapons complex. Both of these efforts will contribute to increasing the overall security at NNSA sites.

In our fiscal year 2007 budget, $1.9 billion is requested for campaigns, which focus on scientific and technical efforts and capabilities essential for assessment, certification, maintenance, and life extension of the stockpile and have allowed NNSA to move to "science-based" stewardship.

Specifically, $424.7 million for the Science and Engineering Campaigns provides the basic scientific understanding and the technologies required to support the workload and the completion of new scientific and experimental facilities. We will maintain the ability to conduct underground nuclear tests at the Nevada Test Site.

The Readiness Campaign, with a request of $206.0 million, develops and delivers design-to-manufacture capabilities to meet the evolving and urgent needs of the stockpile and support the transformation of the nuclear weapons complex into an agile and more responsive enterprise.

With a request of $618.0 million for the Advanced Simulation and Computing Campaign, we will be able to remain on schedule to develop computational tools and technologies necessary to support continued assessment and certification of the refurbished weapons, aging weapons components, and a Reliable Replacement Warhead program without underground nuclear tests. As we enhance our computational tools to link the historical test base of more than 1,000 nuclear tests to computer simulations, we can continue to assess whether the stockpile is safe, secure, reliable and performs as required while reducing the need for underground nuclear testing.

The $451.2 million request for the Inertial Confinement Fusion Ignition and High Yield Campaign is focused on the execution of the first ignition experiment at the National Ignition Facility (NIF) in 2010 and provides facilities and capabilities for high-energy-density physics experiments in support of the Stockpile Stewardship Program. To achieve the ignition milestone, $254.9 million will support construction of NIF (includes the NIF Demonstration Program) and $168.7 million will support the National Ignition Campaign. The ability of NIF to assess the thermonuclear burn regime in nuclear weapons via ignition experiments is of particular importance. NIF is the only facility capable of probing in the laboratory the extreme conditions of density and temperature found in exploding nuclear weapons.

The Pit Manufacturing and Certification Campaign request of $237.6 million continues work to manufacture and certify the W88 pit in 2007 and to address issues associated with manufacturing future pit types including the Reliable Replacement Warhead and increasing pit production capacity at Los Alamos National Laboratory.

In fiscal year 2007 we are requesting $2 billion to provide for the maintenance and operation of existing facilities, remediation and disposition of excess facilities, and construction of new facilities to enable NNSA to move toward a more supportable and responsive infrastructure. Of this amount, $291 million is for Facilities and Infrastructure Recapitalization, $1.4 billion is for Readiness in Technical Base and Facilities (RTBF) Operations and Maintenance, and $281 million is for RTBF Construction.

The Secure Transportation Asset, with a request of $209.3 million, safely and securely transports nuclear weapons, weapons components, and special nuclear materials.

Security and the Design Basis Threat

Securing our people, our nuclear weapons and weapons-usable materials, our information, and our infrastructure from harm, theft or compromise is my highest priority. The job has become more difficult and costly as a result of two factors: the increased post-September 11 threat to nuclear warheads and associated fissile materials coupled with the primacy of "denying access" to these key assets—a much more rigorous security standard than establishing "containment" of the asset. The Department will meet the requirements of the 2003 Design Basis Threat (DBT) by the end of this fiscal year. NNSA's budget request of $665.7 million for security will ensure continued implementation of these DBT requirements and position the Department to respond to emerging 2005 DBT requirements. The current DBT, approved in November 2005, revised the high-level security requirements from which site-specific implementation plans are being finalized. Funds in fiscal year 2007 will be used, among other things, to upgrade protective forces weapons, training and equipment; harden storage structures; improve earlier detection and assessment of intrusion;

consolidate nuclear material; and install additional delay mechanisms and barriers around critical facilities in order to protect them from evolving threats. Funding for NNSA security programs has increased by almost 400 percent during this administration, which is a strong indicator of the priority Congress and the administration place on our security mission.

NONPROLIFERATION AND THREAT REDUCTION PROGRAMS

Let me now turn to our nuclear non-proliferation and threat reduction programs. Acquisition of nuclear weapons, Weapons of Mass Destruction (WMD) capabilities, technologies, and expertise by rogue states or terrorists pose a grave threat to the United States and international security. Our nonproliferation and threat reduction programs designed to combat this threat, implemented by the NNSA, are structured around a comprehensive and multi-layered approach. The administration's request of $1.726 billion to support NNSA activities to reduce the global weapons of mass destruction proliferation threat represents a 6.9 percent increase over the budget for comparable fiscal year 2006 activities.

This increase demonstrates the President's commitment to prevent, contain, and roll back the proliferation of nuclear weapons-usable materials, technology, and know-how. The Department works with more than 70 countries to secure dangerous nuclear and radioactive materials, halt the production of new fissile material, detect the illegal trafficking or diversion of nuclear material, and ultimately dispose of surplus weapons-usable materials. We are also working with multilateral organizations such as the International Atomic Energy Agency (IAEA) and the Nuclear Suppliers Group (NSG) to further strengthen nuclear safeguards and improve the nuclear export control regulatory infrastructure in other countries. This multi-layered approach is intended to identify and address potential vulnerabilities within the nonproliferation regime, reduce the incentive for terrorists and rogue states to obtain WMD, and limit terrorists' access to deadly weapons and materials. The following is a status update on a number of the Department's key nonproliferation programs.

Plutonium Disposition

The administration's fiscal year 2007 Fissile Material Disposition budget request is $638 million. $551 million of this total will be allocated toward disposing of surplus U.S. and Russian plutonium, and $87 million will be allocated toward the disposition of surplus U.S. highly enriched uranium. The plutonium disposition program, the Department's largest nonproliferation program, plans to dispose of 68 metric tons (MT) of surplus Russian and U.S. weapons-grade plutonium by fabricating it into mixed oxide (MOX) fuel for use in civilian nuclear power-generating reactors. DOE has made significant progress in implementing the plutonium disposition program in the past year. The U.S. and Russia successfully completed negotiations of a liability protocol for the program, and senior Russian government officials have assured the United States that this protocol will be signed in the near future. DOE has been also been working to validate the U.S. MOX project cost and schedule baseline as part of our project management process, and we will have a validated baseline in place before construction begins. DOE received authorization to begin construction of the MOX facility from the Nuclear Regulatory Commission, began site preparation work for the MOX facility at the Savannah River Site, and implemented a number of improvements to strengthen the management of the MOX project. Current plans call for construction of the U.S. MOX facility to start in 2006, with operations to start in 2015. The administration's budget request supports continuing this work in fiscal year 2007, which will be a peak construction year. Russia has also made progress by beginning site preparation activities for its MOX facility. Now that the liability issue is nearing resolution, high-level U.S.-Russian discussions are taking place to confirm the technical and financial details for the Russian program.

Global Threat Reduction Initiative (GTRI)

The GTRI represents the Department's latest effort to identify, secure, recover, and/or facilitate the disposition of vulnerable nuclear and radioactive materials worldwide that pose a threat to the United States and the international community. Since the creation of GTRI in May 2004, there have been a number of successes. Under our radiological threat reduction program, we have completed security upgrades at more than 340 facilities around the world. As a result of the agreement reached in Bratislava between Presidents Bush and Putin on enhanced nuclear security cooperation, we have established a prioritized schedule for the repatriation of U.S.-origin and Russian-origin research reactor nuclear fuel located in third countries. As part of our nuclear materials threat reduction efforts under GTRI, we conducted four successful shipments in 2005 to repatriate Russian-origin highly en-

riched uranium (HEU) from the Czech Republic (two shipments), Latvia, and Uzbekistan, in addition to several successful shipments to repatriate U.S.-origin spent nuclear fuel from Japan, the Netherlands, Sweden, Greece, and Austria. In fiscal year 2006, GTRI converted research reactors in the Netherlands, Libya, and the Czech Republic from the use of HEU to the use of low-enriched uranium (LEU) fuel, and also in fiscal year 2006 completed physical security upgrades at priority sites housing dangerous materials in Ukraine and Kazakhstan. The administration's fiscal year 2007 budget request of $107 million for GTRI supports major objectives, examples including; the acceleration of the recovery and/or disposal of eligible Russian origin materials in the Russian Research Reactor Fuel Return Program and the conversion of domestic research reactors under the Reduced Enrichment for Research and Test Reactors Program, with a total of seven conversions in fiscal year 2007.

Materials Protection, Control, and Accounting (MPC&A)

For more than a decade, the United States has worked cooperatively with the Russian Federation and other former Soviet republics to secure nuclear weapons and weapons material that may be at risk of theft or diversion. As a result of the agreement reached at Bratislava, we agreed to accelerate security upgrades at Russian sites holding weapons-usable materials and warheads. The Bratislava agreement provided for a comprehensive joint action plan for cooperation on security upgrades of Russian nuclear facilities at Rosatom and Ministry of Defense sites and cooperation in the areas of nuclear regulatory development, sustainability, secure transportation, MPC&A expertise training, and protective force equipment. A number of milestones for this cooperative program are on the horizon, and the fiscal year 2007 budget ensures that sufficient funding will be available to meet these milestones. Security upgrades for Russian Rosatom facilities will be completed by the end of 2008—2 years ahead of schedule. Cooperation with the nuclear warhead storage sites of the Russian Strategic Rocket Forces and the Russian Ministry of Defense sites will also be completed by the end of 2008. By the end of fiscal year 2007, we will have provided security upgrades at more than 80 percent of all the nuclear sites in Russia at which we now plan cooperative work.

The administration's budget request will enable us to expand and accelerate the deployment of radiation detection systems at key transit points within Russia and accelerate installations of such equipment in five other priority countries to prevent attempts to smuggle nuclear or radiological materials across state borders. Through our Megaports initiative, we are deploying radiation detection capabilities at three additional major seaports in fiscal year 2007 to pre-screen cargo containers destined for the United States for nuclear and radiological materials, thereby increasing the number of completed ports to 13. The International Material Protection and Cooperation fiscal year 2007 budget request of $413.2 million supports meeting all of the accelerated completion dates and objectives.

Elimination of Weapons Grade Plutonium Production (EWGPP)

The EWGPP program is working toward complete shut down of the three remaining plutonium production reactors in Russia at Seversk and Zheleznogorsk. These reactors currently produce enough material for several nuclear weapons per week. The overall EWGPP plan is to permanently shutdown and replace the heat and electricity these reactors supply to local communities with energy generated by fossil fuel plants by December 2008 in Seversk and December 2010 in Zheleznogorsk. The first validated estimate of total program cost—$1.2 billion—was determined in January 2004. After extensive negotiations with Russia, we achieved $200 million in cost savings. Also, pursuant to the authority provided in the Ronald W. Reagan Defense Authorization Act for Fiscal Year 2005 to accept international funding, we have received pledges of $30 million from six Global Partnership participants. Construction of the fossil fuel plant at Seversk started in late 2004, and the start of construction of the fossil fuel plant at Zheleznogorsk was recently approved. The fiscal year 2007 budget request of $207 million keeps both construction projects on schedule.

Nonproliferation and Verification Research and Development

This effort includes a number of programs totaling a budget request of $269 million in fiscal year 2007 that make unique contributions to national security by researching the technological advancements necessary to detect and prevent the illicit diversion of nuclear materials. The Proliferation Detection program advances basic and applied technologies for the nonproliferation community with dual-use benefit to national counterproliferation and counterterrorism missions. Specifically, this program develops the tools, technologies, techniques, and expertise for the identification, location, and analysis of the facilities, materials, and processes of

undeclared and proliferant WMD programs. The Proliferation Detection program conducts fundamental research in fields such as radiation detection, providing support to the Department of Homeland Security (DHS) and the Intelligence Community. The Nuclear Explosion Monitoring program builds the Nation's operational sensors that monitor the entire planet from space to detect and report surface, atmospheric, or space nuclear detonations. This program also produces and updates the regional geophysical datasets enabling operation of the Nation's ground based seismic monitoring networks to detect and report underground detonations.

Nonproliferation and International Security

Through this program the Department provides technical and policy expertise in support of U.S. efforts to strengthen international nonproliferation institutions and arrangements, foster implementation of nonproliferation requirements through engagement with foreign partners, and provide for transparent and verifiable nuclear reductions. Key policy challenges that will be addressed in fiscal year 2007 include efforts to strengthen the IAEA safeguards system, block and reverse proliferation in Iran and North Korea, and augment cooperation with China, India, and Russia. The fiscal year 2007 budget request for Nonproliferation and International Security is $127.4 million.

We need to remain cognizant of the linkage between a future that encourages broader use of nuclear energy in meeting rising energy demands around the world, and one that places a premium on nonproliferation and counterterrorism performance. No one nation can address these future challenges alone. No one nation has a monopoly on nuclear technology or on the ideas or proposals that will mitigate the threats posed by proliferation and terrorism. We will therefore continue to welcome the contributions and proactive cooperation of others who share our vision of a better future, one that enjoys the benefits of nuclear energy and one that is better protected from the dangers of theft or diversion of sensitive nuclear materials and technologies.

NAVAL REACTORS PROGRAM

Also contributing to the Department's national security mission is the Department's Naval Reactors program, whose mission is to provide the U.S. Navy with safe, militarily effective nuclear propulsion plants and ensure their continued safe, reliable and long-lived operation. Nuclear propulsion plays an essential role in ensuring the "forward presence" of the Navy around world to respond anywhere America's interests are threatened. The program has a broad mandate, maintaining responsibility for nuclear propulsion from cradle to grave. Over 40 percent of the Navy's major combatants are nuclear-powered, including aircraft carriers, attack submarines, and strategic submarines, which provide the Nation's most survivable deterrent. The administration is requesting $795 million to support the program's ongoing work on power plant technology, reactor safety, materials development and servicing and evaluation.

ENVIRONMENTAL MANAGEMENT (EM)

The Department's mission of remedying the environmental legacy of the Cold War is inherently challenging and innately beneficial to our country. The Office of EM is striving to regain momentum in the cleanup program, after encountering significant project management, regulatory, and legal challenges.

The program has made significant progress in the last 4 years in shifting focus from risk management to risk reduction and cleanup completion, an achievement not possible without the strong leadership and support of this committee. In fact, this last year we physically completed the cleanup of the Rocky Flats site in Colorado, produced 250 canisters of vitrified high level waste in South Carolina, and began the decontamination and decommissioning of the last remaining centrifuge facilities in Tennessee. This year alone, we expect to complete cleanup at up to nine sites. But over the last year, despite our commitment, EM performance has met with long-term mixed results for longer term cleanup.

Overly optimistic assumptions and unrealized technology advancements have led us to the slower progress we are experiencing. One of the most visible projects on which our progress has slowed is the Waste Treatment Plant at Hanford. The Waste Treatment Plant project is the largest, most complex construction project in the Nation and has encountered design and construction setbacks. We remain committed to fix the problems correctly, complete the project, and begin operations to treat the radioactive waste at the site. Other examples of slowing cleanup progress include delays in start of construction in South Carolina and delays in sludge cleanup from spent nuclear fuel basins in Washington.

We have not lost sight of the mission, nor the will to complete the EM mission in a manner that is protective of the environment and public while demonstrating fiscal responsibility. The fiscal year 2007 budget request reflects a balance of risk reduction and cleanup completion with other Departmental and national priorities. Overall, our request puts a high priority on tank waste treatment and radioactive waste disposition.

The fiscal year 2007 EM budget request is $5,828 million, a decrease of $762 million from the fiscal year 2006 appropriation, an indicator of the success we have demonstrated with the completion and closure of Rocky Flats in Colorado and several other sites.

At the Savannah River Site, this request will support ongoing stabilization of the site's stored nuclear materials, including funding for a container surveillance capability and consolidating the site's own plutonium into a single location. The request also provides for management and disposition of tank waste, including funding for design and construction of the Salt Waste Processing Facility.

This budget request will make possible a ramp up in construction of key components of the Waste Treatment Plant, and continues safe management of the underground tanks and waste retrievals from single shell tanks at Hanford. This request increases funding for the Advanced Mixed Waste Treatment Project in Idaho to support shipments of transuranic waste to the Waste Isolation Pilot Plant and the construction of the Sodium Bearing Waste Facility to treat tank waste. This request reflects an increase to support the critical path to closure for the East Tennessee Technology Park in Oak Ridge.

In addition, the request supports ongoing cleanup at NNSA sites like Nevada Test Site, Pantex Plant, and Lawrence Livermore-Site 300. It also supports transuranic waste disposal operations and complex-wide integration, including the first full year of remote-handled waste disposal at the Waste Isolation Pilot Plant in New Mexico.

This budget request also will continue to focus on our risk reduction and cleanup completion mission, with our goal to complete cleanup of eight more sites by 2009.

LEGACY MANAGEMENT

The Legacy Management (LM) program was established to provide a long term solution to the environmental legacy created by the Cold War. As the Office of EM completes its cleanup activities, certain aspects of the Department's responsibilities at those sites remain. These include remedy surveillance and maintenance, long-term groundwater pump and treat operations, records management, and the oversight of pensions and post-retirement benefits for contractor personnel. A long-term commitment to manage the resources and activities beyond the completion of active remediation is required. The activities of the LM program ensure that these Departmental responsibilities are addressed and EM is able to concentrate its efforts on cleanup and risk reduction.

Over the past year, LM and EM have been working in close cooperation to ensure the timely and effective transition of the three major EM closure sites: Rocky Flats, Colorado; Mound, Ohio; and Fernald, Ohio. EM and LM have established transition teams for each site consisting of subject-matter experts from different fields, such as environmental and regulatory compliance, community outreach, records management, and worker benefits. The goal of the teams is to have a seamless transition of sites from EM to LM.

Legacy Management's fiscal year 2007 budget request is just over $200 million. In fiscal year 2007, EM will transfer post closure management responsibility, work scope and budget target to LM for Rocky Flats, Fernald, and the Nevada Offsites. Due to additional cleanup of Operable Unit-1 at the Mound site, transfer of Mound from EM to LM will occur at a later date.

The significant increase in the LM budget in fiscal year 2007 is for pension contributions and the payment of post-retirement benefits for contractor retirees at Rocky Flats and Fernald. This request, previously included in the EM budget, constitutes just over $100 million of LM's total budget request. LM has also included $10 million associated with the ongoing management and administration of those pension and post-retirement benefits.

Long-term surveillance and maintenance will ensure protection of human health and the environment at legacy management sites. The fiscal year 2007 request for the long term surveillance and maintenance program is $45 million. The funding requested for fiscal year 2007 will allow LM to monitor and conduct long-term treatment of 94 sites in accordance with legal, contractual, and regulatory agreements. The $18 million increase reflects the added responsibility of the sites transferred from EM to LM—Rocky Flats, Fernald and the Nevada Offsites, as well as additional sites transferred to LM from private uranium mining and milling operations

under the Uranium Mill Tailings Radiation Control Act and sites from the U.S. Army Corps of Engineers associated with the Formerly Utilized Sites Remedial Action Program.

Finally, in an effort to communicate the significant costs associated with managing records and information associated with these sites, LM has chosen to separate the roughly $9 million for this purpose from the long-term surveillance and maintenance cost to make it more visible in this year's budget.

ENVIRONMENT, SAFETY, AND HEALTH

The Office of Environment, Safety, and Health (EH) is committed to protecting the safety and health of DOE workers, the public, and the environment by integrating safety and health awareness into all departmental activities. The office is also responsible for Price-Anderson enforcement and funding radiation health studies.

The budget request for fiscal year 2007 is $109.9 million, approximately 6 percent above the fiscal year 2006 appropriation. The budget is broken into Other Defense Program Activities ($80.8 million) and Energy Supply and Conservation Activities ($29.1 million).

In fiscal year 2007, EH will continue its commitment to protecting our environment by: continuing to ensure DOE compliance with the National Environmental Policy Act; guide and assist DOE programs and sites as they shift from development and documentation to implementation of the Environmental Management Systems; assist DOE sites in implementing the Department's Environmental Compliance Management Improvement Plan; and, continuing to guide and assist the implementation of DOE's requirements for public and environmental radiation protection.

The Department, and I personally, consider protecting worker safety to be of paramount importance.

On February 2, 2006, I announced a new safety rule which will require all nonnuclear DOE contractors to comply with applicable OSHA safety and health standards. Also, as applicable on a site-by-site basis, contractors will also be responsible for meeting additional health and safety consensus standards such as the American Conference of Governmental Industrial Hygienists; the National Fire Protection Association; the American National Standards Institute; and, the American Society for Mechanical Engineers. The new rule also establishes investigative procedures and fines for contractors who fail to meet safety and health requirements, with a potential fine of up to $70,000 per violation, per day. DOE nuclear workers are already protected under the Atomic Energy Act, which allows the Department to take enforcement actions against contractors who violate nuclear safety rules.

Environment, Safety, and Health Programs in fiscal year 2007 will continue to promote the health and safety of DOE's workforce and the communities surrounding DOE sites. The Former Worker Medical Surveillance Program provides medical evaluations to former DOE workers who may be subject to health risks as a result of exposures during their work at DOE. EH will also continue its ongoing health activities such as: the Radiation Effects Research Foundation's program, which conducts epidemiologic studies and medical surveillance of the survivors of the atomic bombings in Hiroshima and Nagasaki; and, provide special medical care for a small cohort of radiation exposed individuals in the Marshall Islands.

ADVANCING AMERICA'S ECONOMIC AND ENERGY SECURITY

Finally, I would also like to mention some exciting new Presidential initiatives announced in the State of the Union that involve the rest of the Department of Energy. The Department's budget for fiscal year 2007 follows the blueprint laid out by the President's new initiatives, the American Competitiveness Initiative and the Advanced Energy Initiative. The $23.5 billion budget request seeks to address America's short-term energy needs while positioning our country for the future. The budget request makes bold investments to improve America's energy security while protecting our environment, puts policies in place that foster continued economic growth, spurs scientific innovation and discovery, and addresses and reduces the threat of nuclear proliferation.

The Department's fiscal year 2007 budget features $250 million to begin investments in the Global Nuclear Energy Partnership (GNEP). GNEP is a comprehensive strategy to enable an expansion of nuclear power in the U.S. and around the world, to promote non-proliferation goals; and to help resolve nuclear waste disposal issues.

The Energy Information Administration projects that over the next 25 years, demand for electricity in the United States alone will grow by over 40 percent. Nuclear power is an abundant, safe, reliable, and emissions-free way to help meet this growing demand for energy throughout the world. As part of the GNEP strategy, the

United States will work with key international partners to develop and demonstrate new proliferation resistant technologies to recycle spent nuclear fuel to reduce waste. To help bring safe, clean nuclear power to countries around the world, the international GNEP partners will also develop a fuel services program to supply developing nations with reliable access to nuclear fuel in exchange for their commitment to forgo developing enrichment and recycling technologies.

Thank you. This concludes my formal statement. I would be pleased to answer any questions you may have at this time.

Chairman WARNER. Thank you, Mr. Secretary. We'll proceed with a 6-minute round for the members present and I'm going to yield my position to the chairman of the subcommittee.

Senator SESSIONS. Thank you, Mr. Chairman. You're very gracious. Mr. Secretary, I have great admiration for you, and I've enjoyed talking with you, and I know you've had now a year under your belt and are beginning to grasp some of the magnitude of the programs that we are dealing with. You also are charged with a lot of leadership responsibilities in reducing our addiction to foreign oil, to use the President's word, and I appreciate that.

But, I serve as chairman of the Strategic Forces Subcommittee, which amazingly has jurisdiction over 60 percent of the entire Department of Energy budget. This full Armed Services Committee has jurisdiction over 66 percent of the DOE budget.

Now, I've started to take a very serious look at the DOE programs authorized by the committee. The largest of these programs clearly are the weapons activities and the environmental management programs. In the Strategic Forces Subcommittee this year, Senator Bill Nelson, my ranking member, and I will be holding a hearing on March 7, where we will hear very detailed testimony from two DOE program officials about the fiscal year 2007 budget in these areas: weapons activities and environmental management.

Today, rather than address those details, I'd like to describe in broad terms my concerns about these programs and the DOE budget overall.

In my view, the amount of funding provided by Congress for DOE "atomic energy defense activities," that's what the budget account is called, is very large. Last year, Congress provided $16.2 billion for DOE defense activities. For fiscal year 2007, DOE has requested $15.8 billion. That is a small reduction. The $16 billion per year this committee authorizes for the DOE, though, represents a very large investment.

I've asked my staff to find the total budget for the last 20 years that has been spent on DOE atomic energy defense activities. The number is approximately $230 billion. We are in a situation, Mr. Secretary, where we have not added new warheads to the nuclear stockpile in over a decade.

We are not producing new warheads. We do not have the capability to manufacture many of the essential components of warheads such as plutonium pits. We have a decaying production complex, much of which has already been closed down, the rest of which is so old and contaminated that workers have to wear anti-contamination suits to go in them for routine matters.

We have treaties which require to us dismantle warheads at a faster and faster rate, yet we do not have enough space at facilities that we have left to do the work or to store the dismantled parts, nuclear and non-nuclear.

We have national laboratories that do a lot of gee-whiz science, but I'm not convinced this is all related to national security defense issues. But, it is paid for out of defense accounts. We have an environmental management (EM) program that doesn't seem to be managing very well, frankly.

We have projects such as the waste treatment project at Hanford, and the years when this project was running, it had a cost overrun of approximately $5 billion to $6 billion. That's the overrun. This project had essentially zero oversight from DOE headquarters personnel. That was before your time. In fact, DOE personnel apparently routinely accepted weekly status reports from the contractor claiming the contractor was perfectly on target for schedule and cost, something we now know to be untrue. DOE environmental cleanup budgets and commitments appear to be driven oftentimes by the most vocal outside groups. They seem to be setting standards and directing the investment.

Compliance agreements, many of which were made years ago, may have seemed like a good idea at the time, but technology and reality tend to intervene over the years. It has not been, in my opinion, based on careful analysis of real environmental situations, which ones pose the greatest risk and how much cleanup could be on each side and what priority.

So, Mr. Secretary, I think your challenge is a pot of billions of dollars there. If we could save just a billion or so a year, that would be real helpful. My question is exactly: Are the American people getting their money's worth from these programs? Is it time for Congress to call for a review of the entire DOE expenditure for those programs for both efficiency and value to the Government?

Secretary BODMAN. Senator, you have just accurately described the challenges that I confronted when I arrived, as the chairman said, 1 year ago. I wouldn't say, sir, that I agree with every one of your specific comments, but your general comments I think are well taken. This Department has not been known for its managerial expertise in my view.

There were certainly lapses, the most noted of which you've already mentioned, namely the vitrification plant at Hanford where it was clear that there were problems with respect to the contractor and the kind of reporting that the contractor was doing. There were problems with respect to the Department and the way the Department was overseeing and providing guidance to the contractor. To answer your question directly, if I look backward and ask were the American taxpayers getting their money's worth in some of these programs? I would say no, sir. The American taxpayer was not.

My job, as I see it, is to rectify that situation, and I am in the midst of attempting to do that, and I have shut down the activities with respect to the two most important parts of the vitrification plant at Hanford. We have had a complete review. I have met three times with the chief executive of the contractor. We now have quarterly, personal, face-to-face meetings scheduled. The next one will be in April. I am very satisfied with the changes that we have made in the leadership of the environmental management activities at the Department to take a much more hands-on attitude, apparently.

I do not know what went on before. I can't comment on that, but apparently a much more hands-on attitude. I do believe we have the, if one had to make a judgment, do you retain the contract or do you try to find a new one, I have made the judgment that we should retain the contract. At least that's my preliminary judgment depending on their response. They seem to be responding very well. So I feel that we are well on our way to improving the situation. We have an estimate to complete this. You're quite right that it's $5 to $6 billion more. It was $5 billion plus before, it's $10.9 billion today as an estimate to complete, and I will tell you that I think there are reasons, specific reasons to believe that it may be higher than that.

This is a very significant source of environmental problems that's been inflicted on the environment in Hanford, in and around the river there, and I need to fix it. That's been the job I believe that I've been given by the President and by the Senate committee who confirmed me. I am comfortable that we are making progress. I am not comfortable that we are at this point in time on top of everything.

Senator SESSIONS. Thank you. I appreciate your bringing to bear all your vast managerial skills to bring these matters under control, and we'll be continuing to follow up in our subcommittee.

Secretary BODMAN. I'm sure you will, sir.

Chairman WARNER. Thank you very much, Senator.

Senator Levin.

Senator LEVIN. Thank you very much, Mr. Chairman.

Chairman WARNER. You're welcome again.

Senator LEVIN. Secretary Bodman, 5 years ago Howard Baker and Lloyd Cutler, serving on the task force on Russia, issued a report on the DOE's nonproliferation programs with Russia. One of the key findings of their report was the most urgent unmet national security threat to the United States today was the danger that weapons of mass destruction in Russia could be stolen and sold to terrorists or hostile nation states and used against American troops abroad or citizens at home.

Now here we are 5 years later. They recommended that we spend $3 billion each year to secure the Russian weapons grade materials. We are not spending anywhere near that. The DOE has increased its spending to broaden the scope of nonproliferation programs in the last 5 years, but not relative to that most significant challenge, which is the Russian nuclear material challenge.

I am wondering if you could give us your brief view on the state of the play of our program with Russia, is it just a financial limitation? Is that why we have not carried out the Baker-Cutler recommendation? Also, what is the G–8 doing to support its commitment to provide $10 billion over 10 years to address nonproliferation issues?

Secretary BODMAN. I'm not familiar specifically with the report to which you refer. I am, of course, familiar with our efforts with respect to Russia. We have a number of programs, and are doing everything that I could imagine that we should be doing to ameliorate the situation. I do not believe that we have any major problems with respect to the amount of funding that has been made

available. By and large, this Congress has been quite responsive to requests.

We do have a program that calls for the return of nuclear materials that have been shipped out of Russia to other countries and are now located in laboratories all over the world, to return those materials and replace them with low enriched uranium at the sites that are referred to. We have a similar program in the United States, and the idea is that we have sought to work with the Russians in parallel. The Russians, of course, are a sovereign nation, and we do not dictate to them what they do and what they do not do.

Senator LEVIN. Are we spending all the money that we really need to be spending to address that challenge?

Secretary BODMAN. Would I do it faster if I had the power to spend money? I probably would, but I'm not dealing with a country that I control. I'm dealing with a country that Mr. Putin has responsibility for.

Senator LEVIN. Is that where limits come from, or financial resources here at home?

Secretary BODMAN. I think it's much more, sir, in the responsiveness and receptivity in Russia. They have been responsive and they are, I don't want to say that they have not. They have been. But, it's measured and it takes time. Sir, even despite Senator Sessions' comments about how poorly we have operated, and I don't dispute his comments, the Russian bureaucracy makes us look pretty speedy. There are issues with respect to getting decisions made there.

But I feel that we are doing everything that I can see. These are the professional nonproliferation people.

I have intervened to come to know Mr. Khristenko, who is the new head, Mr. Putin's newly designated person to manage their nuclear affairs. I'll be meeting him personally next month. I have spoken with him on the phone and will talk to him hopefully tomorrow. That's also scheduled. So I think we are making progress, but we have, for example, had the so-called Mixed Oxide (MOX) program which I know Senator Lindsey Graham is very interested in. This is the use of plutonium in Russia, and the creation of a metal oxide fuel that can be used in commercial reactors both in the U.S. and in Russia. We have had 2 years delay on that while we have argued over the terms of liability, and we finally have resolved that matter last summer. We then negotiated final terms, and it is working its way.

As of now as I sit before you, Senator Levin, I do not have a signed piece of paper that says the Russians have signed off on this, but I'm hopeful. Our interlocutors on the other side indicate that everything is fine and that this is how long it takes to get things done.

Senator LEVIN. Mr. Secretary, you made reference to the Global Threat Reduction Initiative (GTRI) which is a series of programs that secure U.S.-origin highly enriched uranium fuel at research reactors around the world, take back the spent fuel and then try to convert that fuel into low enriched uranium.

Secretary BODMAN. That's both Russian and U.S. reactors. So it's both.

Senator LEVIN. Right. That's an excellent program, but the funding for that program is restricted quite severely. It's my understanding it is about $100 million in your request, and my question is this. Is that program injured by a lack of money specifically? Are there countries with research reactors that use U.S. origin highly enriched uranium fuel that want to return that fuel and close down and convert their reactors to low enriched uranium fuel that can't do so because of lack of funds in that program?

Secretary BODMAN. I do not know. I'd be happy to get you an answer to that specific question.

Senator LEVIN. Thank you. Senator Collins and I proposed in the energy bill passed by Congress last August a provision which was adopted to develop procedures for acquiring oil for the Strategic Petroleum Reserve in order to minimize the cost to the taxpayers of filling that reserve and minimizing the effect on oil prices.

Has the DOE implemented that provision?

Secretary BODMAN. I do not know the answer to that either.

Senator LEVIN. My time is up.

Secretary BODMAN. I would be happy to get that answer.

Senator LEVIN. I appreciate that, for the record.

[The information referred to follows:]

The Global Threat Reduction Initiative (GTRI) program is not injured by a lack of money. The administration's fiscal year 2007 request of $106.8 million fully funds the operational priorities of the GTRI. We have developed comprehensive metrics and a prioritization model that identifies the highest threats, considers our ability to address those threats over time, and, thus, allows us to align our priorities over the fiscal years accordingly. The administration's fiscal year 2007 budget request fully addresses those priorities.

The Reduced Enrichment for Research and Test Reactors (RERTR) program has sufficient funding to convert all targeted civil research reactors that use U.S. origin fuel that have also demonstrated a long-term mission and the ability to fund their day-to-day operating costs. The goal of the RERTR program is to support the conversion of civil research reactors to the use of low enriched uranium (LEU). The RERTR program works to ensure that conversion does not exact a financial or scientific penalty on a facility and uses its incentive funding to defray the additional cost that may result from conversion activities. The RERTR program funding is not used, however, to cover the cost of continued operation of the facility. In other words, the facility needs to demonstrate that it has a long term mission and it must be responsible for funding the day-to-day costs of operating the facility.

The Foreign Research Reactor (FRR) Spent Nuclear Fuel (SNF) Acceptance program works with the research reactor operator after its decision to shutdown or convert. A reactor is eligible to participate in the program on the condition that it agrees to convert its core and return the highly enriched uranium (HEU) SNF. The FRR SNF Acceptance program is considered an incentive for the RERTR program. In accordance with GTRI's prioritization models, the program has initiated communication with several research reactors to assist in reactor conversion and/or repatriation of HEU fuel, such as South Africa, Turkey, Austria, Jamaica, and Mexico.

The Notice of Proposed Rulemaking for acquisition of crude oil for the Strategic Petroleum Reserve will be published in the Federal Register on April 24, 2006. The procedures include provisions for acquisition through several means, including direct purchase, by transfer of royalty oil from the Department of the Interior, and by receipt of premium barrels resulting from deferral of scheduled deliveries of petroleum for the reserve.

In accordance with the direction provided in the Energy Policy Act of 2005, the Department developed the procedures with consideration to maximize the overall domestic supply of crude oil; avoid incurring excessive cost or appreciably affecting the price of petroleum products to consumers; minimize costs in acquiring the oil; protect national security; and avoid adversely affecting market forces and supply levels.

The public will have 30 days after publication to submit comments to the Department. After consideration of all of the comments received, the Department will publish a final rulemaking.

Chairman WARNER. Mr. Secretary, I would observe—I appreciate your acknowledgment of what you know and what you don't know. We are all in that boat. Sometimes some of us maybe lack the courage to admit it. I appreciate your wanting to look into it.

Senator LEVIN. Can I just comment on that? I agree with your comment, by the way, Mr. Chairman. The Secretary of Defense sometimes says, "You don't know what you don't know." You do know what you don't know, and we appreciate that.

Chairman WARNER. I want to return to Senator Levin's first question about the Cutler-Baker report. That has to be a priority that I urge you to put at the very, very top. Because in this exceedingly troubled world, and the desire for countries to access some knowledge and indeed the materials to foster their own goals to join the nuclear club or have possession of dirty bombs and the like, we really have to put a lot of emphasis on that. I'm going to ask you to go back and look at that Howard Baker report, study it and provide for the record your own assessment of the validity of the goals as they are compared to the facts facing us today. Maybe some of those goals would be changed. What the Department did in compliance thus far with the recommendations, and what in your judgment remains to be done to fulfill the objectives of that report.

I remember it quite well. It was an exceedingly valuable contribution at that time when the level of concern was great, but I'm personally speaking for myself and I think my colleagues know this. We think it's a high priority.

Secretary BODMAN. Sir, I did not want to suggest that this matter is not a high priority. It is a very high priority in the Department. It has been. It seems to me that the greatest threat to our country is the potential for proliferation of material and I assure you I believe and we allocate our time and effort——

Chairman WARNER. Your point is well taken.

Secretary BODMAN. I have not read that specific report and I would be happy to do that and respond to your request, sir.

Chairman WARNER. For the record we are making this morning.

Secretary BODMAN. Happy to do it.

[The information referred to follows:]

The 2001 Baker-Cutler Report reviewed the Department of Energy's nonproliferation programs in Russia and made a series of recommendations including acceleration of programs, increases in funding, improved access to sensitive Russian sites and the creation of a high-level position to oversee all nonproliferation programs government-wide.

Since the Report, the NNSA has made significant progress in securing sites with weapons usable material and nuclear warheads in Russia. The Bush-Putin Joint Statement on Nuclear Security at Bratislava in February 2005 elevated our dialogue to a national level and has moved our cooperation to one of a shared partnership. This Statement includes for the first time a comprehensive joint action plan for the cooperation on security upgrades of Russian nuclear facilities at Rosatom and Ministry of Defense sites and cooperation in the areas of nuclear regulatory development, sustainability, secure transportation, Materials Protection Control and Accounting (MPC&A) expertise training and protective force equipment.

As a result, cooperation on physical protection of sensitive nuclear sites in Russia was accelerated and all upgrades are expected to be completed by the end of 2008. Hence, we have increased efforts to transition sites at which upgrades are completed into a sustainability phase that will eventually be taken over completely by the Russian Federation. In support of the sustainability of physical protection upgrades, we are also working consistent with the Bratislava statement to promote a strong nu-

clear security culture in Russia and share best practices in handling nuclear materials.

Additionally, since the report, the DOE has requested substantial budget increases for DOE nonproliferation programs. The fiscal year 2001 appropriation was approximately $914 million and the request in the fiscal year 2007 President's budget request is $1.7 billion. However, we must keep in mind that just throwing money at the threat will not always be the solution. There is still no agreement to cooperate at the two serial production enterprises despite numerous overtures by the United States. The Russian side maintains that those sites are too sensitive to receive foreign assistance for security and that they themselves will address any security needs at those sites. However, we have made access gains at other sensitive facilities in the Rosatom weapons complex, and have had a major access breakthrough regarding warhead storage sites. Progress in this area has been facilitated by reciprocal visits by Russian officials to the most sensitive facilities in the DOE complex.

Furthermore, the dangers associated with nuclear proliferation are a constantly evolving and dynamic threat. We have remained vigilant in our efforts and continue to focus on material protection, control and accounting (or MPC&A) measures in order to adequately secure previously at risk material. Notably, since 2001, DOE has dramatically expanded its radiation detection program at land crossings in Russia and countries of the former Soviet Union and at major seaports.

Moreover, the Bush-Putin Joint Statement on Nuclear Security at Bratislava requires periodic reports to the Presidents on progress—providing sustained high level oversight of these important programs.

Chairman WARNER. The Stockpile Stewardship Program is subject to this committee. It's our job to monitor the safety and validity and potential that these weapons still maintain for fulfilling those strategic objectives that we have established. An awful lot of money is being put in that program. My understanding is it's up to $6 billion in the budget before you today.

In your assessment of the status of that program, do you feel that it is fully operational today? If not, when do you hope to have it fully operational? As our stockpile continues to age, and as noted by my colleague from Alabama, we are not acquiring new weapons, what recommendations do you have for the future?

Secretary BODMAN. First, I believe, sir, that the Stockpile Stewardship Program is satisfactorily managed today. This is a matter that I have spent a lot of my personal time investigating, and I've also had Dr. Orbach, who is the head of the Department of Energy's Science Office, who will manage the increase in scientific research that I mentioned, that I alluded to in my preliminary remarks.

Ray is a physicist, former chancellor of the University of California at Riverside, a great business professor. He too was an outsider, looked at the Stewardship Program, and has been involved with me side-by-side in looking at things like the National Ignition Program out at Livermore, where the commitment there, or the intention there is to, in a laboratory, create an environment that comes very close to simulating the innermost workings of a nuclear weapon at ignition.

The Stewardship Program has led this Department to create and then develop some of the most remarkable science that I have ever seen. I am trained in this field and perhaps you know, I'm a little out of date, as I would hasten to add. But, I do have training in engineering and chemistry and physics, but the work that has been done is quite exceptional. I have looked in detail at whether we should come as a part of this budget to fund the new ignition facility or continue funding that very elaborate process that goes on.

I believe we should continue it. Each laboratory, they divide up the weapons among them and they look very hard at issues that might be created by the aging of these materials. These are materials, forgive my lecturing you, which by their definition, they're radioactive, they change with time by definition, and therefore, understanding the metallurgy and the details of that is very important. They do that. They do it very well.

I have sat with them and probably spent 6 or 8 hours with all of the directors of those laboratories in preparation for receipt from them of letters which are scheduled to arrive within a month, certifying the efficacy of the stockpile. I am then required to cosign——

Chairman WARNER. I'm fully aware of all that. Your assessment is that program is fully up and running as designed?

Secretary BODMAN. Yes, sir.

Chairman WARNER. It is effectively giving you the data on which you as Secretary can make the reports to Congress and to the President and to the Nation regarding the safety of these weapons and the viabilities of these weapons to fulfill our future requirements?

Secretary BODMAN. Yes, sir.

Chairman WARNER. Thank you very much. Let's talk about the Reliable Replacement Warhead (RRW). You were doing a study on that, to analyze the approach to warhead design and maintenance which could potentially eliminate many of the most costly and hazardous materials that are used in the current stockpile. What role do you believe such a RRW might play in shaping the nuclear stockpile in the future? How can it complement the Stockpile Stewardship Program?

Secretary BODMAN. I think, sir, that the RRW is crucial to the Stewardship Program. Inherent in what I said before related to the efficacy or viability of the stockpile, the materials in there change with time. They were designed at a time when no one expected a cessation of testing, and therefore, they were not designed to be devices that would have a lot of tolerance and flexibility. They were designed such that they would be put into place and that they would work, which they did. They were tested. It wasn't a problem.

Here we have a situation where we are not allowed, as you are well aware, to test the devices. Therefore having a design that essentially would replicate the same military effect of the weapon on the one hand, yet create a device that would be much more easily certified by future secretaries of Energy and Defense, is the goal. There is a competition now related to a single weapon. I think it's the W76 where Lawrence Livermore and Los Alamos are developing competing approaches to the design of a RRW, a strategy if you will. That would be pulled together, a judgment will be made, and I'm sure will be made known to your committee as to what the results are. But that's ongoing, and will be forthcoming soon.

Chairman WARNER. Now, in your discourse with allies, namely France and Great Britain, and given that these programs are designed primarily for the safety of the storage of these weapons and the safety of the people of Los Alamos, and the safety of the community in proximity where these weapons are stored, is there any commonality, misfortune of a weapon to be somehow accidentally

in other nations that would impact our own census back here in the United States very heavily?

Secretary BODMAN. Yes, there is. There is definite exchange. There is a community of people who exist around the world.

Chairman WARNER. That's what I want to know.

Secretary BODMAN. I have met members of the British community who have come through. I'm certainly engaged with members of the Russian community who are engaged in these matters. I have not personally met with the French, but I do believe that there is a good exchange of information. It is not to say that there is a commonality.

These devices were developed in different times with different assumptions, but if you will, the nuclear culture that must exist in terms of the safety and the reliability of these devices, I think that is something that we believe exists in common and there certainly is, there are conversations and meetings that go on with the professionals who deal with these matters.

Chairman WARNER. That's reassuring. Senator Clinton.

Senator CLINTON. Thank you, Mr. Chairman. Welcome, Secretary Bodman, and thank you for the partnership and work that you've done with my office on a number of issues that are of importance to New York. I want to focus on the nuclear waste reprocessing proposal that is in your budget and that you mentioned at the end of your testimony, the Global Nuclear Energy Partnership (GNEP)?

Secretary BODMAN. That's correct. GNEP. That's our term of art.

Senator CLINTON. Now, this is a proposal to create a global system of nuclear reactors and reprocessing plants over the course of decades that could cost tens if not hundreds of billions of dollars. I believe that this may be a well intentioned proposal, but one which has serious problems, and I don't think it holds up to the claims that the administration has made about it.

If you look at the independent research that has been done about this issue, the 1996 National Academy of Sciences report, a 2003 Massachusetts Institute of Technology (MIT) study, and even by DOE research, we know that we are taking enormous risks going down this path. I want to ask you just a couple of discrete questions, and if we could get through them, I'd appreciate it.

One of the big concerns about reprocessing obviously is that it creates plutonium, which can be used, as we know, to make nuclear weapons. This is a problem associated with the reprocessing technologies used in France and elsewhere and it is a reason why we have consistently opposed reprocessing. The administration as I understand it is claiming that GNEP reprocessing technology would not separate the plutonium from other elements and therefore that the reprocessed material would be proliferation resistant. But that's only in comparison to other reprocessing methods. The MIT and other studies I cited concluded that conventional spent fuel is far more proliferation resistant, the reason being it's too radioactive to be handled safely by terrorists.

So my first question is this. Isn't it true that any reprocessed fuel would be more easily held by terrorists than conventional spent fuel, and therefore doesn't processing under GNEP increase proliferation risks rather than decrease them?

Secretary BODMAN. I don't know the answer to that specifically, Senator. I would say that the goal is to recover plutonium and other actinide materials that are in a form that would not be useful to terrorists. Whether they would be more useful than the spent fuel that we now have, I don't know. My best guess is there wouldn't be a great difference, but that's just a guess.

I would be happy to get you a more thoughtful answer on that than I am able to provide you real time. I just would tell you that we have run this in the batch, on a batch scale out at Argonne and, not on a batch scale, it's been a continuous reaction but it's been on a bench scale, small scale and it seems to work, so it's something that I believe is worthy of examination.

The problem with the spent fuel that we now have scattered all over this country, including your State, is that those materials, we have only extracted about 10 percent of the energy out of it, and the uranium has been transformed into plutonium and other actinide materials and this is merely an effort to recover that energy in a fashion that would be proliferation resistant. I can't comment more than that, but I'd be happy to give you an answer on it.

[The information referred to follows:]

It is important to emphasize that Uranium Extraction Plus (UREX+) is not an end in itself. It is part of a technology pathway proposed as part of the Global Nuclear Energy Partnership (GNEP) initiative to allow the plutonium and other transuranic elements from light water reactor spent fuel to be consumed in electricity producing advanced burner reactors. If this technology is successful, it will allow a complete transformation of the nuclear waste management challenge and of the international nuclear fuel cycle. In today's world, a static focus simply comparing spent fuel assemblies in storage in the U.S. and UREX+ from the point of view of technical "proliferation-resistance" is too narrow, particularly since several of the advanced nuclear economies are currently separating plutonium and separated civil stocks are nearly 250 metric tons today, a figure that is more than double the total amount of plutonium that was produced for the U.S. nuclear weapons program since 1944. Doing nothing is not a success strategy for nuclear energy growth to meet pressing domestic and international, energy, environmental, and nonproliferation challenges.

The real issue is whether we build domestic and international consensus on a sustainable approach whereby a few advanced fuel cycle nations build systems that can eliminate the plutonium and other transuranics separated from the world's vast and growing stocks of light water reactor spent fuel, recycle it back through advanced burner reactors, and fully consume it, both reducing proliferation risks by providing reliable fuel services and resolving the growing nuclear waste problem.

It provides the opportunity to reshape the management of spent fuel at home and abroad, in support of new arrangements that constrain proliferation. Proliferation and the buildup of plutonium in the world have not stopped over the past three decades. The GNEP initiative seeks to address the global buildup of civil plutonium stocks and looks to move beyond the spent fuel standard by defining a path to reduce and eliminate those materials.

Within the U.S., a UREX+ facility on U.S. Government property would be secured to meet all requirements posed by the material stream, up to the stored weapon standard if necessary. UREX+ would not separate or accumulate plutonium, and would be used only in proportion to making fuel for advanced burner reactors.

Senator CLINTON. Mr. Secretary, I really appreciate that, because I think our oversight duty requires us to really understand what it is the administration is proposing and attempting to accomplish.

I think we have two competing goals here. One is to find cost effective, safe ways to increase the role of nuclear power in our energy sector, and the other is to be as vigilant as possible against the potential spread of nuclear materiel and proliferation. I think we can.

Secretary BODMAN. I agree with both of those.

Senator CLINTON. I think we can pursue the first goal, which I'm open to, which I'm sure many people are because of our energy challenges, but at least in my review of the information available through the National Academy of Sciences, MIT, etc., DOE reprocessing as it is currently available seems to raise more dangers and questions than answers, and there are other ways to pursue the potential for greater use of nuclear power within our energy and electricity production.

Part of the reason I'm so concerned about this is that the West Valley Demonstration Project in Western New York is the site of the only U.S. commercial reprocessing effort to date, and the reprocessing occurred in the 1960s. The cleanup has lasted until now. We are still not done with that cleanup. It's cost billions. So the idea that somehow reprocessing is going to solve our waste problem at least insofar as I'm aware of it seems a little optimistic, to say the least.

I'm also concerned about costs. Discretionary spending dollars are very scarce and in the fiscal year 2007 budget the administration spends $250 million on GNEP. That's a project with uncertain and very distant benefits in my opinion.

I think the money would be much better spent in looking at some of the DOE research that is on the brink of being commercially applicable on conservation and alternative, smart energy production, because we are cutting a lot of DOE programs that we know have a direct positive impact on our energy usage. Based on DOE documents, the fiscal year 2008 and fiscal year 2009 costs would total $1.5 billion, forcing further cuts in other programs, and then it ramps up to $1.3 billion for a 10-year demonstration phase. I see no DOE estimates beyond that point, but the best studies that I can find suggest that the reprocessing and transmutation of existing fuel would cost upwards or $100 billion.

So there are a number of very serious issues around this proposal about GNEP and Mr. Chairman, I would like to submit a series of questions in writing, because I think this is going to be one of the areas we really need to zero in on as we move through the authorization process.

Chairman WARNER. I thank the Senator from New York. I concur in that, and all members will be given that option, given the brevity of this hearing, we are going to have to resort to submitting questions. The Chair has a number that I would submit.

Secretary BODMAN. May I comment to the Senator?

Chairman WARNER. Yes. Excuse me.

Secretary BODMAN. There may be some confusion over the French and other related processing producers, they do in fact separate plutonium. GNEP is intended not to separate plutonium, but to leave it with a mixture that is not, we believe, based on what I know of proliferation, it is intended to prevent and to intercept the potential for proliferation.

It will also require the development of a reactor to burn that separated plutonium and actinide material which is a so-called fast reactor, so you are quite right. This is a very expensive, long-term project. I think the number $100 billion would be higher than I would give. My number is sort of in the $20 or $40 billion range.

I don't know what it will be once we work it out, and the goal here is to spend money over the next 2 or 3 years such that we would be in a position to narrow those bands and to make a more intelligent and thoughtful analysis of this problem.

It is a way of trying to simultaneously do both things that you mentioned, expand the availability of nuclear energy on the one hand, and to beat terrorism and proliferation on the other hand. So we have the same objective. It's a question of how to go about it.

Senator CLINTON. Thank you.

Chairman WARNER. Senator Thune.

Senator THUNE. Thank you, Mr. Chairman. Secretary Bodman, welcome to the committee and thank you for your leadership on energy issues for this country. I appreciate the work that your Department has done supporting the use of renewable energies, which is something that's important in my area in the midwest.

I have a question for you and I'd ask that you be frank with your answer, and I preface it by saying that I am concerned by the recent pattern that Congress has taken to zero out funds for programs that are aimed at ensuring America keeps one of its greatest weapons, and that is deterrence. While we need a leader in international efforts to curb proliferation, I believe that we cannot, nor should we, make ourselves a target by compromising our nuclear arsenal in the process.

So my question is, do you believe Congress is asking you to maintain a high standard of performance, but not providing you with the resources that are necessary to complete your mission?

Secretary BODMAN. This is with respect to the stewardship of the current nuclear stockpile, sir?

Senator THUNE. Correct.

Secretary BODMAN. No. I believe that we have had adequate resources and that I can certify as to the efficacy or the viability of the stockpile with the resources that we now have. It would get increasingly difficult, Senator, to do that as time moves on because we have the inevitable change in the materials that are inside these weapons. I alluded to that before in answering the chairman's question, and it's a problem that I think we need to resolve by the RRW approach, that is to say, to redesign the weapons such that they accomplish the same military objective, but do so in a fashion that is much more reliable and manageable so that future Secretaries of Energy do not have to come and make the same statement 20 years from now to you or your successor.

Senator THUNE. Following up on the chairman's line of questioning with you, I think he exhausted or at least got on the record many of the questions that I had with respect to the age. But my understanding is that of course, we have not had new warheads in the arsenal built since 1989, which makes the current arsenal 15-plus years old. It's also my understanding that during the Cold War, nuclear weapons were retired and replaced every 15 to 20 years.

Given that average age, and I know you covered this to some degree already with the chairman, would you be comfortable going to war with our current nuclear stockpile in its current aging condition?

Secretary BODMAN. I would. I so attest, this will be my second time to do it, and this year, I will tell you that I do it with more knowledge than I had a year ago, and that's why I spent as much time with the laboratory directors from the three weapons laboratories. I have looked into this really up to the limit of my technical ability to evaluate what we know, how they go about their work, and I am very impressed. These are great Americans. The men who run these laboratories—men and women run the laboratories generally, but the three directors are men and they do a great job, and I've been very impressed with their work.

Chairman WARNER. If I can intervene for a minute, I must go to the floor to make arrangements for a very important vote of this committee to be taken at the conclusion of the full Senate vote with regard to our nominees that hopefully we can get to the floor tonight.

We are anxious to, if we can, conclude questions. I see colleagues on the right. I do not see further colleagues on the left side of the aisle. I'll entrust the hearing to you, if one of you will elect to be chairman and finish it up. Or you have the authority to keep this hearing open, recess it, and then we'll resume at the conclusion of the votes on the floor.

Senator TALENT. Mr. Chairman, I have an Energy Committee hearing ongoing and so in the interest of time, I'm willing to submit my questions for the record if that will help expedite the hearing.

Chairman WARNER. Mr. Graham.

Senator GRAHAM. Can I ask questions now? You want me to chair?

Chairman WARNER. Senator Thune has a minute or 2. Senator Graham, you have the chair and if you would be kind enough to make the decision whether to resume or not and to inform me. I'll come back right after the floor vote is concluded.

Senator GRAHAM [presiding]. I really love that responsibility. Thank you.

Senator THUNE. One final question. I do have a question I'd like to submit for the record that has to do with dealing with the question we all had discussed here at the committee on the floor, about whether or not we had adequate numbers of scientists and engineers to keep up with the demands that are out there. Whether or not that's a problem. But, one time question. That is——

Secretary BODMAN. It is a problem, Senator.

Senator THUNE. Good. I'd like to hear you elaborate on that, too. In the interest of time, I'll submit that one for the record.

The final question I have has to do with coal liquefaction which is something—we have abundant resources of coal, limited resources of oil. We import most of our oil and we fuel airplanes with that oil. There is increasing discussion that I've had with folks at the Department of Defense about the possibility of being able to convert to liquified coal as an energy source, and I'm just interested to hear what thoughts you might have, how familiar you are with efforts that are ongoing out there, whether you believe that is viable in the near term?

Secretary BODMAN. I think it's viable. I think the issue that the Department of Energy has had, we are in this area, we are re-

searching this, Senator, and we do work on processes and on approaches that are new and novel. This is pretty well known technology. It's been around for some time. You convert it into liquid, the coal. A company in South Africa has done this.

So the issue is, is there a role for things like loan guarantees and that sort of thing. There is a loan guarantee program that was created by the Energy Policy Act of 2005 that you all passed last year and the President signed into law. We are working hard to try to get that created. I will tell you that creating a loan guarantee program where you are guaranteeing the construction of a new chemically based process is a formidable task.

I used to do that for a living and it's very, very hard and how we create that inside the government, I simply am unsure of right now. But nevertheless, the program does exist and that might be an area that would be useful in stimulating further use of this technology. But, there is relatively little research. This is more a funding and a commercialization of already known technology.

Senator THUNE. I'd like to explore that with you some more but I'll yield back, Mr. Chairman.

Senator GRAHAM. Thank you, sir.

Senator Cornyn.

Senator CORNYN. Secretary Bodman, thank you for being here today and for your service to our Nation. I know several Senators have raised the issue of nonproliferation, and it remains a huge concern given the times we are living in and the threats that exist. Just for the information of my colleagues, we are going to be having a hearing before the Emerging Threats and Capabilities Subcommittee on that subject later this spring and hopefully shed some additional light on that critical subject. We all agree that our nuclear weapons complex is critical to our national defense and equally important is that we provide the resources to carry out this critical mission to be good stewards of the taxpayers' money.

I have a particular interest in this issue, not just because of my interest in the national security but also because in Amarillo, Texas, we have an important facility called Pantex that plays a key role in the Stockpile Stewardship Program. Although the good work they do there and at similar sites around the Nation is not often in the news, and that's fine with me, I want to pay special recognition to the good work that they do.

Specifically, I want to ask you, Mr. Secretary, last year I expressed my concerns to you regarding the condition that we found the nuclear weapons complex in 5 years ago, specifically the nuclear weapons production plants such as Pantex and the Y–12 National Security Complex in Tennessee.

Fortunately, we have seen increases in the budget over the last 5 years to fund repairs and demolition of old buildings, putting up new ones, replacing aging equipment. Unfortunately, we still see a downward trend in the Facility Infrastructure and Recapitalization Program (FIRP), the program that funds deferred maintenance and equipment replacement backlogs.

In fiscal year 2005, $313 million was appropriated, in 2006, it was $149 million, and in 2007, $291 million is requested, but fiscal year 2007 remains below 2005 levels. FIRP is supposed to sunset at the end of fiscal year 2011, and I'm concerned that the funding

levels this year and next would leave an excessive deferred maintenance backlog at the nuclear weapons plants after 2011, the very problem that FIRP was supposed to fix. So my question is simply this. Do you have sufficient funds for this program?

Secretary BODMAN. Senator, I can't answer that definitively at this point in time. I can tell you that based on my experience in other departments, there are issues with respect to maintaining the quality of the facility as a general matter throughout the government. For reasons that I think are fairly clear, it is much easier to generate support in Congress for the creation of a new program than to fix an old program, so it is a challenge.

Having said that, I have been to Oak Ridge and I have looked at what is going on there. I can speak about that. I will be going to Pantex soon, but I have not yet been to Pantex. At Oak Ridge, we have made a lot of progress, for example, in developing and funding a very expensive new facility for storing highly enriched uranium and materials, which is a very important part of what we are doing there.

But, there are other buildings that are at Oak Ridge that eventually will need to be destroyed and cleaned out, and that will take years. What we did in this country during the Second World War was to, and it affected not just Pantex, it affected not just Oak Ridge, not just Savannah River, all of the different storage facilities, storied in the scientific history sense, we unfortunately were hellbent on getting the material and the chemistry physics right, so that we could build a bomb and bring the war to an end, and there was less attention being paid to the matters that you describe.

So that we face this throughout this complex, and the goal here is to try to develop the report which we have been asked about already, the EM report that looks at the entire complex and makes recommendations to the Department as to how we can succeed. We need to make some decisions about that, what we are going to do about consolidation of spent nuclear materials, and then go forward to deal with some of these matters.

I can't give you a good answer. I will try to give you a better answer if I may.

[The information referred to follows:]

The administration's budget request and legislative proposal regarding the end date of the program would, if enacted, provide sufficient funding to complete this important mission.

The Facilities and Infrastructure Recapitalization Program's (FIRP) mission is to restore, rebuild, and revitalize the physical infrastructure of the nuclear weapons complex. The program's long term goals are: 1) eliminate $1.2 billion of the National Nuclear Security Administration's deferred maintenance backlog and, 2) eliminate three million gross square feet of excess facility space.

The impact of significant previous reductions to the out year funding profile of the FIRP in support of deficit reduction, as well as congressional reductions to the fiscal year 2006 request, have adversely impacted the program's ability to complete its mission. The Department currently has a legislative proposal before Congress to extend the program's 2011 end date by 2 years to enable the program to complete its mission.

Senator CORNYN. That would be very helpful. Thank you. Mr. Secretary, in 2004, the DOE launched an initiative to provide employment opportunities to Iraqi scientists, technicians, and engineers who may have been involved in WMD programs. This initia-

tive was intended to support reconstruction efforts in Iraq and keep WMDs from terrorists and proliferant states. Can you update the committee on this program?

Have Iraqi scientists been able to take advantage of this opportunity to take advantage of productive and nonresearch activities? Roughly how many Iraqi scientists do you believe might be eligible to participate in this program, and is the program of a sufficient size to meet this anticipated demand?

Secretary BODMAN. There are two areas, if I may, if I could broaden your question. There are two countries in which we have had these kinds of programs. One in Libya. The Libyan program has gone forward and effectively, I believe, has been able to redirect some of the technical people into matters related to the oil field and matters related to environmental stewardship. On matters related to a single nation, I don't have numbers.

Now, I don't know about Iraq. I'll try to get that. The whole Iraqi situation is one that has continued to be a challenge because of the insurgency, and getting people to work in more productive parts of the economy has been a challenge. So exactly what our contributions have been, I can talk to you about in general, it's the same general areas, environmental stewardship, these things that would be required in Iraq. They have major needs in the energy infrastructure. Just how many of them, what the numbers are, I don't know exactly.

Senator CORNYN. I would appreciate that. I understand you may not have all those facts and figures at the tip of your tongue, but I do think it's important that we get at least the facts before us, good, bad, or ugly. Then we could determine whether we are making progress or going backwards.

Secretary BODMAN. Senator, I would be happy to look into it.

[The information referred to follows:]

The projects Department of Energy (DOE) supports all contribute to civilian scientific capacity building. DOE has funded to date 6 civilian scientific projects that employ 29 scientists, including 12 with a WMD background. They include:

- water purification techniques,
- the development of new composite material for use in artificial limbs,
- improving the indigenous capability of the Iraqi pharmaceutical industry,
- the improvement of corrosion resistance in steel,
- an analysis of the level of radionuclides in water and sediments in the Tigris and Euphrates rivers, and
- measuring natural radiation levels in Western Iraq.

Material science and radiation safety projects specifically suit scientists with weapons of mass destruction skills and expertise in nuclear weapons, nuclear energy, operational engineering, and explosives. These areas for research were chosen specifically for that reason.

Senator GRAHAM. Mr. Secretary, I promise you we'll get you out of here just in a few minutes. The vote is on so I'll take about no more than 10 minutes and we'll let you get on your way. One, I'll make a comment about the President's budget about the idea of recycling or reprocessing spent nuclear fuel, which I think is visionary. I support the concept that the President and Department of Energy are advocating for us to look at the fuel cycle differently and try to adopt some reprocessing recycling technology, that's new and exciting, being employed at other places in the world. I want to be a partner with you there.

Secretary BODMAN. Great.

Senator GRAHAM. See if we can expand the nuclear footprint to make our country and the world less dependent on fossil fuels. Savannah River Site, you know how much of my time I've spent on it and I appreciate your time and attention. There are three programs, the MOX program when you talk about nonproliferation as you did with Senator Cornyn, we have had 34 metric tons of weapons grade plutonium, material that was in a nuclear weapon formerly, that will be converted into commercial grade fuel at Savannah River Site as well as in Russia. This is bomb material taken off the market to be used for peaceful purposes.

I was instrumental, along with Senator Thurmond, in getting the Governor of South Carolina to accept this plutonium. The MOX program, according to the Inspector General (IG) report, has been poorly handled financially. It was originally a billion dollar program, now it's $3.5 billion. It's years behind schedule. We have had liability and management problems with the Russians and the funding line, Mr. Secretary, it puts us behind, not forward. Honest assessment, what do you see happening with MOX here?

Secretary BODMAN. We are informed, Senator, by our interlocutors in Russia, that all is well with respect to getting the liability matter resolved. I hope that is true. My colleagues tell me that they believe it is true. I'm a little bit of a, probably like you——

Senator GRAHAM. We have heard this before, haven't we?

Secretary BODMAN. I understand. Until we get that done, I'm a little bit of a Doubting Thomas on it. We continue to work with them. I will be visiting with Mr. Khristenko next month when I travel to Moscow for the G–8 energy ministers gathering, and I will, this is, I have spoken with him by the telephone but I have never met him personally, so this will be my first meeting. He has just been in office a few months. So I will, I think, sir, I understand your conviction and your interest in this, and the vital nature of it.

Believe me, sir, it has my attention and it will be one of the first items I take up when I see him. It's just hard to gauge exactly what is going on in Russia, even when I talk to experts.

Senator GRAHAM. That's fair. My hope is that once we get the liability issue off the table that we can assure people in South Carolina that the money will be there and that we will get the program up and running.

Secretary BODMAN. We are committed to making it happen as soon as I'm satisfied that it's there. We have had a huge delay, huge run ups in steel, concrete, and other things. That's been significant, not in total, but as a reason for the uptick in costs. Each time we delay one of these projects, it's a billion-dollar decision.

Senator GRAHAM. I will talk to you about the IG report. We just need to make sure that people take this job more seriously. We have 5 more minutes and I'm going to let you go.

South Carolina entered into an agreement with DOE that was historic about tank cleanup. It was a very close vote in the Senate, 48–48. I thought we made a rational decision by coming up with a cleanup standard that made sense. Our tanks are leaking, tanks with high level waste, and the deal was we would leave a small footprint in the bottom that would take years to get out, saving $16 billion that we can spend elsewhere.

Now that program is behind. We are 14 months behind; the Salt Waste Processing Facility is behind. We have funding problems. Could you just give me a few minutes about where you see this going and how we can get back on track?

Secretary BODMAN. I think we are there. Section 3116 I think is the section of the law that you were instrumental in getting passed. I made the first determination of that within the next couple of months. We have a similar finding that will go forth with respect to the Idaho facility. There were suggestions that we should pay more attention to the potential seismic impact on the new plant that will be built and that decision was deemed to be correct by my colleagues and I subscribe to it. It will delay the startup of the facility by a year and a half and add a billion dollars or so to the costs, and I'm convinced that it's the right thing to do and we will proceed with it.

Senator GRAHAM. Thank you, Mr. Secretary. As you can tell, South Carolina is certainly a very friendly State when it comes to making good decisions for our national security and high level waste. I want it cleaned up. I don't want the tanks to leak, but I don't want to set standards that are unnecessary. Some things would be sent to Yucca Mountain that really don't need to go.

I have a problem at home. Everything is behind schedule and underfunded, and I appreciate any efforts that you can make and that you have made to get us back on track, because these are very important programs to the Nation at stake. Thank you for your service. You came up from the private sector. This is a tough job.

There are some exciting opportunities that present themselves, the reprocessing, recycling of spent fuel in abundance. This country is deciding, it's a good time to make rational decisions about energy and power. I want to congratulate you and the President in that regard. With that, the hearing will be adjourned and have a good day.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

RELIABLE REPLACEMENT WARHEAD

1. Senator WARNER. Secretary Bodman, at the direction of Congress, the Department of Energy (DOE) is currently conducting a joint feasibility study—with the Department of Defense (DOD)—on a Reliable Replacement Warhead (RRW). This study will analyze a technical approach to warhead design and maintenance which could potentially eliminate many of the most costly and hazardous materials which are used in the current nuclear stockpile. What role do you believe such a RRW might play in shaping the nuclear stockpile of the future?

Secretary BODMAN. We are exploring RRW options in order to ensure the long-term sustainability of the military capabilities provided by warheads in the existing stockpile. With the support of Congress, we are undertaking the RRW study to understand whether, if we relaxed warhead design constraints imposed on Cold War systems (e.g., high yield to weight ratios that have typically driven "tight" performance margins in nuclear design), we could provide replacements for an aging stockpile. These replacement weapons could be more easily manufactured, use more environmentally benign materials, and their safety and reliability could be assured with high confidence for the long-term without nuclear testing. We intend that such an effort will also result in future reduced infrastructure costs for supporting the stockpile. Indeed, we see the RRW program as the "enabler" for both long-term stockpile transformation and transformation to a responsive infrastructure to support national defense capabilities while adding no new military capabilities.

2. Senator WARNER. Secretary Bodman, how could it complement the Stockpile Stewardship Program (SSP)?

Secretary BODMAN. Our decision to embark on the path to a RRW is a reflection of the success of our ability to apply the scientific tools of the SSP. Using these tools will enable us to certify a RRW without underground testing. It will also demonstrate our ability to meet responsive infrastructure goals. We must make continued progress to fully utilize and further develop the modern scientific tools of the SSP; these tools serve as an enabler to guide the transition from a warhead refurbishment program to a warhead replacement program.

DEVELOPING A NEW WARHEAD WITHOUT UNDERGROUND TESTING

3. Senator WARNER. Secretary Bodman, the nuclear weapons experts at the national laboratories believe that it will be possible to design and field a new warhead—such as the RRW now under study—without needing to conduct an underground nuclear weapons test, such as was conducted in this country up until 1992. Can you explain, in broad terms, why these weapons scientists believe it is possible to field a warhead without underground testing?

Secretary BODMAN. The intent of the RRW program is to identify nuclear and non-nuclear replacement components that could be fielded without nuclear testing. Feasible RRW options will be based on our robust database of historical nuclear tests as well as from the experience of the remaining designers and engineers who have successfully fielded our current stockpile. The advances of our SSP enable us to better understand nuclear explosive performance through modeling, simulation, and experiments. That combination of historical test information, modern SSP tools (e.g., high energy density physics and the Advanced Simulation and Computing program), and experienced designers and engineers, along with relaxed military requirements for yield-to-weight ratios, will enable us to design and certify nuclear components with high confidence. As a result, fielding RRW systems will likely reduce the possibility that the U.S. will need to conduct a nuclear test for certification or to diagnose or remedy a stockpile reliability problem.

4. Senator WARNER. Secretary Bodman, are you personally confident it is possible to field a warhead without underground testing?

Secretary BODMAN. While I am not a nuclear weapon designer, I trust the judgment of expert nuclear weapon designers who inform me that it is possible to field a warhead without underground testing, especially if that warhead has ties to a previously tested configuration. Experts at our national laboratories believe that by relaxing some of the requirements imposed on Cold War systems (e.g., maximum yield in minimum size and weight) and employing the modern scientific tools developed in the SSP, there is a strong technical consensus that we can achieve this goal.

TEST READINESS FOR THE POTENTIAL RESUMPTION OF NUCLEAR TESTING

5. Senator WARNER. Secretary Bodman, the National Defense Authorization Act for Fiscal Year 2004 requires DOE to achieve a level of "test readiness" which would allow DOE to resume underground nuclear testing within 18 months of a Presidential decision to conduct a test. Under the law, DOE is to achieve this level of readiness no later than October 1, 2006. I understand, however, that Congress has not appropriated sufficient funds to allow DOE to meet this deadline. Is it correct that DOE forecasts it cannot meet the statutory deadline?

Secretary BODMAN. Due to a reduced appropriation in the 2006 Energy and Water Development Appropriations Act, we cannot meet the statutory deadline of 18-month test readiness by October 1, 2006. If Congress funds the President's request for test readiness in fiscal year 2007, the Department will maintain test readiness at 24 months. To maintain the 24-month readiness beyond fiscal year 2007, the current outyear profile will have to be revisited. At this time, there are no requirements for a nuclear test and there are no plans to do a test. The National Nuclear Security Administration (NNSA) maintains the capability to resume testing if that is needed in the future and is directed by the President.

6. Senator WARNER. Secretary Bodman, do you believe the current readiness of 24 months is sufficient readiness, within which to conduct a test if a problem with the stockpile is discovered, and if so, on what do you base that judgment?

Secretary BODMAN. NNSA achieved 24-month test readiness at the end of fiscal year 2005. Before the administration embarked on its plan to improve test readiness, NNSA's readiness posture stood at about 36 months, and possibly greater. We

believe that this significant improvement (24 months) is adequate for meeting our national security needs.

SAFEGUARDS AND SECURITY—DESIGN BASIS THREAT

7. Senator WARNER. Secretary Bodman, after the attacks of September 11, 2001, the Secretary of Energy increased the security requirements across the nuclear weapons complex. The security requirements for the DOE are known as the Design Basis Threat. Could you describe the progress DOE has made towards hardening its nuclear facilities against the threats we now face?

Secretary BODMAN. NNSA has been very aggressive in pursuing immediate and long-lasting security upgrades within the nuclear weapons complex. Over the past 3 years, based on the results of detailed vulnerability analyses, we have invested hundreds of millions of dollars in enhanced detection systems, anti-vehicle protections, increased protective force capabilities, and facility/target hardening improvements. The net impact of these upgrades is that our facilities rank among the most highly secured operations anywhere in the Nation. We will continue to pursue additional upgrades and refinements, with an eye on new and emerging technologies, as we work to implement the changes necessary to meet the requirements of the 2005 Design Basis Threat.

8. Senator WARNER. Secretary Bodman, another strategy for increasing the security of DOE nuclear materials, is simply to store those materials in fewer locations—in other words, consolidation of these materials in fewer, more hardened locations. Is DOE evaluating opportunities to consolidate its nuclear materials and making progress towards that goal?

Secretary BODMAN. The Department has made considerable progress in the area of nuclear materials consolidation and disposition. There are a number of examples of progress in this area, including the movement of nuclear material from Los Alamos National Laboratory (LANL) to a more secure location at the Nevada Test Site, accelerated dismantlements of warhead secondaries, consolidation of highly enriched uranium material, and construction of the Highly Enriched Uranium Materials Facility at the Y–12 National Security Complex. I have established a Department-wide Coordination Committee to review opportunities for additional consolidation activities and to develop an overarching plan for materials consolidation and disposition.

PIT PRODUCTION AND PLUTONIUM AGING

9. Senator WARNER. Secretary Bodman, the United States no longer has the capability to manufacture an essential component of nuclear weapons—the plutonium pits which power the nuclear reaction. The U.S. ceased production of pits when Rocky Flats was closed in 1989 and is now trying to reconstitute a modest production capability for pits at LANL. What challenges is DOE encountering in trying to increase the rate of production of pits at Los Alamos?

Secretary BODMAN. There are many challenges confronting the DOE and the LANL in increasing the rate of production of pits at the plutonium facility at TA–55/PF–4. The PF–4 facility was designed over 30 years ago to support plutonium research and development and the facility infrastructure and layout supports that mission. Major challenges to improve the pit production capacity of PF–4 include the physical limitations of the facility, equipment configuration and installation, personnel qualification and retention, and continued support of multiple plutonium missions. The TA–55/PF–4 facility supports a number of important national missions in addition to pit production. For example, continuing Pu–238 missions supporting the National Aeronautics and Space Administration, both conventional and enhanced surveillance activities for pits, special recovery activities, non-proliferation activities, and small-scale physics testing. All of these activities use TA–55/PF–4 space that limits the ability to expand the pit manufacturing mission. NNSA and LANL are working to resolve these challenges, and are committed to establishing a pit production capacity of 10 W88 pits per year in fiscal year 2007 and 30–40 pits per year by fiscal year 2012.

10. Senator WARNER. Secretary Bodman, will the production at Los Alamos be sufficient to sustain the stockpile over the long-term?

Secretary BODMAN. NNSA plans to increase the LANL pit manufacturing capacity to at least 30–40 pits per year by the end of fiscal year 2012. This production rate, however, is insufficient to meet DOD projected requirements. The NNSA submitted a report to Congress in January 2005 that confirmed the need for at least a 125-

pit-per-year capacity starting in 2021. This is based on a 60-year pit lifetime and a stockpile based on the planned 2012 stockpile approved by the President and provided to Congress in a June 2004 report. Although we expect more refined pit lifetime estimates by the end of fiscal year 2006, future pit production capacity requirements are likely to be driven more by stockpile transformation than legacy pit lifetimes. In this connection, our ongoing work with the DOD to develop long-term stockpile quantities and transformation rates also suggests that a long-term pit production capacity of about 125 pits per year is about right. This is being validated through the Nuclear Weapons Council. In the meantime, we will work with Congress to gain authorization to reestablish planning activities for an infrastructure that can support the longer-term pit production needs.

11. Senator WARNER. Secretary Bodman, in 2005, Congress directed DOE to initiate more detailed study of the aging of plutonium pits used in nuclear weapons to determine how long we might expect the current pits to last. What is the status of this investigation?

Secretary BODMAN. By the end of fiscal year 2006, we will have system-specific pit lifetime estimates that have been subject to peer review between the weapons physics laboratories (Lawrence Livermore National Laboratory and Los Alamos National Laboratory) and extensive external review by a panel of scientific experts known as JASON.

12. Senator WARNER. Secretary Bodman, what is DOE's current estimate (stated as a range) of pit lifetime?

Secretary BODMAN. The DOE's current estimate of minimum pit lifetime is 45 to 60 years. This range accounts for the differences in design margins among the weapon types, the current uncertainties in the sensitivity of performance to aging degradation, and the lack of aging data beyond the oldest available plutonium used in weapon systems.

RESPONSIVE NUCLEAR INFRASTRUCTURE

13. Senator WARNER. Secretary Bodman, the Nuclear Posture Review (NPR) issued in 2001 called for the development of a responsive nuclear infrastructure which would allow this Nation to have the agility to respond to any problems which might be discovered in the nuclear weapons stockpile, as well as the capability to respond to emerging threats. Much of the work in support of the stockpile, however, is still carried out in facilities from the Cold War era, some of which have not been well-maintained or sufficiently recapitalized over time. Is timely progress being made in developing a responsive nuclear infrastructure and what additional steps could be taken to accelerate this progress?

Secretary BODMAN. Within the NNSA, Defense Programs has been taking actions to develop a more responsive infrastructure. These actions include establishing, in consultation with the DOD, a strategic implementation plan to guide future actions and measure improvements, studying a RRW to facilitate transformation to a more responsive infrastructure, and starting pilot projects (e.g., Multi-Unit Processing at Pantex) to enhance infrastructure responsiveness. NNSA has also been reviewing alternatives for the nuclear weapons complex of the future. These reviews will result in a preferred long-term infrastructure planning scenario to serve as the basis for future actions. Timely progress is being made but more needs to be done, including reaching agreement with Congress (hopefully this spring) on the path forward, particularly on stockpile and infrastructure transformation.

14. Senator WARNER. Secretary Bodman, do you believe that the communication between the DOD and DOE—regarding what is needed and what will be provided—is clear?

Secretary BODMAN. Yes, communications are clear between the DOE and DOD. The DOE and DOD are working as partners to define requirements for the future nuclear weapons stockpile and supporting infrastructure. A Transformation Coordinating Committee was recently established to accelerate these efforts and to ensure we are addressing issues related to transformation in a comprehensive manner. The RRW study is a prime and current example of how DOE and DOD can and do work together.

15. Senator WARNER. Secretary Bodman, has a set of parameters by which to measure "responsiveness" been agreed upon between the DOD and DOE and if not, when will this be done?

Secretary BODMAN. Following the 2001 Nuclear Posture Review and the 2003 Stockpile Stewardship Conference, an initial set of responsiveness criteria were negotiated between the DOE and DOD. These are frequently referred to within the NNSA as the "2012 goals." These goals are "quantified" targets, e.g., resolving a new stockpile issue within 18 months, for seven responsiveness objectives. We have since updated and now formally monitor these responsiveness objectives to judge success. The Nuclear Weapons Council is expected to consider the updated set of responsiveness objectives for approval by June 2006.

NATIONAL IGNITION FACILITY

16. Senator WARNER. Secretary Bodman, the National Ignition Facility (NIF) is a key facility in the science-based SSP. When fully constructed, it will allow weapons scientists to aim 192 lasers at a "BB" sized target, simulating the temperatures and conditions of a nuclear explosion, but at a much smaller scale. DOE's current goal is to achieve this ignition by 2010. What is the current status of NIF?

Secretary BODMAN. The NIF project is on schedule and expected to be completed according to its approved baseline in the second quarter of fiscal year 2009. As of the end of February 2006, the Project is approximately 84 percent complete and is on track to conduct an ignition experiment at the NIF in 2010.

17. Senator WARNER. Secretary Bodman, is DOE's current progress in the development of the NIF on target to meet its goal of achieving fusion ignition by 2010?

Secretary BODMAN. The goal of ignition is a top priority of the DOE. The fiscal year 2006 appropriation and fiscal year 2007 budget request are sufficient to enable DOE to conduct an ignition experiment at the NIF in 2010. The fielding of the first ignition experiment is in itself a highly complex task, and ignition in a laboratory setting has never before been attempted. While it is difficult to predict whether the first experiment will achieve ignition, we are confident that the experiments will ultimately succeed.

NAVAL REACTORS PROGRAM

18. Senator WARNER. Secretary Bodman, for fiscal year 2007, the DOE has requested $795.1 million for the Naval Reactors program to support its part of this joint DOE—Navy program. This tremendously successful program has as its number-one priority ensuring the safety and reliability of the 104 operating naval reactor plants, which power approximately 40 percent of the Navy's major combatants. Funding for Naval Reactors has been essentially flat for a number of years now. Do you believe we are making the appropriate investments in this area?

Secretary BODMAN. The requested funding level for fiscal year 2007 is adequate to meet the needs of the Naval Reactors program. However, as the program reinvests in its 50-year-old infrastructure, and tries to expedite cleanup and disposal of facilities no longer needed, other areas, such as fleet support and investment in future designs, will likely feel pressure. The program also needs to continue investing substantial resources (people, money, and academic capital) in addressing management of spent fuel—that is, preparing naval spent fuel for storage, shipment, and emplacement in a repository.

FISSILE MATERIAL DISPOSITION PROGRAM

19. Senator WARNER. Secretary Bodman, in 2000, the United States and Russia signed an agreement that committed each country to dispose of 34 metric tons of surplus weapons-grade plutonium. Both countries agreed to dispose of the plutonium in mixed oxide fuel (MOX) fabrication facilities that would dispose of the plutonium by using it as nuclear reactor fuel. This program, while laudable in intent, has been plagued by numerous problems: There was a 2-year delay in the Russian program due to an inability to agree on liability issues for U.S. contractors. That delay caused the United States to postpone construction of the U.S. MOX fabrication facility in South Carolina in order to maintain parallelism in the program. Finally, the costs of the program have risen significantly. A December 2005 DOE Inspector General report concluded that the cost of the U.S. MOX facility will be $3.5 billion—$2.5 billion more than the DOE estimate in 2002. The fiscal year 2007 budget request for the MOX program is $638.0 million. Why hasn't Russia signed the liability agreement it reached with the United States last year?

Secretary BODMAN. The United States and Russia successfully completed negotiations of a protocol covering liability protection for the plutonium disposition program

in July 2005. The protocol is currently under final review within the Russian Government, and is expected to be signed in the near future. We have been reassured repeatedly by officials from the Russian Ministry of Foreign Affairs and the Russian Federal Atomic Energy Agency (Rosatom) that there are no substantive problems with the agreed language, but rather it is a question of the protocol undergoing a complete interagency review that has been moving more slowly than I had hoped. While we are disappointed with the delay in signing, it is important to note that critical U.S.-Russian cooperation to move forward with implementation continues.

20. Senator WARNER. Secretary Bodman, since Russia has indicated this agreement must be ratified by the Russian Duma, are there risks in spending additional U.S. taxpayer dollars on the Russian program before the Duma has approved the liability agreement?

Secretary BODMAN. I believe the risks are minimal. We believe the Duma will not oppose an agreement the Russian Government has endorsed.

21. Senator WARNER. Secretary Bodman, do you believe Russia is still committed to disposing of excess plutonium through the MOX program?

Secretary BODMAN. Yes, I believe Russia remains committed to disposing of 34 metric tons of its excess plutonium. Recent high-level meetings at Rosatom indicate that Russia continues to support the goals of the 2000 agreement and would proceed with the MOX program using primarily light water reactors if full funding is provided by the international community.

22. Senator WARNER. Secretary Bodman, do you believe the U.S. and Russian programs should continue to proceed at a parallel pace?

Secretary BODMAN. The United States and Russia remain committed to proceeding with plutonium disposition in parallel, to the extent practicable, as called for in the 2000 agreement. As a result, the two sides will continue to work together to ensure that significant progress is made in both countries. The United States and Russia are working together to translate this requirement into a detailed schedule and corresponding list of milestones on how best to proceed. We will need to agree on a flexible approach to parallelism that allows the parties to meet the overall intent of the 2000 agreement while permitting each side flexibility to take into account differences in each country, such as infrastructure and regulatory requirements.

23. Senator WARNER. Secretary Bodman, if we were to delink the U.S. and Russian MOX programs, what would be the likely impact on the Russian program and on the U.S. program?

Secretary BODMAN. The 2000 agreement commits the United States and Russia to dispose of 34 metric tons each of excess weapons plutonium in parallel to the extent practicable. Linkage with the U.S. disposition program is not the only driving force motivating the Russians to dispose of their excess plutonium. The type of reactor used (the more efficient fast reactors vice the light water reactors) and significant international funding for the disposition program are much more important to the Russians. Impediments to either of these factors would likely result in Russia storing its plutonium for the foreseeable future, which in turn would become a long-term proliferation concern to the U.S. Along with the obvious nonproliferation benefits resulting from a parallel plutonium disposition program with Russia, the U.S. MOX program is a key part of the Department's plan to reduce recurring U.S. costs for security and storage of surplus plutonium throughout the weapons complex, and meet design basis threat requirements.

DOE NONPROLIFERATION PROGRAMS IN IRAQ AND LIBYA

24. Senator WARNER. Secretary Bodman, in 2004 DOE launched an initiative to provide employment opportunities for Iraqi scientists, technicians, and engineers who may have been involved in Iraqi weapons of mass destruction (WMD) programs. This initiative was intended to support reconstruction efforts in Iraq and to prevent the proliferation of WMD expertise to terrorists or proliferant states. Can you update the committee regarding the status and progress of this program?

Secretary BODMAN. Pre-war Iraq had an extensive scientific community of technical experts, many of whom had specialized WMD expertise and knowledge. Iraq developed a workable nuclear weapons design and centrifuge enrichment technology. Scientists and technical experts also helped produce large stockpiles of chemical weapons agents, and undertook advanced research on biological weapons.

Since 2003, DOE has funded projects intended to increase our understanding of the Iraqi scientific establishment and to ensure those experts with WMD-related knowledge do not again become a proliferation threat. DOE's first project was multiphased, beginning with a baseline survey on the state of Iraq's scientific infrastructure, to identify areas where WMD scientists could be employed. This survey, based on the accounts of over 200 scientists, revealed Iraqi needs in key areas: public health, water, the environment, and engineering. Using this assessment, DOE next funded pilot projects in public health and water in 2004. Currently, DOE is funding six civilian technical projects that employ WMD scientists and make use of their unique skills. This ongoing effort reduces the risk of future proliferation from their expertise, while also supporting broader U.S. and Iraqi government reconstruction efforts.

25. Senator WARNER. Secretary Bodman, have Iraqi scientists been able to take advantage of this opportunity to put their talents to work on productive, non-military research activities?

Secretary BODMAN. Yes. The projects DOE supports all contribute to civilian scientific capacity building. DOE has funded to date six civilian scientific projects that employ 29 scientists, including 12 with a WMD background. They include:

- water purification techniques,
- the development of new composite material for use in artificial limbs,
- improving the indigenous capability of the Iraqi pharmaceutical industry,
- improving corrosion resistance in steel,
- an analysis of the level of radionuclides in water and sediments in the Tigris and Euphrates rivers, and
- measuring natural radiation levels in Western Iraq.

Material science and radiation safety projects specifically suit scientists with WMD skills and expertise in nuclear weapons, nuclear energy, operational engineering, and explosives. These areas for research were chosen specifically for that reason.

26. Senator WARNER. Secretary Bodman, roughly how many Iraqi scientists do you think might be eligible to participate in this program, and is the program able to expand to meet the demand?

Secretary BODMAN. The Department of State and the Iraqi National Monitoring Directorate have assessed that there are approximately 500 scientists, senior technicians, and engineers of potential proliferation risk. The 6 projects mentioned employ 29 scientists, including 12 with a WMD background. Currently, our Iraq work operates on a relatively small budget—$1.5 million in fiscal year 2006. As the program evolves, and the situation in Iraq stabilizes, we expect to engage a greater number of Iraq experts.

27. Senator WARNER. Secretary Bodman, I understand DOE had plans to establish a similar program in Libya. What is the status of that effort?

Secretary BODMAN. In recognition of Libya's decision to eliminate its WMD program, the DOE has been working with the Department of State and the United Kingdom to engage and redirect WMD scientists and facilities in Libya. The Department plans to apply $2–3 million annually to these activities. To date, the Department has developed five scientist engagement projects in Libya in the areas of water desalination and purification, groundwater management, and machine tool use. Target institutes are: the Center for Mechanical Industries (CMI), the Tajura Renewable Energies and Water Desalination Research Center (REWDRC), and the National Bureau of Research and Development (NBRD). Project implementation in 2006 would engage 25–50 former weapons scientists, engineers, and technicians.

In addition, last August we signed a sister laboratory arrangement for technical cooperation with Libyan National Bureau of Research and Development to promote peaceful nuclear collaboration in the areas of radioisotope production; health physics; neutron activation analysis; environment, safety, and health; and radioactive waste disposal.

NUCLEAR SECURITY COOPERATION WITH RUSSIA

28. Senator WARNER. Secretary Bodman, at the Bratislava Summit in February 2005, Presidents Bush and Putin agreed on a comprehensive joint action plan for cooperation in nuclear security, including a plan for security upgrades of Russian nuclear facilities and warhead sites. What progress has been made on implementing the agreements reached at Bratislava?

Secretary BODMAN. According to the terms of the joint action plan, security upgrades at all of the Rosatom nuclear sites will be completed no later than the end of 2008. We are presently on track to meet that deadline. With regard to the warhead sites identified for upgrades within the Bratislava discussions, we perceive no major impediments that might prevent us from securing these sites by the end of 2008.

In addition, NNSA and Rosatom developed an accelerated schedule for removal of Russian-origin highly enriched uranium (HEU) fresh and spent fuel from Russian-designed research reactors in third countries. The pilot operation of shipping Russian-origin spent HEU fuel from the WWR–SM research reactor in Uzbekistan is in progress and all of the spent fuel will be removed from Uzbekistan by June 2006. Under the accelerated schedule, all eligible HEU fresh fuel shipments are to be completed by the end of 2006, and shipments of spent nuclear fuel currently stored outside of research reactors will be completed by 2010.

Furthermore, NNSA also has produced a prioritized schedule through 2011 for the repatriation of U.S.-origin HEU spent fuel from research reactors in third countries under the Foreign Research Reactor Spent Nuclear Fuel (FRR SNF) Acceptance program. This effort, in close cooperation with NNSA's Reduced Enrichment for Research and Test Reactors (RERTR) program, works to reduce and, to the extent possible, eliminate the use of HEU in civil nuclear applications and promote the conversion of research reactors to low enriched uranium fuel. The deadline for the FRR SNF Acceptance program was extended by 10 years to 2019. Efforts currently are underway to accelerate program participation.

Finally, NNSA and Russian institutes are collaborating to develop new, higher density low enriched uranium fuels to replace HEU fuels used in U.S.-designed and Russian-designed research reactors in third countries.

29. Senator WARNER. Secretary Bodman, does the fiscal year 2007 budget request for defense nuclear nonproliferation provide all the resources required to fulfill the commitments President Bush made at Bratislava?

Secretary BODMAN. Yes, the administration's fiscal year 2007 budget request fully supports the efforts to complete the security upgrades at the Russian Strategic Rocket Forces (SRF) and 12th Main Directorate warheads sites and all of the Rosatom sites by the end of 2008.

The fiscal year 2007 budget request also supports an accelerated schedule for removal of Russian-origin HEU spent fuel from Russian-designed research reactors in third countries, the return of U.S.-origin HEU spent fuel from research reactors in third countries, and the development of new, higher-density low enriched uranium fuel to enable the conversion of U.S.-designed and Russian-designed research reactors in third countries. In particular, it is important to highlight that the administration's fiscal year 2007 budget request for the Global Threat Reduction Initiative's Russian Research Reactor Fuel Return program reflects a doubling of the budget in order to meet the prioritized schedule in accordance with the Bratislava Joint Statement on Nuclear Security Cooperation.

GLOBAL THREAT REDUCTION INITIATIVE

30. Senator WARNER. Secretary Bodman, in March 2005, DOE launched the Global Threat Reduction Initiative, which aims to identify and secure radiological materials around the world against diversion for use in radiological dispersion devices. What is the status of this important anti-terrorism initiative?

Secretary BODMAN. With the establishment of the Global Threat Reduction Initiative (GTRI) in May 2004, the DOE consolidated and accelerated several programs that reduce the threat posed by high-risk, vulnerable civil nuclear materials and other radioactive materials that could be used in an improvised nuclear device or radiological dispersal device. GTRI is working in cooperation with the International Atomic Energy Agency (IAEA), the International Criminal Police Organization (Interpol), and with other partner organizations in over 40 countries around the world to secure or recover high-risk materials, and minimize and, to the extent possible, eliminate the use of highly enriched uranium in civil nuclear applications.

GTRI secured 373 foreign sites internationally that contain high-risk, vulnerable radiological materials and recovered 12,175 excess and unwanted sealed radiological sources in the United States. In addition, we assist several countries in establishing effective regulatory authority and implementing accounting procedures that will assist national authorities in controlling nuclear and other radioactive materials within their national borders. We are also working bilaterally and through the IAEA to secure and recover unused and orphaned nuclear and other radioactive materials

that pose a terrorist risk. Considering that sustainability is key in any security system, GTRI is also striving to ensure that security enhancements can and will be maintained over the long term.

31. Senator WARNER. Secretary Bodman, has the DOE developed a strategy for prioritizing its activities under this initiative so that the material that poses the highest risk is identified and addressed first?

Secretary BODMAN. Yes, the NNSA has developed a risk-based analysis of the countries and facilities where vulnerable, high-risk nuclear and other radioactive materials pose potential risks to U.S. national security. This analysis provides the Office of Global Threat Reduction with an important tool to allocate its resources.

The risk-based process prioritizes countries and facilities where the combination of dangerous material, terrorist activity, and country or facility vulnerabilities present the greatest potential risks to U.S. national security. The process is derived from the accepted principle of risk as a product of consequence, threat, and vulnerability. The risk-based approach takes into account several criteria, including the type and quantity of material, security conditions at the site, and the location of the material.

DEPARTMENT OF HOMELAND SECURITY'S DOMESTIC NUCLEAR DETECTION OFFICE

32. Senator WARNER. Secretary Bodman, last year, a new Domestic Nuclear Detection Office was established within the Department of Homeland Security (DHS). This office was to be a national-level, jointly staffed office within DHS to strengthen the Nation's ability to detect and prevent attempts to import or use nuclear or radiological materials. The office was tasked with coordinating domestic research and development for detection, identification, and reporting of radiological and nuclear materials. The office was also tasked with coordinating the activities of agencies—including DOE, DOD, and State—that play a role in the development of nuclear detectors or in their use in domestic or overseas programs.

Given that the DOE has historically led U.S. efforts in research and development of nuclear detection technologies, how have DOE's mission and programs been affected by the establishment of this new office?

Secretary BODMAN. While DOE/NNSA's Office of Nonproliferation Research and Development maintains responsibility for the policy direction and implementation of its programs, we are sharing information and coordinating closely on strategy for research and development with the Domestic Nuclear Detection Office (DNDO). DOE/NNSA's Office of Nonproliferation Research and Development and DNDO are responsible for developing technologies for complementary but different missions. NNSA's responsibility includes research and development for international nonproliferation efforts, including support to the defense and intelligence communities. The DNDO is responsible for protecting the U.S. through development of the nuclear detection architecture to prevent radiological and nuclear materials from illicitly entering the United States. Coordination between NNSA and DNDO is beneficial for fulfilling this mission. The benefits of this coordination are evident in DNDO's inclusion of DOE/NNSA in reviewing its R&D program and its efforts to test and evaluate advancements in detection capabilities at the test bed DNDO established at the Nevada Test Site. In addition, our Second Line of Defense program is participating in, and expects to benefit from, DNDO's operational testing and evaluation of advancements in nuclear detection equipment.

