Adversaries and competitors worldwide leverage cyber vulnerabilities to hold our capacity and capabilities at risk. This malign behavior requires a robust response, and we will prioritize building cyber resilience and strengthening our capacity to withstand, fight through, and recover quickly from disruption. To do this, the Department must "bake in" cybersecurity to new capabilities and platforms we procure while "bolting on" cybersecurity capabilities to legacy platforms. This strategy also requires training our sailors and marines to operate in cyber contested environments.

In addition to building cyber resilience, the Department is advancing the technology, tactics, and readiness of our military cyberspace operations forces. One example of this force development is the Navy's forthcoming establishment of a specific cyber warfare officer designator and enlisted rating. The Department is similarly committed to improving the readiness of the cyber forces we present to U.S. Cyber Command, and we will expand the integration of non-kinetic effects afloat.

Marine Corps Information Command, which operates under the Marine Forces Command, achieved initial operational capacity in January 2023. Marine Corps Information Command provides critical linkages at the operational level as well as task-organized elements to support campaign objectives by providing decisionmakers the ability to leverage authorities and approvals across the cyber, space, influence, and intelligence functions, generating multi-domain advantages.

Our information space requires new approaches to training, such as the Persistent Cyber Training Environment, which integrates capabilities to continuously evolve cyber training and exercises. This joint capability has expanded access over the last year, enabling force readiness and driving decisions on the tactical, operational, and strategic levels.

Munitions Procurement

President's Budget 2024 takes full advantage of new authorities granted by Congress in the fiscal year 2023 National Defense Authorization Act that provided a streamlined multiyear procurement process for critical munitions. Not only will this authority allow the Department to replenish munitions stockpiles which are reduced in support of the war in Ukraine, it will also support efforts to strengthen the industrial base capacity to develop, produce, and field munitions. We are requesting funding for the procurement of 34 Block V Tactical Tomahawk missiles for the Marine Corps, as well as several hundred Tactical Tomahawk recertification kits, navigation and communications kits, and Maritime Strike Tomahawk kits for the Navy. Additionally, President's Budget 2024 supports the awarding of multi-year procurement contracts for critical munitions, including Standard Missile (SM–6), the Naval Strike Missile, and Long Range Anti-Ship Missile (LRASM). Overall, funding for these and other weapons increased by $2 billion in this budget—a growth of nearly 50 percent compared to last year.

Organic Industrial Base

The DON's organic industrial base is vital to our national security, and the DON is committed to ongoing depot modernization and optimization efforts. A modernized and ready organic industrial base generates Fleet readiness and strengthens our Nation's security.

President's Budget 2024 continues the investment in our industrial base to further efforts to train, recruit, and retain the workforce, expand capacity and enable the development and integration of new technologies. Deliberate investments in the planning and design of facilities and optimization within the depots, as well as contract execution in dry-dock repair and refurbishment are focus areas of the budget cycle.

President's Budget 2024 reflects the three named efforts within the Organic Industrial Base where these investments highlight the commitment to the Nation's security with regard to maintaining our wartime assets. First, the Shipyard Infrastructure Optimization Program consists of four public shipyards located in Portsmouth, VA; Kittery, ME; Bremerton, WA; and Pearl Harbor, HI. President's Budget 2024 funding totals $2.7 billion across multiple accounts. Replacing Dry Dock 3 at Pearl Harbor Naval Shipyard is a critical enabler of increased naval capability. This project will construct a graving dock in order to support Pearl Harbor Naval Shipyard's ability to continue serving the Navy decades into the future by maintaining and modernizing the Pacific Fleet's nuclear-powered submarines. Second, the Fleet Readiness Center Infrastructure Optimization Program consists of three Fleet Readiness Centers located in NAS North Island San Diego, CA; NAS Jacksonville, FL; MCAS Cherry Point, NC. And finally, the Marine Corps Organic Industrial Base consists of two Marine Corps production plants located in Albany, GA and Barstow, CA.

The Presidential Budget Request funds public shipyard depot maintenance to 100 percent, and increases the overall workforce from 37,089 to 37,234 full-time employees, adding an additional 145 full-time employees for the Pearl Harbor Naval Shipyard and Intermediate Maintenance Facility Guam Detachment. President's Budget 2024 also aligns funding to improve supply chain capability and materiel availability in order to make proper budget and schedule decisions for items such as long-lead-time materiel.

Aviation Investments

The F/A–18E/F Super Hornet will be the numerically predominant aircraft in the carrier air wing into the 2030's. President's Budget 2024 funds service-life modification initiatives and capability upgrades that enhance our strike-fighter inventory by maintaining the tactical relevance of the F/A–18 E/F and minimizing the Navy's strike-fighter shortfall. The Presidential budget request also funds delivery and support of survivable, reliable, and resilient airborne command, control, and communications through the installation of critical modifications to the existing E–6B fleet, along with platform recapitalization to procure a follow-on TACAMO capability.

We will prioritize the continued development and production of unmanned aircraft systems to support current Fleet intelligence, surveillance, and reconnaissance requirements and to support future unmanned aircraft system integration into the carrier air wing. The budget funds two MQ–4 Tritons, three MQ–25 Stingrays, and five MQ–9A Reapers for the Marine Corps. President's Budget 2024 requests funding for 35 F–35s: 19 F–35C variants for the Navy and Marine Corps and 16 F–35B variants for the Marine Corps. These aircraft will be the backbone of DON air combat superiority for decades to come, complementing the carrier strike group with a dominant, multirole, fifth-generation aircraft capable of projecting U.S. power and deterring potential adversaries.

President's Budget 2024 also requests funding for the procurement of 15 CH–53K King Stallions. These production assets will be part of a 2-year block buy contract authorized by Congress in the Fiscal Year 2023 NDAA. The program recently achieved a Full Rate Production decision.

Climate Readiness

For the Navy and Marine Corps, a changing climate means a contested operational environment. Climate change brings extreme weather events, more humanitarian crises, and heightened friction around essential natural resources. A more volatile world increases demands on our Navy and Marine Corps forces while simultaneously impacting the capacity to respond to those demands. Improving the energy performance of our platforms and weapons systems is essential to providing a combat-effective force in contested operating environments. To do this, the Department is working to establish rigorous, energy-informed requirements for new capabilities that are then sustained throughout our acquisition decisionmaking.

Last year, the DON published *Climate Action 2030* to maintain the superiority of our naval forces through resilience and reducing the national security threat of climate change. In support of this initiative, last December, the Naval Postgraduate School signed an education partnership agreement with Stanford University's Doerr School of Sustainability. In bringing together these two globally recognized institu-

tions, it is our hope to realize solutions our Navy and our Nation can employ to mitigate and reduce effects of a changing climate.

Jointly with our partners in Congress, we are constantly seeking innovative solutions, leveraging science, partnering with industry and other government entities, and investing responsibly to ensure mission readiness. Climate readiness is a tactical, operational, and strategic enabler, and we must ensure our naval forces can operate and succeed in any environment.

Building a Culture of Warfighting Excellence

Building the Future Force

The civilian workforce is comprised of talented individuals from all walks of life whose experiences and skillsets are critical not just to our economic success, but to the overall security of our Nation. Today's Navy and Marine Corps team is a forward-deployed highly sophisticated network that is one of the most technologically advanced networks ever conceived and which operates either in concert with other combat units or fully self-sustained, and able to dominate in the air, sea and undersea.

As we become a more technologically advanced force, top civilian talent is increasingly critical to maintaining America's might upon the sea. Technical talent is needed for the wide array of challenges the DON faces. More than half of the civilian workforce are top-tier scientists, logisticians, engineers, mathematicians, technology specialists, or cyber experts; almost a quarter of the workforce are artisans performing critical work at the shipyards, depots, civilian mariners, or safeguarding our facilities and activities. As one indication of the quality and expertise of our workforce, the DON was issued 225 patents (more than the Air Force and Army combined) in fiscal year 2022 and holds more than 58 percent of all active DOD patents (4,129).

Our civilian workforce ensures a 24/7 rapid response to warfighter requirements, develops and manufactures critical systems, repairs and maintains our ships and aircraft and develops game-changing technology and equipment. The civilian workforce is present in 55 countries, supporting sailors and marines around the world.

We are in a competition for talent with many other employment sectors, which is driving us to re-evaluate how we manage the careers of our sailors, marines, and civilians, from initial recruitment to retirement. To maintain a Fleet that is prepared to defend our Nation from all potential adversaries, we must continue to enhance our ability to attract, develop, and retain a workforce equally as talented and diverse as the American people they serve. This includes maintaining an appropriate number of senior executive leadership (general officer, flag officer, and SES) billets to ensure optimal operational readiness.

The Marine Corps continues to make great strides toward retaining more experienced marines under the Service's Talent Management program. Leveraging authorities previously enabled by Congress, the Service enacted nine initiatives in 2022, from which they will expand and accelerate in 2023 including Early Reenlistment Authority, SNCO Promotion Board Realignment, Recruiting Station Commanding Officer Selection Boards, the Special Duty Assignment volunteer program, MarineView 360-degree leadership reviews, officer promotion opt-outs, Digital Boardroom 2.0, Separate Competitive Promotion Categories, and the Career Intermission Program.

As a result of many of these programs, the Marine Corps met or exceeded its first and subsequent term alignment program goals for the first time in 13 years and retained a statistically higher-quality group of marines. The Service is examining numerous other evolutionary initiatives and remains committed to evolving the talent management system with the primary goal of improving warfighting readiness in an increasingly complex world.

As another example of a positive development in force development, in August 2022, Naval Special Warfare Command (NSW) formally established its Assessment Command (NSWAC) to transform how its units compete for talent by building a sustainable architecture for diversified outreach. It conducted more rigorous pre-assessments for character, cognitive, and leadership attributes, and strengthened NSW's culture of continuous assessment. NSWAC is taking a whole-person approach to identify, prepare, and mentor qualified candidates from diverse backgrounds to complete training programs and pursue a successful career in NSW. As this new command was being developed, NSW conducted 60 outreach events with more than half specifically focused on increasing force diversity and inclusivity with underrepresented demographics. These efforts will enhance the way NSW continuously assesses and selects its incoming officers and enlisted personnel.

Educational Initiatives

Last year I talked about the Targeted Re-entry Program, which empowers commanding officers to identify and nominate their sailors for an accelerated return to Active Duty. This year we want to highlight our increased partnership with the Department of Education, trade schools, and colleges and universities to develop and recruit the military and civilian workforce we need.

As we become a more technologically advanced force, education will be a crucial warfighting enabler to maintaining America's might upon the sea. Our naval education enterprise is working to develop leaders with warfighting knowledge, intellectual dynamism, and creativity to maintain a strategic advantage against competitors and global adversaries. Through our naval university system, we are creating a continuum of learning that develops such leaders to serve at every level and equips them with skills to maintain and operate increasingly complex systems in an ever-changing warfighting environment.

President's Budget 2024 requests a $480.2 million investment to continue supporting and growing our naval education institutions. We maintain several world-class institutions, including the United States Naval Academy, Naval Postgraduate School, Naval War College, and Marine Corps University. This requested funding will also sustain our efforts to expand our enlisted personnel's access to the Naval Community College to support their education goals. We are deeply committed to formalizing a culture of lifelong learning for both our enlisted and officer communities.

Resiliency & Readiness

Mental health concerns and rising suicide rates are national-level issues to which the Services have not been immune. We are well aware of the inextricable link between mental health, resiliency, and the readiness of our force. To that end, Admiral Gilday, General Berger, and I are committed to supporting and ensuring the mental health, safety, and well-being of all sailors, marines, and their families, and the Department's civilian workforce.

We must do everything we can to foster the well-being of our people and prevent suicide. No one solution applies to every sailor, marine, family member, or civilian. We are constantly evaluating how we do business when it comes to providing services and resources to ensure they are meeting needs. Military service entails sacrifice not just for the servicemembers, but for their families as well, and we want to make sure family members feel seen, heard, and taken care of regardless of whether their sailor or marine is home, stationed overseas, or deployed. The DON offers multiple mental-health and counseling resources to all servicemembers at all levels. As we continue to encourage positive help-seeking behaviors and combat the stigma around mental healthcare among our marines and sailors, President's Budget 2024 requests $87 million for mental health support, an increase of $13.1 million from last year. This additional funding will provide for increases to our Sailor Assistance and Intercept for Life (SAIL) program, which provides rapid assistance to those in crisis, as well as the addition of two Warrior Toughness Teams for each coast.

Given the complexity of this challenge, our Office of Force Resiliency has taken an integrated approach to enhance holistic, data-driven suicide-prevention strategies which recognize the benefits of addressing common risk and protective factors to promote healthy cultures and climates. As such, our suicide prevention efforts draw from and harmonize with the Defense Strategy for Suicide Prevention and the White House Strategy to Reduce Military and Veteran Suicide. We are taking action on the recently released report from the Suicide Prevention and Response Independent Review Committee, and will work within DOD's coordination framework to implement key recommendations that will strengthen our prevention effort.

The Department of the Navy is laser-focused on countering sexual assault and sexual harassment at every level. In addition to the toll on victims, sexual assault and sexual harassment directly impact unit cohesion and ultimately undercuts our readiness. We must create environments that foster respect, maintain the dignity of military service, and increase our warfighting readiness. Sexual assault and sexual harassment are a persistent challenge requiring a multi-pronged approach that leverages a wide range of initiatives, not only to address these issues, but also to prevent them before they occur.

I directed the establishment of an Implementation Advisory Panel for the Department of the Navy last spring, bringing leaders to the table to pinpoint strategies for the Navy and Marine Corps to implement the recommendations of the Independent Review Commission on Sexual Assault in the Military, as approved by the Secretary of Defense. Through the Implementation Advisory Panel, the DON has already made significant strides to implement the Independent Review Commission's

recommendations, focusing on the Committee's highest-priority efforts first. We fully recognize that we need to continue to confront and prevent these destructive behaviors. We are investing significant resources to fuel the needed changes and we have made substantial progress in standing up a dedicated prevention workforce to prevent harmful behaviors, professionalizing the sexual assault response workforce to better provide victim care and support, and establishing Offices of Special Trial Counsel.

Additionally, our Office of Force Resiliency actively synchronizes the DON's sexual assault awareness and training, prevention, victim response, and accountability initiatives with the DOD Office of Force Resiliency. Sexual assault and harassment are more than just criminal matters. They undermine the trust and commitment that are foundational to our forces and they erode faith in our leaders, institutions, shipmates, and marines. This is a leadership issue, and you have my commitment to clearly and actively support these efforts and to demonstrate that sexual assault and sexual harassment will not be tolerated in any way, shape, or form.

Taking Care of Our People

We continue to make great strides in providing quality-of-life services and improving housing options available to our sailors, marines, and their families. In President's Budget 2024, we are asking you to support our DON families with $622 million aimed at sustaining our child and youth services. Additionally, we continue our investments in housing for both accompanied and unaccompanied personnel. Notably, our request includes $131.8 million for the construction of a Bachelor's Enlisted Quarters and Support Facility at Marine Corps Barracks, here in Washington, DC. We are also requesting funding to support housing renovations at multiple bases, to include Naval Base San Diego, Naval Air Station Lemoore, Naval Air Station Oceana, and Naval Base Ventura County. These investments will yield dividends for years to come as we continue to offer safe, affordable, and convenient housing to those who defend our Nation.

Strengthening Strategic Partnerships

Community Partnerships

The DON is leveraging the Department of Defense Readiness and Environmental Protection Integration Program (REPI) to partner with local governments and nongovernmental organizations to advance mission readiness through mutually beneficial, sustainable communities near our installations and ranges. The recently announced 2023 REPI Challenge includes several projects that support DON installations, to include: invasive species management and reef preservation near Pacific Missile Range Facility Barking Sands and Marine Corps Base Hawaii; habitat improvement and species management at Marine Corps Base Camp Pendleton, Naval Base Coronado, Naval Base Ventura County Point Mugu, and Naval Weapons Station Seal Beach in California; and shoreline stabilization near Marine Corps Base Quantico, Virginia.

Outside our fence lines, the communities that host our Navy and Marine Corps installations continue to utilize the Defense Community Infrastructure Pilot (DCIP) program to fund community infrastructure projects that benefit local installations, enable the DON's warfighting mission, and provide support to our servicemembers and their families. Using 2022 DCIP grant funds, Onslow County in North Carolina will upgrade a runway at a local airport to benefit travel in southeastern North Carolina, including Marine Corps Base Camp Lejeune, Marine Corps Air Station New River, and Marine Corps Air Station Cherry Point. In Florida, a new water main will improve capacity and pressure for not only for Naval Station Mayport, but also the surrounding community where many of our sailors, marines, civilians and their families live. Finally, the city of Newport News in Virginia will undertake a $15 million project at the Harwood's Mill Reservoir Dam to increase flood protection for the entire community and ensure a reliable water supply to Naval Weapons Station Yorktown.

We continue to work with our partners across the Federal Government, the State of Hawaii, and Congress to close the Red Hill Bulk Fuel Storage Facility and remediate the effects of the 2021 spill. We are committed to doing what it takes to address the concerns of servicemembers, their families, and the people of Hawaii. As I've said before, we rebuild trust 1 day at a time, one action at a time. Aging infrastructure such as that at Red Hill is a challenge we face at the national level, and we appreciate Congress's support and partnership as we increase our focus on revitalizing the shore infrastructure our Navy and Marines Corps rely upon.

Joint Force and Government

The Department of the Navy is committed to providing the right mix of capabilities and remaining dominant against threats defined in the National Defense Strategy. Across both Services and throughout the DON, President's Budget 2024 will invest in capabilities for maritime dominance.

Successful implementation of the concepts within the Navigation Plan and Force Design 2030 will be pursued through a unified, integrated effort at every echelon. But our fully integrated naval force is only part of the formidable Joint Force team that stands united in the protection of the American people. Collaboration between military departments and with the interagency is critical to the defense of the United States.

We are constantly seeking opportunities to maximize the combined efficiency and effectiveness of our Navy and Marine Corps in cooperation with the Army, Air Force, and Space Force. For example, we continue to work with our fellow Services on critical advanced research programs including hypersonic weapons. And worldwide, the Joint Strike Fighter program is yielding unprecedented reach and agility for the entire Joint Force.

The Department of the Navy, as a forward-deployed force, is a key contributor to Integrated Deterrence as our daily interactions with allies, partners, and potential adversaries impact diplomatic, economic, and intelligence equities in addition to the obvious military impacts.

Our most significant contribution as a military department is America's naval forces. The combat-credible forces of the Marine Corps and the Navy are unique as America's most timely, flexible, and forward-deployed force across the full spectrum of challenges—from naval diplomacy to strategic deterrence, resource competition, crisis, and conflict. Our allies and partners as well as our potential adversaries see these forces conducting forward operations and training, alongside partner nations. This constant forward presence engenders trust through episodic engagements as well as urgent response in the event of a national emergency.

The iconic presence of marines in our embassies is just one highly visible way the Department of the Navy supports the State Department and whole-of-government activities. Behind the scenes, military attachés strengthen our bonds with international partners as they facilitate and coordinate activities, from small-scale personnel exchanges to large-scale multi-lateral military exercises.

Allies and Partners

Over the past 18 months, the Department of the Navy has been fully committed to the multi-phased, commitments-based process, known as the Australia—United Kingdom—United States Partnership (AUKUS) to facilitate the development of the optimal pathway for Australia's acquisition of conventionally armed nuclear-powered submarines, which will contribute to maintaining peace and stability in the Indo-Pacific region by enhancing deterrence. As part of this initiative, Australian sailors will embed on United States SSNs and the United States Navy will increase SSN port visits to Australia beginning this year. Additionally, as early as 2027, the Navy plans to rotate up to four U.S. *Virginia*-class submarines to HMAS Stirling near Perth, an initiative we are calling "Submarine Rotational Force—West (SRF-W; "Surf West"). Beginning in the early 2030's, pending statutory authority, we intend to sell Australia at least three *Virginia*-class SSNs, and potentially an additional two more if needed. The AUKUS partners will begin delivering the trilaterally developed SSN-AUKUS in the late 2030's. The cost sharing through the different phases of AUKUS will be fair, transparent, and proportional—with the United States and Australia making investments to upgrade the United States submarine industrial base. We will continue to lead and advance this effort as directed by the President and Secretary of Defense.

As the world has seen over the last year with Russia's unprovoked and indefensible invasion of Ukraine, and the strengthened resolve and solidarity of NATO and like-minded nations around the world, the value of allies and partners cannot be overstated; the global landscape offers a stark contrast between those countries with strong international partnerships and those who are isolated due to their antithetical stance vis-á-vis the rules-based international order. Globally, we have strengthened our relationships with like-minded maritime nations, deepening interoperability in order to enable mutual action to address shared challenges.

As we emerged from the COVID pandemic and returned to our historic operating pace, we have looked for ways to expand cooperative deployments and operations around the world. Our recent growth in cooperative efforts with our partners has been focused on increasing interoperability and moving toward interchangeability with allied and partner maritime forces. In every international engagement, I have consistently heard the same message from our allies and partners: "We want to do

more with the U.S. Navy and Marine Corps"—a signal that we are the partner of choice across the globe.

In January 2023, the United States and Japan reaffirmed the necessity to optimize our force posture and enhance response capability through a readjustment in the laydown of United States Forces in Japan. This will provide for stationing of the 12th Marine Littoral Regiment in Japan by 2025, and with it, advanced intelligence, surveillance, and reconnaissance capabilities as well as anti-ship and transportation capabilities.

In a demonstration of the capabilities and resolve of NATO, the USS *George H.W. Bush* Carrier Strike Group recently completed Exercise Neptune Strike 22.2., operating under the command of Striking Forces NATO (STRIKFORNATO), and flexing the capabilities of all-domain warfare at a critical time.

During the same period, we employed the USS *Gerald R. Ford* Carrier Strike Group for the first time with our NATO allies during Exercise Silent Wolverine. The exercise was designed to test the carrier's capabilities through integrated high-end naval warfare scenarios, leading to its inaugural deployment this year. The USS *Kearsarge* Amphibious Ready Group and 22 Marine Expeditionary Unit provided persistent presence in the Baltic Sea. This demonstration of capability exemplifies the unparalleled power of alliance and partnerships.

Last year, I personally witnessed the power of partnership during RIMPAC 2022, when forces from 26 nations from nearly every continent converged at Pearl Harbor. We came together as capable, adaptive partners, and declared our commitment to work together, to grow our collective capability, and to nurture and enhance relationships that are critical to ensuring the safety of the sea lanes and the security of the world's interconnected oceans.

Strengthening maritime dominance requires us to rapidly field the concepts and capabilities that create advantage relative to our pacing threat with the sustainment necessary to generate integrated, all-domain naval power.

Alongside our Filipino allies, marines from 3d Marine Littoral Regiment completed the largest iteration of Exercise Balikatan last April. This was the initial operational employment of 3d Marine Littoral Regiment, and they used it to flex their capability to deploy from Hawaii and carry out amphibious landings in northern Luzon, ultimately enabling combined coastal defense training. This exercise not only strengthened the bond with our Filipino partners but tested small, distributed, and austere encampments, resulting in refinements of the concepts integral to the Marine Littoral Regiment.

This month, marines and sailors with the 31st Marine Expeditionary Unit completed the first Japan-based Iron Fist exercise, which increased interoperability and strengthened relationships between the DON and the Japan Self-Defense Forces, and demonstrated the commitment of United States and Japan forces to maintain a free and open Indo-Pacific.

Last November I had the chance to visit my Indian counterparts in an effort to drive forward high-end navy-to-navy cooperation to address challenges in the undersea warfare domain. While we continue to advance thinking on concepts and technology, we are furthering our defense information sharing and exercising in ways that are relevant to our shared goals, as exemplified by the USS *Ronald Reagan* Carrier Strike Group's participation in Exercise Malabar with India, Australia, and Japan, and which included high-end tactical anti-submarine warfare.

While in Brazil, I had the privilege of presiding over the opening ceremony of the longest-running maritime exercise, UNITAS, and took the opportunity to spotlight the importance of partnerships in our own hemisphere and the Atlantic basin. It was a particular honor to meet with the Cameroonian Head of Navy and visit his two ships, which had conducted their first-ever trans-Atlantic voyage in order to participate in the exercise. Their pride, determination, and dedication to being a part of this U.S.-led multinational exercise were evident as they celebrated this exceptional achievement. Strengthening our relationships across Africa and the Western Hemisphere is an important aspect of furthering the National Defense Strategy as the PRC endeavors to extend its influence over our neighbors and African partners.

One of the most significant detriments to local economies is illegal, unreported, and unregulated (IUU) fishing. I have been keenly interested in this complex challenge, and we are working with our partners across the globe to increase maritime domain awareness, information sharing, and information operations to counter this scourge. Massive fishing fleets from countries such as the PRC prey on countries with weak capabilities to protect their exclusive economic zones. Closely linked to the IUU fishing problem is a country's ability to effectively conduct maritime domain awareness.

As the Navy and Marine Corps team works tirelessly to ensure our forward presence, we are in an intense global competition with the PRC for strategic access and influence. That competition is particularly concentrated in the Indo-Pacific. To prevail, we will continue to innovate, leveraging our naval diplomacy to maximum advantage. Improving ports and enabling enhanced maritime patrolling capacity from modern airfields serves U.S. security interests as well as island nations' interests.

Combined, these critical enablers of U.S. influence, posture, and readiness in the Indo-Pacific are also the core components of the DOD's ability to deliver humanitarian assistance and disaster relief in the region as the catastrophic consequences of climate change accelerate. A resilient, distributed posture to meet our operational needs and outcompeting the PRC for strategic access and influence in the Indo-Pacific go hand in hand.

President's Budget 2024 will strengthen global alliances and partnerships with funding for joint operations and exercises around the world, including CARAT, Malabar, and Balikatan in the Indo-Pacific; NATO operations in the Mediterranean; and exercises like UNITAS in our own hemisphere.

We will continue to foster opportunities for sailors, marines, and DON civilians to train, learn, and operate side-by side with their counterparts in partner and allied forces. We will work on operationally integrating with our allies and partners through shared warfighting concepts, continually campaigning forward to deter adversaries and protect the rules-based international order.

Our sailors, marines and civilians are warrior-diplomats for our Nation. Their professionalism and dedication promote the connections that strengthen our collective security and cultivate shared ideals that send the message that the United States is a friend worth having.

CLOSING

The United States Navy and Marine Corps Team is on the front lines of defending the free and open rules-based international order against those who would cast us into a new dark age defined by the principle of "might makes right."

I have a sacred obligation to Congress and to the American people to ensure that our Navy and Marine Corps are always prepared to defend those liberties, those non-negotiable American values wherever the Nation's interests may be threatened. The Navy and Marine Corps remain, after all, this Nation's single most versatile instrument of national power.

For this, I am grateful for your sustained, bipartisan support of a strong Navy and Marine Corps.

I look forward to working with old friends and new partners in Congress to advance the Nation's security with a Navy and Marine Corps supremely able, first and foremost, to deter all potential adversaries, and if called upon to fight and win our Nation's wars.

Chairman REED. Thank you, Mr. Secretary.

Admiral Gilday, please?

STATEMENT OF ADMIRAL MICHAEL M. GILDAY, USN, CHIEF OF NAVAL OPERATIONS

Admiral GILDAY. Chairman Reed, Ranking Member Wicker, distinguished Members of the Committee——

Chairman REED. Could you bring that closer to you please, sir?

Admiral GILDAY. For the Chairman and Ranking Member, I appreciate your thanks for our service this morning, and my wife has joined me this morning. I would like to thank her as well for her support. I appreciate the opportunity to appear with both the Secretary of the Navy Del Toro and General Berger this morning.

For more than three quarters of a century the United States Navy has been an anchor of world stability, deterring war, upholding international law, and ensuring access to the seas. Today, our Navy's role has never been more expansive or more consequential.

This past year the Navy and Marine Corps team executed more than 22,000 steaming miles and nearly 1 million flying hours. We participated in, roughly, 100 exercises with allies and partners around the globe including the Arctic.

At this moment we have about a hundred ships at sea, a third of the force, reassuring America's allies and partners that we stand the watch alongside them and remind the world that we seek to preserve peace but we are prepared for any fight.

We are America's away team, constantly present, in contact with allies, partners, and potential adversaries every single day. Operating forward, your naval forces defend the rules-based international order. Our Navy flies, it operates, and it steams wherever international law allows so that others can, too.

The United States has always been a maritime nation. To preserve our security and our prosperity America needs a combat credible naval force to protect our interests in peace and to prevail in war, not just today but for the long run.

Our fiscal year 2024 budget request remains consistent with the Navy's enduring priorities. As the Secretary stated, we are prioritizing readiness first with an emphasis on the sailors who empower everything that we do, ensuring that we are always combat ready.

Next, we are modernizing our current fleet, 70 percent of which we will have in the water a decade from now, and third, we are continuing to build our capacity, ensuring we have relevant, lethal platforms to achieve warfighting advantage with a hybrid fleet of manned and unmanned platforms on, above, and below the seas.

Our budget request reflects the Navy's commitment to deliver, to deploy, and to maintain that fleet. It fully funds the *Columbia*-class submarine, ensuring the on time delivery of the most survivable leg of the Nation's strategic deterrent triad.

It keeps our fleet ready to fight tonight. Dedicating the resources necessary to train and educate resilient sailors that can out think, that can out decide, and that can outfight any potential adversary.

It funds private and public sector ship maintenance to 100 percent. Increasing the capacity and retaining highly skilled labor to get our ships back to sea faster with full magazines and spare parts in our storeroom to be prepared for any contingency.

It invests in modernizing our fleet. Procuring weapons with range and speed along with integrated systems to improve fleet survivability, and a resilient cyber secure network infrastructure. It invests in capable capacity, building toward a larger distributed hybrid fleet. Fielding a ready fleet today while modernizing for the future.

Our competitors are investing heavily in warfighting capabilities of their own and the oceans we are operating in are growing more lethal and more contested every single day. Failing to modernize and meet those threats would erode America's maritime superiority at a time when command of the seas will determine the balance of power for the rest of this century.

This means we can no longer afford to maintain ships designed for a bygone era, especially at the expense of readiness and modernization or at the expense of buying new ships most relevant to today's fight.

America cannot afford to field a hollow force. We have been there before and we have seen the tragic results. It is a mistake that we must never repeat. Ships, submarines, and aircraft are no doubt expensive instruments of national power as are the costs of main-

taining them. But history shows that without a powerful navy the price tag could be much higher.

Thank you again for inviting me to testify today. I look forward to answering your questions.

[The prepared statement of Admiral Gilday follows:]

PREPARED STATEMENT BY ADMIRAL MICHAEL M. GILDAY

Chairman Reed, Ranking Member Wicker, and distinguished Members of the Committee, thank you for the opportunity to testify on the posture of the United States Navy. On behalf of every American sailor, Navy civilian, and their families, thank you for your continued leadership and support.

With increased funding in the 2023 Defense Appropriations Act, Congress has provided the means for the U.S. Navy to deliver the fleet our Nation needs in support of the 2022 National Defense Strategy. This investment will help us turn the corner on readiness to meet strategic competitors in peace and war, ensuring our ability to maintain free and open oceans and the international rules-based order. Moreover, consistent, steady funding is necessary to provide a clear signal to our industry partners, especially our shipbuilders, on the way ahead. This statement will detail where we are—and what we must do—to ensure our maritime dominance deep into this century.

Flanked by two oceans, the United States has always been a maritime nation. The seas remain the lifeblood of our economy, our national security, and, consequentially, our way of life. Our livelihood depends upon free, open, and secure maritime trade. A strong naval force is essential to U.S. national security and long-term economic health. The United States Navy has and will continue to serve as our Nation's primary instrument of sea control and power projection, ensuring our global maritime access during times of peace and war.

From our humble beginnings with six wooden frigates, the composition of the U.S. Navy has steadily evolved to defend U.S. interests around the world and ensure American security. For the past 247 years, the U.S. Navy has played a critical part in defending and advancing national policy. For the past 77 years, we have been an anchor of world stability by deterring war, upholding international law, and assuring access to the global maritime domain for our Nation, our Allies, and our partners.

Today, our Navy's role has never been more expansive or consequential. We now face challengers who are attempting to rewrite the rules-based international order and reshape the world to meet their autocratic desires. The People's Republic of China (PRC) has aggressively modernized its militaries and fielded offensive warfighting capabilities at unprecedented speed and scale across all domains. These developments are not solely to support regional designs. They are for global ambitions. At the same time, Russia's unprovoked, full-scale invasion of Ukraine has triggered the largest conflict in Europe since the Second World War—with combat occurring on land, sea, and air. The future of the global order depends on the actions we take in this moment.

Our fiscal year 2024 budget request remains consistent with the Navy's priorities. To meet the challenges of today while building the fleet of tomorrow, our Navy continues to prioritize readiness first—with a special emphasis on the sailors who empower everything we do. Next, we are focused on modernizing our capabilities. Then, we will continue to build the capacity of the fleet. Prioritized investments in people, technologies, critical infrastructure, and platforms ensure that we are ready to fight tonight, while making progress on the capabilities we need to maintain our combat credibility far into the future. To enable Distributed Maritime Operations (DMO), we must generate cost-effective capacity to achieve warfighting advantage with acceptable risk. We have already begun building the future fleet—a hybrid force enhanced by unmanned platforms operating on, above, and below the waterline.

NAVY'S UNIQUE PEACETIME MISSION

With the passage of the Fiscal Year 2023 National Defense Authorization Act, the United States Navy has a new mission statement. The old mission statement, articulated in Title 10 of U.S. Code, called for the Navy to be "organized, trained and equipped primarily for prompt and sustained combat." Now, Congress has additionally charged the Navy with supporting "the peacetime promotion of the national security interests and prosperity of the United States."

Though the mission statement is new, the mission is not. U.S. naval power has always played a unique and vital role in promoting our Nation's security and prosperity during peacetime. The law now accurately reflects our Navy's contributions throughout the history of our Republic.

Whether providing humanitarian assistance and disaster relief, countering sea-based illicit activity, safeguarding global shipping lanes, saving lives, or deterring conflict, sailors advance U.S. interests every day. Constantly on call, our sailors are forward deployed in submarines, ships, and aircraft, standing guard with our allies and partners around the world. In part, the change to title 10 acknowledges our historic mission and recognizes that peacetime activities can produce strategic results. However, the change does more than describe what the Navy has always done. It also highlights the need to build a healthy, ready naval force that will safeguard our Nation—one that is properly sized, equipped, and trained for the vast array of operations needed to preserve peace and prevail in competition, crisis, and conflict.

Of all the peacetime missions that promote security and prosperity, deterring conflict is foremost. Our sailors are constantly present, operating, and training, often in parts of the world that may become hotspots. We are America's away team, deployed in peace and ready to answer the call if we are needed in war.

During peacetime, the U.S. Navy must continue strengthening and expanding our network of Allies and partners. Whether in day-to-day competition, crisis, or conflict, Allies and partners add significant defense capabilities and resources. They provide integrated deterrence against adversaries by expanding access to maritime infrastructure through cost-effective, secure, reliable, and geographically distributed bases, and provide information in support of distributed operations.

Thanks to support from Congress, we are starting to rebuild our fleet following two decades of ground wars. Still, rebuilding will not happen overnight. It will require years of stable and predictable funding and a long-range plan that incentivizes our industry partners to invest in the infrastructure and capacity needed to support our growing fleet.

While most combat forces generally only meet in times of war, navies are in contact with potential adversaries every single day. We are forward deployed around the globe, sailing waters in close proximity to other navies, coast guards, and maritime militias, contesting threats to the rules-based international order and ensuring the world's waterways are free and open for all. In this critical decade, the challenges we face are mounting.

THE MARITIME CHALLENGES TO U.S. NATIONAL SECURITY

The United States continues to face pacing, acute, and persistent challenges to our national security. Above all, our pacing challenge is the PRC. As we have witnessed over the past several decades, the PRC seeks to undermine U.S. alliances and security partnerships in the Indo-Pacific region, and leverage its growing capabilities, including its economic influence and the People's Liberation Army's (PLA) growing strength and military footprint, to coerce its neighbors and threaten their interests. In only two decades, the PRC has tripled the size of its Navy—and is on pace to quadruple to over 400 ships by 2030. Additionally, it has expanded its strategic nuclear capacity and capability, advanced its cyber, irregular warfare, and space capabilities, and constructed a system of sophisticated sensors and long-range precision weapons to intimidate neighbors, challenge free and open access to the seas, and hold U.S. forces and the Homeland at risk.

The PRC seeks to deny United States and allied forces access within the First Island Chain and beyond. Advances in missile technology by the People's Liberation Army (PLA) Rocket Force have provided the PRC with the offensive means of striking U.S. and Allied forces. As the PRC has attempted to displace the U.S. Navy from the waters in the Western Pacific, the PLA Navy, alongside the People's Armed Forces Maritime Militia (PAFMM) and China Coast Guard (CCG), has increasingly conducted aggressive operations—actions just short of war—to intimidate neighbors and force nations to submit to Chinese territorial claims. Through these "gray zone" operations, the PRC has staked illegal maritime claims to offshore resources that threaten the peace, prosperity, and ecological stability of the world's oceans. Without question, the PRC's investments in offensive warfighting systems—across all domains—are aimed at the heart of America's maritime power.

Russia remains an acute threat as its unprovoked war of aggression against Ukraine continues. Although the Kremlin predicted Ukraine would fall within days and NATO would fracture, the citizens of Ukraine have successfully contested Russian forces on land, sea, and air, bolstered by the support of the United States and other like-minded nations. This war has reminded Russia, and would-be aggressors everywhere, of the power and importance of Allies and partners. Along with our Al-

lies, we draw inspiration and strength from the tenacity and courage of the Ukrainian people, and we remain resolute in our responsibility to uphold the rules-based international order, and every nation's inherent right to freedom and self-determination.

In its most provocative year of missile launches ever, North Korea has been a persistent threat on the Korean Peninsula as it continues to expand its nuclear and missile capability to threaten the United States Homeland, deployed United States forces, and the Republic of Korea (ROK) and Japan. With forces on the peninsula and vessels in the surrounding seas, the United States Navy and the Joint Force stand with our ROK Allies. During my visit to the ROK this past November, I confirmed that our alliance and friendship remain strong. We left no doubt that our commitment to extended deterrence for the Korean Peninsula is ironclad.

Iran, beyond its nuclear advancements and development of missile systems, has been building and exporting unmanned aircraft, most notably to support Russia's brutal campaign in Ukraine. All the while, Iran is advancing maritime capabilities that threaten maritime chokepoints, putting at risk the free flow of energy resources and international commerce. Further, Iran is undermining regional stability supporting terrorist groups and military proxies, employing its own paramilitary forces, engaging in military provocations, and conducting malicious cyber and information operations. Global terrorist groups have had their capabilities degraded, but some may be able to reconstitute them in short order, which will require monitoring indications and warning against this threat.

Whether they are pacing, acute, or persistent challengers, our adversaries are focused on acquiring sophisticated technologies that are changing the battlespace. From drone technologies to robust networks of sensors, our adversaries—both state- and non-state-sponsored—have the ability to harm our national interests in myriad ways. In the coming years, developments in new technologies such as artificial intelligence (AI), quantum computing, and additive manufacturing will continue to disrupt the way war is conducted.

CONTRIBUTIONS TO THE JOINT FORCE, NESTED IN THE NATIONAL DEFENSE STRATEGY

A combat-credible U.S. Navy—forward-deployed and integrated with all elements of national power—remains our Nation's most potent, flexible, and versatile instrument of military influence. Together with the U.S. Marine Corps and U.S. Coast Guard, our Navy must deploy forward and campaign with a ready, capable, combat-credible fleet. Decisive naval power is a critical component of the Joint Force.

This past July, I released an updated Navigation Plan, aligning our priorities of Readiness, Capabilities, and Capacity to the 2022 National Defense Strategy (NDS). The U.S. Navy remains committed to (1) strengthening our Nation's deterrence, (2) campaigning through forward presence, and (3) building enduring warfighting advantages. In this rapidly changing world, a formidable naval force is crucial in effectively implementing the NDS and the 2022 National Security Strategy (NSS). The Navy's fiscal year 2024 budget request will deliver on our commitments to the Joint Force by aligning our planning, resources, and investments with national policy objectives:

Strengthening Deterrence. Integrated deterrence—the cornerstone of the 2022 NDS and a strategic focus of the 2022 NSS—is how the Department of Defense (DOD) aligns DOD's policies, investments, and activities to sustain and strengthen deterrence. It is tailored to specific competitors and coordinated to maximum effect inside and outside of the DOD. Integrated deterrence leverages the Joint Force's combined capabilities in all domains. It emphasizes a unity of effort throughout the U.S. Government as the Department of Defense (DOD) coordinates with and supports the State Department, Intelligence Community, and other government agencies. Additionally, integrated deterrence promotes the importance of working with our Allies and partners to uphold the international rules-based order throughout the globe. Neither the DOD nor the public sector holds a monopoly on delivering deterrent effects—thus, we must work with America's vast and innovative private sector to ensure peace.

A secure and reliable strategic nuclear deterrent backstops integrated deterrence. Our Navy operates and maintains the most survivable leg of the Nation's nuclear triad, representing approximately 70 percent of America's treaty-accountable, nuclear arsenal. Navy's fiscal year 2024 budget requests the resources to replace the 14 *Ohio*-class submarines with the more capable *Columbia*-class and continue development of the second life extension of the TRIDENT II D5 missile, as well as refresh supporting infrastructure and modernize our nuclear command, control, and communications systems. Our *Ohio*-class submarines have been patrolling the oceans on deterrent missions for 42 years. This once-in-a-generation overhaul of our

ballistic missile submarine force comes with a massive price tag, but it is a must-pay bill for the Nation so that we maintain America's assured second-strike capability.

In addition to our nuclear forces, our combat-credible conventional naval forces reinforce deterrence. These forces deploy globally to protect American interests across the spectrum of conflict. Operating far from U.S. shores, naval forces provide the first physical line of U.S. Homeland Defense, preventing potential adversaries from using the seas to threaten the American Homeland. Naval Forces are the only element of national power that can fulfill this role.

To deter war, we must continue to work more seamlessly with our Allies and partners across all domains and by integrating key technologies and other instruments of national power. Among other initiatives, we have been working hard to bolster the trilateral security partnership of Australia, the United Kingdom, and the United States, known as AUKUS. AUKUS is a generational opportunity to reinforce the collective defense and prosperity of the United States and two vital Allies who always stand beside us. With the overarching objective of promoting peace and stability in the Indo-Pacific, through our efforts to enable Australia to acquire a conventionally armed, nuclear-powered submarine capability, AUKUS provides a unique opportunity to strengthen the U.S. Submarine Industrial Base while enhancing two of our Allies' military capabilities. This trilateral security partnership also provides an opportunity to set the highest standards of nuclear nonproliferation for this critical endeavor. To successfully compete with the PRC and ensure a free and open Indo-Pacific region, we will continue to find ways to integrate our efforts with our robust network of Allies and partners.

The naval service's ability to control the seas and project power has underpinned America's national defense and economic vitality for generations. Sea control provides freedom of maneuver to the Joint Force and our Allies while denying it to our adversaries in conflict. Our ability to project power deters aggression by convincing rivals they have no viable means of achieving their objectives through force. Should conflict arise, forward deployed sailors and marines stand ready to fight alongside the rest of the Joint Force, our Allies, and our partners to deny enemy objectives, destroy enemy forces, and compel war termination.

Forward Presence and Campaigning. Naval forces provide the United States strategic advantages in position, influence, and flexibility, independent of access to overseas land bases. Our forward posture guarantees our Nation the ability to respond to crisis, blunt gray-zone activities, and preserve a stable and secure global maritime order. The Navy's global maneuverability supports diplomacy, reassures our Allies, and generates favorable influence and access in critical regions.

Alliances and partnerships remain the United States' greatest strategic advantage. Our Allies and partners recognize U.S. naval forces as their on-scene partner of choice for building combined maritime strength. In turn, the U.S. Navy recognizes the value of America's unmatched network. Having met with over 40 heads of navies around the world over the past year, I have witnessed the power of personal connections to bolster our collective strength. Relationships forged on the seas for over seven decades have been the bedrock of the free and open, international, rules-based order. And they will continue to be so.

Our adversaries do not have the same reinforcing strength and global backing that America shares with like-minded nations. In turn, the United States provides maritime power that no other country can. The U.S. Navy also brings to NATO an ability to further the interoperable naval combat power of Allies and partners and enable continued deterrence in response to Russia's war on Ukraine. We also leverage the strength of our allies and partners as part of our integrated deterrence of the PRC as well. We are constantly strengthening interoperability, sharing maritime domain awareness, and helping to build capacity for resilient, integrated logistics for our allies and partners.

Across the spectrum of conflict, the U.S. Navy operates forward, exposing and contesting malign activities of our adversaries. The U.S. Navy remains the partner of choice not just because of our strength, but also because of our respect for the rule of law.

Building enduring warfighting advantages. To maintain our warfighting advantage at sea, America needs a larger and more capable Navy. Faced with competitors and emerging disruptive technologies, we must become more agile in developing and delivering our future force. Above all, our naval forces must be combat credible—measured by our ability to deliver lethal effects in contested and persistently surveilled battlespaces.

In collaboration with the other U.S. Armed Services, we have prioritized the future capabilities we need to employ our warfighting concepts and maintain credible

deterrence. As we build the future fleet, we group these critical capabilities into six overarching Force Design Imperatives, as I described in Navigation Plan 2022.

Expand *Distance.* Long-range precision fires across all domains and platforms with greater reach enable naval forces to strike hostile targets while increasing our own survivability.

Leverage *Deception.* Deceptive measures—including stealth, concealment and maneuver, emissions control, and electronic warfare—degrade enemy surveillance and increase adversary uncertainty, enabling naval forces to operate effectively in contested battlespaces.

Harden *Defense.* Integrating directed energy with hard-kill and soft-kill defensive systems disrupts attacks and keeps naval forces survivable when targeted by adversaries.

Increase *Distribution.* Distributing forces geographically and in all domains enables them to threaten an adversary from multiple attack axes. Smaller, lethal, and less costly platforms—including those manned, unmanned, and optionally manned—further complicate threat targeting, generate confusion, and impose dilemmas for our adversaries.

Ensure *Delivery.* Resilient logistics connecting the foundry to the fleet—enabled by secure communications and information technology—refuel, rearm, resupply, repair, and revive distributed naval forces down to the last tactical mile.

Generate *Decision Advantage.* Naval forces will out-sense, out-decide, and outfight any adversary by accelerating our decision cycles with secure, survivable, and resilient networks, accurate data, and the assistance of AI-enabled decision aids. Connecting sensors, weapons, and decisionmakers across all domains enables naval forces to mass firepower and influence without massing forces.

Together, these six Force Design Imperatives enable DMO and other Joint warfighting concepts. These imperatives also define the requirements for the surface, subsurface, aviation, and information platforms that our fleet needs and will guide our priority investments going forward.

U.S. NAVY PRIORITIES

Navy's fiscal year 2024 budget request delivers a combat-credible Navy designed to deter and, if necessary, prevail in conflict. To deliver that fleet today, tomorrow, and in the future, we will continue to focus on three priorities: Readiness, Capabilities, and Capacity.

Our central challenge is balancing our investments in the future fleet while sustaining a forward posture that keeps America safe and prosperous. It is increasingly costly to operate and maintain our ships. We appreciate Congress' support with additional funding in fiscal year 2023 to mitigate the effects of inflation. We will continue to need congressional support of the robust budget in fiscal year 2024.

In today's fiscal environment, we face the enormous challenge of simultaneously recapitalizing our strategic nuclear deterrent, century-old dry dock facilities, and strategic sealift capacity, while investing in weapons and platforms we will need in a future fight. Our focus on Readiness, modernizing Capabilities, and building Capacity is a result of the threats facing our Nation today and the challenges we face in the decades to come. To defend our Homeland and protect our national interests, we cannot field a fleet larger than we can sustain. Hollow fleets cannot fight tonight, and sacrificing current readiness for future capabilities or increased ship counts would severely constrain our Navy's ability to respond in crisis or conflict. Our Nation needs a larger, more capable, more lethal fleet—but we must build the future fleet at a sustainable rate; not at the expense of warfighters that must be ready to stand the watch tonight.

READINESS

Readiness remains our top priority. Forward-deployed, combat-credible forces deter conflict and protect the free and open system underpinning American security and prosperity.

Across the Navy, from our shipyards and aviation depots, to our global network of bases and stations, to the steaming and flying hours our sailors need to hone their skills, we are focused on readiness. Our fiscal year 2024 budget request dedicates the resources necessary to train and educate resilient sailors that can outthink, out-decide, and out-fight any potential adversary. Today's security environment demands ships, aircraft, and submarines, as well as expeditionary, information, and special warfare forces that are ready to fight and win.

The Navy is committed to accelerating our warfighting advantage by unleashing our people, and our "Get Real, Get Better" call to action empowers our warfighters to find and fix problems, and to innovate at every level, from the deckplates to our

senior leaders. While our Navy team remains the most capable maritime force in the world, we have identified unacceptable variability in our performance. To address this, we must standardize and incentivize best practices, leadership behaviors, and problem-solving techniques throughout the force to reduce this variability and unleash our full potential. The essential element is fostering a healthy ecosystem—a culture—that assesses, corrects, and innovates better than the opposition, accelerating our warfighting advantage in this critical decade.

This past year, the Navy-Marine Corps team executed more than 22,000 steaming days and nearly one million flying hours. Additionally, the Navy participated in roughly 100 exercises with Allies and partners across the globe, strengthening America's integrated deterrence. We are planning for similarly robust level of exercises and engagement efforts over the next year and in years ahead. As our naval forces remain in high demand, our budget request emphasizes critical aspects of our readiness. Our sailors stand ready all over the world, from Sasebo to San Diego and from Norfolk to Naples, as our Navy keeps the oceans open and free.

Since the invasion of Ukraine, the Navy has had a continuous Carrier Strike Group presence in the Mediterranean, from the extended deployment of the USS *Harry S. Truman* (CVN 75), to the current deployment of the USS *George H. W. Bush* (CVN 77) Carrier Strike Group. Furthermore, the Navy provided early support to European Command operations with surge deployments of additional forces, to include six destroyers, two P–8 aircraft, two submarines, and a destroyer squadron staff. Our sailors have been present where it matters, when it matters. Additionally, America's first-in-class aircraft carrier USS *Gerald R. Ford* (CVN 78) returned to Naval Station Norfolk in November after successfully completing its inaugural deployment in the Atlantic, conducting exercises, strategic engagements, and port visits with Allies and partners.

We have deepened our integration with the U.S. Marine Corps with the establishment of Task Force 61/2 under Naval Forces Europe. This effort streamlined command and control of Navy and Marine Corps forces deployed to act as a deterrent and reinforce Alliance cohesion in the wake of Russia's invasion of Ukraine. We operationalized this cohesion with the deployment of the USS *Kearsarge* (LHD 3) Amphibious Readiness Group (ARG) with the 22d Marine Expeditionary Unit (MEU) embarked. After the USS *Kearsarge* ARG-MEU deployment, the same team provided the core U.S. military command element that quickly established humanitarian support for Türkiye after the recent earthquake, utilizing the USS *Hershel "Woody" Williams* (ESB 4) to deliver disaster relief supplies for those affected by the earthquakes.

Our Navy defends the Homeland and ensures maritime routes remain free and open, fostering compliance with existing rules to assure global peace and prosperity, including in the Arctic Region. Increased competition in the area by both Arctic and non-Arctic nations, as a result of increasingly navigable waters, demands additional attention from America's tri-service maritime forces. With the Marine Corps and the Coast Guard, the U.S. Navy jointly trains for operations in Arctic conditions and, since 1958, our submarines continue to conduct routine operations in the Arctic region. We participated in numerous exercises in 2022—NORTHERN VIKING, COLD RESPONSE 2022, DYNAMIC MONGOOSE, ARCTIC EDGE, and ICEX—with several more planned for 2023 in the high north to ensure we are ready to respond in that region in times of crisis and conflict. As we did this past year, we will continue to work closely with our strong network of Allies & partners from Canada, Iceland, Denmark, Sweden, Finland, Norway, and United Kingdom among many other nations that share a vision of a free, open and stable Arctic. Beyond training and operations, our Navy continues important communications, surveillance, navigation, marine meteorology, and physical oceanography research activities to improve situational awareness in support of future cold weather high-latitude operations, including the Arctic Submarine Lab and Polar Over the Horizon Radar. For example, prototype components of the Arctic Mobile Observing System will be deployed in October 2023 using a variety of autonomous platforms over a year-long deployment to demonstrate under-ice navigation, communication, and environmental sensing. Overall, this budget includes $39 million in fiscal year 2024 and $236 million across the FYDP for Arctic research and operations. Now and in the future, the U.S. Navy stands ready to respond to changing geopolitical and climate conditions in the Arctic.

To deliver forward presence and capability, our Navy continues to make progress improvements. For example, our aircraft depots are reducing the time it takes to conduct maintenance and return aircraft and engines back to the Fleet. Our President' Budget 2024 request improves funding over fiscal year 2023 enactment to sustain gains in our aircraft mission capable rates. Of note, in our aviation depot maintenance account, we increase funding for engines by $25 million, $9 million for com-

ponents, and $1 million for our Depot Readiness Initiative. The President' Budget 2024 request provides for the operation, maintenance and training of nine Active Navy Carrier Air Wings, with the necessary flight hours and maintenance efforts to ensure their carrier and expeditionary strike groups are combat ready. The budget request aligns with our broader focus across Naval Aviation to increase lethality and readiness through process improvement and finding efficiencies at all organizational levels. As aviation costs—across both the private and public sectors—continue to increase, the Navy recognizes the need to maintain a relentless drive to reap the full benefit of every investment dollar.

Better maintenance performance has been a point of emphasis across the Navy. Repeatedly deploying combat-credible forces starts with performing high-quality maintenance on time and in full. Data-driven reforms such as Performance-to-Plan (P2P), the Naval Sustainment System (NSS), and other initiatives continue to improve maintenance processes and increase operational availability. Over the last several years, the aviation community has enhanced readiness as we maintained over the threshold Mission Capable Rate for most Type-Model-Series Aircraft, including the F/A–18E/F, E/A–18G, E–2D, P–8A, MH–60R, and MH–60S. This represents a significant improvement in Navy aircraft readiness, but we are not yet satisfied. We are getting real and getting better at applying what we have learned in aviation to our maintenance processes across the fleet.

We continue to take a data-driven approach to improve surface ship and submarine maintenance, and we have seen positive results. However, unprecedented hiring challenges in a competitive job market, along with sustained, pandemic-induced delays and supply chain issues, have hampered progress for our public and private shipyards. Our budget request funds both private and public sector ship maintenance to 100 percent, with a focus on increasing capacity and retaining highly skilled labor at the public shipyards. On top of those resources, we have invested considerably in other requirements essential to the material condition of our Fleet. Completing maintenance for our *Virginia*-class submarines and returning them to the Fleet on time is a critical warfighting priority. To that end, we added $541 million for *Virginia*-class materiel and spares to build depth and breadth in on-hand inventory to help ensure that the necessary parts are available when required during maintenance availabilities.

We remain committed to driving down costs wherever and whenever possible. In particular, P2P-driven improvements—such as the goal of awarding contracts 120 days before the start of a maintenance availability, level loading ports through better prediction of workload, better availability planning, and improved long-lead-time material acquisition—have provided effective solutions for readiness. Still, just like our industrial partners, our public shipyards face headwinds from workforce constraints, supply chain logjams, and increased costs due to inflation. We recognize the challenges, are not satisfied with current conditions, and will continue to invest in people, processes, and infrastructure to drive maintenance delays down to the only acceptable number—zero.

Today, the average age of U.S. naval shipyard facilities and related infrastructure is 62 years, while the average dry dock age is approaching 100 years. The Shipyard Infrastructure Optimization Program (SIOP) provides a strategic roadmap for necessary investments in our public shipyard dry docks, capital equipment, and facilities. We are committed to taking a holistic, analytic approach to our critical shore infrastructure, making necessary investments to overhaul and optimize our Nation's shipyards through SIOP, and ensuring our shore establishment can support fleet operations. With $2.7 billion requested for SIOP in our budget request, the Navy can continue to upgrade and reconfigure our four public shipyards. This robust investment in the infrastructure and facilities of our four public shipyards is a vital effort to maintain and support upgrades of current and future submarines, aircraft carriers, and surface combatants.

When fully executed, SIOP will deliver required dry dock repairs and system upgrades that will optimize workflow within the shipyards through significant changes to their physical layout. Moreover, the SIOP investments allow the public shipyards to recapitalize industrial plant equipment with modern technology that will substantially increase productivity and worker safety. As a result of previous SIOP investments, we have already completed construction of the Super Flood Basin at Portsmouth Naval Shipyard, construction of the Norfolk Naval Shipyard Production Training Facility, and design of Pearl Harbor Naval Shipyard Dry Dock 3 Replacement. We remain committed to working with Congress, DOD leadership, the shipyard workforce, impacted communities, regulators, and industry leaders as we continue to drive down maintenance delays. We acknowledge that submarines are still experiencing an unacceptable amount of delay days. Still, these investments in our four public shipyards are rebuilding the industrial base we need to maintain, up-

grade, and return our ships, submarines and aircraft carriers back where they belong—deployed at sea.

Maintenance delays and other readiness issues are not solely shipyard problems. To ensure fleet readiness, we must also reinforce and build resiliency into our supply chain, and prevent undue influence by strategic competitors. The Naval Sustainment System-Supply is driving end-to-end naval supply chain integration and reform as it streamlines the Navy's supply chains to increase readiness, decrease turn-around times, increase availability of spares, and reduce costs. The key to sustained success will come from the better use of data as we improve the resilience and responsiveness of the Naval Supply System.

Our sailors—and the civilian workforce that supports the fleet—remain our most important weapon system. We must continue to evaluate and improve our capabilities to achieve our mission of attracting, developing, and managing talent to ensure our advantage at sea while providing exceptional service to our sailors and their families. Notably, our budget request contains a substantial 5.2 percent pay raise for our military and civilians. From education and training to overall health and wellness, our budget invests in our Navy's most important asset—our people.

To ensure the readiness of every operational unit, we are working hard to resolve the manpower problems that exist in the fleet. The solution begins with more robust recruiting and retention efforts. We also need to keep honing and optimizing personnel readiness metrics to include the experience and proficiency of sailors to determine whether operational units are getting personnel with the right skills. The solution demands the continuous effort of leadership as we must continue to prioritize and care for our sailors and civilians.

The Navy continues the Fleet Training Wholeness initiative to integrate live platforms and simulators across our strike groups. This initiative funds Live, Virtual, and Constructive (LVC) training at the unit and strike group levels. In the fleet, LVC continues to be a game-changer in training our combat leaders. To date, fleet exercises like Large Scale Exercise–21 have connected eight Maritime Operations Centers, three Marine Force Operations Centers, eight Carrier and Expeditionary Strike Groups, and 30 ships into a single LVC training environment. As we look ahead to Large Scale Exercise–23, planned for August of this year, our expanding LVC capabilities will only increase the numbers of total participants—training both at-sea and pierside—in an advanced, global scenario. From the pilot in the cockpit to the technician on the radar scope, LVC initiatives allow warfighters in all domains to train together at unprecedented levels of integration and complexity.

Investments in training like the Ready Relevant Learning (RRL) initiative allow the Navy to continue to modernize Navy training and accelerate new delivery methods, supplementing our traditional brick-and-mortar schoolhouses with modern, multi-media, multi-platform solutions. In addition, RRL will develop Career-Long Learning Continuums for Navy ratings to map out technical, professional, and leadership training requirements for apprentice, journeyman, and master level milestones in a sailor's career. Career-Long Learning Continuum efforts will change the paradigms of Navy training by delivering Navy Enlisted Classification refresher training, performance support at the point of need coupled with journeyman and master core training to close not only existing capability gaps, but also enhance fleet readiness.

To maintain a Fleet prepared to fight and win in long-term strategic competition, we continue to evaluate and improve our capability to attract, develop, and manage a talented and diverse workforce. Furthermore, at a time of intense talent competition and a rapidly evolving tactical and technical landscape, we are committed to modernizing and enhancing our entire talent management approach to recruit and retain the best and brightest. We are also reengineering advancement and assignment policies and practices to deliver a positive sailor experience in terms of transparency, flexibility, and career-driven choice, while attempting to balance sailor personal and professional desires with Navy priorities.

As part of this initiative, we released MyNavy Assignment (MNA)—an upgrade to our detailing platform providing visibility of all available billets as part of the Detailing Marketplace Assignment Policy (DMAP). MNA is a modern user interface providing sailors the ability to bookmark billets of interest and provide amplifying information. DMAP continues to expand sailors' options beyond the traditional enlisted career paths. It also rewards sailors in sea-intensive ratings who stay on sea duty by offering assignment-based monetary incentives and early advancement opportunities for many sailors who possess the requisite proficiency and experience. We expanded this practice and policy to supervisor positions through the Senior Enlisted Marketplace (SEM), beginning with Master Chief billets during fiscal year 2024 advancement selection boards. We plan to expand to Senior Chief and Chief

Petty Officer billets in the following 2 years to expand SEM to become the primary means of advancement.

To accelerate those sailors with the highest competence and strongest record, we expanded the Advancement-to-Position (A2P) program to fill priority supervisor and journeyman-level billets in eight additional ratings. A2P assists in filling critical gaps and rewards proven performers willing to take a difficult assignment with a spot promotion. We have also empowered commanding officers and officers-in-charge to reward top performers with both an advancement and geographic stability allowed by a guaranteed follow-on 3-year assignment at the same unit through the Command Advancement-to-Position program. These talent management initiatives support sailor development, increase transparency, and generate Fleet-wide, warfighting readiness.

With great sadness, we recognize that suicide rates increased in 2022. Navy leaders and I have been traveling to ships, squadrons, and bases to listen, learn, and help. Every loss of life is a tragedy. As we continue to destigmatize mental health treatment, we are working to ensure every Member has access to the full continuum of mental health support. Our budget request expands mental health programs like sailor Assistance and Intercept for Life, adds support for the 21st Century Sailor Office, and increases our Warrior Toughness Teams to help foster the mental, physical, and spiritual resilience of our forces. Along with these programs, we are working to ensure the availability of mental health and wellness support worldwide, including at specialty and primary care clinics, Navy installation counseling centers, on the waterfront, embedded within the fleet, and via virtual health platforms. Navy Chaplains and deployed resiliency counselors provide confidential counseling and are essential in ensuring the spiritual readiness and resiliency of the Naval Force. The Navy's budget request continues to resource quality care for our sailors and support services for them and their families.

Though we work in the profession of arms and accept the hazards that come with defending our country, all sailors deserve to be treated with respect and dignity and should feel safe among their fellow shipmates. We are focused on creating a culture intolerant of sexual assault and are actively executing and evaluating the DOD Prevention Plan of Action. This is a comprehensive approach to promote prevention and reduce destructive personnel behaviors that lead to incidents. In addition, we are implementing the 82 Independent Review Commission (IRC) recommendations on accountability, prevention, climate, culture, and victim care. Sexual Assault Prevention and Response (SAPR) personnel remain fully available to sailors worldwide to address victims' physical, mental, and emotional well-being, strengthen resilience, encourage reporting, and support victim recovery.

Moreover, we do not accept any form of sexual harassment in our Navy. To ensure sailors are heard, and to remove actual or perceived bias from the process, Navy Sexual Harassment investigations are now conducted by an independent third party assigned from outside the command. Likewise, the establishment of the Navy's Office of Special Trial Counsel ensures that accountability for sexual assault and sexual harassment, among other serious offenses, will be handled by an independent, specialized, and expert cadre of professionals. We listen, and we continue to learn. Our work to eliminate sexual assaults and remove sexual harassment from our fleet is not done.

When sailors are valued for their diverse talents and are treated with respect and dignity, they feel a sense of belonging to their teams and deliver a higher level of performance. With nearly 50 percent of recruitable talent coming from diverse populations, the Navy must be deliberate in advancing a culture where every person, regardless of their background, has the opportunity to succeed as a sailor and where our Navy, in turn, benefits from our sailors' talents, experiences, and insights. We have built on lessons learned from our findings in Task Force One Navy and have launched 53 Task Force One Navy initiatives, which remain on track for full implementation.

All of our most pressing challenges require strong leadership. However, in the past year, as required to support the Space Force and by the fiscal year 2017 National Defense Authorization Act, the Navy reduced more than 8 percent of its Flag Officer billets. These leadership reductions come at a high cost to maintaining operational readiness, impeding the Navy's efforts in an already challenging operational environment. At present, nearly one-third of the Navy's remaining 149 Flag Officer billets are double-or triple-hatted. These significant additional demands on leadership have ripple effects on readiness that negatively permeate across the fleet. To ensure our Navy can respond in crisis and win in conflict, we need Flag Officers with the focus and bandwidth to respond thoughtfully to the many challenges the Navy must navigate.

In the Navy, we serve as families. To improve the lives of our sailors and their families, we continue to focus on improving the consistency of sailor pay, quality of unaccompanied housing, and other quality of life services. This includes installing broadband internet services and wireless connectivity, improving berthing barge living conditions, improving crew parking and transportation, and ensuring an overall better experience for sailors on the waterfront. Access to high-quality childcare is critical to supporting our warfighters. Our budget request supports increased staff salaries and adds two new Child Development Centers. Funding will also support adding full-day pre-Kindergarten opportunities at overseas locations.

We know that to retain our Force of talented and trained sailors we must continue to invest in ways that benefit them and their families, while providing environments that make them feel valued and enable them to serve honorably. Continued funding to improve the lives of sailors will be our greatest return on investment. Our people form the keel of our fleet's readiness and they will inspire the next generation to answer our Nation's call to serve.

CAPABILITIES

The Navy's budget request makes substantial investments that will modernize our capabilities. The Navy prioritizes delivering capabilities that can achieve lethal and persistent effects inside adversary weapon engagement zones, generate advantages to create off-ramps in crisis, and decisively win should crisis escalate into conflict. As the challenges in this era require the support and unified effort of Allies and partners, it is fundamental to our success that we develop compatible and complementary capabilities. To win now and in the future, we strive not only for interoperability with Allies and partners, but also for interchangeability across the combined force.

As we build and deploy a Navy capable of deterring and, if necessary, defeating a strategic competitor, we must prioritize capabilities for DMO—our Navy's foundational operating concept for maintaining warfighting advantage in contested seas. The Navy's budget request focuses on delivering these critical capabilities. To expand our reach, we are investing in hypersonic weapons, space-based capabilities, unmanned tanking, and long-range precision fires. For increased deception and defense, we are investing in undersea platforms, weapons, and systems, next-generation aircraft and surface platforms, cyber capabilities, counter-surveillance, and integrated weapons systems. Finally, we are investing in smaller, lethal platforms, autonomous systems in all domains, AI, resilient logistics, and integrated combat systems and networks, all of which enable a more distributed fleet, the delivery to sustain it, and expand our decision advantage.

Our adversaries are also heavily investing in emerging technologies. In response, the Navy will adopt a more agile approach to experimentation and force modernization, leveraging partnerships with industry and academia. Working closely with Allies and partners, we will expand our partnerships across the entire technology ecosystem. Maritime dominance has always depended upon the employment of game-changing capabilities in combat.

Rising to meet today's challenges with unmatched capabilities, the Navy-Marine Corps combat team completed its first deployment of F–35C and CMV–22B this past year. The warfighting advantages these platforms bring to the battlespace provide the Joint Force with an undeniable, lethal edge over our adversaries. Both aircraft, though different mission sets, allow our forces to project power deep behind enemy lines. In addition, the USS *Gerald R. Ford* completed its first deployment. This aircraft carrier not only signals the next generation of our fleets' principal weapon of power projection has arrived, but also that our Nation remains poised and committed to maintaining our warfighting advantage for decades to come. Deploying such capabilities and platforms marks the culmination of many years and many people's hard work, showing the capabilities that our Nation can bring to bear.

One of the key areas that is shaping and will continue to shape future warfare is the incorporation of cyber-warfare tools to detect and defeat adversary attempts to infiltrate and disrupt our warfighting systems. The Navy continues to make this a priority focus area to ensure our forces are ready to respond to adversary cyber-attacks. In addition, the Navy is working closely with the Joint Force to develop cyber capabilities that can be used across the entire spectrum of conflict. As such, the Navy will continue moving from its current compliance-based cybersecurity approach to one where the right to operate is earned and managed every day. Teams organized around the Department's recently announced Cyber Ready effort will develop solutions, select tools, and produce methods, policies, guidance, and concepts of operation for instituting this new approach. A critical element to implementing this approach is the need to ensure the Navy has a skilled cyber-workforce com-

prised of both military and civilian cyber experts. To ensure the Navy has the cyber workforce the Nation needs, and in alignment with congressional intent, we are implementing a dedicated cyber designator. We remain committed to growing this capability alongside the Joint Force, as well as with our Allies and partners, collectively building a more robust security outlook.

In response to potential adversaries developing and fielding hypersonic missile systems, the Navy collaborated with the rest of the defense enterprise to make hypersonics one of our highest priority modernization efforts. This past year has been marked with certified successes for our Conventional Prompt Strike capability. In 2022, we conducted one First Stage and one Second Stage Solid Rocket Motor static fires, marking five successful static fire tests of the newly developed missile. In another joint effort, the Navy Strategic Systems Programs and the Army Hypersonic Project Office successfully conducted the second High Operational Tempo for Hypersonics flight campaign in October, 2022. These developments represent significant progress in our hypersonic capabilities, and both programs are on track to support the first fielding of a hypersonic capability to the Army later this year. Both the Army and the Navy programs are on track to support the first fielding of a hypersonic capability to the Army later this year. Stable funding at the requested level will keep this critical capability on track to field on *Zumwalt*-class DDGs, followed by *Virginia*-class SSNs equipped with the *Virginia* Payload Module. The rapid development and demonstration of conventional land and sea-based hypersonic strike weapon systems support our Nation's ability to deter and, if necessary, defeat potential strategic competitors. Modernizing capabilities will remain a priority to ensure our Navy maintains warfighting advantage.

Weapons with range and speed are critical capabilities. Our budget request pursues four multi-year procurement contracts for Advanced Medium Range Air-to-Air Missiles and Standard Missile–6 (SM–6). In addition, our request allows us to continue to work jointly with the Air Force in the procurement and production of Joint Air-to-Surface Standoff Missiles and Long Range Anti-Ship Missiles. We are also increasing our investments in Maritime Strike Tomahawks, as well as refreshing and recertifying existing Tomahawks and MK–48 Heavyweight Torpedoes.

Above the sea, we remain resolute in our commitment to the Joint Force in establishing air superiority in the maritime domain, and sustaining our unique ability to project power from the flight decks of our aircraft carriers. The Navy's President' Budget 2024 request supports procurement of thirty-four aircraft, modification, spares and support equipment. In this budget, our significant aviation investments include 15 F–35C Lightning II's, 14 Multi-Engine Training Systems, 2 MQ–4 Tritons, and 3 MQ–25 Stingray II's. These advanced platforms are helping us drive down risk in our future carrier airwings, which will fully integrate unmanned carrier aviation. This past year, we completed MQ–25A aircraft in-flight refueling of Navy carrier-based aircraft and its first carrier demonstration. This unmanned aerial platform will complement the capability of our combat strike fighters and extend the range of our aircraft carriers.

We continue to make progress on the future technologies we need. This past year, we completed over 4000 hours and 46,000 nautical miles of unmanned surface vehicle operations. These unmanned systems, and others like them, will play a key role in building our capability to conduct DMO. To operationalize the Department's Unmanned Campaign Plan, we established Task Force 59, which has been a game-changer for the fleet. As we prioritize the Indo-Pacific and push warships to patrol those waters, we have leveraged unmanned surface vessels and achieved outstanding maritime domain awareness in a critical region with three major chokepoints—the Suez Canal, the Bab Al-Mandab, and the Strait of Hormuz—spanning a maritime area the size of California. This achievement provides the Navy with scalable solutions to monitor the world's waterways and keep the oceans open and free.

As AI and other disruptive technologies rapidly proliferate, we must proactively work to gain every advantage. Many of these rising technological developments play to our strengths as a Nation. More sensors, providing more information, create more battlespace transparency. Our application of AI solutions will provide our forces with decision superiority as we map, measure, manage, and govern the battle space. We will continuously leverage such technological developments to better the fleet and our sailors. While strengthening our Force, we must remain aware that no nation has a monopoly on innovation—and history has shown us the navy that continues to adapt, learn, and improve the fastest gains a strategic warfighting advantage.

To enhance our current and future hybrid fleet, we are maturing AI-enabled warfighting capabilities and developing an AI-ready workforce. This past year, Task Force 59 led and participated in International Maritime Exercise (IMX) 2022, the

largest maritime AI and autonomous system exercise ever held. Along with this IMX, we executed Digital Horizon, an event exercising 15 advanced unmanned systems, 10 of which operated in the Middle East for the first time. Task Force 59 led industry partners during phased evolutions, both ashore and at sea, to advance fleet efforts to enhance regional maritime awareness with greater effectiveness and reduced cost.

Along with building testing platforms and driving operational concepts for the future fleet, Task Force 59 advances our understanding of commercial technology that has the potential to complement other government-sponsored AI procurement and operations. In support of these efforts, the Unmanned Task Force continues to focus on rapid experimentation and solving operational problems to quickly inform acquisition strategies. We also continued work with partners and Allies in events such as NATO Maritime Unmanned Systems Initiative Exercises.

Strategic sealift investments are returning improved capability for the fleet and Joint Force. Our Navy's commitment to surge sealift requirements continues through procurement and refurbishment of used commercial Roll-On Roll-Off ships to replace aging Ready Reserve Force capacity. In 2022, the U.S. Navy purchased five used sealift vessels and received authorization to buy another two in 2023. President' Budget 2024 requests funds for the purchase of up to two more used vessels in fiscal year 2024 and fiscal year 2025. We will need congressional support to fully execute this cost-effective strategy. The buy-used recapitalization program provides a stable acquisition profile with forecasted maintenance and repair costs to meet strategic mobility requirements at a moderate level of risk. In parallel with recapitalizing strategic sealift, the Navy is researching and developing future joint distribution capabilities and making significant investments to meet fleet and joint refueling requirements.

CAPACITY

Congress's support of the Navy's shipbuilding budget this past year helped us signal our partners in industry—as well as our challengers around the world—that we will remain the world's strongest maritime power. Authorizing and appropriating the procurement of 12 battle force ships displays Congress' continued commitment to the Navy's shipbuilding programs. We appreciate the strong support by Congress for naval shipbuilding during fiscal year 2023 enactment. This year, our budget requests funding for procurement of an additional nine battle force ships.

With sustained funding, the Navy can turn the corner on beginning to build the fleet this Nation needs: a combat-credible, hybrid fleet capable of succeeding across the continuum of day-to-day competition, crisis, and conflict. We also need a fleet with the capacity to distribute assets and deliver larger volumes of kinetic and nonkinetic effects across all domains to meet the strategic and operational demands of the Joint Force.

The Navy's most critical role in support of our national defense and robust nuclear posture continues to be maintaining the most lethal ballistic missile submarines in the world. Thus, our number one acquisition priority remains the on-time delivery of the *Columbia*-class ballistic missile submarine. Originally designed for a 30-year service life, the first of the *Ohio*-class ballistic missile submarines will be retired in 2027 after 42 years of highly effective deterrent patrols. The *Columbia*-class will replace it as the Navy's contribution to the nuclear triad—which remains the most survivable leg of the U.S. strategic nuclear deterrent force. This is a once-in-a-generation investment, and sustaining our Nation's most secure and reliable strategic nuclear deterrent will require considerable resources. When the *Columbia*-class enters full-rate production in fiscal year 2026, delivering the Nation's sea-based nuclear deterrent will consume nearly a quarter of the Navy's entire shipbuilding budget. The Navy's request funds the second *Columbia*-class submarine and delivery of the first vessel in fiscal year 2028. Specifically, the *Columbia*-class program request of $5.8 billion, includes the first of 2 years of incremental full funding for the second submarine, to be awarded in fiscal year 2024. The budget request also includes continuing Integrated Enterprise Plan funding initiatives, material procurement for future boats, and continued funding for Submarine Industrial Base investments. The strategic significance of this platform requires the Navy and the Nation to dedicate the necessary resources to ensure its on-time delivery.

Shipbuilding remains critical to increasing our fleet's capacity, and requires significant investments from both the Government, as included in the fiscal year 2024 request, and the private sector. A combined commitment ensures healthy competition in the shipbuilding industrial base, which is vital to meeting Navy requirements in support of our national interests and defense of the Homeland. With the help of Congress, the Navy and private shipbuilders are identifying opportunities

to generate resiliency and productivity in the shipbuilding workforce. Part of the challenge of growing the fleet is having enough shipyards with the capacity and workforce to build the ships that we are budgeted.

The shipbuilding industrial base faces an increase in demand across the enterprise, particularly in nuclear ship construction. As the Navy ramps up production of the *Columbia*-class, we continue to procure two *Virginia*-class submarines per year. The *Virginia*-class submarine budget requests $10.3 billion, or 32 percent of this appropriation, funding two Block V submarines and Advance Procurement for two fiscal year 2025 and two fiscal year 2026 submarines. These investments are important to meet U.S. requirements, and are critical as we accelerate work to deliver on our commitments under AUKUS. The Navy is working with the Department of Defense, Congress, and industry as analysis of the optimal pathway refines future SSN workload.

Additionally, we continue production of the world's most capable, most lethal surface vessels. The *Ford*-class carrier program requests $1.9 billion, and funds the seventh increment of funding for CVN 80, and the sixth increment of funding for CVN 81. As part of the surface combatant portfolio, our budget requests $4.5 billion for two *Arleigh Burke*-class Destroyers as part of the fiscal year 2023 to fiscal year 2027 multi-year procurement of modern Flight III Destroyers. We plan to award these destroyers this fiscal year. To support the building of our *Constellation*-class Frigates, our request includes $2.2 billion for the fifth and sixth ships of this class. These investments ensure that we field a fleet that sails forward, keeps the oceans open, and ensures our maritime advantage on and below the seas.

To ensure that we can build the future submarines and aircraft carriers, we are taking steps to expand and strengthen the nuclear industrial base by investing in six key areas: shipbuilder infrastructure, supply chain capability/capacity, scaling new technologies, addressing workforce trade skill gaps and constraints, expanding productive capacity via strategic outsourcing of large scale fabrication, and government oversight of expanded industrial base efforts. In the Navy, any time we are splitting atoms, we know the work will be demanding, but these nuclear-powered platforms require our sustained commitment and continued support of the shipbuilders delivering these critical assets to the fleet.

Beyond these nuclear shipbuilding projects, we are working closely with private shipyards to strengthen the Surface Combatant Industrial Base and Frigate Industrial Base. A key focus has been on the Workforce Development investments that address risk in schedules, increase capability to meet future force structure, promote job creation and economic security, and address risk in single or fragile supply chains. Expanding the capabilities of suppliers and shipyard infrastructure in the surface ship industrial base results in greater industrial base stability, cost savings, and improved efficiency as production increases to build greater quantities of surface combatants. These initiatives are paralleled by ongoing private sector investments to expand the Nation's shipbuilding industrial base. We support any efforts to grow our capacity to build more ships annually. This is all part of a long-term commitment and clear signal to industry that the unique work done in our private shipyards is essential to the Nation, and the workforce they provide will be gainfully employed for years to come. The Nation's shipbuilding industrial base remains a strategic asset. It requires continued support to expand its capacity, and to recruit and retain the workforce the Nation needs to deliver the fleet of tomorrow.

A robust munitions industrial base, capable of delivering critical munitions in large quantities and in strategically relevant timeframes, is also an essential component of our Nation's warfighting capacity. The rapid expenditure of munitions in Ukraine has demonstrated the timeless truth that industrial capacity is a key enabler of victory. Our budget request adds over $2 billion in critical munitions investments, including supporting multi-year procurement contracts. We are working closely with our defense partners to make the necessary investments to allow us to rapidly ramp up production of critical munitions right now. We are taking a multi-pronged approach to introduce both stability and competition into the weapons acquisition process in order to accelerate delivery times, increase inventories, and lower costs. This includes use of multi-year contracts and large lot procurements, recertification of existing munitions, new production, and exploration of alternative systems designed to circumvent our adversaries' advantages and play to our strengths. We are also working with our partners and Allies to ensure their requirements are met, as well. Today's weapons are intricate, specialized, and depend on complex supply chains, which challenges our ability to quickly ramp up production. We cannot afford to wait until conflict begins to make these critical munitions capacity investments.

Unmanned systems will play an ever-increasing role in expanding the capacity and distribution of our fleet. We will explore opportunities to scale proven capabili-

ties of unmanned Maritime Domain Awareness systems, such as those demonstrated by Task Force 59. In addition, the AI-enabled software that meshes our network of systems and platforms will provide an array of decision advantage solutions as we track forces, manage the battlespace, and maintain our dominance at sea. Finally, we must focus on accelerating the adoption of technologies and scalable platforms that provide increased capability and capacity, while laying the foundation for our future hybrid fleet.

CONCLUSION

The U.S. Navy's mission has never been more essential for the preservation of American security and prosperity. Facing increasingly aggressive challengers, the Navy's priorities—Readiness, Capabilities, Capacity—will help us maintain our combat credibility in contested seas.

In line with the NDS, the Navy's fiscal year 2024 budget request keeps us on a steady path to modernize U.S. naval power, while maintaining readiness and sustaining a forward posture that keeps America and our Allies safe and prosperous.

Capable ships, submarines, and aircraft are expensive instruments of national power, as are the costs of maintaining and sustaining them. However, without a ready, powerful Navy, the costs we incur in potential conflict could be much higher. The investments we make now will shape the global maritime balance of power for the rest of this century.

This is my final testimony before this Committee. It has been the honor of a lifetime serving as the Chief of Naval Operations these past three-plus years.

On behalf of more than 600,000 Active and Reserve sailors and Navy civilians, thank you for allowing me to testify today. I am grateful to this Committee and to your colleagues in Congress for your steadfast commitment to the Navy. Let us continue our work to deliver the Navy that this Nation deserves—a Navy that will preserve peace, strengthen prosperity, and defend America for many decades to come.

Chairman REED. Thank you, Admiral Gilday.

General Berger, please?

STATEMENT OF GENERAL DAVID H. BERGER, USMC, COMMANDANT OF THE MARINE CORPS

General BERGER. Chairman Reed, Ranking Member Wicker, and distinguished Members of the Committee, I also thank you for your comments, and my wife, Donna, is here also as is the sergeant major of the Marine Corps and his wife, and it has been the privilege of a lifetime and this is the best team you could ever hope to match up with.

Three years ago I appeared before you and described how change, in my opinion—rapid change—was required to meet our statutory requirements and the mandates of the National Defense Strategy for the future, and with the bipartisan help of this Committee and the civilian leadership in the Pentagon I am here to tell you that Force Design for the Marine Corps is not a future aim point. It is a reality and it is here today.

A couple of examples. In the Pacific, in U.S. Indo-Pacific Command (INDOPACOM) Task Force 76.3, they were built to create advanced information sensing maritime awareness for Admiral Aquilino, which he desperately needs in the Pacific.

They took what they learned during experimentation and they applied it in exercises. They turned kill webs—what they call kill webs into reality and they did it in the Philippines and they did it in Japan, right in China's backyard.

In U.S. European Command (EUCOM) last fall Task Force 61.2, using some new technology and a different way of organizing, created both air and maritime domain awareness for the European commander and Sixth Fleet and they focus their efforts on the Russian air and naval activities, and marines, in fact, are in Estonia

right now doing the same and they will be there for the next 4 months.

In U.S. Central Command (CENTCOM) General Kurilla has our Marine Corps MQ–9s. He needs ISR [intelligence, surveillance and reconnaissance]. He needs persistent ISR and that is what we are giving him in the key maritime terrain, and this month. In fact, while we are sitting here, the new Marine Littoral Regiment (MLR) out of Hawaii is in the Philippines, Third MLR. They are using new sensing capabilities and lethal capabilities in the Philippines and they are demonstrating that right alongside of our Philippine counterparts and other allies and partners in exercise Balikatan, and that is how it should be.

A couple of months ago Japan announced that they would host the second—the next Marine Littoral Regiment forward. It would stay in Japan in the First Island chain, and that is exactly where I think you want Marine Corps presence.

In short, your marines are forward. I think they are where it matters most and that is exactly how it has always been. Three years ago I described how the Marine Corps would not just modernize quickly but we would self-fund that effort. We would get leaner, lighter, more naval, and 3 years later your Marine Corps—your marines—have done just that and the results are in the field now.

We are not waiting for 2027 or 2025. We are not waiting for 2030. Your marines are ready to handle any crisis anywhere on the globe now, today.

Our major divestments, which we had to do, they are done. We are at our fighting weight. Now we have to sustain our modernization efforts while we focus on the quality of life issues most important to marines and sailors and their families.

People—as both the Secretary and the CNO [Chief of Naval Operations] have mentioned, people are the real source of our competitive advantage as a Nation, as the Marine Corps, and I ask for your help now to invest in their quality of life.

We have to focus on where marines live, where they work, where they eat. marines and their families expect that from us. They have earned it and they deserve it and now we have to deliver.

I think restoring, modernizing our infrastructure, which many of you all have spoken about, is directly tied to recruiting, directly tied to retention. That is how we support families. That is how we generate readiness.

So on behalf of all marines, I ask for your support now as we bring our infrastructure up to par with the quality of marines and sailors who operate from those warfighting platforms.

I also ask for your help, your support for the amphibious fleet. That is how we project power. The CNO and I agree on three key principles when it comes to the amphibious fleet.

First, the absolute minimum number of amphibious warships the Nation needs is 31. That is the operational requirement minimum.

Second, both of us agree block buys do two things. They save the taxpayer money and they give the industry what the CNO calls headlights, which they need.

Third, divesting without replacing, I think, is a dangerous approach. That creates unacceptable risk. Amphibious ships are crit-

ical to crisis response. They are critical to deterrence. That is how we evacuated citizens out of Lebanon. That is how the United States made our initial entry into Afghanistan in 2001. All from the sea.

Today, we are asking them to do all that plus deterrence, plus integrated deterrence and campaigning, and my concern here is the first time this Nation cannot respond to a crisis and someone else does is the last time they trust us.

So in my final year of Commandant I will just finish up by saying thank you. Thank you to the individual Members of this Committee. Thank you for your coaching and your mentoring and your guidance.

With that, I look forward to your questions. Thank you.

[The prepared statement of General Berger follows:]

PREPARED STATEMENT BY GENERAL DAVID H. BERGER

INTRODUCTION

Chair, Ranking Member, and distinguished Members of the Committee, I am thankful for the opportunity to report the progress of your Marine Corps over the last year and seek your support in continuing to prepare the Service to face an increasingly uncertain and challenging future. I would be remiss, in my final year as Commandant, if I did not first acknowledge the unwavering support of this Committee over the last 3 years. Simply put, the Marine Corps of today is a better fighting force because of your guidance, commitment, and resourcing decisions. But there is still much work to be done. A brief review of world events over the past few years tells us we are moving in the right direction, but we cannot slow down. In fact, we need to accelerate our efforts so your Marine Corps can effectively deter while remaining ready to immediately respond to any crisis, anywhere on the globe, at any time. The work of this Committee is crucial to the modernization of the Marine Corps into a force that will continue to do just that.

POSTURE

Today, more than 32,000 marines are forward-deployed or stationed across 50 countries. There are also, on average, 102 Marine Corps fixed-wing aircraft (F–35, F/A–18, and KC–130J) forward-deployed or stationed overseas, a 22 percent increase since 2018. This forward posture is a critical requirement for integrated deterrence and reinforces a national source of strategic advantage—our global network of allies and partners.

Most Marine Forces west of the International Date Line are based in Japan. In January, the Government of Japan announced its intention to host the future 12th Marine Littoral Regiment (MLR). This unit will possess advanced intelligence, surveillance, and reconnaissance (ISR) capabilities as well as long range precision fires capabilities, improving both maritime domain awareness and our ability to deter potential adversaries. When combined with the other stand-in force capabilities of III Marine Expeditionary Force (MEF), 12th MLR will provide a major lethality upgrade for the fleet and joint force in the Indo-Pacific.

While our posture has become more robust in the Indo-Pacific, fewer of our forward-deployed marines are serving afloat with the fleet. In 2018, 16,000 marines served aboard ships, but in 2022, just 12,660 did so—a 20 percent decrease. The principal reason for this decline was the lack of amphibious warfare ship availability. As directed by the Fiscal Year 2023 National Defense Authorization Act (NDAA), 10 LHA/LHD and 21 LPDs are the bare minimum necessary for our amphibious fleet. Additionally, in my best military judgment, the Marine Corps needs a minimum of seven Amphibious Ready Group / Marine Expeditionary Units (ARG/MEU), three MLRs, and 35 Medium Landing Ships (LSM) to provide a strong forward posture for building partnerships in the littorals and to contribute to integrated deterrence.