33. Senator WARNER. Secretary Bodman, how would you describe DOE's relationship with this new entity in DHS?

Secretary BODMAN. Our interactions with DNDO have been positive and we are optimistic that our relationship will continue to be constructive. DOE frequently exchanges data with DNDO to support the global architectural analysis and to collaboratively explore advancements in detection capabilities. Furthermore, DOE has a detailed assignment stationed within the DNDO to support their efforts on a day to day basis. DOE frequently attends and coordinates briefings with DNDO to other agencies and to Congress.

ENVIRONMENTAL MANAGEMENT FUNDING

34. Senator WARNER. Secretary Bodman, the fiscal year 2007 budget request proposes a reduction in funding for the defense Environmental Management (EM) program of approximately $740 million. This reduction is principally a reflection of the completion of the cleanup of the Rocky Flats site during fiscal year 2006. The com-

mittee receives only a 1-year budget request for this program. What do you predict as the out-year funding trend for the DOE cleanup activities?

Secretary BODMAN. The administration determines the details of its appropriations request 1 year at a time. As reflected in the 5-year plan the DOE recently delivered to Congress, the out-year funding for cleanup activities is expected to decline over the next several years.

35. Senator WARNER. Secretary Bodman, some of the most technically challenging cleanup work remains—such as the nuclear waste tanks at Hanford. Given that fact, do you believe the EM program budget can continue to decline in the coming years?

Secretary BODMAN. The DOE believes that there are major uncertainties regarding its ability to comply with current requirements in its environmental cleanup agreements and with other requirements, and address the technical challenges of the remaining cleanup work. The EM out-year target funding levels are based on the previously planned accelerated site closure strategy. The DOE is currently updating these assumptions to reflect known changes in the regulatory and statutory requirements, incorporate changes based on actual program performance, and to incorporate technological and acquisition strategies to meet the DOE's long-term environmental commitments.

WASTE INCIDENTAL TO REPROCESSING—USING THE AUTHORITY GRANTED

36. Senator WARNER. Secretary Bodman, 2 years ago, Congress conducted substantial debate on the issue of residues or "heels" left in nuclear waste storage tanks. Congress ultimately granted DOE the authority to leave some small amount of this residue in place, after DOE had physically emptied as much nuclear waste from each tank as possible. How has DOE used this new authority?

Secretary BODMAN. The authority you cite is section 3116(a) of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005. We are implementing section 3116 at the Savannah River Site (SRS) and the Idaho National Laboratory (INL), the two sites covered by the legislation.

On January 17, 2006, after the statutorily required consultation with the U.S. Nuclear Regulatory Commission (NRC), the DOE made the first section 3116 determination for the Salt Waste Processing Facility (SWPF) at SRS. The DOE is now pursuing the necessary permits from the State of South Carolina. The facility is currently under design and DOE is planning to begin SWPF operations in fiscal year 2011.

We are currently consulting with the NRC, in accordance with section 3116, on two other draft waste determinations. The first would enable us to close two specific SRS tanks containing stabilized residual waste. The second would enable us to close Idaho tanks and associated components containing stabilized residual wastes. We expect to complete our NRC consultations on both of these draft waste determinations this summer.

37. Senator WARNER. Secretary Bodman, the new authority requires DOE to consult with the NRC in these matters. Is that relationship in place and functioning well?

Secretary BODMAN. Section 3116(a) of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 provided additional authority for me to determine, in consultation with the NRC, that certain wastes from reprocessing are not high-level waste.

On January 17, 2006, I made the first determination for disposal of tank salt waste at the SRS, after working an approximately 10-month long statutorily required consultation with the NRC.

HEALTH AND PENSION BENEFITS

38. Senator WARNER. Secretary Bodman, in the Senate debate on last year's defense bill, a number of amendments were filed, related to benefits for cleanup workers at various DOE sites. As the manager of the bill, I was able to work with Senator Levin and the sponsors of these amendments with the result that we did not adopt any provisions related to DOE pension policy. DOE opposed most of the proposed amendments, or at least had strong reservations about them. What was the basis of these reservations?

Secretary BODMAN. The Department believes its approach to contractor benefit requirements is fair and reflects current best commercial practices that will enable

the Department to continue to attract the best contractors and the Department's contractors to attract the best employees.

We opposed the proposed pension amendments because they would have required specific changes to private pension plans—changes that would have significantly increased the liabilities of those plans, would have undermined the agreed-upon resolution of those matters in collective-bargaining agreements, constrained the ability of DOE contractors to manage their workforces, and made future negotiations with labor organizations representing their workforces more difficult. The legislation would have singled out DOE contractors for different treatment from other government contractors and made it more difficult to manage retirement benefit costs. Certain of the proposed amendments were intended to require the contractors to maintain employees' vested accrued benefits in a manner that overlapped with the existing protection of such benefits under the Employee Retirement Income Security Act (ERISA).

39. Senator WARNER. Secretary Bodman, are there any legislative provisions you feel are needed in this area?

Secretary BODMAN. At this time the Department does not believe that additional legal authorities are necessary to address contractor employee benefits issues.

40. Senator WARNER. Secretary Bodman, could you share your view on the general theme of worker benefits under DOE contracts?

Secretary BODMAN. Generally, the Department intends to use an approach to worker benefits under DOE contracts that is fair, reflects current best commercial practices, and will enable the Department to continue to attract the best contractors and the Department's contractors to attract the best employees. In so doing the Department needs to improve the predictability of its contractor cost reimbursement obligations and moderate benefit cost and liability growth in contractor benefit programs.

41. Senator WARNER. Secretary Bodman, what do you believe should be the overarching principles by which DOE guides the development of requirements related to contractor benefits?

Secretary BODMAN. The overarching principles with respect to employee benefits and DOE contract requirements are fairness and a reflection of current best commercial practices that will enable the Department to continue to attract the best contractors and Department's contractors to attract the best employees.

NUCLEAR WASTE CLEANUP AT HANFORD, WASHINGTON

42. Senator WARNER. Secretary Bodman, in your statement, you have called out the environmental cleanup project at Hanford, Washington as being uniquely plagued with management and regulatory challenges. Specifically, you have identified "overly optimistic assumptions" and "unrealized technology advancements" as the source of the approximately $5 billion cost escalation on this project. While it is important that this project regain its momentum, it is critical that it first be placed on the right path. Could you describe for the committee the action plan you are now implementing to find and correct the deficiencies associated with the execution of this project?

Secretary BODMAN. The DOE, along with the U.S. Army Corps of Engineers (USACE) and Bechtel National, Inc. (the Waste Treatment and Immobilization Plant contractor), is currently undertaking several major activities to ensure that we fully understand what is required to successfully complete the project and begin plant operations. Below are key activities that have been initiated in the areas of project management, technology, and the project cost and schedule:

Strengthen Project Management

An independent firm has completed an After Action Factfinding Review which identified the root causes for the project management issues and was published in January 2006. In response, several initiatives have been put into place to strengthen the project management process:

- I have met several times with senior principals of Bechtel National, Inc., to discuss directly DOE concerns and expectations about project performance;
- The Assistant Secretary for Environmental Management has established a Headquarters' senior-level Waste Treatment and Immobilization Plant (WTP) Oversight Team;

- The DOE has recruited qualified personnel and is in the process of hiring several others in the areas of contracting, procurement, contract law administration, and project management;
- A Headquarters Team has been commissioned to assess the Office of River Protection compliance with DOE Order 413.3, Program and Project Management for the Acquisition of Capital Assets;
- The WTP contractor is implementing an Earned Value Management System (EVMS) that fully complies with American National Standards Institute/Environmental Industry Association (ANSI/EIA) 748–A–1998;
- A structured weekly and monthly reporting system is in place, plus a Quarterly Performance Headquarters review is being conducted by the Assistant Secretary for Environmental Management; and,
- Senior DOE management is receiving project status updates on a regular basis.

Verify WTP Design-Engineering

- The DOE has commissioned a broad group of distinguished independent senior professionals from private industry and academia to thoroughly review all technology aspects of the WTP process flow sheet. The flow sheet report was finalized in March 2006 and indicates that other than one correctable flaw dealing with line plugging, the WTP should operate. There are several other solvable issues regarding waste throughput. DOE is formulating a path forward that addresses and remedies these issues. We will share this with the committee.
- The DOE has separately commissioned the USACE to independently review the establishment, validation, and implementation of the revised seismic design criteria, a technology related issue already identified as having a significant cost and schedule impact. Also, the Defense Nuclear Facilities Safety Board has been actively engaged in this issue and will continue to be included in discussions regarding the final seismic criteria.
- In addition, the DOE is proceeding with the drilling of at least one deep borehole to confirm the ground motion data, which should be completed by the summer of 2007. However, the assumption is the final design criteria have acceptable margin of design. The DOE expects the reviews and discussions of seismic criteria to be completed by late summer 2006 to permit proceeding with construction of the facilities affected by the concern for seismic criteria.

Establish a Credible Project Cost and Schedule

- The DOE has commissioned "best and brightest" independent senior professionals from private industry, academia, and Bechtel corporate management with years of experience to review the WTP resource-loaded project cost, schedule, estimating methodology, contingency management, and overall project management system. This report is due to be completed by early spring 2006.
- The DOE has also engaged the USACE to perform an independent expert review of the Estimate At Completion, and, if acceptable, to validate the project baseline scope, cost, and schedule. The USACE has retained a number of recognized industry experts working alongside their own senior staff. The USACE's report is scheduled to be completed by late summer 2006.

Based on the results from the reviews, the DOE expects to establish a sound project cost and schedule to complete the Hanford WTP. The objective is to ensure this project will be well managed. We owe it to Congress, regional stakeholders, and the U.S. taxpayers that the substantial investment in the WTP is receiving the highest level of talent and attention the DOE can provide.

QUESTIONS SUBMITTED BY SENATOR JOHN ENSIGN

MANAGEMENT AND OPERATIONS CONTRACTS

43. Senator ENSIGN. Secretary Bodman, on the issue of management and operations (M&O) contracts for DOE facilities, DOE has indicated that it wants to move toward dispersing these contracts among different contractors, in essence, bringing "new blood" into the management of DOE facilities. Is that still the DOE's intention and what are some examples of where you are doing that?

Secretary BODMAN. I fully support competition as a tool to ensure that the DOE's facilities and sites are managed and operated by the best contractors. DOE is committed to conducting its M&O contract competitions fairly and in a manner that fos-

ters competitive interest. We believe that where competition is employed, regardless of the winner, DOE receives benefits. The competitive pressure, coupled with the stronger contract requirements such as the use of performance-based incentives required by the Department's solicitation, should drive the program and management improvements that the Department is seeking as well as continue to provide the American taxpayer with optimum management teams for our M&O contracts. A phenomenon that we are seeing is that potential offerors are assembling "teams" in order to be more competitive and provide the best possible combination of management and science expertise. This teaming phenomenon was observed under the procurements for the Idaho National Laboratory, the Oak Ridge National Laboratory, the Los Alamos National Laboratory, and the Portsmouth and Paducah remediation requirements. A number of competitions are ongoing or are planned in the near future including the Argonne National Laboratory, the Fermi National Accelerator Laboratory, and the Lawrence Livermore National Laboratory. We anticipate similar industry responses under these competitions.

44. Senator ENSIGN. Secretary Bodman, in that same light, is the fact that a potential contractor might be a first-time M&O contractor for a DOE facility a disadvantage, even if that contractor has experience managing other large-scale Federal Government facilities?

Secretary BODMAN. As a general matter, we strive to develop competitive solicitations that promote competition (1) by open and early communication with industry and (2) by structuring evaluation criteria that induce potential offerors to craft proposals that best meet the Department's requirements. In order to ensure the selection of the optimum management team to manage our M&O contracts, DOE uses a combination of tools to engage the marketplace early in the competitive process by providing meaningful and timely information on the requirement, the contractor's performance, the physical site and facilities, and agreements with regulatory agencies. DOE often uses "one-on-one" meetings where industry officials meet with senior DOE program officials prior to development of the draft solicitation. DOE then considers the information obtained in light of the type of work to be performed at the site in developing the acquisition approach, and evaluation criteria that will be used in the solicitation. With respect to a contractor's experience, during the competitive process, the DOE evaluates offerors' past performance and experience in managing large scale facilities similar in size, scope, and complexity to that of the specific site or facility in order to ensure potential contractors can successfully perform the required effort.

NEVADA TEST SITE

45. Senator ENSIGN. Secretary Bodman, I obviously have a particular interest in the Nevada Test Site (NTS). Since the cessation of nuclear testing, Nevada's congressional delegation has consistently supported the use of that facility for the testing of new technologies, as well as the utilization of potential subcontractors or tenants who can assist with that objective. Is DOE giving any weight to the capability of potential contractors to achieve those aims?

Secretary BODMAN. Yes, as evidenced by this statement that is one of the minimum expectations required by the Acquisition Plan:

> The Contractor is expected to maintain or exceed the performance of the incumbent with respect to applied research, development, and engineering. The Contractor will be expected to sustain and improve the culture of technology application that has contributed to the success of the NTS over the years.

Furthermore, "Section M, Evaluation Criteria for Award" of the Request for Proposals identifies "Other DOE and non-DOE Support", the area under which such work by non NNSA/Defense Programs would be done, as part of "Criterion 1 Applied Science, Engineering, and Technology." Criterion 1 received by far the highest weighting in the evaluation. The NTS has long been used to support the NNSA's mission to "Support the United States leadership in science and technology." The NNSA expects the selection of the M&O contractor for the new contract to be capable of achieving that objective.

46. Senator ENSIGN. Secretary Bodman, as a result of unforeseen circumstances, I understand that the timeline for the selection of a contractor for the NTS has slipped. Can you give me any idea how close DOE is to making a selection?

Secretary BODMAN. The Source Selection Official accepted the Source Evaluation Board's Final Report, and is expected to make a decision in time for the transition

to the new contract to begin by April 1, as identified in "Amendment 003 of the Solicitation" that resides on the DOE Web site at http://www.doeal.gov/nevadacontractrecompete/.

DOE LABORATORY PENSIONS

47. Senator ENSIGN. Secretary Bodman, how far along is DOE towards moving to defined contribution pension plans at the DOE national laboratories, in line with the private sector?

Secretary BODMAN. Consistent with the goal to mitigate cost volatility and liability growth in contractor pension plans, the Department is taking steps to ensure that as contracts are recompeted, solicitations require (unless otherwise required by law) the provision of market-based pension plans competitive for the industry to new, non incumbent employees hired after the date of contract award. The solicitations also provide that incumbent employees will remain in their existing pension plans pursuant to plan eligibility requirements and applicable law; that is, "if you're in, you're in." Since January 1, 2005, we have awarded nine contracts containing the requirement that DOE facility contractors establish market based pension plans for all new employees hired after contract award. DOE believes this is an approach that is fair, reflects current best commercial practices, and will enable the Department to continue to attract contractors and contractors to attract the best employees.

QUESTIONS SUBMITTED BY SENATOR LINDSAY O. GRAHAM

FISCAL YEAR 2007 BUDGET

48. Senator GRAHAM. Secretary Bodman, the overall decrease in the budget for the SRS is approximately $60 million. However, the EM budget for SRS reflects a $94 million decrease from fiscal year 2006. If funding for the SWPF is not included, the total reduction in EM funding for SRS is around $120 million. With this significant reduction in funding, what work will be stopped or eliminated at SRS in fiscal year 2007?

Secretary BODMAN. Savannah River's (SR) EM overall budget is $60 million less than last year. The $94 million difference between fiscal year 2006 and fiscal year 2007 excludes funding for Program Direction and Safeguards and Security, as does the $120 million. There are a number of increases and decreases within the following amounts that make it difficult to reconcile the figures without line-by-line budget examination, but overall, the explanations for the net $60 million decrease for EM are as follows:

- $33.8 million decrease is associated with completion of deactivation of the cooling tower for 235–F and completion of the FB-Line deactivation (PBS SR–0011B).
- $33.2 million decrease is associated with the completion of operations in the F-Area plutonium storage facility and the new strategy to consolidate plutonium storage into one facility in K-Area (PBS SR–0011C).
- $40.4 million decrease is associated with the decontamination and decommission (D&D) project (PBS SR–0040C). This reduction was necessary to realign dollars to meet critical mission needs and higher priority projects in order to meet regulatory compliance issues (e.g. SWPF and the soil and groundwater program).

These decreases were partially offset by an increase in the Radioactive Liquid Tank Waste Stabilization and Disposition project (PBS SR–0014C) of $32.6 million (primarily to support design and construction of the SWPF), an increase in the Soil and Water Remediation Project (SR–0030) of $9.7 million in order to meet regulatory compliance milestones, and an increase in Safeguards and Security (SR–0020) of $21.3 million for implementation of the 2005 Design Basis Threat requirements.

As demonstrated above, the most significant impact of this overall EM reduction of $60 million is associated with the D&D program ($40.4 million) which supports activities that are not required by compliance agreements. This reduction will result in a re-pacing of the D&D program.

49. Senator GRAHAM. Secretary Bodman, the D&D has the most significant cuts. The President's budget reduces funding in this area from approximately $60 million in fiscal year 2006 to $12.5 million for fiscal year 2007. How will this effect worker safety and community concerns?

Secretary BODMAN. The reduced funding for the D&D project means less D&D scope will be accomplished. The D&D scope that is accomplished will be performed with full implementation of safety and worker protection measures and controls. There will be no reduction in safety for the work performed. There will be no impact to the local communities from deferral of this work until a later date. These activities are not required by compliance agreements.

50. Senator GRAHAM. Secretary Bodman, how will the DOE prioritize demolition work at SRS?

Secretary BODMAN. EM's overall priorities are:

1. Conduct compliant and safe operations;
2. Fully establish the disposition capability for radioactive liquid tank waste, special nuclear materials, and spent nuclear fuel;
3. Dispose of contact-handled and remote-handled transuranic waste and low level radioactive waste;
4. Continue to remediate contaminated soil and groundwater;
5. Decontaminate, decommission, and demolish contaminated facilities no longer needed; and,
6. Support post-closure benefits and liability requirements.

The demolition work at the SRS will be prioritized in a manner reflective of these overall priorities.

51. Senator GRAHAM. Secretary Bodman, since there are people assigned to perform the existing cleanup work at SRS, what is the anticipated labor impact associated with the planned reductions?

Secretary BODMAN. Prior to identified reductions in the budget, the SRS planned a workforce restructuring and reduction using a phased approach beginning in fiscal year 2005. The restructuring program was needed as a result of progress made in site cleanup, reprioritization of work scope, and subsequent changes in skills mix requirements. The DOE continues to evaluate workforce requirements to determine whether additional changes will be required.

52. Senator GRAHAM. Secretary Bodman, when SRS took plutonium and other materials from sites such as Rocky Flats and Fernald, DOE was enabled to accomplish cleanup missions ahead of schedule and at cost savings. At the time, DOE stated its intention to use the money saved to reinvest in cleanup of other sites, such as SRS. However, this has not been the case. Can you explain why this has not happened?

Secretary BODMAN. Prior to fiscal year 2001, the DOE's funding strategy for the EM program was that as sites such as Rocky Flats completed cleanup and funding requirements at those sites decreased, that funding would be shifted to other sites. However, as part of the administration's "Accelerated Cleanup Initiative," increased funding was provided beginning in fiscal year 2003 to most sites including Savannah River, Oak Ridge, and Idaho to accelerate cleanup rather than waiting until some sites such as Rocky Flats were completed. This allowed the DOE to address its urgent risks sooner and to accelerate cleanup. Fiscal year 2005 was the peak year of funding for this initiative.

MIXED OXIDE FUEL

53. Senator GRAHAM. Secretary Bodman, when the SRS was selected as the site for the MOX program, the DOE and NNSA made important commitments to the State of South Carolina. If the MOX plant was not constructed and fully operational according to a schedule codified in the National Defense Authorization Act for Fiscal Year 2003, the Federal Government would be required to pay the State of South Carolina up to $100 million per year beginning in 2011. It is South Carolina's intention to follow through on the project and not receive penalty payments, however, the residents of the State simply seek reassurances that weapons grade plutonium would not remain at SRS indefinitely.

The program is approximately 3 years behind schedule. This is due to a number of factors including delays in negotiating a liability agreement with Russia. In the fiscal year 2006 Energy and Water Appropriations Act, the penalty payment time table was to be adjusted by 3 years in order to reflect these delays. However, we must accelerate the program in order to bring it closer to the original construction and operations schedule.

In your opening statement before the committee, you mentioned that the MOX plant will begin operations in 2015. However, current law states that if the MOX

production goals are not met by January 1, 2014, the DOE will be required to pay the penalty payments. Even if the new schedule for MOX plant can be met, is it the intention of the Federal Government to honor its commitments to South Carolina and make the penalty payments?

Secretary BODMAN. The Department is committed to begin operation of the MOX facility as soon as practical. The fiscal year 2006 Energy and Water Appropriations Act directed the Department to prepare and submit to Congress a new baseline schedule for the MOX facility by the end of this year. This new baseline will take into account all relevant factors, including the fiscal year 2007 funding level approved by Congress. This baseline will permit Congress and the administration to consider what, if any, changes should be made to the statutory framework for the MOX facility. The administration will comply with what Congress legislates on payments to the State.

54. Senator GRAHAM. Secretary Bodman, this past fall, we discussed the status of the MOX project. At that time, you told me that the program was approximately 3 years behind schedule. However, according to your testimony, it appears as if your fall schedule was incorrect. What has changed since the fall that has caused an additional delay in the program?

Secretary BODMAN. DOE received approximately $180 million less than the budget request for fissile materials disposition in fiscal year 2006. This has caused an additional delay in the schedule for operation of the U.S. MOX facility, as well as DOE's ability to meet the MOX production objective.

55. Senator GRAHAM. Secretary Bodman, what assurances can you give me that in December, the timetable will not show further postponement of the MOX facility?

Secretary BODMAN. A detailed revised cost estimate and schedule for construction and operation of the MOX facility is currently being developed and will be submitted to Congress by December 2006. Our intent is to establish an aggressive and realistic schedule that reflects all relevant factors including the likely funding level in the Fiscal Year 2007 Energy and Water Development Appropriations Act and the anticipated funding levels for future years.

56. Senator GRAHAM. Secretary Bodman, attempts to alter the agreement the Federal Government entered into with South Carolina send a negative message to all communities that work with DOE. Can I get your assurances that the administration will work to prevent any attempts to further alter the penalty language?

Secretary BODMAN. The MOX facility is a key component of U.S.-Russian efforts to dispose of stockpiles of surplus weapons plutonium. The Department is committed to begin operation of the MOX facility as soon as practicable and to continue working with the State of South Carolina and local communities in achieving that objective. The Department will provide Congress with a revised baseline for the MOX facility by December 31, 2006. This baseline will reflect the fiscal year 2007 funding levels approved by Congress and other relevant factors. We will work with Congress to determine what is the proper path forward in light of this baseline.

57. Senator GRAHAM. Secretary Bodman, the President has requested $383 million for the MOX program for fiscal year 2007. On a cost basis, the MOX program represents our Nation's largest single non-proliferation program. After the MOX plants in South Carolina and Russia are constructed and operational, they will lead to the ultimate elimination of 34 metric tons of defense plutonium. This represents approximately 4,000 nuclear warheads.

Does the fiscal year 2007 budget request aim to accelerate construction to make up for time lost in negotiating with the Russians? How do you plan to make up for the delays?

Secretary BODMAN. DOE has undertaken a number of actions to strengthen the management of the MOX project and will insist on a multi-tier performance incentive in future contract negotiations for the construction of the MOX facility to meet critical project milestones. Our intention is to adhere to the schedule in the report I submitted to Congress on February 15, 2006, although we will continue to explore ways to accelerate its schedule.

58. Senator GRAHAM. Secretary Bodman, how much money would be required to bring the project back on schedule?

Secretary BODMAN. A detailed revised cost estimate and schedule for construction and operation of the MOX facility are currently being developed and will be validated as part of the Department's Critical Decision process. DOE will submit to Congress by December 2006 a report on the revised cost and schedule for construc-

tion and operation of the MOX facility. Until these estimates have been developed and validated, it is premature to speculate on additional funding.

59. Senator GRAHAM. Secretary Bodman, while site preparations have begun, will construction begin this fall as planned?

Secretary BODMAN. DOE began site preparation activities for the U.S. MOX facility at the SRS in October 2005. We fully intend to begin construction this year.

60. Senator GRAHAM. Secretary Bodman, how important is the MOX program in achieving our nonproliferation goals?

Secretary BODMAN. The Russian plutonium disposition program is very important to achieving U.S. nonproliferation goals. This is the only program that will permanently dispose of Russian plutonium so that it can never again be used for weapons.

61. Senator GRAHAM. Secretary Bodman, what message does the delay in our largest nonproliferation program send the international community, including the Russians, North Koreans, and Iranians?

Secretary BODMAN. The international community strongly supports the Russian plutonium disposition program. Our Group of Eight (G–8) partners have committed significant funds to the program and, despite delays between the U.S. and Russia over liability protection, they continue to support the program. The United States demonstrated its commitment to this important nonproliferation program by continuing to pursue the negotiations and continued preparatory work as much as possible. This indicates that we, along with our international partners, will aggressively pursue initiatives to prevent proliferation despite hurdles along the way, and it sends a strong message to potential proliferants that proliferation will not be tolerated.

62. Senator GRAHAM. Secretary Bodman, in 2002, Vice President Cheney was in South Carolina when he said, "this administration is totally committed to work with Congressman Graham and your congressional delegation to pass legislation that will guarantee that South Carolina will not become a permanent storage site for plutonium." We passed that legislation in the National Defense Authorization Act for Fiscal Year 2003.

Can you assure me that the SRS will not become the Nation's repository for defense plutonium and you will work to resist all efforts to make this happen?

Secretary BODMAN. In accordance with applicable law, no surplus, weapons-usable fissile plutonium will be shipped to the SRS without a plan for the disposition of such plutonium. The DOE will continue to be guided by all applicable laws in this regard, including the National Defense Authorization Act for Fiscal Year 2003, as amended. The DOE agrees that the SRS should not become a permanent repository for such plutonium and is committed to dispositioning such plutonium in a proper manner.

63. Senator GRAHAM. Secretary Bodman, I notice there is no funding in the fiscal year 2007 budget request for SRS plutonium disposition. What is your strategy for the disposition of plutonium that is not scheduled to be sent through the MOX process?

Secretary BODMAN. Deputy Secretary Clay Sell approved on September 6, 2005, the mission need (Critical Decision-0) for a new plutonium disposition capability to be established at the SRS to deal with such plutonium not suitable for use in MOX fuel. The DOE's fiscal year 2006 budget request and appropriation includes $10 million for conceptual design for this project. Work on the conceptual design has begun and will continue into fiscal year 2007. Based on the results of the conceptual design and alternatives analysis, after appropriate analysis pursuant to the National Environmental Policy Act, a decision on the selected process will be made.

64. Senator GRAHAM. Secretary Bodman, if the MOX program should fail, DOE would have to remove the plutonium from SRS. Does DOE have the capability to move the plutonium out of South Carolina to an alternative site?

Secretary BODMAN. Yes, we do have the capability to move the material. The amount of time it would take to move the material would depend upon many variables including the priority of the movement with respect to the other commitments of the Secure Transportation Asset, the amount of material to be moved and its configuration, and the location of the alternative site. The material moved to the SRS from Rocky Flats took approximately 11 months of concentrated effort to transport.

HYDROGEN

65. Senator GRAHAM. Secretary Bodman, DOE is to be commended for strengthening its commitment to science research, especially in the advancement of hydrogen research. However, I am deeply disturbed by the lack of funding at DOE's only EM national laboratory.

Despite over 50 years of experience in storing hydrogen, Savannah River National Laboratory (SRNL) does not appear to be a focal point for the DOE's efforts to realize the President's hydrogen initiative. Other labs such as Sandia and Oak Ridge, which have less expertise in hydrogen research than SRNL, are targeted to receive a substantial increase in their funding, as compared to the amount dedicated to funding hydrogen research at the SRNL. Why is the potential of SRNL not being realized by DOE?

Secretary BODMAN. DOE recognizes SRNL's extensive past experience in nuclear applications for hydrogen. As a result of that experience, SRNL was successful in competing for three hydrogen research projects supported by the DOE Hydrogen Program: (1) nuclear-based hydrogen production, (2) metal hydride research as part of a Hydrogen Storage Center of Excellence, and (3) basic research in carbon-based storage materials. SRNL's success has led to an increase in Hydrogen Program funding from $950,000 in fiscal year 2005 to $1,700,000 in 2006. Other national laboratories such as Sandia are also clearly recognized as experts in hydrogen technologies and have been awarded DOE projects based on competitive review. Many hydrogen projects were hit hard by the $25 million appropriations shortfall in fiscal year 2006 and the approximately $40 million in congressionally directed projects. The combined effect was that funding for 66 projects was eliminated and funding for 48 projects was reduced. It is difficult to increase funding for any projects under these circumstances.

In addition to planned DOE investments, SRNL will have the opportunity to participate in future competitive solicitations to contribute new research ideas for the President's Hydrogen Fuel Initiative.

66. Senator GRAHAM. Secretary Bodman, on February 13, 2006, the Center for Hydrogen Research was opened in Aiken, South Carolina. This facility will be a magnet for investment and innovation in hydrogen. Already General Motors and Toyota are working to support hydrogen research at the SRNL. How is DOE planning to capitalize on this investment and increase the resources allocated to SRNL to develop hydrogen research?

Secretary BODMAN. The DOE Hydrogen Program currently supports three projects at the SRNL: (1) nuclear-based hydrogen production, (2) metal hydride research as part of the Metal Hydride Center of Excellence, and (3) basic research in carbon-based storage materials. Hydrogen Program funding at SRNL increased from $950,000 in fiscal year 2005 to $1,700,000 in 2006. In addition to planned DOE investments, SRNL will have the opportunity to participate in future competitive solicitations to contribute new research ideas for the President's Hydrogen Fuel Initiative.

LIQUID WASTE

67. Senator GRAHAM. Secretary Bodman, the storage of 37 million gallons of highly radioactive liquid waste in aging tanks at SRS is the single largest threat to human health and the environment in South Carolina. Recently discovered additional leaks highlight the need to move quickly in closing the tanks. SRS has indicated that they will fail to meet the closure schedules established in the Federal Facility Agreement for High Level Waste (HLW) Tanks 18 and 19 (10/31/06 for Tank 19, 02/28/07 for Tank 18). How does DOE intend to ensure that the HLW tank closure commitments in the Federal Facility Agreement are upheld?

Secretary BODMAN. The DOE, in coordination with the South Carolina Department of Health and Environmental Control representatives, is evaluating actions necessary to ensure future tank closure activities meet the existing Federal Facility Agreement schedule.

On January 17, 2006, I made the first determination for disposal of tank salt waste at the SRS, after working an approximately 10-month long statutorily required consultation with the U.S. Nuclear Regulatory Commission.

68. Senator GRAHAM. Secretary Bodman, as any delays in implementing section 3116 of the National Defense Authorization Act for Fiscal Year 2005 will have a significant impact on the surrounding community, what is DOE doing to ensure that

community stakeholders, such as the South Carolina Department of Health and Environmental Control (SCDHEC) are part of the process moving forward?

Secretary BODMAN. The DOE has published each draft waste determination for public comment and has received comments from the State regulatory agencies. In particular, the SCDHEC has provided comments on the draft determination concerning the SRS. DOE routinely (monthly) briefs the SRS Citizens Advisory Board on the status of waste determinations. Furthermore, representatives from DOE–SR and the SCDHEC recently met on February 24, 2006, to reinitiate technical discussions associated with closing Tanks 18 and 19, and reached agreement to hold regularly scheduled meetings.

69. Senator GRAHAM. Secretary Bodman, I authored and worked to pass section 3116, which was intended to facilitate timely closure of the HLW tanks at SRS. However, the first section 3116 waste determination took over 14 months to complete after passage of section 3116. It appears that DOE's implementation time line is adding about a year to the closure process. How will DOE manage the implementation time line to facilitate the closure commitment dates?

Secretary BODMAN. Section 3116(a) of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 provided additional authority for me to determine, in consultation with the NRC, that certain wastes from reprocessing are not high-level waste. The DOE and the NRC recently held a lessons learned meeting with State representatives to identify opportunities to reduce the implementation time line for future waste determinations and facilitate meeting tank closure commitment dates. Additionally, DOE and NRC staff and senior management continue to have dialogue to resolve specific implementation issues associated with implementing the legislation.

70. Senator GRAHAM. Secretary Bodman, I am concerned DOE has relinquished control of the waste determination to the NRC. What is DOE doing to ensure that goals of section 3116 are being realized and not being slowed down by unnecessary bureaucracy?

Secretary BODMAN. Section 3116(a) of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 provided additional authority for me to determine, in consultation with the NRC, that certain wastes from reprocessing are not high-level waste. The DOE and the NRC recently held a lessons learned meeting with State representatives to identify opportunities to reduce the implementation time line for future waste determinations and to ensure the goals of section 3116 are being realized. Additionally, DOE and NRC staff and senior management continue to have dialogue to resolve specific implementation issues associated with implementing the legislation.

SALT WASTE PROCESSING FACILITY

71. Senator GRAHAM. Secretary Bodman, due to recent decisions by DOE concerning design standards for the SWPF, the schedule for construction and operation has been extended by over 2 years. This has necessitated the need for various interim activities to ensure safe and appropriate operation of the high level radioactive waste tank system. Can you explain DOE's process in determining the proper seismic criteria?

Secretary BODMAN. The DOE has established design and performance standards associated with natural phenomena hazards (including seismic) in DOE Guide 420.1–2, Guide for the Mitigation of Natural Phenomena Hazards for DOE Nuclear Facilities and Non-Nuclear Facilities, and DOE–STD–1021–93, Natural Phenomenon Hazards Performance Categorization Guidelines for Structures, Systems, and Components, that are tailored and graded to the hazards associated with our nuclear facilities. Performance Category 3 (PC–3), representing the most stringent earthquake design requirements, is invoked where the highest hazards exist in these types of facilities. This level of design rigor is typically applied to conditions where facility hazards pose a risk sufficient to warrant safety related functions that protect the public. PC–2 defines a less robust set of earthquake design requirements applied to facility conditions where hazards require a safety-related function to protect workers.

In accordance with the DOE standards early in the design of facilities, the performance categorization is determined and analysis refined as the safety documentation matures. In some cases where the potential consequence to the onsite population and facility workers is high, the PC–3 design is considered for providing a reliable confinement safety function for seismic events.

The SWPF preliminary safety analysis and the original facility design were based on PC–2 categorization. However, questions were raised whether PC–2 systems would provide assurance that confinement of radioactive materials was sufficient to protect workers following a large earthquake at the SRS. As the PC–3 analysis provides more detailed stress information which allows the designer to minimize any permanent structural deformation to ensure that the confinement boundaries remain intact, DOE decided that the SWPF will be designed to meet PC–3 standards in order to provide adequate assurance of radioactive material confinement.

72. Senator GRAHAM. Secretary Bodman, how will DOE meet the technical and funding challenges of achieving these activities without impacting other SRS cleanup and waste management actions?

Secretary BODMAN. At the SRS in South Carolina, the SWPF project design has been revised to meet more stringent confinement design requirements. These proposed changes form the basis for the budget profile and funding scenarios presented in the fiscal year 2007 project data sheets. The DOE believes that there are major uncertainties regarding its ability to comply with current requirements in its environmental cleanup agreements and with other requirements, and address the technical challenges of the remaining cleanup work. The EM activities estimated at target funding levels are based on the previously planned accelerated site closure strategy. Several of these assumptions have not materialized. In addition, new work scope from emerging cleanup requirements has now been identified and execution of some key projects has not been adequate. The DOE is currently updating these assumptions to reflect known changes in the regulatory and statutory requirements, incorporate changes based on actual program performance, and to incorporate technological and acquisition strategies to meet the DOE's long-term environmental commitments.

73. Senator GRAHAM. Secretary Bodman, efficient treatment of the salt portion of HLW is needed as soon as possible to minimize the radioactive residuals at SRS. In addition, treatment of the salt waste is needed to provide proper management of the high level radioactive waste tank system to support new mission activities proposed for SRS. Is DOE planning to commit resources to operate the SWPF as early as possible without detriment to other SRS cleanup activities?

Secretary BODMAN. The DOE recognizes the importance of the SWPF to the treatment and disposition of radioactive tank waste at the SRS. DOE is planning to request funding to begin SWPF operations in fiscal year 2011. The facility is currently under design.

74. Senator GRAHAM. Secretary Bodman, can you comment on DOE's commitment to operate the SWPF and DOE's associated funding plans?

Secretary BODMAN. The DOE recognizes the importance of the SWPF to the treatment and disposition of radioactive tank waste at the SRS. DOE is planning to request funding to begin SWPF operations in 2011. The facility is currently under design.

75. Senator GRAHAM. Secretary Bodman, if a large earthquake hits SRS, the largest risk to the workers and the community will be found in the tank farms. As such, shouldn't it be the highest priority of DOE to close the tanks?

Secretary BODMAN. The DOE considers treatment and safe disposition of the tank farms waste at the SRS to be among the highest priorities of all Office of Environmental Management missions. To this end, the Defense Waste Processing Facility (DWPF) has been stabilizing SRS sludge waste since 1996. The SWPF, currently under design, is critical to the treatment and disposition of salt waste (comprising over 90 percent of the volume of waste in the SRS tank farms and approximately half of the radioactivity). We plan to use our best efforts to begin SWPF operations in 2011.

76. Senator GRAHAM. Secretary Bodman, I understand that SRS stakeholders were not part of the decisionmaking process to change the building standards. Why weren't SCDHEC, the State of South Carolina, or any officials in the legislative branch consulted prior to the announcement of the new standard?

Secretary BODMAN. The DOE should have done a better job of keeping the stakeholders and the regulators fully informed of the status of this issue and the potential impacts of making these decisions. This has been identified as a critical lesson learned.

A management-level team, consisting of representatives from the SCDHEC, the South Carolina Governor's Nuclear Advisory Council, DOE, and the Defense Nu-

clear Facilities Safety Board, has been established to improve communications among the parties.

77. Senator GRAHAM. Secretary Bodman, as potential new missions for the site such as spent fuel recycling may result in an increase of high level waste at the site, I am concerned that if the SWPF is not opened on schedule it could hinder SRS's ability to compete for future missions. Further, if the process is further delayed, it could result in the shutdown of the DWPF and the reduction of mission. How will you ensure that DWPF remains operational?

Secretary BODMAN. The DOE plans to manage the SWPF project aggressively and to use its best efforts to begin SWPF operations in 2011. Doing so will help ensure that the DWPF processing at the SRS is managed in a manner that supports the current missions.

CONTRACT REBID/COMMUNITY CONCERNS

78. Senator GRAHAM. Secretary Bodman, community support for the SRS has always been strong. However, the workforce reductions and uncertainty over programs such as MOX and the MPF have begun to fracture support for SRS. What is DOE doing to revitalize community support?

Secretary BODMAN. The DOE values its longstanding community support for the SRS and its current missions. DOE is committed to community support through numerous proactive measures.

- The Savannah River Operations Office (DOE–SR) Manager meets regularly with the Savannah River Regional Diversification Initiative, the SRS Retirees Association, the Citizens for Nuclear Technology Awareness, and other local economic development and civic groups to expand existing lines of communication. DOE–SR is also increasing the availability of senior staff members to speak at local civic organization events about the SRS current and any future missions.
- DOE is working closely with the SCDHEC and the South Carolina Governor's Nuclear Advisory Board on salt waste disposition and nuclear waste tank closure.
- The SRS Citizens Advisory Board (CAB) provides recommendations to DOE on environmental remediation, waste management and other related SRS issues. In fiscal year 2005, the CAB held six full board meetings in conjunction with combined committee meetings in Georgia and South Carolina and hosted 28 additional committee meetings primarily in the Aiken-Augusta area.
- The Medical University of South Carolina, in partnership with SRS and other civic organizations, sponsored Community Leaders Institutes (CLI) in rural counties in South Carolina and Georgia. While the outreach program has been active for 5 years, in the past year, there have been five CLI events attended by about 900 citizens. These institutes provide citizens with information on grant opportunities in the areas of housing, economic development, health issues, and environmental justice, among other topics. SRS senior managers participate in these institutes to answer questions about SRS.
- In fiscal year 2005, the SRS Tours Program hosted 1,636 people on 148 tours. Those touring the site ranged from congressional staff members and chambers of commerce to nuclear activists groups.
- The SRS Education Outreach Program provides a variety of science and literacy outreach programs at SRS, including DOE, the Savannah River National Laboratory, the Savannah River Ecology Laboratory, Natural Resources Management and Research Institute, and the Washington Savannah River Company. These outreach programs enhance interest in science, mathematics, engineering, and technology and support improvements in education by using the unique resources available at the site. Last year, the site reached more than 62,000 students and helped about 700 teachers with classroom presentations. One example is the SRS-sponsored annual Central Savannah River Area College Night event, the largest college fair in the southeast. Over 6,000 participants and 150 colleges and universities attend the annual event.
- In other areas, SRS employees are noted for their outstanding community support. SRS is the largest area contributor to charity efforts like the Golden Harvest Food Bank, Marine Corps Toys for Tots, the United Way, Habitat for Humanity, and a host of other charities and goodwill causes. The

DOE–SR Federal employees annually rate among the highest Combined Federal Campaign contributors per employee in the Nation.

79. Senator GRAHAM. Secretary Bodman, what steps is DOE taking to improve coordination with the local community?

Secretary BODMAN. In addition to valuing community support, the DOE is also committed to continuing its longstanding positive working relationships with local organizations and agencies via interagency agreements, open communication channels, and sharing of vital resources. To that end, DOE closely coordinates with local and State government agencies for annual emergency exercises as well as making SRS resources readily available in the event of actual life-threatening emergencies. Working with the DOE Headquarters Office of Congressional and Intergovernmental Affairs, DOE–SR seeks to strengthen lines of communication with local congressional delegations, the Office of the Governor, and local elected officials through open, accurate, and timely notifications of notable SRS activities and challenges. DOE–SR respects the views and concerns of all of its stakeholders and is committed to proactively coordinating ongoing site activities.

80. Senator GRAHAM. Secretary Bodman, will DOE be issuing a draft Request for Proposals (RFP) for the SRS Management and Operations (M&O) contract?

Secretary BODMAN. The DOE intends to award two contracts to replace the current site contract with Washington Savannah River Company, LLC (WSRC): one for the site operations currently under contract to WSRC (referred to as the site M&O acquisition), and the second for the liquid waste program. Planning is underway for both of these acquisitions. Typically, DOE issues a draft RFP in order to receive input from industry for complex scopes of work. The decision to issue draft RFPs has not yet been made regarding the upcoming SRS acquisitions.

81. Senator GRAHAM. Secretary Bodman, when will the RFP come out?

Secretary BODMAN. Planning is underway for the site M&O and the liquid waste acquisitions. We are assessing our schedules as part of the current development of the RFPs.

82. Senator GRAHAM. Secretary Bodman, what is the schedule for bid deadlines and decisions to be made?

Secretary BODMAN. Planning is underway for the site M&O and the liquid waste acquisitions. We are assessing our schedules as part of the current development of the RFPs.

83. Senator GRAHAM. Secretary Bodman, as DOE continues to draft an RFP for the upcoming SRS rebid, I encourage you to treat the SRS retiree benefit package in a manner that is fair and consistent with the DOE's previous practice at other sites such as the Los Alamos National Laboratory. This point of view is shared by the entire South Carolina and Georgia Senate delegations, as well as Governor Mark Sanford of South Carolina. Will SRS be treated in the same manner as Los Alamos National Laboratory?

Secretary BODMAN. The anticipated SRS RFPs will provide benefits packages for incumbent employees and new hires consistent with recent solicitations for management of major DOE facilities. Pursuant to this approach, the Department will continue to reimburse the allowable costs for incumbent employees hired by a new contractor to remain in their existing defined benefit pension plans subject to plan eligibility requirements and applicable law; that is, "if you're in, you're in." However, to the extent permitted by law, the RFPs would also require the contractors selected for award to provide market-based pension plans for new, non-incumbent employees hired after award. With respect to medical benefits for contractor employees, the DOE is currently assessing its approach and the anticipated RFPs will reflect the outcome of this process.

84. Senator GRAHAM. Secretary Bodman, last year, money was diverted from projects at SRS to meet obligations of the pension fund. I understand the funding shortfall was not a result of mismanagement of pension assets, but due to a penalty payment that was assessed on the fund as a result of lower-than-expected returns on fund assets. While the budgetary pressures caused by the increased pension liabilities did not directly impact critical work at SRS, work was delayed nonetheless. I understand pension shortfalls are not unique to the SRS and are symptomatic of a DOE-wide problem. How does DOE intend to meet pension obligations without negatively impacting work at DOE sites?

Secretary BODMAN. When the DOE encounters a shortfall in the pension fund, we carefully evaluate and allocate resources based on factors that support primary mission objectives, and attempt to identify as areas for deferral of work only those projects not critical to safety, health, or environmental protection and which do not impact regulatory compliance.

QUESTIONS SUBMITTED BY SENATOR JOHN CORNYN

INFORMATION SECURITY AND ASSURANCE

85. Senator CORNYN. Secretary Bodman, I continue to be concerned with securing Federal information systems. The Federal Government collects and manages a vast amount of information and much of it is sensitive or personal in nature. In addition, the systems that maintain that information are increasingly interconnected. Therefore, there is a growing risk of unauthorized access to these systems and information.

The Federal Information Security Management Act (FISMA) of 2002 requires Federal agencies to annually report on their information security efforts to OMB. The subsequent "Federal Computer Security Report Card" that GAO developed based on the information from the reported information gave the DOE a grade of "F" in 2002, 2003, and 2004. Generally, what efforts has DOE undertaken to improve its FISMA performance?

Secretary BODMAN. I have directed that the Department's entire cyber security program be revitalized. Under the leadership of our new DOE Chief Information Officer and a Department-wide team, we have developed a plan for this revitalization and we are moving aggressively to implement that plan. The revitalized cyber security plan guides systematic improvement of every aspect of cyber security. The plan mitigates the cyber security weaknesses that have been identified, based on the following principles:

- Managing cyber security risk in a dynamic threat environment requires sharing threat information, managing risk, and effective use of resources in such a manner as to be "sufficient but not overdone".
- Cyber security is everyone's business. The cyber security program's responsibilities are distributed among senior Department leaders to ensure a strong cyber-security posture, while preserving mission capability.
- Systematic improvement now as well as continuous improvement over the long term in the DOE cyber security posture is essential to strengthen the protection of DOE's information and information systems.

DOE has begun work under the new cyber security plan, and is leveraging existing expertise within DOE and best practices drawn from both within and outside the Department.

86. Senator CORNYN. Secretary Bodman, what is the status of the DOE's efforts to inventory information systems?

Secretary BODMAN. We have developed a comprehensive plan to improve the way we manage our large inventory of information systems and networks, including tracking all of our major hardware and software. We have invested in an automated capability to bring our inventory of systems up to date and to help ensure that our network boundaries are secure. This capability will help us ensure that our software is up to date, with the latest security software patches. We have already begun implementing this inventory control plan as part of our revitalized cyber security program.

87. Senator CORNYN. Secretary Bodman, what is your guidance to management personnel on the importance of protecting information and networks?

Secretary BODMAN. I have personally made it very clear to all DOE senior management that cyber security is a high priority, and that we must ensure adequate protection of all DOE information and information systems and networks. I have established cyber security as a personal priority for each Under Secretary and other top managers. I have ensured that these managers are directly involved in top-level planning for revitalizing the Department's cyber security by establishing a Cyber Security Steering Committee led by the Chief Information Officer; and having as members the Under Secretary/Administrator of the National Nuclear Security Administration, the Under Secretary for Energy, Science, and Environment, the Director of the Office of Science, the Director of the Office of Safety and Security Performance Assurance, the Administrator of the Energy Information Administration, and a representative of our power marketing administrations. This Executive Steering

Committee has provided overall direction in the formation of the revitalized DOE Cyber Security Program, recently approved by the Deputy Secretary and currently being implemented.

88. Senator CORNYN. Secretary Bodman, what ongoing activities are you pursuing to ensure that information security practices are followed throughout the agency?

Secretary BODMAN. I am holding everyone in the Department responsible for information security, and this accountability begins with senior departmental management. Accountability at all levels is critical to the success of cyber security throughout DOE. The line organization managers are crucial to the success of the cyber security program, ensuring long-term, continued emphasis on cyber security and the commitment of required resources needed to support the implementation of the Department's revitalized cyber security program within their organizations. Information system users are also responsible for doing their part to protect our information and information systems.

QUESTIONS SUBMITTED BY SENATOR JOHN THUNE

EDUCATION TO PRODUCE SCIENTISTS AND ENGINEERS

89. Senator THUNE. Secretary Bodman, one of the things I have heard several times this year both in this committee and on the floor of the Senate is America's struggle to educate and produce scientists and engineers. What threat do you think this problem poses to the maintenance of our current nuclear arsenal, our ability to create new weapons systems, and is the DOE taking any steps to recruit and train a new generation of scientists and engineers who will lead the DOE in the future?

Secretary BODMAN. The NNSA and its laboratories and plants have evolved from the singularly focused Manhattan Project into a national reservoir of technical expertise and capabilities in the numerous technologies that support the design and manufacture of the most complex and precise machines produced, nuclear weapons. Our primary customer, the DOD, relies on the scientists and engineers who design and build nuclear weapons to do their part to maintain U.S. strategic strike capabilities and also draws on them for innovative solutions to a wide range of military and intelligence problems. The Intelligence Community is another long-time customer that has drawn on the laboratories for exceptional, interdisciplinary innovation. The DHS turns to the laboratories often for analysis and technology for applications that range from biological weapons to port security. The Federal Bureau of Investigation and other law enforcement organizations use forensic technologies developed by the laboratories to analyze evidence. Of course, the DOE's Nuclear Nonproliferation effort absolutely depends on scientific and technical expertise available only at the laboratories and plants.

For these and many other reasons, we must maintain this talent pool, and I share your concerns about the challenges of recruiting the next generation of scientists and engineers to maintain and design nuclear weapons. For the Federal Government's homeland and national security enterprises, the potential of overall shortages in the sciences and engineering are even more worrisome because of the requirement for security clearances, which limits hiring to U.S. citizens. With an aging workforce where about 40 percent of nuclear weapons program technical staff members are retirement eligible, NNSA laboratories and plants have already had some difficulty hiring appropriately educated and trained persons into their highly skilled workforces. That experience, plus emerging data on the needs of the broader national security community for the same skills and a constricted education pipeline of U.S. citizens, especially those with advanced degrees, have raised concerns about NNSA's ability to maintain a highly skilled and appropriately trained workforce to carry out the nuclear weapons mission.

In 2004, the National Science and Technology Council (NSTC) Interagency Working Group on Critical Workforce Needs, led by NNSA, collected data across the defense, homeland security, and intelligence communities on hundreds of critical skills and the expected difficulty in finding U.S. citizens with those skills over the next 5–10 years. NNSA plants identified 256 critical skills, 32 percent "expected to be difficult to hire" in the 5–10 year time frame. With the addition of those skills that "may be difficult to hire," the percentage rises to 73 percent. For the laboratories there are 300 identified critical skills, half of them expected by the laboratories to be "difficult to hire." This percentage rises to 84 percent with the addition of skills identified as "may be difficult to hire". Of particular concern is filling positions at NNSA laboratories that require PhDs, as the total number of graduates in fields of

interest has been declining since 1997, and less than half these graduates from U.S. universities are U.S. citizens. Moreover, the 7–10 years it takes to earn a Ph.D., post baccalaureate, makes it imperative that we identify potential shortfalls and take steps now to develop skilled individuals.

To stay on top of the situation, we are committed to re-energizing the NSTC effort and continuing our support and participation in the interagency working group. We will seek annual data updates, added focus on high consequence skills, and continued data mining and analysis to share with all participants even as we use this data to target specific critical skills for attention.

Through headquarters selected programs, NNSA provides highly competitive fellowships and competitively awarded grants to develop needed science and engineering techniques, develop needed skills, and advance scholarship at the high school and undergraduate levels. These grants are awarded to major universities and minority institutions including Historically Black Colleges and Universities and the Massey Chairs of Excellence. We look to the laboratories and plants to both leverage our Federal programs and improve their intern programs to attract and develop diverse U.S. citizens with specific at-risk skills. We are reviewing on a continuing basis the efficiency and cost effectiveness of different investments to be certain that we have the necessary student and university programs. We need them to feed our laboratory and plant internship programs as they actively develop U.S. citizens with specific, at-risk skills.

I have challenged my NNSA managers not to rely on business-as-usual approaches to meet anticipated nuclear weapon critical skill hiring needs. NNSA and its laboratories and plants will work with universities, including minority educational institutions so that students will seamlessly transition from coursework and internships to employment. There are three substantial benefits from feeding the pipeline in this way: 1) there is mutual culling by the students and NNSA, because students return as interns each year by invitation and according to their own interest, 2) there is full benefit to the organization, because returning interns contribute to the mission effort, and 3) the critically skilled interns who are hired when they graduate do not require years of costly on-the-job training.

PIT MANUFACTURING FACILITY

90. Senator THUNE. Secretary Bodman, in your testimony you state "We were disappointed, however, that Congress declined to fund planning for a modern pit production facility in fiscal year 2006. As a result, we did not seek funding for this facility in fiscal year 2007, although we remain convinced that increased pit production capacity is essential to our long-term evolution to a more responsive nuclear weapons infrastructure. In coming months, we will work with Congress to identify an agreed approach to fund long-term pit production capacity. In the meantime, we plan to increase the Los Alamos pit manufacturing capacity to 30–40 pits per year by the end of fiscal year 2012. This production rate, however, will be insufficient to meet our assessed long-term pit production needs."

Do you believe that Congress is asking you to maintain a high standard of performance but not providing you with the resources to complete your mission?

Secretary BODMAN. The lack of funding for a higher pit production capacity is a concern. The NNSA submitted a report to Congress in January 2005 that identified the need for at least a 125-pit-per-year capacity starting in 2021. Our work with the DOD to develop long-term stockpile quantities and transformation rates suggests that this pit production capacity is about right. This spring, the DOE will provide Congress the results of its review of the Secretary of Energy Advisory Board Nuclear Weapons Complex Infrastructure Task Force. The NNSA is committed to work with Congress to establish the appropriate funding and schedule to establish a more responsive infrastructure that will support the nuclear weapons stockpile into the future.

91. Senator THUNE. Secretary Bodman, with the age of our warheads, pit production must be responsive. We must have the capacity to produce what we need. We do not have the luxury of time on our side. The arsenal is decaying. Safety and reliability are in jeopardy because we cannot certify that these aging warheads will operate as they were designed. What is your level of confidence on the safety and reliability of our arsenal?

Secretary BODMAN. I am highly confident in the current safety and assessed reliability of the U.S. nuclear weapons stockpile, and recently joined the Secretary of Defense in providing the President our assessment of this very issue. I have personally met with the Directors of Los Alamos, Lawrence Livermore, and Sandia Na-

tional Laboratories to discuss the status of the nuclear weapons stockpile at length, and I have reviewed their assessments of each system in the stockpile. However, we have concluded that the path we are currently on—successive refurbishments of warheads in the Cold War legacy stockpile which have tight design margins due to the yield-to-weight requirements—presents increased risk in our being able to assure high confidence in the continued safety and reliability of that stockpile over the very long term (many decades) without nuclear testing. The evolution away from tested designs, resulting from the inevitable accumulations of small changes over the extended lifetimes of these highly optimized systems with low performance margins, is what gives rise to this concern. Nor will successive refurbishments support transition to a truly "responsive" and cost effective nuclear weapons infrastructure as called for in the NPR. These concerns reflect the judgment of the directors at the three national weapons laboratories—Los Alamos, Livermore, and Sandia—and that of the Commander of U.S. Strategic Command, who is advised by his group of experts. We are exploring RRW options in order to ensure the long-term sustainability of the current military capabilities provided by warheads in the existing stockpile.

92. Senator THUNE. Secretary Bodman, how do we speed up the transformation to assure we have a safe and reliable nuclear weapons stockpile?

Secretary BODMAN. The RRW concept and responsive infrastructure—each enabled by the other—may genuinely be transformational. RRW allows the promise for sustaining, with long-term confidence and without underground nuclear testing, military characteristics existing in the stockpile today. At the same time, RRW will enable us to enhance safety and security and simplify the manufacturing and certification processes, which helps enable a responsive infrastructure. A responsive infrastructure, in turn, would enable further reductions in stockpile size. We are currently conducting a Nuclear Weapons Council-approved RRW feasibility study. Once that study is completed, the Nuclear Weapons Council will select a preferred option and the administration will agree on a path forward for stockpile transformation.

FUNDING FOR CLEANUP SITES

93. Senator THUNE. Secretary Bodman, over the last year you completed the cleanup of the Rocky Flats site in Colorado while working cleanup of several other sites. Yet, the EM budget only dropped by 2.5 percent. You mentioned that overly optimistic assumptions and unrealized technology advancements have led you to the slower progress you are experiencing. I'm concerned about the management cost overruns and what I consider a lack of oversight. Congress is investing a significant amount of funds each year and your execution of the cleanup has been sub par. What actions have you taken to rectify this problem?

Secretary BODMAN. While EM has had a number of successes, it is true that EM has also had less successful projects, as well. The actions we have taken to address these latter projects include maintaining focus on safe, cost-effective risk reduction and cleanup. Safety is our highest priority. To improve project oversight, we are increasing our concentration on project management. We are training the EM leaders, project managers, and staff to become certified in accordance with industry standards. We are independently validating project baselines, schedules, and assumptions about effective identification and management of risks. We are working to ensure that our cleanup contracts are designed to drive outstanding performance. We are striving for constant, real time feedback of lessons learned to improve project planning and execution. We believe these steps will enable EM to continue making progress and improve project performance:

- Monthly project reviews by site managers and headquarters staff;
- Quarterly project reviews by the Assistant Secretary and senior headquarters managers; and,
- Full implementation of DOE orders on all EM projects, both capital construction and operating.

QUESTIONS SUBMITTED BY SENATOR CARL LEVIN

GLOBAL NUCLEAR ENERGY PARTNERSHIP

94. Senator LEVIN. Secretary Bodman, a key element of the Global Nuclear Energy Partnership (GNEP) plan is that other countries would supply new nuclear fuel and take back spent nuclear fuel. Have any other countries expressed an interest

in being fuel supplier countries, and would these countries also agree to take back and reprocess the spent fuel?

Secretary BODMAN. The preliminary responses from major fuel supply nations and the IAEA have been very encouraging. We look forward to expanding our discussions with both fuel supply nations and potential fuel user nations as this important initiative moves forward. These countries do not necessarily have to agree to take back and recycle used fuel; however, the intent would be that at least one GNEP supplier nation would do so.

95. Senator LEVIN. Secretary Bodman, part of the GNEP program is the development of proliferation resistant nuclear fuel cycle technologies. Are any funds included in the DOE fiscal year 2007 budget request for research and development to support proliferation resistant nuclear fuel cycle technologies?

Secretary BODMAN. The fiscal year 2007 budget request for the GNEP initiative is $250 million to accelerate the development of proliferation-resistant fuel technologies. The Department has proposed to continue research and development and engineering and environmental studies needed to develop a baseline cost and schedule for three possible engineering scale demonstrations of more proliferation resistant fuel technologies that would fit together as an integrated fuel recycle system.

96. Senator LEVIN. Secretary Bodman, in the press packet and budget materials describing GNEP, DOE claims that it has developed a new proliferation resistant fuel reprocessing technology. Would other member countries of the GNEP be required to use the DOE technology?

Secretary BODMAN. Supplier nations would continue to operate current generation fuel cycle facilities and would work with the U.S. and partner nations to develop and demonstrate new, more proliferation resistant fuel recycling technologies that could be deployed in the future.

97. Senator LEVIN. Secretary Bodman, under GNEP some countries would be nuclear fuel suppliers and others would receive the fuel. Who would determine which countries would have nuclear power reactor fuel supplied to them?

Secretary BODMAN. Key supplier states would agree on the framework for safe and secure expansion of nuclear energy, agreeing to arrangements that permit the use of reactors and provide fuel services, while discouraging further spread of enrichment and reprocessing.

98. Senator LEVIN. Secretary Bodman, would the fuel recipients all have to be signatories to the Nonproliferation Treaty (NPT)?

Secretary BODMAN. We envision that all recipients of fuel under the GNEP reliable fuel services regime would have to meet certain nonproliferation commitments, for example, refraining from the development of enrichment and reprocessing capabilities, implementing the IAEA Additional Protocol and complying with NPT and IAEA safeguards and Additional Protocol obligations, and maintaining the latest international standards for the physical protection of nuclear materials.

99. Senator LEVIN. Secretary Bodman, currently, nuclear fuel or other nuclear technology assistance cannot be provided to countries who are not signatories to the NPT. What happens to the NPT under the GNEP proposal?

Secretary BODMAN. GNEP will be implemented in conformity with the NPT and will strengthen the NPT by offering reliable fuel services as an alternative to the further spread of enrichment and reprocessing capabilities, which can be used as a cover for developing a nuclear weapons capability.

100. Senator LEVIN. Secretary Bodman, under the GNEP does DOE see a centralized nuclear fuel pricing arrangement, similar to OPEC? How and who decide the price of nuclear fuel?

Secretary BODMAN. No. GNEP does not contemplate centralized nuclear fuel pricing. GNEP seeks agreement on the shared goals of the partnership and market competition among diverse suppliers within that framework. We seek, among supplier states in the partnership, agreement on goals that will improve security, operation and waste management characteristics of the fuel cycle over time. Currently, commercial marketing of fuel services and reactors is concentrated among the United States, the European Union, Japan, Canada, Russia, and China. These countries account for about 80 percent of world nuclear energy capacity. In addition to seeking to expand nuclear energy within these states, GNEP seeks to expand the market for fuel services responsibly to developing countries interested in bringing the benefits of nuclear power to their economy. These countries, under the GNEP initiative,

would be able to purchase a reactor and then lease fuel and not have to make their own investments in enrichment or reprocessing.

To back up market mechanisms, the United States supports and is committed to supply low-enriched uranium to a fuel reserve to that would provide supply assurances to countries foregoing enrichment and reprocessing. In the event of a short-term supply disruption that the market cannot correct, fuel from this reserve could be sold at market prices for distribution, thus increasing the confidence of reactor-only states that they could meet their energy needs. Market competition would nevertheless be the primary factor in determining the prices for nuclear fuel services.

101. Senator LEVIN. Secretary Bodman, would spent fuel reprocessing reduce the volume of high level waste generated that would be required to be stored at a geologic repository?

Secretary BODMAN. Volume reduction is a factor in determining the loading of the geologic repository, especially to the extent that it reduces the number of disposal containers that are required. However, a more important consideration in the loading of the repository is the heat generated by radioactive decay of certain constituents of the spent fuel. Decay heat drops rapidly as a function of time after discharge from the reactor. Decay heat shortly after discharge is dominated by several short-lived fission products such as isotopes of tellurium, ruthenium, cerium, xenon, and zirconium; that heat is dissipated during water pool cooling. After the initial cooling period, the decay heat is dominated for the next 60–70 years primarily by the decay of cesium and strontium. Beyond that period, the decay heat is dominated by isotopes of the transuranic elements—plutonium, neptunium, americium, and curium—due to their relatively long half-lives. As a result, by separating the cesium and strontium and the transuranic elements from the spent fuel, and consuming the transuranic elements in a fast spectrum reactor, the Department estimates that the capacity of the Yucca Mountain repository would be significantly increased, by a factor of 50–100. The actual increase in capacity will depend on how successful we are with the demonstration projects; that is, to what level of efficiency we can recover and destroy the heat-generating radionuclides.

102. Senator LEVIN. Secretary Bodman, in the past, millions of gallons of high level radioactive waste were generated through reprocessing that must now be vitrified and sent to a geologic waste repository. What is the disposition path for the high level waste that would be generated as part of the GNEP spent fuel reprocessing proposal?

Secretary BODMAN. While the PUREX process used today in the world and DOE's advanced recycle technology, Uranium Extraction Plus (UREX+), both involve chemical separations processes, the detailed "flow sheets" or processes for the technologies are significantly different. For example, PUREX is a batch processing process and UREX+ is a much more efficient and less waste intensive continuous process.

An important design objective of the UREX+ technology, as well as an objective in demonstrating the technology at an engineering scale, is to validate that UREX+ can successfully partition spent fuel into its component parts to produce a transuranic product that can be consumed in a fast reactor rather than disposed of in a geologic repository. Also, the UREX+ group separations process precludes separation of a pure plutonium product, a significant advantage from a proliferation perspective. Finally, UREX+ represents significantly improved means of handling the separated fission products from spent fuel and improved processing which would not result in the accumulation of any high-level liquid waste.

NUCLEAR WEAPONS COMPLEX ISSUES

103. Senator LEVIN. Secretary Bodman, has the DOE prepared a response to the July 2005 recommendations of the Energy Advisory Board on reconfiguring the nuclear weapons complex?

Secretary BODMAN. The Secretary of Energy Advisory Board (SEAB) Nuclear Weapons Complex Infrastructure Task Force Report on the Nuclear Weapons Complex was issued as a draft in July 2005 and submitted by the Board to me in October 2005. We have been analyzing these recommendations and other recent inputs (e.g., QDR) to a long-term planning scenario for the nuclear weapons complex. DOE is preparing a comprehensive response defining what we are going to do. We will be sharing the planning scenario with stakeholders, including Congress, early this spring.

104. Senator LEVIN. Secretary Bodman, what studies, reviews, or other actions has the DOE taken or are currently ongoing in response to the Advisory Board report?

Secretary BODMAN. Within the NNSA, Defense Programs has been actively reviewing the recommendations of the SEAB Nuclear Weapons Complex Infrastructure Task Force to prepare a comprehensive path forward. Of note, many SEAB recommendations are consistent with initiatives that NNSA already has planned or is currently implementing (e.g., immediate design of a RRW, consolidation of special nuclear materials, accelerating dismantlement of retired weapons, and managing the evolving complex to enhance responsiveness and sustainability). However, a major SEAB recommendation dealing with planning for a Consolidated Nuclear Production Center requires further review before a path forward is selected. These reviews are underway and anticipated to be completed in time to share the results with Members of Congress this spring.

ROBUST NUCLEAR EARTH PENETRATOR

105. Senator LEVIN. Secretary Bodman, what is the DOD planning to do with the $4.0 million that was transferred to it from DOE in fiscal year 2006?

Secretary BODMAN. We believe the DOD should address its plans for the $4.0 million appropriated to DOD in fiscal year 2006 for earth penetrator studies.

106. Senator LEVIN. Secretary Bodman, will this money be used to conduct the robust nuclear earth penetrator sled test?

Secretary BODMAN. We believe the DOD should address its plans for the $4.0 million appropriated to DOD in fiscal year 2006 for earth penetrator studies.

107. Senator LEVIN. Secretary Bodman, will DOE/NNSA participate in any way in the sled test?

Secretary BODMAN. The Fiscal Year 2006 Energy and Water Development Appropriations Act eliminated all funds requested for the RNEP program, including funds to conduct a sled test previously under preparation at Sandia National Laboratories. No sled test for a nuclear earth penetrator study will be funded by or conducted at any DOE site. If the DOD conducts an earth penetrator test at a DOD facility and requests DOE support, the Department will, through its national laboratories, provide equipment and technical expertise as necessary.

NUCLEAR TEST READINESS

108. Senator LEVIN. Secretary Bodman, will the DOE be submitting a legislative proposal to repeal section 3113 of the National Defense Authorization Act for Fiscal Year 2004, requiring an 18-month test readiness posture by October 2006?

Secretary BODMAN. Not at this time. While the NNSA has made considerable progress in improving its test readiness posture over the last 4 years cutting the readiness time from 36 months to 24, Congress did not fully provide the funding requested by the President to achieve an 18-month test readiness posture by the end of fiscal year 2006, as required by section 3113 of the National Defense Authorization Act for Fiscal Year 2004. I would be happy to work with Congress to address this issue.

NUCLEAR WEAPONS STOCKPILE REDUCTIONS

109. Senator LEVIN. Secretary Bodman, does the DOE/NNSA budget request for fiscal year 2007 begin substantial reductions in the nuclear weapons stockpile?

Secretary BODMAN. The President's request for the fiscal year 2007 weapons budget is fully consistent with the June 2004 report to Congress on the nuclear weapons stockpile that explains the plan to reduce the size of the U.S. nuclear stockpile. This reduction includes both active and inactive strategic warheads, as well as nonstrategic nuclear warheads. These reductions have already begun and will continue in fiscal year 2007. By 2012, the U.S. nuclear stockpile will be reduced by nearly one-half from fiscal year 2001 levels, resulting in the smallest nuclear stockpile since the Eisenhower administration.

110. Senator LEVIN. Secretary Bodman, how many warheads from the current stockpile will be retired and how many will be dismantled in fiscal year 2007?

Secretary BODMAN. [Deleted.]

NATIONAL IGNITION FACILITY

111. Senator LEVIN. Secretary Bodman, will you commit to providing adequate funding to the National Ignition Facility (NIF) to support ignition by 2010 and support a robust series of high density physics experiments?

Secretary BODMAN. The fiscal year 2006 appropriation and fiscal year 2007 budget request are sufficient to enable DOE to conduct an ignition experiment at the NIF in 2010. The goal of ignition is a top priority of DOE. In order to maintain the commitment to an ignition experiment in 2010, it has been necessary to reduce somewhat other high energy density physics experiments.

MATERIALS PROTECTION CONTROL AND ACCOUNTING

112. Senator LEVIN. Secretary Bodman, is the DOE/NNSA on track to complete all permanent upgrades at nuclear materials sites in Russia and the former Soviet Union by 2010?

Secretary BODMAN. Yes. In response to the September 11, 2001, attacks, NNSA took aggressive steps to accelerate the original 2010 schedule so that the security upgrade activities will be completed by the end of 2008, after which facilities will be transitioned into a sustainability phase. In addition, the Bratislava agreement provided for a comprehensive joint action plan for cooperation on security upgrades of Russian nuclear facilities within the Rosatom complex. This plan ensures that security upgrades for Russian Rosatom facilities will be completed by the target date of 2008.

113. Senator LEVIN. Secretary Bodman, is the DOE/NNSA on track to complete all permanent upgrades at nuclear weapons storage areas in Russia by 2008?

Secretary BODMAN. Yes. Cooperation to secure the nuclear warhead storage sites of the Russian Strategic Rocket Forces will be completed by the end of 2008. Under the Bratislava Initiative, the Russian Ministry of Defense nominated a number of new nuclear warhead storage sites operated by the 12th Main Directorate for cooperative work. We are confident that we will also conclude these efforts by the end of 2008.

114. Senator LEVIN. Secretary Bodman, could either effort be accelerated?

Secretary BODMAN. Yes. Both efforts have already been accelerated. In response to the September 11, 2001, attacks, NNSA took aggressive steps to accelerate the completion of security upgrades by 2008, 2 full years ahead of schedule. The nomination of all the 12th Main Directorate sites under the Bratislava Initiative has increased our work scope, but we believe we will complete these by 2008 as well.

HANFORD WASTE TREATMENT PLANT

115. Senator LEVIN. Secretary Bodman, what is the process for agreeing to final seismic criteria for the Hanford WTP, when will the process be complete, and will the criteria be validated?

Secretary BODMAN. The WTP prime contractor, Bechtel National Inc., has prepared and submitted the latest seismic design criteria. These incorporate the DOE's current best understanding of the seismic hazard at Hanford and the WTP. The DOE is currently reviewing these criteria. The U.S. Army Corps of Engineers, engaged by the DOE, has independently reviewed and concurred with the final design criteria. The DOE will discuss the final seismic criteria with the Defense Nuclear Facilities Safety Board and will carefully consider the Board's recommendation regarding the criteria, if any. The DOE expects the reviews and discussions to be completed by late summer 2006 to permit proceeding with construction of the facilities affected by the seismic criteria.

In addition, the DOE is proceeding with the drilling of at least one deep borehole to confirm the ground motion data, which should be completed in summer 2007. The assumption is the latest design criteria have an acceptable margin of design. Also, the DOE intends to update the probabilistic seismic hazard analysis in the next 2 years to reflect modest changes in methodology that will have occurred.

116. Senator LEVIN. Secretary Bodman, what is the process for determining the realistic cost and schedule to complete the Hanford WTP and when will this process be complete?

Secretary BODMAN. The WTP prime contractor, Bechtel National Inc., was directed and provided to the DOE an updated detailed Estimate-at-Completion (EAC)

for the project in December 2005. Several actions have occurred or are occurring to develop a realistic estimate. DOE has implemented two independent "best and brightest" expert reviews: 1) an evaluation of the technical adequacy of the design to meet the contract performance specifications, which is to be completed by spring 2006, and 2) an assessment of the confidence in the EAC and management approach, which is to be completed by spring 2006. The EAC is being revised based on the impacts and results of these actions and the revision provided to the DOE in late spring 2006. Since the hearing, the two "best and brightest" reports have been completed and delivered to the committees.

The DOE has also engaged the USACE to perform an independent expert review of the EAC, and, if acceptable, to validate the EAC. The USACE has retained a number of recognized industry experts working alongside its own senior staff. The USACE's report is scheduled to be completed by late summer 2006. DOE delivered an interim report produced by USACE in March 2006.

Based on the results from the reviews, the DOE expects to establish a sound cost and schedule to complete the Hanford WTP. The objective is to ensure this project will be well managed. We owe it to Congress, regional stakeholders, and the U.S. taxpayers that the substantial investment in the WTP is receiving the highest level of talent and attention the DOE can provide.

117. Senator LEVIN. Secretary Bodman, will this process be completed using the final validated seismic criteria?

Secretary BODMAN. Since March 2005, the interim seismic criteria have been the basis for the design for the Hanford Waste Treatment and Immobilization Plant. The DOE expects the reviews and discussions for the final seismic criteria to be completed by late summer 2006. This will include reviews by the U.S. Army Corps of Engineers and the Defense Nuclear Facilities Safety Board. The basis for design will transition to the final seismic design criteria and permit proceeding with construction of the facilities affected by the concern for seismic issues.

118. Senator LEVIN. Secretary Bodman, when the cost and schedule are finally revised, what level of confidence will the DOE have in completing the project within the revised cost and schedule baseline?

Secretary BODMAN. The DOE is assessing the confidence in the design, cost, and schedule for each of the five major facilities which make up the Hanford WTP. The WTP prime contractor, Bechtel National Inc., submitted to the DOE an updated detailed Estimate-at-Completion for the project in December 2005. The submittal includes an analysis of the necessary contingency to provide for an 80 percent confidence in the estimate, considering the complexity of the project, the cost and schedule uncertainties, and the maturity of the design. There are also risks which are beyond the contractor's control, such as potential future changes in existing regulatory requirements and funding, which have been estimated by the contractor. These estimates are being reviewed by the DOE and independent external experts as well as a validation review by the U.S. Army Corps of Engineers.

The DOE is also conducting extensive evaluations and enhancing the project management systems, risks management, technical support, business infrastructure, and oversight procedures required for successful execution of the project. The implementation of recommendations from these evaluations will increase the confidence in the management of the project and sets up the tools and the framework to anticipate and resolve new problems that may arise during project execution.

WORKER HEALTH AND SAFETY

119. Senator LEVIN. Secretary Bodman, in early February the DOE published the Worker Health and Safety Rule. Is funding requested in the fiscal year 2007 DOE budget request to implement the rule?

Secretary BODMAN. Yes, funding is requested within the fiscal year 2007 budget request to implement the rule.

120. Senator LEVIN. Secretary Bodman, if there is funding requested what is the amount requested and in what accounts is the requested amount contained?

Secretary BODMAN. The funding falls under the Energy Supply and Conservation Appropriation—in Policy, Standards and Guidance and DOE-Wide Environment, Safety, and Health Programs. The Office of Health requested $410,000 and the Office of Price Anderson Enforcement (which conducts all EH enforcement activities) requested $450,000 in fiscal year 2007. In addition to this funding, the fiscal year

2007 budget also includes funding in Program Direction for three Federal FTEs to conduct worker safety and health enforcement.

QUESTIONS SUBMITTED BY SENATOR EDWARD M. KENNEDY

CHAPMAN VALVE

121. Senator KENNEDY. Secretary Bodman, Chapman Valve in Springfield, Massachusetts, is listed by the DOE as an atomic weapons employer facility covered under the Energy Employees Occupational Illness Compensation Program (EEOICP) for the years 1948–1949. Chapman Valve performed uranium processing work for Brookhaven Labs for their reactor programs and Brookhaven is reported to have records concerning Chapman Valve. According to minutes of a National Institute for Occupational Safety and Health (NIOSH) meeting held in Springfield, Massachusetts, and according to government officials present at this meeting, their records had not been recovered. Would you be able to have the Office of Worker Advocacy within the Office of Environment, Safety, and Health provide a copy of the contract(s) or purchase orders between the Manhattan Engineer District (MED)/Atomic Energy Commission and Chapman Valve?

Secretary BODMAN. The Office of Environment, Safety, and Health (EH) does not have custody of contracts or purchase orders between DOE or its predecessor agencies and Chapman Valve Company. Contracts from this era have been transferred to the National Archives and Records Administration in Atlanta, Georgia. I have instructed EH to attempt to locate the information you requested and provide it to you if found.

122. Senator KENNEDY. Secretary Bodman, can you please provide copies of documents held in the archives of the Brookhaven Labs (or entities which have Brookhaven's historical records) pertaining to Chapman Valve, including but not limited to purchase orders, shipments, receipts, specifications, and memorandum?

Secretary BODMAN. Yes. The EH will make this specific request to Brookhaven Labs and report back to you if the records can be located.

EH regularly works with DOE sites and records centers to ensure that any information and/or records are available for the purposes of EEOICP.

123. Senator KENNEDY. Secretary Bodman, the DOE appears to be cutting its former worker medical screening program. This program was authorized under the National Defense Authorization Act for Fiscal Year 1993. In fiscal year 2006, $16.5 million was appropriated, yet the DOE has requested only $12.3 million in fiscal year 2007. Why has the DOE cut the budget for this program which screens beryllium and nuclear workers for occupational diseases?

Secretary BODMAN. The Department's fiscal year 2007 request for $12.4 million for the Former Worker Medical Surveillance Program (FWP) is essentially level with the Department's fiscal year 2006 request of $12.5 million for the FWP.

The $16.5 million Congress appropriated for fiscal year 2006 includes approximately $4 million in earmarks for targeted program components including a new CT scanning initiative that screens DOE's Oak Ridge National Laboratory and Y–12 plant workers for lung cancer.

QUESTIONS SUBMITTED BY SENATOR JACK REED

ENERGY EFFICIENCY INVESTMENT

124. Senator REED. Secretary Bodman, during the President's State of the Union address, he said America is addicted to oil. Yet, 1 week later, the administration submits a budget to Congress that cuts funding to key energy efficiency initiatives such as building codes and weatherization programs, EnergyStar, and industrial energy efficiency that are proven to reduce our dependence on fossil fuel. In December, Senator Snowe and I led a bipartisan letter signed by 30 Senators asking the President to fully fund energy efficiency and renewable energy programs authorized in the Energy Policy Act of 2005. I am sorry that the administration did not support our request. Today's investments in these programs create energy savings for decades. Could you please explain to me how the administration can ask the American public and businesses to reduce their energy consumption but the administration is not willing to do the same by making meaningful investments in energy efficiency?

Secretary BODMAN. The Advanced Energy Initiative aims to reduce America's dependence on imported energy sources. The fiscal year 2007 DOE budget requests

$2.1 billion to meet these goals, an increase of $381 million over fiscal year 2006. Funding will help develop clean, affordable sources of energy that will lead to changes in the way we power our homes, businesses, and cars.

The Advanced Energy Initiative includes a broad mix of oil displacement and clean energy R&D initiatives, including nuclear (up 56 percent to $392 million), solar (up 78 percent to $148 million), and biomass (up 65 percent to $150 million). Specific goals include reducing the cost of cellulosic ethanol to $1.07/gallon by 2012, and reducing the cost of solar photovoltaics to less than 10 cents/kilowatt hour by 2015. The Energy Policy Act contains authorizations for a variety of initiatives. As the administration noted in the July 15, 2005, letter to the conference committee on H.R. 6, the House and Senate versions included authorizations levels that set unrealistic targets and expectations for future program-funding decisions. The President's fiscal year 2007 budget proposal reflects the administration's programmatic and fiscal priorities. Those priorities took into account the spending opportunities presented by the Energy Policy Act.

ENERGY INFORMATION ADMINISTRATION

125. Senator REED. Secretary Bodman, recently 57 prominent energy economists, analysts, and members of the investment community wrote you urging sustained increases in funding for the Energy Information Administration (EIA) to improve energy data analysis. I personally know the importance of EIA data for tracking energy prices, particularly heating oil in New England, and supply and demand in the marketplace. What is DOE doing to comprehensively assess the budget and staffing requirements necessary to improve EIA's data collection, analysis, and reporting capacity?

Secretary BODMAN. DOE recognizes the importance of EIA's information and analyses and has taken steps to strengthen its data quality, timeliness, and reliability. The Department's fiscal year 2007 budget formulation process assessed budget and staffing requirements across programs. As a result of this review, EIA's fiscal year 2007 request of $89.8 million is 5.2 percent ($4.5 million) above the fiscal year 2006 appropriation. The additional resources, if provided, would be directed toward redesigning key petroleum and natural gas surveys to improve data reliability and statistical accuracy, and toward increasing global oil and gas data and modeling capabilities to address data issues which can contribute to oil market volatility. Also funded would be initial scoping activities on a next-generation U.S. energy model to replace the current National Energy Model System, which would improve EIA's ability to assess and forecast supply, demand, and technology trends impacting U.S. and world energy markets.

126. Senator REED. Secretary Bodman, how do you plan to address the staff shortages, modernize statistical software, upgrade information technology, and improve data quality? I would appreciate it if you please provide a detailed analysis of the resources in terms of both funding and staffing to address these issues.

Secretary BODMAN. As with much of the Federal Government, over 30 percent of EIA's staff is, or soon will be, eligible to retire. EIA is addressing its staffing situation on multiple levels. It continues to reduce skill gaps in mission-critical occupations through aggressive recruiting of mathematical and survey statisticians, operations research analysts, and economists. Its hiring process has been streamlined for entry-level and journeyman-level positions. Rotational opportunities are provided for existing staff to expand their breadth of knowledge and skill level. Formal training and certification in project, contract, and financial management is being pursued for its project managers, engineers, information technology specialists, and contract technical monitors.

Just as retirements are driving human resource challenges, the increasingly more complex and interdependent domestic and global energy markets are driving EIA to focus limited resources on maintaining the quality, timeliness, and relevance of its products. In fiscal year 2007, about half of the requested $4.5 million funding increase, supplemented by resources redirected from lower priority surveys and deferred maintenance activities, will support EIA's critical priorities of improving data quality and upgrading its modeling and forecasting capabilities.

EIA will redirect resources to review and maintain selected, high priority petroleum and natural gas survey frames that have reached the end of their useful life. This effort, which will yield both cost reductions and quality improvements, is essential to produce accurate statistics, resolve data discrepancies, and keep abreast of changes in the energy industry. EIA will identify new respondents required to report on the petroleum and natural gas surveys, and will make needed modifica-

tions to the supply and marketing information database system and the natural gas information processing systems. EIA will continue data quality activities such as reducing large unaccounted-for crude oil statistics, missing motor gasoline production, and missing crude and petroleum product imports. Updating and improving other survey frames, such as petroleum and natural gas reserves and coal and alternative fuels, will be deferred.

During fiscal year 2007, EIA will begin scoping the requirements of a next-generation National Energy Model System. The current system was developed in the early 1990s and has exceeded its expected lifecycle. A reliable and maintainable mid-term energy model is needed for EIA to develop baseline energy projections and execute policy analyses requested by Congress and the administration. We have allocated six full time equivalents and approximately $1.2 million on this effort in fiscal year 2007. EIA will work with its stakeholders to assess their requirements. The redesign will likely improve the representation of energy markets with added flexibility to address new policies and technologies; change the mathematical representation methods resulting in improved accuracy, stable solutions, and reduced time for model simulations; use modern programming tools that are more flexible and powerful; and add the representation of hydrogen production and distribution to enable the analysis of additional options to reduce dependence on foreign oil and to decrease emissions of greenhouse gases.

In fiscal year 2007, EIA also will focus on improving the modeling, forecasting, and analysis of international energy markets which are increasingly influencing U.S. markets for natural gas. EIA plans to enhance its analysis of global liquefied natural gas (LNG) markets, since U.S. dependence on LNG is forecasted to grow from 3 percent of natural gas supplies in 2004 to 20 percent in 2030. Our expanded analysis would reflect fundamental changes in technologies and world energy market conditions, as well as global competition for stranded natural gas resources.

QUESTIONS SUBMITTED BY SENATOR HILLARY RODHAM CLINTON

GLOBAL NUCLEAR ENERGY PARTNERSHIP

127. Senator CLINTON. Secretary Bodman, one of the biggest concerns about reprocessing is that it creates plutonium, which can be used to make nuclear weapons. This is a problem associated with reprocessing technologies used in France and elsewhere, and is the reason that the U.S. has consistently opposed reprocessing. The administration is claiming that the GNEP reprocessing technology would not separate the plutonium from other elements, and therefore, that the reprocessed material would be proliferation-resistant.

But this is only by comparison to other reprocessing methods. In fact, a 2003 MIT study and other studies have concluded that conventional spent fuel is far more proliferation resistant—the reason being that it is far too radioactive to be handled by terrorists or others who lack the necessary safety equipment.

Isn't it true that any conceivable reprocessed fuel, regardless of the reprocessing technology used, would be more easily handled by terrorists than conventional spent fuel?

Secretary BODMAN. It is important to emphasize that UREX+ technology is not an end in itself. It is part of a GNEP technology pathway to allow the plutonium and other transuranic elements from light water reactor spent fuel to be consumed in electricity producing advanced burner reactors. If this approach is successful, it will allow a complete transformation of the nuclear waste management challenge and of the international nuclear fuel cycle. Therefore, a static focus simply comparing spent fuel assemblies in storage in the U.S. and UREX+ from the point of view of technical "proliferation-resistance" is much too narrow, particularly as several of the advanced nuclear economies are currently separating plutonium and separated civil stocks are nearly 250 metric tons today—a figure that is more than double the total amount of plutonium that was produced for the U.S. nuclear weapons program since 1944.

The real issue is whether we can build domestic and international consensus on a sustainable approach whereby a few advanced fuel cycle nations build systems that can eliminate the plutonium and other transuranics separated from the world's vast and growing stocks of light water reactor spent fuel, recycle it back through advanced burner reactors, and fully consume it, both reducing proliferation risks by providing reliable fuel services and resolving the growing nuclear waste problem.

It provides the opportunity to reshape the management of spent fuel at home and abroad, in support of new arrangements that constrain proliferation. Proliferation and the buildup of plutonium in the world have not stopped over the past three dec-

ades. GNEP seeks to address the global buildup of civil plutonium stocks and looks to move beyond the spent fuel standard by defining a path to reduce and eliminate those materials.

Within the U.S., a UREX+ facility on U.S. Government property would be secured to meet all requirements posed by the material stream, up to the stored weapon standard if necessary. UREX+ would not separate or accumulate plutonium and would be used only in proportion to making fuel for advanced burner reactors. Doing nothing is not a success strategy for nuclear energy growth to meet pressing domestic and international energy, environmental, and nonproliferation challenges.

128. Senator CLINTON. Secretary Bodman, doesn't reprocessing under GNEP thus actually increase proliferation risks rather than decrease them?

Secretary BODMAN. No, GNEP is a comprehensive strategy to increase U.S. and global energy security, encourage clean development around the world, improve the environment, and reduce the risk of nuclear proliferation. In this context, GNEP aims to develop and demonstrate technologies that are more proliferation-resistant, but this concept needs to be viewed broadly. The GNEP model works because only the supplier states will be engaged in the recycling of spent fuel. These are states with strong non-proliferation records. One of the principal objectives of GNEP is to develop successor technologies to those in commercial use today. These technologies would be more proliferation resistant and more robust, by design, from a physical protection standpoint, and would employ advanced international safeguards. These processes will be under IAEA verification auspices. GNEP will consider a variety of advanced recycling approaches, beginning with the one that is most mature, UREX+. We also plan to consider other recycling technologies, including pyroprocessing.

More broadly, GNEP will enable the United States to regain the lead internationally in charting the future of the nuclear fuel cycle. By developing a credible alternative to both the once-through cycle and current mixed oxide programs, we will help to transform spent fuel management in a way that advances our own energy, economic, environmental, and security interests, and those of the international community. We will work to build a consensus around the principle that production of separated plutonium should come to an end and separated plutonium should be eliminated from civil use. Over time, GNEP should result in the reduction of existing stocks of separated plutonium and an end to the accumulation of spent fuel around the world. Sensitive facilities and materials would be limited to a small number of advanced and responsible states. Cradle-to-grave fuel cycle services would offer an attractive alternative to current fuel supply arrangements and help to prevent the spread of sensitive fuel cycle capabilities. In sum, we believe GNEP is a net plus for the nonproliferation regime and will decrease proliferation risks.

129. Senator CLINTON. Secretary Bodman, in the fiscal year 2007 budget, the administration spends $250 million on GNEP—a project with uncertain and very distant benefits—but cuts other important programs with significant and near-term payoffs. But the $250 million in fiscal year 2007 is just the first GNEP installment. Based on DOE documents, the fiscal year 2008 and fiscal year 2009 costs would total $1.55 billion. Then funding would increase further, totaling $13 billion for a 10-year demonstration phase of the program.

A 1996 NAS study concluded that reprocessing and transmutation of existing fuel from U.S. reactors could cost upwards of $100 billion. During the hearing, you said that you thought the total life-cycle cost of the program would be from $20–40 billion. What was this estimate based on, and what is the estimated life cycle cost for GNEP? Please provide a detailed cost estimate.

Secretary BODMAN. A preliminary, order-of-magnitude cost estimate for the GNEP initiative ranges from $20 billion to $40 billion. This includes the cost of Nuclear Power 2010 and Yucca Mountain over the next 10 years as well as the cost of demonstrating integrated recycling technologies. Previously reported estimates for the cost of bringing the three technology demonstration facilities to initial operation range from $3 billion to $6 billion over the next 10 years. In 2008, the Department will have more refined estimates of the cost and schedule to complete the full 20-year demonstration effort. One of the primary purposes of the engineering scale technology demonstrations is to produce reliable estimates of the total life cycle cost of GNEP.

130. Senator CLINTON. Secretary Bodman, based on our experience at West Valley, New York, and elsewhere, we know that decontaminating and decommissioning nuclear facilities is inevitable and extremely expensive. Please include an estimate of these costs in your response.

Secretary BODMAN. GNEP is a phased program. Each phase will begin after a well defined decision based on the results of the previous phase and an assessment of risks associated with proceeding to the next phase. Over the next 2 years, the Department will complete pre-conceptual design studies, environmental analyses, and other economic and technical feasibility studies that will be needed to inform a decision in 2008 on whether to proceed with detailed engineering design and construction of the engineering scale demonstration of advanced recycling technologies. As such, as part of the future development of detailed engineering designs, the Department would prepare detailed and more accurate estimates of the costs associated with decontamination and decommissioning the facilities. Those estimates would consider not only the specifics of the design and operation of the proposed facilities but state-of-the-art techniques and experience in decontamination and decommissioning nuclear facilities. Additionally, as a design objective, the Department seeks to incorporate ease of decontamination and decommissioning into the facilities.

131. Senator CLINTON. Secretary Bodman, in the GNEP system that you envision, what are the respective roles of the public and private sectors?

Secretary BODMAN. The Department is open to the participation of the public and private sectors in the GNEP technology demonstration program. We anticipate that international partners will seek to cooperate with the Department in developing and demonstrating these more proliferation resistant fuel recycling technologies. For example, the U.S., Japan, and France recently signed a systems arrangement that provides the foundation for cooperation on investigating sodium cooled fast reactor technology, an advanced reactor technology that could be suitable for consuming actinide-bearing fuel.

On March 17, 2006, the Department issued a Request for Expressions of Interest seeking expressions of interest from entities seeking to compete for award of site evaluation study contracts in hosting engineering scale demonstrations of the advanced recycling facilities. After consideration of the input received and following the development of a Request for Proposals, the Department anticipates issuing a Request for Proposals to conduct site evaluation studies for engineering scale demonstrations for selected sites. The information gained from the site evaluation studies will be important to the Department's decision process for selecting locations for the technology demonstration facilities.

We envision additional public and private sector participation in every aspect of this program where it makes sense to develop partnering relationships.

132. Senator CLINTON. Secretary Bodman, would the reprocessing plants be Government-owned and operated?

Secretary BODMAN. Currently, we anticipate that the engineering scale demonstration of the advanced separations technology would likely be Government-owned and operated in a fashion similar to that under which other such Government facilities are operated.

133. Senator CLINTON. Secretary Bodman, would the fast reactors be privately owned and operated?

Secretary BODMAN. Currently, we anticipate that the demonstration Advanced Burner Test Reactor would likely be Government-owned and operated in a fashion similar to that under which other such Government facilities are operated.

134. Senator CLINTON. Secretary Bodman, GNEP envisions nuclear waste shipments coming from around the world into ports like New York. How would these shipments be secured?

Secretary BODMAN. The U.S. does not anticipate receiving spent fuel from other countries until sufficient recycling capacity is available in the United States. Ports of entry for recycling spent fuel have not been identified, nor can they be in the absence of specific details of the fuel-leasing program's participants, the location of recycling facilities, and the shipments themselves. However, every year hundreds of international shipments of fresh and spent fuel are routinely made in accordance with safety and safeguards precautions. During the last 30 years, more than 60,000 metric tons of used nuclear fuel have been transported around the world without incident or loss. Under GNEP, future shipments would be made under appropriate domestic and international laws and regulations governing the packaging, handling, security, and transport of radioactive material.

135. Senator CLINTON. Secretary Bodman, wouldn't increased shipments of these materials into the United States create new opportunities for terrorists to create dirty bombs or other weapons that utilize radioactive materials?

Secretary BODMAN. The international framework under which the United States, or any other nation, would receive returned fuel under GNEP has yet to be worked out. Over the next few years, we would anticipate working with existing nuclear fuel supplier nations and the IAEA to develop a framework for fuel return. However, fundamental to any U.S. decision is the development and deployment of new domestic recycling technologies and facilities that would not separate plutonium and would minimize wastes requiring geologic disposal.

It should be noted that every year, hundreds of international shipments of fresh and spent fuel are routinely made with all safety and safeguards precautions. During the last 30 years, over 60,000 metric tons of spent nuclear fuel has been transported around the world without incident or loss. Any transportation of spent nuclear fuel under GNEP would utilize the latest technologies and packages that provide a high level of protection against terrorist attack or unauthorized access to the fuel, as well as against a wide range of possible accidents. We do not believe there would be a significant increase in the risk of a dirty bomb or other terrorist dispersion of radioactive materials as a result of the transportation of spent nuclear fuel.

PROCESS OF DEVELOPING THE GNEP PROPOSAL

136. Senator CLINTON. Secretary Bodman, did any non-governmental persons give substantive and technical advice to the DOE during formulating and vetting of the GNEP proposal that is included in the fiscal year 2007 budget? If so, please provide their names.

Secretary BODMAN. In the spring of 2005, I charged the Deputy Secretary with the responsibility of developing a plan to safely and effectively expand the use of nuclear energy. Proposed elements of the plan were developed by Federal employees and reviewed by program secretarial officers.

After interagency discussions on a range of proposals in the summer of 2005, the Department worked on developing additional analyses and plans. These efforts were conducted in consultation with other Federal agencies and were aided by relevant experts from the Department's national laboratories. These analyses and plans were reviewed again by the Department's program secretarial officers, the Deputy Secretary, and me, before further interagency review.

The Department hosted an ad-hoc meeting in August and another in September of 2005 of former officials from prior administrations and academicians, to subject some of the DOE ideas to critical scrutiny, with a particular focus on the international and program management challenges of an ambitious initiative to expand the peaceful worldwide use of nuclear energy. The purpose was to test some of the proposals with individuals who could exercise seasoned, independent, expert judgment. Other than Federal employees and employees of the Department's laboratories, the following people attended those meetings:

Mr. Charles B. Curtis, former Deputy Secretary of Energy (President, Nuclear Threat Initiative)

Dr. William R. Graham, former Science Adviser to the President (President, National Securities Research, Inc.)

Dr. John Hamre, former Deputy Secretary of Defense (President, Center for Strategic and International Studies)

Dr. Arnold Kantor, former Under Secretary of Defense (Scowcroft Group)

Dr. Ernest Moniz, former Under Secretary of Energy (Professor of Physics, Massachusetts Institute of Technology)

Ambassador Thomas Pickering, former Ambassador to the United Nations (Vice President, Boeing)

Mr. Daniel Poneman, former Special Assistant to the President (Scowcroft Group)

Dr. Burton Richter, Professor of Physics (Nobel Laureate, 1976), (Stanford University)

General Larry D. Welch (Ret.), former Chief of Staff, Air Force (former President, Institute for Defense Analyses)

137. Senator CLINTON. Secretary Bodman, if non-governmental persons were involved, were applicable procedures followed under the Federal Advisory Committee Act?

Secretary BODMAN. Yes. First, with respect to involving our employees from the national laboratories who took part in analyses or discussions relevant to GNEP, they are treated as Federal employees for Federal Advisory Committee Act purposes pursuant to section 3112 of the National Defense Authorization Act for Fiscal Year 2004. The GNEP proposal involved analyses on many technical fronts—nuclear

science, separations, reactors, safeguards, repository analysis, simulations, and basic R&D—that benefited by drawing on these resources.

Second, academicians and former senior officials of prior administrations were involved in ad-hoc meetings in August and September with Federal officials to react to the GNEP vision. At these meetings, these individuals were advised to offer only their individual reactions, and in fact no group dynamic or consensus occurred. General advice concerning the provisions of the Federal Advisory Committee Act was given at the start of both meetings to ensure that no violation of the act occurred. No view in support of or opposition to GNEP should be attributed to individuals simply by virtue of their participation in evaluating ideas that the President announced in the following year.

138. Senator CLINTON. Secretary Bodman, can all records be made available to the committee of advice rendered to the DOE?

Secretary BODMAN. The Department would consider such a request made by the chairman of the Senate Armed Services Committee.

139. Senator CLINTON. Secretary Bodman, it is my understanding that the GNEP program was developed in confidence with the DOE. Is this true?

Secretary BODMAN. No. DOE, in early 2005, was already thinking about how to revitalize and accelerate the peaceful use of nuclear energy, consistent with the President's 2001 National Energy Policy that outlines a range of technological objectives for the nuclear fuel cycle and the Advanced Fuel Cycle Initiative for which Congress has appropriated funds for the last 5 years. Consultations with the administration in the spring of 2005 led to a sustained exchange of ideas concerning how to expand nuclear energy in the context of the President's nonproliferation policy to meet a range of national energy, environment, and development goals. The subsequent development of proposals and initiatives conformed to the normal interagency process associated with any large scale initiative, including repeated interagency meetings throughout 2005 and early 2006. Other agencies, including the Department of State and members of the Intelligence Community, were involved throughout. In short, there was a standard deliberative process within the government, and a standard effort to preserve decision options for the President for a potential initiative with global impacts.

140. Senator CLINTON. Secretary Bodman, what procedures did the DOE use to ensure non-disclosure? Were any written forms or express statements provided by the DOE to participants? Can you please provide any form used to protect such confidences. What legal authorities were used in developing such non-disclosure arrangements?

Secretary BODMAN. The GNEP proposal was formulated through the normal type of deliberative process associated with major initiatives announced by the President's budget request. As is normally the case, circumspection is expected of participants in the deliberative process while it is ongoing. I am not aware of any resort to "forms."

WEST VALLEY

141. Senator CLINTON. Secretary Bodman, the West Valley site in western New York is the only place in the United States where reprocessing has been tried before, and cleanup still has a long way to go. I understand that during staff briefings on GNEP, DOE staff indicated that all sites are being looked at as possibilities for the demonstration phase of GNEP. Please clarify. Has the DOE identified any specific sites for reprocessing or other activities that would be conducted as part of GNEP?

Secretary BODMAN. The Department has made no decisions regarding specific sites for locating the engineering scale demonstrations. The Department is seeking Expressions of Interest from entities interested in evaluating and hosting the demonstration facilities. DOE expects to issue a Request for Proposals later this year for the award of contracts for site evaluation studies. In addition, the Department will initiate an Environmental Impact Statement (EIS) this year to examine potential demonstration technologies and locations where they could be located. The input the Department receives from the public and private sectors will be important information for the EIS. A decision on whether to proceed with the design and construction phase of the technology demonstration program and where to locate the facilities will be made in 2008.

142. Senator CLINTON. Secretary Bodman, is the West Valley site being considered? Has it been ruled out?

Secretary BODMAN. The Department has made no decisions on locations that should be examined for the GNEP technology demonstration program. The Department is seeking public and private sector interest in hosting the demonstration facilities and plans to issue a Request for Proposals later this year for the award of contracts for site evaluation studies.

WASTE

143. Senator CLINTON. Secretary Bodman, please explain the DOE's claims that the GNEP program will significantly reduce the volume of waste. What waste is specifically being described?

Secretary BODMAN. Volume reduction of high-level waste is a factor in determining the loading of the geologic repository, especially to the extent that it reduces the number of disposal containers that are required. However, a more important consideration in the loading of the repository is the heat generated by radioactive decay of certain constituents of the spent fuel. Decay heat drops rapidly as a function of time after discharge from the reactor. Decay heat shortly after discharge is dominated by several short lived fission products such as isotopes of tellurium, ruthenium, cerium, xenon, and zirconium; that heat is dissipated during water pool cooling. After the initial cooling period, the decay heat is dominated for the next 60–70 years primarily by the decay of cesium and strontium. Beyond that period, the decay heat is dominated by isotopes of the transuranic elements—plutonium, neptunium, americium, and curium—due to their relatively long half-lives. As a result, by separating the cesium and strontium and the transuranic elements from the spent fuel, and consuming the transuranic elements in a fast spectrum reactor, the Department estimates that the capacity of the Yucca Mountain repository would be significantly increased, by a factor of 50–100. The actual increase in capacity will depend on how successful we are with the demonstration projects; that is, to what level of efficiency we can recover and destroy the heat-generating radionuclides.

144. Senator CLINTON. Secretary Bodman, won't reprocessing increase the total volume of waste generated, by some estimates 20-fold or more?

Secretary BODMAN. The Department does not believe that an integrated recycling program would increase the total volume of waste generated. The reduction in the volume of the waste from the recycle strategy cannot yet be confidently predicted. The reduction in the total volume of waste depends on details associated with the engineering-scale demonstration of the integrated recycling facilities and selection of specific waste forms. Clearly, the objective of this approach to the fuel cycle is to reduce the volume and toxicity of waste requiring a geologic repository and to design processes that do not result in separated streams of pure plutonium or large volumes of liquid radioactive wastes. The Department will design the advanced separations technology to minimize generation of additional waste. More information on anticipated waste generation will be developed as pre-conceptual design studies, feasibility studies, and environmental reviews are completed over the next 2 years.

145. Senator CLINTON. Secretary Bodman, will the volume of low-level and intermediate-level waste be increased and, if so, by how much?

Secretary BODMAN. The Department has set a design objective of reducing the generation of waste to as low as possible. The Department does not currently have specific information on volumes of low level waste generation. More information on waste generation from these technologies should be available over the next two years as the Department completes pre-conceptual design studies, feasibility studies, and environmental analyses related to the technologies.

146. Senator CLINTON. Secretary Bodman, how developed is the technology that the DOE claims will reduce the volume of waste and how soon will it be available on a commercial scale?

Secretary BODMAN. The Department's goal for operation of the Uranium Extraction Plus engineering scale demonstration would be to begin operation in 2011. The Department's goal for the Advanced Burner Test Reactor (ABTR) would be to begin initial operation in 2014. The Department would complete the first module of an Advanced Fuel Cycle Facility by 2016 to begin producing an actinide-based fuel that could be tested in the ABTR. Initial operations of the ABTR would use conventional fuels with the actinide-based fuels beginning to be tested in the reactor in the 2016 timeframe. The Department would need several years of experience operating the

facilities in parallel with the design of commercial scale facilities. It is currently anticipated that commercial scale operations could begin over the next 20 years.

147. Senator CLINTON. Secretary Bodman, do the DOE's estimates for waste reduction include the decommissioning and decontamination of the facilities themselves that must be built for this proposal?

Secretary BODMAN. At this time the Department has initiated conceptual design of the proposed integrated recycling facilities. Given the state of the facility designs, the Department cannot estimate the volume of waste from the decommissioning and decontamination of the recycling demonstration facilities.

148. Senator CLINTON. Secretary Bodman, does the waste volume estimate include liquid and gaseous waste? Please provide a detailed estimate of types and volumes of wastes that would be generated during the GNEP life cycle, the types of facilities that would be required to dispose of those wastes, and an estimate of disposal costs.

Secretary BODMAN. The volume of the waste or the cost of disposing of waste generated from the GNEP demonstration facilities cannot be confidently predicted until the designs of the facilities advances, as the volumes and costs depend on details of several processes and selection of specific waste forms. Initial estimates based on pre-conceptual design studies should be available over the next 2 years.

[Whereupon, at 10:43 a.m., the committee adjourned.]

DEPARTMENT OF DEFENSE AUTHORIZATION FOR APPROPRIATIONS FOR FISCAL YEAR 2007

THURSDAY, MARCH 2, 2006

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

AIR FORCE POSTURE

The committee met, pursuant to notice, at 9:30 a.m. in room SH–216, Hart Senate Office Building, Senator John Warner (chairman) presiding.

Committee members present: Senators Warner, McCain, Inhofe, Roberts, Talent, Chambliss, Thune, and Levin.

Committee staff members present: Charles S. Abell, staff director; Leah C. Brewer, nominations and hearings clerk; and John H. Quirk V, security clerk.

Majority staff members present: Gregory T. Kiley, professional staff member; Derek J. Maurer, professional staff member; David M. Morriss, counsel; Lucian L. Niemeyer, professional staff member; Stanley R. O'Connor, Jr., professional staff member; Sean G. Stackley, professional staff member; Scott W. Stucky, general counsel; and Richard F. Walsh, counsel.

Minority staff members present: Richard D. DeBobes, Democratic staff director; Jonathan D. Clark, minority counsel; Madelyn R. Creedon, minority counsel; Gabriella Eisen, research assistant; Creighton Greene, professional staff member; Bridget W. Higgins, research assistant; Gerald J. Leeling, minority counsel; and Peter K. Levine, minority counsel.

Staff assistants present: Micah H. Harris and Jessica L. Kingston.

Committee members' assistants present: Christopher J. Paul and Paul C. Hutton IV, assistants to Senator McCain; John A. Bonsell and Jeremy Shull, assistants to Senator Inhofe; Chris Arnold, assistant to Senator Roberts; Arch Galloway II, assistant to Senator Sessions; Lindsey R. Neas, assistant to Senator Talent; Clyde A. Taylor IV, assistant to Senator Chambliss; Bob Taylor and Stuart C. Mallory, assistants to Senator Thune; Mieke Y. Eoyang, assistant to Senator Kennedy; Frederick M. Downey, assistant to Senator Lieberman; Matthew Benham, assistant to Senator Bill Nelson; and Andrew Shapiro, assistant to Senator Clinton.

OPENING STATEMENT OF SENATOR JOHN WARNER, CHAIRMAN

Chairman WARNER. When I came to the Senate 28 years ago, I listened to my elders, and one of them used to say, "There are times when the Senate does very little, but there are other times where they try to do it all, to make up." This is one of those days. Senator Levin and I are members of another committee that has a very important markup this morning on legislation relating to lobbying and so forth. Consequently, we'll be in and out, but we're going to give you a very thorough hearing, Secretary Wynne and General Moseley. I welcome both of you here.

This is a day in which we're going to look at the President's budget request. It comes at a critical time of change in the global war on terrorism, but here at home also. The first Quadrennial Defense Review (QDR) fully focused on the September 11 threats has been delivered to Congress, and we have taken care of that and looked at it very carefully.

We commend the President for his continuing commitment to strengthen our defense capabilities, really across the board. We have a very strong budget request this year.

Budget priorities supporting the global war on terror, restructuring our forces and our global posture, building joint capabilities for future threats, and taking care of our troops and their families, certainly are the correct points of emphasis in this budget.

One of the committee's most important duties is to provide oversight over the management of the hundreds of billions of dollars that the Department spends each year on the acquisition of supplies, services, and equipment. We have become aware, over the past several years, of emerging problems in the acquisition area, and this is an area in which you have really distinguished yourself, Secretary Wynne, and we're so pleased that you're in this position.

Consequently, the Department has initiated numerous legislative provisions in an effort to direct the Department toward more sound acquisition practices. We'll continue to work with you to explore and ensure the Services act to carefully spend our taxpayers' dollars.

This committee is committed to doing all we can to ensure the safety of our airmen, soldiers, sailors, marines, and their families, wherever they are in the world. Taking the lessons from recent operations in the war on terrorism, two specific areas bear mentioning. The area of countering improvised explosive devices (IEDs) will continue to be our top priority in this committee; second, we recognize the invaluable contributions that unmanned aircraft systems have made to the warfighter. We need to explore the greater use of this technology. Putting aside any sense of humility, this committee has spearheaded that effort for many years, and I thank so many of my colleagues for the strong support they've given, and, indeed, the staff itself, in working out innovative ways to explore this. I saw one yesterday—the Army has it, it's that instrument they're going to use to take over some of the duties of the helicopters, and it carries that whole suite of weapons that a helicopter can carry. I expect you're watching that one, are you not?

General MOSELEY. You bet, sir.

Chairman WARNER. I'll lay a bet you buy a few of those before the day is over.

General MOSELEY. The Navy has some good systems, too——

Chairman WARNER. Oh, yes.

General MOSELEY.—with the rotary wing unmanned aerial vehicle (UAV).

Chairman WARNER. Extraordinary model.

I applaud the Air Force Battlefield Airman Initiative that has improved combat training to increase joint air-to-ground integration for directing air strikes in support of ground forces. Since 2001, Air Force joint tactical attack controllers (JTACs), many attached to Special Operations Force (SOF) units, have directed over 85 percent of the air strikes in Afghanistan. Also, the Air Force is optimizing Reserve component personnel for new missions that can be performed from the United States, including unmanned aircraft systems operations and intelligence, surveillance, and reconnaissance (ISR), and reachback, leveraging the core competencies of the Reserves, while reducing stress on the force.

We do have some concerns here among us in the committee about several things, about the Air Force proposal to establish a third and fourth operational basing strategy for the F–22A that would reduce the number of aircraft within the squadron, and possibly reduce squadron combat effectiveness. We are also concerned about the Department of Defense (DOD) proposal to terminate the F–136 Joint Strike Fighter (JSF) engine program, effectively leaving the United States and our allies with one single supplier for large fighter engines for the most popular strike fighter aircraft in current history. We anticipate maybe 3,000 of those airplanes and to have that entire program dependent on one engine seems to me—the decision was correct to go to two engines in the beginning, but we're going to review the current budget proposal to drop back to one.

I was very pleased to see that Secretary England responded to the letter that Senator Levin and I forwarded, and that the dual programs will continue until such time as Congress, working with the administration, reconciles this issue. I'll now put in today's record the letter that Senator Levin and I wrote and the response that the Secretary returned to us.

United States Senate
COMMITTEE ON ARMED SERVICES
WASHINGTON, DC 20510-6050

February 15, 2006

Honorable Donald H. Rumsfeld
Secretary of Defense
1000 Defense Pentagon
Washington, DC 20301-1000

Dear Mr. Secretary:

It has come to our attention that the Department of Defense has proposed the termination of the F136 Joint Strike Fighter engine program in the President's fiscal year 2007 budget request. As you are aware, Congress has supported this program for over a decade and will need time to consider this new proposal before the Department takes action that would presume the outcome of our deliberations.

We are writing to strongly urge that the Department not take any action that would slow or otherwise negatively impact the development schedule for the F136 program that Congress just approved in the fiscal year 2006 budget. The Department should continue to provide the funds appropriated for the F136 program, and called for in the F136 systems design and development contract, while Congress is considering the fiscal year 2007 budget request.

Sincerely,

Carl Levin
Ranking Member

John Warner
Chairman

DEPUTY SECRETARY OF DEFENSE
1010 DEFENSE PENTAGON
WASHINGTON, DC 20301-1010

Honorable John Warner
Chairman
Committee on Armed Services
United States Senate
Washington, DC 20510-6050

Dear Mr. Chairman,

Reference your and Senator Levin's letter of February 15 to Secretary Rumsfeld regarding the F136 Joint Strike Fighter engine program, the Department concurs with your request. The Department will continue to provide the funds appropriated in the Fiscal Year 2006 budget for the F136 program and called for in the F136 systems design and development contract, while Congress is considering the FY 2007 request.

CC:
Honorable Carl Levin
Ranking Member
Committee on Armed Services
United State Senate
Washington, DC 20510-6050

Chairman WARNER. So, I thank you, gentleman. These are exciting times to be in your positions. I envy both of you and the country is fortunate to have two extremely competent individuals, well-trained, to take on this responsibility.

Senator Levin, I've proceeded, given we have our heavy schedule this morning. I finished my opening statement.

[The prepared statement of Senator Warner follows:]

PREPARED STATEMENT BY SENATOR JOHN WARNER

The committee meets today to receive the testimony of the Secretary of the Air Force and the Chief of Staff of the Air Force on the posture of the U.S. Armed Forces and President Bush's defense budget request for the Air Force for fiscal year 2007.

We welcome Secretary Wynne and General Moseley back and commend our witnesses for the outstanding leadership they provide our Nation and our men and women serving in the United States Air Force. Our thoughts and prayers are with them and their families, particularly those families with loved ones that are away from home defending our freedom.

The President's budget request arrives this year at a critical time of change not just in the global war on terrorism, but here at home, as well. The first Quadrennial Defense Review (QDR) fully focused on post-September 11 threats has just been delivered to Congress. We will need to carefully analyze and evaluate this document.

I commend the President for his continuing commitment to strengthen our defense capabilities and providing our forces with the resources and capabilities they need to successfully fulfill their missions. The budget priorities of supporting the global war on terror, restructuring our forces and our global posture, building joint capabilities for future threats, and taking care of our troops and their families are clearly the right emphasis.

One of the committee's most important duties is to provide oversight over the management of the hundreds of billions of dollars that the Department spends each year on the acquisition of supplies, services, and equipment—everything from office supplies to weapon systems. We have become aware over the last several years of emerging problems in the acquisition arena and have initiated numerous legislative provisions in an effort to direct the Department towards more sound acquisition practices. We will continue to work with you to explore ways to ensure the Services act as good stewards of taxpayer dollars.

This committee is committed to doing all we can to ensure the safety of our airmen, soldiers, sailors, and marines. Taking lessons from recent operations in the war on terrorism, two specific areas bear mentioning. The area of countering improvised explosive devices (IEDs) has and will continue to be our top priority. Second, recognizing the invaluable contributions that unmanned aircraft systems have made to the warfighter. We need to explore the greater use of this technology.

I applaud the Air Force Battlefield Airman initiative that has improved combat training to increase joint air-ground integration for directing air strikes in support of ground forces. Since 2001, Air Force Joint Tactical Attack Controllers (JTACs), many attached to Special Operations Force units, have directed over 85 percent of the air strikes in Afghanistan. Also, the Air Force is optimizing Reserve component personnel for new missions that can be performed from the United States, including unmanned aircraft systems operations, and intelligence, surveillance, and reconnaissance reach-back, leveraging the core competencies of the Reserves while reducing stress on the force.

I do have concerns, however, about the Air Force proposal to establish a third and fourth operational basing strategy for the F–22A that would reduce the number of aircraft within a squadron and possibly reduce squadron combat effectiveness. I am also concerned about the Department of Defense proposal to terminate the F136 Joint Strike Fighter engine program, effectively leaving the United States and our allies with a single supplier of large fighter engines for the most popular strike-fighter aircraft in our inventories for the next 30 years. The short-term savings achieved by this proposal may result in excessive long-term cost to the taxpayer and less than optimum engine improvements over the service life of the Joint Strike Fighter.

I thank you all for your distinguished service and look forward to your testimony.

STATEMENT OF SENATOR CARL LEVIN

Senator LEVIN. Mr. Chairman, thank you. Let me join you in welcoming our witnesses to the committee. I'm sorry that I'm a few minutes late. Late or not, I'm glad to be able to be here because of the importance of this hearing.

Hundreds of thousands of our military members are currently deployed far away from their homes and families in service to our Nation. Many of those who are serving in very dangerous places like Iraq and Afghanistan depend on our leadership. Many of those who are serving in very dangerous places are also specifically and very much dependent upon the leadership of the witnesses that are in front of us today.

We can't overstate the sacrifice that our military people, who are all volunteers, are making to ensure the security of their fellow Americans. We salute them. We pledge that we will do our part to ensure that they and their families are fully supported as they face these hardships and these dangers.

The Air Force Secretary and General Moseley have responsibility to organize, train, and equip the Air Force. It is they who we turn to, to provide the support, and particularly the best training and equipment that this Nation can provide, so that members of the Air Force have all that they need to successfully perform their crucial duties.

It is important that Secretary Wynne and General Moseley tell us today of any changes that may have taken place since their budget was prepared, and any requirement for funding which did not appear in the 2006 supplemental or in the fiscal year 2007 defense authorization request.

Responsible budgeting means making choices and setting priorities. I am afraid the budget request before us understates the true cost of our defense program, because it does not fully recognize or pay for the cost of ongoing operations in Iraq and Afghanistan.

Funds for those will apparently be requested later this year, on an emergency, non-paid-for basis. That's not responsible budgeting. Those costs should be planned on and paid for now. Honest budgeting requires no less.

Although the exact cost for the operations in fiscal year 2007 are not presently known, we have been spending significant sums, about $5 billion per month, in Iraq and Afghanistan for some time now. We know that these costs are going to continue past September 30 into fiscal year 2007. We also know that equipment that has been destroyed needs to be replaced, and equipment that has been used far more than anticipated needs to be repaired in the near-term, and modernized in the long-term. Those costs should be planned on now. Taken together, those omissions mean this budget understates known defense costs for fiscal year 2007, and the true size of the future deficits, by billions of dollars.

While it is true that no one can predict with precision what these fiscal year 2007 costs will be, we should provide funds to cover known requirements. I have suggested increasing the budget to pay for ongoing operations in Iraq and Afghanistan, as well as resetting the force. It is the responsible thing to do for our troops and for budget accuracy.

Additionally, I know that there are a number of other more programmatic issues that we will be discussing at this hearing, including incremental funding of the F–22, canceling the development of an alternate engine for the JSF, whether to continue C–17 production beyond the current plan of 180 aircraft, and starting a new program for a strategic tanker acquisition.

So, Mr. Chairman, I join you in welcoming our witnesses, and in thanking them for their service. I look forward to their testimony.

Chairman WARNER. Thank you very much.

Does any other member feel they want a minute or two for opening-statement purposes?

Senator Chambliss?

Senator CHAMBLISS. I'll defer.

Chairman WARNER. Thank you very much.

We'll proceed, then, Mr. Secretary. Your entire statement, and that with the distinguished chief, will be put into the record.

STATEMENT OF HON. MICHAEL W. WYNNE, SECRETARY OF THE AIR FORCE

Secretary WYNNE. Thank you very much, Mr. Chairman. Thank you, Senator Levin, and thank you, members of the committee. Thank you for having General Moseley and me here today to testify on behalf of America's Air Force. We are grateful for this committee's steadfast support of our Nation's airmen and their families.

I have seen our innovative and adaptive airmen—Active, Guard, and Reserve—firsthand, and am inspired by their commitment and their patriotism. Nonetheless, as I told you back in October, our Air Force is challenged with trying to get 6 pounds into a 5-pound sack. I have broken these challenges down into three critical components.

First, personnel costs of an All-Volunteer Force are accelerating because of expanding benefits and rising health care costs.

Next, operations and maintenance (O&M) costs continue to rise. We are experiencing unyielding second-order effects that continue to drain our top line. Simply stated, we are exhausting all of our assets at a much higher rate than we had forecast, and absorbing costs to organize, train, and equip for evolving new missions.

Lastly, the acquisition, research and development (R&D), and investment accounts face severe pressure as a result of the foregoing must-pay bills. Nevertheless, we continue to mobilize fast and creative responses to achieve the technology and interdependence required to dominate in the global war on terror and the threats beyond.

So, where does our solution lie? With your assistance, we will responsibly attack all three of these challenges. To rein in personnel costs, we are using Total Force Integration, formerly future total force, started in the mid-1990s. It has exposed redundancies to capitalize on as we continue to operationalize the Guard and the Reserves. "Mission first" continues to be our beacon while partnering with both the Guard and the Reserve. In fact, we are in the process of releasing the post-base realignment and closure (BRAC) Phase 2 mission laydown, which has been cosigned by Active, Guard, and Reserve commanders.

In addition to using our people more efficiently through the Total Force Integration, we instituted Air Force Smart Operations-21 (AFSO–21)—smarter and leaner operations. No process or organizational construct is immune from this Air Force-wide critical review. Efficiencies from AFSO–21, Total Force Integration, and lessons learned from 15 years under fire permit us to forecast an end-strength reduction of 40,000 full-time equivalents across the Fu-

ture Years Defense Plan (FYDP). Using our manpower smarter has been found to be the key to retention and the key to force management.

AFSO–21 will also help us with our second challenge, O&M increases. But smarter operations cannot overcome the elephant in the room, fuel and upkeep for aircraft with decreasing military utility. Aircraft with 1950s-era engines and design expose us to soaring fuel prices, increased maintenance, and obsolete spare suppliers. Many planes are simply not deployable due to their declining military utility. We can harvest savings from cutting requirements, redundancies, and excess capacities in our aircraft and missile fleets. This lets me keep the force robust, while shifting resources to new missions, like Predator, Global Hawk, and long range strike. I need this type of flexibility, and this is where I ask for your help.

I need your help in lifting the legislative restrictions on retirements that prevent me from being the air-fleet manager that you expect me to be. Right now, these restrictions apply to nearly 15 percent of our fleet. Continued restrictive language will not only impede the shift to new missions now, but will lead to exhausting resources on aircraft with declining military utility in our future, and ultimately impact our technological edge for the future.

The final part of this 6-pound problem is the investment accounts: acquisition, and R&D. I reiterate to you my commitment to restore the Air Force to its premier status in acquisition and governance, and we continue to concentrate in this area, access intellectual capabilities, and make sure that we are not in a deficient status.

We must solidify our R&D investment stream, even while we are at war. Along with air dominance, space and cyberspace are keys to the future interdependent warfight. Investment today provides the gateway to tomorrow's dominance.

In summary, personnel, O&M, the investment accounts, acquisition, and R&D are our targets. Despite 15 years of continuous combat since Operation Desert Storm, we have transformed our force like no other. With Total Force Integration, AFSO–21, and your help, we intend to keep the title of the world's most agile and lethal Air Force. Our commitment is to increase the aggregate military utility across the entire spectrum of operations for the Joint Force Commander. This means modernizing, recapitalizing, and recognizing efficiencies as we manage this total force.

Thank you for your strong commitment to our Air Force and to the common defense. I look forward to your questions.

[The joint prepared statement of Secretary Wynne and General Moseley follows:]

JOINT PREPARED STATEMENT BY HON. MICHAEL W. WYNNE AND GEN. T. MICHAEL MOSELEY, USAF

SECAF/CSAF—WELCOME MEMO

We are America's airmen. Our mission is to deliver sovereign options for the defense of the United States of America and its global interests—we fly and we fight—in air, space, and cyberspace. For the past 15 years, our Air Force team has proven its mettle and skill every day. Since the days of Operation Desert Storm, we have been globally and continuously engaged in combat. We will continue to show the same ingenuity, courage, and resolve and achieve success in our three most impor-

tant challenges: winning the global war on terror; developing and caring for our airmen; and maintaining, modernizing, and recapitalizing our aircraft and equipment.

In the global war on terror we face vile enemies—enemies devoid of any positive vision of the future, who seek only to destroy the United States and the ideals and freedoms upon which America is built. We will win this fight. We will maintain our focus on winning this fight. While maintaining focus on winning the global war on terror we will also maintain vigilance—vigilance in defense of our homeland and vigilance against emerging threats in an uncertain world.

Our expeditionary fighting forces and culture, centered on the Air and Space Expeditionary Force, provide the foundation for our operations. We will more closely align our Regular Air Force, Air National Guard, and Air Force Reserve units with total force initiatives to enhance our overall capability. We will continue transforming to meet the challenges of a dynamic world.

We will remain focused on caring for and developing our airmen—our most valuable resource. We will continue to look for ways to maintain and improve their training, their personal and professional development, and their quality of life, so they will continue to meet the commitments of today while preparing for the challenges of tomorrow.

We are operating the oldest inventory of aircraft in our history, while maintaining the intense operations tempo required by the global war on terror, humanitarian crises, and routine requirements. Meanwhile, competitor states are developing air and air defense systems that could threaten our ability to maintain air and space dominance. These factors drive the urgent need to modernize and recapitalize our aircraft. We must act now to preserve our Nation's freedom of action in the future. The Secretary of Defense described future threats in terms of four quadrants—traditional, irregular, catastrophic, and disruptive. We must develop, acquire, and maintain systems that can counter threats in any of these quadrants. We will do so by incorporating lean principles that eliminate waste while providing transparency in our processes.

Our 2006 posture statement outlines our plan to accomplish these goals regarding global war on terror, our airmen, and our aircraft and equipment. It reflects our commitment to good stewardship of the resources entrusted to us, and our dedication to protecting our Nation in air, space, and cyberspace.

INTRODUCTION—HERITAGE TO HORIZON

Over a century ago, America crossed the threshold of powered flight and gave wings to the world. Soon military leaders realized the implications of this development, and warfare was changed forever. America was fortunate to have "great captains" with the vision to imagine the possibilities of air and space power—airmen like Billy Mitchell, Frank Andrews, Hap Arnold, Ira Eaker, Jimmy Doolittle, and Bennie Schriever. They have given us a proud heritage of courage, excellence, and innovation. In so doing, they also give us a sense of perspective and a way to understand the Air Force's future.

They have shown us an unlimited horizon. Each of them lived in dangerous times and faced many demanding challenges. Today, we also find ourselves as a Nation and an Air Force facing similarly dangerous and demanding challenges. Some are global or national in scope; others are specific to the Air Force.

During the last decade the United States Air Force transformed to a modular expeditionary force of 10 Air and Space Expeditionary Force (AEF) packages providing agile air and space power. Our airmen have proven tremendously successful across the spectrum of operations from humanitarian efforts to homeland defense operations and the global war on terrorism. We will continue transforming to meet the challenges of a dynamic world by rebalancing the force and realigning our structure into a total force that meets increased demands for persistent intelligence, rapid mobility, and precision strike capabilities. The AEF construct provides the ideal toolbox from which we can provide tailored, efficient, and lethal air and space forces to deal with future challenges.

The Air Force faces the broadest set of mission requirements across the entire spectrum of warfare. We will bolster our Nation's ability to respond swiftly, flexibly, and decisively to asymmetric, irregular, and emerging threats. We have embarked on a bold, new initiative known as Air Force Smart Operations for the 21st century (AFSO–21) as a means to best allocate our resources to meet this increasing set of challenges. All of these challenges will require the very best efforts of our airmen throughout the total force.

Winning the Global War on Terror

Our first priority is to maintain focus on winning the global war on terror. We will continue to operate as part of a true joint and coalition team, multiplying the

effectiveness of our partners to win this war. We fly and we fight—whether we're flying A–10s over Afghanistan; flying F–16s over Iraq; operating and maneuvering communications satellites in geosynchronous orbit; remotely piloting unmanned aerial vehicles (UAVs) patrolling over Baghdad; or maintaining vigilance over our Nation's homeland in an E–3 airborne warning and control system (AWACS) aircraft. All airmen, no matter what their specialty, contribute to this mission.

We must keep in mind that the global war on terror is not defined by today's headlines or locations. It will be a long war, with shifting venues and constantly evolving threats. The character and capabilities of potential U.S. adversaries are increasingly uncertain, veiled, growing, and changing, as both state and non-state actors acquire advanced technology and the means to either acquire or develop weapons of mass destruction (WMDs).

We can foresee serious threats posed by increasing numbers and sophistication of ballistic and cruise missiles; chemical, biological, radiological, and nuclear weapons; advanced surface-to-air missiles (SAMs); and sophisticated combat aircraft. We also anticipate the real threat of potentially crippling attacks on our Nation's critical infrastructure, including space networks. Not only must we be prepared to confront known threats, but we also must be ready for unexpected, disruptive breakthroughs in technology that may undercut traditional U.S. advantages.

Maintaining a strong defense able to overcome and defeat these threats remains an imperative for our Nation. Currently, the Air Force can command the global commons of air and space and significantly influence the global commons of the sea and cyberspace; however, we cannot indefinitely maintain this advantage using the current technology of the air and space systems and equipment comprising our existing force structure.

Developing and Caring for Our Airmen

Our Regular Air Force airmen, Air National guardsmen, Air Force reservists, and civilians, who together form our total force, are building on their inheritance of courage, excellence, and innovation. They are highly educated and resourceful, and have created the most lethal Air Force that has ever existed. We must continue to look for ways to maintain and improve their training, their personal and professional development, and their quality of life, so that they may continue to meet the commitments of today while preparing for the challenges of tomorrow.

Airmen today are contributing to combat operations in ways never before envisioned—as convoy drivers and escorts, detainee guards, and translators to give a few examples. Other airmen routinely serve "outside the wire" as special tactics operators, joint terminal attack controllers and special operations weather personnel. All of these airmen must receive the proper training to survive, fight, and win. We are working within the Air Force, as well as with our joint warfighting partners, to ensure that all airmen are fully prepared when they arrive in the combat zone.

Developing airmen involves more than combat skills. It is a career-long process that maximizes the potential of each member of the total force team. We will look at every airman as an individual and provide them with specialized training, relevant educational opportunities, and appropriate assignments in order to capitalize on the talent these brave airmen offer for this country's defense.

Every airman is a vital national resource and must be cared for as such. In addition to providing professional opportunities for our airmen and fostering an environment of mutual respect, the Air Force is committed to investing in health and fitness programs and facilities, world class medical access and care, and housing and morale programs for our airmen. Our airmen have proven themselves to be the best America has to offer—they deserve the best support available.

By ensuring that our airmen are prepared for combat, effectively developed and properly supported, we will continue to provide our Nation with the best Air Force in the world.

Maintenance, Modernization, and Recapitalization

One of our most daunting challenges is maintaining the military utility of our aircraft as reflected in mission readiness, maintenance costs, and other factors. We have been actively engaged in combat for the past 15 years. We currently maintain an air bridge to southwest Asia. Our state of alert for global war on terror requires us to operate at an elevated and sustained tempo of operations (OPTEMPO). Increased investment and increased maintenance tempo can keep our older aircraft flying and slow their decaying military utility, but equipment age and use are unrelenting factors.

Presently, we have the oldest aircraft inventory in our history. Our aircraft are an average of over 23 years old—older in many cases than those who fly and maintain them. In particular, our inventory of tanker aircraft averages over 41 years old,

and our C–130 tactical airlifters average over 25 years old. As our equipment ages, it requires more frequent maintenance and replacement of parts; meanwhile, increased OPTEMPO accelerates wear and tear on our equipment and operational infrastructure, exposes our equipment to extreme conditions, and, in some cases, delays routine maintenance.

We must recapitalize our aircraft and operational infrastructure, as well as modernize our processes for services, support, and information delivery in order to maintain the grueling pace required into the foreseeable future. We must do so in a fiscally prudent manner. This means retiring and replacing our oldest, least capable, and most expensive aircraft and equipment, as well as accepting a manageable level of risk in order to selectively maintain some older systems until newer systems are on the ramp.

These newer systems will cost far less to operate and maintain and are designed to defeat emerging threats. The U.S. no longer enjoys a monopoly on advanced technology, and we are already witnessing the emergence of highly sophisticated systems that threaten our capability to achieve joint air and space dominance. Along with ongoing robust science and technology (S&T) programs, transformational systems such as the F–22A Raptor, F–35 Joint Strike Fighter (JSF), Space Radar (SR), and Transformational Communications Satellite (TSAT) will ensure that we maintain the ability to provide overwhelming air and space power for our combatant commanders.

Concurrently, the Air Force is also focusing on reforming, modernizing, and improving processes for acquisition of new systems and equipment. We will achieve greater efficiencies and higher productivity by reforming our business practices. By incorporating lean processes and transparent accounting, and reinforcing a culture of continuous improvement, the Air Force will maintain the high standards of our heritage. We will continue our tradition of transformation, realize both lethality and efficiency in our capabilities in this new century, and stand ready for the challenges of the future.

The future is what you bring with you when tomorrow comes. Our 2006 Air Force posture statement outlines our flight plan into the future. By focusing on winning the global war on terror, maintaining the excellence and maximizing the potential of the America's airmen, and maintaining, modernizing, and recapitalizing our aircraft and equipment, we will provide air and space dominance for U.S. forces well into the future.

AIR AND SPACE POWER TODAY—BUILDING ON OUR HERITAGE

Current Security Environment

The current security environment is marked by seemingly constant change and uncertainty. Our security environment is also marked by the threats posed by terrorist organizations and rogue states around the world bearing ill will toward our Nation. In times of uncertainty and heightened threat, our citizens turn to the military to defend this great Nation at home and abroad. Our airmen stand alongside soldiers, sailors, marines and coast-guardsmen—a joint team poised and ready to defend the Nation.

Throughout the history of American air and space power, airmen have often faced complex challenges during times of change and uncertainty—times when our Nation's survival was at stake. In early 1945, General "Hap" Arnold reported to the Secretary of War, ". . . our Air Force must be flexible in its basic structure and capable of successfully adapting itself to the vast changes which are bound to come in the future. Whatever its numerical size may be, it must be second to none in range and striking power." In retrospect, Hap Arnold's words were amazingly prescient.

Today our force is still second to none in range and striking power. Potential adversaries, well aware of the strength of our Air Force, seek to limit our range and striking power through development of new and emerging threat systems. These systems, coupled with the proliferation of weapons of mass destruction, form a formidable threat to the joint force and to our Nation.

In order to achieve victory in the global war on terror and meet the challenges of emerging threats, the Air Force looks to build on the great heritage established by decades of airmen—airmen who have confronted daunting challenges and succeeded as vital members of the joint warfighting team.

Global War on Terror

Several key elements—ideologies of hatred, vast resources, mutual support structures, as well as veiled state and private sponsorship—provide linkages across the array of enemies confronting us in the global war on terror. The general terrorist

threat also spans several regions of the world, often acting on a global scale. While the strategy to prosecute and win the global war on terror is an enterprise necessarily involving many agencies and actions in addition to military forces, the Air Force, in particular, serves a vital role in our Nation's battle against terrorist networks.

America's airmen have become seasoned veterans of Post-Cold War conflicts and are postured to answer any contingency or challenge on a moments' notice. The Air Force has been taking the war to America's enemies for 15 consecutive years. Our constant presence in Southwest Asia since Operations Desert Shield and Desert Storm kept regional instability in check. Airpower effectively controlled two-thirds of Iraq for over a decade, setting the conditions for Iraq's stunning military collapse in Operation Iraqi Freedom.

Recognizing the new reality of rapidly emerging global threats in the Post-Cold War environment, the Air Force has significantly reduced its force structure and transitioned from a Cold War legacy paradigm to a vastly more agile, responsive, and scalable force structure built around the AEF concept. The AEF construct provides the combatant commanders and the joint force with the agility and lethality required to engage U.S. adversaries anywhere in the world with correctly tailored forces—all in a matter of hours to single-digit days. The AEF construct presents air and space forces in a continuous rotation cycle—currently a 20-month cycle with nominal 4-month deployments—and provides the combatant commands with greater capability and stability of forces in theater while providing more predictability for our airmen.

As defined by our national leadership, the global war on terror strategy seeks to reduce both the scope and capability of terrorist networks globally, regionally, and locally. This strategy requires global perspective and regional focus. It also demands an ability to simultaneously conduct long-range strikes and humanitarian relief on opposite sides of the world. In order to execute effectively, the strategy requires unparalleled command, control, communications, computers, intelligence, surveillance, and reconnaissance (C^4ISR). These are all activities our Air Force conducts for the joint force on a daily basis—activities critical to successfully prosecuting the global war on terror.

As an essential part of the joint team, the Air Force contributed to defeating the Taliban and eliminating Afghanistan as a safe haven for al Qaeda. While the Air Force remains actively engaged in operations in Afghanistan, our national strategy is simultaneously focused on Iraq as the central front for the war on terror. While the United States and its partners have defeated Saddam Hussein's regime of terror, the enemies of freedom—both members of the old regime and foreign terrorists who have come to Iraq—are making a desperate attempt in the name of tyranny and fascism to terrorize, destabilize, and reclaim this newly-liberated nation and aspiring democracy.

The Air Force continues to lead the fight in defending the home front as well. The Air Force recently conducted an Air Force-Navy strategy conference addressing the global war on terror and counterinsurgencies. The conference report forms the basis for an ongoing Air Force study to further improve the Air Force's posture for homeland defense. The Air Force has also taken a leadership role in developing a concept of operations for joint maritime interdiction to defend our shores and those of our allies. In addition, Air Force aircraft maintain a 24/7 alert status in defense of the United States and its approaches, against both airborne and maritime threats.

From a global perspective, we are continually bolstering airman-to-airman relationships with our allies and partners to build interoperable and complementary capabilities as well as to ensure access to foreign airspace and support infrastructure. We are using training, exercises, personnel exchanges, cooperative armaments development, and foreign military sales to expand and cement these vital coalitions that are essential to prosecuting the global war on terror and to our future joint air operations.

In addition, from local, regional, and global perspectives, foreign internal defense is an indispensable component of successful counterinsurgency strategies. The Air Force is partnering with Special Operations Command to rapidly expand Air Force foreign internal defense forces to bolster partner nations on the front lines of the global war on terror.

From direct support of special forces, to maritime interdiction, to global strike, the Air Force remains prepared to engage those who would threaten our friends, our interests, or our way of life.

Emerging Threats

The threats airmen will encounter in the coming years are changing dramatically. Adversaries are developing and fielding new ground-based air defenses, improved

sensor capabilities and advanced fighter aircraft. These capabilities will increasingly challenge our legacy aircraft, sensors, and weapons systems.

Advances in integrated air defense systems, to include advanced sensors, data processing, and SAMs continue trends noted in the 1990s. SAM systems are incorporating faster, more accurate missiles, with multi-target capability, greater mobility, and increased immunity to electronic jamming. Currently possessing ranges of over 100 nautical miles (NM), these anti-access weapons will likely achieve ranges of over 200 NM by the end of the decade. These advanced SAMs can and will compel non-stealthy platforms to standoff beyond useful sensor and weapons ranges. Proliferation of these long-range SAMs is on the rise, with projections for 2004–2007 indicating a twofold increase over the number of advanced SAM system exports during the mid to late 1990s.

Another trend is the development and proliferation of upgrades to older, 1960/70's-era SAMs. At a fraction of the cost of a new advanced, long-range SAM, many African, Asian, and Mid-East nations are looking to upgrade older SAMs to revitalize their aging air defense forces. By bringing in modern technologies, improved missile propellants, and increased mobility, older SAM systems are becoming more reliable and more credible threats.

Finally, the threat from manportable air defense systems (MANPADS) continues to grow. Large, poorly secured stockpiles of these weapons increase the chances of highly capable MANPADS ending up in the hands of an insurgent or terrorist group.

The threats from advanced fighter aircraft also continue to grow. Currently there exist 31 nations already fielding 2,500 or more airframes. Increased use of state-of-the-art radar jammers, avionics, weapons, and reduced-signature airframes/engines are becoming the norm in fighter design. Additionally, countries like India and China are now able to produce their own advanced fighters, thereby increasing the quantity and quality of adversary aircraft the Air Force may face in the future. By 2012, China will more than double its advanced fighter inventory to over 500 airframes, most with advanced precision-guided munitions and air-to-air weapons. Similarly, self-protection jamming suites are growing in complexity and proliferation, potentially eroding our ability to target adversary aircraft.

The threat from the development, fielding, and proliferation of standoff weapons such as long-range cruise missiles will also provide potential adversaries with offensive capabilities of ever-increasing accuracy and range which, when combined with their relatively small size, presents an increasing challenge to detection and tracking.

Many nations are enhancing the utility of advanced fighters by pursuing, procuring, and integrating support aircraft as force multipliers. They acquire aerial refueling tankers to extend the range of strike operations and increase on-station time for fighters. Furthermore, airborne early warning aircraft are extending the reach of many nations through datalink capabilities that provide control of fighter operations well beyond the reach of land-based radars. Several nations are also purchasing standoff jamming assets in both manned and unmanned platforms to attempt to deny our traditional sensor advantages. UAVs of all varieties are in high demand and are becoming increasingly available on today's market, providing low-cost, but highly effective reconnaissance capabilities. This situation represents a new and increasingly prolific and complex challenge on the battlefield.

Additionally, the combination of improved C^4ISR with improved ballistic and cruise missile capabilities will increasingly threaten regional and expeditionary Air Force basing. China, in particular, has a growing over-the-horizon intelligence, surveillance, and reconnaissance capability from a combination of ground, air, and space-based systems. Coupled with its large and growing inventory of conventionally-armed theater ballistic missiles, China's increasing capabilities and reach collectively present a serious potential to adversely impact allied and joint air and space operations across the Asian theater.

Worldwide advancements in the development, deployment, and employment of foreign space and counterspace systems are challenges to U.S. space superiority. Adversaries, including terrorists, are more and more easily obtaining a number of increasingly sophisticated space services. Furthermore, they are developing the means to degrade U.S. space capabilities, freedom of action, and access. The intent of U.S. adversaries combined with the capabilities of foreign space and counterspace systems will increasingly threaten U.S. military forces and interests worldwide.

Threat of WMD Proliferation

The threat of proliferation of WMD to countries with advanced military capabilities has changed dramatically since the end of the Cold War. India and Pakistan became overt nuclear powers in 1998, adding to their formidable conventional capa-

bilities. North Korea claims and is assessed to have built nuclear weapons, while Iran is suspected of pursuing them; both countries face intense international pressure to halt their efforts.

Less catastrophic, but of equal concern, are chemical and biological weapons (CBW). Chem-bio WMDs can range in sophistication from World War I-vintage gases or traditional agents like anthrax, to highly advanced "fourth-generation" chemical agents or genetically modified bacterial or viral weapons that challenge state-of-the-art defenses and countermeasures. It is much less expensive and more technologically feasible to produce CBW than it is to obtain nuclear weapons or fissile materials. Furthermore, CBW can be concealed very effectively and inexpensively, veiled under a veneer of legitimate civilian industry or "dual-use" activities.

Future adversaries, deterred from challenging the U.S. openly, may seek to offset U.S. warfighting advantages by developing, using, or threatening to use these weapons. As such, the acquisition of WMD capabilities by terrorists/non-state actors is a grave concern. Many groups have declared their desire to pursue such a goal, and evidence is growing they are attempting to obtain the necessary financial means, weapons knowledge, and necessary materials.

Air Force Contributions to Operation Iraqi Freedom (OIF), Operation Enduring Freedom (OEF), and Operation Noble Eagle (ONE)

Air and Space Operations in OIF and OEF

Over 26,000 airmen are currently forward deployed in support of combatant commanders throughout the world. These airmen continue to deliver key Air Force capabilities of precision engagement, rapid global mobility, and information superiority to OEF and OIF missions.

Pulling from 89,000 tailored deployment teams built around specific capabilities, the Air Force has flown the preponderance of coalition sorties in support of OIF and OEF. In Iraq, the Air Force has flown over 188,000 sorties, while in Afghanistan, airmen have flown over 130,000. Overall, the Air Force has flown a total of over 318,000 sorties, or approximately 78 percent of the total coalition air effort. Counted among these sorties are missions ranging from airlift and aeromedical evacuation, to close air support (CAS) missions to protect ground troops as well as provide them with precise fire support and sensor capabilities.

In 2005, Air Force fighters and bombers supporting OIF and OEF expended over 294 munitions (bombs), 90 percent of which were precision-guided, including the Joint Direct Attack Munition (JDAM). These trends represent a 10 percent increase over 2004 totals in the use of precision-guided munitions (PGMs). Our airmen have also provided nearly all of the in-flight refueling for joint and coalition forces.

Leading the way in reconnaissance and imagery, the Air Force is currently flying Predator UAV missions 24 hours a day, 7 days a week. This capability will grow from 8 to 12 total orbits in 2006 to meet increased demand. Predator aircraft are able to transmit live video pictures to ground-based targeting teams equipped with the Remote Operations Video Enhanced Receiver (ROVER) system. Linking precision engagement and persistent C^4ISR capabilities to forces on the ground, ROVER has been used repeatedly to detect, target, and destroy improvised explosive devices (IEDs) and disrupt insurgent activities across the region. Bolstering these capabilities are Tactical Airborne Reconnaissance System (TARS) equipped F–16s flown by Air National Guard units. In recent testing, TARS has demonstrated the ability to aid in the location and destruction of IEDs.

Air Force operations in Iraq and Afghanistan also highlight the importance of space-based C^4ISR capabilities to U.S. and coalition forces. These capabilities have become integral to effective warfighting operations and include secure communications, global weather, persistent worldwide missile warning, and intelligence gathering. Commanders continue to rely extensively on the all-weather precise position, navigation, and timing capability provided by the Air Force's Global Positioning System (GPS) constellation, satellite communications (SATCOM) and timely observations of weather and enemy activity to conduct operations in Iraq and Afghanistan. In strikes against time-sensitive targets, nearly 40 percent of all munitions used in OIF were GPS-guided, which made them unaffected by sand storms and inclement weather. Additionally, at the senior leadership level of warfighting, the Joint Force Air and Space Component Commander's duties as the Space Coordination Authority have become critical to successful joint planning and execution of space capabilities for joint forces. Holding the ultimate high ground, Air Force space professionals keep a constant vigil over a global battle space—planning, acquiring, maintaining, and operating the systems that sustain our Nation's advantages in space.

Sister Services and U.S. Government agencies continue to heavily rely on Air Force capabilities. Running the spectrum from logistics expertise to medical care, the Air Force is fully partnered with the Army and Marine Corps units running con-

voys throughout Iraq with more than 1,000 transportation, security forces, and medical airmen trained to support convoy missions.

Moreover, Air Force capabilities are saving soldiers' lives and simultaneously reducing our required footprint in southwest Asia. Increased use of Air Force airlift capabilities—notably the unconventional yet highly effective use of workhorse C–17s as well as C–5 aircraft to increase our intra-theater airlift capabilities in Iraq—has dramatically reduced the need, number, and frequency of ground convoys along the most dangerous roads and routes in Iraq. These capabilities and optimized theater airlift mission planning methods have also contributed to a planned reduction of the number C–130s required for OIF support.

Additionally, Air Force support personnel are taking a more active role in the direct protection of personnel and resources. In early 2005, Air Force security forces at Balad Air Base, Iraq, in conjunction with the Army, were assigned a sector outside the base to patrol and clear of insurgent operations. This aspect of the air base defense mission has not been seen since the Vietnam War, yet Task Force 1041 was successful in reducing attacks on Balad Air Base by 95 percent.

Airmen also worked to strengthen relationships, develop capabilities, and enhance the self-reliance of Afghanistan, Iraq, and other regional global war on terror partners. For example, Air Force air traffic controllers helped return safety and commercial viability to Afghan airspace. At Ali Airbase, Iraq, a cadre of Air Force instructors taught Iraqi airmen how to fly and maintain their newly acquired C–130 aircraft. In Kyrgyzstan, Air Force C–130s air-dropped U.S. Army and Kyrgyz National Guard troops over a drop zone in the capital of Bishkek during a joint training exercise. Additionally, United Arab Emirates (UAE) recently acquired American-made F–16 Block–60 aircraft. This acquisition provides them with cutting edge aviation technology and a capability complementary to the UAE's new Gulf Air Warfare Center, which has become a tremendously successful training venue for our regional and global coalition partners.

Finally, Air Force innovations in command and control (C2) technologies have allowed airmen to seamlessly automate and integrate efforts of critical air assets. The systems baseline in use in the Falconer Air and Space Operations Center (AOC) at Al Udeid has improved automated support for the daily air tasking orders, while the capabilities of the battle control system-mobile communications module reduces the number of airmen needed at forward locations in Iraq, resulting in fewer airmen exposed to hostile fire.

Air and Space Operations in ONE

While engaged in OEF and OIF, the Air Force simultaneously contributes to Operation Noble Eagle—the defense of the homeland. Through a variety of efforts, the Air Force continues to guard the skies of our Nation from coast to coast. The Air Force's principal homeland defense mission is air defense and preserving the air sovereignty of the United States and its territories.

Since September 11, 2001, over 41,000 fighter, aerial refueling, and airborne early warning sorties have been flown in defense of the U.S., while over 2,000 air patrols have responded to actual incidents and suspicious flight operations. This is a true Total Force mission, leveraging the combined capabilities of the Air Force Reserve, Air National Guard and Regular Air Force components to provide seamlessly orchestrated C2 and refueling support for fighter aircraft operating from alert sites throughout the U.S.

The range, flexibility, persistence, and precision inherent in U.S. air and space power provide joint warfighters with a unique tool set for creating war-winning results with a relatively small footprint. Air and space operations stand ready to continue providing these important resources to OIF, OEF, and ONE, as well as exploring new ways to lead the way in the global war on terror.

Air and Space Power—An Essential Element of the Joint Fight

Innovation is a central theme in Air Force heritage. It is a strength the Air Force lends to the overall effort to transform joint operations into a more seamless, integrated, and interdependent team effort. U.S. military performance during ongoing operations in Iraq and Afghanistan demonstrates unprecedented joint interdependence. We've gone from struggling with C2 and coordination of air and ground forces on the battlefields of Operation Desert Storm to demonstrating a high degree of integration among joint and coalition forces engaged in OIF.

Overall success of future interdependent joint force efforts will place greater demands on Air Force capabilities. As ground forces seek to increase their agility and speed, they will rely increasingly on air and space power to move them throughout the battlespace; provide the information needed to outmaneuver numerically superior or elusive adversaries; and deliver precise, rapid strikes across multiple, distrib-

uted operations areas. The future joint force concept of seabasing, as yet another means to project power and support ground forces, further underscores the requirements for land-based air and space power. Clearly, the need for rapid mobility, persistent C4ISR and precision engagement will only increase in the future.

Concurrently, as we reduce prepared, garrisoned overseas bases in the out-years, the Air Force will increasingly operate from expeditionary air bases. The Air Force, having transformed over the past 15 years to an AEF construct and culture, continues to innovate and evolve with new expeditionary concepts. AEF contingency response groups (CRGs) are organized, trained, and equipped to provide an initial "open the base" capability to combatant commanders. The theater CRG provides a rapid response team to assess operating location suitability and defines combat support capabilities needed to AEF operating locations. In addition, basic expeditionary airfield resources (BEAR) will provide the scalable capability necessary to open and operate any austere airbase across the spectrum of AEF contingency or humanitarian operations. BEAR will provide vital equipment, facilities, and supplies necessary to beddown, support, and operate AEF assets at expeditionary airbases with limited infrastructure and support facilities.

Battlefield Airmen

Airmen are increasingly engaged beyond the airbase and "outside the wire," bringing ingenuity and technology to joint warfighting on the ground by using advanced systems to designate targets, control aircraft, rescue personnel, and gather vital meteorological data. The Air Force is optimizing this family of specialties, known as battlefield airmen. So far, we have identified program management, acquisition and sustainment synergies across the combat rescue, combat control, terminal attack control, and special operations weather functional areas. Air Force personnel are an integral part of the battlespace, and we are continuously identifying and updating common training requirements for these airmen.

We are organizing battlefield airmen for maximum effectiveness in the modern battlespace. In addition, we will train battlefield airmen in the skills required to maximize airpower and standardize that training across those battlefield airmen. Finally, we must equip our battlefield airmen with improved, standardized equipment for missions in the forward and deep battlespace. This will expand the commander's ability to employ battlefield airpower professionals able to integrate unequaled accuracy, responsiveness, flexibility, and persistence into air operations supporting joint ground forces.

From forward positions, joint terminal attack controllers (JTACs), a subset of Battlefield airmen, direct the action of combat aircraft engaged in CAS and other offensive air operations. Recently JTACs have become recognized across the Department of Defense (DOD) as fully qualified and authorized to perform terminal attack control in accordance with a joint standard.

In addition to night vision equipment, JTACs carry a hardened laptop computer and multi-channel radio. We've significantly reduced the weight these battlefield airmen must carry while simultaneously providing them with greater ability to perform critical tasks such as designate targets ranging up to several kilometers away. We are striving to further decrease the weight of their gear while increasing the capabilities and interoperability of their equipment with other air, space and ground assets. This combination of technology facilitates the direct transfer of information to combat aircraft, minimizing errors in data transfer. This equipment will increase situational awareness, assist in combat identification, maximize first-attack success, shorten the kill-chain, and provide better support to ground forces.

Innovative Uses of Technology

Innovation—our Air Force heritage and strength—is critical to success in defeating enemies on the battlefield as well as in defending our homeland. Each day, airmen across the world produce military effects for the joint team through ingenuity or with advancements in technology.

To meet U.S. Central Command's (CENTCOM) urgent operational needs, the Air Force is accelerating the modification of our Sniper and LITENING advanced targeting pods (ATPs) with video datalink transmitters to share information more rapidly. The high resolution images from our targeting pod TV and infrared video is generations better than the low altitude navigation and targeting infrared for night (LANTIRN) pods used during previous conflicts, and they provide tactical information in greater volume and relevance than ever before.

The Air Force is quickly adapting new tactics, techniques, and procedures for integrating the ROVER III and ATPs into nontraditional intelligence surveillance and reconnaissance (NTISR) missions. These include convoy escort, raid support, and infrastructure protection missions in addition to traditional CAS missions. Equipped

with air-ground weapons, our ATP-equipped aircraft have the flexibility to provide responsive firepower and unprecedented tactical reconnaissance, making our fighters and bombers more effective and versatile than ever.

Furthermore, some ROVER IIIs were diverted to support disaster relief and humanitarian assistance in the aftermath of Hurricanes Katrina and Rita. Instead of flying ATPs on fighter or bomber aircraft, we located video transmitters on rooftops or attached them to helicopters to provide overhead video streams to the recovery teams equipped with ROVER III.

Predator UAV systems continue to demonstrate the Air Force penchant for innovative application of technology for fighting the global war on terror. Current operations allow airmen in Nevada to pilot and control Predators operating in the Iraq and Afghanistan theaters of operations. Increasing experience in these novel approaches to flight and mission control operations have led to revolutionary advances in the execution of military capability.

Equipped with an electro-optical, infrared, and laser designator sensor, and armed with Hellfire missiles, Predator has not only shortened the sensor-to-shooter timeline—it has allowed the sensor to become the shooter. Since 1995 Predator has amassed over 120,000 total flying hours. From January through September of 2005, Predators logged more than 30,000 flight hours, over 80 percent of which were in direct support of combat operations. In August 2005, the Predator program flew four aircraft controlled by a single pilot and ground control station, successfully demonstrating the multiple aircraft control concept. Complementing the Predator's capabilities, the Global Hawk is a high altitude, long endurance, remotely piloted aircraft (RPA). Through the innovative use of synthetic aperture radar as well as electro-optical and infrared sensors, Global Hawk provides the joint warfighter persistent observation of targets through night, day, and adverse weather. Global Hawk collects against spot targets and surveys large geographic areas with pinpoint accuracy, providing combatant commanders with the most current information about enemy location, resources, and personnel. The Global Hawk program is delivering production systems to the warfighter now and is in constant demand by combatant commanders.

Since its first flight in 1998, Global Hawk has flown over 8,000 hours—including over 4,900 combat hours and over 230 combat missions with prototype systems deployed in support of global war on terror. In OIF and OEF the prototype systems have produced over 57,000 images.

The long-established ISR stalwart, the RC–135 Rivet Joint continues to demonstrate its adaptability to a changing and evolving threat environment with the application of progressive technologies and upgrade programs.

The RC–135 Rivet Joint continues to field improvements in tactical signals intelligence (SIGINT) capabilities and platform performance, including re-engining and avionics modernization, to support the full spectrum of combat operations and national information needs. Additionally, Rivet Joint has become the cornerstone for airborne, net-centric development. Rivet Joint plays a key role in the network-centric collaborative targeting advanced concept technology demonstration and serves as the platform of choice for implementation of new reachback technologies to enhance national and tactical integration. Adding yet another chapter to Rivet Joint's continuous record of support to CENTCOM since 1990, the platform flew over 550 airborne reconnaissance missions in support of OEF and OIF.

Aeromedical Evacuations

As early as 1918, the military has used aircraft to move the wounded. The Air Force continued this proud tradition with the aeromedical evacuation of over 11,000 wounded personnel from Afghanistan and Iraq. The aeromedical evacuation system has transformed to ensure the Air Force can conduct rapid and precise operations in an expeditionary environment. The placement of aeromedical crews in forward locations continues the chain of survival that starts on the battlefield with self-aid and buddy care. The chain continues through expeditionary medical support hospitals, to aeromedical in-flight care and finally to stateside medical centers within as little as 72 hours. Expeditionary aeromedical operations reduce the necessity and large footprint of theater medical assets and conserve valuable health care resources.

The force mix of aeromedical evacuation crewmembers consists of 12 percent Regular Air Force and 88 percent Air Reserve component. This use of the total force was best demonstrated in the fall of 2005 during the swift aeromedical evacuation of over 3,800 sick and elderly people threatened by Hurricanes Katrina and Rita.

As modern medicine evolves, the aeromedical system continues to adapt to meet future challenges. The Air Force continues to lean forward by looking at future threats such as biological warfare. We are leading the way in the development of

a litter transportable patient isolation unit for the movement of contaminated patients. The aeromedical evacuation system demonstrates the Air Force's commitment to providing the best capabilities to the joint team and our coalition partners.

Adaptive Airmen: Airmen Filling Nontraditional Roles

Presently, airmen are meeting the challenges of filling CENTCOM shortfalls in several critical roles which are nontraditional for airmen, including convoy support, detainee operations, protective service details, law and order detachments, military transition teams, and provincial reconstitution teams.

Detainee operations and convoy support are our most heavily supported missions. Airmen attend training at Fort Lewis, WA or Fort Dix, NJ where they learn the fundamentals of detainee security, handling, and interaction. At the conclusion of this training, airmen move forward to a detainee facility in theater and receive additional on site training. Airmen provide convoy support in the form of heavy weapons teams supporting long haul convoy operations. These airmen attend heavy weapons training followed by a convoy-training course. From that training platform, airmen deploy forward to support theater operations.

Air Force intelligence personnel are also fulfilling non-standard, unconventional roles as members of the joint team. Air Force intelligence analysts attend the Enhanced Analyst and Interrogation Training Course at Fort Huachuca, AZ, where they learn to provide analytical support for interrogations. At the conclusion of this training, intelligence personnel deploy forward as part of the interrogator teams to joint interrogation detention centers in Southwest Asia.

Law-and-order detachments provide vital joint support missions throughout the area-of-operations. In this capacity, Air Force security forces personnel provide garrison law enforcement and security. Never routine, these missions occasionally support operations outside the confines of an installation.

Military transition teams are comprised of specially trained personnel who work within the organizations of indigenous forces. They are responsible for training these forces to support and sustain themselves without the assistance of advisors. Provincial reconstruction teams are organizations that move into a different region within the area-of-operations and provide additional support, training, and sustainment.

With the exception of the law-and-order detachments, none of these missions fall within the traditional skill mix of Air Force security forces. Additional training varies from 1 to 5 months, and deployments are normally longer than the standard 120-day deployment. We are understandably proud of the outstanding adaptability and professionalism with which our airmen have filled the shortfalls in required skillsets on the joint roster and accomplished these nontraditional yet critical missions on behalf of the joint team.

Other Operations

In addition to our major contingencies and defense of the homeland, the Air Force remains engaged in numerous other operations around the world ranging from humanitarian relief and disaster response to maintaining our strategic nuclear forces and space assets. The presence of forward deployed forces is just the leading edge of a greater effort representing the totality of Air Force daily support to the combatant commanders.

Humanitarian and Disaster Relief Operations

In December 2004, nearly 60 years after the great Berlin Airlift of 1948–1949, the Air Force, while fully engaged in operations in Afghanistan and Iraq, once again answered the call for help in the wake of the tsunami that devastated Indonesia and South Asia—one of the worst natural disasters in history. Our airmen responded immediately, and in the course of the first 47 days following the disaster led an allied effort that airlifted over 24 million pounds of relief supplies and over 8,000 people. The entire world witnessed the absolute best of America at work—agility, strength, resolve, and compassion—just as it had witnessed nearly 60 years before.

At home, the Air Force leveraged the agility, scalability, and responsiveness inherent in our AEF structure and culture to speed support to civil authorities for Hurricanes Katrina and Rita. Hurricane Katrina devastated an entire region of the southern U.S. While destruction of infrastructure stifled ground transportation, airmen continued to reach flooded areas and bring relief. The Air Force flew over 5,000 sorties, airlifting more than 30,000 passengers and 16,000 tons of cargo and accomplishing 5,500 search and rescue saves. Additionally, Air Force operations were a Total Force effort, incorporating Guard and Reserve capabilities into airlift and rescue operations as well as into the establishment of state-of-the-art medical facilities that treated over 17,000 patients.

Air Force support during Hurricane Katrina and Rita recovery operations illustrated how persistent C4ISR can integrate with other agencies and proved critical to supporting U.S. Northern Command (NORTHCOM) and the Department of Homeland Security during civil support operations. Our airborne reconnaissance platforms, ranging from C–130s to U–2s, combined with military satellite communications (MILSATCOM) capabilities like the Global Broadcast Service (GBS), provided detailed imagery critical for decision makers and aided in directing relief efforts to the worst hit areas.

Additionally, our civilian auxiliary, the Civil Air Patrol (CAP) provided capability to NORTHCOM, Federal agencies, and State and local governments during all phases of the hurricane rescue and relief efforts. The CAP provided nearly 2,000 hours of air and ground search and rescue, airborne reconnaissance, and air transport of key personnel. The CAP leveraged the skills and vigilance of 60,000 non-paid volunteers in over 1,700 units to bolster the Nation's defense during these national crises.

Future natural disasters and relief operations will likely be similar to those faced by the U.S. over the past year. Major populations requiring immense support are often isolated from the infrastructure that is their lifeline. Airpower provides the capability to overcome terrestrial obstacles and deliver aid directly to those in need. Always seeking new ways to innovate and improve, the Air Force will continue its ongoing transition to a force with unprecedented capability for civil support and homeland defense.

Maintaining Our Nuclear Deterrent

The DOD's new strategy of employing a capability-based approach vs. threat-based approach to planning led to the ongoing transformation of the existing triad of U.S. strategic nuclear forces, consisting of intercontinental and sea-launched ballistic missiles and bomber aircraft armed with cruise missiles and gravity weapons, into a new triad composed of a diverse portfolio of systems. Elements of the new triad will include nuclear and non-nuclear strike capabilities; active and passive defenses; and robust research and development programs; and industrial infrastructure for developing, building, and maintaining offensive and defensive weapon systems. Maintaining our traditional nuclear strategic forces is a key capability in an effective new triad.

National security presidential directives outline the future force structure and requirements for U.S. nuclear forces. To meet National Military Strategy, Nuclear Posture Review and the Moscow Treaty requirements, near-term capability and sustainment improvements must be made to the legacy forces while development and procurement of follow-on systems proceed. These efforts will enable Air Force nuclear forces to continue to provide critical capabilities to policymakers. The nuclear forces will dissuade current and potential adversaries from pursuing policies or military initiatives that are unfavorable to our interests or those of our allies.

Our intercontinental ballistic missiles (ICBMs) and cruise missiles are poised to decisively defeat an adversary if deterrence fails. The cruise missile inventory, both air launched cruise missile and advanced cruise missile, is being upgraded through a service life extension program (SLEP) to maintain a viable and flexible bomber-delivered weapon. Additionally, the Department of Energy is conducting a SLEP on the cruise missile warhead.

The Air Force is committed to the new triad and the associated nuclear C2 systems. To provide survivable strategic communications, the Air Force fielded and currently operates the Milstar SATCOM system. We are preparing to field the next generation advanced extremely high frequency (EHF) SATCOM system to replace it, as well as a single terminal to provide reliable, redundant, and secure radio and satellite communication links with Minuteman ICBM forces. The Air Force recognizes the importance of the Nation's nuclear C2 resources and will continue to pursue the new triad strategy for our strategic systems to ensure they are always ready to respond to the direction of our national leaders.

Space Support for Operations

The U.S. depends upon the Air Force to supply critical space capabilities to meet the needs of joint operations worldwide, and also the needs of national missions across the instruments of diplomatic, informational, military, and economic power. The National Security Strategy commits us to assuring allies, dissuading military competition, deterring threats, and decisively defeating adversaries. The robust space capabilities our airmen provide and maintain will continue to ensure our Nation's goals are met.

As the DOD Executive Agent for Space, and the Under Secretary of the Air Force released a coordinated national protection framework in 2005. This framework will

aid senior decision makers by stating how space systems will be expected to operate during and following an intentional attack. The framework supports senior leaders in creating a total force solution across the national security space community. Air Force satellite communications will ensure our Nation's leaders can communicate globally through times of crisis while providing warfighters instant access to information. As evidenced by the hurricanes in the Gulf of Mexico, space environmental monitoring has become essential in saving lives and property as well as ensuring ground, sea, and air forces prepare effectively for weather impacts.

In support of worldwide military operations, the Air Force launched eight DOD and national satellite systems in 2005 from Air Force-managed and maintained launch ranges at Cape Canaveral Air Force Station, Florida and Vandenberg Air Force Base, California. That number is expected to increase to 13 in 2006 as the evolved expendable launch vehicle (EELV) program takes over as the foundation for U.S. assured access to space.

We have seen the first challenges to U.S. advantages gained from space assets. During OIF, the Iraqis employed GPS jammers in an attempt to reduce the precision of U.S. and allied strikes. We defeated this threat through a variety of methods including space system design, munitions design, and tactics development to operate in a GPS-hostile environment. As technology develops and becomes available to more countries, organizations, and individuals, new types of threats to space capabilities will emerge. Preparation now using non-materiel and materiel solutions to address the variety of potential realistic threats will lead to continued success in the battlespace.

Comprehensive space situation awareness (SSA) and defensive and offensive counterspace capabilities are the foundational elements of our space superiority efforts. Enhanced, ground-based, and new space-based SSA assets will provide the necessary information to gain and maintain space superiority. With respect to defensive counterspace, we maintain a diversified ground-based C2 network, and we are developing increased protection for our satellites and space-based services to ensure that the vital capabilities they provide are available when needed. We also recently fielded the counter-communications system to deny these same services to our adversaries. A well-balanced, multi-tiered architecture enables execution of a robust, effective space superiority strategy.

Even as the first challenges to our space superiority have arisen, the Air Force is already working toward responses to the next set of potential challenges. First, the U.S. would like to deter potential adversaries from attacking or exploiting our space capabilities. To accomplish this objective, worldwide space operations must be monitored, assessed, and understood. SSA involves those capabilities that allow the interagency and joint communities to find, fix, track, characterize and assess space operations on orbit and inside the various combatant commanders' areas of responsibility. SSA capabilities will allow the Air Force or other members of the Joint community to target, if necessary, our adversaries' space capabilities. As part of the C2 process, we will evaluate options ranging from diplomatic to economic to military actions to determine the best flexible option to achieve the desired outcome. By understanding how friendly and hostile actors are leveraging these space capabilities in their operations, senior decisionmakers can deter potential adversaries while preventing unnecessary escalation and allowing for a range of response options to meet national objectives.

The Air Force will protect space capabilities vital to the success of the Joint Force and the defense and prosperity of our great Nation. Some defensive measures will be integrated into new satellite designs. Other space systems, such as the Rapid Attack Identification Detection and Reporting System (RAIDRS) will be specifically designed to conduct defensive operations. We are also leaning forward on the development of new tactics, techniques, and procedures to mitigate potential threats to Air Force space systems. Furthermore, experimentation has aided us immensely by facilitating risk reduction and providing interim defensive capabilities today—RAIDRS is an excellent example. The Air Force developed a prototype RAIDRS and demonstrated the capabilities of the system during Joint Expeditionary Force Experiment 2004 (JEFX 04). The inclusion of this prototype laid the groundwork for both tactics development and for design improvements for future development programs. As a result of JEFX 04, CENTCOM requested this prototype to support real-time joint operations in theater. The results and lessons of this operational employment will certainly shape future capabilities by improving our understanding and providing further opportunities for innovation.

Priorities

Developing and Caring for Our Airmen

Force Shaping

For the past 18 months, the Air Force has reduced our Active-Duty end strength to congressionally authorized levels taking action to relieve some of our most stressed career fields. The 2004–2005 force shaping program allowed officers and enlisted personnel to separate from Active-Duty service earlier than they would otherwise have been eligible. In addition to voluntary force shaping measures, the Air Force significantly reduced enlisted accessions in 2005 to help meet our congressional mandate.

While the Air Force met our 2005 end strength requirement, we began 2006 with a force imbalance: a shortage of enlisted personnel and an excess of officer personnel, principally among those officers commissioned from 2000 to 2004. This imbalance created several unacceptable operational and budgetary impacts. Consequently, the Air Force took several actions to ensure our force is correctly sized and shaped to meet future challenges and to reduce unprogrammed military pay costs. First, we increased our enlisted accession target for 2006 to address the enlisted imbalance. Second, we continued to encourage qualified officers, especially those commissioned in 2000 and later, to consider voluntary options to accept service in the Air National Guard, Air Force Reserve, civil service, or as an interservice transfer to the Army.

Additionally, we are institutionalizing the force shaping authority granted in the National Defense Authorization Act for Fiscal Year 2005 to restructure our junior officer force. Only after exhausting all efforts to reduce officer end strength by voluntary means, the Air Force will convene a force shaping board in 2006 to consider the performance and potential of all eligible officers commissioned in 2002 and 2003. This board will be held annually thereafter, as required, to properly shape and manage the officer corps to meet the emerging needs of the Air Force. Essentially, the force shaping board will select officers for continued service in our Air Force. Current projections indicate that we need about 7,800 of these eligible officers (2002 and 2003 year groups) to continue on Active-Duty. Approximately 1,900 officers will be subject to the force reduction. Exercising this authority is difficult, but our guiding principle is simple—we must manage our force to ensure the Air Force is properly sized, shaped, and organized to meet the global challenges of today and tomorrow.

Balancing the Total Force

In addition to maintaining and shaping the Active-Duty Force, we must continue to focus on the balance of forces and specialties between Regular, Air National Guard, and Reserve components—the total force. We are diligently examining the capabilities we need to provide to the warfighter and to operate and train at home. We continue to realign manpower to our most stressed areas and are watchful for any new areas that show signs of strain.

As we look to the future in implementing Base Realignment and Closure (BRAC) and Quadrennial Defense Review (QDR) decisions, we must ensure a seamless transition to new structures and missions while preserving the unique capabilities resident in our Regular Air Force, Air National Guard, and Reserve communities. Examining functions for competitive sourcing opportunities or conversion to civilian performance will continue to be one of our many tools for striking the correct balance of missions across the total force.

Force Development

The Air Force's force development construct is a total force initiative that develops officers, enlisted, and civilians from the Regular Air Force, the Air National Guard, and the Air Force Reserve. The fundamental purpose of force development is to produce leaders at all levels with the right capabilities to meet the Air Force's operational needs by leveraging deliberate training, education, and experience opportunities.

The Air Force Personnel Center created a division dedicated to supporting corporate and career field development team needs. Development teams have now been incorporated into the officer assignment process and they now guide assignment of all officer career fields. Additionally, development teams recommend officers for special selection boards and developmental education opportunities.

The Air Force is also deliberately developing our enlisted airmen through a combined series of educational and training opportunities. We are exploring new and

exciting avenues to expand our process beyond the current system in place today. Each tier of the enlisted force will see changes to enlisted development. Airmen (E–1 to E–4) will be introduced to the enlisted development plan, increasing their knowledge and solidifying future tactical leadership roles. The noncommissioned officer (NCO) tier will be encouraged and identified to explore career-broadening experiences and continuing with developmental education. Our senior NCO tier will see the most dramatic changes as we explore the use of development teams in conjunction with assignment teams to give career vectoring and strategic level assignments. Institutionalizing the practice of development as a part of enlisted Air Force culture is paramount for supervisors, commanders and senior leaders.

On the civilian side, the Air Force is making significant progress in civilian force development as we align policy, processes and systems to deliberately develop and manage our civilian workforce. We have identified and mapped over 97 percent of all Air Force civilian positions to career fields and have 15 career field management teams in place with three additional management teams forming this year. Additionally, we manage various civilian developmental opportunities and programs, with our career-broadening program providing several centrally funded positions, specifically tailored to provide career-broadening opportunities and professionally enriching experiences.

Recruiting/Retention

After intentionally reducing total accessions in 2005, the Air Force is working to get the right mix of officer and enlisted airmen as we move to a leaner, more lethal, and more agile force. We will align the respective ranks to get the right person in the right job at the right time to meet the Air Force mission requirements in support of the global war on terror, the Joint Force, and the Air Force's expeditionary posture.

A key element for success is our ability to continue to offer bonuses and incentives where we have traditionally experienced shortfalls. Congressional support for these programs, along with increases in pay and benefits and quality-of-life initiatives, has greatly helped us retain the skilled airmen we need to defend our Nation.

Personnel Services Delivery

To achieve the Secretary of Defense's objective to shift resources "from bureaucracy to battlefield," we are overhauling Air Force personnel services. Our personnel services delivery initiative dramatically modernizes the processes, organizations and technologies through which the Air Force supports our airmen and their commanders.

Our goal is to deliver higher-quality personnel services with greater access, speed, accuracy, reliability, and efficiency. The Air Force has been able to program the resulting manpower savings to other compelling needs over the next 6 years. This initiative enhances our ability to acquire, train, educate, deliver, employ, and empower airmen with the needed skills, knowledge, and experience to accomplish Air Force missions.

National Security Personnel System (NSPS)

Our civilian workforce will undergo a significant transformation with implementation of the DOD NSPS. NSPS is a simplified and more flexible civilian personnel management system that will improve the way we hire, assign, compensate, and reward our civilian employees. This modern and agile management system will be responsive to the national security environment, preserve employee protections and benefits, and maintain the core values of the civil service.

NSPS design and development has been a broadbased, participative process to include employees, supervisors and managers, unions, employee advocacy groups, and various public interest groups. We plan to implement these human resource and performance management provisions in three phases called "spirals." The first spiral will include approximately 89,000 general schedule and acquisition demonstration project civilian employees in the Air Force. NSPS is the most comprehensive new Federal personnel management system in more than 50 years, and it's a key component in the DOD's achievement of a performance-based, results-oriented total force.

Caring for Airmen

Combat capability begins and ends with healthy, motivated, trained, and equipped airmen. We must remain committed to providing our entire Air Force team with world class programs, facilities, and morale-enhancing activities. Our "Fit to Fight" program ensures airmen remain ready to execute our expeditionary mission at a moment's notice, and our food service operations further complement an Air Force healthy lifestyle.

Through various investment strategies in both dormitories and military family housing, we are providing superior living spaces for our single airmen and quality, affordable homes for our airmen who support families. Our focus on providing quality childcare facilities and programs, on and off installations, enables our people to stay focused on the mission, confident that their children are receiving affordable, quality care. The Air Force is a family, and our clubs and recreation programs foster and strengthen those community bonds, promoting high morale and an esprit de corps vital to all our endeavors.

Additionally, we are equally committed to ensuring that all airmen in every mission area operate with infrastructure that is modern, safe, and efficient, no matter what the mission entails—from depot recapitalization to the bed down of new weapon systems. Moreover, we must ensure airmen worldwide have the world class training, tools, and developmental opportunities that best posture them to perform with excellence. We also continually strive to provide opportunities and support services that further enable them to serve their Nation in a way that leaves them personally fulfilled, contributes to family health, and provides America with a more stable, retained, and capable fighting force.

Housing and Military Construction (MILCON)

One of the highlights in our emphasis on developing airmen is our focus on housing investment. Through MILCON and housing privatization, we are providing quality homes faster than ever before. Over the next 2 years, the Air Force will renovate or replace more than 49,000 homes through privatization. At the same time, we will renovate or replace an additional 10,000 homes through military construction.

Investment in dormitories continues to accelerate in order to provide superior housing to our unaccompanied members—evidenced by nearly 8,600 dormitory rooms programmed for funding over the next 6 years. Approximately 75 percent of these initiatives will rectify currently inadequate dormitory conditions for permanent party members. Our new "Dorms–4-airmen" standard is a concept designed to increase camaraderie, social interaction, and accountability by providing four single occupancy bedroom/bathrooms with a common kitchen and living area in each module. Finally, the remaining dormitory program initiates modernization of inadequate "pipeline" dormitories—those dormitories that house young enlisted students during their initial technical training.

The Air Force has taken risk in facility and MILCON funding in order to support modernization and transformation. However, we continue to fund our most critical requirements to include new mission projects, depot transformation, dormitories, fitness centers, and child care centers. The Air Force is committed to improving its infrastructure investment by meeting the DOD's recapitalization goal through the Future Years Defense Plan (FYDP).

Common Airman Culture

An airman culture manifests the totality of our commonly transmitted behaviors, patterns and beliefs. Our Air Force clearly recognizes the relationship between mission capabilities and our Air Force Core Values. Integrity, Excellence and Service, remain critical guideposts to every airman's personal and professional flight path. Principles of dignity, self-worth, respect, and diversity are firmly embedded elements of these values. Together, our core values are reflected in every airman's pride, dedication to mission, subordination of their own needs for those of their wingman, and devotion to duty and this great Nation. In this past year, we have made significant strides in our efforts to promote, reinforce, and inculcate our core values across the Air Force and throughout the total force team—including our regular, Guard, Reserve, civilian, and contractor teammates. We expect and accept no less from everyone on the Air Force team.

Certain behaviors are absolutely incongruous with the common airman culture and our core values. Among these is sexual assault. The Air Force has created the Sexual Assault Prevention and Response Program to ensure that every airman is provided the respect and dignity they deserve as their Nation's air and space warfighters. We have trained and fielded sexual assault response coordinators and victim advocates to ensure every airman has access to immediate assistance, should it be required. We are rewriting our education and training curricula at every level to ensure airmen understand how these crimes occur, how they are often unwittingly facilitated by bystanders and third-party witnesses and how we can better take care of our people by preventing sexual assault crimes from occurring to them, their wingmen, friends, and family members.

Reflecting our belief that diversity adds strength to our organization, the Air Force has accepted the challenge to "create a diverse and an inclusive total force

which reflects and leverages the talents of the American people to maximize the Air Force's combat capabilities." We created the Office of Air Force Strategic Diversity Integration in the summer of 2005 to lead the Air Force's diversity efforts. This office provides leadership guidance and strategic support for the understanding, furtherance, and advantage of diversity within the ranks of the Air Force.

Inherent in our common airman culture is a belief in professional and personal dignity and a deep respect for individual religious beliefs. The protection of every airman's freedom of religion, while also defending the constitutional prohibition on official establishment of religion, is an area of significant emphasis. As airmen, we take an oath to support and defend the Constitution. In that endeavor, we are striving to assist Air Force personnel, in the course of their official duties, to meet and balance their multiple constitutional obligations and personal freedoms, regarding the free exercise of religion, avoidance of Government establishment of religion, and defense of the Nation. This is an area of national debate. Balancing these foundational American principles demands common sense, good judgment, and respect for each airman's right to hold to their own individual personal beliefs.

We also recognize our airmen must have the ability to interact with coalition partners and local communities at home and abroad, and the Air Force is transforming how it engages friends and partners in the expeditionary environment. Operations in this dynamic setting necessitate extensive international insight to work effectively with existing and emerging coalition partners in a wide variety of activities. Through the Air Force International Affairs Specialist program, we are developing leaders who are regional experts with foreign language proficiency. Our focus is on building a cadre of officers with the skills needed to foster effective relationships with global partners in support of the combatant commanders and U.S. global interests.

Over the next year, the Air Force will continue to vigorously reinforce our common airmen culture, our belief in professional and personal dignity and most importantly our enduring core values of Integrity First, Service Before Self and Excellence in All We Do.

Training at Keesler Air Force Base Following Hurricane Katrina

In August 2005, Hurricane Katrina struck the Gulf Coast of the United States. Keesler Air Force Base (AFB), Mississippi lay in its direct path. The Air Force is attempting to rapidly reestablish Keesler's critical training missions. Of 56 enlisted initial skills training "pipelines," 90 percent have already resumed operation. Additional pipelines have been temporarily reestablished at other locations. Significant challenges remain ahead, but training and developing our expeditionary airmen remains one of our highest priorities. We take exceptional pride in the work our airmen have done, and continue to do, in restoring Keesler AFB's training capability.

Maintenance, Modernization, and Recapitalization

Our airmen are the best in the world. However, they can only be as effective as the tools we give them. Within today's fiscal constraints, we must fight the global war on terror and protect the homeland while transforming the force and maintaining an appropriate level of risk. The Air Force is committed to the modernization and recapitalization necessary to maintain the health of the force and bridge our current capabilities to systems and capabilities required in the future.

Aircraft

Our primary fighter modernization and recapitalization program is the F–22A Raptor. The F–22A is a fifth generation fighter aircraft that delivers joint air dominance to counter persistent and emerging national security challenges. Given its vast improvements in every aspect—air-to-air, air-to-ground, all-aspect stealth, and an open, adaptable architecture—the F–22A is an insurance policy against future threats to Joint Air Dominance and represents the absolute best value for the American taxpayer. The F–22A is the only fighter currently produced that will defeat conceivable threats to joint air dominance in anti-access environments over the next 20–30 years.

The F–22A is flying today and is in full rate production. Its performance continues to meet or exceed key performance parameters and spiral modernization will enhance its air-to-air and air-to-ground target engagement capability.

The F–35 Joint Strike Fighter (JSF), also a fifth generation fighter, will complement the tremendous capabilities of the F–22A. The JSF will recapitalize combat capabilities currently provided by the F–16 and A–10. Optimized for all-weather performance, JSF will specifically provide affordable precision engagement and global attack capabilities. In 2005, the JSF program continued to address design challenges to develop three aircraft variants and coordinate the requirements of the Air Force, Navy, and Marines, along with our international partners.

The C–17 continues to be a success story for the joint warfighter, deploying troops and cargo to Iraq and Afghanistan, as well as numerous locations around the world. The Air Force is on schedule for delivery of the next 40 aircraft through 2008—for a total of 180. During the past year, C–17s flew over 63,000 sorties, bringing the total number of OEF and OIF missions to over 109,000. Additionally, the C–17 flew over 100 humanitarian and disaster relief missions following Hurricanes Katrina and Rita, as well as the October 2005 earthquake in Pakistan. The C–17, in concert with C–5 modernization programs, is critical to meeting our U.S. inter-theater airlift requirements.

To meet continuing intratheater airlift demands, we have a two-pronged approach to modernize our C–130s. First, but most problematic, we are striving to replace our oldest aircraft with new C–130Js. Second, the remaining C–130s are being standardized and modernized via the C–130 avionics modernization program and center-wing box replacement programs. C–130s have been the workhorse for intra-theater airlift during numerous contingencies. C–130Js have supported global war on terror and humanitarian operations since December 2004 and have proven to be a force enhancer as they deliver more cargo in a shorter time than older C–130s. C–130 modernization, coupled with the wing-box modification, reduces operation and sustainment costs and improves combat capability.

The Air Force is developing the next generation combat search and rescue (CSAR) recovery vehicle, called CSAR–X. We are planning to replace the current and aging CSAR inventory of "low-density, high-demand" (LD/HD) HH–60G Pave Hawk helicopters with 141 CSAR–X aircraft. The CSAR–X will address deficiencies of the current HH–60G by providing increased capabilities in speed, range, survivability, cabin size, and high altitude hover operations. The CSAR–X will provide personnel recovery forces with a medium-lift, vertical take-off and landing aircraft that is quickly deployable and capable of main base and austere location operations for worldwide recovery missions. The CSAR–X will be capable of operating day or night, during adverse weather conditions, and in all environments including nuclear, biological, and chemical conditions. Onboard defensive capabilities will permit the CSAR–X to operate in an increased threat environment, and in-flight refueling capability will provide an airborne alert capability and extend its combat mission range.

UAVs

UAVs are demonstrating their combat value in the global war on terror. The Air Force rapidly delivered operational UAV capabilities to the joint warfighter and is continuing to mature and enhance those capabilities.

Predator is transforming the way we fight, providing a persistent ISR, target acquisition, and strike capability against critical time sensitive targets (TSTs) in direct response to warfighters' needs. Today, by controlling combat operations remotely from the U.S., Predator provides a truly revolutionary leap in how we provide persistent military capability to the warfighter.

The Air Force will continue to enhance Predator's ability to support the joint warfighter. We are developing the ability to operate multiple aircraft by a single pilot, which will increase our overall combat effectiveness. We demonstrated this capability in August 2005. We are also developing and deploying the Predator B, a larger, more capable, more lethal variant. In its role as a "hunter-killer," Predator B will be capable of automatically finding, fixing, tracking, and rapidly prosecuting critical emerging TSTs.

Global Hawk is a high-altitude, long endurance RPA providing robust surveillance and reconnaissance capabilities. Despite being a developmental prototype system, Global Hawk has flown over 4900 combat hours. This year the Air Force moved beyond the proven capability of the Global Hawk prototypes by deploying two production aircraft to support global war on terror operations.

Airborne ISR

E–8C Joint Surveillance Target Attack Radar System (J–STARS) continues to be a high-demand asset. J–STARS aircraft provide wide theater surveillance of ground moving targets. Crews from the 116th Air Control Wing at Robins AFB, Georgia, the first-ever "blended wing" of Regular Air Force, Air National Guard and Army, operate these aircraft. Modernizing these aircraft while maintaining the current high OPTEMPO in combat theaters will be ongoing challenges. The recent installation of the Force XXI Battle Command Brigade and Below module, the reduced vertical separation minima module, and the Airborne Battlefield Command and Control Center are some of the latest capability upgrades. The most urgent modernization needs for J–STARS include re-engining, radar upgrades, installation of the traffic alert collision avoidance system and integration of a self-protection suite.

The E–10A program will highlight the advanced capabilities of the Multi-Platform Radar Technology Insertion Program (MP–RTIP) sensor by demonstrating advanced cruise missile defense, interleaved ground tracking, and ground imaging capabilities in 2010 and 2011. A smaller variant of the MP–RTIP sensor, developed within the E–10A program, will be integrated into the Global Hawk in 2008 to begin developmental and operational testing. These demonstrations will advance critical sensor technology and provide vital warfighting capabilities.

Space and Nuclear Forces

Air Force modernization and recapitalization efforts also continue for space systems. The Air Force is modernizing critical capabilities across the spectrum of global strike, navigation, weather, communication, missile warning, launch, surveillance, counterspace, and ground-based space systems.

The Minuteman intercontinental ballistic missile (ICBM) was originally designed in the late 1950s and deployed operationally in October 1962. Modernization programs have been crucial to this system originally designed to last just 10 years. Service life extension programs are underway to ensure the Minuteman III remains mission capable through 2020. These programs, nine in all, will replace obsolete, failing, and environmentally unsound materials while maintaining missile reliability, survivability, security, and sustainability. These efforts are critical in sustaining the ICBM force until a follow-on system can be fielded.

The Air Force is also addressing the need for a follow-on ICBM system. This system will address future warfighter needs, reduce ownership costs, and continue to provide policymakers the critical capabilities provided by the ICBM. The effort to modernize the ICBM force is vital to the U.S. for the foreseeable future.

Continued, unhindered access to space is vital to U.S. interests. As the Air Force continues programs to upgrade and modernize America's launch ranges, the EELV program will continue to provide the U.S. with assured access to space for both DOD and national space assets. The EELV program includes two launch vehicle designs—Delta-IV and Atlas-V—with each design comprising a family of scalable, tailorable launch vehicle variants.

The TSAT program will employ Internet Protocol networks, onboard routing, and high-bandwidth laser communications relays in space to dramatically increase warfighter communications connectivity. TSAT capability enables the realization and success of all DOD and Joint visions of future network-centric operations, such as the Army's Communications-on-the-Move (COTM) and Future Combat System (FCS) concepts and the Navy's Sea Power 21 vision and Fleet FORCEnet/FORCEview concepts.

GPS modernization and development of the next-generation GPS–III will enhance navigation capability and improve resistance to jamming.

In partnership with the National Aeronautics and Space Administration and the Department of Commerce, the National Polar-orbiting Operational Environmental Satellite System (NPOESS) will accurately calculate surface winds over the oceans and gather meteorological data for our forces deployed overseas.

The Space Based Infrared System (SBIRS) will provide a transformational leap in capability over our aging Defense Support Program satellites. Complementing the space-based system are ground-based missile warning radars, being upgraded to support the missile defense mission.

Another future transformational space-based ISR program is the Space Radar (SR) system. SR's day-night and all-weather capabilities will include Synthetic Aperture Radar (SAR) imagery, high-resolution terrain information (HRTI), surface moving target indication (SMTI), geospatial intelligence (GEOINT) and open ocean surveillance (OOS), and rapid revisit. It will support a broad range of missions for the joint warfighter, the Intelligence Community, and domestic users. SR will be integrated with other surface, air, and space ISR capabilities to improve overall collection persistence and architecture effectiveness.

Modernization of our ground-based space systems will provide new capabilities to keep pace with the satellites they support and will continue to provide assured C2 for our satellites and space-based capabilities. This effort includes the modernization of ground-based radars, some of which are over 25 years old. Through programs like the Family of Advanced Beyond Line of Sight Terminals (FAB–T) and the Ground Multi-band Terminal, the Air Force is modernizing its ground-based space capabilities with satellite communications terminals that consolidate logistics support, provide increased satellite throughput and laser communications, and ensure seamless C2. Additionally, enhanced ground-based and new space-based SSA assets will provide the necessary information to gain and maintain space superiority.

As part of the broader space control mission, the ground-based, theater-deployable Counter Communications System (CCS) has achieved initial operational capability

(IOC) and provides the combatant commander with a non-destructive, reversible capability to deny space-based communication services to our adversaries. Incremental upgrades to the CCS will continue to enhance our offensive counterspace capabilities. Overall counterspace enhancements also include ongoing RAIDRS development, which is a defensive counterspace system designed to assist in the protection of our space assets. RAIDRS will provide a capability to detect and geolocate satellite communications interference via fixed and deployable ground systems. Future developments will automate data access analysis and data fusion and provide decision support tools.

Operational Infrastructure and Support Modernization

Finally, the Air force is pursuing to modernize its operational infrastructure and the tools we use to manage operational support to our airmen and joint warfighters. The Air Force's ongoing Operational Support Modernization (OSM) program will improve operational support processes; consolidate personnel and financial service centers; and eliminate inefficiencies in the delivery of services, support, and information to our airmen and the combatant commanders. Realizing these economies, OSM will improve Air Force-wide enterprise efficiency and provide a resources shift from business and combat support systems, thereby returning resources to Air Force operations, equipment modernization, and long-term investments.

Air Force efforts also continue in the development of an effective, holistic asset management strategy for the restoration and modernization of operational infrastructure—facilities, utilities, and natural resource assets—throughout their useful life cycles. Operational infrastructure is critical to the development and testing of new weapon systems, the training and development of our airmen, and the conduct of joint military exercises.