RESOURCES

The fiscal year 2024 budget request for the Marine Corps is $53.2 billion (B). To date, the Marine Corps has taken every possible opportunity to self-fund our modernization. This required hard choices and difficult, unpopular decisions. With the

support of our civilian leadership in the Department of the Navy (DON), Department of Defense (DOD), and Congress, from Presidential Budget 2020 to Presidential Budget 2023 this approach succeeded. Over the last five program objective memorandum (POM) cycles, the Marine Corps divested $18.2 billion across the Future Years Defense Program (FYDP) in structure and legacy platforms and systems and has reinvested $15.8 billion directly into modernization. The success of these divest-to-invest actions would not have been possible without the support of our civilian and congressional leadership.

To be clear, the Marine Corps is now complete with our major divestments. Reducing the approved acquisition objectives (AAO) of major programs like the CH–53K or F–35 at this point would not produce resources for investment elsewhere and would be premature decisions. We approached fiscal year 2024 as a program review year. Limiting the introduction of new programs in fiscal year 2024 allows the Marine Corps to maintain or even accelerate progress on investments from preceding budget cycles that are directly tied to our pacing threat.

The suggestion that we may have to choose between preparing to fight tonight—which your marines are fully prepared to do—and preparing for some distant point in the future presents a false dichotomy. Readiness, lethality, and modernization to meet future challenges are all required today. Our collective challenge is to balance the resource tension between the force we employ today and the development of the force to compete and win in the years to come.

WARFIGHTING READINESS

In many ways, Marine Corps readiness has improved since 2018. Our units have higher levels of persistent manning / staffing, more equipment and supplies, enhanced individualized training, and more collective training—much of it force-on-force. Our combat arms units are equipped with modern capabilities far superior to those of past formations. Yet, while many things have changed, the foundational elements have not. We remain the most elite infantry in the world, with the most proficient combined arms teams on the globe.

While there have been substantive readiness improvements across the force, nowhere have these improvements been more visible than in Marine aviation. Across all type / model / series of aircraft, our mission capable rate has increased from 57 percent in 2018 to 66 percent in 2023—an achievement that would not have been possible without congressional support and the herculean efforts of Marine aviation mechanics and maintenance crews. We anticipate further improvements to aviation readiness as we retire older airframes (e.g., F/A–18 and CH–53E) and accelerate acquisition of newer platforms like the F–35B/C and CH–53K.

In 2018, we employed a lethal, though primarily fourth generation, tactical air (TACAIR) force of 173 F/A–18C/D and 126 AV–8B, with 72 fifth generation F–35B/Cs. Today, our TACAIR force is comprised of 174 F–35B/C and 178 fourth generation aircraft—a major step forward. Despite the challenges associated with transitioning the force from fourth to fifth generation aircraft, the overall readiness of our TACAIR fleet increased from 56 percent in 2018 to 68 percent in 2023.

We have also achieved significant gains in the readiness of our MV–22 fleet, rising from 52 percent in 2018 to 64 percent in 2023. The current challenges surrounding a series of hard clutch engagements caused each of the Services to take immediate action to replace certain transmission components in our V–22 fleets. That action is ongoing, and we expect to see a rebound in readiness this spring and summer.

Amphibious Combat Vehicle (ACV): The introduction of the ACV has the potential to greatly enhance our littoral mobility and expeditionary reach. However, as with all new systems and technologies, there have been a few notable challenges. At present, we are working with BAE Systems to address two major component issues—one with the struts / shock absorbers, and the other with the central tire inflation system. Both issues have caused part failures, resulting in a decrease in reliability and a corresponding decrease in readiness. We have also identified issues related to possible water incursion into the power train and are working with our industry partner to resolve those as well. In addition to these mechanical issues, we have experienced three incidents in the surf zone that resulted in vehicles rolling over. According to BAE Systems and confirmed by our safety investigations, these rollovers were caused by a lever effect generated when the vehicle becomes parallel to the surf-line and is struck by a large wave. These events were, in large part, the product of training shortfalls. We are actively working with BAE Systems to rectify all mechanical concerns and are enhancing the training regimen for our vehicle operators on this new and more sophisticated amphibious vehicle.

F135 Engine: In both President's Budget 2022 and President's Budget 2023, Congress enacted funding to support F135 engine modernization. In addition to this funding, the Office of the Secretary of Defense (OSD) added significant resources for an engine core upgrade and for power and thermal management system (PTMS) modernization. We will continue to monitor the current F135 engine and F–35 PTMS's ability to support Block IV mission systems and will work with the Joint Program Office to ensure our requirements are being met.

Unmanned Aircraft System (UAS) Pilot Training: As an integral part of Force Design, we embarked along a path in late 2019 to double our uncrewed aircraft capacity across the force from three unmanned aerial vehicle squadrons (VMU) to six squadrons, while transitioning from the RQ–21 to the much more capable MQ–9. While our commitment to uncrewed systems is unshakeable, we have concluded the Air Force's capacity to generate trained MQ–9 UAS officers is insufficient to satisfy Marine Corps requirements. At present, half of our total inventory of UAS officers (72 of 148) are not yet trained and qualified to operate the MQ–9. We are working with the Air Force to remedy this throughput issue. However, there is a need to direct the necessary resources in future budgets to establish a Naval UAS School to resolve this larger joint force issue.

Pilot Readiness Concerns: Service Chiefs are routinely asked about how the joint force can effectively compete against the Department's pacing challenge—the People's Republic of China (PRC)—or our acute threat—Russia. But there is a different competition that is more directly and more adversely impacting the joint force than that emanating from either Russia or China, and that is the unhealthy competition between the Services and the airline industry. As the head of personnel for the Air Force stated during testimony in 2017, we cannot compete with the airlines. We could not then and we cannot now. This is an issue that requires your oversight. We are at a competitive disadvantage and risk our reservoir of pilots drying up. As an example, in 2018, the Marine Corps had 88 of the 203 required F–35 pilots (43 percent of the requirement). At the end of 2022, we had 218 of 498 F–35 pilots (44 percent of the requirement). At the end of 2022, we had 200 F–35 pilots in flight school and another 62 at our fleet replacement squadrons with fiscal year 2023 and fiscal year 2024 completion dates. We are making some progress, but not enough—and certainly not quickly enough. We are exploring various options for structuring aviation bonuses and aviation incentive pay under the new authorities granted in the fiscal year 2023 NDAA. But ever-larger monetary incentives are neither sustainable nor the appropriate remedy. This is not just a Marine Corps problem. It is a joint force problem, and we will continue to work with the other services and Congress as our understanding of this issue develops.

FORCE DESIGN AND CURRENT OPERATIONS

There is a misperception by some that Force Design might create a gap in Marine Corps capabilities between divestment and fielding new capabilities. The reality is that fielding new capabilities associated with Force Design is already well underway. Many of these "future" capabilities tied to Force Design 2030 are already being employed by Marine forces today. Six examples from 2022 are illustrative:

TF 61.2 and Reconnaissance and Counter-reconnaissance: In March 2022, U.S. Sixth Fleet partnered with II MEF to create Task Force (TF) 61.2. TF 61.2 was designed as a joint task force crisis response capability to command and control naval forces supporting contingencies in Europe and Africa. This force was delegated tactical control of amphibious forces (ARG/MEU) in theater, allocated Marine forces (Marine Rotational Force—Europe), and a task organized reconnaissance/counter-reconnaissance force. Near simultaneously, II MEF and 2d Marine Division were tasked with "accelerating experimentation with maritime, multi-domain reconnaissance constructs and activities to enhance the ability of the stand-in force to dominate the information environment, sense and make sense of the situation, and win the reconnaissance vs. counter-reconnaissance competition." Commander, Sixth Fleet, immediately volunteered TF 61.2 to support these broader Service experimentation efforts. During the next several weeks, TF 61.2 conducted training aboard both the USS *Woody Williams* (ESB–4) and USS *Georgia* (SSGN–729) and engaged in combined-arms training in both Greece and Turkey. Those initial exercises demonstrated that maritime expeditionary forces could increase surface, subsurface, and aerial domain awareness for the fleet commander—regardless of theater—and allowed us to focus on the information web required to create domain awareness in a contested space. TF 61.2 then transitioned these experimental capabilities to the Baltics, where it participated in bilateral training on maritime domain awareness with the Estonian Navy in the Gulf of Finland. During this period, TF 61.2 participated in an amphibious landing in Estonia and Exercise BALTOPS with 16 North

Atlantic Treaty Organization (NATO) nations, utilizing 47 ships and 7,000 personnel. This new organization has been so successful the previous Commander, U.S. European Command (EUCOM) chose to highlight the value of the task force during his spring 2022 annual testimony. The bottom line is that your marines' ability to conduct reconnaissance and counter-reconnaissance is a current force capability that directly contributes to competition and deterrence today.

TF 76.3: Building upon the success of TF 61.2, in October 2022, the 3d Marine Expeditionary Brigade and Naval Task Force 76 staffs merged into a completely integrated naval task force in the Indo-Pacific. Over the next several months, TF 76.3 experimented with naval concepts at sea and ashore via a broad campaign of learning labeled Noble Fusion 22.2. TF 76.3 also participated in exercises Kamandang in the Philippines and Resolute Dragon in Japan. Once again, marines and sailors demonstrated the ability to create advanced information webs to support maritime domain awareness across the theater. Just as importantly, they demonstrated this capability to potential adversaries.

USS *Tripoli:* The most recent deployment of the USS *Tripoli* (LHA–7) demonstrated the strategic and operational advantage that amphibious warfare ships create today. In early 2022, *Tripoli* set sail as an independent deployment, in part to test our F–35B "Lightning Carrier / Assault Carrier" concept by which 16–24 F–35Bs were embarked and operated in concert with a traditional carrier strike group. During *Tripoli's* time in the Indo-Pacific, embarked marines and sailors trained with and supported the USS *Abraham Lincoln* (CVN–72) and USS *Ronald Reagan* (CVN–76), among other traditional surface combatants. Not only did the deployment illustrate the potency of the Lightning Carrier concept in support of carrier strike group operations, it also demonstrated the versatility and value of the platform for the integrated Navy-Marine Corps team. During Exercise Valiant Shield 2022, the Commander of U.S. Seventh Fleet, Vice Admiral (VADM) Karl Thomas, embarked his staff aboard the Tripoli and used it as his command platform for 15 days—a strong endorsement of the platform's importance within the larger fleet. VADM Thomas noted, "One day you can have F–35Bs on the flight deck, the next day you could have MV–22s and you can be putting marines ashore . . . it just is a very versatile instrument . . . [with] 14 5th-gen fighters on board—it's an incredibly capable sensor."

The LHA's size, which closely mirrors the amphibious warfare ships of our allies, makes it an attractive partnership and learning platform. During their deployment, marines and sailors from Tripoli and the 31st MEU trained with forces from Japan, Australia, the Philippines, and Singapore.

Multifunction Air Operations Center (MAOC): In March 2022, 2d Marine Aircraft Wing (MAW) conducted the Service's first operational deployment of a multi-function air operations center (MAOC). In Lithuania, under the command of U.S. Air Forces Europe, the MAOC conducted air surveillance and multi-domain awareness in support of NATO operations. This is not simply an evolutionary step in fixed aviation command and control (C2) nodes, but rather, a transformational, expeditionary capability that can serve as a hub for Marine Corps, naval, and joint kill chains and webs. The MAOC provides the Marine Corps with the capability to control aircraft and missiles and enables decision superiority. It also offers the ability to gain and maintain custody of adversary targets and hold those targets at risk via fires with its organic TPS–80 Ground/Air Task-Oriented Radar (G/ATOR), Common Aviation Command and Control System (CAC2S), and highly proficient aviation C2 marines. The MAOC is scalable by task-organized units, small enough to support distributed teams or large enough to support a multi-MEF or Corps-level fight. This agency construct is also the model we are using for the development of all-domain C2. 3d MAW is now leading the Service's MAOC experimentation efforts and employed this capability as part of Marine Rotational Force—Darwin (MRF-D), integrating C2 and sensor services for 16 allied and partner nations during Exercise PITCH BLACK. From these initial efforts, 3d MAW has matured the MAOC, creating a persistent hub to enhance the common tactical picture for I and III MEF. Recent experiments in February 2023, which included U.S. Indo-Pacific Command (USINDOPACOM), have further demonstrated the MAOC's ability to integrate additional capabilities from the MEF Information Group and improve the common tactical picture for a carrier strike group, and is visible evidence of Joint All-Domain Command and Control (JADC2) in practice.

Marine Corps Information Command (MCIC): In October 2022, we streamlined and simplified much of the coordination required for space and cyberspace operations at the headquarters level, by realigning current relationships and structure at Headquarters, Marine Corps (HQMC) from a staff officer to an operational commander, to create the MCIC. The MCIC is a service-retained command designed to integrate global Marine Corps capabilities in information, intelligence, cyberspace,

and space to support Fleet Marine Forces (FMF) resulting in decision advantage. This two-star command operates under Marine Forces Command (MARFORCOM) and provides critical linkages across operational level planning. It also provides task organized detachments to support the FMF commander's campaigning objectives. This allows the commander to leverage the authorities needed to synchronize global cyber, space, influence, and intelligence effects and generate multi-domain advantages in support of the commander's objectives. The MCIC achieved initial operational capability (IOC) in January 2023.

VMGR–153 and HMH–461: In January 2023, we activated Marine Aerial Refueler Transport Squadron 153 (VMGR–153) in Kaneohe Bay, Hawaii. By 2026, VMGR–153 will bring 15 KC–130J aircraft to the region, building on the organic mobility available to marines responding to crisis or conflict in the region. We are also approaching 1 year since the CH–53K program achieved IOC and are well underway transitioning Marine Heavy Helicopter Squadron 461 (HMH–461) into our first fully operational CH–53K squadron. Despite their ongoing transition, HMH–461 is already demonstrating the significant impact of this new capability, conducting heavy lift assault support missions previously impossible with legacy aircraft. In parallel, the operational test and evaluation squadron (VMX–1) continues to push the boundaries of heavy lift operations. Last December, they successfully lifted an F–35C, demonstrating the platform's utility in conducting next generation tactical recovery missions.

FORCE DESIGN AND THE GROUND COMBAT ELEMENT (GCE)

Infantry Battalion Experiment (IBX): IBX is an ongoing Service-level initiative designed to evaluate the future infantry battalion's ability to conduct expeditionary, offensive, and defensive operations as an element of a MEU, MLR, or infantry regiment in support of fleet and joint operations. The results of IBX live-force experimentation represent a critical component of our campaign of learning and are one of several inputs informing our ongoing assessment of the future infantry battalion.

After 24 months of experimentations and force-on-force exercises with three infantry battalions, our combat developers, division commanders, and MEF commanders recommended an 811-person infantry battalion. This new battalion demonstrated improved C2, sensing, and lethality. Importantly, this recommendation reflects the value of our campaign of learning. In 2019, we experimented with a 735-person battalion. But force-on-force experimentation made clear our initial assumptions were off. It also demonstrated a need for additional ground ISR and indirect fires capacity. In line with these findings, we right-sized personnel, added back indirect fires capacity, and added organic UAS platforms and personnel to improve surveillance and target acquisition. Future infantry battalions will possess Block IV Javelins at the company-level to increase anti-armor capability and will have loitering munitions (organic precision fires (OPF)) at the squad and platoon levels to increase lethality, enhance maneuver, and facilitate distributed operations. They will have additional communications, logistics, and intelligence capabilities at the company-level, and new signals intelligence and electromagnetic warfare capabilities at both the battalion and company levels. They will possess vehicle-mounted and canister-launched OPF at the company and battalion level to enhance the lethality, multi-domain awareness, and reach of those units, and will have improved C2 systems at the company-level. But our learning never stops. We will build from past efforts and conduct another round of experiments with two additional battalions this year. These experiments will evaluate the new infantry battalion design against a peer adversary, with the aim of further refining its structure and capabilities to the demands of the modern battlefield. We will also begin incorporating our lessons learned into FMF battalions not directly involved in IBX later this year.

Close Combat Lethality: In 2018, former Secretary of Defense James Mattis convened the Close Combat Lethality Task Force (CCLTF). As we approach 5 years since that effort was launched, we should take stock of its significant impact. The CCLTF's insights have been instrumental in informing the ongoing transformation within our infantry formations, the most visible of which being the success of the Multi-purpose Anti-armor Anti-personnel Weapon System (MAAWS). It provides a multiple-effects rocket system to infantry and combat engineer squads to increase firepower and enhance their ability to close with and destroy the enemy. The MAAWS is a medium-range, multi-purpose, man-portable, line-of-sight, reloadable, recoilless, day/night, anti-armor, and anti-personnel weapon system with an available suite of 84mm rockets. MAAWS munitions will be capable of obscuration, illumination, personnel denial, armored vehicle denial and penetration, bunker and hardened facility penetration, and soft target destruction capabilities. Every rifle squad, combat engineer squad, and Marine Special Operations Command

(MARSOC) team will be equipped with one MAAWS. Fielding began in the 3d quarter (3Q) of fiscal year 2021 and will be complete in 3d quarter of fiscal year 2025.

The Marine Corps has also fielded lightweight body armor including a new plate carrier (PC Gen 3), and an enhanced combat helmet—all of which address the significant weight of the individual marine's combat load so well documented from operations in Iraq and Afghanistan. In addition, new night vision devices (AN/PVS–31A) have enhanced night movement and weapons lethality for our infantry, improving their situational awareness and ability to acquire targets. The MAAWS, Squad Common Optic, M27 squad automatic rifle, M17 pistol, and Mk13 and Mk22 precision rifles have all increased organic lethality within our small units. Multi-domain sensing and targeting is being addressed with a new signals intelligence / electromagnetic warfare (SI/EW) program called Marine Electromagnetic Ground Family of Systems (MEGFoS). This SI/EW suite of equipment, crewed by dedicated SI/EW and cyberspace personnel, will be employed in the future infantry battalion, greatly enhancing tactical level target identification and engagement. All these capability enhancements make our squads and platoons more lethal.

3d MLR and 12th MLR: On 3 March 2022, we activated 3d MLR and it is on track to achieve IOC this year. 3d MLR has an established littoral combat team (LCT), combat logistics battalion (CLB), and littoral anti-air battalion (LAAB), all of which have been exercising in operations, activities, and investment events in the Indo-Pacific region. 3d MLR continues to operate in coordination with the Naval Surface Group Middle Pacific (NAVSURFGRU MIDPAC) to further develop its maritime fires capabilities, and most recently, deployed to Marine Air-Ground Task Force—Training Command (MAGTF–TC) to execute the first Service-level MLR training exercise. This exercise focused on the MLR's ability to sense and make sense of the operating environment and rapidly close kill chains. 3d MLR is designed to be a stand-in force, but it is not the Service's sole stand-in force. Rather, it is one part of the larger III MEF system of stand-in forces that includes our forward deployed naval force, as well as other expeditionary capabilities including the F–35B/C.

We are on track to activate 12th MLR by 2025. The Government of Japan and Secretary Austin recently announced that 12th MLR will be forward stationed on Okinawa to create greater maritime domain awareness and enhance our collective ability to deter in the region. As Secretary Austin stated during the announcement, "We will equip this new formation with advanced intelligence, surveillance, and reconnaissance, as well as anti-ship and transportation capabilities that are relevant to the current and future threat environments." 12th MLR's presence and capability suite will augment our existing stand-in force capacity in the first island chain.

These littoral regiments provide the joint force two essential capabilities. First, they serve as eyes and ears of the joint force—meaning their persistent, forward, and distributed posture enables the joint force to reach well inside of weapons engagement zones. Second, they provide decision space and time for the other joint forces to deploy, while maintaining continuous maritime domain awareness.

FORCE DESIGN EMERGING CAPABILITIES

In addition to current operations that demonstrate Force Design in action today, a number of emerging capabilities on the horizon will increase the Marine Corps' ability to enable full-spectrum operations for the Joint Force in contested environments.

Unmanned Logistics System-Aerial (ULS-A): As the ongoing conflict in Ukraine has illustrated, even traditional ground resupply, executed over interior lines and relatively short distances, can be disrupted with operational level effects. Consistent with these lessons, the Marine Corps is developing the ULS-A Small or Tactical Resupply Unmanned Aircraft System (TRUAS). The TRUAS has a 9-mile range and maximum payload of 150 pounds, which is sufficient to fly in ammunition, food, medical supplies, and batteries, among other supplies. This small system only requires two marines to operate and will be a game-changing capability for our distributed forces. The TRUAS is anticipated to achieve IOC in 2023 with fielding completed in 2027. Fielding this capability is critical toward setting conditions for the development of the ULS-A Medium system, which is the required capability for large-scale tactical distribution in a contested space. The emerging ULS-A Medium will be fielded in 2025 and will provide payloads between 300 and 600 pounds with a range of up to 100 miles.

Marine Air Defense Integrated System (MADIS): MADIS is an expeditionary, upgradable, and state-of-the-art capability to protect maneuver forces, installations, and other designated critical assets from fixed / rotary wing (FW/RW) aircraft and Group 1–3 UAS. It uses sensor-integrated C2 to provide beyond line-of-sight cueing,

targeting, and engagement. Current air defense capabilities only defend against FW/RW targets and Group 3 UAS within line of sight. The MADIS is composed of a complementary pair of Joint Light Tactical Vehicles (JLTV). The Mk1 JLTV is designed to kill FW/RW variants with a turret-mounted 30mm cannon, Stinger missiles, and an electromagnetic warfare (EW) jammer. The Mk 2 JLTV provides redundant, non-kinetic and kinetic fires while primarily employing C2 software and sensors to collect, interpret, and pass radar tracks to the Mk 1 via a wireless local network for target engagements. The AAO is 131 systems comprised of 262 vehicles; the fiscal year 2024 budget request provides for 13 MADIS (26 vehicles). We will achieve IOC in 4th quarter fiscal year 2024 with the delivery of 17 systems, and we anticipate reaching full operational capability (FOC) in fiscal year 2031. The fiscal year 2024 budget request for the MADIS family of systems is $265 million (M).

Medium Range Intercept Capability (MRIC): The MRIC defends forward-deployed forces against the threat of cruise missiles and other aerial threats with similar flight profiles. This is accomplished through the integration of already-fielded Marine Corps and Israeli systems that include CAC2S, the TPS–80 G/ATOR, the Iron Dome Battle Management Controller, and the Tamir missile and guidance uplink. Each MEF will be fielded with one MRIC battery. A battery is comprised of a headquarters element and four independently deployable firing platoons. To date, there have been four successful live fire events: August 2019, November to December 2021, April to June 2022, and September 2022. Each live fire successfully demonstrated the destruction of multiple operationally challenging missile threats. The Service's fiscal year 2024 budget request is for $44 million.

Navy-Marine Expeditionary Ship Interdiction System (NMESIS): The Marine Corps is transitioning the majority of its existing lightweight 155mm towed artillery batteries into medium-range missile (MMSL) batteries equipped with NMESIS to conduct anti-surface warfare operations as a component of an integrated naval force. By 2030, the Marine Corps will have 14 MMSL batteries: three batteries forward deployed in support of MLRs and 11 continental U.S. (CONUS)-based batteries supporting the rotational and MEU deployments. The program will enter low-rate initial production (LRIP) in 3d quarter fiscal year 2023. The first six operational launchers will be fielded to MMSL Battery, 3d MLR in 4th quarter fiscal year 2023 to give the Service its first capability to contribute to sea denial and sea control operations with ground based anti-ship missile (GBASM) fires. We anticipate reaching IOC in fiscal year 2025 after fielding five MMSL batteries and a MMSL battalion headquarters. We anticipate reaching FOC in fiscal year 2030 when all 14 MMSL batteries have been fielded. The Service's fiscal year 2024 budget request for $402 million supports procurement of 24 NMESIS launchers and associated equipment, and 90 Naval Strike Missiles (NSM) keeping the program on track to reach 774 NSM. The 774 NSMs provide one combat load plus one combat load resupply per deployed MMSL unit.

Long-Range Fires (LRF): OSD directed the Marine Corps to develop and field a ground-launched Tomahawk Land Attack Missile (TLAM) capability to support joint force long range, precision fires requirements. The LRF weapons system is composed of a Remotely Operated Ground Unit for Expeditionary (ROGUE) Fires leader kit, LRF launcher, LRF C2 System (LC2S), and LRF Reload and Resupply System (LRRS). All four components are required to complete a full mission of loading, transporting, and firing a Tomahawk missile. This capability leverages existing Navy and Marine Corps hardware and software such as the Mk41 Vertical Launch System, Tactical Tomahawk Weapon Control System, Tomahawk cruise missile, and JLTV to reduce risk by accelerating capability delivery to the FMF and combatant commanders. The current plan is to establish three 16-launcher, long range missile (LMSL) batteries to form one LMSL battalion capable of deploying one battery at a time by 2030. The first four operational launchers are scheduled to be fielded during 4th quarter fiscal year 2024. Remaining batteries are planned for activation between fiscal year 2026 and fiscal year 2028. OSD provided $1.2 billion in research, development, testing, and evaluation (RDT&E) and Procurement Marine Corps (PMC) funding through fiscal year 2026 to support the development and procurement of 56 LRF launchers, C2 and support equipment, and 152 Tomahawk (TLAM and MST) missiles. The fiscal year 2024 budget request for LRF is $142 million.

RESEARCH, DEVELOPMENT, TEST & EVALUATION (RDT&E)

This year, we will invest heavily in the next generation of RDT&E efforts. We are placing an emphasis on the future of marine aviation, JADC2, persistent sensing, and contested logistics, while expanding our experimentation efforts. With the support of the Office of the Under Secretary of Defense for Research and Engineering's Joint Capability Technology Demonstration office, we will begin the Long-Range At-

tack Munition (LRAM) project, to rapidly develop and field a low-cost, air launched, family of loitering and swarming munitions. The LRAM can be employed by not just H–1s and F–35s, but also palletized and employed from MV–22s, CH–53Ks, and C–130's, thereby significantly expanding our magazine depth. Likewise, we have moved out in earnest on experimentation with our capstone research and development effort, the family of integrated targeting cells (FITC). FITC accelerates the evolution of combined arms to a new level. It fuses operations, intelligence, and fires functions together in one center and creates the means by which the Marine Corps will be able to participate in and control joint fires, while also gaining and maintaining persistent custody of adversary targets. We will also expand our ground launched loitering munitions capabilities by demonstrating a common launcher for the family of munitions, and we continue testing a low-cost, hypersonic booster that will be in a form factor the Marine Corps can logistically support in a contested environment. For maritime mobility, we are also investing in our first Stern Landing Vessel (SLV) prototypes, which are helping buy down risk and advance the Medium Landing Ship (LSM) program. We will continue efforts to develop a medium-sized, uncrewed logistics aircraft and will begin small boat experimentation to determine the future of our surface reconnaissance capabilities.

FORCE DESIGN EXPERIMENTATION IN SUPPORT OF CONTESTED LOGISTICS

The Marine Corps Warfighting Laboratory, in close collaboration with both the Navy and III MEF, is currently experimenting with more than a dozen new technologies and potential future capabilities focused on enabling logistics in a contested environment. These operational experiments include well-known capabilities such as the SLV and wing-in-ground-effect (WIG) craft, as well as lesser-known, emerging capabilities such as the autonomous low-profile vessel (ALPV). Based on our existing experimentation plans, operational experimentation with these and other capabilities will continue over the next 3 years and inform future capability investment decisions.

FORCE DESIGN EXPERIMENTATION WITH LITTORAL MOBILITY

Mobility is a key characteristic to the dispersion and persistence of stand-in forces. In the case of the Indo-Pacific, littoral mobility will be essential to our ability to maneuver through the complex geography of the region. We recognized this capability gap early in the design process and identified the LSM as a mechanism to transport marines in this unique maritime environment.

Medium Landing Ship (LSM): Distinct, yet complementary to traditional L-Class amphibious warfare ships, the LSM is purpose-built to provide tactical maneuver for regimental sized units, forward-deployed naval forces, and other expeditionary advanced base-enabling forces operating within contested environments. The LSM is a maneuver asset, and as a shore-to-shore connector, is unique and critical to expeditionary littoral mobility. It will facilitate campaigning and support diverse missions such as security cooperation, humanitarian assistance / disaster relief (HA/DR), and logistics support. While not optimized for any one threat or region, we envision the LSM being of particular utility in the maritime gray zone contests omnipresent in the Indo-Pacific. Given its size and characteristics, this vessel could be employed with a lower risk of escalation than larger platforms.

After extensive research and wargaming, we calculated a need for nine LSMs to support a single regimental sized unit. The DON's Amphibious Force Requirements Study over the last 2 years validated this number, articulating a requirement of no fewer than 18 LSMs to support littoral maneuver. Given that current force structure plans call for three MLRs, we require 35 LSMs to account for operational availability and mobility for those units. We anticipate an initial request for 18 of the 35 LSMs we seek will be a step toward enabling us to more effectively counter adversaries' strategies, support and reinforce alliances and partnerships, and do so at a relatively low cost.

Despite focusing our efforts over the past 3 years on deterring, competing, and if necessary, contesting the pacing challenge, the Marine Corps will not fully realize the capabilities of the MLR until we have the littoral mobility assets that enable these forces. The decision to delay LSM procurement from fiscal year 2022 to fiscal year 2025 was a setback in our ability to bring this capability online within an operationally relevant timeframe. As marines do best, we have adapted to this challenge and are developing bridging solutions to experiment with LCU–1700's and leased Expeditionary Fast Transports (T-EPF) and SLVs. While these platforms will inform the eventual employment of the LSM, they will fall short of desired capabilities if called upon in an operational setting. Our modernized expeditionary forces need a

comparably modern mobility platform to bring the full weight of their capability to bear on competitors or adversaries, particularly in littoral regions.

FORCE DESIGN CAMPAIGN OF LEARNING

Marine Corps Wargaming and Analysis Center (MCWAC): Wargames play an essential role in concept development and operational planning and provide the basis for informed decisionmaking. The Marine Corps is undergoing a shift from human-driven to technology-enabled processes that will provide disproportionate benefits—not only to the Service, but the joint force writ large.

Upon completion in 2024, the MCWAC in Quantico will provide a state-of-the-art facility designed to help decisionmakers better visualize the threat environment, gain competitive advantages over adversaries, and simulate future operating environments. It will also provide data that informs force development, force management, and system functionality. Simulations will support existing and developing weapons platforms and capabilities in all regions of the globe.

MCWAC will incorporate elements of artificial intelligence and machine learning to amplify decision accuracy on issues that determine the way we organize, train, and equip for the future fight. This facility will also provide a critical asset to the joint force and senior leadership currently unavailable in the National Capital Region. Its location facilitates participation by joint, interagency, and multinational organizations, in addition to Service-specific analysis.

Lessons Learned: Between July 2019 and December 2022, we executed 25 wargames. This calendar year, we will conduct another 9 wargames and welcome the participation of any Member, or their staff, interested in observing. These wargames will primarily focus on two subjects: (1) reconnaissance and counter-reconnaissance, and (2) III MEF deployment and sustainment during major combat operations.

One of the persistent lessons from our wargames is that our current logistics concepts and capabilities are not optimized for maritime campaigns in a contested environment. Improving joint and combined logistics integration, and streamlining logistics C2, are critical areas for further planning and development. The number and capabilities of current logistics distribution platforms are insufficient to adequately deploy, maneuver, and sustain stand-in forces. Due to geographical distribution of forces, all Services will be challenged to meet their sustainment requirements. This suggests the Marine Corps will have reduced access to connecters under the operational control of the other Services.

Our learning is continuous, and we have already refined some of our initial Force Design decisions based on that learning. For example, when we initially reduced the number of cannon batteries, we assumed that the existing 6-gun per battery model would be sufficient to meet requirements. After additional study, we decided to expand those batteries back to their original, pre-2015, 8-gun structure and added back two batteries. Next, we initially assessed 10-plane fighter-attack squadrons (VMFA) as the operationally suitable and sustainable approach for the future force. After multiple studies, a series of experiments and wargames, and emergent capabilities development, we know the 10-plane model requires redress and are undertaking that effort now. Likewise, initial assessments of our heavy-lift helicopter capacity demonstrated we could cut several squadrons; yet real-world considerations have resulted in a modification to our original plans and restoration of some of that structure and capacity.

AMPHIBIOUS WARFARE SHIPS

Achieving the priorities of the National Defense Strategy requires a Navy that creates advantage for the joint force across the competition continuum. Sustaining and recapitalizing our nuclear deterrent and nuclear command, control, and communications systems; enhancing and expanding our undersea advantage; and creating advanced naval expeditionary forces that consist of all classes of ships and are capable of persisting and prevailing against any threat, are all things we must do now. We cannot create and sustain this force on the time horizons necessary to achieve competition and deterrence objectives without a significant expansion of our defense industrial base, which is currently organized for peacetime efficiency. We are a maritime nation that requires naval forces capable of answering the Nation's call, whenever or wherever that might be. Amphibious warfare ships are, and will continue to be, a critical component of the Nation's fleet. They provide an essential capability to the joint force that cannot be overstated. As the amphibious fleet requirement authority, as designated in the Fiscal Year 2023 NDAA, it is my obligation to ensure this Committee is aware of the current status of your amphibious fleet.

Secretary of the Navy Amphibious Ship Studies: Since 2019, three DON studies have examined amphibious warfare ship force structure requirements. Combining the findings of those studies with amphibious warfare ship readiness trends over the past 10 years and projected ship availability rates, I conclude that the Nation requires no fewer than 31 traditional amphibious warfare ships (10 LHA/LHD and 21 LPDs/LSDs) to ensure the warfighting readiness and responsiveness of amphibious naval forces.

The Importance of Amphibious Warfare Ships and the ARG/MEU: Our Nation's amphibious warfare ships enable marines to execute three essential missions in support of the National Defense Strategy. First, unlike traditional surface combatants whose role is to sink enemy surface combatants and submarines or destroy enemy aircraft and missiles, amphibious warfare ships are meant to project the national power of the United States globally as both a warning to our adversaries and as a visible sign of our commitment to allies and partners. Our defense strategy clearly identifies those allies and partners as a source of our strategic advantage. As Secretary Austin has previously stated, we "need resources matched to strategy, strategy matched to policy, and policy matched to the will of the American people." Our strategic aims are clear: we must deter any act or activity intended to disrupt the rules-based international order. Our strategy is to not fight unless necessary; we seek only to deter conflict. Effective integrated deterrence requires amphibious warfare ships. More so than any other Marine Corps operation, activity, or investment, amphibious warfare ships with embarked marines provide a flexible, scalable, and visible capability for our combatant commanders to employ at the time and place of their choosing in support of integrated deterrence campaigning.

Second, amphibious warfare ships enable marines to immediately respond to crisis or contingency. When the Japanese nuclear reactor in Fukushima was damaged by an earthquake in 2011, an amphibious Task Force responded immediately. Noncombatant evacuations in Lebanon, the response to Hurricane Katrina in New Orleans, the rescue of downed U.S. aircrew in contested areas, and numerous other situations around the world have all required an amphibious response, either due to lack of inland access or a determination that a large U.S. military footprint ashore would exacerbate an already dire situation.

Third, amphibious warfare ships and their embarked marines ensure the President and his Ambassadors, as well as all U.S. citizens living outside the United States, have the on-call crisis response protection required to ensure their safety. Whether in Haiti, Venezuela, South Sudan, Yemen, Eswatini, or anywhere else on the globe, MEUs are ready to respond and protect. We must maintain forward-deployed ARG/MEUs with the operational reach to rapidly respond to our highest threat consulates and embassies globally. Marines forward-deployed aboard ships are the operationally desirable solution.

Lastly, the 31 combined amphibious warfare ships are vital components of our Nation's seven ARG/MEUs. This number of ships allows the Nation to maintain at least two ARG/MEUs at sea, with the option to surge to five. Assuming our present trajectory, we will fall below the congressionally mandated floor of 31 amphibious warfare ships. From my perspective, this is a result of divesting these platforms faster than we are procuring their replacements. The result of not meeting this requirement became most acutely visible when we were unable to provide traditional disaster-relief response following the earthquake in Turkey earlier this year. Our ARG/MEU deployments are a visible sign of commitment to our allies and partners and provide evidence to the PRC of our readiness to contest any malign activities. They also provide a visible sign to Russia about our commitment to NATO. In fact, when the Prime Minister and Minister of Defense for Sweden wanted to send a clear signal to Russia regarding Sweden's intention to join NATO, they did so by making a statement on the flight deck of the USS *Kearsarge*—a Wasp-class amphibious assault ship.

LPD Flight II Program: The PRC is accelerating their production of amphibious warfare ships. We cannot overlook the fact that since 2019, the People's Liberation Army Navy (PLAN) has launched three Type 075 "LHA-like" and three Type 071 "LPD-like" amphibious warfare ships. The PLAN intends to launch an additional five Type 075 "LHA-like" amphibious warfare ships in the next 5 years. It appears that the PLAN sees amphibious warfare ships as highly relevant and a critical instrument in power projection as evidenced by their recent deployments extending beyond the South China Sea. In my opinion, there is also a soft power component to our amphibious warfare ships that cannot be replaced by other platforms. It is obvious the PRC is learning this lesson and is pursuing their own amphibious warfare ship program as a competitive act.

Next, an LPD's or any other amphibious warfare ship's vulnerability to an antiship missile is no more relevant to its value than an aircraft's vulnerability to being

shot down is relevant to its value. Over 5,000 helicopters were destroyed during the Vietnam War, yet we do not hear persistent arguments related to their survivability. In a recent series of wargames held by the Center for Strategic and International Studies, 2 carriers and 10—20 destroyers and cruisers were sunk in the Pacific during each of the 24 iterations. Just as these wargames do not signal the irrelevance of these surface warships, conjecture about the survivability of amphibious warfare ships does not either. Instead of focusing exclusively on the survivability of platforms in a high-end fight, we should instead seek an appropriate balance of capabilities needed to effectively campaign and maintain deterrence with those capabilities optimized for major war. As evidenced by constant year cost, the LPD Flight II is the most effective and affordable answer until a follow-on amphibious warfare ship is developed.

FORCE DESIGN AND MARINE FORCES RESERVE

The Marine Innovation Unit (MIU), manned by Marine Reservists, was recently established aboard Stewart Air National Guard Base in New York. This cutting-edge unit will make considerable contributions by focusing marine talent toward accelerated identification and adoption of advanced capabilities, transforming naval service capacity for technology employment, and retaining and investing in human capital. MIU is expanding Marine Corps reach into the wider innovation ecosystem and developing key partnerships with the Defense Innovation Unit (DIU), NavalX, Army Futures Command, and others to increase tempo and progress toward Force Design objectives.

The MIU is just the beginning. We continue to explore the efficacy of establishing a maritime reconnaissance capability within our Reserve component (RC) as part of our larger multi-domain reconnaissance initiatives across the force. We are currently evaluating the potential to establish a reserve MQ–9 squadron, as well as Reserve augmentation detachments with Active Duty squadrons.

In addition to its role supporting Force Design, Marine Forces Reserve (MARFORRES) continues to function as both an operational and strategic Reserve to augment and reinforce the Active component (AC). In 2022, more than 1,100 marines and sailors activated to support Operation ALLIES WELCOME (OAW), honing their security and humanitarian relief skills. From that activation, 103 marines volunteered to deploy to OAW-Kosovo aboard Camp Bondsteel. Finally, as the Service brought new capabilities online during fiscal year 2022, MARFORRES provided High Mobility Artillery Rocket Systems (HIMARS) and Amphibious Assault Vehicle (AAV) rotations in support of USINDOPACOM requirements. This augmentation enabled the AC to execute Force Design experimentation and unit transitions without an impact on combatant commands. The Marine Corps' continued employment of the RC demonstrates our total force approach and has proven to be a critical component of force modernization efforts.

FORCE DESIGN AND MARINE SPECIAL OPERATIONS FORCES

As part of the larger Force Design effort, our marine special operations forces are modernizing through their Next Generation Raider Force (NGRF) initiative. The NGRF is intended to implement the strategic shaping and reconnaissance (SSR) operating concept, and its two major sub-components—irregular warfare and special reconnaissance, both focused in the littoral regions of the globe. In a manner consistent with other marine forces, MARSOC seeks to provide the joint force with the capability to shape the operating environment; illuminate adversary actions, activities, and intentions; and provide options to impose cost, both kinetically and non-kinetically, from competition to conflict.

TALENT MANAGEMENT

Talent Management 2030 (TM2030) directed accelerated personnel reforms and oriented the Service toward retaining more experienced marines. In February 2022, I directed the Assistant Commandant of the Marine Corps to form a Talent Management Strategy Group to align and harmonize Service-wide talent management efforts. This group focuses on future demographics, economic, and human capital trends, while working with academia, research organizations, pertinent departments in HQMC, and commanders in the FMF to identify initiatives that will better align individual abilities, skills, and desires with the warfighting needs of the Service. Since the release of TM2030, we have better aligned departments and organizations involved in talent management, assessed, and mapped out interdependencies of total force personnel policies, and begun to generate momentum with a sense of urgency. Leveraging authorities previously enabled by Congress, we enacted nine initiatives in 2022, which we will expand and accelerate in 2023:

Commandant's Retention Program (CRP): During fiscal year 2023, the CRP offered pre-approved reenlistments to top-performing marines by streamlining the process and giving priority access to primary military occupational specialty (MOS) monitors for duty station and assignment options. The CRP resulted in a 72 percent increase of first-term reenlistment submissions by top-performing marines with the average reenlistment approval accomplished in 24 to 48 hours, much quicker than the previous norm. Going forward we will expand the program to more first-term marines as well as our career force.

Staff Non-Commissioned Officer (SNCO) Promotion Board Realignment: Beginning in fiscal year 2024, we are realigning SNCO promotion boards to sequence more effectively with the assignments and reenlistment processes. This initiative will reduce SNCO billet gaps in the FMF and decrease the processing time of reenlistment packages. The realignment will provide greater predictability for SNCOs and their families while dramatically reducing the number of permanent change of station (PCS) moves across the force.

Recruiting Station Commanding Officer Selection Board: We implemented two initiatives for the fiscal year 2023 Recruiting Station Commanding Officer (RSCO) selection board. First, officers now have the opportunity to volunteer for command, including officers otherwise not scheduled for consideration. Second, officers may also request removal from RSCO consideration for 1 year, without penalty, should they prefer to complete a deployment or other professional obligation, or due to a personal life circumstance.

Special Duty Assignment (SDA) Volunteer Program: Prior to 2022, we screened and selected marines for Special Duty Assignments en masse. But last year, we launched a pilot SDA volunteer program, expanding incentives to provide duty station preference for volunteer recruiters, drill instructors, and combat instructors. As a result, volunteers increased by 62 percent, reducing the number of involuntarily screened marines by 38 percent. This minimized disruption to our marines, their families, and FMF units while also reducing SDA school attrition. We will improve and expand this program in 2023.

MarineView 360-Degree Leadership Review: MarineView360 is a development tool for leaders that helps marines identify their strengths, personal blind spots, and areas for focused improvement through the polling of their supervisors, peers, and subordinates. Leaders receive feedback and advice through a dedicated mentor and coach. The MarineView360 pilot began with a group of 150 sitting commanders and is now leveraging the experience of 200 additional selected commanders and senior enlisted advisors. The final phase of the pilot will expand to 1,000 marines of varying rank from gunnery sergeant to colonel.

Officer Promotion Opt-Out: Starting in 2022, both the AC and RC offered certain officer populations the ability to opt-out of consideration for promotion once without penalty. This allowed officers increased flexibility in their career paths to pursue unconventional career experiences or formal education that would otherwise take them off track for key developmental assignments. We are currently exploring the expansion of this initiative to enlisted marines to afford them the same flexibility in their careers.

Digital Boardroom 2.0 (DBR 2.0): DBR 2.0 increases the functionality and accuracy of information presented to board members, enhances the conduct of virtual boards, safeguards data, and improves this critical talent management process. The Enlisted Career Retention and Reserve Aviation boards successfully used DBR 2.0 in 2022. With the availability of cloud-based data, we will expand use of DBR 2.0 while simultaneously assessing the outcomes, cost and time savings, and professional depth and breadth of board members to benchmark with our legacy process.

Separate Competitive Promotion Categories: To meet the demands of the future, the Marine Corps must retain the highest quality officers with the necessary skill sets at all ranks. To that end, we are exploring options to reorganize the unrestricted officer population into separate competitive categories to better meet the Marine Corps' needs for diverse expertise and experience at all ranks by competing for promotion with peers having similar skill sets, training, and education. We will conduct a pilot program to evaluate the merits of this reorganization during the 2025 field grade officer promotion boards.

Career Intermission Program (CIP): Many marines desire to pursue specialized education, or to focus on family for a significant life event. The CIP is an initial step toward allowing marines an option to temporarily pause their Active Duty service and later resume their careers without penalty. This program enables career flexibility, and in doing so, also encourages retention of experienced, talented marines.

TALENT MANAGEMENT WAY-AHEAD

Manpower Information Technology System Modernization (MITSM): In February 2022, Deputy Commandant, Manpower and Reserve Affairs (DC, M&RA), created a business capability requirements document that outlines the capabilities required to begin the MITSM acquisition process. MITSM will aggregate legacy systems and capabilities into a device-agnostic, data-driven, and dynamic human resources information technology solution that meets the evolving needs of the Marine Corps' talent-based workforce. One aspect of the MITSM will be a web-based "talent marketplace," which will enable a collaborative and transparent assignment process and increase the role of both commanders and individual marines. This capability will help us better align the talent of individuals with the needs of the Service to maximize the performance of both. Despite its criticality to modernizing our talent management systems and processes, MITSM is currently challenged by the acquisition process.

Potential Implementation of "Indefinite End of Active Service" Policy for Enlisted Personnel: As we seek to mature the force, we also seek to eliminate antiquated processes and policies that induce both friction within the personnel system as well as personal and familial stress. There is little reason why those who have served honorably for 16+ years need to worry about re-enlistment before completing 20-years of service. This year, we will explore the feasibility of senior SNCO career designation to establish an indefinite expiration of Active service. This shift will align senior SNCO retention practices with those of officers, increase flexibility in assignments, reduce administrative burden and needless paperwork, and minimize uncertainty for SNCOs and their families.

Small Unit Leader Initiative: Under the current policy, first-term marines are ineligible for promotion to sergeant. While the spirit of that policy is reasonable, it creates a disincentive to the highest performing marines across the force by establishing an administrative obstacle they cannot overcome regardless of individual talent. Going forward, if one of our talented marines with at least 36-months of service wishes to re-enlist, then that marine will become eligible for promotion to sergeant upon their re-enlistment. This program will incentivize the most talented who desire to stay for another enlistment and should help mitigate the persistent need for sergeants across the FMF.

Active and Reserve Permeability: During the next year, we will explore options to increase the permeability between the AC and RC. The aim is to better match the diverse—and often immediate—operational needs of AC commanders with the specialized skills of individual marines in the RC. Due to statutory limitations on reserve employment, we will work with the administration to identify potential opportunities for improvement to AC-RCg permeability.

Orders Issuance: In an attempt to give individuals and their families as much time as possible when executing a PCS move, we will increasingly attempt to issue orders up to 12 months before the execution date. We will also assess the feasibility of issuing follow-on assignment orders to those individuals selected for resident professional military education. This should do two things. First, it should provide greater clarity to servicemembers and their families to facilitate proper planning for any school transitions, childcare needs, and special healthcare needs, and will provide spouses more time to secure desirable employment. Second, earlier issuance of orders would allow the Service to clarify a unit's incoming personnel picture to increase long-term planning, effectiveness, and risk management.

Five-Year Orders: The importance of unit cohesion cannot be overstated. To achieve that cohesion, we need to shift from a 3-year tour model toward a 5-year tour model—with notable exceptions for some of locations such as Okinawa, Japan and Twentynine Palms, California. In addition to creating greater unit cohesion and, as a result, greater readiness, a 5-year model would facilitate improvements to family stability and family readiness. Using the standard twenty-year career timeline, the new assignment length would only require a family to relocate three times after the initial assignment. This suggested tour length should enable children to finish elementary or secondary school in one location, and would enable extended periods of spouse employment—minimizing the impacts on dual-income households.

Assignment Incentive Pay / Hardship Duty Pay: Congress and the Department have provided us with the authorities necessary to incentivize service at some of the more challenging duty stations and we have a plan to use them. We will increasingly utilize Assignment Incentive Pay (AIP)—consistent with the other services—to increase the attractiveness of hard-to-fill duty stations. Notably, Army soldiers stationed at Fort Irwin, California or in Korea, have many of the same concerns as our marines at Twentynine Palms and Okinawa. In addition to AIP, we are explor-

ing other authorities provided by Congress, to incentivize duty by our most talented marines in our hardest-to-place locations.

Weapons Systems Officers (WSO) & Electronic Countermeasures Officers (ECMO): As we transition from the F/A–18D and EA–6B to the F–35, we will have the opportunity to transition some of our most talented Naval Flight Officers (NFOs) currently serving as WSOs and ECMOs into our expanded uncrewed aircraft squadrons (VMUs). At present, we have 95 WSOs and 32 ECMOs. While the legacy aircraft these officers were previously associated with are being retired, their individual skills remain critical to the future force.

Attracting, developing, incentivizing, and retaining dedicated professionals that increase our readiness and lethality is a priority and necessary to improve our efficacy as a force. The initiatives undertaken since the publication of TM2030 demonstrate our commitment to our expeditionary warfighting legacy and our drive to fight and win in 2030 and beyond. Our performance in future battles will be defined by the investments we make in our Marine Corps today. All actions to evolve our talent management system are aimed squarely at supporting our warfighting requirements. They will incentivize and optimize our talent and sustain our ability to serve as the Nation's premier expeditionary force in readiness within the rapidly evolving world we face.

RECRUITING AND RETENTION

The Marine Corps is not insulated from the challenging recruiting and retention environment impacting the entire DOD. The fiscal year 2024 budget supports an Active Duty end strength of 172,300 marines, an achievable target. The Marine Corps will monitor and reevaluate end strength, even as we continue to increase retention as part of our Talent Management strategy. We appreciate the support and flexibility that Congress provides us on retirement, retention, and end strength.

In 2022, we achieved our annual recruiting mission and exceeded both our first-term re-enlistment goal (101 percent) and our subsequent-term re-enlistment goal (107 percent). To put this in perspective, 5,063 first-term marines re-enlisted in 2018, while 5,820 re-enlisted in 2022. Further, we are re-enlisting those marines earlier. In fiscal year 2022, the Service met its First Term Alignment Program (FTAP) mission on 8 July 2022, which at the time was considered a major accomplishment. In fiscal year 2023, we met our FTAP mission of 6,225 marines on 6 February 2023—a full 6 months earlier—and retained higher quality marines than we have in the last few years.

The Marine Corps met or exceeded both our FTAP and Subsequent Term Alignment Program (STAP) goals across the force for the first time in 13 years. In fiscal year 2023, we expanded early re-enlistment authorizations for marines with at least 24 months' time in service from 200 to 600. We reached 150 in the first weekend, and then reached 200 (last year's total) within 3 weeks. We then expanded this program to accommodate the 700+ submissions we had received by 1 February this year. Completing these early re-enlistments will help mitigate any recruiting challenges across a 2-year period (fiscal years 2025 to 2027). In fiscal year 2023, we satisfied our retention goal of infantry marines before December for the first time in over a decade. As a result of these retention efforts, we are gradually maturing the force. This will result in more mature non-commissioned officers leading our youngest marines and will generate better operational outcomes on the modern battlefield.

As noted by RAND economist Dr. Beth Asch, we should never forget that we do not have an All-Volunteer Force; but rather, a predominantly all-recruited force. To overcome current challenges in recruiting, we have challenged all assumptions. We have also resurrected and reviewed ideas and options previously generated over the years, but never actioned or implemented. The results have been very promising.

While some assumed 5 year "infantry-only" contracts would not be well received, that assumption has been invalidated. During the past year, we conducted a limited experiment in which we offered recruits a 60-month infantry-only contract. This 400-spot program "sold out" immediately and was subsequently expanded to accommodate the demand. Infantry-only contracts ensure unit cohesion and almost guarantee marines two deployments in a single contract, mitigating unit turnover between deployments. Since the completion of that pilot program, we continue to find that our young marines prefer the stability afforded by these 60-month contracts and are choosing this option over 48-month contract options.

Some assumptions related to the utility of monetary incentives have also been invalidated. Big sums of money are not required to incentivize potential marine recruits. This past year, we implemented a $5,000 shipping bonus program for new enlistees with great success. In exchange for this one-time payment, we direct shipping at a date of our choosing, which gives us greater predictability and flexibility.

This experiment was very successful. We also]implemented a $9,000 shipping bonus program with similar success. In exchange for this one-time payment, the individual's contract time does not officially begin until they arrive at their first unit. As a result, those in this program that become infantry marines will average 2 deployments during their first contract, because their initial 7 months of entry-level training will not count toward their obligated service.

Finally, we want to make the statement, "there is always boat-space for talent," a truism across the Marine Corps. In the past, talented individuals were denied reenlistment due to "closed" MOSs or other administrative obstacles beyond their control, such as an inability to transition from an MOS they didn't choose or perhaps never wanted. These talented marines want to re-enlist, but they also want a new (primary MOS) PMOS. The ability to "laterally move" talent into a new PMOS is an obstacle at present, but we are working on this issue. This is a training issue, not a personnel issue. Regardless, we are not going to let 8 to 12 weeks of retraining costs prevent us from benefiting from the talents and leadership of these proven marines for another 4 years or more of service. If we must choose between proven leadership and MOS credibility, we will prioritize proven leadership for a greater return-on-investment. Retraining costs less than the $42,000 cost to recruit a marine. While recruiting will remain challenging for the foreseeable future, the Marine Corps is up to the challenge. But there is one option that we will not exercise: we will not lower our standards. This is non-negotiable. Despite the well-known recruiting challenges in recent years, from 2018 and 2022, the average Armed Forces Qualification Test (AFQT) and average General Technical (GT) scores of our infantry marines (0311s) have actually increased across the force.

CHILDCARE

Addressing the availability of childcare remains a top priority for the Service. Unfortunately, persistent supply and demand imbalances have resulted in unacceptable wait times for our marine families. At present, there are notable waitlists for full-time childcare at Marine Corps Base (MCB) Quantico, MCB Camp Lejeune, MCB Camp Pendleton, and MCB Hawaii. These locations still maintain approximately 77 percent of the Service's unmet waitlist for ages 6 weeks to 5 years. This is primarily due to a shortage of qualified workers, high turnover due to less competitive pay, lengthy hiring and background check processes, seasonal PCS fluctuations, and facility renovations. While we have capacity to serve 6,523 children at present, we only have sufficient staff to serve 5,880 children. To provide a variety of options that fit families' needs and to mitigate lengthy Child Development Center (CDC) waitlists, we also offer fee assistance for eligible marines who are geographically remote, reside more than 15 miles from an installation, or are assigned to an installation with a lengthy CDC waitlist.

In 2022, with the support of OSD Office of Military Family Readiness Policy, we established the Child Care in Your Home (CCYH) Pilot Program. CCYH is a DOD fee assistance pilot program that helps military families cover the cost of full-time childcare (30–60 hours per week) provided in their homes. Designed to support families with non-traditional work schedules, care can be provided every day of the week and during non-traditional hours, such as evenings and weekends, or on rotating schedules.

At present, we maintain 58 childcare facilities (32 CDCs and 26 school-aged care facilities). Renovations are currently in-progress aboard MCB Quantico and Marine Corps Air Station (MCAS) Beaufort. We recently completed a $37.7 million construction project aboard MCAS Miramar, which will provide 412 new childcare spaces to our families. In addition, we have construction planned aboard MCB Butler in Okinawa for a new school-aged care facility, aboard Camp Pendleton for a new CDC that will add 250 additional spaces, and aboard MCB Camp Blaz in Guam to satisfy the needs of 276 children in the future.

SUBSTANCE ABUSE PREVENTION

The Marine Corps' Substance Abuse Program focuses on three distinct areas: drug demand reduction, alcohol misuse prevention, and substance misuse non-medical counseling services. As part of our continued vigilance, we have expanded our urinalysis testing to include both illicit and prescription drugs, including the most misused and abused opiates. One hundred percent of urine samples are now tested for fentanyl. Additionally, due to a regrettable resurgence in lysergic acid diethylamide (LSD) in some of the communities surrounding our major bases and stations, we added LSD testing back to the standard drug testing panel. Delta–8 tetrahydrocannabinol (THC) was also added to the standard drug testing panel in July 2021, expanding testing for THC products. THC remains the most prevalent

drug detected during our testing. While expansion in testing did result in an increase in positive test results, the Marine Corps remains below the DOD benchmark for positive test results and current data indicates that prescription drug misuse is low.

SEXUAL ASSAULT PREVENTION AND RESPONSE

As a Service, we have focused on countering sexual assault within our ranks by professionalizing the prevention workforce, improving training for marines at all levels, professionalizing the sexual assault response workforce, and strengthening an environment of accountability by establishing an Office Special Trial Counsel. As of January, our newly established Office of Special Trial Counsel reached IOC and is on track to reach FOC by December 2023, putting prosecutorial discretion for these offenses in the hands of trained attorneys. In addition to these efforts, the Marine Corps continues to implement the recommendations of the Independent Review Commission on Sexual Assault in the Military, as approved by the Secretary of Defense. These efforts include developing organizational structure, hiring qualified professionals, and ensuring our prevention workforce is trained and postured to provide this crucial support to commanders. We are also investing in education to enable prevention, focusing on leadership responsibilities to both prevent and respond to sexual assault and sexual harassment, and providing training for trauma-informed leadership. While this larger societal problem persists, we are actively pursuing solutions to improve prevention and ensure offender accountability when prevention efforts fail.

SUICIDE PREVENTION

As part of our larger human performance management efforts, we continue to examine our mental health programs and suicide prevention efforts. Every life lost to suicide is one too many. As an organization known for our camaraderie, we take every loss of life seriously and continue to pursue all opportunities to reduce the incidence of suicide amongst our marines, sailors, and their family members.

The Secretary of Defense recently released a report from the Suicide Prevention and Response Independent Review Committee. The Committee concluded that the most important preventative measure is engaged quality leadership, and we agree. This has long been a focus of ours, as have many of the recommended personnel reforms, which mirror our on-going talent management initiatives. We also embrace the Committee's conclusions about the criticality of access to mental healthcare professionals and services, and their recommendations related to TRICARE reform to enable such access.

HEALTHCARE

Developmental Pediatricians: Generating ready forces requires building and sustaining readiness at-home among our military families. Military service is demanding. Extended training, frequent military moves, and routine deployments—scheduled and unscheduled—strain marriages and stress families, regardless of a marine's rank or time-in-service. That stress is magnified in cases where children have special medical needs, such as Autism Spectrum Disorder (ASD). Regrettably, we are currently unable to provide sufficient developmental pediatric care across the force, even in areas where we enjoy highly developed military healthcare infrastructure, such as San Diego or the National Capital Region. Parents are often forced to wait 6 months or longer for an appointment. This is not acceptable. The scholarship is clear and undisputed: early intervention is the key to better outcomes for children with ASD. Today, we have four Active Duty and three civilian developmental-behavioral pediatricians to support the force, which is insufficient to meet the needs of our families. The force requires at least two developmental-behavioral pediatricians per medical treatment facility to meet the needs of our families. If providing these additional developmental pediatricians is considered unsupportable, then we would ask for Congress' support in creating legislation to make it easier for families requiring this care to obtain it from the civilian market. Parents should not be forced to choose between their profession and calling to serve, and their need to provide for their families.

Defense Health Agency (DHA): The DHA has undertaken the largest transformation in the history of the military health system. From the lens of providing support to servicemembers and families, this undertaking has failed to satisfy expectations, and has resulted in both unsustainable costs and degraded services. While the DHA is maturing in its role as a combat support agency (CSA), the lack of agreement between the DHA and military departments regarding DHA's roles and responsibilities as a CSA, as well as business rules governing employment of

uniformed personnel inside the medical treatment facilities (MTFs), has created significant challenges. This problem is compounded by a recent exodus of military and civilian healthcare professionals due to "burn out" from the COVID–19 pandemic and operational tempo, the ability to double or even triple salaries in the civilian sector, and uncertainty and frustration over the DHA transition. Due to the nationwide shortage, the DOD is competing for the same finite resources when attempting to hire contract healthcare professionals. Unfortunately, the DOD contract pay rate is near the lowest, if not the lowest, in the industry, making recruitment particularly challenging.

In terms of improving the affordability of healthcare as promised, these cost savings have not been realized. In fact, the transition has come with higher costs. An additional undesired outcome of the movement away from Service authority, direction, and control of healthcare delivery is the lack of consideration for Service-specific requirements and the impact to healthcare operations. Specifically, in remote locations such as Okinawa and Iwakuni, decisions to reduce access to care inside MTFs has negatively impacted dependents and civilian personnel, which impacts operational readiness.

I ask for your continued oversight of the DHA and help in addressing the overwhelming gap between DOD contract healthcare labor rates and the civilian market. The success of the military health system (MHS) requires the ability to hire qualified, civilian healthcare labor. The MHS must have contract rates that can compete in a highly competitive market for a finite and highly valuable resource. Failure to remedy this issue will have catastrophic consequences on the readiness of the force.

TRAINING AND EDUCATION

The Marine Corps enjoys a hard-earned reputation as a learning organization. The previous 3 years of Service-level training exercises, along with other large and small exercises, wargames, and live force experiments, established a sound foundation for organizational learning. Collectively, they provided clear evidence that change is required. We have learned that today's training and education system must rapidly evolve to prepare individual marines and units to succeed on an all-domain battlefield. Those changes are articulated in the recently published Training and Education 2030 report.

Training and Education and the Russo-Ukraine Conflict: While the future remains uncertain, clear trends are emerging from the conflict in Ukraine that are consistent with much of what we have seen in other recent conflicts, evidencing the need for accelerated modernization across the joint force. However, we should not lose sight of the fact that the Ukrainians succeeded in the early phases of the conflict not because of superior equipment, but because they were adaptable—especially at the tactical level—and rapidly innovated new concepts of employment to address specific areas where the Russians had achieved advantage. In fact, their bias for action, unit cohesion, and emphasis on decentralized C2 had a significant impact on the readiness of Ukraine's infantry and maneuver forces. These factors allowed Ukrainian battalions to effectively operate in and control battlespace we would normally associate with an Army Brigade or Marine Regimental Combat Team—units 3 or more times larger than a traditional battalion. The operational requirements associated with these expanded areas of responsibility are placing more and more demands upon junior leaders that can only be addressed through greater investment in the training and education of our marines. The conflict is demonstrating that advanced capabilities will be available and employed at much lower tactical levels than we have witnessed in our own recent past. In future conflicts, we are going to ask junior leaders at the company level and below to do things battalion commanders may not have had the authority to do in recent years. It is clear this will require an increasing investment in the training and education of our leaders at all levels and across the entire joint force.

DOCTRINE

Doctrine establishes the basis for developing operational concepts and requirements. It also describes our understanding of how those capabilities are to be employed and ultimately, details training and associated resource requirements. Marine Corps Doctrinal Publication (MCDP) 1, Warfighting, tells us that doctrine "establishes a particular way of thinking about war and a way of fighting. It also provides . . . a mandate for professionalism, and a common language." Our doctrine, including its bedrock in Warfighting, has given us a solid grounding in the essential elements of maneuver warfare, upon which we expect our philosophy of warfare to remain anchored for the foreseeable future. This is not enough. The character of warfare has always been subject to the constant and uneven pressures of techno-

logical advance and social and geopolitical change. Warfare's changing character means we must constantly review and revise our assumptions; they will change, and we must change with them. Doctrine, in turn, must evolve, adapt, and keep pace. For example, in June 2022 we published MCDP 8, Information, describing how the Marine Corps gains and exploits information advantages in all warfighting domains across the competition continuum. We also recently revised MCDP 4, Logistics, updating our doctrinal foundation of this critical warfighting function to meet the challenges of the future.

Changes to our warfighting ideas, theories, and concepts must be expressed clearly and quickly. This leads to greater emphasis on the rapid creation and dissemination of doctrine at a level of specificity below that of our capstone publications and tied tightly to our campaign of learning, including feedback from the FMF. Most importantly, we must hold ourselves accountable for training and operating in accordance with our refined doctrine.

ENHANCED INFANTRY AND LEADER TRAINING

Fourteen-week Infantry Marine Course (IMC): Before our IMC pilot effort began, the Marine Corps underwent a deliberate process to identify the infantry skills necessary to win in a fight against a peer adversary. During this process, Training and Education Command developed 39 behaviors required for all infantry marines. These required behaviors range from traditional skills like employing the service rifle, patrolling, and land navigation to skills such as "embodying the Marine Corps' warfighting philosophy" or "manag[ing] signature." Based on feedback from our division commanders, a subset of 20 of the original 39 infantry behaviors were prioritized as a requirement for entry-level training. Those 20 infantry behaviors became the foundation for a new program of instruction (POI) and the first pilot of the 14-week IMC.

IMC marines are held to a much higher physical standard to both enter training and to graduate than previously required. Marines earning the infantry MOS are now challenged to achieve first class scores on the Physical Fitness Test (PFT) and Combat Fitness Test (CFT), achieve a minimum swim qualification of Water Survival Intermediate (WSI), and pass an evaluation on the Shallow Water Egress Trainer (SWET), which simulates procedures for evacuating a sinking aircraft. Student physical graduation requirements also include a 10-kilometer (km) Combat Endurance Assessment (CEA) and completion of a 20km hike with a 75-pound fighting load.

In addition to better physical fitness, IMC marines develop better decisionmaking skills. By the end of the course, students make thousands of decisions, receiving constant feedback from both combat instructors and peers, significantly increasing the experiential foundation for sound decisionmaking. As IMC builds a better decisionmaker, it also produces a significantly more lethal marine. IMC graduates are trained to a markedly higher standard in rifle marksmanship and are combat capable in all environments with the M27 Infantry Automatic Rifle (IAR). They are further trained in the employment of medium machine guns, grenade launchers, antiarmor systems, and light mortars—all of which are new weapons skills for basic riflemen.

Better-trained marines generate operational tempo—a key to success in maneuver warfare. The outcomes thus far are remarkable. IMC graduates are trained to be quicker-thinking and better decisionmakers, more physically fit, and much more lethal at earlier points in their careers than their predecessors. All these things should increase the readiness of their units and the overall force. To date, 3,524 marines have graduated from this program. While it is too early to make any definitive conclusions, initial findings suggest IMC graduates may have lower non-EAS attrition rates.

THE MODERNIZED MARINE CORPS TRAINING ENVIRONMENT (PROJECT TRIPOLI)

We train how we fight. But we are limited by the number of ranges and training areas available, environmental limitations, airspace restrictions, and several other factors that ensure marines can employ the full range of capabilities they will have at their disposal. One solution to this challenge is to expand and modernize the Marine Corps training environment (MCTE) through an effort called Project Tripoli, which seeks the integration of the live, virtual, and constructive training domains. The MCTE is our combined arms training concept for the future that will enable us to realistically train and exercise with our advanced capabilities both internally and as part of the joint force. Importantly, it permits training with capabilities in a manner concealed from our adversaries and in ways that would otherwise be resource prohibitive in terms of materiel, ordnance expenditure, and personnel. The

MCTE will enable combined arms training in the broadest sense and will allow new and expanded dimensions in force-on-force (FoF) exercise capabilities. Conceptually, a modernized MCTE integrates all training enablers—from high-fidelity flight simulators, to ranges and training areas, to FoF training systems—into C2 architectures and networks supporting training events. MCTE is not a single acquisition program, but a system comprised of multiple training programs. To further improve the MCTE network, we will continue to build interoperability among existing training systems as we bring new systems online, pre-designed with enabling technologies to support increasingly dynamic training environments.

Our next big step will be to field our Force-on-Force Training System (FoF-TS) Next Program across the force to equip units with the training tools necessary to conduct realistic and challenging FoF training. This system is designed specifically to accommodate rapid changes and refinements in the training continuum. Additionally, it will process the tremendous amounts of sensor data needed for our FoF-TS, UAS, cyber, electronic warfare, and loitering munition capabilities to facilitate readiness. The fiscal year 2024 budget request for training and education modernization is $581 million.

TRAINING AREAS AND RANGES

At present, ensuring sufficient range access and training in the Western Pacific region is challenged a by a lengthy supply chain, environmental constraints, infrastructure challenges, and access restraints. To ensure the persistent readiness of marines in the region, the Marine Corps has a number of planned investments across the Commonwealth of the Northern Mariana Islands. Investments planned for Guam include: a live-fire training range complex, a multi-purpose machine gun range, and urban combat training facility, and a training support center. On Tinian, the Marine Corps is pursuing a platoon level live-fire and maneuver range and an explosive ordnance disposal range. These efforts are pending a positive determination of ongoing environmental impact studies. The Marine Corps is also involved in the Pacific Multi-Domain Training and Experimentation Capability (PMTEC) initiative. PMTEC will better integrate existing capabilities and expand the ranges and training areas available to marines, to include the Joint Pacific Alaska Range Complex and the Pacific Missile Range Facility.

Training areas and ranges in Alaska continue to grow in importance to overall Marine Corps readiness. The sophistication, instrumentation, infrastructure support, and sheer size of Alaska ranges make them indispensable for the development of 5th generation fighter aircraft tactics. During 2022, marines participated in four joint exercises in Alaska, to include the high-end rehearsal exercise RED FLAG. The Marine Corps provided 38 F–35Bs across different phases of the exercise as well as leading edge air C2 capabilities. In 2023, we will expand our participation in exercises in Alaska to include Exercises NORTHERN EDGE and ARCTIC EDGE.

While our efforts to prevent encroachment have focused on protecting the ranges and training areas we have, modernized training requirements are going to push us to expand training areas in multiple domains to ensure we have trained and ready forces to meet our Nation's needs into the future. MCAS Yuma makes an outsized contribution to the training readiness of marine aviation due, in part, to the presence of Marine Aviation Weapons and Tactics Squadron One (MAWTS–1) and the conduct of the biannual Weapons and Tactics Instructor (WTI) courses. In addition to the decades long challenges associated with the location of the Yuma Fairgrounds, the continued use of Marine Corps Air Station (MCAS) Yuma's Barry M. Goldwater Range (BMGR) in support of modernized aviation training is at risk due to the loss of Flat Tailed Horned Lizard (FTHL) habitat associated with border wall construction. By risk we mean, the loss of habitat increases the likelihood that the FTHL would be listed under the Endangered Species Act. Listing the FTHL could result significant restrictions to our ability to train and experiment to meet force design objectives. To prevent this from occurring, we need to act now to secure necessary FTHL habitat and are leveraging the Readiness and Environmental Protection Integration Program as one tool to support habitat protection efforts.

In addition to physical ranges, we will also leverage a variety of virtual ranges like the Persistent Cyber Training Environment (PCTE) for joint qualification requirements and rehearsals. The PCTE integrates capabilities that support continuous evolution of cyber training and exercises, enabling force readiness and driving decisions on tactical, operational, and strategic levels. Over the past year, the PCTE has expanded access to cyber operating forces in the FMF. We are confident that access to these modern training environments will significantly enable the all-domain nature of our marine forces.

INSTALLATIONS AND LOGISTICS

In recent years, we have identified logistics as the "pacing function" for warfighting. Among the seven warfighting functions, logistics most dictates the tempo of operations and the operational reach of a unit. No other warfighting function more profoundly affects our ability to persist in contested spaces. Moreover, logistics and sustainment capability and capacity have a deterrent effect. Persuading an adversary that a quick win is not possible by demonstrating an ability to generate, re-generate, and sustain combat power is, in itself, a deterrent.

An uncertain future, the threat of peer and near-peer competitors, and developing challenges in all warfighting domains create wide-ranging implications for sustaining the current and future force. To support emerging and future operational requirements against peer and near-peer adversaries, we will have to transform our approach to logistics. Simply put, we must transition from a force optimized for supporting sustained operations ashore to a maritime force capable of supporting operations in austere, expeditionary, and littoral environments that are contested across all domains. This process of change and adaption began with the release of our Installations and Logistics 2030 report and our revised foundational doctrinal publication on logistics, MCDP 4.

While our current approach worked well in the past, it is insufficient to meet the demands of the future operating environment, particularly when contested across all domains. The magnitude of change required to prepare the Marine Corps installations and logistics enterprise to support the future force mandates a fundamental reevaluation of our approach to logistics.

INSTALLATIONS ASSESSMENT AND RESOURCES

Ready and resilient bases and stations are a critical requirement today and into the future. Years of under-funding the installations portfolio has resulted in a funding shortfall across the FYDP in the tens of billions of dollars. Earlier decisions to take near-term risk in these accounts and shift resources to support readiness-related accounts resulted in longer-term systemic risks to the Service that we must address.

Beginning in 2023, we will engage in a comprehensive and informed infrastructure recapitalization that directly contributes to the requirements of the future force. This will require additional funding, and while it will take more than one FYDP to accomplish, the foundation must be laid today.

FACILITIES SUSTAINMENT, RESTORATION AND MODERNIZATION (FSRM)

Fiscal year 2024 will be the second year using our pilot Readiness Maximization Tool. This pilot program prioritizes restoration, modernization, and demolition in order to achieve a better facility readiness outcome as opposed to the traditional emphasis of focusing on sustainment metrics. The Marine Corps' fiscal year 2024 FSRM budget request for the Active and Reserve forces totals $1.3 billion.

INSTALLATIONS PLAN 2023 (IPLAN)

In the near future, we will publish our first ever Installations Plan (IPLAN), modeled after the Aviation Plan (AVPLAN), to create a shared understanding of the Marine Corps Installations Command (MCICOM) enterprise. We intend to produce this reference document annually to show military construction (MILCON) and FSRM funding framed across time by region, base, and station. The report will further identify the five priority MILCON projects (funded or unfunded) by base and station for the next 1 to 10 years. Finally, future versions of the IPLAN will include a threat-based resiliency assessment by base and station regarding resiliency of force protection; airfield operations; range support; and command, control, and communications. It will also describe the scope, cost, and schedule to achieve resilience.

MILCON PRIORITIES IN SUPPORT OF FORCE DESIGN

The fiscal year 2024 budget includes $1.3 billion to support a total of 16 projects, which includes both planning and design. This funding includes seven projects totaling $457 million to continue our efforts to relocate marines from Japan to Guam.

INFRASTRUCTURE

Water Infrastructure: Aging drinking water and wastewater systems were not designed to meet increasingly stringent environmental requirements. These old systems also require significant maintenance to continue operation. Since fiscal year 2016, the Marine Corps has invested approximately $400 million to upgrade or re-

place drinking water and wastewater infrastructure, improving environmental compliance and reducing risk to personnel and the environment. We are currently evaluating the need for future support.

Energy Infrastructure: The vast majority of our installations are dependent on a commercial electrical grid vulnerable to disruption due to a variety of threats such as aging infrastructure, severe weather, and both physical and cyber-attacks. While procedures and infrastructure are in place to respond to short-term power outages, there is a growing need to ensure we can maintain essential functions and critical services during a prolonged outage. As part of our renewed focus on installations, we will produce energy resilience plans by base and station in 2023.

Fuel Storage Tanks: In April 2022, in response to an inquiry by the Assistant Secretary of the Navy for Energy, Installations, and Environment, MCICOM conducted a risk assessment of significant (>10,000 gallon) fuel storage tanks located on Marine Corps installations, and the risk to drinking water sources and systems. This assessment included tank condition, tank location relative to systems and sources, and condition and adequacy of containment systems. The assessment concluded no immediate threat for this population of storage tanks. However, the assessment did identify two >10,000-gallon tanks with a high-risk for release due to condition, but due to their locations, concluded any release from either tank would not impact water sources or systems. Since the completion of this assessment, the high-risk tank located aboard Camp Fuji has been replaced, and the other tank, located aboard MCB Quantico, is scheduled to be replaced this fiscal year. As an additional risk mitigation, the tank aboard MCB Quantico has been drained pending replacement.

Barracks: The Marine Corps possesses 672 barracks with 155,329 bed spaces. On average, those barracks are 32 years old and in need of renovation. In fiscal year 2022, we renovated 14 barracks for a total cost of $118 million, and in fiscal year 2023, we plan to renovate another 16 at a cost of $262 million. The barracks renovations completed in fiscal year 2022 to fiscal year 2023 will positively impact 8,116 marines living in them. The per barracks renovation costs over the past 2 years have risen from $8.4 million to $16.4 million. At present, 16 percent or 108 Marine Corps barracks are in poor (Q3 on the facilities conditions index ratings) or failing (Q4) condition. Current estimates to recapitalize, sustain, or demolish require an additional $3 billion to return all assets to Q2 (>80 facility condition index) by 2031. Clearly Q2 is not our goal; Q1 is and will be. In fiscal year 2024, we plan to use approximately $270 million to renovate 25 barracks including some renovations previously deferred.

GUAM AND H2B VISAS

Earlier this year the Marine Corps reactivated Camp Blaz—a facility that secures a geographically distributed and operationally resilient posture for the Marine Corps in the Indo-Pacific. It also strengthens DOD's ability to deter, defend, and support allies and partners in the region. The continued build-out of Guam projects will require a reassessment of the H–2B visa issue, based on available qualified workforce.

CLIMATE CHANGE RESILIENCE

Currently, the Marine Corps is undergoing a review of installation master plans to build resilience against all hazards such as wildfires, water scarcity, rising sea levels, and hurricanes. Marine Corps Recruit Depot (MCRD) Parris Island (PI) has already completed a master plan (2021) and a Climate Change Resiliency and Adaptation Plan (2020), which are being used to develop MILCON and FSRM investment projects to reduce existing and projected localized flooding. The Military Installation Resilience Review of the low country community surrounding MCAS Beaufort and MCRD PI developed a toolkit for structural interventions and nonstructural planning approaches to enable the low country communities to adapt to climate change. The toolkit has been applied to three pilot projects: St. Helena Island wastewater treatment plant, Lady's Island neighborhood, and the Shell Point Interchange. MCRD PI's efforts to address sea-level rise and climate change with regional conservation groups and the local community is growing stronger. MCRD PI currently has five initiatives in process with our regional partners: Lowcountry Sentinel Landscape Application, National Fish and Wildlife National Coastal Resiliency Fund (carbon sequestration $550,000), South Carolina Department of Natural Resources, Readiness and Environmental Protection Integration Program, and U.S. Army Corps of Engineers.

CONCLUSION

On-going conflicts across the continent in Africa, along the line-of-actual-control between India and China, along the Turkish-Syrian border, and in Ukraine remind us that despite our best efforts, we can never know with certainty when, where, or how an adversary might precipitate conflict—especially against an ally or partner. We must be ready—not simply available—to respond tonight, tomorrow, and every night into the future. We are. As a Service, we must ensure that your crisis response force is globally deployable. We are. But we don't have the luxury of building a force for only one threat, one region, or one form of warfare. The Marine Corps must be organized, trained, equipped, and postured for the full range of operations in places we might not expect, and on timelines we did not anticipate. We are. In these times of increasing complexity and uncertainty, the Nation needs one force, maintained at the highest levels of readiness, that can respond to the crises that few saw coming. We are that force.

This Committee's support to our modernization efforts—anchored on Force Design 2030, Talent Management 2030, Training & Education 2030, and Installations and Logistics 2030—has been crucial to our success thus far. Today is an opportunity to re-recommit to our modernization program and help facilitate its acceleration, while at the same time addressing issues often mistakenly deemed secondary to readiness such as barracks, housing, childcare, and healthcare. Which are equally essential to the readiness of the force.

Based on your continued support, 2022 and 2023 will be known as the years Force Design transitioned from ideas to operational capabilities. Force Design is now; it is here today. But with updates to organization and equipment well underway, we must turn both our attention and our resources to manning, training, and retaining. We must never lose sight that our most critical warfighting advantage is our people, and that they deserve the best quality-of-life that we can provide them given the anticipated stress associated with military service. I look forward to working with the Committee Members and staff over my final months as Commandant, and thank each of you and your staff for the tireless efforts in support of the Marine Corps.

Chairman REED. Thank you very much, General Berger.

Mr. Secretary, submarines are critical, in fact, I would argue the most critical aspect of our Navy, and looking at the contract right now they are beginning to work on Block V.

But going back to Block IV we are seeing already delays, which will translate into the next block—the multiyear acquisition of these submarines. Block IV has been running about 12 to 18 months behind, costs have been increasing, and we are trying to bring the *Columbia* in on course and on schedule. But when you see these reverberating cascading effects you wonder if that is possible, too.

What are you doing and what is the Navy doing to get these course and schedule issues on track?

Mr. DEL TORO. Thank you, Mr. Chairman. There is numerous steps that we are taking, first and foremost, obviously, providing proper oversight over the construction contracts themselves.

We believe by several estimates that they are at about 1.2 to 1.4 submarines a year when they need to be at 2.0 submarines a year. No one ignores the fact that we have been living in COVID and COVID has actually had a significant impact on our supply chains and our providers and so this takes all hands on deck basically to get to a better place and I hope, and I am actually optimistic that we can get to a better place in the next 5 years.

But it is going to demand a lot of incremental progress and a lot of continued investment in the submarine industrial base. So last year, for example, there was approximately $700 million that was invested alone in projects like the regional training centers or systems that are so critical to getting to a better place.

Those regional training systems have been implemented in the Northeast. They have also been implemented in Virginia as well, and out in San Diego working with the community colleges. Working with numerous suppliers and vendors throughout the area so that then we can make the CAPEX [Capital Expenditure]-like investments in those companies to help them get to a better place with their own capital investments as well.

Fundamentally, we also have a challenge, obviously, with regards to workforce training and recruitment, and so I believe, as I have visited all the shipyards and met with all the senior leaders of the shipyards, that they are committed now to actually increasing benefits at the shipyards themselves. Making the shipyards more amenable to workers coming and working there. Looking for housing solutions in the local communities as well in places where housing is a real problem.

I am hopeful that over the course of the next few years we are actually going to see some significant increased improvements and getting us to the right place closer to two boats per year on the *Virginia*-class.

Chairman REED. I hope we can because it is essential to the Navy. It is one of our greatest assets, particularly in the Pacific if there is any conflict there.

Admiral Gilday, I recently received a briefing from Secretary Raven about the suicides on the *George Washington.* The first phase was focused on the individual sailors who were involved.

This new phase is more about collective causal conditions, environmental conditions. But with respect to the first phase, I think not only myself but some of my colleagues were interested about accountability for commanders.

Was there a thorough investigation of commanders' responsibilities and was it formally concluded that there was no command or leadership gaps or, in fact, is that still pending?

Admiral GILDAY. Sir, in the first investigation we did not take action against the commander of the *George Washington.* The Secretary and I have both been to that ship. We have walked those deck plates. We have met with those sailors before and after that investigation was completed.

The investigation found that those suicides, tragic as they are, were independent and there were no common causal factors across those three.

With respect to improvements, although the second investigation has not yet been signed out, there are many improvements that we have made across the force. They include investments in things that we learned from the *George Washington.*

As an example, parking was a problem at the shipyard so we are investing in two parking lots, two multipurpose fitness facilities. We brought minimarts, if you will, closer to the ships. We improved WiFi. We moved sailors off the ship. We invested in new berthing barges. Yes, sir.

Chairman REED. I appreciate that. But, very succinctly, was there an investigation of the chain of command? Was it completed with a conclusion by the Secretary that there was no leadership failings?

Admiral GILDAY. Yes. That was a rigorous investigation, sir. There were things that went wrong. But tying those specific failures to the specific death by suicide were not clear.

Chairman REED. Let me make one other comment, no questions. But as we went through the reports on the *George Washington* we noticed that one factor was sleep deprivation. That was also a factor in the investigation regarding the *McCain* and *Fitzgerald* collisions.

I would presume that you are now relooking at policies and procedures so that that is not a factor and I will——

Admiral GILDAY. Sir, for ships that are underway we absolutely have and we have sleeping policies in effect now based on what we learned from the collisions in 2017.

The particular issue that you spoke to with respect to the *George Washington* is the fact that one sailor in particular was having trouble sleeping on the ship. As I mentioned a moment ago, we have tried to move everybody but the duty sections off the ship into new berthing barges and other facilities to get after that problem.

Chairman REED. Thank you very much.

Senator Wicker, please?

Senator WICKER. Thank you very much, Mr. Chairman.

General Berger, let us talk about LPDs. I think you said that there is a minimum—absolute minimum requirement of 31 amphibs. Also, you have asked for $1.7 billion as your number-one unfunded requirement to fully fund the LPD 33. Why have you done that and why is this so important? What if we do not do it?

General BERGER. Sir, the study that the Secretary of the Navy directed us to do last year determined the operational requirement. Pretty rigorous study. Thirty-one is the minimum and that made some assumptions on readiness but 31 is the minimum of 10 big decks and 21 medium and smalls.

So 31 is both the operational requirement and now the statutory law minimum. That is where the minimum came from. In the shipbuilding plan and the budget submitted there is no plan to get to that number and that is why I put it as the top of the unfunded list. I understand it—I know it to be the operational requirement and the law and I saw no plan to get there.

Senator WICKER. Where will that disadvantage us the most if we do not do that?

General BERGER. It may be a paraphrase, but in the Chairman's opening statement he said that the Navy and the Marine Corps are the Nation's first line of deterrence, first line of defense. I agree with that.

If we do not have enough amphibious ships or other naval vessels, then you put at risk both deterrence and defense and the ability to respond to a crisis. So the short answer is my concern is if something happens around the world we will not have the right capability nearby where the combatant commander needs it.

Senator WICKER. In particular, how would that help us in the Pacific?

General BERGER. If something happened in Taiwan or any of the regions of the Pacific where there was an aggressive action and we did not have a naval expeditionary force nearby, then time—if you

are a combatant commander, if you are an operational commander, as you know, sir, time matters.

I think the same you could say in Central Command, same in European Command. There are times when you can fly in and land a force, but not always. In fact, most of the cases you need a seaborne force, and you need marines that can project power ashore when you need to.

Senator WICKER. Let us also talk about production line. Now, we are building LPDs now but if this current budget is not changed what will happen to that production line? What will be the consequences of it?

General BERGER. That line would stop, sir.

Senator WICKER. In the future when we decide we finally want another amphib, how will that disadvantage us? You got to go find the workers again, do you not?

General BERGER. That is correct.

Senator WICKER. Okay.

General BERGER. You got to retrain them, hire them. You got to start from scratch.

Senator WICKER. Also, with regard to cost savings I understand the LPD has already gone through cost saving programs and someone has suggested a dramatic reduction in flight decks and you view that as unacceptable. Would you explain that to us?

General BERGER. In 2014 the Navy and the Marine Corps, directed by the Secretary of the Navy, undertook a study for about 18 months looking at the LPD–17 and what could be an affordable but capable replacement for the LSD and that became the LPD Flight II.

Reduction of what was an LPD–17 version into a Flight II status, every bit of efficiency squeezed out of that. I think the input from Huntington Ingalls was really important. So now if there is another effort to reduce that further I know that we went to the minimums in 2014. Nothing less will do.

Senator WICKER. Okay. Good. Let us leave it there and, Secretary Del Toro, let us talk briefly about frigates. Now, we are building those in Wisconsin now?

Mr. DEL TORO. That is correct, sir.

Senator WICKER. The decision has been made to build the frigates there and at another shipyard. Is that correct?

Mr. DEL TORO. No, sir, not as of right now. The decision——

Senator WICKER. That has not been made?

Mr. DEL TORO. No, sir. That decision has not been made.

Senator WICKER. Okay. Well, where are we on that?

Mr. DEL TORO. We are actually waiting for the completion of the technical design package, which is expected by the end of this year.

Once that technical design package is fully mature and submitted for review, we will review it and at that point we will make a decision on whether we have the ability to actually take that technical data package, and make sure that it is mature enough to actually compete—perhaps, compete with another shipyard so that we could have two shipyards building the *Constellation*-class frigate.

Senator WICKER. Well, we are going to need four a year. Is that right?

Mr. DEL TORO. I am sorry, sir?

Senator WICKER. We are going to need four frigates a year and that that concept is a way to get that. Is that correct?

Mr. DEL TORO. No, sir. Right now the President's Budget recommends a saw tooth pattern of two one two one, moving forward. So it is two frigates a year that we will initially need.

Senator WICKER. Admiral Gilday, how important would it be to move to four?

Admiral GILDAY. I think very important, based on the comments of both you and the Chairman at the opening of the Committee. If we could get a second shipyard and two a year from each shipyard—two destroyers, two to three destroyers a year, we would be in a much better place. We are catching up and you cannot buy back time, sir, with the seven shipyards that we have, relative to the 30 that we had years ago.

Senator WICKER. It is going to be hard to get to four a year without designating two shipyards. Do you agree?