Acquisition Reform

The Air Force will meet the challenges of the 21st century, including asymmetric threats, through continued exploitation of our technological leadership and with our ability to respond quickly to the demands of a rapidly changing world. Effective leadership in research and development, procurement, and sustainment of current and future weapons systems depends upon the integrated actions of professionals in the acquisition, as well as the requirements generation, resource, and oversight processes. Everything we do in Air Force acquisition drives toward the goal of getting an operationally safe, suitable, and effective product of best value to the warfighter in the least amount of time.

Program cost and schedule growth have drawn widespread criticism and undermined confidence in the defense acquisition process. A recent Government Accountability Office (GAO) study of 26 DOD weapon systems reports average unit costs have grown by 50 percent and schedules have stretched an average of 20 percent, to nearly 15 years, despite numerous attempts at reform.

In an effort to address these concerns, the Air Force formed the Acquisition Transformation Action Council in December 2004. This group is comprised of general officer and senior executive service representatives from the Air Force product centers, labs, air logistics centers, and headquarters. The group continues to lead the transformation of Air Force acquisition from its present state into that of an agile acquisition enterprise. The goals of agile acquisition include shortened acquisition process time and improved credibility with both internal and external stakeholders. Achieving these goals will be critical to making the delivery of war-winning capabilities faster, more efficient, and more responsive.

The Acquisition Transformation Action Council's short-term focus is on incremental improvements and eliminating non-value-added processes in areas such as conducting acquisition strategy panels, meeting immediate warfighter needs, and effectively incentivizing contractors. A more comprehensive strategic plan for acquisition transformation, due later this year, will detail not only where the near-term changes fit into the big picture of acquisition reform, but also the longer-term actions needed to achieve the goals of agile acquisition.

The Air Force is also pursuing initiatives aimed at improving the Air Force's cost analysis capability. Among these initiatives are efforts to strengthen the Air Force cost analyst career field, improve the quality, quantity, and utilization of program cost and technical data and estimating methods, and establish new policy requiring robust independent cost estimates for programs—earlier and more often. These improvements will promote realistic program cost and technical baselines as well as strengthen the Air Force's capacity to produce accurate, unbiased cost information for Air Force, DOD, and congressional decisionmakers.

The Air Force is on a bold, ambitious, yet necessary journey to provide our commanders and decisionsmakers with accurate, reliable real-time business and finan-

cial management information that is validated by a "clean audit" opinion. Basic building blocks for this effort include a revitalized emphasis on transparency in our business processes and an enterprise-wide financial management capability that is modern, comprehensive, and responsive to the warfighter. Sound financial management and improved accountability are at the core of our financial management transformation.

Initiatives in Air Force contracting include development and implementation of the Enterprise Architecture for Procurement, consolidation of Major Command (MAJCOM) Federal Acquisition Regulation Supplements, standardization of the strategic sourcing process, and assessment of current contracting organizational alignments.

The Air Force will continue to promote small business participation in our acquisitions. Partnering with small businesses—including historically underutilized business zones; women-owned small businesses; service disabled veteran-owned small businesses; small disadvantaged businesses; and historically black colleges, universities, and minority institutions—helps ensure we maintain a strong defense industrial base and have the widest range of products and services available to support the joint warfighter.

The Air Force is also working with the Office of the Secretary of Defense (OSD) to understand the demand on our acquisition personnel and to appropriately size our workforce. Our objective is to have the right mix of military and civil service acquisition professionals with the appropriate education, experience, and training.

Focus Areas

Total Force Integration

The Chairman of the Joint Chiefs of Staff, General Pace, stated, "We must transform if we are to meet future challenges." One of the Air Force's more significant commitments to long-term transformation is the creation of the Total Force Integration Directorate. This new directorate is responsible for future force structure, emerging-mission beddown, and development of total force organizational constructs. Working with our partners in the Air National Guard and Air Force Reserve, the Air Force is maximizing our overall joint combat capability. Our efforts will enable the Air Force to meet the challenges of a shrinking budget, an aging aircraft inventory, and new and emerging missions.

The Air Force plans to shift investment from "traditional" combat forces, with single-mission capabilities, to multi-role forces by aggressively divesting itself of older systems. The result will be a force structure with expanded capability to combat conventional threats while continuing to wage the global war on terror. Simply stated, the Air Force will become a smaller, yet more capable force through modernization and recapitalization of selected weapon systems with a commitment to networked and integrated joint systems.

Our total force initiatives will maximize efficiencies and enhance combat capability through innovative organizational constructs. We have developed an organizational construct based on the success of an associate model in use by the Regular Air Force and Air Force Reserve since 1968. Associate units are comprised of two or more components operationally integrated, but whose chains of command remain separate. This model capitalizes on inherent strengths of the Air Force's three components, ensuring partnership in virtually every facet of Air Force operations, while preserving each component's unique heraldry and history. Increased integration allows Regular Air Force personnel to capitalize on experience levels inherent in the Guard and Reserve, while building vital relationships necessary to sustain successful combat operations.

Air National Guard and Air Force Reserve members will continue to support the Air Force's global commitments and conduct vital homeland defense and security missions. Total force initiatives will integrate Air Force components into missions critical to future warfighting: ISR, UAV operations, and space operations. These missions are ideally suited for the Guard and Reserve since many provide direct support to the joint warfighter from U.S. locations. Using this approach will improve our operational effectiveness, reduce our overseas footprint, reduce reliance on involuntary mobilization, and provide more stability for our airmen and their civilian employers.

Ongoing total force transformation benefits from a robust, dynamic, cross-functional coordination process, involving the headquarters, all regular component MAJCOMs, the National Guard Bureau and Air Force Reserve Command.

The Air Force continues to make significant progress on total force initiatives such as the Richmond-Langley F–22A integration in Virginia; community basing in Vermont; F–16 Integration at Hill AFB, Utah; new Predator missions in Texas, Arizona, New York, North Dakota, California, and at the Air Force Warfare Center in

Nevada; and C–17 associate units in Alaska and Hawaii. We are also working additional initiatives such as C–130 Active Associate units in Colorado and Wyoming; a C–5 Flight Training Unit in Texas; C–40 Integration in Illinois; and Centralized Intermediate Repair Facilities in Illinois, Connecticut, Louisiana, Utah, South Carolina, Georgia, North Carolina, and Florida.

The Air Force, through its Total Force Integration Directorate, is continuing a broad effort to ensure that new total force concepts are embedded in our doctrine, policy directives, instructions, and training. We are creating procedures to ensure resource and other decisions related to total force initiatives become routine parts of the planning and programming processes. The goal is clear, albeit ambitious: take greater advantage of total force elements and capabilities in the way the Air Force does business.

The Air Force is transforming from a Cold War force posture to a structure that supports expeditionary warfare and leverages total force capabilities. More efficient use of our Regular Air Force, Air National Guard and Air Force Reserve assets increases our flexibility and capacity to be a more agile and lethal combat force and a more vigilant homeland defender.

Science and Technology

The Air Force develops and exploits new technologies to meet a wide range of conventional and asymmetric threats. To achieve required future capabilities, we continue to support science and technology (S&T) investments for the major tasks the Air Force must accomplish to support the combatant commanders.

Air Force S&T is focused on high payoff technologies that could provide current and future warfighting capabilities to address not only conventional threats, but also those threats encountered in the global war on terror. The Air Force has embraced a new technology vision to guide our S&T program—"anticipate, find, fix, track, target, engage, assess . . . anytime, anywhere." We are integrating this vision into our annual planning activities to ensure we develop and transition relevant technology to the joint warfighter.

Air Force technological advantages and superior warfighting capabilities are the direct result of decades of Air Force investment in S&T. Similarly, today's investment in S&T will produce future warfighting capabilities as we adapt to continually changing threats. The Air Force continues to seek ways to create a significantly greater advantage over these threats. Investment in technologies such as nanotechnology could provide stronger and lighter air vehicle structures, while investment in hypersonic research could provide on-demand access to space and reduced time-to-target for conventional weapons. New information assurance technologies should allow real-time automatic detection and reaction to network attacks, enabling us to automatically isolate the attack and collect forensic evidence, all while continuing uninterrupted network operations. Research in sensor and information technologies should provide increased battlefield situational awareness, which will provide unprecedented insight and understanding of events in the battlespace. These are but a few examples of developing technologies that could lead to operational systems that are smaller, lighter, smarter, faster, stronger, and more effective, affordable, and maintainable than they are today.

The Air Force directed energy (DE) master plan is on track and some DE applications are already being fielded, especially for defensive purposes. For example, the Large Aircraft Infrared Counter Measures has now been used extensively and successfully in OIF and OEF on C–17s. Also, the airborne laser program continues to move DE technology forward. The capabilities possible through DE hold the potential to profoundly transform how we fly, fight, and defend ourselves.

Impressive as our technological advances have been, maintaining an advantage relies, in part, on our commitment to future S&T investments. These investments also clearly highlight that air and space power is an asymmetric advantage for the joint warfighter and the Nation.

Air Force Smart Operations for the 21st Century (AFSO–21)

To meet the challenges of the road ahead, we have embarked on an Air Force-wide journey embracing continuous process improvement, lean thinking and six sigma quality. This major initiative is called AFSO–21. Achieving excellence in all that we do requires us to institutionalize the precepts of AFSO–21 throughout all of our operations, across the Total Force, and in our daily lives as airmen. The Air Force is stepping up to the challenge and making the commitment necessary to achieve true process excellence. AFSO–21 focuses on the identification and elimination of activities, actions, and policies that do not contribute to the efficient and effective operation of the Air Force. We will seek out and discontinue any activity not ultimately contributing to creating military utility and mission capability. Con-

tinuous identification and systematic elimination of so-called "non-value added" activities are the keys to improving service, reducing costs, and enriching the lives of our airmen.

We are seeking three outcomes from this approach. First, we want airmen who are fully aware of the importance of their work and how it contributes to the mission; airmen must look to improve what they do every day. We want airmen to see their role in a fundamentally different way: by focusing on increasing value and eliminating waste. Second, we want to make the most of our existing budgets and free resources for future modernization by systematically identifying and eliminating the waste in our day-to-day processes. Finally, we want to enhance our ability to accomplish our mission and provide greater agility in response to rapidly changing demands.

Institutionalizing this new way of thinking and operating will allow the Air Force to meet the enormous challenges of the next decade and ultimately to sustain and modernize the world's best air and space force.

Fuel Conservation and Efficiency

The Air Force is the largest renewable energy power purchaser in the U.S. and is set to continue making large buys that will not only greatly reduce reliance on petroleum-based fuels but, over time, will reduce utility costs.

The Air Force is pursuing an aggressive energy conservation strategy and is committed to meeting and surpassing the energy goals mandated by the Energy Policy Act of 2005 and other overarching policies and mandates. We have been successful at reducing our energy consumption in accordance with past legislation and will continue to use a variety of programs aimed at reducing our use of petroleum-based fuels.

Our overall ground fuel conservation efforts in accordance with mandates and guidance have yielded some notable reductions. Specifically, Air Force motor vehicle gas and diesel consumption has fallen significantly alongside a corresponding increase in Air Force use of alternative fuels. Air Force progress in these areas will be driven largely by commercial research and funding since we do not substantially drive alternative fuels technology and infrastructure changes. The Air Force is partnering with the Army to develop and use a hybrid electric-diesel engine for the High Mobility Multi-purpose Wheeled Vehicle (HMMWV) with a planned delivery starting in 2008. Other alternative fuel-technology is still in the development stage.

Michigan's Selfridge Air National Guard Base (ANGB) will become the demonstration center for the latest fuel-efficient and environmentally compliant technologies for use in Air Force support equipment to include basic expeditionary airfield resources (BEAR) and ground vehicle inventories. Tests at Selfridge ANGB, Michigan will look at fuel cell powered vehicles and hydrogen fuel infrastructure requirements and will ultimately provide models for future Air Force/DOD procurement.

Our use of energy from renewable sources and construction and infrastructure improvement programs are designed to create cost effective energy efficiencies in new and existing facilities. In addition, our aggressive pursuit of on-base renewable power generation is rapidly increasing. We have bases where power is being produced from wind, solar, geothermal, and biomass resources, and we have projects planned, in design, or under construction to greatly expand this capability. Some of our bases are already using 100 percent renewable power from purchases and onsite production. With our combined purchase/production strategy, the Air Force is poised to surpass the renewable goals set by the Energy Policy Act.

We realize our reliance on petroleum-based fuels must be curtailed and it will take a concerted and coordinated effort to meet the energy reduction needs of the Air Force. We use the tools available to improve infrastructure while we continue to strive to instill an energy conservation mindset in our airmen.

C^4ISR

Future transformational C^4ISR capabilities will provide all-weather, persistent surveillance to the joint warfighter and the Intelligence Community, and they will be tightly integrated with space, air, and land assets to deliver even more precise and responsive situational awareness in support of national security objectives.

The Air Force's biggest challenge with its world-class C^4ISR systems remains the proper integration of these systems. The goal of our technology improvements is to integrate intelligence and operations capabilities. An integrated enterprise solution will enhance joint, multi-agency, and multi-national C^4ISR collection and dissemination capabilities and will eliminate information seams among air, ground, and space based assets. It will also expand information superiority and accelerate decision-making. This integration allows us to achieve decision dominance, leading to knowl-

edge-enabled operations and supporting the development and execution of sovereign options using air, space, and cyberspace capabilities.

Knowledge-based operations are critical to closing the seams between joint forces. We anticipate a future in which each force element, no matter how small, is constantly collecting data and "publishing" it to a joint warfighter network. Information will flow from every corner and element of the joint force, from ISR collectors to the warfighters. A key aspect of future C4ISR capabilities will involve replacing time-consuming human interfaces with machine-to-machine digital integration to ensure commanders have ready access to the information they need to execute their missions.

The concepts of intelligence fusion and streamlined sensor-to-shooter processes imply a high level of system interoperability at many levels. Information technology increases the ability to send ISR information to any point on the globe in near-real time. The Air Force is adapting doctrine, tactics, techniques, and procedures to manage this ever-changing growth in C4ISR capabilities.

To maximize our C4ISR capabilities, the Air Force is eliminating organizational restrictions that inhibit the flow of information between these systems. Advances in information technology are removing historical limitations inherent in legacy systems, such as line-of-sight data links, incompatible C2 systems and manual collection-management processes. Our goal is to increasingly "share" rather than "own" information.

Overcoming past shortfalls through improvements in the timeliness, accuracy, and completeness of battlespace knowledge will also bring tactical-level information to command functions that previously had access to only the operational or strategic levels of war. The AOC is the focal point for operational C2 of air and space assets delivering combat effects to the warfighter. To make this capability more effective, we made it a weapon system—the Air Force provides manpower and training as it does for every other weapons system—standardized, certified and lethal. We injected the technology necessary to increase machine-to-machine connectivity. Through both technical and procedural improvements, we have increased the system's capacity for information fusion and accelerated the decision-to-shooter loop. All five of our full-function AOC weapon systems (Falconers) should be fully operational in 2006.

In support of DOD and the joint community's broader efforts to adopt and transition to network centric warfare, the Air Force is aggressively integrating existing C4ISR platforms across a distributed processing environment. The Network Centric Collaborative Targeting Program (NCCTP) will initially integrate capabilities that include airborne C2, ground surveillance, signals intelligence, and operational C2 at the AOC. The Air Force will expand NCCTP into a broader airborne networking capability that will support the full and expanding range of future joint air and space operations.

The Air Force is actively pursuing the extension of global information grid (GIG) networked capabilities out to the extreme edge of tactical air operations. Programs like Family of Advanced Beyond-Line-of-Sight Terminals (FAB–T), the Joint Tactical Radio System (JTRS), tactical targeting network technology (TTNT), the Battlefield Airborne Communications Node (BACN), and, eventually, the TSAT constellation will provide rich connectivity and interoperability for joint air operations as well as tactical users and warfighters.

The Air Force is working closely with the other Services and agencies to define new doctrine and organizational structures to optimize joint warfighting operations. Consequently, we are developing the necessary technical capabilities, refined processes, and trained personnel to achieve desired effects.

Warfighting Headquarters (WFHQs)

The Air Force is transforming our C2 structure by establishing new WFHQs. These will be positioned globally, replacing our old Cold War structures and providing the Joint Force Commander (JFC) with the most effective means to lead air and space forces in support of national security objectives. These forces will be organized and resourced to plan and deliver air and space power in support of combatant commanders, enabling a seamless transition from peacetime to wartime operations. WFHQs will maximize usage of C4ISR technology and reachback to minimize required manpower. The WFHQs are also designed to act as the combined/joint force air component commander headquarters, or joint task force headquarters.

Joint Warfighting Space (JWS)

The JWS concept is an outgrowth of Air Force efforts to develop operationally responsive space (ORS) capabilities. JWS and ORS will enable rapid deployment and employment of communication, ISR, and other vital space capabilities and services.

JWS will emphasize agility, decisiveness, and integration to provide dedicated, responsive space and near-space capabilities and effects to the JFC.

In 2005, the Air Force successfully conducted the first JWS demonstration. By capitalizing on an existing commercial communications capability using free-floating platforms, the Air Force was able to extend line-of-sight communications for ground forces from 5–7 miles to over 300 miles. This demonstration was the initial step in exploiting existing off-the-shelf technologies in a long loiter environment.

In 2006, the Air Force will team with our sister Services to conduct the first in a series of small (1,000 pounds or less) satellite experiments. These demonstrations are designed to enhance and incorporate space capabilities in joint training and exercises, increase space integration, and allow the joint force to take advantage of the many synergies multi-service space professionals provide. Lessons learned from these activities have the potential to further evolve and improve space doctrine and help the joint community in developing innovative space-derived effects.

JWS and ORS demonstrations will continue to explore ways of achieving new, more effective ways of providing space capabilities to the joint warfighter. As technologies mature, JWS will bring the joint force more persistent, responsive, and dedicated capabilities.

Long-Range Strike

To further refine its rapid strike capabilities, the Air Force is transitioning its long-range strike strategy to focus on effects instead of platforms. We view long-range strike as the capability to achieve desired effects rapidly and persistently on any target set in any operational environment.

Our forces must be simultaneously responsive to multiple combatant commanders and be able to strike any point on the planet. Today, we provide deep strike capabilities through a variety of platforms and weapons. Future capabilities must continue to enhance the effectiveness of the system. Responsive capabilities will combine speed, stealth, and payload to strike hardened, deeply buried, or mobile targets, deep in enemy territory, in adverse weather and with survivable persistence.

Improving CAS

Detailed integration of each air mission with the fire and movement of supported joint forces is the trademark of CAS. In the past, aircrews and ground forces shared information through lengthy voice descriptions. When providing CAS or time-critical-targeting, this dialogue often took several minutes and occasionally resulted in missed opportunities. To increase integration and lethality, the Air Force has developed new equipment and training to increase situational awareness in CAS operations. We also continue to sustain and modernize the A–10, the only Air Force aircraft dedicated to the CAS mission.

With video downlinks, battlefield airmen can share time-sensitive information instantaneously and complete target coordination in mere seconds. Most JTACs are already equipped with ROVER III receivers to display video feeds from most UAVs and ATPs.

In 2006, the Air Force will begin operational fielding of the precision engagement modification that integrates ATPs and data links and enhances employment of GPS-aided munitions. This modification will greatly enhance the pilot's situational awareness and improve both the responsiveness and accuracy of A–10 targeting. This will increase the A–10's lethality while reducing the probability of fratricide incidents. The Air Force will also improve the sustainability of its A–10s by continuing a SLEP that doubles the flight hour life of the A–10, helping to ensure the A–10 can remain in service for as long as the warfighter requires.

In 2006, the A–10 Propulsion Upgrade Program will enter the system design and demonstration phase. This program will upgrade the A–10's current TF34–100A engines to provide approximately 30 percent more thrust. This will help overcome some limitations that the A–10 faces when operating from expeditionary airfields at high field elevations and temperatures. It will also improve the A–10 performance at medium altitudes and increase its weapon load, thus improving survivability and more fully leveraging the capabilities of the precision engagement modification and ATPs.

Special Operations Forces (SOF)

Air Force Special Operations Command offers combatant commanders specialized airpower and ground forces to conduct and support special operations and personnel recovery missions. These forces offer a unique combination of capabilities and personnel that the U.S. can call upon for the global war on terror, homeland defense, and disaster response missions.

To meet operational requirements, we will add 4 AC–130U gunships to the force structure in 2006, followed by 10 MC–130H Combat Talon IIs by 2010. The first

CV–22 Osprey combat unit anticipates IOC in 2009. The Osprey will add a long-range, self-deployable, vertical lift mobility aircraft to sustain SOF in remote environments.

We will support expanding our SOF combat aviation advisory forces so they can assess, train, advise, assist, and integrate more nations' Air Forces into the global war on terror and other combined operations and contingencies. We have begun the CSAR–X program in an effort to provide a fast, long-range, all-weather aircraft to achieve IOC in 2010 and replace the HH–60 CSAR aircraft.

The Air Force is also developing the persistent surface attack system of systems as the follow-on to the current AC–130 gunship. This gunship follow-on will provide responsive, survivable, persistent, and precise fire support in the low-threat to selected high-threat engagements in the 2015 timeframe.

BRAC

BRAC 2005 will transform the Air Force for the next 20 years to meet new challenges as a total force. The BRAC results improve Air Force warfighting effectiveness, realign Cold War era infrastructure to meet future defense strategy, maximize operational capability by eliminating excess physical infrastructure, and capitalize on opportunities for joint teaming with our sister Services. We will continue the excellent record established in prior BRAC rounds by closing bases as quickly as possible so savings are realized and properties expeditiously turned over for viable reuse, in concert with community plans for development and economic revitalization.

SUMMARY—HERITAGE TO HORIZON

We have received a proud heritage forged through the ingenuity, courage, and strength of the airmen who preceded us. Our duty today is to deliver their Air Force to the limitless horizon ahead of us. The mission of the Air Force remains to fly, fight, and win whether we are delivering lethal effects against insurgents in Iraq, protecting the skies of the U.S. against terrorist attacks, providing a global positioning system that is essential to our modern military and the global economy, or providing relief to victims of natural disasters both at home and abroad.

The Air Force of today and of the future will strengthen the entire joint and coalition team. Dominance of air, space, and cyberspace paves the way to overall success. In keeping with the current emphasis on innovation and transformation, our future Air Force will be a more capable yet smaller force. As such, the future Air Force will increase the capability and flexibility of the joint force and, subsequently, will increase the depth and breadth of options available to the President and the Secretary of Defense. These military options will be crucial to the defense of the Nation as the U.S. continues to wage the global war on terror while transforming and strengthening the joint force for any future contingency.

The Air Force offers an unparalleled set of combat capabilities to directly influence any joint, coalition, or interagency operation, as well as the enabling capabilities to improve joint warfighting in conjunction with our partners on the ground, on or under the sea, and through space and cyberspace. Recognizing that no Service, or even the DOD, can achieve success by itself, the Air Force has focused on increasing the integration and effectiveness of the joint force and interagency team.

To achieve new levels of integration and effectiveness, the Air Force will take advantage of our Nation's long-held command of the global commons—air, space, sea, and cyberspace. The Air Force will extend its current air and space power advantage. As part of the joint force, the Air Force is positioned to leverage its persistent C^4ISR, global mobility, and rapid strike capabilities to help win the global war on terror, strengthen joint warfighting capabilities, and transform the joint force—while maintaining good stewardship of public resources.

The Air Force faces the broadest set of mission requirements across the entire spectrum of warfare. We will bolster our Nation's ability to respond swiftly, flexibly, and decisively to asymmetric, irregular, and emerging threats. We have embarked on AFSO–21 as a means to best allocate our resources to meet this increasing set of challenges.

To accomplish this requires continued, focused investment in our people, science and technology, and the maintenance, sustainment, modernization, and recapitalization, and, where it makes sense, retirement of our aging aircraft and weapon systems.

We are America's airmen. Our heritage is innovation. Our culture is expeditionary. Our attitude is joint. Our mission is clear. As threats change and America's interests evolve, we will continue to adapt, evolve and remain the world's premier air and space force. Together with our fellow Services, we stand resolute, committed to defending the United States, and defeating our enemies.

Chairman WARNER. Thank you, Mr. Secretary. A very fine statement.

General Moseley.

STATEMENT OF GEN. T. MICHAEL MOSELEY, USAF, CHIEF OF STAFF, UNITED STATES AIR FORCE

General MOSELEY. Mr. Chairman, Senator Levin, members of the committee, thank you so much for watching over this great joint team in this Air Force, which is so special to the defense of this country.

Mr. Chairman, thank you for including my remarks in the record. If you would humor me, I'd like to take my time and introduce four American heroes, four great airmen, to the committee.

Chairman WARNER. Yes, but you can do the introductions, as well as comment on your statement. We'll provide you that flexibility.

General MOSELEY. Sir, I'd rather just use my time to introduce these great Americans.

Chairman WARNER. We'll accept that. Go right ahead.

General MOSELEY. Yes, sir.

First—and as you would please stand up when I introduce you—first is Senior Airman Polly Ann Bobseine. She has three combat deployments under her belt. She's a fire-team member in a security forces group. She's participated in allied and coalition offensive ground combat operations in Iraq over those three combat tours. These include over 100 combat patrols, 45 offensive missions. She's been engaged in 30 ambushes, 5 direct-action missions against Iraqi insurgents. She's just earned U.S. Army jump wings, and has been given, by the Army, the combat patch for the big red one, the 1st Infantry Division. Sir, you can see why we're proud of these folks.

Chairman WARNER. Not only that, but it underscores the risks associated with today's modern warfare, that it's a 360-degree perimeter, and men and women are equally engaged in those actions and taking the risks. We thank you, airman, for your service to the country.

Senator INHOFE. Mr. Chairman, it also means that they're getting this training. A lot of people don't realize what the airmen are getting right now in the field. We're aware of this, of course, from Altus and other places. So, they are performing well. But they also have to be trained for that, and they are getting proper training.

General MOSELEY. You bet, sir.

Chairman WARNER. That also underscores—if I might interrupt, Chief—we, understandably, focus the attention on the Army and the Marines valiantly carrying out those ground operations, but there are literally thousands of your people integrated, in one way or another, in those ground ops, as well as the Navy, and it's truly a joint-force operation.

General MOSELEY. Sir, we have close to 5,000 airmen involved in this business today.

Chairman WARNER. In country?

General MOSELEY. Either in prep or in country, actually in combat, just like Senior Airman Bobseine.

Chairman WARNER. Thank you.

General MOSELEY. Sir, next is Tech Sergeant Bradley Reilly. He is one of those joint tactical air commands (JTACs) that you're talking about. He's had four combat deployments. He's just earned the Silver Star, which we're going to award to him down at Tampa when he's with his family, and he wears a Purple Heart. This particular action, he was part of a quick-reaction force moving to reinforce ambushed Afghan security forces. Upon arrival, his helicopter drew heavy fire. His detachment overran the enemy position, but then came under reinforcing fire from three positions, three sides. Tech Sergeant Reilly was wounded, as were other members of his team. While caring for his team members, he provided lifesaving medical skills for others, controlled close air support (CAS) and aircraft fire into the fight, and provided suppressive fire himself against the numerous hostiles for approximately 2 hours, while wounded. So, sir, here's that JTAC that you were talking about, in person.

Next, Lieutenant Colonel Ann Konmath. Mr. Chairman, she has spent a lifetime in the world of space in maintaining America's high frontier. She is now the squadron commander of the Weapons School Squadron at Nellis. She is the expert, teaching experts about space and space operations and the orchestration of space effects through strategic and operational and tactical levels. She not only commands the squadron, but she teaches the courses out there, and she teaches the courses not just to space professionals, but to fighter pilots, bomber pilots, combat rescue pilots, et cetera. She started life as a distinguished Reserve Officers Training Corps (ROTC) graduate. She is a graduate of the Air Force Weapons School. She has been an orbital analyst in Cheyenne Mountain. She's operated several space control systems, and she served as a space weapons officer at 8th Air Force Operations Center, and also in Pacific Command.

So, sir, here is one of those people that you almost never see, because they live in a world that's incredibly complicated and technical, and she is the expert of all experts teaching those new folks.

Last, we have Lieutenant Colonel Luther, or "Trey," Turner. He is the commander of our 17th Reconnaissance Squadron, which is our UAVs that are doing special missions. He was a naval officer in a previous life, Top Gun graduate, 1992, interservice transfer to the Air Force in 2003. He's a command pilot with 4,000 hours, F–18, F–14, A–4, 376 carrier landings, and proficient in all missions of the current and the future UAV world. He is the expert that's taken us there. He has deployed to Iraq, flown Predator missions in support of Operation Iraqi Freedom (OIF) and Operation Enduring Freedom (OEF), and he's had three combat deployments.

So, sir, thank you for the time to introduce four American heroes and four great airmen in lieu of an oral statement. Thank you for the opportunity to bring them here today, also. [Applause.]

Chairman WARNER. What a marvelous way to start a hearing. But if you would allow me, as I understand it, one of our senior staff members was your squadron commander, and I want to know how you let him go. Would you stand, please, and give the answer to that question?

Mr. O'CONNOR. He is a great credit to this Nation, and I'm so glad to see that he's continuing to serve this Nation.

Chairman WARNER. Why did you let him leave the Navy? [Laughter.]

Mr. O'CONNOR. That was his decision, sir. [Laughter.]

Chairman WARNER. Thank you very much.

We'll now proceed with a 6-minute round of questions.

Mr. Secretary, your Department is presenting the defense committees with a nontraditional funding strategy for the F–22A that would result in a multiyear procurement of the aircraft from fiscal years 2008 through 2010, at 20 aircraft per year, with no aircraft procurement in fiscal year 2007. However, to do this, the Air Force would require an economic order quantity (EOQ)—that's an EOQ authorization under a firm, fixed-price contract in fiscal year 2006, and a waiver to carry the cancellation ceiling as an unfunded contingent liability. This appears to be an incremental funding plan procuring 3 years of aircraft over 4, for the F–22. Please provide the committee with your understanding of how this would work and whether it's in compliance with current regulation and law.

Secretary WYNNE. The intent of this stretch-out, which it is a stretch-out, is to hedge the bet, if you will, because this is our only fifth-generation fighter that is in warm production today. I was able to work with the Office of the Secretary of Defense (OSD) to convince them that it was not in our Nation's interest to terminate this fifth-generation fighter before we got access to another fifth-generation fighter. The second fifth-generation fighter is the JSF, which comes alive in the 2011–2012 timeframe. To do this, they have stretched the F–22 program out, added four aircraft to it, and allowed us to do a 3-year multiyear at 20 a year to try to salvage some of the foregone cost savings that were requisite with the volume, I think, at 27 and 28 airplanes a year.

The zero that is currently there is a reflection of the desire on the part of the Department to buy subsystems in this period of time, and to comply with the law. It does make it a little bit more difficult to contract for those, but you basically write in the items that you're going to get on an economic order quantity, such that there is no impact to the production line in Fort Worth or Marietta.

These means and methods have been vetted, apparently, with senior acquisition officials in the Department and the legal—necessary legal—to bound it, and they required a waiver, as you properly indicated to make this happen.

We were, frankly, thrilled with the opportunity to extend this program, because I don't think that anyone here would rejoice in seeing the only fifth-generation fighter line taken away as an option should we get into a hot engagement. That having been said, we did not object to the funding that went down to allow us to do that.

Chairman WARNER. General Moseley, your perspective on this?

General MOSELEY. Sir, as we looked at the portfolio and the choices made in the QDR of long-range strike and global strike, and of balancing the funding sources that we had, we were very happy to be able to extend the line 2 more years and to have the authorities to begin to work with the committees on a multiyear to be able to get the cost down even further. Out of that, we were able to buy four more aircraft from the PBD–753 decision of two Decembers ago. So, we came out with four more airplanes, plus the line

extended 2 years at Marietta, plus an opportunity to work a multiyear to get the cost down even further.

So, sir, that's the endstate of this and the ability to work this. We're now working hard with the OSD staff and with Lockheed Martin on Lot 6 negotiations, which will be the lead item, then, for working with the committee and with OSD and Lockheed on the multiyear.

Secretary WYNNE. I have advised the OSD staff that it would probably be prudent, just because of the mechanics of, "How do I get a follow-on, should this hedge not be sufficient?"—and there may be a need for a follow-on 20 airplanes, that maybe we should price an unfunded fourth-year option so that I can find out when I need permission to go forward, because I am somewhat concerned that I may have boxed in our ability, if you will, to buy number 184, should that become an option for the Nation.

Chairman WARNER. Thank you.

I'd like to bring up the subject of this engine problem with the JSF. I recounted here, earlier, the correspondence that Senator Levin and I forwarded, and the indication by the Deputy Secretary, in a very courteous manner, that he'll adhere to our recommendations. I will soon be advising the committee of my intentions, in consultation with Senator Levin, to hold a special full committee hearing on this subject, because I think it's so important—important from two standpoints. One, this is the fighter aircraft, which holds the future for the free world to deter such aggression as might be involved in the missions that this plane is designed for. We have eight nations participating in the program, estimated at between 2,000 and 3,000 aircraft. Clearly, it seems to me that it's prudent that we continue to go forward with the decision of two engines—I must express to you forthrightly my own present inclination—because of any number of reasons. I respect, here this morning, that you're here to defend the President's budget and I shall not elicit from you your views as to where you think this program should go. It's obvious that you have that obligation.

But it is important, as we in the committee prepare for these hearings, to have a better understanding of the decision to drop the second engine—referred to as the General Electric (GE)/Rolls engine. Did it originate, Mr. Secretary as an option in your Department? If so, what consultation among your peer group—namely, the Chief of Staff and others—took place? What consultation did you take with the other nations and their corresponding Secretaries of Air or whatever the political situation is in those countries? Would you kindly put that on the record?

Secretary WYNNE. Yes, sir. Thank you.

[The information referred to follows:]

During fiscal year 2007 budget deliberations, the Department considered maturity of the F135 primary engine, the investment cost of developing a second engine, and findings of past engine assessments. The Department has reasonable confidence in the reliability of the F135 engine due to its initial test results. However, given the approximately $2.4 billion investment cost for developing a second engine, the Department's analysis concluded that a second source would not yield program cost savings. Therefore, the Department concluded that a single engine supplier provides the best balance of risk and cost.

The Services did not discuss the budget proposal to cancel the engine with our international partners since it was considered a Department of Defense internal

issue until official submission of the President's budget request. We have, however, had discussions with several partners following the submission that I am aware of.

Secretary WYNNE. This is a question of reliability, because you want to have two engines as this is going to be a relatively large program. I think it's going to be more than 3,000 airplanes but I appreciate that we are talking now about 3,000 airplanes.

The Navy had a bigger play in this, if you will, because they are buying a smaller fleet than the Air Force. So, we can amortize the cost of a second engine over it. Frankly, we would benefit from having a second engine because of our larger fleet size.

The impact on other nations is problematic, in that the British Rolls-Royce company is partnered with GE, I agree, and they formed a partnership, but they supply many of the same components to Pratt & Whitney. They're just not partnered with Pratt & Whitney and are treated on a little bit different scale.

So, the issue really is reliability of the core engine. During the early stages of the F–16 program, we did have problems with the F–101 and the F–100 engine. But those problems have long been resolved, and we have not had a history of unreliable engines. The 119 engine has been very good.

So, when it was brought forward, there were cost savings tabled up by a lot of folks, and the senior leadership of the Department gathered around relatively quickly and tried to sort through this thing by doing some analysis and trying to make sure that the savings that they would expect for this—two engines versus one engine would be——

Chairman WARNER. Do I infer that your Department, then, put that into the——

Secretary WYNNE. I would say that the Navy brought it forward, and we did not object.

Chairman WARNER. So, the Navy originated it, and Department of Air Force did not object, and, therefore, it was elevated to the Deputy Secretary/Secretary level for selection among the various options as to where to save some money?

Secretary WYNNE. That is correct.

Chairman WARNER. General Moseley?

General MOSELEY. Sir, I wouldn't have anything to add, other than that it is $1.8 billion.

Chairman WARNER. I am fully aware of that.

General MOSELEY. Yes, sir.

Chairman WARNER. From an operator's standpoint, clearly, throughout history, and, I'm sure, into the future, there will be problems associated with these highly complex engines, and particularly when this particular engine is designed to perform three different functions. I don't know that it's ever been done before in aviation history.

Now, if you had to have a standdown of aircraft while your technical people and other people had to ascertain what the problem is, that's a big fleet of aircraft worldwide to stand down. It seems to me there's some advantage in having the two engines so that presumably a substantial portion of the fleet could continue to operate rather than standing down. Isn't that an advantage?

General MOSELEY. Yes, sir, it is. We've had histories of fleet stand-downs in the Air Force and the Navy has, as well—with our

F–100 engines and also with our GE engines, on occasion, with bearings and with oil seals that have shut us down for a while until we could fix them. The Navy had historic problems with their TF–30 engines on their F–14s. So, the redundancy and the depth of the engine technology and the availability of an additional engine is an attractive option, operationally.

Chairman WARNER. Mr. Secretary, I would say to you, because you're an acknowledged expert on procurement, hasn't history taught us that competition can generate savings?

Secretary WYNNE. There's no doubt it has. I think that was one of General Abrahamson's principal arguments. He actually created the second engine for the F–16 program, after it had gone into production, primarily to drive competition. I think his realization was on the 20 to 30 percent range. At least that was his expectation, as I recall, when I left the program.

The realization is—I don't know, I just don't recall. What I think is here is that this is a program that—first of all, everything costs more these days. So, it takes longer to amortize any savings.

Chairman WARNER. I'm just talking about historically, throughout military procurement history, competition has generally brought about savings, correct?

Secretary WYNNE. Yes, sir, it has.

Chairman WARNER. General, on the technical side of the second engine, it's roughly 3 to 4 years following the initial engine, isn't that correct, in R&D?

General MOSELEY. Yes, sir. That's my understanding.

Chairman WARNER. I've been informed that that engine probably will have some advantages over the Pratt engine, simply because 3 or 4 more years of technology is being incorporated, perhaps additional thrust. Is that correct?

General MOSELEY. Perhaps so, sir. That's my understanding also.

Chairman WARNER. So there is the potential for the second engine—and I'm not critical of the Pratt engine—but it is possible that that engine could have certain attributes that would make it, say, better suited for the vertical-thrust missions. Is that correct?

General MOSELEY. Perhaps, sir.

Chairman WARNER. Talking like a lawyer, I think. We'll see.

To a different subject, this committee has focused tremendous attention, and will continue to do so, on the IEDs. Has the Air Force, General Moseley, increased the number of C–130s in Central Command (CENTCOM) area ops to transport supplies in Iraq in order to reduce the Army and Marine Corps dependence on convoys? What capabilities does the Air Force provide in CENTCOM's area of operation that support the defeating of these IEDs?

General MOSELEY. Sir, we've been involved, alongside the Army and the Marines and the Navy explosive ordinance disposal (EOD) efforts, from the very beginning, when we stood up the IED Task Force, about a year and a half or so ago. We now have a general officer who's a part of that. That's his full-time job. We have several bodies of effort, to include a battle lab that's looking at applications of anti-IED work from an air perspective, and we are sharing everything that we have, as well as the other Services, on electronic warfare applications, surveillance and reconnaissance applications, et cetera.

Sir, we have everything deployed forward that plays into this war for John Abizaid and for George Casey, to include the EC–130s, which we will like to have to shut the schoolhouse down here within the next few weeks, if not a month or so, because we have all of the assets forward. We have 31 of 31 combat-coded Predators forward. We have all of our EOD effort forward, alongside the Navy's EOD effort, plus Tactical Air Reconnaissance System (TARS) pods that Selfridge and Richmond bring to the fight in the Guard units—it is a wonderful pod—as well as our sniper and LITENING pods aboard our F–15s and F–16s.

Chairman WARNER. I thank you, General. I think that shows the full support.

General MOSELEY. Yes, sir. This is a frustrating effort, because I'm not sure any of us have an answer for this that's satisfying to John Abizaid and George Casey, but we're trying.

Chairman WARNER. We'll keep working.

Secretary Wynne, I omitted one question on the engine. To what extent was there consultation with our allies that are a part of this program with the JSF?

Secretary WYNNE. I don't know exactly the extent of the consultation, sir.

Chairman WARNER. That wasn't incumbent upon your Department? Aren't you the primary manager of it?

Secretary WYNNE. At this point, I would tell you that the acquisition, technology, and logistics (AT&L) group is the primary manager, but I am the designated service acquisition executive, yes, sir. I do know that the British were advised. Also, the Italians were advised.

Chairman WARNER. Is that after the fact, or were they advised, and, "Look, this is before us"?

Secretary WYNNE. I would say that it was during the final stages of the deliberation, if not after the fact.

Chairman WARNER. All right. Where could I go to check into the——

Secretary WYNNE. I would say probably the Defense Acquisition Executive, and ultimately the program office.

Chairman WARNER. I'd like to have you fully answer that question for the record.

Secretary WYNNE. I will do that for you, sir. Absolutely.

[The information referred to follows:]

SECRETARY OF THE AIR FORCE
WASHINGTON

MAR 1 3 2006

The Honorable John Warner
Chairman, Committee on Armed Services
United States Senate
Washington, DC 20510-6050

Dear Mr. Chairman:

Thank you for the opportunity to testify March 2 regarding the FY07 President's Budget submission. During the hearing you asked several questions with regard to the cancellation of the F136 alternate engine for the F-35 Joint Strike Fighter. In particular, you asked if the F-35 international partners were involved in the Department's decision to cancel the program.

During FY 2007 budget deliberations the Department considered maturity of the F135 primary engine, the investment cost of developing a second engine, and findings of past engine assessments. The Department has reasonable confidence in the reliability of the F135 engine due to its initial test results. However, given the approximately $2.4 billion investment cost for developing a second engine, the Department's analysis concluded that a second source would not yield program cost savings. Therefore, the Department concluded that a single engine supplier provides the best balance of risk and cost.

The Services did not discuss the budget proposal to cancel the engine with our international partners since it was considered a Department of Defense internal issue until official submission of the President's Budget request. We have, however, had discussions with several of the partners following the submission that I am aware of.

I appreciate your attention to the F-35 Joint Strike Fighter program and I am hopeful that you will support this request.

Sincerely,

Michael W. Wynne

cc:
The Honorable Carl Levin

Chairman WARNER. Thank you.

Senator Levin.

Senator LEVIN. Thank you, Mr. Chairman. Thank you, General Moseley, for introducing the four airmen sitting behind you. More importantly, thanks to each of them for standing up for us and for all the support that you provide this Nation and all the people you represent.

General Moseley, at a briefing last week the Air Force told our staff that Air Force readiness had dropped to historic lows. Can you describe what that situation is and what steps are being taken to remedy it?

General MOSELEY. Sir, we struggle with readiness across the board with a fleet of aging systems, with cost per flying hour going up, and maintenance issues going up. Our readiness is sustainable

now, given our deployments, but it's always a concern. I don't know that I would agree that it's at an all-time low. I would say that we're maintaining this deployment schedule, but we're maintaining it with an aging fleet, and it's costing us more at every increment to do that.

We have spent a lot of money, with the help of this committee, on readiness and on spares and on streamlining depots, to try to keep this equipment operating. So, sir, I don't know that I would say an all-time low, but I would say this is a challenge.

Chairman WARNER. Is it unacceptably low?

General MOSELEY. Sir, we're getting to a margin where it's going to be unacceptable in our low-density, high-demand deployable assets of airborne warning and control systems (AWACs) and our combat rescue helicopters, our U2s, and some of our aging systems, yes, sir.

Senator LEVIN. Secretary Wynne, your posture statement reflects that the Air Force began 2006 with a force imbalance consisting of a shortage of enlisted personnel and an excess of officers, primarily junior officers commissioned between 2000 and 2004. This imbalance creates some unacceptable operational and budgetary impacts. Apparently, you are going to remedy the imbalance by proposing to cut almost 20 percent of the 2002 and 2003 commissioning class, which is 1,900 of the 9,700 total officers that were commissioned in 2002 and 2003. Is that accurate? If so, by what process will those cuts be made?

Secretary WYNNE. Yes, sir, I believe that is an accurate reflection. We are very respectful, and value every member of our Service. We have advised those classes on their options. One of their options, of course, is to resign, the other option is to go from blue to green. There is an option to take a Civil Service position, and we are trying to be respectful of the fact that they joined the United States Air Force to bring value to our Air Force. We value and respect every one of our Active volunteers.

Senator LEVIN. What is the budgetary implication of that imbalance for fiscal year 2007 and for subsequent years?

Secretary WYNNE. Sir, I analyzed it as a total impact, across the board, and, frankly, took advantage of it, in the sense of the 40,000 cut that we had proposed, which ended up, I think, with about $22 to $23 billion in savings across the breadth of the FYDP. I will have to get, for the record, the 2007 impact.

[The information referred to follows:]

There is no impact due to an imbalance of forces. We ended fiscal year 2006 slightly under authorized end strength levels and plan to meet 2007 authorized levels through increased numbers of separations using the Voluntary Separation Incentives Program, Selective Early Retirement Board, and Force Shaping Board for officers and the Career Job Reservation, Date of Separation rollback and the Limited Active-Duty Service Commitment Waivers for enlisted personnel.

Senator LEVIN. Mr. Secretary, last year you told the committee what the out-year funding wedge for the Missile Defense Agency (MDA) that the military departments would be budgeting for missile defense, starting in fiscal year 2008 was. Is the Air Force currently planning to budget for missile defense activities of the MDA in fiscal year 2008?

Secretary WYNNE. Sir, right now I cannot respond to that specifically. I know that we are partnering with General Trey Obering, and trying to pick up our share of the load. But I'm going to have to take that one, also, for the record.

[The information referred to follows:]

DOD guidance directs fielding of elements of the ballistic missile defense system (BMDS) as soon as practicable. Additionally, the BMDS will be managed in three phases: development, transition, and procurement/operations. The Missile Defense Agency is responsible to develop missile defense capabilities and then transition those capabilities to the Services to procure and operate. The Air Force funds base operating support for the ground based interceptors at Vandenberg Air Force Base in California and missile defense operations at Schriever Air Force base in Colorado. Beginning in fiscal year 2008, the Air Force will assume responsibility for the missile defense capability of the Cobra Dane radar at Eareckson Air Station in Shemya, Alaska. As additional missile defense capabilities are developed and transitioned, we will program funds to support those capabilities such as the Airborne Laser and Space Tracking and Surveillance System that will eventually transition to the Air Force.

Senator LEVIN. All right, that would be appreciated.

Mr. Secretary, the Air Force is intending to use incremental funding within the proposed multiyear procurement program for the F–22 aircraft. In essence, the Air Force wants to spread the funding for 3 years' worth of production over 4 years. Congress has sometimes resorted to incremental funding in the shipbuilding account, but, to my knowledge, has not used incremental funding when we buy aircraft. Are we, indeed, using incremental funding to buy F–22 aircraft in 2007? If so, why should we make the exception to our usual, full-funding policy when we buy aircraft?

Secretary WYNNE. We were extremely pleased that we were convincing to the OSD that we should not terminate a fifth-generation fighter line before we get another fifth-generation fighter line. Part of the agreement in doing that was to extend the line to 183, and lower the rate of acquisition by 7 or 9 airplanes to make it 20–20–20 across the 3-year multiyear.

An additional element of that was to understand that in this 2007 budget we would list a zero, and we would list all of the subsystems which we would be purchasing, to make sure that we were not, if you will, subject to the incremental funding, in specifics.

On the other hand, we did ask for a waiver on contingent liability, termination liability, so that we could proceed on with this multiyear. It is a bit tortuous for me to see my way to number 184. I would like to make sure I continue to offer the Nation a hedge, but, on the other hand, we were very pleased with the total outcome, and accepted it.

Senator LEVIN. General, the decision was made, apparently, to significantly reduce the B–52 fleet. My question is this: was a cost-benefit or other analysis conducted that discussed various issues that may have played a part in that decision? For instance, number of flying hours, flying hours per airframe, cost and maintenance issues? If so, would you provide a copy of that analysis to the committee?

General MOSELEY. Absolutely, sir.

[The information referred to follows:]

The Air Force performed an operational and programmatic risk assessment of the impact of a reduced B–52 force structure informed by the Air Force 2005 Capability Review and Risk Assessment and of planned/programmed modernizations and im-

provements across the entire Global Strike portfolio. This assessment concluded the proposed B–52 force structure/Global Strike portfolio met any single Combatant Commander's Operational War Plan or Major Contingency Operation's requirements.

The money gained from the B–52 drawdown will be used to aggressively recapitalize and modernize the remaining bomber fleet. The modernized bomber fleet will be more lethal, responsive, and survivable as a result of planned investments in advanced weapons, increased accuracy, integrated data links, improved connectivity, improved threat awareness systems, low observability upgrades, and improved electronic countermeasures.

Additionally, the impact of this reduction is currently being assessed as part of the PDM-directed U.S. Strategic Command B–52 Bomber Force Structure study.

Senator LEVIN. Can you just briefly, since my time is up, tell us why that decision was made?

General MOSELEY. Sir, we have a long range strike portfolio that we're looking at in three phases. The first phase is to bring the existing bomber fleet up to as high of a mission capability rate as we can, the B–1, the B–2, and the B–52. We have, I believe, close to $3 billion in that, in data links, pods, sensors, and electronic warfare capabilities, to bring those airplanes up, like we did with the B–1, to bring the fleet size down to 60, with 7 additional ones, so we could spend the money on the existing combat-coded airplanes.

Phase two of that is to look at a new program, which we are in the process of doing. The QDR validated that with an initial operational capability (IOC) of a new platform, at 2018, which may be unmanned, or it may be manned, or it may be both. We're beginning to work our way through that.

Then, phase three is out in the distance, relative to technologies on exoatmospheric or hypersonic propulsion.

The first step is the phase one, to get the existing bomber fleet the right size where we can spend the amount of money we have, and keep the combat-coded airplanes viable.

Senator LEVIN. Thank you.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you.

Senator Inhofe.

Senator INHOFE. Thank you, Mr. Chairman.

This morning I talked to the Guard Association. I shared with them my thoughts that I shared with each one of you individually in my office. I just wanted to get it on the record and keep talking about this.

These hearings bother me. We sit around and try to say, what is our need going to be 10 years from now? We're never right. I served 8 years in the House, and 11 years in the Senate. In the House Armed Services Committee, in 1994, we had someone testify that in 10 years we would no longer need ground troops. [Laughter.]

We're sitting here right now, recognizing how wrong we were at that time, and I don't care how smart we say we are now, we're not going to guess this right. I think the only answer is, something I brought up 6 years ago during the first Rumsfeld confirmation hearing, and that is, if you looked back historically for the last century, the defense budget has equaled about 5.7 percent of the gross domestic product (GDP). It went down during the Clinton years, down to 2.9 percent. We're at about 3.8 percent right now. I think we're going to have to look at the overall picture, because if we sit

here right now and try to do something with our lift capacity, anticipating where our needs are going to be 10 years from now, or with the F–22 or the JSFs, or with the non-line-of-sight (NLOS) cannon, we're going to guess it wrong. So, what we need to be doing is getting everything so that, no matter what situation we're facing at that time, we're going to be there.

I'm going to be striving for this, Mr. Chairman.

On the C–17s, last year we went through this thing, and we talked about going up to 220. Then, we find out that even right now—and I talked to General Schwartz—he said that today we're flying the C–17 at 160 percent of our planned utilization rate. I think you all would agree that General Schwartz is correct. Yet, we come up with the QDR in—which coincidentally happens to be the same as the Mobility Capability Study—saying no, we just need 180. I know this is wrong.

Now, I'd like to have your thoughts about this. You know, do you think that they took into consideration the utilization rate when they came up with the recommendation that, "No, we think the 180 is going to be adequate"? Or is it just that our top line is too low, and we just can't do all the things we're supposed to be doing? What are your thoughts on that?

Secretary WYNNE. I think that they took into account the total mobility assets in a portfolio analysis, and they presumed that it would maintain the mission capability rate because of increased maintenance activities along. So, they essentially took a capability analysis and broached it with a capacity analysis.

We have some of our aircraft that are on legislation restriction. We cannot retire them and we are working our way through some of that. That impinges upon where the capacity comes from that would factor into this C–17 decision.

That having been said, we're also looking for a way to get light cargo aircraft into the game. So, this whole C–17, and, oh, by the way, as the C–17 decision looms, we're finding interest overseas in the airplane, not only from the United Kingdom (U.K.) for additional airplanes.

Senator INHOFE. But you're making my case, Mr. Secretary. I mean, yes, I understand, with the light cargo aircraft and the Army's version of that, also, it's going to be necessary. Their needs for this are very obvious and I agree with that. But the point is, not at the expense of the C–17 program.

My first year in the House was when they started the C–17 program. Kind of like the B–1 and the B–2, we really went through it, and we ended up with this thing that far exceeded our expectations.

Secretary WYNNE. Right.

Senator INHOFE. Do you have any comments about that, real brief, General Moseley?

General MOSELEY. No, sir. The Mobility Capability Study did include some surge scenarios, but what it did not include was the Army Stryker system and the modularity that's out beyond the window of the study. So, there's another piece of this that will be in play.

Senator INHOFE. Okay, I appreciate that.

General MOSELEY. But, Senator, with the fixing of 112 C–5s, without the ability to retire them or do anything to the C–5 fleet, out of the Mobility Capability Study came a range of strategic airlifters that gave us about 300. That's the 180 program of record for the C–17 and 112 C–5s.

Senator INHOFE. I understand that. Last weekend, several of us—Senators from Utah, Georgia, and myself—went to the three air logistics centers (ALCs) in Georgia, Utah, and Oklahoma. We saw the results of this setting aside the $150 million. This leads me into the next question and the results are just incredible. I would invite both of you, either personally to go and see this for yourselves, or make sure your staff adequately briefs you on the success rates. Just issue by issue, the grounding due to parts has decreased by 37 percent, bettered our flying goal hours by 922,000 hours, the rate of aircraft incidents has dropped. Then the most important thing is your flow days. The flow days at all three—now, it was true with KC–135s in Tinker, but also with A–10s and C–5s in Warner Robins and Hill—we just about cut those flow days down in half right now. That means we have 50 percent more of those in the air right now, saving lives and performing their functions.

So, I would say to you that I would like to reconsider this whole notion of putting the $150 million back in the working capital fund. Now, you can all say, "Yes, it's going to be there, and the successes in the three ALCs are due to that." But, in fact, that's not the case, because your money is in jeopardy if it's in the working capital account. I can point out cases. I don't need to, both of you know that.

Now, what do you think about getting this back in its own separate bucket and out of the working capital account?

Secretary WYNNE. Sir, this is a very detailed subject. I can tell you this, that we are so proud of our depot personnel for the efforts that they have done. I have personally gone to Warner Robins and seen what they have done, and gotten briefed by the other two while I was there. They have been the genesis of AFSO–21, and springing it on the entirety of the Air Force.

This is one of those cases where they have used the invested capital in the very best way to focus their attention on how to do it better, and actually gave a lot of strength, if you will, to the Mobility Capability Study about the goodness of the maintenance activity to maintain the capacity.

All of this is working around to your question. I think, no matter where the $150 million lies, we will use it right.

Senator INHOFE. I would agree with you, if we know for a fact that the $150 million is going to be there, as it was set up to be there, all the way from 2004 to 2009, then I would agree wholeheartedly with you. I'm not saying this in a critical way of you. I'm just saying that that's a success story.

Secretary WYNNE. Oh, yes.

Senator INHOFE. The very thing that you saw at Warner Robins, you would see the same percentages, in terms of flow days, both in Utah, as well as Oklahoma.

General Moseley, any comments?

General MOSELEY. Yes, sir. I would agree. Sir, there is another initiative that we're getting close to being able to talk to your staff

and you about, which is a different scheme, through Air Force Materiel Command (AFMC), to fund the depots upfront and provide the money to General Carlson at Wright-Patterson, so industrial enhancements or growth at the depots would not be dependent on the major command (MAJCOM) end of your money, but we would fund it upfront. That's to the tune of $2 or $3 billion over the FYDP that we hand to AFMC to be able to manage the real property better than we have in the past. We have some information technology opportunities here for visibility on movement of the money that's going to make this possible.

So, this is exciting to me, because it lets us get at these things upfront, instead of waiting until the end of the year.

Senator INHOFE. Yes. My time's expired, but I would hope that you really take a good look at what is happening at those three locations. It's pretty miraculous.

Chairman WARNER. Thank you very much, Senator.

At this time, I must depart, as did Senator Levin, to go to our markup, but I shall be back. Senators McCain and Inhofe, it's in your able hands with these two gentlemen.

Secretary WYNNE. Thank you, sir.

Chairman WARNER. Senator Roberts, you're next.

Senator ROBERTS. I note, Mr. Chairman, you indicated it was just Senator McCain and Senator Inhofe, not myself, which I certainly appreciate. [Laughter.]

I have my hands full? Yes, okay. All right, thank you. Mr. Chairman, thank you very much.

I have a rambling-rose question that Senator McCain will be interested in. It's about tankers. General Moseley, I want to thank you for coming out to McConnell last August. We were talking about the three studies that were going to be held at that particular time, the analysis of alternatives (AoA), the Mobility Capability Study, and the fleet viability study. Let me toss a bouquet to Senator McCain. I don't think any of you said—perhaps maybe one or two of them may have been done—without his insistence that we do this right in regard to tankers. I don't think that would have happened and I think we're in a better position to at least take a look at the challenges that we have.

I don't need to be telling you about the importance of tankers in regard to our global reach. I understand that. We want to be of help to you. My question to you, which is the last thing that I'll say, is, is there anything we can do to help you in this endeavor?

But General Kelly went over to the House, on Tuesday, and he testified before the House Armed Services Projection Forces Subcommittee, that to buy 12 next-generation tankers next year, at costs ranging between $150 million to $200 million per aircraft, it's going to take 38 years to replace the KC–135 fleet capability. Now, that's about $1.9 billion to $3.2 billion a year. I don't know how we do that. He indicated that 38 years—and if your average aircraft today, or tanker, is 46 years old, that's an 85-year-old airplane. I can't imagine anyone, other than maybe Jim Inhofe, flying a plane like that. He flies planes, and the propeller drops off, and he still lands. It's an amazing feat. But I don't think even Jim Inhofe would do that.

These planes were started back in the Ike era. I still like Ike, you know, being from Kansas, but I just don't really think that that is the answer. So, we need, really, to answer this challenge, if we possibly can.

By the way, the Mobility Capability Study indicated that there are four domestic aircraft that would qualify, and three that are nondomestic like Airbus. I just want you to know that the Airbus issue, with the EU subsidy, to me, is like the Dubai Port Authority issue to many others in Congress. So, just consider that for the record.

There is a Defense Science Board that met a couple of years ago that said, "No problem with the tankers." I doubt if any of the scientists have ever been in the tanker. There is the AoA that was put on hold for a year, for obvious reasons—and I understand that was conducted by RAND and the Air Force. I don't know if they ever got on a tanker. But I do know somebody that did and it's the husband of a young lady that works in the pharmacy at Bellehaven—close to where I live—and her husband is age 32, and the tanker that he was flying is 52. Every time I would get my prescription for my various maladies, she would look at me and say, "I know you. I've seen you on television," mainly because we both had the same haircut and we can—you know, people understand who we are. So, consequently, she said, "My husband's going to get out of this business. He doesn't think that aircraft is safe, and he's the pilot."

So, I guess what I'm asking is, how on Earth do we match this tremendous cost challenge that we have and still maintain the global lift? We have the three studies that are completed, and we're going to do it the right way this time. So, how can we be of help to you so we can get there from here and we don't have an 85-year-old aircraft sitting somewhere that can't fly?

There's a rambling rose for you. I'm talking to General Moseley and thank you for all you've done on this issue.

General MOSELEY. Sir, thank you. The AoA and the other studies are done, and they're in the DOD. I've not been privy to read the entire thing. I've read the executive summary. But they're in the DOD.

The program is on hold now by the Deputy Secretary of Defense. When he releases that, then there will be an opportunity for release of a request for information (RFI) which will then begin the upfront, visible, competitive process to see what's possible out there with a set of options.

We asked, this morning, to refresh us, or confirm to us, that there are no options that are off the table, that now, as we go through the RFI, and the way the RFI should be written, and the request for proposal (RFP) that comes after that, that OSD will help us with, that nothing is precluded or off the table or any set of options.

Senator, we're anxious to be able to move on this program, but we're also anxious to be able to move on this program in a way that the committee's comfortable with and with full transparency and competitive notions of what's next.

Senator ROBERTS. How many tankers on a given day are nonmission capable because of maintenance repairs? Can you give me an

idea on how many of these maintenance repairs you would characterize as unscheduled?

General MOSELEY. Sir, let me take that for the record and get you the accurate number.

Senator ROBERTS. All right. I'll be happy to.

[The information referred to follows:]

Since January 2006, an average total of 168 tankers (KC–10s and KC–135s) per month were nonmission capable for maintenance repairs. These repairs include scheduled maintenance inspections and programmed depot maintenance. Of the 168 nonmission capable aircraft, approximately 57 were nonmission capable for unscheduled maintenance repairs.

General MOSELEY. Sir, I'll tell you, the depots have done a great job. I used to be able to say that a third of our tankers were in depot, broke, and it took 400-plus days to get them out. That's not the case. Senator Inhofe is right, we're down to less than 200 days' flow through the depots. So, the guys out there maintaining these things have done a great job.

Senator ROBERTS. I'm going to yield back the remainder of my time.

Senator MCCAIN [presiding]. Senator Chambliss.

I apologize. Senator Thune is next. I apologize, Senators.

Senator THUNE. Thank you, Mr. Chairman.

I, too, want to thank our witnesses, Secretary Wynne and General Moseley, and echo what has already been said, and express my enormous appreciation to the men and women that you introduced today for their extraordinary service to our country, as well as all the folks who are serving under your command.

Secretary Wynne and General Moseley, I have a question that I'd like to direct to both of you. I would like to have you explain to me your policy on how the Department plans to deal with the rising problem of aviation congestion and airspace capacity. As airspace capacity in many regions of the country becomes more congested, and unfettered, open airspace become more scarce, what actions is the Department taking to work with the Federal Aviation Administration (FAA) to establish additional military operations areas (MOAs) in restricted airspace so that we preserve the valuable training areas for the future?

Secretary WYNNE. Senator Thune, I know that we have been constantly in touch with the FAA to make sure that we have open airspace where we need it. This occasionally, as you point out, causes reroute of commercial flights, and adds to their clock, if you will. But I will have to take, for the record, the specifics of the interaction, because it usually goes on at the local level, when a training thing—there's a notice to airmen, just like when we fire a missile downrange, that we have a restricted airspace. The commercial people have been very cooperative with us and the FAA is very cooperative with us in taking care of that.

So far, it has not impacted the training, that anybody has advised me of. But I must tell you, I must get an answer for the record for you on that.

[The information referred to follows:]

Air Force use of the National Airspace System (NAS) is determined by its operational requirements. These requirements necessitate certain volumes of airspace within close proximity of our installations that possess the appropriate characteris-

tics (chaff, flares, supersonic) and associated ground assets. This airspace is to be used for the exact amount of time required to perform the training activities. With the support of the Federal Aviation Administration (FAA), the Air Force is continually developing and refining this dynamic training space in order to accomplish our fundamental mission to train and equip our forces. At this time, we have over 30 actions pending in collaboration with the FAA that delineate new or modified airspace requirements.

The DOD is actively engaged with the FAA through the Policy Board on Federal Aviation in advocating our needs while balancing the increasing demands of the commercial and general aviation community. The unique nature of Air Force activities in the NAS will be planned for as a vital component of the Next Generation Air Transportation System Concept of Operations, which is currently in development. The Air Force will be an active participant in developing a dynamic paradigm for the future designed to meet our evolving mission needs.

Senator THUNE. General Moseley, we are already encountering problems with the FAA when it comes to permitting, for example, UAVs to fly in anything but unrestricted airspace, for safety reasons. I guess my question is, is it not in the best interest of the Air Force to begin to identify and establish additional military aerial training areas sooner rather than later?

General MOSELEY. Senator, let me go back and answer. I think I can help with part of your first question. We have ongoing dialogue with the FAA, because we fly most of the military things inside the continental United States. We deal with them as a partner. They have some unique challenges in the contemporary civil aviation world, because now people don't necessarily fly on established jet routes. Because of GPS navigation, they can fly point to point off of established jet routes. So, it makes their airway traffic control system incredibly more complicated, which then complicates our training ranges and space.

Sir, we have multiple bogeys. One of my first activities was to get a range view and a range concept of operations put together, in partnership with the Navy and the Army, on possible opportunities for joint enhanced composite force training. What does that mean for us in the future with aircraft that need bigger footprints, not less footprint?

Also, the UAV thing has been a bit of a challenge, but we have been able to work memoranda of agreement with the FAA to cross corridors. But that will always be a challenge. It would make it easier if we were operating inside military airspace with the airplane, which is what makes the big ranges very attractive to us in Utah, Arizona, and Nevada, but it also allows us, with the MOAs, to begin to look at these new locations of the UAVs to do exactly what you've said, to be able to partner with local entities and local air traffic centers to be able to work with the FAA as a combined team.

So, sir, this is on the top of our list every day: ranges and access to ranges, supersonic airspace, bombable ranges, and ranges to conduct joint activities.

Senator THUNE. I would just add, because I think that the FAA study of the issue reveals that aviation congestion, as you have noted, around major airports and busy airspace around and between metropolitan areas, is reducing the amount of available airspace capacity. It would certainly seem to me that it ought to be a matter of policy now to begin funding and claiming available airspace for training before the airspace is gone, because clearly some

of the demands and the needs that we have are exceeding the supply of available airspace and creating these types of problems between the FAA and the military.

Just one other question. I would like to come back to something that Senator Inhofe was talking about, and associate myself with some of his remarks with respect to the funding challenges that we face. I will preface it by saying that I just believe that the defense of our Nation in providing the troops with the equipment and resources they need to execute their mission has absolutely got to be our top priority. It's been referenced to some degree already that the number of C–17s and F–22s place them in the low-density, high-demand category. Secretary Rumsfeld was once quoted as saying that "low-density, high-demand asset is just a euphemism meaning we didn't buy enough of what we need."

I guess my question is, is this situation any different, or are we going down that same road again?

I would also associate myself with the comments that were made with respect to the need for adding to, or increasing, that top-line number, the amount that we're spending as a percentage of our GDP on our military, because I think that is a very serious challenge, as you look around the planet, in what our future needs are going to be.

But could you speak to that particular comment, the low-density, high-demand asset, and it just being a euphemism, meaning we didn't buy enough of what we need, and whether or not this is a situation that's any different from what we've encountered in the past?

Secretary WYNNE. Senator Thune, I know that he made that comment. I think that the Mobility Capability Study tried to figure out what was going to be the acceptable risk within the context of the whole mobility portfolio.

As to the F–22s, we've tried to do a comprehensive tactical fighter look. I would postulate that there are extremes in which you could find yourself with quantity having a quality all its own. But the studies done to date demonstrate that your Air Force, in accepting the FYDP that we have here has no desire to cede its dominant position in the world.

Senator THUNE. I thank you very much for your testimony and for your response.

Mr. Chairman, I yield back.

Senator MCCAIN. Senator Chambliss.

Senator CHAMBLISS. Thank you.

General Moseley, thanks for introducing these four great men and women over there. I know they're representative of all the thousands and thousands of folks that serve under the two of you. We, needless to say, are very proud of not just these four, but all those great men and women.

I was just talking outside. I had to step out for a minute to visit with a long-time family friend, who is the father and stepfather of two Air Force special operations folks. He was telling me that his son and daughter-in-law are deployed somewhere in the world today. He doesn't know where, but they have a pretty good idea. He, just like all of us, is very proud of those folks, as well as these folks.

I want to associate myself also with the remarks of Senator Inhofe, relative particularly to what's going on at our ALCs. This $150 million in the President's budget that is earmarked—and I hate to use that term—but that's set aside, let me say that, for depot maintenance, and has been for the last couple of budgets, that somehow it gets transferred into working capital, and all of a sudden those of us who visit our depots on a regular basis understand that we're not always getting the amount of funding that we need to maintain and in the case of Robins Air Force Base, F–15s, C–130s, C–5s and other items. But I would urge you, as Senator Inhofe said, let's see if we can't make sure that we maintain that $150 million going to the depots.

General Moseley, I'd like to talk to you about our strategic airlift capability. I see that the number one request in the Air Force's unfunded priority list is the national defense airlift fund, which includes funding for 7 new C–17s, 4 new C–130Js, and 16 C–130 center wingbox replacements. I am a strong advocate for buying new aircraft. Secretary Wynne, you and I have had this conversation many times. I know we need to. The C–17 and the C–130J are great weapons systems. All you have to do is ask the men and women that are flying them, and look at the missions that they're carrying out today in theater, and you know what great systems they are.

However, I also believe that in order to make good use of the taxpayers' resources, we must also look at modernizing the equipment that we have. It's my understanding that the two studies recently completed by DOD, the QDR, as well as the Mobility Capability Study, both affirm that the Nation's airlift requirements could be met with 180 C–17s and 112 modernized C–5s. My sense is that that may be technically true, although those numbers, on the C–17, particularly, don't leave much margin for error. I would like the assessment, General Moseley, from you on what you think about those particular numbers put forth in those studies.

General MOSELEY. Sir, we're restricted from language doing any divestiture of the C–5. So, we have the 112 C–5s, which are the 50 C–5Bs, the 60 C–5As, and the 2 C–5Cs. We have the program now for a complete Avionics Modernization Program (AMP) of the entire fleet, and we have the Reliability Enhancement and Re-engineering Program (RERP) that were conducting the tests on a couple of these, and an A model, which will take us 2 or 3 years to get the data on that. That money is laid in with the program to completely upgrade all of the C–5s, As, Bs, and the two Cs.

Senator, what I don't know is at what point does even an AMP'd and RERP'd C–5A become so expensive to fly, or the readiness rates or the in-commission rates or the availability on the aircraft, become troublesome for us in the future? So, I've asked the staff to take a look at a program so that we can discuss with the committees, and with others on the third floor, about a full AMP on all of the airplanes, and perhaps look at only pylons and new engines for the B models and the two C models, and see what that would do. Sir, I don't know what that would do yet.

But if you have 112 full-up C–5s, and you live with the conditions and the assumptions of the Mobility Capability Study, the program of record for the C–17 is 180. The challenge with that is,

we are using these aircraft at a rate that we didn't program, no different than the Navy's F–18s or the Army's vehicles. We're flying the C–17 like a C–130 now. We're using it for intertheater lift, as well as intratheater lift. We're using it as flying hospitals. We're using it to do things we never envisioned prior to this conflict that a strategic airlifter would do. The airplane is proving itself to be gold in doing that.

The downside is, we're burning the airplanes up at a much higher consumption rate. That's why we put those aircraft into a general mobility fund, on an unfunded priority list, to see if there's not some assistance that we could get.

Senator CHAMBLISS. It's my understanding that the Air Force's fleet viability board found no major structural or corrosion issues for the C–5A. Is that correct?

General MOSELEY. At the time of the study, no known. Yes, sir.

Senator CHAMBLISS. Okay. It seems to me that, given that the Air Force's own studies have validated that C–5s have 70 percent of their usable service life left in them, and that modernization of the entire C–5 fleet produces double the return on investment, that that should support modernizing C–5s. Would you not agree with that?

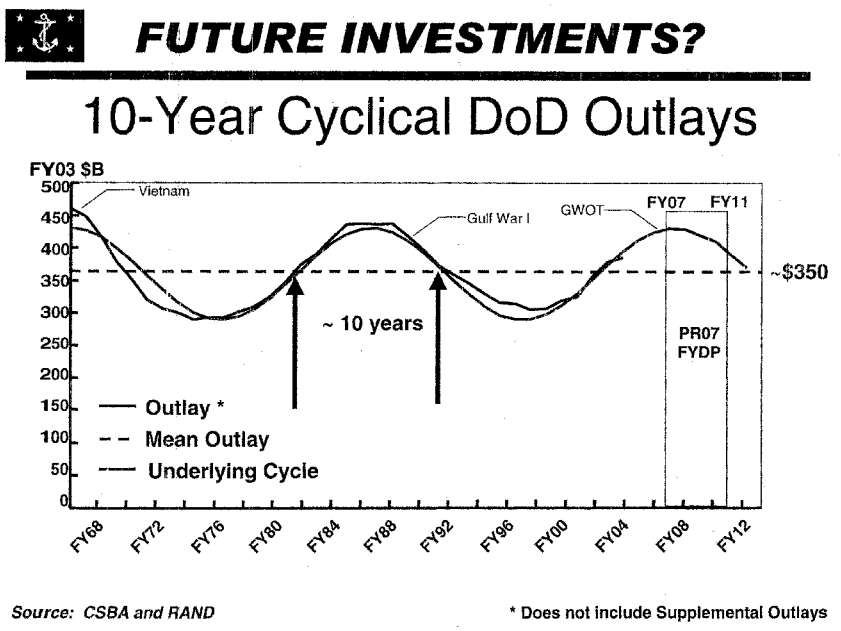
General MOSELEY. Sir, for sure the avionics modernization program, which will get us a much more reliable A, B, or C is a good thing and, as I said, I've asked to have some more data and to take a look at the re-engining piece, because I'm not sure.

Senator CHAMBLISS. Okay. Is it your intention now to move ahead with the modernization of the C–5?

General MOSELEY. Yes, sir.

Senator CHAMBLISS. On the C–130, I know that our mix in the multiyear procurement on the C–130J is nine and four, Air Force and Marine Corps. Last year, we had some changes in that. We went to eight and five, and also advanced procurement on eight and five for this year. Would you give me your thoughts on what that proper mix might be? I'm sure, when we have General Hagee here, we'll talk about this with him, also.

General MOSELEY. Sir, we're partnered closely with the Marine Corps on the recapitalization of their airplanes also. There's not been any of this that we haven't done together. Whether it's nine and four, or eight and five, our partnership with him is solid and I have no issues with going from eight or nine to four or five, because we're still operating the same airplane in a joint sense, and we're still in this together.



Senator CHAMBLISS. Thank you, General and Mr. Secretary.

Senator MCCAIN. Thank you very much, Senator Chambliss.

Mr. Secretary, I'm looking at a chart here that shows, historically, what I know you're familiar with, and that is the cyclical aspect of defense spending. It seems, about every 10 years, we go through an increase and then a decrease. It's obvious that the deficit, even including information we received today, is going to be extremely large and, if history means anything, we are going to see a decrease in defense spending, or at least a leveling off and that's not counting the continued cost of the war in Iraq and the global war on terror, et cetera.

Have you thought about how you're going to procure the F–22A, JSF, new tankers, new cargo aircraft, new combat search-and-rescue helicopters, UAVs, and other programs? Have you thought about how you're going to pay for all of this? Do you think that we may, at some point, run into a brick wall here?

[The information referred to follows:]

Secretary WYNNE. Senator, first of all, I think your cyclical chart is dead-on and I've told my colleagues, about 6 years of growth followed by a topping off. My fear is that we are going to have to really look hard at all of our follow-on procurements, and perhaps department-wide, to take a look at exactly how you prioritize and, what you really need, to fight the war. Of course, as the war drags on, as we've talked about, the secondary effects of wear and tear will really begin to show. I share your concern, and right now I can tell you, from my opening comments about trying to get 6 pounds into a 5-pound sack, I fear the day when I have to get 6 pounds into a 3-pound sack.

Senator MCCAIN. Let me suggest that you embark on a study looking at the cost of all of these new acquisitions, which I certainly don't argue are very necessary. I also think you ought to crank in a little historical data, particularly recent years, over the escalation in costs that's been associated with every new weapon system. I don't mean just Air Force. We had a hearing yesterday about the Future Combat Systems, which has increased more than 50 percent in cost, although there have been some changes in the kinds of equipment they're procuring. But, still, we are seeing escalating costs throughout. JSF cost has gone up 14 times, and we're now spending—what? At one time the Air Force was going to pur-

chase 750 F–22s, now it's $320 million a copy. We're down to 180. I think that Congress and the American people should be warned, sooner than later, that we're going to have to make some tough choices.

I look at all of these new requirements, and it's not only the new requirements, it's replacement for existing equipment. Small example—every time I go to Iraq, I'm flown around by Guard C–130 personnel. Those C–130s, as we all know, are wearing out at a far higher rate than we had ever anticipated, particularly Guard assets.

So, particularly where the Air Force is concerned, I'd like you to embark on some kind of study, using historical data, on increases in cost. There's not been one system that's come in under cost. We all know that. Cranking in some kind of inflationary aspect of it.

Secretary WYNNE. In fact, sir, I would offer that we even went to a buy-to-budget. What tends to occur is, yes, it's great to talk about buy-to-budget, but what happens is, the costs go up, your quantity comes down. As your quantity comes down, you end up in a program death spiral. So, your point is extremely well taken, that these things are just not forecasts, because, you know, we're hesitant to forecast that. But I think that's a prudent thing to do, sir.

Senator MCCAIN. Maybe you could bring in some of our friends at RAND and other organizations that could provide you with some estimates. Because if we're going to have to make a decision between F–22 and JSF, I'd like to make that decision sooner rather than later. I'm not saying we are. But I just don't see how we're going to afford replacement of existing equipment, plus all of the new systems that obviously, there is a need for. I don't question the need for them. I'm a little cynical about the F–22 now being just an air-to-air fighter.

I'm very worried about it. I'd like for you to embark on some kind of study and drop me a letter saying what you intend to do. It really should be done DOD-wide, but I think a lot of the new programs, understandably, are in the United States Air Force.

Secretary WYNNE. You're right. Our focus is recapitalization, so we are, understandably, underway here. The F–22 has dropped a joint direct attack munition (JDAM), by the way. I think some of the precision aspects are there. But what General Moseley and I wanted to do was to make sure we set a baseline that we did not have the technologists simply piling on. We could really wring out the costs of that air fleet. So, you're correct in that assessment.

Senator MCCAIN. There is just one other issue I want to raise with you. In the 1980s, we had fixed-price contracts. Now we have cost-plus contracts, with incentives. These incentive payments have been over 90 percent awarded, even though both scheduling delays and cost escalation have occurred. We need to stop that. People should be able to enter into contracts for the product, whether it be of a widget or an F–22, and if they don't meet the scheduling—and I know what the answer is, "Well, the Air Force demanded changes." Well, stop demanding changes. If you haven't—if you can't figure out what you need when you enter into the contract, then don't give them the out. I think this whole issue of incentive fees, certainly according to—90 percent of the available award fees

are almost—$850 million has been spent. These are on programs that are behind schedule and over cost.

Just one other thing I want to mention to you. I still don't think we're giving enough priority to the UAVs. When we lose a pilot that's captured, it has a huge effect. We can remember when one pilot was captured in Lebanon, how that skewed things. We have a border that, despite the desires of some of my colleagues, we're not going to be able to build a wall all the way across, nor is there a need to. But a UAV can loiter, as you know, for 12 hours, can surveil, and provide information so that we can counter either good people or bad people trying to come across our border illegally.

I just don't see enough on the UAV front. I sometimes think—I'm sorry to—I'm not a conspiracist, maybe they don't have a strong enough lobby here—that the uses of UAVs are phenomenal, both in combat and as far as border security. One of the big issues that we're debating right now is, how do we secure our borders? I don't know a cheaper way than UAVs. Now, that's not the only answer. But it seems to me that a big part of the solution is to be able to detect individuals or goods or whatever is coming across our borders.

So, I'd like you to go back and look and see whether we're doing enough in the UAV area. They're still relatively inexpensive. The uses of them—not according to me, I'm not that smart—but everybody I talk to says that this is an arrow in our quiver that can be of tremendous utility in a broad variety of areas.

So, we seem to be moving much more slowly in both the development, procurement, and especially deployment of UAVs.

Secretary WYNNE. Sir, we have the premier UAV commander, a former Navy pilot, here today. I think he would jump up—and I'm surprised he hasn't jumped up in applause. These Predators—and other UAVs, lighter ones—have proven themselves. Our inventive soldiers and airmen, the tactical air control posts (TACPs) have learned how to use them in concert with other assets. So, you are right, we are getting tremendous coverage on the battlefield. I don't know how that would be translated to a border situation, but I suspect, as you probably suspect, that we are using it in some border situations right now—not necessarily in this country, but in other countries, trying to maintain some control over who comes in and who comes out of our battlefront.

That having been said——

Senator MCCAIN. I'm told that they have been effective in Iraq on the Syrian/Iraq border.

Secretary WYNNE. Yes, sir.

I would tell you that we have been wanting to—and I know the Special Operations Command has been wanting to—expand the Predator fleet, at least. We also have tried to put some money in for expansion of UAVs. In total we have, I think, $2 billion——

General MOSELEY. A little over $2 billion.

Secretary WYNNE.—over the course of the FYDP. I mean, we are onsides, if you will, on that one, in the sense that we believe they are a future for us.

Senator MCCAIN. General Moseley?

General MOSELEY. Sir, I agree. We have a desire for 189 of the Predator A models, which is the MQ–1. We've taken delivery of a

number of them. We've lost 58 of them, for a variety of reasons, shot down or training incidents with them. So, we're looking to recap that entire fleet back out to 189 of the Predator As, the MQ–1s.

The MQ–1, which is what our squadron commander's squadron flies, is a good little airplane. When you hang missiles on it, you lose station time, you lose 4 hours per pylon per missile but that's not the real issue. It offers some incredible capability with the infrared, the electro-optical imaging, which is the application that you're talking about, perhaps, at looking at a border. We have 60 of the bigger ones, the MQ–9s. We have one in combat now in one place, and one about to be in combat in another place and we're beginning to take deliveries of the operational ones now.

The Global Hawks are a different issue, I believe, than what you're addressing, but we'll have a program of 50 of those. We have two of the operational birds in combat now, and we've brought the test birds back to be able to get back into that program.

Sir, we've begun to partner, in a more robust manner, with the Air National Guard on this to look at building out to 21 orbits. Because one of the fascinating things about this that we've learned since the beginning—well, since the spring of 1996—is that we can fly them in combat in Afghanistan or Iraq. His squadron is at Nellis, in Las Vegas, and he flies every day and every night in combat in Afghanistan.

So, the reachback to this thing provides incredible opportunities in combat, but also in perhaps a homeland defense or homeland security role, which is why we had talked to General Rataczak about an Arizona application and a Texas application first, because we can get additional orbits. We're continuing to engage with him on opportunities to do that. We have six of his Arizona Guard guys now trained, three pilots, three sensor operators, and we're working our way through the Guard Bureau and with him to see if we can't incentivize more manpower moves to be able to stand that up. Those were the reasons those two States were picked first.

Senator MCCAIN. Again, I'm not putting in a plug for Arizona, but there are hundreds of miles of literally trackless desert—New Mexico, Texas, California, all across our border—and we're never going to have enough people to patrol it. It seems to me that, with all the emphasis that all of our colleagues, understandably, and America, are placing on the fact that we don't control our borders, that this is a tool that we need to use more of. I'm sure I've made my point.

Secretary WYNNE. Yes, sir.

Senator MCCAIN. I thank the witnesses.

General MOSELEY. Sir, could I dogpile, just 1 minute? The other reason that I believe that Arizona and Texas—not because you're the Senator from Arizona—matters is because Fort Huachuca is there, and we can partner with the Army, with additional applications. Also, the Goldwater Rangers are there that we can train with folks out of Luke and out of Yuma and out of Davis-Monthan, which has the other assets that we need. Texas is the same, with Fort Hood and close to Fort Sill. So, we have applications not just from San Diego to El Paso, and El Paso to Brownsville, but we have co-located joint capabilities and ranges that we can get into

and take this to a completely different level. They're live ranges that we can fire on, which make a big difference for us.

Senator MCCAIN. Thank you very much.

Senator Talent.

Senator TALENT. Thank you, Mr. Chairman. I really want to associate myself with your comments, really pretty much across the board.

Secretary, when you say you're trying to cram a 6-pound sack of potatoes into a 3-pound sack—and, by the way, I don't know what supermarket you're buying potatoes in. I haven't seen any 6-pound sacks. But you can certainly buy 10-pound sacks that you try and cram into a 5-pound sack and the pressures you get—at a certain point, when the pressure gets to be too high—it ends up actually costing you money. I was thinking, during Senator McCain's questioning, that if you have to reduce, for example, the number of platforms that you buy beyond a certain point, then, of course, the per-copy cost goes up. So, in order to save money, you reduce the number you buy, and then the per-copy cost goes up even more. So it's tremendously inefficient. The urgent can crowd out the important.

You mentioned UAVs. We all believe in UAVs, but we have to have a new-generation strike fighter. So, in other words, if you don't have enough money, or you're putting it all into F–22, which I think, given what's happened with the Chinese, I mean, it's validated the requirement that you all think you need it, and then it's hard to find the money to fund important, but not as urgent, programs, like the UAV.

So, all this argues, to me, in favor of a mixed approach where we really search hard and make the tough decisions, try and do better, in terms of reducing build cycles and the rest of it, but also get the top line up. I know Senator Inhofe was talking about that, as well.

Senator Inhofe, I think, asked you all about the rate of usage of C–17. I just want to make certain you have a chance to address that specifically. My sense of it is that we're flying C–17 at a rate well above what we had anticipated; and, therefore, using the aircraft up faster, just to put it in layperson's terms. Would you agree with that? What implications would that have on your ability to have the necessary lift in the future?

General MOSELEY. Sir, that's correct. Some numbers are 160 percent above program rates, some numbers are 168 percent above program rates. But if General Duncan McNabb were standing here as the commander of Air Mobility Command, he would tell you that we're using the airplanes up a lot faster than we thought we would. The success of the airplane is a direct result of the design, because the airplane offers so much more capability and so many more options, because you can operate it as if it's a C–130, you can operate it tactically or strategically, you can convert it to a hospital, or you can fly it to do medevac missions. Therefore, it has become the gold standard of being able to move things in a theater, or to a theater, which is the direct result of the success of the airplanes and the crews that fly them, as we're burning them up.

Senator TALENT. I'm sure that bore on your decision to put attrition aircraft high up on the unfunded priorities list.

General MOSELEY. Sir, just exactly as if Pete Schoomaker were standing here to talk about vehicles and tanks and up-armored Humvees, or if Mike Mullen were here to talk about F–18s or other assets, or Mike Hagee, to talk about other ground equipment, we're burning these things up, just like everything else.

Secretary WYNNE. One thing, sir, is that, from a reliability and structural analysis, once a crack appears, you can fix that crack, but it is highly likely that another crack will appear somewhere in that airframe. This is really the essence of wear and tear, and why you might, after you discover a crack, put it on flight restriction so it does lighter duty. If we're going to do that, we need those extra airplanes, then, to retain our capacity.

Senator TALENT. Yes, and I just don't think anybody anticipated that you would need C–17s so much for intratheater lift. We know how much it's being used within CENTCOM, and I just think everybody always thought of C–17 in terms of intertheater lift. But General Schwartz has told me that you're using it much more for intratheater lift, and that really wasn't a factor in the Mobility Capability Study. Do you want to comment on that at all?

General MOSELEY. Senator, one of the other factors that is not a Mobility Capability Study issue, but it is our desire to get as many vehicles off the roads as we possibly can to prevent exposure to IEDs or hostile fire. So, our desire to get 350 to 400 to 450 vehicles off the road, we can fly as much of that in C–130s or C–17s as we can. So, young airmen and young soldiers, like our senior airman back here, who has 100 or so convoys in combat, we can reduce that exposure by flying these assets. So, the C–17, again, is the gold standard for large amounts of that, and we never foresaw that.

Senator TALENT. Yes, and just because it's war, things are messy, and you don't foresee everything. I mean, the Mobility Capability Study was a snapshot, and a fair snapshot, based on assumptions that you have to make. But you don't always know what's going to happen in war, and you may have additional needs. Is that a fair statement?

General MOSELEY. Sir, the other part is just the inherent flexibility of air power, that you can take the vehicles off the roads by putting it in a C–17 or a C–130, and preclude exposure to young soldiers along those convoy routes.

Senator TALENT. Yes. We've mentioned the top line before. This is one of a number of areas where resetting the force is a reality that we're just going to have to confront at some point. We all talk about the pressure of the budget. I think it's important to keep you all under some pressure, because we want you to be looking for reforms and making the tough decisions. But, at the same time, I don't think people should view this as something that's not within our capabilities or our economic abilities as a Nation. I know Senator Inhofe has talked about, and I talked about, you know, if we move the percentage of GDP that we're spending on defense up two-tenths of a percent, I think it would make it much easier to get the new platforms we need, as well as resetting the force.

You talk about flexibility, but if the C–17 line should close, then that really does cut off our flexibility, does it not, in terms of addi-

tional purchases? So, it's a priority, would you agree, to keep that option available for the future?

General MOSELEY. Sir, we have money laid into the program to keep the line and the tooling hot so that if we have to come back to that, it's $245–$265 million, I think. But that is a downstream issue and you don't know what you don't know, so I don't know how hard it would be to reopen a line.

Senator TALENT [presiding]. Okay. I'm not going to push you, probably, as far as I should, in terms of the budget submission. I do recall that in the early 1980s a decision was made to buy C–5Bs in lieu of developing C–17, and then, in the late 1980s, we had to reverse that decision, and reconstituting that pool of expertise, even though we had not actually started the program and produced the aircraft—was very expensive. So, I think this is just another situation of what I referred to before, that sometimes if the pressure becomes too great and the urgent crowds out the important in the long-term, it ends up actually costing you more money because we do have to meet these needs at a certain point.

I'm now stating, I think, what we all probably agree with.

That's all I have. I've just been handed a note asking me to put the hearing into recess rather than adjourning. I'm assuming that I'm now the chairman of the committee, by default. [Laughter.]

So, I guess I'll go ahead and do that. I assume Senator Warner wishes to return and probably ask some more questions.

All right, we know your time is very valuable. We appreciate it. I appreciate very much your service, as well. These are difficult decisions and difficult times. I have full confidence, though, in the ability of this country and our leadership to meet the needs of the future.

I'll put the hearing into recess, and appreciate your indulgence, and I'm sure Senator Warner will be back soon. [Recess.]

Chairman WARNER [presiding]. Thank you very much. Again, Senator Levin and I apologize for the requirement to go upstairs. He may join me here momentarily. I wanted to finish up on one or two matters.

I had a colloquy with the Secretary of the Air Force regarding the JSF engine, and the Secretary indicated that he would provide me and the committee with a more complete recitation of the procedures and the facts relating to consultation with our allies. I stress the need for that, Mr. Secretary, because as our industrial base shrinks—and in my 28 years here, I have seen it—I might add another 5 to that, when I was in the Pentagon, so it's over 30 years that I've had the privilege of being able to participate in the process of our defense procurement—but it has shrunk, by necessity and for other reasons. We then have a dependence on our allies overseas who have an industrial base and I don't doubt that that base has shrunk, also.

Consequently, I think we have to maintain the closest and best possible relationships we can when we enter into these joint contracts with our allies, to see that all aspects of the contracts are conducted in a manner in which they are, should we say, partners.

Now, my understanding is that, in this contract, Great Britain, because of its significant financial contributions to the program, is really, in a sense, a full partner. Would that be a correct?

Secretary WYNNE. Without a doubt, sir, they are a full partner with us.

Chairman WARNER. Right. The other countries, although partners, are of a lesser—I don't think anybody's established a protocol, but they are very interested, and they're——

Secretary WYNNE. Certainly we value Italy and the Netherlands and all of our partners in this program.

Chairman WARNER. Surely. All right. That's fine. That's the reason that I'm going to have a special hearing on this in the very near future, at which time we'll ask the Deputy Secretary of the Defense, Mr. England, to be the lead witness, and, quite possibly he'll be joined—it's up to him—by yourself and the Chief of Staff, followed by panels, probably two panels, with those partners, to get their views, and then we'll allow the engine manufacturers themselves to come forward and give us information so that we can make a technical evaluation. So, I just sort of advise the community of interest of my program for that engine.

Now, on the question of recruiting, I'm not sure that was covered fully, and I'd like to go back into it. Recruiters in the Active and Reserve components face significant challenges. Today, we received reports of shortfalls in achieving goals. At the same time, we want to ensure that retention of experienced enlisted personnel remains high. Could you give us the situation report on your Department, Mr. Secretary?

Secretary WYNNE. Sir, right now, with the exception of the Guard, which has some unfulfilled requirements, I think we're doing very well. Our recruiters are not having a problem. Our retention is very high. So, I think it's a credit, and it's something we need to guard in the future, to make sure that every airman has noble work and challenging work. Right now I'm very proud of all of that. I hope I'm not too corrected by my partner, the Chief of Staff.

Chairman WARNER. Chief?

General MOSELEY. No, Mr. Chairman, we're online with the Active and the Reserve. The Guard, though, is lagging a bit behind. What we don't know is, we'll normally have a bump in the spring and the summer. We're not there yet, so we don't know what the end of the fiscal year will look like. But if our Guard is like the Army Guard, there will be some challenges out there. We will not get, probably, to 100 percent. We'll be above 90 percent. Sir, remember the Guard recruits locally so a Guard unit on the east coast is different than a Guard unit in Alaska. So we're having those dynamics across the board.

But right now, the trend lines are positive, just with that bump in the Guard and we don't know what'll happen in the spring and the summer.

Chairman WARNER. Could you address the retention of Active personnel and Guard personnel to have a repeat enlistment for officers who wish to continue in service?

General MOSELEY. Sir, our retention is high in the Active——

Chairman WARNER. Is it above expectations or your projections? I know that the Army is experiencing that now.

General MOSELEY. Yes, sir, we are. Please let me take that for the record, to get you the exact numbers.

[The information referred to follows:]

The Air Force measures retention by Average Career Length (ACL). The ACL is a measure that estimates how long airmen are staying in the Air Force. It is based on year-group retention over the previous 12-month period. The observed measure is compared to a goal, typically the historic average.

Based on data at the end of September 2006, the enlisted ACL is 12.34 years (124 percent of goal) and the officer ACL is 14.90 (110 percent of goal). Note that during Air Force strength reduction efforts, additional losses obtained from force shaping programs are excluded from the ACL measure since they are not part of "normal" loss patterns. Although overall retention is good, there are specific career fields such as medical and special operations that require special incentives to maintain retention and the desired manning levels.

In the Guard and Reserve, we measure our success of retaining members through attrition rates, rather than retention rates like the Active Force. Retention does not have the same meaning for the Guard and Reserve as it does for the Active Force, and attrition rates provide a more comprehensive and applicable measure for the Guard and Reserve. The Air National Guard (ANG) once again remained below their enlisted attrition ceiling of 12.0 percent in fiscal year 2006 with a 10.9-percent enlisted attrition rate; the officer attrition rate was an excellent 7.7 percent; and, the composite (officer plus enlisted) ANG attrition rate was 10.5 percent, reflecting a very motivated and highly experienced force.

General MOSELEY. But in some of the career fields, we're seeing 110–120 percent, which is troublesome in a different way. The Active and the Reserve, we're not seeing issues. Only in a small percent of the Guard are we seeing the issues, and those are the non-prior-service first-term Guard. We're seeing a bit of a hiccup in retention and we're focusing everything we can on trying to hang onto those people.

Chairman WARNER. It's been my observation—I've been privileged to travel extensively to military operations throughout the world—flying with the Air Guard. I'll never forget one time in the Balkans campaign. I approached an Air Guard 130, and said, "I'd like to go into Sarajevo," and the guy never blinked an eye, and he said, "Let's go," and I went. I think I was the first United States Senator to go in there during those tragic operations that were taking place. There was sort of a civil war going on in that one city. I remember the day very well, because there was a tragic accident by another aircraft in that airlift.

I just think the record of the Air Guard is exceeded by no one.

Secretary WYNNE. Sir, I'll tell you, as a Service Chief—and I'm, of course, partial to the United States Air Force—I view us as a flock that is imperceptibly different, whether it's Guard or Reserve or Active. I'm equally proud of the air guardsmen who are doing the things that they do every day for Operation Noble Eagle, and in Afghanistan and Iraq. Unbelievable set of people.