Admiral GILDAY. I agree. I also agree with the Secretary's comments. I think two shipyards is in the plan. We want to make sure that we are measuring twice and cutting once before that decision is made.

Senator WICKER. Thank you, gentlemen.

Admiral GILDAY. Yes, sir.

Chairman REED. Thank you, Senator Wicker.

Senator Hirono, please?

Senator HIRONO. Thank you, Mr. Chairman. Thank you very much for your service and especially for Mr. Secretary and General Berger. This will be your last, I guess, year of service, so I thank you.

I note, Mr. Secretary, that recently the DOD [Department of Defense] opened up its Red Hill Clinic to people who were not in the service and that is very much appreciated by a community that has been rocked by the disaster at Red Hill and continue to raise many questions about what the military is doing and how they are doing it.

There were a number of recommended changes to the—based on what happened at Red Hill and characterizing what happened at Red Hill as having had a culture of procedural noncompliance, a lack of ownership, and poor training.

These were among the descriptions of what led to the disaster at Red Hill, and there were a number of recommendations made, Mr. Secretary. Among the changes that were recommended can you describe a specific major change that you have implemented or that is being implemented?

Mr. DEL TORO. Yes, ma'am, and currently out of the 253 repairs that were identified in order to defuel Red Hill approximately just over half have now been completed.

But the one major change that I would say that I have personally implemented is to ensure that anyone who actually enters Red Hill is actually being supervised properly. So out of the many subcontractors that do work at Red Hill at any given day they have Government oversight.

There is a plan in place that they have to demonstrate for exactly what they are going to do, how it was verified, and oversight

over the individual actions that they are going to take with regards to any maintenance that actually gets conducted in Red Hill.

Senator HIRONO. So it is not just at Red Hill. There are other installations where this kind of review needs to take place. It is stunning to note that the lack of ownership, poor training, lack of oversight that characterize what happened at Red Hill may be going on in other facilities and that needs to be changed. That kind of culture of lack of oversight is really very stunning and totally unacceptable.

Mr. DEL TORO. Senator, if I can just add that that degree of oversight actually has been enforced now at all other fuel facilities as well, too.

Immediately after the incident at Red Hill we made sure that we looked at every other fuel farm that we own and operate to try to ensure that we up the standards of how those fuel farms are actually operated.

Senator HIRONO. That is reassuring.

Mr. DEL TORO. So those measures are in place.

Senator HIRONO. That is reassuring, Mr. Secretary, because as you know the community is still very much questioning the—basically the military's capacity to do the right thing and complete the work that needs to be done at Red Hill.

General Berger, many field grade officers who are actually on the ground and closest to the problem have come on and publicly said the changes made by Force Design 2030 have made their units more capable, and you mentioned the Hawaii-based Third Marine Littoral Regiment's successes against a more standard Air-Ground Task Force in recent exercises.

These young men are the future leaders of the Marine Corps and are currently tasked with ensuring the marines are prepared. So their support for the changes made by Force Design 2030 is instructive. I just wanted to make that statement, General, because I do support the changes that you have made.

One thing that does concern me, General Berger, is you noted that infrastructure is very important. The modernization and maintenance of infrastructure that has to do with the quality of life of our people, and, yet, the Marine Corps only funded 54 percent of the facilities' sustainment and restoration funds that it needs.

So why is this, General? Because for other funding needs it is a much higher percentage of the items that are being funded and yet for the Marine Corps it is only 54 percent. Why is that?

General BERGER. The approach of 80 percent funding for FSRM [Facilities, Sustainment, Restoration and Modernization], which has been the model that we have used for as long as I have been a marine, has not always allowed us the flexibility to put money where we should have put it because we are tied to a fixed percentage across FSRM. The model that we are using now supported by OSD [Office of the Secretary of Defense] allows us the flexibility to move money within, to not waste money where it is not going to do any good.

Senator HIRONO. There is a question as to what you consider will not do any good because there are a lot of infrastructure needs. I think, throughout the DOD and, as you know, to me, Red Hill and some of the other events that have occurred with regard to the

Army and the other services says to me that we need to pay a lot more attention to our infrastructure needs.

The kind of deferred maintenance that is exemplified, I would say, throughout DOD is an area that I personally—well, I will be focused on as Chair of the Readiness Subcommittee.

I just want to note that to you that I will be paying attention to the needs of all of our services with regard to repair and maintenance of infrastructure. I want to know that what is going through our lines, our pipes, our electrical lines are—that those infrastructure needs are being met.

Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Hirono.

Senator Fischer, please?

Senator FISCHER. Thank you, Mr. Chairman. Good morning.

Mr. Secretary, earlier this morning I attended a classified briefing on the modernization of our triad platforms, and I would say since the *Columbia* program is on a tight timeline to deliver the first submarine to the Navy in 2027, can you provide us an update in this public setting on whether the Navy will be able to meet this timeline given workforce and supply chain challenges?

Mr. DEL TORO. Thank you, Senator. Thank you for that question and for your commitment to the nuclear triad as well.

As you know, currently approximately 50 percent of our ship construction funds are devoted to submarines of which *Columbia* is the highest acquisition priority. When I came in as Secretary approximately 19 months ago or so. I also foresaw that there always could exist, perhaps, a gap between the decommissioning of the *Ohio*-class and the oncoming of the *Columbia*-class.

One of the measures that I did take last year was to start analysis associated with how long it would take, and how much resources would be needed to actually look at each one of our *Ohio* sub hulls and see if we could extend some of those hulls to close the potential gap between *Columbia* and *Ohio*. That process is now underway and we should have better estimates, hopefully, by the end of this year that we can invest in the President's 2025 Budget.

In addition to that, all the oversight functions that I mentioned earlier to the Chairman with regards to keeping *Columbia* on track and, again, I thank the Congress for their investments in the industrial base.

Senator FISCHER. Can you give us a timeframe that we are currently seeing for the *Columbia?* Is it on track? Is it maintaining?

Mr. DEL TORO. Yes.

Senator FISCHER. Is it dropping back?

Mr. DEL TORO. So *Columbia* is on track in accordance with her contract requirements. There was an expedited schedule that was created by Electric Boat, approximately 6 months advanced. It is about approximately 10 percent behind the 6 month advance schedule that we would like to adhere to as well, too.

But rest assured that we are working very closely with the industrial base to keep it on its contract schedule.

Senator FISCHER. Admiral, do you have anything to add to that?

Admiral GILDAY. I was just up in Connecticut last week at the shipyard. The Secretary is absolutely right. We are about 10 per-

cent behind in the advanced schedule. We are watching that very closely.

So that advanced schedule, 78 months versus the 84 months contracted, is intended to give us margin for first-of-a-class ship. We are going to have to do weapon systems testing and we are going to have to do testing of a first-of-a-kind integrated propulsion system, and so we are trying to factor that in, watching it very closely.

I would say that the shipbuilders are making really great strides—in terms of hiring 4,000 additional workers last year, another 6,000 planned for this year.

So we remain confident and keep a close eye on it, ma'am.

Senator FISCHER. In working with the industry on this, can you give us some specifics that you are looking at to help them continue on that expedited schedule?

Admiral GILDAY. So, as you know, the Congress has been very generous in terms of infrastructure investments that we have made in those two shipyards down in Newport News and also up at Electric Boat to the tune of billions over the Future Years Defense Program (FYDP).

Separately, I think that the money that we are applying for advanced procurement materiel, particularly given the supply chain challenges we have seen post COVID, are also going a long way to get that materiel well in advance so that we have no work stoppages.

Senator FISCHER. Okay. Thank you.

What do you assess the role of the unmanned platforms? What are they going to play in future Navy operations? You mentioned those in your opening statement. How do you think the architecture of the fleet should be structured so that you can achieve that balance between manned and unmanned?

Admiral GILDAY. So whether it is under, on, or above the sea we are looking at manned/unmanned teaming. So this will be a phased approach. Initially, you would have unmanned teamed with manned aircraft, as an example, where the manned aircraft would be the quarterback and the unmanned would be the wingman.

We are doing the same thing under the sea. We are doing the same thing on the sea. Under the sea, we have our first extra large UUV [Unmanned Undersea Vehicle] prototype in the water now for testing off the coast of California, with more to follow. This brings a clandestine mine-laying capability to the combatant commanders.

On the surface we have been doing a lot of work with drones in the Middle East. We will have a hundred this year operating along with six other countries. We are only paying 20 percent of that bill. The other countries are chipping in and paying most of it.

That allows us to have more persistent coverage in an area where—in the Middle East that is still a maritime domain. But we do not have the numbers of ships that we have had in the past.

In the air we have our drone and MQ–25 that is operating off our carriers now and testing. We will go IOC [Initial Operational Capability] in a couple of years and so that frees up—that is our first instantiation of an airborne UAV [Unmanned Aerial Vehicle] that allows us to refuel aircraft in the air, give them another 500 miles of range.

So we are making all of these progressive advancements and trying to do it very deliberately but at speed.

Senator FISCHER. The lessons you are learning in the Middle East are those transferable to the Pacific?

Admiral GILDAY. Absolutely. The Secretary just announced that we are going to scale our unmanned operations from the Middle East to Southern Command. So it is taking a closer look at illicit drugs and illicit persons that are coming up the northern approaches by the maritime. Also, our intent is to put an unblinking eye on illicit Chinese fishing on both coasts of South America.

Senator FISCHER. Thank you. Thank you, Mr. Chair.

Chairman REED. Thank you, Senator Fischer.

Senator Kaine, please?

Senator KAINE. Thank you, Mr. Chair, and to Admiral Gilday and General Berger, my congratulations and gratitude to both of you for wonderful service.

General Berger, I just want to pick up one point and make sure I get the punch line version of one aspect of your testimony. The Nation needs 31 amphibs. The statutory requirement is 31 amphibs. The budget we have before us has no path to get to 31 amphibs. Am I reading you right?

General BERGER. Yes, sir.

Senator KAINE. All right. Thank you.

Secretary Del Toro, I want to thank you for your attention to an issue that has been very challenging for us in Virginia and that is military suicides, particularly connected with the *George Washington* and also the Mid-Atlantic Regional Maintenance Center (MARMC).

You and I went together down to MARMC and I could tell in your interaction with the command and with the rank and file, both the sailors and the civilians in that unit of 2,500 people, that this is something you take very, very seriously and you are focused on trying to figure out a way to improve this set of tragedies.

If I could ask you a set of questions about that. Could you first tell me what is the status of Brandon Act implementation?

Mr. DEL TORO. Yes, sir. The fine details of how best to implement the Brandon Act are being reviewed by the Under Secretary of Defense for Personnel and Readiness. I hope that over the course of the next several months we will actually have a path forward on how best to execute it.

It is extremely important to bring every tool in the toolkit in order to solve this or try to help solve this very, very tragic situation with regard to not just suicides in the Navy, but suicides in the Nation, and there is no greater responsibility the Secretary has than the safety of their personnel both in the Navy and Marine Corps and the civilian personnel. As you suggested, we take this responsibility very seriously.

Senator KAINE. I would love to stay in touch with you about this because what I would not like to happen would be for there to be a report about implementation after the NDAA is done that we do not find satisfactory.

I would like to stay in dialog with you about the implementation, so that if we feel like we want to offer some additional muscle to

implementation we have a chance to do that before the Committee finishes its work on this. So I will continue with you on that.

I also had the chance to talk to Admiral Franchetti and Secretary Raven about the phase two analysis of the *George Washington* suicides, and I know that it is not yet done.

I was heartened by some of the initial discussion about the depth of recommendations that are going to be made. But I am interested in one particular issue and I am not sure that it is covered in the phase two, based upon my questions.

Last year's House Report to the NDAA directed a briefing on personnel assignments to carriers undergoing refueling. Do we need to maintain the entire ship's fleet with a ship during an extended refueling? In the *George Washington* case it is 6 years. Senator Scott has raised some similar questions in hearings before.

As I asked Secretary Raven and Admiral Franchetti about, does phase two get into challenging assumptions about whether we have to keep the entire ship personnel component intact during the entire refuel, which can be a very extended one as the *George Washington*, I got an answer that made me think that was not part of the analysis. So and yet that was a suggestion in the NDAA language from the House side last year that we analyze ship personnel assignments during extended refuels.

Tell me if you are doing anything to sort of challenge your own assumptions about what personnel component is needed during a refuel, or particularly for first tour sailors, are there other assignments that they could take on that would more closely match the MOSes [Military Occupational Specialties] they have trained for.

Mr. DEL TORO. Absolutely so, Senator, and in fact, the summary report may not have highlighted that as a fact. But we are taking a close look at this because it is extremely important, and while the entire crew may not be needed throughout the course of the entire RCOH [Refueling and Complex Overhaul], especially when the ship first comes into port and to its following stages, toward the end of the RCOH you do have to build that crew back up.

In fact, one of the things that we discovered on the *George Washington,* for example, is that there was a lack of mid level leadership in the chief petty officer corps. They were not providing the necessary oversight for junior personnel, for example.

So although it is complicated, I do not think the entire crew is needed throughout the entire period. But there are stages where we actually need that mid level management overseeing our most junior sailors who could be challenged with living in a shipyard environment.

Senator KAINE. Just one final thing as I conclude. When we visited the Mid Atlantic Regional Maintenance Center following the suicide of four sailors there within 2 months it was, I think, fairly clear that a contributing factor was a manning policy that allowed for a 60 percent increase in the assignment of personnel who were either on limited duty or pregnancy postpartum, with no additional assignment of medical resources to help them deal with, for example, a med board process or other needs they might have.

What are you doing to try to deal with that issue to provide more in-unit resources in billets like this where there is a high percent-

age of people who are assigned on either a limited duty or a pregnancy postpartum status?

Mr. DEL TORO. Yes, sir. I will let the CNO address the specific actions that are being taken, but we actually have channeled back on that policy. We have way too many LIMDUs [Limited Duty Personnel] going to other places where they cannot be cared for in the manner that they deserve to be cared for.

So we are actually looking at withholding the ones that we can back on ship where they have better care and more resources available to them. But, perhaps, the CNO can go into a little bit more detail on the specific action.

Senator KAINE. I am over time. But if you could do it briefly.

Admiral GILDAY. Yes, sir. I will make three quick points.

The first thing that we are doing is making a faster determination of what path they ought to be on. Are they just on light duty for a period of 2 weeks because they have a sprained ankle or do we need to move them off the ship on a more permanent basis. Getting them the help that they need at an accelerated rate so that we prevent them from going into a limited duty status. The point is to keep sailors at work.

The third, for those on limited duty to get them those medical evaluations at a much faster pace. We are also reducing the ratio of those in limited duty at commands so that we do not have another MARMC, so that people are properly supervised, sir.

Chairman REED. Thank you, Senator Kaine.

Senator Cotton, please?

Senator COTTON. Thank you, Mr. Chairman.

Admiral Gilday and General Berger, thank you for your latest and presumptively your last appearance at the Committee as Chief and Commandant. We congratulate you for a lifetime of service and appreciate everything you have done for this country.

Mr. Secretary, I want to be the latest Senator to ask about this issue of the 31 amphibs. The budget this year does not include any fiscal year 2024 money for the seventeenth *San Antonio*-class ship.

That sets you on a path to fall below the legislatively mandated 31-ship amphib floor, as Senator Kaine pointed out, and, General Berger, you testified that you think that is in the needs of the Marine Corps.

I just want to ask what is up with this discrepancy between that legislative mandate and General Berger's stated needs for the Marine Corps, and the budget request? Can you explain it to us?

Mr. DEL TORO. Thank you, Senator. First, let me unequivocally State that I do not dismiss anything that the Commandant of the Marine Corps said with the need for our Nation to have the heavy lift that is necessary to provide our expeditionary forces in the Pacific. In particular, the ships that they need to be able to carry equipment and personnel around the Pacific.

The concern that developed over the course of the last year or so has been the increasing costs of the platforms themselves. There were two studies that were done to address this issue.

One is a cost study that was initiated by the Office of Security Defense to look at the—and compare the costs, essentially, between the different designs of the LPD and see if we could actually bring down those costs. The second is the BFSAR [Battle Force Slip As-

sessment and Requirement] which is mandated by the 2023 NDAA as well, and to take a look at the overall requirements for the amphibious ships, both large and medium, in order to make the right decisions necessary in the 2025 budget to invest in the required platforms.

I think that there is also general recognition that moving toward a multi-ship multiyear procurement is an effective way to bring the cost of those ships down in the future.

Senator COTTON. So at bottom it is a cost issue?

Mr. DEL TORO. Yes, sir. The cost per ship issue.

Senator COTTON. Yes.

General Berger, any further thoughts on this matter?

General BERGER. You, the Senate—the Congress gave the service chiefs the authority, the responsibility to determine the operational requirement. Which I did, which is 31.

But the Secretary, obviously, has a lot of things he has to fund as does the Secretary of Defense. I am not in their position to weigh it against all the other things that they must fund. I can just tell you that the operational requirement, the minimum, is 31 and that assumes a level of maintenance that provides the availability to the combatant commanders.

Senator COTTON. Okay, Thank you both. Obviously, this matter has a high degree of interest on the Committee and I suspect we will be addressing it in the months ahead.

Mr. Secretary, I also want to speak about the State of our industrial base, especially what it means for submarines, the Navy's inability to build ships and the fleet on time and on budget for many years. Well before you came along, to be fair——

Mr. DEL TORO. Trying to make it better, Senator.

Senator COTTON. Yes.

[Laughter.]

Senator COTTON. We all are, but it has been a source of growing concern. There are press reports that it is now going to take 5 years for the *Virginia*-class submarine production to reach its target of two boats per year.

Admiral Gilday earlier this year spoke to industry and he told them that they needed to prove it. That is a direct quote. I think that is an apt quote to industry regarding the ability to ramp up production. Our submarines, obviously, provide us an unmatched strategic advantage, especially in the Western Pacific against Communist China.

So could you give us some thoughts about what we can do in this Committee and in Congress to help assist with the ramp up of the industrial base especially as it relates to submarines?

Mr. DEL TORO. Yes, sir. Again, it is an all hands on deck approach. Everything from trying to improve the manpower issue and trying to get the shipyards to be able to recruit more effectively.

I mean, we face across the entire country, a national shortage when it comes to blue collar workers. I think increasing legal immigration to this country and work visa programs actually may very well help to better and support that blue collar workforce that is needed in places like the shipyards, for example.

But, again, the investments that you have made in 2023 and 2024 are in the right direction in terms of the investments in the industrial base itself.

One thing that I have been trying to do, Senator, is trying to expand the marketplace with regards to smaller shipyards. Getting them involved in Department of Defense construction and having them actually support the big primes.

I have been having conversation with the primes, for example, to try to include more smaller shipyards to feed the primes, and a perfect example of that actually is being executed now at Austal, where even before I got here the CNO encouraged the development of steel hulls at Austal.

They are now building steel hulls and they are actually contributing to Electric Boat up in Connecticut and providing the necessary modules necessary. I think HII [Huntington Ingalls Industries] is doing the same thing as is Ingalls down in Pensacola as well, too.

I think continued investment in CAPEX makes a lot of sense where the Government invests in these capital improvement programs at the shipyards so that the shipyards can also make an equal investment and help get us to the right place.

It is all hands on deck across the entire spectrum of improvements that have to be made.

Senator COTTON. Thank you.

Chairman REED. Thank you, Senator Cotton.

Senator Rosen, please?

Senator ROSEN. Thank you, Chairman Reed, Ranking Member Wicker, for holding this very important hearing and I want to thank all of you for being here today and thank you for your service and for your support for things in Nevada, of course, across the country as well.

I want to talk a little bit about Nevada and the Fallon Range Training Complex modernization. Secretary Del Toro, as you know, we are so proud in Nevada to host Naval Air Station Fallon, home to "Top Gun" and the Nation's premier carrier air wing and the SEAL training centers. I want to offer you and your staff again my personal gratitude for working with me and the Nevada delegation on a consensus proposal to modernize the Fallon Range Training Complex, which was included in the Fiscal Year 2023 NDAA.

I appreciate that Under Secretary Raven and other senior leaders will be traveling to Fallon just later this week to meet with the Tribal Nations because this agreement included key mitigations for local and tribal governments that require future appropriations.

Specifically, the Navy is responsible for compensating for the timely reconstruction and, of course, relocation of impacted roads and infrastructure, the displaced grazing permittees, our cultural resource surveys and environmental assessments. Funding and completion of these requirements is not just important for my constituents, it is also necessary to ensure that expanding the training complex can become operational for the future of the Navy.

Given that Fallon modernization was the top Navy's legislative priority the Nevada delegation was expecting that in the fiscal year 2024 budget the request would include funding for those various

commitments. However, fiscal year 2024 budget was silent, silent on Fallon modernization.

Secretary Del Toro, can you speak to the Navy's implementation plan for modernization of the Fallon Range Training Complex, given the urgency to modernize? I am curious why this implementation is not included in the Navy's fiscal year 2024 budget request.

Mr. DEL TORO. Senator, let me first, again, thank you for your leadership on this issue. I was so proud to have been—played a small role by your side, basically, to bring this across the finish line. But it is about execution now.

I am unaware that we actually do not have the necessary funds to execute on the plans that were already baked into the agreement in fiscal year 2024. As far as I know, and I have reviewed the actual next steps that are required to execute the plan, I know that there is going to be moneys that get put into the President's Budget 2025 to continue those efforts.

But as far as I am aware there are no delays in actually us being able to meet the requirements necessary that were laid out in that plan, in accordance with agreements that were made between the tribes and us and the community and us as well, too.

It is my understanding that all the funds that we currently have are enough to fulfill the existing requirements that we currently have. More will come, obviously. But let me get back to you with more specifics because I do not want to misspeak on that.

Senator ROSEN. Perfect. I will have my team circle back and we can find out about that.

Mr. DEL TORO. Yes, ma'am.

[The information referred to follows:]

Mr. DEL TORO. Thanks to strong support from Congress, the Department of Interior, Tribal, and State and local stakeholders, the Navy continues to make significant progress on Fallon Modernization, and our fiscal year 2024 budget request aligns with our overall schedule. While our current efforts are not listed as distinct budget line items, the Department of the Navy's fiscal year 2024 budget request includes several key actions within our Operations and Maintenance funding. In fiscal year 2023 and fiscal year 2024, the Navy will execute numerous planning studies and surveys that are needed to support our military construction projects. We are conducting the environmental planning needed for the relocation of Sand Canyon/Red Mountain Road and the relocation of the gas pipeline at B–17 and State Route 361. We have also initiated the process to update the Integrated Natural Resource Management Plan and Wildland Fire Management Plan at Fallon.

The first of five military construction projects needed to support modernization, P442 Range Training Complex Land Acquisition, was authorized and appropriated in fiscal year 2021, and with the passage of the fiscal year 2023 National Defense Authorization Act can now move forward on that project. The remaining four military construction projects will be included in future budget requests aligned with execution timelines and mission-need dates.

Senator ROSEN. I also want to ask you this, that I understand the Navy has yet to finalize an agreement with the local tribes regarding access to important sites. So can you give me an update on the Navy's engagement with the tribes and the timeline for finalizing access?

Mr. DEL TORO. Ma'am, allow me to get back to you with specifics because I do not want to misspeak in any way. My understanding was that everything is on track and actually Secretary Berger and Secretary Raven are traveling out there to actually celebrate, in many ways, the progress that we have made in the path forward

and review what lays ahead, basically, on the POA&M [Plan of Action and Milestones].

[The information referred to follows:]

Mr. DEL TORO. The Department of the Navy deeply values our relationships with the Tribes, and Naval Air Station Fallon has existing procedures established to support public access, including Tribal access requests.

In fiscal year 2022, the Navy and the Northern Nevada Tribes collaborated to produce a draft Memorandum of Agreement (MOA) to streamline Tribal access requests. Based on new requirements included as part of the Fallon Range Training Complex modernization in the fiscal year 2023 NDAA, the Navy updated the draft Tribal Access MOA, and shared it with the Tribes on February 27, 2023. The Fallon Paiute Shoshone Tribe (FPST) has been convening the Northern Nevada Tribes for discussions and to collect feedback on the updated draft Tribal Access MOA, and has offered to consolidate any additional Tribal comments and return them to the Navy. The Navy is in regular communication with our Tribal leaders at the local and Secretariat level, and we understand that their process should finish soon. Once we receive the consolidated comments from the Tribes, we will finalize the agreement.

Senator ROSEN. I am going to stay a little bit on Naval Air Station Fallon because the personnel stationed there they do conduct critical training missions. The fleet is deployable and operationally ready every day.

These operations [are] incredibly demanding and so reducing external stressors is important not only to the sailors but also to the mission. I know 172 new housing units are on track to be built at Naval Air Station Fallon. It is going to help ease a little bit of that housing strain.

But more needs to be done, and Fallon is still considered a remote duty installation and I want to ensure that other things for quality of life are also addressed. I can take this off the record if you would be brief—can you speak to the quality of life at Fallon, mental health resources that might be available for our sailors and folks that train there and work there. What are you doing to support those on remote duty in the NDAA?

Mr. DEL TORO. We recognize that Fallon is a remote site and we recognize the challenges that go along with that, in general.

The CNO, the Commandant, and I are hyper focused on actually the remote sites across the entire country more so than the major concentration areas as well, too, because they undergo a lot more stressors than other locations.

I have actually specifically spoken to the Under Secretary of Defense for Personnel and Readiness on the hospital issues associated with Fallon, Nevada, for example. Because it is so important to get the right mental health providers necessary to fill those billets in Nevada and we are struggling to fill those billets in Nevada, obviously, as well as in Yokosuka, Japan and Rota, Spain as well, too.

But allow me to get back with a long list of actions that we are specifically taking with regards to Nevada on the quality of life issues on the bases.

[The information referred to follows:]

Mr. DEL TORO. Taking care of sailors and their families remains one of my top concerns, and this is especially important in more remote areas where certain services may not be as readily available. To your point, we need these outstanding sailors to be able to focus on their mission, so ensuring that they and their families have the resources they need is extremely important. To that end, the Navy provides mental health resources, child and youth programs, and an array of morale, welfare and recreation programs for those assigned to NAS Fallon.

Mental Health Resources:

The Fleet and Family Support Center at NAS Fallon is staffed with independently licensed mental health professionals to provide in-person, short-term, non-medical clinical counseling for commonly occurring life situations and adjustment issues, thereby intervening prior to the development of more serious problems or diagnosable mental disorders.

Additionally, Sailor Assistance and Intercept for Life (SAIL) is a voluntary program that quickly provides rapid assistance, ongoing clinical case management, care coordination, and reintegration assistance during the stressful period following suicide-related behavior by a sailor. SAIL is delivered virtually and to increase access to services in remote duty locations like NAS Fallon, Navy recently expanded virtual access to both SAIL and non-medical, clinical counseling services.

The Navy's Integrated Primary Prevention Program is dedicated to the prevention of interpersonal violence and self-harm. The Navy Integrated Primary Prevention Workforce will total more than 300 personnel over the next 5 years. NAS Fallon will be assigned three Integrated Primary Prevention billets, and Navy Region Southwest assigned another 50 billets.

Child and Youth Programs (CYP):

NAS Fallon Child Development Center is the only accredited childcare provider in Churchill County and supports children ages 6 weeks to 5 years. CYP also provides a School-Age Care (SAC) Program for elementary school-aged children (before/after school and summer programs/camps) and a Youth/Teen Program. Finally, a School Liaison Officer is assigned to NAS Fallon to connect military families with area schools and to support schools in responding to military and family needs.

Morale, Welfare, and Recreation (MWR):

NAS Fallon MWR offers an array of quality of life services, activities and events, and delivers high-quality, innovative, recreation programs. Navy MWR provides a variety of free and low/competitively priced options for sailors and their families, including dining, fitness, recreation, gear rental, an RV park, and a variety of other amenities on the installation. The revenue generated from these programs is reinvested in sailor and family programs. NAS Fallon actively engages with sailors and families, both those permanently assigned and those visiting for temporary additional duty, training, or other mission reasons to ensure quality of life programs are relevant, accessible, convenient, and well-marketed.

The Navy supplies similar quality of life resources at other remote locations. These services are critical as they directly benefit the well-being of sailors and families. The Navy is also engaged with the Suicide Prevention and Response Independent Review Committee Implementation Working Group to target QOL support to Remote and Isolated locations.

Senator ROSEN. Perfect. Thank you very much. I will be submitting some more questions for the record. Thank you.

Mr. DEL TORO. Yes, ma'am.

Chairman REED. Thank you, Senator Rosen.

Senator Rounds, please?

Senator ROUNDS. Thank you, Mr. Chairman. First of all, to all three of you thank you very much for your service to our country.

Admiral Gilday, 38 years is a long time. Cannot do it without family. I appreciate you and your family. Very, very special.

General Berger, thank you very much for your 42 years of service and, once again, without what you do, the Services here in the United States simply are not what they are today. So thank you to both of you.

Admiral Gilday and General Berger, there have been efforts to share or take parts of the spectrum away from DOD activities and to use them for 5G, recognizing that 5G is an important aspect in this country and it is something that we need to be able to utilize.

But in doing so there is a particular part of the spectrum which is, I believe, very critical to a number of our defensive systems. Specifically, the 3.1 to 3.45 gigahertz band, or the S band, of the electromagnetic spectrum is used specifically by a number of your platforms.

Admiral Gilday, General Berger, could you share with us in this unclassified meeting the types of systems that would be impacted if this transfer of spectrum capability or limitation of spectrum capability were actually enacted before this September study is completed? Can you share with us how serious this could be to your ability to do your mission?

Admiral GILDAY. Senator, I would like to talk about three specific threat areas that I think come to mind when it comes to the very powerful capabilities that we have in that part of the spectrum.

The first is air defense. We just saw what happened when a balloon flew over the United States. We cannot have that happen with a more serious threat, and so that band affects the ship-borne radars that specifically would provide that type of early warning.

The second point I would make is about countering unmanned and so these are drones that are increasing in capability and size and lethality. I do not mean to be dramatic but we have to look around the bend to the future, the possibility of having to defend ourselves against threats like that and we cannot be blind to them. Taking away the capability in that band would do so.

The last area that I would speak to is missile defense and so we need warning there as well. These radars in that band bring that to bear. We know that we are in the age of hypersonics. It is not a place where we think that we want to accept risk.

If we do lose access to that band, if it is either vacated or shared and we cannot do that job on a continual basis, then I think we have to look at what modifications that we would need to make to probably 188 ships in terms of their systems to provide the American people with a degree of confidence that those three areas that I mentioned are properly defended.

Senator ROUNDS. Thank you.

General Berger?

General BERGER. I think what seems lost in that conversation, Senator, is those systems, those radar, electronic warfare systems were designed to optimize that spectrum for a weapon system.

We had access to that when the requirements were developed. That is why we went with that weapon system. So if that access is lost then the very reason you pick that part of the band of the spectrum for a radar, for electronic warfare, for a training system, all that is lost to us.

We have to be able to train realistically. So, for us, I think the same as CNO, the radar systems primarily but also other sensing systems and electronic warfare. That is why we chose that portion of the band.

Mr. DEL TORO. Senator, if I can just add, the cost of actually relocating these systems would be enormous, I mean, upwards of $250 billion, probably. So I am really fearful of the secondary consequences that some of these decisions could actually lead us to.

Senator ROUNDS. Thank you, sir. Would it be fair to say that the State of Hawaii is protected by those systems today, Admiral Gilday?

Admiral GILDAY. Yes, sir, to some degree.

Senator ROUNDS. How about the capital of our country, Washington, DC?

Admiral GILDAY. Yes, sir.

Senator ROUNDS. How about the West Coast of the United States today?

Admiral GILDAY. Absolutely. Yes, sir.

Senator ROUNDS. All of those are utilizing weapon systems or radars that are specific to this particular part of the spectrum that they are talking about trying to either share or sell, correct?

Admiral GILDAY. Yes, sir, and importantly also it would affect our ability to train to a high degree of proficiency to use those weapon systems.

Senator ROUNDS. Thank you. My time is expiring. I would not want to disappoint the Committee. I will ask a question for the record with regard to the USS *Boise* and your plans for not only the USS *Boise* to actually get it through dry dock, but those other *Los Angeles*-class attack subs that are behind it in line. Right now we do not have the shipbuilding capacity to be able to get those back in operation in less time than what it took to build them in the first place.

Admiral GILDAY. Yes, sir.

Senator ROUNDS. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Rounds.

Senator King, please?

Senator KING. Thank you, Mr. Chairman.

First, I would like to associate myself with Senator Rounds' questions on spectrum and the answers that you have provided. This is a critical issue. There is no reason to move forward with a spectrum auction before this study is completed. I think there is a significant national security risk.

Second, before beginning my questions I want to compliment General Berger. A friend of mine once said everybody is for progress, nobody is for change. You have managed both progress and change in a remarkable way, I think, during your 3 years as Commandant and I want to compliment you on that because it is not easy to move a large institution. You have done it with a very forward thinking way of looking at the future demands on the Marine Corps and you have done that very effectively.

Mr. Secretary, we have talked about this before. I am concerned about the transition from the DDG Flight III to the DDG(x), which is currently in design. Number one, are you supportive of the joint work that is being done by Bath Iron Works and Huntington Ingalls to be sure that the design is buildable and will be most effective for the Navy and for the taxpayers?

Mr. DEL TORO. Yes, Senator. Not only am I supportive but it is actually critical to success for the DDG(X) and it is part of the reason why we actually have moved the schedule 2 years to allow for a far more mature design and allow the shipyards to actually work closely with us to determine exactly not just the propulsion plant and what it should look like but to actually build out a land-based engineering site that we could actually test the propulsion plant at. As well as the many other technologies—advanced technologies—like Helios and others that it will actually provide in the future.

Senator KING. You used the right word, maturity of design, because as I have sat through 10 years of hearings on weapon systems, maturity of design is one of the key factors to prevent a debacle in terms of acquisition, both in terms of time and cost.

Also we need to be thinking now about the transition from the Flight IIIs to the new ship, that there not be a lag. You have seen me draw the graph of the trough in employment if we do not have a smooth transition. I hope that is in your plan.

Mr. DEL TORO. I could not agree with you more, Senator. I think continuing to build DDG–51 Flight IIIs is critical to ensuring that we do not have a gap like we are trying to prevent between the *Ohio* and the *Columbia*-class.

Senator KING. The issue of suicide has come up several times. There is an aspect of it that has not been discussed today. That is the relationship between the transition from Active Duty to veteran status and suicide.

Unfortunately, there is a correlation. Many suicides of veterans take place in the first 1 or 2 or 3 years after the transition.

I hope that we can work together and perhaps discuss offline how we can improve that transition—the handoff, if you will—so that a sailor does not walk out the door 1 day in the warm embrace of the Navy, and then suddenly into the cold world without the handoff to the veteran status. So will you commit to working with me on that?

Mr. DEL TORO. Absolutely, Senator, and continuity of care is essential to that transition.

Senator KING. Admiral Gilday, I think I asked you a similar question when you were first up for confirmation about hypersonics and we will take this in a classified setting.

But a general question is are you satisfied with where we area in terms of naval defense to a hypersonic attack? It seems to me that is one of the most serious strategic challenges that we face today, particularly in the Indo-Pacific?

Admiral GILDAY. Sir, no, I am not. We are working to close some known gaps that we have with respect to layered defense. Some of the biggest obstacles are technology, including mature technology, that would be—that we would be able to apply to the—to that problem set.

I think another aspect of it is being able to confuse and disrupt the adversary's ability to accurately target and use those weapons effectively. In a classified setting, sir, I think we can talk about that in a little bit more detail.

Senator KING. Well, I am glad you started with the question—the answer was no because that implies we have work to do.

Admiral GILDAY. We do.

Senator KING. I will look forward to working with you and your successor. I hope you will pass that sense of urgency on to your successor.

Admiral GILDAY. Yes, sir. I shall.

Senator KING. I will have another couple of questions for the record on some manpower issues.

Mr. Secretary, I commend you for the work you have done in terms of helping our shipyards with their workforce challenges. It sounds mundane but things like parking and childcare availability is important to having the workers that we need to build the next generation of ships, whether they be submarines or destroyers or frigates or amphibs.

Please keep that work in mind. Workforce, in my view, is maybe one of the most significant challenges that we have today.

Thank you, Mr. Secretary.

Chairman REED. Thank you, Senator King.

Senator Ernst, please?

Senator ERNST. Thank you, Mr. Chair, and thank you, gentlemen, very much for being here today. Admiral and General, thank you so much for your service and dedication to our great United States of America and to your families and your teammates as well. Truly appreciate them for their support.

China's military has raised the risk of great power war and our combat credibility, especially as we look at the Indo-Pacific, is increasingly in question and that is why Congress has really called on the Department to build our lethal capabilities to deter China.

General Berger, I would like to start with you. The late Chairman, John McCain, had declared that, quote, "The Marine Corps must modernize itself for the deterrence of great power competitors," end quote. We all know there has been a lot of debate surrounding modernization efforts within the Marine Corps. How did this Committee's intent inform your vision for the future force?

General BERGER. Probably, first, I would start with when Senator McCain said that and 4 years ago the Marine Corps very ready to handle the problem sets of today, right now.

In fact, if we had the capacity we would have a Marine Expeditionary Unit—an Amphibious Ready Group off the coast of Africa right now so that if Sudan got worse that General Langley would have a number of options.

I think readiness in terms of handling the problem sets of today was not the issue. But the National Defense Strategy, the indicators in the intelligence community, the developments in technology were a clear indicator to General Neller before me that we had to change. Holding on to what we had that was successful in the past was not going to help us in the future.

To your point, I think the indicators from this Committee, the support from individual Members and collectively, that has allowed us in 3½-years to get to where we are. We are very ready today but we cannot slow down.

We have to move quickly to stay in front. We have a pacing threat. We have a pacing challenge.

Senator ERNST. Yes, we do, and, General, you shared your predecessor's assessment that the marines were not organized, trained, equipped, or postured to meet the demands of the rapidly evolving future operating environment and you just referenced that.

How do your investments meet operating requirements in the Indo-Pacific specifically?

General BERGER. Some of it is the weapon systems themselves, the capabilities. Everything from the MV–22, which this Committee and others saved from death 25 years ago and thank God we have it right now. The 53K [CH–53K], the anti-ship missile capability that we're developing and all this were years in the making.

I think in the Pacific the challenges that Admiral Aquilino and his commanders face are range and it is a home game for the

PLAN [People's Liberation Army-Navy]. So we have a couple of challenges out there.

We have to be present. We have to be the stand-in force there from the beginning, because fighting your way in from the outside not a good plan. We have to work on the logistics so that that forward stand-in force is sustainable, is ready. You have to be there with allies and partners because they have to believe that the United States is not running away from them, is going to be there even when things get tough, and that is where the Marine Corps-Navy [team]—I mean, this is where we make our money. Right alongside the allies and partners forward where it matters. If we back off, if we pull out of there, we are sending a message strategically, which is not the message we are going to send.

Senator ERNST. You have outlined a number of gaps that exist logistically, support and working with other nations. Are there other gaps that you can address specifically within the Marine Corps?

General BERGER. The biggest one is what most of the Members brought up, which is the capacity to get us there, to have that presence forward all the time.

If we do not have the vessels, if we are not forward and we are in the United States and we are fighting our way to get in, bad place to be. I think if you still believe, in other words, that 3 ships—amphibious ships loaded up with 2,300 marines. If they have a deterrent value, and I think they do, then you want them right in the adversary's grill, right in their face where they can see them all the time.

Senator Cotton asked basically can we afford conventional deterrence. Absolutely, yes, because the alternative is a lot worse.

Senator ERNST. Are you managing that near-term risk as you divest from some of the legacy programs that you have?

General BERGER. Absolutely, yes. Absolutely, yes, ma'am.

Senator ERNST. Okay. Thank you very much, gentlemen. Thank you, Mr. Chair.

Chairman REED. Thank you, Senator Ernst.

Senator Kelly, please?

Senator KELLY. Thank you. Thank you, Mr. Chairman. Thank you for being here.

My first question is to General Berger. First of all, thank you for all the incredible work that is happening in southern Arizona at the Marine Corps Air Station in Yuma. It is home to the, as you know, the largest F–35 command in the Marine Corps.

It is also the home of the weapons and tactics instructor corps so it is helping train F–35 pilots in the Marine Corps across the country, essentially.

But also across our entire State we have got other flying missions. We have got Luke Air Force Base, Davis-Monthan. We are training F–16 pilots and operational squadrons and A–10's, Air Force F–35s. We have got the Compass Call mission at Davis-Monthan with C–130's, soon to be getting a new airframe.

Helicopters, UAVs, we got all this—a lot of stuff and it is the greatest place in the country to train. I am not being parochial here on it being Arizona. I mean, it really has good weather to train these missions.

What we are struggling with right now a little bit is airspace. We have got a lot of airspace. We got the Barry Goldwater Range. We have got Military Operations Areas (MOAs), Outlaw, Jackal, other MOAs. We have got a restricted area over Fort Huachuca.

General, I am interested from your perspective, the perspective of the Marine Corps, how would expanded airspace in the Southwest improve DOD's ability to support fifth-generation fighter aircraft training?

General BERGER. Senator, sitting behind me is my wife and she is probably smiling because we took our family to Yuma, Arizona. We lived there for 3 years, raised our kids there. So everything that you describe we lived when we had kids that were younger. It was a great place to raise a family.

It is also a fantastic place to train. You mentioned the weapons and tactics instructor course. That is what my assignment was. I am an infantry guy so, first of all, getting invited to teach at an aviation school I thought they had made a mistake.

But off I went to Yuma and learned more about combined arms, Marine Air-Ground Task Force, how we fight, than any other assignment I have ever been in. Airspace is critical. Without that you cannot put all the pieces together, and it was a box that we operated in in the 1990's when I was an instructor there but we did not have the range of the weapon systems we have now.

We did not have the speed and range of the aircraft we have now. If we cannot stretch the legs of the F–35, of the Multiple Launch Rocket System (MLRS), if we cannot use the airspace to the maximum degree of the weapon system, then the first time the marines are going to employ it is in combat and that is not what we want.

So absolutely critical, both altitude and depth of the Barry Goldwater ranges and the rest, as you mentioned. If we do not have that then we are putting our air crews, our ground marines, in a risk because the first time they are going to really put all the pieces together is when the fighting starts.

Senator KELLY. Yes. As you mentioned, as the stick gets bigger the airplane is going faster, the Advanced Medium Range Air to Air Missile (AMRAAM) is going further. We need more space. We can stitch together some of this space, by the way. That is something we have talked about in Arizona is we have an opportunity here with the Federal Aviation Administration (FAA) reauthorization bill. Talk to the FAA, come up with a plan that works for commercial aviation, works for the airline industry, but also helps us train better.

Now, I think Senator Sullivan, if he goes next, he is probably going to jump in here and talk about the airspace in Alaska. But this is really important and the weather is ideal for this training.

General BERGER. Just one quick plug for the FAA. They have been fantastic partners for 35 years, handing off airspace between LAX [Los Angeles International Airport] and Twentynine Palms and Yuma. Great partners.

Senator KELLY. Thank you. Thank you, General.

Secretary Del Toro, just real quick. I know Senator Kaine talked about the Brandon Act. I really appreciate all the hard work you have done on this.

We need to get it implemented. We discussed a little bit about this from a more personal side this morning. Can you just give me a really quick—and I do not have a lot of time—but a status update. How is the Navy working with DOD to make this a reality and what specific actions have you taken to support implementation?

Mr. DEL TORO. Thank you, Senator.

Well, for starters, I have personally met with the Caserta family to understand the challenges that they have undergone, and what they would like to see moving forward in terms of the Department of Navy and the Department of Defense being able to work with families like the Caserta family as they struggle with this tragic incident.

I believe it has to be with—we have to get to a better place with regards to executing the right of individuals to be able to seek out help from the private sector privately but at the same time with the checks and balances necessary so that the military also understands the struggles that this individual may be facing because if we do not understand the struggles that they are facing then that presents even greater threats as well, too, to operations and also to the individuals themselves.

We have to find that right balance between those two needs in order to get to a better place and those are the discussions that I have had with the Department of Defense.

Admiral GILDAY. Sir, I know we are over. Can I make just one quick comment?

Senator KELLY. Yes. Yes.

Admiral GILDAY. The Department issued a mental health playbook and so for sailors and marines one of the things it does is it helps them. It raises their awareness of what options are available and there are already self-referral and confidential options that are available.

We still have work to do as the Secretary is working on to make this more holistic across the Force. But we have made investments and we are trying to head in the right direction in order to make that available.

Senator KELLY. Thank you, Admiral. Thank you, Mr. Secretary, and thank you, General.

Chairman REED. Thank you, Senator Kelly.

Senator Sullivan, please?

Senator SULLIVAN. Thank you, Mr. Chairman.

I would like to thank the witnesses, in particular Admiral Gilday, General Berger. Thank you for your incredible service and to your families over decades. It is very appreciated. I have enjoyed working with both of you.

I am going to dig into this 31 amphib ship issue a lot more harshly because I just do not think what is happening right now is remotely appropriate.

Mr. Chairman, I would like to submit for the record a Defense One news article "Navy on the path to violate 31 amphib ship requirement in 2024" for the record.

Chairman REED. Without objection.

[The information referred to follows:]

Defense One
March 13, 2023

Navy On Path To Violate 31-Amphibious-Ship Requirement in 2024

By Caitlin Kenney

The Navy is proposing to drop its amphibious fleet below 31 ships, despite an agreement with the Marine Corps and a potential violation of last year's defense policy law.

Sent to Congress on Monday, the Navy's proposed $255.8 billion 2024 budget aims to retire eight warships before the end of their intended service life, including three *Whidbey Island*-class dock landing ships, or LSDs, that it proposed to scrap last year but which were saved by the 2023 National Defense Authorization Act.

The Navy's $32.8 billion shipbuilding request buys nine battle force ships but no amphibs, including the *San Antonio*-class amphibious transport dock ships, or LPDs, that are meant to replace the LSDs.

The LSDs chosen for early retirement were found to be in "poor material condition," according to Defense Department budget slides.

"We've gone through, not only on LSDs but the other divestments proposed in this budget, did a ship-by-ship review, to understand the material State of each of the ships. What we found on the LSDs is that they are challenged in terms of readiness. We want to make sure that the capabilities that we field are the right capabilities, and are able to perform the mission to the standards that we expect," Navy Undersecretary Erik Raven told reporters ahead of the proposed budget's release.

"And so we're proposing those divestments because we think the return on investment, on further investments on those particular ships, as judged hull by hull, that return on investment is not there," Raven said. "Additionally, say that we have sailors and marines who are serving on these ships, we think that getting them matched up to the right platforms is the way to go."

Marine Corps Commandant General David Berger last week rejected any plans that would cut these aging LSDs before their replacements were delivered.

Despite the delivery of one LPD in 2024, the early retirement of the three LSDs would mean the total number of amphibs that year would drop below the legally required 31 ships minimum laid out in the 2023 NDAA, according to the budget documents. Raven told reporters that the Navy is not seeking a waiver at this time.

It was a surprise that the Navy "has thumbed its nose that defiantly to the Congress" after lawmakers supported the ship minimum last year, said a congressional staffer who spoke to *Defense One* on condition of anonymity. "So what the Navy has done with this budget is they took all of those signals and all those indications and warnings, if you will, from the Congress and—said you know, 'Thanks, but no thanks, we're going to do what we think what we ought to be doing, and we don't really care what the Congress has to say on this subject.'"

Berger on Monday reiterated the reasoning behind the 31-ship requirement for amphibs.

"Anything less incurs risk to national defense by limiting the options for our combatant commanders," he said in a statement to Defense One. "Per strategic guidance, the Marine Corps must be able to provide the Nation with crisis response capabilities and build partnerships with allies and partners in support of integrated deterrence—difficult to achieve without the requisite number of amphibious warships."

The requirement is linked to the Nation's defense, said Sen. Roger Wicker, R-Miss., and ranking member of the Senate Armed Services Committee, at the March 9 Amphibious Warship Industrial Base Coalition event on Capitol Hill.

"We cannot defend this Nation, we cannot do what we need to do to prevent war, to prevent war, without the 31 ships," Wicker said. "And so the National Defense Authorization Act—makes it clear that the Commandant of the Marine Corps is the one we're finally going to listen to in terms of our ship requirement."

This year's 30-year shipbuilding plan, and what it may say about the long-term future of these ships, will be released "very soon," Raven told reporters ahead of the budget roll out.

Procurement

The Navy budget documents also chart out the ship procurements from 2024 to 2028, and there are a lot of zeros in the amphibious fleet's future. The Navy plans to buy its next America-class amphibious assault ship or LHA in 2027 and does not plan to buy any San Antonio-class LPD 17 Flight IIs in any of the years listed.

The shipbuilding topline includes new ship construction as well as funds for other vessels like the Landing Craft, Air Cushion (LCAC) Service Life Extension Program and the Landing Craft Utility LCU 1700 class.

The future Landing Ship Medium or LSM, is still planned for 2025. However, that is already 2 years past the original plan to buy the first ship in 2023. The Marine Corps just started to experiment with a commercially leased ship to inform the LSM's future capabilities.

Last month, Navy Secretary Carlos Del Toro said the service is taking a "strategic pause" on buying more LPDs until additional studies are completed, Defense News reported. Afterward, the Navy would "probably" start buying them again, according to the report.

On Monday, Raven told reporters at the Pentagon that the office of the Secretary of Defense had directed the pause and a capabilities-based assessment, and that there is an "integrated team" to assess the ships.

"What we are making sure that we are doing as we move forward with our budget plans, is making sure that we have the right capabilities at the right price aligned to not only meeting military requirements, but working with industry," Raven said. "And for LPD, we're taking a look at the acquisition strategy moving forward, again, to make sure that we would have the right capabilities at the right price and working with industry partners to put together that plan moving forward."

The Navy has "time to get this right" with the LPD, and that the Navy and Marine Corps are "fundamentally aligned" on the 31-ship requirement, Rear Adm. John Gumbleton, the deputy assistant secretary of the Navy for budget, said Monday.

"Both service chiefs like 31 [ships] as a requirement. Both service chiefs like multiyear procurements. Both service chiefs want to buy in a predictable future. And so if we can do a study and actually lower the costs of this, that's all to the good of the Department of the Navy and Marine Corps," Gumbleton said.

Buying amphibious ships tends to be the last priority for the Navy after spending shipbuilding funds on aircraft carriers, submarines, and destroyers, Hudson Institute Senior Fellow Bryan Clark said March 9 during Defense One's State of the Navy event.

"Whatever gets left over is what can go toward the amphibious ships and the support ships. And when you do all the numbers for that, you always end up with you know maybe not quite enough for the amphibious ships, because if you're building one LHA every four or 5 years that you can incrementally fund, that's a chunk of money that's on the scale of you know, $500 million a year. And then you've got maybe $500 million or a billion dollars leftover for one more amphibious ship, which isn't quite an LPD," Clark said.

Senator SULLIVAN. The 30-year plan makes it clear that the Navy has no intention of meeting this statutory requirement. Last year the Congress of the United States, there was an amendment that I worked on personally with the Commandant. Got this in the law. It is the law. Let me read the law.

"The naval combat forces of the Navy shall include not less than 11 operational aircraft carriers and not less than 31 operational amphibious warfare ships of which not less than 10 shall be amphibious assault ships."

That is the law. We passed that. I want to compliment the Commandant. It is not easy to be sitting next to your boss saying we need this, we need this, we need this. Your boss, obviously, does not agree, General.

But here is the thing. There has been these discussions of balancing costs, another CAPE [Cost Assessment and Program Evaluation] study that is going to come out in June 2023 for the fiscal year 2025 budget on amphib requirements. That is irrelevant.

The Congress of the United States did the balancing, Mr. Secretary, working with the Marine Corps. It was unanimous, by the way, in this Committee. You are violating the law.

Would you come before this Committee and say, sorry, we are not going to do 11 carriers? No way. You would get your you know what handed to you. You cannot do it, sir. I find it simply unac-

ceptable that we are all just letting you say maybe that was a suggestion by the Congress. It was not a suggestion. It was a mandate.

Mr. Secretary, I would like to just ask you right off the bat. Why are you violating the law? Why does your shipbuilding plan have no remote interest, for the next 30 years, as far as I can tell, of hitting the statutory mandate that we told you to hit? I have no idea what your answer is going to be. But you need to follow the law, sir. What is the answer?

Mr. DEL TORO. Senator, as a member of the executive, it is my responsibility to follow the law.

Senator SULLIVAN. Yes.

Mr. DEL TORO. It is also my responsibility to ensure that we just do not waste taxpayer money on vessels, for example, that will never see the light of day——

Senator SULLIVAN. Okay. Let me ask you on that one. This Congress has given you multi-ship procurement authorities, past three NDAAs. This is the third year in a row that amphibs are not being procured with this cost-saving authority.

So it is a little rich when you tell me about taxpayer savings when you are not using the ability to save money that we gave you on amphibs. You use it for every other ship but not amphibs.

So I am not really buying the taxpayer argument because you are not using that authority. What is your answer to the issue that you are not following the law? What I am going to ask for a request on, because I am running out of time. I am requesting you come back to this Committee soon and tell us how you are going to follow the law.

That is your only option, Mr. Secretary. Another CAPE study? We did the study. We told you what to do and you need to do it. The Commandant agrees with us. This Committee agrees with us.

So what is your answer to this question? You are violating the law right now, and your shipbuilding plan looks to say, hey, we are going to violate the law for the next 30 years. That is totally unacceptable.

In my view, you have not been hit hard enough by Members of this Committee. You are ignoring us. Worse, you are ignoring the law. What is your answer to that? I do want your commitment to come back here with a statement on how you are going to fix this.

Mr. DEL TORO. Senator, you have my commitment that I will come back to you with a statement on how we can fix this. I think——

[The information referred to follows:]

Mr. DEL TORO. Admiral Gilday, General Berger and I agree on the requirement for 31 amphibious ships, and we are committed to ensuring we meet this requirement and doing so in a timely manner, but with a capable, sustainable mix of ship classes that will support our marines and sailors for decades to come. On June 19, 2023, I committed to implementing the law requiring 31 amphibious ships, and I commit to providing an updated shipbuilding plan in support of the President's Fiscal Year 2025 Budget, which explains this strategy.

Senator SULLIVAN. And follow the law.

Mr. DEL TORO. Yes, sir. It is my intent to follow the law and I hope that, hopefully, by the President's Budget 2025 submission we will be able to be back in place with a multiyear procurement that actually looks at——

Senator SULLIVAN. Not looks at. That is not your option. We looked at it.

Mr. DEL TORO. Like I said, sir, as we develop the President's Budget 2025 I will look at that as an option that we can pursue to get us back on track with multi-ship procurements for LPDs.

Senator SULLIVAN. It is not an option for you, Mr. Secretary. The Committee, the Congress, the President have spoken.

Thank you, Mr. Chairman. This is a big issue and right now with the Secretary of the Navy ignoring the Congress of the United States is unacceptable.

Chairman REED. Thank you, Senator Sullivan.

Senator Shaheen, please?

Senator SHAHEEN. Thank you, Mr. Chairman, and thank you all for being here this morning. I am sorry I missed much of the questioning. We have multiple hearings at the same time.

I would like to also echo the Chairman and Ranking Member's comments about you, Admiral Gilday and General Berger, and the service that we all very much appreciate.

Secretary Del Toro, I was really pleased to see that the Navy included several new funding options for childcare centers. I think each one of you talked about the quality of life and the importance of ensuring that we can maintain those people who join our military and childcare is one of those areas where it is absolutely critical.

In New Hampshire we were able to have a joint effort between the Portsmouth Naval Shipyard and the New Hampshire National Guard to put a joint childcare center on, but one of the big challenge just has been recruiting teachers.

Can you speak, Secretary Del Toro, to what more the Navy is looking at in terms of recruitment for teachers within our childcare facilities? Or Admiral Gilday, either one.

Mr. DEL TORO. Yes, ma'am. I will just be brief and then pass it to the admiral.

One of the initiatives that we are looking actually is to be able to provide those childcare providers the ability to save costs on the children if they have children themselves.

We allow up to 50 percent reduction, for example, in childcare costs so that they can actually have their own children at the childcare center as well, too, in addition to trying to increase the pay for those childcare providers as well.

Admiral GILDAY. Exactly. On the pay piece we are paying above minimum—above the—I am sorry, above the average national wage for childcare center workers, about $5 above the median.

Second, we have reached out to a couple of schools in Texas and Utah, particularly during peak months where they are having students come in and help us in those childcare centers as well, and they are being adequately compensated for that help.

Senator SHAHEEN. Well, I applaud any efforts that you can undertake that will improve our ability to provide childcare for the men and women in the military.

One of the things I learned as Governor when we were trying to address childcare in New Hampshire was that the military was the role model for the private sector on this issue and we need to see that continue.

Secretary Del Toro, I think you mentioned AUKUS in your opening comments and I wonder if—it is my understanding one of the challenges that we have had is the challenging framework that exists for sharing information and technology about our capabilities.

Can you speak to whether we are able to do that through AUKUS right now. What changes do we need to make in order to provide that sharing that is really going to make that compact work as it should?

Mr. DEL TORO. Senator, when it actually comes to sharing of the nuclear-powered technology for the submarine itself there have—it has not been a challenge necessarily. It is actually in the other areas in terms of AI [artificial intelligence] and machine learning and other technologies where we actually have to get to a better place with regards to being able to share that technology with our international partners.

CNO, would you comment a little bit more on that, too?

Admiral GILDAY. On the second pillar?

Mr. DEL TORO. Yes.

Admiral GILDAY. One of the things that AUKUS has done is it has really opened up the blinders in terms of our collaboration with both the U.K. and Australia and their industry in areas like quantum computing, AI capabilities.

We are already doing a lot of that with both of those countries in the submarine force but this will accelerate it in terms of investment by private individuals as well, by equity firms that are seeing the progress that we are making in those specific areas.

Senator SHAHEEN. Well, I would encourage us to continue that. Obviously, if we cannot make something like AUKUS work with our closest partners we are going to have challenges across the board.

General Berger, I think several times when you have been before this Committee I have asked you about the ability of the Marine Corps to recruit women—recruit and retain women, and I understand that in fiscal year 2022 the Marine Corps was able to recruit a slightly higher percentage of women than in the past.

But can you talk about what the biggest obstacles are to that recruitment and also to retention of women once they get into the Marine Corps?

General BERGER. The first obstacle, I think, was not having any role models in most of the fields in the Marine Corps where they got promoted to colonel and general. In other words, they could not go into combat arms until 2015, so they did not see anybody at the top that was representing them except in administrative sort of staff fields.

But the Marine Corps is a warfighting organization. I think now they are seeing role models in aviation and infantry that were not there 6, 7 years ago.

That is a huge plus. Right now we have an infantry officer school just like the Army does. We have three female lieutenants in the course right now. Five years ago there were none.

We have female enlisted marines that are in the infantry course in both coasts—in the East Coast and West Coast. We have them in infantry battalions now that are mortarmen. These were not even thinkable things 5, 6, 7 years ago.

So, first of all, I think it has produced—make sure that we advance the ones who can serve as role models. I think the initiatives that Congress has given us in the last few years have helped a lot, being able to opt out of promotion.

If it is not the right time in my family career can I just step out of promotion and then come back in without a penalty? Yes, you can. Can I ask to step out of command, not be considered for command? Sure. Can I take an intermission from my career? I want to do something for a couple of years and come back in without any penalties.

All these are provisions that Congress has given us, which are now, I think, becoming more and more useful. We changed a policy last year, where dual military people—which are more prevalent now, I think, than they were a decade ago—for us to assign them to different duty stations, it takes a general officer to approve that now. So we are making it better for females to stay, and raise a family, and have it all instead of making a choice, and I think over the next 10 or 15 years if recruiting continues like it is right now. I mean, in a decade we have 85 percent more female aviators now than we did 10 years ago—85 percent.

Last month, Colonel Nicole Mann, she came back from the International Space Station. She is a jet pilot, test pilot, astronaut, mission commander. These are the kind of role models that we need.

Senator SHAHEEN. Thank you very much.

Chairman REED. Thank you, Senator Shaheen.

Senator Tuberville, please?

Senator TUBERVILLE. Thank you, Mr. Chairman. Gentlemen, thanks for being here today and your sacrifice and your families' sacrifice. We know how tough that is.

You know, guys, I am proud of our Navy and I want to talk a little bit about team building and recruiting. Americans are proud of their Navy. Outside of ports like Norfolk and San Diego many Americans do not see the work that your sailors do. They do not see it.

The Navy's work is often unseen, it is far from our shores. Even the Navy's history like the Midway and Manila Bay it is hard to see. So to recruit new sailors you must tell the Navy's story to both internal and external audiences. It has got to be told.

Today we have more ships named for politicians and activists than we do for great Navy battles and heroes of our past. We have a USS *Carl Vinson* but no USS *Enterprise.*

We have the USS *John P. Murtha* but where is the *Yorktown?* New sailors should be on USS ships like the *Wasp,* the *Midway,* the *Vengeance,* or the *Intrepid.*

Mr. Secretary, you were the commander of the DDG–84 who was named after who, sir?

Mr. DEL TORO. John Duncan Bulkeley, Senator.

Senator TUBERVILLE. Yes, sir, and he was a Medal of Honor winner, and I know you were proud to serve on that ship. When he was asked about charging two German ships when he had only one working gun, Admiral Bulkeley said, quote, "What else could I do? You engage, you fight, you win. That is the reputation of our great Navy."

Mr. Secretary, in your capacity to name ships I hope in the future that we get back to naming ships after heroes, people that has actually done something. Now, we have had politicians that has been in the military before and I understand that. But our history is told through our battleships and the things that we put names on.

Our sailors need to hear and see all these stories instead of divide us. Sometimes they do divide us. This week many of us watched the video that has gone viral online of a young Navy lieutenant JG. I have a lot of problems with this video. This nonbinary officer said the highlight of her deployment on the USS *Gerald Ford* was reading a poem to the entire ship.

Admiral Gilday, have you seen this video?

Admiral GILDAY. I have.

Senator TUBERVILLE. I hope we train our officers to prioritize their sailors, not themselves. Did it surprise you that a junior officer says the highlight of her deployment, her first and the ship's first, was about herself and her own achievement?

Admiral GILDAY. I will tell you why I am particularly proud of this sailor. Her grandfather served during World War II and he was gay and he was ostracized in the very institution that she not only joined and is proud to be a part of, but she volunteered to deploy on *Ford* and she will likely deploy again next month when *Ford* goes back to sea.

Sir, we ask people from all over the country, from all walks of life, from all different backgrounds to join us and then it is the job of a commanding officer to build a cohesive warfighting team that is going to follow the law and the law requires that we be able to conduct prompt sustained operations at sea.

That level of trust that a commanding officer develops across that unit has to be grounded on dignity and respect, and so if that officer can lawfully join the United States Navy, is willing to serve and willing to take the same oath that you and I took to put their life on the line, then I am proud to serve aside them.

Senator TUBERVILLE. Admiral, I agree with that. I do not care who you are as long as you join our military to fight for the freedom of our country and protect our country.

The problem that I am having is the obsession with race, gender, sex. It is focused on self. It is not focused on team, and if we do not start building a team, we have no chance to win individually in this country. We have no chance.

Everybody else is building, and to do a poem with all the 8,000 other people on this ship and to focus on herself—and do not get me wrong. Her uncle or whoever that fought—hey, my dad died in the military. Okay. I am all for that.

But I am all for building a machine. We do not—our recruiting is suffering. We do not need to have another Bud Lite moment. I mean, we do not need to have a Bud Lite moment in the Navy.

I mean, we have to build a killing and fighting machine, and it just concerns me that we do all these things and we focus on one thing, one person. We are all Americans. That is what we are and I hope as admirals and generals and people, secretaries, that we start pushing Americans first. Not a gender, not a race, not nationality.

We all got to come together. If we do not we have zero chance, because this is not the country we used to have. This is not the military we used to have and we have got to get out of that rut of saying we are individuals.

We are not individuals. We are the best country on the face of the earth and the best military, the United States of America.

Thank you. Thank you, gentlemen. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Tuberville.

Senator Blumenthal, please?

Senator BLUMENTHAL. Thanks, Mr. Chairman. Thank you all for being here and for your service to our Nation.

Admiral Gilday and Commandant Berger, thank you particularly and your families for your extraordinary service over many years.

I want to just take a moment to tell my colleagues about a bill that I introduced along with Senator Sullivan to commemorate the United States Marine Corps' 250 years in a commemorative coin to mark this important milestone.

I am really grateful to my colleague, Senator Sullivan, to join with me in this tangible reminder of the Marine Corps' contributions to our Nation and I hope all my colleagues on the Committee will join us in this legislation.

It may seem symbolic but symbols often tell an important story, particularly, Commandant, in a time when the Force Design 2030 has created issues within the Corps. This kind of point of solidarity, I think, can be important.

Admiral Gilday, I want to come back to the questions raised by the Chairman about accountability on the USS *George Washington.* I was in the briefing that we received and I have no question that you and the briefers and our top command in the Navy are deeply concerned about those three suicides.

But what I heard in that briefing was that phase one did not address accountability. Phase two did not have it as a specific topic, but that accountability might emerge somehow from phase two.

I would like your assurance that accountability, that is, holding responsible anyone in command who knew or should have known about the desperate straits of those three sailors will be at least named and held accountable in some way.

Admiral GILDAY. Yes, sir. I know that you understand—everybody does—how complicated death by suicide can be and the number of factors that can be involved, and I am in no way trying to be evasive on this issue. I take personal ownership for some of the failures that we saw in Norfolk and other places that we are currently correcting.

That said, in any specific investigation and the Navy has relieved 15 commanding officers over the past 12 months for various reasons. We have to connect those actions directly to the findings, to the facts, of those investigations.

I commit to you, sir, that we will look very closely to that and come back to you.

Senator BLUMENTHAL. Thank you.

Admiral GILDAY. Yes, sir.

Senator BLUMENTHAL. We are at the 1-year anniversary of the death of one of those sailors. Master of Arms Seaman recruit Xavier Mitchell-Sandor, and I want to suggest that one way to allevi-

ate—and I know you are taking steps on the USS *Stennis* to alleviate some of those issues that were involved in those suicides, maybe to procure housing on the open market when ships are in maintenance for many years using the BAH [Base Allowance for Housing], a bigger topic for further consideration.

Secretary Del Toro, we all have seen the recent leaks of classified documents that are so deeply alarming, appalling, and that show Americans how many members of our military have such wide access to top secret documents.

I wonder if you are considering measures that might restrict access, particularly on the part of junior members of the military in the Navy, for example, to classified documents.

I have been a longtime advocate of declassifying documents that do not need to be kept secret. But at the same time maybe we ought to be looking at who has access to those documents that truly have to be kept secret to protect vital information and sources and methods.

Mr. DEL TORO. Well, thank you, Senator. We very much are and the Department of the Navy and throughout the Department of Defense. The Secretary of Defense just this morning actually has requested a 45-day review of security clearances and accesses across the Department and so we will be looking at this issue very, very carefully.

As you know, on the one hand you have the desire to be able to share more intelligence information with our allies and partners and that presents risks, obviously. On the other hand there is a need to actually protect the secrets that we do have and so it is a bit of a dual-edged sword.

But we have to do better across the Department to ensure that we keep it to only those that really need the intelligence in order to be able to fulfill their responsibilities and their duties, both substantively and administratively as well.

Senator BLUMENTHAL. Thank you. Thank you all. Thanks, Mr. Chairman.

Chairman REED. Thank you very much, Senator Blumenthal.

Senator Budd, please?

Senator BUDD. Thank you, Mr. Chairman, and again, thank you all for being here. Thank you, each of you, for your service.

General Berger, a common criticism of Force Design 2030 is that the Marine Corps has depleted its combat power, for example, by divesting of its main battle tanks and a significant portion of its aviation assets.

To the extent that you can talk about it in this setting, can you talk about the underlying analysis and your logic to these divestment decisions?

General BERGER. Yes, Senator. First, the underlying analysis was derived from a series of wargames 5, 6 years ago, 7 years ago, where each individual wargame was testing the force against the pacing challenge—pacing threat.

In every case it was not a good outcome. So the conclusion there was if you do not change, the outcome is not going to change. That drove us toward devising, first of all, if that is the case, keeping our original equipment and our formations, everything, the same, is not going to keep up with the pacing challenge then what do we

need to do differently and we started with how we are going to operate. Not equipment, but how we are going to fight.

So the first step was, as the Chairman said, a more distributed way of operating in an expeditionary naval manner that fits right into the joint concept for the future concepts drive everything in the Marine Corps. So, first, get the concept right.

Second, if that is an underlying concept that the Navy and Marine Corps joint force is going to operate upon, then test it in a series of wargames and then go out into the field and experiment with it, and that is exactly what has happened for the past 4 years.

Senator BUDD. Thank you for that. So those that are criticizing Force Design 2030 the simple answer, and I will let you fill in the blank for that, is it divestment? Is it a change? How would you approach the critics of Force Design 2030?

General BERGER. This July—this summer when the president sends me home, that will be the last day that I get a morning intel report. It will be the last access I have to every bit of technological development that the CNO and I and the other services chiefs have.

We will not have access to all of the information we need to develop the force anymore. My answer to the critics is beginning on the next day I will be the biggest supporter of whoever the next Commandant is because I will know he has information I do not and I will trust that the marines who are doing the experimentation out in the fleet, as long as we have a mechanism for feeding that back in to the headquarters of the Marine Corps and we make the changes, we will be fine.

I trust that this current Commandant, past ones, future ones, have access to the best information available. We have the best process for developing the Marine Corps that fits into a naval construct, complements the joint force. All that I am very confident in.

Senator BUDD. Thank you, General.

Admiral Gilday, much has been made about the growth of the Chinese navy and the need to grow the number of the United States ships in the fleet to meet that growing threat. I would like to hear from you not about the quantity of ships in their fleet or in our fleet but about the relative qualitative advantage of Navy power.

What kind of technological advancements are we seeing from the Chinese and how should we be viewing this issue?

Admiral GILDAY. Sir, we are watching the Chinese very closely, and to the Commandant's point, what we are going to fight with is being informed by how we are going to fight and that is what we are out there doing with our strike groups, with our amphibious ready groups, in our fleet exercises, in our war games, to try and refine that based on how we are watching China.

There is no question our biggest asymmetric advantage is people. The investments we are making in live, virtual, constructive training, as an example, allow us to train as a Fleet Marine Force and as a Navy at a scope and scale that we could never do by getting individual ships underway, first.

Second is we are completely revolutionizing the way we are training individual sailors through a framework called ready relevant learning where it is beyond brick and mortar classrooms or

school houses. We are getting information to young sailors at the right time and the right quantity.

With respect to—you mentioned capacity, and if I could for a second, sir, for the last 2 decades the Nation has been focused on ground wars. That has been the priority and understandably so.

The investments that we are making now and, largely, due to the support of this Committee, we have 56 ships in construction across 7 shipyards with another 77 on contract. That rudder turns the ship of the United States Navy very slowly but we are really trying to get after that capacity issue as well.

In the modernization investments that we are making we have increased—if you take a look at our operations and modernization accounts we are up 5 percent from where we were last year, a total of $11 billion, and much of that is going into readiness.

I mentioned in my opening statement we are funding maintenance at 100 percent. We are investing in new submarines, expanding the amount of missile tubes. We are improving torpedoes that they fire. With surface ships we are giving them longer range weapons, both Tomahawks and defensive weapons.

We are investing in the electronic warfare capabilities. We are investing in the weapons, doing multiyear buys of weapons, that our aviators fire from their F–35s and their Super Hornets. We are trying to wherever we can buy down risk and close on vulnerabilities so that we can pace China instead of trying to follow them.

Senator BUDD. Very good. Thank you all.

Chairman REED. Thank you, Senator Budd.

For the information of my colleagues, the vote has started and, of course, at the conclusion of this open hearing we will go into a closed hearing in SVC 217.

With that, Senator Duckworth, you are recognized.

Senator DUCKWORTH. Thank you, Mr. Chairman, and I want to say thank you—a deep and profound thank you to both Admiral Gilday and General Berger, to you and your families for your extraordinary lifetime of service to our country.

I do want to associate myself with Senator Sullivan's concerns that the current Navy budget proposal significantly undercuts Marine Corps amphibious capabilities. In fact, I think it undermines Marine Corps doctrine.

At a time when we need to be looking at the Indo-Pacific region and a shift toward a forward deployed island-based force, to cut back on LPDs in particular, I think, is a misjudgment. That said, I do want to talk about logistics in the Indo-Pacific.

General Berger, I have appreciated your leadership among the Service Chiefs and recognizing the challenges posed by sustaining forward deployed troops in a contested logistics environment, particularly in the Indo-Pacific region, which is characterized by island formations and huge swaths of open sea. I have been ringing alarm bells about this problem, especially in a contested logistic environment, for years, not just because of my own experiences or because U.S. Transportation Command is in Illinois, but also because I truly believe that for the sake of our servicemembers and for the credibility of our deterrent we have to get this right.

General Berger, in what ways does this year's Marine Corps budget request support contested logistics and how does this benefit the Marine Corps and how does it benefit the joint force?

General BERGER. We have had some long discussions on contested logistics. I am going to miss them.

First of all, the structure—the laydown of where we have prepositioned supplies and parts and munitions and equipment across the Pacific, across the world, we have to relook now, quickly.

It was built for a different timeframe, under a different set of circumstances. So where we have afloat and ashore prepositioning has to be revisited, has to be changed, and there is funding to do that. But that is going to take a fundamental—it is going to take a different look and some tough decisions in the next few years.

A second is, I think, the platforms that we use to move that equipment, those supplies around. Here, the good news is everything from the 53K [CH–53K] to the medium landing ship to every other conveyance that is unmanned that the CNO is working on and we are working on that is going to move that around, we are going to need it all. It is going to be planes, trains, and automobiles.

We also have to educate, train our logisticians in a different way, which you have talked to me about before. It is not business as usual for them, because it is not an administrative move of materials. Even the way that we contract has to change, because this peacetime exercise approach is not going to work in a conflict in a contested environment.

Last, I would say the resilience part. If it comes to a conflict we are both going to—there is going to be some degradation across the board. How fast can we come back? That gets into applying the same methodology for kill webs into, as you pointed out before to me, logistics webs. How do we create logistics webs that look like kill webs?

Senator DUCKWORTH. I think LPDs are going to be an important part of that and this budget does not support the number of LPDs that I think that we need.

A critical vulnerability for any military is the logistics tail associated with delivering operational energy to its fielded forces. Both our readiness and our allies' and partners' readiness will be bolstered by reducing our reliance on fossil fuels and employing more diverse and renewable operational energy sources, as well as seeking more creative and cooperative ways of supplying operational energy to U.S. troops and to our overseas partners.

Secretary Del Toro, General Berger, how much could we gain from cooperating with our allies and partners in Europe and in the Indo-Pacific to improve our logistics availability and distribution? What efforts in your budget request work toward operational energy security and resilience?

Mr. DEL TORO. Thank you, Senator. It is an incredibly important topic.

We have significantly improved, I would say, our alliances across the Indo-Pacific for this very nature. We are kicking off with Balikatan, for example, 2023 with 17,500 marines right now working side by side with our allies and partners.

The ability to actually move our forces forward and provide the logistical bases that they need. As you know, the Secretary of Defense just came from the Philippines and negotiated four additional bases as logistics bases in the Philippines, as well in the north as close to Taiwan as one can possibly get.

Providing operational energy investments to those bases is always critical. We have—and the Marine Corps is another example in Albany, Georgia, for example, where we have become zero dependent on outside sources for energy, for example. The same thing applies to Miramar in California, for example, where we actually have provided energy out to the local communities.

These are all investments that are necessary. They are also necessary at sea as well, too. For many years biofuels have been very, very expensive, and it has been hard to get the price point of biofuels down to the point where it actually makes sense to be able to invest in that.

So we have in the President's Budget commitment to continue in the R&D [research and development] effort that is necessary to try to discover that biofuel that will provide the biggest return on investment to our forces.

Senator DUCKWORTH. General Berger?

General BERGER. For us it is not as much of a money issue as it is an operational-tactical imperative. We cannot fly in batteries, fuel the way we used to. It is not going to be possible. It is not going to be practical.

We have got to find other ways to power our equipment, vehicles, everything. There is money in the budget to do that but it is going to take time and your support.

Senator DUCKWORTH. According to DOD's own reports 50 percent of all casualties during the war in Iraq occurred during convoy operations and 80 percent of all convoys were conducted to move fuel. We need to do better.

Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Duckworth.

Let me recognize Senator Cramer and also give the gavel to Senator Warren while I go vote and return quickly.

Senator Cramer, please?

Senator CRAMER. Thank you. Thank you, Mr. Chairman. Thank you, General and Admiral, for your decades of service and congratulations on another good solid year ahead.

Mr. Secretary, I am going to get right to the point with you. I worked with the Navy for a little better than a year and a half to this point, on behalf of a Navy SEAL and an officer who wanted to get out of his service a few months early so that he could pursue his next level of service—his next area of service in political office.

It is pretty much over—the case—but I wanted to highlight it in this forum because it is really a horrible vignette of how the Navy, I think, far too often treats its people. I brought it up with you once quite a while back, with Admiral Gilday as well, and I will make it as brief as I can.

Lieutenant Adam Schwarze asked in July 2021 for permission to run for office while serving his final few months in the Navy. The paperwork got lost and it took me getting involved for the paper-

work to find its way back into the process. Then the CNO endorsed his request and then it was denied by you.

Meanwhile, Lieutenant Schwarze also tried to get out using an old but still authorized early retirement authority. Again, process stopped unexplainably. But I weighed in and the process then continued with the commander of naval personnel endorsing the package, only again to be denied at your level.

Then, from my vantage point, Mr. Secretary, began what I think was a witch hunt. He was called back from his SkillBridge assignment in Minnesota to his last assignment in Hawaii where he could then be punished.

The Naval Special Warfare Group lawyers proceeded to rip apart his history, his dedication, and question his integrity with statements that literally, quote, "call into question his sincerity and trustworthiness." I am happy to provide all of this for you in case your team has lost it.

In fact, you went after this decorated hero with a veracity that made my staff, including a commander in the military, reach out to him to check his well being and reached out to the Navy to make sure that they were looking out for his well being.

You pulled his trident and then prevented him from retiring on time. You did an investigation that included false statements about me and my connection with Lieutenant Schwarze, statements that seemed quite political for what is supposed to be an apolitical organization.

The whole time that my office was trying to get information from the Navy it faced roadblocks, barriers. It was like pulling teeth. Then after all of that, a board of inquiry was held and on all counts the board voted three to zero that the preponderance of the evidence did not support any basis of misconduct. Three-zero, seven times.

In summary, you screwed the sailor's paperwork up constantly, repeatedly. You made a political decision on his future. You tarred and feathered him out of revenge.

A board of inquiry unanimously absolved him of all charges. You held him past his retirement date until the law actually required you to let him out, and you left a patriot feeling like the Navy does not care about him or worse at the end of his service, and you kept his trident.

I just—after hearing all this stuff about how important the people are, Mr. Secretary, I am perplexed and I hope it is not too late for some corrective measure to replace this person's integrity and dignity.

With that, I will just let you respond.

Mr. DEL TORO. Thank you, Senator. I would be happy to continue to work with you on this situation.

However, first, I would like to make a statement that I personally did not make any statements against you or Lieutenant Adam Schwarze myself. But I will add that we have a responsibility in the Department of Defense that all servicemembers actually act in accordance with the Hatch Act, and Lieutenant Adam Schwarze knew exactly what the rules and requirements of the Hatch Act were.

We cannot allow uniformed service personnel, even if they are 1 day from retirement, to participate in political activities, especially election-related activities.

That is a standard that must be met. It has been adhered to since the beginning of the founding of our Nation and we have to actually meet that standard.

Senator CRAMER. So is there a standard where Navy lawyers are allowed to just absolutely trash a guy's reputation, create misstatements—factually untrue statements about his career and his claims so that they can somehow prove their point? Is that a standard?

Mr. DEL TORO. Senator, I would be happy to look into the case further to see if those statements are accurate. I do not know the details of the——

Senator CRAMER. I do. I do. I know them.

Mr. DEL TORO.—statements that were made by lawyers and I would be happy to work with you on that.

Senator CRAMER. I know them including the statements about me that are in your lawyer's records. So——

Mr. DEL TORO. I would be happy to collaborate with you and your office, Senator.

Senator CRAMER. I look forward to that. I would rather not have to do it so publicly but after a year and a half of being stonewalled I am glad you are here today. Thank you.

Senator WARREN. [Presiding.] Thank you. So I recognize myself now.

Last year the White House released a report telling agencies to prioritize union shops with pro-worker employers when awarding government contracts. This includes the Department of Defense. Workers are central to the United States' national security and the strength of our Defense Industrial Base.

I am concerned that the Navy is not following through on the President's commitment to unions and workers. For example, I have heard reports that the Navy is consistently passing over union shipyards for contracts and giving them to nonunion shipyards instead. Some of these nonunion shipyards are already at capacity, working on multiple contracts at the same time, while the docks at the union shipyards are sitting empty.

It sounds like even though there is plenty of work to go around, the Navy is actively choosing to ignore union shipyards where workers generally have better wages and better protections in favor of nonunion ship yards that are already overburdened with contracts.

Secretary Del Toro, do you agree that the Navy contract should prioritize union workers when their shipyard is ready and able to do the job?

Mr. DEL TORO. I do, Senator, in accordance with all the other regulations that drive the issuance of contracts under the FAR [Federal Acquisition Regulations].

Senator WARREN. Good. Thank you. I agree with you on this.

This has serious consequences. Missing out on contracts can mean closing the doors for these shipyards and laying off hundreds of workers, especially for smaller shipyards, and it means the next time that the Navy needs a ship repaired it will have to go to a

nonunion shipyard that is likely already over extended, resulting in delays and threatening our ability to protect our coastline and to support our allies.

The implications of this are huge as ongoing conflicts like the war in Ukraine and the threat of future conflicts fuel demand for weapons and other equipment. Delays in completing crucial projects could leave us vulnerable when we most need security.

Secretary Del Toro, do you agree that the closure of union shipyards is a threat to the Defense Industrial Base?

Mr. DEL TORO. Senator, the closure of any shipyard in the United States can present a threat to the United States in terms of our ability to build our ships and maintain our national security. I would be most interested in actually getting the details of those reports that you mentioned so I could validate whether they are true or there is other issues at play that I am just not familiar with.

Senator WARREN. That is good but we also—the good news is that the Navy still has time to change this approach. You said earlier this year that now is the time to invest in the defense workforce and I could not agree more with you on that.

Part of the solution should be to take advantage of the resources that we already have but we are not using or not using enough like union shipyards. More broadly, there is a lot that the Department can do, for example, making sure that contractors are properly notifying employees of their right to organize, improving contractors' compliance with anti-union consultant disclosure forms, and ensuring that Federal funds are not spent by contractors on union busting.

Secretary Del Toro, can you tell me what steps you plan to take to ensure that the Navy is reinforcing the Defense Industrial Base while preserving union jobs?

Mr. DEL TORO. Senator, I am committed to preserving union jobs, as I said earlier, and we actually have several shipyards that are already under union labor agreements as well, too. My commitment to you is that I will work with my acting Assistant Secretary of the Navy for Research, Development, and Acquisition (RD&A), that I hope we will actually have a permanent Assistant Secretary RD&A [for] Research, Development, and Acquisition, so I can actually invest more time in looking into these issues and many other issues as well.

Senator WARREN. I appreciate it and I look forward to working with you on this. President Biden has made an historic commitment to empower workers by prioritizing union labor in Federal contracting and, as you know, DOD is not exempt from that pledge and should not want to be exempt from that pledge.

Protecting union jobs in the defense sector is a question of national security and I look forward to working with you to make sure that the Navy can fulfill its duty to the American people. Thank you.

Mr. DEL TORO. Thank you, Senator.

Senator WARREN. Thank you, and I now recognize Senator Scott.

Senator SCOTT. Thank you, Chairwoman Warren.

[Off mic.]

If we could talk about Taiwan a little bit. It sure appears that China is building a military to somehow intimidate or defeat Taiwan. If that happens the United States Navy and most likely the marines are going to be front and center in doing whatever we can to support Taiwan.

In the meantime, the most important thing we could do is make sure does not happen. So can each of you talk about what you are doing to get Taiwan prepared to make sure this does not happen?

One thing you keep hearing up here is the fact that I think it is something like $19 billion worth of United States military equipment has been ordered and not been delivered and so what are we doing to make sure Taiwan is doing their part?

What are we doing to make sure our military industrial base provides the resources and what can you do to make sure that happens? Because it does not make any sense to me that the equipment is not there and Taiwan is not actually doing more than what they are doing right now. So if each of you could answer that.

Mr. DEL TORO. Senator, if I could start.

Our National Defense Strategy is hyper focused on China as the pacing threat, obviously, with regards to their interest in potentially using military force against Taiwan, which we have to avoid at every possible moment.

Part of the challenge that we face in providing the equipment, obviously, is the challenges that we have had in the supply chain over the last 3 or 4 years. So that is an issue that the Office of the Secretary of Defense is trying to address with special authorities.

Senator SCOTT. Can I just stop you right there? Can I just stop you right there for a second?

Mr. DEL TORO. I am sorry?

Senator SCOTT. That sounds really good. I have not heard one thing that is going to accelerate the $19 billion or whatever the number is. We have had these hearings and it keeps coming up. I have not heard one thing that actually has been done to accelerate it.

Mr. DEL TORO. I will—happy to provide you a list of things that have been done in the industrial base to actually accelerate the deliveries of those equipments and authorities.

[The information referred to follows:]

Mr. DEL TORO. While the Department of State has legal responsibility for the FMS process, accelerating delivery of these capabilities to Taiwan is a focus at the highest levels of the Department of the Navy. From the Secretary on down, we are working with senior Department of Defense leadership and our industrial partners to see how fast they can accelerate their production lines. We are working to identify and provide investment opportunities to streamline testing and recertification to alleviate some of the existing barriers to increased production throughput. In particular, we are making targeted investments in those critical munitions necessary in a high-end, sustained war fight. But it's going to take some time to do so, because capital investments need to be made, both materially and also in the workforce, in order to increase the production rates that are necessary to get new capabilities to Taiwan, in addition to our other international allies and partners, who have been asking for additional munitions, as well, too.

So industry has to do its part to fulfill its contracted obligations for timely delivery of systems to our international partners. I think that they see the commitment that the President and the Secretary of Defense are making in terms of ensuring a reliable, solid pipeline in the future and now is the time for industry to make those capital investments.

In the meantime, we are not standing still. We are working to ensure Taiwan is ready and able to use this equipment to full effect upon delivery, increasing their overall training and readiness postures.

Senator SCOTT. So is it happening? Is there anything that is happening?

Mr. DEL TORO. There is discussions at the OSD [Office of the Secretary of Defense] level, both at the DSD [Deputy Secretary of Defense] level and the Under Secretary of Defense for Acquisition and Sustainment across the entire Department, working with suppliers of munitions providers and other equipment across the board to see how fast they could accelerate their production lines.

But it is going to take some time to do so because capital investments need to be made, both materially and also in the workforce in order to increase the production rates that are necessary to get them to Taiwan in addition to our other international allies and partners as well, too, who have been asking for additional munitions as well, too.

So industry has to do its part. I think that they see the commitment that the President and the Secretary of Defense is making in terms of ensuring a reliable solid pipeline in the future. Now is the time for industry to make those capital investments.

Senator SCOTT. I would love to see concrete actions that are actually going to change the timeline because I was just in Cyprus the week before last. They got the same issue. They are not getting all—everything they want. They do not have any expectation of the dollar numbers but even a country like that cannot get what they want.

So what is the Navy doing, what are the marines doing actually to get Taiwan in position on top of the equipment and ready to make—hopefully, deter China from doing something?

Admiral GILDAY. Sir, I think it is best if we talk about that in a classified session in terms of the things that we are looking at in terms of our responsibility to field a ready force every single day.

So our priorities have been readiness of the current force, modernization of the force, 70 percent of which we are going to have 10 years from now, and that is important from two aspects. One is you got to be ready to fight tonight to put doubt in Xi's mind that today is not the day.

In a series of speeches last month in one of them he challenged his generals to be ready for war now, and so we take those kinds of assertions very seriously. Readiness has to be our top priority. Getting ships out of maintenance on time, which we are improving at but not yet satisfied with, has to improve.

As the Commandant said earlier in this hearing, pushing everything we can forward: that is where we need to be. The Navy and the Marine Corps needs to be forward, and it is not just likely that it will be the Navy and Marine Corps. It is definitely that it will be the Navy and the Marine Corps as the away team and the first on the scene.

Again, we are making balanced investments in the force that we have today, the best we can put in the field in terms of weapons.

We have just done in this budget proposal four big multiyear procurements based on the authorities that the Congress has provided us for weapons with range and speed. Two of those are between the

Navy and the Marine Corps. The other two are with the United States Air Force.