Chairman WARNER. I've been with them so many times, I'll never forget one time, we were flying over the high mountains in Afghanistan, and I was up in the 130 cockpit with these gents up there, and suddenly there were a couple of bells that rang, and, in a very calm manner, the plane captain shut down an engine, kind of leaned over to me and said, "Well, we lost one up here at 22,000 feet." I'm looking down at those mountains, and—absolute calm. Then I checked the number, and it was an old 1961 or 1962 model, and he sort of said, "You know, Senator, we could use a little help in this area, getting some new aircraft." So, he got my attention. [Laughter.]

General MOSELEY. I'm sure that was an Active Duty airplane if it's 1960 or 1961, yes, sir.

Chairman WARNER. It was an Active?

General MOSELEY. It probably was, sir. The Guard has the H–2s and the H–3s, which are the best C–130s.

Chairman WARNER. Well, all right, whatever he was. But I just remember the calm, professional manner in which that crew went on with the mission and kind of lobbied me.

Of course, now we're upstairs in this other room, which I just left, requiring all lobbies to be registered. I'm not sure whether that's going to apply to you or not, but we'll have to figure that out.

General MOSELEY. I will be happy to lobby for the Air National Guard.

Chairman WARNER. Good.

Secretary WYNNE. What I was going to say, sir, is that this whole concept of Total Force Integration really looks at reachback, which means that we're flying Predators, we're doing a lot more space operations, and tries to identify the magnificent part of the experience base that comes from the Guard and comes from the Reserve and take full advantage of that in training and mentoring and things that they don't have to leave their hometown for. I do think they're still going to have flying missions. They're probably still going to be joining us in wars to come, if you will, or conflicts to come. But this is all about trying to make sure that we get the best out of them. They want to help.

Chairman WARNER. You know, there have been some stories that have appealed to me greatly here recently about men and women who have had long service in the various military branches, who are now going to Iraq. One fellow flew in Vietnam. Maybe you saw that story.

General MOSELEY. I saw that.

Secretary WYNNE. Yes, sir.

Chairman WARNER. Do you have some cases like that?

General MOSELEY. Yes, sir, we do.

Chairman WARNER. I think people would be interested. How does a person, who maybe served previously and got a little age on them get back into the Air Force? What options are there?

General MOSELEY. Sir, we have lots of folks that are under service contracts, or under a variety of other things, to do things that are not necessarily uniformed members. That's where a lot of those people will volunteer to go. We have lots of folks that are running Army and Air Force post exchanges at places like Balad and Bagram. A lot of those people are volunteers, exactly like you're talking about, that raise their hand and say, "I want to contribute, too."

Chairman WARNER. They were former uniformed personnel?

General MOSELEY. A lot were, yes, sir. Or spouses.

Chairman WARNER. Or spouses that retired and decided that they want to go back and shoulder the responsibilities and assume the risks of this generation. Is that correct?

General MOSELEY. It makes you proud, sir.

Secretary WYNNE. The whole air-traffic control in Bagram is ex-military, and they have been there for 5 years.

General MOSELEY. Yes, sir.

Chairman WARNER. You're recycling them, I mean, with tours of duty? You have a cadre that go in and out of Bagram with some frequency?

General MOSELEY. Sir, I don't know if it's a cadre, but it is a body of people that raise their hand and want to do that. We're not short of that sort of volunteerism.

Chairman WARNER. I've had my chief here note that, because we're going to be in that proximity, and I want to make sure to go up in those towers when I'm over there.

Secretary WYNNE. They're fabulous people.

General MOSELEY. Selfless.

Chairman WARNER. I'd like to ask Mr. Abell, you know, this question of the funding to the full level of the Active and Reserve, we've been addressing that in the context of the Army. Do we have a similar problem here? We do not have that problem here.

Mr. ABELL. No, sir.

Chairman WARNER. We'd want to make sure to protect the cash that enables you to achieve your statutory limits in the service.

General MOSELEY. Mr. Chairman, could I ask one more plug—

Chairman WARNER. Yes, of course.

General MOSELEY.—for the Reserve component? One of the strengths in our aviation units, which is the core or soul of an Air Force, is the experience levels that are in the Guard and Reserve. Those squadrons have experience levels that are far beyond an Active squadron, because we bring in second lieutenants and first lieutenants. For the most part, a Guard unit may get a second lieutenant every once in a while. But they are extremely experienced and that's the strength of those units.

Chairman WARNER. I'm so glad that you mentioned that, because I'd like to bring to your attention a little bit about down in Virginia.

The Air Force has proposed a plan to permanently base F–22s at two additional locations and reduce the number of aircraft in each squadron from 24 to 18. Has the Air Force made a decision to implement this plan? If so, why? Because, in Virginia we're so proud of having received an F–22 outfit and designation, and the military construction of the taxpayers went ahead and built the infrastructure to sustain your earlier projections. Now, with the dropping projections, I'm just concerned that we're not going to fully utilize that infrastructure to justify it from the taxpayers' standpoint.

General MOSELEY. Sir, let me address where we are with that. We're looking at options, because with 183 airplanes, we can get 7 squadrons. Out of the tactical air dominance study, and out of some of the other studies, it takes you above 7 squadrons, but 7 squadrons is what we can field with the 183 that came out of the QDR. That's 7 squadrons of 18.

Now, why seven squadrons, or why multiple squadrons in multiple locations? Mr. Chairman, I'll tell you, it's very important for us to have access to ranges to be able to fly these airplanes, and access to the right ranges to be able to partner with the Army. For instance, at Holloman, which we've announced as a potential, or an optional bed-down location, the Army's moving multiple maneuver brigades into Fort Bliss. That allows us to partner with them on

the White Sands Missile Range, and on the McGregor Ranges, to be able to drop bombs and work with those maneuver elements because they're changing the focus of Fort Bliss not from the Air Defense School, but to maneuver brigades. That's important, for us to have that large amount of airspace. At Holloman, we have two ranges, Red Rio and Oscura, that we can bomb on with that airplane.

Alaska is important, because it gives us access to the Pacific. It also gives us access to those huge ranges that are now the Red Flag ranges in Alaska. The ranges around Eielson, which are up by Fairbanks, are actually bigger than the ones at Nellis, in Nevada.

Also, to partner with the Guard, the test case has been our Virginia association with the unit out of Richmond and I'm very happy about that.

Chairman WARNER. It's co-located with our Air Guard.

General MOSELEY. Yes, sir, or the Air Guard's co-located with the 1st Wing at Langley, because that's where the airplanes are. They've not completely moved out of Richmond yet, and there are all sorts of opportunities with the city, and that's a Virginia issue. But they're happy, and we're happy they're happy, and we can partner better with them at Langley.

So, Mr. Chairman, I'll tell you, our desire is to be able to get access to ranges. The east coast ranges off of Langley are great air-to-air ranges, but they're less great air-to-ground ranges. The ranges in Alaska are big, and the ranges in the Southwest are big, and we need access to that so we can fly and train.

Sir, two other parts of this that we're working our way through. Because we now have 183 airplanes instead of a bigger number, we will keep the F–15Cs around, and we will keep a proposal to keep a squadron of F–15Cs at Langley, and make sure we have F–15Cs in Alaska, and we'll keep a number of these, of the newest F–15Cs around. We're looking at, what do we have to do to mod them, if any, to keep them capable for theater missions, as well as Operation Noble Eagle missions?

Sir, the other thing, which I believe is equally important, is multiple squadrons.

Chairman WARNER. Mention the mission of Operation Noble Eagle. I think it's important to those following this record.

General MOSELEY. Yes, sir. Remember the first weekend that we were able to declare initial operational capability down at Langley, we had the F–22 flying Operation Noble Eagle missions. I think another one that I think you will be fully supportive of is the inauguration of the Governor of Virginia, down at Williamsburg. The flyby was flown with a mix of Virginia Guard and 1st Wing guys in F–22s.

Chairman WARNER. I was there that day, but—unfortunately, the rain was so hard, and the clouds were so thick, we could just hear the roar of the engine. But, anyway——

General MOSELEY. It's a stealth airplane, so it's hard to see it anyway. [Laughter.]

But, sir, the other part of it——

Chairman WARNER. Most of us on the ground were trying to figure out how we were going to stay for another 2 hours of speeches,

all soaking wet. But, anyway it was a grand day for everybody. We enjoyed it.

General MOSELEY. The other part of multiple squadrons and multiple operating locations is the depth of leadership. I mentioned to you the other day, when we had a chance to chat, that we have about 400 aircraft deployed into CENTCOM's area of responsibility. So, we have three-plus wings of hardware deployed, but we have five wing's worth of leadership deployed, because you need wing commanders, group commanders, command sergeant majors, you need first sergeants, you need all of that. So, multiple squadrons in multiple locations give us depth so that we can deploy the airplane and fight with it. So, sir, that's what we are attempting to get our arms around.

Chairman WARNER. All right, and I thank you very much.

General MOSELEY. Yes, sir.

Chairman WARNER. It's helpful to get your perspective. I really strongly support the decisions of the Secretaries and Chiefs of Staff of our military, because they're trying to do what's right with a national perspective. As proud as I am to represent the great State of Virginia, which has enormous spectrum of bases and people, I have to continuously remind my constituents, I have an overall obligation to the entirety of our force structure, wherever they are in the United States, and indeed, in the world. We had to go through somewhat of a discouraging development on carriers, but it was imperative that the Chief of Naval Operations be given the flexibility, as you say, to use his assets. I assure you, Mr. Secretary, I will look very carefully at the statutory requirements about the retention of aircraft, which, in your professional and managerial judgment, should be lifted. I thank you for making that request.

Lastly, the famous QDR. As required by law, every 4 years the Secretary of Defense will conduct a comprehensive examination of our National Defense Strategy and Defense Program. Can you provide us with your assessment of both the process and the results of that? Because I'm anxious to determine how soon we'll need another one of these QDRs.

Secretary WYNNE. Sir, from my perspective—and I would like to offer this as my perspective—this QDR was naturally colored by the engagement that we're in. This is a long war. We recognize that strategies are supposed to look out 20–25 years. I think it is difficult to raise your eyes when you're in an engagement where soldiers are dying, and you're reaching deep into your technology toolkit. I think the QDR did a marvelous job of trying to balance, in the force spectra that they did—how do you take your resources and allocate them across that force spectra. They know that there's still a deterrent factor to the United States Air Force and to the United States military, in general. They know that they can get more synergy out of a joint force than they can out of a single force. They are pushing us in that direction, which I think is the right direction to go to. I'm doing it, if you will, with the Total Force Integration. There is no reason that I should shrink from doing it with my colleagues in the Navy and in the Army. In fact, what we're seeing is, with the allocation of the sniper pod and the viper pod and some of the TARS that you're flying, all of a sudden I get to see, and I get to have the ground commander see, with the re-

motely operated video enhanced receiver system, exactly what we're doing. This kind of synergism is brought about by the engagement and the inventiveness of the soldiers and airmen that are on the ground.

So, this QDR took a good, long perspective. I think one thing that I really appreciated is, it finally recognized, if you will, over the grand spectrum of things, some pressures in the bio area, and that we need to look at this weapons of mass destruction (WMD) issue, and not just think that someone else is doing it. The fact of Katrina and Rita, as it came upon us, was duplicative, if you will, of multiple WMD attacks. I remember somebody referring to that it was the entirety of England and Ireland and Scotland all moving to Europe at the same time. That's how large the land mass was, and the migration required in this country of ours.

So, it told us a lot of about making sure that we do not ignore those kinds of things and I think it really emphasized some of the aspects of the integration of the National Guard. The integration of that and some of the lessons learned worked their way into the QDR.

So, I'm quite proud of it. I'm quite proud of the result that came out, and I will give you my endorsement.

Chairman WARNER. Thank you very much.

Chief, from the perspective of the uniformed side?

General MOSELEY. Sir, bottom line, upfront, I endorse it. We spent a lot of time wrestling and discussing and debating. There was a little shouting or throwing of objects, but at the end of the day, I would offer to you that this is a product of jointness, and it's a product of looking at strategic partners. Some of the things that I believe you see that are evident is a much closer partnership between myself and the Chief of Naval Operations, and projection with naval and air assets on a global scale, our ability to support land activities, but also our ability to conduct unique air and space activities partnered with the Navy, or unique maritime activities partnered with the Air Force. You see an increase in special operations business. You see an increase in unmanned vehicles, which is a direct outcome. You also see an emphasis on long-range strike, with the desire to move to an airplane or a capability by 2018. You also see reinforcements of tactical air and fifth-generation capabilities that require the technologies to maintain these edges out there in an uncertain world, which brings us back to the F–22 and the F–35 series that we partner with the Department of the Navy on, and our very important partners in the international market.

Chairman WARNER. Thank you very much.

Gentlemen, we had an extraordinarily successful hearing, not the least of which is to have the introduction of these four distinguished airmen. Thank you, airmen, for coming here today, and for your service.

The hearing is now adjourned.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JOHN MCCAIN

ACQUISITION/AWARD AND INCENTIVE FEES

1. Senator MCCAIN. Secretary Wynne, according to the Government Accountability Office (GAO) the cost of the F–22's development has increased by over $10 billion

since it began, the program has been delayed by over 2 years, and the cost of each aircraft has increased. At the same time the Department of Defense (DOD) has paid the contractor over 90 percent of the available award fees or almost $850 million. Those award fee numbers would lead someone to believe that this is a very successful program. How do we hold contractors accountable when we give them incentive fees for non-performance or award fees for just doing their job, regardless of the quality of the work they produce?

Secretary WYNNE. While award fee arrangements should be structured to motivate excellent contract performance, award fees must be commensurate with contractor performance over a range from satisfactory to excellent performance. Clearly, satisfactory performance should earn considerably less than excellent performance, otherwise the motivation to achieve excellence is negated. However, though base fees are typically limited to no more than 3 percent of target cost Defense Federal Acquisition Regulations ((DFARs) 216.405–2), on future contracts and to the extent current contracts can be adjusted, I will expect award fee recommendations to reward only realized superior performance leading to successful end-item delivery or performance. Performance that is less than satisfactory is not entitled to any award fee. The Office of the Secretary of Defense (OSD) recently issued a policy memo dated March 29, 2006, reiterating the fact that award fees need to be directly linked to achieving desired program outcomes.

With respect to cost, the price of the F–22 has decreased from Lot 2 to Lot 3 to Lot 4 to Lot 5 by 16 percent, 11 percent, and 13 percent respectively.

2. Senator MCCAIN. Secretary Wynne, what changes do you have in store given the GAO findings?

Secretary WYNNE. Prior to the issuance of the GAO report the Secretary of the Air Force, Acquisition (SAF/AQ) chartered a transformation initiative group (TIG) under the auspices of the Air Force Acquisition Transformation Action Council to research existing acquisition programs and provide a comparative analysis of performance reflected in award fee, contractor performance assessment report (CPAR), and the cost, schedule, performance reports for each program. The TIG was to determine how well the three separate reports tell the same story and determine where changes to Air Force policy and training are needed. Due to the efforts, which were recently completed, the Air Force is developing a "Back-to-Basics" campaign, with one of the tenets to re-emphasize the Federal Acquisition Regulations (FAR) preference for objective incentive arrangements and to address the Air Force's cultural aspects of using award fees. I issued (April 4, 2006) a contract incentive policy memo emphasizing a cultural change through five criteria:

1. Incentives must not emphasize cost, schedule, and technical performance as they relate to program outcomes and successful end-item delivery or performance.

2. When implementing incentive type contracts, we should initially focus on incentives based wholly on objectively verifiable criteria.

3. Award fee contracts, when used, must be structured to motivate superior contractor performance and then award earned fee only for realized successful performance.

4. Award fee contracts should be structured to include a base fee as well as a combination of objective (performance related) and, as appropriate, subjective criteria.

5. On future contracts and to the extent current contracts can be adjusted, I will expect award fee recommendations to reward only realized superior performance leading to successful end item delivery or performance. The proper combination of these criteria will work to ensure contractor emphasis on program success and to provide the program manager the flexibility required to incentivize performance.

3. Senator MCCAIN. Secretary Wynne, the same GAO study highlighted the serious problem of program rebaselining—in the case of the F–22, 14 times. This rebaselining obscures the true cost of the program and results in a program avoiding a Nunn-McCurdy violation. In the 2006 Defense Authorization Law, Congress instructed the Pentagon to report on every program that costs at least 50 percent more than initial projections. The provision was designed to tie programs to their original cost estimates. For example, the C–130J originally cost $33 million a copy but it now costs over $66 million a copy. How do you plan to implement this new amendment with regard to Nunn-McCurdy violations?

Secretary WYNNE. Many times the program is rebaselined due to funding constraints, not performance. This occurred a lot in the 20-year F–22 program, this schedule stretch out then drives cost. This is, however, not always the case, and the

C–13J is a good example. Actual implementation over the long-term is straightforward, we will expand on existing processes. For Major Defense Acquisition Programs (MDAPs), we currently compare the program manager's current estimate each quarter, and in conjunction with annual selected acquisition reports (SARs) to the acquisition program baseline (APB) to determine if the program has breached the Nunn-McCurdy unit cost thresholds. We will add a comparison against the "original baseline estimate" to this analysis. We will be analyzing MDAPs each quarter to determine if there is significant or critical cost growth against both the APB and the "original baseline estimate" using essentially the same procedures we have used in the past to evaluate unit cost against the APB.

In the near-term, we have determined the status of programs against their "original estimate" based on the fiscal year 2007 President's budget submission. The fiscal year 2007 President's budget was essentially complete on January 6, 2006, when the changes to Nunn-McCurdy were enacted. Programs exceeding the "original baseline estimate" by more than 50 percent will reset their "original baseline estimate" to the cost baseline in their current APB, and the Secretary of Defense will provide a report to Congress on these programs per changes in the National Defense Authorization Act (NDAA) for Fiscal Year 2006. Programs with growth between 30 percent and 50 percent will include an expanded section 12 in their annual SAR.

4. Senator MCCAIN. Secretary Wynne, what plans do you have in place to ensure programs are held to their original baseline figures instead of allowing the current practice of rebaselining?

Secretary WYNNE. We intend to put more emphasis into the execution of our programs so it is only rarely necessary to rebaseline a program, but rebaselining is occasionally needed to effectively manage and oversee our efforts. In our "Back-to-Basics" initiative we are reemphasizing basic acquisition management principles as we stand up new programs, and rebaseline old ones, to establish viable parameters for cost, schedule, and technical performance, further minimizing the need to rebaseline in the future. On those rare occasions where it is necessary, any rebaselining will be done within the rules, as has always been the case. We have never taken the need to rebaseline lightly, but recognize the need for improvement in this area.

5. Senator MCCAIN. Secretary Wynne, at one time the Air Force was going to purchase 750 F–22s. Now, at $320 million a copy for procurement and development costs, it can afford only 180. Once the F–22 was an air-to-air fighter then it was a multi-role aircraft and now the first spiral of the production aircraft is essentially an air-to-air fighter. The Air Force loses credibility with contractors when requirements and numbers of units to be purchased change and subsequently we then have to pay a higher price for equipment. How do you plan to improve this requirements process?

Secretary WYNNE. The Air Force requirements process delivers to the combatant commanders the capabilities needed to protect America's interests today and in the future. The initial F–22 requirement of 750 aircraft was based on the force structure at that time. The Defense Planning Guidance directed study in 2002 determined that 381 F–22s were the minimum number of F–22s needed to support the National Defense Strategy with acceptable risk. The fiscal year 2007 President's budget procurement of 183 aircraft frees fiscal year 2007 funding for other critical Department priorities, extends aircraft production 1 year, and provides decision opportunity for more aircraft in future years. We must execute our responsibilities in the most efficient way, thereby optimizing support to the warfighter while meeting taxpayer expectations. Rising costs, like those for health care and fuel, oblige reducing our infrastructure and effectively managing our fleet. Costs continue to grow to maintain equipment we are legislatively restricted from retiring. We do not anticipate challenges getting any easier and we are conducting actions to balance Air Force allocation of resources, including:

1) re-examining acquisition programs with respect to their impact on furthering the Air Force mission and national defense;
2) husbanding Air Force personnel resources with our total force; and
3) analyzing every aspect of operations and maintenance costs.

The Air Force is focused on excellence in warfighting over the long-term. We recognize resources will be constrained for the foreseeable future and are rebalancing the Air Force's priorities and our long-term commitment to recapitalize, conduct smart operations, and size the force structure to meet our responsibilities.

6. Senator MCCAIN. Secretary Wynne, per the DOD Award Fee Guide, ". . . an award fee is an amount of money which is added to a contract and which a con-

tractor may earn in whole or in part during performance and that is sufficient to provide motivation for excellence in such areas as quality, timeliness, technical ingenuity, and cost-effective management." A contractor starts with 0 percent of an incentive fee and works for the evaluated fee for each evaluation period. The contractor does not start with 100 percent and get portions deducted along the way. A fee determining officer (FDO) ensures the amount and percentage of an incentive fee earned accurately reflects the contractor's performance. The incentive fee guide clearly delineates the roles and responsibilities of the FDO and defines how an incentive fee plan can be developed to map out the process of how a contractor should be evaluated.

The GAO has shown through their recent study that from their sample of 597 contracts the median percentage of available incentive fees paid was 90 percent. This study clearly demonstrates that not only is the incentive fee guide not being followed but in some cases it is being blatantly disregarded. Why are our FDOs not using their training and the published guidance when determining award fees and what do you plan to do to rectify this situation?

Secretary WYNNE. On future contracts and to the extent current contracts can be adjusted, I will expect award fee recommendations to reward only realized superior performance leading to successful end-item delivery or performance.

Award-fee arrangements are appropriate when, for the most part key elements of performance cannot be wholly objectively/quantitatively measured and areas of importance may shift over the course of the contract. FDOs review the performance of the contractor and determine independently the amount of award fee the contractor should receive. The award fee evaluation team includes the FDO, an award fee review board, and performance monitors—the FDO makes the final determination regarding the award fee earned during the evaluation period and ensures that award fee process integrity is maintained. The amount of award fee paid on any particular contract is dependent upon the award fee criteria established in the award fee plan for that contract and the judgment of the FDO with regard to how the contractor performed against the stated award fee criteria.

In general, the FDOs are using their training and following their award fee guides. However, the guides may be placing too much emphasis on subjectivity, which can make performance measurement less than optimal. New OSD and Air Force guidance has been issued to provide support of the GAO report. This guidance should include the need for award fee plans containing objective measurable criteria when possible, which when combined with the subjective judgment of the FDO should improve the correlation between contractor performance and award fee earned.

C–130J

7. Senator MCCAIN. General Moseley, in April 2005 your predecessor, General Jumper, promised that the C–130J contract would be converted from a FAR part 12 commercial contract to a FAR part 15 military contract thus providing the proper oversight required for a program of this magnitude. Two key pieces of legislation were passed concerning the procurement of the C–130J:

SEC. 135. PROCUREMENT OF C–130J/KC–130J AIRCRAFT AFTER FISCAL YEAR 2005.

> Any C–130J/KC–130J aircraft procured after fiscal year 2005 (including C–130J/KC–130J aircraft procured through a multiyear contract continuing in force from a fiscal year before fiscal year 2006) shall be procured through a contract under part 15 of the FAR, relating to acquisition of items by negotiated contract (48 C.F.R. 15.000 et seq.), rather than through a contract under part 12 of the FAR, relating to acquisition of commercial items (48 C.F.R. 12.000 et seq.).

SEC. 803. REQUIREMENT FOR DETERMINATION BY SECRETARY OF DEFENSE AND NOTIFICATION TO CONGRESS BEFORE PROCUREMENT OF MAJOR WEAPON SYSTEMS AS COMMERCIAL ITEMS.

In fact, the contract is still not converted. Congress was absolutely clear in their intent to convert the contract. How could this have happened?

General MOSELEY. The Air Force executed an undefinitized contractual action (DCA) with Lockheed Martin on February 10, 2006 to convert the multiyear procurement contract for the C–130J and KC–130J aircraft in program years 2006 through 2008. The DCA incorporates the standard terms and conditions applicable to a contract negotiated under FAR Part 15. Among these are clauses that subject the contractor to the requirements of the Truth in Negotiations Act. The Air Force

expects that the negotiation of final, revised prices for program years 2006 through 2008 under the multiyear contract will be complete by October 2006.

PREDATOR UNMANNED AERIAL VEHICLES

8. Senator MCCAIN. General Moseley, in November 2004 the Secretary of the Air Force (SECAF), the Chief of Staff of the Air Force (CSAF), and you sought out both Texas and Arizona because you wanted to put Predator unmanned aerial vehicle (UAV) units into these States. Immediately thereafter, the SECAF and CSAF tasked the Arizona Air National Guard with standing up a Predator squadron which would include the proper plus-up in manning as well as a ground control station and other essential equipment to execute its mission. Given the flying conditions, the quality of life, and the outstanding recruiting record of the Arizona Air National Guard, it made sense to stand up a unit in Arizona. In the year that followed, two troubling events took place:

1. October 2005: National Guard Bureau delays the initial operational capability (IOC) by 6 months; and
2. December 2005: Lieutenant General Blum tells Governor Nepolitano that the AZ Predator unit will be "delayed indefinitely."

Lieutenant General Blum has stated on several occasions that he is willing to move force structure from States that cannot recruit to support their assigned strength, to States that can. Arizona has one of the best recruiting records in the country. Will Arizona be given the proper manning, a ground control station, and other essential equipment in order to properly stand up the Predator unit by June 2006 as was promised in November 2004?

General MOSELEY. Our Total Force Integration Office has been working closely with the National Guard Bureau and your adjutant general to solve manpower and programming issues. This will allow us to move forward on positioning the Predator mission in Arizona. We are expediting the process and have agreed upon an approximate IOC date of second quarter, fiscal year 2007. Specific time lines are being determined for the flow of equipment, training, and facilities so an exact lay-down plan can be provided. We continue to team with the Arizona Air National Guard to develop their unit manning document and identify the manpower positions needed to achieve IOC. Due to initial delays, our ability to meet the original IOC dates has been hampered, but we are confident the plans are now back on track to meet an IOC goal of second quarter, fiscal year 2007.

ANALYSIS OF ALTERNATIVES GUIDANCE FOR KC–135 RECAPITALIZATION

9. Senator MCCAIN. Secretary Wynne and General Moseley, on January 26, 2006 the OSD and the RAND Corporation presented the draft Analysis of Alternatives (AoA) for KC–135 recapitalization in a staff briefing to the Senate Armed Services Committee. Generally, the report seems sound. However, the report appears flawed inasmuch as it does not consider three options that, according to RAND, were eliminated because of Air Force "guidance" which applied an arbitrary 20 percent rule to the tanker recapitalization effort. The instruction was not in either the February 24 or May 25, 2004 guidance you directed the SECAF to follow when you held the position of Acting Under Secretary of Defense for Acquisition, Technology, and Logistics.

This arbitrary restriction harms other cost-effective and less capital intensive solutions which have been recommended as possible alternatives by other expert organizations such as GAO, Congressional Research Service, Defense Science Board, National Defense University, etc. Specifically, the rule prescribed that 20 percent of the aerial refueling tanker fleet would have to be recapitalized out of 545 tankers—approximately 110 tankers. The three areas that were dismissed as suitable efforts for recapitalization were:

1. Re-engining KC–135E tanker aircraft—dismissed because the Air Force says that there are only 73 KC–135Es that could be re-engined (less than 110 tanker aircraft);
2. Purchasing and converting used commercial aircraft and converting them to tankers—dismissed because RAND says there are only 75–100 used commercial aircraft that could be considered to be converted to tankers (less than 110 tanker aircraft); and
3. Commercial air-refueling delivery. This flaw is notable where the Navy has, for some time, developed a commercial tanker capability. Such an option might be particularly suitable in the context of fighter Civil Air Patrols

over major U.S. and foreign metropolitan cities and other worldwide air refueling tanker support—RAND noted that there are only three "Omega Air" tankers growing to 25 in 3 years (less than 110 tanker aircraft).

Secretary Wynne, did you give additional guidance to exclude these three options in the so-called RAND 20 percent rule?

General Moseley, as the former chairman of the Air Force Steering Group for Project Air Force which provides resources and assigns projects to RAND, did you give additional guidance to exclude these three options in the so-called RAND 20 percent rule?

Secretary WYNNE and General MOSELEY. No guidance was given to RAND to exclude these three options.

In answering this question for the record, RAND states, "no such 20 percent rule was applied, either directly or indirectly, in the AoA. None of the three options in the list were dismissed. Each of these options was evaluated on its merits." RAND also states:

1. "Re-engining 73 KC–135E tanker aircraft—This option was analyzed for cost and effectiveness. The result was that it would only have present value cost savings if the re-engined aircraft were operated beyond the late 2030s. If the aircraft were retired before then, there would be a net present-value loss due to re-engining because the sustainment cost savings would not amortize the capital cost. Only a small effectiveness increase was associated with this option."

2. "Purchasing and converting used commercial aircraft and converting them to tankers—The cost-effectiveness of this option was analyzed, and the result was that an aerial refueling fleet that included converted used aircraft was less cost-effective than one that only included new aircraft. However, it was noted that the cost-effectiveness penalty was not great enough to exclude this option from any future competition. It was further noted that careful and detailed assessment of the technical condition of the used aircraft candidates would be critical in this case."

3. "Commercial air-refueling delivery—The cost-effectiveness of this option for meeting the requirements on which the AoA was based was analyzed, and it was found that this option was less cost-effective than organic air-refueling delivery, and resulted in some increased operational risk. All of the requirements in the AoA, including support of homeland defense patrols, were wartime requirements, which required advanced electronics and defensive systems. The Omega commercial tanker now operating is not equipped to meet these requirements. The Omega tanker is additive to the KC–135 fleet, not a substitute for it. The analysis of this option was done in the AoA for a commercial contribution of 100 tankers, which was representative of the arrangements being proposed by private industry in 2004. However, the result is not dependent on the number of tankers. Since completion of the AoA, RAND has done additional analysis on this option at a level of 20 tankers, and at a reduced capability level per tanker. The results stand in that case as well."

10. Senator MCCAIN. Secretary Wynne, would you please look into this matter and consider these three less capital intensive alternatives as additional ways to recapitalize the tanker fleet as your previous guidance directed? Please provide the committee with your conclusions.

Secretary WYNNE. I have directed the Air Force to include these three alternatives, referenced in your previous question, in the request for information to industry that will be released shortly after the Acquisition Decision Memorandum is issued by Under Secretary of Defense (Acquisition, Technology, and Logistics) (USD(AT&L)).

JOINT STRIKE FIGHTER ALTERNATE ENGINE PROGRAM

11. Senator MCCAIN. Secretary Wynne, on February 16, 2006, I wrote Secretary Rumsfeld regarding the Joint Strike Fighter (JSF) Alternate Engine Program. In my letter to him I requested that "[he] please produce a complete copy of the analysis supporting the Department of Defense's decision to terminate the F–136 JSF alternate engine program in the Department's fiscal year 2007 budget request."

On February 27, 2006, Senators Warner, Levin, and I received a response from Secretary England which I regret was unresponsive. In Secretary England's response he attached briefing slides titled "JSF Alternate Engine Decision". These slides provide superficial background and historic information, but fall short of the

complete copy of the analysis that was requested in my letter. Would you please inform the Department that we are dissatisfied with the response that was sent and we reiterate our original request that the information be produced as to the complete analysis supporting the decision to terminate the F–136 alternate engine program?

Secretary WYNNE. To our knowledge, Secretary England's office has provided you all of the information available regarding the decision to cancel the F136 alternative engine program.

QUESTION SUBMITTED BY SENATOR JAMES M. INHOFE

COMBAT FLIGHT INSPECTION AIRCRAFT

12. Senator INHOFE. Secretary Wynne and General Moseley, we have received the Air Force's 2007 unfunded priority list (UPL) and once again see the Combat Flight Inspection (CFIN) aircraft, which is used to calibrate navigational aids for safe night or adverse weather instrumented flight, is listed as a budget shortfall. The rapidly aging C–29 Hawkers suffer from operational shortfalls, which limit the Air Force's ability to provide rapid and flexible response to critical mission taskings, including support of vital military operations in Iraq and Afghanistan. I am very concerned that this situation may be creating undue risks in safe flight operations. Therefore, notwithstanding any congressional action on the UPL, what is the Air Force's plan to meet its commitment to the Federal Aviation Administration (FAA) regarding the acquisition of the replacement aircraft for the C–29 Hawker to support these critical worldwide mobility missions?

Secretary WYNNE and General MOSELEY. The Air Force agrees the C–29 fleet is no longer cost effective or operationally efficient to provide combat flight inspection, particularly to support global war on terrorism operations. As part of the July 2001 Air Force/FAA memorandum of agreement, both organizations committed to replacing six aging C–29 Hawkers with six Challenger 600-series aircraft during the transition period between 2002 and 2010. More specifically, the Air Force agreed to purchase one Challenger aircraft. In addition to placing the CFIN aircraft on the Air Force's fiscal year 2007 UPL, the Air Force Flight Standards Agency is planning to submit the CFIN requirement for consideration in the fiscal year 2008 Air Force budget process.

QUESTIONS SUBMITTED BY SENATOR JOHN CORNYN

INFORMATION ASSURANCE

13. Senator CORNYN. Secretary Wynne and General Moseley, protection of military networks, information, and communications is critical to our safety and operations. You recently updated the Air Force mission to include cyberspace as an operational environment. What are the Air Force's primary technical, organizational, and policy challenges in the area of cybersecurity?

Secretary WYNNE and General MOSELEY. Securing cyberspace means successfully defending and operating our part of the Global Information Grid. Most of our network defense today is reactive: we find and eventually block intruders after they're already on our network. We are trying to get more proactive by identifying and tracking intruders before they get into our networks. The long pole in the tent is attribution: figuring out who the culprit is.

Both the technical and policy challenges revolve around attribution because of the anonymity, flexibility, and creativity that cyberspace affords the intruder. Technology is dynamic—new holes in our networks can be found, shared, and exploited quickly by intruders who are able to move fast and cover their tracks. U.S. laws and policies that properly protect Americans' right to privacy also limit and slow our ability to pursue, identify, monitor, and block the culprits. Organizational challenges relate to unity of control over the operation and configuration of our network. Both the DOD and the Air Force have vastly improved unity of command over our portion of global network, and those efforts continue.

14. Senator CORNYN. Secretary Wynne and General Moseley, have you completed an inventory of critical Air Force information systems that require protection?

Secretary WYNNE and General MOSELEY. Yes, and this information was included in last year's Federal Information Security Management Act of 2002 (FISMA) report to Congress and will be included in this year's report. The Air Force conducts annual inventories of critical information systems. The Air Force reported 50 mission

critical information systems in the fiscal year 2005 FISMA report with 44 fully accredited (88 percent). Currently the Air Force has 60 mission critical systems in the inventory with 54 systems fully accredited (90 percent). The remaining six mission critical systems have an interim approval to operate and a documented plan of action and milestones to obtain full accreditation.

15. Senator CORNYN. Secretary Wynne and General Moseley, on what strategic documents do you rely for guidance on securing the Air Force's information systems and networks?

Secretary WYNNE and General MOSELEY. There are various strategic documents that provide us guidance on protecting our information systems and networks. These documents range from Presidential Executive Orders, DOD and joint guidance, to Air Force level guidance. Examples of these are:

- Public law 107–347 (i.e., the E-government act that contains the Federal Information Security Management Act)
- U.S.C. titles 10 ("Man, Train, and Equip"), 18 (Crimes and Criminal Procedure), and 50 (National Security and accountability for intelligence activities)
- Executive Order 12333 (Intelligence Activities (IA))
- Homeland Security Presidential Directive-7 (HSPD–7), Subject: Critical Infrastructure Identification, Prioritization, and Protection, December 17, 2003
- DOD 8500 policy series (i.e., DOD IA policies which include IA controls) The National Strategy to Secure Cyberspace
- An implementing component of The National Strategy for Homeland Security
- DOD and Air Force Intelligence Oversight policy
- Joint Publication 3–13, Information Operations
- Global Information Grid (GIG) Information Assurance Architecture v1.0 (through 2008)
- Air Force Doctrine Document 2–5, Information Operations

TEST AND EVALUATION

16. Senator CORNYN. Secretary Wynne and General Moseley, the recent Defense Acquisition Performance Assessment (DAPA) recommends creation of an "operationally acceptable" evaluation testing category for systems whose performance is not fully adequate to meet criteria established by the Director of Operational Test and Evaluation (DOT&E) but are determined to meet an operationally useful capability by combatant commanders. What are your thoughts on this recommendation?

Secretary WYNNE and General MOSELEY. The Air Force agrees with the creation of an "operationally acceptable" evaluation testing category. Programs can benefit from a rating system that allows for other than a pass/fail rating.

17. Senator CORNYN. Secretary Wynne and General Moseley, in an era of rapid fielding initiatives and evolutionary acquisition, what are the appropriate roles for developmental testing?

Secretary WYNNE and General MOSELEY. Developmental Test and Evaluation (DT&E) will play the same roles as in the past, but we envision developmental testers collaborating much closer and more seamlessly with our contractor testers, users, and operational testers. We must give our developmental testers the right infrastructure and instrumentation, while demanding that all testing be structured as an efficient continuum. All test data will be shared among program stakeholders to eliminate duplication of effort. Last, we need to retain and train our testers to be the best in the Nation. We have made and continue to make significant changes in Air Force test and evaluation policy to achieve these goals.

18. Senator CORNYN. Secretary Wynne and General Moseley, in an era of rapid fielding initiatives and evolutionary acquisition, what are the appropriate roles for operational testing?

Secretary WYNNE and General MOSELEY. Operational Test and Evaluation (OT&E) will play the same roles as in the past, but will be more dynamically involved at the earliest, initial stages of system development. Working through our integrated test teams, operational testers will stay involved by providing operationally relevant test data and feedback throughout the program to help ensure the warfighters' capabilities-based requirements are addressed. They will collaborate closely with contractor and developmental testers, and have access to prior test data

to help eliminate duplicative testing. However, operational testers must still independently evaluate system operational effectiveness and suitability as Title 10 requires.

19. Senator CORNYN. Secretary Wynne and General Moseley, what standards for technical maturity should be used for the standard test and evaluation process?

Secretary WYNNE and General MOSELEY. The Air Force has a number of tools available for assessing technical maturity at key points in system development, one of which is the National Aeronautics and Space Administration-developed technology readiness levels (TRLs). TRLs are measured on a scale of one to nine, with level 7 being the demonstration of a technology in an operational environment. This level of technological maturity affords a sufficiently low risk for starting a product development program. As the system matures, the Air Force has another process called Certification of Readiness for Dedicated OT&E. This process requires production-representative articles of sufficient maturity and with a stable configuration to be available before operational testing may start. These tools cover the early, middle, and later phases of system development.

20. Senator CORNYN. Secretary Wynne and General Moseley, what standards for technical maturity should be used for the accelerated test and evaluation process?

Secretary WYNNE and General MOSELEY. We believe the same tools as previously discussed will be used in any future (accelerated) test and evaluation process. Whatever tools we use, they must have two basic characteristics: 1) they must give us clear indications at key decision points of a technology's readiness to enter each product development phase; and 2) they must remain focused on the most current, realistic operational environment in which that system must eventually operate. Our bottom line—the final test—must always ensure each new system is combat ready and capable of performing the missions for which it was designed.

TECHNICAL EVALUATIONS OF PRE-ACQUISITION PROGRAMS

21. Senator CORNYN. Secretary Wynne and General Moseley, we are aware of the new Air Force effort to provide a distinct and separate technical voice at the table during service acquisition executive and milestone reviews. Could you comment on the impact of this initiative so far?

Secretary WYNNE and General MOSELEY. We are early in the process of institutionalizing this initiative, but we believe it is having a positive impact. With our technical staff looking at the programs at Air Force Acquisition Strategy Panels and Air Force Review Boards (e.g., Air Force milestone reviews), program systems engineering and technical approaches are getting a more stringent evaluation.

22. Senator CORNYN. Secretary Wynne and General Moseley, have milestone review decisions been altered due to technical risk advice provided earlier in the process through this initiative?

Secretary WYNNE and General MOSELEY. The Air Force Acquisition Strategy Panel and Air Force Review Board processes were revised in May and August 2005, respectively, to include the Deputy Assistant Secretary of the Air Force for Science, Technology and Engineering as the technical voice. Of the reviews to date, this technical voice has made an impact to the acquisition strategy for the Small Diameter Bomb Increment II. However, we expect that a major impact of this initiative will be in how a program is managed and reviewed at the program executive officer level prior to an Air Force acquisition review or decision.

23. Senator CORNYN. Secretary Wynne and General Moseley, what efforts is the Air Force pursuing to provide sufficient personnel and resources for pre-acquisition systems engineering and an increased technical role in acquisition strategies?

Secretary WYNNE and General MOSELEY. We are refocusing our internal workforce to better address pre-acquisition systems engineering and include a technical voice in program milestone and acquisition strategy reviews. To obtain the personnel needed for milestone and acquisition strategy reviews, the Deputy Assistant Secretary of the Air Force for Science, Technology, and Engineering (SAF/AQR) has reorganized duties and shifted personnel within the organization to set up a chief engineer group. Additionally, SAF/AQR augments this group in several ways. SAF/AQR Science and Technology Program Element Monitors (PEMs) are utilized to review a major defense acquisition program's technology readiness. These PEMs provide valuable experience in these reviews since they already support technology readiness assessments for programs at milestones B and C. Three career-broadening

positions have been established to bring in additional product line engineering expertise from Air Force product and logistics centers. In addition, SAF/AQR has the ability to reach back and tap into the technical expertise of Air Force scientists and engineers located in both Air Force Space Command and Air Force Materiel Command, to include the Air Force Research Laboratory.

Finally, we are looking at options for initiating a pilot program to improve the pre-acquisition systems engineering process. This pilot program would utilize existing personnel and would establish a set of standard systems engineering process steps that could be tailored for application across the Air Force. The pilot program would document the systems engineering processes used during concept development to generate concepts for the AoA and the systems engineer processes used to mature the selected concept from the AoA and mature it to a milestone A decision.

C–130 AVIONICS MODERNIZATION

24. Senator CORNYN. Secretary Wynne and General Moseley, what is the Air Force's plan for the Avionics Modernization Program (AMP) for the C–130 fleet?

Secretary WYNNE and General MOSELEY. The Air Force program of record modifies 434 C/AC/EC/HC/LC/MC–130s with AMP in order to meet the communication navigation surveillance/air traffic management (CNS/ATM) and Air Force navigation safety requirements. The first AMP-modified C–130H is currently in ground test with first flight planned for August 30, 2006. Installation of the first production kits is scheduled to begin in fiscal year 2008 and continue until fiscal year 2017. An updated service cost estimate is scheduled to be completed by August 2006. This plan, of course, will be reassessed when the updated costs and schedules are completed, and resources available considered.

25. Senator CORNYN. Secretary Wynne and General Moseley, what is the estimated cost per aircraft?

Secretary WYNNE and General MOSELEY. Because of the wide variance in complexity across the C–130 fleet (i.e., C–130H versus an AC–130U Gunship), there is a range of estimated costs: $8–12 million per aircraft depending upon its model. This cost is preliminary since the Air Force now plans to compete kit production and installations following the low rate initial production (LRIP) run. Also, these costs are being evaluated as part of the C–130 AMP service cost estimate to be completed in the fall of 2006.

26. Senator CORNYN. Secretary Wynne and General Moseley, how many C–130Es will undergo the modernization program?

Secretary WYNNE and General MOSELEY. No Combat Delivery C–130Es are programmed to receive the AMP modifications.

27. Senator CORNYN. Secretary Wynne and General Moseley, what is the timetable for this work to be done?

Secretary WYNNE and General MOSELEY. First flight is planned for August 30, 2006, first production kits are programmed to be procured in fiscal year 2008 with the last installation in fiscal year 2017.

28. Senator CORNYN. Secretary Wynne and General Moseley, how many C–130H1s will undergo the modernization program?

Secretary WYNNE and General MOSELEY. The current plan has 47 C–130H1s programmed to be modified under the AMP. This program is undergoing a cost review scheduled to be completed in August 2006.

29. Senator CORNYN. Secretary Wynne and General Moseley, what is the timetable for this work to be done?

Secretary WYNNE and General MOSELEY. First installation on the C–130H1 is programmed to be in fiscal year 2015.

C–130 WING BOX REPAIR

30. Senator CORNYN. Secretary Wynne and General Moseley, what is the Air Force's plan for repairing the wing boxes of the C–130 fleet?

Secretary WYNNE and General MOSELEY. The fiscal year 2007 President's budget provides sufficient funding to meet our immediate center wing box (CWB) replacement needs while positioning us to meet our out-year needs prior to aircraft being

placed on operational restriction. Additional CWBs will be purchased as needed to ensure the fleet remains healthy.

In addition, we are implementing an inspect and repair program for the C–130H1. This program enables us to repair restricted aircraft and operate them at full operational capacity until they reach the grounding point of 45,000 equivalent base hours. This short-term fix provides the time needed to replace the CWBs on these aircraft before they are grounded. Ultimately, 47 C–130H1 CWBs are programmed to be replaced.

31. Senator CORNYN. Secretary Wynne and General Moseley, what is the estimated repair cost per aircraft?

Secretary WYNNE and General MOSELEY. The estimated cost to procure and install a new CWB is $9 million per aircraft. The estimated cost to inspect and repair an original CWB is $800,000.

32. Senator CORNYN. Secretary Wynne and General Moseley, how many C–130Es will undergo wing box repairs?

Secretary WYNNE and General MOSELEY. We are not planning to replace the CWBs of any C–130Es at this time.

33. Senator CORNYN. Secretary Wynne and General Moseley, what is the timetable for these repairs?

Secretary WYNNE and General MOSELEY. There is no timetable since we are not planning to replace the CWBs on the C–130Es.

34. Senator CORNYN. Secretary Wynne and General Moseley, how many H1s will undergo wing box repairs?

Secretary WYNNE and General MOSELEY. We currently plan to replace 47 CWBs for the C–130H1s.

35. Senator CORNYN. Secretary Wynne and General Moseley, what is the timetable for these repairs?

Secretary WYNNE and General MOSELEY. We will begin our procurement of the C130H1 CWB kits this year. The table below provides, based on the current plan, a year-by-year breakout of the C–130H1 procurements and installations:

C–130H1	Fiscal Year								Total
	2006	2007	2008	2009	2010	2011	2012	2013	
Buy	1	12	14	4	9	7	.....	.....	47
Install	.....	.....	1	9	10	11	9	7	47

36. Senator CORNYN. Secretary Wynne and General Moseley, how many H2s will undergo wing box repairs?

Secretary WYNNE and General MOSELEY. Initially, we plan to procure 26 CWBs for the C–130H2s during fiscal years 2011–2020. We plan to continue the CWB replacement program beyond fiscal year 2020 at a pace to ensure fleet aircraft are not placed on restricted operations.

37. Senator CORNYN. Secretary Wynne and General Moseley, what is the timetable for these repairs?

Secretary WYNNE and General MOSELEY. We plan to begin installation of the C130H2 CWBs in fiscal year 2014. The table below, based on our current plan, provides a year-by-year breakout of the C–130H2 procurements and installations through fiscal year 2020:

C–130H2	Fiscal Year									
	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020
Buy	1	1	1	1	2	2	2	4	6	6
Install	.....	.....	.....	2	1	1	2	2	2	4

38. Senator CORNYN. Secretary Wynne and General Moseley, how many H3s will undergo wing box repairs?

Secretary WYNNE and General MOSELEY. The first phase of this replacement will be from fiscal year 2011–2017. During that time, we plan to procure and install 14 C–130H3 CWBs. We plan to continue the CWB replacement program at a pace to ensure fleet aircraft are not placed on restricted operations.

39. Senator CORNYN. Secretary Wynne and General Moseley, what is the timetable for these repairs?

Secretary WYNNE and General MOSELEY. The table below, based on the current plan, provides a year-by-year breakout of the C–130H3 procurements and installations through fiscal year 2017:

C–130H2	Fiscal Year						
	2011	2012	2013	2014	2015	2016	2017
Buy	1	2	4	4	3	.....	.....
Install	.....	.....	.....	3	4	4	3

C–130 RETIREMENT

40. Senator CORNYN. Secretary Wynne and General Moseley, what is the Air Force plan for retiring C–130s?

Secretary WYNNE/General MOSELEY. The Quadrennial Defense Review (QDR), as informed by the Mobility Capabilities Study (MCS), determined that 395 C–130 equivalent aircraft are sufficient to meet intratheater warfighting needs with a moderate risk level.

As of March 30, 2006, there are 497 combat delivery C–130s in the total Air Force inventory, including 170 C–130E models. Of the 170 C–130Es in the fleet, 29 are currently grounded—21 for CWB cracking issues, and 8 for other reasons. In addition to the 29 grounded C–130Es, 31 more are flown under significant flight restrictions. By the end of fiscal year 2011, 62 C–130Es will be grounded, with an additional 57 aircraft operated under flight restrictions, for a total of 119 aircraft impacted, representing 70 percent of the C–130E fleet.

The C–130 force structure beddown plan includes retirement of all 170 C–130E aircraft. The Air Force plans to retire 141 C–130Es by fiscal year 2011, with the remaining 29 by fiscal year 2014.

The Air Force will meet the 395 C–130 equivalent requirement through a combination of modernized C–130Hs, C–130Js, Joint Cargo Aircraft (JCA), and C–17s operated in an intratheater role.

41. Senator CORNYN. Secretary Wynne and General Moseley, how many C–130Es are to be retired and what is the timetable for retiring C–130Es?

Secretary WYNNE and General MOSELEY. 141 C–130Es will be retired by fiscal year 2011. All 170 C–130Es will be retired by fiscal year 2014. The NDAA for Fiscal Year 2006 prohibited the Air Force from retiring any C–130Es in fiscal year 2006. Therefore, we will retire 51 in fiscal year 2007 (which includes 27 originally programmed to retire in fiscal year 2006, plus 24 programmed to retire in fiscal year 2007). The Air Force will then retire 24 in fiscal year 2008, 24 in fiscal year 2009, 28 in fiscal year 2010, and 14 in fiscal year 2011 (for a total of 141 retired in the Future Years Defense Plan (FYDP)). The remaining 29 aircraft will be retired from fiscal years 2012–2014.

42. Senator CORNYN. Secretary Wynne and General Moseley, how many C–130H1s are to be retired and what is the timetable for retiring these C–130H1s?

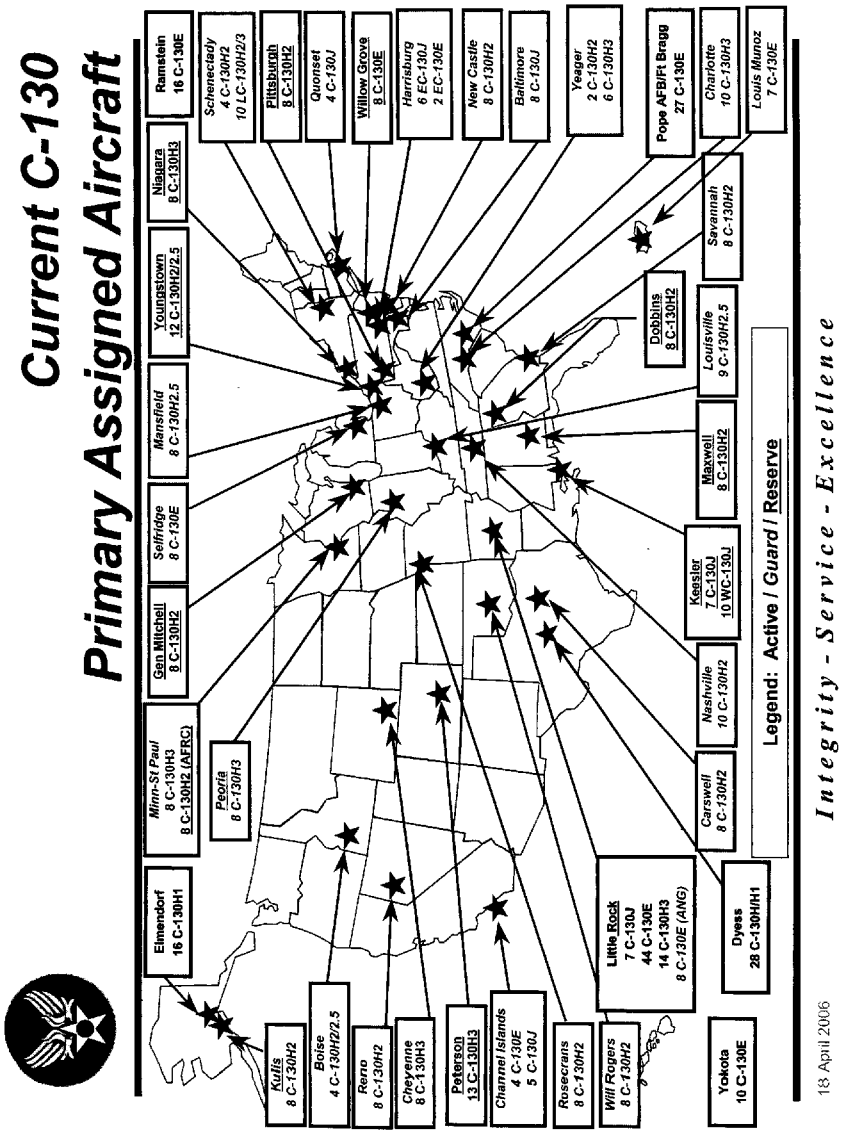
Secretary WYNNE and General MOSELEY. The Air Force has no current plans to retire C–130H1s.

43. Senator CORNYN. Secretary Wynne and General Moseley, how many C–130H2s are to be retired and what is the timetable for retiring these C–130H2s?

Secretary WYNNE and General MOSELEY. The Air Force has no current plans to retire C–130H2s.

44. Senator CORNYN. Secretary Wynne and General Moseley, how many C–130H3s are to be retired and what is the timetable for retiring the C–130H3s?

Secretary WYNNE and General MOSELEY. The Air Force has no current plans to retire C–130H3s.



C–130 BASING

45. Senator CORNYN. Secretary Wynne and General Moseley, what is the present allocation of C–130s among the Active-Duty, Air National Guard, and Air Force Reserve?

Secretary WYNNE and General MOSELEY. Of the 454 primary assigned aircraft (PAA) combat delivery C–130s in the inventory, 165 (36.3 percent) are in the Active Duty, 190 (41.8 percent) are in the Air National Guard, and 99 (21.8 percent—including 10 WC–130Js) are in the Air Force Reserve.

46. Senator CORNYN. Secretary Wynne and General Moseley, please provide the current list of C–130 bases and the number and model of C–130 aircraft at each base.

Secretary WYNNE and General MOSELEY. See attached map detailing current C–130 bases and the number and model of C–130 aircraft at each base.

47. Senator CORNYN. Secretary Wynne and General Moseley, what is the Air Force plan for maintaining C–130s in the Active-Duty Force?

Secretary WYNNE and General MOSELEY. The Air Force regularly evaluates the force structure mix between our Active-Duty, Air National Guard, and Air Force Reserve components. Our current force structure program maintains approximately 36.3 percent of the PAA C–130 combat delivery fleet in the Active-Duty Air Force. We will continue to evaluate our future force mix in the fiscal year 2008 and future budgets.

48. Senator CORNYN. Secretary Wynne and General Moseley, what is the Air Force basing plan for Active Duty C–130s in the next 5 years?

Secretary WYNNE and General MOSELEY. Air Mobility Command (AMC), as C–130 lead command, has the primary responsibility for recommending long-term C–130 force structure adjustments and plans. AMC is developing a long-term Mobility Roadmap now that will be presented to the Air Staff and C–130 user commands for review and comment in the near future. Additionally, the DOD continues to assess requirements for intratheater airlift aircraft, to include the C–130 fleet, the JCA, C–17s operated in an intratheater role, as well as other future options to provide intratheater airlift capability. Analyses such as the MCS and Intratheater Lift Capabilities Study will help guide the Air Force and DOD as we continue to plan and program intratheater airlift capability to best meet warfighter requirements.

49. Senator CORNYN. Secretary Wynne and General Moseley, what is the Air Force basing plan for Active Duty C–130s in the next 10 years?

Secretary WYNNE and General MOSELEY. AMC, as C–130 lead command, has the primary responsibility for recommending long-term C–130 force structure adjustments and plans. AMC is developing a long-term mobility roadmap now that will be presented to the Air Staff and C–130 user commands for review and comment in the near future. Additionally, the DOD continues to assess requirements for intratheater airlift aircraft, to include the C–130 fleet, the JCA, C–17s operated in an intratheater role, as well as other future options to provide intratheater airlift capability. Analyses such as the MCS and Intratheater Lift Capabilities Study will help guide the Air Force and DOD as we continue to plan and program intratheater airlift capability to best meet warfighter requirements.

PURCHASE OF C–130J STRETCH MODEL

50. Senator CORNYN. Secretary Wynne and General Moseley, what is the Air Force plan for continued acquisition of the C–130J stretch model beyond the existing contract?

Secretary WYNNE and General MOSELEY. The Air Force currently does not have any plans to procure C–130Js after the existing C–130J multiyear procurement ends in fiscal year 2008 and as a result the Air Force will have 79 C–130Js in the inventory. It should be noted, however, that the Air Force, U.S. Marine Corps, and U.S. Southern Command (SOCOM) are all currently considering requirements that could be competed in the future for aircraft in this type of aircraft class.

51. Senator CORNYN. Secretary Wynne and General Moseley, if the Air Force plans to purchase additional C–130J stretch aircraft, will these aircraft be placed in the Active-Duty Force, the Guard, or the Air Force Reserve?

Secretary WYNNE and General MOSELEY. The current Air Force C–130J procurement program of record ends in fiscal year 2008 with 79 total C–130J aircraft.

LIGHT CARGO AIRCRAFT

52. Senator CORNYN. Secretary Wynne and General Moseley, what is the Air Force's plan concerning the acquisition of a Light Cargo Aircraft (LCA)?

Secretary WYNNE and General MOSELEY. The Air Force has teamed with the Army to form a joint program for the procurement of the Air Force's LCA and Army's Future Cargo Aircraft (FCA). The request for proposals has been released and contract award is planned for late calendar year 2006. The aircraft selected will be known as the JCA and will be the same aircraft for the LCA and FCA.

53. Senator CORNYN. Secretary Wynne and General Moseley, how many LCAs are needed?

Secretary WYNNE. I coordinated on the Acquisition Strategy Report February 24; it was signed by Ken Krieg on March 17, 2006. This report contained the initial joint buy profile for the JCA at 145. This initial purchase will be shared jointly between the Air Force and Army. Ongoing Air Force analysis will further refine the intratheater airlift requirements and build a mobility mix to support emerging joint warfighting needs.

General MOSELEY. We have determined the initial joint requirement (Army and Air Force) for the JCA is 145 airplanes, based on analysis conducted by the Army. This initial number will be purchased jointly between the Army and Air Force. Additionally, the Air Force has contracted with RAND Corporation, through Project Air Force, to conduct additional analysis required by Joint Capabilities Integration and Development System to support broader joint sustainment and maneuver requirements for all the Services. Results from this analysis and a Joint AoA along with

the results of the Program Decision Memorandum III will refine the intratheater requirement and fleet mix for the Air Force.

54. Senator CORNYN. Secretary Wynne and General Moseley, what is the Air Force's timetable for procuring these LCAs?

Secretary WYNNE and General MOSELEY. The Air Force plans to begin procurement in fiscal year 2010.

55. Senator CORNYN. Secretary Wynne and General Moseley, is the Air Force planning to use LCAs as replacements for C–130s?

Secretary WYNNE and General MOSELEY. The Air Force intratheater fleet will be a mix of C–130, C–17 and JCA, formerly the LCA, to meet the needs and requirements of the warfighters. We continue to weigh the MCS airlift options as identified in the QDR.

APG–68(V)10 UPGRADE

56. Senator CORNYN. Secretary Wynne and General Moseley, please explain the Air Force's rationale for terminating the APG–68(V)10 upgrade to the United States Air Force (USAF) F–16 fire control radar. This program fulfills the number one Air Force acknowledged capability gap of all-weather precision targeting that no other aircraft will address before the planned fielding of the JSF in 2014. This $69 million development program for the (V)10 is more than 50 percent complete, on schedule, under cost, and exceeding all performance requirements. Today's F–16 is expected to be in service until beyond 2025 to support our men and women in combat operations. The (V)10 upgrade will provide an extremely cost-effective, major capability leap for the next 2 decades, without having to make the unnecessary larger development and procurement investment in an active electronically scanned array (AESA).

Secretary WYNNE and General MOSELEY. We appreciate your concern regarding the termination of the F–16 APG–68(V)10 Radar Modernization Program. The Air Force considered current F–16 capabilities, plans for F–16 fleet retirement by 2025, and fiscal budget realities when developing the fiscal year 2007 budget. Based on these factors, we decided against continuing the research and development for the APG–68(V)10 program. In addition, we determined an AESA radar upgrade is also not economically feasible for the F–16. Termination of the (V)10 program saved $57.2 million in research, development, test, and evaluation (RDT&E) and $188.5 million (procurement for 108 Block 50/52 modifications) within the FYDP. To complete development and modify all Block 50/52 aircraft (an additional 143 aircraft), plus modify 403 Block 40/42 aircraft, would require restoring FYDP funding plus an additional $819 million (procurement). Even with the loss of this program, the Air Force maintains capability of fulfilling combatant commander (COCOM) all-weather targeting requirements.

QUESTIONS SUBMITTED BY SENATOR JOSEPH I. LIEBERMAN

C–17

57. Senator LIEBERMAN. Secretary Wynne, it is my understanding that the C–17 has been and still is considered the airlift of choice by the combatant commanders. However, the proposed fiscal year 2007 budget has attempted to terminate production of the C–17 at the end of this year, opting for a total buy of 180 planes instead of the anticipated 222. I understand there are budget restraints, but this decision appears to run against the expressed airlift needs of combatant commanders. If you can, please describe the importance airlift operations have played in ongoing operations domestically and abroad. Also, can you please outline the current state of the airlift fleet?

Secretary WYNNE. Airlift Operations: Mobility airlift—and specifically C–17 airlift—has been crucial in the war on terror. From the beginning, the airlifter led the way in the projection of United States power, whether it was dropping humanitarian supplies on night one of the Afghanistan campaign, or the initial positioning of warfighters and their supplies into the Iraq theater, or the continuing resupply efforts—our Nation's airlifters provide the global reach air bridge necessary. Since September 11, utilizing the heavy airlift capability of the C–5 and C–17, as well as the C–130, the Air Force has moved over 1.287 million tons of critical warfighter cargo and moved more than 939,487 passengers.

This power projection also plays a key role in taking care of needs within our own borders. This was best exemplified during the Hurricanes Katrina and Rita evacu-

ations. With the help of our Nation's airlift fleet, thousands of displaced refugees were moved from the New Orleans and Gulf coast area to locations where their needs could best be met. It also gave the first responders the equipment they needed. Commercial airlift could not accomplish this mission, due to the infrastructure damage incurred at the region's affected airfields. Only the C–17 and C–130, with their short and unimproved field landing capabilities, were able to help the victims in most areas.

Current Status of the Airlift Fleet: Total C–5, C–17, and C–130 aircraft availability showed a slight improvement the last three quarters increasing from 59.2 percent in fiscal year 2005/3 to 60.4 percent in fiscal year 2006/1. All three airframes show positive mission capable, total non-mission capable maintenance, and total non-mission capable supply trends over the same period.

58. Senator LIEBERMAN. General Moseley, the MCS, which is frequently quoted at setting the procurement level of C–17s at 180, was completed prior to the QDR and the Army's articulation of its current deployment needs. As I understand it, the rationale behind Army modularization, specifically the increase in the number of brigades, is a supposed expansion in operational ground capabilities. How can we expand our ground capabilities if we do not continue to procure the only strategic airlifter that can deliver troops, materials, and ammunition to the operational frontline?

General MOSELEY. The MCS and the QDR occurred in overlapping timeframes and there was significant sharing of information between the two studies. The fiscal years 2006–2011 Strategic Planning Guidance (SPG) directed the OSD and Joint Chiefs of Staff (JCS) staffs to complete the MCS study and report results for use in the fiscal year 2008 program objective memorandum (POM) and the QDR.

The MCS used the programmed 2012 force structures along with the projected, service-approved concepts of operations (CONOPs) that would be employed with these future forces. This data, along with other detailed modeling information on the scenarios, threat conditions, and timing contained in the Multi Service Force Deployment document was used to conduct the analysis.

The MCS task was to determine if the 2012 mobility capabilities would support the defense strategy. After a very thorough analysis of various scenarios and warfighting demands, the study results indicated the projected capabilities meet the strategy with acceptable risk.

The study also found that continued investment in the mobility system, in line with current priorities, is sufficient to maintain these capabilities into the future. The MCS provides a solid foundation for future studies and eases the data gathering burden, scenario development, and time required for study completion. It provides us with an analytically sound range of required mobility capabilities to use as we manage our force structure to meet the needs of the COCOMs.

59. Senator LIEBERMAN. General Moseley, what have the COCOMs said about the decision to halt C–17 production at 180 instead of the projected buy of 222?

General MOSELEY. The fiscal year 2007 President's budget and Air Force program of record is 180 C–17s. The QDR, informed by the MCS, confirmed the current intertheater airlift program, comprised of 180 C–17s and 112 modernized C–5s, would support DOD warfighting demands with acceptable risk. All of the COCOMs concurred with the MCS.[1] General Schwartz, Commander, United States Transportation Command, reiterated this position on March 2, 2006, before the House Armed Services Committee.[2] He also subsequently stated we are using up C–17s at a faster rate than expected.[3] As a result of faster than planned use rates, the Air Force has subsequently added seven C–17s as its number one unfunded priority in fiscal year 2007.

---

AIR FORCE MANUFACTURING TECHNOLOGY PROGRAM

60. Senator LIEBERMAN. Secretary Wynne, what role does the Air Force Manufacturing Technology (ManTech) program play in supporting the industrial base on which the Air Force will depend for the production of its future systems?

Secretary WYNNE. The ManTech program was established by U.S.C., title 10, for the ". . . development and application of advanced manufacturing technologies and processes for use to meet manufacturing requirements that are essential to the national defense . . ." and to ". . . reduce the acquisition and supportability costs of defense weapon systems and reduce manufacturing and repair cycle times across the life cycles. . ." In this role, ManTech advances industrial base capabilities for both current and future weapon systems. The program typically focuses on manufacturing-related needs that are pervasive across multiple weapon systems that might otherwise go unaddressed. Another powerful aspect of the ManTech role is that the program has the ability to invest in promising technologies that are otherwise considered beyond the normal risk of industry and systems program offices.

61. Senator LIEBERMAN. Secretary Wynne, how does the ManTech program widely disseminate the manufacturing processes and technologies it develops throughout Air Force programs and the industrial base?

Secretary WYNNE. The ManTech program uses multiple avenues to disseminate its processes and technologies throughout Air Force programs and the industrial base. First, the ManTech investment strategy of bringing multiple "customers" together in joint ventures enables wide dissemination of manufacturing technologies. ManTech typically focuses on manufacturing-related needs that are pervasive across multiple weapon systems—not only are various Government offices involved, but their industry counterparts are as well. Such investments are often beneficial to multiple Services and defense agencies and this is coordinated through a standing joint leadership body called the Joint Defense ManTech Panel (JDMTP). Second, ManTech has an active and deliberate "success story" program that develops and publishes technology accomplishments through various media on a continual basis. Also, like other research and development activities, ManTech submits final reports to the Defense Technical Information Center, which are available to Government and industry. Finally, every year the JDMTP holds a well-attended Defense Manufacturing Conference to facilitate exchange of information on new and emerging manufacturing processes and technologies.

62. Senator LIEBERMAN. Secretary Wynne, what incentives are in place for defense contractors to adopt these new technologies and processes?

Secretary WYNNE. The primary incentive for defense contractors to adopt the technologies and processes developed within the Air Force ManTech program is the potential for improved capabilities and efficiencies, which in turn should position a company to better compete and win future business. Of further incentive, is the fact that while the ManTech program encourages industry cost-sharing in its Government investments in military critical industries, it does not require it.

JOINT STRIKE FIGHTER ENGINES

63. Senator LIEBERMAN. General Moseley, you testified in response to Chairman Warner that the alternate engine (F136) would provide additional thrust and that it would be better suited for the vertical thrust mission. Given that the engines are interchangeable and that the lift fan gear box capacity is limited, please explain how this can be accomplished.

General MOSELEY. It is possible that the F136 engine could generate more thrust. However, the Short Takeoff and Vertical Landing (STOVL) variant could not benefit from more thrust even if the F136 could provide it. Limiting factors for STOVL operation are the lift components, specifically lift fan torque and speed limits and exhaust system (three bearing swivel case and nozzle) loads. Because the lift fan thrust must equal the engine thrust to maintain aircraft balance during vertical lift, the lift fan's ability to make thrust is the limiter. Additionally, the exhaust system's load capability is limited to specification performance to save weight.

64. Senator LIEBERMAN. General Moseley, you testified that the Air Force and the Navy have a history of fleet stand-downs with the F100 engines, as well as with other General Electric engines on occasion. Please provide the details of these fleet stand-downs, including when the stand-downs occurred and for how long.

General MOSELEY. The Air Force has experienced two system wide fleet stand-downs due to engine issues. The first instance of Air Force fleet-wide grounding ac-

tion was the December 1990 grounding of the B–1B fleet due to blade retaining ring failure resulting in first stage fan blade liberation on the F101 G.E. engine (there were two failure events, one severe enough that the engine departed the aircraft). The fleet remained grounded from late December 1990 through early February 1991 until compliance with a 90-day safety time compliance technical order (TCTO) to install the new blade retainers that was completed by April 1991. The second instance was a F–16 stand down in March 1999 due to engine augmentor liberation, for aircraft using the P&W 100–220/220E (730 airframes, 101 spares).

QUESTIONS SUBMITTED BY SENATOR JACK REED

NUCLEAR AIR LAUNCHED CRUISE MISSILES

65. Senator REED. Secretary Wynne and General Moseley, the Air Force maintains two types of nuclear cruise missiles, which both use the same type of nuclear warhead, the W–80. Over the years there have been numerous discussions about the need for these air launched cruise missiles, and on several occasions there have been proposals to retire these systems. The W–80 warhead is in need of a life extension. Planning is currently underway to begin this life extension program at the Department of Energy (DOE). Plans call for spending $98 million in 2006, $102 million in 2007, $100 million in 2008, $154 million in 2009, and $118 million in 2010. From now until 2010 this money is used to plan and design the life extension program because the first life extended W–80 is not produced until 2010. Between now and then the DOE will spend over $550 million. If there is any doubt about the need for these cruise missiles we need to make the decision to retire them now, before half a billion dollars are spent just to get ready to begin the life extension. Is there a compelling need for these systems?

Secretary WYNNE and General MOSELEY. The Commander of U.S. Strategic Command (USSTRATCOM) determines current requirements for cruise missile forces. As the COCOM responsible for executing the Nation's military strategy regarding nuclear weapons, he sets current and future requirements. The continuing requirement for nuclear cruise missiles compels the Air Force to provide properly trained and equipped forces to the COCOM. To support the current cruise missile requirement, the W80 warhead requires a life extension program in order to be viable through the timeframe required by USSTRATCOM.

DOD is in the final phase of a comprehensive study that will establish cruise missile requirements for the post-2007 timeframe. Results of this study may necessitate changes to the existing programs of both the Air Force and the DOE.

NATIONAL DEFENSE EDUCATION PROGRAM

66. Senator REED. Secretary Wynne, how has the Air Force participated in the newly authorized Science, Math, and Research for Transformation (SMART) program?

Secretary WYNNE. The Air Force Office of Scientific Research was the executive agent for the SMART Defense Scholarship Pilot Program in fiscal year 2005. As part of this pilot program, the Air Force selected 11 of the 30 initial SMART scholars—5 of whom are scheduled to graduate in 2006 and will then be placed in Air Force civilian positions. The remaining six SMART scholars not scheduled to graduate this year will be interns at the Air Force Research Laboratory this summer and will be placed in civilian Air Force positions upon graduation.

With the start of the permanent SMART program in fiscal year 2006, the Navy Postgraduate School took over as the executive agent for the program. The Air Force, however, is still an active participant in the selection of SMART scholars and comprised 40 percent of the DOD reviewers on the SMART selection panel that met recently.

67. Senator REED. Secretary Wynne, what issues do you see in the current setup and execution of the program?

Secretary WYNNE. As with any new program, there will be challenges. The main challenge the Air Force faces with the SMART program is matching each scholar with an appropriate employment opportunity to create a win-win situation. The Air Force is proud of our SMART scholars and we want them to succeed in their Air Force civilian careers.

68. Senator REED. Secretary Wynne, what other initiatives is the Air Force undertaking to attract and retain scientists and engineers?

Secretary WYNNE. The Air Force participates in many exciting DOD programs to increase the number of scientists and engineers within the Air Force. These programs cover the education spectrum from high school to post-doctorate levels. We reach out to high school students through the Junior Science and Humanities Symposium (JSHS), which awards college funding for future researchers. In fact, this year's JSHS is being sponsored by the Air Force in Albuquerque, New Mexico. The Awards to Stimulate and Support Undergraduate Research Experiences provides funding to research universities so that they can reach out to students at non-research universities to provide these undergraduates research opportunities not otherwise available to them. In addition, the DOD National Defense Science and Engineering Graduate (NDSEG) Fellowship Program is another program aimed at increasing the number of scientists and engineers with doctorate degrees. The NDSEG Fellowship Program does this by providing talented graduate students with portable fellowships that allow the recipient to pursue their graduate studies at whichever U.S. institution they choose to attend. Finally, the Air Force's Young Investigator Program is an exciting new program designed to encourage recently graduated doctorate-level scientists and engineers by awarding them with grants to support their Air Force-relevant innovative research efforts. The Air Force is committed to the development, mentorship, and hiring of talented scientists and engineers.

AIR FORCE TECHNICAL WORKFORCE NEEDS

69. Senator REED. Secretary Wynne, has the Air Force done a survey or analysis to determine its current and future technical workforce needs?

Secretary WYNNE. We are a capabilities-based force. We continually assess our workforce needs based on capabilities defined by the COCOMs, today and in the future. Commanders, functional authorities, and career field managers design their technical workforces to meet these capabilities. Generating and projecting aerospace power in the 21st century requires a technological force with a myriad of different skills. We use modeling and analysis to assess our Air Force workforce sustainment and training requirements based on changes in the global threat environment, national security strategy, workforce trends, and budgetary constraints. Each of our career field managers develops workforce forecasts based on their thorough understanding of evolving technology, changes in Air Force roles, and influences from outside sources. We consolidate and balance those forecasts to produce our overall workforce requirements, and build our accession, retention, development, and workforce management strategies to meet those requirements.

70. Senator REED. Secretary Wynne, what were the general conclusions of that analysis?

Secretary WYNNE. Technology is ever changing and because our airmen operate within a closed but dynamic personnel system, we must proactively recruit, train, and retain people with the necessary mix of skills. Our recruiting efforts and incentives allow us to attract technically savvy people, who we can develop to respond to the ever-changing environment. Based on these changes, we develop education and training opportunities to grow the right people with the right training/education at the right time. Once we invest resources to develop our workforce, we make deliberate and targeted resource decisions to retain these skilled professionals.

71. Senator REED. Secretary Wynne, which particular technical disciplines concern you most when it comes to finding highly qualified talent to fill Air Force positions?

Secretary WYNNE. The Air Force enjoys the highest quality recruits in the DOD for both technical and non-technical disciplines. We are competing favorably with the private sector to access and train top-notch officer and enlisted as well as civilian airmen across a myriad of functional areas for the employment of air and space power. Our biggest challenges are recruiting fully-qualified professionals in nursing, dentistry, and specialized medical fields. With increased emphasis on culturally-competent airmen, we are also working hard to increase the number of foreign language qualified recruits.

QUESTIONS SUBMITTED BY SENATOR BILL NELSON

SANTA ROSA ISLAND REPAIR

72. Senator BILL NELSON. Secretary Wynne, I understand that DOD approved but that the Office of Management and Budget subsequently disapproved funds in the

current Fiscal Year 2006 Supplemental Appropriations Request related to storm damage at Eglin Air Force Base that would repair and strengthen Santa Rosa Island (SRI). Without this repair, the island may not survive another storm. What is the dollar value of the necessary repairs?

Secretary WYNNE. The total amount to fully fund the repairs at SRI is $169.8 million (this number includes military construction, RDT&E, and operation and maintenance (O&M) funded requirements). These funds will repair roadways and facilities damaged during the recent hurricane season.

73. Senator BILL NELSON. Secretary Wynne, what are the operational consequences or mission risks if this work is not done?

Secretary WYNNE. SRI is the only DOD range with unobstructed continuous land-to-sea access. It allows for testing and training from sea level to high altitude. It is also currently the only operating DOD range with unrestricted testing/training for large safety footprint weapons. Last year, test and evaluation (T&E) facilities on this island were essential to completing 24 quick reaction tests for munitions in support of Operations Iraqi Freedom and Enduring Freedom.

Losing SRI would require reliance on other heavily tasked and less capable test facilities, or a significant investment in land purchase, airspace access, and infrastructure to duplicate the SRI T&E capabilities. The exact mission impacts are not quantifiable, but history has shown that reduced testing results in fielding of weapons with poorer operational performance.

MILITARY/ENVIRONMENT RELATIONSHIP

74. Senator BILL NELSON. Secretary Wynne, the OSD and the Army, Navy, and Marine Corps have initiated a number of projects throughout the country to protect against encroachment under the authority provided by Congress in section 2811 of the National Defense Authorization Act for Fiscal Year 2003 (now section 2684a of title 10, U.S.C.). This program is commonly referred to as the Range and Environmental Protection Initiative (REPI). Last year, the Air Force promulgated guidance and procedures to major commands and installations with regard to initiating requests for such projects. As far as I can find out, not a single project was forwarded by the Air Force to DOD for approval. Why not?

Secretary WYNNE. The Air Force uses a systematic approach to encroachment. As requested by DOD, the Air Force canvassed for potential REPI projects and provided guidance to the major commands and installations. We reviewed the candidate submissions and advised major commands and installations to first ensure they followed the Air Force's systematic approach to encroachment prevention. This means working with the local communities so that mission-compatible land use controls are adopted. This primary approach ensures the Air Force does not take on the necessary O&M costs associated with owning properties that should instead continue to contribute to the local tax base and be utilized by the community in ways that do not conflict with base operations.

75. Senator BILL NELSON. Secretary Wynne, what is the Air Force's view of this program and its potential to protect installations from incompatible encroachment?

Secretary WYNNE. The Air Force considers the authority in 10 U.S.C. 2684a, as amended, as one tool of many available to us for use in addressing encroachment concerns. The Air Force prioritizes these tools when it comes to encroachment strategies. Our first priority is to fully pursue no-cost strategies such as the Air Installation Compatible Use Zones (AICUZ) Program. The Air Force has 30 years' experience working with neighboring communities and counties in collaborative planning efforts under AICUZ, supplemented as needed with joint land use studies, interagency/intergovernmental coordination and outreach with local and State governments, and State and Federal agencies. In those situations where land use planning solutions are inadequate, or inappropriate, we have, thanks to Congress, a number of authorities available for our use to include 2684a. The Air Force is currently evaluating how to best use the partnering opportunities provided by 10 U.S.C. 2684a in a comprehensive encroachment strategy.

76. Senator BILL NELSON. Secretary Wynne, the Northwest Florida Greenway project is an Eglin Air Force Base, State, and local project to rationalize and set aside large tracts of land in West Florida to ensure compatible use and prevent encroachment. According to DOD's 2006 Sustainable Ranges Report, the Greenway is an "important regional success story" to "maintain an important flight path for five U.S. Air Force and Navy installations in that area that support important service

and joint testing and training missions." The project was praised as a national model by Secretary Rumsfeld in remarks he gave in August 2005 at the White House Conference on Cooperative Conservation. Moreover, the Northwest Florida Greenway project is an element of the most recent Joint Gulf Range Complex Strategic Plan, approved by senior officials of all four Services that use the range, including the Air Force. What is the view of the Air Force with regard to the Northwest Florida Greenway project? If the Air Force supports the project, what specific steps does the Air Force intend to take to further its implementation?

Secretary WYNNE. The Northwest Florida Greenway project is certainly a successful cooperative effort to preserve operational capability for the military and achieve benefits for threatened and endangered species. In fiscal year 2004, the Air Force worked through OSD to provide $1 million to the Phase I Nokuse Plantation conservation easement; helping prevent development under restricted airspace and protecting black bear habitat. The Air Force uses a systematic approach to encroachment and will continue to emphasize working with local communities so that mission-compatible land use controls are adopted. Where this approach does not achieve desired objectives, the Air Force will continue to review encroachment prevention projects, including those proposed for the Northwest Florida Greenway. We will invest where possible in those projects demonstrating the best operational and environmental return.

77. Senator BILL NELSON. Secretary Wynne, last year, Congress amended section 2684a of title 10, U.S.C., to expand the scope of possible projects under that authority from areas "in the vicinity of a military installation" to areas "in the vicinity of, or ecologically related to, a military installation or military airspace." The reason for that change was the recognition by Congress that the expanded scope of the authority was necessary in order to effectively assure sustainable operations over the long-term, and to remove any questions concerning the validity of projects like the Northwest Florida Greenway that are designed to protect habitat and prevent incompatible development both with regard to the "near vicinity" of installations and with regard to critical military airspace beyond that "near vicinity". Will this change in the scope of the authority affect the Air Force policy on the use of the authority to assure sustainability of Air Force test and training operations?

Secretary WYNNE. Pending development of any additional DOD policies related to section 2684a, the Air Force does not anticipate the referenced amendments to section 2684a—which address areas "in the vicinity of or ecologically related to"—to drive significant change in Air Force policy. The authority provided under section 2684a is another option in assuring sustainable operations. Through the use of fiscally smart and operationally effective approaches, the Air Force continuously strives to do better at anticipating and preventing encroachment.

78. Senator BILL NELSON. Secretary Wynne, oil interests have been attempting to encroach upon military test and training ranges in the Eastern Gulf of Mexico. I would be interested to know your assessment of this risk to Air Force weapons testing and training today and into the future. I also understand that the Air Force is leading a detailed analysis to ensure we can meet future requirements for unencumbered air space in the Eastern Gulf for the broad scope of next generation hypersonic, precision, long range, and directed energy munitions and weapons. What is your role in this analysis? How is this analysis structured and how will the results be considered toward a policy decision?

Secretary WYNNE. We have thoroughly evaluated current and future mission requirements in the Gulf of Mexico. Our analysis revalidated the location of our Military Mission Line (MML). The majority of the proposed sale area is west of the MML. There is a small triangular portion of the proposed sale area which crosses to the east of the MML. We requested Minerals Management Service remove this area from the program. Therefore, the new proposed program will have minimal impact to test and training missions. In addition, there is no prohibition to conducting military missions west of the MML, with due regard to any surface structures. Our position supports a balance between the Nation's energy and DOD needs in the Gulf of Mexico.

A review of existing Contiguous United States and Outside Contiguous United States weapons ranges is being conducted to determine possible candidates to test precision and long range weapons. A draft screening report will soon be available for review which lists all of the pertinent ranges worldwide. A screening criteria is applied to pare down the list to a group of reasonable alternatives. Those alternatives will then be further researched and put into a description of proposed action and alternatives (DOPAA) document. Following senior leadership approval of the

DOPAA, an environmental impact statement will then be conducted to select a location to perform precision and long range weapons testing.

F–22 BASING

79. Senator BILL NELSON. Secretary Wynne, I am aware that the Air Force has modified its basing plan for the operational squadrons of the F–22 and has settled on the number of aircraft for the training base. How has this change affected requirement for military construction? Specifically, do you have everything you need for the training squadron at Tyndall Air Force Base to ensure the facilities will support the mission by 2008?

Secretary WYNNE. The modified basing plan has not changed the number of F–22A aircraft projected for Tyndall Air Force Base, and thus has not changed the requirement for military construction. We believe we can support the training squadron at Tyndall with the amounts already appropriated in prior years and the $1.8 million project being requested in the fiscal year 2007 President's budget.

MILITARY SPACE INVESTMENT

80. Senator BILL NELSON. Secretary Wynne, what are your greatest concerns regarding our investment strategy and program management in military space and how does this budget request deal with those challenges?

Secretary WYNNE. My greatest concern regarding our investment strategy and program management in military space is to ensure that we are funding programs that demonstrate a high likelihood of success based on proven technology maturity. We can ill afford to fund programs that are high risk and do not deliver capabilities to the warfighter on schedule.

To address this challenge, we are implementing a "Back to Basics" philosophy that reflects a "walk before you run" program construct. The cornerstone of the "Back to Basics" philosophy is to implement, wherever feasible, a classic evolutionary acquisition approach that apportions risk by applying a construct of four distinct, interrelated stages: science and technology, technology development, systems development, and system production. Appropriately funding the space portfolio will become even more important as we look to fund our programs at an increased confidence level. Space programs tend to have small production lots, small production issues such as test failures, parts problems, component delivery delays, et cetera that have large impacts to total program cost. The Young Panel has recommended budgeting to an 80/20 confidence level, which includes a 20–25 percent management reserve. Accordingly, the current budget requests funding for a higher level of confidence where possible, such as in the transformational satellite program.

EVOLVED EXPENDABLE LAUNCH VEHICLE

81. Senator BILL NELSON. Secretary Wynne, what is your evaluation of the Boeing—Lockheed Martin joint venture to produce the Evolved Expendable Launch Vehicle (EELV)?

Secretary WYNNE. The Federal Trade Commission (FTC) has final approval authority on the United Launch Alliance (ULA) anti-trust review. As part of the FTC approval process, the USD(AT&L) provides a DOD recommendation to the FTC. The Air Force is supporting the DOD evaluation of ULA for this purpose. It is premature for me to comment on the Air Force's position on ULA until a DOD position is finalized and delivered to the FTC.

QUESTIONS SUBMITTED BY SENATOR HILLARY RODHAM CLINTON

PROPOSED CUTS IN AIR NATIONAL GUARD

82. Senator CLINTON. Secretary Wynne and General Moseley, New York has more Air National Guard bases than any other State and these installations play a critical role in our national security and our homeland defense. Therefore, I have joined with many of my colleagues in expressing concern over the proposed cuts in the National Guard including the Air National Guard (ANG). Please provide additional details about the proposed cuts in the ANG, specifically addressing the following issues: Given the importance that the ANG plays in homeland defense, is the impact of any cuts on homeland defense considered when end strength reductions are considered?

Secretary WYNNE and General MOSELEY. Bottom line—to modernize the Total Air Force, operating efficiencies will have to be found through rebalancing among components, reducing redundancies and inefficient business practices, and targeted end strength reductions. The National Guard Bureau (NGB) will use the following guiding principles, methodology, and priorities:

ANG Mission

• To provide trained units and qualified persons available to support the Air Force in its mission to deliver sovereign options for the defense of the United States and its global interests—to fly and fight in air, space, and cyberspace.
• To provide trained and equipped units to protect life and property and to preserve peace, order, and public safety within the State or territory.

Guiding Principles

• Flying mission in every State.
• Proportionality—share skill sets.
• Retain surge capability with approximately 60 percent part-time, "Traditional."
• Maintain regional capability in support of disaster response.
• Priority to dual-use (Federal and State) capability, weigh against "how much capability is enough?"

Initial Methodology/Priorities

- Make units "whole."
  - Must fix shortfalls in validated/essential missions and base realignment and closure (BRAC) requirements.
- Align aircrew ratios with Air Force (1.5 to 1.25).
  - Shift from "strategic reserve" to "operational reserve."
- Align United Manpower Document (UMD) with United Type Code (UTC).
  - E.g. Combat Communications.
  - Logistics Composite Mobility (LCOM) vs. ANG manpower model.
- Regionalize domestic capability.
  - E.g. Evaluate need for both ANG Red Horse and Army National Guard (ARNG) Combat Engineers in same region.
- Force-shaping authority to target retention efforts.
  - Selective early retirement or retaining critical skills.
- If this is not enough, we must "do less with less."
  - Eliminate capability excess to ANG requirements—"Big Blue" missions.
    - E.g. Deployable Security Force.

83. Senator CLINTON. Secretary Wynne and General Moseley, are there any plans to reduce the ANG full-time equivalents, and if so, by how many?

Secretary WYNNE and General MOSELEY. There are no costs to the ANG planned in fiscal year 2007. Program Budget Decision (PBD) 720 provided guidelines and targets to the NGB to plan the future. The NGB is working with the various adjutants general to adjudicate how to respond to the guidelines for fiscal years 2008–2011. Manpower reduction is one option. PBD 720 includes cuts to ANG programs of $1 billion.

84. Senator CLINTON. Secretary Wynne and General Moseley, how would a reduction support the continued global war on terror and homeland security requirements?

Secretary WYNNE and General MOSELEY. Bottom line—to modernize the total Air Force, operating efficiencies will have to be found through rebalancing among components, reducing redundancies and inefficient business practices, and targeted end strength reductions. The NGB will use the following guiding principles, methodology, and priorities:

ANG Mission

• To provide trained units and qualified persons available to support the Air Force in its mission to deliver sovereign options for the defense of the U.S. and its global interests—to fly and fight in air, space, and cyberspace.
• To provide trained and equipped units to protect life and property and to preserve peace, order, and public safety within the State or territory.

Guiding Principles

- Flying mission in every State.
- Proportionality—share skill sets.
- Retain surge capability with approximately 60 percent part-time, "Traditional."
- Maintain regional capability in support of disaster response.
- Priority to dual-use (Federal and State) capability, weigh against "how much capability is enough?"

Initial Methodology/Priorities

- Make units "whole."
  - Must fix shortfalls in validated/essential missions and BRAC requirements.
- Align aircrew ratios with USAF (1.5 to 1.25).
  - Shift from "strategic reserve" to "operational reserve."
- Align UMD with UTC.
  - E.g. Combat Communications.
  - LCOM vs. ANG manpower model.
- Regionalize domestic capability.
  - E.g. Evaluate need for both ANG Red Horse and ARNG Combat Engineers in same region.
- Force-shaping authority to target retention efforts.
  - Selective early retirement or retaining critical skills.
- If this is not enough, we must "do less with less."
  - Eliminate capability excess to ANG requirements—"Big Blue" missions.
    - E.g. Deployable Security Force.

85. Senator CLINTON. Secretary Wynne and General Moseley, has the Air Force finalized its most recent MCS? When will it be released to this committee?

Secretary WYNNE and General MOSELEY. The MCS was co-led by the Office of the Secretary of Defense for Program Analysis and Evaluation (OSD/PA&E) and the JCS J4 with participation by the Services and the COCOMs. The study is complete and the final report signed out by the Deputy Secretary of Defense on December 19, 2005. Copies of the entire report were made available to congressional offices.

COMBAT SEARCH AND RESCUE

86. Senator CLINTON. Secretary Wynne and General Moseley, as the combat search and rescue (CSAR) mission within the Air Force shifts and the current fleet of CSAR helicopters is nearing the end of its service life, please provide an update on this program focusing on these questions: What is the current plan for the rescue forces as it relates to the restructuring of the Air Force?

Secretary WYNNE. As we continue our long war against global terror, one of the crucial capabilities the Air Force provides to the joint warfighter and our Nation is dedicated CSAR. CSAR capability is consistently one of the most requested capabilities by the COCOMs. To further enhance this capability, the Air Force is taking actions to ensure the most effective means to make available these forces for any contingency. Recently, the Air Force moved administrative control of its CSAR forces under Air Combat Command (ACC) to ensure integration into all facets of the joint community including operational deployments, training, as well as national crisis response. This transition is clearly the best avenue to ensure CSAR for the joint warfighter. Also, the future acquisition of a replacement helicopter for CSAR through the CSAR–X program fits hand-in-glove with the recent transition.

General MOSELEY. I view CSAR as a moral and warfighting imperative. As the Air Force transforms in the 21st century, we will ensure a robust CSAR capability even in the current budget environment. We have recently aligned CSAR forces underneath ACC. This realignment will ensure the availability of our CSAR forces, not only for combat operations, but also for homeland defense. Also, as noted in your inquiry, the current Air Force CSAR helicopter fleet is approaching the end of its service life; to continue future CSAR operations the Air Force requires a new platform through the CSAR–X program. CSAR–X, currently in sourcing, will not only sustain the Air Force ability to perform CSAR but will offer faster response, greater survivability, and greater rescue capabilities. The recent realignment, coupled with

the future recapitalization with CSAR–X, will increase the capability of the superb CSAR forces the Air Force provides.

87. Senator CLINTON. Secretary Wynne and General Moseley, detail the current operations tempo and the maintenance status of the current fleet.

Secretary WYNNE and General MOSELEY. The Air Force currently has approximately 29,000 personnel and 240 aircraft deployed worldwide, and another 40 aircraft on alert or flying in support of Operation Noble Eagle.

However, the Air Force is unique among the Services in that a very large number of people serve multiple COCOMs at one time—often from home station. On any given day, approximately 210,000 of our total operating force of 405,000 airmen are engaged and actively supporting COCOM operations. Some serve through deployment and posturing for the Air Expeditionary Force (AEF), but many more through strategic missions such as missile duty, strategic mobility, and forward presence.

The current Active-Duty Special Operations utilization rate for the HH–60 and HC–130 separately and combined by fiscal year from 2001 to fiscal year 2006/2 is provided in the table below. Average HH–60Gs deployed to CENTCOM increased from 13 in fiscal year 2002 to 15.8 aircraft in fiscal year 2006/2 and average HC–130Ps deployed to CENTCOM declined from 54.9 in fiscal year 2002 to 13.9 aircraft in fiscal year 2006/2.

Active HH–60 and HC–130P UTE Rate

	Fiscal Year					
	2001	2002	2003	2004	2005	2006
HH060G	30.4	31.2	29.1	29.7	30.2	37.8
HC130P	32.0	43.1	36.9	36.7	39.5	37.8
Combined	30.7	33.5	30.6	31.0	31.7	32.5

Active HH–60 and HC–130P MC Rate

	Fiscal Year					
	2001	2002	2003	2004	2005	2006
HH060G	68.7	68.1	66.7	68.5	73.4	74.8
HC130P	73.4	75.9	72.3	71.3	68.4	78.8
Combined	69.6	69.6	67.7	69.0	72.6	75.5

Note: Fiscal year 2006 MC Standard for HC–130P = 72 percent and HH–60G = 70 percent.

88. Senator CLINTON. Secretary Wynne and General Moseley, what is the status of the acquisition of a new helicopter for your CSAR mission area?

Secretary WYNNE and General MOSELEY. The CSAR–X is currently in source selection. We expect a Milestone B defense acquisition board (DAB) and contract award in August 2006.

89. Senator CLINTON. Secretary Wynne and General Moseley, has the OSD approved the acquisition strategy for CSAR–X? If not, why not?

Secretary WYNNE and General MOSELEY. The acquisition strategy is currently in coordination with Office of the Secretary of Defense for Acquistion, Technology, and Logistics (OSD(AT&L)). Additionally, OSD(AT&L) conducted an investment program review (also referred to as the concept decision review) on March 23, 2006, to examine the program affordability, requirements, and additional directed mixed-fleet analysis, and affirmed "that the department is on track for the planned August CSAR–X DAB."

PREDATOR Bs FOR AIR NATIONAL GUARD

90. Senator CLINTON. Secretary Wynne and General Moseley, the Air Force made preliminary plans for the Predator MQ–9 beddown at the 174th Fighter Wing New York Air National Guard at Hancock in the first quarter, fiscal year 2010. This coincides with the agreement General Jumper made with several members of the congressional New York delegation last year. What is the timeline for final funding and production decisions of the MQ–9?

Secretary WYNNE and General MOSELEY. Currently, MQ–9 aircraft are in initial, low-rate production, while the system undergoes system development and demonstration. Following completion of initial operational test and evaluation and a corresponding Milestone "C" production decision, which is scheduled for the first quarter fiscal year 2009, the Air Force will commence full-rate production. Current program funding supports this schedule.

91. Senator CLINTON. Secretary Wynne and General Moseley, what, if any, mechanical/design issues need to be worked out prior to these decisions?