So, sir, already approaching your limit. But Commandant——

Senator SCOTT. Do you want to add anything?

General BERGER. We have been training with the Taiwanese marines for more than a decade. I think lately, the last 2 years, I would say, focus on command and control, air defense, defense from the beach, and mining and building out their national guard and reserve—in other words, making it a whole total force, which is what they are going to need.

Senator SCOTT. [Presiding.] Thank you.

Let me recognize Senator Schmitt.

Senator SCHMITT. Thank you, Senator Scott, and unlike Senator Scott's home State of Florida, Missouri is landlocked—my home State. But when I started on this Committee I wanted to be on the Seapower Subcommittee.

So we have an Army base. We have an Air Force base. Missouri, obviously, does not have a naval base. Mississippi is not deep enough.

The reason for that is because I think that our biggest challenge from a national security perspective that we are facing—Missourians, Americans—is China. That is a focus of mine and I know that it is a focus of yours with the Navy and the Marines and to that end there are several very concerning trends that I want to discuss.

The first is the fact that China's naval fleet is rapidly outpacing our own and that gap is only widening. The Pentagon reports suggest China may have 420 ships by 2025 and 460 ships by 2030. What is worse, Beijing is devoting significant amounts of its maritime training on island capture scenarios.

In 2021, the People's Liberation Army, quote, "conducted more than 20 naval exercises with an island capture element, greatly exceeding the 13 observed in 2020," according to a Pentagon 2022 report on Chinese military developments.

This is another indicator, I think, of China's ambitions and Taiwan is in the crosshairs. There is no doubt about it.

So to sort of followup on Senator Scott's questions, to me the best way to support Taiwan's ability to defend itself from Chinese aggression is to bolster their defensive capabilities today.

Harpoon anti-ship missiles, which the U.S. Government is already committed to providing, is critical, providing a hundred new delivery systems, which I think has already been committed, as well as 400 Harpoon Block II surface-launched missiles.

But the fact is that these are not going to be fully fielded until 2027. To expedite this critical capability as a stopgap until the new systems can be fielded, the U.S. should transfer from several hundred older missiles in the military's inventory that are under consideration for deep militarization or destruction.

Secretary Del Toro, will you commit to working collaboratively and creatively with the Taiwanese and the Administration to leverage existing munitions and support equipment to expedite defense aid to Taiwan?

Mr. DEL TORO. Absolutely, I will. We have been actually collaborating within the letter of the law and the authorities that are al-

lowed by law for us to collaborate with the Taiwanese, provide them the munitions that are necessary, the equipment that is necessary for them to be able to defend themselves.

Senator SCHMITT. Well, I think—that is good to hear. I think we have heard a lot about the supply chain issues. But Taiwan—the shot clock has probably started. It is between now and 4 years.

I mean, this is coming and I just do not know how much time they really have to have the support that they need to deter a Chinese offensive. Which they seem to be dead set at.

In that vein and also in this broader sort of industrial base, you mentioned the discussions that have been had. Let us say we were at war today. Let us say today the United States is at war with some power—China, whoever. What would we do differently than we do right now to ramp up that industrial base? What is holding us back?

There is a demand signal, which I think is being sent. There is a demand—what else would we do? I mean, three or four things that we would do differently than we are doing right now to be prepared, and also this also relates to Taiwan.

Mr. DEL TORO. There are war authorities that would be exercised that are not currently exercised. But let us—the goal here is to prevent war with China——

Senator SCHMITT. Correct.

Mr. Del TORO.—to deter China from going to war and I think the power of our coalitions with our allies and partners internationally has much to do with that fact.

Senator SCHMITT. I agree, and I have limited time. I think the Philippines see what is happening. I think this is——

Mr. DEL TORO. In South Korea and many other——

Senator SCHMITT. Yes.

Mr. Del TORO.—countries in the Indo-Pacific that we rely on as partners actually.

Senator SCHMITT. But as it relates specifically to the industrial base other than the war powers what is it that we can do differently? Are there State barriers in the states where we have naval shipyards? What is it——

Mr. DEL TORO. So this President's Budget actually has increased the amount of funding for increased munitions by 50 percent, for example. That is the most significant increase that we have had in the several past years and its investments in SM–6, LRASM [Long-Range Anti-Ship Missile], and numerous other missions as well, too.

We are also investing in CPS [Conventional Prompt Strike], for example, to try to get deployable on the *Zumwalt*-class destroyer by 2025 and on the *Virginia*-class submarine by 2030. Those—we are pushing on all fronts, on all cylinders, to actually try to move as fast as we can.

But just like in the shipbuilding industry with regards to the shipbuilding plan as well, too, we can only move as fast as industry can actually produce as well, too. Because the opportunity costs associated with making major multibillion dollar investments when industry cannot keep up with those productions means that we cannot spend money in other places as well too where it is badly needed as well.

So it is all about finding the right balance and the right compromise to move forward . . .

Senator SCHMITT. Right, which is why I am sort of highlighting Taiwan. Because I think they have been on the backburner and I do not think they can be anymore.

Admiral GILDAY. Sir, can I make one——

Senator SCHMITT. Yes.

Admiral GILDAY. So if I would use Austal Shipbuilding in Alabama as an example. That company shifted from completely working with aluminum to working with steel.

The reason they could do that—the sole reason they could do that—is because of the Defense Production Act. So to answer your question, there needs to be substantial investment by the U.S. Government in those industries in order for them to surge.

We stopped doing that in shipbuilding in the Reagan administration. You saw 30 shipyards go down to 7. We saw that in the 1990's during the Clinton administration with the aircraft industry and how it supports the military. That is the first thing.

The second thing is you need a bigger Navy and Marine Corps to protect those approaches from the sea to keep the United States economy humming and to deny that to any adversary. Those are the two things.

Senator SCHMITT. I am going to ask my hypersonic question in closed session. So thank you.

Senator SULLIVAN. [Presiding.] I am taking over as the Chairman until the Chairman gets back so I will call on myself.

General Berger, you have gotten a lot of compliments on Force Design. I have complimented you on it previously. But it is not without risks—significant risks. You acknowledged this in your testimony last year.

Like the Navy, the Marine Corps has minimum force levels that are required by Congress. I have been reading a lot about the history of the 82d Congress. The Marine Corps loves to cite the 82d Congress in the aftermath of the Korean War.

You know this, General. The only reason the Marine Corps exists—the only reason the Commandant of the Marine Corps is a coequal to the CNO in a hearing like this is because of Congress.

Very importantly, the 1952 law that the Secretary of Defense, Secretary of Navy, the President of the United States all opposed, mandated that the Marine Corps has three full combat infantry divisions, three full air wings, and task-organized for combined arms operations.

I am going to talk about some of the Force Design divestments. They have been dramatic. But I have concerns they have been so dramatic that the current U.S. Marine Corps does not meet the congressionally required minimums. Again, that is not your choice. We gave that to you. So I do not want to debate that right now.

What I would like for the record to this Committee I would like you to provide a detailed T&O [Table of Organization] of the Marine Corps as it currently stands. You can use MCRP 1–10 [Marine Corps Reference Publication], three regiments, everything in here, that the Marine Corps has kept these minimums that are required by the Congress. [The MCRP 1–10 has been retained in Committee files.]

Can I get a detailed detail of the current T&O of the Marine Corps Today to make sure Force Design is not taking us under the statutory requirements of the 1952 law?

General BERGER. We can provide you—absolutely, it is unclassified—a task organization of the Marine Corps today. The law—the statute, as you accurately depicted, three divisions, three wings.

[The information referred to follows:]

General BERGER.

9 May 23

Executive Summary

Subj: PUBLICATION OF MCRP 1-10.1, *ORGANIZATION OF THE UNITED STATES MARINE CORPS*

1. BACKGROUND

a. Marine Corps Reference Publication (MCRP) 1-10.1, *Organization of the United States Marine Corps*, provides general information on the mission, concept of employment, organization, and equipment of Marine Corps forces and their subordinate organizations.

b. This is the first update to MCRP 1-10.1 since August 2015 and provides an overview of Marine Corps force structure since Force Design 2030 began in 2019. The publication should be used as a high-level overview, not a detailed guide, of the Marine Corps force structure and equipment. It is intended for Marine commanders and staffs, Marine Corps training and education institutions, and Department of Defense personnel. Specific structure and equipment information can be obtained from the Total Force Structure Management System (TFSMS) as changes occur frequently.

c. The Marine Corps is modernizing at a pace beyond what can reasonably be captured in a formal publication, therefore any update serves only as an institutional snapshot and is the catalyst for subordinate or adjacent doctrinal publications. As such, the defined structures, command relationships, mission, tasks, and concepts of employment reflected in MCRP 1-10.1 lags behind the most current structured decisions and is based on decisions reflected in the February 2023 Authorized Strength Report.

2. KEY UPDATES

a. This publication was informed by approved force structure within the Marine Corps inventory through Fiscal Year 2022. Key Updates include the Marine Littoral Regiment (MLR), Marine Corps Information Command (MCIC), Marine Forces Cyber, and updated missions, capabilities, and organizational charts. This publication also includes the Amphibious Combat Vehicle (ACV), along with references to FD 2030 formations like the Littoral Anti-Air Battalion (LAAB), Littoral Combat Team (LCT), and Littoral Logistics Battalion (LLB). Finally, the publication standardizes all doctrinal terms in accordance with the latest Marine Corps and DoD dictionaries.

b. Similarly, all Force structure and equipment changes (new organization and equipment, reductions, or outright divestments) depicted in the MCRP reflect approved changes in the requirements through February 2023. Associated Changes in inventory (manpower and on-hand equipment) are still underway.

3. OMISSIONS

a. Due to the dynamic nature of the Marine Corps' organizational change process, large-scale initiatives spanning multiple years of execution, future year programmed changes are not depicted

UNCLASSIFIED

Subj: PUBLICATION OF MCRP 1-10.1, *ORGANIZATION OF THE UNITED STATES MARINE CORPS*

herein and will be updated in future promulgations of this reference publication once fully instantiated. It is not that these omissions are unimportant, but that doctrinal publications are based on formations and units that are at full operational capability, or no longer associated with experimentation. Other changes were omitted due to pending decisions, such as snipers within infantry battalions.

b. Ground Combat Element: MCRP 1-10.1 displays pre-Force Design Infantry Battalion organizational structure with no depiction or mention of Infantry Battalion Experiment-30 (IBX-30) capabilities or structure changes and include snipers. It also does not align the Marine Division capabilities with the Stand-in-Force, Expeditionary Advanced Bases, MLR, etc. Finally, there is no mention of Medium-range Missile or Long-range Missiles Batteries and depicts the Artillery Regiments having two cannon and 1 High Mobility Artillery Rocket System (HIMARS) batteries for 2d Marine Division, 1 HIMARS battery for 1st Marine Division, and 1 cannon battery for 3d Marine Division.

c. Logistics Combat Element: MCRP 1-10.1 does not include the LCE Modernization or the Material Readiness Battalion, while the Landing Support Battalion and Transportation Support Battalions still depicted. Finally, the MCRP states that the requirements for emplacement of standard and nonstandard bridging and rafting will be globally sourced as required to support this function.

d. Aviation Combat Element: Within 2d Marine Aircraft Wing (MAW), the Marine Unmanned Aerial Vehicle Squadron was not changed to Marine Unmanned Aerial Vehicle Training Squadron, and within 4th MAW the MCRP shows Marine Aerial Refueler Squadron 452 under 2d MAW, despite it being deactivated in December 2022.

3. CONCLUSION. Because the MCRP 1-10.1 is a snapshot of Marine Corps, it is out of date the moment it is released. Despite continual change, this publication is an important combat development milestone because it resets the organizational baseline. This update reflects three years of Force Design 2030 initiatives.

UNCLASSIFIED

The Publication of MCRP 1–10.1, Organization of the United States Marine Corps (Limited Dissemination Control: None) and the Publication of MCRP 1–10.1 Organization of the United States Marine Corps (Distribution Statement A: Approved for public release, distribution is unlimited). [The MCRP 1–10 has been retained in Committee files.]

Senator SULLIVAN. Correct.

General BERGER. There was nothing more specific in that and we have changed it significantly over 70 years.

Senator SULLIVAN. I just want—just look at the T&O. I have been looking at this. Look at the same one for the air wing and just

say that you are meeting it. Again, that is not your call. That is our call and you need to meet that, and I would like to see details on that.

I have been focused on Force Design more than any other U.S. senator. Again, I have been very complimentary of your bold approach. It takes a lot of guts, as Senator King said.

I have been, as you know, General, frustrated by some of the answers that the Committee has been provided with. I think this idea that everything has to be classified—I think even your comment to Senator Budd that, well, you get classified stuff and the other generals do not. I get classified stuff.

So I think it is really in the Marine Corps' interests to be able to explain this. There is a lot of criticism of it. One of the criticisms is that the Marine Corps is creating more of a niche force focused on one combatant command with one littoral mission, and putting at risk the critical statutorily-mandated global crisis combat capability, kick in the door capability of the Marine Corps anywhere in the world for any contingency, not just littoral contingencies, and without 31 amphibs I believe this is a real concern.

Lieutenant General Heckl, recently at the Seapower Subcommittee when I was asking him, said having a hearing on this—I have talked to the Chairman and others—just getting it out there. Marine Corps defend this, critics come and—I think it is good for the Marine Corps. Would you be supportive of that, General?

General BERGER. Senator, earlier this week we finished another briefing, as you all have requested. That was, by our count, 429 briefings——

Senator SULLIVAN. Those are classified—those are classified briefings, General. You need a hearing on this. The Congress of the United States—the biggest undertaking of reorganization of the Marine Corps in decades, merits a hearing. I do not know why you would resist that and I do not know why we keep getting——

General BERGER. I have never said no to a hearing from any Committee in 4 years.

Senator SULLIVAN. Okay. So would you be up for a hearing?

General BERGER. Any hearing that is requested by a Committee with jurisdiction over the military absolutely I would say yes to.

Senator SULLIVAN. Okay.

General BERGER. I have not said no yet.

Senator SULLIVAN. I have run out—I am running out of time here and I have committed to the Chairman.

Let me just ask one—one of the things that I put in the section 1023 of last year's NDAA—and, again, I do not think we have gotten it in the way in which I was expecting it and it has been classified, which does not help—is the extent to which the Marine Corps has divested so much capability and I have the long list here and it is very long—and the aviation side is enormously shocking to me—that the Marine Corps would have to rely on the Army to provide such capabilities.

I do not think anyone has, at least as far as I can tell, given this Committee that information we requested—bridging, armor, assault breaching, route clearing, MPs [Military Police]. There is a lot that we do not have anymore, that if we go to war tomorrow and

there is a river the marines have to cross, they cannot cross the river.

So can you commit to this Committee again to take a look at section 1023 and the letter I sent you on April 5th to answer those questions? You have answered. Maybe I will just ask around.

Do you have answers to that question on what capability have the Marine Corps given up that the Army now has to take? Then that is my final question.

General BERGER. The Act required us—asked us to give briefings, which we provided this month in accordance with the statute.

Senator SULLIVAN. Classified.

General BERGER. We checked with the Committee to make sure that it answered——

Senator SULLIVAN. I do not think classified briefings do that justice, but go on.

General BERGER. That was what was required in the NDAA——

Senator SULLIVAN. It was not classified. I wrote it. I know what I am talking about.

General BERGER. It did not specify classified or unclassified. I think across the joint force to get the whole picture of what the capability of any element of the joint force is, you need to have unclassified and classified put together so you get a better picture of both capability and capacity.

Senator SULLIVAN. The Army question?

General BERGER. Pardon me?

Senator SULLIVAN. The Army question?

General BERGER. What is the question again, Senator?

Senator SULLIVAN. This is in the law—the extent to which the Marine Corps is relying on the Army to provide capabilities it has divested.

General BERGER. What requires the combatant commander to make decisions on how to employ the force that is the combatant commander's decision, not mine? We provide, man, train, and equip forces as does the other services. How they are employed that is up to combatant commanders.

Chairman REED. [Presiding.] Thank you, Senator Sullivan. I have two additional questions, gentlemen, before we break.

First, unfortunately, there has been an impasse in confirming general offices at a regular schedule. We previously used unanimous consent for all general officers except those with key positions requiring hearings.

Are you seeing an impact, Admiral Gilday, in the service not only in terms of readiness but also in terms of quality of life of families, planning for families, planning for schooling, and also decisions at that level about whether they retain themselves in the service or depart?

Admiral GILDAY. Sir, we are not at that point yet. We are not at that point yet but we will be soon, and so to give you just a few examples, the director of Naval Reactors, responsible for more than 60 reactors and in the middle of AUKUS, is a concern. Four fleet commanders, including the fleet commander forward in the Western Pacific and the fleet commander in the Middle East, is a concern.

Three force commanders—surface, air, and subsurface—three-star officers, the head of Naval Installations Command, the superintendent of the naval academy as we are beginning to—as we are on the verge here of bringing another class and to keep that production line moving uninhibited is another example.

We have five promotion lists with over 50 people and so it is close to 80 right now and growing, sir, but I would double it in terms of the amount of families that are affected this summer.

Chairman REED. General Berger, do you have comments?

General BERGER. I think my review is exactly the same. Within 90 days they are going to have significant impacts. At the one-and two-star general list we can move those. At the three-and four-star level they are one by one assignments.

As you point out, without confirmation there is no moves. There are vacancies or delayed retirements or family plans that they do not know when that will happen. It is—I think by the late summer, early fall, you will have fairly—you will have significant impacts to both readiness and quality of life both.

Chairman REED. Let me followup one question. This force structure is interesting and should be pursued but you train regularly, I presume, the Marine Corps with Army armored units and the Army has far more tanks and mechanized vehicles than Marine Corps could ever want, not only need. The whole thrust, I think, of our strategy over the last several decades has been joint fighting, not individual services with their expertise.

So you have available armored vehicles if the combat commander believes that is for the mission. Is that correct?

General BERGER. Absolutely do. Everything that we do is as a joint force. The Navy, the Marine Corps will not do anything on a large scale by itself. It is entirely as a joint force.

There is some duplication, as you know, Senator, but mostly we want complementary capabilities. We have capabilities the Army does not. They have capabilities we do not. I think that is what you want.

Chairman REED. Yes, I tend to agree and you could want everything in the world like your own fleet of C–141s so you could be flown everywhere with marine pilots. But that would not make a lot of sense, would it?

I think, again, we have to look carefully at this because we do have a responsibility to view the force structure changes and make sure they are correct. But I think so far what we have done is try to incorporate the threat that is emerging, not fight the last war.

Mr. DEL TORO. Mr. Chairman, you could not have said it better. I am sorry to interrupt. It is about today's threat and I fear that some of the critics of both, perhaps, Force Design or our Navy operations fail to understand that the threat very much has changed in the Indo-Pacific. When you take into account satellites and cyber security and everything else—cyber warfare that is at play here, they fail to understand that we have to evolve and we have to be able to innovate in order to be able to effectively fight not yesterday's war in 1953 or 1952 but tomorrow's war.

Chairman REED. Well, thank you all very much. We are going to recess until 1230 hours to go into the closed session and in the meantime I hope the second vote is called.

So we will reassemble in the SVC–217 at 12:30. Thank you very much.

[Whereupon, at 12:15 p.m., the Committee adjourned.]

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JEANNE SHAHEEN

PORT SECURITY BARRIERS

1. Senator SHAHEEN. Admiral Gilday, I continue to be concerned about the State of the Navy's port security barriers. We do everything we can to ensure our ships are capable and protected at sea, so we should commit a similar level of effort to make sure they are protected from terrorist and other threats when they are in port. How important is it that we are investing in modern, capable port security barriers that can defeat the threats we face today?

Admiral GILDAY. The Navy is committed to ensuring the security of our ships, while in port and at sea. The Navy utilizes Port Security Barriers, also called Waterborne Security Barriers (WSB), which are systems designed and used to protect U.S. military assets. WSBs are able to thwart attacks by terrorists that use small vessels laden with explosives as mobile weapons targeting military ships and waterside installations. In order to defeat the threats we face today, the Navy has developed WSB technical requirements to support the acquisition of the next generation of WSBs (WSB 2.0), which will include enhanced attack survivability and maintainability over existing Port Security Barriers. Barriers are sustained and placed on a phased replacement plan to ensure continued operation and protection of our ships.

2. Senator SHAHEEN. Secretary Del Toro, will you commit to ensuring that any efforts to procure port security barriers will involve a fair and open competition?

Secretary DEL TORO. The Navy complies with all statutory and regulatory requirements, including Part 6 Competition Requirements of the Federal Acquisition Regulations (FAR), to acquire quality supplies and services that satisfy the Navy's needs for measurable improvements to mission capability and operational support at a fair and reasonable price. If an other than full and open competition strategy is used, it is performed in accordance with FAR 6.302 and in compliance with Title 41 United States Code (U.S.C.) 3304 and Title 10 U.S.C. 3204.

An Acquisition Strategy Framework was developed in March to support competitive procurement of new Waterborne Security Barriers 2.0 (WSB 2.0). The Navy intends to engage industry using Industry Days and Requests for Information, to include review of a draft Request for Proposal (RFP), before releasing the final RFP. WSB 2.0 will provide for enhanced attack survivability and maintainability over legacy variants.

INTELLECTUAL PROPERTY

3. Senator SHAHEEN. Secretary Del Toro, I am concerned with China's ongoing theft of American intellectual property and the impact that has on small businesses, including a constituent company of mine that provides an important technology to your Department. What is your view of China's ongoing theft of United States private sector intellectual property and the impact that has on our defense industrial base?

Secretary DEL TORO. Chinese cyber intrusions are the most prolific in the world. China uses cyberspace to conduct operations against the Department of Defense Information Network and the United States Homeland. They do this to weaken our allies and partners and to undermine United States interests. We need to do better at protecting our intellectual property.

4. Senator SHAHEEN. Secretary Del Toro, do you see this an issue that the Department of the Navy, and the Department of Defense as a whole, can do a better job of working to address?

Secretary DEL TORO. The Department of the Navy continues to focus on cyberspace activities by prioritizing investments in cyberspace workforce, operations, research and capabilities.

SHORTFALLS IN CIVILIAN POLICE FORCE STAFFING

5. Senator SHAHEEN. There is a Department of Defense (DOD) civilian police force shortage across the Department that has developed into a severe national security concern. In the State of Maine, this directly affects Portsmouth Naval Shipyard (PNSY) and Naval Computer and Telecommunications Area Master Station Atlantic Detachment Cutler (Naval Support Area Cutler), with PNSY falling below 50 percent of their authorized force and 37 percent of their required, and Naval Support Area Cutler falling 32 percent below their authorized force and 25 percent of their required.

Admiral Gilday, how aware is the Navy of this issue, how long has this been occurring, and how is the Navy addressing these shortfalls?

Admiral GILDAY. The Navy is keenly aware of the challenges we continue to face attracting, hiring, and retaining security force personnel at PNSY and NSA Cutler. We have focused on recruiting and retaining talent for several years. We have employed a number of strategies to address the manning shortfalls; including expanded authorization and use of direct hiring capabilities for Police and Security positions, authorizing targeted recruitment, relocation and retention incentives, and raising the full performance level of Police Officer positions to the GS–7 level. Several CNIC Regions expanded outreach through Navy and State sponsored marketing, and hiring events targeted toward Police Officers have been carried out over the years to recruit local talent to expedite the hiring process. Further, CNIC has a focused Performance to Plan (P2P) working group that is assessing recruiting and retention challenges and proposing mitigations to reduce fill time and enable management's ability to respond to turnover.

6. Senator SHAHEEN. As it stands, multiple barriers contribute to the workforce shortage. Some include pay parity with civilian counterparts, the Commander, Navy Installations Command requirement to have a bachelor's degree (which is not required by police departments in the local area), and a lack of transferability of credentials/qualifications. For example, a Navy Master at Arms on the PNSY police force might not meet the hiring criteria to be a General Schedule (GS) police officer, given that the prerequisite for a new applicant is that they must have a bachelor's degree or like experience. Or, a 10-year veteran of the Maine State police would have to go to the Federal Law Enforcement Training Center or police academy since the mid-Atlantic region will not honor a waiver for a 20-year retired officer or anyone with a prior police academy with a law enforcement background.

Secretary Del Toro, of these barriers, which can the Navy remove, which require the DOD to remove, and which require changing by Office of Personnel Management? In addition, will pay levels need to be considered?

Secretary DEL TORO. The Office of Personnel Management (OPM) is the authority that establishes formal qualification requirements for jobs within the General Schedule employment system. The Department of Navy (DON) applies the OPM regulations when evaluating candidates for jobs in the Police Series (0083) and does not supplement these requirements with other qualification factors.

A candidate for employment as a Police Officer may qualify for the position based on three criteria: 1) education; 2) experience; or 3) a combination of the two. New entrants to the 0083 series may qualify at grades GS–02 through GS–06. Qualification at a specific level is dependent upon the candidate's experience and/or education. Personnel with prior Law Enforcement (LE) experience may submit a waiver for LE training and police academy requirements. The waiver must be reviewed by the DOD Peace Officer Standards and Training (POST) Commission and approved by the Under Secretary of Intelligence & Security per Department of Defense (DOD) Instruction 5525.15, *"Law Enforcement Standards and Training."*

7. Senator SHAHEEN. Admiral Gilday, would it be helpful to change policy and consider classifying base police as law enforcement officers?

Admiral GILDAY. Candidates who lack qualifying work experience related to the position may also seek qualification consideration by a substitution of education for experience. All Executive Agencies use the OPM established minimum qualification requirements, along with agency-prescribed specialized requirements to qualify candidates for Federal positions. Establishment of a Law Enforcement Officer (LEO) designation would create significant labor implications to include age requirements and benefit contributions.

8. Senator SHAHEEN. Secretary Del Toro and Admiral Gilday, has DOD or the Navy applied for direct-hire authority to address the issues identified at the named facilities?

Secretary DEL TORO. The Department of Defense currently has Direct Hire Authority (DHA) for Police Officer positions The Department of the Navy is taking advantage of the DHA to address the identified issues at the named facilities.

Senator SHAHEEN. In talks with constituents of Maine impacted by this, a suggestion I received was to amend the recruitment process by hiring recruits as GS–5, processing them through their required training in the time that takes, and joining the field as GS–7, skipping GS–6.

9. Secretary Del Toro, how feasible would change be, and what effects would it have across the organization?

Secretary DEL TORO. The experience and training completed at each GS level provide our civilian Police Officers with the necessary qualifications for career advancement. Adjusting the career development to allow for a two-grade interval pattern would not be consistent with current training requirements.

Police Officer hires have a rigorous training and development plan that includes specific work and exposures at each grade level. Adjusting the development plan to increase compensation without alignment to their skill would not result in improved quality of the work performed at the higher level without the on-the-job experience at the intervening level.

It should be noted that increasing the grade level is not the only way to increase pay for General Schedule (GS) employees. The Navy, similar to other civilian employing components and agencies, has the option to seek OPM approval of higher special rates of pay for a category of GS employees if a determination is made that pay increases are needed to address significant recruitment and/or retention difficulties. (See 5 U.S.C. 5305 and 5 CFR part 530, subpart C.)

QUESTIONS SUBMITTED BY SENATOR MAZIE HIRONO

AMPHIBIOUS TRANSPORT DOCKS (LPDS)

10. Senator HIRONO. General Berger, a key part of Force Design 2030 is the ability to get marines and supplies to austere locations, which requires a robust amphibious fleet. Yet, I understand the Office of the Secretary of Defense has delayed the purchase of a required LPD for a 12th study. How would not resourcing the LPD line impact the Marine Corps vision for Force Design 2030?

General BERGER. The LPD is an essential component to reaching the operational and statutory requirement of 31 amphibious warfare ships. As ships are being decommissioned faster than they are procured, delivered, and eventually employable, this inventory under President's Budget 2024 will decrease to 27 ships over the next 5 years. While we will likely still be able to support the Indo-Pacific Theater, we will accept risk elsewhere in the world. The decrease in the overall Amphibious Warfare Ship (AWS) inventory, combined with consistent/constant Global Force Management (GFM) demand and longer than planned maintenance availabilities results in an overworked AWS fleet with no "ready bench" lacking ships to fulfill SECDEF directed GFM requirements, delayed deployments and reductions in training and certification periods. Meanwhile, the LPD Flt II continues to be affordably constructed with capabilities critical to providing strategic mobility, force projection, and the ability to campaign across the globe. It provides the ability to operate offensively in a medium-density, multi-threat, anti-access littoral environment by being a seabase from which the Marine Expeditionary Unit (MEU) operates helicopters, tiltrotor aircraft, landing craft, and amphibious vehicles.

Effective integrated deterrence requires amphibious warfare ships. LPDs with embarked marines provide a Distributed Maritime Operations capability that is a flexible, scalable, and visible capability for our combatant commanders to employ at the time and place of their choosing in support of integrated deterrence campaigning. This flexibility is further enhanced by the LPD Flt II capability to embark rotary-wing and tilt-rotor aircraft and operate independently, unlike its predecessor LSDs, which expands the options provided to the combatant commanders.

The Marine Corps has a requirement for no less than 31 amphibious warfare ships: 10 LHA/LHD and 21 LPDs. Since 2019, three DON studies have examined amphibious warfare ship force structure requirements. The requirement was informed by combining the findings of those studies, the most recent being the SecNav directed Amphibious Fleet Requirement Study (AFRS) in 2022, with amphibious warfare ship readiness trends over the past 10 years. AFRS was a threat informed, scenario directed, model driven, multiple phase event executed by the analytic arms of the Navy and the Marine Corps. The findings of AFRS were briefed to the service chiefs and SecNav, 31 amphibious warfare ships were reported as the minimum re-

quired. This finding is consistent with 11 amphibious warfare ship inventory studies completed over the last 14 years.

The last Congress recognized this requirement in the James M. Inhofe National Defense Authorization Act, Public Law 117–263 (2023). Section 1023 requires the Navy maintain "not less than 31 operational amphibious warfare ships, of which not less than 10 shall be amphibious assault ships." This law mirrors the need of the National Security Strategy, but it is important to note, this is a floor not a ceiling.

SEA LIFT CAPACITY

11. Senator HIRONO. Secretary Del Toro, it is widely known lift will be crucial for any contingency in the Pacific. There are many ongoing Navy programs aimed at this problem: the future Landing Ship Medium and the re-capitalization of the Ready Reserve Fleet to name a few. What does the Navy need to make sure we have the lift capabilities the force needs in this decade?

Secretary DEL TORO.

- To address inter-theater lift requirements, Department of Navy (DON) has made it a priority in their fiscal year 2024 budget submission to recapitalize the sealift forces. This plan is an integrated three-phase approach that 1) modernizes most viable existing ships through a Service Life Extension program, 2) procures militarily useful used sealift vessels to address near term capacity gaps, and 3) develops requirements for new construction ships to recapitalize Maritime Prepositioning Force. This work is being accomplished in order to meet Combatant Commands delivery requirements.
- Navy's commitment to meeting near-term surge sealift requirements continues through procurement and refurbishment of used commercial Roll-On Roll-Off ships for replacement of aging Ready Reserve Force capacity. The Navy requires continued support for the BuyUsed recapitalization program in order to provide a stable acquisition profile with forecasted maintenance and repair costs to meet strategic mobility requirements at a moderate level of risk.
- Navy continues to act on congressional authorities to address strategic sealift readiness and recapitalization by purchasing two used vessels that participated in the Maritime Security Program. The CAPE ARUNDEL and CORTES will complete re-classification, baseline readiness and modification and be ready for tasking Q3 FY23. Also, Maritime Administration (MARAD)'s Vessel Acquisition Manager awarded a contract for three sister ships and is performing a market analysis for additional ships. Ships will complete re-flag, reclassification and modification and be ready for tasking approximately 8 months after transfer of ship from seller.
- The Sealift Buy-Used program will execute to authorized limitations with the purchase of nine used vessels by fiscal year 2024. The Navy requires support for the fiscal year 2024 Sealift Legislative Proposal requesting removal of the overall limitation of the purchase of foreign-built used vessels, necessary to expediently and cost effectively be prepared to deliver this required capability in wartime.
- As part of the intra-theater lift requirement the Navy is investing in requirements development of the newest class of at-sea resupply ships, the Next-Generation Logistics Ships (NGLS). NGLS will augment existing Combat Logistics Force ships, adding more capacity in theater for the distribution of logistics commodities. The Navy's fiscal year 2024 budget request includes research and development funding for the NGLS program to support procurement of the first ships in fiscal year 2026.
- As part of the integrated solution to address tactical lift, Navy is investing in Landing Craft Air Cushion (LCAC) service life extension and the procurement of the LCAC's replacement, the Ship to Shore Connector (SSC). The SSC provides a robust, modern operational capability to land credible combat power from amphibious ships across beaches not accessible by conventional landing craft, thus enabling the Marine Corps and Navy to project combat power ashore from the sea. The SSC provides a one-for-one enhanced replacement platform for legacy LCAC, which are reaching an average 30 years of age. The Navy is continuing to support production progress in serial SSC deliveries.
- The Navy is also replacing its aging Landing Craft Utility (LCU) fleet with the LCU 1700 program which recapitalizes the capabilities and flexibility currently provided by the LCU 1610 Class in a more fuel efficient, cost effective, and updated design. Navy requires support of the fiscal year 2024 budget request to continue to modernize the aging LCU 1610 fleet, which is currently approaching an average age of 50 years, with a request for two additional LCU 1700.

- The Navy is investing in a Medium Landing Ship to provide distributed maneuver and mobility support for littoral expeditionary forces such as Marine Littoral Regiments in contested littoral environments. The fiscal year 2024 funding request continues the development of the equipment baseline and efforts to support a lead hull contract award in fiscal year 2025.
- Navy's integrated strategy addresses near-term lift needs while establishing strategically placed long-term lift solutions to support employment across the competition continuum.

SHIPYARD MODERNIZATION

12. Senator HIRONO. Admiral Gilday, I was glad to see the Dry Dock 3 replacement at Pearl Harbor was fully funded in this year's budget request. As you know, this is a complex project that the Navy must get right. I also remain focused on resourcing the Waterfront Production Facility to ensure our shipyard workers have the required tools and a logical shop layout. While I understand there may be engineering constraints to completing the dry dock at the same time as the production facility, this is a critical part of the Shipyard Infrastructure Modernization Plan and should be prioritized as such. Admiral Gilday, the planned mission need date for the waterfront production facility is fiscal year 2028. Is the facility on track to be completed by then?

Admiral GILDAY. The Waterfront Production Facility (WPF) at Pearl Harbor Naval Shipyard (PHNS) is not on track to meet the mission need date of fiscal year 2028 reflected in the most recent Shipyard Infrastructure Optimization Program 5-Year Plan Report to Congress. The Navy has prioritized completion of the PHNS Dry Dock 3 replacement project, but as mentioned in the same report, needs additional funding for WPF planning and design efforts. The $20 million provided for WPF design funding in the fiscal year 2023 Omnibus spending bill allowed for the initiation of facility design efforts.

13. Senator HIRONO. Admiral Gilday, how are is the Navy ensuring that the Dry Dock 3 replacement project stays on time and on budget?

Admiral GILDAY. The Navy is employing a coordinated management strategy across contracting, organizational, and scope domains to control cost and schedule for the Dry Dock 3 replacement project at Pearl Harbor Naval Shipyard (PHNS). That work is synchronized with fleet and maintenance schedules to ensure alignment with operational demands.

During project design, the acquisition strategy used early contractor involvement to obtain feedback from all five potential bidders on constructability of the project and the contract documents. Their feedback ensured the design was buildable, led to improvements in the design, and corrected items that would have otherwise been found during construction, potentially creating cost and schedule changes. The contract allowed for alternative technical approaches, changes to the design that the government accepted as part of the award which will mitigate cost and schedule risk.

Additionally, the Navy awarded separate contracts ahead of the main construction contract, to accomplish environmental dredging and remove unexploded ordnance, averting a significant risk of delay at the beginning of work. A separate contract was completed to relocate the perimeter fence around the Controlled Industrial Area, allowing unimpeded access for the construction contractor at the start of work. The construction contract includes an economic price adjustment clause that places risk for the escalation of many materials on the government, lowering the award cost. The contract offers significant award fees for completing specific milestones (including ultimate completion) by specific dates, providing meaningful incentives to meet performance standards.

Lastly, the Shipyard Infrastructure Optimization Program's Program Management Office retains visibility and accountability for schedule, cost, and performance at every level, with well-defined thresholds to preserve flag officer-level decision space. The Navy has established formal project governance, learning from other mega-projects, setting expectations for issue resolution. The Naval Facilities Engineering Systems Command commissioned a dedicated Officer in Charge of Construction to provide a level of oversight far beyond the typical construction effort, patterned off recent success at other naval depots. The project execution team continuously identifies and monitors risk and uses both qualitative and quantitative analysis to report on and manage risks until they are retired.

WORK FORCE DEVELOPMENT; IMMIGRATION REFORM

14. Senator HIRONO. Secretary Del Toro, I am concerned by the slow pace of ship and submarine construction and maintenance. For example, the Navy is buying 2 *Virginia* submarines a year, but only receiving about 1.2 a year, which I know you both find unacceptable. The DOD is spending a fortune to fix this, in part through workforce development—but I am not sure that we have yet to find the right answer to this complex problem. Developing a workforce is a worthy endeavor, but if there are simply not enough workers, money alone will not solve the problem. Secretary Del Toro, I was pleased to hear you speak on the need for immigration reform earlier this year. Could you expand further on the importance of our immigrant workforce to military readiness?

Secretary DEL TORO. We are facing a national shortage of blue collar workers and with historically low unemployment rates, recruiting skilled laborers is even more challenging. We need to take a holistic approach to maintaining a shipyard workforce that is capable of executing the Department of the Navy's (DON) shipbuilding plans. This all-hands-on-deck approach involves multiple engagement strategies to include retention and recruitment efforts as well as potentially increasing the number of candidates by leveraging applicable visa work programs.

With retention efforts focused on monetary incentives for current employees, the DON is expanding its outreach program with hiring events at colleges, vocational centers, and conference centers. In addition to these employment focused events, the DON is developing an engagement strategy to advertise and recruit skilled laborers at various public venues to include sporting events and Fleet Week festivities.

The abovementioned efforts may not be enough and we will need to do more to attract the skilled labor force our shipyards require. This includes a potentially greater focus on programs that provide foreign nationals an opportunity to lawfully employ their skills in a trade that advances our military readiness.

CLIMATE RESILIENCY

15. Senator HIRONO. Admiral Gilday and General Berger, your services own many of the bases most vulnerable to climate change in the country. This year's budget request includes $3.7 billion for installation resiliency measures, which is about equal to the cost of repairs to Camp Lejeune after Hurricane Florence. Rising sea levels and more extreme weather events will make these types of repairs costlier and more frequent unless we make investments now. Following the Department of Defense's Climate Adaption Plan, the Department of the Navy released Climate Action 2030. Admiral Gilday and General Berger, how is implementation of both these plans going, and what is the importance of fully funding these measures?

Admiral GILDAY. The Department of the Navy's Climate Action 2030 acknowledges that climate resilience is an important component of mission readiness and works to ensure our installations and infrastructure are resilient to a wide range of near-term and long-range challenges. These challenges include extreme weather events, water scarcity, sea level rise, flooding, wildfires, and other environmental considerations and threats that can affect operations and present significant risks to mission. We see climate affecting the Navy in significant ways and expect this impact to intensify in the coming years. By incorporating climate change considerations into the decisionmaking process for shore investments, the Navy gains operational and tactical advantages, remains agile, preserves decision space, and reduces climate hazard risks to mission and operations.

To further support the Administration's priorities, the Navy integrated the goals of Climate Action 2030 into current mission requirements and installation investments, for example:

- Incorporating installation climate resilience plan (ICRP) components in our Master Planning process and plans. The Navy completed an ICRP at Naval Base San Diego and prioritized and resourced ICRPs at Naval Base Guam, Naval Base Coronado, and Naval Support Activity Hampton Roads.
- Increasing implementation of water and energy conservation measures in buildings and piloting use of low-carbon building materials.
- Incorporating water resilience analysis and mitigation recommendations into annual Installation Energy Program Summaries.
- Conserving water to the maximum extent practicable through activities that positively impact groundwater recharge, stormwater retention, and sustainable land management on Navy installations and ranges.
- Planning installation micro-grids and long duration battery storage to ensure continuity of critical missions.

- Proactively leveraging public and private ventures and third-party financing to reduce greenhouse gas emissions of non-tactical vehicle fleets and the emissions and traffic impacts of the commuting military, civilian, and contractor workforce.
- Constructing living shorelines and breakwater projects to reduce shoreline erosion and protect Navy missions from sea level rise and storm surge.
- Investing in resilience projects at the U.S. Naval Academy (USNA) to improve installation resilience.

Investments in the President's Budget 2024 focus on building installations resilience and include investments to improve the Navy's aging utility systems, USNA resilience investments, planning and design of two Net Zero building retrofits, upgrading building control systems for improved cybersecurity and energy savings, initiating carbon footprint assessments to identify energy savings opportunities at Navy installations, planning and installation of electric vehicle support equipment (EVSE) and leasing of non-tactical zero emission vehicles, greening bases initiative, xeriscaping projects, and greenhouse gas emissions tracking and reduction.

General BERGER. These initiatives are important to ensuring the ability of our installations to to withstand natural hazards and extreme weather events (e.g., coastal storms, floods, desertification, drought, wildfire, etc.).

The Department of Defense's Climate Adaptation Plan, Department of the Navy's Climate Action 2030, and congressional statutes improve resiliency and sustainability of installations through master planning; improve energy security posture through third party financing and accelerating advanced micro-grid deployment; and implement nature-based solution projects to address climate impacts, sequester carbon, and enhance ecosystems. We are pursuing climate resiliency initiatives aligned with our missions.

Marine Corps Recruit Depot (MCRD) Parris Island (PI) completed a Climate Change Resiliency and Adaptation Plan (2020) and a Master Plan (2021). These documents are being used to develop military construction and facilities, sustainment, restoration, and modernization investment projects to reduce existing and projected localized flooding. The Military Installation Resilience Review of Marine Corps Air Station (MCAS) Beaufort and MCRD PI has developed a toolkit for structural infrastructure interventions and nonstructural planning approaches to adapt to climate change and optimize resilience for shared community assets and infrastructure.

Fiscal year 2023 funding and the Fiscal Year 2024 President's Budget Request address erosion and flooding issues affecting training areas and ranges at Marine Corps Base (MCB) Hawaii, MCAS Cherry Point, MCAS Beaufort, and MCAS Yuma. Installation Master Plan updates will be complete in fiscal year 2025 for MCB Camp Lejeune and in fiscal year 2026 for MCB Camp Pendleton.

These resources ensure the Marine Corps is postured to meet the Department's stated performance goals: 1) build climate resilience, and 2) reduce climate threat through prioritizing Science & Technology research of Operational Energy advancements and fossil fuel demand reduction initiatives such as anti-idle applications, hydrogen power research and continued research into tactical vehicle hybrid/electric components.

PIER SIDE MAINTENANCE

16. Senator HIRONO. Admiral Gilday, as more ships and submarines are based forward the need for pier side maintenance capacity is outpacing shipyard growth. What is the importance of replacement submarine tenders in Guam?

Admiral GILDAY. Forward-based replacement submarine tenders are required to support SSNs, SSBNs, SSGNs, UUVs, and submarine emergency response requirements for homeported, transient, and visiting submarines and UUVs in Guam. Submarine tenders directly contribute to submarine force readiness by enhancing submarine material readiness through intermediate-level maintenance support, loading, unloading, and storing submarine weapons and unmanned vehicles, and resupplying submarines with a range of materials. The tenders also support emergent nuclear and non-nuclear repairs for submarines across the theater. The replacement submarine tenders will be more capable of providing submarine and UUV support than current tenders and will be specifically designed to support deployed *Virginia*-class and *Columbia*-class submarines. The nearest Intermediate Maintenance Facility (IMF) is in Pearl Harbor, HI for Guam homeported boats. Replacement tenders in Guam also add significant time in operational availability back to Guam-homeported and visiting platforms since they are not forced to transit to Pearl Harbor for tending, resupply or intermediate-level maintenance. In addition, future tenders in Guam will be required to support submarines during peacetime and war-

time. The proximity of Guam replacement tenders will allow the submarine force to maintain presence and project power in the INDOPACOM theater.

USS *Frank Cable* and USS *Emory S. Land* submarine tenders will exceed their service lives by 13+ years before the first AS(X) reaches initial operational capability in fiscal year 2031. These tenders were designed and fitted to accommodate attack submarines in a peacetime environment at Guam and provide pier-side moored repair and services to submarines. The current tenders lack the capacity to support modern weapons systems handling and storage, C5I communications, water processing, rapid mooring counter weights, and fender storage/deployment. The current tenders also lack dedicated airlift capability.

The AS(X) platform, as an expeditionary tender, will have peacetime and wartime missions. In peacetime, the AS(X) provides pier side support in a forward deployed submarine homeport, providing sustained repair, supply, weapons handling, and tending operations for home ported or visiting submarines and ships, and fly away emergent voyage repair services for other deployed submarines and ships. AS(X) also provides rapid emergency response to crew rescue operations, nuclear/radiological emergencies, and natural disasters. AS(X) will periodically provide tended submarines off ship support, including messing and berthing facilities, when they become uninhabitable due to repair and overhaul work.

In wartime, AS(X) may be tasked to transit in an open-ocean, hostile environment, unescorted to or from a port where operations are occurring. During the transit, the AS(X) can conduct independent anti-surface self-defense operations against non-warship surface craft and limited anti-air self-defense employing small caliber crew-served weapons fire. Once AS(X) has arrived at a Joint or Allied force forward staging port or at anchor, it will continue self-defense and force protection and require minimal port security. From the forward location, AS(X) will be capable of providing repair, resupply, weapons replenishment, and tending operations to multiple submarines providing rapid repair and replenishment of deployed submarines, allowing them to get back to the fight faster.

17. Senator HIRONO. Admiral Gilday, Hawaii is scheduled to get a floating dry dock in 2032. Will that be late to need?

Admiral GILDAY. The Navy plans to initiate construction of a floating dry dock for Hawaii in 2032 for delivery to meet the mission need date in 2036. The Navy awarded a site selection study in late 2022 to evaluate potential operating sites within Joint Base Pearl Harbor-Hickam. The results of this study are due this summer and will inform the Navy's way ahead on pier infrastructure requirements and Military Construction / Sustainment, Restoration and Modernization project funding needed to support the floating dry dock.

18. Senator HIRONO. Admiral Gilday, what can be done to make pier-side maintenance more efficient?

Admiral GILDAY. Analysis by the Center for Naval Analysis shows Days of Maintenance Delay are attributed to four main efforts: Modernization, Throughput, Unplanned Work, and Material Availability. Improvements in each of these efforts will make pier-side maintenance more efficient.

To address the challenges of completing availabilities on time from CNO Availabilities and Intermediate Availabilities, the Navy continues to develop and institute Naval Sustainment System—Shipyard (NSS-SY) and Supply initiatives, leverage Performance to Plan (P2P) and Get Real, Get Better behavior and improvements. These initiatives are not constrained to availabilities in dry docks, rather they permeate throughout each of the public shipyards, and include pier side maintenance.

In support of all maintenance availabilities, the Navy has developed the 15-Year Maintenance Strategy while NSS-SY identifies and executes initiatives that reduce nuclear ship and submarine maintenance availability durations at public shipyards.

Additional initiatives underway to improve shipyard performance, throughput and material readiness, and reduce unplanned work include:

- Waterfront improvement initiatives which span three focus areas:
  1. Project Management Fundamental adherence including transparency, accountability and training needed at all levels.
  2. Improved metrics fidelity to drive better understanding of performance versus targets and why goals are missed.
  3. Implementing a culture of fix or elevate at shipyards. Leadership is spending more time on the deck plates and improving process review to better support inputs from mechanics.

- Inside the shops, there is focus on lean transformation resulting in leaning out ship areas to drive safe, quality flow of material. The shops are also working on schedule integration to improve connectivity to project schedules and implement "drop-in" governance. Finally, shops are using lean skillsets to unlock shop leads and Gemba through lean coaching and training. Gemba is the observation of work in action, often to provide senior leaders a better understanding of how things get accomplished and provide any help that may be needed.
- NAVSEA is leveraging a three-pronged approach to address hiring challenges and improve retention.
  - Special Pay Rates: One of the leading indicators related to under performance of hiring plans is the disparity of pay in comparison to private industry. Each shipyard developed data-driven positions to be considered for Special Pay Rates.
  - Through the NSS-SY People Pillar the Expert Tradesperson initiative creates a career path that incentivizes our best and brightest mechanics to stay in the wage grade field. The Expert Tradesperson position was established with a clear vision and intent to enhance a career in trades and increase responsibilities and authorities within the production department, thereby dramatically improving throughput and productive capacity.
  - Exceptions to Pay Increase Limitations: Annual appropriations law found in the Financial Services and General Government Appropriations Act places limits on wage schedule increases for Federal Wage System positions. This limitation does not provide parity with private industry and places undue burden on the naval shipyards to recruit or retain qualified employees.
- Development of a comprehensive plan to purchase CNO availability material with sufficient lead time to ensure it is received by the start of availability.
- Development of the Planning Improvement Control Board process which helps alter or remove outdated requirements, or anticipate more efficiently addressing planning or inspection requirements.
- Development of the Engineering Intervention Board (EIB) which was established in fiscal year 2021 to revise or remove maintenance requirements and improve maintenance effectiveness by leveraging SEA 05 expertise and technical authority. The goal of this effort is to reduce work package sizes by challenging cumbersome technical requirements and supporting ideation of priority improvement items, in partnership with field activity stakeholders. This effort by the EIB supports the NAVSEA Commander's intent to implement a full system transformation to deliver nuclear ships from maintenance availabilities to the Fleet on time.

The aforementioned initiatives will improve Modernization, Throughput, Unplanned Work, and Material Availability and thus increase the overall efficiency of ship maintenance including pier side maintenance availabilities within the public shipyards.

QUESTIONS SUBMITTED BY SENATOR TIM KAINE

NON-DEPLOYABLE ASSIGNMENT & CARE

19. Senator KAINE. Secretary Del Toro and Admiral Gilday, as discussed during the hearing, it came to my attention during visits to the Mid-Atlantic Regional Maintenance Center following the suicides of 4 sailors that Navy manning policy allows for a 60 percent increase in the assignment of personnel (30 percent for limited duty and 30 percent for pregnancy/post-partum) but does not address the additional resources needed to support a population that requires specialized time and attention. During the hearing Secretary Del Toro mentioned that Navy is "channeling back" on that policy. Where are these changes codified and how are you ensuring their implementation?

Secretary DEL TORO. and Admiral GILDAY. Navy is currently conducting a holistic review of assignment policies for both Limited Duty (LIMDU) and pregnant/postpartum sailors to ensure their assignment offers sufficient support and meaningful duties with accommodation for their medical/work limitations. As an immediate and interim action while this review is ongoing, distribution of LIMDU sailors was shifted from previous distribution models to an even percentage across appropriate shore commands within a geographic region, providing a reduction in LIMDU populations at our largest shore commands.

RCOH ASSIGNMENT POLICIES

20. Senator KAINE. Secretary Del Toro, last year's House report to the National Defense Authorization Act for fiscal year 2023 directed a report to the Committees of the Armed Services of the Senate and House to address alternative approaches to manning ships undergoing refueling and complex overhaul (RCOH). What is the status of the report?

Secretary DEL TORO. The report has been drafted and is under review within the Department of the Navy. It will be provided to you and the Committee in the near future.

21. Senator KAINE. Secretary Del Toro and Admiral Gilday, is the Navy considering the implementation of alternative policies for first-term sailors assigned to ships undergoing RCOH as a result of the House report requirement?

Secretary DEL TORO. and Admiral GILDAY. The Navy is considering options for assignments policies for first-term sailors assigned to ships undergoing RCOH with anticipated costs and benefits. Options currently being reviewed by Navy leadership include:

1) Expanding cross-deck opportunities for first-term sailors to serve aboard operational units.

Developing a split-tour program that ensures first-term sailors are not assigned to carriers in RCOH for longer than 2 years.

22. Senator KAINE. Secretary Del Toro and Admiral Gilday, in addition to considering changes to policy regarding first-term sailor assignment to ships undergoing significant maintenance, what are other ways (if any) that the Navy is challenging assumptions about crew assignments during RCOH?

Secretary DEL TORO. and Admiral GILDAY. The Navy is challenging assumptions about crew assignments during RCOH in the following areas:

1) Navy Manpower Analysis Center will conduct a study to identify RCOH "essential" manning. The study will establish minimum acceptable RCOH crew size by rating, for each of the different phases of the RCOH.
2) Evaluating Basic Allowance for Subsistence (BAS) policy and the provision of crew meals when shipboard food services are not available or are limited during RCOH.

COMPONENTS OF MENTAL HEALTH

23. Senator KAINE. Secretary Del Toro and Admiral Gilday, we understand that Navy has recently made adjustments to its physical readiness program in an effort to boost recruitment and retention. Although the program can be an effective force-shaping tool when used in this manner, it does not appear to incentivize the individual physical readiness of the average sailor but rather, encourages meeting the minimum standard by employing negative reinforcement in terms of career consequences. This type of policy does not seem to align with the Navy's Get Real, Get Better or Culture of Excellence campaigns. Furthermore, physical health is an essential component of mental health so it stands to reason that positive reinforcement of and a commitment to physical fitness requirements could have a positive effect on the overall mental health of the force. What is the feasibility of providing sailors with career incentives for individual physical readiness achievements and are there plans to incorporate this into future talent management initiatives?

Secretary DEL TORO. and Admiral GILDAY. Navy supports a holistic approach to overall wellness, recognizing that a tough and resilient mind, body, and spirit is essential to preparing one's self for the rigors of deployments and combat.

Sailors are incentivized for their physical fitness in their periodic performance evaluations. The military bearing section considers a sailor's performance in physical readiness. These performance evaluations are considered when sailors compete for advancement.

Commanding Officers and Officers in Charge are highly encouraged to further develop awards or incentive programs that encourage sailors to live healthier lifestyles. Examples include special liberty for excellence, award certificates for excellence and improvement, and sailors who score outstanding being exempt from command physical training for a period of time.

24. Senator KAINE. Secretary Del Toro and Admiral Gilday, during the hearing Senator Reed asked about sleep deprivation as a contributing factor to sailor mental health and suicide. You responded by saying that the suicide of the sailor he was referring to was partly due to their inability to sleep aboard the USS *George Wash-*

ington, undergoing RCOH. However, a Government Accountability Office (GAO) report in 2021 found that only 14 percent of deployed Surface Warfare Officers were receiving the recommended 7 or more hours of sleep needed for optimal performance and that the Navy was inconsistent in its efforts to ensure the mandatory amount of rest per 24-hour period. A survey of surface fleet officers and enlisted personnel drew similar conclusions. Fatigue management has not only been a causal factor in the USS *Fitzgerald* and USS *John S. McCain* collisions but it is shown to contribute to mental health issues. The Navy's own Mental Health Playbook issued in February states, "Consistently, the data and the science show that if our people are not sleeping, eating, or exercising—they are at higher risk for mental health issues." How is the Navy implementing and enforcing Commander Naval Surface Forces Pacific Instruction/Commander Naval Surface Forces Atlantic Instruction 3120.2A?

Secretary DEL TORO. and Admiral GILDAY. The Navy is implementing the measures below to mitigate the effects of fatigue and improve the sleep obtained by Navy Surface forces.

- A 24-hour work and sleep cycle for all hands, every day.
- Target of 7.5 hours of sleep opportunity for all hands each 24-hour period, subject to operational tasking and manning. If not achievable in a single block, planned naps.
- Limits to the length of the work-day (12 hours planned, maximum of 14 hours)
- A shipboard routine that supports both rest and work (scheduled watch, meals, announcements, training, meetings).
- Specific, formal consideration of the risk of fatigue in planned and unplanned work and watch evolutions.
- Leveraging bio-monitoring, analytics, data-driven manning experiments, and additional research to further improve, supervised by our Human Factors Engineer, including our Human Systems Integration experts, and share best practices with other type commanders via the U.S. Fleet Forces Command & Commander, Pacific Fleet Fleet Operational Safety Council.
- Addressing physical barriers to quality sleep/sleep obtained and better watch environment including:
  - Improved lighting for berthing and workspaces, mattresses, blankets, rack design, berthing noise, and berthing temperatures.
  - Bridge lighting and equipment lighting/positioning improvements for day and night, bridge and combat information center paint schemes
  - Partnership with Naval Sea Systems Command Human Systems Integrations and technical warrant holders.
- Training in these policies is provided at each milestone including the Basic Division Officer Indoctrination Course, Department Head School, and the Surface Command Course. Similar training is provided to each ship as part of the shipboard Basic Phase.

Since 2022, to promote enforcement, the Navy has introduced two tools that provide near real-time data on sleep and fatigue at multiple echelons. Command Readiness, Endurance and Watchstanding (CREW) collects biometric sleep, activity and health data to provide near real-time information to the sailor, medical, and leaders. This overcomes the inaccuracy inherent in individuals' attempts to gauge the effects of fatigue on performance, and allows for timely, effective individual, team, unit-level and Force interventions and risk management. This effort is largely funded by the Military Operational Medicine Research Program (MOMRP) and builds on previous work to monitor COVID and a partnership with the Naval Health Research Center and Office of Naval Research, in addition to previous work with NASA and the trucking industry. Initial operational capability is pending additional funding.

Additionally, Optimized Watch bill Logistics (OWL) uses data and individual qualifications in a sophisticated model for watch bill and work planning and management. Initial operating capacity is 2023 with several ships already enrolled. Like CREW, OWL is largely MOMRP funded. Modeling and decision tools are also embedded within the Surface Training and Readiness Management System (replacing the Relational Administrative Data Management system), which is in testing at sea for integration with the Consolidated Afloat Networks and Enterprise Service. OWL has a fatigue module that is based on schedules; once CREW is fully funded, it will provide actual fatigue data to OWL to aid decision makers.

25. Secretary Senator KAINE. Del Toro and Admiral Gilday, how is the Navy implementing and enforcing the fatigue management recommendations made in the GAO–21–366, Navy Readiness report, particularly recommendations 1–4 related to

collecting data, addressing causal factors, and identifying and assisting units that are not in compliance?

Secretary DEL TORO and Admiral GILDAY. The Afloat Safety Climate Assessment Survey is administered twice per Optimized Fleet Response Plan (OFRP) to each ship. This focused, peer-reviewed set of questions focuses on safety and sleep and provides detailed information on the amount of sleep achieved by each individual, with the data sorted by ship class and Department. To assist individual ships with compliance, the results are reviewed by the cognizant Type Commander and debriefed in-person to the Triad (CO/XO/CMC) with specific recommendations for improved sleep. To date, the average sleep has increased from 5.1 to 5.25 hours since the surveys started in 2021, but further improvements will be contingent upon improved manning onboard ships. In addition to the length of sleep, the transition to circadian watches has been shown to reduce overall fatigue across the force. The surveys also show the main factors that impact the quality of sleep: the most frequently cited issues are work stress, mattresses, interference from other crew members, and rack curtains. Initiatives are underway with the NAVSEA Habitability Technical Warrant Holder to address the challenges associated with the berthing environment.

Starting in 2023, each ship must conduct a quarterly self-assessment in the Training and Operational Readiness Information Services program, to address adherence to the Crew Endurance Policy. Additionally, each ship must sign out a Commanding Officer's Standing Order that articulates a tailored policy to meet the requirements of the SURFOR instruction. This approach is designed to ensure a consistent deckplate application of the instruction and a culture of self-assessment. External assessments are conducted once per OFRP during Mariner Skills Week as part of the Basic Phase.

The Command Readiness, Endurance and Watchstanding (CREW) represents the primary effort by the Navy Surface Force to collect data on sailor fatigue, identify causal factors for sailor fatigue, and identify units not in compliance with Commander Naval Surface Forces Pacific Instruction/Commander Naval Surface Forces Atlantic Instruction 3120.2A. CREW collects biometric sleep, activity and health data to provide near real-time information to the sailor, medical, and leaders, providing for systematic collection of quality and timely fatigue data from sailors that are accessible to operational commanders to support underway decisionmaking.

Once fully implemented, CREW data on sailor fatigue will be utilized to identify, monitor, and evaluate factors that contribute to fatigue and inadequate sleep such as the effects of crew shortfalls, work requirements, administrative requirements, and collateral duties. Additionally, the data provided to operational and administrative leadership by CREW will allow for identification of those units that need greater assistance and attention in implementing the Navy's policies on fatigue.

HR TRANSFORMATION

26. Senator KAINE. Secretary Del Toro and Admiral Gilday, our office has received over 18,000 pieces of correspondence from constituents concerning Navy pay and personnel issues, ranging from inaccurate affiliation dates resulting in a break in service and loss of Transitional Assistance Management Program benefits, to DD–214 errors and untimeliness that cause significant issues for servicemembers attempting to transition from the service. What is the status of your Human Resources modernization efforts and how do you plan to offer increased transparency and responsiveness (in addition to speed, accuracy and quality) to your processes?

Secretary DEL TORO and Admiral GILDAY. The MyNavy H.R. system digital transformation is designed to improve services to all Active component and Reserve sailors and future recruits through a modernized MyNavy H.R. information technology (IT) system of systems. We are engaging in a number of lines of effort within transformation:

1. Enterprise Customer Relationship Management (eCRM)—focused on enhanced recruiting and maintaining customer relationships to provide transactional handoffs through a tiered service helpdesk model.
2. MyNavy All Access (MNAA)—dedicated to developing a single point of entry for the sailor to interact with and view data in the MyNavy H.R. environment via web and mobile applications.
3. Authoritative Data Environment (ADE)—the data service for MyNavy HR, providing a single, integrated, and authoritative source of data to enable workforce decisionmaking to improve sailor and fleet readiness.
4. Navy Personnel and Pay (NP2)—the integrated personnel and pay system that enhances how sailors receive pay support. NP2 leverages an audible,

cloud-hosted software solution to enable Treasury-Direct disbursement and a single pay source.

5. Learning Stack (LS)—provides modernized content delivery and curriculum development to support on-demand training at the point of need.

This IT modernization will enable improved operations in recruiting, personnel and pay support, assignment and distribution, training, and in other mission areas within the Personnel, Manpower and Training space. With regards to personnel and pay issues, MyNavy Career Center (MNCC) recently transformed the legacy, decentralized Personnel Support Detachment (PSD) model of 27 locations to align around the work and eliminate variability. It now consists of a Human Resources Service Center (HRSC) with call center locations in Millington, TN and Little Creek, VA; six Transaction Service Centers (TSC); a Travel Processing Center (TPC) in Millington; and 13 Regional Support Centers (RSC) to improve efficiency, accuracy, and training.

Each TSC functions as a Center of Excellence (COE) for a specific major transaction type and is led by an O–5 or above commanding officer for accountability, transparency, responsiveness and to uphold a higher standard for Sailor Pay. RSCs are designed as the principal point of contact for leadership teams who are working through personnel and pay issues and to train Command Pay and Personnel Administrators (CPPAs).

HRSC operates 24/7/365 and provides a wide range of assistance to sailors and their families. HRSC provides up-to-date information and resolves issues at the Tier 1 level. HRSC conducts "warm handoffs" to subject matter experts in our TSCs and one TPC if the situation requires action beyond the authority of HRSC agents.

In order to deliver a simple IT solution to Personnel/Pay and increase the visibility, transparency, and responsiveness of the personnel and pay enterprise, the following items have recently been implemented for use by MNCC, command triads, and CPPAs:

- Enterprise Customer Relationship Management (eCRM). Allows MNCC to globally track, process, and manage most Personnel/Pay transactions. eCRM allows MNCC to track a transaction from the time it is submitted through completion, with full visibility of all actions taken.
- CPPA Dashboard. Increases transparency of transactions and allows command leaders to view individual CPPA performance metrics at the unit level.
- Enhanced Unit Commanders Financial Report (eUCFR). MNCC coordinated with the Defense Finance Accounting Service to develop the eUCFR, providing commands with a monthly snapshot of each sailors monthly pay and entitlements.

MNCC continues to review and improve business processes for all types of personnel and pay transactions. As these processes improve MNCC has also been dedicated to increase Personnel/Pay knowledge and experience in our TSCs, RSCs, and CPPAs to further improve transaction responsiveness and accuracy.

SUBMARINE INDUSTRIAL BASE

27. Senator KAINE. Secretary Del Toro, Congress has provided significant funding for investment in the submarine industrial base. How is the Navy deciding where that funding should go? Can you provide a summary of where these investments are being made?

Secretary DEL TORO. The Navy's ability to reach and sustain the required submarine production cadence of one *Columbia*-class submarine and two *Virginia*-class submarines per year is gated by addressing challenges to Submarine Industrial Base (SIB) capability, capacity, and workforce. SIB funding is addressing these challenges by investing in critical areas to include modernizing shipbuilder infrastructure, strengthening supply chain capability/capacity, scaling new technologies, addressing workforce trade skill gaps and constraints, expanding productive capacity via strategic outsourcing, and scaling government oversight of expanded industrial base efforts.

Through significant analysis, the Navy has identified the most pressing needs within each of these areas and is providing resources to address.

QUESTIONS SUBMITTED BY SENATOR ANGUS KING

SHORTFALLS IN CIVILIAN POLICE FORCE STAFFING

28. Senator KING. There is a DOD civilian police force shortage across the Department that has developed into a severe national security concern. In the State of Maine, this directly affects Portsmouth Naval Shipyard (PNSY) and Naval Com-

puter and Telecommunications Area Master Station Atlantic Detachment Cutler (Naval Support Area Cutler), with PNSY falling below 50 percent of their authorized force and 37 percent of their required, and Naval Support Area Cutler falling 32 percent below their authorized force and 25 percent of their required.

Admiral Gilday, how aware is the Navy of this issue, how long has this been occurring, and how is the Navy addressing these shortfalls?

Admiral GILDAY. The Navy is keenly aware of the challenges we continue to face attracting, hiring, and retaining security force personnel at PNSY and NSA Cutler. We have focused on recruiting and retaining talent for several years. We have employed a number of strategies to address the manning shortfalls; including expanded authorization and use of direct hiring capabilities for Police and Security positions, authorizing targeted recruitment, relocation and retention incentives, and raising the full performance level of Police Officer positions to the GS–7 level. Several CNIC Regions expanded outreach through Navy and State sponsored marketing, and hiring events targeted toward Police Officers have been carried out over the years to recruit local talent to expedite the hiring process. Further, CNIC has a focused Performance to Plan (P2P) working group that is assessing recruiting and retention challenges and proposing mitigations to reduce fill time and enable management's ability to respond to turnover.

As it stands, multiple barriers contribute to the workforce shortage. Some include pay parity with civilian counterparts, the Commander, Navy Installations Command requirement to have a bachelor's degree (which is not required by police departments in the local area), and a lack of transferability of credentials/qualifications. For example, a Navy Master at Arms on the PNSY police force might not meet the hiring criteria to be a General Schedule (GS) police officer, given that the prerequisite for a new applicant is that they must have a bachelor's degree or like experience. Or, a 10-year veteran of the Maine State police would have to go to the Federal Law Enforcement Training Center or police academy since the mid-Atlantic region will not honor a waiver for a 20-year retired officer or anyone with a prior police academy with a law enforcement background.

29. Senator KING. Secretary Del Toro, of these barriers, which can the Navy remove, which require the DOD to remove, and which require changing by OPM? In addition, will pay levels need to be considered?

Secretary DEL TORO. OPM is the authority that establishes formal qualification requirements for jobs within the General Schedule employment system. The DON applies the OPM regulations when evaluating candidates for jobs in the Police Series (0083) and does not supplement these requirements with other qualification factors.

A candidate for employment as a Police Officer may qualify for the position based on any of three criteria: 1) education, 2) experience, or 3) a combination of the two. New entrants to the 0083 series may qualify at grades GS–02 through GS–06. Qualification at a specific level is dependent upon the candidate's experience and/or education. Attainment of a bachelor's degree is not required under OPM qualifications in order to qualify at any grade level in the 0083 series. Personnel with prior law enforcement (LE) experience may submit a waiver for LE training and police academy requirements. The waiver must be approved by the DOD Peace Officer Standards and Training (POST) Commission.

30. Senator KING. Admiral Gilday, would it be helpful to change policy and consider classifying base police as law enforcement officers?

Admiral GILDAY. Candidates who lack qualifying work experience related to the position may also seek qualification consideration by a substitution of education for experience. All Executive Agencies use the OPM established minimum qualification requirements, along with agency-prescribed specialized requirements to qualify candidates for Federal positions. Establishment of a Law Enforcement Officer (LEO) designation would create significant labor implications to include age requirements and benefit contributions.

31. Senator KING. Secretary Del Toro and Admiral Gilday, has DOD or the Navy applied for direct-hire authority to address the issues identified at the named facilities?

Secretary DEL TORO. The DOD has Direct Hire Authority for Police Officer positions. The DON is taking advantage of the DHA to address the identified issues at the named facilities.

32. Senator KING. In talks with constituents of Maine impacted by this, a suggestion I received was to amend the recruitment process by hiring recruits as GS–5, processing them through their required training in the time that takes, and joining the field as GS–7, skipping GS–6.

Secretary Del Toro, how feasible would change be, and what effects would it have across the organization?

Secretary DEL TORO. The experience and training completed at each GS level provide our civilian Police Officers with the necessary qualifications for career advancement. Adjusting the career development to allow for a two-grade interval pattern would not be consistent with current training requirements.

Police Officer new hires have a rigorous training and development plan that includes specific work and exposures at each grade level. Adjusting the development plan to increase compensation without alignment to their skill would not result in improved quality of the work performed at the higher level without the on the job experience at the intervening level.

It should be note that increasing the grade level is not the only way to increase pay for General Schedule (GS) employees. The Navy, similar to other civilian employing components and agencies, has the option to seek OPM approval of higher special rates of pay for a category of GS employees if a determination is made that pay increases are needed to address significant recruitment and/or retention difficulties. (See 5 U.S.C. 5305 and 5 CFR part 530, subpart C.)

QUESTIONS SUBMITTED BY SENATOR ELIZABETH WARREN

FUTURE USE OF UNFUNDED PRIORITIES LISTS (UPLS)

33. Senator WARREN. Secretary Del Toro, Admiral Gilday, and General Berger, do you agree that if funding is needed for a project, it should be a part of the command/service budget?

Secretary DEL TORO and Admiral GILDAY. The President's Budget represents the best balance and prioritization of resources to execute the National Defense Strategy and National Military Strategy. However, opportunities always exist to enhance the President's Budget, accelerate capabilities, and reduce warfighting risk should additional resources become available. In addition, as we operate over time, there can be emergent warfighting needs that are identified too late to be included in the annual President's Budget.

General BERGER. Yes.

34. Senator WARREN. Admiral Gilday and General Berger, historically, have previous UPL items been included in the following year's base budget? Have UPL items from fiscal year 2023 been included in the fiscal year 2024 base budget? If yes, please provide detail including the requested item, funding amount, and vendor executing the effort. If no, why not?

Admiral GILDAY. My understanding of the purpose of 10 U.S.C. 222 directing the Unfunded Priorities List (UPL) is to identify items that are executable in the budget year in order to provide Congress with options to enhance or accelerate capabilities and reduce warfighting risk, should additional resources become available as Congress marks up the defense bills that year. While some UPL items may be included in the following year's budget, they are not necessarily correlated to the UPL. For example, maritime and aviation spares were identified on the fiscal year 2023 UPL as an executable way that Congress could enhance readiness in fiscal year 2023 if funding above the President's Budget Request was available. The fiscal year 2024 President's Budget includes funding for maritime and aviation spares to fund fiscal year 2024 requirements—not because they were included on the fiscal year 2023 UPL. The funding is related, but cannot be directly correlated. The Navy's Program Objective Memorandum (POM) process assesses each year's requirements to inform the President's Budget Request.

General BERGER. Yes, previous unfunded UPL items have historically been included in the following year's budget. Yes, unfunded fiscal year 2023 UPL items have been included in the fiscal year 2024 budget. The information for those items is articulated in the fiscal year 2024 budget justification material.

35. Senator WARREN. Admiral Gilday and General Berger, do you agree that Federal agencies should be required to work within the confines of base budget process?

Admiral GILDAY. The base budget process includes the submission of the President's Budget Request, working with and supporting Congress in their review and oversight of the budget, and Congress' enactment of the final defense bills each

year. This process is typically sufficient for the Navy to operate. However, there are circumstances where supplemental funding may be necessary. For example, in fiscal year 2022–2023, the Department of Defense was challenged with resourcing support for Ukraine beyond our base budget, and fact-of-life increases needed in our base budget for higher than expected inflation. We are grateful to the Congress for supporting these emergent needs.

General BERGER. Yes.

36. Senator WARREN. Admiral Gilday and General Berger, Secretary of Defense Austin supports legislation that would repeal the requirement for individual leaders to submit unfunded priority lists under 10 U.S.C. 222a. He stated this publicly in a Senate Armed Services Committee hearing on March 28, 2023 and in a letter that Under Secretary Michael J. McCord sent on behalf on Secretary Austin to me on March 20, 2023. Do you plan to continue to submit unfunded priority lists?

Admiral GILDAY. As a Service Chief, I plan to meet the reporting requirements directed to me by Title 10 of the U.S. Code. Should Congress repeal 10 U.S.C. 222a, then I would no longer be required to submit my unfunded priorities list each year.

General BERGER. Yes.

37. Senator WARREN. Admiral Gilday and General Berger, if you plan to submit unfunded priority lists in the future, why are you doing so despite Secretary of Defense Austin's support for the repeal of these required lists?

Admiral GILDAY. As a Service Chief, I plan to meet the reporting requirements directed to me by Title 10 of the U.S. Code. Should Congress repeal 10 U.S.C. 222a, then I would no longer be required to submit my unfunded priorities list each year.

General BERGER. While my term as the Commandant will end on 10 July 2023, in order to be in compliance with 10 U.S.C. 222a, which requires Service Chiefs to submit a unfunded priority list, it is likely that future Commandants will submit a list.

INFORMATION ON UPLS

38. Senator WARREN. Admiral Gilday and General Berger, what was the cost of putting together this UPL list?

Admiral GILDAY. The Navy developed the fiscal year 2024 Unfunded Priorities List (UPL) as part of the POM–24 budget development process, so there was minimal additional cost. Emergent needs were added to the UPL as identified through normal execution processes, e.g. dry dock repairs needed at Puget Sound Naval Shipyard and Trident Refit Facility Bangor.

General BERGER. There is no additional cost for putting together the UPL as it is part of our Planning, Programming, Budgeting and Execution process.

39. Senator WARREN. For each item on the unfunded priorities list you submit in response to 10 U.S.C. 222a, please provide the following information:

Admiral Gilday and General Berger, please provide a detailed description of the UPL.

Admiral GILDAY. Attached is the Navy fiscal year 2024 Unfunded Priorities List (UPL) package provided to Congress, which includes a detailed description of each UPL item [Appendix].

General BERGER. In support of 10 U.S. Code § 222a, I submitted a prioritized list of the Marine Corps' unfunded priorities for fiscal year 2024, which I respectfully asked the Senate Armed Services Committee to consider should additional funds above those requested in the Fiscal Year 2024 President's Budget be made available. I have made extensive efforts in the fiscal year 2024 budget submission to assess, prioritize, and balance force capability, capacity, and readiness to most rapidly achieve Force Design objectives and build the Joint Force's Stand-in Force while maintaining the Nation's crisis response capabilities. The UPL submission reduces risk in executing the National Defense Strategy by prioritizing investment in the next LPD–17 Flight II *San Antonio*-class Warship (LPD–33), continuing a vital component in amphibious warfare ship formations to meet the demands of Distributed Maritime Operations and crisis response. It accelerates key Force Design warfighting investments and supporting modernization initiatives that advance the kill chain and increase our ability to credibly deter adversaries. Finally, military construction projects are listed that accelerate development of facilities supporting our future force. Please see the enclosure which I included with my letter to the Committee that provides detailed supporting material on each of the 32 items requested in the Marine Corps Unfunded Priority List. [Enclosure 1 has been retained in Committee files.]

40. Senator WARREN. Admiral Gilday and General Berger, what does the UPL purchase?

Admiral GILDAY. Attached is the Navy Fiscal Year 2024 Unfunded Priorities List (UPL) package provided to Congress, which includes a list of each UPL item that Congress could procure if additional funding becomes available. [The Navy Fiscal Year 2024 Unfunded Priorities List has been retained in Committee files.]

General BERGER. Please see "Item" in Section I of the enclosure. [Enclosure 1 has been retained in Committee files.]

41. Senator WARREN. Admiral Gilday and General Berger, please include detail on all end items with quantities, contractor full-time equivalents, etc.

Admiral GILDAY. Attached is the Navy Fiscal Year 2024 Unfunded Priorities List (UPL) package provided to Congress, which includes a detailed description of each UPL item and the quantity where applicable. Some UPL items (e.g. maritime and aviation spare and repair parts) cannot be quantified at this time. Contractor full-time equivalents will be determined during contract negotiations should Congress enact appropriations for the UPL item. [The Navy Fiscal Year 2024 Unfunded Priorities List has been retained in Committee files.]

General BERGER. Please see the table at the top of Section I of the enclosure. [Enclosure 1 has been retained in Committee files.]

42. Senator WARREN. Admiral Gilday and General Berger, what specific capability will the UPL provide?

Admiral GILDAY. Attached is the Navy fiscal year 2024 Unfunded Priorities List (UPL) package provided to Congress, which includes a detailed description of each UPL item and the capability each item will support.

General BERGER. Please see Operational Impact in Section I of the enclosure and 11 in Section III. [Enclosure 1 has been retained in Committee files.]

43. Senator WARREN. Admiral Gilday and General Berger, what gap will this fill that is not in the base budget?

Admiral GILDAY. [Deleted.]

General BERGER. Please see 11 in Section III of the enclosure. [Enclosure 1 has been retained in Committee files.]

44. Senator WARREN. Admiral Gilday and General Berger, how will this capability support objectives outlined in current National Security, Military, and Defense Strategy documents?

Admiral GILDAY. [Deleted.]

General BERGER. Please see 11 in Section III of the enclosure. [Enclosure 1 has been retained in Committee files.]

45. Senator WARREN. Admiral Gilday and General Berger, what is the operational requirement? How does this UPL support current or future operations?

Admiral GILDAY. Attached is the Navy fiscal year 2024 Unfunded Priorities List (UPL) package provided to Congress, which includes a detailed description of each UPL item and how each item will support current or future operations and requirements. [The Navy Fiscal Year 2024 Unfunded Priorities List has been retained in Committee files.]

General BERGER. Please see "OPERATIONAL IMPACT" in Section I of the enclosure. [Enclosure 1 has been retained in Committee files.]

46. Senator WARREN. Admiral Gilday and General Berger, what is the operational impact if this UPL is not funded in fiscal year 2024?

Admiral GILDAY. The President's Budget provides the best balance of investments to meet operational requirements within the directed fiscal topline. My understanding of the purpose of 10 U.S.C. 222 directing the Unfunded Priorities List (UPL) is to identify items that are executable in the budget year in order to provide Congress with options to enhance or accelerate capabilities and reduce warfighting risk, should additional resources become available as Congress marks up the defense bills that year. Thus, the operational impact of not funding the UPL is the missed opportunity to enhance or accelerate capabilities and reduce warfighting risk.

General BERGER. Please see "OPERATIONAL IMPACT" in Section I of the enclosure. [Enclosure 1 has been retained in Committee files.]

47. Senator WARREN. Admiral Gilday and General Berger, are there plans to include this item in the fiscal year 2025 base budget?

Admiral GILDAY. All fiscal year 2024 UPL items will be considered as we develop the fiscal year 2025 budget. Some UPL items are regularly included in our budget whether included on the UPL or not, e.g. maritime and aviation spares; and facilities sustainment, restoration, and modernization funding. The Navy's Program Objective Memorandum (POM) process assesses each year's requirements to inform the President's Budget Request. The POM–25 process is currently ongoing and the final fiscal year 2025 President's Budget is pre-decisional.

General BERGER. The fiscal year 2025 budget process is ongoing and this information cannot be shared at this time.

48. Senator WARREN. Admiral Gilday and General Berger, why was this UPL not included in the fiscal year 2024 President's Budget submission?

Admiral GILDAY. The President's Budget provides the best balance of investments to meet operational requirements within the directed fiscal topline. My understanding of the purpose of 10 U.S.C. 222 directing the Unfunded Priorities List (UPL) is to identify items that are executable in the budget year in order to provide Congress with options to enhance or accelerate capabilities and reduce warfighting risk, should additional resources become available as Congress marks up the defense bills that year. The UPL also includes emergent warfighting needs that are identified too late to be included in the annual President's Budget, e.g. dry dock repairs needed at Puget Sound Naval Shipyard and Trident Refit Facility Bangor.

General BERGER. The Fiscal Year 2024 President's Budget submission reflects our extensive efforts to assess, prioritize and balance force capability, capacity, and readiness within a constrained topline.

49. Senator WARREN. Admiral Gilday and General Berger, what is the name of the vendor(s) executing this effort? Sub-vendor(s)?

Admiral GILDAY.

1. Maritime Targeting Cell Afloat (MTC-A) Development—Northrop Grumman
2. Fund ZEUS for DDG–1000 Class—Raytheon
3. Dry Dock Repairs for PSNS Investment Restoration and Modernization (RM)—Kiewit-Alberici
4. DDG–51 SEWIP Blk III (DDG 136–137)—Northrop Grumman, GD-BIW, HII
5. CVN 75 and CVN 80 SEWIP Blk III—Northrop Grumman, HII
6. E–2D Theater Combat Id and HECTR—Northrop Grumman
7. Navy Unique Fleet Essential Airlift Logistics KC–130J (+1 A/C Reserves)—Lockheed Martin
8. Targeted Facilities Sustainment, Restoration and Modernization (FSRM) Investment—Various Vendors competing
9. APN–6 Spares—Various vendors and depends on Program (air vehicle)
10. OPN–8 Maritime Spares—Various vendors and depends on program (ship type)
11. VIOLET—classified, will provide information through appropriate channels if requested.

General BERGER. Please see Section II of the enclosure. [Enclosure 1 has been retained in Committee files.]

50. Senator WARREN. Admiral Gilday and General Berger, how often has your command met with the vendor executing this effort? Please provide a list of all such meetings, and the agenda for these meetings?

Admiral GILDAY. Vendors are selected through a competitive process in accordance with Federal Acquisition Regulations. For those items where contracts with vendors are already established, the Navy has frequent, ongoing contact as a normal course of program management. The focus of such contact ensures proper administration of contract requirements and oversight of contractor performance to confirm the effective delivery of goods and services to the Government.

General BERGER. Please see Section II of the enclosure. Vendors are selected through a competitive process in accordance with Federal Acquisition Regulations. For those items where contracts with vendors are already established, the Marine Corps has frequent, ongoing contact as a normal course of program management. The focus of such contact ensures proper administration of contract requirements and oversight of contractor performance to confirm the effective delivery of goods and services to the Government. [Enclosure 1 has been retained in Committee files.]

51. Senator WARREN. Admiral Gilday and General Berger, what is your history with this vendor? Please detail when the relationship began, the number of contracts applied for by this vendor, the number of contracts awarded to this vendor, and if you have had a personal relationship with the vendor.

Admiral GILDAY. Vendors are selected through a competitive process in accordance with Federal Acquisition Regulations. In the conduct of my duties as Chief of Naval Operations, any relationship with vendors providing goods or services to the Navy is on a professional basis and in accordance with Government ethics rules.

General BERGER. Please see Section III of the enclosure. Vendors are selected through a competitive process in accordance with Federal Acquisition Regulations. In the conduct of my duties as Commandant, any relationship with vendors providing goods or services to the Marine Corps is on a professional basis and in accordance with Government ethics rules. [Enclosure 1 has been retained in Committee files.]

52. Senator WARREN. Admiral Gilday and General Berger, has anyone who formerly worked for your command represented the vendor in meetings? What is their name, what was their position, and when did you meet with them?

Admiral GILDAY. The Navy does not track this level of information. However, Government ethics rules impose employment restrictions on personnel after leaving the Department of Defense. This includes representational bans that prevent individuals from representing a vendor before the Government regarding any official action for a certain period of time.

General BERGER. The Marine Corps does not track this level of information. However, Government ethics rules impose employment restrictions on personnel after leaving the Department of Defense. This includes representational bans that prevent individuals from representing a vendor before the Government regarding any official action for a certain period of time.

53. Senator WARREN. Admiral Gilday and General Berger, in which city/State will the UPL be executed?

Admiral GILDAY. The locations would vary with each UPL.

1. Maritime Targeting Cell Afloat (MTC-A) Development—Northrop Grumman (Aurora, CO)
2. Fund ZEUS for DDG–1000 Class
   - Total Ship Computing Environment (TSCE): Raytheon (Tewksbury, MA & Portsmouth, RI)
   - Integrated Combat System (ICS): Lockheed Martin (Moorestown, NJ)
   - AN/SPY–6 radar: Raytheon (Andover, MA)
   - Installed on DDG 1000 Class in San Diego, CA during a maintenance avail
3. Dry Dock Repairs for PSNS Investment Restoration and Modernization (RM)—Kiewit-Alberici (Bremerton, WA)
4. DDG–51 SEWIP Blk III (DDG 136–137)—Northrop Grumman (Baltimore, MD);
   - Installed on DDG 136 BIW (Bath, ME)
   - Installed on DDG 137 at HII (Pascagoula, MS)
5. CVN 75 and CVN 80 SEWIP Blk III—Northrop Grumman (Baltimore, MD)
6. E–2D Theater Combat Id and HECTR—Northrop Grumman (Melbourne, FL)
7. Navy Unique Fleet Essential Airlift Logistics KC–130J (+1 A/C Reserves)—Lockheed Martin (Marietta, GA)
8. Targeted Facilities Sustainment, Restoration and Modernization (FSRM) Investment —Various vendors competing
9. APN–6 Spares—Various vendors and depends on Program (air vehicle)
10. OPN–8 Maritime Spares—Various vendors and depends on program (ship type)
11. VIOLET—classified, will provide information through appropriate channels if requested.

General BERGER. Please see II.3. and II.4 Section II of the enclosure. [Enclosure 1 has been retained in Committee files.]

54. Senator WARREN. Admiral Gilday and General Berger, is this requirement on an existing contract? If so, with who? What is the history of the contract?

Admiral GILDAY. Yes, the UPL identifies items that are executable in the budget year in order to provide Congress with options to enhance or accelerate capabilities and reduce warfighting risk.

General BERGER. Please see III.3 and III.4 in Section III of the enclosure. [Enclosure 1 has been retained in Committee files.]

55. Senator WARREN. Admiral Gilday and General Berger, what is the anticipated contract award date if the UPL receives funding?

Admiral GILDAY. Funding vehicles are in place for every UPL. The obligation and execution of funds would vary depending on if Congress funded a UPL and the project funded.

General BERGER. Please see 8b of Section III of the enclosure. [Enclosure 1 has been retained in Committee files.]

56. Senator WARREN. Admiral Gilday and General Berger, what funding lines are associated with this UPL?

Admiral GILDAY. Below is the Navy fiscal year 2024 Unfunded Priorities List (UPL) with appropriation, line title, and line item numbers identified for each UPL item.

NAVY FY24 UNFUNDED PRIORITIES LIST (UPL)

11	OPN-8 Maritime Spares	OPN	142	Spares and Repair Parts	89020	9020	$ 100,000
						TOTAL	$ 2,022,500

General BERGER. Please see the table at the top of Section I of the enclosure. [Enclosure 1 has been retained in Committee files.]

57. Senator WARREN. Admiral Gilday and General Berger, if multiple appropriations fund this requirement, must all appropriations be funded simultaneously to source this requirement, or can each appropriation stand on its own to fund a portion of the requirement?

Admiral GILDAY. Any funding enacted for the Navy fiscal year 2024 Unfunded Priorities List (UPL) will be used to enhance or accelerate capabilities and reduce warfighting risk as identified. However, funding the identified multiple appropriations together enables better integration of effort and reduces delays. The unfunded portions may be requested in future budget requests to complete the identified UPL item/effort and deliver the subsequent benefit.

General BERGER. Please see table at the top of Section I of the enclosure. [Enclosure 1 has been retained in Committee files.]

58. Senator WARREN. Admiral Gilday and General Berger, how much was enacted and obligated (or expended for Research, Development, Test, and Evaluation) in fiscal years 2022–2023 for this requirement?

Admiral GILDAY. The table below shows the enacted and obligated (and expended for RDT&E) amounts for fiscal year 2022 and fiscal year 2023 for each Unfunded Priorities List (UPL) item based on the line item, program element, and/or ship hull. The UPL informs Congress of ways they can enhance, accelerate, or reduce risk for existing line items/program elements should additional resources become available.