Secretary WYNNE and General MOSELEY. The most significant new capabilities remaining to be developed as part of the MQ–9 system development and demonstration effort are: a stores management system, which allows the aircraft to communicate with and efficiently employ precision-guided weapons; a 45 KVA electrical power generation system; a digital electronic engine control to increase flight endurance by optimizing engine performance; increased-strength landing gear to allow the MQ–9 to land using normal procedures without having to jettison unexpended weapons; and a characterization of Lynx Synthetic Aperture Radar automatic static target cueing.

92. Senator CLINTON. Secretary Wynne and General Moseley, these decision impact another timeline which is for the programmatic movement (retirement) of the 174th's F–16s to Fort Wayne, Indiana (second quarter 2009). General Jumper stated that no F–16s would be moved until Predators were on the base and operational. Can you provide assurance that regardless of what happens with the timeline of funding and production decisions of the MQ–9, the F–16s at Hancock will not move until Predators are on base?

Secretary WYNNE and General MOSELEY. Our current plan includes IOC with fully-trained New York ANG manpower and a Ground Control Station at Hancock Field by the first quarter of fiscal year 2010. It is important to note that it takes a minimum of 6 months and a maximum of 1 year to train IOC crews and maintainers. Qualified crews at Hancock Field can operate Predators that are forward deployed throughout the world. This "reach back" sourcing allows New York ANG members at Hancock Field to provide immediate combat capability even as MQ–9s are being delivered. With the F–16s programmed to continue flying until the second quarter of fiscal year 2009, we anticipate a smooth transition as we re-role the combat capability of New York ANG at Hancock Field.

C–5A REFURBISHMENT AND C–17S

93. Senator CLINTON. Secretary Wynne and General Moseley, are there any plans to provide C–17s to the ANG?

Secretary WYNNE and General MOSELEY. The ANG currently has eight C–17s assigned to the 172nd AW in Jackson, Mississippi, plus an associate unit at Hickam Air Force Base (AFB). An additional C–17 associate unit is planned for Elmendorf AFB. Under our current total force construct, no additional C–17 aircraft will be assigned to the ANG.

94. Senator CLINTON. Secretary Wynne and General Moseley, will all C–5s, both As and Bs, go through the re-engining (RERP) process and AMP?

Secretary WYNNE and General MOSELEY. The current plan is to modernize the entire C–5 fleet (C–5 As, Bs, and Cs) with AMP and RERP modifications. This plan is currently in review with the costs, schedule, and resources required.

COMPUTER SCIENCE AND CYBERSECURITY RESEARCH

95. Senator CLINTON. Secretary Wynne and General Moseley, how much funding is the Air Force request for research in computer science and cybersecurity?

Secretary WYNNE and General MOSELEY. As part of its fiscal year 2007 President's budget request, the Air Force requested $14.7 million for research in computer science and $25.0 million for research in cybersecurity.

96. Senator CLINTON. Secretary Wynne and General Moseley, how much of this funding is for fundamental research efforts?

Secretary WYNNE and General MOSELEY. As part of its fiscal year 2007 President's budget request, the Air Force requested $6.7 million for fundamental or basic research in computer science and $5.2 million for fundamental or basic research in cybersecurity.

97. Senator CLINTON. Secretary Wynne and General Moseley, how are these investments coordinated with Defense Advanced Research Projects Agency (DARPA) programs in similar areas?

Secretary WYNNE and General MOSELEY. Air Force investments in computer science and cybersecurity are closely coordinated with DARPA to ensure programs complement each other, do not duplicate research, and both DARPA and the Air Force gain maximum benefit by leveraging each others' funding. At DARPA's request, Air Force scientists, engineers, and program managers assist DARPA in defining research topics, writing solicitations, and evaluating inputs received from academia and industry. DARPA then selects the Air Force to be their executive agent in managing the contract and technical program for the majority of these projects.

98. Senator CLINTON. Secretary Wynne and General Moseley, is the Air Force the lead Service for funding 6.1 (basic research) in cybersecurity? If not, who is?

Secretary WYNNE and General MOSELEY. The Air Force is not the lead Service for funding 6.1 (basic research) in cybersecurity. The DOD has not designated a lead Service in this area.

[Whereupon, at 11:35 a.m., the committee adjourned.]

DEPARTMENT OF DEFENSE AUTHORIZATION FOR APPROPRIATIONS FOR FISCAL YEAR 2007

TUESDAY, MARCH 7, 2006

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

COMBATANT COMMANDERS ON THEIR MILITARY STRATEGY AND OPERATIONAL REQUIREMENTS

The committee met, pursuant to notice, at 9:36 a.m. in room SD–106, Dirksen Senate Office Building, Senator John Warner (chairman) presiding.

Committee members present: Senators Warner, McCain, Inhofe, Collins, Talent, Cornyn, Thune, Levin, Reed, Akaka, and Clinton.

Committee staff members present: Charles S. Abell, staff director; and Leah C. Brewer, nominations and hearings clerk.

Majority staff members present: William M. Caniano, professional staff member; Regina A. Dubey, professional staff member; Ambrose R. Hock, professional staff member; Gregory T. Kiley, professional staff member; Derek J. Maurer, professional staff member; David M. Morriss, counsel; Lucian L. Niemeyer, professional staff member; Lynn F. Rusten, professional staff member; Sean G. Stackley, professional staff member; and Scott W. Stucky, general counsel.

Minority staff members present: Richard D. DeBobes, Democratic staff director; Daniel J. Cox, Jr., professional staff member; Gabriella Eisen, research assistant; Evelyn N. Farkas, professional staff member; Richard W. Fieldhouse, professional staff member; Bridget W. Higgins, research assistant; Michael J. McCord, professional staff member; and William G.P. Monahan, minority counsel.

Staff assistants present: Jessica L. Kingston, Benjamin L. Rubin, and Pendred K. Wilson.

Committee members' assistants present: Samuel Zega, assistant to Senator Warner; Christopher J. Paul, assistant to Senator McCain; John A. Bonsell, assistant to Senator Inhofe; Arch Galloway II, assistant to Senator Sessions; Mackenzie M. Eaglen, assistant to Senator Collins; D'Arcy Grisier, assistant to Senator Ensign; Russell J. Thomasson, assistant to Senator Cornyn; Stuart C. Mallory, assistant to Senator Thune; Elizabeth King, assistant to Senator Reed; Darcie Tokioka, assistant to Senator Akaka; William K. Sutey, assistant to Senator Bill Nelson; and Andrew Shapiro, assistant to Senator Clinton.

OPENING STATEMENT OF SENATOR JOHN WARNER, CHAIRMAN

Chairman WARNER. Good morning, everyone. The Armed Services Committee meets today to receive testimony from Admiral Fallon, Commander, U.S. Pacific Command (PACOM); General Bell, Commander, U.S. Forces Korea (USFK); and General Jones, Commander, U.S. Forces European Command (EUCOM), Supreme Allied Commander, Europe.

I want to thank each of you and your families, for the leadership, the dedication, and the service that you've given our Nation for so many years. I ask that you convey on behalf of all the members of this committee to the men and women under your command the Nation's deep gratitude for their respective service and their families.

We look forward today to your insights on the developments in your area of operations, as well as your assessment of the administration's fiscal year 2007 defense budget request as it relates to your area of responsibility (AOR). The committee is also interested to hear your views with regard to the Quadrennial Defense Review (QDR) and about the status of planned changes to the U.S. force posture in the years to come.

North Korea—and we will start off with North Korea—has shown extraordinary twists and turns here in the past few years; withdrawn from the Nuclear Nonproliferation Treaty, the NPT, and resumed production of plutonium for nuclear weapons. Although the participants in the Six-Party Talks agreed last year on a statement of principles to guide their further negotiations, North Korea rather abruptly walked back and is currently boycotting a resumption of the talks.

North Korea's willingness to halt and dismantle its nuclear weapons program is in question. This situation poses a grave threat to the regional and international stability. I hope that the United States, working closely with our friends and allies, can resolve this situation through diplomatic means.

Admiral Fallon and General Bell, we look forward to hearing your assessment of this complex situation on the Korean peninsula. The committee is particularly interested in any changes you have seen over the past year in North Korea's military posture, as well as your assessment of North Korea's nuclear program, ballistic missile and proliferation activities, and the readiness of our forces and those of South Korea to respond to any possible developments on the peninsula, both now and in the future.

Developments in China are of continuing interest to this committee. Admiral Fallon, I look forward to your assessment of China's military modernization program and plans and the impact of this military modernization on the U.S. interests in the region. Clearly, China is developing military capabilities far beyond its requirements to defend its own interests in the homeland. What are their intentions?

I would also be interested in your assessment of the current state of China-Taiwan relations in light of the recent decision by the Taiwanese president to dissolve the National Unification Council and China's continuing buildup of its missiles across the strait.

In the Asia-Pacific region, the global war on terrorism is being waged in Singapore, Malaysia, Thailand, the Philippines, Indonesia, and other nations. I understand that you have recently visited several of these countries, Admiral, and I look forward to an update on your opinions.

General Jones, there has been significant activity in North Atlantic Treaty Organization (NATO) since you appeared before this committee last year. The committee is interested in your assessment of how well the alliance, now 26 members strong, is functioning or not functioning in your judgment as well as they should. Our NATO allies' spending—what are their defense budgets and what is it in relation to what we are spending here in our Nation?

Are they developing the capabilities needed to keep the alliance militarily effective and interoperable? How is the NATO decision-making process working? I know that has been a matter of concern to you. Are there plans for further enlargement of the alliance in your judgment?

NATO is increasing the activity in out of area missions. This is appropriate and welcome, given that Europe is largely stable and that threats to international security are increasingly global. Since August 2003, NATO has been leading the International Security and Assistance Force (ISAF) in Afghanistan. The committee is particularly interested to hear your report on how the expansion of the NATO ISAF mission throughout Afghanistan is proceeding.

Last week General Maples, Director of the Defense Intelligence Agency (DIA), testified before this committee that the security situation in Afghanistan is worsening and could further deteriorate in the coming spring. Should that undesired scenario unfold, what would be the likely effect on the planned expansion of the NATO ISAF force?

This committee is keenly interested in NATO's commitment to help train Iraq security forces. NATO made this commitment at the Istanbul summit in June 2004, but the follow-through has been slower than we had hoped. We look forward to your report on the status and results to date of NATO's training mission in Iraq.

Further, General Jones, you have been a leader in promoting an enhanced strategic partnership with Africa and highlighting the important strategic role Africa plays in supplying energy, fighting against terrorism, and promoting regional stability. The committee looks forward to hearing about the efforts of your command to counterterrorist and transnational threats in Africa and to help African nations develop their capabilities to effectively address security and stability changes. The committee is also interested in your assessment of China's expanding activities in Africa and your views on the possibility of an expanded role for NATO in Darfur.

Another region of continuing interest to this committee is the Balkans, the one area of Europe that is most prone to conflict. We look forward to your assessment of the political and military situation there and to hearing about the status of the NATO forces currently serving in Kosovo.

Again, we welcome all of our witnesses today and thank you again for your service.

Senator Levin.

STATEMENT OF SENATOR CARL LEVIN

Senator LEVIN. Thank you, Mr. Chairman. First let me join you in welcoming our witnesses and thanking them for their leadership and for the work that their commands have done in their AORs, and also in support of other efforts, including those in Iraq and Afghanistan.

Relative to North Korea, analysts say that North Korea could now have up to 12 nuclear weapons this year. North Korean officials have declared that they have a nuclear weapons arsenal and that they have reprocessed the fuel rods that had been frozen from 1994 to 2003 under the Agreed Framework. The reactor the North Koreans restarted over a year ago continues to produce plutonium and another reactor which had been under construction could produce many more times the plutonium than the existing one.

Meanwhile, the Six-Party Talks remain stalled over counterfeiting issues that the United States raised in the same month the last round of talks concluded. There is apparently no diplomatic progress and this time North Korea has not frozen its nuclear activities during the talks. North Korea continues to use the time to bolster its nuclear arsenal.

U.S. forces in Europe and in the Pacific will undergo a major realignment as part of the administration's integrated global posture and basing strategy. In Europe this plan calls for the return of thousands of troops to military bases in the United States, the closing of hundreds of bases in the territories of our traditional NATO allies, and the creation of new basing arrangements in Eastern Europe and Africa as European Command's strategic emphasis shifts to the East and the South.

While many of these changes are necessary as the Department of Defense (DOD) moves to lighter, more flexible expeditionary forces, concerns have been raised by the congressionally-mandated overseas basing commission and others as to whether the Department is moving too quickly or cutting our forward stationed forces too deeply without adequately considering the impact such a reduction in U.S. presence in Europe and NATO will have on our influence and leadership globally.

I look forward to General Jones' views on the pros and cons associated with our posture realignment in the EUCOM's AOR and I also look forward to hearing from Admiral Fallon and General Bell on the strategic logic and challenges of our reposturing, particularly in Korea and Japan.

NATO is also undergoing a major transformation. This past year has seen NATO make the shift from an alliance based on collective defense to one based on collective security in response to today's threats. NATO has demonstrated its willingness to operate outside the alliance's borders leading and expanding the ISAF in Afghanistan; deploying a mission inside Iraq to train Iraqi security forces; providing humanitarian assistance to Pakistani earthquake victims; and giving logistical support to African Union (AU) peacekeepers in Darfur, Sudan.

However, as General Jones noted in an interview last October, even as NATO has demonstrated a willingness to do more, there appears to be a desire on the part of some NATO members to fund less. Despite NATO members' commitment at the 2003 Prague

Summit to a spending goal of 2 percent of each country's Gross Domestic Product (GDP) for defense, a majority of NATO members are below the mark. Further, the recent Dutch debate over participating in the expanded ISAF mission in southern Afghanistan raises concerns over whether allies will provide the resources to match NATO's new missions. General Jones, I hope you would address those concerns today.

I want to commend General Jones for the EUCOM's strong leadership in elevating the strategic importance of Africa, both as a part of the counterterrorism strategy and because of Africa's significant political and economic potential. Through its theater security cooperation programs, the EUCOM has been proactive in building partner nations' security capacity and establishing important relationships in this too often neglected part of the world.

Relative to the crisis in Darfur, I want to thank you, General Jones, for passing along a message at my request to the NATO Secretary General. On January 30, 2006, a bipartisan group of 34 Senators signed a letter to President Bush urging him to take immediate steps to help end the violence in Darfur. On February 1, I wrote you, General Jones, asking that you provide a copy of that letter to the NATO Secretary General, urging him to engage NATO members in developing options for an expanded NATO role in addressing that crisis. I thank you for your assistance in that regard.

I support President Bush's call for at least a doubling of the international peacekeeping force in Darfur and note the recent moves by the U.N. Security Council to have the U.N. Secretary General begin planning for the AU's mission in the region to transition to a U.N. peacekeeping mission. But that transition is months away and meanwhile the crisis appears to be worsening, including spilling over into neighboring Chad. I would very much like to hear from General Jones on what role NATO might play in the near-term in assisting the AU mission in Darfur and what needs to be done to ensure that the political will and resources are provided.

I would ask, Mr. Chairman, that the rest of my statement, including a number of thoughts relative to the situation in India and various issues that relate to our relationship with China, be inserted in the record at this time.

[The prepared statement of Senator Levin follows:]

PREPARED STATEMENT BY SENATOR CARL LEVIN

Let me join the Chairman in welcoming our witnesses—General Jones, Admiral Fallon, and General Bell. I would like to extend our thanks to all of you for the work that your commands have done in your areas of responsibility, and in support of other efforts, especially those in Iraq and Afghanistan.

The vital strategic issues that we have to explore this morning include: 1) the situation on the Korean peninsula; 2) China's military modernization and strategic objectives; 3) the impact of Indo-U.S. strategic initiatives; 4) U.S. global force posture in the Pacific and European Command (EUCOM) areas of responsibility; 5) North Atlantic Treaty Organization's (NATO) new missions in out-of-area operations such as Afghanistan, Iraq, the Balkans and elsewhere; and 6) the international and U.S. response to the crisis in Darfur.

Analysts say North Korea could have up to 12 nuclear weapons this year. North Korean officials have asserted that they have a "nuclear weapons arsenal," and that they reprocessed the 8,000 fuel rods that had been frozen from 1994 to 2003 under the Agreed Framework. This means that over the last 4 years North Korea has potentially produced up to six more nuclear weapons on top of the one to two devices

the Intelligence Community assessed that they already had. In addition, the 5 megawatt reactor the North Koreans restarted over a year ago continues to produce enough plutonium for about another nuclear device per year. If the 50 megawatt reactor under construction is finished in a couple of years, as some reports indicate may be possible, North Korea would be able to produce 11 additional nuclear weapons annually.

Meanwhile, the Six-Party Talks remain stalled over counterfeiting issues that the United States raised in the same month the last round of talks concluded. There is no diplomatic progress, and unlike the negotiating process in the 1990s, North Korea has not frozen its nuclear activities.

The recently released Quadrennial Defense Review states that "U.S. policy remains focused on encouraging China to play a constructive, peaceful role in the Asia-Pacific region and to serve as a partner in addressing common security challenges, including terrorism, proliferation, narcotics and piracy." Given the concerns raised by China's rapid military modernization and global engagement activities, it is incumbent upon our Government to devise a wise policy vis-a-vis China, one that does not box us—or them—into any corners militarily or politically.

The other potential Asian power, India, is one that the United States has seen increased defense cooperation with since the late 1990s. The relationship between our two democracies is clearly moving in a constructive direction. Nevertheless, some concerns have been raised about the impact of one potential area of strategic cooperation—the recently announced civil nuclear agreement. This committee needs to know what impact this agreement would have—if Congress took action to allow it to come into force—on global nonproliferation efforts and on the regional nuclear balance.

U.S. forces in Europe and the Pacific will undergo a major realignment as part of the administration's Integrated Global Posture and Basing Strategy. In Europe, this plan calls for the return of thousands of troops to military bases in the United States; the closing of hundreds of bases on the territories of our traditional NATO allies; and the creation of new basing arrangements in Eastern Europe and Africa as EUCOM's strategic emphasis shifts to the east and south. While many of these changes are necessary as the Department moves to lighter, more flexible expeditionary forces, concerns have been raised, by the congressionally-mandated Overseas Basing Commission and others, that the Department may be moving too quickly and cutting our forward-stationed forces too deeply without adequately considering the impact such a reduction in U.S. presence in Europe and NATO will have on our influence and leadership globally. I would be interested in getting your views, General Jones, on the benefits and downsides associated with our posture realignment in the EUCOM's area of responsibility. I also look forward to hearing from Admiral Fallon and General Bell regarding reposturing, particularly in Korea and Japan.

NATO also is undergoing a major transformation. This past year has seen NATO make the shift from an alliance based on collective defense to one based on collective security in response to today's threats. NATO has demonstrated its willingness to operate outside the alliance's borders leading and expanding the International Security Assistance Force, ISAF, in Afghanistan; deploying a mission inside Iraq to train Iraqi security forces; providing humanitarian assistance to Pakistani earthquake victims; and giving logistical support to African Union peacekeepers in Darfur, Sudan. However, as General Jones noted in an interview last October, even as NATO has demonstrated a willingness to do more, there appears to be a desire on the part of some of NATO members to "fund less." Despite NATO members' commitment at the 2003 Prague Summit to a spending goal of 2 percent of each country's GDP for defense, a majority of NATO members are below that mark. Further, the recent Dutch debate over participating in the expanded ISAF mission in southern Afghanistan raises concerns. General Jones, I hope you will address these concerns today.

I want to commend you for EUCOM's strong leadership in elevating the strategic importance of Africa, both as part of a counterterrorism strategy and because of Africa's significant political and economic potential. Through its Theater Security Cooperation programs, EUCOM has been proactive in building partner nations' security capacity and establishing important relationships in this too-often neglected part of the world. Regarding the crisis in Darfur, Sudan, I want to thank you, General Jones, for passing along a message at my request to the NATO Secretary General. On January 30, 2006, a bipartisan group of 34 Senators, including myself, signed a letter to President George Bush urging him to take immediate steps to help end the violence in Darfur, Sudan. On February 1, 2006, I wrote to you, General Jones, asking that you provide a copy of that letter to the NATO Secretary General, and urging him to engage NATO in resolving that crisis. Thank you for your assistance. I support President Bush's call for at least a doubling of the international

peacekeeping force in Darfur and note the recent moves by the U.N. Security Council to have U.N. Secretary General Kofi Annan begin planning for the African Union's mission in the region to transition to a U.N. peacekeeping mission. But that transition is months away, and meanwhile the crisis appears to be worsening, including spilling over into neighboring Chad. I would like to get your thoughts about what role NATO might play in the near-term in assisting the African Union mission in Darfur and what needs to be done to ensure that the political will and resources are provided.

There are many other issues I hope we can touch on today including: (1) our evolving relationship with Japan; (2) efforts to combat terrorism, especially in Southeast Asia and Africa; (3) the future of our military relationship with Indonesia, the world's most populous Muslim country; and (4) the status of Kosovo and the impact of recent elections there on ongoing talks.

I look forward to hearing from our witnesses regarding these issues and their assessments of how adequately the budget request for fiscal year 2007 and beyond meets their operational, readiness, and quality of life requirements.

Thank you.

Chairman WARNER. Without objection.

Senator LEVIN. Thank you.

Chairman WARNER. Thank you very much, Senator.

Our committee will hold a closed hearing immediately following this in our committee room, SR–222, to receive such further testimony as each of the witnesses desires and to respond to questions. We will also put in today's record the entire statement by each of our distinguished witnesses. I commend you for getting them here in a timely way and they are quite prodigious in size. So I think we had best get a brief overview from each of the witnesses and we will proceed to our questions.

Admiral, will you lead off.

STATEMENT OF ADM WILLIAM J. FALLON, USN, COMMANDER, UNITED STATES PACIFIC COMMAND

Admiral FALLON. Yes, sir. Mr. Chairman, Senator Levin, distinguished members of the committee: It is a great pleasure and honor to be here representing the men and women of PACOM to testify this morning regarding our military strategy and operational requirements in the Asia Pacific region. The Pacific area is dynamic, vibrant, and I will tell you that overall the outlook is optimistic among most of the people in this region.

Of course, we still have some deep-seated and long-standing frictions and mistrusts among nations that are a source of continuing challenge in the area. I realize that now, having been new in the job last year, the magnitude of this area. It is indeed vast. I told you last year that I was going to make an effort to get out and about as quickly as possible to see as many of these countries as I could, to meet the leaders, to get a first-hand view of just what is going on. I will tell you that I have been successful in being able to visit many of the countries.

In terms of assessments, I will tell you that we are working hard to maintain the readiness of our forces in every area and I think we are in very good shape in that regard. I will also tell you that we have a great emphasis on maintaining our alliances in the region, so that we can work with our partners on issues within the region and in other parts of the world. The other major area of emphasis is on helping countries to develop their own capacities and capabilities, to deal with their internal problems, to deal with their people, so that we try our best to eliminate the conditions that

have been prone to foster the extremist activity that has resulted in so many problems in the world. We work very hard to try to orchestrate our theater security and cooperation plans with the Department of State (DOS) and with each of the nations in the area.

I will tell you that the priorities that I established last year are still I think appropriate, first off, to maintain our activities in the global war on terror, both within the region—and I will cover that in a second—and to support activities ongoing in the Central Command (CENTCOM), to mature our joint and combined warfighting. We have been continuing to work on that—I want to make sure that our operations plans and forces are credible if we should need to call upon people to execute those plans—continuing to advance our regional security cooperation throughout the Asia Pacific area, and then working to posture our forces for agile and responsive movement if required.

To address some specific issues, in terms of overall threat, I will tell you that since last year there have been several areas that have been actually decreasing in tension, and I would point out Kashmir on the Indian-Pakistan border as one area to highlight. The situation in Korea, General Bell can cover in great detail, but my assessment of that is that some progress was made in that Six-Party Talks. Actually a couple of sessions were held and that was a good opportunity to get people together to at least go over a framework. As far as substantive results of those sessions, I think the jury is still out. I know that Ambassador Hill is working this hard, looking forward to another engagement.

The situation in China, the tension in the Taiwan Strait, I would characterize as significantly reduced from a year ago, although in recent weeks the move by Chin Shui-ben to take action with the Unification Council has caused some concern. But I will cite the fact that the response from China has been pretty muted. There has not been much of a reaction and that is a change from past activity. But I think it is an area that we obviously have to continue to watch.

Chairman WARNER. Would you bring the mike up a little tighter. Your voice is failing and a lot of people in the back cannot hear.

Admiral FALLON. All right, sir.

Chairman WARNER. Thank you.

Admiral FALLON. Regarding the Taiwan situation, we have been working with the military of Taiwan to encourage them to take steps to bolster their own defense, which I think would be exceedingly useful both for themselves and to help us. I will tell you that we have had success in that regard and we are going to continue to work with them closely to move that particular initiative forward.

Regarding our current military operations, we are supporting anti-terrorist activities in Southeast Asia, particularly in the Philippines. I have recently come back from a trip to Indonesia and Malaysia, reporting that both of those countries are moving out smartly in tightening security, particularly in the area around the Sulu-Aceh Sea, which has historically seen a lot of problematic activity, with numerous terrorist groups, working in the area to train their forces and to prepare for terrorist acts which they have carried out in the region.

Regarding the budget for 2007 and the readiness of our forces, I am satisfied that we are generally moving forward in areas that would be helpful in the Pacific area, and I do not have any specific requirements that are not being met. We are paying close attention to force protection in every one of our areas in which we have people, working with our own component commanders and with the nations which we deploy forces to for exercises or training or operations. This is something that we watch every day and I'm confident that we have a handle on it.

The other major area of endeavor is the business of force posture changes as we look to the future. As you mentioned, we have just concluded a major strategic review with Japan. We are in the process of working out the details of implementation. In fact, as we are here this morning there is a meeting occurring later on today in Hawaii where the representatives of Japan are going to sit down again with Office of the Secretary of Defense (OSD) and with our people to try to work through details of this very, very comprehensive scheme.

General Bell, I am sure, is going to address the changes in Korea that are going to result in our moving essentially out of Seoul and down into two enclaves further south in the country. We have just concluded this past year a strategic framework agreement with Singapore, a staunch ally that continues to support our efforts in that area and give us access to some very excellent port and airfield facilities.

There are other countries throughout the region. I will not go name by name, but—Australia, our very staunch ally, we continue a close relationship with that nation, enhancing our training program. I would also highlight the fact that during the tsunami relief response earlier last year we were able to take advantage of a good relationship with the country of Thailand to stage forces, and again just in the past couple of weeks, in response to a disaster in the Philippines, the advantage of having our forward-deployed, very well prepared forces, enabled us to respond within 36 hours to have people on the ground in the southern Philippines in Leyte trying to help people, to relieve their suffering and do what we could to help that nation to recover from its efforts, from yet another natural disaster.

So as you can see, it is a busy theater. We have lots going on. Our men and women are working hard every day to support a wide range of activities. We are delighted to be there serving, and I want to tell you that our people thank this committee for your very strong support every day of our efforts. The soldiers, sailors, airmen, and marines in the PACOM are very proud to serve this Nation in the many endeavors in which they are engaged and we are very, very pleased to be working in the Asia Pacific area.

I would be pleased to answer your questions when my colleagues here have had their opportunity to have an opening statement. Thank you very much, sir.

[The prepared statement of Admiral Fallon follows:]

PREPARED STATEMENT BY ADM WILLIAM J. FALLON, USN

INTRODUCTION

Mr. Chairman and members of the committee: On behalf of the men and women of the United States Pacific Command (PACOM), I thank you for this opportunity to testify on the posture of our command, and provide an assessment of security in the Asia-Pacific region.

The Asia-Pacific region is an area of dynamic human activity, unprecedented economic growth and continuing security challenges in several areas. During this past year, Pacific-based U.S. military forces have served in large numbers in Iraq and Afghanistan, provided relief to thousands in the wake of natural disasters, built capacity in Southeast Asian nations combating terrorists and helped stabilize the region through exercises and engagement with countries throughout Asia and the Pacific.

In the past year, I have traveled extensively throughout the PACOM area of responsibility, meeting with military and government leaders, familiarizing myself first hand with issues, and determining how we—in concert with allies and partners—should prioritize efforts. These face-to-face discussions and first hand experiences have been very helpful in charting the course of our work. Several key impressions frame my overall assessment of the region.

In Northeast Asia, the U.S.—Japan relationship—the only military alliance for the Japanese—continues as the cornerstone for security in that area. The soon to be concluded Defense Policy Review Initiative (DPRI) has charted the strategic way ahead for the alliance and established a framework for the future U.S. force structure in Japan.

The U.S.-Republic of Korea (ROK) alliance is healthy and evolving. The transformation and rebalancing of our combined military forces continue on pace with no impact to our readiness to decisively defeat aggression from North Korea, if required. The North Korean leadership remains an enigma and the known ballistic missile capability of this country plus the potential possession of nuclear weapons are cause for continuing concern and attention to the Korean Peninsula. The Six-Party Talks, while not yet yielding a resolution to the North Korean nuclear issue, provide an encouraging framework for regional diplomatic leadership by the ROK, Japan, Russia, and China.

China's economic momentum and military modernization are conspicuous and influential. Regional leaders value the prosperity generated by their growing neighbor. Much of Asia's recovery from the late 1990's financial crisis was a direct result of strong Chinese markets. Asia-Pacific nations are grateful for the many decades of security and stability which a strong U.S. military presence has provided to the region. But most nations also want to share in the economic benefits which are being generated by China. Consequently, a positive relationship with both China and the United States remains the goal of most nations.

China continues to modernize its armed forces and acquire new capabilities at an accelerating rate. While nowhere near U.S. military capabilities, the People's Liberation Army (PLA) is enhancing a diverse and robust array of military hardware. While economic, commercial and almost every other type of interaction between the U.S. and China has been accelerating, military-to-military ties have lagged. We are working hard now to change the vector in this area, to encourage Chinese military leaders to substantively engage with us in a more transparent manner. In my discussions with PLA military leaders, they indicated a willingness to reciprocate. It is important to advance our mutual military relationship, not only to ease tension and suspicion but to encourage, by example, Chinese participation in the full range of international engagement.

While consistently seeking to assure the People's Republic of China (PRC) of our desire for peaceful resolution of cross-strait issues, we retain our strong commitment to the defense of Taiwan should it be threatened by PRC military action. In this regard we have firmly and consistently advocated a stronger commitment and investment by Taiwan in its own defense. We welcome the general reduction in cross-strait tension between China and Taiwan, but recognize the potential for danger in this relationship.

Southeast Asia is the front line of the war on terror in PACOM. Activities by terrorists and their supporters have been centered in the Philippines, Indonesia, and Malaysia, particularly in the area of the Sulawesi Sea. With the cooperation of those nations, we have been building capacity and strengthening the ability of those countries to resist the activities of the terrorists and to actively seek their capture or demise.

In Indonesia, we are in the early stages of applying newly available foreign military financing and we anticipate that this investment, along with continued infusion of security assistance funding next year, will support efforts to professionalize and reform the Indonesian military. Terrorist and separatist perpetuated violence in southern Thailand, Sri Lanka, Nepal, and Bangladesh is also a serious concern.

Relations with India are strongly positive. The world's largest democracy has much in common with us. We seek to reinforce the administration's effort to build a U.S.-India strategic partnership by enhancing our military-to-military interaction, particularly with increased exercises and engagement.

These impressions highlight both the challenges and opportunities in the PACOM area of responsibility. We have in place key elements to succeed in advancing U.S. security interests and enhancing regional stability—vibrant alliances, opportunities for new partnerships, combat ready and agile forces, and committed soldiers, sailors, airmen, and marines to lead our efforts. As we move forward, our initiatives are organized into five focus areas—prosecuting and winning the war on terror; maturing our joint and combined warfighting capabilities and readiness; ensuring the credibility of our operational plans; advancing regional security cooperation; and, posturing forces for agile and responsive employment.

WINNING THE WAR ON TERROR

Winning the war on terror is our highest priority at PACOM. Cooperating nations of the region, particularly Australia, Japan, Republic of Korea, Thailand, Singapore, Fiji, Mongolia, and New Zealand, are making or have made significant, worldwide contributions to the war effort in Iraq and Afghanistan. Tonga has previously committed forces and we expect force contributions again in 2006.

Within Asia and the Pacific, we strive to eliminate the violence that now threatens the people and stability of the region and, more importantly, to transform at-risk environments—by, with, and through our regional partners. In every case, we work closely with the host nation, the OSD, the DOS, and our U.S. Ambassadors in crafting our approaches to the at-risk areas.

Southeast Asia remains the PACOM focal point in the war on terror. It has experienced significant terrorist activity—as evidenced by the October 2005 bombing in Bali. In the southern Philippines, Mindanao and the Sulu archipelago remain a sanctuary, training and recruiting ground for terrorist organizations. We continue efforts to create a secure and stable environment.

Operation Enduring Freedom-Philippines (OEF–P) remains focused on training, advising, and assisting war on terror efforts of the armed forces of the Philippines (AFP). As a result, we note both operational and organizational improvement in counterterrorism capacity of the AFP and other Philippine security forces. For example, AFP units have been able to sustain themselves for longer periods in the field. Additionally, they have been able to better coordinate across services to pursue objectives. Other efforts, such as strategic communication, humanitarian and civil assistance, civil-military operations, intelligence fusion, and ongoing peace negotiations between the Philippine government and separatist Moro Islamic Liberation Front (MILF), have eroded support to the Abu Sayyaf Group and Jemaah Islamyah. In summary, we have made progress, but more can and will be done.

The Government of Indonesia's commitment to thwarting extremism and maritime security is readily evident, and recent operations against key terrorist leaders demonstrate that the skill and capabilities of Indonesian forces are improving. Indonesian security forces aggressively pursued terrorists responsible for the October 2005 Bali bombing, resulting in the death of one of the top two Jemaah Islamyah leaders, Al Zahari.

To support and accelerate Indonesian counterterror actions, and to enhance maritime security, particularly in the strategically important Strait of Malacca, we endorse a rapid, concerted infusion of assistance. Aid to the Indonesian military (TNI) will help sustain ongoing reforms as well as increase capacity for action against security threats and bolster their professionalism. Our assistance to the TNI will contribute to the long-term success of the Indonesian democracy—and ultimately—help remove conditions that breed terrorism. In the wake of the recent DOS decision to waive the Fiscal Year 2006 Foreign Operations Appropriations restrictions in the interest of national security, we have moved out smartly to implement Foreign Military Financing (FMF) for Indonesia. As we move forward in this new partnership, we remain committed to the improving the professionalism of the TNI and we will continue to closely observe and emphasize their support for human rights.

The dedicated professionals of our Joint Interagency Task Force-West (JIATF–W) made major contributions in furthering war on terror objectives by attacking a key enabler of terrorism—transnational crime—in an exceptionally cost-effective way.

JIATF–W personnel coordinated military-to-military training, information sharing, law enforcement training and infrastructure development projects throughout the theater but primarily among countries with the greatest threat of drug-related funding to terrorist activities. In a major success, the Interagency Fusion Center in Jakarta, Indonesia provided significant assistance to the raid of an industrial-scale drug lab outside Jakarta on November 11, 2005, the largest seizure in Indonesian history and among the largest in the world. The Philippine center is also operational and contributing to counter transnational threats.

Forces from the Special Operations Command (SOCOM) Pacific play a key role in supporting PACOM war on terror operations. They lead the effort in the Philippines—in concert with our Filipino partners—helping stabilize and improve the social-political environment. In addition to operations in the Philippines, the Joint Combined Exchange Training (JCET) program is the principal mechanism used by Special Operations Forces (SOF) to assist partner nations in building capacity to defeat terrorism and improve our understanding of complexity of the local environment.

MATURE OUR JOINT AND COMBINED WARFIGHTING CAPABILITY AND READINESS

Fundamental to success in the war on terror and continued stability in the Asia-Pacific region is our joint and combined warfighting capability and readiness. As virtually every operation and activity is conducted jointly and in concert with allies, it is important that we train to operate more effectively as a multinational team.

The revised PACOM training plan is specifically designed to mature joint and combined warfighting capability, and advance security cooperation while more effectively using resources. During the past year, we have completely reviewed our training program with the goals of maximizing scarce training dollars and minimizing unnecessary stress on the force. We aligned, reduced, and, where appropriate, eliminated exercises. By leveraging rotational forces in theater, we can meet obligations with partners and allies, enhance training opportunities and demonstrate resolve. As one example, Exercise Cobra Gold continues as a premier multilateral event with 5 countries partnering in a Command Post Exercise and more than 20 countries participating within the Multinational Planning and Augmentation Team. We are also using this existing venue to lead the Asia—Pacific Global Peace Operations Initiative (GPOI) training and certification. Through the routine interaction created by our exercises, we expect to reduce existing interoperability barriers, increase military capacity and confidence, and enhance the likelihood of an effective regional response to future crises.

Maturing our capability and readiness also requires operational improvements that not only span the spectrum of mission types—from nontraditional to combat operations—but also reflect the maritime nature of our theater.

Undersea Superiority

The Pacific Fleet has renewed its focus on Anti-Submarine Warfare (ASW) in view of the proliferation and increased capability of submarines in Asia and the Pacific. Continued enhancement of air, surface, subsurface, and C^4I systems, as well as regular training and operations with partners and allies, will ensure our sustained ability to dominate any submarine threat.

Deep Intelligence Penetration/Persistent Surveillance

We remain overly dependent on technical collection for our human intelligence (HUMINT)—a dependency that prevents us from gaining an acceptable degree of insight into adversary intent. Such insight is necessary, however, if commanders are to effectively shape, deter, or respond militarily, particularly during the initial, escalatory stage of a crisis. We are working to adopt better management processes to meet our knowledge goals. However, increased and focused capabilities—more persistent, deep, and discreet surveillance, better regional expertise, better HUMINT—are needed to better assess adversary intentions.

Command and Control (C2)

A robust, reliable, secure, and shared communications architecture is critical to the C2 of military forces in joint and combined warfighting. To support current plans and future network-centric operations, we need to provide sufficient Military Satellite Communications (MILSATCOM) capabilities across the vast Pacific region. We are working to diversify critical command, control, communications, and computers (C^4) sites to reduce the possibility of a disabling attack on our networks. Furthermore, to facilitate coalition interoperability, critical to the war on terror, we need to rapidly move from bilateral to multinational information sharing. Since extremism does not respect borders, meaningful counterterror response requires all af-

fected nations to join hands, creating nodes of knowledge to thwart attacks. The ongoing effort to improve information sharing among Strait of Malacca littoral states is a good example.

Strategic and Intratheater Lift

Given the size and maritime nature of our AOR, agile employment—in responding to conventional attack or for a nontraditional mission—requires a reliable, versatile, complementary, and rapid airlift and sealift force. The arrival of U.S. Air Force (USAF) C–17s this year at Hickam Air Force Base (AFB), Hawaii and Elmendorf AFB, Alaska adds increased airlift capacity. We are working to ensure that beddown support requirements, such as maintenance and training facilities, practice assault air strips, and associated infrastructure, keep pace with the aircraft delivery schedule.

High-Speed Vessels (HSVs) are a cost effective sealift alternative, providing an exceptionally flexible augment to intra-theater airlift assets. The acquisition of HSVs can significantly enhance the rapid deployment of the Stryker Brigade Combat Teams and the mobility of SOF throughout the AOR. We favor continued leasing of HSVs as an interim capability, and strongly support a more aggressive acquisition process to expedite Joint HSV delivery.

Prepositioned Stocks (PREPO)/Preferred Munitions

Due to the time-distance challenges in this theater, PACOM forces require readily available and properly maintained PREPO stocks at the outset of any conflict. With command-level attention, we have elevated the effectiveness of PREPO maintenance. However, we still have an immediate need for replenishment of these stocks and other preferred munitions, particularly Global Positioning Satellite (GPS)-aided and laser-guided weapons. The appropriate mix of emerging weapons such as Guided Multiple Launch Rocket System, new Patriot missiles, and the Joint Air-to-Surface Standoff Munitions will be important in the future.

Air dominance, sea control, effective ballistic, and cruise missile defense, and the ability to counter chemical, biological, radiological, and nuclear (CBRN) attacks on our forces and homeland are essential requirements to military readiness in the Pacific theater. Throughout our operating environment, these capabilities enable our forces to gain access, freely maneuver, and focus on the objective—whether conducting maritime interdiction operations or preventing an adversary's lodgment. We support Joint and Service programs that would preserve our superiority.

ENSURE OPERATIONAL PLANS ARE CREDIBLE

Operational plans form the basis for military requirements in peacetime and initial response in war. As such, they must be both credible and executable. At PACOM, we bring to the planning process a culture that challenges assumptions, analyzes with rigor, and demands refinement when variables change. For homeland defense, we work with Northern Command (NORTHCOM) to refine and exercise comprehensive strategies that safeguard Americans. Additionally, annual exercises, such as Terminal Fury, enable us to more closely examine key aspects and potential friction points in our plans and to develop options which optimize capabilities. Equally important, our staffs gain confidence in their ability to execute as a result of these exercises.

ADVANCE REGIONAL SECURITY COOPERATION

Our Theater Security Cooperation Plan serves as the primary blueprint to enhance U.S. relationships and military capacities of allies and regional partners. It is fully coordinated with our embassy country teams and integrates available resources—security assistance, military-to-military exchanges, exercises, cooperative technology development, and outreach programs—into a coherent, mutually supportive set of activities for each country. Of note, our enlisted leadership development program, targeted at militaries in developing nations, serves to enhance the professionalism and capacity of this key cohort. With stronger noncommissioned officers, we believe that the operational professionalism of units is increased as well as individual soldier leadership, important in building capability and respect for human rights.

We view these security cooperation activities as essential to the execution of U.S. strategy. For relatively low cost, we can make progress in each of the PACOM focus areas, and we facilitate situations in which future challenges can be met through strong regional cooperation and capacity.

Japan

The U.S.-Japan alliance remains the most important pact in the Pacific and is as strong as ever. Approximately 50,000 U.S. Armed Forces personnel are in Japan, either permanently assigned or forward deployed with Naval Forces. The Government of Japan also provides approximately $4 billion annually in host nation support to our basing arrangements. These forward-stationed and forward-deployed forces send a strong signal of U.S. commitment to maintaining peace and stability in the region as well as providing a ready response force in East Asia.

Our alliance is undergoing important changes, ensuring its relevance for the long-term. Continuing the work announced in the Alliance Transformation and Realignment Report in October, we are developing detailed implementation plans with Japan for each of the proposed posture changes (discussed later in this text). Simultaneously, we are conducting a U.S.-Japan interoperability study, exploring ways to improve how our forces coordinate a wide range of operations. Close collaboration is also ongoing for cooperative missile defense, an effort that will improve the security of Japan as well as the U.S.

Prime Minister Koizumi has demonstrated exceptional leadership in support of the U.S.—Japan security alliance and guided the Japanese government (GOJ) and military through significant change. With renewal of its Special Legislation, Japan continued its deployment of Self-Defense Force (SDF) personnel to Iraq and the Indian Ocean in support of OEF. Additionally, Japan expeditiously deployed its SDF to Indonesia for humanitarian relief in the aftermath of the tsunami disaster. These actions clearly show the willingness and capability of the GOJ to deploy the SDF regionally and globally in support of security and humanitarian operations.

Republic of Korea (ROK)

The U.S.-ROK alliance is sound and continues to form the foundation to peace and security on the Korean peninsula. Our alliance remains focused on the most immediate security threat to the Korean people—North Korea (Democratic People's Republic of Korea—(DPRK)). The DPRK maintains more than 70 percent of its forces within 100 kilometers of the Demilitarized Zone (DMZ) and its export of missiles and missile technology poses a very serious proliferation concern. Other illicit activities—including probable state-run narcotics and currency counterfeiting enterprises—continue to finance the DPRK regime while undermining regional security.

After four complete rounds of Six-Party Talks aimed at eliminating North Korea's nuclear weapons programs, it is clear that deliberate and coordinated multilateral efforts between the ROK, Japan, Russia, and China must continue. The strong ROK-U.S. defense partnership has been an essential cornerstone of the effort to deter aggression and resolve the North Korean nuclear issue peacefully through regional diplomacy.

The ROK-U.S. alliance must remain adaptable in light of the changing security environment, including unconventional threats, China's military modernization, and the potential for reconciliation between the Koreas. The ROK and U.S. are working to transform both our militaries and the alliance. We also hope to foster greater trilateral military cooperation between the ROK, Japan, and the U.S., and we welcome Korea's adoption of a more regional view of security and stability. By moving forward as partners we will continue to successfully modernize the alliance for our mutual and enduring benefit.

Australia

One of our closest and steadfast allies, plays a key role in the Pacific and is a staunch partner in the war on terror. U.S. and Australian military forces coordinate security cooperation and counterterrorism activities in the Philippines, Indonesia, and Malaysia. Additionally, Australia plays a leading role in regional security with operations in East Timor, the Regional Assistance Mission to the Solomon Islands, and maritime security in the Pacific Islands.

High quality, bilateral training between the Australian Defense Force and the U.S. Armed Forces has been a longstanding and fundamental tenet of our alliance, resulting in successful combined operations in East Timor, Afghanistan, the Persian Gulf, Iraq, and tsunami relief. The establishment of a Joint Combined Training Centre in Australia's Northern Territory will take bilateral training to a new level, allowing our combined forces to prepare for a modern and dynamic threat environment. In addition, we are strengthening intelligence sharing with Australia to further enhance our bilateral cooperation and interoperability.

Republic of the Philippines

The Republic of the Philippines is a steadfast ally in Southeast Asia, and our mutual commitment to this alliance was just reinforced by rapid U.S. civil and military

response to February's Leyte mudslide disaster. Challenged by recent threats to stability, the Philippine Government (GRP) appears committed to democratic practices and rule of law. The GRP has taken the lead on initiatives to improve our counterterrorism cooperation, and at the same time, we see steady progress in Philippine Defense Reform. The GRP is committed to a comprehensive reform program that includes a multiyear planning and budgeting process and publication of annual Defense Planning Guidance. The Philippine Government is setting aside resources to retrain and re-equip up to 14 battalions with U.S. material every year for the next 5 years and is confident this effort will succeed with very modest U.S. assistance. President Arroyo deserves credit for reducing the Philippine budget deficit by 22 percent in 2005. This strong fiscal position makes military reform more affordable. As Philippine commitment is demonstrated, we should reinforce progress appropriately.

I am encouraged by the continued support and involvement of the Philippine government in significant regional events. This year they endorsed the Proliferation Security Initiative and its Statement of Interdiction Principles. They actively participated in the Association of Southeast Asian Nations (ASEAN) Regional Forum venues addressing counterterrorism and maritime security and cooperated with Australia and other friends and allies on diverse security matters.

Thailand

Thailand is a Major Non-NATO Ally, Treaty Ally, and partner which maintains a robust military relationship with the U.S. Having led military peace observers in Aceh, Indonesia, and completed engineering deployments in Afghanistan and Iraq, Thailand routinely demonstrates international commitment and also supports our training requirements by generously hosting the premier PACOM multilateral exercise, Cobra Gold. This annual exercise is a centerpiece for building regional competencies to respond to a wide range of transnational security threats and humanitarian relief contingencies. Also, Thailand has been particularly open and cooperative in the war on terror and counternarcotics efforts, and a year ago hosted U.S. and multi-nation tsunami relief efforts. We continue to stay abreast of the terrorist activity in the Southern Provinces.

India

We are working with our Indian armed forces counterparts to realize the goal of national strategic partnership envisioned by President Bush and Prime Minister Manmohan Singh. As vibrant democracies, India and the U.S. are working together to resolve issues of mutual interest such as maritime security, counterterrorism, and disaster relief. This year, PACOM forces conducted more complex and realistic training exercises with the Indian military, including the Malabar naval exercise with aircraft carriers from both nations, the second in a series of Army exercises leading to a brigade-level Command Post exercise, and the Cope India air exercise featuring a wide range of Indian and U.S. aircraft. As U.S. and Indian security interests overlap, we will ensure our military interaction enhances interoperability and fosters a military-to-military relationship based on trust. We believe a strong, democratic India will be a cornerstone of stability in the region.

Singapore and the U.S. signed a Strategic Framework Agreement in July 2005 recognizing Singapore as a major security cooperation partner. This agreement, and the supporting Defense Cooperation Agreement, solidifies strategic access to Singapore for visiting U.S. forces and provides a framework to guide our expanding bilateral security relationship. Maritime security cooperation remains a key common interest, and we continue to work with Singapore and other partners to improve capacity in this area. In August 2005, Singapore, a regional leader within the Proliferation Security Initiative (PSI), held the first Joint and Combined PSI Exercise in Asia. A staunch supporter of the war on terror, Singapore continues to provide forces to Operation Iraqi Freedom (OIF) and OEF.

Indonesia plays a unique strategic role in Southeast Asia and the Muslim world. As the world's most populous Muslim nation, located astride strategic trade routes, Indonesian democracy is critically important to security in the Pacific.

Over the past year, we have advanced engagement with the Indonesian military by completing the first JCET since 1992, providing $11 million of medical supplies, and formalizing the military-to-military security consultative process. Our strategy for moving forward is carefully targeted toward areas such as humanitarian assistance and maritime security. We are well on the way to providing $15 million in C–130 parts to the Indonesian Air Force through the foreign military sales system to help Indonesia improve its airlift capacity, particularly important in responding to natural disasters. We also plan to use $1 million in Foreign Military Financing (FMF) to support critical improvement to the Indonesian Navy maritime security in-

frastructure. Additional FMF funding in fiscal year 2007 would allow us to continue airlift development and speed the deployment of coastal radars and communications equipment essential to Indonesia and maritime security for the region.

As we move forward in this renewed partnership, we remain committed to the improved professionalism and reform of the Indonesian military. We will closely observe and strengthen their demonstrated support for human rights—a major PACOM focus, continually emphasized during numerous high level visits with Indonesia. Just last week, I returned from Indonesia, and several of my component commanders have recently visited—each of us is heartened by the progress and values we observed. Of note, President Yudhoyono has warmly greeted the recent U.S. policy changes and remains deeply committed to continued military reforms.

China

The rapidly expanding economy, growing demand for energy and clear aim to assume a more prominent role in regional and international affairs is having a major impact on the Asia-Pacific security environment. PACOM activities have been in concert with the Taiwan Relations Act (TRA) of 1979, the three Joint U.S.-PRC communiqué's (1972, 1979, 1982) and the One China policy. These policies have helped maintain peace and stability in the area of the Taiwan Strait for the past quarter century. DOD has two obligations under the TRA: assist Taiwan in maintaining its self-defense capability and retain the capacity to resist any use of force against Taiwan. Our efforts are aimed to prevent miscalculation which might result in conflict.

The PRC has continued to acquire new hardware and expand military capabilities. While not constituting a capability near that of the U.S., the increasing sophistication and size of modern military equipment, coupled with the lack of clear national intent with regard to this military capability, merits our close attention. Until the PRC renounces any intention of using force to resolve the Taiwan issue, we will maintain sufficient military capability in the region to meet our obligations under the TRA.

Given the complex and extensive relationship between the U.S. and PRC and the expressed desire to deepen the military relationship between us by the political leaders of both countries, PACOM has been strongly advocating a reinvigorated military-to-military relationship in a variety of areas. We have sought to focus in areas of common interest but have made clear to PLA leaders that the relationship should be guided by principles of transparency and reciprocity.

Taiwan

Our relationship with Taiwan is also guided by the TRA. Recognizing that tensions in the area have relaxed in the past year, PACOM has continued to encourage both Taiwan and the PRC to work to resolve peacefully their differences. Enhancing the ability of Taiwan to defend itself is the focus of our military engagement with Taiwan and we have seen strong interest by the Taiwan military in strengthening their defensive capabilities. We will continue to encourage their acquisition of useful technologies and a strong commitment to their own defense.

Mongolia

Mongolia remains a staunch ally fighting terror around the world, whether through involvement in Iraq, or as a volunteer for U.N. missions. Our relationship remains strong. The Mongolians strive to establish a regional center for Peacekeeping Training. Khaan Quest, a PACOM-Mongolia Peacekeeping exercise, will serve as a capstone to this year's peacekeeping training efforts. We are moving from a bilateral to a multi-lateral forum to include other nations in the region in this exercise. PACOM is steadfast in our support of Mongolian Defense Reform efforts; providing guidance and direction to align with more efficient models of Command Structure with a Joint Defense Assessment.

Russia

EUCOM is the supported command for Theater Security Cooperation planning and coordination with the Russian Federation with PACOM in a supporting role. Extensive coordination with EUCOM ensures security cooperation efforts are consistent and mutually supporting. PACOM interaction with Russia during 2005 saw some success; including the actual rescue of a trapped Russian submarine crew, the 11th trilateral search and rescue exercise with Canada and the U.S., and the historic port visit by the U.S.S. *Cushing* to Petropavlovsk—the first U.S. Navy warship visit there since World War II. Cooperative Threat Reduction interaction suffered because of sharply reduced funding.

Sri Lanka

Limited progress occurred over the past year in the peace process between the Government of Sri Lanka (GSL) and the Liberation Tigers of Tamil Eelam (LTTE). After a flurry of violence following the November 2005 elections, we are encouraged by the recent talks in Geneva by the GSL and the LTTE and the plan to continue these talks in the near future. The PACOM security cooperation program with the Sri Lankan armed forces helps deter renewed violence by improving its preparedness as well as demonstrating to the LTTE that the GSL has U.S. support. Military-to-military activities are aimed at developing institutional values that ensure civilian control of the military, and a military commitment to human rights.

Nepal

Policy decisions as a result of King Gyanendra's February 2005 assumption of direct rule prevented PACOM from allocating the $1.48 million in planned Foreign Military Financing (FMF) for Nepal. Prior to the cessation of engagement, FMF and Special Forces Joint Combined Exercise Training with the Royal Nepalese Army (RNA) Rangers were making a difference in Nepal. International pressure and current U.S. policy regarding military-to-military activities with His Majesty's Government of Nepal have yielded little progress in democratic reform. The security situation in Nepal is deteriorating as the Maoist campaign of terror against the government and people intensifies. The RNA is increasingly challenged in its attempt to protect the population against the terrorists.

Bangladesh

We seek to reinforce shared values of democracy and human rights with the Bangladesh armed forces through security cooperation and training. PACOM objectives are to assist Bangladesh in fighting extremism, developing border control, increasing maritime security, and developing the counterterror skills necessary to align its security capabilities. The security situation in this country is deteriorating as Muslim extremists take advantage of corrupt government with increased terrorist violence.

Malaysia

This country has a strongly expanding economy and growing affluence. The government supported the "Eyes in the Sky" initiative to increase combined aerial surveillance over the Strait of Malacca and stood up the Malaysia Maritime Enforcement Agency, a Coast Guard-like organization, in late November 2005. Additionally, Malaysia has worked to develop the Southeast Asia Regional Center for Combating Terrorism as a hub for exchanging best practices on combating terrorism. These initiatives demonstrate a commitment to combating piracy and other maritime threats, reducing the potential for terrorists to use Malaysia for sanctuary or transit zone, and a desire to work cooperatively with regional partners to increase stability.

Vietnam

Our military-to-military relationship with Vietnam is progressing in a modest but positive direction. Vietnam accepted the International Military and Education Training (IMET) program, co-hosted a PACOM multilateral conference on military medicine, and expressed the possibility of supporting international peace operations. These are strong indicators of increased Vietnamese willingness to participate regionally. Along with prisoner of war/missing in action (POW/MIA) recovery operations, we promote a combined approach between our Armed Forces, particularly on issues that can influence regional security or make contributions in humanitarian assistance/disaster relief.

New Zealand

New Zealand has been a strong supporter of the war on terror, including operations in Afghanistan. The Government of New Zealand's 1986 legislative ban of nuclear powered ships in its waters continues to hinder improved military-to-military relations.

Compact Nations

We continue to reinforce our special relationship with the three "freely associated" states—the Federated States of Micronesia, the Republic of the Marshall Islands and the Republic of Palau. We take seriously our defense obligations to these nations under the Compacts of Free Association through the implementation of our homeland defense planning and preparation. We also recognize the significant contributions of the citizens of the compact nations as they serve with great distinction in the U.S. Armed Forces including OEF and OIF. The Marshall Islands have a particular importance as the location of the Ronald Reagan Ballistic Missile Defense

Test Site, a unique asset which is integral to the development of our Nation's missile defense programs and the conduct of space operations.

Security Assistance

One of the most important features of PACOM theater security cooperation is the security assistance effort we execute in partnership with the DOS and in close cooperation with our embassy country teams. Of special interest are the grant aid security assistance programs including IMET and FMF, powerful tools in building partnership capacity of security forces from developing countries. It is a vital element of the Philippines Defense Reform, and is enhancing counterterrorism and maritime security capabilities of other war on terror countries, such as Indonesia, Thailand, and Bangladesh. FMF is also improving the capability and readiness of war on terror coalition partners Mongolia and Fiji. PACOM countries typically receive less than 1 percent of the annual worldwide allocation of FMF. These modest investments in capacity building and prevention of the conditions which foster instability merit increased funding.

Other key programs in PACOM contribute more broadly to security cooperation by addressing transnational concerns. Our Global Peace Operations Initiative program, efforts to combat weapons of mass destruction, preparations for pandemic influenza, the periodic deployment of the hospital ship, U.S.N.S. *Mercy,* and outreach organizations like the Center of Excellence in Disaster Management and Humanitarian Assistance (COE) and the Asia-Pacific Center for Security Studies (APCSS) provide foundational expertise while establishing enduring relationships between nations of the region. Additionally, Joint POW/MIA Accounting Command has proven itself as powerful force multiplier in our efforts to meet security cooperation goals.

Pandemic Influenza

Over the past year, PACOM has conducted planning, preparation, education, and an exercise focused on pandemic influenza in an effort to prepare U.S. Pacific forces for the potential of this disease. In addition, and in cooperation with the DOS and the Department of Health and Human Services (HHS), we have engaged with other Asian-Pacific militaries to raise the collective level of awareness and cooperation. We believe such coordination will help provide better visibility into some nations in the region, and buildup limited response capability. The U.S. overseas military medical laboratories in Jakarta and Bangkok are providing essential services in support of these efforts.

U.S.N.S. Mercy Deployment

The deployment of one of the Nation's two hospital ships, U.S.N.S. *Mercy,* during the South Asia tsunami relief operations clearly demonstrated the potential of these ships to aid the needy as well as advance security cooperation. This year we plan to begin periodic humanitarian and civil assistance deployments to further our relationships, build capacity and flexibility, and encourage stable, secure environment development in key nations in the Asia-Pacific. To effectively employ resources and build upon the lessons learned and teamwork from tsunami relief, we hope to include nongovernmental organizations (NGOs) on U.S.N.S. *Mercy* to support our operational and humanitarian goals.

POSTURE FORCES FOR AGILE AND RESPONSIVE EMPLOYMENT

Forward deployed forces, ready for immediate employment, send an unambiguous signal of undiminished U.S. commitment to the Asia-Pacific area. Agile and responsive global forces also act to deter aggression, provide the National Command Authority rapid, flexible options in crises, and the ability to dominate an opponent in combat if required. We are focusing our ongoing transformation and rebalancing efforts on improving our responsiveness.

Importantly, we approached transformation and rebalancing from a regional perspective and have enjoyed the support of allies and partners in the process. In particular, the cooperation with the GOJ and the ROK has set the stage for improved combat capability while also reducing the impact on the local populace. Additionally, we are coordinating closely with the Government of Guam as we strive to optimize our future military posture. In executing the posture changes described below, we are concerned first and foremost with preserving combat capability. We will relocate U.S. forces in close consultation with allies and in a manner which retains our force employment capability. Completing the necessary infrastructure on the agreed timeline will require expeditious and continued commitment of financial resources.

The realignment and consolidation of USFK into two hubs optimally locates forces for combined defense missions, better positions U.S. forces for regional stability,

greatly reduces the number of major installations, returns most installations in Seoul to the ROK, and decreases the overall number of U.S. personnel in Korea. When completed, these initiatives will also result in joint installations that provide more modern and secure facilities, expanded training space, a less intrusive presence, and an enhanced quality of life for both Koreans and U.S. forces and their families. Additionally, transformation reciprocally supports our Korean ally's goal of building military self-reliance and a regionally capable force. The redeployment of 12,500 American forces remains on schedule for a 2008 completion.

Our Japan Alliance Transformation and Realignment negotiations through the DPRI are nearing conclusion, with an agreed implementation plan expected by March 30 of this year. This effort assessed the security environment in the region and bilaterally determined the required roles, missions, capabilities, and force structure. With this initiative, we will inaugurate several substantive changes in Japan including transfer of U.S. carrier tactical aviation from Atsugi Naval Air Facility to Marine Corps Air Facility Iwakuni, collocation of U.S. and Japanese air command and control at Yokota Air Base, reduction of the Marine footprint on Okinawa by approximately 7,000 Marines and relocation of them to Guam. Subsequent to Marine redeployment and consolidation of forces on Okinawa, we intend to return land to the Japanese and thereby mitigate some irritants to local communities. The GOJ has also approved U.S.S. *George Washington,* a nuclear carrier, as a replacement for U.S.S. *Kitty Hawk.*

In South and Southeast Asia, we are continuing efforts to increase access and theater security cooperation opportunities through the development of Cooperative Security Locations (CSL) and Forward Operating Sites (FOS). Such locations would be characterized by minimal infrastructure and periodic presence. In December 2004, we validated the CSL concept in the tsunami response.

QUALITY OF SERVICE

Our personnel readiness remains strong. Morale is high. Your continued support of our Quality of Service (QOS) initiatives contributes immensely to our combat readiness and the retention of our highly skilled soldiers, sailors, airmen, and marines. In particular, thank you for demonstrating your commitment to our military men and women and their families by approving the 3.1 percent pay raise, authorizing full Basic Allowance for Housing for reservists called to Active-Duty for more than 30 days, making permanent the increase to the Family Separation Allowance rate, enhancing the death gratuity benefit to $100,000, increasing the Servicemen's Group Life Insurance maximum amount to $400,000, and authorizing retroactive Hostile Fire and Imminent Danger Pay. In addition, by providing travel and transportation rights to family members to visit their hospitalized service member and not requiring payment for meals in a military hospital by members undergoing recuperation or therapy, you have helped to improve morale and build loyalty.

SUMMARY STATEMENT

Last year's visits to the region by the President and Defense Secretary are indicative of the growing prominence of the Asia-Pacific. The extraordinarily dedicated men and women of PACOM—serving in and out of uniform—understand the region and its importance to our national interests. We are committed and prepared to serve those interests—whether in peace or at war. The American people and Congress have provided staunch support and we sincerely appreciate your advocacy and assistance. I am proud and honored to represent the men and women of PACOM. On their behalf, thank you for your support, and thank you for this opportunity to testify on our Defense posture.

Chairman WARNER. Thank you, Admiral.

General Bell.

STATEMENT OF GEN BURWELL B. BELL III, USA, COMMANDER, UNITED NATIONS COMMAND AND REPUBLIC OF KOREA/ UNITED STATES COMBINED FORCES COMMAND, AND COMMANDER, UNITED STATES FORCES KOREA

General BELL. Thank you, Mr. Chairman, Senator Levin, distinguished members of the committee. It is my pleasure to appear before you today representing the servicemembers and DOD civilians who serve in the Republic of Korea (ROK). On behalf of these out-

standing young men and women, I want to thank you for your continuing support.

Since I assumed command in Korea last month—last year you were on the hook, Admiral Fallon, to be the new guy and that is my situation this year—I have had a chance to assess the ROK's military capability and certainly that of North Korea. It is my belief that our alliance with the ROK remains strong as a key strategic partnership for the United States, as well as for the ROK.

The ROK-U.S. alliance provides a pillar of stability in northeast Asia while it deters North Korea. The ROK-U.S. mutual defense treaty relationship has progressed from a single-purpose military alliance into a broader alliance based on shared democratic values and common interests. Although the United States has many ongoing global commitments, and I realize that, I am convinced that we must continue to stand with our South Korean partner to deter aggression on the Korean peninsula. In doing this, we will also substantially contribute to regional stability.

The success and prosperity of the ROK reflects the results of a half century of United States and American commitment. Since the Korean War, the alliance has maintained a security environment favorable to the development of what is truly a remarkable free market economy, as well as a great free and democratic society in the ROK. Today South Korea is a world economic leader. They are indeed our close friend and our partner.

One-quarter of the world's economic output is generated in northeast Asia and the ROK ranks as our seventh largest trading partner. United States trade alone in the region exceeds $500 billion a year. Our Nation, as you may know, is currently entering into negotiations with the ROK for a free trade agreement. All this is good for us at home in my view as we trade in the global economy.

Meanwhile, my assessment of the ROK military is that it is on a solid path to modernization and transformation. It continues to assume tough mission sets which heretofore could only be accomplished by the United States forces. Today, with our help, the ROK is fully capable of defending itself from North Korean aggression.

In contrast, North Korea is a significant threat that must still be deterred. North Korea's Kim regime continues to build and sustain a military arsenal far beyond any requirements for self-defense, at the dire expense of its own people's wellbeing. North Korea's military is located forward along the DMZ and is positioned to strike, well within range of Seoul, where about half of South Korea's 48 million population resides.

North Korea's missile inventory and its self-declared possession of nuclear weapons threaten the northeast Asia region and beyond. North Korea proliferates a range of weapons and technologies and it appears willing to sell to anyone. As North Korea continues to proliferate and pursue weapons of mass destruction (WMD) capability, they may eventually threaten the continental United States and indeed the entire world.

The United States and our allies have attempted significant engagement efforts with North Korea and we will continue to do so in the future. But North Korea delays discussion, breaks commitments, and disregards international standards of behavior. The Kim Jong Il regime prefers to pursue its own ends, regardless of

the good faith efforts of the United States and other regional actors.

With the reality of North Korea ever present, there is a desire in both the United States and the ROK to see our half-century alliance mature and adapt to the contemporary and foreseeable security environments. I think this approach is reasonable and healthy.

As we support the ROK's desire for a greater role in its own defense, we also complement our efforts to meet our own transformation objectives. In the past few years, we have begun to reposition our forces south of Seoul, redeploy selected units to our home shores, and return valuable land to the Korean people. This process will continue over the next few years.

Recently the ROK government has asked us to revise the command structure which characterizes our current military relationship should war break out on the peninsula. Today the alliance calls for a combined or equally shared operational command arrangement between our two nations, under my leadership of what we call the Combined Forces Command (CFC). In the future, South Korea would like to move to a command relationship where they would independently direct combat operations of their forces, and the United States forces would transition from our current equally shared command relationship to more of a supporting role. The ROK military is in my view modern and capable and my assessment is that this arrangement that they seek will make sense for both nations, while continuing to effectively deter and ensure victory should deterrence fail.

In the future, to support the ROK where our ally is exercising independent combat command, I envision U.S. military contributions to the alliance to be air- and naval-centric. As I see it, our past commitment to the ROK and the region has significantly benefited our own Nation as well as that of the ROK. Throughout our history, the United States has prided itself in our promotion of democracy, free market economies, the celebration of individual freedoms and rights, and the propagation of peace and security. The ROK-U.S. alliance demonstrates our continued dedication to those ideals today and into the future.

That is my current assessment. I really do thank you for this opportunity to appear before you today and I look forward to taking your questions during this hearing. Thank you, Mr. Chairman.

[The prepared statement of General Bell follows:]

PREPARED STATEMENT BY GEN B.B. BELL III, USA

Mr. Chairman, and distinguished members of the committee, thank you for the opportunity to appear before you today as Commander, United Nations Command; Commander, ROK—United States CFC; and Commander, USFK. It is my distinct honor to represent the soldiers, sailors, airmen, marines, and their families who serve in the ROK. On behalf of these outstanding men and women who serve our country, I thank you for your unwavering commitment to our Nation's Armed Forces and improving the quality of life of our servicemembers and their families. Your support allows us to ensure security on the Korean peninsula and promote stability in the Northeast Asia region. I appreciate this opportunity to report on the state of the Command and on the strengthening of the ROK-United States Alliance.

Much has changed in the more than half-century of the ROK-United States Alliance, change affected both by the events of September 11, 2001 and by new developments on the Korean peninsula, revealing a far more complex security environment. These changes have resulted in increased security responsibilities for the United States and increased interdependence with our allies and coalition partners

throughout the world. A new generation of South Korean leaders, cognizant of their national achievements, is eager to achieve a more constructive relationship with North Korea and to take a more active role in regional affairs. At the same time, while still dependent on international aid for economic survival, North Korea has continued to defy international conventions through its declared possession of nuclear weapons, presenting a clear threat to both the region and the entire world.

While the dynamics of the security environment are evolving and our security relationships continue to mature, the fundamental purpose of the ROK-United States Alliance remains unwavering: deter and defend against a North Korean threat; and sustain a mutual commitment to regional security and stability. We continue to encounter calculated North Korean efforts to divide an alliance that has been the foundation for peace and prosperity in the Northeast Asia region for over half a century. Together, we are working to transform the ROK-United States Alliance into a stronger, far more capable alliance, while setting conditions for an enduring United States military presence in Korea. This military transformation of the ROK-United States CFC will also bolster regional security and stability, promote prosperity, and better defend democracy in the region.

THE NORTHEAST ASIA SECURITY ENVIRONMENT

The United States has significant, long-term interests in Northeast Asia; namely, mitigating threats to regional stability, promoting economic cooperation and free market enterprise, and fulfilling our commitments to allies and friends. The long-standing presence of United States forces and the strength of our strategic partnerships provide the foundation for stability and the catalyst for continued cooperation and prosperity in the region. Forward-deployed United States forces demonstrate our resolve to strengthen and expand alliances, counter the proliferation of weapons of mass destruction, work with partners and friends to defuse regional conflicts, and stand with our partners to oppose threats to freedom wherever they arise. United States forces based in South Korea, along with military forces from the ROK and other regional partners, enable the promotion of long-term regional stability by continuing to deter an increasingly manipulative and provocative North Korea.

Northeast Asia is a nexus of economic might. United States trade in the region accounted for about 24 percent of our Nation's total international trade in goods for 2005, exceeding the share of goods traded with the European Union (EU) and second only to our trade with the countries of the North American Free Trade Agreement (NAFTA). Bilateral United States-ROK trade alone totaled $72 billion in 2005. All told, over one-quarter of the world's total trade flows through the Northeast Asia region. With this trade and investment likely to expand in the future, the stability of Northeast Asia is essential to the vitality of global markets, upon which the prosperity of the United States also greatly relies.

While economic cooperation and interdependence within Northeast Asia represent a positive trend toward encouraging stable relations, our military presence remains essential in a region that includes five of the world's six largest militaries, three of the world's proven nuclear powers, and one self-declared nuclear state—North Korea. Historical enmity amongst nations, coupled with the continuing upward trend in regional military expenditures, present the potential for large-scale military competition and corresponding instability. Over the last decade, while average global defense spending has declined, defense spending in Northeast Asia has increased by about one quarter.

Within this context, North Korea continues to defy the international community by declaring its possession of nuclear weapons, which are a threat to the security and stability of the peninsula, the region, and the world. The Six-Party Talks between the United States, ROK, North Korea, China, Japan, and Russia on the issue of North Korea's nuclear weapons programs represent the six countries most engaged in this area of the world with respect to the assurances of a peaceful and stable Korean peninsula. The United States is committed to resolving the North Korean nuclear issue peacefully. Because the North Korean nuclear issue is complex, the solution will likely be complicated, requiring substantial effort by all parties involved. However, the fact that the six parties remain engaged is an indication of positive intent. Throughout this process, the Alliance will remain ready to deter, and if necessary, to defeat a North Korean attack.

NORTH KOREAN CHALLENGES TO REGIONAL AND GLOBAL SECURITY

North Korea poses a variety of threats to regional and global stability: an active nuclear weapons development program; growing proliferation of missiles and missile technology; assessed possession of chemical weapons and a biological research program; large conventional and SOF; and a failing economy. Its leader, Kim Jong Il,

shows little regard for the welfare of ordinary citizens, and uses extensive internal security measures to ensure that no internal challenge to his regime emerges. He increasingly encourages illicit activities such as drug trafficking and counterfeiting of U.S. currency to generate hard cash, and demonstrates little regard for international convention or agreements. The regime repeatedly uses the threat of large-scale war and WMD in order to extort aid or other concessions from the international community.

Kim Jong Il's paramount concern is to remain firmly in control. He rules the Nation through a small cadre of elites who control all aspects of North Korean life. While the reunification of the peninsula under North Korean control remains the primary stated purpose of his regime, the ultimate goal of the North Korean dictator is self-preservation. Currently, there is little evidence to suggest that any internal threat to the regime exists.

The North Korean Military

The world's most militarized nation in proportion to population, North Korea has the world's fourth largest Armed Forces with over 1.2 million Active-Duty personnel, and more than 5 million Reserves. Mandatory military conscription lasts 8 years on average, with most servicemen performing the same job in the same unit the entire period. This stability in the ranks allows North Korean units to maintain readiness while limiting the expenditure of scarce resources. With more than 70 percent of its Active-Duty combat forces deployed south of the Pyongyang-Wonsan line, within approximately 50 miles of the DMZ, North Korea poses a significant and immediate threat to the security of the ROK.

Despite aging equipment and simplistic methods, North Korea's conventional military forces pose a continuing threat due to its sheer size and forward positions. Approximately 250 long-range artillery systems are within range of Seoul from their current locations. Although qualitatively inferior, North Korea's air force and navy, with over 1,600 aircraft, 700 ships, and the world's largest submarine fleet, are postured to launch operations against the ROK or other nations in the region with little or no warning.

While North Korean economic difficulties have impaired the readiness, modernization, and sustainability of its conventional forces to some degree, North Korea, through its "Military First" policy, has continued significant investment in asymmetric capabilities that include nuclear weapons programs, SOF, missiles, and WMD.

North Korean Asymmetric Threats: Nuclear Capabilities, Special Forces, Missiles, and WMD

North Korea's asymmetric capabilities are substantial and represent a significant threat to the ROK and the region. The most pressing concern of these threats is North Korea's nuclear weapons programs. North Korea's abandonment of the 1994 Agreed Framework and International Atomic Energy Agency (IAEA) Safeguards Agreement, withdrawal from the Nuclear Non-Proliferation Treaty, restart of the Yongbyon nuclear reactor, and declarations that it possesses nuclear weapons and reprocessed 8,000 spent nuclear fuel rods are all matters of great concern. North Korea claims to have nuclear weapons—a claim the Director of National Intelligence (DNI), Ambassador John D. Negroponte, assesses as probably true. These weapons are a threat to regional stability and, if proliferated, global security. In addition, the Kim Jong Il regime continues to use its "nuclear deterrent capability" as a bargaining tool for economic assistance and political concessions.

North Korea's 100,000-man SOF are the world's largest and enjoy the highest military funding priority for the regime. Tough, well trained, and profoundly loyal, these forces are engaged in strategic reconnaissance and illicit activities in support of the regime. During conflict, these forces will direct long-range missile and artillery strikes against key facilities in the ROK, attack to disrupt command facilities of the ROK-United States CFC, and seek to destroy the Alliance's ability to generate combat power through off-peninsula reinforcement.

The North Korean ballistic missile inventory includes over 600 SCUD missiles that can deliver conventional or chemical munitions across the entire peninsula. North Korea also possesses as many as 200 medium range ballistic No Dong missiles with a range of 1300km that are capable of reaching Japan with these same payloads. Reports indicate North Korea is also preparing to field a new intermediate range ballistic missile which could easily reach United States facilities in Okinawa, Guam, and possibly Alaska. The regime's continued development of a three-stage variant of the Taepo Dong missile, which could be operational within the next decade, would not only provide North Korea the capability to directly target the continental United States, it would also allow North Korea—the world's leading supplier

of missiles and related production technologies—the ability to provide its clients with the intercontinental capability to undermine stability in other regions.

The size of North Korea's chemical weapons stockpile is likely significant. We assess North Korea is probably capable of weaponizing chemical agents for conventional weapons systems, missiles, and unconventional delivery. Some reports suggest that Pyongyang may have a biological weapons research program. North Korea believes its nuclear and missile programs complement its conventional military capabilities to contribute to its security, providing deterrents to external intervention. Given North Korea's record of ballistic missile proliferation, we are concerned they may proliferate WMD.

The North Korean Economy

Severe economic problems remain the most pressing threat to the viability of the Kim Jong Il regime. Despite North Korea's limited experiments with free-market reform, its leadership is struggling with the cumulative impacts of a decade of economic decline. Total economic output has dropped nearly 25 percent since 1992 and factories operate at less than 25 percent capacity. The Nation's power and transportation infrastructure are in need of massive overhaul and agricultural output can only feed two-thirds of the population. Compounding these difficulties, the regime institutes a "Military First" Policy which directs approximately one-third of the limited domestic output to the military. This policy ensures that the military receives top priority with all resources, thus limiting the resources that could be used for the welfare of the North Korean people. While many factors contribute to North Korea's economic decline, the regime's high rate of military spending remains the major impediment to long-term recovery. North Korea's economy remains bolstered by aid from the international community. The regime also directs illicit activities such as drug trafficking, smuggling, and counterfeiting, as well as the proliferation and international sale of missiles, missile technology, and conventional arms to raise hard currency.

Assessment of the North Korean Threats

Despite its apparent economic decline and political isolation, North Korea continues to pose a dangerous and complex threat to regional and global peace and security. It maintains a massive, offensively postured conventional force that far exceeds the requirements to defend its country. There is little evidence to suggest the regime will abandon its "Military First" Policy, provocative diplomacy, nuclear challenges, missile proliferation and illegal activities, all of which are designed to contribute to its survival. North Korea will continue to maintain its bellicose stance toward the rest of the world, implementing limited policy and economic changes, while subjecting its people to continued repression. For now and into the foreseeable future, it will remain a major threat to stability and security in Northeast Asia and the world.

THE REPUBLIC OF KOREA-UNITED STATES ALLIANCE

The ROK-United States Alliance has, for over 50 years, guaranteed the security of the ROK against the threat of North Korean aggression, while enhancing peace and stability in the region. This alliance was forged during the Korean War and is exemplified today through the CFC. While there have been many challenges in the region, the ROK—United States Alliance has remained stalwart in its mutual and enduring commitment to the security of the ROK and stability in the region. The ROK has been and remains a reliable ally to the United States, promoting peace and stability in the region and around the world.

The Republic of Korea Today

In the course of the Alliance's half-century of economic and security cooperation, the ROK has emerged as one of the leading economic powers and one of the preeminent democracies in the region. The ROK is the world's 12th largest economy with a gross national income of $673 billion; exceeded in the region only by Japan and China. With economic growth fueled by global exports of high technology and consumer goods, the ROK is a major economic partner for the United States, ranking as our seventh-largest trading partner, seventh-largest export market, and an important investment location for American companies.

While the ROK has firmly secured its place as an important player in the global economy, declines in domestic consumption and business investment have slowed the growth of the economy over the past few years. Although private consumption appears to be improving, high household debt continues to be an issue of concern as well as the generation of jobs, particularly for South Korean youth. The effort to achieve 5 percent economic growth this year, while improving employment, will

remain a top priority for the Roh administration. This recovery is essential to realizing the ROK's vision of becoming the transportation, financial, and information technology hubs of Northeast Asia, and in improving the quality of life for all of its citizens.

On the political front, the ROK enjoys a vibrant democracy. Generational perspectives impact the ROK's view of the threat posed by North Korea, which at times impacts the South Korean perception on the importance of our longstanding alliance. While impassioned debates and public demonstrations clearly exist, most South Koreans share the same view on two important issues: first, a nuclear armed North Korea is an intolerable threat to stability in the region, and second, a catastrophic failure within North Korea would destabilize the entire region and have extremely adverse consequences for South Korea.

In an effort to lessen the dangers of these potential threats, the Roh administration has adopted its "Policy for Peace and Prosperity" in guiding South Korea's approach to inter-Korean relations. This policy formally opposes North Korea's pursuit of nuclear weapons while continuing efforts toward inter-Korean rapprochement through humanitarian assistance, family reunions, tourism, and trade.

As a result of this policy, inter-Korean trade and South Korean aid to the North grew to over $1 billion last year. In July 2005, the tenth meeting of the Inter-Korean Economic Promotion Committee was held in Seoul. In its discussions, the two governments agreed to combine economic production factors such as labor, capital, and technology to achieve balanced development of both nations' economies; invest in North Korea's Kaesong Industrial Complex; and conduct discussions on fisheries cooperation to promulgate peace in the West Sea. Through its Policy for Peace and Prosperity, Seoul hopes to promote gradual economic integration and reconciliation, providing the catalyst for a formal peace agreement to replace the Korean Armistice Agreement. While this is the intent, full implementation of this policy is predicated on resolving the North Korean nuclear issue on favorable terms for the region.

Strengthening the Republic of Korea-United States Alliance

During the December 2002 34th Security Consultative Meeting (SCM) the United States Secretary of Defense and the Republic of Korea Minister of National Defense established the Future of the Alliance (FOTA) Policy Initiative, a 2-year dialogue designed to develop options for modernizing and strengthening the alliance. Following the conclusion of the FOTA dialogue in late 2004, the ROK-United States Security Policy Initiative (SPI) was established as a high-level consultative forum to address the broader, long-term issues of the alliance, and to monitor the successful implementation of the initiatives that were begun under FOTA. Major SPI agenda items include managing the relocation of USFK, transferring military missions and responsibilities from American forces to Korean forces, enhancing combined readiness, and expanding security cooperation. The goal of these discussions is to develop a broad, comprehensive alliance based upon guiding principles that underpin our two nations. It is our expectation that this new vision will look beyond potential threats from North Korea and produce a robust view of what the alliance stands for, showcasing it as the embodiment of our common principles, common values, and common objectives to include democracy, open markets, nonproliferation, counterterrorism, human rights, rule of law, and civilian control of the military.

During senior policy dialogues in 2005, it was mutually agreed to appropriately accelerate discussions on command relations and the transfer of wartime operational control in light of the ROK's increasing role in its national defense. The two alliance partners set a goal of presenting agreed recommendations on future command relationships, to include wartime operational control, at the 38th SCM in the fall of 2006.

In March 2004, the Roh administration published its first-ever national security strategy outlining its plan for the peaceful unification of Korea and for common prosperity in Northeast Asia. In this plan, the administration restates its opposition to North Korea's pursuit of nuclear weapons, while stating its "plans to first resolve the North Korean nuclear issue through dialogue based on a firm national defense posture." [1]

This strategy also outlines the Roh administration's plan for a more self-reliant defense posture, advocating the continued transformation of the ROK-United States alliance, the promotion of security cooperation with other nations, and the enhance-

[1] Republic of Korea National Security Council, Peace, Prosperity and National Security: National Security Strategy of the Republic of Korea (Seoul, Cheongwadae, 1 May 2004), 21. In November 2004, President Roh stated that "there is no other means than dialogue [to resolve the North Korean nuclear issue]." Roh Moo-hyun, "Speech by President Roh Moo-hyun at a Luncheon Hosted by the World Affairs Council of the United States," (13 November 2004).

ment of its own capabilities to assume greater responsibility for the defense of the ROK. This "Cooperative Self-Defense Pursuit Plan" accommodates the reduction of United States military forces in Korea, the relocation of United States forces to the south of Seoul, and the transfer of a number of military missions from United States forces to ROK forces as the first of many steps toward a more self-reliant defense posture.

During 2005, the ROK government unveiled a draft defense transformation initiative called Defense Reform 2020. The year 2020 is the objective year for this defense transformation initiative, which envisions the development of a technology oriented, qualitative defense force that is capable of self-reliance while still strongly aligned with the United States. Additional targeted reforms include the increased civilianization of the defense ministry; the reformation of defense management systems for military justice, personnel management, defense acquisition, and the reorganization of the Joint Chiefs of Staff as a warfighting planning and execution headquarters.

Under the defense reform initiative, the Republic of Korea's Ministry of National Defense has requested an average defense budget increase of 11 percent per year until 2015, followed thereafter by an average increase rate of 9 percent until 2020. In December 2005, the National Assembly provided $22 billion for defense in 2006—a 6.7-percent increase over the 2005 budget. While this defense budget increase shows growth, successful execution of Defense Reform 2020 requires both legislative support and consistent, substantive annual defense budget increases to enable the ROK to achieve its stated defense objectives.

With the ROK's increasing economic capacity and prominence in the international community, a balanced defense burden sharing arrangement in support of United States forces in Korea is fundamental to the strength of the Alliance. Early last year, the ROK and United States concluded a 2-year Special Measures Agreement for 2005 and 2006. Per this agreement, the ROK agreed to provide a 2-year annual payment of $680 billion Korean Won (~$680 million), resulting in a decrease in 2005 of $67 billion Korean Won (~$67 million) for non-personnel stationing costs of United States forces in Korea from 2004 levels. Inevitably, such funding shortfalls require the USFK to make difficult decisions on important combat readiness issues. Clearly, defense burdensharing is advantageous to both Alliance partners. For the United States, the ROK's willingness to equitably share appropriate defense costs is a solid indicator that United States forces in Korea are wanted, needed, and respected by our host. For the ROK, cost-sharing contributions are returned back to the Korean economy at a ratio greater than one point four to one. These funds are injected directly back into the South Korean economy by paying the salaries of Korean USFK employees, Korean contractors, and Korean construction firms. Additionally, as the ROK builds its self-reliant defense force, the United States continues to invest in capabilities enhancements that contribute enormously to the security of the ROK. As the Alliance evolves, the ROK and the United States must develop a burden sharing framework that accurately reflects the realities of our allied partnership and properly supports United States forces in the ROK.

During their May 2003 Summit Meeting, President Bush and President Roh noted the significance of the 50-year partnership and highlighted the importance of building a dynamic alliance relationship for continued peace and prosperity on the Korean peninsula and in Northeast Asia. Noting the ROK's growing national strength, the presidents pledged to increase mutual security cooperation and to modernize the ROK—United States Alliance. These same sentiments were again echoed in their November 2005 bilateral meeting in Gyeongju, South Korea during the Asia-Pacific Economic Cooperation (APEC) Economic Leaders' Meeting. During this bilateral summit, the two sides introduced a new strategic dialogue for ministerial-level talks between the United States Secretary of State and the Republic of Korea Foreign Minister. Under this framework, the ROK and the United States will periodically discuss and review bilateral, regional, and global issues of mutual interest.

During the January 2006 inaugural session of the ministerial-level strategic dialogue, the United States and ROK governments reached agreement on strategic flexibility of United States forces in Korea. The agreement has two basic tenets: the ROK fully understands the rationale for the transformation of United States global military strategy, and respects the necessity for strategic flexibility of United States forces in Korea; and in the implementation of strategic flexibility, the United States respects the ROK's position that it shall not be involved in a regional conflict against the Korean people's will. This agreement is a testament of alliance strength and solidarity between the ROK and United States.

South Korea's efforts to develop improved warfighting capabilities for self-reliant defense are consistent with the United States' aims of encouraging our allies to assume greater roles in regional security. Peaceful resolution of the North Korean nu-

clear issue, enhanced Republic of Korea military forces, and greater regional cooperation—key elements of Seoul's national security strategy—are congruent with Washington's policies, and the USFK fully supports the realization of such initiatives.

The Republic of Korea's Support of Global and Regional Security

Consistent with the spirit of mutual cooperation, the Republic of Korea continues to assist United States' efforts to promote global and regional security as an active partner in the global war on terrorism; support for operations in Iraq and Afghanistan; and participation in United Nations' peacekeeping, humanitarian assistance, and disaster relief missions. Recalling the sacrifice of so many countries during the Korean War, the Republic of Korea's ability to now contribute to international stability elsewhere is commendable and noteworthy.

Since 2002, the Republic of Korea has been an active supporter in the global war on terrorism, contributing millions of dollars in aid for reconstruction and providing and deploying a large contingent of troops to support operations in Afghanistan and Iraq. In 2004, the Republic of Korea National Assembly authorized the military deployment of South Korea's Zaytun [2] Division to assist with stability and reconstruction efforts in Iraq. In August 2004, the Republic of Korea deployed this unit to Iraq, where it joined the ranks of its previously deployed advance contingent of medics and engineers at Irbil in Northern Iraq. In December 2005, the Republic of Korea National Assembly approved a second, 1-year extension of the Zaytun Unit to remain in Iraq through 2006, although with a reduced force structure of 2,300 troops. The Republic of Korea's continued participation in OIF is a testament to its continuing support to the global war on terrorism, its commitment to the democratization of Iraq, and its efforts at enhancing and sustaining the Republic of Korea-United States Alliance.

At the same time, the Republic of Korea's support to Afghanistan has been substantial, to include providing a 58-person medical unit (which recently surpassed 10,000 in total medical patients treated), a 147-person engineer construction unit in Afghanistan, and contributing other military assistance worth millions of dollars.

Beyond Afghanistan and Iraq, the Republic of Korea has been a partner in United Nations peacekeeping operations around the globe. The Republic of Korea has dispatched Sudanese mission supporters in November 2005, while continuing to post medical officers in the Western Sahara, and observers deployed to the United Nations Observer Missions in Kashmir, Georgia, Liberia, and Burundi. Collectively, these contributions are a strong testament to the Republic of Korea's commitment to stability and security beyond the Korean Peninsula.

UNITED NATIONS COMMAND, COMBINED FORCES COMMAND, AND UNITED STATES FORCES KOREA

The Republic of Korea-United States Alliance, the United Nations Command, the CFC, and the USFK provide the foundation for the security of the Korean peninsula, and peace and stability in the region. Together, the forces of these commands provide a potent, integrated team with dominant military capabilities to deter any provocation and deter escalation that could destabilize the region. The commands remain trained and ready to fight, even as they are being transformed to adapt to a changing security environment by leveraging strengths of the Republic of Korea-United States Alliance and advanced warfighting technologies of increasingly more capable military forces. Throughout this transformation process, my command priorities will remain consistent: namely, to ensure peace and stability on the Korean Peninsula; strengthen the Republic of Korea—United States Alliance through transformation; enhance warfighting readiness; and improve force well-being.

Ensuring Peace and Stability on the Korean Peninsula

For over 50 years, United States forces have contributed to stability in the Republic of Korea and the region. The impenetrable friendship between our two nations continues to grow stronger every day; in large part, because of America's ongoing commitment to ensure security on the Korean Peninsula and to promote stability in the Northeast Asia region. The Republic of Korea continues to be a valuable ally and partner in the region and around the globe. The presence of United States forces in Korea demonstrates our commitment to shared interests: regional peace and stability; free trade; and the spread of democratic principles. The United Nations Command, CFC, and the USFK are trained and ready. We remain confident in our ability to deter, and if necessary, defeat aggression against the Republic of Korea.

---

[2] Zaytun is Arabic for olive branch, which is a symbol representing peace.

Strengthening the Republic of Korea—United States Alliance through Transformation

During the October 2005 37th SCM, the United States Defense Secretary and Republic of Korea Defense Minister emphasized the continuing transformation of the Republic of Korea—United States Alliance into a comprehensive and dynamic bilateral relationship. Both sides concurred that transformation of the commands into a solid combined defense posture is vital to securing peace and stability on the Korean peninsula and in Northeast Asia.

United Nations Command

As the longest standing peace enforcement coalition in the history of the U.N., the United Nations Command represents the international community's enduring commitment to the security and stability of the Korean Peninsula. With 15 current member nations, the United Nations Command actively supervises compliance with the terms of the Korean Armistice Agreement, fulfilling the members' mutual pledge to "fully and faithfully carry out the terms" of the Armistice, and if there is a renewal of North Korean armed attack, to provide a unified and prompt response to preserve the security of the Republic of Korea.

With exclusive authority south of the Military Demarcation Line for the maintenance of the Armistice, the United Nations Command holds meetings with the North Korean People's Army, inspects U.N. units along the DMZ, and conducts investigations into alleged violations to prevent minor incidents from escalating into destabilizing crises. In October 2004, the responsibility for the protection of the Joint Security Area at Panmunjom shifted from the United States Army to Republic of Korea forces. This mission transfer is part of the Alliance agreement that recognizes the increased capabilities of the Republic of Korea military.

Although the United Nations Command is a multi-national organization, the United States has historically provided the Command with a majority of its personnel, while other coalition members have primarily functioned in liaison and advisory roles. It is the Command's intent to create a truly multi-national staff by expanding the roles of the member nations and integrating them more fully into our contingency and operational planning and operations. This integration is even more vital with the recent opening of two inter-Korean transportation corridors crossing the DMZ. The United Nations Command has approached coalition members to augment its staff to assist in the management of the two transportation corridors crossing the DMZ. The United Kingdom, Australia, France, and New Zealand now provide officers on a rotational basis for these duties. Several other countries, including Columbia, Philippines, and Thailand, are also considering sending augmentees. Additionally, member nations participated in the first contingency planning conference last year and are sending observers to major exercises with the objective of integrating their expertise where it is needed. The United Nations Command hopes to further expand the coalition on a more permanent basis throughout the United Nations Command staff.

Combined Forces Command and United States Forces Korea

Since its inception nearly 30 years ago in 1978, the CFC has been the warfighting command supporting the Republic of Korea-United States Alliance. Through authority based on the 1953 Mutual Defense Treaty between the Republic of Korea and the United States, the CFC provides the cornerstone of deterrence against North Korean aggression, and if deterrence fails, is ready to win decisively. Vigilant and well trained, the CFC is the most powerful combined warfighting alliance in the world today.

The CFC continues to adapt to the changing security environment by advancing warfighting technologies and leveraging a more capable Republic of Korea military force. United States capabilities enhancements are significant, including the fielding of the PAC–3 Patriot Missile System coupled with the stationing of a Patriot brigade headquarters, and a second Patriot battalion with two additional Patriot batteries to strengthen our theater missile defense. The upgrade of our Apache Helicopters to AH–64D Longbows greatly increases the lethality and survivability of that weapon system and significantly enhances its ability to destroy North Korea's long-range artillery that threatens Seoul. The Republic of Korea is also enhancing its military capabilities as it continues to field and upgrade its fleet of K1A1 tanks, K–9 self-propelled howitzers, and multiple launch rocket systems. Additionally, in 2005 it launched its first Landing Platform Experimental (LPX) amphibious ship, and the first 4 of 40 F–15K multi-role fighters. The Republic of Korea is also in the final stages of constructing a new naval base for their third fleet. This facility will include a nuclear-powered carrier capable pier and will be completed in late June 2006.

We must continue to expand our capabilities and revise the way we conduct operations. Simultaneous maneuvers, parallel planning, effects-based operations, and asymmetrical assaults all conducted in a dynamic battlespace will improve the conduct of our future combined operations.

As a result of combat capabilities enhancements, in 2003 the United States and the Republic of Korea agreed to transfer 10 selected military missions from United States forces to Republic of Korea forces over a 3-year period. This effort, which began in 2004, continues and to date we have successfully transferred seven missions, to include the early transfer of the Main Supply Route Regulation Enforcement mission, the Counterfire Task Force Headquarters mission (transferred last year on time and with a subsequent increase in capability), and most recently, in January 2006, the Maritime Counter SOF mission. Indeed, this is a direct reflection of the Republic of Korea's military capabilities. With the Republic of Korea's procurement of required equipment and training, it is expected that each of the remaining three missions will also be transferred without any loss in combined readiness.

Concurrent to these mission transfers, the United States and Republic of Korea governments agreed to the reduction of 12,500 personnel from United States Forces Korea over a 5-year period which began in 2004. Per this agreement, between 2004 and 2005, we reduced 8,000 troops to include the deployment of the U.S. Second Infantry Division's 2nd Brigade Combat Team to Iraq, followed thereafter by its restationing at Fort Carson, Colorado. This year we will reduce 2,000 more troops, and in 2007 and 2008, an additional 2,500 will be reduced, leaving an authorized end strength of 25,000 military personnel on the peninsula.

This reduction plan principally affects the Eighth United States Army, which is reducing its force by 40 percent as it simultaneously restructures many of its units as part of the Department of the Army's Total Force Transformation effort. Army-wide, the United States is tailoring its command and control echelons from four headquarters-type elements—brigade, division, corps, and field army—to three types of headquarters elements, while forming modular, self-sustaining brigade-level organizations. The Eighth United States Army's transformation efforts align with this, and last year the Second Infantry Division completed the transformation of its division headquarters; heavy brigade combat team; fires brigades; and combat aviation brigade. Seventh U.S. Air Force is also reducing, but on a much smaller scale.