- Fiscal year 2023 obligation/expenditure data is as of 18 May 2023.
- For UPL priority #7, the SCN funding data shows DDG 136 and DDG 137 (fiscal year 2021 ships) cost to complete.

- For UPL priority #8, the SCN funding for "Carrier Replacement Program" shows CVN 80 funding.
- For UPL priority #8, the SCN funding for "CVN Refueling Overhauls" shows CVN 75 refueling overhaul funding.

General BERGER. Please see the "Current Funding Profile" table in Section I of the enclosure. [Enclosure 1 has been retained in Committee files.]

59. Senator WARREN. Admiral Gilday and General Berger, how much was requested in fiscal year 2024 for this requirement?

Admiral GILDAY. The table below shows the amount requested in the fiscal year 2024 President's Budget for each Unfunded Priorities List (UPL) item based on the line item, program element, and/or ship hull. The table shows both the fiscal year 2024 and Future Years Defense Program requests. The UPL informs Congress of ways they can enhance, accelerate, or reduce risk for existing line items/program elements should additional resources become available.

- For UPL priority #8, the SCN funding for "CVN Refueling Overhauls" shows CVN 75 refueling overhaul funding.

General BERGER. Please see the "Current Funding Profile" table in Section I of the enclosure. [Enclosure 1 has been retained in Committee files.]

60. Senator WARREN. Admiral Gilday and General Berger, is there a tail associated with this UPL?

Admiral GILDAY. Yes, most items in the President's Budget and on the Unfunded Priorities List (UPL) have associated tail costs. For example, the procurement of a KC–130J aircraft will require additional manpower, training, operations, spares and repair parts, and maintenance costs when it delivers to the fleet. Some items, such as aviation and maritime spares, are continuous investments needed each year to sustain the overall Navy fleet.

General BERGER. Please see "Current Funding Profile" table in Section I of the enclosure. [Enclosure 1 has been retained in Committee files.]

61. Senator WARREN. Admiral Gilday and General Berger, is any tail funded in the future years defense plan?

Admiral GILDAY. The table below shows the amount requested in the fiscal year 2024 President's Budget for each Unfunded Priorities List (UPL) item based on the line item, program element, and/or ship hull. The table shows both the fiscal year 2024 and Future Years Defense Program requests. The UPL informs Congress of ways they can enhance, accelerate, or reduce risk for existing line items/program elements should additional resources become available.

For all UPL items except for the KC–130J, some funding is programmed over the FYDP of the fiscal year 2024 President's Budget. If Congress enacts appropriations to procure the KC–130J in fiscal year 2024, then Navy will include "tail funding" for the aircraft in the fiscal year 2025 President's Budget FYDP based on when it delivers to the fleet.

General BERGER. Please see "Current Funding Profile" table in Section I of the enclosure. [Enclosure 1 has been retained in Committee files.]

62. Senator WARREN. Admiral Gilday and General Berger, please describe how much the requirement will cost per year for the next 5 years.

Admiral GILDAY. The table below shows the amount requested in the fiscal year 2024 President's Budget for each Unfunded Priorities List (UPL) item based on the line item, program element, and/or ship hull. The table shows both the fiscal year 2024 and Future Years Defense Program requests. The UPL informs Congress of ways they can enhance, accelerate, or reduce risk for existing line items/program elements should additional resources become available. The cost per year may change if Congress enacts funding for the UPL items in fiscal year 2024. In some cases, accelerating funding may result in reduced costs per year over the next 5 years, pending contract negotiations and revisions to the program schedules.

- For UPL priority #7, the SCN funding data shows DDG 136 and DDG 137 (fiscal year 2021 ships) cost to complete.
- For UPL priority #8, the SCN funding for "Carrier Replacement Program" shows CVN 80 funding.
- For UPL priority #8, the SCN funding for "CVN Refueling Overhauls" shows CVN 75 refueling overhaul funding.

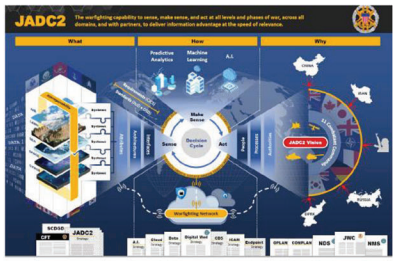
General BERGER. Please see "Current Funding Profile" table in Section I of the enclosure. [Enclosure 1 has been retained in Committee files.]

64. Senator WARREN. Admiral Gilday and General Berger, if the requirement is not included in the future years defense plan, will that be rectified in the next Program Objective Memorandum or the Program, Planning, Budget, and Execution cycle?



Admiral GILDAY. My understanding of the purpose of 10 U.S.C. 222 directing the Unfunded Priorities List (UPL) is to identify items that are executable in the budget year in order to provide Congress with options to enhance or accelerate capabilities and reduce warfighting risk, should additional resources become available as Congress marks up the defense bills that year. While some UPL items may be included in the following year's budget, they are not necessarily correlated to the UPL. For example, maritime and aviation spares were identified on the fiscal year 2023 UPL as an executable way that Congress could enhance readiness in fiscal year 2023 if funding above the President's Budget Request was available. The Fiscal Year 2024 President's Budget includes funding for maritime and aviation spares to fund fiscal year 2024 requirements—not because they were included on the fiscal year 2023 UPL. The funding is related, but cannot be directly correlated. The Navy's Program Objective Memorandum (POM) process assesses each year's requirements to inform the President's Budget Request.

General BERGER. Please see "Current Funding Profile" table in Section I of the enclosure. [Enclosure 1 has been retained in Committee files.]

65. Senator WARREN. Admiral Gilday and General Berger, please provide photos of this requirement for visual aid.

Admiral GILDAY. Below are photos of the items on the Navy fiscal year 2024 Unfunded Priorities List (UPL). Some UPL items are technology development, so a photo of the platform on which the technology will be used is provided. Some UPL items include a variety of efforts or parts, so a representative photo of the UPL item is provided as an example.

MENTAL HEALTH AND SUICIDE PREVENTION

66. Senator WARREN. Admiral Gilday and General Berger, what steps are the Navy and Marine Corps taking to integrate the recommendations of the Suicide Prevention and Response Independent Review Committee (SPRIRC) and when does it expect these recommendations to be implemented?

Admiral GILDAY. Upon receipt of the Suicide Prevention and Response Independent Review Committee report, the Secretary of Defense directed the immediate implementation of several recommendations. These addressed servicemember well-being and access to behavioral and mental health care along with establishing a Suicide Prevention Implementation Working Group as the primary body to assess the advisability and feasibility of implementing each of the remaining recommendations.

General BERGER. On March 22, 2022, the Secretary of Defense established the Suicide Prevention and Response Independent Review Committee (SPRIRC) to conduct a comprehensive review of the Department's efforts to address and prevent suicide. The Committee provided a range of recommendations to eliminate suicide in the military. The SECDEF's SPRIRC issued its final report on February 24, 2023, and made 127 recommendations. The Marine Corps fully supports efforts to reduce suicide. Marine Corps representatives are serving on most of the 20 sub-working groups and have begun developing implementation plans for the IRC recommendations. The Marine Corps continues efforts to reduce suicides by focusing on integrated and comprehensive efforts. We will continue to invest at every level of our

Corps to ensure marines know how to recognize signs of a teammate who is struggling, and where to go for resources.

67. Senator WARREN. Admiral Gilday and General Berger, the SPRIRC report emphasizes the critical need to limit or reduce access to highly lethal methods for suicide. What steps are you taking to reduce access to these methods, particularly firearms, and which of the SPRIRC recommendations regarding lethal means reduction do you plan to implement?

Admiral GILDAY. Lethal means safety is a critical component of Navy's suicide prevention program. The Navy has continued its partnership with the Defense Suicide Prevention Office and Department of Veterans Affairs to provide sailors with over 413,400 gunlocks.

Navy promotes the voluntary use of gunlocks and other safe storage methods for privately owned firearms. If a sailor demonstrates suicidal ideations or presents themselves at risk for causing harm to others, it is a requirement for the health professional and/or commander who witnesses these action to ask the member to store their privately owned firearms and ammunition for temporary safekeeping. This step must be entirely voluntary for the sailor and for a duration determined solely by the owner of the firearm. The Navy also continues to work with the Defense Suicide Prevention and the other Services on how best to highlight the importance of safe firearm storage practices.

General BERGER. The SECDEF's SPRIRC issued its final report on February 24, 2023, and made 127 recommendations. The Marine Corps fully supports efforts to reduce suicide. We are working with the Office of the Secretary of Defense to review the recommendations and develop implementation plans. Reducing access to lethal means is an important aim and part of the SPRIRC's recommendations. Gun locks are provided with every purchase of a firearm at Marine Corps Exchanges, and safes and other locking devices are available for sale. The Marine Corps also has been working with the Department of Veterans Affairs to distribute gun locks throughout the Marine Corps. Additionally, lethal means and firearm safety messaging are being disseminated to marines and families to increase suicide prevention and lethal means safety awareness. Other strategies include our Suicide Prevention Podcast Series, Welcome Aboard Briefs, and Suicide Prevention and Lethal Means Safety Toolkit, all of which provide suicide prevention and lethal means safety education and resources.

68. Senator WARREN. Admiral Gilday and General Berger, what mental health services do you provide to Navy and Marine Corps-affiliated civilians and contractors and what steps do you plan to take to support those communities in suicide prevention?

Admiral GILDAY. The Department of the Navy (DON) Civilian Employee Assistance Program (CEAP) provides services to civilian employees and their families. The DON regularly reminds employees about DONCEAP services and encourages them to seek assistance. DONCEAP services include mental health counseling, suicide prevention, educational materials, and webinars. Employees have continuous access to many of these services, twenty-four hours a day, 7 days a week. DON civilian employees have increased their use of DONCEAP services over the course of the last 3 years.

Navy and Marine Corps leadership will continue to encourage employees about DONCEAP services as well as the importance of cultivating healthy wellness habits, including mental health. Supervisors are reminded to include the availability of DONCEAP services when counseling employees on leave and workplace flexibility options. These flexibilities include self-help and caring for eligible family members. DON leadership believes that initiating regular conversations surrounding mental and emotional well-being is instrumental in normalizing and destigmatizing receiving mental health treatment and fostering a healthier workforce.

The DON is committed to supporting civilian employee well-being and ensuring that employees are aware of available mental health and suicide prevention services.

General BERGER. Each Federal executive branch agency has an Employee Assistance Program (EAP). An EAP is a voluntary, confidential program that helps employees work through various life challenges that may adversely affect job performance, health, and personal well-being to optimize an organization's success. EAP services include assessments, counseling, and referrals for additional services to employees with personal and/or work-related concerns, such as stress, financial issues, legal issues, family problems, office conflicts, and alcohol and substance use disorders. EAPs also often work with management and supervisors providing advanced planning for situations, such as organizational changes, legal considerations, emer-

gency planning, and response to unique traumatic events. An essential role of Federal Work-Life and EAP Coordinators involves reducing the stigma associated with seeking support around mental wellness.

69. Senator WARREN. Admiral Gilday and General Berger, what steps are the Navy and Marine Corps taking to address concerns about drug overdoses among its Active Duty servicemembers?

Admiral GILDAY. The Navy takes drug misuse seriously and recognizes that even one overdose is one too many and has enacted the following actions to prevent drug overdoses:

- Educate leaders on the dangers of misusing prescription drugs to ensure early warning signs of misuse are identified.
- Educate sailors and their family members on properly disposing of unused and outdated medications and encourage them to dispose of medications following proper disposal procedures. The Navy supports the Drug Enforcement Administration's "Prescription Drug Take Back" initiative to turn in unused and outdated prescriptions.
- Increased urinalysis testing for the most commonly misused prescription drugs. The Navy monitors the prescription drug positives to identify specific drug and demographic trends.
- Promote information sharing across the medical continuum of care to deter Navy personnel from inappropriately gaining access to and using prescription drugs in a manner other than it was prescribed.

To further prevent drug overdoses, specifically opioids, the Navy also follows Department of Defense (DOD) policy that promotes the use of evidence-based pain management guided by clinical practice guidelines to effectively prevent acute pain, treat acute and chronic pain, promote non-pharmacologic treatment, and minimize the use of opioids with appropriate prescribing only when indicated. The DOD also makes opioid antagonist reversal medications (i.e., naloxone) available and promotes their use by military medical treatment facility providers and pharmacies in conjunction with patient education and training. Substance use identification, education, and awareness activities are a key component to the DOD and Navy's efforts at preventing or reducing drug misuse and overdose.

General BERGER. Urinalysis testing includes illicit and prescription drugs, including marijuana and opiates. One hundred percent of urine samples are now tested for fentanyl, which will assist in efforts to assess fentanyl misuse in the Marine Corps. While the percent of marines testing positive for fentanyl remains very low, the Marine Corps did see an increase in fentanyl positives in fiscal year 2022 compared to previous years (.01 percent of all marines tested compared to .007 percent in fiscal year 2021 and .008 percent in fiscal year 2020).

70. Senator WARREN. Admiral Gilday, what steps is the Navy taking to better understand the needs of servicemembers living aboard aircraft carriers to prevent further suicides, as occurred on the USS *George Washington,* and those at maintenance centers such as those at the Mid-Atlantic Regional Maintenance Center?

Admiral GILDAY. Navy reinforces the importance of access to the full continuum of mental health (MH) resources for our sailors, while aiming to utilize the right care, at the right level, at the right time. There is "no wrong door" for our sailors and marines to get help through MH services in primary care and specialty clinics, embedded within the Fleet, and via virtual health (VH) platforms. Non-medical MH services are available for sailors and their family members through Fleet and Family Support Centers, Military and Family Life Counseling, and Military OneSource. Navy Chaplains provide confidential counseling and are important in ensuring spiritual readiness and resiliency of the Naval Force.

Embedded Mental Health (EMH) remains vital for Fleet and Fleet Marine Force, with just over 36 percent of Active Duty mental health providers and 31 percent of behavioral health technicians assigned to EMH billets. The Navy also recently assigned Chaplains to guided missile destroyers to provide confidential counseling while ensuring spiritual readiness and resiliency of the Naval Force.

71. Senator WARREN. Admiral Gilday, what steps is the Navy taking to respond to those identified needs of those servicemembers and reduce the risk of suicide of those who are stationed on aircraft carriers and at maintenance centers?

Admiral GILDAY. One of the Navy's key initiatives in addressing mental health needs is a recently developed "Mental Health Playbook" released in February 2023. The Playbook is designed to support command leaders in preventing mental health issues from occurring and, when they do, to connect sailors with the proper mental health care, at the right level, at the right time.

The Playbook enables all sailors to share an understanding of how to conduct mental health preventive maintenance and where to go for additional resources. The Navy must continue to prioritize access to the full continuum of mental health and wellness support resources for our sailors available ashore, within the Fleet, and via virtual health platforms.

72. Senator WARREN. Admiral Gilday, what steps is the Navy taking to provide more mental health resources to the needs of those servicemembers who are stationed on aircraft carriers and at maintenance centers?

Admiral GILDAY. Navy Medicine is committed to a comprehensive approach to support Fleet readiness through collaboration with stakeholders to address access to mental health resources. In effort to provide greater resources, Naval Surface Force, U.S. Pacific Fleet opened a new Embedded Mental Health facility in October 2022 to ensure fast and quality access to mental health care for their operational sailors. The facility also provides consultation to leadership triads (Commanding Officer, Executive Officer, Senior Enlisted Leader) and training for medical personnel and crews.

As further mental health support, chaplains were recently added on guided missile destroyers. President's Budget 2024 includes a request for additional end strength for Operational Forces Embedded Mental Health Programs to improve access to care for marines and sailors in the Operational Forces by reducing the time for evaluation and treatment. This increase includes 25 Psychiatrists, 18 Clinical Psychologists, 11 Licensed Clinical Social Workers, and 47 Behavioral Health Technicians (54 officer and 47 enlisted).

President's Budget 2024 also includes a request for additional end strength for USMC Medical Battalions to provide health service support to the Marine Expeditionary Force through forward resuscitative health care capabilities. The personnel addition includes eight officers (3 Medical Corps, 4 Medical Service Corps, and 1 Nurse Corps).

Further, the Navy is working with the Defense Health Agency and entering into agreements for additional clinical support from the staffs at military medical treatment facilities to provide assistance on ships or on installations.

73. Senator WARREN. Ongoing Naval Criminal Investigative Service (NCIS) Investigation into the Death of Lance Corporal Ronald Valentin

Secretary Del Toro, the Naval Criminal Investigative Service is continuing to investigate the death of Lance Corporal Ronald Valentin, USMC, who died in 2018. Five years later, this investigation continues to be ongoing with little answers for his family and they remain concerned about the lack of regular updates and information that they have been given by NCIS. Secretary Del Toro, will you commit to NCIS providing the family of Lance Corporal Valentin a monthly call to update them on the latest status of their son's investigation?

Secretary DEL TORO. NCIS has provided regular updates to the family of LCpl Valentin throughout the investigation and has noted recent contact and lengthy conversations with Ms. Ortiz (LCpl Valentin's mother) on the following dates: October 11, 2022; October 27, 2022; December 14, 2022; January 30, 2023; March 23, 2023; and May 3, 2023. The investigation has remained active since 2018 and NCIS is committed to completing this investigation in the most expedient manner possible, while ensuring all possible investigative leads are pursued. Because this remains an active criminal investigation, NCIS must limit the information being released in order to preserve the integrity of the investigation. Though NCIS seeks to be transparent and provide as much information as possible to the family, in some instances, no new information has been available to share.

74. Senator WARREN. Secretary Del Toro, when do you anticipate the investigation into the death of Lance Corporal Valentin will be completed?

Secretary DEL TORO. NCIS is working diligently to explore all logical leads in the investigation as quickly as possible while ensuring those steps are accomplished in the most effective manner possible. Determining an estimated date of completion of the active investigation is difficult given the complexity of the investigation and the possibility that additional investigative tasks may be identified from results of the remaining identified tasks. NCIS has completed hundreds of individual actions during this investigation and is currently pursuing the re-interview of several witnesses in an effort to identify additional information to explain the circumstances of Lance Corporal Valentin's death. Additional laboratory analyses have also recently been requested and are currently ongoing.

75. Senator WARREN. Secretary Del Toro, what has contributed to the delays of this investigation as it continues into its fifth year without a conclusion?

Secretary DEL TORO. This investigation has remained active since 2018 and NCIS continues to pursue all potential leads that might provide relevant information to explain the details of how Lance Corporal Valentin died, if criminal activity was involved, and if so, who was responsible. NCIS continues to support this investigation with multiple NCIS personnel around the globe.

76. Senator WARREN. Secretary Del Toro, during this investigation, the family of Lance Corporal Valentin has faced several changes in the case agents they are working with. How often do case agents turn over and what is the process for notifying the family in advance when the case agent will change?

Secretary DEL TORO. NCIS strives to limit the number of case agents in all cases and especially in complex investigations such as this one. As the incident occurred in an overseas location, there are regular cycles where NCIS Special Agents move, or complete a Permanent Change of Station (PCS), from Okinawa to other offices throughout the world. Per DOD PCS regulations, Okinawa, Japan, is designated as a 2-year tour, wigth option to request and extension. Three case agents have been assigned to this investigation since it was initiated in 2018 and each change was made as a result of the PCS of the assigned case agent. When the assigned case agent changes, the family would be notified prior to that occurring during a regular update.

77. Senator WARREN. Secretary Del Toro, the family of Lance Corporal Valentin has disclosed that they initially received the body of a different individual instead when Lance Corporal Valentin was being returned to his family. Please explain why this incident occurred, if there are any other cases when NCIS has provided the incorrect body to other families, and what steps NCIS is taking to ensure this does not happen to another family.

Secretary DEL TORO. The Port Authority at John F. Kennedy Airport (JFK) and the commercial airline responsible for the transportation of Lance Corporal Ronald Valentin's remains misidentified the aircraft carrying his casketed remains resulting in this unfortunate mishap. This misidentification was communicated to family members and their Marine Casualty Assistance Calls Officer awaiting his arrival at JFK, to the family's funeral director who was present to receive custody of his remains from the commercial airline, and to the Marine Honor Guard who was onsite to conduct planeside honors. This resulted in the conduct of planeside honors of the incorrect casketed remains by the marines and transfer of custody from the commercial airline to the family's funeral home. Upon discovery of this mishap, the incorrect remains were returned to the custody of the commercial airline. Lance Corporal Valentin's casketed remains, accompanied by his commanding officer and escorted by a uniformed marine, were transferred via planeside honors conducted by the Marine Honor Guard to the family's funeral home. Lance Corporal Valentin's remains were escorted at all times throughout the process and treated with the utmost dignity and honor.

78. Senator WARREN. Secretary Del Toro, the family of Lance Corporal Valentin has expressed concerns that the cameras at Camp Hansen had stopped working in July 2018 and were still not working at the time of Valentin's death at the end of August. Why had these cameras not been fixed yet at the time of Valentin's death, how many of these cameras were not working, and how long were they inoperable before and after his death?

Secretary DEL TORO. These cameras were maintained by a DLA contract. The Marine Corps has no record of operational status or maintenance on these cameras.

79. Senator WARREN. Secretary Del Toro, the family of Lance Corporal Valentin has expressed concern regarding whether the investigators were able to access the information in Valentin's phone. Has NCIS been able to open and access the information in Valentin's phone?

Secretary DEL TORO. Because this remains an active criminal investigation, this information is not releasable in a public forum. The family has been provided updates regarding the phone's status.

NAVAL CRIMINAL INVESTIGATIVE SERVICE

80. Senator WARREN. Secretary Del Toro, in September 2022, the Government Accountability Office (GAO) released a report on "Servicemember Absences: DOD Actions Needed to Enhance Related Data, Procedures, and Staffing." This report found

that NCIS was not properly identifying the number of special agents it needed to conduct criminal investigations. The Department of Defense stated in February 2023 that it has begun to keep a record of the number of special agents it needs. What steps is NCIS taking specifically to fulfill this recommendation?

Secretary DEL TORO. NCIS disagreed with the GAO finding that NCIS does not have a process to determine staffing requirements to conduct criminal investigations. NCIS has an overall End Strength that is composed of special agent and non-special agent positions. From there, NCIS Director has discretion to properly allocate the resources authorized to meet strategic mission objectives.

NCIS maintains a dynamic approach to staffing occupational series in order to maximize recruiting efforts and maintain End Strength fill rates within authorized budgetary targets. Creating a process that forces rigidity on 1811 staffing levels, as a measure of mission success, fails to account for the diverse occupational series that contribute to the criminal mission and limits the ability to surge to emergent mission need.

Since April 2022, NCIS keeps a record of the number of special agents needed to support NCIS' mission. At the beginning of each fiscal year, NCIS will update that number and keep previous years' numbers for historical trending. Specifically, NCIS is taking the following steps:

1. NCIS maintains data of numbers of special agents each fiscal year.
2. This dashboard will include data from past and future fiscal years for comparison.
3. NCIS' process is to record the necessary number of special agents at the start of each fiscal year.
4. NCIS will keep a similar record for future fiscal years.

81. Senator WARREN. Secretary Del Toro and General Berger, in the same GAOreport, GAO found that the Marine Corps lacks procedures to determine whether the absence of a servicemember is involuntary or voluntary, which is important in helping to "ensure that the absence is reported to the appropriate military organization for further action, to include notifying and assisting the servicemember's family and investigating any criminal activity associated with the absence." In February 2023, DOD stated there were Marine Corps working groups being held to establish procedures addressing this recommendation and that these procedures would be issued by March 2023. What is the status of these working groups and have these procedures been completed? If so, please provide a copy of them.

Secretary DEL TORO. Staff from Marine Corps Installations and Logistics and Manpower and Reserve Affairs held working group meetings in late 2022 and early 2023 to establish procedures for commanders to use to determine whether a marine's absence is voluntary or not. The working group is recommending updates to policies on the absentee and deserter collection program in the Marine Corps Corrections Manual, which are in final coordination. We expect a final decision in summer 2023.

Currently, personnel accountability is taken the morning of every workday and status reported to local headquarters through an electronic Unit Manning Status Report. If a marine is not present or accounted for as expected, a command will attempt to locate them via telephone, by visiting their dwelling, speaking to coworkers and friends, contacting family members listed as emergency contacts in their Record of Emergency Data, and potentially notifying law enforcement. If a commander believes the marine is 'duty status unknown' as opposed to in an 'unauthorized absence' (UA) status, they follow policy outlined in the Casualty Procedures Manual. If they believe a marine is UA, they follow procedures outlined in the User Manual for Unit Diary Reporting.

General BERGER. Staff from Marine Corps Installations and Logistics and Manpower and Reserve Affairs held working group meetings in late 2022 and early 2023 to establish procedures for commanders to use to determine whether a marine's absence is voluntary or not. The working group is recommending updates to policies on the absentee and deserter collection program in the Marine Corps Corrections Manual, which are in final coordination. We expect a final decision in Summer 2023.

Currently, personnel accountability is taken the morning of every workday and status reported to local headquarters through an electronic Unit Manning Status Report. If a marine is not present or accounted for as expected, a command will attempt to locate them via telephone, by visiting their dwelling, speaking to coworkers and friends, contacting family members listed as emergency contacts in their Record of Emergency Data, and potentially notifying law enforcement. If a commander believes the marine is 'duty status unknown' as opposed to in an 'unauthorized absence' (UA) status, they follow policy outlined in the Casualty Procedures Manual.

If they believe a marine is UA, they follow procedures outlined in the User Manual for Unit Diary Reporting.

QUESTIONS SUBMITTED BY SENATOR GARY PETERS

FFG INDUSTRIAL BASE

82. Senator PETERS. In recent years, this Committee has advocated for investments in Navy shipbuilding to ensure timely acquisition and reduce program risk. We've seen the benefits of these investments in programs like *Columbia* and DDG–51, to name two. I'm pleased that Congress provided $50 million last year for the Frigate industrial base and workforce development and look forward to seeing the positive impact on the workers and manufacturers in Michigan's Upper Peninsula.

I understand that this funding has already been allocated and needs remain. That's why I'm advocating for another round of additional funding in fiscal year 2024 to continue to address challenges typical of new ship classes as they ramp up production—like recruiting, retaining and training skilled workers, developing critical suppliers, and supporting needed shipyard infrastructure improvements.

Secretary Del Toro, can you share your thoughts on how these investments are critical to ensuring the success of the Frigate program?

Secretary DEL TORO. Sustained Industrial Base investment is a critical enabler to ensuring the success of the Frigate program. Recruiting, retaining, and training skilled workers to build Frigates is the primary long-term challenge to the program's ability to meet the Navy's small surface combatant requirements. Fincantieri must execute an aggressive talent acquisition strategy and compete with other non-defense industrial activities in Wisconsin and Michigan to grow and maintain a skilled workforce. Continued investments in workforce activities must include outreach to local school systems to increase interest in skilled trade jobs, coordination with universities and technical colleges to develop and bolster training pipelines and apprenticeship opportunities, and direct recruitment and retention incentives such as bonus programs and other tangible benefits. Workforce development efforts are also constrained by a lack of available housing in Marinette, Menominee, and the surrounding areas. Continued investment will allow the Frigate program to support regional investments in the communities where defense workers reside, increasing their attractiveness and accessibility to sustain and grow the workforce.

The Frigate Industrial Base includes regional suppliers facing similar challenges. Beyond the benefits of supporting the workforce at the shipyards and their suppliers, investments in supply chain risk reduction, efficiency improvements, and capacity expansion are warranted. Fincantieri has invested substantially in shipyard infrastructure, and commensurate investment in the supply chain that provides equipment, materials, and subcontracted services will allow the program to realize the full potential of those investments.

QUESTIONS SUBMITTED BY SENATOR JOE MANCHIN

FORCE DESIGN 2030

83. Senator MANCHIN. Secretary Del Toro, your testimony highlighted the importance of Force Design 2030. Can you detail to the Committee, how you as Service Secretary responsible for the Marine Corps and Navy are supporting Force Design 2030 and the improved integration of the Navy and Marine Corps? General Berger, as I said we're proud to see the Marine Corps making tough decisions as it relates to funding to get after the China problem, but what is your estimate for future funding increases needed to support Force Design and what are your top three priorities?

Secretary DEL TORO. Supporting and accelerating Force Design 2030 is a top priority for Department of the Navy budget requests. I am closely working with both the Marine Corps and Navy to ensure that this and future budget requests support both Force Design 2030 and drive increased integration of naval capabilities. These efforts are central to my enduring priority of strengthening maritime dominance.

General BERGER. My estimate for future funding requirements needed to support Force Design 2030 will be provided in the fiscal year 2025 budget and in each subsequent budget cycle as we take stock of the impacts of inflation and prioritize our modernization efforts across the Department.

It is critical to maintain the funding levels we have been provided, adjusted for inflation in the future, to ensure we have sufficient buying power to continue to accelerate the Force Design 2030 capabilities needed to stay ahead of the pacing

threat. Over the course of the last several budget cycles, the Marine Corps has taken every possible opportunity to self-fund our modernization, reallocating $15.8 billion in structure and legacy platforms and systems for our transformation efforts. However, any reduction in topline will challenge our ability to modernize commensurate with the pacing threat, while simultaneously maintaining current levels of combat ready forces. The resulting lost buying power will force hard choices between Global Force Management commitments, current readiness, and the velocity of our modernization efforts, the speed which has been set by our adversaries.

As I've testified in the past, my main effort as Commandant is to build the Marine Corps that will define integrated American naval power in 2030, even as it must remain ready to confront the challenges of today. I remain fully committed to this goal. My three top priorities continue to focus on the three pillars of Force Design 2030—equipment modernization, talent management reform, and training and education modernization—that will enable the Marine Corps to meet global threats and remain the Nation's premier crisis response force. The Marine Corps will also prioritize Quality of Life and critical infrastructure investments going forward, areas where we have accepted risk in the past. To achieve this, sustained, adequate, predictable funding is the single most effective way to maintain critical strategic momentum in our ability to continue our Force Design 2030 transformation efforts, while ensuring that marine forces operating forward provide the foundational integrated deterrence and day-to-day campaigning necessary to build advantage with our allies and partners.

AMPHIBIOUS SHIP FLEET

84. Senator MANCHIN. Secretary Del Toro and General Berger, why was there no funding included in the Navy's budget request for amphibious shipbuilding? Taking the politics out and considering the future threat as well as unforeseen maintenance and accidents, what minimum number of amphibious ships do you believe we need? Same question for the Commandant.

Secretary DEL TORO. Admiral Gilday, General Berger, and I all agree on the requirement for 31 amphibious ships, and we are committed to ensuring we meet this requirement and doing so in a timely manner, but with a capable, sustainable mix of ship classes to ensure we meet the Nation's need for ARG/MEUs for decades to come. The current analytical work is assessing the recently approved Department of Defense Planning Scenario for the 2022 National Defense Strategy (NDS), and studying the cost/capability of LPD 17 Flt II amphibious ships. The analytic results of both will be reflected in the fiscal year 2025 30-Year Shipbuilding Plan.

General BERGER. The Marine Corps has a requirement for no less than 31 amphibious warfare ships 10 LHA/LHD and 21 LPDs. Since 2019, three DON studies have examined amphibious warfare ship force structure requirements. The requirement was informed by combining the findings of those studies, the most recent being the SecNav directed Amphibious Fleet Requirement Study (AFRS) in 2022, with amphibious warfare ship readiness trends over the past 10 years. AFRS was a threat informed, scenario directed, model driven, multiple phase event executed by the analytic arms of the Navy and the Marine Corps. The findings of AFRS were briefed to the service chiefs and SecNav, 31 amphibious warfare ships were reported as the minimum required. This finding is consistent with 11 amphibious warfare ship inventory studies completed over the last 14 years.

The last Congress recognized this requirement in the *James M. Inhofe National Defense Authorization Act,* Public Law 117–263 (2023). Section 1023 requires the Navy maintain "not less than 31 operational amphibious warfare ships, of which not less than 10 shall be amphibious assault ships." This law mirrors the need of the National Security Strategy, but it is important to note, this is a floor not a ceiling.

TALENT MANAGEMENT 2030—INVEST AND RETAIN ENLISTED MARINES

85. Senator MANCHIN. Can you comment on the potential benefits of a retain and invest model? What are the biggest challenges you are facing toward affecting this reform?

General BERGER. Force Design 2030 envisions a "Stand-in Force," of relatively small, highly mobile, distributed, and lethal units. To succeed, such units must possess both the maturity to decide and act during increasingly complex conflicts and a greater technical expertise demanded by high technology, multi-domain battlefields. As such, Talent Management 2030 has directed a paradigm shift from the Marine Corps' legacy, high turnover "recruit and replace" personnel model toward one that places greater emphasis on retention of the most capable marines. Some of these efforts are already well underway. This deliberate maturation of the force will develop the necessary structure to fight and win on tomorrow's battlefield. By

doing so, the marine Corps can achieve cost savings to entry-level training, reduce the accession requirement in today's challenging recruiting environment, increase unit continuity, and benefit from more mature marines.

As the Marine Corps strives to increase its return on investment, we will ensure that its warfighting capability is enhanced through training and education within its formations. This will create a more stable team to support the collective national defense. Lateral entry opportunities enable the service and marines to match duty to an individual's performance and desire to serve.

Potential challenges include the ability to retain enough marines to pivot to the new paradigm, which can be addressed by implementing tailored incentives. Additionally, the Marine Corps must recruit marines who are compatible with longer duration service, which can potentially be achieved through implementing new applicant screening tools and initiatives.

As the Marine Corps works to invest in and retain its best talent, it must also prioritize the quality of leadership, life, and support for marine families; these factors fuel the retention of talent.

LANDING SHIP MEDIUM

86. Senator MANCHIN. At a time of increasing tensions in the world, especially the Pacific, how will this delay in acquiring the Landing Ship Medium (LSM) hinder the Marine Corps' ability to operate in costal environments? Will you explain the difference in Marine Corps capability against our pacing threat when comparing 18 LSMs that the Amphibious Force Requirement Study identifies as a minimum capability and 36 LSM's, which the Marine Corps considers their requirement?

General BERGER. Operational intra-theater surface maneuver, tactical mobility and sustainment is critical today in the Indo-Pacific to assure campaigning activities are achieved for integrated deterrence of malign activities. Until the Medium Landing Ship (LSM) is available in appreciable numbers (IOC –FY34), the Navy and Marine Corps have developed a strategy known as the Littoral Maneuver Bridging Solution (LMBS). The LMBS utilizes a mixture of available ships and landing craft, as well as chartered platforms with an operational focus for use in Indo-Pacific region. The LMBS provides flexible options and informs future naval resourcing decisions to ensure the Marine Corps can operate throughout the littorals as required until the LSM is delivered to the fleet.

The purpose built, beachable, shore-to-shore LSM requirements is derived from multiple studies and wargames that highlight a critical gap in capability and capacity between amphibious warfare ships and their complementary landing craft. The LSM allows shore-to-shore maneuver, mobility and sustainment of task organized units of action of stand-in forces (SIF) and enables sustained logistics forward in contested environments. The delay in this capability hinders our ability to establish key terrain and develop relationships required. The LSM inventory objective is 35 ships based on the concept of operations (CONOPS) to provide littoral maneuver for three Marine Littoral Regiments (MLR) as the foundational formation of the SIF. The near-term inventory requirement is 18 LSM to initiate the program. Maturation of the CONOPS and experimentation will inform the long-term inventory objective.

DELAYED BUDGET AND CONTINUING RESOLUTIONS

87. Senator MANCHIN. Secretary Del Toro, General Berger and Admiral Michael M. Gilday, can I have each of your commitments to get Congress as accurate an estimate as possible on the financial impact previous continuing resolutions have had on the Department of Defense?

Secretary DEL TORO and Admiral GILDAY. Continuing Resolutions (CRs) of any duration create inefficiency in government operations. The execution of this year's requirements based on small incremented periods of availability substantiated by last year's appropriations means every transaction is executed in increments of the number of CRs, rather than deliberate transactions for the entire quarter or fiscal year. The administrative cost of the inefficiency is impossible to quantify but it spans across the Department wherever funds are executed, and increases with the number of CRs.

- The Department cannot execute our strategic priorities, such as investing in cutting-edge technologies and capabilities, with last year's budget.
- A full-year CR erodes the United States military advantage relative to China, impedes our ability to innovate and modernize, degrades readiness, and severely limits our ability to take action against energy challenges (e.g., fuel and utilities). It signals to our adversaries that the U.S. is not committed to its stated priorities.

- CRs create uncertainty, particularly in an era of increasing and evolving requirements to meet the demands of the DON as we face competitors who are not hamstrung by inefficiencies in funding requirements.
- The Department is challenged to execute national defense strategies required today when funding is limited to a prior year level, and more important, while there are restrictions to move ahead with the investments in new programs and technologies that are required today. The longer a CR lasts, the greater uncertainty, and decision time that is lost; longer CRs require the Department to respond to and execute the congressional decisions made on the President's Budget Request in an appropriations act in a truncated period of time. This is particularly challenging for military personnel and readiness accounts that are in 1 year appropriations.
- Given the commonplace nature of CRs today (in 13 of the last 14 years), the DON has worked around the inefficiencies as much as possible. However, delays in initiating new starts in procurement and research and development, and increased production rates place our Navy and Marine Corps at a strategic disadvantage with our competitors. In the last 3 years, each year there are have been over 60 programs that are precluded from execution during a CR because of restrictions on new starts and production rate increases. The DON appreciates the anomalies Congress has provided in the past for the Columbia program, but there are other programs that stall pending appropriations acts.
- While CRs are inefficient and delay getting on with today's business, receiving an appropriation act at some point is essential. A yearlong CR would have devastating consequences not only for funding levels, but the misalignment of priorities and budget requests in the current year compared to last year. . Further, the comparison of fiscal year 2024 program requirements compared with fiscal year 2023, without the ability to realign funding, would create a $26.1B misalignment of funds. We cannot afford this type of perturbation in funding the investments we need today and for the future.
- Increased inflation experienced during fiscal year 2023 and projected for fiscal year 2024 will reduce the Department's buying power, further stressing the Department's topline.
- This year we have identified 49 new starts slated for fiscal year 2024. When looking at the last 4 years (fiscal year 2020 to fiscal year 2023), all which have started under CRs of 80 days or more, the sum of delayed programs for the Department of the Navy alone is 81. This sets programs off poorly, creates doubt with committee staff, erodes trust in our industrial base, and cedes ground to our adversary.

General BERGER. Over the past several years that I have been Commandant, every fiscal year has begun with a continuing resolution or CR, due to the absence of enacted appropriations. Given that Congress has eventually passed the appropriations acts, the strictly financial impact is neutral. However, I'd offer three ways that these continuing resolutions, particularly a yearlong CR, adversely impact your Marine Corps.

First is people. In an all-volunteer force, an extended CR has the potential to eat away at the trust that marines and their families have in their government. Without enacted appropriations, I may have to delay or cancel transfer orders; reduce incentive pays and bonuses; families won't know whether to renew their housing leases; and spouses won't know whether to accept the job offer they got last week all due to uncertainty. The impacts on recruiting and retention may very well be lasting at the time we are facing the most challenging recruiting environment since the advent of the all-volunteer force.

Second is our ongoing transformation efforts. CRs look in one direction—backward—forcing us to execute last year's budget against this year's priorities. At a time when we are working to accelerate transformation efforts, CRs slow us down. They artificially slow acquisition programs delaying the start of new contracts. They effectively prevent modernization at speed, ceding the initiative to our adversaries. This includes slowing R&D and procurement of critical Force Design 2030 programs, affecting workers across the country, as well as preventing facilities supporting new platform investment, training, and quality of life initiatives. Service chiefs need sufficient, stable, predictable funding to stay in front of our pacing threat. CRs often require services to temporarily reprioritize their requirements to ensure sufficient resources remain available for must pay obligations.

Third is our strategic partners. Under every CR, we face the prospect of losing the trust and confidence of our allies and partners because commanders may have to scale back or cancel scheduled exercises. For a National Security Strategy that depends on allies and partners, trust is a big part of what keeps the door open. Once

that door closes, it's hard to recover from the damage done to the military relationships.

The concern with budgetary stagnation is compounded by the fact that our strategic competitor, China, is accelerating. The three impacts illustrated above translate to an increased risk to our ability to deter and compete with China, particularly in the Pacific. Our people, our transformation efforts, and our relationship with our strategic partners are key to staying ahead of the pacing threat.

QUESTIONS SUBMITTED BY SENATOR JACKY ROSEN

RESILIENCE OF SAILORS AND MARINES

88. Senator ROSEN. Secretary Del Toro and General Berger, sailors and marines have been subjected to extended deployments and heightened operational tempos over the last few years, which has impacted our people as well as the ships, aircraft, and equipment that they operate and maintain. Taking care of our servicemembers must also be a top priority, especially considering the particularly arduous pandemic-era operations coupled with ongoing supply chain issues and a downturn in recruitment.

How are the Navy and the Marine Corps focusing on the well-being of sailors and marines throughout the deployment cycle, in addition to maintaining their operational readiness and ability to deploy?

Admiral GILDAY. The Navy is overhauling the totality of its prevention programs through its Advance Navy Culture initiative. This places a focus on the outcomes of the Navy programs which are currently in place that aim to build teams with high connectedness, cohesion and inclusion to better monitor the well-being of our sailors throughout the deployment cycle. In addition, Navy is overhauling its internally developed Warrior Toughness and congressionally mandated Expanded Operational Stress Control program into one continuum focusing on building sailor minds, bodies, and spirits. The Navy is also increasing the number of mental health providers and chaplains on the waterfront.

In March, the Navy published its Mental Health Playbook which helps to normalize the conversations about mental health and provides a roadmap to navigate care options for sailors.

For Newport News Shipyard in particular, we have increased the mental health professionals assigned to Refueling and Complex Overhaul (RCOH) aircraft carriers and leased office space to put the crew's medical department in closer proximity to the ship. This increases accessibility and reduces commute times. Additionally, we have taken numerous actions to improve the quality of life of sailors. These include improving access to food options consistent with 24/7 work hours by bringing in food trucks in the evenings, reopening the self-use kitchen in unaccompanied housing, and opening a Navy Exchange mini-mart within the confines of the industrial area of the shipyard. We are also providing increased Wi-Fi access for sailor personal use. We have taken steps to improve the parking concerns. We centralized parking, allowing closure of some of the most remote parking areas.

General BERGER. Preserving the psychological health of servicemembers and their families is as much a warfighting matter as it is a sacred duty, and it is of paramount importance to mission readiness. The Marine Corps' Combat and Operational Stress Control (COSC) Deployment Cycle Training principles enable a cohesive ready force and promote long-term health and well-being among marines and attached personnel. The COSC program has three main goals—prevention, identification, and treatment of combat and operational stress (COS), stress arising from military training and operations, and typical life stressors experienced by servicemembers. COSC assists commanders in maintaining warfighting capabilities by prevention, identification, and management of COS. Training is focused on both warrior and leader audiences at three stages: pre-deployment (30 days prior to deployment), re-deployment (15–30 days prior to return), and post-deployment (60–90 days after deployment).

COSC is executed by Marine Corps' Operational Stress Control and Readiness (OSCAR) teams. They consist of command-selected marines who assist commanders in prevention and identification of COS, early intervention to mitigate stress, and reintegration efforts in all units, whether operational, deployed, in training, or in garrison. OSCAR team members act as sensors for the commander by noticing small changes in behavior and acting early. OSCAR marines become certified as the commander's representatives on COSC efforts in the unit. They support the commander in building unit strength, resilience, and readiness and keeping marines in the fight.

89. Senator ROSEN. Admiral Gilday, just this past week, U.S. Naval Forces Central Command (NAVCENT) held a mental health stand-down as a part of the Navy's mental health pilot program in Bahrain. We want to make sure that each of our sailors and their families have mental health resources available to them and communities that support them. Are there plans for this mental health pilot program to be expanded to other Navy installations, both overseas and right here at home?

Admiral GILDAY. The health and well-being of sailors and their families is a vital responsibility and a top priority for the Navy. We are focused on improving programs and investing additional resources to ensure that sailors and their families have access to the best possible mental health and community support resources. These investments are being made both at the command level and Navy-wide (e.g. deploying mental health trained chaplains on smaller ships for the first time and increasing the number of mental health care practitioners across the Navy). The work that NAVCENT is doing is a great example of a command-level initiative to optimally tailor resources to meet the needs of sailors and families in an overseas environment. The Navy will employ the best practices from this and other similar initiatives as we strive to better care for our people.

IMPACT OF MILITARY HEALTH SYSTEM GENESIS ON RECRUITMENT

90. Senator ROSEN. The transition to Military Health System (MHS) Genesis and digitized medical records is necessary to ensure that servicemembers, veterans, and their families are receiving proper health care with continuity between providers. Not only is this system used for the men and women already serving in the military, but it is also used to screen the medical history of potential recruits prior to accession.

Secretary Del Toro, given the Navy and Marine Corps' recruitment challenges and a decrease of people eligible for military service, how has the transition from the previous medical intake process to MHS Genesis impacted recruitment efforts?

Secretary DEL TORO. The capabilities and expectations from MHS Genesis were welcomed. It was thought that MHS Genesis would provide a more efficient and comprehensive medical history of an applicant during the enlistment process, allowing the Navy and Marine Corps to avoid the costs associated with undisclosed preexisting medical conditions on overall service readiness. After 1 year, the transition has not yet generated the expected efficiencies. During the same period, it has exposed issues within the processing of applicants at Military Entrance Processing Stations (MEPS). Collectively, those results have impacted recruiting.

One of the expected efficiencies from MHS Genesis was that an applicant's medical history would be made readily available through data gathered through the Health Information Exchange (HIE) networks. The Department of Health and Human Services mandated that HIE information be provided into MHS Genesis. However, it was quickly discovered that not all medical provider networks authorized or participated in the release of medical information. For example, one part of the country may only provide an applicant's prescription information history, while another network may only provide prescriptions with doctor's notes. This patchwork of inconsistent HIE medical information resulted in MEPS medical personnel requesting the applicant or recruiter obtain this information, which lengthened the overall enlistment process and defeated one of the intended purposes of MHS Genesis. Until the HIE networks provide a more uniform and comprehensive medical history flow into MHS Genesis, the system will not meet anticipated efficiency.

By its nature, MHS Genesis is designed to increase the volume of medical information provided for each applicant in order to uncover pre-existing medical conditions. Although the volume of information increased as a result of HIE data, there was no corresponding increase in MEPS personnel to screen and evaluate the documentation. This resulted in a greater burden being placed on a workforce designed to review and decipher medical information under the previous intake methodology. Limitations on civilian labor hours, staffing shortages due to less than competitive wages compared to the surrounding medical community, and inability to acquire the services of fee-based medical providers has compounded MEPS' ability to deliver optimum and timely processing for the recruiting services.

CYBER WORKFORCE

91. Senator ROSEN. The establishment of a cyber-capable workforce in the Navy is critical, recognizing that cyberspace is a warfighting domain that continues to adapt in terms of threat and sophistication. The fiscal year 2023 NDAA required the establishment of a dedicated Navy Cyber Warfare Operations career field, which ensures that the Navy has a capable cyber workforce that can integrate within the greater DOD cyber-warfare community.

We must continue to invest in innovative, traditional and non-traditional cyber capabilities and talent to support the Department of Defense's cyber mission requirements.

Admiral Gilday, how do you envision that the creation of Cyber Warfare specialists will impact the retention of high-skilled cyber-capable sailors? Can you speak to the progress of the establishment of a training pipeline and implementation plan?

Admiral GILDAY. Creating a dedicated cyber warfare officer designator, an enlisted rating, and applying appropriate retention bonuses will help to increase retention rates. Cyber personnel will have dedicated career paths allowing them to stay in cyber roles for most—if not all—of their service. Before the creation of a dedicated designator and rating, it was necessary for personnel to take non-cyber tours within their communities to be considered competitive for promotion and retention; however, cyber skills can quickly atrophy. Now, those personnel will be competitive for promotion without having to periodically leave the cyber community. This workplace stability is a noted non-monetary benefit many of our sailors, regardless of designator or rating, have expressed interest in. Between these monetary and non-monetary incentives, the Navy is confident that we will see increased retention rates.

For officer training, the Navy will pilot a new approach to create Maritime Cyber Warfare Officers with on-keyboard skills this summer in Pensacola, Florida. Navy plans to utilize current enlisted cyber rating schools that are in high demand for Cyber Mission Force team work roles. The intent is for new Maritime Cyber Warfare Officers to undergo the same training as their enlisted Cyber Warfare Technician counterparts. For more senior officers, the Navy will initially seek to use other services' schools that have proven successful in delivering the required skills to meet work role assignments. For enlisted training, the ongoing coordination with USCYBERCOM to accomplish all foundational training prior to assignment to Cyber Mission Forces will be the basis of the new cyber warfare rating initial training.

The Navy established the Maritime Cyber Warfare Officer designator and the Cyber Warfare Technician rating on 26 June and 28 June 2023, respectively.

92. Senator ROSEN. Admiral Gilday, as a former director of operations for U.S. Cyber Command, can you discuss the value of reserve models, including potentially establishing a civilian cybersecurity reserve, to support the Department of Defense's cyberspace operations?

Admiral GILDAY. The Naval Reserve Force is vital to our national security. History has demonstrated the importance of maintaining a warfighting ready strategic reserve of trained military personnel, which reflects the essence of the Navy's mission and vision. Deploying and training side-by-side with Active Duty counterparts, Navy Reserve sailors provide a unique combination of military experience and civilian expertise that gives the Navy a competitive advantage over our adversary. Cybersecurity is one of the areas in which it is impossible to have too much capability or too much expertise. Extending the reserve force out to establish a civilian cybersecurity reserve corps builds to our existing reserve programs and could prove beneficial. A cost-benefit analysis determining further considerations (i.e., pay, benefits, risk, limitations, etc.) would need to be executed across the DOD to evaluate the advantage of tapping into the vast pool of cybersecurity talent.

QUESTIONS SUBMITTED BY SENATOR MARK KELLY

RECRUITING

93. Senator KELLY. Secretary Del Toro, I understand the Navy hit its Active Duty enlisted recruitment goals last year, but failed to meet target numbers for Reserve enlisted personnel, and for both Active Duty and Reserve officers. How has the Navy changed its strategy to meet Officer and Reserve recruitment goals?

Secretary DEL TORO. Commander, Navy Recruiting Command (CNRC) established a Navy Recruiting Reserve Command (NRRC) on 1 April 2022, a major command focused on Prior Service and Direct Commission Officer Reserve missions. Prior to NRRC, Prior Service recruiting was part of total force recruiting commands focused on both Active and Reserve missions. NRRC's model is Reserve Recruiters in Reserve Markets, working Reserve Only Missions and led by Reserve Leaders. In support of this model, there is newly developed Reserve-centric Prior Service Training and a new Reserve-centric Prior Service Marketing and Advertising called Navy+, which targets Civilians, Veterans and Active Duty separating from Service.

Since the execution of NRRC, 460 Enlisted and Officer recruiting professionals have been transferred from Navy Recruiting Command and 26 Navy Talent Acquisition Groups (NTAGs) to NRRC. Reserve recruiting billets (675) were transferred to

NRRC commensurate with the reserve missions that were transferred to the new command. NRRC's manning is strategically built with Officer and Enlisted Canvasser Recruiters from a variety of general and specialty rates and designators. Canvasser Recruiters are Reservists on Active Duty recruiting tours for up to 3 years. In essence, NRRC recruiters are reservists selling reserve careers. The Prior Service recruiters are strategically placed in densely populated veteran markets in each State to include Hawaii and Alaska, as well as Guam, Puerto Rico and the United States Virgin Islands.

As of April 2023, NRRC has produced an additional 270 Enlisted and additional 50 Officer contracts over the past year. Navy Recruiting is expanding reach to the Prior Service and Active Duty market to ensure separating individuals have the information they need to consider extending service by way of the Navy Reserve. NRRC currently attends all Transition Assistance Programs (TAP) in the local areas and they have designated Benefit Advisors that partner with Active Duty Command Career Counselors to educate separating sailors on Navy Reserve benefits.

Navy Recruiting Command (NRC) has adjusted to a very aggressive shipping posture. Upon receipt of selection results from the Officer Community Managers (OCMs), selectees are immediately booked for the next available Officer Candidate School (OCS) class, often within 2 weeks of board results. It has been communicated to the NTAGs to prepare applicants to ship selects as soon as possible. A selection memo has been introduced to reinforce candidate contact and reduce close-in attrition or "rolls" by mandating recruiters contact selectees directly following selection results to verify their acceptance to the community and verify their shipping date. Additionally, NRC has strategically overbooked designators with high pre-shipping attrition in hopes to attain shipping goals before the last OCS class of the fiscal year.

NRC is actively working with OCMs to reevaluate Program Authorizations to allow more applicants to be sent to selection boards. NRC provides a number of selections needed at each board to OCMs in order to maintain mission glideslope. OCMs are encouraged to select over their quota to allow for any potential attrition and build a Delayed Entry Program for fiscal year 2024.

NRC is expanding the Mobile Medical Recruiting Academy training topics to include Nuclear Propulsion Officer Candidate programs and renaming it Mobile Officer Recruiting Academy. This change should increase penetration to quality colleges and universities for all non-medical attainments if applied by field recruiters.

94. Senator KELLY. Secretary Del Toro, what can the Navy do to expose our youth to the opportunities the military can provide? This is critical to ensure we have the quality and quantity of sailors and marines needed to support our national defense in the future

Secretary DEL TORO. As propensity for military service has reached record lows, the Navy and Marine Corps are heavily focused on expanding and enhancing opportunities to tell our story and communicate the opportunities and benefits of military service to young Americans.

Expanding community and school outreach. High schools remain the most sustainable market for our recruiters, who are working hard to reestablish relationships with educators and students lost as a result of COVID closures and restrictions. We are also working closely with State and Federal education officials to promote the value of military service and military-connected recognition programs.

Currently, recruiter access requirements set a low threshold for compliance in schools that fulfill just their minimal obligations. We encourage Congress to modernize these requirements in a way that supports the ability of our recruiters to establish meaningful connections with both students and educators.

Enhancing marketing to youth and influencers. Today's fragmented media environment means television ads do not have the same impact on young people as in the past. Instead, we must employ creative and more personal approaches that directly appeal to our audience, highlight the diversity of our career opportunities, and convey the military's tangible and intangible benefits to youth and those who influence them, such as educators, family members, and community leaders.

Our advertising programs are vital to building awareness among high-quality, diverse populations that are increasingly disconnected from military service. A strong advertising program that reaches young people in formats they heavily utilize enables our recruiting commands to modernize, attract, and recruit the highest quality accession cohorts.

Attracting a diverse and skilled talent pool. The Navy and Marine Corps strive to recruit every zip code in the country and have implemented community outreach within under-represented communities to attract a wider range of potential recruits. The Department of the Navy continues to assess where our Naval Reserve Officer

Training Corps units are established and how we are leveraging cross-town affiliations at Minority-Serving Institutions in communities with large minority populations. Recruiters also seek diverse and innovative STEM talent by visiting magnet schools, specialized high schools, and career and technical education programs. By continuing to highlight our commitment to diversity and inclusion, we promote the Department of the Navy as an attractive and welcoming option for young people of all backgrounds.

95. Senator KELLY. General Berger, I understand that most of the services have recruiting challenges, but the Marine Corps has been doing well with retention. What does the data suggest is the reason for this success?

General BERGER. The Marine Corps has achieved exceptional retention rates, surpassing our goals. This achievement is a testament to the fact that once your marines become marines, they want to stay marines. The marines who we are retaining are extremely high quality; this year, over 70 percent come from the top 40 percent of our force. We are decisively retaining and increasing the number of marines who have innate ability, skills, and commitment to continued service, in line with our Talent Management 2030 strategy. Introducing initiatives, such as increased lateral move opportunities, allows marines to continue service while further aligning individual desires to service requirements. Our culture of warfighting excellence coupled with Talent Management initiatives that seek to enhance the marine and family experience significantly contribute to our retention success. Overall, the Marine Corps' retention achievements are a testament to its ability to attract and retain high-caliber personnel who are committed to serving their country with excellence. Also, we only select the best of our marines to serve on recruiting duty. As an example, a great majority of our General Officers have commanded recruiting stations.

QUESTIONS SUBMITTED BY SENATOR TOM COTTON

LITTORAL COMBAT SHIP

96. Senator COTTON. Secretary Del Toro, Congress asked you to look at alternative uses for the Littoral Combat Ship (LCS). You currently have a requirements study out for an unmanned mothership. Has there been any consideration of the LCS as a mothership for unmanned systems?

Secretary DEL TORO. Yes, LCS (Freedom Class) is among the various ships we have included in our SECNAV Unmanned Mothership Study. Additionally, it will also be evaluated as a potential solution, if/when required, as part of the Unmanned Systems (UxS) Expeditionary Support and Integration Requirements Evaluation Team (RET) commencing this summer.

97. Senator COTTON. Secretary Del Toro, what is the feasibility of experimentation with the LCS to inform those requirements as opposed to simply paper studies?

Secretary DEL TORO. Fourth fleet has commenced with their initial concept exploration. Additionally, the Navy is about to award a contract to put Unmanned Aerial System Intelligence Surveillance Reconnaissance, Commercially Owned / Commercially Operated Services on three LCS from Multiple Fleets. This is an expansion of the work that was done last year to put the same capability on DDG FLTI/II (x2) in 7th Fleet. This is meant to be complementary to the MQ–8 (if available) and not replace.

QUESTIONS SUBMITTED BY SENATOR MIKE ROUNDS

ADDITIVE MANUFACTURING

98. Senator ROUNDS. Admiral Gilday, do you believe additive manufacturing provides a major opportunity for reducing maintenance lead times both on board ships and at the shipyards?

Admiral GILDAY. Additive manufacturing provides a strong opportunity to reduce maintenance lead times. It is currently being used at the shipyards with conventional manufacturing and sustainment, particularly with tooling and fixtures. Additive manufacturing on board ship has focused primarily on low criticality parts due to the current maturity of the materials and processes. Additively manufactured high criticalaity end-use items require qualification and certification for specific applications. The Department of the Navy is continuing to mature its processes and

invest in research and development to take advantage of additive manufacturing opportunities.

The Navy is embracing new technologies in order to deliver and maintain quality ships and submarines on time to meet the threat posed by our Nation's adversaries. The Navy sees significant opportunity for advanced manufacturing technology, particularly additive manufacturing, to deliver benefits across the shipbuilding industrial base and supply chain as a means to:

- Increase manufacturing resilience.
- Reduce reliance on sole-source supply points and address constraints in challenged markets.
- Reduce manufacturing lead-times and fabrication spans.
- Address obsolescence concerns for ship maintenance, modernization, repair, and sustainment.
- Reduce the manpower needed for critical manufacturing while attracting, upskilling, and retaining the skilled workforce needed across the supply chain.

99. Senator ROUNDS. General Berger, would forward deploying printers, capable of producing additively manufactured components, with logistics units help improve the ability of the marines to sustain themselves in a denied environment?

General BERGER. Yes. A forward deployed manufacturing capability (additive, subtractive, and hybrid versions of the two) are critical in sustaining Marine Corps and joint forces in a denied environment. In addition to fielding the hardware that produces these parts (Expeditionary Fabrication (XFAB) at the intermediate level, and Tactical Fabrication (TACFAB) at the organizational level), the Marine Corps is working to field the authoritative digital data thread required for those machines to produce required parts. We have fielded a deployable additive manufacturing capability to all three Active Duty Maintenance Battalions and additional logistics units are scheduled to receive this capability across the FYDP. We are on track to begin fielding polymer additive manufacturing capabilities to every battalion within the Marine Corps this calendar year (CY23). We are on course to update our dedicated maintenance unit's capabilities to be able to print metal parts in fiscal year 2026. Additionally, we intend to undergo a modernization effort for our deployable machine shop that will replace our legacy deployable subtractive manufacturing capability and provide our logistics units with a better sustainment capability.

100. Senator ROUNDS. Secretary Del Toro, what will you do to enable the Navy and Marine Corps to rapidly qualify additively manufactured components?

Secretary DEL TORO. The ability to rapidly qualify additive manufacturing (AM) processes and certify parts within the Department of the Navy (DON) is continuing to mature. The diverse nature of Navy and Marine Corps operational environments requires different qualification/certification approaches across various weapons systems. For example, approval of low-critical parts for ships, submarines, and ground units are delegated down to the waterfront and unit level while higher criticality parts (i.e., air-worthy and nuclear SUBSAFE/Level 1 parts) require higher levels of approval.

The AM industry at large is limited by a lack of AM standards, material data, and qualification/certification approaches. The DON is coordinating with other government, academic and industry partners in the development of these standards and approaches to enable more rapid AM qualification and certification. Current processes only enable approval of individual parts for particular platforms produced by specific machines. The DON is improving this process in the near term by identifying ways of scaling process qualification to multiple AM vendors as well as implementing approaches for "families of parts" in which parts with similar design features, performance requirements, and consequence of failure are certified together. In the longer term, qualification will be accomplished by analyzing the vast amounts of data captured through AM processes comparing the "as designed" part to the "as built" part. While these efforts are in their beginning stages, DON will continue to fund the efforts that contribute to the maturation of the AM qualification and certification process.

NAVAL MAINTENANCE

101. Senator ROUNDS. Secretary Del Toro and Admiral Gilday, the USS *Boise* still sits in dry dock at Newport News Shipyard. Due to compounding problems with the Navy's ship maintenance schedules and workflow, it has been over 8 years since this submarine completed its last mission. It has now spent 6 years in port due to maintenance issues. I view this case and the ship maintenance backlog as an extremely

grave matter. What is the plan to get USS *Boise* and other ships out of dry dock and back into the fight?

Secretary DEL TORO and Admiral GILDAY. *Boise* is currently in an Early Production Period (EPP), an availability that authorizes a portion of the Engineered Overhaul (EOH) Availability Work Package, at HII-NNS Shipyard in Newport News, VA. As *Boise* awaits commencement of the full EOH, the currently authorized and ongoing EPP is being executed by HII-NNS with the intent of reducing the risk associated with executing the entire EOH. The EPP commenced in September 2020.

An EOH is a CNO-scheduled depot level maintenance availability that is required within the submarine life cycle to perform repairs, upgrade capabilities, and reset the operating interval and certification. Commencement of the *Boise* EOH has been delayed due to resource shortages at HII-NNS, due primarily to the Navy's assignment of two higher priority submarine repair availabilities, the *Helena* (SSN 725) Drydocking Selected Restricted Availability (DSRA) and the *Columbus* (SSN 762) EOH, at the same time *Boise* entered the shipyard. The *Helena* DSRA is complete and the ongoing *Columbus* EOH has been progressing steadily following a slower than expected start.

The Navy is working with HII-NNS to award a *Boise* EOH contract that will incentivize performance and share risk. Once this contract is awarded, the *Boise* EOH will begin and then availability duration, undocking, and completion dates will be determined.

In July 2022, the Navy approved a 15-Year Attack Submarines (SSN) Maintenance Strategy, a holistic approach to SSN Maintenance that includes leveraging public and private sector capability and capacity to increase submarine operational availability and sustain material readiness.

The 15-Year SSN Maintenance Strategy provides long term guidance and planning of Public Shipyard and Private Shipyard Repair availabilities. The goal of this effort is to level load depot maintenance facilities, smoothing out peaks and troughs in combined workloads and enabling the facilities to execute maintenance with predictability.

Execution of the 15-year SSN Maintenance Strategy requires investment across public and private sector, to include:

- Fully funding public shipyards
- Establishing stable requirements and funding for private shipyard availabilities
- Addressing funding shortfalls for Virginia Class (VCS) material, obsolescence, rotatable pools, etc.
- Engaging industry on discrete jobs to outsource
- Executing funding options/processes to support material availability

The President's Budget 2024 adds for VCS material parts, obsolescence, acquisition, and private yard availability planning to improve SSN maintenance execution at public and private shipyards. Additionally, this fully funds Submarine Maintenance (1B4B) which will enable greater confidence in schedule execution and material availability for planned submarine overhauls.

Key President's Budget 2024 investments in SSN maintenance are:

- Invests in the long lead-time (LLTM) materials that are causing significant delays in VCS availabilities.
- Addresses obsolete systems or components and invests in outsourced work to enable shipyard worker focus on critical path work.)
- Restores Navy Working Capital Fund investment in VCS material made in fiscal year 2023.—$350 million (fiscal year 20DP)
- Funds planning of a private shipyard VCS availability in heel-to-toe fashion following *Boise* EOH, continuing Navy's partnership with private industry.
- Fully funds Submarine Maintenance (1B4B) which will improve confidence in schedule execution and material availability for planned submarine overhauls.

Additionally, President's Budget 2024 budget request adds $600 million in OPN to fund remaining shortfall for *Boise* EOH.

The Navy is committed to these investments, and executing the 15-Year SSN Maintenance Strategy to improve our national defense posture.

102. Senator ROUNDS. Secretary Del Toro and Admiral Gilday, in recognition of the poor State of our public shipyards, Navy leadership developed the Shipyard Infrastructure Optimization Program (SIOP) in 2018. Can you tell me what the State of this program is, whether the Navy is getting the resources it needs to recapitalize our public shipyards on an appropriate timeline to provide a credible naval deter-

rent to China, and whether resourcing this requirement to a higher level is something that this Committee needs to seriously consider?

Secretary DEL TORO and Admiral GILDAY. The Navy's primary initiative to modernize and optimize the four public shipyards is the Shipyard Infrastructure Optimization Program (SIOP). Shipyards with resilient facilities, efficient layouts, modernized equipment, and digital interconnections generate Fleet readiness and strengthen our Nation's security. The Navy's fiscal year 2024 budget submission confirms the Administration's commitment to SIOP with $9.9 billion of funding across the fiscal years 2024 to 2028 Future Years Defense Program.

With the support received from Congress—to include the $1.9 billion appropriated in fiscal year 2023—SIOP is advancing three lines of effort (LOE): (1) deliver required dry dock repairs and upgrades to support current and planned classes of nuclear-powered aircraft carriers and submarines, (2) optimize workflow within the shipyards through significant changes to their physical layout, and (3) recapitalize obsolete industrial plant equipment with modern technology, substantially increasing productivity and safety.

SIOP has achieved a number of accomplishments toward each LOE: Completion of the Portsmouth Naval Shipyard (PNSY) Super Flood Basin and the modernized Norfolk Naval Shipyard Dry Dock 4; awarding construction of the Norfolk Naval Shipyard Dry Dock 8 Saltwater Upgrades and Pearl Harbor Naval Shipyard (PHNS) Dry Dock 5; commencing design of a *Gerald R. Ford*-class aircraft carrier capable dry dock at Puget Sound Naval Shipyard; awarding multiple Facilities Sustainment, Restoration, and Modernization projects across all four shipyards; and continuing capital equipment investments to include delivery of a 175-ton portal crane to PNSY.

The foundation of SIOP's optimization effort are the industrial modeling and simulation, engineering studies, and area development plans (ADPs) underway for each shipyard. SIOP completed the first increment of industrial modeling in 2022, which provided facility-level data describing optimized workflow among buildings and validated reductions in availability durations possible by optimizing facility layouts and infrastructure. The second increment of industrial modeling started in 2022 and focuses on processes within facilities to optimize shop floor layout and equipment to further increase efficiencies. The modeling and simulation of the ideal shipyard layout, combined with the engineering studies that describe local constraints allow the development of shipyard specific ADP that provide the Navy a range of options and sequencing for facilities recapitalization. The PHNS ADP was delivered by the contractor in July 2022, and the Navy expects to make a recapitalization decision this year. The ADPs for the other shipyards will complete in 2024 and 2025.

The Navy budget balances requirements across all domains, and the scale of SIOP requires that it remain a Navy priority for many years. Consistent, predictable funding for the program is necessary to move swiftly through planning, design, and construction, while synchronizing the recapitalization with shipyard operations and fleet requirements. Acceleration opportunities exist if project designs can be further advanced to take advantage of operational windows for construction.

Navy readiness demands that all SIOP investments are coordinated with fleet operational commitments to ensure alignment of requirements, construction, and ship maintenance, while remaining mindful of the impact SIOP will have on our shipyard workers and our need for sustainable infrastructure. This includes ensuring the program is integrated with the Naval Sea Systems Command Performance to Plan, the Naval Sustainment System—Shipyards efforts, local communities and regulators, and the Administration's climate initiatives.

QUESTIONS SUBMITTED BY SENATOR JONI ERNST

WEAPONS PROCUREMENT

103. Senator ERNST. Secretary Del Toro, since the Navy proposes growing the weapons procurement account by more than 40 percent in fiscal year 2024, what production lines for missiles have been maxed out?

Secretary DEL TORO. Senator, the following weapons procurement production lines are maxed out:

- AIM–120 AMRAAM through fiscal year 2026. This is an Air Force led effort, to include the DON procurements.
- AGM–158C LRASM is near max capacity as annual quantities procured fluctuate year-to-year across the FYDP. LRASM is a Navy led program with Air Force as the contracting lead for procurement with both Navy and Air Force procurements.

- RIM–174 SM–6 is maxed out across the FYDP.
- RGM/UGM–109E Tactical Tomahawk is at maximum capacity and coordinating investments to increase capacity. The Tomahawk production line, and sub-vendors, are shared across new production and recertification and multiple service customers, including Navy, Marine Corps, Army and Foreign Military Sales.

104. Senator ERNST. Secretary Del Toro, what production lines have excess capacity?

Secretary DEL TORO.

- Naval Strike Missile has some additional capacity that the Navy could leverage as part of the planned fiscal year 2024 to 2028 Multi-Year Procurement. With additional funds, the Navy can procure up to 104 missiles across the FYDP on the planned fiscal year 2024 MYP for NSM.
- ESSM has additional capacity that can be leveraged. Due to investments made to increase production capacity, ordering capacity will increase from 300 up to 540 ESSM Block 2 missiles starting in fiscal year 2024.
- LRASM will achieve additional capacity in fiscal year 2025 following planned investments in fiscal year 2024.
- AGM–88G AARGM-ER currently has excess production capacity for up to 91 missiles. Fiscal year 2024 production capacity will be updated once the fiscal year 2023 contract is awarded.
- AIM–9X will have additional capacity that can be leveraged in fiscal year 2025. They are currently at 1,400/year with a stretch goal to reach 1,650 in fiscal year 2024. Multiple efforts are ongoing to increase production capacity up to 2,000/year with an eventual end State of 2,500/year.

105. Senator ERNST. Secretary Del Toro, can you describe how you have been using multi-year authorities for select munitions?

Secretary DEL TORO.

- The DON is moving in lock-step with the Air Force and OSD to support the Department's Critical Munitions Strategy (CMS).
- The DON continues to view MYPs as a valuable tool as we respond to an increasing demand for munitions.

To that end, the DON has planned MYPs upcoming for Naval Strike Missile and SM–6, and are partnering with other Services to use upcoming MYPs for AMRAAM and LRASM.

106. Senator ERNST. What more can Congress do to support the Navy and the industrial base surge capacity?

Secretary DEL TORO.

- Support the President's Budget and approve MYP and additional Advanced Procurement & Industrial Base requests.
- Continue to support and partner with the Department as we execute and consider expanding authorities to streamline processes to accelerate and efficiently acquire munitions.
  - Continue and expand support for Multiyear Procurement (MYP) and OSD's Large Lot Procurement (LLP) effort.
  - MYP contracts incentivize the OEM to build in LEAN and Six Sigma efficiencies more feasibly than with a 1-year contract; opportunity to deploy and yield efficiencies increases as the period of performance increases.
  - MYP guarantees Tier II, III and IV subcontractors work across the entire scope of the contract period, instead of only a single year of guaranteed work. For the "small companies" a multiyear contract solidifies their production capacity.

QUESTIONS SUBMITTED BY SENATOR DAN SULLIVAN

FORCE DESIGN 2030 DIVESTMENT

107. Senator SULLIVAN. General Berger, you have been taking bold, innovative action on Force Design 2030 as part of your follow through on the National Defense Strategy. You should be commended for this. Nevertheless, given how dramatic and far reaching your actions have been with Force Design 2030, and given some of the criticisms this initiative has received, I am presenting a number of questions that are important to answer in the fullest possible detail.

General Berger, in your statement for the Committee, you asserted that today the Marine Corps fields "the most proficient combined arms teams on the globe." Mili-

taries around the world have long understood combined arms to mean employing a combination of infantry, tanks, cannon artillery, engineers, and close support aircraft in a coordinated manner. Those same militaries today are endeavoring to add these systems to their inventories, and daily we see their utility on the battlefields in Ukraine. Yet, the Marine Corps has divested or are on the way to divesting all the Marine Corps' tanks, two-thirds of its cannon artillery, nearly all its engineering equipment that enables breaching of enemy minefields and obstacles, all its engineering equipment that enables clearing and proofing minefields, all its bridging, and nearly a third of its close support rotary and fixed wing aircraft. How is it possible for the Corps to have "the most proficient combined arms teams on the globe" without these needed weapons and items of equipment?

General BERGER. The Marine Corps defines combined arms in our doctrinal publications, specifically in Marine Corps Doctrinal Publication (MCDP) 1 Warfighting (dtd 4 April 2018). According to MCDP 1, combined arms is "the synchronized and simultaneous application of different arms and elements of combat power to achieve an effect greater than if each element were used separately or sequentially." In detail the combined arms section of MCDP–1 states that:

> *"In order to maximize combat power, we must use all the available resources to best advantage. To do so, we must follow a doctrine of combined arms. Combined arms is the full integration of arms in such a way that to counteract one, the enemy must become more vulnerable to another. We pose the enemy not just with a problem, but with a dilemma—a no-win situation.*
> *We accomplish combined arms through the tactics and techniques we use at the lower levels and through task organization at higher levels. In so doing, we take advantage of the complementary characteristics of different types of units and enhance our mobility and firepower. We use each arm for missions that no other arm can perform as well; for example, we assign aviation a task that cannot be performed equally well by artillery. An example of the concept of combined arms at the very lowest level is the complementary use of the automatic weapon and grenade launcher within a fire team. We pin an enemy down with the high-volume, direct fire of the automatic weapon, making them a vulnerable target for the grenade launcher. If they move to escape the impact of the grenades, we engage them with the automatic weapon.*
> *We can expand the example to the MAGTF level: We use assault support aircraft to quickly concentrate superior ground forces for a breakthrough. We use artillery and close air support to support the infantry penetration, and we use deep air support to interdict enemy reinforcements that move to contain the penetration. Targets which cannot be effectively suppressed by artillery are engaged by close air support. In order to defend against the infantry attack, the enemy must make themselves vulnerable to the supporting arms. If they seek cover from the supporting arms, our infantry can maneuver against them. In order to block our penetration, the enemy must reinforce quickly with their reserve. However, in order to avoid our deep air support, they must stay off the roads, which means they can only move slowly. If they move slowly, they cannot reinforce in time to prevent our break-through. We have put them in a dilemma."*

MCDP 1 explains that combined arms are a fundamental concept of Marine Corps warfare, which involves the integration of various combat kinetic and non-kinetic capabilities. The goal of combined arms, employed with maneuver, " . . . is to shatter the enemy's cohesion through a series of rapid, violent, and unexpected actions which create a turbulent and rapidly deteriorating situation with which the enemy cannot cope." Furthermore, MCDP 1 emphasizes that combined arms are not limited to the integration of combat arms but includes other elements of combat power, such as intelligence, logistics, and command and control.

The definition of combined arms remains valid, though the means and methods of employment continue to evolve under Force Design 2030. One of the Marine Corps' capstone research and development projects in Force Design 2030 is the family of integrated targeting cells. The effort accelerates the evolution of combined arms multi-domain formations by fusing operations, intelligence, and fires functions (i.e., Combined Arms) together in a single center, creating the means for marine units to participate in and control joint fires, while also gaining and maintaining persistent custody of adversary targets. The Marine Corps today now has the ability to fight and contest in all five warfighting domains to include space and cyber. The integration of advanced technological capabilities has increased the lethality of the MAGTF to deter, but also contend against our adversaries in these domains with combat credible formations and capabilities that can provide precision fires at range.

Additionally, Force Design 2030 investments have prioritized sensing and communication capabilities that enable forward postured formations to detect and track adversaries' targets and provide the Joint Force with the necessary target data to project combat power into an Anti-Access/Area Denial environment. These efforts will continue to enable maneuver of units, but more importantly the maneuver of Joint Force units and the maneuver of maritime platforms.

At its core, the Marine Corps modernization effort is focused on enhancing the ability to conduct combined arms. A key element of Force Design 2030 is developing and employing modern capabilities that contribute to a multiple joint "kill webs." This approach also improves our ability to leverage non-lethal fires that provide the combatant commander more options in day-to-day competition and pre-conflict deterrence activities. However, we continue to invest in modern lethal fire platforms that provide a more effective capability than legacy systems. This includes legacy systems such as heavy tanks and towed, tubed cannon artillery that lack the precision and range to be relevant in the maritime and littoral battlespaces applicable to our directed pacing threat. See question #20 for breakdown of retained artillery, as part of our kinetic, combined arms capability. Let us not forget that marines will be able to provide lethal combined arms with precision at ranges that far exceed current capabilities; combined arms inventory for FD2030: mortars, artillery, MLRS family of munitions on versatile JLTV platforms, HIMARS, loitering munitions, NSM, and close air support from RW and FW CAS. A rifle company will be able to destroy most targets on R400 (combined arms company assault range) before leaving the attack position, not the case in a pre-FD2030 rifle company.

Prior to Force Design 2030 initiatives, the Marine Corps focused primarily on kinetic combined arms consisting of surface and air assets making our combined arms capabilities two dimensional. Today, the Marine Corps still maintains the ability to conduct combined arms in the surface, air, and sea domains but we have significantly increased both the kinetic and non-kinetic combined arms capabilities in the cyber and space domains creating a multi-domain capability. Regardless of what assets are utilized to employ combined arms, they will only be as effective as the Command and Control (C2) architecture that is designed to enable the execution of the assets. Therefore, Force Design 2030 has focused significantly on organizing, training, and resourcing the MAGTF to effectively conduct MAGTF C2 at echelon and rapidly transition across the competition continuum to enable all-domain joint and combined kill webs. To do this we must transition from a legacy, air-land battle paradigm to a 21st Century, all-domain, joint single battle mindset. We can no longer accept multiple, disparate C2 systems optimized for single-domain awareness bound by analog/human-speed processing. There are a variety of ongoing efforts to evolve the Service's C2 capability to conduct all domain operations, enable kill webs, and further expand our value to the joint and combined force.

Our Marine Air Command and Control System remains the exemplar for the Service's evolving C2 ecosystem and has showcased an innovative capability to enable kill webs across multiple domains via the Multi-functional Air Operations Center (MAOC). Additionally, we are on track to create the first cadre of kill web subject matter experts via the C2 Interface Control Officer Primary Military Occupational Specialty in 2025.

As evidenced by experiments, exercises, wargames, and analyses, the integration of intelligence, fires, and C2 is at the heart of the targeting cycle and is required to enable and conduct kill webs across multiple domains.

108. Senator SULLIVAN. General Berger, do any of the changes to force structure in Force Design 2030 violate the Title 10 requirement that "[t]he Marine Corps, within the Department of the Navy, shall be so organized as to include not less than three combat divisions and three air wings, and such other land combat, aviation, and other services as may be organic therein?" In your answer, please provide specific references to MCRP 1–10.1 and the exact number of marines in the three divisions and three air wings in 2018 and 2023.

General BERGER. Title 10 United States Code, Section 8063 (United States Marine Corps: composition; functions) states that:

(a) The Marine Corps, within the Department of the Navy, shall be so organized as to include not less than three combat divisions and three air wings, and such other land combat, aviation, and other services as may be organic therein. The Marine Corps shall be organized, trained, and equipped to provide fleet marine forces of combined arms, together with supporting air components, for service with the fleet in the seizure or defense of advanced naval bases and for the conduct of such land operations as may be essential to the prosecution of a naval campaign. In addition, the Marine Corps shall provide detachments and organizations for service on armed vessels of the Navy, shall provide security detachments for the protection of

naval property at naval stations and bases, and shall perform such other duties as the President may direct. However, these additional duties may not detract from or interfere with the operations for which the Marine Corps is primarily organized.

(b) The Marine Corps shall develop, in coordination with the Army and the Air Force, those phases of amphibious operations that pertain to the tactics, technique, and equipment used by landing forces.

(c) The Marine Corps is responsible, in accordance with integrated joint mobilization plans, for the expansion of peacetime components of the Marine Corps to meet the needs of war.

Force Design 2030 adheres to the requirements set forth in Title 10 of the United States Code. The Marine Corps regularly assesses our force structure, capabilities, and readiness to ensure that we can fulfill our obligations as outlined in Title 10. Force Design 2030 optimizes Marine Corps force structure to meet the demands the National Defense Strategy and of modern warfare. This plan was developed with the direction and oversight of senior civilian and military leaders.

After the Commandant's Planning Guidance (CPG) was released in the summer of 2019 and Force Design 2030 modernization began, the Marine Corps has conducted over 400 congressional engagements with Members, Professional Staff Members, and staff from personal offices some of which were repeated engagements or deep dives with the same staff. The Marine Corps has averaged more than five congressional engagements a month for the past 3.5 years. Marine Corps leadership values and honors the need for congressional oversight and has actively supported that lawful requirement. Combat Development and Integration (CD&I) alone has conducted 209 of those engagements as of April 2023. Of those 209 engagements roughly 30 percent were classified briefs at the secret level and above, we must respect the threat and the associated security classification protocols to safeguard critical capabilities. The remaining 70 percent of those engagements were at the unclassified level to be as transparent as possible in our modernization efforts.

Force Design 2030 was also informed by an extensive and continuous review of current and future threats. The Intelligence Community (IC) Annual Threat Assessment continues to highlight the increase in military modernization from the Peoples Republic of China (PRC). The 2023 IC Annual Threat Assessment has identified the PRC as working to field a military by 2027 designed to deter U.S. intervention in a future cross-strait crisis. Furthermore, the 2022 NSS identifies the People's Republic of China (PRC) as the only competitor with the intent and the capacity to reshape the international order. The 2018 and 2022 NDS clearly State the case for change by identifying the Indo-Pacific as the priority theater from a competition and threat perspective.

Force Design 2030 creates a more agile, flexible, and lethal force that is better equipped to operate forward, compete, project power and influence as directed by the National Defense Strategy and other strategic guidance documents. This includes enhancing the Marine Corps' ability to conduct expeditionary and amphibious operations, improving our ability to operate in contested and denied environments, and increasing our capacity to conduct distributed operations with joint and allied partners. These efforts are directly tied to our Title 10 requirements of:

> *"The Marine Corps shall be organized, trained, and equipped to provide fleet marine forces of combined arms, together with supporting air components, for service with the fleet in the seizure or defense of advanced naval bases and for the conduct of such land operations as may be essential to the prosecution of a naval campaign."*

Over the past two decades the Marine Corps has been involved in a land campaign as the Nation directed and required. Force Design 2030 redirects the Marine Corps to our original mission as a naval expeditionary force in readiness that supports the fleet commanders within the naval campaign. Overall, Force Design 2030 intends to ensure that the Marine Corps remains a highly capable and responsive force that can effectively fulfill our obligations under title 10 and other statutory and regulatory requirements.

109. Senator SULLIVAN. General Berger, when responding to a question during the hearing on 18 April 2023 about where the Marine Corps would acquire the weapons and equipment it divested if needed in a future conflict, you stated that a combatant commander is able to tailor forces as required. You noted that it was your responsibility solely to organize, train, and equip marine forces. It stands to reason that marines would need to have the skill and knowledge to operate effectively in conjunction with supporting elements from sister Services, which would require training with them. Including information on units, dates, and locations, where have marines trained with the Army tank units, combat engineers, and bridging units in the past year?

General BERGER. The Marine Corps conducted multiple joint exercises with U.S. Army units in the previous 12 months at the National Training Center at Fort Irwin, California, the Joint Readiness Training Center at Fort Polk, Louisiana, and during Exercise NORTHERN STRIKE 23–1 at Selfridge Air National Guard Base, Michigan. The purpose of this training is to prepare marines to operate effectively in a joint environment. Consequently, Marine Corps Operation Plans (OPLANS) are being revised in accordance with guidance from Combatant Commanders, and capabilities contained in the Defense Readiness Tables and Apportionment Tables in response to Force Design 2030.

Marine Corps training with Army tank, combat engineer, and bridging units in the previous 12 months includes:

- National Training Center 22–10; 3—16 Sept 2022; Ft Irwin, CA
- 3d Low Altitude Air Defense Battalion trained with 2d Brigade Combat Team, 1st Armored Division to increase close-in, low altitude, surface-to-air weapons fire proficiency and readiness in support of maneuver elements and joint force.
- National Training Center 23–05; 20 Feb—31 Mar 2023; Ft Irwin, CA
- 1st ANGLICO trained with 2d Armored Brigade Combat Team, 3d Infantry Division to increase Joint Terminal Attack Controller proficiency and readiness.
- National Training Center 23–06; 20 Mar—30 Apr 2023; Ft Irwin, CA
- 3d ANGLICO trained with 3d Armored Brigade Combat Team, 1st Armored Division to increase Joint Terminal Attack Controller proficiency and readiness.
- NORTHERN STRIKE 23–1; 20—29 Jan 2023; Selfridge Air National Guard Base, MI
- VMFA–115 trained with 1st Battalion, 120th Field Artillery Regiment, 32d Infantry Brigade Combat Team to increase proficiency in Expeditionary Advanced Base Operations, cold weather Joint Close Air Support, Forward Air Controller-Airborne; Tactical Air Control-Airborne, Strike Coordination and Recon, Armed Recon, and Suppression of Enemy Air Defenses.
- Joint Readiness Training Center 23–04; 20 Feb—5 Mar 2023; Ft Polk, LA
- 2d ANGLICO trained with 2d Infantry Brigade Combat Team, 10th Mountain Division to increase Joint Terminal Attack Controller proficiency and readiness.
- Joint Readiness Training Center 23–07; 12 Apr—13 May 2023; Ft Polk, LA
- 6th ANGLICO trained with 3d Infantry Brigade Combat Team-Airborne, 82d Airborne Division to increase Joint Terminal Attack Controller proficiency and readiness.

110. Senator SULLIVAN. General Berger, in your statement for the Committee, you noted that". . . the Marine Corps is now complete with our major divestments. Reducing the approved acquisition objectives (AAO) of major programs like the CH–53K or F–35 at this point would not produce resources for investment elsewhere and would be premature decisions." Because you have cut squadrons it is unclear where the major program aircraft you list will go if the Marine Corps retains the numbers of aircraft in the Program of Record (POR). Will a future commandant come back to Congress seeking funds for the personnel and support equipment required to again stand up the needed squadrons?

General BERGER. Force Design 2030 not only provides a roadmap for Marine Aviation to modernize and optimize into a more capable agile expeditionary force, but Force Design 2030 also sets Marine Aviation on the path to look to the future. For example, Marine Aviation is teaming with U.S. Navy in the development of the Marine Air Ground Task Force Unmanned Expeditionary Family of Systems (FoS). These efforts include acceleration of prototyping and experimentation of TACAIR Collaborative Combat Aircraft and building a common interoperable system control architecture for control of Joint assets. In parallel, Marine Aviation is also exploring the Vertical Takeoff and Landing Family of Systems (VTOL FOS), where the Logistics Connector is the first major effort to support the execution of the Stand-in Force (SIF) through airborne logistics in a contested environment. This portfolio also includes but is not limited to Air Loitering Munitions, an Attack/strike capability, and a future Assault support capability to replace our extant platforms.

Force Design 2030 has expanded, optimized, and enhanced Marine Aviation's ability to provide unique and unmatched lethal, sustainable, and fiscally responsible capabilities to the MAGTF, JFMCC, and Joint Force.

The Marine Corps Program of Record (POR) for F–35 is 420, and 200 for CH–53Ks. Over the last two future-years defense programs (FYDP), these numbers have not changed. Nothing in the Force Design 2030 modernization efforts, changes these programs of record and we have no plan to reduce the total number of aircraft.

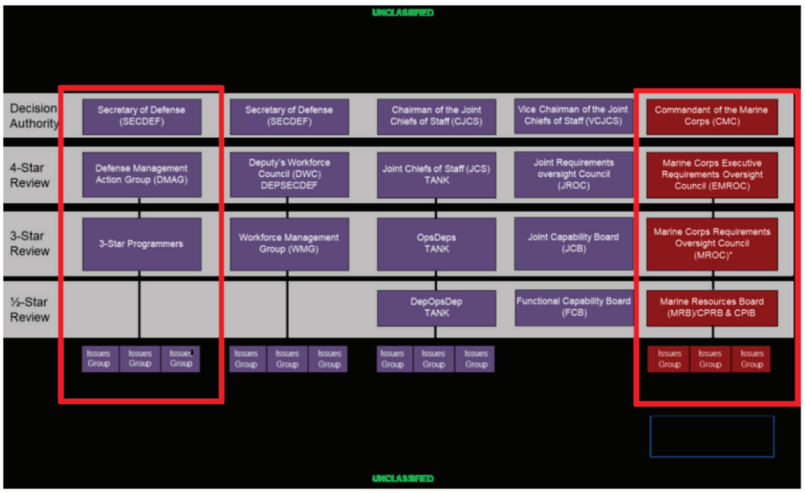
Historically, the number of squadrons (organizational construct) and aircraft (composition) within aviation units has always evolved inside the Program of Records (POR) to ensure the Marine Corps remains the Nation's crisis response force while modernizing and optimizing the fleet to meet the challenges of the future operating environment. To provide examples of this evolution, between 1990 and 2016:

- Between 1990 and 2015, CH–53 Active component Marine Heavy Lift Helicopter Squadrons (HMH) fluctuated from nine to ten, to nine, to ten, to eight.
- Between 1990 and 2016, H–1 Active component Marine Light Attack Helicopter Squadrons (HMLA) fluctuated from six to eight, to nine, to eight, to seven.
- Between 2011 to 2014, MV–22 Active component Marine Medium Tiltrotor Squadrons (VMM) fluctuated from 18 to 16 to 18.
- F/A–18 squadrons changed organizational construct or composition nine times between 1990–2016.
- In 1992, the Marine Corps had only one 18 plane EA–6B Prowler squadron which disaggregated into four squadrons with five planes each.
- In 2007, the Marine Corps planned an all F–35B fleet consisting of 14 squadrons of 10 aircraft and seven squadrons of 14 aircraft. o In 2009, we increased seven of the squadron's allocations to 16 aircraft.
- In 2011, F–35C was incorporated.
- In 2013, the plan changed to nine squadrons of 16 aircraft and nine squadrons of 10 aircraft.
- All these changes were done without adjusting the Program of Record.

Force Design 2030 modernization optimized Marine Aviation to operate from austere, distributed locations and across extended distances while providing cutting-edge advantages to the naval expeditionary force through the six functions of Marine Aviation, which consists of: Offensive Air Support, Anti-Air Warfare, Assault Support, Air Reconnaissance, Electronic Warfare, and Control of Aircraft and Missiles. Marine Aviation is manned, trained, and equipped to conduct the six functions and is integral to tomorrow's Marine Air-Ground Task Force (MAGTF), bringing lethal, agile, and sustainable capabilities to compete with, deter, and—if necessary—defeat our Nation's adversaries. These functions have not changed as a result of Force Design 2030.

111. Senator SULLIVAN. General Berger, the Marine Corps' divestment of its tanks and assault breaching, route clearance, and bridging assets raises concerns about

the Marine Corps' ability to meet its Title X requirement to organize, train and equip fleet marine forces "—for the conduct of such land operations as may be essential to the prosecution of a naval campaign." The Commandant has stated previously that the Marine Corps will get these items from the Army. Was an agreement in place with the Army when the Marine Corps began Force Design 2030 divestments?



General BERGER. Force Design intends to ensure that the Marine Corps remains a highly capable and responsive force that can effectively fulfill its obligations under Title 10 and other statutory and regulatory requirements that state:

> *"The Marine Corps shall be organized, trained, and equipped to provide fleet marine forces of combined arms, together with supporting air components, for service with the fleet in the seizure or defense of advanced naval bases and for the conduct of such land operations as may be essential to the prosecution of a naval campaign."*

The Marine Corps' Expeditionary Advanced Based Operations and Stand-In Forces (SIF) concepts are two of our primary modernization efforts that focus on distributed forces that can operate inside adversaries' weapons engagement zone, sense and make sense of the environment, and contribute to the joint kill web. Both concepts directly support the Marine Corps' title 10 requirements as an expeditionary force-in readiness in support of the overall naval campaign. After two decades of engaging in a prolonged land campaign in the Middle East, the 2018 and 2022 National Defense Strategies (NDS) redirect the services' focus toward Great Power Competition. After detailed planning, historical analysis, and a rigorous Campaign of Learning informed by multiple wargames it was determined that the Marine Corps was not prepared to support the naval campaign in the 21st Century threat environment. Platforms that were heavy, difficult to sustain, and provided less relevancy to an expeditionary environment were determined to be a lower priority for investments. Furthermore, decisions to divest were supported by the inherently joint nature in which the services are employed by combatant commanders while forward deployed.

There was no formal agreement with the U.S. Army when the Marine Corps began Force Design modernization efforts. After multiple iterations of wargaming, analysis, and strategic guidance, heavy land-combat capabilities were determined to not be a high priority for prosecuting the landward portion of a naval campaign in the areas prioritized to the naval Services in the NDS. This is especially true in the modern threat environment that is characterized by advanced technological capabilities that operate in multi-domain formations with long-range precision fires platforms creating an anti-access, area-denial (A2/AD) dilemma for the surface naval fleet. The Marine Corps divested of tanks, route clearance, assault breaching, etc. to invest in new capabilities more readily applicable to the future joint maritime operating environment.

Furthermore, the Marine Corps follows the Planning, Programming, Budgeting, Execution, and Analysis (PPBEA) process for all divestment and investment decisions. Within this process the Marine Corps develops its investment plans and balances those against available resources which feed the Department of the Navy's (DON) Program Objective Memorandum (POM). As part of PPBEA, the Marine Corps' budget request is adjudicated and scrutinized at all levels of leadership prior to its final submission to the Office of Management and Budget. Below is a graphical depiction of the DOD deliberation and decision bodies:

The two most relevant decision bodies are the Marine Corps' Executive Requirements Oversight Council (E-MROC) and the Defense Management Action Group (DMAG). Were the Marine Corps to pursue further divestments, they would be identified during investment planning as potential offsets. The final decision on any divestment would be made by the Commandant during an E-MROC on the Marine Corps investment plan. Marine Corps investment planning is a holistic service-wide effort. This includes the Marine Corps component commands to the joint force, i.e. Marine Forces Pacific, Marine Forces North, Marine Forces Europe/Africa, etc. These commands represent the service and advise their respective geographic combatant commands on potential force offerings and capabilities provided by the Marine Corps. The Commandant of the Marine Corps is the approving authority for the service's investment plan and its subsequent POM submission to the DON. Prior to being submitted to OSD via the DMAG, the Marine Corps' POM is briefed at the Naval Integration Planning and Programming Board which is chaired by the Secretary of the Navy. Once the SECNAV approves the Navy and Marine Corps POMs, they are submitted to the Office of the Secretary of Defense. Within OSD the primary office that reviews and scrutinizes submissions is the OSD Cost Assessment and Program Evaluation (CAPE). After being thoroughly reviewed, the service chiefs then brief the DMAG, chaired by the Secretary of Defense. The final output of this process is included within the Department of Defense portion of the President's Budget Request. Ultimately, the service is a force provider to the geographic combatant commands. Through the use of component commands, the Commandant of the Marine Corps, under his Title 10 authorities, mans, trains, and equips, the service based on the needs of the joint force.

112. Senator SULLIVAN. General Berger, are there any current agreements with the Army or other services on these divested or reduced capabilities?

General BERGER. No. While there are formal joint agreements for capabilities such as aerial refueling, theater level logistics, etc. there is no formal agreement with the other services concerning these capabilities divested of or reduced as a part of Force Design modernization efforts. It is worth repeating that any future fight will inherently be a joint fight. In that fight, we, as services, are tasked with manning, training, and equipping our respective forces to provide those forces to a Joint Force Commander who will have the authority to employ those forces with mutually supporting joint capability without the need for formal agreements or MOUs.

The Marine Corps is organized, trained, and equipped to fight as a Marine Air Ground Task Force (MAGTF). The most common MAGTFs in the Marine Corps is the Marine Expeditionary Unit (MEU) which is organized across the three ship Amphibious Ready Group (ARG) based on the threat environment and historical trends of Combatant Commander mission assignments to the ARG/MEU team. The ARG/MEU team remains a tailorable and integrated tool for the joint force that is already working in that capacity.

Given its modular organization, the MAGTF remains tailorable, able to receive attached units from other services or nations, such as naval construction battalions, or infantry/armor brigades. In 2016, the 26th MEU with the Kearsarge ARG was operating in the Central Command (CENTCOM) area of operations when the Combined Joint Task Force-Operation Inherent Resolve (CJTF-OIR) was exploring different options for fire support accelerants in support of the fight against Islamic State of Iraq and Syria (ISIS) forces in Northern Iraq. The CJTF-OIR tasked the 26th MEU with sending an artillery battery ashore to provide an Indirect Fire (IDF) capability to support Iraqi Forces in offensive operations to regain control of Mosul. The 26th MEU rapidly tasked organized a force that was comprised of an artillery battery, a reduced infantry company, and critical enablers that would provide specific capabilities for the unit. However, the artillery battery did not have a robust counter fire radar system that was critical for the threat environment. The Army had a AN/TPQ–53 radar system in Kuwait that accurately detects mortars, rockets, and artillery point of origins (POO) and expected point of impact (POI) to rapidly develop a counter-fire mission. The Army also had a Counter-Rocket, Artillery, and Mortar (CRAM) system in Kuwait that provides force protection measures to ground force units from enemy IDF. Both the AN/TPQ–53 and the C-RAM assets were attached to the task organized force that the 26th MEU assigned to the mission. This is just one small example of the MEU's capacity to rapidly task organize for an assigned mission and integrate within the Joint Force to meet the operational requirements of the Combatant Command.

113. Senator SULLIVAN. General Berger, has the Marine Corps formalized any agreement with the Army to provide equipment or capabilities since 2019?

General BERGER. No; however, should Marine Corps forces find themselves in a land campaign requiring the use of heavy armor, and if said armor is available within the theater of operations, the Joint Force Commander has the authority to task organize by pairing Marine Corps infantry formations with U.S. Army armored formations.

The Marine Corps and the U.S. Army regularly train alongside one another employing the full spectrum of the respective service's capabilities. Once forward deployed in response to crisis or contingency, it is the Joint Force Commander's responsibility and prerogative to task organize his U.S. Army and Marine Corps formations in such a way that make sense to accomplish the mission. It is worth repeating that any future fight will inherently be a joint fight. In that fight, we, as services, are tasked with manning, training, and equipment our respective forces to provide those forces to a Joint Force Commander who will have the authority to employ those forces with mutually supporting joint capability.

114. Senator SULLIVAN. General Berger, what assurances has the Marine Corps received from the U.S. Army about the availability of these units or assets for training and integrating with marine formations during combat operations?

General BERGER. The Marine Corps and the U.S. Army regularly train alongside one another employing the full spectrum of the respective service's capabilities. Once forward deployed in response to crisis or contingency, it is the Joint Force Commander's responsibility and prerogative to task organize his U.S. Army and Marine Corps formations in such a way that make sense to accomplish the mission. It is worth repeating that any future fight will inherently be a joint fight. In that fight, we, as services, are tasked with manning, training, and equipment our respective forces to provide those forces to a Joint Force Commander who will have the authority to employ those forces with mutually supporting joint capability.

115. Senator SULLIVAN. General Berger, during the May 2022 Department of the Navy posture hearing, I asked you to "provide to this Committee a timeline and a chart that anticipates year by year between now and 2030, or maybe even looking back when Force Design 2030 began, to what we are divesting and what we are gaining and how will that make sure that the gap in the trough between divestment in combat capability is not so big that it poses risk to the force or mission." You answered "I can absolutely do that. And that is the rationale that is the reason behind publishing each year, this is where we are with Force Design, this is what we have learned today, the actions taken, this is the plan ahead, which we published last month for this year." It has been almost a year since you made that commitment. Please provide the information requested in 2022 in a detailed format that clearly visualizes when capabilities have been divested or reduced since 2019?

General BERGER. The product you are referring to is the Force Design 2030 Annual Report. Since becoming Commandant, I have published an unclassified report to update the service and our various stakeholders about where we are it in our

modernization. These reports capture and provide rationale to all decisions related to divestment. The 2022 report was released in May 2022.

The 2023 Force Design 2030 annual report was released on 5 June. The annual reports from 2020–23 are included as enclosure 2 "FD 2030 Annual Update 2020–2023" (please see Appendix).

116. Senator SULLIVAN. General Berger, can you provide a timeline that indicates which Marine Corps capabilities, including equipment, Military Occupational Specialties, and number of personnel, have been divested or reduced because of Force Design 2030, as requested in Section 1023 of the fiscal year 2023 NDAA?

General BERGER. Over the past five President's Budget cycles from fiscal year 2020 through fiscal year 2024, the Marine Corps divested $18.2 billion of legacy equipment and invested $15.8 billion in modernization. The Marine Corps adopted a funding strategy based on investing in capabilities to maintain operational relevance, budget constraints, and compliance to strategic guidance. The following table shows the amount of funding divested and invested over the Future Years Defense Program (FYDP) in each of the five most recent budget cycles:

USMC DIVEST TO INVEST (PB-20 TO PB-24)						
($B)	PB-20	PB-21	PB-22	PB-23	PB-24	Total*
Divestment	0.7	1.8	5.9	8.7	1.1	18.2
Investment	0.7	1.2	5.9	7.0	1.1	15.8

*Note: Numbers may not add due to rounding

With the drawdown of forces supporting operations in CENTCOM in 2014, the Marine Corps identified the necessity to transition from sustaining a land campaign to modernizing the force in support of maritime campaigning inherent in our Title 10 requirements. To maintain operational and tactical relevance on a modern battlefield due to the evolution of technology, the Marine Corps divested of legacy force structures that were of lesser relevance for a naval expeditionary service. Additionally, budget constraints were identified by NDS architects and Marine Corps' Force Design 2030 planners with the underlying assumption that the department's topline budget would grow modestly at a 2 percent inflation rate. Furthermore, the Marine Corps' divestment strategy followed the 2018 and 2022 NDS and the associated Defense Planning Guidance that directed the divestment of legacy capabilities and modernization at the speed of the pacing threat.

In the President's Budget 2020 cycle, the Marine Corps reallocated $0.7 billion by divesting of the AN/TPS–59 Air Defense Radar, AAV7A1 Project Improvement Program, and the MV–22 Aerial Refueling System (VARS). These funds were used to invest in such programs as Ground Based Air Defense (GBAD), F–35 spares and Block 4 modification, nascent Command-and-Control systems, sensors, and communications platforms.

In the President's Budget 2021 cycle, we reallocated $1.8 billion by divesting of certain ground programs such as the Light Armored Vehicle Program Improvement Project (LAV PIP) and M1A1 Weapons and Combat Vehicle Modification Kits. The Marine Corps also made a 2.3K Active Component reduction in end-strength, and unit modifications of Fleet Anti-terrorism teams and Combat Logistics Battalion. The Marine Corps used $1.2 billion of these funds to invest in Strike/Anti-surface warfare capabilities, network, sensors, intelligence platforms, Air Defense, Ground Combat lethality modernization, and S&T programs.

In the President's Budget 2022 cycle, as part of the overall Force Design 2030 investment strategy, the Marine Corps made our second largest divestment of $5.9 billion by reducing the Active Component end-strength by 5,100, completing our divestments in legacy force structure such as Tanks, Bridging Companies, and Law Enforcement Battalions in addition to reducing Active and Reserve Infantry Battalions, Cannon Artillery Batteries, and Aviation Squadrons. One hundred percent of these divestments were directly used to invest in critical ground-based fires programs such as Navy Marine Corps Expeditionary Ship Interdiction System (NMESIS) and Organic Precision Fires Family of Systems (OPF FoS). Advanced sensor investments included the MAGTF Unmanned Aircraft System Expeditionary (MUX)/Medium Altitude Long Endurance (MALE)—MQ9A, Ground/Air Task Oriented Radar (G/ATOR) and MAGTF Electronic Warfare Ground Family of Systems (MEGFoS). Furthermore, critical ground networking investments were made in our Network on The Move (NOTM) and Marine Corps Enterprise Network (MCEN).

In the President's Budget 2023 cycle, the Marine Corps made our largest divestment of $8.7 billion with a 744 reduction in Active component end-strength, as well as further reduction to legacy capabilities such as the Marine Corps Security Cooperation Group (MCSCG) and Marine Augmentation Program-Korea (MAP-K) programs and delayed procurement of Joint Light Tactical Vehicles (JLTVs), F–35B Joint Strike Fighters, CH–53K Heavy Lift Helicopters. We also took unique approaches to save resources by reducing capacity during Marine Week, made a 10 percent reduction to Permanent Change of Station (PCS) moves, and a 15 percent reduction to Headquarters Marine Corps (HQMC) staff positions to include Marine Forces Reserve (MARFORES) and the supporting establishment. Nearly all these divestments, over $7.0 billion, were directly used to modernize critical areas that enable Force Design 2030 by investing in multi-domain areas such as Command and Control (Big Data Platform), Counter Air, Counter C5ISR–T, MQ–9A Unmanned Aircraft System (UAS) sensors and enablers, and Anti-Surface Warfare capabilities.

In the President's Budget 2024 cycle, the Marine Corps reallocated over $1.1 billion from such programs as Organic Precision Fires, Amphibious Combat Vehicles, and Advanced Reconnaissance Vehicles, as well as a 15 percent reduction in the Marine Corps Bands program to eight field bands. All divested funds were directed utilized to invest in critical warfighting capabilities such as Signature Management (YETI), Secure Expeditionary Resilient Position, Navigation and Timing (SERPNT), Light Marine Air Defense Integrated System (L-MADIS), and Tactical Communication Modernization. Aviation investments were utilized to increase Flight Hour Program and the MV–22 nacelle improvement program. Additionally, several Talent Management investments were made, including increased funding for Sexual Assault Prevention and Response programs and the Marine Corps Embassy Security Guard.

After completing five budget cycles with this approach, the Marine Corps does not plan to divest any more capacity or legacy programs. As part of the modernization strategy, the CMC prioritized the identification of risk areas to mitigate near term readiness and installations. The Marine Corps understands that modernization strategies in any organization will not be successful if the Marine Corps:

- fails to resource our major initiatives;
- fails to make the hard choices to align available resources with the strategy's level of ambition;
- fails to effectively incorporate new technologies and identify, recruit, and leverage new talent; and
- fails to reduce the barriers that limit collaboration with allies and partners.

We aim to mitigate these and other risks through ruthless prioritization. The Marine Corps is now at a juncture where the service can no longer accept additional risk in readiness and installations.

The two charts below identify specific military occupation specialties (MOS) (Graph 1) and platforms (Graph 3) that the Marine Corps reduced in capacity, divested completed of, or transitioned due to modernization efforts tied to strategic guidance.

The Marine Corps regularly assesses its force structure, capabilities, and readiness to ensure that it can fulfill its obligations as outlined in title 10. Force Design 2030 seeks to optimize the Marine Corps' force structure to meet the demands of modern warfare. With the reduction in capacity in specific Military Occupation Specialties (MOS), Force Design 2030 acted on the necessity to train and equip critical enablers that enable the Marine Corps and forward deployed formations to operate in multi-domain environments. As a result, the Marine Corps invested in critical MOS that were either non-existent pre-Force Design 2030 or in need of acceleration. The increased investment in critical enablers such as intelligence, networks, communications, space, and cyber have accelerated the ability of the Marine Corps to operate in multi-domain operations at the tactical level.

An important aspect to distinguish in the Marine Corps' modernization is the distinct difference between a divestment in a platform compared to a transition or modernization in a platform. Based on analysis, wargaming, and experimentation the Commandant concluded in 2020 that the Marine Corps' inventory of bridging platforms—Armored Vehicle Launched Bridge (AVLB), Medium Girder Bridges (MGB), and Improved Ribbon Bridges (IRB), were best suited for land operations ashore. For reference, the AVLBs, MGBs, and IRBs all require large black-bottom commercial sealift or Maritime Prepositioning Ships to get to the fight, requiring permissive offload at seaports and significant preparation time to prepare for onward movement to support maneuver. Even when permissive offloads are conducted, mobility mismatch between maneuver forces and engineering and breaching capabilities can pose tactical challenges. During the opening land conflict of the 2003 invasion of Iraq, maneuver forces routinely outpaced supporting assets such as heavy logistical assets, bridging, and breaching capabilities. The tempo and threat environment of the future operating environment makes these heavy capabilities irrelevant, particularly considering the limited quantity of systems and the significant requirements for large shipping and aircraft to move these capabilities into position across a maritime theater.

However, many of the above platforms are currently being transitioned to modernized platforms. The Amphibious Assault Vehicle (AAV) is transitioning to the Amphibious Combat Vehicle (ACV). The Marine Corps will have 168 ACVs fielded by June 2023. This equates to 27 percent of the 632-vehicle acquisition objective. These ACVs will equip seven Fleet Marine Force ACV Platoons, a training allocation at the Assault Amphibian School, and a test set at the Amphibious Vehicle Test Branch. Additionally, the High Mobility Multipurpose Wheeled Vehicles (HMMWV) have begun a programmatic sunset synched with the fielding and complete service transition to the Joint Light Tactical Vehicles (JLTV). The Marine Corps will have 3,867 JLTVs and 332 JLTV trailers fielded by June 2023. This equates to 31 percent of the 12,500 vehicle fiscal year 2030 acquisition objective and 8.3 percent of the 4,000 JLTV trailer fiscal year 2030 acquisition objective. 84 percent of these vehicles will be fielded to I, II, and III Marine Expeditionary Forces. The remaining vehicles will be allocated to Marine Special Operations Command, Training and Education Command, and supported specialty truck programs (i.e., the Network on the Move and Marine Air Defense Integrated System programs).

117. Senator SULLIVAN. General Berger, which of the capabilities being divested or reduced under Force Design 2030 will be provided by other services?

General BERGER. The primary capability divested by the Marine Corps as part of Force Design 2030 is the M1A1 main battle tank. Given that the Marine Corps has historically and by U.S. Code been responsible for the "conduct of such land operations as may be essential to the prosecution of a naval campaign" and informed by warfare trends, the Marine Corps divested tanks with the understanding that

the Army possesses adequate armor capacity to respond to the demands of the joint force.

Through detailed operational planning, historical analysis, and a rigorous Campaign of Learning we made some hard decisions regarding engineering and breaching capabilities. Consequently, the Marine Corps divested its inventory of bridging platforms to include the Armored Vehicle Launched Bridge (AVLB), Medium Girder Bridges (MGB), and Improved Ribbon Bridges (IRB) which are too heavy and slow to be relevant in modern operations. The Marine Corps and Army are working collectively with industry to develop a more suitable lightweight, scalable tactical bridging platform that can be transported on current Joint Light Tactical Vehicles (JLTVs). The Marine Corps is currently awaiting delivery of three test vehicles for experimentation within our engineer formations. In the meantime, the Marine Corps retains its capability to do nonstandard bridging. On a frequent basis marine engineers are used for theater security cooperation and for support to other government agencies to construct non-standard bridges, which continues to build their experience with the use of local materials

The Marine Corps also totally divested of its Active component law enforcement (LE) battalions; the Marine Corps retains one Reserve component LE battalion, 4th LE Battalion. The Marine Corps is confident that most LE battalion mission sets and requirements can be fulfilled by other Marine Corps formations during the conduct of a naval campaign. Any additional requirement for law enforcement exceeding what might be handled by organic Marine Corps units or by activating components of 4th LE Battalion will have to be handled by the Army.

The Marine Corps has already effectively integrated with Army units and Army armor formations during past joint exercises. Examples include:

1. BALIKATAN 23: I MEF units and 25th Combat Aviation Brigade conducted a combined, joint all-domain rehearsal exercise with the Armed Forces of the Philippines and Australian Defense Forces to enhance warfighting advantage, strengthen alliances and partnerships, reorient theater posture, dominate the information environment, and ensure a free and open IndoPacific in April 2023.
2. TALISMAN SABER 21: 31st MEU, MRF-D, and 94th Army Air and Missile Defense Command units conducted a biennial combined exercise with Australian Defense Forces to enhance interoperability at the tactical level through a bilateral field training exercise and improve warfighting lethality by training in a high end, high-intensity environment under real-world threat conditions in July 2021.
3. REDLEG TEMPEST 21: SPMAGTF-CR-CC and 130th Field Artillery Brigade participated in a joint, bilateral exercise with the Royal Jordan Armed Forces at Muwaffaq Salti Air Base in Jordan focused on fire support coordination, mortar employment, and increasing interoperability among participants in August 2021.
4. SABER STRIKE 18: USAREUR led company level FTX/LFX and Brigade/Battalion level CPX/CAX designed to sustain U.S. and Baltic Partner interoperability in the area of ISAF/OCO support focusing on counterinsurgency operations. Tank Plt from 4th Tank BN, 4th MARDIV. Latvia, June 2018.
5. NORTHERN STRIKE: National Guard Exercise in Michigan; typically supported by 4th MARDIV, tank platoon from 4th Tank Bn, 4th MARDIV; Michigan, August 2018
6. JOINT WARFIGHTING ASSESSMENT 19.1: An annual exercise that provides participating organization the opportunity to conduct joint operations in a realistic and large scale live/virtual/constructive training environment. Trains Army units below the corps level, services, SOF, and multinational participants. Marine forces attached to the CFLCC to simulate the expansion of the lodgment. Tank Co from 4th Tank BN, 4th MARDIV; FT Bliss, TX April—May 2019.

Moreover, the Marine Corps, organized as a MEU has routinely integrated with the Joint Force to provide increased capabilities. In 2016, the 26th MEU with the Kearsarge ARG was operating in the Central Command (CENTCOM) area of operations when the Combined Joint Task Force-Operation Inherent Resolve (CJTF-OIR) was exploring different options for fire support accelerants in support of the fight against Islamic State of Iraq and Syria (ISIS) forces in Northern Iraq. The CJTF-OIR tasked the 26th MEU with sending an artillery battery ashore to provide an Indirect Fire (IDF) capability to support Iraqi Forces in offensive operations to regain control of Mosul. The 26th MEU rapidly tasked organized a force that was comprised of an artillery battery, a reduced infantry company, and critical enablers that would provide specific capabilities for the unit. However, the artillery battery

did not have a robust counter fire radar system that was critical for the threat environment. The Army had a AN/TPQ–53 radar system in Kuwait that accurately detects mortars, rockets, and artillery point of origins (POO) and expected point of impact (POI) to rapidly develop a counter-fire mission. The Army also had a Counter-Rocket, Artillery, and Mortar (CRAM) system in Kuwait that provides force protection measures to ground force units from enemy IDF. Both the AN/TPQ–53 and the C-RAM assets were attached to the task organized force that the 26th MEU assigned to the mission.

118. Senator SULLIVAN. General Berger, does the Marine Corps have any formal agreement or plan with other services to provide capabilities being divested or reduced under Force Design 2030 such as bridging or assault breaching?

General BERGER. While there are no formalized agreements for other services to provide capabilities divested or reduced under Force Design 2030, it is important to note that any future fight will be a joint fight. In such a joint fight, we, as a service, are tasked with manning, training, and equipping our respective forces provide those forces to a Joint Force Commander who will have the authority to employ those forces with mutually supporting joint capability without the need for formal agreements or MOUs. It is highly unlikely that the Marine Corps will deploy as a stand-alone force to fight against a peer adversary for an extended periods absent support from the other services or the militaries of allied and partner nations.

Force Design intends to ensure that the Marine Corps remains a highly capable and responsive for the Joint Force that can effectively fulfill its obligations under title 10 and other statutory and regulatory requirements that state:

"The Marine Corps shall be organized, trained, and equipped to provide fleet marine forces of combined arms, together with supporting air components, for service with the fleet in the seizure or defense of advanced naval bases and for the conduct of such land operations as may be essential to the prosecution of a naval campaign."

The Marine Corps' *Expeditionary Advanced Based Operations and Stand-In Forces* (SIF) concepts are two of our primary modernization efforts that focus on distributed forces that can operate inside adversaries' weapons engagement zone, sense and make sense of the environment, and contribute to the joint kill web. Both concepts directly support the Marine Corps' title 10 requirements as an expeditionary force-in readiness in support of the overall naval campaign. After two decades of engaging in a prolonged land campaign in the Middle East, the 2018 and 2022 National Defense Strategies (NDS) redirect the services' focus toward Great Power Competition. After detailed planning, historical analysis, and a rigorous Campaign of Learning informed by multiple wargames it was determined that the Marine Corps was not prepared to support the naval campaign in the 21st Century threat environment. Platforms that were heavy, difficult to sustain, and provided less relevancy to an expeditionary environment were determined to be a lower priority for investments. Furthermore, decisions to divest were supported by the inherently joint nature in which the services are employed by combatant commanders while forward deployed.

FORCE DESIGN 2030 INVESTMENT

119. Senator SULLIVAN. General Berger, can you provide a timeline that indicates which Marine Corps capabilities, including equipment and Military Occupational Specialties, have been added because of Force Design 2030, including when they will achieve Initial Operational Capability and Full Operational Capability?

General BERGER. The Marine Corps regularly assesses its force structure, capabilities, and readiness to ensure that it can fulfill its obligations as outlined in Title 10. Force Design 2030 seeks to optimize the Marine Corps' force structure to meet the demands of modern warfare. With the reduction in capacity in specific Military Occupation Specialties (MOS), Force Design 2030 acted on the necessity to train and equip critical enablers that enable the Marine Corps and forward deployed formations to operate in multi-domain environments. As a result, the Marine Corps invested in critical MOS that were either non-existent pre-Force Design 2030 or in need of acceleration. The increased investment in critical enablers such as intelligence, networks, communications, space, and cyber have accelerated the ability of the Marine Corps to operate in multi-domain operations at the tactical level.

Over the past five President's Budget cycles from fiscal year 2020 through fiscal year 2024, the Marine Corps divested $18.2 billion of legacy equipment and invested $15.8 billion in modernization. The Marine Corps adopted a funding strategy based on investing in capabilities to maintain operational relevance, budget constraints, and compliance to strategic guidance. The following table shows the amount of funding divested and invested over the Future Years Defense Program (FYDP) in each of the five most recent budget cycles:

USMC DIVEST TO INVEST (PB-20 TO PB-24)						
($B)	PB-20	PB-21	PB-22	PB-23	PB-24	Total*
Divestment	0.7	1.8	5.9	8.7	1.1	18.2
Investment	0.7	1.2	5.9	7.0	1.1	15.8

**Note: Numbers may not add due to rounding*

With the drawdown of forces supporting operations in CENTCOM in 2014, the Marine Corps identified the necessity to transition from sustaining a land campaign to modernizing the force in support of maritime campaigning inherent in our Title 10 requirements. To maintain operational and tactical relevance on a modern battlefield due to the evolution of technology, the Marine Corps to divest of legacy force structures that were of lesser relevance for a naval expeditionary service. Additionally, budget constraints were identified by NDS architects and Marine Corps' Force Design 2030 planners with the underlying assumption that the department's topline budget would grow modestly at a 2 percent inflation rate. Furthermore, the Marine Corps' divestment strategy followed the 2018 and 2022 NDS and the associated Defense Planning Guidance that directed the divestment of legacy capabilities and modernization at the speed of the pacing threat.

In the President's Budget 2020 cycle, the Marine Corps reallocated $0.7 billion by divesting of the AN/TPS–59 Air Defense Radar, AAV7A1 Project Improvement Program, and the MV–22 Aerial Refueling System (VARS). These funds were used to invest in such programs as Ground Based Air Defense (GBAD), F–35 spares and Block 4 modification, nascent Command-and-Control systems, sensors, and communications platforms.

In the President's Budget 2021 cycle, we reallocated $1.8 billion by divesting of certain ground programs such as the Light Armored Vehicle Program Improvement Project (LAV PIP) and M1A1 Weapons and Combat Vehicle Modification Kits. The Marine Corps also made a 2,300 Active Component reduction in end-strength, and unit modifications of Fleet Anti-terrorism teams and Combat Logistics Battalion. The Marine Corps used $1.2 billion of these funds to invest in Strike/Anti-surface

warfare capabilities, network, sensors, intelligence platforms, Air Defense, Ground Combat lethality modernization, and S&T programs.

In the President's Budget 2022 cycle, as part of the overall Force Design 2030 investment strategy, the Marine Corps made our second largest divestment of $5.9 billion by reducing the Active Component end-strength by 5,100, completing our divestments in legacy force structure such as Tanks, Bridging Companies, and Law Enforcement Battalions in addition to reducing Active and Reserve Infantry Battalions, Cannon Artillery Batteries, and Aviation Squadrons. One hundred percent of these divestments were directly used to invest in critical ground-based fires programs such as Navy Marine Corps Expeditionary Ship Interdiction System (NMESIS)and Organic Precision Fires Family of Systems (OPF FoS). Advanced sensor investments included the MAGTF Unmanned Aircraft System Expeditionary (MUX)/Medium Altitude Long Endurance (MALE)—MQ9A, Ground/Air Task Oriented Radar (G/ATOR) and MAGTF Electronic Warfare Ground Family of Systems (MEGFoS). Furthermore, critical ground networking investments were made in our Network on The Move (NOTM) and Marine Corps Enterprise Network (MCEN).

In the President' Budget 2023 cycle, the Marine Corps made our largest divestment of $8.7 billion with a 744 reduction in Active Component end-strength, as well as further reduction to legacy capabilities such as the Marine Corps Security Cooperation Group (MCSCG) and Marine Augmentation Program-Korea (MAP-K) programs and delayed procurement of Joint Light Tactical Vehicles (JLTVs), F–35B Joint Strike Fighters, CH–53K Heavy Lift Helicopters. We also took unique approaches to save resources by reducing capacity during Marine Week, made a 10 percent reduction to Permanent Change of Station (PCS) moves, and a 15 percent reduction to Headquarters Marine Corps (HQMC) staff positions to include Marine Forces Reserve (MARFORES) and the supporting establishment. Nearly all these divestments, over $7.0 billion, were directly used to modernize critical areas that enable Force Design 2030 by investing in multi-domain areas such as Command and Control (Big Data Platform), Counter Air, Counter C5ISR-T, MQ–9A Unmanned Aircraft System (UAS) sensors and enablers, and Anti-Surface Warfare capabilities.

In the President's Budget 2024 cycle, the Marine Corps reallocated over $1.1 billion from such programs as Organic Precision Fires, Amphibious Combat Vehicles, and Advanced Reconnaissance Vehicles, as well as a 15 percent reduction in the Marine Corps Bands program to eight field bands. All divested funds were directed utilized to invest in critical warfighting capabilities such as Signature Management (YETI), Secure Expeditionary Resilient Position, Navigation and Timing (SERPNT), Light Marine Air Defense Integrated System (L-MADIS), and Tactical Communication Modernization. Aviation investments were utilized to increase Flight Hour Program and the MV–22 nacelle improvement program. Additionally, several Talent Management investments were made, including increased funding for Sexual Assault Prevention and Response programs and the Marine Corps Embassy Security Guard.

RESPONDING ACROSS THE SPECTRUM OF CONFLICT

120. Senator SULLIVAN. General Berger, the Marine Corps you inherited in 2019 and the Marine Corps the next Commandant will inherit in 2023 look significantly different. In responses provided to my office by the Marine Corps following an April 14, 2023 brief on Section 1023 of the fiscal year 2023 NDAA, the Marine Corps reported:

- A 56 percent reduction in the number of 155mm howitzers
  - o Pre-Force Design: 126 howitzers (21 x 6-gun batteries)
  - o Force Design: 56 howitzers (7 x 8-gun batteries)
- A 100 percent reduction in armor and associated assault bridging
- A 100 percent reduction in assault breaching with the total divestment of the M1150 Assault Breaching Vehicle fleet
- A 12 percent reduction in the number of infantry battalions (24 to 21) and a 9 percent reduction in the number of marines in each infantry battalion for a total of a 21 percent reduction of infantry marines which corresponds to one out of five in the Marines Corps.

Are these numbers accurate?

General BERGER. The composition of the Marine Corps that the 39th Commandant will inherit will not look entirely different and the capabilities that have modernized our forces will ultimately increase the lethality of the Joint Force. The Marine Corps will still maintain three Marine Expeditionary Force (MEF) Headquarters (Command Element—CE) comprised of a combat division (Ground Combat Element—GCE), an aviation wing (Aviation Combat Element), and a logistics Group (Logistics Combat Element—LCE). This structure and composition of the Marine

Air Ground Task Force (MAGTF) will not change, nor will the mission of the Marine Corps to provide an expeditionary force in readiness to fleet commanders in support of the naval campaign. Furthermore, the Marine Corps will continue to maintain seven Marine Expeditionary Units (MEUs) as the service continues to modernize. The 22d, 24th, and 26th MEUs will continue to garrison and deploy from Marine Corps Base (MCB) Camp Lejeune in North Carolina. The 11th, 13th, and 15th MEUs will continue to garrison and deploy from MCB Camp Pendleton in California. Last, the 31st MEU will continue to garrison and deploy from MCB Butler in Okinawa, Japan.

However, the capability and capacity gains within the MAGTF have significant increases in lethality. The Pre-Force Design 2030 MAGTF was capable of fighting in three domains—land, air, and sea. Today, the MAGTF is capable of fighting in all five domains with the investments in space and cyber capabilities. The Marine Corps has primarily invested in these capabilities at the Command Element (CE) level with the increase in cyber and space military occupation specialties and the establishment of the Marine Information Group (MIG) (a product of Future Force 2025) within the MEF. Furthermore, we have significantly increased the lethality of the Ground Combat Element (GCE) with precision fires platforms with increased ranges and sensor capabilities to track and detect adversary targets at distance. The Aviation Combat Element (ACE) has increased both operational reach and lift capacity with investments in the CH–53K, MV–22B, and an increase in Active component KC–130C squadrons. The ACE has also increased in our ability to sense and make sense of the environment with fifth generation F–35 platforms. As the pacing function the Logistics Combat Element (LCE) is developing new concepts for afloat and shore sustainment capabilities that are tethered within a network of appropriate command arrangements that expedite logistics in a contested environment.

The increased lethality of the core infantry battalion is improved through increased manning. From 1995 until now, Battalion T/Os have gotten slightly smaller (from 904 to 897), *but the manning percentage has increased, and the unit-to-unit variances have decreased. The higher manning level allows commanders to train as they will fight." For Infantry battalions, the manning as a percent of T/O is 97 percent now; up from 89 percent in 1995 (all battalions aggregated). In 1995 only 5 of 24 battalions were manned above 100 percent of T/O while 12 were below 90 percent of T/O, compared to that to 2023 where 10 battalions are above 100 percent and only 5 are below 90 percent.*

- A 56 percent reduction in the number of 155mm howitzers
  - o Pre-Force Design 2030: 126 howitzers (21 x 6-gun batteries)
  - o Force Design 2030: 56 howitzers (7 x 8-gun batteries)
  - o Both are accurate. Pre-Force Design 2030, the Marine Corps maintained 21 cannon artillery batteries organized with 6 howitzers for a total of 126 howitzers. In fiscal year 2027, the Marine Corps will retain 7 batteries organized with 8 howitzers for a total of 56 howitzers, a roughly 56 percent reduction. *The Marine Corps is transitioning 14 cannon artillery batteries to 14 Medium-Range Missile (MMSL) Batteries, which will be capable of employing multiple precision fire missiles, including Naval Strike Missiles and the MLRS Family of Munitions.* Additionally, the Marine Corps will retain 6 Reserve component batteries, which will also increase to 8 howitzer batteries in fiscal year 2025. *Since 2019, the lethal capacity of the Marine Divisions has increased. As measured by crew served weapons (in the graph below), to include artillery firing systems, combat vehicles, and infantry weapons systems, the Marine Corps possesses more combat power. By 2030 towed artillery, rockets, and missiles more than double (132 percent) since 2019. NMESIS platform will also be able to fire MLRS FoM.*

Active Marine Division Firepower

MARINE AIR DEFENSE INTEGRATED SYSTEM (MADIS) MK1		0	13
MARINE AIR DEFENSE INTEGRATED SYSTEM (MADIS) MK2		0	13

- A 100 percent reduction in armor and associated assault bridging
  - o *Both are accurate.* The divestment of M1A1 Main Battle Tanks also nullified the requirement for the 85-ton load capacity of the Armored Vehicle-Launched Bridge (AVLB). The subsequent divestment of all AVLBs and associated force structure removed an assault bridging capability to accommodate the Marine Corps ground combat and tactical vehicle inventory. As a result, Marine Corps combat developers are now working with Army researchers and industry to develop a lightweight, scalable tactical bridging solution to accommodate all current (and planned) Marine Corps ground combat and tactical vehicles. That is, the Marine Corps has divested of non-expeditionary armor and associated assault bridging, capabilities that that are not optimized for maritime campaigning and instead seeks to generate expeditionary solutions to existing and emerging capability gaps.
- A 100 percent reduction in assault breaching with the total divestment of the M1150 Assault Breaching Vehicle fleet
  - o *Mostly accurate.* The weight and size of the M1150 Assault Breaching Vehicle (ABV) makes it incompatible for amphibious landings and littoral operations. However, the divestment of this armored breaching system including its twin M58 Mine Clearing Line Charges (MICLIC), remote firing machine gun, heavy armor protection, proofing and clearing attachments (i.e., mine plow, rake, and blade), and associated force structure does limit the Marine Ground Combat Element's ability to conduct protected and in-stride assault breaching. Dismounted marines continue to train with and utilize the Anti-Personnel Obstacle Breaching Systems (APOBS) to blast 45-meter-long paths through anti-personnel mine and wire obstacles to enable foot-mobile movement. Marine Combat Engineers also continue to train with and employ the trailer-mounted MICLIC for mounted operations for breaching 100-meter-long vehicle lanes through mines and other obstacles.
- A 12 percent reduction in the number of infantry battalions (24 to 21) and a 9 percent reduction in the number of marines in each infantry battalion for a total of a 21 percent reduction of infantry marines which corresponds to one out of five in the Marines Corps.
  - o Total force structure allocated to infantry battalions reduces until 2029, when the IBX–30 reorganization is complete. Force Structure reductions occur in two phases. Phase 1 included divestment of three infantry battalions; 3d Battalion 8th Marines in Camp Lejeune, 2d Battalion 3d Marines, and 3d Battalion 3d Marines in Hawaii along with the reorganization of 1st Battalion, 3d Marines into 3d Littoral Combat Team (LCT). Phase 2 of reductions is IBX–30 reorganization, which reduced the size of each infantry battalion by 9.4 percent, from 894 to 811 marines (Marine Structure only—Does not in-

clude Navy structure within infantry battalions). *The combination of reducing from 24 to 21 Infantry Battalions and the IBX–30 reorganizations result in a 19.4 percent reduction in infantry Battalion structure due to FD2030.*

- o However, both the Littoral Combat Team and the modernized IBX–30 infantry reduction of marines within infantry battalions do not provide the necessary context to understand the increased lethality these formations have gained by investments in capabilities such as loitering munitions, advanced sensor assets, and critical communications equipment to synthesize targeting. There are more killing assets per infantry marine in 2030 than in 2019. Infantry battalion lethality, as measured by share of crew-served weapons per marine assigned to infantry battalion, increased by 28 percent from 2019 to 2030. These smaller formations support Marine Corps concepts of Expeditionary Advanced Base Operations (EABO) and Stand-in Forces (SIF) that are capable of persisting inside an adversaries' weapons engagements zone during competition, responding to crises, and seizing and defending key maritime terrain during conflict.
- o *Inaccurate* Combining the 12 percent reduction of infantry battalions and 9 percent reduction of marines within infantry battalions to equate to a 21 percent total loss does not provide the accurate context for the gain in capabilities. *The manning percentage has increased substantially (89 percent to 97 percent) while working to achieve 100 percent manning.* The 21 marine infantry battalions are still sufficient to meet operational commitments while maintaining a 1:3 deployment to dwell ratio. These smaller formations support Marine Corps concepts of Expeditionary Advanced Base Operations (EABO) and Stand-in Forces (SIF) that are capable of persisting inside an adversaries' weapons engagements zone during competition, responding to crises, and seizing and defending key maritime terrain during conflict.
- o As noted above these raw numbers do not provide the necessary context to understand the increased lethality these formations have gained by investments in capabilities such as precision fires, advanced sensor assets, and critical communications equipment to synthesize targeting. Moreover, as a combined arms force, the Marine Corps will retain 7 Active component and 6 Reserve component tube-artillery batteries and 14 Medium Range Missile (MMSL) batteries and 3 Long Range Missile (LMSL) batteries. While initially fielded with an anti-ship missile, the MMSL will incorporate the MLRS Family of Munitions (MFOM) allowing a wider array of effects. In aggregate, we have increased our ground indirect fires capability.

Overall, the Marine Corps remains a combined arms force that can operate across multiple domains. Combined arms in the 21st century now encompasses additional domains such as space, cyber, and information, and new capabilities in each of these domains must be integrated within our combined arms approach. Additionally, the Marine Corps will still sense, communicate, and fire—just in new ways that are effective against technologically advanced peer adversaries.

121. Senator SULLIVAN. The new Marine Littoral Regiments (MLRs), three of which will be established within III Marine Expeditionary Force (III MEF), will not have the minimum number of LSMs they need to execute Expeditionary Advanced Base Operations (EABO)/Stand-In Forces (SIF) for at least 5 years according to the Navy's shipbuilding plan, robbing them of intra-theater mobility. Will the MLRs be able to execute combat operations in the intervening years before they receive LSMs?

General BERGER. This is why it is important to acquire amphibious lift, 31 amphibious warships and 35 LSMs as quickly as possible. We appreciate your continued support to achieve this floor requirement. This is not a limitation MLRs created. All forces are dependent on Joint, Naval, and organic mobility assets to maneuver throughout the battlespace. However, the current programmatic timeline for Medium Landing Ships (LSMs) does not support delivery to support (1) MLR until fiscal year 2033. But the MLR has more access to lift than a current regiment does or 3d Marine Regiment did for combat operations. Prior to the creation of 3d MLR, infantry regiments in general required numbered fleet support for lift in support of combat operations, just as they do now. Until the LSM becomes fully operational, the service has explored other interim solutions to support SIF. The interim planned composition is (2) T-EPFs, (5) stern landing vessels (SLVs), and (5) LCUs until the LSM becomes available to support (1) Marine Regiment in fiscal year 2033. T-EPF is a Military Sealift Command (MSC) operated vessel with capabilities comparable to LSM during competition (speed and lift capacity) but faces challenges in higher sea states and has no shore-to-shore capability. SLVs operated by contracted civilian crews provide shore-to-shore capabilities comparable to LSM during competition.

Moreover, emerging platforms such as the SLV and ancillary surface connectors (ASC) will be experimented with to determine the tactics, techniques, and procedures needed to best support the Stand In Force (SIF). LCUs provide marine elements of the SIF with proven tactical mobility that does not necessitate T-EPF or SLV but will face adequate crewing and maintenance challenges.

Once LSMs are available in fiscal year 2033, the Marine Corps current requirement is (35) LSMs. The LSM requirement stems from a minimum of (9) LSMs required to support (1) Marine Regiment. Our SIF required maritime mobility for (3) Regiments. To ensure (27) LSMs are available for these forces at any given time, procurement includes (8) additional LSMs due to routine maintenance cycles at an 80 percent readiness rate. The LSM provides the Stand-in Forces (SIF) maneuver options and connect logistics webs within contested spaces. The LSM will be an important littoral maneuver platform that supports the SIF while forward deployed, engaging in campaigning activities that assure integrated deterrence. The LSM is capable of transporting personnel and equipment within an archipelagic environment such as the first island chain (FIC) where there is limited access to ports or runways.

III Marine Expeditionary Force (MEF), as the service's only forward postured MEF, is uniquely suited to validate new concepts such as Expeditionary Advanced Based Operations (EABO) and Stand-in Forces (SIF). As an element of the SIF, III MEF supports naval, joint, and allied and partnered forces with agile, capable, and lethal forces able to operate across the competition continuum. Forces Stand in during competition alongside partners and allies, are forward postured to respond during crisis, and are capable of seizing and defending key maritime terrain during conflict while maintaining critical target data and maritime domain awareness for the Joint Force to project fires into the battlespace.

Although III MEF demonstrates the ability to operate as a SIF without the Medium Landing Ship (LSM), the service and III MEF have registered the requirement for both inter-(operational) and intra-(tactical) mobility.

122. Senator SULLIVAN. Last year during your posture hearing we discussed a risk trough, the time between when existing Marine Corps combined capabilities are divested or reduced and new capabilities come on line to replace them. The world is a dangerous place and the Marine Corps seems to be firmly in the risk trough. This seems like the period of maximum danger. We are no longer the legacy Marine Corps yet the new capabilities promised with Force Design 2030 are not arrived. How is the force the next Commandant inherits better positioned to respond to contingencies across the conflict spectrum than the Marine Corps you inherited?

General BERGER. The composition of the Marine Corps that the 39th Commandant will inherit will not look entirely different and the capabilities that have modernized our forces will ultimately increase the lethality of the Joint Force. The Marine Corps maintains three Marine Expeditionary Force (MEF) Headquarters (Command Element—CE) comprised of a combat division (Ground Combat Element—GCE), an aviation wing (Aviation Combat Element), and a logistics Group (Logistics Combat Element—LCE). This structure and composition of the Marine Air Ground Task Force (MAGTF) will not change, nor will the mission of the Marine Corps to provide an expeditionary force in readiness to fleet commanders in support of the naval campaign. Furthermore, the Marine Corps will continue to maintain seven Marine Expeditionary Units (MEUs) as the service continues to modernize. The 22d, 24th, and 26th MEUs will continue to garrison and deploy from Marine Corps Base (MCB) Camp Lejeune in North Carolina. The 11th, 13th, and 15th MEUs will continue to garrison and deploy from MCB Camp Pendleton in California. Last, the 31st MEU will continue to garrison and deploy from MCB Butler in Okinawa, Japan.

However, the capability and capacity gains within the MAGTF have significant increases in lethality. The Pre-Force Design 2030 MAGTF was capable of fighting in three domains—land, air, and sea. Today, the MAGTF is capable of fighting in all five domains with the investments in space and cyber capabilities. The Marine Corps has primarily invested in these capabilities at the Command Element (CE) level with the increase in cyber and space military occupation specialties and the establishment of the Marine Information Group (MIG) (a product of Future Force 2025) within the MEF. Furthermore, we have significantly increased the lethality of the Ground Combat Element (GCE) with long range precision fires, and sensor capabilities to track and detect adversary targets at distance. The Aviation Combat Element (ACE) has increased both operational reach and lift capacity with investments in the CH–53K, MV–22B, and an increase in Active component KC–130C squadrons. The ACE has also increased in our ability to sense and make sense of the environment with fifth generation F–35 platforms. As the pacing function the

Logistics Combat Element (LCE) is developing new concepts for afloat and shore sustainment capabilities that are tethered within a network of appropriate command arrangements that expedite logistics in a contested environment.

Today, the Marine Corps is better prepared as a naval expeditionary force-in-readiness and to operate inside actively contested maritime spaces in support of fleet operations and joint campaigns. The Marine Corps is already standing-in alongside allies and partners within reach of enemy weapon systems during competition. During crisis the Marine Corps also continues to be the premiere global crisis response force. Critical to this is maintaining no less than 31 L-Class amphibious warfare ships and delivering 35 Medium Landing Ships (LSMs) to posture forces forward to provide the Marine Corps the required maritime maneuver and mobility. During conflict the SIF is prepared to seize and defend key maritime terrain, support sea control and denial operations, and maintain custody of maritime targets in support of projecting combat power from the Joint Force back into an anti-access, area denial environment.

Additionally, while there is work needs to be done, our initial investments in lethality are already bearing fruit. With the support of congress, III Marine Expeditionary Force will be receiving the first delivery of the Navy Marine Corps Expeditionary Ship Interdiction System (NMESIS). This is a significant milestone, as within 3 years since Force Design 2030 started, we will be operationalizing a new capability we did not have before—a ground-based anti-ship capability.

123. Senator SULLIVAN. General Berger, in answers provided by the Marine Corps staff to questions from my office, the Marine Corps frequently stated that divested combat capabilities were "incompatible for amphibious shipping and littoral operations." But not all future Marine Corps missions will be focused on littoral operations. How does Force Design 2030 support operations outside the littorals?

General BERGER. It is clearly understood that we are a naval force and are focused on the littorals. As you have pointed out from Title X, "the Marine Corps shall be organized, trained, and equipped to provide fleet marine forces of combined arms, together with supporting air components, for service with the fleet in the seizure or defense of advanced naval bases and for the conduct of such land operations as may be essential to the prosecution of a naval campaign."

But the Marine Corps is also capable of land operations as needed by our Nation. The Marine Corps' premier Service Level Training Exercises is in the deserts of Twenty-nine Palms in the Marine Corps Air Ground Combat Training Center (MCAGCC). Typically, every infantry battalion conducts its predeployment training and certification in either the Marine Corps Mountain Warfare Training Center (MCMWTC) or MCAGCC.

The plan for light, lethal, and distributed forces would be successful in other Combatant Commands (COCOMs), such as European Command (EUCOM) or Central Command (CENTCOM)—and have shown to be successful. On 16 March 2022, TF 61/2, led by a Marine General Officer with a task-organized staff was integrated into the United States 6th Fleet Headquarters in Naples, Italy, and executed a combined joint exercise, planned operations for various ARG/MEU teams in multiple locations throughout the theater, and improved Maritime Domain Awareness for the Fleet Commander and partners and allies. Task Force 61/2 executed a proof of concept during 2022 in which they provided 6th Fleet Headquarters with real-time Maritime Domain Awareness (MDA). In that effort, marine forces tested, refined, and validated concepts of employment for MDA and closing kill webs, while also conducting real-world, time sensitive reconnaissance-counter reconnaissance missions. These efforts continue to support 6th Fleet operations as well as nested within EUCOM and Africa Command (AFRICOM) priorities and have since turned into a rotational force.

Throughout history the military and national security experts have rarely—if ever—made accurate predictions about the next conflict. The same could be said about the current threat environment and the past two National Defense Strategies and Intelligence Communities (IC) Annual Threat Assessments that have emphasized an era of great power competition and the threat that Russia and China present to United States interests. However, over history we have always modernized, trained, and equipped our forces for the most dangerous threat which has enabled our flexibility to respond to global crises. As Force Design 2030 is threat-informed, the IC assess that the transition from ambiguous and unambiguous warning will happen within compressed timelines relative to decades before. Because of that, the Marine Corps cannot rely upon a Time Phased Force Deployment Data-approach to buildup capabilities, in permissive environments, to stock-pile capabilities. Non-expeditionary form factors only exasperate that problem. As such, the concern is not about one domain, but the threat and temporal estimates of transitions

from ambiguous to unambiguous warning. Hence, the Marine Corps' value to the Joint Force is to be expeditionary and forward, to be credible, and to contribute not just to Combatant Commanders operations, activities, and investment (OAI), but to increase their flexible deterrence options (FDOs) and flexible response options (FROs). Capabilities that impede or frustrate our ability to be forward and to leverage sea-space for maneuver have not been prioritized as part of the Marine Corps' Redesign efforts Force Design 2030 continues to keep these factors in the forefront of our modernization efforts and maintain the ability to respond to any crisis around the globe. Specifically, the Marine Corps' Expeditionary Advanced Base Operations (EABO) and Stand-in Forces (SIF) concepts meet the 2022 National Defense Strategy (NDS) intent and are theater agnostic.

This has also been demonstrated in the Indo-Pacific with a Navy-Marine team of 7th Fleet and III MEF embarking on an 18-month experiment through the establishment of Task Force 76/3, which combines approximately 11,500 marines and sailors of Expeditionary Strike Group (ESG) 7 and 3d Marine Expeditionary Brigade (MEB) into a single command focused on campaigning inside the contested areas of the western Pacific. Furthermore, the Commandant in his 2022 annual Force Design 2030 update directed the service to develop another JTF-HQ in II MEF to enhance our force offerings to the Combatant Commands.

The Marine Corps still maintains all organic crisis response capabilities that enable the forward posture and rapid deployment of flexible and tailorable forces to the needs of the Combatant Commanders (COCOMs). The Amphibious Ready Group (ARG) and Marine Expeditionary Units (MEU) are the most common Navy-Marine Corps tactical units that are forward deployed at the operational level and can accomplish strategic level engagements.

The Marine Corps routinely trains to forcible entry operations in several joint and service-level exercises to include, but not limited to, Talisman Saber, Cold Response, and various Marine Expeditionary Force exercises and Marine Warfighting Exercises (MWXs).

Furthermore, the Marine Corps continues to train for all crisis response missions during the MEUs pre-deployment training period (PTP). Training consists of afloat and ashore training environment that require the synchronization of assets across the MAGTF to accomplish an assigned objective. Our Training and Education 2030 publication describes the investment in Live, Virtual, and Constructive training environment (LVC-TE) that is inherently joint and enables the simultaneous training of geographically dispersed units. This capability will replicate, to the greatest extent possible, the conditions and threats that a commander will experience on tomorrow's battlefield.

When the Marine Corps was completing the withdrawal from Afghanistan and there was a need for forces to support the embassy and non-combatant evacuation operations, the ARG/MEU was a key component of those operations. At a moment's notice, the Marine Corps was able to hold a defensive perimeter and process evacuees while providing a variety of aviation and other assets to support the broader evacuation.

A heel-to-toe ARG/MEU provides the Nation a mobile, multi-mission force that is forward deployed and able to quickly move to any number of crises around the world. A naval crisis response force is significantly more flexible than other land-based crisis response forces because it is less restricted by issues of access, basing, and overflight. The ability to maneuver by sea to the point of crisis makes the ARG/MEU critical to our Nation's ability to demonstrate resolve in a HA/DR mission or to project power in a limited conflict. Another reason we appreciate your support in obtaining he floor requirement of amphibs, 31, and a healthy maintenance posture. In recent crises, like the earthquake in Turkey and the non-combatant evacuation (NEO) in Sudan, the Marine Corps had the ready-trained force with the right equipment; however, the readiness of amphibious shipping was not available.

In the next two to 5 years, many of our amphibious ships will reach the end of their service life and will cause delays in ARG/MEU deployments. When there are gaps in global ARG/MEU coverage, the Nation risks not having the right assets capable of getting to the crisis in time. If the U.S. is not able to perform this role, our adversaries would be happy to step in with their forces and their messaging. The best way for marines to address complex situations in chaotic areas around the world is to maintain a minimum of 31 amphibious ships to support our ARG/MEU deployments.

The Marine Corps, more than any other service, has a unique nature regarding essential requirements that are subject to the Naval Service budgetary process. For example, the amphibious warfare ship (AWS) statutory requirement includes capabilities that are critical for amphibious ships such as connectors, C4I afloat capabilities, preposition afloat assets, and the Next Generation Logistics Ship (NGLS). All

of these are essential to the Stand-in Forces (SIF) and crisis response operations, yet all fall outside the Marine Corps Total Obligation Authority (TOA). We identify the Marine Corps' dependency on the Navy to champion naval requirements. Our nation is a maritime nation that requires a modern, ready, and forward postured naval force that can deter war and prevail in conflict if deterrence fails.

124. Senator SULLIVAN. General Berger, for decades the Marine Corps has provided the hedge the U.S. military needs for unexpected contingencies. As the other Services focused on the Soviet military the Marine Corps honed its capabilities as the Nation's rapid global response force. One criticism of Marine Corps Force Design is that in reorienting on the "pacing threat"—the Chinese People's Liberation Army (PLA)—the Marine Corps has given up much of its 9–1–1 capabilities. Does Force Design 2030 retain the weapons and equipment that enabled the Marine Corps to hedge as the other Services turn their attention to China?

General BERGER. The most common MAGTFs in the Marine Corps is the Marine Expeditionary Unit (MEU). However, the composition of how the MEU is spread across the three ship Amphibious Ready Group (ARG) and what capabilities that are within it will be tailored to the threat environment and historical trends of Combatant Commander mission assignments to the ARG/MEU team. Prior to deployments, the ARG/MEU will conduct a 9-month pre-deployment training period (PTP) with various at sea exercises that allow the two commands to build and work on Standard Operating Procedures (SOPs) for assigned Mission Essential Tasks (METs). During at sea periods the ARG/MEU commanders, staff, and major subordinate commands will execute a variety of full mission profile exercises such as amphibious raids, amphibious assaults, non-combat evacuation operations (NEO), etc. The two commands will also coordinate with Fleet and Joint headquarters in the Combatant Commands that the ARG/MEU is expected to be assigned to during the deployment to coordinate Theatre Security Cooperation (TSC) exercises and receive intelligence briefs to understand the threat environment. Through the combination of the at sea training periods, development of SOPs, understanding of anticipated assigned missions, and the threat environment, the ARG/MEU team tailors what assets are assigned to each amphibious warfare ship within the ARG to be appropriately organized for operational deployment. As such, MAGTFs can and will vary in size and capability according to their assigned or likely missions.

The Marine Corps has not divested any equipment or structure that prevent the service from still being the premier global crisis response force. The Marine Corps still maintains seven MEUs. The 22d, 24th, and 26th MEUs will continue to garrison and deploy from Marine Corps Base (MCB) Camp Lejeune in North Carolina. The 11th, 13th, and 15th MEUs will continue to garrison and deploy from MCB Camp Pendleton in California. Last, the 31st MEU will continue to garrison and deploy from MCB Butler in Okinawa, Japan. The structural organization of our MEUs will also remain the same and will be comprised of a Command Element (CE), a Battalion Landing Team (BLT) as the Ground Combat Element (GCE), a Composite Aviation Squadron as the Aviation Combat Element (ACE), and a Combat Logistics Battalion (CLB) as the Logistics Combat Element (LCE)

Currently, the 26th MEU is conducting their Pre-Deployment Training Period (PTP) with the Bataan Amphibious Ready Group (ARG) in preparation for their upcoming deployment this Summer. The Artillery Battery within the BLT for the MEU will be organized with a traditional M777 Howitzers platoon and a Force Design 2030 incorporated High Mobility Artillery Rocket System (HIMARS) platoon. Throughout the PTP, the battery has been training on new Tactics, Techniques, and Procedures (TTPs) for HIMARS-Tactical Insertion Dynamic Employment (HI-TIDE) that will enable the rapid employment of long-range precision fires after ship-to-shore connectors have maneuvered the assets. This employment concept is an aspect that supports the ability of expeditionary units that can contribute to sea-denial and sea-control operations. Maintaining control of Sea Lines of Communication (SLOC) and the race for key maritime terrain is critical in the current operating threat that has created an Anti-Access, Area-Denial (A2AD) environment through the proliferation of low-cost long-range fires, sensors, and a communications architecture that place U.S. assets at risk. Although Force Design 2030 is modernizing, the capabilities resident within the MEU has increased lethality while the core structure and organization of the MEUs remain the same.

The Marine Corps continues to have capacity for seven MEUs. That is, regardless of the availability or readiness of amphibious warfare ships, the Marine Corps has and will continue to field the same number of MEU even as the service continues to modernize. For the foreseeable future, the Marine Corps will maintain seven MEUs. Force Design 2030 has not changed the number of MEUs the Marine Corps

can field; in fact, Force Design 2030 reinforces the need for the continued global employment of this versatile and highly capable unit.

However, unrelated to the Marine Corps modernization efforts with Force Design 2030, the Navy's readiness and inventory of amphibious warfare ships do impact the ability of the MEUs to be forward postured and available for Combatant Commander requirements. Over the past 10 years the average operational readiness or availability of amphibious warfare ships has been 46 percent. This challenges the ARG/MEU team to adequately conduct critical pre-deployment training requirements and qualifications to conduct day and night operations at sea. This not only decreases the safety of our forces by reducing proficiency, but also decreases the Flexible Response Options (FDOs) and Flexible Deterrence Options (FDOs) of the Combatant Commanders to have ready and available forces for operational requirements.

During the 1990's the amphibious warfare ship inventory exceeded operational employment allowing adequate time for maintenance, and more materially available ships to surge when required. For example, in 1991 the Department of the Navy maintained roughly 60 amphibious warfare ships while only 37 percent were deployed. However, in the early 2000's the amphibious warfare ship inventory decreased by nearly half while the operational requirements maintained the same. Overtime as the operational demand remained consistent to historical baselines while inventory decreased, the material condition of amphibious warfare ships has been strained. This has led to common delays of ARG/MEU deployments and provides fewer ready ships to surge if directed.

Finally, offered in attempt to add clarity to this QFR, multiple Administrations, multiple National Defense Strategies, and a half-dozen sets of associated Defense Planning Guidance, as informed by the broader Intelligence Community (IC), direct the Marine Corps to pace to the principal threat and focus on the principal theater. The Marine Corps does not have the authority—nor a differing understanding of the threat environment—to deviate from those threat-informed sets of strategy. The Marine Corps has complied with political leadership's overarching guidance and decisions—while retaining its ability to respond to crisis globally—as that same guidance charges the Navy and Marine Corps to retain response capabilities. In fact, a forward and credible, lethal and resilient, Stand-in Force does just that—it creates Flexible Deterrence Options and Flexible Response Options to Combatant Commanders in the face of emerging crises.

125. Senator SULLIVAN. General Berger, you and LtGen Heckl have testified that the Marine Corps is fully capable of meeting all global commitments. Nearly 60 percent of the Maritime Prepositioning Forces required to sustain marines have been cut, the Marine Expeditionary Unit (MEU) Augmentation Program-Kuwait has been eliminated, and prepositioned equipment in Norway has been reduced. Do these reductions or eliminations or pre-positioned equipment impact the Marine Corps' ability to meet global commitments?

General BERGER. The Service remains fully capable of meeting all global commitments but due to the Navy's reduction of operational MPS ships, closing the force for some OPLANs will take longer. The Service's elimination of the MEU Augmentation Program—Kuwait supporting CENTCOM was due to it being purpose built to support marines deployed to and engaged in that region, and with the strategic guidance focusing the Marine Corps on the INDOPACOM theater, that purpose was no longer a priority based on available resources. The reduction in Marine Corps Prepositioning—Norway was of legacy equipment, which is no longer needed for a crisis response in EUCOM. However, with 5 additional Maritime Prepositioning Ships (MPS) in Reduced Operating Status (ROS), it will take longer for Combatant Commands to close the force. This increase in time to close the force highlights the need to fully fund our prepositioning program.

Current Impact: Placing 5 additional MPS in ROS will not only diminish the ability to forward position and sustain these additional forces required to counter aggressive People's Republic of China (PRC) actions, but also increase the strain on III MEF forces, allies, and partners in the FIC, and limited organic and joint air and maritime transportation assets.

Future Impact: This impact will be felt most acutely in a crisis where the ability to close forces will be diminished by the requirement to use other assets to sustain already forward-postured forces.

Additionally, MPF is tied to every Operation Plan (OPLAN), not just the Indo-Pacific ones. Placing Maritime Prepositioning Ships in a Reduced Operating Status delays the U.S. Marine Corps' responses in all OPLANs.

Due to placing the 5 MPS in ROS, for MARFORPAC Crisis Response, MPS arriving in theater went from C+25 to now between C+60 and C+75. Sustainment will

be late to need, resulting in critical risk to mission and force in terms of consequence.

The Service is developing a Global Positioning Network (GPN) as a recognition that we need to think differently about how to preposition assets around the globe to support our Stand-in Forces across the full range of military operations.

126. Senator SULLIVAN. General Berger, has the Marine Corps' capability to meet all global commitments been exacerbated by the admitted shortage of amphibious shipping?

General BERGER. Yes. A shortage of amphibious shipping has exacerbated the Marine Corps capability to meet global commitments.

The decrease in the overall Amphibious Warfare Ships (AWS) inventory, combined with consistent/constant Global Force Management (GFM) demand and longer than planned maintenance availabilities have resulted in an overworked AWS fleet with no "ready bench" and insufficient numbers to fulfill Secretary of Defense directed GFM requirements, delayed ARG/MEU deployments (slower response), and reductions in amphibious training & certification periods (warfighting proficiency).

Even at the current inventory of 31 AWS, fulfilling GFM requirements has been a struggle with 4 of our last 5 MEU/ARG deployments being delayed due to failing material readiness, and the 5th one immediately having to return one of its ships to homeport due to material readiness issues.

However, despite this challenge, the Marine Corps still maintains all organic crisis response capabilities that enable the forward posture and rapid deployment of flexible and tailorable forces to the needs of the Combatant Commanders (COCOMs). The Amphibious Ready Group (ARG) and MEU are the most well-known naval expeditionary Navy-Marine Corps tactical units that are forward deployed at the operational level and can accomplish strategic level engagements.

The Marine Corps still possesses (7) Marine Expeditionary Units (MEU). Additionally, III MEF is capable of being employed as Joint Task Force headquarters (JTF-HQ) for various missions to include a forcible entry operation. Furthermore, the Commandant in his 2022 annual Force Design 2030 update directed the service to develop another JTF-HQ in II MEF to enhance our force offerings to the Combatant Commands.

The Marine Corps routinely trains to forcible entry operations in a number of joint and service-level exercises to include, but not limited to, exercises Talisman Saber, Cold Response, and various Marine Expeditionary Force exercises and Marine Warfighting Exercises (MWXs).

Furthermore, the Marine Corps continues to train for all crisis response missions during the MEUs pre-deployment training period (PTP). Training consists of afloat and ashore training environment that require the synchronization of assets across the MAGTF to accomplish an assigned objective. Our Training and Education 2030 publication describes the investment in Live, Virtual, and Constructive training environment (LVC-TE) that is inherently joint and enables the simultaneous training of geographically dispersed units. This capability will replicate, to the greatest extent possible, the conditions and threats that a commander will experience on tomorrow's battlefield.

When the Marine Corps was completing the withdrawal from Afghanistan and there was a need for forces to support the embassy and non-combatant evacuation operations, the ARG/MEU was a key component of those operations. At a moment's notice, the Marine Corps was able to hold a defensive perimeter and process evacuees while providing a variety of aviation and other assets to support the broader evacuation.

A heel-to-toe ARG/MEU provides the Nation a mobile, multi-mission force that is forward deployed and able to quickly move to any number of crises around the world. A naval crisis response force is significantly more flexible than other land-based crisis response forces because it is less restricted by issues of access, basing, and overflight. The ability to maneuver by sea to the point of crisis makes the ARG/MEU critical to our Nation's ability to demonstrate resolve in a HA/DR mission or to project power in a limited conflict.

In the next two to 5 years, many of our amphibious ships will reach the end of their service life and will cause delays in ARG/MEU deployments. When there are gaps in global ARG/MEU coverage, the Nation risks not having the right assets capable of getting to the crisis in time. If the U.S. is not able to perform this role, our adversaries would likely step in with their forces and their messaging. The best way for marines to address complex situations in chaotic areas around the world is to maintain a minimum of 31 amphibious ships to support our ARG/MEU deployments.

In recent crises, like the earthquake in Turkey and the non-combatant evacuation (NEO) in Sudan, the Marine Corps had the ready-trained force with the right equipment; however, the readiness of amphibious shipping was not available.

The Marine Corps, more than any other service, has a unique nature regarding essential requirements that are subject to the Naval Service budgetary process. For example, the amphibious warfare ship (AWS) statutory requirement includes capabilities that are critical for amphibious ships such as connectors, C4I afloat capabilities, preposition afloat assets, and the Next Generation Logistics Ship (NGLS). All of these are essential to the Stand-in Forces (SIF) and crisis response operations, yet all fall outside the Marine Corps Total Obligation Authority (TOA). We identify the Marine Corps' dependency on the Navy to champion naval requirements. Our nation is a maritime nation that requires a modern, ready, and forward postured naval force that can deter war and prevail in conflict if deterrence fails.

The next two forecasted ARG/MEUs to deploy have already been delayed due to extended Chief of Naval Operations Maintenance Availabilities and Material issues.

The 31st MEU's last patrol (23.1) began as a 2-Ship Amphibious Task Force due to an emergent drydock for shafting issues on Dock Landing Ship (LSD) 47, which led to LSD 48 covering down late into the patrol and delaying her homeport shift back to the United States.

Forward Deployed Naval Forces—Japan inventory will drop from 4 ships to 3 ships in fiscal year 2025 when the USS *Rushmore* (LSD 47) is planned to decommission, years prior to her projected end of service life. This will reduce lift capacity and prevents embarking an entire MEU, creating risk to performance of all designed missions.

Per the Chief of Naval Operations Instruction 3501.216C *Force Composition of Afloat Navy and Naval Groups,* a minimum of three ships comprises an ARG and a minimum of four ships is required in Forward Deployed Naval Forces—Japan (four ships to make three due to maintenance requirements). Additionally, (82) total incidents in Calendar Year 2021–2022 have impacted Amphibious Warfare Ship operational readiness. As our Amphibious Warfare Ship fleet ages, and our current ships retire faster than new ships are being delivered, we anticipate that material readiness impacts to national security will only worsen.

WAR GAMES

127. Senator SULLIVAN. General Berger, were the studies, war games, or analysis that informed your decision on the Marine Corps force structure briefed to the Secretary of Defense, Secretary of the Navy, Combatant Commanders, or Member of the Senate and House Armed Services Committees?

General BERGER. No one wargame, study, or live-force experimentation event was sufficient to prompt the service to undergo significant service-level changes to force structure. Instead, the body of evidence resulting from many wargames and experiments over the course of several years, which when aggregated, forced the service to admit change was necessary and thus provoked action. A collection of the most significant influencing events is included below.

There are currently unclassified and secret wargame reports and experimentation reports that have been produced that either identified the need for Force Design 2030 or have resulted from wargames conducted to aid Force Design 2030 decisions.

Reports are available for the following wargames and experimentation events which pre-dated FD2030:

Advanced Naval Technology Exercise 2017, April 2017
- Purpose: Examine ship to shore maneuver, amphibious fire support and effects, amphibious C4, clearing amphibious assault lanes, and information warfare.
- Reports available: unclassified final report

MAGTF Warrior 17 Wargame, 12–16 Jun 2017
- Purpose: Define Marine Corps capabilities required to conduct sea control and power projection within a joint campaign against a peer adversary.
- Reports available: Secret final report.

Dawn Blitz 2017, Oct 2017
- Purpose: Examine EAB concepts such as naval integration, maritime strike, sea control, EAB development, and F–35 integration with Advance Field Artillery Tactical Data System (AFATDS)
- Reports available: unclassified report

Expeditionary Warrior 18 Wargame, 2–6 April 2018
- Purpose: Examine operational level logistics support to marine expeditionary forces in the western Pacific in an anti-access/area denial environment.
- Reports available: Secret final report.

Naval Services Game 18, 9–12 July 2018
- Purpose: Explore command relationships, tasking, capabilities, and employment implications of Marine Corps and Navy forces task-organized for littoral combat across the full range of naval missions.
- Reports available: Secret final report.

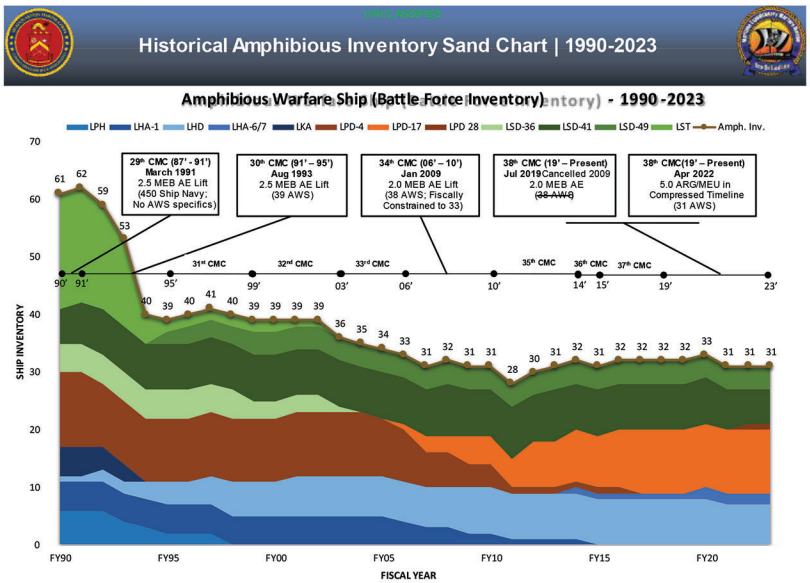
MAGTF Warrior 18 Wargame, 17–21 Sep 2018
- Purpose: Inform future logistics operating concepts of support and how the MEF will be organized, trained, and equipped to support and sustain operations as part of an inside force.
- Reports available: Secret final report.

Within Sea Dragon Phase II initiative, Trident Juncture 2018, Oct-Nov 2018
- Purpose: To test hybrid logistics, particularly data-driven logistics systems and additive manufacturing with CLB–2 as the assigned experiment force
- Reports available: unclassified final report

After the Commandant's Planning Guidance (CPG) was released in the summer of 2019 and Force Design 2030 modernization began, the Marine Corps has conducted over 400 congressional engagements with Members, Professional Staff Members, and staff from personal offices. We received extensive feedback from these engagements that helped inform follow-on experimentation. Marine Corps leadership values and honors the need for congressional oversight and has actively supported that lawful requirement.

From January 2020 to April 2023, Headquarters Marine Corps, Combat Development and Integration (CD&I), alone has conducted 209 of those engagements. Of those 209 engagements roughly 30 percent were classified briefs at the secret level and above, we must respect the threat and the associated security classification protocols to safeguard critical capabilities. The remaining 70 percent of those engagements were at the unclassified level to be as transparent as possible in our modernization efforts. Combatant Commanders have been given advanced copies of Force Design products for comment. Several Combatant Commanders have testified with positive comments about he Marine Corps' modernization efforts.

128. Senator SULLIVAN. General Berger, when did the Marine Corps determine its current amphibious shipping requirement of 31 ships?



General BERGER. The Marine Corps has a requirement for no less than 31 amphibious warfare ships 10 LHA/LHD and 21 LPDs. Since 2019, three DON studies have examined amphibious warfare ship force structure requirements. The requirement was informed by combining the findings of those studies, the most recent being the SecNav directed Amphibious Fleet Requirement Study (AFRS) in 2022, with amphibious warfare ship readiness trends over the past 10 years. AFRS was a threat informed, scenario directed, model driven, multiple phase event executed by the analytic arms of the Navy and the Marine Corps. The findings of AFRS were briefed to the Service Chiefs and Secretary of the Navy; 31 amphibious warfare ships were reported as the minimum required. This finding is consistent with 11 amphibious warfare ship inventory studies completed over the last 14 years.

The readiness and inventory of amphibious warfare ships does impact the ability of our Marine Expeditionary Units (MEUs) to be forward postured and available for Combatant Commander requirements. Over the past 10 years the average operational readiness or availability of amphibious warfare ships has been 46 percent. This reduces the readiness of the Amphibious Ready Group (ARG)/MEU team from completing critical pre-deployment training period (PTP) qualifications to conduct day and night operations at sea. This not only decreases the safety of our forces by reducing proficiency, but also decreases the Flexible Response Options (FDOs) and Flexible Deterrence Options (FDOs) of the Combatant Commanders to have ready and available forces for operational requirements.

During the 1990's the amphibious warfare ship inventory exceeded operational employment allowing adequate time for maintenance, and more materially available ships to surge when required. For example, in 1991 the Department of the Navy maintained 63 amphibious warfare ships while only 37 percent were deployed. In the early 2000's the amphibious warfare ship inventory decreased to 39 with the operational lift requirement shifting to 2.5 Marine Expeditionary Brigades (MEBs). However, the operational requirements for deployed amphibious warfare ships maintained the same. As the operational demand remained consistent to historical baselines while inventory decreased by nearly 50 percent, the material condition of amphibious warfare ships began to degrade. Between 2007 and 2020 the amphibious warfare ship inventory has fluctuated between 28 (low point in 2011) and 33 (high point in 2019). The decrease in amphibious warfare ship inventory has created significant delays in our ability to maintain the material availability of ships and led

to common delays of ARG/MEU deployments and provides fewer ready ships to surge if directed. As a result, we have not been able to maintain a consistent heel-to-toe ARG/MEU in our two primary theatres, EUCOM and INDOPACOM. Historically, the outgoing and incoming ARG/MEU units conduct a turnover while forward deployed providing the Combatant Commanders with a consistent ARG/MEU presence which eliminates any gap in a maritime crisis response force. The fiscal year 2023 NDAA mandates an inventory of no less than 31 amphibious warfare ships which enables a forward deployed presence of ARG/MEUs for competition, campaigning, crisis response and contingency response for Combatant Commanders while having the ability to surge up to a total of five ARG/MEUs if required. However, this is only achievable if the availability and material readiness of amphibious warfare ships is maintained with consistent procurement of new ships to replace aging ships that are currently at the end of their service life.

To be clear, critics of Force Design 2030 suggest that Force Design 2030 has resulted in the drastic reduction in amphibious warfare ship capabilities and capacities. The critics' assertions are false. The slide below demonstrates a precipitous drop in the mid–90's when the Navy reduced the total fleet size post-cold war. That inventory was only exasperated due to nearly 2 decades of Middle East Campaigning, in which the Navy's Fleet was under——

Capitalized as the DOD prioritized sustained Middle East Land Campaigning. Several Commandants before General Berger have, too, worked to inform naval requirements, resourcing, and risk decisions. Ultimately, Force Design 2030 is not the cause of declining Amphibious Warfare Ship capabilities and capacities, and, in fact, Force Design 2030 with its focus on naval campaigning should be credited sharpening DOD level deliberations regarding naval requirements.

129. Senator SULLIVAN. General Berger, in what documents was 31 amphibious shipping requirement communicated to the OPNAV staff, Secretary of the Navy, Secretary of Defense, and Members of Congress?

General BERGER. Please see Question for the Record #128. USMC General Officers have repeatedly testified in Congress to 31 Amphibious ships being the minimum requirements. This is echoed in CAPE, OSD, DPG, and NDS meetings. Since 2019, three DON studies have examined amphibious warfare ship force structure requirements. The requirement was informed by combining the findings of those studies, the most recent being the SecNav directed Amphibious Fleet Requirement Study (AFRS) in 2022, with amphibious warfare ship readiness trends over the past 10 years. AFRS was a threat informed, scenario directed, model driven, multiple phased events, executed by the analytic arms of the Navy and the Marine Corps. The findings of AFRS were briefed to the Service chiefs, SecNav, and components

of the Office of the Secretary of Defense (OSD), specifically reporting that 31 amphibious warfare ships as the minimum required. Congressional interest in the AFRS prompted OSD to submit a Report to Congress. On 27 December 2022, findings were submitted Members of Congress which modified the original AFRS by introducing a range of 25–31 as the requirement.

130. Senator SULLIVAN. General Berger, the Center for Strategic and International Studies' recent war game "First Battle of the Next War" found MLRs could contribute to the fight on a limited basis but were largely nonfactors as political assumptions and China's defensive capabilities prevented them from being close enough to the fight. In fact, in several instances of the game, United States players tried to move an MLR onto Taiwan by air or sea, but in all cases the unit and transportation assets were destroyed trying to do so. Ultimately, the CSIS war game found one squadron of bombers alone had more impact on the battlespace than an MLR. What is your assessment of this war game and its conclusions?

General BERGER. The CSIS war game report on "First Battle of the Next War" provides an in-depth analysis of the challenge, the methods utilized, and key results. With additional context in the level of planning that went into the war game to include the players that were involved and the extent to which they were making decisions, based on operational contingency plans, more substantial feedback on the wargames report can be provided. Also, this wargame was unclassified using unclassified ranges of munitions. A secret or top-secret wargame and next generation munitions could alter the findings. The CSIS wargame summary emphasized:

First, the criticality of employing a whole-of-government approach to prioritizing the deepening of diplomatic and military ties with regional allies and partners, especially Japan. The MLR placement and access to key maritime terrain in order to enable joint force maneuver is the basis of the entire idea of the Stand-in Force. The placement and access necessary to assure allies and partners, to deter adversaries, and to pose a credible threat in the event of armed conflict is contingent upon strong international ties developed through application of all the instruments of national power.

The second point is that the United States cannot wait when deciding what to do in the event of a crisis. Should the PRC give indications and warnings of a cross-channel invasion of Taiwan and thereby escalate from competition to crisis, it is crucial for U.S. political leadership to act quickly to provide the Marine Corps with the time necessary to reposition forces on key maritime terrain where they can be optimally employed in support of the Joint Force. The longer the United States delays entering a potential future war, the more difficult the fight.

While there are multiple points of agreement with the CSIS study and the Marine Corps' vision for the anticipated future operating environment, there were two areas of disagreement that must be highlighted:

First, regarding the difficulties associated with resupplying missiles to an MLR while engaged in conflict, it is important to emphasize the MLR's kinetic fires capability is a secondary function. While the MLR certainly maintains a robust fires capability, its primary role is to function as part of an integrated and redundant network of expeditionary sensors at key battlespace chokepoints, providing situational awareness, targeting data, and Command & Control (C2) for the naval, joint, and coalition force. By combining Marine Corps sensors with joint kinetic and non-kinetic fires and effects, the stand-in force can hold key adversary assets at risk and disrupt adversary decisionmaking, thereby enabling the rapid deployment of naval, joint, and coalition forces in theater. The MLR provides combatant commanders with both optionality and improved information upon which to interpret and manage their decisionmaking space.

Second, the MLR is also designed to deter and defeat strategic competitors through strengthening crucial relationships with allies and partners, reassuring them of U.S. security commitments, and to foster access in times of crisis or conflict. MLR is designed to be capable of interoperability with joint or coalition forces in the contact and blunt layers. In crisis, the MLR's forward posture and access enable it, in coordination with coalition forces, to hold adversary assets at risk, contribute to coalition forces' sea denial and sea control operations via organic lethality, and to close coalition kill webs and provide other critical enabling actions.. The MLR is purpose-built and designed to rapidly transition from competition, to conflict, and back to competition as escalatory dynamics dictate in support of either a joint or coalition force.

131. Senator SULLIVAN. General Berger, was the Marine Corps involved in the execution of this CSIS war game?

General BERGER. The Marine Corps did not participate in the planning or execution of this event. Additionally, no personnel from the Marine Corps Warfighting Lab's Wargaming Division, which is responsible for our force design wargaming, was asked to participate or was otherwise involved.

The Marine Corps continues to employ wargames, incorporating joint and allied partners, as an integrated component of the analytical processes necessary for force modernization. Through our Campaign of Learning (CoL) and modernization efforts, the Marine Corps has conducted (26) studies, (35) wargames, (19) experiments, and (40) integrated planning teams in support of Force Design 2030. The CoL informs modernization by providing a structured mechanism for evaluation, continuing the effort to be as efficient and effective as possible.

The Marine Corps' experimentation plan and wargaming efforts for fiscal year 2023 are focused on identifying solutions to logistics and littoral maneuver challenges, optimizing infantry battalion and MLR structure and equipment, and identifying critical Marine Corps contributions to the Joint Force in competition and conflict. Examining Marine Corps concepts for reconnaissance/counter-reconnaissance and identifying capability strengths and gaps will also be a key part of our wargaming program. These efforts support a family of threat-informed naval concepts that are well nested with joint warfighting approaches and are written to provide the basis for subsequent force design and development decisions. These Service-approved operating concepts call for enabling units with next-generation, uncrewed intelligence, surveillance, and reconnaissance (ISR) and weaponized systems, enhanced situational awareness tools, communication infrastructure, and enhanced prototypes for littoral maneuver.

132. Senator SULLIVAN. General Berger, has the Marine Corps discussed this war game with CSIS?

General BERGER. I can say with certainty that no personnel from the Marine Corps Warfighting Lab's Wargaming Division, which is responsible for our force design wargaming, was asked to participate or was otherwise involved. My staff did reach out to Mr. Mark Cancian to discuss the results of the wargame, he did not respond.

133. Senator SULLIVAN. General Berger, how does the Marine Corps respond to this CSIS assessment of the MLR's effectiveness? Please do not contend that the Marine Corps has access to classified information and CSIS does not.

General BERGER. The CSIS assessment of the MLR is largely based on using it to provide kinetic fires. While the MLR has the capability to provide these fires, its strongest contribution to the Joint Force is its ability to find, fix, and track adversary ships and aircraft, make sense of what will likely be a confusing and cluttered operating environment, and provide targeting information to other elements of the Joint Force to increase their effectiveness, efficiency, and survivability. At the same time, the MLR will contribute to denying or degrading an opponent's ability to do the same.

During the campaign in the Solomon Islands during 1942 and 1943, Australian, British, and American coast watchers provided advanced warning of Japanese ship movements and aerial strike packages that enabled Allied ships and aircraft to position themselves for optimal intercepts, allowing our comparatively meager forces to prevent effective Japanese reinforcement of Guadalcanal and prevent effective Japanese attacks on United States land-based and naval forces. These small teams of personnel were extremely difficult to locate, tied down much larger Japanese forces intent on finding them, and had a massive impact in enabling the defeat of Japanese forces in the Solomon Islands without ever firing upon an aircraft or ship.