Finally, we have made significant progress in properly aligning U.S. forces in Korea. In October 2004, the Republic of Korea Minister of National Defense and Commander, USFK signed the Yongsan Relocation Plan Agreement, which was ratified by the Republic of Korea National Assembly in December 2004. According to the terms of that agreement, the headquarters elements of the United Nations Command, CFC and USFK will relocate to Camp Humphreys, near Pyeongtaek, in 2007, and all other units at Yongsan will finish relocating by December 2008.

The realignment of the United States Army's 2nd Infantry Division is part of this alignment plan which, when complete, will allow United States forces to assume a more efficient and less intrusive footprint within two hubs of enduring installations south of Seoul's Han River, significantly improving the quality of life for our servicemembers, while returning valuable land to the citizens of the Republic of Korea.

Per our international agreements, we are making significant progress in relocating United States forces from facilities and areas in and north of Seoul into two hubs of enduring installations south of Seoul. At the end of 2005, we had closed a total of 31 USFK facilities and areas, amounting to 11,000 acres with a tax assessed value of over $500 million. By the end of 2008, we will have closed 59 facilities and areas—two thirds of all land, granted under the Status of Forces Agreement, totaling 36,000 acres.

In exchange for the eventual return of the majority of our dispersed camps, the Republic of Korea, per our agreements, has purchased an additional 2,852 acres of land that is needed to expand Camp Humphreys and Osan Air Base to accommodate our relocation. It has now granted the first 200 acre parcel to USFK, and is currently conducting an environmental impact assessment of all these properties that will be completed in September 2006. Thereafter, the land will be prepared and major construction initiated.

The relocation of the 2nd Infantry Division will begin once construction at Camp Humphreys is complete. Sustained funding of United States military construction projects in Korea, coupled with sufficient host nation-funded construction by the Republic of Korea, is crucial for this plan to remain on track.

Enhancing Warfighting Readiness

While our militaries transform, it is critical that we continue to enhance readiness, and the key to enhancing readiness is by ensuring unfettered access to suitable training ranges and areas for the CFC. As Commander of CFC, vested with

combined delegated authority, warfighting readiness is a major priority. Training ranges in Korea are small, austere, de-centrally managed, and subject to encroachment. As our military capabilities are enhanced and transformed, our training facilities must keep pace. We must work together on a long-term solution to keep our Combined Forces trained and ready in the future. Our recent upgrades to Pilsung Range, and planned upgrades at Chik-do Range, are only the beginning of that long-term combined solution. Of great immediate concern is the closure of Koon-ni Range. Closing that range was the right decision, but we now have a loss of training capacity in Korea until Chik-do Range modifications are completed later this summer. Until that time, we need to regain required levels of training access to keep USFK forces combat ready. These forces are critical to seizing the initiative should the Republic of Korea be attacked. We are working closely with the Republic of Korea government to restore training access.

Training is central to our capabilities and at the core of what binds our CFC into an effective fighting force. Tough, realistic, battle-focused training will enable our components to deter hostile acts of aggression and, if necessary, defeat the forces that mount an external attack against the Republic of Korea. As a forward deployed force, we must be ready at all times to deploy to wartime locations and conduct operations. The robust annual CFC exercise programs ensure that we are trained and ready for contingencies. The theater-level exercises—Ulchi-Focus Lens; Reception, Staging, Onward Movement, and Integration; and Foal Eagle—collectively train over 400,000 Republic of Korea and United States active and Reserve component personnel in the critical tasks essential to deterring, and if necessary, defeating North Korean aggression against the Republic of Korea. These command post and field training exercises use battle simulations technologies to train leaders in battle command, leveraging the significant United States theater-wide investment in Command, Control, Communications, Computers, and Intelligence (C^4I) systems. These combat enablers provide the Collaborative Information Environment to plan, execute, and assess effects from distributed locations; allowing the CFC to see, understand, and act to dominate the battlespace.

Ulchi-Focus Lens is a simulation-driven command post exercise focused on joint and combined effects-based operations, and sustaining command and control, logistics, and dominant maneuver skill sets. The objective of the Reception, Staging, Onward Movement, and Integration, or RSO&I exercise, is to improve our ability to rapidly reinforce and sustain operations in the Korean theater. Foal Eagle is a tactical-level joint and combined exercise that hones warfighting and interoperability skills. These exercises, supplemented by subordinate command training programs, ensure that the CFC remains ready and capable to win decisively, thus deterring North Korean aggression.

Your continued support to our joint and combined training programs and theater exercises are critical to our readiness, as is your support to our capabilities enhancements. Key focus areas for modernization are: joint and C^4; theater missile defense; intelligence, surveillance, and reconnaissance (ISR); prepositioned equipment and logistics; and counterfire and precision munitions.

With your help, we have made meaningful progress in Joint and Combined C^4 integration and interoperability. The CFC and the USFK have successfully linked all United States and Republic of Korea command centers and staff elements with secure and protected information systems. Each command center is equipped with increased bandwidth to provide shared situational awareness via a near real-time common operational picture of the battlespace. These command centers are equipped with secure video teleconference, collaboration tools, and information portals which are supported across a Combined Enterprise Regional Information Exchange System (CENTRIXS) network enterprise. This capability enables parallel planning for all Combined Forces and USFK units as well as other friendly forces. Current initiatives in coalition interoperability seek to extend a seamless command and control capability throughout the theater that will greatly improve multi-national information sharing capability. Your support for these improvements and your assistance in coupling our coalition warfighting C^4 systems to hardened, secure long-haul strategic communications nodes on peninsula and throughout the region is essential to our continued progress in this important area.

The regional missile threat requires a robust theater missile defense system to protect critical CFC capabilities and personnel. PAC–3 Patriot Missile System upgrades and improved munitions have significantly enhanced our posture. To protect critical United States facilities in Korea, we must complete upgrading the remainder of our systems with advanced theater missile defense capabilities. Continued production of PAC–3 missiles in the near-term, followed by continued development of the Theater High Altitude Air Defense (THAAD), Airborne Laser, and Aegis Ballistic Missile Defense (BMD) will provide the layered missile defense capability we

require in the future. Your continued support to these and other service component programs remains essential to protecting our forces on peninsula, and to our ability to reinforce the peninsula in the event of a crisis.

Robust ISR capabilities are essential to provide sufficient warning of an impending crisis and to support rapid, decisive operations in the event of a North Korean attack or collapse. The CFC's efforts to transform our combined intelligence capabilities are progressing, but require sustained and significant support from Congress and the combat support agencies if we are to achieve the full spectrum persistent surveillance we require to avoid surprise. Our intelligence transformation efforts are focused on three things: improving our warning posture, modernizing legacy C4I architectures and sensor suites, and improving our ability to discern intent.

As evident in the Intelligence Community's recent completion of our Intelligence Campaign Plan, there are a number of intelligence shortfalls in our national and theater coverage that require immediate attention. Chief among these are the need for persistent national and theater surveillance systems that provide continuous multi-discipline base-lining of the threat. Central to this is the accelerated fielding and installation of state-of-the-art Signal Intelligence (SIGINT), Imagery Intelligence (IMINT), and Measurement and Signal Intelligence (MASINT) sensors that are relevant to target sets. In addition to the fielding of a long-range unmanned aerial sensor, upgrades for the theater's aerial sensors, and modernization of our SIGINT and Tactical Exploitation of National Capabilities (TENCAP) architectures, the theater will benefit greatly from increased access to space systems supporting ISR operations. With these improvements to our collection capabilities, we must also sustain the expansion and modernization of our C4I architectures to improve the theater's reach back to the PACOM and the combat support agencies, to provide bridging technology to our host nation's systems, and to enable the horizontal integration of the national to tactical intelligence enterprise that supports our theater.

The Under Secretary of Defense for Intelligence and the Joint Forces Command's Information Dominance Center Initiative and Project Morning Calm have demonstrated the technical approaches we require to improve our theater's intelligence architecture and to fuse live intelligence with operational data in a common domain to speed decision making. Continued support for this effort will allow us to expand the fielding of Information Dominance Center technology across our joint and combined components, and to extend a common architecture across the enterprise to enable rapid data sharing and collaboration in near real time. Support to these initiatives will provide us with the timely, accurate assessments we require to establish conditions that enable rapid dominance of the battlespace. Your continued support to modernizing intelligence, surveillance, and reconnaissance capabilities is required and an essential investment for the Alliance.

Logistically supporting USFK is a complex, multi-faceted undertaking. The proximity of the North Korean threat, coupled with the long distances from United States sustainment bases, requires a robust and responsive logistics system to support United States forces based in Korea. The capability enhancements currently programmed will significantly improve our core logistics functions through modern pre-positioned equipment, responsive strategic transportation, and modern logistics tracking systems.

Prepositioned equipment sets, which include critical weapons systems, preferred munitions, repair parts, and essential supplies, are critical to the rapid power projection to reinforce the Korean theater. Of note, command leadership took an aggressive approach last year to improve the readiness of Army Pre-positioned Stocks in Korea. The Army Material Command significantly increased their workforce for these stocks, and from March 1 through September 23, 2005, inspected and took corrective action on 1,531 pieces of equipment in the Heavy Brigade Combat Team. These efforts ensured all of this equipment met standards. Present operational readiness of the Heavy Brigade Combat Team combat systems is at 96 percent fully mission capable. Monthly video teleconferences occur to track the maintenance and readiness, as well as the shortfall posture. However, shortages continue to exist and can only be overcome through increasing the priority of fill for Army Prepositioned Stocks and the allocation of additional funding.

Responsive strategic transportation—fast sealift ships and cargo aircraft—remains indispensable to rapidly reinforce the Korean theater and sustain United States forces. Expeditious fielding of the Air Force's C–17 fleet, and the Joint High Speed Vessel to the PACOM area of responsibility remains a high priority to support United States forces based in Korea.

Equally important is the ability to maintain in-transit visibility of supplies and equipment with a modernized joint Logistics C4I system. Lessons from OIF and OEF have highlighted several areas where relatively small investments in asset

tracking systems and theater distribution yield significant efficiencies and improve the overall effectiveness of our logistics systems.

Also of great assistance is legislation recently enacted by Congress and signed by the President that authorizes the United States government to offer, for sale or concessions, surplus ammunition and military equipment to the Republic of Korea from the War Reserve Stocks Allies—Korea (WRSA–K) program that will terminate soon. This legislation relieves the United States of the burden to maintain this stockpile and further encourages the government of the Republic of Korea to continue its stated goal of a self-reliant defense posture. Your continued support for improved logistics and sustainment programs will ensure that United States forces remain prepared with the highest levels of readiness.

Counterfire and precision strike are core capabilities for all of our contingency plans, allowing us to change the dynamics of a conflict and rapidly achieve campaign objectives. Increasing the forward stocks of preferred munitions is critical to operational success in the Korean theater. Our priority ordnance requirements include: the GPS-guided Multiple Launch Rocket System with extended range capability; a ground-launched, extended range and all weather capability to defeat hardened and deeply buried targets (HDBTs); precision guided munitions; air-to-ground missiles; and air-to-air missiles. Your continued support to these programs provides the overmatching capabilities to buttress our deterrence.

Improving Force Well-Being

The staying power of the United States military fighting for freedom in the Republic of Korea comes at a cost that is born daily by the men and women in uniform that live and work in facilities unlike their counterparts in the continental United States. Establishing a stable stationing environment will enhance readiness, force protection, and overall quality of service. Adding to your support of programs such as Assignment Incentive Pay and Cost-of-Living Allowance, our current initiatives to improve quality of life and readiness include increasing the number of accompanied personnel, increasing accompanied tour lengths to 3 years, and working with the Services to provide forces using unit rotations. Unit rotations provide the benefit of enhanced readiness and unit cohesion as well as reducing personnel turbulence. These measures, in addition to upgrades to facilities (e.g., housing, schools, commissaries, community centers) and equitable pay, provide an attractive working environment that result in an increased number of military and civilian personnel extending their tours. These initiatives also allow us to recruit and retain the talented and motivated people we need to accomplish our mission in Korea.

Furthermore, improvements in programs such as the Army's Family Readiness Group, which recently incorporated programs to support unaccompanied servicemembers' families living outside of the Korean peninsula, ensure that these families are properly cared for during their separation. With your assistance, we will continue to sustain momentum and continue to build on these initiatives.

Upgrading and Building New Infrastructure

The relocation of USFK to two hubs of enduring installations will provide a unique opportunity to upgrade our servicemembers' quality-of-life while establishing the long-term infrastructure that is required to maintain an enduring presence on the peninsula. As we move forward with our overall construction master plan—executable with sustained military construction funding under the Future Years Defense Plan and host nation-funded construction—we must also maintain our existing facilities. Your support of our Sustainment, Restoration, and Modernization Program requirements, along with host-nation contributions, will allow us to complete our infrastructure renewal program to enhance our force protection posture and the quality of life for our personnel. The President's fiscal year 2007 budget request includes several military construction projects that are essential to our forces in Korea and critical to the execution of our overall theater master plan.

The challenge in recapitalizing our infrastructure is substantial and continues to be underfunded. Our facilities and infrastructure are old: over one-third of the buildings in the command are between 25 and 50 years old and another one-third are classified as temporary structures. Due to previously underfunded Sustainment, Restoration, and Modernization Programs, many buildings have deferred maintenance, contributing to their continual deterioration. Our annual allocations for sustainment funding have been about 50 percent of requirements, while restoration and modernization funding has been much less than that. A robust Sustainment, Restoration, and Modernization profile is absolutely essential if we are to maximize the appropriated military construction dollars we receive. Without the funds to sustain, restore, and modernize our facilities, we will perpetually be relegated to live and work in run-down, patched-up facilities.

Many of our unaccompanied and accompanied servicemembers continue to live in substandard housing, whether in military facilities or in crowded urban areas outside our installations. Our realignment to two enduring hubs will allow us to focus on improving living and working conditions at our enduring installations; to this end, sustained access to several different funding programs will be essential to include United States military construction, host nation-funded construction, and commercial build-to-lease programs.

We are making good progress towards achieving the DOD's goal to house all unaccompanied servicemembers in adequate installation housing by 2007. The Army and Air Force are using military construction to build 10 unaccompanied housing facilities (or 3,316 barracks spaces)—6 facilities at Camp Humphreys, 2 at Osan Air Base, and 2 at Kunsan Air Base. In addition, we are contracting two host-nation funded construction projects in our southeast hub to provide adequate barracks space for all of our marines and sailors assigned to Camp Mu Juk in Pohang. To improve the unaccompanied senior enlisted and officer quarters, we have contracted a commercial build-to-lease project at K–16 Air Base and plan similar projects at Camp Humphreys. In fiscal year 2007, I am requesting $123.7 million in military construction funds to build two barracks complexes at Camp Humphreys ($77 million) and a large dormitory at Kunsan Air Base ($46.7 million).

Currently, over 25 percent of our Government family housing units do not meet the DOD minimum living standards. Continued support for family housing construction in Korea through commercial build-to-lease projects will help ensure quality housing for all our servicemembers' families, facilitating the attainment of DOD or Service living standards, and is essential to support the relocation program. I want to assure you that we will continue to be stalwart stewards of the appropriations that you entrust to us, which will provide our servicemembers with adequate working and living facilities.

Force Protection

Well being is about providing a safe, high quality, productive, and predictable environment. Through the combined efforts of our men and women, we will employ appropriate force-protection measures to ensure that all members stationed in the Republic of Korea can go about their daily lives confident that we have done everything possible to safeguard and protect them. I expect commanders to empower subordinates while holding them accountable for the safety of their soldiers, sailors, airmen, and marines.

Prostitution and Human Trafficking and Sexual Assault

USFK has a zero tolerance policy towards prostitution and human trafficking. To ensure members are fully aware of this policy, we initiated a four-pronged approach focusing on awareness, identification, reduction and enforcement. As a result, we experienced few violations in the past year that resulted in disciplinary action. Equally important is the command's initiatives in combating sexual assault. Since its inception in 2004, the USFK Sexual Assault Working Group has developed and implemented an education program for training our leaders and servicemembers on awareness and prevention of sexual assault. This training stresses sexual assault risk factors and victim care. I will continue to be vigilant in enforcing the sexual assault prevention programs and zero tolerance approach adopted by the command. Promoting dignity and respect are of the utmost importance and a mandate we fully embrace within USFK.

Ensuring Equitable Pay

Major improvements have been made on the pay disparity in the Republic of Korea. For the first time in over 50 years of the Alliance, a cost-of-living allowance (COLA) was authorized in 2003. Additionally, the Army and the Air Force implemented the Assignment Incentive Pay (AIP) Program, authorizing a cash incentive for servicemembers who are willing to extend their tours in Korea. So far, over 14,000 soldiers and airmen have volunteered for AIP, saving the DOD nearly $67 million in reduced permanent change of station costs. Although the cost savings will be reduced due to recent program enhancements such as payment beginning the month of signature, the benefits of this program are immeasurable. Following on the great success of the Army and Air Force, in January 2006, the Navy implemented AIP for its sailors. AIP improves stability, predictability, and operational readiness of the Alliance.

TRANSFORMING FOR THE FUTURE

Transformation of USFK is well underway. Your continued investments in equipment and infrastructure are greatly improving our operational capabilities and the

quality of life for United States servicemembers, DOD civilian employees, and family members. Our transformed forces and state-of-the-art capabilities greatly improve deterrence on the peninsula by providing strategically mobile overmatching power to dissuade potential threats to Alliance interests. Your continued support will ensure we achieve our transformation objectives by providing our forces with the resources needed to deter aggression and to foster peace and stability on the Korean peninsula and in the region.

You can be justifiably proud of the soldiers, sailors, airmen, marines, and civilians serving in the Republic of Korea. Their daily dedication and performance continue to earn the trust and confidence that you have placed in them.

Chairman WARNER. Thank you very much, General.

General Jones.

STATEMENT OF GEN. JAMES L. JONES, JR., USMC, COMMANDER, UNITED STATES EUROPEAN COMMAND AND SUPREME ALLIED COMMANDER, EUROPE

General JONES. Good morning, Mr. Chairman, Senator Levin, members of the committee. It is a great honor and a pleasure for me to be once again in front of this remarkable committee that means so much to the welfare and security of our Nation, our families, and our troops, and we thank you for everything you do for us.

I am particularly honored to be at the same table with Admiral Fallon, whom I have known for a number of years, and General Bell. General Bell just recently left Europe, where he commanded the U.S. Army in Europe and lent his considerable skills to the transformation of the U.S. Army's footprint. I have enjoyed very much our personal and professional relationships and I am delighted that the Secretary of Defense saw fit to ask General Bell to stay on on Active-Duty and take over this very important command.

I would also like to bring to the committee's attention the presence today of an extraordinary marine, sitting to my left rear, the fourteenth Sergeant Major of the Marine Corps and the first Sergeant Major of the Supreme Headquarters, Allied Powers in Europe, Sergeant Major Al McMichael, who for over 35 years has been the consummate marine, typifying everything that we want in a staff noncommissioned officer (NCO), providing leadership, mentorship, guidance, courage, dedication. He and his wife have contributed immeasurably to the status of the Marine Corps today and through his leadership and innovation as the first Sergeant Major of Supreme Headquarters Allied Powers Europe (SHAPE) in NATO he has virtually singlehandedly, with just a few of his colleagues, brought eight nations to adopt the NCO structure, mostly in Eastern Europe, to adopt an NCO structure that they had never had before. He has done that in a remarkable 2½ years.

Sergeant Major McMichael will be leaving Active-Duty this summer after a sterling career and I wanted to take a few moments to highlight this remarkable American and his remarkable contribution to the security of our Nation. Thank you, Sergeant Major.

Chairman WARNER. Thank you very much. [Applause.]

I think it is most appropriate that you do that, General Jones. Particularly I was impressed with his work to establish the concept of the NCO structure. Former Warsaw Pact nations and indeed the old Soviet Union just did not put that emphasis on its military, and that is today's military. So I commend you, Sergeant.

General JONES. Thank you, sir.

As the Commander of the United States European Command and as the Supreme Allied Commander, Europe (SACEUR), we continue to commit our resources towards proactively addressing the challenges and opportunities of our new security landscape, while stressing the ever-important transatlantic relationships necessary to preserve our security, our collective security, as Senator Levin pointed out.

With your support, we are now implementing the transformation in depth that I originally discussed with you in 2003 during my first year in this assignment. This portion of the strategic theater transformation is achieving a posture and force capability that ensures the greatest strategic effect while providing operational agility to serve as both a supporting and supported combatant commander within the framework of the U.S. National Security Strategy and the National Defense Strategy.

Your continued backing also ensures that we maintain sufficient critical assets and capabilities in theater to sustain forward stationed and rotational conventional and special operations forces. These forces preserve our leadership role throughout our theater. They provide a visible example for NATO's transformation. They serve as a defense in depth for homeland security. They strengthen U.S. diplomacy and foreign policy. They signal the United States' commitment to the transatlantic link. They demonstrate the United States Government's resolve and bolster common security through a critical array of theater security cooperation programs.

We base our strategies on the principle that it is much more cost effective to prevent conflict than it is to stop one once it has started. The scope and diversity of the 91 sovereign nations that fall within EUCOM's AOR encompass the full range of human conditions and government. As such, our theater requires a multifaceted approach, including a complementary relationship with many international organizations in developing and implementing a strategy that fully addresses the challenges to European, African, and the United States' strategic interests.

Despite being faced with nontraditional and continually evolving threats, we are committed to expanding the peace and prosperity long enjoyed by Western Europe to Eastern Europe and Africa. Our development of a more agile force and strengthening of our trans-Atlantic partnerships has enhanced our capability to conduct far-reaching operations while ensuring that Europe remains engaged in a collaborative effort to counter common security challenges both today and in the future.

The centerpiece of our efforts remains our theater security cooperation programs. These programs represent a much-needed proactive approach to building partnership capacity with the intent of enabling emerging democracies to defend their homelands, defeat terrorist extremists, develop common economic and security interests, and respond to health crises such as potential pandemic influenza outbreaks.

Our approach is regional, linking individual country objectives to broader theater goals. We assist our friends and allies in developing the capabilities required to conduct effective peacekeeping and contingency operations with well-trained, disciplined forces.

This helps mitigate the conditions that lead to conflict, paves the way for peaceful growth, and reduces the would-be burden on U.S. involvement.

In Europe, our priorities are to deepen and strengthen our relations with allied and partner nations, to assist our allies in developing capabilities to deploy rapidly and to be interoperable with our forces, to encourage our allies in developing a robust special operations force capability, to align our forces in a manner that enables a more rapid deployment to areas of instability, and to increase U.S. influence with our new NATO members.

In Africa, our priorities are to increase the capability of African nations to conduct peacekeeping and contingency operations, to protect their natural resources, and to promote stability by providing medical advice and assistance in dealing with health issues such as HIV–AIDS, cholera, malaria, and other diseases that have both humanitarian and strategic consequences.

In trans-Saharan Africa, EUCOM supports the long-term interagency plan to combat terrorism, the plan known as Trans-Sahara Counterterrorism Initiative, through Operation Enduring Freedom Trans-Sahara (OEF–TS). Using a preventive approach, EUCOM builds indigenous capacity and facilitates cooperation among governments in the region in order for them to gain better control of their territories and deny terrorist groups a safe haven.

Of equal importance, OEF–TS promotes democratic governance while fostering the development, education, and emphasis of the military's proper role in supporting democratic ideals. Political instability in Africa, left unattended or unaddressed, will require reactive and repeated interventions at enormous cost in the future. Prudent funding, coupled with small military-to-military engagement today, will pay enormous dividends in the future. It will strengthen our presence and offset the gains of other state actors in this critical region.

I remain optimistic that the steady development of the African regional organizations, combined with modest, consistent investment in our efforts in Africa, will assist in halting the deteriorating conditions and impede the potential for some regions in Africa to become the next front in the war on terrorism.

The United States' continued security cooperation measures will ultimately lead to peace, stability, and hope for people who have little at present. In this context, the future of EUCOM is as critical today as it ever was, perhaps even more so, to the implementation of our Nation's policies and our commitment to the forward defense of freedom.

Better synchronization and more streamlined policy and legislative lines of authority at the interagency level will provide increased efficiencies and greatly assist in developing and implementing a more effective overarching strategy for achieving these foreign policy objectives. Such reforms might also prevent some nations from turning elsewhere for security assistance needs.

With regard to the relevance of NATO in the post-Cold War era, as the SACEUR I am among those who passionately believe in the relevance and importance of NATO in this still new and emerging century. NATO is transforming and redefining itself as we speak to meet the new challenges of this century. It is making significant

progress and is in the midst of the most fundamental physical and philosophical transformation in its history.

While operational structures have been transformed, the political and military decisionmaking procedures of the alliance, as well as the budgetary funding mechanisms, are also being addressed. Much more needs to be done with regard to the funding mechanisms which support our operations, to include the new and emerging NATO response force.

Formerly anchored to the need for common defense against the Soviet Union, the alliance is now identifying and committing itself to a new set of anchor points. Such anchor points could potentially include a better definition of operations in support of combating terrorism, enhancing security, stability, and reconstruction activities, increasing its attention to critical infrastructure security, ensuring the security of the flow of energy to markets and consumers, and more actively engaging in preventing the proliferation of WMD and corresponding consequence management actions.

NATO's commitment to ongoing operations, 30,000 troops deployed on three different continents today, including the ISAF in Afghanistan, NATO's training mission in Iraq, NATO assistance to the AU in Darfur, Operation Active Endeavor in the Mediterranean, the Balkan operations with emphasis on Kosovo, and humanitarian operations in response to Katrina and Pakistan disasters, demonstrates that NATO has turned the corner from common defense and begun the journey to promote stabilization and security at strategic distances, and all of this in the past 3 years.

NATO remains the preeminent security alliance in the world. I believe it is destined to provide its most significant contribution at some point in the future. Keeping this in mind, our leadership of and contributions to this alliance are more critical now than at any time in the alliance's history. This year's November summit in Riga, Latvia, will cap this year as one of the most remarkable in the history of the alliance.

In conclusion, the EUCOM is fully and actively engaged in a diverse and expanding AOR while simultaneously transforming its posture to better meet the new and evolving security environment. Success will require institutional innovation, increasingly cohesive and more comprehensive national approaches to the challenges, greater coordination throughout the interagency and within the framework of the international community, and investment in a number of critically important areas, such as military construction, security cooperation programs, and our theater intelligence architecture.

As we further refine the nature and scope of our efforts to implement an effective security strategy, we would do well to reflect and appreciate the value of our leadership role in global affairs. We should redouble our efforts to remain a shining example of the principles of freedom which stand as a beacon of hope for so many in our unsettled world.

The indispensable benefits of our forward-deployed presence will continue to be a hallmark of our efforts as we expand our national influence and enhance the framework of our theater cooperation programs.

We look forward to working with the members of this committee as we assist in the development of effective security structures that are essential to our theater, our Nation, and to our allies. 2007 will be a critically important year in this regard, and on behalf of the soldiers, sailors, airmen, marines, DOD civilians, contractors of EUCOM, and their family members, I want to express our gratitude for your continuing support, especially during this very challenging time.

Thank you, Mr. Chairman.

[The prepared statement of General Jones follows:]

PREPARED STATEMENT BY GEN. JAMES L. JONES, USMC

INTRODUCTION

Chairman Warner, Senator Levin, distinguished members of the committee, thank you once again for the opportunity to appear before you to discuss the United States European Command (EUCOM). On behalf of the soldiers, sailors, airmen, marines, Department of Defense civil servants, civilian contractors of EUCOM, and their family members, I want to express our gratitude for your continued support, especially during these very challenging times.

In my testimony before this committee over the past 3 years, I have emphasized the changing security landscape that has emerged since the end of the Cold War. It continues to evolve in ways that were largely unforeseen just a few years ago. An increasingly interconnected world is shaping our economic, political, and social realities in a manner that is in stark contrast to the previous century. The wide scope and unpredictable nature of this new landscape has compelled us to develop new strategies that require the harmonization of the full spectrum of national power. In concert with our friends and allies, as the Commander, EUCOM and as SACEUR, I have continued to commit our resources to proactively address the challenges and opportunities of this new environment.

With the support of the United States Congress, we have begun to implement the "transformation in depth" I originally discussed with you in 2003. The path and pace of our transformation is continually assessed in order to ensure that we meet our Nation's strategic goals.

The intricacy of the changing security landscape also reaffirms the importance of our transatlantic relationships in preserving the security and stability of our Homeland, that of our allies and partner nations, increasingly in areas outside the traditional borders of the North Atlantic Treaty Organization (NATO). The founding principles that prompted NATO's creation over 50 years ago remain valid today, albeit for different and evolving purposes. NATO's "raison d'etre" no longer simply addresses common defense, but addresses the evolving necessity for common security in the face of the asymmetric array of threats now facing the Alliance.

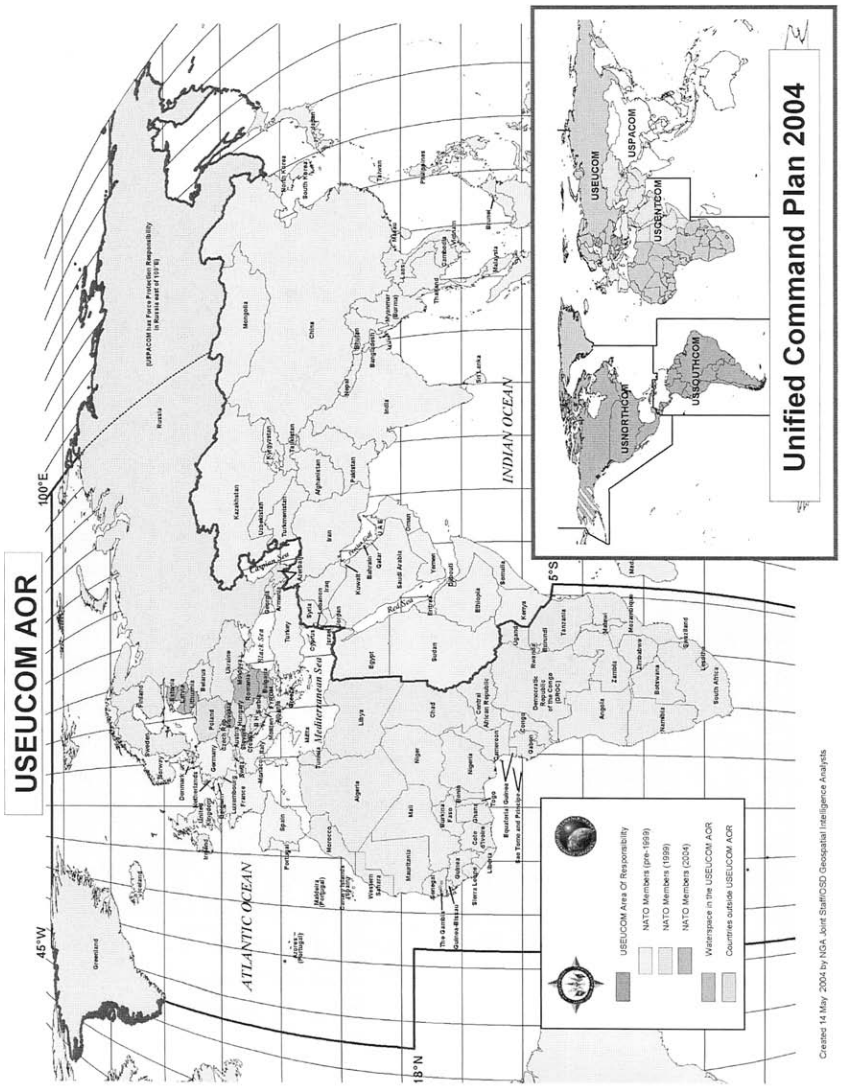
By establishing new capabilities and undertaking nontraditional missions, NATO is increasingly able to better address the challenges of the new security environment. A key relationship in NATO's continuing evolution is EUCOM. EUCOM is the "sine qua non" embodiment of the U.S. military's commitment to NATO and to our theater's allies. The simultaneous transformations, which both began in 2003, are central to our ability to meet both the challenges and enormous opportunities of the 21st century.

Our main security objective in EUCOM is to achieve a posture and force capability that ensures greater strategic effect, both within our area of responsibility and with other combatant commands within the framework of the U.S. National Security Strategy and the National Defense Strategy. Forward-stationed and rotational forces will preserve our leadership role in NATO and provide a visible model for its transformation. Our agile forces also enhance our capability to conduct operations, and ensure that Europe remains engaged in a collaborative effort to counter common security challenges, both today and in the future. This transatlantic partnership will dramatically help solidify regional and global security efforts.

The developed world faces threats that are sub-national and supra-national; threats which are based on ideological, theological, cultural, ethnic, and political factors. Our adversaries do not recognize international law, sovereignty or accepted international norms of behavior. As such they are able to exploit the seams of the international order. This reality, and our understanding of the new world "disorder," brings with it unique challenges that require new and different approaches by which

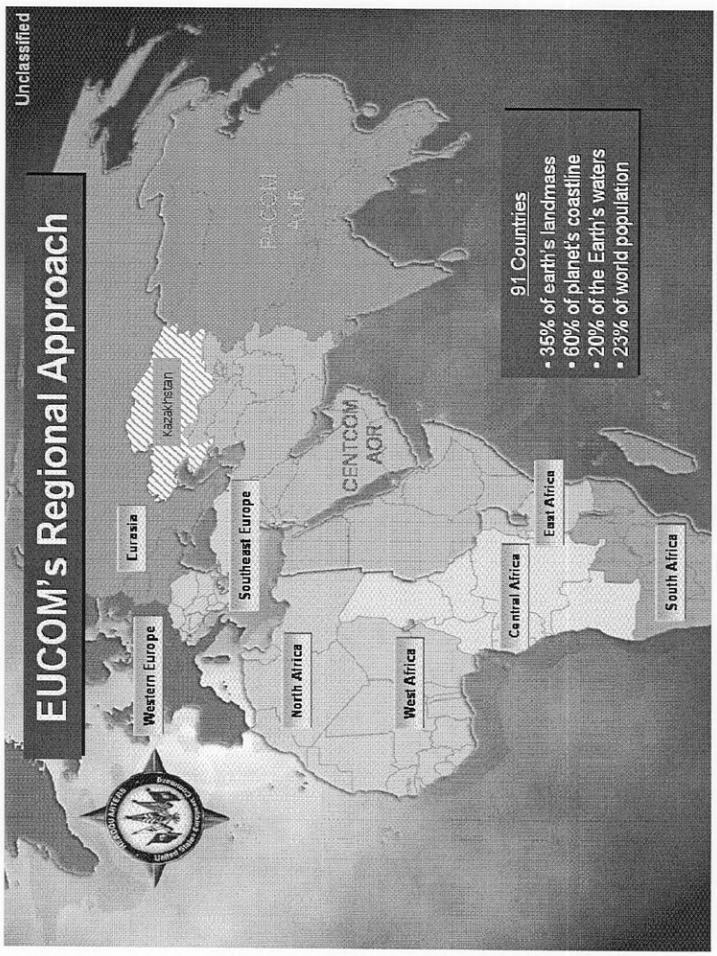
we cooperate with our allies, allocate resources, and develop strategies to protect our national interests.

Our current structures do not always give us the required agility, flexibility, and responsiveness needed to convert innovative ideas into actionable programs. The complexities of the world and the diversity of its threats require our continued focus on fully implementing our transformation. We must institutionalize our new operational concepts, complete our institutional reforms, and reform our enhanced business and acquisition practices in order to better provide positive outcomes to our many undertakings. With continuing reform we can assist our friends and allies in securing their borders, defeating terrorism, and improving the economic outlook in many regions of the European-African theater.



I remain optimistic that the steady development of African regional organizations presents opportunities to positively shape the security environment for the continent. An improved security posture among African partner nations, Regional Economic Communities, and the AU is a key element in winning the global war on terrorism. Working with partners, allies, and multiple United States Government agencies, we are making long-term investments in African-developed programs that are aimed at improving that posture.

I appreciate the opportunity to discuss recent developments and to highlight the latest activities in the various regions of our theater. I will also discuss ongoing initiatives within the command and the key theater investment needs required to maintain and employ our forces in a manner that supports our transformation efforts. I hope to show how programs executed with our security partners further our national security interests. Lastly, I will offer some suggestions with regard to how transformation improves the ability of a combatant commander to better achieve our national strategic goals and objectives.



STRATEGIC ASSESSMENT

The EUCOM area of responsibility comprises a vast geographic region covering over 46 million square miles of land and water, stretching from the northern tip of Norway to the southern tip of South Africa, and from Greenland in the west to Russia's Pacific coastline (See Enclosure 1). The scope and diversity of these 91 sovereign nations encompass the full range of human conditions and governments. As such, our theater requires a multi-faceted approach, including a complementary relationship with many international organizations in developing and implementing a strategy that fully addresses the challenges to European, African, and U.S. strategic interests. Therefore, rather than focus on 91 individual nations, our theater perspective and efforts are framed around 8 regions and special relationships with Russia and Ukraine (See Enclosure 2). This approach is supported by our experiences that problems are often not confined by national boundaries, but require regional solutions.

Enclosure 1: United States European Command Area of Responsibility

Enclosure 2: EUCOM's Regional Approach to Theater Security Cooperation

Western Europe has now benefited from 60 years of peace and stability. Our strategic goal is to expand similar peace and prosperity to Eastern Europe and Africa. Our ability to maintain this prolonged period of stability is attributable to our shared recognition of the threat once posed by the Soviet Union and the common desire to establish an alliance that would seek to safeguard the freedom and security of its members. Today, in the absence of a discernable, predictable, and traditional threat, we are faced with a more menacing adversary; one that is multi-dimensional, non-traditional, and continually evolving from region to region. It metastasizes itself in ways that presents challenges to a coherent, collective security strategy to rapidly and effectively address its asymmetric expansion.

Progress toward a more peaceful and prosperous world in this century is predicated on recognizing the new array of challenges that clearly threaten our common interests, strengthening NATO as the centerpiece of our regional security framework, and implementing a comprehensive strategy that can effectively address our concerns. As a global community we struggle to come to agreement on what truly threatens our common security. We also need better coherence concerning the most effective response to the challenges we all face.

Issues that were previously overshadowed by the 20th century threat of conventional and nuclear war have come to the forefront. In no particular order, these threats include pandemic disease, terrorism, famine, economic collapse, uncontrolled illegal immigration, proliferation of weapons of mass destruction, narcotrafficking, radical fundamentalism, and of course, armed conflict. These perils are transnational in nature and are not easily contained within established geopolitical borders or by the past century's traditional military structures. Our historical experience in working within alliances and coalitions has shown us that the most lasting solutions to existing threats will be found within collaborative and multifaceted approaches. In other words, common solutions for common problems are probably the best path to success.

Terrorism has only recently emerged as our preeminent security threat. Many European nations have dealt with terrorism for a much longer period of time, and hold differing views on how to combat it successfully. For example, some perceive terrorism as an issue for local national law enforcement rather than a problem to be handled by classic military means. We view terrorism as an interconnected network that is global in nature, requiring both domestic (interagency) and international participation in order to defeat it. To the point that terrorism is a threat to all of us, there is no disagreement on either side of the Atlantic.

While our respective approaches to countering terrorism may differ somewhat, I believe we are now closer to understanding its nature and the structures that provide it support. For example, the success both the U.S. and Europe have had in reducing traditional means of support to such networks is clearly forcing terrorist groups to turn to alternative means of financing. There is no question but that transnational crime and the terrorist world are converging. Terrorist groups increasingly adopt the same methods as organized crime and have developed their own money laundering, drug processing and trafficking rings, as well as human smuggling operations. To ensure success in our goals of advancing common security in the 21st century we must adjust our tactics correspondingly in order to counter the new array of threats.

It is clear that the primary fronts in the war on terror are currently in Afghanistan and Iraq; however, EUCOM's current and future impact on this front is a point of strategic interest. Today, increasing numbers of foreign fighter support to both areas originate from, train in, and transit through the EUCOM AOR. There is evidence that terrorist efforts may eventually shift from Iraq and Afghanistan to Northern Africa and Western Europe as experienced fighters return from the Middle East. The time to prepare for this strategic transition is now.

Europe

Our successful Western European strategy was built on the foundation of common values and common interests. Without full European assistance in addressing the demographic, cultural, and energy challenges which loom on the near horizon, our long-term collective security interests will be at higher risk. Even as we orient our focus on regions to the south and east, new demographic and energy security issues are evolving to highlight emergent fault lines within Western Europe itself. Last year's riots in France, the recent natural gas dispute between Russia and the Ukraine, and rapidly changing demographics are but three of the challenges Europe will face in the near future.

From our shared foundation of common interests we continue to reinforce three main pillars. First, we continue to promote and seek to preserve NATO as the primary instrument for European security while encouraging the European Union's military capability to develop, but not in competition with the proven capability of the Alliance. Our second pillar encourages our European allies to play a greater role in their own security affairs. Third, we encourage the modernization of Europe's military capabilities to become more expeditionary and to be better able to cope with our mutual security challenges.

NATO and EUCOM continue to build partnerships with Russia and Ukraine, including the development of security cooperation architectures which have proven to be effective in ensuring access to the region and promoting common interest. EUCOM conducts regular military consultations with the Russian military and we are making steady progress through the U.S.-Russia Work Plan in developing a normalized military relationship that moves us past the days of the Cold War. NATO routinely conducts high-level consultations on a wide range of interoperability security issues with the Russian Foreign Ministry, Defense Ministry and General Staff. NATO's establishment of Military Liaison Missions in Moscow and Kiev has improved communications and facilitated day-to-day coordination of activities. Similarly, Russia, as a Partner Nation, has a full delegation permanently assigned to my NATO headquarters at SHAPE.

Ukraine's strategic location, recent history as a contributor to coalition operations, and its newly reinvigorated policy of Euro-Atlantic integration, make it an increasingly important regional ally. The Ukraine is at a crossroads between achieving modern western institutions and Soviet models. Its near-term success or failure will effect the political evolution of the entire region. We are working hard to expand and accelerate our already robust military cooperation with Ukraine. Through our bilateral work plan we assist Ukraine in adopting the military and defense reforms necessary to achieve NATO aspirations, and to enable them to continue to provide trained and ready forces to coalition operations.

Africa

Political instability in Africa is exacerbated by social, economic, and security problems related to high population growth rates, poor land management, desertification, agricultural and environmental disruptions, massive refugee movements and, pandemic conditions. Over the past 5 years, the United States has responded to humanitarian crises and political instability in Somalia, Mozambique, Liberia, Chad, Sierra Leone, the Democratic Republic of Congo, Cöte d'Ivoire, and most recently in Darfur.

For the past few years, we have worked to take a more engaged approach to achieving long-term stability through proactive, preventive measures. Consequences for inaction may include continued and repeated U.S. intervention in conflicts and humanitarian crises, disruption of economic trade vital to the development of Africa's nascent economies, and increased presence of radical fundamentalism, especially in Africa's vast ungoverned spaces.

Violence in West Africa has created ungoverned pockets that extend across national borders and threaten to further destabilize an already fragile region. Broad expanses of marginally governed areas can become havens for terrorists and criminals and have become attractive to terrorist groups increasingly denied sanctuaries in Afghanistan and the Middle East. North Africa, and in particular the Pan-Sahel region of Sub-Saharan Africa, offers opportunities to Islamic extremists, smugglers, and various insurgent groups. Parts of Africa have also become home to "franchise groups" who ally themselves with major terrorist organizations and have the unique characteristic of being composed of native African members.

East Africa continues to undergo great human tragedy, as exemplified by the situation in Darfur. In response to a request from the African Union (AU) NATO has provided airlift, coordination of strategic airlift movement, and staff capacity training to the African Union Mission in Sudan (AMIS). This AU mission has had some limited success, but the situation in Darfur remains critical. There have been discussions concerning a possible transition of AMIS to the U.N., with a general realization that the eventual handover of the mission to an international organization will be necessary.

Africa's vast potential makes African stability a near-term global strategic imperative. The Gulf of Guinea is a largely poorly governed maritime security region where smuggling, piracy, and oil bunkering are a way of life. Africa currently provides over 15 percent of U.S. oil imports and recent explorations in the Gulf of Guinea region indicate potential Reserves that could account for 25–35 percent of U.S. imports within the next decade. In addition to their size, these high-quality Reserves also have the advantage of geo-strategic location on the west coast of Africa, allowing for rapid transit by sea to Western Europe and the United States. Through the interagency process, we will increasingly assist the AU and African regional organizations in developing their security structures and in fostering continent-wide efforts to achieve stability and security. Throughout our engagement, we will continue to assist in the fight against HIV–AIDS, perhaps the region's greatest ongoing internal struggle.

The United States is not unchallenged in its quest to gain influence in and access to Africa. We face continuing competition by other nations seeking international political support and access to natural resources. As Asia's emerging industries expand, requirements for petroleum products and strategic metals will grow exponentially and will likely compete more intensely for these resources with the U.S. Other nations offer money, military aid, and political support, and many other incentives without the conditions that we traditionally require.

It is in our national interest to help Africa achieve broad-based and sustainable economic, security, political and social development. This is the most effective way to fight hunger, poverty, and extremism. Over the longer term, EUCOM will work aggressively with our interagency partners, allied nations, and the African regional organizations to advance our common interests and values. There can be no doubt that Africa will occupy an increasingly larger amount of our national attention in the years ahead. Early recognition of this reality is very important.

U.S. EUROPEAN COMMAND

In support of our national engagement policies in Europe and Africa, EUCOM continues our efforts to expand security and stability throughout the theater. The challenges I have previously enumerated are what the National Defense Strategy terms "irregular and catastrophic." Enduring success against such challenges has both an interagency and an international component. Continued investment in our current transformational capabilities and initiatives is critical to furthering our international collaborative efforts toward achieving common security. In order to be successful in the strategic environment in which we find ourselves, we must be capable of responding to a much wider variety of potential contingencies.

In this context, the future of EUCOM is as critical as ever, perhaps even more so, to the implementation of our Nation's policies and our commitment to the forward defense of freedom. Our forward-based and rotational forces are powerful and visible instruments of national influence: They provide defense-in-depth for homeland security; strengthen U.S. diplomacy and foreign policy; signal U.S. commitment to the transatlantic link; demonstrate U.S. Government resolve; and bolster common security through a critical array of Theater Security Cooperation (TSC) programs. The majority of our operations are "peace support" operations, ranging from peace enforcement, to stability operations, to training missions and exercises. Proactive peacetime engagement activities reassure allies and partners, promote stability and mitigate the conditions that lead to conflict. We base our strategies on the principle that it is much more cost effective to prevent conflict than it is to stop one once it has started.

Due to the modern day complexity of our theater's security challenges, U.S. efforts will require a broad interagency approach. In EUCOM we integrate our TSC program in ways that maximize effectiveness of each TSC dollar by allocating resources towards priority countries and regions identified by our plans. We work to improve interagency coordination across the spectrum of governmental and nongovernmental organizations in order to achieve optimal national results. As I will discuss, a critical component to this effort is the long overdue implementation of necessary TSC reforms.

Strategic Theater Transformation

We execute our Strategic Theater Transformation (STT) plan in order to posture ourselves to meet the emerging security landscape. Our objective remains constant: to enhance our strategic effect and our operational agility. Success hinges on maintaining sufficient critical assets and capabilities in theater as both a "supported and a supporting" combatant command. Such assets include: mobility; power projection platforms; operating bases; a joint forces command structure; nurturing and developing alliances and coalition partners; integrated intelligence systems; and agile, expeditionary forces. To ensure the full implementation of our STT plan, we request an investment of $940 million in military construction and family housing in fiscal year 2007. While this is a large request, it needs to be understood within the overall context of our STT plan which supports the Secretary of Defense's Global Defense Posture.

Since 2003 and projected through 2006 we will have closed 43 bases and installations and repatriated approximately 10,000 forces and 13,800 family members. Upon the completion of our STT plan we anticipate the closure of several hundred bases and installations and the return of over 40,000 military personnel, 65,000 DOD civilians, and over 57,000 family members. The rightsizing of forces and bases in Europe has yielded considerable benefits to DOD's ability to manage personnel and infrastructure globally, while empowering EUCOM to counter new threats throughout a greater proportion of the AOR.

Certain elements of the EUCOM transformation plan—including force levels, training, and access to facilities and protocols to assure freedom of action for our forward forces—continue to be negotiated with host nations. Additionally, our transformation is being coordinated through the Services, the Joint Staff and OSD. It is also being synchronized with the efforts of other combatant commands, NATO, and the results of the Base Closure and Realignment Commission (BRAC) process in the United States.

Through a dramatically reformed forward presence concept, we will create a more adaptive infrastructure with increased use of rotational units to improve on our operational reach and tactical flexibility. Increasing access to strategic host nation infrastructure and cooperation with friendly nations will improve our responsiveness. Our evaluation of infrastructure requires focus on Main Operating Bases (MOBs), Forward Operating Sites (FOSs), and Cooperative Security Locations (CSLs).

In Europe, our basing strategy seeks to sustain and leverage our commitments to our longstanding alliances. We maintain a robust presence in Western Europe—making necessary improvements to existing bases and training facilities—while at the same time shifting our focus to improving the ability of new allies and partners to be able to deploy rapidly and operate with our forces. The goals of this strategy are to deepen and strengthen relations with our newer allies; develop our focus to the south and east of our theater; maintain our national commitment to NATO; and to improve our interoperability with like-minded friends, allies, and major NGOs. The Eastern Europe Task Force initiative in Romania and Bulgaria is a good example of our developing relationship towards the east.

For relatively small, but consistent investments, our theater efforts in Africa will have major impacts on the multitude of strategic, security, economic, and political challenges we face. As we strive to assist in halting the deteriorating conditions in this increasingly important continent, we impact on Africa's potential for becoming the next front in the war on terrorism. We should remain engaged in Africa in order to build upon international relationships and to strengthen the many institutions that help mitigate the risk of armed conflict and provide relief when they do occur.

Theater Security Cooperation

Our TSC programs remain the centerpiece of our efforts to promote common security to strengthen the transatlantic link. TSC programs represent a much needed proactive approach to building partnership capacity with the aim of enabling emerging democracies to defend their homelands, address and reduce regional conflicts, defeat terrorist extremists, develop common economic and security interests, and respond to health crises, such as pandemic influenza outbreaks. Our approach is regional, linking individual country objectives to broader theater goals. Assisting our allies in developing the capabilities required to conduct effective peacekeeping and contingency operations with well-trained, disciplined forces helps mitigate the conditions that lead to conflict, prepares the way for success, and reduces the potential burden of U.S. involvement. Excluding Israel, we have requested a total of $166.6 million in Foreign Military Financing (FMF) and $40.5 million in International Military Education and Training (IMET) for fiscal year 2007. If approved, these programs will have direct benefit in regions where we need them the most.

Regional Approach

In EUCOM our TSC strategy derives from regional priorities and policy themes outlined in the Secretary of Defense's Security Cooperation Guidance. Our priorities are: to deepen and strengthen our relations with allied and partner nations; to assist our allies in developing capabilities to deploy rapidly and to be interoperable with U.S. forces; to encourage our allies in developing a robust SOF capability; to align our forces in a manner that enables a more rapid deployment to areas of instability; and to increase U.S. influence with new NATO members. We continue to focus on enhancing stability through Operation Active Endeavor, NATO's only Article V counterterrorism operation. Additionally, we have strategic security interests in other regions such as the Black Sea and the Caucuses. We will continue to support the Balkans in their reconstruction and in their eventual, but still conditional, integration into Euro-Atlantic institutions. Multinational training and exercises are essential elements of our regional approach to build military-to-military cooperation, to improve interoperability, and to facilitate the development of professional militaries. Our continuing mission in Georgia is a good example of "low investment, high yield" TSC strategy.

In Africa, our priorities are to increase the capability of African nations to conduct peacekeeping and contingency operations in each of their five regions, particularly through the AU and other regional organizations; to protect natural resources; and to promote stability by providing medical advice and assistance in dealing with health issues such as HIV/AIDS, cholera, malaria, and other diseases that have both humanitarian and strategic consequences.

Stability programs targeting improvements in health, education, good governance, and civil infrastructure are focused on countries with the greatest need. Development of effective security structures in Africa will establish the foundation for future success; however, they are dependent on the commitment of manpower, as well as the financial and institutional resources necessary to establish and sustain real progress. Working with donor nations and the interagency, our security initiatives—providing military training and education and enhancing peace operations capabilities, resources, and infrastructure—are focused on countries that possess the capability and show the desire to lead Africa into the future. African security issues will increasingly continue to directly affect our homeland security. Modest near-term in-

vestments will enable us to avert future crises that could, left unaddressed, require costly intervention in the future.

Trans-Sahara Counterterrorism Initiative (TSCTI)

TSCTI is the long-term interagency plan to combat terrorism in trans-Saharan Africa using a full range of political, economic and security tools. The need for TSCTI stems from concern over the expansion of operations of Islamic terrorist organizations in the Sahel region, a region that approximates the size of the United States. In EUCOM we support TSCTI through our involvement in Operation Enduring Freedom-Trans Sahara (OEF–TS). OEF–TS is a regional and preventive approach to combat terrorism and enhance partner nation border security and response in Trans Sahara Africa. It is designed to assist governments who seek to better control their territories and to prevent large areas from becoming safe havens for terrorist groups. TSCTI builds upon the successful 2002 Pan Sahel Initiative (PSI) which helped train and equip at least one rapid-reaction company in each of the four Sahel states: Mali, Mauritania, Niger, and Chad. TSCTI is a follow on effort, more ambitious in both programmatic and geographic terms.

TSCTI's overall approach is straightforward: to build indigenous capacity and facilitate cooperation among governments in the region. Participating nations, Algeria, Chad, Mali, Mauritania, Morocco, Niger, Senegal, Nigeria and Tunisia, join in the struggle against Islamic extremism in the Sahel region. This cooperation strengthens regional counterterrorism capabilities, enhances and institutionalizes cooperation among the region's security forces, promotes democratic governance, fosters development and education, emphasizes the military's proper role in supporting democratic ideals and ultimately strengthens our bilateral relationships in the region. It also assists participating nations in halting the illegal flow of arms, goods, and people through the region, helps nations better protect their vast borders and contributes to common security.

Political instability in Africa, left unattended or unaddressed will require reactive and repeated interventions at enormous costs (i.e. Liberia). For a relatively small investment, TSCTI has the potential to produce significant results in countering terrorism. It will be a powerful brake on future terrorist expansion, leading to an increasingly stable region. The administration is working to integrate TSCTI into future budget and planning cycles. Long-term, continuous engagement will build bonds where few existed and strengthen those already established. The United States should continue security cooperation measures with nations supporting regional initiatives which ultimately lead to peace, stability, and hope for people who have little at present.

Global Peace Operations Initiative (GPOI)

GPOI is a Department of State program, which is planned and implemented in consultation with the Department of Defense to train and equip peacekeepers. The bulk of real world GPOI activities is undertaken by African Contingency Operations, Training and Assistance (ACOTA), which is directed toward African nations and currently includes 15 ACOTA "partners." Countries considered for GPOI funding must demonstrate a strong commitment to participate in Peace Support Operations, as is one of the four criteria for being an ACOTA member. In fiscal year 2005, for the first time, operating funds to the ACOTA program were distributed via GPOI channels, as opposed to being a line-item in the Bureau of African Affairs, as has been the case since 1997.

Through GPOI and our own theater security cooperation and engagement programs, we will continue to support the AU and regional organizations to help ensure their success in progressing towards self-sufficiency. We believe GPOI and ACOTA should continue to be designed to help African regional organizations and their member countries develop the military capabilities needed to respond to regional problems, protect their strategic resources, reduce internal destabilizing tensions, and further develop cooperative, mutually beneficial external relationships. Our top priority in Africa is to support the AU's Common African Defense and Security Policy (CADSP) and other viable regional security organizations. The AU's five regional economic communities are developing common policies on defense and security issues in support of the AU CADSP. In EUCOM's view, GPOI funding should support ACOTA and benefit those programs and activities that promote the growth and increase the capabilities of the AU as the lead organization for increasing African responsiveness to crises.

Caspian Guard Initiative (CGI)

CGI is a framework program designed to coordinate security cooperation activities in Azerbaijan and Kazakhstan with those of CENTCOM and other U.S. Government agencies to enhance Caspian security. CGI assists Azerbaijan and Kazakhstan in

improving their ability to prevent and, if needed, respond to terrorism, nuclear proliferation, drug and human1 trafficking, and other transnational threats in the Caspian region. With CENTCOM we work with the Defense Threat Reduction Agency (DTRA), DOS, the DOD (Under Secretary of Defense for Policy), and the Department of Energy (DOE) to improve Azerbaijan's and Kazakhstan's capacities. As a result, U.S. Government "stakeholders" know their contributions are part of a coherent, strategic effort that promotes interoperability among activities, identifies capability gaps and cooperation opportunities, and mitigates redundant and duplicative efforts. CGI-related projects in Azerbaijan and Kazakhstan include maritime special operations training, weapons of mass destruction (WMD) detection and response training and equipment, naval vessel and communications upgrades, development of rapid reaction capabilities, border enhancements, counternarcoterrorism and border control training, naval infrastructure development planning, and interministry crisis response exercises.

Maritime Security in Africa

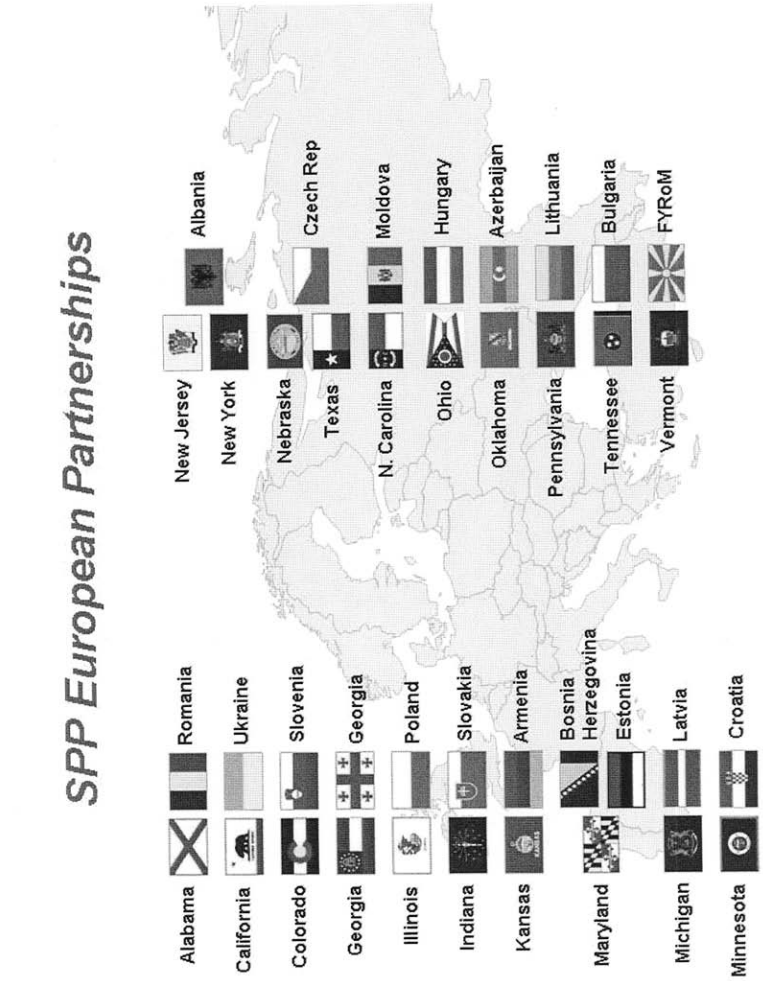
The West Indian Ocean and Gulf of Guinea (GOG) regions of Africa are areas which epitomize the complexity of maritime security challenges. Problems such as criminal activity, piracy, environmental and fisheries violations, resource theft, and trafficking occur on a regular basis. In order to address these challenges, EUCOM is engaged in the creation of a comprehensive maritime security initiative for Africa. U.S. Naval Forces, Europe (NAVEUR), EUCOM's lead component in this initiative, has developed a robust maritime security strategy and regional 10-year campaign plan for the Gulf of Guinea region. Gulf of Guinea Guard, EUCOM's investment initiative for long-term regional security and stability, will help GOG nations protect natural resources and use their wealth to develop economically and socially. Enabling objectives of the initiative are: enhancing physical security of national ports; improving control of littoral areas; and promoting collective and cooperative maritime security beyond littoral areas.

African Contingency Operations, Training, and Assistance (ACOTA)

ACOTA is a DOS Peace Support Operations (PSO) training initiative designed to improve the AU's ability to respond quickly and professionally to regional crises at the battalion, staff, brigade, and increasingly, at the multinational and Regional Economic Community level. ACOTA has for several years been a crucial African engagement and capacity-building program, directly supporting U.S. national objectives and EUCOM theater objectives of promoting stability, democratization, and military professionalism in Africa. Objectives of the ACOTA program include training and sustaining an African peacekeeping operations forces of 40,000 personnel by 2010; developing and improving sustainable PSO capacities for African forces to deploy and conduct peace support and humanitarian relief operations within Africa; and developing new programs of PSO training that will be relevant to the African Standby Force (ASF) and the Regional Brigades as they come on line.

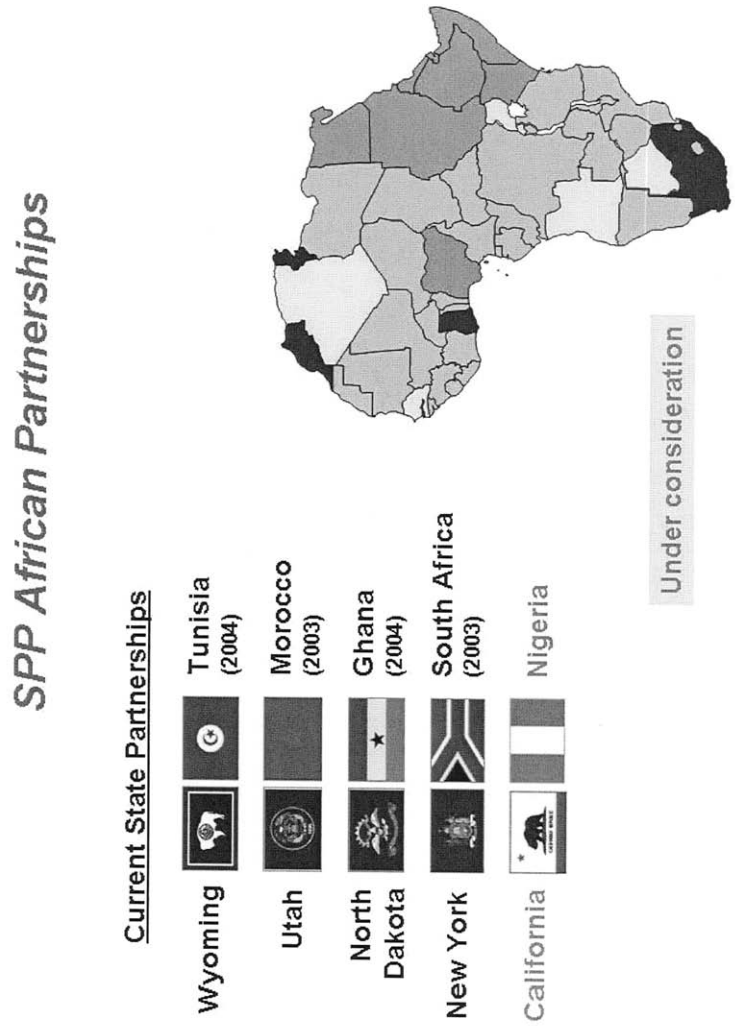
Our support to the DOS contract-led training will continue throughout 2006. We will continue to provide active and Reserve component uniformed mentors to support battalion or brigade-level training focused on the peace support operations skills for individual soldiers, squads, platoons, and companies, culminating with a battalion-level exercise, along with staff training and multinational exercises for larger components, mixed staffs, and more complicated joint exercises. Training for specialty units will also be included.

Security Cooperation Activities



Security Cooperation Activities are managed programs planned and executed for the purpose of shaping the future security environment, spreading democratic values, and developing the potential of nations. Key among U.S. combatant command's TSC tools are Combined/Multinational Training and Exercises, FMF, Humanitarian Assistance (HA), Joint Contact Team Program (JCTP), Military-to-Military (M2M) Program, International Military Education and Training (IMET), Foreign Military Sales (FMS), and direct commercial sales. These programs provide access and influence, help build professional, capable militaries in allied and friendly nations, and promote interoperability. We execute the larger security assistance programs using our 44 Offices of Defense Cooperation in concert with U.S. Embassy Country Teams, while smaller programs are executed by Defense Attachés and Embassy Offices.

IMET remains our most powerful security cooperation tool, and proves its long-term value every day. At a relatively low cost, the program exposes foreign military and civilian leaders to U.S. military training, builds relationships, facilitates access, and builds influence. It is the single most effective tool available to demonstrate democratic control of militaries, and in many cases is the primary theater security cooperation activity that we have. Today, we continue to see the value of this pro-



gram in the professional development and transformation of militaries in such establishing allies as Poland, Bulgaria, Romania, and many other countries.

The National Guard State Partnership Program (SPP), a united security cooperation program, also continues to be one of our most effective programs (See Enclosure 3). By linking our states and territories with designated partner countries, we promote access, enhance military capabilities, improve interoperability, and advance the principles of responsible governance. The unique civil-military nature of the National Guard allows it to actively participate in a wide range of security cooperation activities. During the past 3 years the SPP has conducted over 115 events and expanded into Africa with 5 additional partnerships, including the latest partnership between Nigeria and California.

Enclosure 3: State Partnership Program (SPP)

Enclosure 3 cont

Combating WMD is among our highest priorities, and the DTRA provides support unique within DOD that EUCOM has fully incorporated. DTRA's contributions cover the entire spectrum of our mission: Cooperative Threat Reduction programs address the nonproliferation of known WMD; detection programs address counter-proliferation, particularly interdiction of unknown items; and DTRA's exercise programs address our consequence management responsibilities, reassuring our friends and allies with regard to EUCOM capabilities.

The EUCOM Sustainment and Stability Operations Program (SSOP) in Georgia focuses on enhancing the capabilities of Georgian military forces to assist in preparing deployments in support of OIF. The U.S. and Georgia have developed a solid, cost effective partnership dedicated to promoting peace and stability and countering

terrorism. This program still serves as a model for other programs designed for the same purpose.

Additionally, U.S. Army, Europe supported training of Romanian tactical human intelligence teams at Grafenwoehr, Germany, which has been instrumental in creating military-to-military relationships between units, and in bridging the gap between U.S. and foreign military concepts. This training has allowed participating countries to replace EUCOM personnel in the Balkans, thus freeing up U.S. personnel for other duties elsewhere.

We attach great value to our programs offering multinational educational activities. They foster the professional development of emerging civilian and military leaders, reinforce ideals of democratic governance and stable apolitical militaries, and facilitate long-term dialogue with and among future international leaders. The George C. Marshall European Center for Security Studies, our preeminent transatlantic security and defense educational institution, is dedicated to the creation of a more stable security environment. It plays a major role in advancing democratic institutions and relations, peaceful engagement, and enhancing enduring partnerships between the Nations of North America, Europe and Eurasia. Three other prominent educational institutions are the NATO School, the Near East-South Asia Center for Strategic Studies, and the Africa Center for Strategic Studies (ACSS). Such educational activities achieve their greatest effectiveness when they are permanently located in the regions they are designed to influence. For the ACSS, currently based in Washington, DC, its success would be greatly enhanced by relocation to Africa, with mechanisms to give African nations greater ownership of its programs. All such schools play a central role in our engagement strategy by building trust and cooperative relationships with the leaders (current and future) of over 50 nations across Europe, Eurasia, and Africa.

HIV/AIDS Prevention Programs continue to be a key influence activity within our AOR. We have worked with DOD HIV/AIDS Prevention Program personnel in advocating projects and programs sponsored by the country teams and worked to incorporate these into the theater security cooperation plans. We appreciate the provision of $5.3 million in Public Law 109–148 for this program in Africa in fiscal year 2006. All government and nongovernmental HIV/AIDS programs are important in supporting security cooperation.

To ensure that U.S. actions are coordinated with other nations within the same region, we have established a regional security cooperation approach known as Clearinghouse Initiatives. Clearinghouses help deconflict programs, avoid duplication, and find ways to collaborate on matters of mutual interest. They have been created for Africa, the South Caucasus, and Southeast Europe, and serve as a multinational forum for interested countries to share information about security assistance programs. The goal is to capitalize on limited resources by merging various security cooperation programs into a comprehensive, synchronized regional effort.

Comprehensive TSC Reforms

Traditionally, our Armed Forces focus on fighting and winning wars. While we need to be prepared to operate across the full spectrum of conflict, in the new security landscape we conclude that early engagement, often requiring modest investment, can yield significant long-term dividends. In many cases, early actions can minimize or eliminate future engagements. Our approach to proactive versus reactive engagement highlights TSC as a cost effective and very important capability. Reforms to our existing national TSC authorization are necessary to promote greater efficiencies, and to more effectively expand U.S. influence in accordance with National Military Strategy and OSD Security Cooperation.

EUCOM has an abundance of programs, initiatives, and policies designed to help in developing and implementing our TSC strategy. There are as many as 30 sources of funding which emanate primarily from the DOD and the DOS—and which are regulated by various, often times competing, authorities and guidelines. Although the Unified Command Plan establishes the authority of the Geographic Combatant Commander (GCC) to plan and conduct security cooperation activities within an assigned area of responsibility, there are a number of programs or activities over which the GCC has no influence. Additionally, there exist government and nongovernment programs of which the GCC has no visibility.

In 2006, we will continue working to improve the efficiency and effectiveness of our TSC programs. We will complete development of effects-based, regionally focused plans that fully support nationally-directed strategic guidance. These plans, and our TSC strategy, support our overarching effects and capabilities-based theater strategic objective and effects management process. To increase efficiency, we will seek security cooperation funding and authority reform. The OSD, the Joint Staff, and individual Services work closely with the unified commands to explore ways to

improve program element structure in order to provide greater resources to the combatant commanders.

Ultimately our goals should include matching resource management with the responsibility for TSC success under the various unified regional commands. For EUCOM, this would empower us to better compete in the developing parts of our theater, particularly Africa and Central Asia. Recent changes in the Security Cooperation Guidance (SCG) which requires all DOD components to coordinate their SCG implementation strategies, plans, and activities with the relevant geographic combatant commanders and the identification of the combatant commanders as the DOD's supported entities for security cooperation is a positive development.

At the interagency level, better synchronized and more streamlined policy and legislative lines of authority would provide increased efficiencies and greatly assist in developing and implementing a more effective, overarching strategy to achieve our Nation's foreign policy objectives. Such reforms would also help develop democratic principles, common ideals, and defense reform of potential coalition partners and might also prevent some nations from turning elsewhere for security assistance needs. By streamlining these processes, we increase our agility and effectiveness, thereby allowing increased assistance and enhanced programs to those that need them most.

Component Command Activities

U.S. Army, Europe (USAREUR)

USAREUR is in the midst of transforming to restructure and refocus the Army footprint in Europe. This transformation incorporates substantial force redeployments to the United States, reconfiguring tactical units, and creating a new command and control structure.

The new command—which will be designated 7th Army—will combine the command functions of USAREUR with the warfighting capabilities of V Corps. When the transformation initiatives are complete, 7th Army will have eight separate organizations (instead of the current 20) and two permanently assigned combat brigades—a Stryker Brigade Combat Team (SBCT) in Vilseck, Germany, and an Airborne Infantry Brigade Combat Team (BCT) in Vicenza, Italy. The command is planning to utilize a third brigade on a rotational basis in support of the Eastern European Task Force.

Transformation of Army forces is now shifting from planning to execution of key decisions of the Integrated Global Presence and Basing Study (IGPBS) with the return this summer of 1st Infantry Division headquarters and one of its brigades to the Continental United States (CONUS). The other Germany-based 1st Infantry Division Brigade will redeploy to CONUS after its current tour in Iraq. The redeployment of these units from Europe is offset with the re-stationing of a 4,000 man Stryker Brigade Combat Team in Vilseck, Germany by August 2006.

Over the past 3 years, USAREUR has continued to provide substantial support to the global war on terrorism. Southern European Task Force (SETAF) and the 173rd Airborne Infantry Brigade formed the U.S.-led combat force in Afghanistan (Combined Joint Task Force 76), while V Corps headquarters re-deployed with two Brigade Combat Teams from 1st Armored Division to Iraq to form the bulk of the Multinational Corps-Iraq Headquarters for the two U.S. Army divisions, Marine Corps and coalition forces in Iraq. USAREUR recently deployed medical and support personnel to Pakistan to provide critical humanitarian assistance to earthquake victims.

Despite high rates of operational and personnel tempo, USAREUR continues to provide tremendous support to our TSC initiatives. Particularly, the command is working with our allies and partners to improve their capabilities and increase coalition contributions to multinational operations. For example, USAREUR's support to the Polish Land Forces—training NCOs and officers; supporting and participating in rehearsal exercises; and providing Mobile Training Teams to assist deployments—have directly assisted six successful Polish deployments of brigade and division headquarters to Iraq. Additionally, USAREUR led the way in nurturing our relationships with Russia and Ukraine via interoperability and peace support exercises through the ongoing Torgau Exercise series with Russia, coupled with key senior leader engagement. USAREUR continues to build upon the Peace Shield and Rapid Trident exercise programs with the Ukraine, focusing on the Ukraine's emerging Rapid Reaction Force and NATO/U.S. standard operating procedures. This year USAREUR will also initiate an airborne exchange program with the Ukraine.

USAREUR's focused activities in Eastern Europe have advanced our transformation goals throughout this critical region, helping to realign the U.S. global defense posture through cooperation with allies. Bilateral exercises in Bulgaria (immediate response) and Romania in July 2005 (ROMEX) provided both an outstanding

opportunity to train as NATO allies and test critical training areas and movement infrastructure. The Defense Cooperation Agreement with Romania will enable U.S. forces to start establishing the Eastern European Task Force (EETAF), which will operate from Forward Operating Sites at Mihail Kogalniceanu Air Base (MK) as the EETAF headquarters and adjacent to the Babadag Training Area. We are studying the concept of making Mihail Kogalniceanu Air Base a joint forward operating base for rotational presence and training of not only Army forces, but Air Force, Marine, and Special Operations units. The potential also exists to establish the EETAF operational command post at MK air base as a JTF HQs as well. Additionally, the USAREUR-led EETAF will significantly improve our ability to plan, coordinate, and execute security cooperation and allied interoperability in Eurasia and the Caucasus regions.

In Africa, USAREUR's 212th Mobile Army Surgical Hospital (MASH) led a historic mission: Exercise MEDFLAG 2005, the first-ever exercise by U.S. forces in Angola, was viewed by both U.S. and Angolan military and government officials as a tremendous success. The 212th MASH gained valuable training experience in deploying personnel and equipment in support of a humanitarian assistance operation in a challenging multinational environment by completing a civil engineering project, conducting joint training with the Angolan military, and providing medical assistance to Angola's civilian population. Immediately following this exercise, 212th MASH deployed to Pakistan to conduct operations in support of CENTCOM's earthquake assistance mission. Lastly, USAREUR has established a formal liaison—Military Liaison Officer-Africa—to establish contacts with a variety of African nations such as Senegal, Angola, Sao Tome, Nigeria, Mali, Tunisia, and others.

NCO development with partners and allies remains a cornerstone of USAREUR security cooperation. USAREUR has opened its Warrior Leader Course at Grafenwoehr to international participation by junior non-commissioned officers. Poland, Russia, Albania, and Slovenia have all participated in this IMET-funded program which will increase the level of interoperability. Furthermore, Botswana and South Africa have expressed interest in the program.

USAREUR has transformed the 7th Army Training Command to the Joint Multinational Training Command with enhanced expeditionary training, exercise capability, and theater security cooperation support. Over the last 3 years, the command conducted significant expeditionary training in both Bulgaria and Romania, while simultaneously conducting certification events for two combined joint task force headquarters (for Afghanistan and Iraq). The command continues to provide training at the brigade level to U.S. forces in Germany and to coalition partners both in Germany and in partner nations.

U.S. Air Forces Europe (USAFE)

Over the past year, USAFE has continued its broad transformation while simultaneously developing Theater Security Cooperation relationships in key geographical areas. It has also continued to provide substantial direct support to the global war on terrorism with both personnel and equipment.

The most visible change in USAFE over the past year was the transfer of mobility throughput capabilities from Rhein Main Air Base to Ramstein and Spangdahlem air bases. The closure of Rhein Main and the return of real estate to the German government was the culmination of 6 years of work and was planned and executed with no effect on either theater or global-mobility capability. This seamless transition will ensure the continued support of global military operations.

A second notable change is the activation of the Warfighting Headquarters (16 AF) at Ramstein Air Base, Germany. This is part of the overall Air Force transformational effort to enhance wartime operations. The 16 AF provides a single, full-time air component command structure capable of assuming responsibilities of a combined/Joint Air and Space Component Headquarters when required. The 16 AF ensures effective command and control of air, space, and information operations forces. A key underlying benefit of this organization is the ability to immediately transition to any mission across the full spectrum of conflict. It increases command and control capability due to embedded communication systems coupled with co-located functions such as intelligence, surveillance, and reconnaissance (ISR), and logistics.

USAFE is supporting OSD's training transformation through its implementation of the Joint National Training Capability. Together with USAREUR, USAFE is providing the warfighter integrated constructive simulations with virtual and live instrumented ranges. This provides theatre forces and NATO allies training opportunities in both joint and combined operations. We are conducting operational and tactical level exercises, linking warfighters in live, virtual and constructive scenarios. This capability allows USAFE and USAREUR, through the Warrior Preparation

Center, to link warfighters from across Europe and the world with C2 weapon systems to provide realistic and relevant training.

USAFE Theater Security Cooperation programs support the command's overarching initiatives. In 2005, USAFE participated in over 500 events with 66 of the 91 countries in our AOR. Events ranged from major JCS exercises and NATO support activities to bilateral/multilateral events. One shining example of USAFE's Theater Security Cooperation was Exercise Rescuer-Medceur 2005 with the Georgian Army. This USAFE-led exercise provided 15 NATO and Partnership for Peace nations medical training, a forum to exchange information on medical techniques and procedures, and medical assistance to the rural populace in Western Georgia.

Theater Security Cooperation also extends to the operational arena. In an effort to further interoperability and extend the capacity of U.S. ISR assets, USAFE has taken a two-pronged approach to security cooperation. First, it has almost doubled its traditional exchanges and added new contacts with our partner nations. Second, because USAFE currently operates a limited number of airborne ISR assets in this theater, it has aggressively pursued working with partner nations who have or are developing airborne ISR capabilities. By building these relationships and working with these nations on standardizing tactics, techniques, and procedures, we may have the opportunity to integrate their assets into our contingency operations.

In addition to conducting operations within the USEUCOM AOR, USAFE continues to support CENTCOM and ongoing OEF and OIF operations. The USAFE Basing Strategy maintains and improves infrastructure at its Main Operating Bases that support the massive mobility throughput that is resupplying OIF/OEF forces and other worldwide operations. A strategic cargo hub has been activated at Incirlik which has enabled increased mobility throughput to CENTCOM. Support is not limited to mobility throughput, but also includes the contributions of USAFE units and individual personnel. Additionally, 4 of USAFE's 10 flying squadrons are conducting operations in CENTCOM; USAFE C–130s are on indefinite deployment to CENTCOM; the USAFE Air Operations Center is deployed to CENTCOM and is providing effective Air Command and Control for OIF. Finally, USAFE airmen and civilians are also on individual deployments, providing critical support to support both OEF and OIF.

U.S. Naval Forces, Europe

NAVEUR continues to transform its footprint in Europe. Since it began to restructure in 2003, it has reduced assigned military personnel from more than 14,000 to just over 10,000. The command has accomplished this through the consolidation of three headquarters staffs and refocusing all activities in the AOR. This footprint will continue to shrink with the planned closure of the U.S. Naval Facility at La Maddalena, Sardinia.

While NAVEUR's mission has changed substantially, its value and impact in the AOR has not decreased. Initiatives like the U.S. Navy's Fleet Response Plan—enhancing the Fleet's surge capability—have enabled NAVEUR to focus on the development of new skill sets. While retaining the ability to maintain supremacy at sea in the traditional sense, NAVEUR is also building regional nation maritime capability and capacity to provide maritime stability, safety, and security and to help win the global war on terror.

Prime examples of effective relationship building from 2005 include the West Africa Training Cruise and the U.S.S. *Emory S. Land* deployment to the Gulf of Guinea. The West Africa Training Cruise featured U.S.S. *Gunston Hall* with embarked U.S. Marines, Spanish Marines, and Italian Marines and Army personnel working with navy and land forces from several Gulf of Guinea nations. U.S.S. *Emory S. Land* deployed to West and Central Africa where they hosted personnel from seven African nations and embarked personnel from numerous NATO partners as well. These efforts gave our emerging and enduring partners first-hand experience with our Navy, providing the type of interaction that makes lasting impressions.

This trend will continue. Already in 2006 the Navy sent the U.S.S. *Mount Whitney* to support Liberia's presidential inauguration in January and will deploy U.S.S. *Emory S. Land* to the Gulf of Guinea for 3 months this spring.

Operationally, maritime security is at the top of NAVEUR's priority list. The long range vision for maritime security in the region includes a series of Automated Identification System (AIS) receivers along the coast of West Africa providing the ability to identify ships transiting the region. AIS, coupled with a system of coastal radars able to detect suspicious vessels at sea and a communication infrastructure that will allow our partners to receive notification that there is a potential security issue/risk at sea, is the first step. These measures are attainable and affordable. Ultimately, partner navies in this region must possess the capability and capacity to engage

lawbreakers at sea. Earlier this year, NAVEUR leadership met with Gulf of Guinea nations to lay the groundwork for this priority.

Later in March, NAVEUR will jointly sponsor—with the Africa Center for Strategic Studies—a Maritime Safety and Security Workshop in Ghana that will be attended by each of the Gulf of Guinea nations, additional African maritime nations and several NATO nations. This workshop is preparatory to a maritime safety and security ministerial-level symposium this fall.

NAVEUR has also been active in engagement with all of the Black Sea littoral nations in improving maritime security in the east. Bilateral training, multi-lateral exercises, ship visits, senior officer engagements and operational staff talks are part of the engagement effort. Success stories include NAVEUR providing assistance in developing the noncommissioned officer corps of some navies in this region. This serves as a model for developing relationships with emerging partners.

NAVEUR continues to operate with NATO to strengthen enduring partnerships and improve interoperability. The NAVEUR push south and east will increasingly include NATO whenever possible. As NAVEUR increases presence in the Gulf of Guinea to the south and in the Black Sea to the east, their goal is to operate with NATO allies as frequently as possible. Force multiplying with our allies is essential to success in the maritime domain.

U.S. Marine Forces, Europe (MARFOREUR)

MARFOREUR continues to transform, while retaining its flexibility to ramp up and down based upon missions, priorities, and real world contingencies. The net effect is greater output from a smaller command.

MARFOREUR's support to the global war on terrorism remains strong. Its training of the Georgian military, now in its fourth year, through the Georgia Sustainment and Stability Operations Program (SSOP) has resulted in the deployment of over 1,000 Georgian soldiers on a permanent rotation basis to OIF since 2004. MARFOREUR's maintenance of a Hospital Liaison Staff at Landstuhl Regional Medical Center (LRMC) since January 2003 is another example of its contribution to OIF. This detachment is responsible for the in-patient reception of our wounded marines from operations throughout our AOR and CENTCOM. Over 2,500 marines and family members have been assisted by this team since its inception.

MARFOREUR's Security Cooperation activities range from individual and small team efforts to battalion and squadron-size unit deployments. In all instances, the security cooperation focus continues to shift to furthering the attainment of objectives in the Black Sea and Caucasus Regions and North and West Africa. Support to the International Military Assistance Training Team in Sierra Leone, various Africa Contingency Operations Training and Assistance program sponsored events, and numerous Joint Contact Team Program (JCTP) activities create long-term dividends for a relatively small investment. MARFOREUR's support to the Joint Exercise Program relies largely on the Marine Corps Reserves, offering unique annual training opportunities to U.S.-based forces while offsetting the impact of limited Active-Duty Force availability. MARFOREUR is coordinating activities that occur in Trans-Sahara Counter Terrorism Initiative (TSCTI) countries with Special Operations Command, Europe—such as Exercise Shared Accord in Niger and intelligence-focused JCTP events in Niger and Mali.

Special Operations Command, Europe (SOCEUR)

SOCEUR also continued to transform in 2005, while maintaining its emphasis on operations and exercises in the global war on terror. Naval Special Warfare Unit (NSWU) 10 de-activated at Rota, Spain, merging its responsibilities into NSWU Two, in Stuttgart, Germany. SOCEUR conducted operations in the Balkans, and deployed forward-stationed forces to OEF and OIF. SOCEUR designed its exercise program to have operational impacts in the global war on terror, improving partner nation capacity in Europe and Africa and diminishing the conditions that support terrorism.

SOCEUR's premier European counterterrorism exercise in Romania fostered improved cooperation with one of our new NATO members. SOCEUR will continue this trend with its 2006 European counterterrorism exercise, cooperating with new NATO nations in the Baltic region. In addition, SOCEUR deployed 900 SOF to Africa for exercise Flintlock, cooperating with our African partners to support the Trans-Sahara Counterterrorism Initiative.

With continuing support of operations in the CENTCOM's AOR, SOCEUR has fewer forces to execute security cooperation programs. To mitigate against this shortage, SOCEUR has contracted trainers and cooperated with theater partners. For example, SOCEUR facilitated Italian support to Albanian commando training, and will continue to facilitate the expansion of this cooperative effort to develop spe-

cial operation forces capability among the Adriatic nations. Despite its force availability, SOCEUR was able to conduct 15 Joint Combined Exchange Training (JCET) events in 12 countries during fiscal year 2005.

SOCEUR plans to execute 37 JCET events to 17 nations during fiscal year 2006. These JCETs will directly support Secretary of Defense Security Cooperation Guidance and USSOCOM Global Security Cooperation Strategy. SOCEUR JCETs will primarily target OEF–TS nations, with secondary emphasis upon both Caucasus/Baltic Regional Partner Development and Traditional NATO Partner Cooperation. We accept risk in not engaging with all TSC Partners in order to achieve the persistence required to make measurable progress in Trans-Saharan Africa.

Truly transformational is SOCEUR's emerging role as a model and enabler for NATO SOF. SOCEUR leads NATO's effort to develop, organize, and train interoperable SOF forces which will hopefully culminate in a U.S.-led NATO SOF component consolidated around a "Center of Excellence" for SOF. This will increase U.S. leadership opportunities as the commander of SOCEUR could ultimately be "dual-hatted" as both a NATO commander and a U.S. component commander.

Key to SOCEUR transformation initiatives and its evolving leadership role for NATO is the consolidation of our Theater SOF forces. SOCEUR, EUCOM, Special Operations Command, and DOD are developing future basing options for an eventual consolidation. The importance of maintaining relationships with both our traditional and future partners underscores the importance of sustaining SOF capabilities within our theater.

Theater Investment Needs

EUCOM's ability to transform and achieve U.S. national security objectives depends directly on the investment provided in a number of critically important areas, such as military construction, security cooperation programs, and our theater intelligence architecture (See Enclosure 4). Your support to our infrastructure programs over the next 3 years is critical to reshaping our transformed future basing posture. These investments will pay important dividends as we divest our many non-essential bases and consolidate our forces into more efficient communities such as Grafenwoehr/Vilseck, Ramstein and Spangdahlem in Germany and Vicenza/Aviano Italy.

Enclosure 4: Theater Investment Needs

We continue our efforts to consolidate our geographically separated units throughout the theater at enduring, major operating bases. This will provide greater crisis response capabilities, enhance joint training opportunities, and more effectively position our assets for use in future mission areas. Upgrades to essential theater transportation nodes are essential for the sustainment of strategic throughput required to support OEF and OIF and other global contingencies and operations. Recent global deployments have reemphasized the strategic value and necessity of our MOBs in Europe.

Theater Infrastructure

Continued support of Military Construction (MILCON) is absolutely necessary in order to achieve our Strategic Theater Transformation. The theater's most important effort is to complete USAREUR's Efficient Basing Grafenwoehr (EB–G), which provides an ideal training and operating bed-down location for the majority of enabling forces with the ability to rapidly respond to current and emerging threats south and east. We are seeking an additional $176.6 million in the fiscal year 2007 budget for this initiative, which had its origin in 2003. If approved, we will be able to bring the project to 90 percent completion this year. Completing this major program permits the repositioning of 3,500 soldiers who form our early deploying units, as well as the closure of many obsolete installations, all the while supporting the desired end-state of our strategic footprint in the theater.

Equally important to adjusting the theater structure is the modular conversion of the 173rd Infantry Brigade Combat Team (ABN) beginning in fiscal year 2006. The Brigade will increase in size and capability and will be stationed south of the Alps at Main Operating Base Aviano-Vicenza, Italy, improving and ensuring its deployability. The fiscal year 2007 budget request includes $306 million for phase I of the critical mission and soldier support facilities at Vicenza for the arrival of the expanded number of soldiers and units. Continued funding of this project through fiscal year 2008 for phase II is critical to completing the remaining facilities for the standup of the modular brigade.

Finally, the fiscal year 2007 request includes a request for facilities to establish FOSs to carry out EETAF operations that foster stability via Theater Security Cooperation initiatives. This project will establish initial operating capability. The project will provide the base camp with approximately 60 percent of basic infrastructure (utilities) and operations facilities. We plan to complete base camp construction for EETAF with our fiscal year 2008 MILCON request. Through these FOSs, we will engage with multiple countries through expeditionary training events across the EUCOM's AOR.

Concurrent with these actions, we need to ensure our soldiers are housed in facilities comparable to their CONUS counterparts. The DOD goal is to modernize barracks to 1+1 standards by fiscal year 2008, although DOD accepted a 1-year delay at Army OCONUS sites. To date, we are at 70 percent, slightly behind the Army average, and appreciate your continued support of barracks projects as we strive to achieve the Army goals for modernization projects which are essential quality-of-life, retention and readiness initiatives.

Family Housing

The well-being of our military families is linked to readiness, retention, reinforcement of core values, and mission accomplishment. Housing remains at the top of the list for our servicemembers and has become even more critical over the past 3 years as many of our personnel have deployed leaving their families behind. These families are an absolutely integral part of our team and deserve quality housing.

Currently, 42 percent of our families still live in inadequate housing. The DOD-wide goal is to eliminate substandard housing by 2007. While NAVEUR will meet this goal, USAFE and USAREUR are not currently projected to meet it until 2009.

Significant Family Housing MILCON investments are included in the President's budget request for fiscal year 2007. We will not invest resources in housing we anticipate closing in the near future. USAREUR requests $107 million in MILCON funds to fully renovate more than 515 housing units in Stuttgart, Ansbach, and Wiesbaden. The closure of the logistics gateway at Rhein-Main Air Base required expansion at Main Operating Bases in Ramstein and Spangdahlem to meet EUCOM mission requirements. USAFE requests $148.0 million for new construction and renovation of 254 housing units to meet the increased family housing requirements created by the expanded mission at main operating bases in Ramstein, Spangdahlem and Lakenheath. NAVEUR continues to improve its housing inventory through build-to-lease projects and USAREUR is using this program to acquire over 800 additional houses in the Grafenwoehr area. Both USAREUR and USAFE continue to explore additional build-to-lease housing opportunities in Europe to meet our housing shortages.

Quality-of-Life Programs

Quality-of-Life programs are a top priority for this command. The top three quality-of-life issues are: obtaining quality living accommodations, predictable access to health care to include family member dental support, and dependent education programs provided by the DOD dependent schools. Paramount in this effort is the need for adequate Operations and Maintenance funding to sustain Base Operations Support programs. The importance of these programs is magnified in an overseas environment where personnel and families cannot rely on off-base options as they do in the United States.

The well-being of soldiers, sailors, airmen, marines, DOD civilians, contractors, and their families are inseparable from combat readiness and mission success. They have endured hardships in support of many diverse missions. We must match their commitment to duty and country with a pledge that our troops and their families experience a standard of living that is comparable to the society they are pledged to defend. Commanders depend on these resources to provide crucial morale programs, enhance retention, and foster esprit de corps.

To respond to the changing needs of our personnel and their families, we host an annual theater-wide quality of life conference. The command consistently receive requests for increased support of child development centers, school age programs and youth services. We are dedicated to increasing funding for child care and family child care subsidy programs as 44 percent of EUCOM personnel have children. Family member employment is also a major concern raised at our conferences, as the overseas environment limits employment opportunities. We are aggressively focusing on alternatives to enhance opportunities for spouses seeking employment, and to expand educational opportunities and unemployment compensation eligibility.

In addition, we must simplify Reserve duty status for our Reserve component members, particularly given our reliance on Reserve component augmentation in support of our mission. There are currently 32 different duty status categories for reservists which can affect operational access and greatly complicate benefits to the member. We are working through the DOD in an effort to consolidate and standardize Reserve multiple duty statuses.

Non-Lethal Capabilities

Non-lethal capabilities remain an important transformational requirement, offering a wide range of flexible response options to our forces. To combat the emerging asymmetric threats throughout our AOR, we have expanded our use of these capabilities, so that they are now a regular part of operations and exercises. Current non-lethal capabilities, while rapidly improving, still have limited application, focusing primarily on tactical, short-range, crowd control equipment, and techniques. Rapid development and acquisition of non-lethal systems with a higher degree of precision, increased range, and more effective payloads, will provide EUCOM with far greater force response options capabilities than currently exist. These capabilities will continue to have application across the full range of military operations and to offer positive alternatives to more traditional means of physical security, crowd control, force protection, and search and seizure.

Security Assistance

FMF provides critical resources to assist strategically important nations without the financial means to acquire U.S. military equipment and training. This year's FMF request for countries in the EUCOM area of responsibility, included in the

International Affairs (Function 150) account, totals approximately $2.5 billion, of which more than 90 percent is earmarked for Israel.

FMS and Direct Commercial Sales (DCS) demonstrate our Nation's continued commitment to the security of our allies and friends by allowing them to acquire superior U.S. military equipment and training. Funding requests by country in our area of responsibility are contained in Enclosure 5.

International Military Education and Training (IMET) and Expanded IMET (E–IMET) provides education and training opportunities for foreign military (IMET) and civilian personnel (E–IMET). The EUCOM portion of the fiscal year 2007 IMET request is approximately $40.5 million and like FMF, is also included in the International Affairs (Function 150) account.

Theater C⁴ISR

A critical investment need relates to the dissemination, analysis, and sharing of information. It is imperative that our C4 investment needs include information sharing, electromagnetic spectrum access, assured information networks, and a robust Satellite Communications (SATCOM) architecture for the transformed operational environment.

Our theater transformation plan places operational forces in regions not currently supported on a day-to-day basis by the DOD Global Information Grid (GIG). Establishing a networking and information sharing capacity with our allies and partners is a critical first step in mitigating this problem. We need long-term investment in persistent ISR capability with assured electromagnetic spectrum access utilizing up-to-date collection technologies to find, track and interdict mobile and technologically competent terrorist groups and platforms operating within the vast regions of Africa and Europe, including both air and maritime environments. SATCOM programs meeting the goals of the Transformational Communications Architecture are a critical step towards realizing persistent ISR capabilities.

For our expanding agenda in Africa, we need to establish a networking and information sharing capacity with our partners there so that they can better execute internal and cross-boundary counterterrorism activities in support of the global war on terror. We also need to address the chronic shortage of information assurance personnel to defend the information networks that are critical in enabling theater command and control both for warfighting and for stability, security, transition, and reconstruction operations.

We have made significant progress in our effort to establish an intelligence fusion capability within NATO to better support NATO military operations, both in and out of area. A provisional capability operates at RAF Molesworth in the United Kingdom and supports, or has recently supported, the International Security Assistance Force (ISAF) operating in Afghanistan, as well as NATO forces deployed in support of Darfur, Sudan and Pakistan earthquake relief operations. We plan on the Intelligence Fusion Center (IFC) reaching full operational capability by 2007.

In another major transformational step, we are implementing the Joint Intelligence Operations Center-Europe (JIOCEUR) as part of the greater DOD JIOC effort. JIOCEUR will enhance our ability to synchronize and direct theater and national collection, analytic, and production efforts. It will also help strengthen the intelligence and operations interface through the establishment of a robust intelligence operations and planning team capability embedded within the EUCOM Plans and Operations Center (EPOC). These measures will significantly improve our

ability to leverage all available intelligence assets against theater and component requirements.

A central aspect to our strategy in combating terrorism is the development of partner-nation intelligence capabilities and the increased utilization of their cultural and linguistic expertise. We seek to apply U.S. technological advantages to leverage partner strengths in order to build more cohesive relationships. Integrated Intelligence Security Cooperation funding coupled with information sharing authorities are required to fully leverage partner nations in the global war on terrorism.

Lastly, as more collection platforms add to the amount of data to support EUCOM, NATO, and interagency support operations, I strongly recommend increasing the capacity of our intelligence analytical force. Such an increase would facilitate fused intelligence sharing capacity across the spectrum of allied and interagency organizations, ensuring that key intelligence gets disseminated quickly to those who need it most.

Strategic Mobility and Maneuver

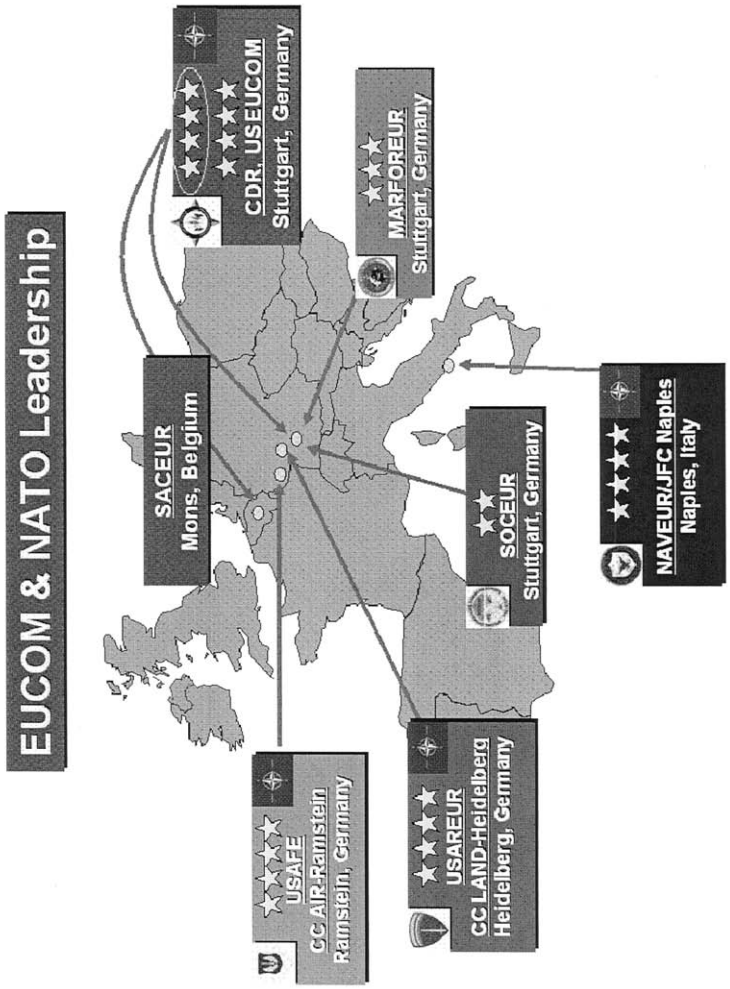
As we become more expeditionary, our ability to rapidly respond to crises becomes more dependent on strategic airlift and its close association with prepositioned equipment for timely projection and sustainment of operational forces. Looking south, we envision expanding our "en route" infrastructure system in order to respond to developing conditions in the vast underdeveloped expanse of sub-Saharan Africa, and elsewhere as required.

As we continue to adjust our European footprint to enable the rapid deployment of forces across Europe, Africa and elsewhere in the world, our requirement for intra-theater strategic airlift will also increase. Our small fleet of aging C–130s does not have the operational range or capacity to support rapid mobility and maneuver of forces throughout the AOR. Our experience in Exercise Flintlock 2005 revealed that successful deployment of forces to austere locations in Africa are best served by strategic airlift platform such as the C–17. USAREUR's transformation to the Brigade Combat Team force structure will also increase their dependence on heavy lift for both training and combat operations.

Much of the Service's War Reserve Material/Prepositioned Equipment within our theater has been removed in support of ongoing operations and will not be reset in the near future. For example, the Marine Corps Pre-positioning Program-Norway (MCPP–N) and the Maritime Pre-positioned Force (MPF) programs have directly supported OIF and OEF with weapons, ammunition, and equipment. The full reconstitution of these assets to pre-OIF levels is necessary and will allow us the flexibility to support real-world contingency operations and the multiple TSC initiatives of the future.

Given the current posture of our prepositioned equipment, we will temporarily rely heavily on U.S. based stocks to respond to a major contingency operation within our area of operations, making intertheater strategic lift, and hence C–17 availability, a top priority for the future.

A recent success story has been the arrival of the High Speed Vessel (HSV) Swift, a Theater Support Vessel (TSV), whose capabilities are an integral part of our transformation efforts. Its high speed, large capacity, and shallow draft provide EUCOM a viable alternative to intratheater airlift for the operational movement and sustainment of combat forces along the vast littoral region. The capability demonstrated by HSV Swift will complement both Army and SOF Transformation efforts while enhancing Marine Corps maneuver by increasing operations throughput, providing additional means to counter probable anti-access threats.



EUCOM AND NATO

Since the Prague Summit in 2002 when the Alliance signaled its recognition of the changing security landscape, it has made major shifts in its organization membership and capabilities. NATO is in the process of "reinventing" itself to meet the new challenges of the 21st century. It is making significant progress and is in the midst of the most fundamental physical and philosophical transformations in its history. While operational structures have been transformed, the political and military decision making procedures of the Alliance, as well as resourcing and funding mechanisms are similarly being addressed. Reforms in these critical areas must be achieved in order to ensure that the Alliance can adequately align its political will to take on new missions with its ability and flexibility to resource them.

Across the NATO command structure, U.S. military leaders are privileged to hold key positions of influence shaping the direction of the Alliance (See Enclosure 6). The combined U.S. and European military experience helps in promoting new solutions to today's security challenges. Such solutions have resulted in NATO's in-

creased flexibility and agility and have resulted in increased deployments NATO's forces around the globe.

Enclosure 6: EUCOM and NATO Command Structure

Operational Trends In the Alliance

NATO recognizes the interdependent instability of the current strategic environment. As such it has assumed a more active leadership role in ongoing operations. These include: ISAF in Afghanistan, NATO Training Mission-Iraq, NATO assistance to the AU in Darfur, Operation Active Endeavor, Balkan operations, and humanitarian operations in response to the Katrina and Pakistan disasters. EUCOM works closely with the Alliance to ensure the seamless execution and successful conduct of these operations.

- International Security Assistance Force. ISAF is NATO's primary operation and is currently responsible for the security and stability of half of the territorial landmass of Afghanistan and is in the process of expanding its operations to the south and east. As NATO assumes this increased re-

sponsibility, its force levels will surpass those of the coalition, and will constitute the largest ground operation in Alliance history. It is envisioned that the United States will continue to contribute significantly to this mission. U.S. leadership in both the ISAF command structure and the adjacent counterterrorist operations of the coalition will be offered to NATO. NATO has built on the coalition concept of Provincial Reconstruction Teams and successfully supported the Government of Afghanistan in its Presidential, National Assembly, and Provincial Council elections.

• NATO Training Mission-Iraq (NMT–I) In Iraq, NATO has deployed a successful training mission to Baghdad to assist the government's efforts to establish security and stability. Its "in country" mission complements the work of the U.S.-led Multi-National Security Transition Command-Iraq (MNSTC–I) in training Iraqi security forces. NATO focuses on the military strategic and operational levels, strengthening the Iraqi Training and Doctrine Command and providing command and staff training for mid- to senior-level officers. In September 2005, with support from the NATO Training Mission, Iraq opened its National Defense University. The Alliance has also provided numerous training opportunities for Iraqi officers and civilian leaders in educational facilities across Europe and coordinated the acquisition and delivery of donated military equipment from NATO nations.

• African Mission in Sudan (AMIS). In Africa, NATO and the European Union jointly responded to an AU request to airlift its forces. NATO generated and coordinated the majority of airlift, provided personnel to assist with staff capacity building activities in key AU headquarters and deployed training teams to work with their AU counterparts. Currently NATO's support is committed until May 2006; however, strategic partnerships are developing, and extensions or expansion of NATO support is possible if requested by the AU. NATO's capacity building approach to increase stability and security on the continent complements EUCOM's efforts to deliver considerable long-term reward with minimal, focused, and appropriate effort.

• Operation Active Endeavor (OAE). Closer to Europe, NATO's only Article V operation, OAE, continues to counter terrorism and illegal activities in the Mediterranean. Additionally, it provides an opportunity for non-NATO "Partnership for Peace" and "Mediterranean Dialogue" nations to enhance their involvement and interoperability. In 2006, Russian vessels will join OAE, with Ukrainian vessels anticipated participation in 2007. Formal discussions have commenced on the possible involvement of Algerian, Israeli, Moroccan, and Georgian participation as well.

• Balkan Operations (Kosovo Force). The Balkans were arguably NATO's first test in addressing the dangers associated with interdependent instability. Showcasing NATO's enduring commitment to its neighbors, and by using security sector reform initiatives, the Alliance has successfully set the conditions in the region for the peaceful transition to democratic institutions and is making progress toward government controlled and reformed militaries. Political and institutional incentives linked to standards of behavior have encouraged Balkan states to recognize the benefits of closer integration with the EU and NATO. This has resulted in considerable progress in the capture of persons indicted for war crimes, though two "most wanted" remain at large.

An example of NATO's successful operations in the Balkans to date is Kosovo Force (KFOR) which continues to provide critical security to this region in support of the international community. NATO's persistence in Kosovo has enabled the international community to establish the Kosovo status talks. As these talks develop over the coming months and consensus is reached between ethnic Kosovar Albanian and Serbian communities, NATO will be postured to restructure force levels significantly in the province and in the Balkans.

Evolving Operational Capabilities

NATO's quick response to Hurricane Katrina and the devastating earthquake in Pakistan demonstrates that not all stability operations emanate from armed conflict. Through its primary transformational vehicle—the NATO Response Force (NRF)—the Alliance has prepared itself to respond to future crises across the full spectrum of military missions. Due to its agility, adaptability, and expeditionary nature, the NRF proved ideally suited to assist in the relief efforts and to stabilize the affected region. These two disasters highlighted the NRF's ability to operate at a strategic distance, outside NATO's boundaries, and in the most challenging of environments.

Upon reaching full operational capability (FOC), planned for October 1, 2006, the NRF will be supported by five capability "pillars" of strategic lift, advanced planning and intelligence fusion, integrated logistics, deployable communications and information systems, and full force generation. Failure to meet the full Combined Joint Statement of Requirements (CJSOR) is a current obstacle to achieving FOC. Its future viability will depend on member nations' willingness to resource the necessary forces and commit to a structure of common Alliance funding.

Additionally, NATO is dedicated to establishing a SOF capability, recognizing a gap during recent operations. Recent NATO transformation initiatives, especially in the NRF, have provided a real focus for establishing NATO SOF capabilities, co-operation, and cohesion. EUCOM's SOCEUR actively leads an effort to establish the Alliance's special operation capabilities by the end of this year. Like their U.S. counterparts, NATO SOF will be specially selected, trained, equipped and organized. This new capability will strengthen NATO's out-of-area crisis prevention and ensure a rapid deployment capability.

Common Values for Common Security

NATO's commitment to ongoing operations demonstrates it has turned the corner from common defense and begun the journey towards common security. As the Alliance continues to redefine its role in the 21st century, it anticipates further opportunities to promote stabilization and security.

The Alliance was formerly anchored to a need for common defense in order to deter the enormous conventional military threat posed by the Soviet Union. With the end of the Cold War, however, the anchor point stabilizing the Alliance in turbulent seas was removed and to date the Alliance has not successfully articulated its new course. Economic interdependence, the nexus of WMD and terrorism, vulnerable energy infrastructure, disenfranchised people and ethnic minorities, abject poverty and natural disasters have created a new security mosaic and demand new "anchor points."

Potential "anchor points" include expanding NATO operations in support of combating terrorism; enhancing security, stability, and reconstruction activities; increasing involvement in critical infrastructure security; ensuring the flow of energy to markets and consumers by assuring safe and secure access to sources; and engaging in a more active role in preventing the proliferation of WMD and corresponding consequence management actions. This mosaic of asymmetric security challenges will define the contribution NATO will make towards our common security. A key component of such an effort would be clearly articulating to member nations' populations the Alliances new "raison d'etre." There is an opportunity during the Heads of State NATO Summit in November 2006 to identify the new "anchor points" that could secure the Alliance's direction for the foreseeable future.

While NATO was critical to preserving peace and stability in Europe throughout the Cold War, it is becoming increasingly apparent its future will be even more dynamic. As the Alliance endeavors to overcome new challenges, it recognizes that the security landscape requires a more far-reaching strategy to protect its interests and a different methodology by which it resources its evolving missions. Over the course of the past few years, NATO has brought the benefits of strategic security of the trans-Atlantic relationship to new locations throughout the world. Through its actions, NATO has enhanced the concept of common security, which supports the Alliance's traditional objective of providing for the common defense.

NATO is a great alliance which remains destined to do great things. As we look to the future, it is possible to conclude that NATO's most important days and most significant contributions still lie in the certainty of a challenging future.

CONCLUSION

The EUCOM is fully and actively engaged in a diverse and expansive area of responsibility while simultaneously transforming its posture to better meet the new and evolving security environment. As we further refine the nature and scope of our efforts to implement an effective security strategy, we would do well to reflect and appreciate the value of our leadership role in global affairs. We should redouble our efforts to remain a shining example of the principles of freedom which stand as a beacon of hope for so many in our unsettled world. The indispensable benefits of our forward-deployed presence will continue to be a hallmark of our efforts as we expand our rotational influence and enhance the framework of our Theater Security Cooperation programs. Success in the years ahead will require institutional innovations, increasingly cohesive and comprehensive national approaches to the challenges and greater coordination throughout the interagency and within the framework of the international community.

There has been debate with regard to the relevance of NATO in the post-Cold War era. I am among those who passionately believe in the relevance and importance of NATO in this still new century The vitality of this organization lies in its ability to find solutions through dialogue. Those who fail to understand the value of democratic dialogue perceive occasional political differences and associated animated discussions as divisions that undermine the viability of the organization. In truth, our so-called differences are the pillars that uphold the institution and strengthen its character. Many have predicted the demise of the Alliance; yet it has demonstrated astounding resiliency by transforming itself in ways no one would have thought possible in 2000. Unquestionably, NATO remains the preeminent security organization in the world. Its future viability and its built-in ability to recognize the interdependency of our world, as well as the threats that challenge our common interests will fuel a continuing transformation process for years to come. The changes underway clearly demonstrate that NATO member nations have understood the need for reform in order to be relevant on the world stage. Challenges remain, but they are visible and are being addressed. Our leadership contributions to the Alliance are more critical than at any other time in the Alliance's history.

We look forward to working with the members of this committee as we assist in the development of effective security structures that are essential to our theater, our Nation, and to our allies. The next 2 years will be critically important in this regard. The EUCOM looks forward to making important contributions to the achievement of our national goals and objectives.

Chairman WARNER. Thank you very much, General, for a very excellent statement covering a lot of responsibilities that you have.

Given that we will have a classified session following this and the need for each of us to attend various functions in the middle of the day, I would suggest we try an 8-minute round and hopefully we can conclude our questions in one round for each member. So we will proceed on that basis.

First, General Jones, we awakened this morning with the distressing news that a very prominent senior officer in the Iraqi forces lost his life in Baghdad. It draws our attention then to what NATO is doing by way of training and equipping those security forces so they can fully provide for their own security.

First, did you know that officer in conjunction with the work that you are doing over there?

General JONES. No, sir, I did not know him.

Chairman WARNER. The type of training that you are doing, how does that bear on what is now the immediate concern, namely insurgency—a variety of terms have been applied to it, but insurgency, real operations, terrorists—and the need to rapidly train the security forces in Iraq to take on that responsibility?

At the present time—I am speaking for myself—I do not believe that the term "civil war" applies to the overall situation there, even though it is gravely serious, and there is all too much secular interest in fighting at the very time that we are trying to urge this country to bring together its diverse political structures into a unified new government and for that government to quickly, and I underline "quickly," take over the full responsibilities of administering to a sovereign nation.

Could you elaborate on the type of training and the success that you feel that has been achieved to date by NATO and the extent to which there is serious participation in other nations, members of NATO of course, in contributing to these goals?

General JONES. Mr. Chairman, the NATO mission in Iraq is relatively straightforward. It consists of three elements. One is to train approximately 1,000 junior officers a year for service in the Iraqi army. We do this at a training base called Arustemaya, which

is on the outskirts of Baghdad. This operation is fully resourced and functioning. I was in Baghdad a month ago and I attended the first graduating class of these young officers. They are trained along the Sandhurst model. The lead nation is Great Britain. I was very impressed by the training I saw.

Chairman WARNER. How soon do you anticipate that some will be graduating and available for immediate assignments?

General JONES. This graduating class after graduation went right to the field and took over units.

Chairman WARNER. How long ago was that?

General JONES. A month ago, sir.

Chairman WARNER. Good.

Have you had an opportunity to really assess in some depth the capability of these young men to become good professionals and to establish a solid loyalty to the government of Iraq, as opposed to their understandable loyalties to their own origins, namely the tribal situation which is very dominant throughout that region?

General JONES. Mr. Chairman, the class that I saw and the training that I saw—and I am responsible for, along with the Allied Command for Transformation, for developing the syllabus and the manning, the instructors, and I have spoken to the trainers, and they believe that the product that they are delivering is in fact a very, very good product.

I attended the swearing-in ceremony of these young officers as they took the oath of alliance to the government of Iraq, to the constitution of Iraq. It was—one can never be completely sure, but it was certainly—there was a lot of passion in that room. You could see it on their faces, that they believed in what they were doing.

Chairman WARNER. The ultimate question is, should the conditions continue to deteriorate where a civil war in fact is taking place and this new government is struggling to continue, it is dependent on these forces that you have trained and that we and other coalition partners have trained to fight to support that new government, because, speaking again for myself, I strongly urge that we have plans whereby we do not commit the coalition forces and principally the U.S. forces into a civil war situation and subject our young men and women to that type of risk.

We fought bravely side-by-side with the Iraqis to free their nation. It is a sovereign nation. They have a government elected by the people, and it is time that they took charge and took that full responsibility.

Do you feel that these young men that have been trained under your command will keep the allegiance to that new government in the time of civil strife and fight to preserve it, rather than revert to their own constituent interests back in the tribes? I do not have any disrespect for the tribes. It is just that they have a very powerful influence.

General JONES. They do, Mr. Chairman. I was impressed by the seriousness of purpose as they took the oath. I am confident that they were put through a rigorous program and I believe they will do their job.

Now, far more important than my observation is, of course, General Abizaid's and General Casey's——

Chairman WARNER. We are going to have that opportunity very shortly.

General JONES.—who are deeply involved. They also are very high on these young people.

I might just, to complete my answer to your question, say there are two other aspects to NATO's training mission. The first one is the training of the 1,000 officers. The second is NATO has invited Iraqis to come out of country to go to various countries for more specialized training. So we are doing that as well. The third part is we are providing equipment for the emerging Iraqi army. Most recently, we shipped over 170 T–72 tanks from Hungary to the new army.

Chairman WARNER. Let me quickly go on and touch on the Afghanistan situation. Your own views as to whether or not the security situation is not improving—as a matter of fact, it is becoming more serious and the ability of ISAF to continue its goals, given those changes in the security situation?

General JONES. Mr. Chairman, I am very optimistic that the NATO force that is going to take over more of Afghanistan in the next few months, that they will be a force of very great capability and will be able to withstand any challenges that it faces.

I would like to comment on the security situation because I think it is important to understand that violence in Afghanistan is of a disparate nature. It is at least composed of a group of five different sectors of the society: the criminal element, some Taliban, some al Qaeda, the narcotics traffickers, remnants of warlord organizations. These are people that are operating in the fringes between where the Karzai government can reach and the higher level of the people's expectations.

I think that we should be very careful not to fall into the easy trap of saying that every act of violence means that there is an insurgency coming back. Of far more importance to me in Afghanistan for the long-term reconstruction of Afghanistan is the narcotics problem and the percentage of the GDP that is dependent on the narcotics trade. It is not to say that I do not recognize the fact that there are upticks in violence, but they are generally tied to specific events: a parliamentary election, a presidential election, a local election.

What I see in Afghanistan is an inability of an insurgency to mass. I will see—we will see more instances of improvised explosive devices (IEDs) and things like that because they are going to copycat what they see elsewhere. But I think we would be wrong at this point in thinking that this is a trend in terms of an insurgency.

I think the Karzai government deserves our support. We should continue to bolster the five pillars of reconstruction that the G–8 nations have agreed to. We should make sure that this year we particularly add reinforcements to the developing of a police, which needs to be paid and needs to be honest and free of corruption. We should continue to lend our efforts to the reform of the judicial process.

Chairman WARNER. General, I am going to have to ask you to finish that for the record.

General JONES. I understand.

Chairman WARNER. I want to finish my last question to both Admiral Fallon and General Bell. You commented, General, on the half century we have had a very significant part of our military there securing the southern part of that Korean peninsula. It has been an important mission and a successful mission.

But I pause to reflect on, the Korean War was a coalition war. I am not able to recall from memory, even though I had a minor role there during the winter of 1951–1952 in the Marines, but it seems to me there were at least seven or eight nations that had forces aligned to secure that peninsula. Since then we have seen through the evolution of NATO, the Balkans operations, all multinational, Gulf One, Gulf Two, multinational, Afghanistan multinational.

Has anyone given some thought as to whether or not we should rethink this very heavy commitment of the United States and begin to internationalize that additional support that the South Korean government and our government think is necessary? Because if, Admiral, a conflict burst out on the Korean peninsula it would have serious adverse effects on other nations in that region. Consequently, it seems to me some thought ought to be given to having them, not only members of the Six-Party Talks, but also other nations bearing some of the heavy costs and burden of maintaining the current posture on that peninsula.

Has any thought ever been given to that, in light of all the other operations that have taken place in the half century since that conflict?

General BELL. Thanks, Senator. I think I can take a pretty good stab at that. There are two factors at play here with respect to our commitment or the international community's commitment. One is the bilateral security treaty that we have, and I know you are fully familiar with that, with the ROK, which is really the basis for our commitment today and that commitment that we have had over the last decades.

Secondarily, there still remains the United Nations Command, very much viable but admittedly not with troop contributions. That U.N. command consists of 15 nation representatives which are at hand today and prepared, at least in theory, should war break out to recommit to military operations.

Now, I am also the U.N. commander as well as the bilateral treaty commander under the auspices of what we call the CFC. So while I cannot speak for all those nations certainly in terms of what they might or might not commit, what I can inform you of is that the framework to discuss a potential broader commitment is resident and that could certainly be undertaken.

But meanwhile, the ROK continues to progress——

Chairman WARNER. Well, that is all fine, but I'm trying to think about the very heavy commitment. We have a force today, our United States military, spread throughout the world, and it is placing severe burdens on the members of the Armed Forces and their families. We continue for over a half century with one concept, against experience in all the other conflicts of significance where there has been multinational participation.

If that conflict were to erupt over there, you and I know it is probably going to be decided within days or weeks. It is not going to be a prolonged one.

General BELL. No, sir, it is not.

Chairman WARNER. Therefore they should have people there, and if they had them there I think they would be more serious about trying to deal with North Korea because they would have some exposure and risk that they do not have now.

Do you have any comments, Admiral?

Admiral FALLON. Mr. Chairman, I would point out that, regarding our force levels in Korea, we are in the process of coming down about 20 percent of that structure over the past year and I think that drawdown to 28,000 or so should be completed this year, and going down to 25,000 as a goal for the year beyond that.

General Bell knows the details of this, but the ROK government is clearly interested in picking up more of the responsibility for particularly the land operations on the peninsula. I see that as this desire develops into actionable plans, which we are going to have to work with, and General Bell has the lead on this, I would expect to see that our force levels might continue to decline.

Chairman WARNER. All right. I gave you the option to comment on something innovative in the future. So be it.

Senator Levin.

Senator LEVIN. Thank you, Mr. Chairman.

I'd like to pick up on Senator Warner's first questions, General Jones, relative to the training and equipping of Iraqi officers, what is the goal in terms of total number of officers to be trained under the NATO program that you described? What is that number?

General JONES. That number is 1,000 per year, sir.

Senator LEVIN. For how many years? How many do we need totally?

General JONES. I think it complements General Abizaid's program, so I think it's 1,000 a year, and of course there will be——

Senator LEVIN. Indefinitely?

General JONES. Indefinitely, to feed the requirements, the spaces.

Senator LEVIN. Do we know whether or not there is a balance of Shiite, Sunni, and Kurd in the officer corps that you are training?

General JONES. In this, in the NATO mission, they are integrated. There is no Shiite class or Kurd class.

Senator LEVIN. Is there a significant number of all three groups?

General JONES. Yes, sir.

Senator LEVIN. On another NATO issue, is the NATO Response Force or the NRF expected to become operational in October?

General JONES. By October 1, the goal is to declare the force fully operationally capable.

Senator LEVIN. All right. Relative to Africa, is NATO prepared to take on a larger role in support of the AU mission in Darfur?

General JONES. NATO's role is to provide some airlift into the Sudan for participating battalions, which we have done and are doing, provide capacity-building for the AU forces in the way of helping them get ready for expeditionary operations, command and control, logistics, and the like. But it is a modest number of people involved in this and that is the extent of the mission at present.

Senator LEVIN. According to an article in the Washington Post last Friday, the U.N. Secretary General has requested that U.N. members consider providing close air support to AU mission forces in combat situations. Is it your opinion, judgment, prediction, that our NATO allies would be prepared to provide close air support to those forces in combat situations?

General JONES. Senator, I think that I have no—I have received no guidance and no instructions from the NATO to prepare for that kind of mission, and as a matter of fact NATO has not received any communication from either the U.N. or the AU that would lead me to believe that there is—there is no request on the table for an extension of the mission.

Senator LEVIN. If there were a request, what do you think the response would be?

General JONES. I think it is quite possible that nations would consider expanding the capacity-building and doing those things that would help the African battalions be more successful as they have deploy into Darfur. Whether they would extend to close air operations and the like would be very speculative on my part and I would just as soon not comment.

Senator LEVIN. Okay, thank you.

General Bell, you mentioned to me when we met in my office that for the first time in 2 years North and South Korean military officials at the general officer level have now met to discuss issues of common interest. Would you tell us what you believe the significance of that meeting is and whether you regard this as a development as favorable or unfavorable?

General BELL. Thank you, Senator. You are right, they have just concluded a series of meetings over 2 days last week. There were no substantive outcomes from the meeting, however. Their purpose in this meeting—and there was an agenda which they put forward initially—was to talk about the fishing zone in the western sea area, which has been an area of contest over the last several years. You may recall back in 2002 the gunboat incident.

Nonetheless, what they were hoping to do is come to an arrangement during the upcoming fishing season, which starts in May and goes through June, to lower tensions in the area. So we supported that and we were encouraged by the fact that the North agreed to discussions with the South.

Regrettably, the North's position during these talks was to eliminate the very demarcation regimen that we have that keeps forces separated over there, to eliminate that and create some kind of free zone of movement. This was not satisfactory to the ROK and so the talks did not produce substantive outcome.

Having said that, the fact that at the two-star level the two nations met to discuss mutual issues of this nature I think is positive. We should encourage this. These kinds of confidence-building opportunities and confidence-building measures, engagement strategies, can be beneficial. So I would continue to encourage it. As I meet with ROK military, I will encourage them to continue these kind of engagements, and hopefully we can see some progress in the near future.

Senator LEVIN. Thank you, General.

Admiral Fallon, the QDR identifies China as a likely competitor. China has announced recently that its defense budget is going to increase by 15 percent this year. Is it a foregone conclusion that China and the United States are going to be at odds over security in the Pacific or even globally?

Admiral FALLON. No, sir, I do not think that is necessarily the case at all. There is a tremendous potential for good here in this relationship between the two countries. We have many, many common interests. It has been our desire to try to work with China to find areas in which we might move forward on a constructive relationship.

That said, of course we are going to have to be cautious and careful because there is still activity ongoing with the Chinese that makes it challenging for us to engage with this country. The defense budget increases which apparently are continuing and certainly at a rate, near as we can tell, that is higher than their GDP growth, which has been pretty spectacular in the past decade, and the lack of transparency with the Chinese is a cause for concern.

We have asked for a significantly increased engagement program this year. The Secretary of Defense has agreed to that. We have had a negotiation with the Chinese and that is on the table to take place this year. I think that we need to continue to press on in this area because the absence of any engagement whatsoever would put us back where we were in the last couple of years, where we virtually have gone down parallel paths with no interaction.

I think this gives us an opportunity to by example try to get them into the kinds of behaviors that we enjoy with other countries in the region.

Senator LEVIN. Do you in the DOD want increased military-to-military cooperation and contact with China?

Admiral FALLON. Yes, sir, we do.

Senator LEVIN. Finally, Admiral, what impact, if any, do you believe that the U.S.-India civilian nuclear cooperation agreement, assuming that Congress supports it and allows it to come into force, would have on relations between India and Pakistan?

Admiral FALLON. Senator, I think there are several opportunities here for positive impact. First of all, the relationship we have with India. This is a very, very large country, huge population, that has been not particularly working with us until very recently. We are trying to form a new strategic alliance with this country. Certainly in the military-to-military area we have opportunities and we would like to see continuing engagement, because we think that this country not only has an existing huge influence over South Asia, but its strategic position in the world with its huge population, very advanced technological and educational know-how, is a major factor in the world.

The situation regarding Pakistan in the past year has been getting considerably better in my opinion. De-tensioning along the lines of friction in Kashmir through active engagement by both Pakistan and India have moved us forward in this area.

The fact that the President went to visit both countries, the proposal for a very significant arrangement with India, then going to Pakistan, I think that the potential for continued de-tensioning and for an improving situation between these two countries is, I would

hope, likely. We have had a close relationship with Pakistan. They have been cooperating very well with us in the war on terror and I think that the outreach to India in the last year or so is significant. I think both countries see that we are reaching out to both in parallel, and it would be my expectation that we actually make progress in our relationship with both.

Senator LEVIN. Thank you, Mr. Chairman.

Chairman WARNER. Thank you very much.

Colleagues, I am advised that we will be having a vote in a matter of a few minutes, and it is my hope that we can continue this hearing. Senator Inhofe has left to go vote early and he will return and chair. But right now, Senator McCain.

Senator MCCAIN. Thank you, Mr. Chairman. I want to thank the witnesses for being here today and thank them for their great service, as well as the members of the Armed Forces who were brought with them today.

General Jones, it has been about 3 years since we expanded NATO. There was some controversy surrounding this rather significant enlargement. How are these new members doing?

General JONES. Senator, in 2004 we did in fact admit seven new members, and in my judgment they are bringing not only value but also renewed energy and spirit to the alliance. New members, especially former Warsaw Pact countries, are still basking in the glow of freedom and they bring that energy to the alliance. They are trying hard to align their military capabilities with what the alliance needs. Some of the economies are not quite as strong as we would like, but we have this pledge of 2 percent of GDP for national security and they are trying hard to meet those goals.

So my report would be that they are bringing value and capability and spirit to the alliance and it has been a good thing.

Senator MCCAIN. Thank you.

I would like to go back to Darfur a second with you. In the last 2 years the United States has provided $150 million in support to the African mission in Sudan. In the same period, it is estimated that 300,000 to 400,000 Sudanese have been killed and almost 2 million refugees created. It was I believe 2 or 3 years ago that then-Secretary of State Colin Powell declared that genocide was taking place in Darfur. The latest reports are that it has now spilled over into Chad.

General, I know you do not make policy and I know that this is a tough question. But this trend seems to me that we are just going to see continued needless deaths and dislocation and, as was determined by our Secretary of State a couple years ago, was genocide in Darfur. Do you have a recipe or an idea of what we need to do from a pure military standpoint, or is it not a military solution?

General JONES. Senator, I think obviously when you have chaos and the types of events that are going on in a place like Darfur, there is an application for military forces. The problem has been that there has been an insufficient number of AU peacekeeping forces in terms of the problem.

Senator MCCAIN. In terms of numbers or capability?

General JONES. In terms of numbers and perhaps capabilities, but certainly numbers, to stem the violence against the humani-

tarian operations, which puts a couple of million refugees at risk as well as—I just met with the International Committee of the Red Cross in Geneva 2 weeks ago and they have a big program on the ground, and one of the things that they are hoping for is that we do not have this displacement of upwards of 3 million people towards the cities. They are trying to get out to keep people in their homes in order to try to keep some management of this crisis.

But it is a serious problem. It has a military solution set, but it takes the will of the nations. It takes the U.N. to task us to do things, and we are waiting for that political process to come together as to what it is the international community wishes to do.

Senator MCCAIN. I thank you, General. Again, I know it is not your job, but it is frustrating for us to keep saying never again, and it is very clear that the situation, the status quo, is not going to have a measurable effect. I would like to say that I was pleased that the President of the United States made a very strong statement concerning this issue recently.

I am afraid we are going to have to at least come clean and say there is nothing we can do about it, there are going to be some millions of people that are going to die, and that is the way things happen in Africa, which I would deeply regret, or we have to develop some kind of plan to attack this situation. I understand it is not purely military. It is political, divisions within the country.

But we may be asking you and NATO, since you are already very involved, at least in northern Africa, in a very beneficial way in the war on terror, to come up with some ideas as to how we can address the issue. So it is very disturbing and I hope that you can give us the kind of advice we need, or at least the President, as to what would be necessary to bring this genocide under control.

I would like to just mention to you, the State of Israel now is under direct threat, according to the President of Iran, who has called for on numerous occasions the eradication of the State of Israel. How are NATO's relations with Israel? Are there any?

General JONES. Israel is part of a group of seven nations called Mediterranean Dialogue nations and that is a formal relationship with NATO, to include military-to-military relationships. We have recently this year revitalized that Mediterranean Dialogue to include five countries of North Africa and Israel and Jordan on the northern rim of the Mediterranean.

We have had NATO Airborne Warning and Control System (AWACS) deployed to do some demonstrations in Israel and we do have an active dialogue with the Israeli Defense Force in terms of interoperability, and particularly as it regards the security of the Mediterranean Basin at sea.

Senator MCCAIN. Clearly, if there were an attack on Israel by Iran—it is not inconceivable, given their public statements—this could destabilize the whole region.

General JONES. Absolutely. If that happened that would certainly do that.

Senator MCCAIN. Thank you, Mr. Chairman. I thank the witnesses.

Chairman WARNER. Thank you very much, Senator McCain.

Senator Akaka.

Senator AKAKA. Thank you very much, Mr. Chairman.

Admiral Fallon, it is good to welcome you here to Washington, DC.

Admiral, the QDR released last month stated that it is the DOD's intention to increase the Navy's presence in the Pacific. According to the QDR, the Navy will adjust its force posture to provide at least six operationally available and sustainable carriers and 60 percent of its submarines in the Pacific.

I believe basing an aircraft carrier in Hawaii, co-located with our nuclear-capable shipyard, will prove the best option from an economic and quality of life standpoint, in addition to its strategic benefits. Admiral, when will the Navy plan to move forward on implementing the QDR's decisions and when will the specifics on the forward basing of an additional aircraft carrier in the Pacific be determined?

Admiral FALLON. Aloha, Senator. Thank you very much for the question and for your suggestion.

The Navy is working closely with us as we look at the overall force posture laydown in the Pacific to try to optimize our force structure. Several submarines have already had their home ports moved to Pacific bases. We are studying particularly the intricacies of forward basing on Guam as we absorb the negotiations, the DPRI negotiations with Japan and what that means. I am leading from my staff a study of each of the components, the Navy, Army, Air Force, and Marine Corps' changing plans in the Pacific, so that we can have one comprehensive look at this.

The Navy is taking steps to try to increase the availability of aircraft carriers in particular in the region. There has not been any decision to go forward on a new permanent home basing for one of those carriers yet. We are still looking at this and, sir, we will advise you. The Navy and we together will come forward when we have what we think is the recommended position here.

Senator AKAKA. In addition, Admiral, please comment on the increased capability and flexibility that an additional aircraft carrier in the Pacific would provide?

Admiral FALLON. Sir, the striking power and flexibility of having these ships have certainly been demonstrated many times in the past. We will be looking at this to ensure that we have enough capability to meet our response requirements under existing contingency plans and as we try to forecast the future requirements.

We are also mindful that there are other demands on these forces in other parts of the world, and that the Nimitz-class carriers are going through a cyclic refueling cycle, so that at any period of time now for the next couple of decades we are going to have one of these ships off the line. So I believe that the commitment the Navy is making to the Pacific is as we go through this restructuring and the refueling that the Navy is going to make every effort to make sure that there are six actually available in the Pacific. Exactly how we do that is still under study and it is going to have to be closely coordinated with these refueling schedulings that are ongoing.

Senator AKAKA. Admiral, at a recent Homeland Security and Government Affairs Committee hearing on Hurricane Katrina the Secretary of Homeland Security, Michael Chertoff, was unaware of the relationship between PACOM and NORTHCOM as it relates to

homeland security. Given what appears to be some confusion regarding the appropriate delegation of authority, what assurances are you able to give me that Hawaii's needs will be able to be met in an emergency situation? Also, what plans do you have to make sure that lines of authority and lines of communication are more visible in the future?

Admiral FALLON. Yes, sir. No confusion here in the military between NORTHCOM and PACOM. We know that I have responsibility for Hawaii and the Pacific islands. We have been working this with NORTHCOM in an ongoing series of dialogues and exercises to ensure that we have seamless coverage in this area. We recently had a session with Governor Lingall and our people to discuss emergency responses to cover Hawaii. I feel very confident that we have this well in hand and we will continue to work with NORTHCOM to solidify the lines of responsibility to make sure we are well covered here, sir.

Senator AKAKA. Since 1997, Admiral, the avian flu has spread to more than a dozen countries in Asia and Eastern Europe. Just recently, the first fatalities outside of Asia were reported in Turkey and Iraq. Although there have been no documented cases of avian flu in Hawaii, I am concerned about its potential spread to the State due to its position as an important Pacific entry port.

Please tell me what plans PACOM has made in case of an outbreak and what role you would play in relation to other Federal and State agencies in this?

Admiral FALLON. Yes, sir, Senator. It is a high interest item. We have had a lot of discussion, a lot of research. Marine Forces Pacific Commander is my designated lead for this project. I have reviewed several in-progress reports from him and his staff. In fact, I believe that we are in the lead—if not in the lead, we are certainly close to it—in this Nation's study and understanding of this particular problem.

We have provided material back here to Washington to both the DOD and to the DHS. We have had ongoing discussions with our allies in the region. In fact, just several months ago in Hawaii we hosted a chiefs of defense conference at which we invited commanders from throughout the Pacific area and we specifically took up this issue of the pandemic flu potential.

It was very enlightening for us to see that there is a lot of work being done by other countries in this area, too. We exchanged ideas and in fact I think we are poised to continue to develop our responsive plan. We talked to the governor about this as well. It is certainly an area of high interest and as we continue to see cases develop we are working hard to refine exactly how we can respond.

We have a very good template based on the tsunami response last year. There is an ongoing series of meetings in which we have continued to share lessons, not only among U.S. staffs and organizations, but with our allies as well. We are going to pay very, very close attention to this in concert with each of the organs of government here in the U.S. as we go forward.

Senator AKAKA. Thank you very much, Admiral, for your responses.

Thank you very much, Mr. Chairman.

Chairman WARNER. Senator Reed.

Senator REED. Admiral Fallon, if I may, India is in PACOM and Pakistan is in CENTCOM, so you have a potential unity of command issue at a critical border. How do you handle this on an operational basis, not only with respect to those two countries, but with respect to CENTCOM?

Admiral FALLON. Yes, sir. So far not an issue and I aim to keep it that way. We have very good relationships with CENTCOM in this area. Each of my component commanders works very closely with his counterpart in CENTCOM. In fact, we can talk about this maybe in the closed session, but I just had a communication from one of the CENTCOM commanders on an issue asking for help. We have had several recent events involving forces and exercises that have been very well-handled across the border.

So I think we are pretty well-poised to make this a non-issue. We pay close attention to it and the people that actually operate out in that area are very attuned to it.

Senator REED. Do you have a formal India-Pakistan cell, a staff section?

Admiral FALLON. No, I do not have a specific cell that works those two issues in concert. Of course, we stay very close to the Indian military and from CENTCOM I understand that they also stay close to Pakistan.

Senator REED. In your statement, Admiral Fallon, you say that PACOM forces require ready, available, and properly maintained prepo stocks. You go on to say we still have an immediate need for replenishment of these stocks and other preferred munitions. What is the status of your prepo? What percent is there at the moment?

Admiral FALLON. I cannot give you an exact percent, but I will tell you that we looked at this very closely because last year I was concerned about the status of some of these supplies because of the material that had been taken out and sent to CENTCOM. I am satisfied that we are on track to replenish these supplies in a manner that makes sense. Recognize that there are several factors at work here. Certainly there is an absence of material that was intended to be dedicated to the Pacific. But I also realize that there are equipment changes and weapons changes that are in progress and it would not make a lot of sense to me from an economic standpoint to go ahead and build up these supplies with material that we know is in the process of changing out, such as armored vehicles and precision weapons and Navy Tomahawk missiles.

So I think the plans are sound. I have drilled into this pretty heavily and my chief of logistics is the point man for it. I think we are on the right track, sir.

Senator REED. Does this budget that has been sent to us make you whole, give you 100 percent of your prepositioned stocks?

Admiral FALLON. It is moving us in the right direction, sir. It is not going to happen in 1 year.

Senator REED. Do you have any idea how many years?

Admiral FALLON. I will get back to you with the specifics on it, sir.

[The information referred to follows:]

The equipment is still being tested with no conclusive results at this time. Results will be forthcoming.

Senator REED. General Bell, could you make a comment on the same issue, your prepositioned stocks, what percentage do you have and how fast will it take you to get whole?

General BELL. Thank you, Senator, I sure can. The principal nature of the prepositioned stocks on the peninsula in Korea surrounds a heavy brigade combat team, Army—M–1 tanks, Bradley fighting vehicles, et cetera. That is the essence of it. The readiness of that heavy brigade combat team has been an area of great focus for the last year. What we found about a year ago was that the amount of money that we were spending to maintain the equipment, repair parts, just maintenance by mechanics, hours on the job—and it is mostly by civilian mechanics—was inadequate and consequently some of that equipment was not as ready as it should have been.

We have done an enormous amount of work. The amount of money that we are spending to buy repair parts and to hire people has been tripled just in the last year. The Army Materiel Command has hired an additional 160 mechanics to work on the equipment and the latest numbers are very positive on the readiness of the equipment, 96 percent readiness. All the combat equipment is present.

So it is very encouraging and very positive. I will tell you that we are still missing some equipment, and obviously if it is missing it is not ready. While most of this equipment is in the area of combat service support—trucks, Humvees, which went to Iraq, deuce and a half trucks—these are very important and necessary to make this combat team operate effectively. We do need that equipment, but it is not a show-stopper.

So my report to you, Senator, would be that a lot of energy has been put into that forward prepositioned heavy brigade combat team, which is right on the cusp of potential combat, and the results are positive. The budget accounts for a continuing focus on that equipment, although I would tell you there is about one-third again more money that I believe we should put into the maintenance of it to really give me the satisfaction that I would prefer. But it is a very positive story and a lot of great work has gone on, sir. Thank you.

Senator REED. I appreciate the progress that is made, but how does that translate into readiness? Because one of the key aspects of the strategy is if hostilities ensued folks would have to fall in on that equipment, and without trucks you have a problem.

General BELL. It is vital. As you are aware, we redeployed a heavy brigade combat team from Korea to Iraq, where they performed magnificently for a year in combat, and then back to Fort Carson, Colorado. So the ability of a heavy brigade from the United States Army to come and fall in on that equipment and have that confidence that it is ready is necessary.

So the first thing we have to do is make sure the stuff is ready. The second thing we have to do is exercise it. We have to draw it, at least a good sample of it, and take it to the ranges, put it out on the roads, et cetera, to make certain that what we are seeing in the warehouses is translated into capability where it counts. We are doing that in various exercises. We are beginning this exercise called Reception, Staging, Onward-Movement, and Integration. I

will not go into the details, but we will sample this equipment and I will get back to you on how well it is performing. I think it is going to be pretty good.

[The information referred to follows:]

[Deleted.]

Senator REED. Thank you.

General Jones, just to be consistent, can you comment on your command's prepositioned stocks?

General JONES. Yes, Senator. I will be brief. With regard to the Army, about 88 percent of the Army's European prepositioned stocks were deployed in support of OEF and OIF. This equates to roughly 11 out of the 12 battalions prepositioned in Europe. The cost to reset these 11 battalions will be approximately $144 million. Of the 11 battalions, EUCOM has refitted one battalion to date.

The Navy has approximately 30 percent of prepositioned ordnance that was used to support OIF. The Marines, approximately 40 percent of the prepositioned items in Norway were used to support OIF-OEF. The Air Force has a wide variety of equipment that was used in both missions and is still being used in both missions. It is estimated that their reconstitution cost is about $2.9 million. If you add the Harvest Eagle replacement, it would be about $3.9 million.

Senator REED. Are these funds identified in the budget that has been sent up to us?

General JONES. They are identified. Some of this equipment, for instance the Marines' equipment, will go right back to Norway. But some of it will have to be—and I might say that the Army's reconstruction will have to be done very carefully because with the departure of the First Armored Division and the First Infantry Division, their prepo stocks of the future will look considerably different than what they did with a larger footprint. So we are adjusting that.

Senator REED. Thank you very much, General. Thank you for your service.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you very much, Senator Reed.

Senator Clinton.

Senator CLINTON. Thank you, Mr. Chairman, and thank you, gentlemen, for being here and for your service. Thank you, too, General Bell, for coming and giving me an excellent briefing about the Korean peninsula.

I want to start with you, General Bell. Last week Lieutenant General Maples, Director of DIA, responded in a public hearing to a question about North Korea's efforts to develop a long-range missile that could reach the United States. He stated that North Korea is, "in the process of developing an intercontinental ballistic missile that would be capable of delivering a nuclear warhead, but they have not done so yet nor have they tested it."

Do you agree with General Maples' assessment and, furthermore, how far do you believe they are from developing and testing, and how best can we deter that?

General BELL. Thank you, Senator Clinton. I have looked at this in some detail. The Taepodong 2 and 3 missiles, as we call them,

are of the kind that, at least in theory, could produce intercontinental capability. Up through the late 1990s, there was a fairly active program in North Korea to develop that missile technology and potentially to test it. In the years since the late 1990s, the last 6, 7 years, we have seen very little activity by the North Koreans to actively continue to develop and test long-range missile systems.

There is no doubt in my mind that they have the capability to begin more technological investigation and to begin a regimen to lead to testing and potentially to lead to fielding. But there is no evidence of it right now. The evidence that we see is in short-range missiles, most useful, quite frankly, in a conflict on the peninsula. I would be more than happy to discuss that in some detail with you in a closed session.

But I do agree with General Maples and I think his assessment is accurate.

Senator CLINTON. General Bell, do you think that the Chinese have the same interest as we do in putting an end to North Korea's nuclear efforts?

General BELL. We are taking a good look at the Chinese relationship first with North Korea to see what kind of partner or ally they are with North Korea and try to make some assessment with regard to that. Now, Admiral Fallon would also be able to address this in some detail. First and foremost, the relationship between the People's Republic of China and North Korea is not as active as one might think. The exercising that you would expect between the ROK—I am sorry—the North Koreans and the Chinese, is very low and essentially not extant. The supply of military hardware, et cetera, et cetera, is very low and non-extant.

So these are all positive things. My sense would be if North Korea wanted to confront the United States with respect to nukes that it would be more engaged in a conventional sense at the baseline, but they are not. Does North Korea have—do the Chinese share our interests in the Six-Party Talks to see these talks conclude positively? It is not in the interest of China in my view to see the Six-Party Talks fail. I am not certain that they are as excited about the conclusion at an early point as we are, but they have been good hosts. They hold the talks in Beijing. They have been positive in their comments with respect to North Korea and their desire to see this resolved peacefully.

So all the members of the Six-Party Talks in my view have their own agendas and their own perspectives, but they have repeatedly said in open session that they are committed to the same objectives, and that is a de-nuclearization of North Korea, the return of North Korea to the peaceful community of nations. My assessment at this point is that China is helping us in that regard as opposed to hurting us.

I would be glad to let Admiral Fallon continue, ma'am, if you would like.

Senator CLINTON. I would, thank you.

Admiral FALLON. Thanks, Senator. I concur with what General Bell said; maybe just add a couple of additional comments. It seems to me that the Chinese put a premium on stability, certainly within their own country, and the potential for having instability along that border with North Korea, either instigated because of actions

that Korea might provoke with its neighbors over nuclear weapons or any other issue, seems to me to be motivation for the Chinese to stay engaged in this process.

In my discussions with Ambassador Hill, who is our chief negotiator——

Chairman WARNER. Would you speak more directly into the microphone? Thank you, Admiral.

Admiral FALLON. Sorry, sir.

In my discussion with Ambassador Hill, our negotiator in the Six-Party Talks, he indicates that the Chinese have been helpful, particularly in the last session, in trying to move forward in this area. So it seems to me it is tough to get into their heads and see exactly what the calculus might be that they are using, but by all appearances it is in their interest and they appear to be working in this area with us.

Senator CLINTON. Admiral Fallon, what military assistance do you plan to provide to the Philippine government over the next year or so?

Admiral FALLON. Senator, we have been engaged for some time with the Philippine government in a number of areas. We are trying to help them to build the capacity to deal with the terrorist problem in the southern Philippines. We have been working with them in a significant effort called Philippine defense reform. It has been undertaken by the government of the Philippines, led by their Secretary of National Defense, the Honorable Secretary Cruz, in which they are looking at a far-reaching overhaul of their entire structure, which I think would be in their best interest and ours as well.

We are helping them on the ground with advisers in Mindanao and the Sulu Archipelago and we are working a number of military assistance cases to try to help them in the material condition to build up their capability, particularly airlift and in other areas that would be helpful to them in gaining a better military that might be more useful for them and for the region.

Senator CLINTON. Your predecessor, Admiral Fargo, agreed to inform this committee in advance of any changes in our involvement with the Philippines and particularly with respect to conditions under U.S. servicemembers would be involved in combat activities. Will you honor that agreement so that we would have advance knowledge of any changes?

Admiral FALLON. Yes, ma'am, I certainly will.

Senator CLINTON. Thank you.

General Jones, I just want to go back to a point that Senator McCain was asking you with respect to Darfur. You may remember that a year ago February we talked in Munich about the potential of NATO providing airlift, and I note that from personal conversations with you in the months since that there was a great effort undertaken to get the appropriate permission and then to find the necessary resources.

Could you just enlighten me at least on what the process was and what actually came out of that process, because I know you worked it and pushed it. It was difficult and we did not really provide all that much airlift in retrospect. I do not know what the spe-

cifics are, but I know that it has not been adequate, and now we are looking to see what else we can do.

What is the problem? Is the problem it is an out-of-area commitment? Is the problem that our other allies in NATO are not committed to it? Can you just briefly describe, what is the obstacle to doing something even as limited as airlift to the extent necessary?

General JONES. Senator, thank you for that. With regard to the airlift, actually it turned out to be successful. NATO did lift six out of the seven African battalions into Darfur and has committed to doing the same for the ongoing rotation. So we are—at present we are doing our second round of airlift. So I think NATO has the capacity and the will to do this, as well as the capacity-building that we have been doing with the AU.

The problem, the fact is that both of those mandates run out. One I think runs out in March and the other one in May. In order to continue a NATO mission, either the AU or the U.N. or both need to come and make a request to the NATO for a continuation or for an expansion or whatever it is they wish.

Absent that, the NATO does not have the mandate to respond, and that is generally what the state of play is right now. There is a lot of discussion. There are a lot of telephone calls, but the official letter that comes from the organizations that would be able to trigger the process of a decision by the North Atlantic Council, that has not happened yet.

Senator INHOFE [presiding]. Thank you, Senator Clinton.

Senator Thune, I have already voted. I know you have not. Why don't you go next and then I will wait until after you are through.

Senator Thune.

Senator THUNE. Thank you, Mr. Chairman. I think we have 4 minutes left on the vote, so I will not have a lot of time to ask questions here.

But I appreciate, General and Admiral—thank you so much for your very distinguished service to our country and for the extraordinary work of those under your command. Please extend our deepest appreciation and support for the troops.

We have an interest, the Senator from Oklahoma and I both, in making sure that Congress is responding appropriately in terms of the funding and the resources that we need to deal with the many threats that exist around the world today. We have been involved in an effort to increase the top line funding for our readiness. So that is an effort, a debate that we will have around this place ongoing for some time, every budget year. But we want to make sure that we are taking the steps that are necessary so that the troops are able to complete their mission and fulfill the responsibilities that you ask of them and that we ask of you.

I just—we have, many of us, I think, our National Guard in town. I will be meeting tomorrow with the Adjutant General from South Dakota. I guess I am curious as to what sort of update you can give us about the role the National Guard is playing, about the types of—there is concern when you talk to Guard members and their families about the deployments and bringing greater predictability and as we talk about modernization and all these other things associated with that. There are concerns about funding levels for the National Guard, what the future entails.

So I am wondering if you could give me, in a nutshell, your assessment of things and how they play in, how they integrate into the overall objectives that you have to achieve.

General JONES. Senator, thank you for that question. The National Guard plays a very important role in the European and African theaters. Currently the National Guard and Reserve in EUCOM are composed of about 3,300 members on duty. Most of them are in Kosovo doing very good work, very important work in that mission in the Balkans.

The Navy has a very modest, a couple of people. The Air Force has 197. Marines have 49, for a total of about 3,500 National Guard and Reserve on duty in Europe and Africa.

I should comment that one of the most critical programs that we have, that I value almost above all others, is the State partnership program, where Air and Army Guard units have relationships directly from the State to a particular country. Three years ago in Africa we had no programs and now we have I think eight, with as many as four or five more getting ready to be established. In Europe, in Western and Eastern Europe, we have considerably more because we have had longer time to get them going.

But these are very intensive relationships between a sovereign country and one of our States, and the interaction between our members of the National Guard, both Air and Army Guard, really has a lot to do with the transformation and the ongoing military-to-military relationships that build long-term relationships between the State—and not just at the military level, but at the economic level, the political level, and so on and so forth. A very important element of our theater engagement plan.

So I hope that answers your question, Senator.

General BELL. Thank you, Senator. I would like to come at it from just a bit of a different perspective and talk specifically about the United States Army and what we in the Army as a Service have tried to do since the breakout of OIF and OEF. I think you are aware that for years, decades literally, since the end of World War II, the National Guard in many respects, in this case Army Guard, was the victim of a tiered readiness process that said fundamentally that, while these units in theory would be late deployers in a general conventional war, it was okay to not organize them and equip them and man them at the same level as an Active-Duty division or an Active-Duty unit might be.

That approach over the years resulted in many of our magnificent Guard units not being trained and not being as ready as they ought to be, principally because we did not focus on them. The Chief of Staff of the Army and the Army as an institution for the last 3 to 5 years for certain has attempted to reverse that and I think done a masterful job. I have had the distinct pleasure of going to Afghanistan many times, Iraq many times, all over Europe, the Balkans, both Kosovo and in Bosnia, and now in Korea, and I have had a chance to look at these units in their current configuration and talk to them.

Two quick examples, and I will not take too long. First the Tennessee National Guard. I am from Tennessee and I am proud of it, sir. I am sorry you are not from Tennessee, but it is okay. [Laughter.]

The Tennessee 278th Armored Cavalry Regiment went to Iraq a little bit north of Baghdad and took over a very difficult area. They were trained, they were ready, they were proud. They brought their traditions of service over a century of commitment and they pridefully and effectively made a huge and lasting difference in a large segment of Iraq.

This is a radically different outcome than what we could refer to back during the Operation Desert Storm days, when in attempting to get some of our National Guard brigades—and the 278th is a regiment—ready, we learned that they were not ready and they were not capable. That has been changed.

While the National Guard is under stress—and I will tell you that they are working awfully hard—what they are bringing to the global war on terror, this long war, is a perspective of magnificent service to their Nation, something like I have not seen, at least in reading history, since World War II.

So that the issue for all of us now is what do we do from here as we go forward. I would argue that, one, we need to continue to resource our National Guard units effectively. We need to man them at the highest levels. We need to recognize that they are not going to be latecomers; they are going to be firstcomers in many cases. We need to finally recognize that as a cultural institution that they represent the very best and brightest of the United States of America. They are citizen soldiers. They represent the Nation perhaps better than anybody and they deserve the best training, best equipping, and best consideration by the Active-Duty Forces.

I think we are getting it today and I would hope that as we go into the future that we would all, both the administration side and the congressional side, keep them in the forefront of our readiness paradigm and make certain that they continue to be as ready in the future as in my view they are today.

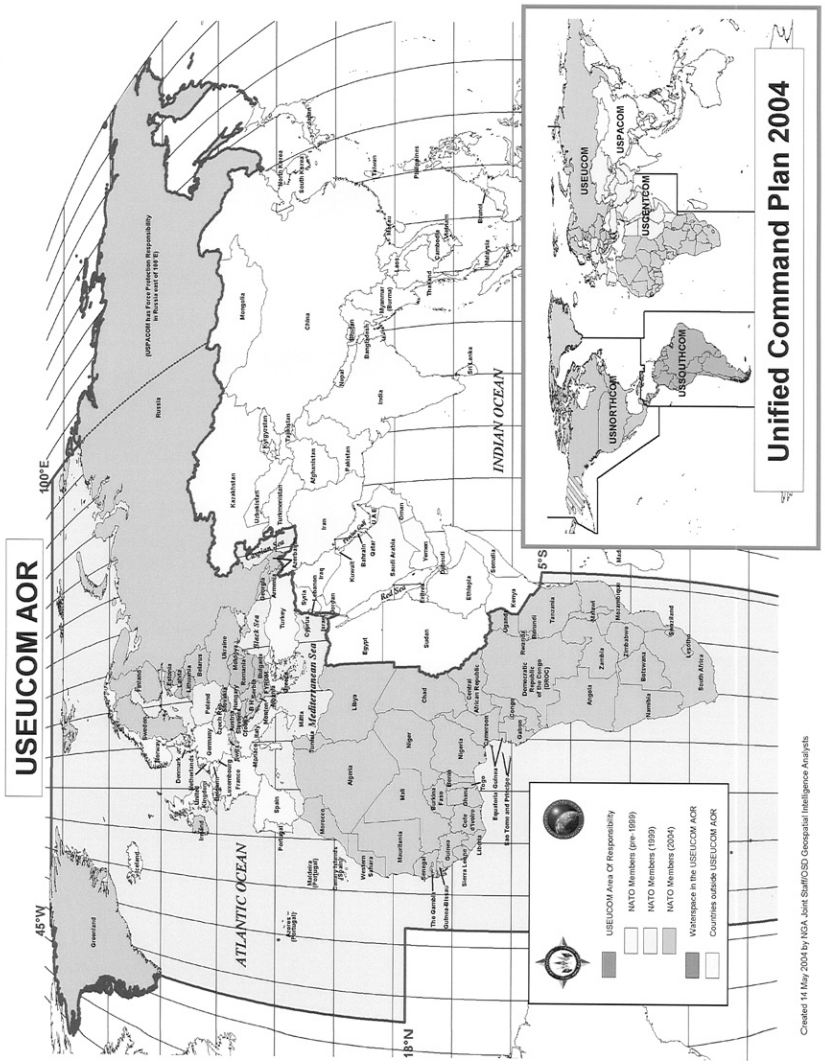
Thank you, sir.

Senator THUNE. Thank you, General.

Admiral FALLON. Senator, just to pile on a little bit, in the Pacific theater, as you are well aware, we are particularly dependent on air and maritime forces to be able to execute our responsibilities. This would not be possible without a significant contribution from the National Guard and Reserve. I will give you a couple of examples.

We are in the process of introducing the C–17 to the Pacific both in Alaska and Hawaii, a very, very much needed capability increase, and the units in both States are going to be mixed units of National Guard, Reserve, and Active Forces, and this integration is well underway. In fact, the first aircraft have cast their shadows over the ramp there at Hickham.

I get to see on a regular basis particularly the Air Guard coming through, stopping at Hickham mid-Pacific. Most of the tanker fleet as well as a big chunk of the airlift support is a mixture of Active and Reserve Forces.



I might also highlight that there is a major contribution being played by ground forces, particularly Army Guard and Reserve, in the war effort in CENTCOM, and many of these forces are being

taken from Pacific-based units. So we get to see their phenomenal contribution and their sacrifices on a daily basis.

Thank you, sir.

Senator THUNE. Thank you all very much, and thank you, Mr. Chairman.

[The information referred to follows:]

Senator INHOFE. Thank you, Senator Thune. Frankly, I am glad you are from South Dakota for a lot of reasons, one being very obvious.

Let me just ask you a question, General Jones. I told you I was going to ask it. Am I the only one who is disturbed by this map

[indicating], the way our commands are divided up? I have been very active for 10 years now in Africa and you have Africa under the EUCOM except for Sudan, Ethiopia, Somalia, Kenya, and Eritrea. But right now, in the case of Ethiopia that is the location of the AU. It would just seem to me it just seems real cumbersome, because I will be going again next week and I will be in two different commands but in one continent. So again, I just thought I would throw that out there and hopefully you will have a meeting some time and bring it up and see if I am the only one who is disturbed by it.

General JONES. Sir, the unified command plan is always a document that gets a lot of attention and where you draw the lines is important. I would just simply say that I think this is something that we need to take a constant look at. The relations between the EUCOM and the CENTCOM in this case, where the lines intersect separating one from the other in Africa, have become increasingly blurred. In other words, I want to reassure you that, although the lines are there, the crosstalk between CENTCOM and EUCOM is——

Senator INHOFE. Yes, I know that is true. I know what is going on.

Several have talked about Darfur. It seems as if that is getting an awful lot of attention from members, a lot of members who are not all that familiar with Africa or not perhaps as familiar as I am. Consequently, I have not really been spending a lot of time on that, but I am very much concerned about the Lord's Resistance Army, about what is happening in northern Uganda. To me—and nobody ever talks about that and here we have one guy up there, Joseph Koni. He has been there for 30 years, beating up and killing and maiming kids, and nothing seems to be done about it.

The other day I was up in Gulu and we saw the product of his efforts there. Our intelligence knows where he is most of the time. President Museveni in Uganda just went through having to change the constitution and was then elected. I guess it is the first real election they have had in some 25 years.

Now, when you look and you see these horrible atrocities—and they are all little kids—and that there is an easy solution to it—and I do not want to get into something you would have to go into a closed session to talk about, but with those dynamics, with Museveni now back re-elected and having come from a military background, I might add, do you think that—do you have any light at the end of that tunnel? What statement could you make publicly as to any progress you see down the road in getting rid of this Joseph Koni?

General JONES. Senator, I think that this should be an achievable goal and I think that, with the elections over with and the refocus, I think that I am in accord with you that generally speaking the area that he operates in is relatively known, although it is a large issue. There is the issue of the borders that people hide behind quite a bit. But I think we need to continue to put pressure on the regional governments to bring this thing to a close.

It is not going to be NATO or anybody else. They are going to have to get this guy themselves and they are going to have to be

encouraged and supported in any way we can to make sure that he is brought to justice, because it is outrageous what he is doing.

Senator INHOFE. If you see it and you see it first-hand, it is really, really, really disturbing.

The New York Times had a report that 25 percent of the nearly 400 foreign fighters—this has been about 6 months ago—captured in Iraq were from Africa. I was not aware of this. Do you think that is accurate today? Do you think—because my experience has been that the Africans are very anxious to help us and they have joined us, many of the countries, in our war against terrorism. They recognize that Africa through the Horn and down through Djibouti, that as the squeeze goes on the Middle East that they are coming their way, and we are preparing and helping them prepare for that.

Do you see that there is that big of a presence there of Africans within the insurgents?

General JONES. I do not know what the percentage is, Senator. But one of the things we guard against is the obvious ease with which recruiters can come into regions in Africa, particularly the poor regions, and marshal the passions of people who do not have much hope. We are worried about people going to and from the conflict areas, fighting for a while, then coming back to Africa and bringing back what they have learned and generating and fomenting similar groups to cause problems in Africa.

I do not know what the size is, but I do know that it is going on. We do have a general sense of the highways that they use to get to and from the conflict and we are doing our best to stay engaged with the theater security cooperation plans that we have to mitigate against that.

Senator INHOFE. One last question about Africa. Not too long ago, the President announced this Trans-Sahara Counterterrorism Initiative. Then for quite some number of years now we have been working with the five African brigades. We know that they are very proud that they are the ones who are putting that together and we are just trying to assist where our assistance is requested, and we are doing a very good job with them.

Can you give us any kind of an update as to where we are now with these African brigades? Because I think it is going to become increasingly important as the squeeze continues in the Middle East.

General JONES. Sir, I think, looking at Africa the same way that the Africans look at Africa, based on the five regions, is an important thing to do. They are obviously, the ones that are deploying into Darfur, the ones in the highest state of readiness. But it is coming along. I believe that there is a lot more capacity-building that we could bring, not only the United States but the family of nations could bring, to accelerate the process of the emerging capabilities of the AU peacekeeping battalions. I think this is a good way to help the Africans help themselves. To do it in the right way and to do it over a protracted period of time would be very beneficial.

Senator INHOFE. I think that is right. You had mentioned the area, the Sea of Guinea, and the serious problems there. I just came back from there. They asked me a lot of questions that I cannot answer in terms of the locations of the various regional oper-

ations and what they can get. One thing that they need more than anything else seems to be lift capacity and that comes up almost every time that we are there.

Admiral, I want to just mention one thing. I wrote down three words from your opening statement, where you said that the tension has been significantly reduced, referring to China and Taiwan. Only this morning, in USA Today talk about—well, I will just read it. It says: "Symbols are everything when it comes to the prickly relationship between China and Taiwan, and recent moves by both countries could signal the potential tightening of tensions between China and Taiwan," referring to President Chen's recent action to scrap this council that they have had, which has not met in 5 years, so I can understand why they would scrap it.

But they go on to talk about how serious the tension is. The vice chairman of the central military commission in China, Guo Boxiong, talked about how serious that was, that it is something they are now going to be able, that China—I got the impression, anyway, is going to be able to use that in order to try to escalate the hostilities, and the fact that they have some 700 missiles aimed at Taiwan right now.

So do you have any further evidence that the tensions are lessening there? Because I was glad to hear it.

Admiral FALLON. I guess I would like to go back and review the year's history. A year ago things were indeed tense. There was not only—there was a lot of rhetoric being thrown back and forth by both sides, but in fact there was significant activity going on on the ground.

That has subsided significantly during the year. This recent announcement by Chen, not particularly helpful, I think, in the situation. But I guess the absence of any significant activity from the Chinese, from the PRC, other than the statements which have indicated that this particular move was not helpful—but there have not been the types of activity we have seen in the past, such as riots and loud protests involving large numbers of people. So I think that to me, at least so far, is indicative of taking this more in stride than just reacting. We have certainly, to the best of my knowledge, not seen any military movements.

Senator INHOFE. If it is all right, Mr. Chairman, I would like to pursue just one more question along that line.

Something that has bothered me for a long time, starting back in the 1990s when the drawdown, the military drawdown, was taking place in this country, and it happened during that decade of the 1990s the military procurement in China increased by 1,000 percent. So we are not looking at just something, a potential nuclear power. We are looking at great conventional assets and opportunities.

This has been really troublesome for me for quite some time. I look also and I see that China is doing a lot of smart things that we ought to be doing and we are not, such as cornering the market of energy all around. Getting back to Africa, everyplace down there around the Sea of Guinea you see the presence of China trying to do their thing. We know that they had their $70 billion deal with Iran and now they are getting 13 percent of their energy from Iran.

But I look at it just from the military might that they have and the fact that most Americans believe that we in America have the best equipment out there and that we give our kids the best equipment, when it is just not true. We suffered mightily during the 1990s. I was very proud of General John Jumper when in 1998 he stood up and he said that now the Russians are making with their SU series, SU–27, SU–30s, SU–35s, a better strike vehicle than the best that we have, which was the F–15 and the F–16. That was borne out again in the trials in India.

So with that, what is your level of comfort with the direction that China is going with the massive buildups that they are in the middle of right now?

Admiral FALLON. Senator, I think I would break this down into a couple of different areas. One, they have a massive sized force, but I do not believe that the majority of that force is particularly well-equipped. I believe that they are a legacy force of the past and I think that the Chinese—the PLA leadership knows this and they would like to see this changed.

Certainly from my visit there and discussion with their leaders, they make this a high priority. They made it a high priority with me to point out that they really need to overhaul. They would love to transform their military probably in a way that we have been doing.

The second point is that the new equipment, the hardware that they are acquiring, they are buying most of this stuff off the shelf and most of it from the Russians. Some of the stuff is high end relative to certainly what they have had in the past, and the numbers are increasing on a percentage basis because they are starting from a pretty low, low beginning. So the types of equipment are troubling because the capabilities are new and modern. The numbers are not yet anywhere near the kinds of numbers that I believe truly threaten this country.

Regarding the raw materials, it is pretty obvious that they are heavily dependent on the outside world to sustain their economic development and they are obviously very active in trying to get materials from any place they can in the world to keep this economic engine going.

Senator INHOFE. Thank you, Admiral.

Admiral FALLON. Thank you, sir.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you very much, Senator.

I was quite interested in your colloquy with Senator Clinton and indeed others about China's depth of sincerity to try and bring to closure and hopefully a positive outcome of the talks with North Korea. One man's opinion, it is just mine: I think they are trying to play it both ways. How vividly I do recall in the Korean War how it was their support in the military decision which turned the tide in that conflict and ended up with this rather heavy burden on the United States to remain there all these many years.

But on the other side, you say there is an enhancement of the military-to-military relationship, and I think that is a good positive one. I come back to again a chapter in our military history, which I think from time to time has been examined in the context of China. That is the tragic situation we had with the shootdown of

one of our aircraft, as you will recall, the patrol aircraft years ago, and the question of whether or not we could work out the executive agreement, commonly referred to as an incident at sea agreement, that we once had with the Soviet Union, and it continues to this day with Russia, as a means by which to lessen tensions between the interoperability of—well, maybe not the interoperability, but the parallel missions that our forces and the Chinese seem to be running in part of the AOR for which you are responsible.

Admiral FALLON. Thank you, Senator. I share your interest in moving forward in this area. In fact, the talks, "MMCA" is the designated term, Military Maritime Consultative Arrangements. We have made a little progress on this this year. I think it is critical that we move this ball forward because the Chinese do things in a very structured manner, particularly military-to-military. I mentioned earlier the challenge we have in actually getting things accomplished with them. A very rigid bureaucracy. Just about everything is funneled through their foreign affairs office in the PLA and it makes life challenging for us.

So their inclination is to want to do things in a very structured manner. We have tried to use these talks to actually move this from an overarching policy discussion to very concrete measures, so that when our forces are operating in close proximity we will have a framework for action, something that we can give our commanders and hopefully they give their commanders to lessen the likelihood that we are going to have an untoward incident.

Maybe by working this agreement to actually take steps to move forward, we might be able to move the military relationship as well. But I share your concern and your interest in doing this.

Chairman WARNER. I would hope that you would refer to that chapter of history between the United States and the Soviet Union. It took place basically from 1970 to 1972. In 1972 the agreement was executed in Moscow, as a matter of fact at the occasion of President Nixon going over. It was an historic moment in our history.

But the tensions between the United States and Russia, the tensions between NATO and Russia, were at a high pitch in those days and yet they suddenly decided that they did not want to see an accident between our military forces as they operated in the open seas and it came about, and it has been very positive.

So I hope that you might blow off the dust and try it a little bit.

Admiral FALLON. Yes, sir. That said, I will tell you that the instances in which our forces have been in close proximity certainly in the past year appear to have been conducted quite reasonably and quite professionally, and we watch this very closely.

Chairman WARNER. But for them to enter into an agreement would be a signal in the region that they want to try and do business in a positive way.

Admiral FALLON. I agree, yes, sir. I certainly agree.

Chairman WARNER. General Jones, to you the question of your opinion regarding the relationship between NATO and Russia. As your posture statement indicates, NATO-Russia cooperation appears to have deepened significantly over the past few years and is based on acting and exercising jointly, not just talking. That seems to be a positive development.

Now, I ask this question because I think it is within days that the Russian foreign minister is here, is it not? As a matter of fact, I am going to be meeting today with the foreign minister. I would like to have your assessment as to NATO's long-term objectives with respect to this cooperative engagement with Russia.

General JONES. Mr. Chairman, thank you very much for that question. I am happy to be able to report that the relationship between NATO and Russia, as overseen by the NATO-Russia Council, which is a standing body, is very positive. I guess that is the word I would use. It is consistent over the last several years, where the Russians have shown a willingness to work with NATO to achieve measures of interoperability that are probably of the highest order that we have ever had between the two.

Just a few weeks ago, two Russian warships joined Operation Active Endeavor, which is an ongoing article 5 mission, Mediterranean mission, counterterrorist mission. They are now fully interoperable with the maritime mission being directed by Admiral Ulrich. Those kinds of relationships have gone on now for the past several years.

In my headquarters I have a Russian general officer and a staff full-time as a partner nation, and I have visited in my NATO capacity Moscow and the chief of defense of the Russian forces has also visited me in his official capacity at SHAPE.

So I characterize it just the way I wrote it in the posture statement. It is positive, it is ongoing, and it is substantive.

Chairman WARNER. To what extent is the deliberation within NATO about new membership revolving around the Ukraine and their desire to become a NATO member, and how would that affect the cooperation that you perceive today between Russia and NATO?

General JONES. The idea of expansion, of course, is something that is on many aspiring nations' minds. The Ukraine is one of them. The issue of expansion will be taken up I would imagine at the Riga summit in November of this year. I do not think that they will announce an expansion this year, but I think the subject matter will be discussed.

Chairman WARNER. What candidates do you anticipate will be the subject of that discussion?

General JONES. In the open press the nations that have expressed the desire to become members of NATO include virtually every nation in the Balkans, the Ukraine. Generally speaking, it is that group.

I think that obviously these will be sensitive discussions. I think Russia will make its voice known when and if the time comes that NATO does decide to enlarge, which it has not yet. I think we have to be careful about too much alienation and some unintended consequences that may or may not come as a result of those kinds of discussions.

But new members are not on the table at present and that is for work in the future.

Chairman WARNER. I would like to return to Afghanistan, General Jones. Last Friday an article appeared in the Washington Post suggesting that the State Department was unable to get the Pentagon to agree to have U.S. troops provide force protection for pro-

vincial reconstruction teams, PRTs, that the United States would like to deploy throughout Iraq, similar to what ISAF is doing in Afghanistan.

Are you in a position to comment on the veracity of this article and the conclusions?

General JONES. Mr. Chairman, I am not. That is new to me.

Chairman WARNER. All right. Would you agree with me that providing security to the PRTs is an appropriate role for our troops in Iraq and that expanding the use of the PRTs in Iraq with adequate force protection would further our objective of helping reconstruct Iraq and enhancing long-term stability there?

General JONES. Mr. Chairman, PRTs in Afghanistan have proven to be really the coin of the realm for reconstruction. They are the most visible manifestation that help is on the way while the government of Afghanistan develops its reach into the hinterlands. Obviously, if you are going to establish PRTs, you have to have some measure of adequate security. It has to be done by somebody. You cannot put these small units out there and leave them by themselves, especially in a hostile environment. So whether it is Afghanistan or Iraq, to me the principles remain the same.

Chairman WARNER. Thank you.

Lastly, Admiral Fallon, the question again, China and Taiwan. Describe this latest incident which caused a problem? It seems to me that in our opening statement my recollection is you felt it was not a serious one, but it is nevertheless one of those unfortunate incidents that seem to continue to arise.

Admiral FALLON. Senator, this is a political issue. I believe you are referring to President Chen's——

Chairman WARNER. Right.

Admiral FALLON.—whatever the actual characterization is, and this is debatable. I have seen a number of interpretations of what actually transpired in Taipei. But by certainly diminishing the importance of this Unification Council, which, as somebody indicated, had not really done much in recent times, it just to my way of thinking exacerbates the challenge we have here, where rhetoric goes back and forth.

I guess—again, I will look for other indicators. If it is just rhetoric and it is reasonably moderate in tone, I think that is unfortunate, but probably not particularly damaging. If other steps are taken, other military, some military actions or other indications that people are being agitated or stirred up to take other actions, then I think this would be a real concern.

So we are in an interesting position here. We are trying to do what we can to see China come in to play a major constructive role in the world and at the same time to honor our obligations to an emerging democracy in Taiwan and not get ourselves wrapped around the axle here where we end up with another major engagement. So we are trying to walk a thin line.

Chairman WARNER. You say another major engagement. I will just give you again my own view. I think if that conflict were precipitated by just inappropriate and wrongful politics generated by the Taiwanese elected officials, I am not entirely sure that this Nation would come full force to their rescue if they created that problem. I just give you my own view.

If you look at the history of our engagement with Asian nations in terms of conflict, it has not been one that encourages us to go further into military actions of that type, particularly if they are brought on in such a way that it just shows totally injudicious judgment in politics. One thing for Taiwan—and I have been supportive—to build up their military capacity, but at the same time they build that up they ought to build down the heated politics.

We will now recess and resume this hearing in 222 Russell, the committee spaces, for such period of time as may be required.

Thank you very much, gentlemen. We are adjourned.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

U.S.-CHINA MILITARY-TO-MILITARY RELATIONS

1. Senator WARNER. Admiral Fallon, under your leadership, U.S. Pacific Command (PACOM) has recently initiated an exchange of military officers with China to enhance mutual understanding and reduce the chances of miscalculation leading to hostilities. Do you believe there is an opportunity for expanded U.S.-China military-to-military engagement over the next few years?

Admiral FALLON. I think we can do more with the PLA. PACOM strongly advocates a reinvigorated military-to-military relationship, focused in the near-term on mid-level officer exchanges, dialogue on humanitarian assistance and disaster relief experiences, and expanded educational interaction at the Asia-Pacific Center for Security Studies. At the same time, we have emphasized to the PLA that forward progress should be guided by principles of transparency and reciprocity—areas where improvement is necessary. I believe that these activities contribute to the overall U.S. efforts to shape the U.S.-China relationship and promote a peaceful resolution of the cross-strait conflict. However, the extent to which we are successful in encouraging more effective military-to-military engagement with the PLA over the next few years will be largely determined by the Chinese response.

2. Senator WARNER. Admiral Fallon, what are the benefits of increased military-to-military contacts, in your view?

Admiral FALLON. Military-to-military interaction enhances mutual understanding of each other's military capabilities and intention, reducing the potential for miscalculation. Increased contact also encourages responsible Chinese participation in regional and international fora. We have encouraged Chinese engagement in areas of common interest, including counterterrorism and pandemic influenza. Through increased military-to-military activities, PACOM contributes to U.S. efforts to shape the broader U.S.-China relationship and promote a peaceful resolution of the cross-strait conflict.

Importantly, as we move forward in the military-to-military arena, we continue to emphasize to PLA leaders the need for transparency and reciprocity—areas where PLA improvement is necessary to promote mutual understanding.

3. Senator WARNER. Admiral Fallon, do you recommend any changes in current legislated authorities or restrictions governing U.S.-China military-to-military exchanges in order to carry out a program of exchanges that you believe will be beneficial to the United States?

Admiral FALLON. [Deleted.]

NORTHERN ATLANTIC TREATY ORGANIZATION (NATO) FINANCING AND ACQUISITION

4. Senator WARNER. General Jones, you have been an advocate of changing the manner in which NATO peacekeeping missions are financed. As I understand it, your concept would require an increase in the NATO-common funded budgets so that the cost of operations would be shared more equitably, regardless of which members were actually contributing forces for a particular effort. How is this idea being received by your counterparts and colleagues at NATO?

General JONES. The idea is receiving mixed reviews among the nations. While some newer members (such as Bulgaria and Romania) appear favorably disposed, some older members (such as France) are not.

There is a concern that common funding could create disincentives that would not be good for the Alliance. For example, the United Kingdom is worried that expanding common funding might encourage nations to delay developing their own capabilities in the false belief that NATO would pay Belgium is concerned that common funding would make it too easy for the U.S. to push NATO into operations without gaining sufficient political consensus within the Alliance.

At the same time, newer members with relatively small budgets and a relatively large willingness to deploy, would welcome the opportunities that increased common funding would bring.

NATO's mission is changing from one of near static defense to one of collective security. In my view, the Alliance needs to transform its Cold War institutional processes such as funding so that they more effectively and efficiently support NATO's expeditionary operations in remote locations at strategic distances from the Euro-Atlantic region.

5. Senator WARNER. General Jones, you have also indicated that NATO should consider acquiring more defense equipment of its own, similar to the AWACs planes NATO currently owns and operates. What are your thoughts regarding whether NATO should acquire its own assets, such as lift capability?

General JONES. NATO strategic lift capability covers sea and airlift. NATO is continuing to support long-term solutions to reduce strategic sealift shortfalls and encouraging nations to declare some of their capacities to be available to NATO. NATO is also examining the possibility of warning contractors through an early "Warning Notice" that could improve shipping companies' response time.

As NATO roles and missions continue to expand beyond the traditional area of responsibility (AOR), the Alliance will most certainly have an increasing need for airlift to support those far-reaching operations. However, with few exceptions, NATO funding does not cover the procurement of military forces or of physical military assets such as ships, submarines, aircraft, tanks, artillery, or weapon systems. Military manpower and materiel are assigned to the Alliance by member countries, which remain financially responsible for their provision.

An important exception is the NATO Airborne Early Warning and Control Force, a fleet of radar-bearing aircraft jointly procured, owned, maintained, and operated by member countries and placed under the operational command and control of a NATO Force Commander responsible to the NATO Strategic Commanders. NATO also finances investments directed towards collective requirements, such as air defense, command and control systems, or Alliance-wide communications systems which cannot be designated as being within the responsibility of any single nation to provide. Such investments are subject to maintenance, renewal, and ultimately replacement in accordance with changing requirements and technological developments and the expenditures this requires also represent a significant portion of NATO funding.

National and multinational programs such as Strategic Airlift Interim Solution (SALIS) contribute to overall NATO airlift capabilities, however the SALIS program relies on a fixed number of airframes, not in the possession of NATO. Nations must continue to acquire a modern and capable means by which to deploy forces in support of alliance/national operations. The A–400M program is absolutely essential to improving NATO's deployment posture and nations must see it through. In addition, NATO is examining securing it own strategic airlift capability over which it would operational control. Military advice has been provided on this specific initiative and currently sits with NATO HQ.

6. Senator WARNER. General Jones, if NATO were to acquire large and costly defense items, do you think NATO should use a competitive bidding process to acquire such assets? How would such a process work?

Admiral FALLON. In the vast majority of cases, yes, the acquisition process should be by competitive bid. There are rare occasions due to expediency or supply that could make the competitive bid process cumbersome.

U.S. industry may use a number of avenues in seeking business opportunities associated with NATO. These include pursuing International Competitive Bidding (ICB) opportunities through the U.S. Department of Commerce as well as non-ICB opportunities directly with the NATO Maintenance and Supply Agency; the NATO Consultation, Command, and Control Agency (NC^3A); the Supreme Headquarters Allied Powers Europe; and the Supreme Allied Commander Transformation.

There is already an established precedent concerning NATO's acquisition processes for large costly defense items. Under the NATO Infrastructure Committee the NATO Security Investment Program has managed common funded programs that

support the Alliance. Here are three examples of competitively bid program efforts active in NATO.

The NATO ACCS Level of Operational Capability 1 (LOC1) program is a NATO-funded command and control program being implemented in NATO Europe. The system will provide both static and deployable assets as part of the NATO Reaction Forces.

NATO also has joined the Radar System Improvement Program (RSIP), a multinational cooperative effort. RSIP will improve the E–3's radar by increasing the sensitivity of the pulse Doppler radar so the aircraft can detect and track smaller stealthy targets over a longer range.

Air Command Systems International, a joint venture equally owned by Raytheon Company and Thomson-CSF, has been awarded four additional NATO Air Command and Control Level of Capability 1 (ACCS LOC1) contracts for work associated with validation sites in Belgium, France, Germany, and Italy.

FUNDING FOR THE JOINT POW/MIA ACCOUNTING COMMAND

7. Senator WARNER. Admiral Fallon, the Joint POW/MIA Accounting Command (JPAC)—which is subordinate to the PACOM—performs the crucial and sensitive job of recovery and identification of the remains of U.S. servicemembers from past wars, including World War II, Korea, Vietnam, and more recent conflicts. Funding for JPAC operations in fiscal year 2006 has been reduced significantly and, even though some actions have been taken to restore some of the funding, JPAC's level of effort in Southeast Asia—including in Vietnam and Laos—will be reduced by 22 percent and the world-wide level of effort will be down about 50 percent. What is the current status of funding for JPAC?

Admiral FALLON. After applying a proportional share of fiscal year 2006 congressional marks, POM taxes, and program review adjustments, the JPAC operating budget for fiscal year 2006 was $44,004,000. Of note, to offset expenses and permit increased mission activity, Navy provided an additional $2,500,000.

The JPAC annual operating plan strives to meet the following objectives: 10 Joint Field Activities (JFAs) in Southeast Asia (SEA), 5 JFAs in North Korea, and 10 JFAs worldwide. In fiscal year 2006, JPAC expects to complete 10 of 10 JFAs in SEA and 8 of 10 planned JFAs worldwide. The U.S. suspension of operations in North Korea prevents JFAs in that country.

Finally the Department of Defense (DOD) is working with the Navy, PACOM, and JPAC to identify the appropriate operational tempo and the budget to support it for both fiscal year 2007 and beyond.

8. Senator WARNER. Admiral Fallon, what is the rationale for reducing funding for JPAC?

Admiral FALLON. Throughout JPAC existence, the only reductions applied to its funding have been a proportionate share of congressional, OSD, and Navy marks that were levied against PACOM baseline resources. The JPAC baseline represents approximately 30 percent of the total PACOM BA–1 (O&M, N) baseline. When taxes/marks are levied against PACOM, JPAC funds are part of the base against which those taxes are calculated.

9. Senator WARNER. Admiral Fallon, what is the status of recovery operations in North Korea?

Admiral FALLON. The U.S. suspended JPAC operations in May 2005, at the conclusion of the first joint field activity, in response to aggressive DPRK actions regarding nuclear weapons and belligerent rhetoric against the United States.

HOST NATION BURDENSHARING

10. Senator WARNER. General Jones, in your written statement describing United States European Command's (EUCOM) Strategic Theater Transformation (STT) plan, you state that almost a billion dollars of new construction is required in fiscal year 2007 to enhance existing infrastructure as well as establish new bases for rotational forces. Citing the need for continued investment, you specifically mention "shifting our focus to improving the ability of our new allies and partners to be able to deploy rapidly and operate with our forces." In your plan, have you considered the desire and ability of host nations or NATO to share the investment burden and to contribute towards the construction of new facilities and housing?

Admiral FALLON. As a preliminary matter, every project is examined first for NATO funding eligibility as part of a prefinancing agreement. NATO Security In-

vestment Program (NSIP) provides the funding for NATO facilities investment. NSIP funding can only be used to construct NATO operational facilities that meet NATO identified minimum military requirements.

At each step of EUCOM's transformation, we have aggressively sought to have allies and partners pay their fair share of the burden in material, operations, and manpower costs. For example, at new Forward Operating Sites (FOS) in Eastern Europe, EUCOM forces are basing troops at host nation bases, and using host nation training ranges. EUCOM is not paying for these bases or ranges; rather we are only paying for use of facilities for EUCOM forces and any new structures that are specifically needed to carry out our missions. Our NATO allies stand behind our transformation efforts, and we have been able to direct NATO funding away from legacy bases, and have the resources directed towards enduring facilities. Additionally, EUCOM is closing bases that don't fit into our strategy to combat current and future threats. In the long run, changes EUCOM makes today will save U.S. taxpayers millions, and at the same time put EUCOM in a position to best meet evolving security challenges.

11. Senator WARNER. General Jones, can some of this construction, which also supports the host nation's military and NATO forces, be funded by NATO?

General JONES. The operational facilities and family housing projects requested in the fiscal year 2007 presidential budget request are for U.S. only facilities and NSIP or host nation military funding is not authorized.

Only United States military families reside in United States funded family housing. Additionally, it is the responsibility of the host nation to fund quality-of-life for their military personnel.

12. Senator WARNER. General Jones, I recently met with local German Government officials who expressed the most sincere desire to build new housing for our military personnel at Ramstein Airbase. Are you aware of this offer and have you had the chance to evaluate it?

General JONES. Yes, EUCOM is aware of the offer and U.S. Air Forces Europe is actively exploring cooperative ventures with the State Minister Karl-Peter Bruch of Rheinland-Pfalz (R–P). The State Minister has proposed a plan for cooperation but we cannot fully evaluate it until the German Government establishes the details and specific timelines of their plan. R–P officials are concerned the local economy cannot satisfy the combined housing demand of both U.S. military and local German families, and this must be considered in their plan. They view their housing construction plans and incentives as a necessary supplement to the U.S. family housing construction program on base, not as a substitute. Recent dialogue with R–P officials suggests their initiative may gain momentum and eventually help support the Kaiserslautern Military Community's overall housing needs. We continue to aggressively work with Minister Bruch's staff to coordinate our efforts that provide a satisfactory housing solution for our military families and will keep you apprised of developments as they occur.

MILITARY CONSTRUCTION (MILCON) INVESTMENT IN ROMANIA

13. Senator WARNER. General Jones, the fiscal year 2007 budget includes a request for the first phase of military construction funds to support the rotational basing of U.S. forces in Romania. The United States recently signed a base support agreement with the Romanian government to allow access to their military bases and training ranges, and is currently negotiating with the Government of Bulgaria for the same purpose. How may U.S. personnel do you envision will maintain in Romania and Bulgaria?

General JONES. U.S. Army Europe is spearheading the establishment of the Eastern European Task Force (EETAF) split-based between Romania and Bulgaria. EETAF command and control will be a Seventh Army command post at Mihail Kogalniceanu (MK) Airbase, Constanta, Romania, manned by approximately 100 personnel. Rotational Brigade sized units deploying to EETAF will be "split-based" in Novo Selo, Bulgaria (up to 2,500 servicemembers) and Babadag, Romania (up to 1,700 servicemembers). Also at MK, U.S. Air Forces Europe is looking to establish a small support unit (20–60 airmen) to support fighter aircraft training deployments to the region. The daily presence (rotational brigade and EETAF Command Post) between Romania and Bulgaria locations would range from 1,500–4,000 personnel based on the types and size of units participating.

In addition, Special Operations Forces (SOF) in Romania and Bulgaria will be limited to short duration deployments to conduct training. Approximate personnel

during these deployments will range from 10 to 300 personnel, depending on the type of training event.

14. Senator WARNER. General Jones, what type of training will these forces undertake?

General JONES. Training will center on theater security cooperation events that support the global war on terrorism—i.e., measures which we believe deliver very high value for a relatively small investment. These would include:

- EUCOM or Joint Staff-directed exercises;
- enhance interoperability and contribute to future coalitions;
- combined/partnership training with host nation or other NATO/regional partner armies; and
- individual soldier or unit level collective training opportunities in host nations.

In addition, time will be available for bilateral training with host nation forces to enhance their ability to support the global war on terrorism, and expose them—and particularly their noncommissioned officers—to U.S. Army soldiers.

Units will also have time to conduct unit training which is key to maintaining individual and collective proficiency.

15. Senator WARNER. General Jones, will the training syllabus be unique to these two countries?

General JONES. All land and air forces that deploy to Romania and Bulgaria will be fully trained to conduct operations throughout the spectrum of warfare. This allows U.S. forces to focus on improving NATO and eastern European partner nations capability during training evolutions. Training objectives for each country will require a tailored approach to bring units at different proficiency levels operating with equipment that may not yet meet NATO Standardization Agreement interoperability.

Operational land and air forces that will deploy for up to 6-month deployments to FOS in Romania and Bulgaria will conduct interoperability training exercises on a bilateral and multilateral basis. U.S. objectives are to develop and enhance military capability of former eastern bloc nations making these nations more interoperable with NATO. The overarching goal is to anchor the eastern expansion of the NATO Alliance through FOSs and training ranges in Romania and Bulgaria and promote cooperative security relationships that will advance our national interests.

16. Senator WARNER. General Jones, will the bases in these two countries serve strictly as training locations or power projection platforms?

General JONES. The EETAF will be a credible expeditionary land force that will serve as a powerful instrument for building military-to-military relationships and partnership capabilities that will enhance U.S. interests in the Black Sea Region. The move to Romania and Bulgaria will be beneficial in helping these former eastern bloc countries transform their militaries into vital assets for inclusion into NATO missions. Romania and Bulgaria offer greatly improved training opportunities over legacy bases in Central Europe, providing access to ranges without encroachment issues.

Land and air forces will deploy from the U.S. and Europe to FOS installations in Romania and Bulgaria for multi-month deployments. The DOD and EUCOM envision deployments will be up to 6 months in duration. Along with training at ranges in Romania, Bulgaria, and Germany, EETAF forces will deploy for shorter periods from the EETAF FOSs to training facilities in Eastern Europe and Southwest Asia to conduct NATO, bilateral, and multi-national training. In the case of contingencies that require deployment of the forces deployed to Bulgaria and Romania, the EETAF FOS installations will serve as a staging and departure base to the region of conflict. U.S. presence in EETAF will provide strategic reassurance of an enduring U.S. commitment to Central and Eastern Europe.

17. Senator WARNER. General Jones, has EUCOM developed base master plans for each location in these countries that can provide this committee an idea of the total expected investment in facilities and infrastructure required to support U.S. operations?

General JONES. The fiscal year 2007 EUCOM Master Plan contains primary facilities at FOS in Romania and Bulgaria. The President's fiscal year 2007 budget request includes facility costs of $34.8 million in military construction to achieve initial operating capability for 1,000 servicemembers in Babadag, Romania. The Phase II funding will support an additional 700 servicemembers in Babadag, Romania and

will achieve Full Operating Capability for 2,500 soldiers in Bulgaria and 100 servicemembers at MK Airbase, Romania.

The facilities at FOSs in Romania and Bulgaria will include container or prefabricated/panel type structures to serve as expeditionary-type billets, operational, and maintenance facilities. These structures will be simple, lightweight, and modular to support the requirements of rotational training units.

The one-time costs associated with establishing the FOSs for EETAF are as follows:

[In millions of dollars]

	Fiscal Year 2007 (Phase I)	Fiscal Years 2008–2013 (Phase II)
MILCON	34.8	73.3
OMA	6.1	11.9
OPA	6.9	15.5
Total (one-time)	47.8	100.7

The facility support operations costs associated with the FOSs for EETAF are as follows:

[In millions of dollars]

	Fiscal Year 2007	Future Years
OMA	5.0	12.4 million per year

The operations costs include only those fixed costs to operate and maintain the facilities regardless of troop presence.

Other variable costs, such as transportation, sustainment of soldiers and equipment, and training support, will be incurred when units rotate through EETAF. These costs will vary according to the type and size of the unit, length of their rotation, and location of training or Theater Security Cooperation engagements. In addition, the availability of units will be dependent on other global commitments. The initial rotations will be at the combined arms task force level (BCT-) for "proof of principal" and subsequent rotations for planning purposes will be full brigades. The following are notional costs for a 6-month rotation for a full brigade:

[In millions of dollars]

25.7	Transportation of a brigade from Continental United States (CONUS) (fiscal year 2008 at the earliest).
7.3	Transportation of brigade to/from exercises.
9.8	Sustainment (e.g., sup services personnel, AT/FP, food, laundry).
0.8	Training Support from Joint Multi-National Training Center.
3.9	Facility Support including utilities and guards.