The MLR is designed to perform many of these same functions. We understand the speed with which near-peer adversaries can target and engage our forces. The MLR's small operational footprint and mobility will allow it to survive in this highly contested and information saturated environment. If the enemy wants to expend an exquisite munition on a small number of marines—only to find they moved in the time it took the missile to arrive at its planned target—then that is one less exquisite missile bound for an aircraft carrier or key base. These forces will provide targeting-level information to the rest of the Joint Force, so that the 200 missiles a bomber squadron can carry are directed against the right targets in the right place, despite the fact that those targets may have moved hundreds of miles during the interval between launch of the aforementioned bombers and their arrival at their weapons release points.

The CSIS report notes the difficulty associated with deploying an MLR to Taiwan after the start of hostilities. While an MLR could certainly be employed on the island of Taiwan, in the context of a western Pacific conflict it provides more value

to the Joint Force by positioning on key pieces of maritime terrain and limiting an opponent's freedom of maneuver, east of the first island chain. When other targeting systems are degraded or denied, the MLR will leverage multi-domain communications pathways to provide targeting information to the Joint Force. In turn, this will limit other critical asset's exposure to threats while leveraging their larger weapons magazines and capabilities to attrite enemy forces. The

MLR further supports the Joint Force by conducting sea denial operations through the prosecution of enemy forces with their own organic fires capabilities.

Additionally, the MLR is intended to be partially deployed at all times, conducting exercises with allied and partner nations, bolstering their capabilities and interoperability. This creates uncertainty for potential adversaries as they will not know what they will be forced to contend with, should they choose to engage in armed conflict. Further, the MLR's partial deployment reduces the portion of the MLR that will need to be re-positioned in the event armed conflict commences. The Marine Corps recognizes that strategic lift is a vulnerable resource, and that it will be heavily employed by other Services in the event of significant U.S. force deployments. This is a large part of the reason the Marine Corps is seeking a light amphibious ship capability to deploy and sustain portions of the stand in force.

It is also worth noting that the MLR tends to be perceived as a unit that is only useful in a western Pacific conflict. This is not the case. The capabilities of the MLR have proven useful in the Baltic during multi-lateral exercises, tracking real-world unfriendly contacts in multiple domains and providing that information to combined forces. There are numerous other maritime chokepoints around the world where the MLR can provide utility in ensuring friendly freedom of maneuver, while denying the opponents ability to maneuver.

134. Senator SULLIVAN. General Berger, what is the Marine Corps doing to assure access to terrain where MLRs are likely to operate in a contingency involving China or Russia?

General BERGER. "Admiral Aquilino, when you look at the broader China threat in terms of our allies and partners, can you sort of walk us through that world of those partners?

Admiral Aquilino responded with the following statement:

"Certainly, foundational to our strategic deterrence approach and integrated deterrence is the allies and partners and it's an asymmetric advantage. Let me just say that the strategy and approach is competition, not containment. And the five treaty allies of Japan, Korea, Australia, Philippines and Thailand are foundational, right. Those are mutual defense treaties that stand through Senate ratification and are truly important. But our approach is to pull in as many additional allies through a set of layers of many and multilateral engagements, operations and work we do together for a variety of reasons. Number one, we are like minded nations with common values. We have deep ties and that's beyond just the treaty allies. Indonesia, Malaysia, Bangladesh, all the nations in the region. And we operate and exercise with them frequently, 120 exercises a year, deep engagements in the form of key leader and other events. So, pulling that layer together, Congressman, is really important. And it is the asymmetric advantage because it's the one thing China doesn't have and that's partners."

During crisis and conflict, the ability for the Joint Force to gain and maintain access, basing, and overflight from our partners and allies are critical to projecting combat power in support of the combatant commanders. This is one of the significant advantages that the Amphibious Ready Group (ARG) / Marine Expeditionary Unit (MEU) provides to combatant commanders in terms of Flexible Response Options (FROs) and Flexible Deterrence Options (FDOs). However, it is necessary to build and sustain those relationships during competition.

During competition, the Marine Corps' Stand-In Forces (SIF) are executing this strategy by being forward postured with our partners and allies in support of the broader strategy of integrated deterrence. With the latest change to the international agreement with the Government of Japan, 12th MLR will provide a ready and capable stand-in force in the First Island Chain, prepared to support the United States and allied nations by bolstering our ability to support deterrence efforts and respond to contingencies. The 2+2 agreement enhances stand-in force capability within the First Island chain which ensures these forward-deployed marines are ready to support our Allies amidst evolving regional and global security challenges. Today, there are more than 20,000 marines forward-postured west of the International Date Line. They live in our priority theater, assuring allies and partners, and working daily to respond to crisis, deter conflict and support a free and open Indo-Pacific. Should deterrence fail, our forward posture places forces already inside

a potential Weapons Engagement Zone as a survivable and credible threat to our adversaries.

Access for unit employment is largely within the remit of combatant commanders, but the Marine Corps works with combatant commanders and our allies and partners to establish relationships that are the foundation for future access. Some examples of this include scheduled bilateral and multilateral exercises like Balikatan and Nordic Response (formerly Cold Response), key leader engagements, high-level diplomatic meetings like the recent 2+2 with Japan, and humanitarian assistance/disaster relief (HA/DR) support. Security agreements also play an important role in providing the legal and administrative framework for Marine Corps presence, while respecting the sovereignty and interests of U.S. allies and partners.

135. Senator SULLIVAN. General Berger, the Marine Corps has previously conducted its own war games as part of the Force Design 2030 development effort. Will the Marine Corps release classified or unclassified versions of these war game conclusions to my office?

General BERGER. Yes.

Reports are available for the following wargames:

MAGTF Warrior 17, 12–16 June 2017 (pre-FD 2030)
- Purpose: Define Marine Corps capabilities required to conduct sea control and power projection within a joint campaign against a peer adversary.
- Reports available: Secret final report.

Expeditionary Warrior 18, 2–6 April 2018 (pre-FD 2030)
- Purpose: Examine operational level logistics support to marine expeditionary forces in the western Pacific in an anti-access/area denial environment.
- Reports available: Secret final report.

Naval Services Game 18, 9–12 July 2018 (pre-FD 2030)
- Purpose: Explore command relationships, tasking, capabilities, and employment implications of Marine Corps and Navy forces task-organized for littoral combat across the full range of naval missions.
- Reports available: Secret final report.

MAGTF Warrior 18, 17–21 September 2018 (pre-FD 2030)
- Purpose: Inform future logistics operating concepts of support and how the MEF will be organized, trained, and equipped to support and sustain operations as part of an inside force.
- Reports available: Secret final report.

POM22, 7–11 October 2019
- Purpose: Identify capability roadmap changes required to support Force Design 2030.
- Reports available: Unclassified summary.

Strategy 2030, 16–17 October 2019
- Purpose: Inform CMC Force Design 2030 construct and identify potential service-level risks associated with directed force reductions and reorganizations.
- Reports available: Unclassified summary.

Pacific Surprise, 21–31 October 2019 (MLR-focused)
- Purpose: Operational level test of Force Design 2030 force in context of extended joint, maritime campaign against the pacing threat.
- Reports available: Unclassified summary, Secret final report.

Ghost Fleet 1, 14–17 January 2020 (MLR-focused)
- Purpose: Examine the extent to which proposed FD 2030 MLR and MEU can support a given sea denial mission within the context of JFOS 2.2
- Reports available: Unclassified summary, Secret final report.

Black Sheep Squadron, 31 December 2019–28 January 2020
- Purpose: Explore concepts of employment and capabilities for manned and unmanned Marine Corps aviation assets to inform future force design and development.
- Reports available: Unclassified summary.

Ender's Shadow, 15 April and 21 August 2020 (MLR-focused)
- Purpose: Inform FD 2030 decisions and the development of the Tentative Manual for Expeditionary Advanced Base Operations (TM-EABO) through tactical employment of and MLR capabilities as part of a joint maritime campaign conducted in the SCS.
- Reports available: Unclassified summary, two Secret final reports.

Ghost Fleet 2, 20–24 July 2020

- Purpose: Examine the value of proposed sustainment vessels and existing Military Sealift Command ships in sustaining the Joint Force during a joint maritime campaign.
- Reports available: Unclassified summary.

Provident Forge, 23 September–6 October 2020
- Purpose: Evaluate the FD 2030 infantry battalion against selected mission requirements to assess capability when executing global crisis response and contingency missions.
- Reports available: Unclassified summary, Secret final report.

Naval Services Game 20, 18–23 October 2020
- Purpose: Explore fleet integration of Navy and Marine Corps force design initiatives to inform command and control relationships to fight effectively.
- Reports available: Unclassified summary, Secret final report.

Crown Jewel, 2 February–23 April 2021
- Purpose: Evaluate proposed FD2030 MEU construct and concept of employment against selected missions to gauge the formation's ability to execute proposed mission essential tasks.
- Reports available: Unclassified summary, Secret final report.

ENIGMA, 21 February–18 April 2021
- Purpose: Explore design and development considerations of Marine Information Detachments in support of forces operating in the information environment.
- Reports available: Unclassified summary, Secret final report.

Stand-in Force, 29 March –2 April 2021 (MLR-focused)
- Purpose: Inform design of a Stand-in Force that is optimized to conduct reconnaissance and counter-reconnaissance as part of a Joint Force campaign in SCS that can transition seamlessly between competition and conflict.
- Reports available: Unclassified summary.

Ender's Rise, three-game series between February–25 July 2021 (MLR-focused)
- Purpose: Inform revisions and enhancements to the TM-EABO and recommend DOTMLPF-P actions to support organizing, training, and equipping Marine Littoral Regiments and Littoral Maneuver Squadrons in preparation in competition.
- Reports available: Unclassified summary, Secret "quicklook" report.

Littoral Logistics (Expeditionary Warrior 21), 9–13 August 2021
- Purpose: Inform the development of concepts required to posture and sustain a naval force-in-readiness executing theater-level expeditionary advanced base operations in a contested environment.
- Reports available: Unclassified summary, Secret final report.

Littoral Maneuver, 30 August–3 September 2021
- Purpose: Develop and assess boat capabilities and concepts of employment in order to inform requirements documents.
- Reports available: Unclassified summary, Secret final report.

Ground Warrior 22, 7 October 2021–17 February 2022
- Purpose: Refine and clarify the concept of employment for, and examine the composition of, the FD 2030 infantry battalion set against global mission requirements.
- Reports available: Unclassified summary, secret "quicklook" report.

Aviation Wargame, 13–17 December 2021
- Purpose: Review and refine marine aviation requirements in support of the Stand-in Force of 2030 and beyond.
- Reports available: Unclassified summary, TS/SCI final report.

Expeditionary Warrior 22.1, 7–11 March 2022 (MLR-related)
- Purpose: Explore Marine Corps means of contributing to naval, joint, and national objectives in competition below the threshold of major armed combat.
- Reports available: Unclassified summary, Secret "quicklook" report.

Expeditionary Warrior 22.2 / Global 15, 16–20 May 2022 (MLR-related)
- Purpose: Examine Navy and Marine Corps afloat and ashore integration opportunities which enable a Joint Task Force scheme of maneuver and scheme of fires in a high-end conflict against a peer threat.
- Reports available: Unclassified summary, TS/SCI report (under classification review)

MLR Game 2022 Agile Competition/Agile Response (collaboration w/SAW), 23–27 May 2022 (MLR-focused)

- Purpose: Assess concepts related to the employment of Stand-in Forces and the Marine Littoral Regiment at the operational level of war during transition from competition to conflict.
- Reports available: Unclassified final report published in United States Naval Institute journal Proceedings

MLR Game 2023 (collaboration w/Krulak Center), 17 January and 24 March 2023, (MLR-focused)

- Purpose: Identify alternative COAs to the current Littoral Combat Team construct.
- Reports available: Secret

Azure Dragon, 9–13 January 2023 (MLR-related)

- Purpose: Explore III MEF ability to transition from day-to-day operations to major armed combat operations and explore MEF Major Subordinate Commands' ability to serve as Naval Task Group Headquarters.
- Reports available: Secret "quicklook" report, Secret final report (final review).

Ground Warrior 23, 13 December 22–6 January 23

- Purpose: Explore employment of the FD2030 infantry battalion in offensive operations and assess the sufficiency of the battalion's composition.
- Reports available: Secret final report (in review).

Other wargames have been conducted since January 2023, but those reports were not yet available at the time of responding to this QFR. Similar to the above, wargames (and other Campaign of Learning activities)—at the classified and unclassified level—will be made available on a need-to-know basis.

MEU CAPABILITIES

136. Senator SULLIVAN. General Berger, the most visible component of the Marine Corps' crisis response capability is the MEU. The 2,200 marines on a MEU, divided between a Battalion Landing Team, a Composite Helicopter Squadron, and a Combat Logistics Battalion, bring organic capabilities that a combatant commander can employ. Force Design 2030 changes the type and amount of equipment available to the MEU as well as the structure and composition of units assigned to the Command Element (CE), Ground Combat Element (GCE), Aviation Combat Element (ACE), and Logistics Combat Element (LCE). Can you provide a detailed breakdown of the composition of the 31st MEU and the 13th MEU in 2018 and 2023, including any changes to their Mission Essential Tasks and the number of marines assigned to the CE, GCE, ACE, and LCE?

General BERGER. Force Design 2030 has not changed the number of Marine Expeditionary Units (MEUs) the Marine Corps can field; in fact, Force Design 2030 reinforces the need for the continued global employment of this versatile and highly capable unit. The Marine Corps continues to have capacity for seven MEUs. That is, regardless of the availability or readiness of amphibious warfare ships, the Marine Corps has and will continue to field the same number of MEU even as the service continues to modernize. In the late 1980's, the Marine Corps changed the nomenclature of the Marine Amphibious Units to become the MEU. Since then, and for the foreseeable future, the Marine Corps will maintain seven MEUs.

However, unrelated to the Marine Corps modernization efforts with Force Design 2030, the Navy's readiness and inventory of amphibious warfare ships do impact the ability of the MEUs to be forward postured and available for Combatant Commander requirements. Over the past 10 years the average operational readiness or availability of amphibious warfare ships has been 46 percent. This challenges the Amphibious Ready Group (ARG)/MEU team to adequately conduct critical pre-deployment training requirements and qualifications to conduct day and night operations at sea. This not only decreases the safety of our forces by reducing proficiency, but also decreases the Flexible Response Options (FDOs) and Flexible Deterrence Options (FDOs) of the Combatant Commanders to have ready and available forces for operational requirements.

During the 1990's the amphibious warfare ship inventory exceeded operational employment allowing adequate time for maintenance, and more materially available ships to surge when required. For example, in 1991 the Department of the Navy maintained roughly 60 amphibious warfare ships while only 37 percent were deployed. However, in the early 2000's the amphibious warfare ship inventory decreased by nearly half while the operational requirements maintained the same. Overtime as the operational demand remained consistent to historical baselines while inventory decreased, the material condition of amphibious warfare ships has been strained. This has led to common delays of ARG/MEU deployments and provides fewer ready ships to surge if directed.

The 22d, 24th, and 26th MEUs will continue to garrison and deploy from Marine Corps Base (MCB) Camp Lejeune in North Carolina. The 11th, 13th, and 15th MEUs will continue to garrison and deploy from MCB Camp Pendleton in California. Last, the 31st MEU will continue to garrison and deploy from MCB Butler in Okinawa, Japan.

The structural organization of our MEUs will also remain the same and will be comprised of a Command Element (CE), a Battalion Landing Team (BLT) as the Ground Combat Element (GCE), a Composite Aviation Squadron as the Aviation Combat Element (ACE), and a Combat Logistics Battalion (CLB) as the Logistics Combat Element (LCE)

Currently, the 26th MEU is conducting their Pre-Deployment Training Period (PTP) with the Bataan Amphibious Ready Group (ARG) in preparation for their upcoming deployment this Summer. The Artillery Battery within the BLT for the MEU will be organized with a traditional M777 Howitzers platoon and a Force Design incorporated High Mobility Artillery Rocket System (HIMARS) platoon. Throughout the PTP, the battery has been training on new Tactics, Techniques, and Procedures (TTPs) for HIMARS-Tactical Insertion Dynamic Employment (HI-TIDE) that will enable the rapid employment of long-range precision fires after ship-to-shore connectors have maneuvered the assets. This employment concept is an aspect that supports the ability of expeditionary units that can contribute to sea-denial and sea-control operations. Maintaining control of Sea Lines of Communication (SLOC) and the race for key maritime terrain is critical in the current operating threat that has created an Anti-Access, Area-Denial (A2AD) environment through the proliferation of low-cost long-range fires, sensors, and a communications architecture that place U.S. assets at risk. Although Force Design is modernizing, the capabilities resident within the MEU has increased lethality while the core structure and organization of the MEUs remain the same.

A. 13th MEU Summary. The Service has increased its number of F–35s from 6 to 10. This is only feasible in a 2x LPD class ship composition as executed in 2023 unless other aviation assets are reduced. The divestment of heavy main battle tanks has resulted in an increase in ashore mobility of personnel and cargo via additional All-Terrain Vehicles (ATVs), 7-tons, and Joint Light Tactical Vehicles (JLTVs). The temporary reduction in AAVs has allowed additional engineer equipment and containerized cargo to be embarked. The vertical takeoff and landing—unmanned aerial system (V-BATs) have begun fielding, placing an additional aviation capability with the medium deck ships during disaggregated operations. Personnel composition remains similar across the MAGTF.

B. 31st MEU Summary. F–35s were slated to deploy in 2018, however were land-based for operational considerations. The homeport shift of LHA–6 USS *America* replacing LHD–1 USS *Wasp* in Forward Deployed Naval Forces—Japan (FDNF-J) has brought an F–35 certified flight deck into 7th Fleet resulting in regular 5th Gen TACAIR presence with the MEU. Some traditional towed artillery has been replaced with HIMARS rocket artillery. As with 13th MEU, V-BATs have begun fielding with very positive feedback from our commanders, and personnel composition remains consistent.

C. Detailed composition of MEU capabilities in 2018 and 2023 is provided below and is displayed in two columns (column 1 represents 2018 and column 2 represents 2023).

13th MEU Aircraft and UAS: MV–22: 10/10. CH–53: 4/4. AH–1: 4/4. UH–1: 3/3. F–35: 6/10. V-BAT: 0/3.

13th MEU Vehicles and Equipment: M777: 6/4. M1A1 Main Battle Tank: 4/0. M88 Tank Retriever: 1/0. AAV: 15/0. LAV: 20/20. 7-Ton: 41/45. HMMWV/JLTV: 84/94. ATV: 7/17. Engineering equipment: 5/7. Containerized cargo: 468/548.

31st MEU Aircraft and UAS: MV–22: 10/10. CH–53: 4/4. AH–1: 4/4. UH–1: 3/3. F–35: 0/6. V-BAT: 0/3.

31st MEU Vehicles and Equipment: M777: 6/4. HIMARS: 0/2. AAV: 15/0. LAV: 5/11. 7-Ton: 37/30. LVSR: 3/0. HMMWVs/JLTV: 85/49. ATV: 11/15. Engineering equipment: 5/2. Containerized cargo: 367/357.

The Mission Essential Task List (METL) for both the 31st and 13th Marine Expeditionary Units (MEUs) have experienced some changes between 2018 and 2023. These changes included the removal of four METs:

- Conducting Theater Security Cooperation Activities
- Conducting Aviation Operations from Expeditionary Shore-Based Sites
- Performing Enabling Operations
- Conducting Airfield Seizure Operations

While adding one new MET: Establishing and Operating Expeditionary Advanced Bases.

Now, both MEUs are expected to be capable of the following:

- Establishing an expeditionary site to support naval operations, which may include ports, airfields, Forward Arming and Refueling Points (FARPs), forward operating bases, and firing areas
- Conducting enabling operations as required for naval operations
- Establishing and maintaining operations at a site until it is either disestablished or control is transferred to another entity
- Reducing pockets of resistance, securing the area, and defending the site against company-level threats.

While the METL for the 31st and 13th MEUs are identical, there is a minor difference in the baseline and advanced standards for Maritime Interception Operations (MIO). The primary difference is the specified ability to conduct daytime bottom-up entry, which is a baseline standard for the 13th MEU, but is an advanced standard for the 31st MEU.

137. General Berger, the MEU GCE is based on a Battalion Landing Team (BLT) with three rifle companies. The standard attachments to form the BLT have been an artillery battery (6 x M777 lightweight howitzers), an assault amphibious vehicle (AAV) platoon (18–21 AAVs), a light armored reconnaissance platoon or company (6–25 Light Armored Vehicle variants), and engineer platoon, and a reconnaissance platoon. The composite squadron in the ACE traditionally deploys with the following mix of airframes and detachments: medium tiltrotor (VMM) squadron (10–12 x MV–22s), heavy helicopter squadron (HMH) detachment (4 x CH–53E/K), light attack helicopter squadron (HMLA) detachment (4 x AH–1Z and 3 x UH–1Y), marine attack squadron (VMA or VMFA) detachment (6 x AV–8B or F–35B), aerial refueler transport squadron (VMGR) detachment (2 x KC–130's), Marine Air Control Group (MACG) detachment, Marine Wing Support Squadron (MWSS) detachment, and a Marine Aviation Logistics Squadron (MALS) detachment. Typical MEU LCE equipment includes 15 MTVR, 18 HMMWVs, 2 M36 wreckers, 2 D–7 bulldozers, 3 forklifts/front-loaders, 4 bulk fuel vehicles, 2 water vehicles, 1 recovery AAV, and 1 noncombatant evacuation operations (NEO) tracking system. Are MEUs deploying in 2023 deploying with organizational structures like that described above?

The organizational structure described above remains similar across all Marine Expeditionary Units (MEUs), except for the use of assault amphibious vehicles (AAV), and HIMARS. Currently, the force is transitioning to the Amphibious Combat Vehicle (ACV) and divesting of AAVs. The Service is currently on track to deploy the first ACV platoon via an ARG/MEU in fiscal year 2024 to fiscal year 2025, which is a change to the above organizational structure as described. MEUs will task organize based off assessments conducted by the MEF Commanders and the MARFORs. In some cases, a MEU may deploy with HIMARS (HIMARS Platoon has 2x Launchers) vice deploying with an artillery battery (6x M777 lightweight Howitzers). In this case, the Service's 31st MEU deploys with HIMARS as opposed to East and West Coast MEUs. Task Organization is driven by many factors such as the deployment schedule, forces available, pre-planned partnered exercises, and adversarial actions. The stated changes to Task Organization (T/O) and Table of Equipment (T/E) do not prevent the execution of any assigned Mission Essential Tasks (METs).

138. General Berger, if MEUs deploying in 2023 will be organized differently that described above, please provide a detailed comparison of how they deviate from the standard MEU load out, including the number of personnel assigned to each unit within the CE, GCE, ACE, and LCE.

See Question for the Record #137. The structural organization of our MEUs also remain the same and will be comprised of a Command Element (CE), a Battalion Landing Team (BLT) as the Ground Combat Element (GCE), a Composite Aviation Squadron as the Aviation Combat Element (ACE), and a Combat Logistics Battalion (CLB) as the Logistics Combat Element (LCE)

The composition of how the MEU is spread across the three ship Amphibious Ready Group (ARG) and what capabilities are within it will be tailored to the threat environment and historical trends of Combatant Commander mission assignments to the ARG/MEU team. Prior to deployments, the ARG/MEU will conduct a 9-month pre-deployment training period (PTP) with various at sea exercises that allow the two commands to build and work on Standard Operating Procedures (SOPs) for assigned Mission Essential Tasks (METs). During at sea periods the ARG/MEU commanders, staff, and major subordinate commands will execute a variety of full mission profile exercises such as amphibious raids, amphibious assaults, non-combat evacuation operations (NEO). The two commands will also coordinate with Fleet and Joint headquarters in the Combatant Commands that the ARG/MEU is expected to be assigned to during the deployment to coordinate Theatre Security Cooperation

(TSC) exercises and receive intelligence briefs to understand the threat environment. Through the combination of the at sea training periods, development of SOPs, understanding of anticipated assigned missions, and the threat environment, the ARG/MEU team tailors what assets are assigned to each amphibious warfare ship within the ARG to be appropriately organized for operational deployment. As such, MAGTFs can and will vary in size and capability according to their assigned or likely missions.

FORCE DESIGN 2030 TRANSPARENCY

139. Senator SULLIVAN. General Berger, it has been reported that senior marine officers were required to sign non-disclosure agreements after working on Force Design 2030. Is this accurate?

General BERGER. Prior to the public release of information and decisions made, regarding Force Design 2030, the Marine Corps provided Non-Disclosure Agreements (NDA) to a select number of officers and staff. These NDAs were provided in an effort to minimize incorrect information and guidance from being publicly shared while Force Design 2030 was in its developmental stage. These officers and staff were members of a select, core group who were instrumental in the decision-making process. The NDAs were provided and signed on a voluntary basis, whereby if a member of the group did not desire to sign the NDA, they were not forced to sign and participate.

This practice of non-disclosure agreements is not uncommon—in the private nor in the public sector—where organizations are considering change-at-scale. The Service relied upon a small group of hand-selected, senior planners, to include a number of retired General Officers, that spanned the MAGTF and possessed a diverse experience base. They helped to craft General Berger's Commandant's Planning Guidance and the initial framework of Force Design, not a part of a public forum, but as a small team of critical thinkers, helping the Service mature its Force Design initiative. Subsequently, using a concentric-circles approach to implementing change-models, during the first year of planning, in which the foundations of Force Design were matured, a broader population of senior planners and subject matter experts were selected to support Service-level planning efforts—and were subject to non-disclosure agreements—so as to (a) afford the planners with the opportunity to creatively think absent limitations or pressures of "sustaining status quo" while (b) allowing nascent ideas to be discussed, developed, and matured before they were made public. Simply put—this is responsible planning. In the second year of planning, better matured ideas that required further examination, to include understanding their broader Service-level implications across the Fleet, the Supporting Establishment, and the Service's Headquarters, allowed for the concentric circle of planners to be further expanded. Twelve to 24 months later, outputs such a Talent Management 2030, Training and Education 2030, and Installations and Logistics 2030—all institutional enablers to a redesigned Marine Corps—were generated. Simply put, this process of change—the use of concentric circles of planners—to include the temporary use of non-disclosure agreements—is not unique to Force Design and, in fact, in the private and public sector, is a well-recognized technique to implement change.

140. Senator SULLIVAN. General Berger, if senior Marine Officers were required to sign non-disclosure agreements after working on Force Design 2030, why was that necessary?

General BERGER. See Questions for the Record #139. It was determined that those involved be restricted from discussing the topic with those not read in to prevent the disclosure of anything pre-decisional. Select personnel were subject to non-disclosure agreements so as to (a) afford the planners with the opportunity to creatively think absent limitations or pressures of "sustaining status quo" while (b) allowing nascent ideas to be discussed, developed, and matured before they were made public.

141. Senator SULLIVAN. General Berger, you indicated that the Marine Corps has conducted over 400 engagements with Congress to discuss Force Design 2030. Can you provide a list of those engagements specifying whether they were meetings, briefs, or hearings with Members of Congress to discuss Force Design 2030 or other issues within the Marine Corps?

General BERGER. When the Marine Corps first undertook Force Design 2030, we assessed that the Congress would be a key partner in the development and execution. We understood that to move at the necessary speed that the pacing threat re-

quired, we would need to capitalize on the wisdom and perspectives of both Members and staff of the Congress. They were an essential source of information on our Campaign of Learning—where we sought to rapidly inject lessons learned, wargaming and experimentation into our decisions. We sought congressional oversight at the start—so as to take advantage of the invaluable perspective of Congress.

In 2019, the Service released the Commandant's Planning Guidance, setting forth the intent and direction for the Force Design 2030 initiative. The document emphasized the need to reallocate resources and shift the Marine Corps' focus toward future conflict scenarios, such as great power competition and naval integration. It was recognized we need to provide regular updates, engage in briefings, and seek congressional feedback to ensure that the Force Design 2030 aligned with national security objectives and received appropriate oversight.

Following the release of the Planning Guidance, the Service actively engaged with Congress to facilitate a robust and ongoing dialog. Marine Corps leaders conducted multiple office calls and briefings to provide in-depth insights into the Force Design 2030, be available to address any concerns, and solicit feedback from Members of Congress, as well as personal and professional staff. From 2019 until the release of Force Design 2030 in March 2020, the staff participated in 31 engagements (office calls, breakfasts, briefings, phone calls, and events) with Members of Congress, committee personnel, and personal.

These engagements spanned comprehensive classified and unclassified presentations on force structure changes, acquisition plans, projected budgets, and anticipated timelines. The program briefs were especially detailed to ensure projected investments remained on cost, on schedule, and within performance parameters. During these briefs and office calls, the marine briefers welcomed rigorous scrutiny and worked closely with congressional committees, so as to take full advantage of their experience.

As Force Design 2030 plans began implementation, the Service remained committed to transparency by sharing progress reports, conducting site visits, and facilitating access to classified and unclassified information related to the Force Design 2030. Regular updates and consultations with relevant committees were established to maintain a continuous flow of information, enabling Congress to effectively exercise its oversight responsibilities.

Since 2020, the Service has increased congressional engagements upon the release of Force Design 2030 and in subsequent years.

**Each items listed reflects a separate, distinct engagement.*

2020
Office Calls with Members: 35
]Briefings to Members: 13
Briefings to Professional or Personal Staff: 37

Briefings to Professional or Personal Staff: 26
Other (breakfasts, etc.): 6
Total Engagements: over 70 to date

Hearings and Questions for the Records: Separately (and not counted in the above totals), the Marine Corps' Force Design 2030 concept was addressed on the record (either during testimony or questions for the record) in over 41 hearings from March

2020 until February 2023 and responding to Questions for the Record from all defense committees.

Force Design 2030, initiated in 2019, represents a transformative effort aimed at ensuring the Marine Corps remains prepared for the challenges of the future. As the Force Design 2030 continues to be implemented, the Service remains committed to maintaining open lines of communication with Congress and upholding the principles of transparency and accountability, thus strengthening the Marine Corps and the Nation's defense capabilities for the future.

142. Senator SULLIVAN. General Berger, the Goldwater-Nichols Department of Defense Reorganization Act of 1986 provides Service Chiefs the responsibility to man, train, and equip personnel for the unified commands. Did you consult with any combatant commander prior to embarking on Force Design 2030 in 2019 or during initial Force Design efforts in 2020?

General BERGER. Yes.

As the Commandant of the Marine Corps, per Title X, I, along with my fellow Service Chiefs, am responsible for the development of requirements for the equipping of my respective Service's forces. Additionally, as the Marine Corps falls within the purview of the Department of the Navy, I am subject to the authority, direction, and control of the Secretary of the Navy (SECNAV). It is my responsibility to transmit the plans and recommendations of my Headquarters to the SECNAV. Should the Secretary approve those plans and recommendations, I am then required to act as the agent of the Secretary in carrying out those plans and recommendations.

Force Design 2030 was a process of modernization, designed to refocus the Marine Corps on the pacing threat as identified in the 2018 National Defense Strategy (NDS), which was then reiterated in the 2022 NDS. Based on the Intelligence Communities assessment of adversaries' capabilities, the Marine Corps evaluated what was needed to support the fleet and Joint Force in accordance with the service's Title X requirements. In consultation with Navy partners, specifically the 7th Fleet Commander and his staff, it was determined that the Navy needed the Marine Corps to support and conduct sea denial in and around maritime choke points. This initial input was a critical driver in our early modernization efforts as the Marine Corps had nothing in its inventory to provide that capability to the Navy. By the end of this year, it will. III Marine Expeditionary Force, which is assigned to the Commander for U.S. Indo-Pacific Command, will be capable of conducting sea denial with the Navy Marine Corps Expeditionary Ship Interdiction System, or NMESIS. This new capability will be complimentary to other services capabilities such as the Army's Precision Strike Missile and will directly impact the needs of the Navy and by extension, Combatant Commanders.

While the 2018 and 2022 National Defense Strategies clearly State the case for change by identifying the Indo-Pacific as the priority theater, from a competition and threat perspective, the Marine Corps has implemented threat-driven and concept-based changes that will support more than one Fleet or Combatant Commander. The Marine Corps' Expeditionary Advanced Base Operations (EABO) and Stand-in Forces (SIF) concepts are aligned to both NDSs and are theater agnostic. The plan for light, lethal, and distributed forces is applicable in any Combatant Command, such as U.S. European Command (EUCOM) or U.S. Central Command—and have shown to be successful. For example, Task Force 61/2 (TF 61/2) executed a proof of concept in 2022 in which they provided the 6th Fleet Headquarters with real-time Maritime Domain Awareness (MDA). In that effort, marine forces tested, refined, and validated concepts of employment for MDA and for closing kill webs, while also conducting real-world, time sensitive reconnaissance-counter reconnaissance missions. These efforts continue to support 6th Fleet operations, which directly support EUCOM and United States Africa Command priorities. Since those proofs of concept in 2022, TF 61/2 has become a standing force within the U.S 6th Fleet, sourced by a marine rotational force.

143. Senator SULLIVAN. General Berger, if you did consult with combatant commanders, can you provide details about which combatant commanders and when you consulted with them?

General BERGER. As the Commandant of the Marine Corps, per title X, I, along with my fellow Service Chiefs, am responsible for the development of requirements for the manning, training, and equipping of my respective Service's forces. Additionally, as *the Marine Corps falls within the purview of the Department of the Navy, I am subject to the authority, direction, and control of the Secretary of the Navy (SECNAV). It is my responsibility to transmit the plans and recommendations of my Headquarters to the SECNAV. Should the Secretary approve those plans and rec-*

ommendations, I am then required to act as the agent of the Secretary in carrying out those plans and recommendations.

Conversely, Combatant Commanders' responsibilities include producing the plans for the employment of their assigned forces. Those plans are then carried out, as appropriate to accomplish the Combatant Command's assigned missions.

During the *U.S. European Command's (EUCOM)* posture hearing on 30 March 2022, General Wolters was asked how new concepts such as Expeditionary Advanced Based Operations (EABO) and Stand-In Forces (SIF), along with the advanced sensing capabilities that marines from Task Force 61/2 operate with, enhanced his options as a Combatant Commander.

> *"They dramatically enhance our options, Congressman. and as you know, we have exercise Cold Response ongoing as we speak, and the Commandant just paid a good visit. What we're seeing is doing exactly just what you alluded to, a brown water force that can shoot, move, and communicate and is very, very expeditionary is priceless for 21st century security. All of that is ongoing in all domains . . . And you can't succeed if you just occupy one domain and attempt to achieve effects in one domain. So, the marines are doing a fantastic job of leading from the front and showing the rest of us how to do it right, especially in the brown water environment."*

Later, on 18 April 2023, *Admiral John C. Aquilino, Commander, U.S. Indo Pacific Command* provided the following response when asked about the Marine Littoral Regiment in his theatre of operations.

> *" . . . General Berger who came out of MARFORPAC, as you know, I think was pretty understanding of the threat, the scenario, and what was needed. So, I appreciate his effort to focus on the Indo Pacific problem set. That said, we need to deliver that organization with the capabilities to deliver effects to surface-to-air, surface-to-surface, and surface-to-ship. When that force is armed and prepared with that set of capability, it's exactly what we need in the Indo-Pacific to support the fight."*

The Marine Corps' Expeditionary Advanced Base Operations (EABO) and Stand-in Forces (SIF) concepts meet the 2022 National Defense Strategy (NDS) intent and are theater agnostic. The plan for light, lethal, and distributed forces would be successful in other Combatant Commands (COCOMs), such as European Command (EUCOM) or Central Command (CENTCOM)—and have shown to be successful. For example, Task Force 61/2 executed a proof of concept during 2022 in which they provided 6th Fleet Headquarters with real-time Maritime Domain Awareness (MDA). In that effort, marine forces tested, refined, and validated concepts of employment for MDA and closing kill webs, while also conducting real-world, time sensitive reconnaissance-counter reconnaissance missions. These efforts continue to support 6th Fleet operations as nested within EUCOM and Africa Command (AFRICOM) priorities and have sense turned into a rotational force.

144. Senator SULLIVAN. General Berger, you and Lieutenant General Heckl have testified that the Marine Corps is fully capable of meeting all global commitments. Were Force Design 2030 related divestments coordinated with the Commander, United States Forces—Korea before they were implemented? Please provide the documentation in support of your answers.

General BERGER. No, but Combatant Commanders were given advanced copies of Force Design documents for comment.

As the Commandant of the Marine Corps, per Title X, I, along with my fellow Service Chiefs, am responsible for the development of requirements for the manning, training, and equipping of my respective Service's forces. Additionally, as the Marine Corps falls within the purview of the Department of the Navy, I am subject to the authority, direction, and control of the Secretary of the Navy (SECNAV). It is my responsibility to transmit the plans and recommendations of my Headquarters to the SECNAV. Should the Secretary approve those plans and recommendations, I am then required to act as the agent of the Secretary in carrying out those plans and recommendations.

The Marine Corps overall Indo-Pacific posture is nested within the INDOPACOM Theater Posture Plan. Our stand-in forces within the first island chain offer advanced capabilities and serve as integrated deterrent forces in support of Joint, Interagency, and multinational missions. When not in direct conflict, these forces continuously strive for interoperability with foreign security forces and improve civilian-military relations with partners while serving as a deterrent force against potential adversaries.

MARINE CORPS AS A STAND IN FORCE

145. Senator SULLIVAN. General Berger, it will be many years before the Marine Corps has sufficient missiles to engage in a prolonged fight with the PLA. How will Stand-in Forces operate after they have exhausted their missile inventories?

General BERGER. The Marine Corps' forward presence within a potential adversary's weapons engagement zone enables the service to emplace an integrated and redundant network of expeditionary sensors at key maritime chokepoints to provide situational awareness, targeting data, and Command & Control (C2) for naval, joint, and coalition forces. The employment of kinetic fires is a secondary role of the Stand-in Force (SIF). By combining Marine Corps sensors with joint kinetic and non-kinetic fires and effects, stand-in forces can hold key adversary assets at risk and disrupt adversary decisionmaking, thereby enabling the rapid deployment of naval, joint, and coalition forces in theater while providing additional options for commanders and senior leaders. Additionally, by holding adversary assets at risk, the Stand in Force is able to provide commander and national leaders with off-ramps from conflict, ideally, preventing the escalation of competition to crisis and beyond.

The SIF will also enable strategic messaging to our allies and partners, as well as the adversary, that our actions are defensive in nature, demonstrate resolve, and would be costly to effectively counter. The Stand-in Force integrates with coalition forces and stiffens the resolve of allies and partners while influencing adversary risk calculations. SIF daily interactions and operations with the nations and communities of our allies and partners strengthen U.S. alliance networks while simultaneously allowing opportunities for de-escalation should competition escalate above the threshold of violence.

While magazine depth of various elements within the SIF will vary depending on element size, location, and mission, the SIF will also be able to sustain itself inside the adversary's weapons engagement zone with missile and other aerial defense capabilities. To counter these, the Marine Corps has invested in the Marine Air Defense Integrated System (MADIS) to counter drones and aircraft. The Marine Corps is also developing Medium-Range Intercept Capability (MRIC) to defend forward-deployed forces against cruise missiles. Our premier joint-capable aviation command and control platform is the Common Aviation Command and Control System (CAC2S). CAC2S possesses the tactical data links and communication paths needed to quickly alert the Joint force when any data on a hypersonic launch is classified by our sensor network. These capabilities provide the Joint force with the ability to detect and see the hypersonic threats within the fleet and Joint force commanders' theater.

146. Senator SULLIVAN. General Berger, why is the Marine Corps redesigning and restructuring itself to conduct sea denial operations that can already be performed by other Services, for example, Navy attack submarines, Air Force long-range missiles, and Army Multi-Domain Task Forces (MDTFs)?

General BERGER. Part of the Marine Corps' Title X responsibilities are to "provide fleet marine forces of combined arms, together with supporting air components, for service with the fleet in the seizure or defense of advanced naval bases and for the conduct of such land operations as may be essential to the prosecution of a naval campaign." It is inherent in the Marine Corps' Title X responsibilities to provide an expeditionary force in readiness that can provide combat credible forces that can operate across the conflict continuum in support of naval campaigns. Force Design has enhanced the Marine Corps' ability to support naval campaigns and fleet commanders by equipping formations with the necessary capabilities to enable sea control and denial operations as required to seize or defend advanced naval bases.

Furthermore, the Force Design process is not seeking to restructure the Marine Corps to be solely responsible for sea denial and control operations. These capabilities will be inherent in our Marine Littoral Regiments (MLRs) and other elements of the Stand-in Force, and are complementary to other Service's capabilities, within the joint warfighting construct. Moreover, the Marine Corps' sea-denial capabilities are not redundant to joint and coalition force capabilities but are a complimentary collection of combined arms capability options for Combatant Commanders. Marine Corps Doctrine Publication 1 defines combined arms as the "synchronized and simultaneous application of different arms and elements of combat power to achieve an effect greater than if each element were used separately or sequentially."

One of the Marine Corps' capstone research and development projects in Force Design is the family of integrated targeting cells. The effort accelerates the evolution of combined arms multi-domain formations by fusing operations, intelligence, and fires functions (i.e., Combined Arms) together in a single center, creating the

means for marine units to participate in and control joint fires, while also gaining and maintaining persistent custody of adversary targets. The Marine Corps today now has the ability to fight and contest in all five warfighting domains to include space and cyber. The integration of advanced technological capabilities has increased the lethality of the Marine Air Ground Task Force (MAGTF) to deter, but also contend against our adversaries in these domains with combat credible formations and capabilities that can provide precision fires at range. Additionally, Force Design investments have prioritized sensing and communication capabilities that enable forward postured formations to detect and track adversaries' and provide the Joint Force with the necessary target data to project combat power into an Anti-Access/Area Denial environment. While these efforts will enable maneuver of units, more importantly they will enable the maneuver of Joint Force and naval units in and around the maritime domain.

Last, while the MLR is a tailored MAGTF, specifically designed to support operations across the conflict continuum, it is not a Marine Infantry Regiment. The MLR and Marine Infantry Regiment differ based on the unique mission, task organization, and the equipment of each organization. The MLR is a key Force Design output with global applicability, although based in the Indo-Pacific. Alternatively, the Marine Infantry Regiment exists within all three Marine Divisions and remains tailorable and scalable to support operations across the conflict continuum, globally.

Marine Corps Aviation under Force Design 2030

147. Senator SULLIVAN. General Berger, the Marine Corps has stated that the key to sustaining Stand-in Forces is the Landing Ship Medium augmented by aviation support, buying from local inhabitants, and "foraging" for food. The decision to divest critical logistics capabilities was made several years ago, but testimony by marine leaders has also admitted that the logistics support concept has not been solved. If marines are deployed today under the SIF concept, how would they be sustained with all classes of supply, medical/casualty evacuation, and required maintenance capabilities?

General BERGER. As stated in our recently released I&L 2030 we clearly recognize that "the Marine Corps Installations and Logistics Enterprise is not yet organized, trained, or equipped to sustain expeditionary forces across all domains as envisioned by A Concept for Stand-In Forces (SIF), Littoral Operations in a Contested Environment, and Expeditionary Advance Base Operations, nor in traditional crisis response scenarios. Year after year, exercises, wargames, and experiments have demonstrated and validated this assessment." Stand-in Forces today are currently operating in this environment and are relying on a mix of legacy and new capabilities.

Primary classes of supply such as class I/III are established through pre-existing procurement methods with the Defense Logistics Agency (DLA). Class V supportability is related to registered operational plans in support of Combatant Commander requirements. Initial ground sustainment for Class V is coordinated and distributed from forward prepositioned stocks. Medical support for SIF is sustained through on scene organic capabilities within battalion aid stations for Class VIII requirements. The level of care that is required organically depends on the size, capabilities, and mission of the unit supporting the SIF. The Marine Corps is not resourced or authorized to provide all required medical services, such as theater hospitalization and aeromedical evacuation out of theater and must rely on Joint Force support. Required maintenance support for the SIF is currently being sustained through standard DLA coordination and routine sustainment methods. For larger maintenance requirements or exercises with allies and partners, one of our various Maritime Preposition Squadrons (MPSRONs) could be employed to support the SIF with the necessary capabilities. Smaller maintenance requirements can be supported through a variety of methods. For example, the Marine Corps' aviation capabilities routinely conduct Passengers, Mail, and Cargo (PMC) requirements from both ashore and afloat platforms to transport the necessary support.

However, the Marine Corps understands that enabling flexible and responsive sustainment in a contested environment requires a broad mix of ashore and afloat platforms and an integrated logistics network to support the SIF. This is the reason we are pursuing modernization across our entire logistics enterprise. We intend to transition our logistics from a capability optimized for supporting sustained operations ashore to a maritime capability capable of supporting operations in austere, expeditionary, and littoral environments that are contested across all domains. The centerpiece of this concept of support is the development of an integrated ashore and afloat sustainment network that can support marine forces globally. This network would be capable of generating multiple logistics webs that provide options to commanders, creates resiliency, contributes to deterrence, and overcomes the precision lethality of the modern battlefield. To do this, this network would seek to inte-

grate naval, joint, Allied and Partner capability based on the operational requirement.

From a resourcing perspective, this network requires four critical capabilities: multi-capable distribution platforms, increased and diversified forward positioning of sustainment, installations that are prepared for operations in a contested environment, and improved logistics command and control. As noted previously and as seen in the activation of the new Marine Aerial Refueler/Transport Squadron in Hawaii, the Marine Corps is working to establish multi-capable distribution platforms to enable our modernized logistics efforts. As for increasing and diversifying the forward positioning of sustainment—we will achieve this through the Global Positioning Network (GPN) which consists of a dynamic, integrated, afloat and ashore networks, to support the Stand-in-Force and global crisis response. The Marine Corps will make our installations ready for the contested environment by transforming our Indo-Pacific installations into advanced bases capable of serving as vital nodes in the logistics network, while our CONUS-based installations are made more efficient, resilient, and capable. Last, the Marine Corps will enhance its logistics command and control to enable better logistics decisionmaking. For additional details, I offer two key sources of information to further inform your team. First, is DC, CD&I's recently released Contested Logistics video at: *https://www.youtube.com/watch?v=478rCQCzuoUn.* The recently relesed Installations and Logistics 2023 is enclosure 3. [The enclosure has been retained in Committee files.]

MARINE CORPS AVIATION UNDER FORCE DESIGN 2030

148. Senator SULLIVAN. General Berger, several weeks ago LtGen Heckl affirmed that the Marine Corps was not diminishing a single aviation POR. That just means that the Marine Corps is going to buy the amount of aircraft it planned on buying. There is a delta between the number of aircraft the Marine Corps will require in each POR and the number of operational aircraft in the total force based on the number of squadrons and the number of aircraft per squadron. Can you provide a detailed accounting of this delta, including any aircraft that will be in storage, inventory management, available for Foreign Military Sales, or otherwise divested from the Marine Corps inventory?

General BERGER. As a result of Force Design 2030, no aviation programs of record were reduced. Marine Aviation capabilities have expanded since Force Design 2030 efforts began in 2019. Today, Marine Aviation consists of fifth generation F–35s, tiltrotor MV–22s, the only marinized heavy lift helicopter in the U.S. arsenal—the CH–53K, H–1s that have been upgraded in lethality and survivability, the venerable C–130J, new MQ–9As, the Ground/Air Task Oriented Radar (G/ATOR) and the Marine Air Defense Integrated System (MADIS). Across all platforms, modernization efforts have integrated readiness initiatives, incorporated advanced technologies, and ensured the capabilities procured meet or exceed those of their preceding platform. Force Design 2030 has expanded, optimized, and enhanced Marine Aviation's ability to continue to deliver more lethal, effective, and survivable capabilities to enable naval and joint campaigning in all domains across the continuum of conflict.

Force Design 2030 brings significant additional capabilities to the Aviation Combat Element. Force Design 2030 efforts have expanded Marine Aviation with modernized capabilities, increased readiness, and enhanced lethality across all platforms to meet the demands of global force management, rapidly changing technology, and the ever-changing operating environment. Historically, the number of squadrons (organizational construct) and aircraft (composition) within aviation units has always evolved inside the Program of Records (POR) to ensure the Marine Corps remains the Nation's crisis response force while modernizing and optimizing the fleet to meet the challenges of the future operating environment.

The Marine Corps POR for F35 is 420; the POR for CH–53K is 200; the POR for MV–22 is 360 (final procurement in fiscal year 2023); the POR for H–1s is 389 (procurement completed in fiscal year 2019).

- F–35: The Marine Corps is procuring 353 F–35B and 67 F–35C, a total of 420 aircraft at the rate of roughly 20 aircraft per year. Force Design 2030 modernization directing an organizational construct change to 18 squadrons of 10 F–35 aircraft allows the Marine Corps to deploy 10 F–35Bs aboard our MEUs compared to the traditional six AV–8B TACAIR contingent. After completing the F–35 transition, 18 Active component operational squadrons will enable Marine Corps TACAIR to meet steady-State Global Force Management requirements.
- CH–53K: The CH–53K POR has remained at 200. A CH–53 squadron is designed to be task organized and is manned, trained and equipped in the fol-

lowing manner: 16-aircraft squadron (1.0) Primary Mission Aircraft Authorization (PMAA), 12-aircraft temp squadron (.75) Primary Mission Aircraft Inventory (PMAI), 8-aircraft squadron minus (.5), 4-aircraft detachment (.25). In accordance with Force Design 2030, the heavy lift community will support the Marine Corps with 5.25 Active squadrons x 16 CH–53, 1 Reserve squadron x 16 CH–53, 1 fleet replacement squadron x 17 CH–53.

- MV–22: The Marine Corps is procuring 360 MV–22Bs in the following squadron bed-down: 14 Active squadrons x 12 MV–22B, 2 Reserve squadrons x 12 MV–22B, 1 fleet replacement squadron x 27 MV–22B. The Marine Corps is complete with the medium lift transition. Force Design 2030 has reduced the total squadron end strength from 18 squadrons to 14 squadrons. Force Design 2030 modernization from a 12 to 10-aircraft squadron enables the Marine Corps to extend the service life of this unmatched capability from the mid–2030's to the early 2050's.
- H–1: The H–1 POR is 349. Force Design 2030 directed the deactivation of two HMLA squadrons. By the end of fiscal year 2024, Active component squadrons will be reduced from 7 to 5. Force Design 2030 modernization increases the H–1s readiness and provides flexibility for our operational commanders for decades to come The Total Active Inventory required will be 284 H–1 aircraft. Four west coast squadrons will support global force commitments and MEU detachments operations for the 11th, 13th, 15th, and 31st MEU (Okinawa) as well as the Unit Deployment Program (Okinawa) while one east coast squadron will support the 22d, 24th, and 26th MEU.

Current Force Primary Aircraft Authorization:

- 7 AC HMLA Squadrons 15 AH–1Z, 12 UH–1Y
- 1 RC HMLA Squadron 15 AH–1Z, 12 UH–1Y
- 1 RC HMLA Squadron (-) 10 AH–1Z, 8 UH–1Y
- 1 Fleet Replacement Squadron 15 AH–1Z, 12 UH–1Y

Future Force Primary Aircraft Authorization (Fy25):

- 5 AC HMLA Squadrons 15 AH–1Z, 12 UH–1Y
- 1 RC HMLA Squadron 15 AH–1Z, 12 UH–1Y
- 1 RC HMLA Squadron (-) 10 AH–1Z, 8 UH–1Y
- 1 Fleet Replacement Squadron 15 AH–1Z, 12 UH–1Y

149. Senator SULLIVAN. General Berger, in responses to Requests for Information from my office, the Marine Corps indicated that varying numbers of aircraft in the Marine Corps inventory would go into storage or inventory management extend the service life of MV–22s, AH–1Zs, UH–1Ys, CH–53Ks, and F–35s. In fact, according to the information the Marine Corps provided me, a significant amount of aircraft—as many as 60 MV–22s, 30 AH–1Zs, 24 UH–1Ys, 48 CH–53Ks, and 54 F–35Bs will go into storage, or inventory management as the Marine Corps calls it, by 2030. When I read you these numbers at a closed session following the April 18, 2023 hearing, you said they were not accurate even though they had been provided to my office by the Marine Corps. What are the accurate numbers of aircraft the Marine Corps is putting into storage or inventory management?

General BERGER. Before discussing inventory management, it is important to understand all elements that comprise the Program of Record (POR). When the Service determines a POR, three primary categories are calculated to ensure the Service procures the exact number of aircraft needed to support the operational forces over the aircraft's lifetime. The three primary categories are:

- Primary Aircraft Inventory (PAI). PAI ensures operational, training, testing, and reserve squadrons maintain their full complement of aircraft (defined as Primary Aircraft Authorization (PAA)) on a day-to-day basis.
- Backup Aircraft Inventory (BAI). BAI are backup aircraft that ensure when operational, training, testing, and reserve squadrons aircraft undergo long-term planned maintenance or modification pipelines; there is no degradation in readiness on our flightlines (defined as Backup Aircraft Authorization (BAA)).
- Attrition Reserve (ATT). ATT aircraft ensure that if an operational, training, testing, or reserve squadron loses an aircraft due to a mishap or damage, we can immediately replace it to ensure there is no degradation in readiness of the Marine Corps' ability to respond to crises.

Aircraft inventory management for the Marine Corps is defined by SECNAVINST 5442.3, which provides the framework for how the Service determines the appropriate quantities of BAI and ATT aircraft. Each airframe type uses different per-

centages based on historical data to calculate BAI and ATT. The Marine Corps, like every other Service, manages aircraft inventory through a variety of means; we place BAI and ATT aircraft in our Fleet Replacement Squadrons (FRS), into storage at the Aerospace Maintenance Aircraft Regeneration Group (AMARG), or into preservation on the flight line, depots, or contracted facilities. For the purposes of answering this question, we will cover storage and preservation.

Storage:

Aircraft storage occurs primarily at the 309th AMARG and at the Depots. In 1964, the Secretary of Defense designated AMARG as the sole storage, reclamation, and disposal manager for the DOD. Naval aircraft stored at 309th AMARG fall under six sections, and Sections 1–3 bear review in further detail.

- Section 1—War Reserve and Force Level Assurance Storage. Aircraft designated for retention in Section 1 shall not have any components removed from them without HQMC/OPNAV approval. Aircraft in section 1 are not stricken from the inventory and are counted in TII. The Marine Corps has the following aircraft in Section 1.
- Section 2—CNO Special Program Storage. Stricken aircraft held in storage as a hedge against future force structure and procurement uncertainties. Aircraft designated for retention in this section may be re-preserved every 4 years as determined by the strike board. The Marine Corps has the following aircraft in Section 2.
- Section 3—FMS. Stricken aircraft are on hold for FMS and SAP are CNO inviolate. Marine Corps aircraft in Section 3 are:
- Section 4—Museum. Stricken aircraft identified for donation to service museums. The "maintain-in" storage fees for these aircraft are borne by the museums.
- Section 5—Reclamation and Disposition. Stricken aircraft awaiting final reclamation and disposition.
- Section 6—Identified for Disposal. Stricken aircraft, fully reclaimed, and being prepared for final disposal.

Preservation:

There are four levels of preservation in inventory management.

- Level I. Conducted at the organizational level of maintenance. Aircraft may be maintained in Level I preservation for a maximum of 90 days.
- Level II. Conducted at the depot level of maintenance. Level II is similar to Level I. Level II preservation provides minimum protection for up to 1 year.
- Level III. Conducted at the depot level of maintenance requiring dehumidification. Level III preservation provides optimum protection for an indefinite period of time.
- Level IV. Level IV preservation is used as an umbrella term to designate the partial preservation of aircraft undergoing depot-level maintenance actions. The aircraft systems and components are preserved to the maximum extent possible; however, systems and components may be in various levels (Level I, II, or III) of preservation.

MV–22, H–1, CH–53K, and F–35 preservation numbers, along with a review of those same platforms in storage, as follows:

MV–22: POR is 360 aircraft. There are no MV–22Bs entering inactive inventory. The Inventory Management program is designed to provide aircraft capability modernization, manage the lifecycle and airframe flight hours, and ensure enough aircraft with the required capability are available to always satisfy Primary Aircraft Inventory (PAI) requirements. The aircraft in the Inventory Management program is contracted to be reconstituted within 30 days of notification, providing a rapid response capability to adjust to changing fleet needs. Beginning in fiscal year 2025, the MV–22 Inventory Management program will be resourced for the induction and maintenance activity requirements of 48 planned aircraft. The anticipated annual cost for the program is approximately $600,000 per aircraft.

H–1: POR is 349 (189 AH–1, 160 UH–1) aircraft. There are 37 aircraft that have been transferred to inactive inventory, including 19 aircraft for future uncertainty (section 2), eight aircraft for Foreign Military Sales (FMS) and Security Assistance Program (SAP), and ten stricken aircraft awaiting final reclamation and disposition. Section 2 storage is planned to increase from 19 aircraft to a total of 32 aircraft, which would result in a total of 50 aircraft in storage. The cost to store the H–1 aircraft is less than $125,000 per aircraft every 4 years. There are no reoccurring costs until the aircraft is removed from inactive inventory.

CH–53K: POR is 200 aircraft. During the transition from CH–53E to CH–53K between now and 2030, there are no plans to place any CH–53Ks into preservation and storage.

F–35: POR is 420 aircraft. The Marine Corps F–35 POR has been steady at 420 aircraft for more than two decades. How many and where we place our BAI and ATT F–35 aircraft is yet to be determined since we have not finished buying out the POR. Until then, thoughtful inventory management is the key to Marine Corps TACAIR readiness and capability.

In sum, the Marine Corps is not "divesting" of any aircraft. The Marine Corps has historically made changes in organizational construct and composition to meet mandates. Without appropriate inventory management and a backup inventory, our operational squadrons would consistently operate with fewer ready aircraft for training and tasking.

150. Senator SULLIVAN. General Berger, the Marine Corps is reportedly buying new aircraft and putting them directly in storage. Is it a good use of tax payer dollars for the Marine Corps to have a plan to purchase dozens of aircraft that it has no intention of using and will immediately put into storage?

General BERGER. Yes. The Marine Corps has historically made changes in organizational construct and composition to meet mandates. As the Marine Corps executes its Force Design efforts, the Marine Corps continually evaluates and rebalances squadrons. While there is a cost associated with inventory management, the long-term benefits of inventory management outweigh the costs and it enables the service to provide flexibility to commanders, increase readiness, and extend the service life of airframes well into the future.

H–1: There are 37 aircraft that have been transferred to inactive inventory, including 19 aircraft for future uncertainty (section 2), eight aircraft for Foreign Miliary Sales (FMS) and Security Assistance Program (SAP), and ten stricken aircraft awaiting final reclamation and disposition. Section 2 storage is planned to increase from 19 aircraft to a total of 32 aircraft, which would result in a total of 50 aircraft in storage. The cost to store the H–1 aircraft is less than $125,000 per aircraft every 4 years. There are no reoccurring costs until the aircraft is removed from inactive inventory.

MV–22: There are no MV–22Bs entering inactive inventory. The Inventory Management program is designed to provide aircraft capability modernization, manage the lifecycle and airframe flight hours, and ensure enough aircraft with the required capability are available to always satisfy Primary Aircraft Inventory (PAI) requirements. Further, the aircraft in the Inventory Management program is contracted to be reconstituted within 30 days of notification, providing a rapid response capability to adjust to changing fleet needs. Beginning in fiscal year 2025, the MV–22 Inventory Management program will be resourced for the induction and maintenance activity requirements of 48 planned aircraft. The anticipated annual cost for the program is approximately $600,000 per aircraft.

CH–53K: POR is 200 aircraft. During the transition from CH–53E to CH–53K between now and 2030, there are no plans to place any CH–53Ks into preservation and storage.

F–35: POR is 420 aircraft. The Marine Corps F–35 POR has been steady at 420 aircraft for more than two decades. How many and where we place our BAI and ATT F–35 aircraft is yet to be determined since we have not finished buying out the POR. Until then, thoughtful inventory management is the key to Marine Corps TACAIR readiness and capability.

151. Senator SULLIVAN. General Berger, in responses provided to my office by the Marine Corps following an April 14, 2023 brief on Section 1023 of the fiscal year 2023 NDAA, the Marine Corps reported that 50 aircraft will be transferred into the inactive inventory, along with an unknown number of MV–22s. What is the cost associated with the procurement and storage of these aircraft?

General BERGER.

H–1: There are 37 aircraft that have been transferred to inactive inventory, including 19 aircraft for future uncertainty (section 2), eight aircraft for Foreign Miliary Sales (FMS) and Security Assistance Program (SAP), and ten stricken aircraft awaiting final reclamation and disposition. Section 2 storage is planned to increase from 19 aircraft to a total of 32 aircraft, which would result in a total of 50 aircraft in storage. The cost to store the H–1 aircraft is less than $125,000 per aircraft every 4 years. There are no reoccurring costs until the aircraft is removed from inactive inventory.

MV–22: There are no MV–22Bs entering inactive inventory. The Inventory Management program is designed to provide aircraft capability modernization, manage

the lifecycle and airframe flight hours, and ensure enough aircraft with the required capability are available to always satisfy Primary Aircraft Inventory (PAI) requirements. Further, the aircraft in the Inventory Management program is contracted to be reconstituted within 30 days of notification, providing a rapid response capability to adjust to changing fleet needs. Beginning in fiscal year 2025, the MV–22 Inventory Management program will be resourced for the induction and maintenance activity requirements of 48 planned aircraft. The anticipated annual cost for the program is approximately $600,000 per aircraft.

In sum, the Marine Corps has historically made changes in organizational construct and composition to meet mandates. As the Marine Corps executes its Force Design efforts, the Marine Corps continually evaluates and rebalances squadrons. While there is a cost associated with inventory management, the long-term benefits of inventory management outweigh the costs and it enables the service to provide flexibility to commanders, increase readiness, and extend the service life of airframes well into the future.

152. Senator SULLIVAN. General Berger, can you provide any after action reports, war game analysis, or other evaluation or assessment mechanism that informed assault support requirements for infantry units under the Force Design 2030 force structure?

General BERGER. The Marine Corps assault support requirements are based on current and forecasted Global Force Management tasking to include, Marine Expeditionary Units (MEU), maintaining a Crisis Response Force, sustained service level training exercises, Marine Air Ground Task Force training, and Weapons and Tactics Instructor support, at a minimum. As the Marine Corps continues to assess the future operating environment, further adjustments, in line with our campaign of learning may be necessary, as seen in the modification of the size of our MV–22 Osprey squadrons. Based on a series of analysis, looking at airframe lifecycles, and training and operational requirements, it was determined that the Marine Corps' 14 MV–22 squadrons, each consisting of 12 aircraft be modified to 16 squadrons, each with 10 aircraft.

The addition of two MV–22 squadrons allows the Marine Corps to maintain its desired deployment-to-dwell ratio for pilots and crew, while simultaneously optimizing a given squadron's Primary Aircraft Authorization for deployment as the MEU Air Combat Element, supporting increased 5th generation tactical aircraft (TACAIR) operations. We will continue to assess our assault support posture to determine the most effective construct to deliver capability and capacity through wargames, service level exercises, and other analytical initiatives.

While the Force Design process has laid the foundation for a modernized roadmap for Marine Aviation, it also sets Marine Aviation on the path to look to the future. For example, Marine Aviation is teaming with U.S. Navy to develop the Marine Air Ground Task Force Unmanned Expeditionary Family of Systems (FoS). These efforts include acceleration of prototyping and experimentation of TACAIR Collaborative Combat Aircraft and building a common interoperable system control architecture for control of Joint assets. In parallel, Marine Aviation is also exploring the Vertical Takeoff and Landing Family of Systems (VTOL FoS), where the Logistics Connector is the first major effort to support the execution of the Stand-in Force (SiF) through airborne logistics in a contested environment. This portfolio also includes but is not limited to Air Loitering Munitions, an Attack/strike capability, and a future Assault support capability to replace our extant platforms.

153. Senator SULLIVAN. General Berger, can you provide any after action reports, war game analysis, or other evaluation or assessment mechanism that informed close air support requirements for infantry units under the Force Design 2030 force structure?

General BERGER. Force Design efforts have modernized Marine Aviation capabilities, increased readiness, and enhanced lethality across all platforms to meet current and future demands of global force management (GFM) requirements in support the Joint Force and Commandant Commanders (COCOM), rapidly changing technology, and the ever-changing operating environment. One of the many mission essential tasks that Marine Aviation preforms is offensive air support. As part of force modernization, Marine Aviation conducts significant integrated analysis of both weapon systems and aircraft employment techniques to ensure Marine Aviation meets sortie requirements with appropriate munitions for the best weapon-to-target match.

This analysis is captured in virtual, simulated, and live wargames and exercises throughout Headquarters Marine Corps as well as the operational fleet not only to inform and develop capabilities, but to capture and refine tactics, techniques, and

procedures for current and emerging weapon systems. As the Marine Corps continues to assess the operating environment, further adjustments in line with our campaign of learning will occur to gain and maintain the edge in lethality, readiness, while simultaneously optimizing our F–35 and H–1 fleet to support the Joint Force and Commandant Commanders (COCOM).

As we have always done, we will continue to assess and evolve our organizational construct and composition through wargames, service level exercises, and analytical initiatives to ensure the Marine Corps continues to deliver lethal capability to support the Joint Force and COCOM demands now and into the future.

MARINE AIR-GROUND TASK FORCE (MAGTF) SELF-SUSTAINABILITY

154. Senator SULLIVAN. General Berger, the MAGTF enables marines to deliver rapid, powerful, and sustainable response on a global scale. Sea-to-shore, air-to-ground, door-to-door, there isn't an organizational model more capable of quickly putting marines where they need to be in order to fight and win for our country. From the MEU to the MEF, marines are capable of self-sustaining for 15–60 days, operating without ports, airfields, or civilian infrastructure. Force Design 2030 changes the equipment and personnel available to the MAGTF, particularly the ACE. Using specific references to types and numbers equipment and personnel, describe how the MAGTF's ability to sustain itself at the MEU, MEB, and MEF level differs between 2018 and 2023.

General BERGER. Between the years 2018 to 2023, the MAGTF's ability to sustain itself remains relatively unchanged and uninterrupted. MEUs/MEBs/MEFs have deployed with largely unchanged manpower and equipment configurations.

For future MAGTF self-sustainment, we will transition from a logistics capability optimized for supporting sustained operations ashore to a maritime based support concept to serve us in contested, all domain, austere, expeditionary, and littoral environments. The centerpiece of this concept of support is the development of an integrated ashore and afloat sustainment network that can support our marine forces globally. This network will generate multiple logistics webs that provide options to commanders, enable resiliency, contributes to deterrence, and overcomes the precision driven lethality of the modern battlefield. To do this, this network integrates naval, joint, Allied and Partner capabilities based on the operational requirement. From a resourcing perspective, this network requires four critical capabilities:

1. Multi-capable distribution platforms with enough capacity to meet mission requirements.
2. Increasing and diversifying the forward positioning of sustainment—we will achieve this through the Global Positioning Network (GPN) which consists of a dynamic, integrated, afloat and ashore network to support the Stand-in Force and global crisis response.
3. Prepare our installations for the contested environment.
4. Improve our logistics command and control to enable better logistics decision-making.

The Marine Corps will create a leaner and more capable distribution element better equipped to support Force Design 2030 initiatives by combining Military Occupational Specialties, 3112 (Distribution) and 3152 (Packaging), that increases the capability of the Marine Corp's Combat Logistics Battalions (CLB) through a four-person Distribution cell. The goal of these efforts are effective capacity management (monitoring and movement execution of cargo through all available nodes and modes), asset visibility (in-transit, nodal and non-nodal), and an enterprise-level view of distribution capabilities and functions that provide near real-time situational distribution awareness (transportation and movement). Distribution flexibility will drive overall sustainment improvement in the future.

From a ground equipment perspective, changes that increased the sustainability of the MAGTF include the divesting of logistics intensive platforms such as Tanks and associated bridging. Subsequent introduction of modernized expeditionary platforms such as the ultralight tactical vehicles and Unmanned Logistics Systems—Air (ULS-A) have diversified our distribution capability. All new platforms are intentionally designed to implement predictive maintenance capabilities reducing the sustainment burden on individual units. Additionally, the introduction of advanced manufacturing capabilities that allow units to create repair parts onsite, significantly reduces the reliance of legacy supply chains.

FD modernization optimized Marine Aviation to operate from austere, distributed locations and across extended distances while providing cutting-edge advantages to the naval expeditionary force through the six functions of Marine Aviation which consists of Offensive Air Support, Anti-Air Warfare, Assault Support, Air Reconnais-

sance, Electronic Warfare, and Control of Aircraft and Missiles. Marine Aviation is manned, trained, and equipped to conduct the six functions and is integral to tomorrow's Marine Air-Ground Task Force (MAGTF), bringing lethal, agile, and sustainable capabilities to compete with, deter, and—if necessary—defeat our Nation's adversaries.

For the F–35, FD modernization directing an organizational construct change to 18 squadrons of 10 F35 aircraft allows the Marine Corps to deploy 10 F–35Bs aboard our MEUs compared to the traditional six AV–8B TACAIR contingent. This offers the Combatant Commanders (COCOMs) a 66 percent increase in TACAIR—5th Gen aircraft—forward deployed and globally engaged with our Marine Expeditionary Units (MEUs) time now. The transition to 5th Gen TACAIR provides the MAGTF, Joint Force Maritime Component Commander (JFMCC), and Joint Force enhanced situational awareness, greater freedom of maneuver, and flexible response options in what was previously considered a denied environment.

The MV–22 has revolutionized military air transport not seen before. The revolutionary capability of the tiltrotor, with the optimized and fiscally responsible and sustainable organizational construct, enables the Marine Corps to generate unprecedented tempo across our operating environment, allowing commanders to seize and retain the initiative not found in traditional rotary platforms. For the MV–22, FD modernization from a 12 to 10-aircraft squadron enables the Marine Corps to extend the service life of this unmatched capability from the mid–2030's to the early 2050's.

For the CH–53K, as the only marinized heavy-lift helicopter in the DOD in development or production, provides a greater payload capability for Assault Support than any current or emerging rotorcraft at sea level and high-altitude conditions at great ranges. Achieving Initial Operational Capability (IOC) in April 2022, the CH–53K was approved for Full Rate Production in December 2022 and plans to deploy for the first CH–53K MEU detachment in fiscal year 2025. The CH–53K provides critical expeditionary organic heavy-lift sustainment and mobility capability to the MAGTF, Joint Force, JFMCC, and COCOM.

For the AH–1Z and UH–1Y, FD modernization increases the H–1s readiness and provides flexibility for our operational commanders for decades to come. Deploying in detachments as part of the MEU onboard amphibious shipping, H–1s provide a wide variety of capabilities and mission sets and the entire spectrum of conflict.

Additionally, the post-FD force construct enables the activation of an additional KC–130J squadron in the Pacific, as well as the additional three squadrons of UAS. The KC–130J provides organic lift and tactical aerial-refueling capabilities to the Marine Corps. At the same time, MQ–9A supports the MAGTF by providing multisensor surveillance, maritime domain awareness, and enables the detection and engagement of targets during expeditionary, joint, and combined operations.

Ultimately, enhancement of the Marine Corps sustainment capability and capacity for the future operating environment through Force Design initiatives, ensures the MAGTF retains its self-sustainment capability.

A NICHE FORCE?

155. Senator SULLIVAN. General Berger, the Marine Corps divested significant components of its traditional combined-arms capability to develop capabilities specifically designed to counter China in the Indo-Pacific Command Area of Responsibility (INDOPACOM AOR). Does tailoring III MEF to fight China in the INDOPACOM AOR reduce the Marine Corps' ability to respond to contingencies around the globe? Provide specific examples in your response.

General BERGER. No, throughout the force design effort, all MEUs, without METL changes, have been prepared to deploy. When amphibious ships have been available, no MEU has missed a deployment timeline.

From the outset of our current modernization efforts, I directed the Marine Corps to design and develop a force focused on our pacing threat. Our approach to modernization has been deliberately iterative as to remain flexible to changes in the operating environment. Where feasible, we are constantly looking for opportunities to sustain or expand existing strategic competitive advantages over our adversaries. The priority being the pacing threat. There are constraints and restraints associated with modernization. Specifically, our assumption is we must continue to modernize under the existing topline budget. Additionally, we are beholden to industry's capacity to manufacture equipment as well as the maturation of certain technologies. In the case of the latter, regardless of how many resources you align to a new technology, it won't necessarily speed up its development.

The reality is that fielding new capabilities associated with Force Design 2030 is already well underway. Many of these "future" capabilities tied to Force Design

2030 are already being employed by marine forces today. Six examples from 2022 are illustrative:

TF 61.2 and Reconnaissance and Counter-reconnaissance: In March 2022, U.S. Sixth Fleet partnered with II MEF to create Task Force (TF) 61.2. TF 61.2 was designed as a joint task force crisis response capability to command and control naval forces supporting contingencies in Europe and Africa. This force was delegated tactical control of amphibious forces (ARG/MEU) in theater, allocated marine forces (Marine Rotational Force—Europe), and a task organized reconnaissance/counter-reconnaissance force. Near simultaneously, II MEF and 2d Marine Division were tasked with "accelerating experimentation with maritime, multi-domain reconnaissance constructs and activities to enhance the ability of the stand-in force to dominate the information environment, sense and make sense of the situation, and win the reconnaissance vs. counter-reconnaissance competition." Commander, Sixth Fleet, immediately volunteered TF 61.2 to support these broader Service experimentation efforts. During the next several weeks, TF 61.2 conducted training aboard both the USS *Woody Williams* (ESB–4) and USS *Georgia* (SSGN–729) and engaged in combined-arms training in both Greece and Turkey. Those initial exercises demonstrated that maritime expeditionary forces could increase surface, subsurface, and aerial domain awareness for the fleet commander—regardless of theater—and allowed us to focus on the information web required to create domain awareness in a contested space. TF 61.2 then transitioned these experimental capabilities to the Baltics, where it participated in bilateral training on maritime domain awareness with the Estonian Navy in the Gulf of Finland. During this period, TF 61.2 participated in an amphibious landing in Estonia and Exercise BALTOPS with 16 North Atlantic Treaty Organization (NATO) nations, utilizing 47 ships and 7,000 personnel. This new organization has been so successful the previous Commander, U.S. European Command (EUCOM) chose to highlight the value of the task force during his spring 2022 annual testimony. The bottom line is that your marines' ability to conduct reconnaissance and counter-reconnaissance is a current force capability that directly contributes to competition and deterrence today.

TF 76.3: Building upon the success of TF 61.2, in October 2022, the 3d Marine Expeditionary Brigade and Naval Task Force 76 staffs merged into a completely integrated naval task force in the Indo-Pacific. Over the next several months, TF 76.3 experimented with naval concepts at sea and ashore via a broad campaign of learning labeled NOBLE FUSION 22.2. TF 76.3 also participated in exercises 6 KAMANDANG in the Philippines and RESOLUTE DRAGON in Japan. Once again, marines and sailors demonstrated the ability to create advanced information webs to support maritime domain awareness across the theater. Just as importantly, they demonstrated this capability to potential adversaries.

i. The LHA's size, which closely mirrors the amphibious warfare ships of our allies, makes it an attractive partnership and learning platform. During their deployment, marines and sailors from Tripoli and the 31st MEU trained with forces from Japan, Australia, the Philippines, and Singapore.

Multifunction Air Operations Center (MAOC): In March 2022, 2d Marine Aircraft Wing (MAW) conducted the Service's first operational deployment of a multi-function air operations center (MAOC). In Lithuania, under the command of United States Air Forces Europe, the MAOC conducted air surveillance and multi-domain awareness in support of NATO operations. This is not simply an evolutionary step in fixed aviation command and control (C2) nodes, but rather, a transformational, expeditionary capability that can serve as a hub for Marine Corps, naval, and joint kill chains and webs. The MAOC provides the Marine Corps with the capability to control aircraft and missiles and enables decision superiority. It also offers the ability to gain and maintain custody of adversary targets and hold those targets at risk via fires with its organic TPS–80 Ground/Air Task-Oriented Radar (G/ATOR), Common Aviation Command and Control System (CAC2S), and highly proficient aviation C2 marines. The MAOC is scalable by task–7 organized units, small enough to support distributed teams or large enough to support a multi-MEF or Corps-level fight. This agency construct is also the model we are using for the development of all domain C2. 3d MAW is now leading the Service's MAOC experimentation efforts and employed this capability as part of Marine Rotational Force—Darwin (MRF-D), integrating C2 and sensor services for 16 allied and partner nations during Exercise PITCH BLACK. From these initial efforts, 3d MAW has matured the MAOC, creating a persistent hub to enhance the common tactical picture for I and III MEF. Recent experiments in February 2023, which included United States Indo-Pacific Command (USINDOPACOM), have further demonstrated the MAOC's ability to integrate additional capabilities from the MEF Information Group and improve the

common tactical picture for a carrier strike group, and is visible evidence of Joint All-Domain Command and Control (JADC2) in practice.

Marine Corps Information Command (MCIC): In October 2022, we streamlined and simplified much of the coordination required for space and cyberspace operations at the headquarters level, by realigning current relationships and structure at Headquarters, Marine Corps (HQMC) from a staff officer to an operational commander, to create the MCIC. The MCIC is a service-retained command designed to integrate global Marine Corps capabilities in information, intelligence, cyberspace, and space to support Fleet Marine Forces (FMF) resulting in decision advantage. This two-star command operates under Marine Forces Command (MARFORCOM) and provides critical linkages across operational level planning. It also provides task organized detachments to support the FMF commander's campaigning objectives. This allows the commander to leverage the authorities needed to synchronize global cyber, space, influence, and intelligence effects and generate multi-domain advantages in support of the commander's objectives. The MCIC achieved initial operational capability (IOC) in January 2023.

VMGR–153 and HMH–461: In January 2023, we activated Marine Aerial Refueler Transport Squadron 153 (VMGR–153) in Kaneohe Bay, Hawaii. By 2026, VMGR–153 will bring 15 KC–130J aircraft to the region, building on the organic mobility available to marines responding to crisis or conflict in the region. We are also approaching 1 year since the CH–53K program achieved IOC and are well underway transitioning Marine Heavy Helicopter Squadron 461 (HMH–461) into our first fully operational CH–53K squadron. Despite their ongoing transition, HMH–461 is already demonstrating the significant impact of this new capability, conducting heavy lift assault support missions previously impossible with legacy aircraft. In parallel, the operational test and evaluation squadron (VMX–1) continues to push the boundaries of heavy lift operations. Last December, they successfully lifted an F–35C, demonstrating the platform's utility in conducting next generation tactical recovery missions.

MARINE LITTORAL REGIMENTS

156. Senator SULLIVAN. General Berger, have any combatant commanders asked for an MLR to deploy to their theater?

General BERGER. The Service's one MLR is still in pre-FOC status and not yet ready for global operational employment; however, there are multiple theaters in which the MLR's ability to sense and make sense in the maritime domain in support of sea denial or sea control are applicable. It is not a force offering yet, but could be employed in a limited capacity if desired.

The Marine Corps activated Hawaii based 3d MLR and will reach its initial operating capability (IOC) in the 4th quarter of fiscal year 2023. Activating and reaching IOC of our MLRs are heavily reliant on the ability to be appropriately resourced. Current planning envisions the Okinawa based 12th MLR, and Guam based 4th MLR will be similar positioned in fiscal year 2025 and fiscal year 2027, respectively.

As part of the Marine Corps' Campaign of Learning, 3d MLR recently participated in Joint and Combined exercises such as Balikatan and Northern Edge. Both exercises experimented with platforms, concepts, and capabilities that the MLR formations will be employing to further enhance lethality of the Joint Force.

Although the MLRs have not reached a Fully Operational Capability (FOC) status, the experimentation and proof of concepts have demonstrated the value provided to the Joint Force.

When replying to a question during the House Armed Services Committee (HASC) hearing on the Indo-Pacific National Security Challenges. Admiral John C. Aquilino provided the following response when asked about the MLR in this theatre of operations.

"First the Marine Littoral Regiment again, General Berger who came out of MARFORPAC as you know I think was pretty understanding of the threat, the scenario, and what was needed. So, I appreciate his effort to focus on the Indo Pacific problem set. That said, we need to deliver that organization with the capabilities to deliver effects to surface to air, surface to surface, surface to ship. When that force is armed, prepared, and that set of capability, it's exactly what we need in the Indo-Pacific to support the fight."

The Marine Corps is fielding force design capabilities to MLRs today. (23) Ground/Air Task-Oriented Radars (G/ATORs) were fielded by the end of 2022, (31) will be fielded by the end of June 2023, and (57) will be in the fleet by the end of 2025. (6) Navy Marine Expeditionary Ship Interdiction System (NMESIS) medium missile batteries will be fielded in Q4 fiscal year 2023, providing 3d MLR with the capability to contribute to sea denial and control operations. (13) Marine Air Defense In-

tegrated Systems (MADIS) will begin fielding in fiscal year 2024. (31) Network on the Move (NOTM) systems will be mounted onto ultra-light tactical vehicles (ULTVs) providing 3d MLR with more resilient Satellite Communication (SATCOM) capabilities in September of this year.

However, the current programmatic timeline for the Medium Landing Ship (LSM) does not support delivery of the first (9) platforms to provide the Naval force with organic littoral mobility for one Marine Regiment until fiscal year 2033. To meet our current IOC timelines, the Marine Corps is investing in bridging solutions such as the Stern Landing Vessel (SLV) that will be delivered in Q2 FY23 for experimentation. Additionally, the Marine Corps has increased air mobility platforms such as the CH–53K, KC–130J, and the MV–22B to provide organic littoral mobility for the MLR.

157. Senator SULLIVAN. General Berger, can MLRs conduct amphibious assaults, raids, or other missions that a MEU would conduct?

General BERGER. The most common Marine Air Ground Task Force (MAGTF) in the Marine Corps is the Marine Expeditionary Unit (MEU). The composition of how the MEU is spread across the three ship Amphibious Ready Group (ARG) and what capabilities that are within it will be tailored to the threat environment and historical trends of Combatant Commander mission assignments to the ARG/MEU team. Through the combination of at sea training periods, development of Standard Operating Procedures (SOPs), understanding of anticipated assigned missions, and the threat environment, the ARG/MEU team tailors what assets are assigned to each amphibious warfare ship within the ARG to be appropriately organized for operational deployment. These tailored MAGTFs are optimized to conduct amphibious assaults, raids, and other operations that require Amphibious Warfare Ships.

Marine Littoral Regiments (MLRs) are purpose built MAGTFs that are designed to support the National Defense Strategy in achieving integrated deterrence. However, the MLR's ability to support sea denial, sense, and conduct counter-reconnaissance in support of a maritime campaign has value to all geographic combatant commands. While highly capable, the MLR is not optimized for amphibious assaults, raids, or other missions, more common to a MEU. Most notably, the MLR does not operate from or train with an ARG comprised of three Amphibious Warfare Ships, which allow it to conduct said operations.

The MLR, as part of the Stand-in-Force, disrupts the adversary in a contested littoral environment through reconnaissance, counter-reconnaissance, and sea denial operations to support the Naval Expeditionary Force's maritime campaign.

MLR Tasks:

- Conduct Expeditionary Advanced Base Operations
- Support Maritime Domain Awareness
- Conduct Reconnaissance in the Maritime Domain
- Support Littoral Targeting
- Conduct Littoral Transportation Operations
- Conduct Air Direction in Support of Expeditionary Advanced Base Operations
- Command and Control Distributed Maritime Operations
- Plan and Direct Littoral Maneuver
- Plan and Direct Sea Denial Operations
- Support Sea Denial Operations

MLRs support Stand-in Forces in a naval campaign through Expeditionary Advanced Base Operations (EABO). Expeditionary Advanced Base Operations are a form of expeditionary warfare that involves the employment of mobile, low-signature, operationally relevant, and relatively easy to maintain and sustain naval expeditionary forces from a series of austere, temporary locations ashore or inshore within a contested or potentially contested maritime area to conduct sea denial, support sea control, or enable fleet sustainment.

The MLR comprises a headquarters (Headquarters Company, Communications Company, and the Long-Range Unmanned Surface Vessel Company), and three subordinate commands—Littoral Combat Team (LCT), Littoral Anti-Air Battalion (LAAB), and Littoral Logistics Battalion (LLB), each command by a Lieutenant Colonel.

LCT Mission: The LCT conducts reconnaissance and counter-reconnaissance, employs, and enables multi-domain fires, and establishes expeditionary sites to support the maritime campaign across the competition continuum.

The LCT is composed of an infantry battalion, a medium range missile battery, and an engineer platoon. The LCT seizes, secures, controls, and defends key mari-

time terrain to allow expeditionary advanced base operations, conducts bilateral operations with the host nation, and attacks enemy maritime targets with naval strike missiles (NSM) utilizing naval and joint sensors.

LAAB Mission: The LAAB conducts anti-air warfare and enables integration of aviation operations with organic and joint fires to support the maritime campaign across the competition continuum.

The LAAB is composed of a low altitude air defense battery and an air control squadron with an air surveillance platoon and air support platoon. The battery is capable of short-range air defense and counter-unmanned aircraft systems. The squadron provides the MLR with multiple scalable command and control nodes providing air control and fires integration throughout the MLR area of operations. Additionally, the LAAB provides airspace surveillance, limited air direction, air control, air intercept control, and coordination of support anti-air and anti-surface fires. The LAAB's capabilities enable joint or combined forces to gain and maintain custody of littoral targets supporting sea denial operations.

LLB Mission: The LLB provides tactical logistics and explosive ordinance disposal support to sustain regimental operations across the competition continuum.

The LLB is composed of two direct support combat logistics companies that support the LCT and LAAB, and a general support logistics company. The direct support logistics companies support managing cache sites and connects tactical and operational logistics distribution. The support companies provide functional logistic support across all functions of logistics and classes of supply. The general support logistics company establish logistics support areas for logistics command and control to provide timely support to forward expeditionary advanced base positions.

158. Senator SULLIVAN. General Berger, how specifically do MLRs differ from the U.S. Army's MDTFs?

General BERGER. The Marine Corps' Marine Littoral Regiment (MLR) and the Army's Multi-Domain Task Force (MDTF) represent innovative and thoughtful approaches to compete and win on the modern battlefield, against peer adversaries. Both formations offer unique, yet complementary, capabilities that present multiple dilemmas for adversaries and generate options for the Joint Force commander in both competition and conflict.

The MLR is designed specifically to operate in the littorals. Its mission is, as part of the Stand-in Force, is to disrupt the adversary in a contested littoral environment through reconnaissance, counter-reconnaissance, and sea denial operations. Additionally, the MLR operates below the threshold of armed violence by strengthening relationships with allies and partners, reassuring them of U.S. security commitments, and fostering access in times of crisis or conflict. It is designed to support the Joint Force in the contact and blunt layers of the Global Operating Model. In crisis, forward posture and access enables the MLR to hold adversary assets at risk, contribute to the Joint Forces' Sea denial and sea control operations via organic lethality and the closing of joint kill webs, and provide other critical enabling actions to the naval and Joint Force. Finally, the MLR is purpose-built and designed to rapidly transition from competition, to conflict, and back to competition as escalatory or de-escalatory dynamics dictate.

The MLR is distinguished by its forward posture, its ability to rapidly deploy with organic Marine Corps and Navy assets, and its capabilities to persist within an adversary's weapons engagement zone. These capabilities are underpinned by naval concepts to include Littoral Operations in a Contested Environment, Distributed Maritime Operations, Expeditionary Advanced Base Operations, and the Concept for Stand-In Forces.

The MDTF provides complementary theater-level maneuver elements focused on anti access/area denial (A2/AD) networks through the conduct of multi-domain operations (MDO). The MDTF does not possess organic mobility, rather it relies on strategic lift and commercial vessels for inter-theater mobility within a distributed maritime environment, such as the Indo-Pacific region.

In the expansive Indo-Pacific region, a clear necessity exists for the MLR and the MDTF, particularly in time of conflict. Both units leverage a similar multi-domain approach, in some cases using like systems. However, the MLR has a unique mission requirement to operate forward postured in the Indo-Pacific region within a contested area. This necessitates balancing lethality with mobility—through lighter, expeditionary equipment and the employment of organic and Navy mobility assets.

159. Senator SULLIVAN. General Berger, as so much of the success of MLRs depend on the prepositioning of forces, what steps is the Marines Corps currently taking to ensure partner nations will allow these units to operate in their territory?

General BERGER. The Marine Corps Force Design 2030 concept, including the activation of Marine Littoral Regiments (MLRs), supports integrated deterrence with partner and allied forces to meet the pacing threat across the conflict continuum. Security cooperation is our key means of enhancing access and increasing the likelihood that this access will be permitted during a crisis.

- The Marine Corps is reinforcing traditional and developing new partnerships with numerous allied and partner (A&P) nations to build habitual, practical interaction and maintain continuing access.
- Although our main focus is on the Pacific, we maintain relationships across the globe with key A&P to ensure relevance for crises anywhere.
- Agreements play a key role by providing the legal and administrative framework for presence that respects the sovereignty and interests of our A&P. The close interaction and cooperation that accompany our presence build and maintain true partnerships.
- Key vehicles that facilitate our security cooperation include visits by deployed Marine Corps forces, key leader engagements, bilateral and multilateral exercises, and humanitarian assistance/disaster relief (HA/DR) support.
- These sustained relationships will enable the Marine Corps Stand-In Force and deter or engage common enemies alongside our allies and partners from a forward posture.

Key Points. Examples of key engagements the Marine Corps supports includes:

a. *Defense Policy Review Initiative (DPRI):* In the post-2001 era, both the United States and Japan recognized the need to adjust United States force posture to effectively fulfill the requirements of the Alliance. The DPRI laid out a future path to realign United States forces across the Indo-Pacific to meet the challenges of the future and included significant repositioning of forces from Okinawa to Guam and other locations. As a result of the 2021 Global Posture Review, the Department of Defense is engaged with our A&P across the region to advance initiatives that contribute to regional stability. Posture changes announced on January 11, 2023, by the United States and the Government of Japan Security Consultative Committee (2+2) ensures that the Marine Corps remains ready to address evolving regional and global security challenges. Specifically, a mutual agreement was reached that the 12th Marine Regiment will remain on Okinawa and will be reorganized into the 12th Marine Littoral Regiment (MLR) by 2025 in accordance with Marine Corps modernization efforts. The 12th MLR will provide a ready and capable Stand-In-Force within the first island chain, prepared to support the United States-Japan Alliance, bolstering our ability to support deterrence efforts, and respond to contingencies.

b. *Enhanced Defense Cooperation Agreement (EDCA) sites in the Philippines:* In 2014, the United States and the Philippines signed the EDCA, which bolsters the bilateral alliance by allowing extended rotational presence of U.S. forces and the establishment of facilities for joint use—these facilities are known as "EDCA sites." Marine Corps Forces, Pacific (MARFORPAC) and the Philippine Marine Corps (PMC) signed the 5-Year Integrated Readiness and Deterrence Plan 2022–2026 to advance integrated deterrence and enable the maintenance and sustainment of combat readiness. The goal is to integrate and posture PMC-MARFORPAC forces and capabilities by 2026, including persistent MLR engagement. The United States-Philippine joint development and investment within EDCA locations exemplify the necessity of the Marine Corps and United States Forces in the Philippines in order to develop Philippine bases and locations to bilaterally respond to HA/DR situations and enable combined training through scheduled exercises, like Balikatan, and engagements.

c. *Marine Rotational Force-Darwin (MRF-D) in Australia:* Per the 2023 Australian Defence Strategic Review, the Australian Army is developing a highly capable, modern amphibious fighting force. The Marine Corps and the Australian Army maximize integration, capability development, and training with MRF-D, the rotational Marine Corps presence in Australia. MRF-D, supported by the Ground Equipment Staging Program (GESP) participates in recurrent multilateral exercises like TALISMAN SABRE and bilateral engagement opportunities like PITCH BLACK. Additionally, Marine Corps support for the Australian Army's amphibious capability development which bolsters the second pillar of the enhanced trilateral security partnership "AUKUS." This continual support to Australia's defense development and modernization not only strengthens longstanding bilateral ties thus enhancing ongoing operational access.

d. *Marine Rotational Force-Southeast Asia (MRF-SEA):* Since 2022, MARFORPAC has forward-deployed forces to Southeast Asia to achieve maritime security objec-

tives with A&P in the region. MRF-SEA reassures A&P in region by consistently and reliably executing agreed-upon security cooperation activities. This contributes to regional stability by increasing MARFORPAC's responsiveness to crises and contingences. MRF-SEA conducts bilateral and multilateral security cooperation engagements with partners such as Singapore and Indonesia. This modular rotational force exercises distributed command, control, logistics, and transportation nodes supporting multiple, sometimes simultaneous, regional engagements. The exact composition of the force, locations, and schedules vary each year according to agreed-upon security cooperation engagements with host countries. This concept also operates within existing access, basing, and overflight agreements with Southeast Asian partners and allies to mutually support posture initiatives and reduce inter-theater transportation requirements for not only the Marine Corps but also partner and allied forces.

e. *Task Force Koa Moana (TF KM):* TF KM is the primary Marine Corps force to counter the People's Republic of China (PRC) influence and access in Oceania. Through TF KM's modest investments, the Marine Corps obtains excellent access to key sea lines of communication and achieves outsized effects that are mutually beneficial to A&P and the U.S. In fiscal year 2022 TF KM primarily engaged in Palau and the Commonwealth of Northern Marianas Islands due to pandemic-induced travel restrictions. In fiscal year 2023, TF KM has returned to contested terrain such as the Solomon Islands, Vanuatu, Kiribati, Fiji, and Tonga. These engagements supported maritime security and maritime domain awareness, as well as reinforce combined logistics hubs within contested environments. The development of multilateral maritime law enforcement, HA/DR response exercises, and climate change resilience continues to enhance multilateral security cooperation and accessibility throughout Oceania.

f. *Marine Rotational Force-Europe (MRF-E) in Norway:* The Marine Corps maintains a very close relationship with Norway that facilitates setting the theater—developing a profound understanding of the region and establishing conditions for Marine Corps success—through an exercise schedule that provides near-persistent presence of USMC forces in Norway and the High North. The United States—Norway Memorandum of Understanding (MOU) Governing Prestockage and Reinforcement of Norway provides USMC access to the Marine Corps Prepositioning Program in Norway (MCPP-N). MCPP-N facilitates prepositioned stocks, which are available for global operational requirements in support of any geographic combatant commander. In addition to the NATO Status of Forces Agreement, which allows USMC forces to move into, through, and transit out of Norway, the United States and Norway share a Defense Cooperation Agreement and Supplemental Defense Cooperation Agreement, which assure United States forces additional access to Norwegian and United States-built infrastructure in Norway.

III MARINE EXPEDITIONARY FORCE

160. Senator SULLIVAN. General Berger, Title X states that, "[t]he Marine Corps, within the Department of the Navy, shall be so organized as to include not less than three combat divisions and three air wings, and such other land combat, aviation, and other services as may be organic therein." Can you explain the difference in III MEF's structure pre-Force Design 2030 and once Force Design is complete?

General BERGER. The Marine Corps still possesses three combat divisions, three air wings, three logistics groups, and has added three information groups.

Historically, the Marine Corps relies on supplying approximately one-fifth of III Marine Expeditionary Force's (III MEF) combat power via the Unit Deployment Program (UDP). Pre-Force Design, III MEF's structure consisted of just over 27,000 marines. At the conclusion of Force Design 2030, III MEF's structure will consist of just over 22,100 marines, however 89 percent of III MEF's combat power will be organic, reducing the requirement to source unit deployment-based marines to the MEF.

III MEF	Pre-FD (2019)	2023	2030 (4th/12th MLR)
MEF CE	3218	3174	3207
1st MAW	6418	7072	7281
3d MARDIV	6334	4358	4759
3D MLG	5288	4705	4517
Wing UDP	663	663	663
Div UDP	3732	3743	339
MEF CE UDP	120	120	120
31st MEU UDP	1235	1235	1235
Total UDP	5750	5761	2357
Total	27008	25070	22121
Share UDP	21%	23%	11%
Share non-UDP	79%	77%	89%

161. Senator SULLIVAN. General Berger, what was the structure of the 3d Marine Division pre-Force Design 2030 and what will it be in 2030?

General BERGER. Marine Corps Reference Publication (MCRP) 1–10.1 Organization of the United States Marine Corps defines the composition of a division. As the MCRP provides the high-level overview of the current structure of the Marine Corps at the time of publication, it is not a prescribed document. Thus, the three MEFs and the subordinate divisions, wings, and logistics elements will not be identical across the service. 3d Marine Division has always been organized differently than the other divisions (pages 5–2 through 5–4 of the 2015 publication). In this document, 3d Marine Division is composed of only two infantry regiments, one of which is filled by units throughout the Marine Corps under the unit deployment program (UDP).

This reference publication is currently in the final stages of republication in the first time since August 2015. Key updates to this republication will include the additions of the Marine Littoral Regiment (MLR), Marine Corps Information Command (MCIC), Marine Forces Cyber, and updated missions, capabilities, and organizational charts. This publication will also include the Amphibious Combat Vehicle (ACV) for the first time, along with references to Force Design 2030 formations like the Littoral Anti-Air Battalion (LAAB), Littoral Combat Team (LCT), and Littoral Logistics Battalion (LLB). Finally, the publication standardizes all doctrinal terms in accordance with the latest Marine Corps and DOD dictionaries.

At the completion of Force Design 2030 modernization efforts, 3d Marine Division will have three operational MLRs, the 3d, 4th, and 12th MLRs. Going forward, 3d Marine Division will retain a similar structure but with a different organization of the units within it.

162. Senator SULLIVAN. General Berger, by table of organization, how many infantry marines were in the 3d Marine Division pre-Force Design 2030?

General BERGER. 4,548

	Pre-FD (2019)	2030 (4th/12th MLR)
Total	4548	2203
% DIV Inf	44%	25%

The increased lethality of the core infantry battalion is improved through increased staffing. From 1995 until now, Battalion T/Os have gotten slightly smaller (from 904 to 897—with Navy personnel), but the staffing percentage has increased, and the unit-to-unit variances have decreased. The higher staffing level allows commanders to train as they will fight." For Infantry battalions, the staffing as a percent of T/O is 97 percent now; up from 89 percent in 1995 (all battalions aggregated). In 1995 only 5 of 24 battalions were staffed above 100 percent of T/O while 12 were below 90 percent of T/O, compared to that to 2023 where 10 battalions are above 100 percent and only 5 are below 90 percent.

163. Senator SULLIVAN. General Berger, how many infantry marines will be in 3d Marine Division when Force Design 2030 is fully implemented?

General BERGER. Two thousand, two hundred and three.

	Pre-FD (2019)	2030 (4th/12th MLR)
Total	4548	2203
% DIV Inf	44%	25%

For context the raw data depicted in the above two QFRs does not provide the necessary context to understand the increased lethality these infantry formations have gained by investments in capabilities such as precision fires, advanced sensor assets, and critical communications equipment to synthesize targeting. There are more killing assets per infantry marine in 2030 than in 2019. Infantry battalion lethality, as measured by share of crew-served weapons per marine assigned to infantry battalion, increased by 28 percent from 2019 to 2030.

The increased lethality of the core infantry battalion is improved through increased staffing. From 1995 until now, Battalion T/Os have gotten slightly smaller (from 904 to 897—with Navy personnel), but the staffing percentage has increased, and the unit-to-unit variances have decreased. The higher staffing level allows commanders to train as they will fight." For Infantry battalions, the staffing as a percent of T/O is 97 percent now; up from 89 percent in 1995 (all battalions aggregated). In 1995 only 5 of 24 battalions were staffed above 100 percent of T/O while 12 were below 90 percent of T/O, compared to that to 2023 where 10 battalions are above 100 percent and only 5 are below 90 percent.

164. Senator SULLIVAN. General Berger, in 2030 will III MEF be able to conduct humanitarian/disaster relief operations on the scale that it did during Operation Unified Assistance, the response to the tsunami in Southeast Asia in 2004?

General BERGER. Yes, while our operations are dependent on amphibious fleet size, the Marine Corps will be able to conduct humanitarian/disaster relief operations on a scale heretofore achieved.

Title 10 United States Code, Section 8063 (United States Marine Corps: composition; functions) states that:

> The Marine Corps, within the Department of the Navy, shall be so organized as to include not less than three combat divisions and three air wings, and such other land combat, aviation, and other services as may be organic therein. The Marine Corps shall be organized, trained, and equipped to provide fleet marine forces of combined arms, together with supporting air components, for service with the fleet in the seizure or defense of advanced naval bases and for the conduct of such land operations as may be essential to the prosecution of a naval campaign. In addition, the Marine Corps shall provide detachments and organizations for service on armed vessels of the Navy, shall provide security detachments for the protection of naval property at naval stations and bases, and shall perform such other duties as the President may direct. However, these additional duties may not detract from or interfere with the operations for which the Marine Corps is primarily organized.

The Marine Corps is and continues to be the Nation's force in readiness and prepared to respond to crisis across the globe. Our investment strategy for modernization required us to accept some risk in near-term readiness. However, we have continued to balance and mitigate that risk and still provide combatant commanders with relevant capabilities. These capabilities include credible deterrence and offer an option for the rapid aggregation of forward, tailored and ready forces to respond to crisis or conflict.

Mobility is a key characteristic to the dispersion and persistence of stand-in forces and crisis response. In the case of the Indo-Pacific, littoral mobility will be essential to our ability to maneuver through the complex geography of the region. A heel-to-toe ARG/MEU provides the Nation a mobile, multi-mission force that is forward deployed and able to quickly move to any number of crises around the world. A naval crisis response force is significantly more flexible than other land-based crisis response forces because it is less restricted by issues of access, basing, and overflight. The ability to maneuver by sea to the point of crisis makes the ARG/MEU critical

to our Nation's ability to demonstrate resolve in a HA/DR mission or to project power in a limited conflict.

In the next two to 5 years, many of our amphibious ships will reach the end of their service life and will cause delays in ARG/MEU deployments. When there are gaps in global ARG/MEU coverage, the Nation risks not having the right assets capable of getting to the crisis in time

165. Senator SULLIVAN. General Berger, beyond its role to operate in the contested littorals, is III MEF today currently capable of meeting its requirements for other regional war plans?

General BERGER. Yes. III MEF can meet all of its regional war plan requirements.

From the outset of our current modernization efforts, I have directed the Marine Corps to design and develop a force focused on our pacing threat. Our approach to modernization has been deliberately iterative as to remain flexible to changes in the operating environment. Where feasible, we are constantly looking for opportunities to sustain or expand existing strategic competitive advantages over our adversaries. The priority being the pacing threat. There are constraints and restraints associated with modernization. Specifically, our assumption is we must continue to modernize under the existing topline budget. Additionally, we are beholden industry's capacity to manufacture equipment as well as the maturation of certain technologies. In the case of the latter, regardless of how many resources you align to a new technology it won't necessarily speed up its development.

As we have seen from 2019 until now, the operating environment continues to evolve. I fully expect it to continue to evolve from now until 2030 and beyond. As such, 2030 is only a way point for our modernization and not the end.

However, with respect to our ability to respond in 2027, the Marine Corps is still the world's premier crisis response force. Additionally, I have prioritized III MEF and we have weighted them with the people and equipment necessary to be able to support INDOPACOM and their requirement to "fight tonight."

Our modernization envisions the activation of MLRs in III MEF only, which operates in the INDOPACOM area of responsibility (AOR). The MLRs were designed to support the National Defense Strategy in achieving integrated deterrence and preventing future war from occurring. However, the MLR's ability to support sea denial, sense, and conduct counter-reconnaissance in support of a maritime campaign has value to all geographic combatant commands. Wargames and experimentation continue to evaluate the effectiveness and efficacy of MLRs in key maritime terrain globally. The Marine Corps' modernization initiatives do not exclude the possibility providing similar capabilities to other geographic combatant commands. NMESIS Battalions, GLCM Batteries, LAAD Battalions, and MACCs units from I and II MEFs can dynamically task organize to provide MLR capabilities.

MARINE CORPS MINE CLEARANCE

166. Senator SULLIVAN. General Berger, in responses provided to my office by the Marine Corps following an April 14, 2023 brief on Section 1023 of the fiscal year 2023 NDAA, the Marine Corps reported that the Anti-Personnel Obstacle Breaching System (APOBS) and M58 Mine Clearing Line Charge (MICLIC) enabled the clearance for a 100m-long path through minefields for foot-mobile and vehicle movement. When either of these capabilities are employed, how will the minefields be "proofed" to ensure it supports foot-mobile or vehicular movement?

General BERGER. All "proofing" methods possesses risk. Enemy obstacles with deeply buried mines or more modern methods such as command detonated ancillary explosives not in the breach lane, or even loitering munitions targeting breaching and proofing vehicles all present risk. The action-reaction-counteraction cycle will continue. While there is no feasible way to eliminate risk in breaching operations, the Service has explored more technical means to identify remaining threats pre and post breach.

Currently, we are investing in the development of lighter route clearance capabilities; using unmanned air and ground platforms intended to detect and neutralize landmines and IEDs from a safe distance (i.e., outside the serious injury zone around the mine/IED). Between fiscal year 2023 and fiscal year 2028, $80 million will be invested into these emerging capabilities. One of these capabilities is the Littoral Explosive Ordnance Neutralization (LEON) program of record designed to provide an initial organic Marine Corps counter-mine capability from shallow water through the beach zone. Derived from a 2019 Rapid Statement of Need (RSON), the program fields a family of systems (FoS) that enables Explosive Ordnance Disposal (EOD) marines to detect and neutralize underwater explosive hazards from standoff distances with robotic and autonomous platforms. When fully operationally capable,

this FoS complements Navy Mine Countermeasure (MCM) capability and capacity, enhances multi-domain awareness, and ensures the maneuver, protection, and sustainment of the Naval expeditionary force.

"Proofing" as envisioned by veterans from a conflict 33 years ago against an adversary without long range precision fires is a different character of war than the peer competitor character of war for which the Marine Corps is modernizing. It is true proofing from a heavy mechanized vehicle will not be organically possible by the Marine Corps units. Enhanced tactics, techniques, and procedures more aligned with the lighter, highly mobile, and low signature maneuver capabilities are required to survive in a contested operating environment.

Marine engineer battalions remain equipped with the man-portable Anti-Personnel Obstacle Breaching Systems (APOBS) for clearing 45m lanes for foot-traffic, as well as with the trailer mounted M58 Mine Clearing Line Charge (MICLIC) for clearing up to 100m vehicle-capable lanes.

Through large land battles in CENTCOM over the past 20 years, route clearance capabilities have erroneously become synonymous with large Mine Resistant Ambush Protected (MRAP) vehicles. In 2007, Secretary of Defense Robert Gates initiated the MRAP Task Force to rapidly procure the Department of Defense's highest priority program to meet the need of the

Improvised Explosive Device (IED) threat in the Central Command (CENTCOM) theater. These vehicles were a critical asset during a prolonged land campaign against an inferior adversary that relied on improvised capabilities and saved many American lives.

Today's threat environment is characterized by great power competition with multiple peer adversaries that maintain advanced threat capabilities that put large, heavy, high-signature vehicles at risk. Furthermore, the size of these vehicles requires heavy sealift or airlift capabilities to get into the region, which limits the global responsiveness demanded of our Marine Forces as America's Force in Readiness. Even the employment of these 18-ton vehicles is limited on the unimproved roads across the landscape of archipelagos in the Indo-Pacific region. In 2021, the Marine Corps divested of mounted route clearance capabilities that used 18-ton Mine Resistant Ambush Protected (MRAP) vehicles as base platforms.

MARINE CORPS ARTILLERY

167. General Berger, senior Ukrainian military leaders have praised the addition of the HIMARS rocket system to their forces, but also add that the most important fire support system for their forces has been cannon artillery. How does the present, real world example comport with the significant reductions in marines' cannon artillery?

General BERGER. We have retained two cannon artillery battalions in the Active component, which provides capacity to support MEU deployments and to provide close support fires for a Marine Brigade-sized unit. Two additional cannon artillery battalions are available in the Reserve component to support surge requirements.

Ukraine is heavily dependent on 155 cannon artillery and mortar systems due to the nature of warfare being conducted across the forward line of troops. When Ukraine wants to prosecute long range, high value targets with precision, they rely on the HIMARS. Currently, the vast majority of Ukrainian and Russian forces fighting inside Ukraine are in close contact; oftentimes the distance between Russian and Ukrainian lines are a few hundred meters. Further, small pockets of territory are captured and recaptured by Ukrainian and Russian forces accentuating the war's relative closeness. From the Ukrainian perspective, the closeness of combat operations suggests that cannon artillery is the optimum fires required to support Ukrainian forces in contact with the Russians.

How the Ukrainian military is defending its homeland is a different problem set as to how the Marine Corps will integrate with the joint force in a future conflict and fulfill its Title 10 responsibilities of conducting "land operations as may be essential to the prosecution of a naval campaign" against a near peer adversary.

Cannons and rockets are complimentary fire support systems, but provide unique advantages and disadvantages depending on mission, enemy, targets, and terrain. The Ukrainians have effectively employed both cannons and rockets to defend and retake territory with a lack of aviation fires. As a part of our combined arms doctrine, the Marine Corps integrates artillery, aviation, naval, and non-kinetic fires to achieve effects that enable maneuver. We have carefully assessed the current and future capabilities of our peer adversaries, as well as the capabilities required to support naval maneuver. Through that analysis, we are retaining some cannon artillery for land-based contingency operations while transitioning to more long-range precision fires (i.e. rockets and missiles). In addition to providing greater range and

accuracy, these new systems provide an anti-ship capability that is critical to supporting naval campaigns. We will continue to assess the right mix of artillery systems to compliment the other fires components within the MAGTF.

FORCEMENT CAPABILITIES

168. Senator SULLIVAN. General Berger, the Marine Corps is divesting of three Law Enforcement battalions and consequently capabilities like policing, crime scene processing, mobility/route security, detention operations and Enemy Prisoner of War/detainee handling, biometrics and evidence handling, military working dogs, sensitive site exploitation, and police advising and training. Have Combatant Commanders been made aware that assigned or allocated Marine Corps forces will no longer possess these operational units and their associated capabilities?

General BERGER. Yes, the Marine Corps makes its capabilities and offerings known to the Joint Force and Combatant Commands through the annual Global Force Management Allocation Plan (GFMAP) development process.

169. Senator SULLIVAN. General Berger, does the Marine Corps intend to retain law enforcement capabilities in other units, and if so, which specific units and in what capacities?

General BERGER. With the divestment of the Active component Law Enforcement Battalions (LE Bn), the USMC continues to retain law enforcement capabilities within the installation and the Marine Corps Reserves within 4th LE Bn. Installation Law Enforcement capabilities reside within Marine Corps Installation Command (MCICOM), Training and Education Command (TECOM), and Marine Corps Reserve Headquarters, New Orleans LA. Installation Law Enforcement is comprised of Provost Marshal Offices and Marine Corps Police Departments (PMO / MCPD) and provide Law Enforcement capabilities to commanders that include, but are not limited to, Incident Response, Criminal Investigation, Special Reaction Teams (SRT), Military Working Dogs, Accident Investigation, Corrections, Physical Security, and Administrative Services. 4th LE Bn is organized to support operational requirements, while the PMO / MCPD at the installations train to garrison law enforcement standards.

Installation PMO/MCPD Locations

- MCICOM o MCLB Albany, GA
  - MCSF Blount Island, FL
  - MCB Camp Lejeune
  - MCAS Cherry Point
  - MCB Cam Pendleton
  - MCAS Miramar
  - MCAS Yuma
  - MCLB Barstow
  - MCB Quantico
  - MCAF (HMX–1
  - MCB Camp Butler
  - MCAS Futenma
  - Camp Fiji
  - Camp Mujuk
  - MCAS Iwakuni
  - MCB Hawaii
  - MCAS Hawaii
- TECOM
  - MCAGCC 29 Palms, CA
  - MCMWTC Bridgeport
  - MCRD San Diego
  - MCRD Parris Island
- Marine Forces Reserve
  - NOLA HQ

4th Law Enforcement Battalion Units/Location

- Military Police Company A
  o Lexington, KY
- Military Police Company B
  o North Versailles, PA
- Military Police Company C
  o Dayton, OH

- Military Police Company D
  - o Billings, MT
  - o Anchorage, AK
- Headquarters Support Company
- Albuquerque, NM

SCOUT SNIPERS

170. Senator SULLIVAN. General Berger, in late February 2023 the Marine Corps issued a memo announcing the immediate transition of Scout Sniper Platoons to Scout Platoons. The reason given was that scout sniper platoons didn't provide battalion commanders with sufficient "continuous all-weather information gathering." These new Scout Platoons of 26 marines, which is larger than the traditional Scout Sniper Platoon size of 18, will "provide the commander with relevant, reliable, accurate and prompt information." While Marine Forces Special Operations Command and Reconnaissance Battalions will continue to train their own snipers, infantry battalions will no longer have an organic sniper capability. Instead they will rely on some type of less capable and specialized designated marksman for precision shooting. I believe efforts to increase the information available to a battalion commander are worthwhile but I am concerned about the tradeoff. What exercises and experiments informed this decision?

General BERGER. In Spring 2020, the Commandant of the Marine Corps approved the Force Design 2030 plan, divesting the preponderance of weapon-specific military occupational specialties within the infantry battalions in favor of highly trained marines more capable of employing a variety of weapons and equipment. Included in this decision was divesting Scout Sniper Platoon structure, believing that rifle squads with advanced equipment and training could provide suitable ground-based sensing in support of the infantry battalion. (Today's basic infantry rifle with integrated scope is considerably more accurate than earlier versions, and infantry company "arms rooms" also include precision rifles for designated marines to employ as directed for specific missions.)

Infantry Battalion Experimentation (IBX) Phase I determined the redesigned infantry battalions lacked sufficient all-weather intelligence, surveillance, and reconnaissance (ISR) capabilities. Based on these findings, the Commandant approved establishing a Scout Platoon in each infantry battalion, providing timely, organic ISR capability in support of the battalion commander's Priority Intelligence and Commander's Critical Information Requirements.

Infantry companies retain their precision rifle capability, and the Marine Corps will maintain school-trained snipers within Reconnaissance and Marine Special Operations units. Reconnaissance marines will attend the Service-run Reconnaissance Sniper Course, training in precision marksmanship and weapons employment standards in multiple environments, focusing on distributed small unit operations. Marine Raiders attend the U.S. Marine Corps Forces Special Operations Command-run special operations sniper courses.

The Marine Corps no longer awards the 0317 (Scout Sniper) MOS. Beginning in fiscal year 2024, all infantry battalions will add a Scout Platoon, divest of the sniper platoon, and move the precision rifles to the infantry companies' arms rooms.

Experimentation is a core component of Force Design 2030, and the Service will continue testing concepts and equipment to ensure infantry battalions are properly structured, trained, and equipped to meet Joint, naval, and service requirements. In this spirit, experimentation is currently underway (IBX Phase II) to study how the new Scout Platoon best supports battalion-level organic all-weather ISR requirements and the Service's enduring requirements for precision marksmanship capabilities.

171. Senator SULLIVAN. General Berger, will Recon snipers be employed and assigned differently to provide the missing sniper capability if a battalion commander wants it?

General BERGER. No, Reconnaissance snipers will be employed to meet the missions assigned to their units. Within the restructured infantry battalions, the precision rifle capability now resides within an "arms room" in the infantry companies to be employed by infantry marines as deemed necessary for specific missions. Infantry marines designated by their commanders will attend the additional training necessary to become proficient in the employment of precision rifles. Through experimentation, the Marine Corps is in the process of analyzing the enduring requirements for precision marksmanship capabilities within the infantry battalions to determine the performance standards and training necessary to meet Fleet Marine Force requirements.

Infantry Battalion Experimentation (IBX) Phase I determined the redesigned infantry battalions lacked sufficient all-weather intelligence, surveillance, and reconnaissance (ISR) capabilities. Based on these findings, the Commandant approved establishing a Scout Platoon in each infantry battalion, providing timely, organic ISR capability in support of the battalion commander's Priority Intelligence and Commander's Critical Information Requirements.

Infantry companies retain their precision rifle capability, and the Marine Corps will maintain school-trained snipers within Reconnaissance and Marine Special Operations units. Reconnaissance marines will attend the Service-run Reconnaissance Sniper Course, training in precision marksmanship and weapons employment standards in multiple environments, focusing on distributed small unit operations. Marine Raiders attend the U.S. Marine Corps Forces Special Operations Command-run special operations sniper courses.

The organizational structure of the scout platoon will be comprised of 26 marines that fall within the battalion's Headquarters and Service Company. It will consist of:

- 1x Platoon Commander
- 1x Platoon Sergeant
- 4x Scout Teams, each consisting of 6x marines (1x Scout Team Leader, 1x Scout Assistant Team Leader, and 4x Scouts).

LSM

172. Senator SULLIVAN. Secretary Del Toro and Admiral Gilday, the Landing Ship Mediums are essential to MLRs operating as Stand-in Forces and conducting EABO. The fiscal year 2024 Navy budget shows six LSMs being ordered over the next 5 years. That isn't enough to support one MLR, let alone the three MLRs the Marine Corps will field in the INDOPACOM AOR. How can the Navy accelerate delivery of LSMs?

Secretary DEL TORO and Admiral GILDAY. The ability to procure the Medium Landing Ship (LSM) is dependent on the approved requirements that are currently under development. The fiscal year 2024 funding request continues the development of acquisition documentation, equipment baseline, and efforts to support a lead ship contract award in fiscal year 2025. After lead ship contract award, opportunities may exist to accelerate deliveries of LSMs following sufficient reduction of design and production risks. The Navy supports the fiscal year 2024 President's budget request as the best balance of investments to deliver a combat-credible Navy within the directed topline. Any acceleration opportunities would be included in future President's budget requests, in that if future budget submissions include sufficient quantities, there may be an opportunity to establish a second source to accelerate LSM deliveries to the fleet.

The Navy-Marine Corps team is evaluating a broad range of options to provide a bridging strategy until the Medium Landing Ship (LSM) enters the fleet in sufficient numbers to meet Marine Littoral Regiment maneuver, mobility and sustainment requirements.

LIFT CAPABILITY IN INDOPACOM AOR

173. Senator SULLIVAN. General Berger, maintenance issues and amphibious ship retirements have prevented the Navy from deploying Amphibious Ready Groups when MEUs have been ready to deploy. The Navy's 30-year shipbuilding plan never achieves the legal requirement to have at least 31 amphibious ships in the fleet. The Landing Ship Medium, which is critical to realizing the full capability of the MLR, will not be fielded in sufficient numbers to satisfy the requirements for even one MLR in the next 5 years. With these significant challenges in amphibious lift, the Marine Corps is posed to reduce the organic aviation lift available to the MAGTF over the next several years, including putting MV–22s and CH–53Ks into storage. Please explain how the changes to Marine Corps aviation with Force Design 2030 do not decrease the Marine Corps' organic lift capability in the INDOPACOM AOR.

General BERGER. First, there is no substitute for a ready, deployable amphibious warfare fleet. These platforms are the most versatile surface ships in our fleet—prepared to respond when and where our Nation needs them. Second, the additive capability of LSMs provide significant shore-to-shore mobility for our stand in force. Marine aviation is a complement to these capabilities, not a substitute.

Force Design (FD) efforts have expanded Marine Aviation with modernized capabilities, increased readiness, and enhanced lethality across all platforms to meet the demands of global force management, rapidly changing technology, and the ever-

changing operating environment. Historically, the number of squadrons (organizational construct) and aircraft (composition) within aviation units has always evolved inside the Program of Records (POR) to ensure the Marine Corps remains the Nation's crisis response force while modernizing and optimizing the fleet to meet the challenges of the future operating environment. To provide an example of this evolution,

- Between 1990 and 2015, CH–53 Active component Marine Heavy Lift Helicopter Squadrons (HMH) fluctuated from nine to ten, to nine, to ten, to eight.
- Between 2011 to 2014, MV–22 Active component Marine Medium Tiltrotor Squadrons (VMM) fluctuated from 18 to 16 to 18.

FD modernization optimized Marine Aviation to operate from austere, distributed locations and across extended distances while providing cutting-edge advantages to the naval expeditionary force through the six functions of Marine Aviation which consists of Offensive Air Support, Anti-Air Warfare, Assault Support, Air Reconnaissance, Electronic Warfare, and Control of Aircraft and Missiles. Marine Aviation is manned, trained, and equipped to conduct the six functions and is integral to tomorrow's Marine Air-Ground Task Force (MAGTF), bringing lethal, agile, and sustainable capabilities to compete with, deter, and—if necessary—defeat our Nation's adversaries.

The Marine Corps is not divesting of any of its assault support aircraft. We are continuing to purchase the AAO for the MV–22 (359 of 360 funded). The current AAO will ensure enough MV–22 aircraft are available to support its program lifecycle with 16 squadrons of 10 aircraft each. Within INDOPACOM, a quarter of these medium lift assault support squadrons have been and will continue to be permanently stationed forward. These MV–22 aircraft numbers will be supplemented with those operating from amphibious warfare ships as Marine Expeditionary Units are assigned to the combatant commander.

Similarly, the Marine Corps AAO for the CH–53K is 200 aircraft. This platform is the only marinized heavy-lift helicopter in the DOD in development or production and provides a greater payload capability for Assault Support than any current or emerging rotorcraft at sea level and high-altitude conditions at great ranges. Achieving Initial Operational Capability in April 2022, the CH–53K was approved for Full Rate Production in December 2022 and plans to deploy for the first CH–53K MEU detachment in fiscal year 2025. The CH–53K provides critical expeditionary organic heavy-lift sustainment and mobility capability to the MAGTF, Joint Force, JFMCC, and COCOM. The USMC continues to analyze the heavy-lift requirement to support the stand-in force as part of force modernization.

To achieve our goals in the INDOPACOM AOR, the Marine Corps activated a second INDOPACOM Active Duty KC–130 squadron, VMGR–153, located at Marine Corps Air Station (MCAS) Kaneohe Bay. In conjunction with VMGR–152 and its 16 KC–130 at MCAS Iwakuni, this additional squadron expands fixed wing assault support capacity within INDOPACOM.

The Marine Corps continuously examines capacity and capability to support anticipated global force management requirements, maintain mandated response forces, and sustain service level training exercises, MAGTF training requirements and pilot development balanced with deployment-to-dwell. Current assault support squadrons are manned, trained, and equipped to execute their assigned tasking in support of the Marine Corps and Joint force.

NAVY STRATEGY DOCUMENTS

174. Senator SULLIVAN. Admiral Gilday, during the May 2022 Department of the Navy posture hearing, I asked you to ensure the Navy provided more explicit references to its role support EABO and SIF in its strategy documents and doctrine. I highlighted the need for Navy support to ensure Force Design 2030's success in an op-ed later that year. Can you provide a list of every Navy strategy document or doctrinal publication produced since May 2022 that lists EABO and SIF, including where those concepts are mentioned in the documents?

Admiral GILDAY. The Navy was a co-author of the Expeditionary Advanced Base Operations (EABO) concept and is keenly interested in its implementation. Leveraging land forces to support our Fleet Commanders' fight for sea control is a key focus of the concept, and it serves as an important enabler for Navy's Distributed Maritime Operations (DMO).

I released Navigation Plan 2022 to the Fleet on 26 July 2022. This document outlines how the U.S. Navy will build, maintain, train, and equip a dominant naval force to strengthen strategic partnerships, deter conflict, and if called upon, help win the Nation's wars. Navigation Plan 2022 aligns Navy's vision with the 2022 National Defense Strategy and discusses how the Navy is uniquely positioned to

strengthen integrated deterrence. On page 7, Navigation Plan 2022 describes how Navy will leverage the concepts for Stand-In Forces (SIF) and EABO (among others) to persist forward, prevail in conflict, and end hostilities on favorable U.S. terms.

Navy Tactical Techniques and Procedures (NTTP) 3–10.1 Maritime Expeditionary Security Force Operations, published January 2023, discusses support to SIF in section 1.5 (pages 1–2) and Navy Warfare Publication 3–26, Protection of Forces at the Operational Level of War, published February 2023, discusses support to EABO in section 8.14.1 (pages 8–18).

ARCTIC OPERATIONS

175. Senator SULLIVAN. Admiral Gilday, the January 2021 the Navy released Blue Arctic, which outlined its Arctic strategy. "Russia is investing heavily to enhance its Arctic defense and economic sectors, with a resultant multilayered militarization of its northern flank," the document states. "By modernizing its military capabilities and posture—particularly the Northern Fleet—Russia aims to improve command and control, infrastructure, and joint force employment to project power and defend its northern approaches." The blueprint also states the Department will take a tailored approach when considering permanently stationed forces, rotational forces, and temporary forces, pre-positioned equipment and stocks, and basing infrastructure across the region. The blueprint also states that the Department will enhance military education, training and exercises with allies and partners in and around the Arctic. It has been 2 years since this document was released and it is difficult to tell what investments the Navy has made to execute this strategy. Can you provide a detailed list, referencing provisions in the fiscal year 2022 and fiscal year 2023 National Defense Authorization Acts and the fiscal year 2022 and fiscal year 2023 Appropriations Acts, of investments the Navy has made to execute its Arctic strategy?

Admiral GILDAY. The Navy continues to make investments to execute the Blue Arctic strategy, per the following provisions of the fiscal year 2022 and 2023 National Defense Authorization Acts and Appropriations Acts:

R–1 Line Item 26, PE 0603801N, Innovative Naval Prototype Advanced Technology Development

Arctic Mobile Observing System (AMOS)

Fiscal year 2022 $3.457 million

- Deploy next-generation AMOS gliders and buoys to assess design changes and upgraded performance. Demonstrate Arctic-hardened Unmanned Underwater Vehicle (UUV) capabilities under Arctic sea ice. Perform 2 month persistence test of full AMOS system.

Fiscal year 2023 $4.480 million

- Construct, deploy and test Arctic-hardened ice gateway buoys with integrated meteorological sensor subsystems for final Arctic Node system test. Construct, deploy and test persistence of AMOS floats and gliders with two-way communication capabilities. Deploy and test performance of very low acoustic frequency source. Deploy complete AMOS node (buoys and UUVs) for final program demonstration.

R–1 Line Item 14, PE 0602792N, Innovative Naval Prototype Applied Research

Arctic Mobile Observing System (AMOS)

Fiscal year 2022 $6.446 million

- Model under ice communications to enable sustained and persistent communications in the Arctic using gliders and floats. Evaluate & assess network Command & Control (C2) & power strategies.

Fiscal year 2023 $8.320 million

- Evaluate performance of very low frequency acoustic sources for under-ice navigation system and glider communication and evaluate performance of C2, satellite and radio communication strategies for AMOS components in the Arctic environment.

R–1 Line Item 9, PE 0602435N, Ocean Warfighting Environment Applied Research

Marine Meteorology Applied Research

Fiscal year 2022 $0.500 million

- Support improvements in numerical models of the atmosphere that will enable more skillful forecasts of Arctic weather at longer lead times.

Fiscal year 2023 $0.500 million

- Implement new techniques to increase the predictability of Arctic cyclones at longer lead times based on results from prior basic research initiatives.

Physical Oceanography Applied Research

Fiscal year 2022 $0.800 million

- Support the collection of additional Arctic observations under the International Arctic Buoy Program to improve high-latitude forecasts capability and understand the role of observations in Arctic predictability.

Fiscal year 2023 $1.800 million

- Develop new autonomous systems to enable persistent observations of the maritime Arctic, including sea ice thickness, upper ocean heat content and stratification, and Arctic Ocean circulation through augmentation of ice-tethered profilers with new sensors.

R–1 Line Item 2, PE 0601153N, Defense Research Sciences

Marine Meteorology

Fiscal year 2022 $2.000 million

- Explore the role of Arctic clouds on cyclone development and the predictability of high-impact Arctic weather events. Perform phenomenological and predictability studies of the structure and evolution of Arctic cyclones, polar lows, and polar vortices.

Fiscal year 2023 $2.100 million

- Support research to better understand the role of the stratosphere in subseasonal to seasonal variability and predictability of Arctic weather systems. Study the potential for new observations to improve Arctic forecasting and prediction.

Physical Oceanography

Fiscal year 2022 $5.700 million

- Support basic research studies of critical environmental processes in the Arctic, including the mechanics and dynamics of sea ice, changes in the stratification and circulation of the Arctic ocean, and the processes that control the seasonal cycle of sea ice cover in the Arctic Ocean.

Fiscal year 2023 $4.500 million

- Enhance our understanding of changes in the Arctic physical environment through an expansion of observational sensors and systems deployed on and below the sea ice over the Arctic Ocean. Complete a multi-investigator study of sea ice rheology to inform future numerical models of sea ice for use in Arctic System Models.

Ocean Acoustics

Fiscal year 2022 $0.750 million

- Support studies of acoustic propagation across the Beaufort Gyre using observations collected during the Coordinated Arctic Acoustic Transmission Experiment.

Fiscal year 2023 $1.600 million

- Explore the use of acoustics for ocean thermometry through initiation of the High Arctic Acoustic Thermometry and Soundscapes (HiAATS) project.

SHIPBUILDING PLAN

176. Senator SULLIVAN. Secretary Del Toro, the 30-year plan makes it clear that the Navy has no intention of meeting the 31-amphibious ship statutory requirement. As the law states, "the naval combat forces of the Navy shall include not less than 11 operational aircraft carriers, and not less than 31 operational amphibious warfare ships of which not less than 10 shall be amphibious assault ships." Why are you violating the law?

Secretary DEL TORO. Admiral Gilday, General Berger and I agree on the requirement for 31 amphibious ships, and we are committed to ensuring we meet this requirement and doing so in a timely manner, but with a capable, sustainable mix of ship classes that will support our marines and sailors for decades to come. The Chief of Naval Operations submitted the Battle Force Ship Assessment and Requirements (BFSAR) to Congress in June 2023. I recently wrote to you to State my commitment to executing the law. The DON is now engaged in formulation of the President's fiscal year 2025 budget, which will be submitted to Congress early next year, followed by the fiscal year 2025 30-year Shipbuilding Plan.

177. Senator SULLIVAN. Secretary Del Toro, why does your 30-year shipbuilding plan project to never meet the legal requirement for 31 amphibious ships?

Secretary DEL TORO. Admiral Gilday, General Berger and I agree on the requirement for 31 amphibious ships, and we are committed to ensuring we meet this requirement and doing so in a timely manner, but with a capable, sustainable mix of ship classes that will support our marines and sailors for decades to come. The Chief of Naval Operations submitted the Battle Force Ship Assessment and Requirements (BFSAR) to Congress in June 2023. I recently wrote to you to State my commitment to executing the law. The DON is now engaged in formulation of the President's fiscal year 2025 budget, which will be submitted to Congress early next year, followed by the fiscal year 2025 30-year Shipbuilding Plan.

178. Senator SULLIVAN. Secretary Del Toro, when will you appear before the Senate Armed Services Committee with a plan to adhere to the legal requirement to maintain 31 amphibious ships in the United States Navy?

Secretary DEL TORO. Admiral Gilday, General Berger and I agree on the requirement for 31 amphibious ships, and we are committed to ensuring we meet this requirement and doing so in a timely manner, but with a capable, sustainable mix of ship classes that will support our marines and sailors for decades to come. The Chief of Naval Operations submitted the Battle Force Ship Assessment and Requirements (BFSAR) to Congress in June 2023. I recently wrote to you to State my commitment to executing the law. The DON is now engaged in formulation of the President's fiscal year 2025 budget, which will be submitted to Congress early next year, followed by the fiscal year 2025 30-year Shipbuilding Plan.

179. Senator SULLIVAN. Secretary Del Toro, Congress has given you multi-ship procurement authorities. However over the past three NDAAs, amphibious ships are not being procured with this cost-saving authority. Why are you not using multi-ship procurement authorities to purchase the required amphibious ships?

Secretary DEL TORO. Admiral Gilday, General Berger and I agree on the requirement for 31 amphibious ships, and we are committed to ensuring we meet this requirement and doing so in a timely manner, but with a capable, sustainable mix of ship classes that will support our marines and sailors for decades to come. The Chief of Naval Operations submitted the Battle Force Ship Assessment and Requirements (BFSAR) to Congress in June 2023. I recently wrote to you to State my commitment to executing the law. The DON is now engaged in formulation of the President's fiscal year 2025 budget, which will be submitted to Congress early next year, followed by the fiscal year 2025 30-year Shipbuilding Plan.

180. Senator SULLIVAN. Secretary Del Toro, the Marine Expeditionary Unit does not exist without Navy amphibious ships. In the fiscal year 2023 NDAA, Congress established in law a minimum number of amphibious ships the Navy must maintain—31. 10 must be "big deck" LHAs and 21 must be LPDs. Several Navy and DOD studies informed this number yet, surprisingly, the Navy's fiscal year 2024 budget treats this requirement like a suggestion under the auspices of conducting yet another study to determine what the requirement is. The Navy's new 30-year shipbuilding plan, which was not released with the budget, makes it even clearer that the Navy has no intention of following the law. Under all three alternatives, the Navy never once meets the legal requirement of 31 ships over the next 30 years. Marines cannot be the Nation's expeditionary force in readiness without the Navy amphibious ships required. In April 2022, the Department of the Navy could not sortie an Amphibious Ready Group/Marine Expeditionary Unit (ARG/MEU) early in response to a request from then United States European Command Commander General Todd Wolters because the Navy didn't have enough amphibious ships. In February 2023, an ARG/MEU could not deploy to assist with earthquake response in Turkey because there were not enough amphibious ships although marines were ready to deploy. Combatant commander demand for ARG/MEUs is high but the Navy's commitment to build and maintain the minimum number of amphibious ships required by law is low. Your 30-year shipbuilding plan doesn't meet the demand. What is your plan to comply with the law to ensure ARG/MEUs are available when the Nation needs them?

Secretary DEL TORO. Admiral Gilday, General Berger and I agree on the requirement for 31 amphibious ships, and we are committed to ensuring we meet this requirement and doing so in a timely manner, but with a capable, sustainable mix of ship classes that will support our marines and sailors for decades to come. The Chief of Naval Operations submitted the Battle Force Ship Assessment and Requirements (BFSAR) to Congress in June 2023. I recently wrote to you to State my commitment to executing the law. The DON is now engaged in formulation of the

President's fiscal year 2025 budget, which will be submitted to Congress early next year, followed by the fiscal year 2025 30-year Shipbuilding Plan.

DEPARTMENT OF DEFENSE AUTHORIZATION REQUEST FOR APPROPRIATIONS FOR FISCAL YEAR 2024 AND THE FUTURE YEARS DEFENSE PROGRAM

THURSDAY, APRIL 20, 2023

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
WASHINGTON, DC.

UNITED STATES INDO-PACIFIC COMMAND AND UNITED STATES FORCES KOREA

The Committee met, pursuant to notice, at 9:30 a.m. in room SD-G50, Dirksen Senate Office Building, Senator Jack Reed (Chairman of the Committee) presiding.

Committee Members present: Senators Reed, Shaheen, Gillibrand, Blumenthal, Hirono, Kaine, King, Peters, Duckworth, Rosen, Kelly, Wicker, Fischer, Cotton, Rounds, Ernst, Sullivan, Cramer, Scott, Tuberville, Budd, and Schmitt.

OPENING STATEMENT OF SENATOR JACK REED

Senator REED. Good morning. The Committee meets to receive testimony from Admiral John Aquilino, Commander of the United States Indo-Pacific Command and General Paul LaCamera, the Commander of United States Forces Korea. Gentlemen, thank you for your service to the Nation and please convey our thanks to the men and women serving under your commands.

This is a critical time for our forces in the Indo-Pacific. China's ambition in the region continues to grow, as does its aggressive behavior. Chinese leadership seeks greater power influence around the world, and it is leveraging a wide range of military, economic, and political pressures against its neighbors to advance these goals.

As our defense leaders have made clear, the United States does not seek conflict with China, and strategic competition is not an inevitable march to conflict. America has long been a Pacific nation, and we have deep economic and security interests in the region.

During today's hearing I look forward to discussing how our forces can continue to improve our military posture and capabilities while also supporting whole-of-government efforts to compete effectively in the region.

To that end, the Defense Department recently raised its Joint Concept for Competing, which makes clear the objective of China and our adversaries is to, in their words, "win without fighting." The concept warns that if we do not adapt to the realities of long-

term competition, the United States risks ceding strategic influence, advantage, and leverage while preparing for a war that never occurs. I am interested to hear from our witnesses how they plan to utilize the joint capabilities in the Indo-Pacific and Korea to address these challenges.

Recognizing the challenges in the Indo-Pacific, President Biden has requested a considerable funding increase for INDOPACOM in the fiscal year 2024 budget. This includes $9.1 billion for the Pacific Deterrence Initiative, or PDI, to strengthen the posture, infrastructure, and capabilities of our forces. In addition, this PDI investment will help build the capabilities of our allies and partners through military-to-military training exercises, freedom of navigation operations, and infrastructure improvements. The PDI request is a subset of broader department-wide investments to modernize and equip the force, much of which is focused on China as the Department's pacing challenge.

Our comparative advantage over China remains our network of allies and partners in the region and globally. I am encouraged by the progress made through AUKUS, our military partnership with Australia and the United Kingdom, which is serving as an important test case for potential future partnership. The maturation of the Quadrilateral Security Dialogue, or Quad, involving the United States, Japan, India, and Australia, also presents a valuable framework.

Further, we have recently seen momentum in a number of other relationships throughout the region, including our new basing agreement with the Philippines, historic cooperation announcements between South Korea and Japan, and a remarkable transformation in Japan's new defense strategy. It is my hope that these developments will provide more opportunities to engage other regional powers.

However, the most dangerous flashpoint that could turn our competition with China into a conflict remains Taiwan. In the past several years we have seen a surge of aggressive Chinese military exercises around Taiwan's airspace and territorial waters, as well as an escalation in combative language from Beijing. The world has a right to be concerned.

To help Taiwan develop its own defense capabilities, consistent with the Taiwan Relations Act, the 2023 National Defense Authorization Act (NDAA) included a package of security assistance tools ranging from foreign military financing to Presidential drawdown authority. I understand INDOPACOM is continuing to help Taiwan develop its training and warfighting concepts, and I expect Congress will continue to support this effort. Admiral Aquilino, faced with these wide-ranging challenges, I would like to know your assessment of INDOPACOM's preparedness to carry out the United States' strategy in the region.

As we seek to more effectively compete with China, we must also manage the threat posed by North Korea. North Korea has conducted nearly 2 dozen missile tests this year, including ICBMs [intercontinental ballistic missiles] and cruise missiles, and has reportedly stopped its routine military-to-military communication with South Korea. We also know that Kim Jong-un continues to view nuclear weapons as the ultimate deterrence against foreign

intervention, and intends to gain international acceptance as a nuclear arms state.

The goal of United States policy remains the denuclearization of the Korean Peninsula, but we are not taking an all-or-nothing approach. Instead, the Biden administration has pursued what it describes as a calibrated, practical approach to diplomacy with the North, with the goal of eliminating the threat to the United States. This approach will require smart and firm engagement with the North Koreans, but more importantly, it requires coordination with our allies and partners in the region, particular South Korea and Japan. General LaCamera, I would ask for your views on the partnership between the United States, Japan, South Korea, and other regional partners in addressing North Korea's destabilizing activity. I would also like to know how your forces are maintaining readiness through training exercises with their South Korean counterparts.

I want to again thank the witnesses and look forward to your testimony. Let me now recognize the Ranking Member, Senator Wicker.

STATEMENT OF SENATOR ROGER F. WICKER

Senator WICKER. Thank you, Mr. Chairman, and I want to thank both of our witnesses for being here today.

The Department of Defense's (DOD's) most pressing task remains ensuring deterrence of conflict in the Indo-Pacific. Failure to prevent aggression there would have enormous consequences. But we have already seen deterrence fail in Europe. We did not deter Putin from invading Ukraine, and not doing so has cost the global economy over $1 trillion thus far, brought untold suffering to the Ukrainian people, and heightened the threats under which our European allies live. Our intelligence community predicts that a deterrence failure in the Indo-Pacific would be much, much worse.

We are entering a particularly dangerous period. Xi Jinping is the most powerful and ruthless leader in China since Chairman Mao. We know Xi has aggressive intent, and he is rapidly increasing China's military capability.

His ally, Kim Jong-un, has also improved North Korea's capabilities to threaten the continental United States and our allies. The North Korean dictator has already provided significant weaponry to Russia's failing fight in Ukraine. We also know that Xi and Putin have signed up to a so-called "No Limits" partnership.

We have a lot of work to do. The fiscal year 2024 budget request before us is the last one in which significant programs and activities could be funded and fielded in time for 2027, the year by which Xi has told the Chinese military to be prepared to take Taiwan. That is less than 4 short years away.

Although a portion of the Pentagon is operating on a wartime tempo when it comes to supporting Ukraine, I cannot say the same for their focus on China.

Because this Committee felt that our defense strategy was not being implemented fast enough, the Pacific Deterrence Initiative was created and requires the Indo-Pacific Combatant Commander to provide an independent assessment of resources required to meet the challenge in that region.

This initiative has allowed us to start moving our policies and investments in the right direction, but this forward motion has come in fits and starts. For example, last year, Congress authorized and appropriated an additional $100 million for planning and design activities in the Western Pacific. These funds were meant to expand our basing and logistics footprint in places such as Yap in Micronesia, Tinian in the Marianas Islands, and the Philippines, and elsewhere.

Once again, these initiatives are not fully funded in this budget. At this pace, it would take 25 years to modernize our basing posture in the Western Pacific, compared to what we did in 5 years in Europe through the European Deterrence Initiative.

Similarly, low-cost and high-value investments for allies and partners remain unfunded. We still cannot effectively share communications and intelligence with allies and partners.

These are just a few of the important enabling capabilities we need in the Indo-Pacific. We need much more. For instance, the Pentagon still seems unserious about building the Guam Defense System in a timely fashion. There are key space, cyber, electronic warfare, and command and control technologies we must accelerate as well.

This Committee recognizes the seriousness of the competition. That is why this Congress led the bipartisan charge to increase the defense budget in last year's cycle, with a set of investments tailored to our most significant operational challenges in the Indo-Pacific. I am hopeful we can do so again this year. We really have to do so again this year.

Allow me to repeat: the window during which this Committee can authorize significant capability to deter China in the near term is closing. The year 2027 is a few short years away, if that is the accurate projection. I am not convinced we have treated that date with the adequate seriousness thus far. We will need to prioritize our defense investments more effectively here in Congress.

So, I thank our witnesses. You have quite a job ahead of you, and we appreciate what you do and want to work with you. Thank you, Mr. Chairman.

Chairman REED. Thank you very much, Senator Wicker. Admiral Aquilino, please.

STATEMENT OF ADMIRAL JOHN C. AQUILINO, USN, COMMANDER, UNITED STATES INDO-PACIFIC COMMAND

Admiral AQUILINO. Chairman Reed, Ranking Member Wicker, and distinguished Members of the Committee, thank you for the opportunity to discuss the Indo-Pacific region with you here today.

I deeply appreciate your continuous support to all of our servicemembers, Government civilians, and their families within the Indo-Pacific Command. It is my distinct honor and privilege to serve alongside these brave men and women who selflessly execute our deterrence mission and defense missions every day. Your support is instrumental in our ability to accomplish these missions, but there is more to do, and we must act with a greater sense of urgency.

Every day, USINDOPACOM works tirelessly to prevent conflict, not provoke it. War in INDOPACOM is not inevitable, and it is not

imminent. However, this decade presents a period of increased risk, as illustrated by a variety of things. First, the illegal, illegitimate war by Russia in Ukraine. Second, the largest and fastest military buildup and malign behavior of the PRC [People's Republic of China], including their "No Limits" relationship and partnership with Russia. Third, the continuous missile provocations and nuclear rhetoric by the DPRK [Democratic People's Republic of Korea], and in this theater the threat of violent extremism is also present.

Our National Defense Strategy identifies the PRC as the most consequential strategic competitor to the United States, and the only competitor capable of combining its economic, diplomatic, military, and technological capabilities to mount a sustained challenge to the rules-based international order.

"Seize the Initiative" is INDOPACOM's approach to execute the National Defense Strategy and accomplish our defense priorities—defend the Homeland, deter strategic attacks, deter aggression, and build a resilient joint force. By design, this approach prevents conflict through integrated deterrence. It ensure we can fight and win should deterrence fail. And it provides the Secretary of Defense and the President with options for any contingency.

There are four pillars to our approach. First is a robust theater posture; second, a joint operations campaign comprised of lethal, persistent forces forward; third, technologically superior capabilities to maintain our warfighting advantages in the near, mid, and long term; and fourth, an enhanced network of allies and partners that which any of our challengers do not have. We respectfully request your continued support for these four focus areas, and recognize that any delay in one area directly affects all the others and puts the overall success of our deterrence efforts at risk.

Again, conflict in the Indo-Pacific region is not inevitable, but we cannot rest on our past accomplishments to secure a future peace. Security challenges threaten our very way of life as well as the peace, prosperity, and stability of the rules-based international order that has enabled that peace for over 80 years.

The investments we make today will allow future generations to enjoy the same legacy of liberty our ancestors entrusted to us, but we do not have the luxury of time. We must act now to preserve this free and open Indo-Pacific.

Chairman, Ranking Member Wicker, thanks again for the opportunity to appear today, and I look forward to your questions.

[The prepared statement of Admiral Aquilino follows:]

PREPARED STATEMENT BY ADMIRAL JOHN C. AQUILINO

INTRODUCTION / OPENING STATEMENT

Chairman, Ranking Member, and distinguished Members of the Committee, thank you for the opportunity to appear before you to discuss the Indo-Pacific region. I also want to extend my thanks for your continuous support to the men and women of United States Indo-Pacific Command (USINDOPACOM) and their families. It is my distinct honor and privilege to serve alongside the dedicated soldiers, sailors, airmen, marines, guardians, special operators, guardsmen, and civilian warriors that execute our deterrence and defense missions selflessly every day. Your support is instrumental in our ability to accomplish these missions. But there is much more to do, and we must act with a greater sense of urgency.

The men and women of USINDOPACOM work tirelessly every day to prevent conflict in this region, not to provoke it. War is not inevitable. However, this decade presents a period of increased risk as illustrated by Russia's illegitimate, unprovoked war in Ukraine; the People's Republic of China (PRC)'s nuclear and conventional buildup; the PRC's malign behavior, including its "No Limits" expanding partnership with Russia; the Democratic People's Republic of Korea (DPRK)'s continued missile provocations and nuclear rhetoric; and the risk of violent extremism. Our National Defense Strategy (NDS) identifies the PRC as the most consequential strategic competitor to the United States and the only competitor capable of combining its economic, diplomatic, military, and technological capabilities to mount a sustained challenge to the rules-based international order.

Seize the Initiative is USINDOPACOM'S approach to implement the NDS and accomplish our defense priorities—defend the homeland, deter strategic attacks, deter aggression, and build a resilient joint force. By design, this approach prevents conflict through integrated deterrence, ensures we can fight and win should deterrence fail, and provides the Secretary of Defense and President with options for any contingency. It aims to deliver a robust theater posture; campaign with lethal, persistent forces forward; technologically superior capabilities to maintain our warfighting advantages in the near, mid, and long-term; and stronger relationships with our allies, partners, and friends.

1) *A Distributed Force Posture* supports all elements of the joint force, enables our ability to seamlessly operate with our allies and partners, and demonstrates U.S. commitment to a stable and peaceful security environment. The access agreements and military construction (MILCON) requests outlined in our Independent Assessment (1254 Report) prioritize the locations and the required capacity at each. Given the time needed to complete the planning, design, and construction of each project, we must look for ways to accelerate our actions today to be prepared for future contingencies.
2) *A Joint and Combined Operations Campaign* synchronizes full spectrum military operations in all domains to build warfighting advantage and accelerate our ability to respond immediately. Persistent forces positioned west of the International Date Line (IDL), combined with our exercise and experimentation program, and synchronized with our allies and partners is an effective means to deter potential adversary aggression. Our globally coordinated efforts allow us to compete with our security challengers and positions the joint force to be able to rapidly transition from competition, to crisis, to conflict if required. This persistent, forward force operates throughout the region with our partners every day to demonstrate our commitment to the rules based international order and to provide options for our civilian leadership.
3) *Delivering Advanced Warfighting Capabilities* that outpace our challengers immediately improves our lethality and enhances our deterrence mission. The Guam Defense System (GDS) is our top homeland defense priority and our vision for the future includes offensive fires as well as robust theater logistics. Capabilities that enhance our command and control decision superiority in the near term are of equal importance. We must maintain the ability to safely operate in contested space, sustain our target quality, real-time battlespace awareness, and deliver advanced multi-domain joint fires munitions utilizing a Joint Fires Network (JFN) while integrating our allies and partners. The 1254 Report provides specificity on the capabilities and munitions to enhance combat credible deterrence in the near and mid-term.
4) *A Robust Network of Allies and Partners,* built on the strength of our shared interests, is our greatest advantage. USINDOPACOM is strengthening all layers of our security network: allies, multilateral arrangements, partners, friends, and the Five Eyes nations. We execute security cooperation activities, training, and exercises to strengthen those relationships, build partner capacity, and enhance interoperability. Security arrangements such as AUKUS (Australia, United Kingdom, and the United States) and other mini and multilateral opportunities allow us to pull together like-minded nations to improve our training. While not a military alliance, the Quad diplomatic partnership between Japan, Australia, India, and the United States enhances regional security and stability. We continue to develop our Mission Partner Environment (MPE) to facilitate information sharing, coordinate our operations, and enable high-end weapon system integration.

Advancing these four, critical areas are mutually reinforcing and each is foundational to USINDOPACOM's ability to deter and defend. Defense of the homeland and deterrence of threats in the Indo-Pacific requires significant, sustained investments, supported by a strong industrial base, reliable supply chains, and predictable budgets. We respectfully request your continued support to deliver the end

states of our four focus areas, recognizing that any delay in one area directly affects the others and puts at risk the overall success of our deterrence efforts.

USINDOPACOM thanks the Congress, the American people, and our partners for their continued support. We must act together and with urgency to maintain the rules-based international order that delivers the peace, stability, and prosperity of a free and open Indo-Pacific.

KEY ADVERSARIAL CHALLENGES

As stated in the 2022 U.S. National Security Strategy, the Indo-Pacific is the epicenter of 21st century geopolitics. The region features authoritarian regimes using military threats to subvert the existing rules-based international order while seeking to undermine confidence in U.S. commitment to the region. The PRC is taking increasingly coercive actions to reshape the Indo-Pacific region in its favor, supported by a rapidly modernizing People's Liberation Army (PLA) that is executing the largest military buildup since WWII. Russia's irresponsible behavior, exemplified by its illegal, illegitimate invasion of Ukraine, continues to pose an acute threat. The DPRK is increasing its bellicose behavior through development of ballistic missile and nuclear technology threatening the U.S. Homeland and placing regional partners at increased risk. Violent extremism also remains a threat in this theater.

People's Republic of China (PRC)

Strategic Intent

The PRC aspires to become the world's leading power in its drive toward "national rejuvenation," to replace the existing international order with a system that benefits authoritarian regimes at the expense of all other nations. Militarily, the Chinese Communist Party (CCP) has directed the PLA to develop the capability to seize Taiwan by force and surpass the United States as the dominant power in the Pacific. The PRC further seeks a network of overseas military installations and expeditionary capabilities to expand the PLA's ability to project power globally.

The CCP uses all elements of national power to create an international environment favorable to authoritarian regimes that furthers their totalitarian reach. The PRC is implementing a trifecta of global initiatives to reshape international norms for development, trade, and security under the Global Security Initiative (GSI), Global Civilization Initiative (GCI), and the Global Development Initiative (GDI). While each includes deceptively attractive language and concepts, they suffer from lack of specificity, vague implementation plans, and unclear goals allowing for PRC interpretation and enforcement. These initiatives seek to undermine the existing fair and respected international architecture and replace it with a system that encourages repressive, authoritarian governance and protectionist economics that distort markets by avoiding openness and transparency.

CCP representatives exploit, distort, and misrepresent international law for their own benefit and at the expense of all other nations. The CCP is attempting to portray troubling aspects of its own domestic legal framework as globally accepted international law to assert regional dominance. Domestic laws such as the Anti-Secession Law, China Coast Guard Law, Maritime Traffic Safety Law, Civil-Military fusion legislation including the National Defense Transportation Law, and so-called emergency fast-track laws provide the CCP with the domestic legal architecture to advance its ambitions and streamline political decisions under a veneer of international legal legitimacy. The CCP is also engaging in a large-scale campaign to influence media outlets around the world in an effort to advance their narratives while mischaracterizing or obfuscating facts.

Military Modernization

The PLA continues the largest, fastest, most comprehensive military buildup since World War II in both the conventional and strategic nuclear domains. In spite of economic and manufacturing challenges brought on by the COVID–19 pandemic, the accelerated pace at which the PLA has added advanced capabilities is concerning. In 2022 alone, the PLA added to its operational inventory 17 major warships, including four guided missile cruisers, three destroyers, five frigates, two attack submarines, and a large amphibious assault ship, plus scores of support and specialty ships. The air forces have doubled the production capability for its 5th Generation J–20 fighter with an estimated 150 of these aircraft now operational, many of them fielded last year. In 2022, the PRC completed 64 successful space launches that placed at least 160 satellites into orbit. And perhaps most stunning of all, the PLA Rocket Force continues to massively expand its arsenal of conventional and nuclear missiles, building hundreds of silos for nuclear missiles and fielding several hundred

ballistic and cruise missiles. This almost certainly includes a large number of hypersonic missiles, some of which may be nuclear-capable. The PRC may also be developing nuclear-armed hypersonic glide vehicles for use in a fractional orbital bombardment system (FOBS).

The CCP has now directed 2027 as the target for the PLA to deliver the capabilities needed to counter the United States military in the Indo-Pacific and project power across the globe. In October 2022, the 20th National Congress of the CCP set objectives focused on accelerating the PLA's modernization goals over the next 5 years, including strengthening its "system of strategic deterrence." With the 14th Five-Year Plan, the Chinese government has doubled-down on multiple national strategies already being implemented to ensure China achieves a globally dominant position in the emerging technologies that it believes are necessary for enabling complex modern military operations. The PRC continues to target technology and talent around the world to secure these technologies in pursuit of advanced military capabilities.

The PLA Navy (PLAN) consists of ~350 battle force ships and an additional ~85 patrol combatants and craft. The PLAN is on track to deliver 440 battle force ships by 2030 including significant increases in aircraft carriers and major surface combatants. The PLAN continues to expand their area of maritime operations emphasizing the development of expeditionary capabilities enabling their global aspirations. While much of the world expects the PLA to build-out a large dedicated amphibious fleet for a potential Taiwan invasion, in the near-term, we see use of modified civilian roll-on/roll-off (RORO) ferries as a means of troop transport and logistics support.

The PLA's aviation force is rapidly fielding technologically advanced, domestically built aircraft and a wide range of Unmanned Aerial Systems (UAS). More than half of its fighter force is 4th generation or better, a ratio quickly growing with the rapid fielding of its 5th generation J–20 stealth fighter. The PLA is also developing jet-powered and supersonic UAS systems, as well as stealth, Unmanned, Combat-Aerial Vehicles (UCAV).

PLA ground forces have received equipment upgrades and project a new 4th generation main battle tank in the near future. The PLA increasingly incorporates amphibious military and civilian vessels in its ground forces' training for potential amphibious operations and has significantly increased the number and roles of a variety of helicopters.

The PLA is developing a host of nuclear and conventionally armed long-range missiles and advanced weapons at a pace faster than expected. PLA Medium and Intermediate Range Ballistic Missiles (MRBM/IRBM), as well as Chinese cruise missiles can range United States bases, forces, and the homeland. The PRC continues developing longer range capabilities such as the DF–27 ballistic missile that will be able to reach targets well beyond the second-island chain. Additionally, China is developing hypersonic glide vehicles (HGVs) and a new generation of nuclear-armed mobile missiles that employ multiple independently targetable reentry vehicles (MIRVs) with the intent to evade United States, ally, and partner missile defenses.

The PLA is rapidly advancing its space and counter-space programs. In 2022, the PRC executed 64 space launches, probably meant to expand intelligence, surveillance, and reconnaissance (ISR), telecommunications, and navigation capabilities. For counter-space, the PRC is delivering capabilities that seek to deny use of our own space architecture despite their statements opposing the weaponization of space.

The PRC's cyber capabilities deliver both gray zone coercion and an enabling function to achieve decisive military advantage. PLA cyber efforts remain focused on developing capabilities to enable warfare activities targeting United States and partner critical civilian electric, energy, and water infrastructure to generate chaos and disrupt military operations. The PLA also actively pursues espionage operations and intellectual property theft through targeted cyber operations.

The PLA has embarked on a rapid and opaque expansion, modernization, and diversification of its nuclear forces. Construction of silo fields across northern China, coupled with modern ballistic-missile submarines and the H–6N nuclear-capable, air-to-air refuelable bomber, underscore China's focus on developing a survivable, nuclear triad. The PRC has not declared an end goal nor acknowledged the scale of this nuclear force expansion. The PRC likely will possess at least 1,000 deliverable nuclear warheads by 2030. This larger arsenal could provide the PRC with new options before and during a crisis or conflict to leverage nuclear weapons for coercive purposes, including military provocations against United States allies and partners in the region.

Destabilizing Actions

Taiwan

The PRC sees unification with Taiwan as "indispensable for the realization of China's great rejuvenation" and a top priority. To this end, the PRC uses all elements of national power, most notably a mix of military, economic, legal, information, and diplomatic tools, in pursuit of this goal. Beijing publicly claims a preference for peaceful unification over conflict; however, its consistent pressure tactics and coercive behavior demonstrates a significant disconnect between their words and their deeds.

During the CCP's 20th Party Congress, Xi Jinping unequivocally stated China will never renounce the right to use force as a means to achieve unification with Taiwan. Such rhetoric accompanies a concerted effort to develop military capabilities the PRC sees as necessary to seize Taiwan by force.

Beijing significantly increased its military pressure against Taiwan in 2022, in response to a perceived policy shift in United States-Taiwan political and military ties. Following the United States Speaker of the House's visit in August 2022, the PLA deployed its most capable assets around Taiwan and conducted ballistic missiles launches in a show of force. Since August, the PLA has normalized warship patrols around Taiwan and increased the number of military flights crossing into Taiwan's self-declared Air Defense Identification Zone. They have in effect erased the unofficial Taiwan Strait centerline, a mutually observed boundary designed to avoid unintended friction, to pressurize the people on the island.

Unsafe Intercepts of U.S. and Allied Aircraft

As Secretary Austin has noted, "we've seen an alarming increase in the number of unsafe aerial intercepts" of U.S. and allied aircraft throughout 2022. These included a February incident where a PLA Navy vessel directed a military-grade laser at an Australian P–8A patrol aircraft that could have permanently impaired the vision of the P–8A's crew. In May 2022, another Australian P–8A was intercepted by a PLA aircraft that maneuvered in front of the P–8A and ejected chaff into the Australian aircraft's engine. Days later, the Canadian armed forces issued a statement that PLA aircraft attempted to divert the flight path of one of their CP–140 long-range patrol craft, conducting a U.N. sanction enforcement mission, forcing the Canadian pilots to modify their flight path to avoid collision. Canada has noted such interactions are occurring with increased frequency. On December 21st, a US RC–135 surveillance aircraft, operating in international airspace was intercepted by a PLA fighter that unsafely maneuvered to within 20 feet of the cockpit of the RC–135, forcing our aircraft to take evasive action to avoid a collision.

All of these aircraft were operating in international airspace in accordance with international law when these dangerous intercepts occurred. In just over a year, the number of increasingly close intercepts against U.S. aircraft increased by 600 percent. Conducting destabilizing and coercive intercepts increases the potential for an accident, loss of life, or miscalculation.

Line of Actual Control (LAC)

Tensions between the PRC and India along the LAC, the de facto border between India and PRC, have remained high since a significant clash in June 2020, and an additional incident in December 2022. A 2021 PRC land borders law that allows for greater PLA involvement in border security represents a continuation of PRC's "lawfare" strategy to justify military action in territorial disputes. China's consistent attempts to expand its border has resulted in two physical confrontations between PLA and Indian soldiers. The PLA has also significantly expanded its military infrastructure along the LAC to maintain pressure on India and better posture forces for future contingencies. These actions are designed to expand their borders and consolidate their gains. The PRC's provocative behavior creates instability and increases the risk of unintended incidents.

Excessive Maritime Claims

The PRC's expansive maritime claims in the South China Sea are inconsistent with international law as reflected in the 1982 United Nations Convention on the Law of the Sea. Yet the PRC continues its coercive activities to reinforce these legally baseless claims and undermine the rules-based international order. The PRC has militarized its South China Sea outposts to expand its military reach, arming these features with anti-ship and anti-aircraft missile systems, laser and jamming equipment, and fighter jets that threaten all nations operating nearby. The PRC continues to explore and exploit the region's vast natural resources, including hydrocarbons, fish stocks, and minerals, including those inside other nations' Exclusive Economic Zones (EEZ).

The PRC uses domestic laws as justification to enforce its expansive maritime claims. In 2021, the PRC passed both a China Coast Guard (CCG) Law and a Maritime Traffic Safety Law (MTSL). The first authorizes its coast guard to fire upon or tow foreign ships it sees as violating China's domestic laws. The MTSL requires all specified vessels entering territorial sea areas "under the jurisdiction of China" to notify maritime authorities, carry required permits, and submit to Chinese command and supervision.

The enforcement of these domestic measures intimidates South China Sea nations from enjoying their rights to natural resources in the exclusive economic zones and continental shelf while infringing upon rights and freedoms guaranteed under international law as reflected by the United Nations (U.N.) Convention on the Law of the Sea (UNCLOS), a treaty to which the PRC is a party. These laws could provide the pretext for the use of force that could spark a wider conflict. More broadly, these laws and other unilateral actions, such as its annual, unilateral summer fishing ban, threaten China's neighbors and clearly illustrate an attempt to change the existing international order in its favor.

High Altitude Balloons

The February high altitude balloon incursion into United States territorial airspace, and similar incidents across the globe, demonstrated the CCP's intent to develop and deploy additional intelligence collection platforms. Such actions are in direct violation of the sovereignty of the nations overflown and further highlight the CCP's irresponsible behavior. This is a clear example of the disconnect between CCP words and actions.

PRC-Russia Cooperation

In February 2022, Chairman Xi and President Putin announced a "no limits" strategic partnership rooted in a common opposition for democratic systems and an international order both believe constrain their authoritarian governments. Just last month, Chairman Xi stood alongside President Putin in Moscow and jointly reiterated their mutual goal of a new world order. Xi once again failed to condemn Russia's unprovoked, illegal, and illegitimate invasion of Ukraine. CCP leaders and media continue to amplify Russian propaganda, and we diligently monitor the situation for any evidence of the PRC providing material aid. Additionally, Russia is transferring highly enriched uranium to the PRC, which will be used in fast-breeder reactors and could support the PRC's nuclear force expansion through the production of weapons-grade plutonium. Militarily, the relationship has incrementally grown over the past decade. In 2022, the PLA participated in VOSTOK 22, a multinational Russian exercise, and the two countries conducted multiple combined naval and strategic bomber patrols. Some of those highly symbolic events occurred in the air and sea spaces around Japan and near Alaska and Guam. These developments are especially troubling given the PRC's ongoing nuclear and conventional military buildup. By the 2030's, for the first time in its history, the United States will face two major nuclear powers as strategic competitors and potential adversaries, creating new stresses on stability and new challenges for deterrence, assurance, and risk reduction.

Russia

Strategic Intent

Russia represents an acute threat that desires to maintain its status as a global power and influence by using all elements of national power. Russia seeks to upend the international order's status quo in favor of a multipolar system that advantages its authoritarian regime. Russia's illegal, illegitimate war against Ukraine is the most blatant example of its contravention of international law and norms. Moscow's ongoing support of Burma's military regime and its continued assistance to the DPRK, are less publicized but nonetheless concerning. Russia's actions are an attempt to demonstrate a global position of strength even in the midst of diplomatic, economic, and military struggles.

Military Modernization

Despite Russia's brutal war in Ukraine, Russia's updated 2022 Naval Doctrine prioritizes the Pacific region, establishes a primary goal of "strategic stability," and describes the Sea of Okhotsk as an "area of existential importance," alongside Russian territorial seas and its EEZ. As such, Russia is upgrading strategic assets in the Eastern Military District. Such improvements are designed to bolster Russia's ability to threaten the United States and our allies, including Japan.

In 2022, Russia transferred multiple naval assets to the Pacific including a Dolgorukiy II-class nuclear-armed, nuclear-powered ballistic missile submarine, a

Severodvinsk-class nuclear-powered cruise missile submarine, and upgraded Kilo—class cruise missile-capable diesel submarines. Another eight advanced cruise missile capable vessels will likely arrive before 2026. Armed with dual nuclear and conventional capable Kalibr cruise missiles and the Tsirkon hypersonic cruise missile (still in testing), the Russian Pacific Fleet is increasing its ability to threaten United States and allied land and maritime targets.

Russia executed its quadrennial VOSTOK capstone exercise in early September 2022 with the naval component conducting simulated cruise missile and bomber strikes to message they are still capable of defending their far-eastern region.

President Putin vowed to modernize Russia's nuclear forces, which he described as "the main guarantee of our sovereignty and territorial integrity, strategic parity and the global balance of forces," and indicated the Sarmat Intercontinental Ballistic Missile (ICBM) will enter service shortly.

Destabilizing Actions

Power Projection

In the Pacific, Russia increasingly relies on its Pacific Fleet, particularly its submarine force, to shoulder the burden of defense for Russia's eastern regions. The Pacific Fleet, long-range aviation forces, and strategic capabilities remain mostly unaffected by Russia's illegal war in Ukraine. We expect Moscow to use these forces to demonstrate Russian power and presence through expeditionary air and maritime operations that threaten the homelands of the United States and several of our allies.

Bomber Patrols

Russia continues to send strategic bomber patrols near United States airspace, having executed patrols near Alaska, Hawaii, and Guam in recent years. These patrols are meant to message Russia's ability to threaten the United States Homeland. Russian forces, which also routinely patrol airspace off the coast of Japan, are increasingly collaborating with the PLA to execute combined air patrols that regularly cross into Japan and the Republic of Korea's Air Defense Identification Zones (ADIZ), further threatening our allies.

Naval Exercises

Russia also employs its Navy to demonstrate reach and showcase some of its newest capabilities. In 2021, a large naval deployment operated in the vicinity of Hawaii for this very purpose, an event that could be repeated this year with some of the new capabilities recently fielded in the Pacific Fleet.

Combined Exercises with the PRC

The PRC participated in VOSTOK 2022 sending more than 2,000 troops, 300 vehicles, 21 fixed-wing aircraft and helicopters, and 3 ships. Additionally, the two countries also conducted multiple combined air patrols, and naval exercises. While the increase of combined military maneuvers does not translate to an integrated force, deepening cooperation poses an increased risk to the United States and our partners in the region.

Arms Transfers from DPRK

Russia is procuring ammunition and other military equipment from the DPRK, which has significant experience obfuscating shipments in the face of international sanctions. Russia, through its private military company the Wagner Group, has reportedly purchased infantry rockets and missiles from North Korea to restock its diminished reserves.

Territorial Dispute with Japan

The territorial dispute over the southern Kuril Islands / Northern Territories dominates Russia-Japan relations. In December 2021, Russia positioned Bastion coastal defense missile systems on Matua Island to underline Moscow's firm stance on disputed territory with Japan. These missiles are part of a newly formed permanent missile brigade, which demonstrated live-fire events as part of VOSTOK 22.

Democratic People's Republic of Korea (DPRK)

Strategic Intent

The DPRK prioritizes regime security above all else and views its strategic weapons programs and vast conventional military force as keys to deterring external aggression and invasion. Pyongyang's forces pose a threat to United States and Republic of Korea (ROK) forces on the peninsula, to Japan, and across the Indo-Pacific. Its investment in ballistic missiles, nuclear technologies, and other weapons of mass destruction (WMD), are in direct violation of U.N. Security Council resolutions, and

consistent with the regime's goal of achieving strategic deterrence. Underscoring this point is DPRK leader Kim Jong Un's December 2022 call for an exponential increase in the country's nuclear arsenal and mass production of tactical nuclear weapons. In September 2022, the DPRK passed a law reaffirming its self-proclaimed status as a nuclear power and establishing conditions for nuclear use and rejecting de-nuclearization.

Military Modernization

The DPRK is prioritizing upgrades to its nuclear and other WMD programs as well as its conventional military capabilities. The majority of Pyongyang's modernization efforts focuses on its WMD forces, underscored by an unprecedented number of missile tests in 2022. The DPRK is increasing its missile inventory and is testing new, more advanced ballistic and cruise missile systems capable of launching from diverse platforms, including sea-based and rail-launched systems. In 2022, the regime conducted a test flight of the Hwasong–17 ICBM, which it claimed demonstrated the capability to strike the entire continental United States with nuclear weapons. The DPRK is also testing a series of increasingly capable short range missiles that Pyongyang claims are capable of delivering tactical nuclear warheads. Kim Jong Un appears ready to conduct the first nuclear test since 2017.

The DPRK's modernization of its conventional forces is muted in comparison to its WMD force developments. The naval modernization program is pursuing submarine-launched ballistic missile technology. The DPRK is upgrading some air defense systems and is pursuing unmanned aerial vehicles for military missions. Modest upgrades to DPRK ground forces include tanks and artillery pieces that made appearances in parades since 2020.

The DPRK continues to advance aggressive cyber programs as a low risk, cost effective tool to influence and intimidate adversaries. Pyongyang also uses cyber programs to steal intellectual property and generate revenue, which includes the theft of crypto assets that helps finance weapons research and development.

Destabilizing Actions

Missile Launches

The DPRK conducted over 70 ballistic and cruise missile launches in 2022, more than tripling the amount in any previous year, including an IRBM that overflew Japan. 2022 marked the DPRK's first ICBM launch since 2017. The DPRK launched a Hwasong–17 ICBM at a deliberately steep angle making it difficult to analyze its true capability. Finally, the DPRK tested a solid-fuel-powered rocket engine that, if effective, would allow the DPRK to transport and launch missiles faster than current liquid fuel-powered variants.

Nuclear Program

Over the last year, the DPRK increased its threatening rhetoric and took steps to expand and improve its nuclear capabilities. In September, Pyongyang codified its nuclear use policy stating its nuclear forces have a deterrence and a wartime-use mission. Pyongyang also carried out what it termed "tactical nuclear warhead" training and "ballistic missile launching drills" in support of the regime's goals to operationalize its nuclear weapons program.

In 2022, the regime reconstituted its nuclear test site at Punggye for potential future use. Additionally, an International Atomic Energy Agency (IAEA) report highlighted indications of ongoing operations at the DPRK's plutonium enrichment facility, which produces fissile material that could be used in nuclear weapons.

Support to Russia

North Korea is using Russia's war against Ukraine war to strengthen its relations with Russia. In addition to its vote against the U.N. General Assembly's resolution demanding Russia's withdrawal and its recognition of Russian's illegal referendum of Ukrainian provinces in the Donbas region, the DPRK has supplied Russia with a significant amount of ammunition.

Sanctions Evasion

The DPRK continues to evade U.N. imposed sanctions intended to curtail funding for its nuclear and other WMD and ballistic missile programs. A U.N. Panel of Experts found continued sanctions evasion by entities, networks, and vessels that persistently fund these programs in defiance of U.N. Security Council Resolutions.

Violent Extremist Organizations (VEOs)

Transnational and ethno-nationalist violent extremist organizations continue to pose a threat to safety and stability across the Indo-Pacific region. We continue to defend the United States and our many regional allies and partners from this desta-

bilizing threat. Additionally, we monitor the potential return of foreign fighters from distant conflicts, and seek ways to prevent violent extremists from planning and executing violent attacks.

IMPLEMENTING SEIZE THE INITIATIVE

Seize the Initiative is USINDOPACOM's approach to defend the Nation and deter conflict. If deterrence fails, this approach ensures our forces are prepared to fight and win. *Seize the Initiative* consists of a distributed force posture that facilitates a campaign of joint and combined operations utilizing advanced warfighting capabilities with an enhanced network of allies and partners.

DISTRIBUTED FORCE POSTURE

Forward-based and rotational joint forces armed with lethal capabilities demonstrate resolve, support the security of our allies and partners, and provide the Secretary and President with multiple options if required. Definitive access, basing, and overflight (ABO) arrangements enable the joint force, improve interoperability with host-nations, and position capabilities forward in the event of a crisis. A widespread and distributed force posture west of the IDL gives us the ability to more easily exercise and operate with our partners, increases survivability, reduces risk, and sustains the force with a network of stores, munitions, and fuel to support operations in a contested environment.

USINDOPACOM is pursuing operating locations, both permanent and rotational, across "clusters" throughout the Indo-Pacific. Funding provided by the Congress in 2023 and the requests in the President's Budget Request (PBR) for 2024 will allow USINDOPACOM to continue the necessary planning and implementation efforts to disperse the joint force, enhance interoperability, and build capacity with allies and partners. The classified 1254 Report describes and prioritizes the specific locations and capabilities at each location.

The Guam Cluster

As the most-forward United States territories in the Pacific, Guam and the Commonwealth of Northern Mariana Islands (CNMI) are critical to United States regional security in the theater. The Department, along with the Government of Japan, has committed more than $7Bn for military construction and family housing projects on Guam in fiscal years 2022 to fiscal year 2028 to meet our commitment with Japan under the Defense Policy Review Initiative (DPRI). This investment in Guam, which is home to 170,000 American citizens, highlights the importance of the island for sustaining the joint force as a main operating base.

Several upcoming key posture projects in Guam and the CNMI will require historic levels of military construction. While Guam has the third highest construction workforce per capita nationally, current military construction demands require a workforce more than three times as large as what currently exists in Guam. Anticipated levels of future military construction will further exacerbate consistent labor shortages that have already left private construction projects unable to meet their baseline needs. The Department requires relief from the H–2B visa restrictions through at least 2029 to be able to provide the workforce required for our construction needs. A longer-term extension, beyond the current date of December 31, 2024, helps meet the Department's requirements and deliver critical military construction projects on time.

To execute our command and control responsibilities, USINDOPACOM has requested support for Joint Task Force (JTF) Micronesia forward stationed in Guam. The JTF's area of responsibility will be the Guam cluster, which includes United States Territories (Guam, CNMI, Wake Island, and Midway Island) and the Freely Associated States (FAS), which consist of the Federated States of Micronesia (FSM), Republic of Palau, and the Republic of the Marshall Islands (RMI).

The Japan Cluster

The United States is working to strengthen our alliance and optimize our force posture with Japan through the forward-deployment of more versatile, resilient, and mobile capabilities. An optimized United States posture in Japan, alongside enhanced Japan Self-Defense Forces (JSDF) in areas including Japan's Southwest Islands, will substantially strengthen deterrence and response capabilities. The United States deployed MQ–9 remotely piloted aircraft to the Kanoya Japan Maritime Self-Defense Force (JMSDF) Base, and we will establish the Composite Watercraft Company at Yokohama North Dock this year. We are also working closely with Japan to expand joint/shared use of United States and Japanese facilities and are increasing bilateral exercises and training.

The Philippines Cluster

We have made significant progress to improve interoperability of United States and Philippines forces through utilization and expansion of the Enhanced Defense Cooperation Agreement (EDCA). EDCA permits the United States to build infrastructure and preposition equipment at agreed upon locations. Under EDCA, United States infrastructure investments help meet our alliance requirements, fill short-term Armed Forces Philippines (AFP) capability gaps, support long-term AFP modernization, and better position the Department of Defense to respond to Humanitarian Assistance / Disaster Relief (HA/DR) events. In February 2023, our governments announced the addition of four future AFP sites as EDCA agreed locations, bringing the total to nine sites and ~$82 million in U.S. investments to date.

The Australia Cluster

The United States and Australia have agreed to continue the United States rotational presence across air, land, and maritime domains, including U.S. Bomber Task Force rotations. Leaders identified priority locations in Australia to support enhanced United States force posture to enable our combined exercises and presence. Assessments are underway for the potential use of various Australian locations for logistics, increasing the prepositioning of munitions and fuel. The 1254 Independent Assessment identifies several significant posture initiatives in Papua New Guinea (PNG), where negotiations on a bilateral Defense Cooperation Agreement are underway.

CAMPAIGN OF JOINT AND COMBINED OPERATIONS

Campaigning involves persistent and synchronized joint operations in tandem with our allies and partners, linked over time and space, to build warfighting advantage and deter our security challengers. Persistent day to day joint operations aligned with our combined exercises are critical to our ability to deter conflict. Campaigning normalizes our operations throughout the AOR, delivers interoperable and confident warfighting partners and gives us the ability to rehearse warfighting concepts together. In 2022, key highlights included ground forces operating in Northern Luzon and Japan's Southwest Island, the Rim of the Pacific Exercise (RIMPAC), and a new 14 nation combined exercise initiated by Indonesia titled Super Garuda Shield.

Exercise, Experimentation, and Training

Joint, all-domain exercises demonstrate combat credibility by bolstering the joint force's interoperability with our allies and partners and deliver warfighting proficiency. USINDOPACOM's robust exercise program demonstrates our commitment to defending the rules-based international order, facilitates capability development, and builds relationships across the region with our partners. USINDOPACOM seeks to further expand multilateral participation in our exercise program, and train in contested, all-domain environments. These desired effects require continued investment in the Joint Training Exercise and Evaluation Program (JTEEP).

USINDOPACOM is facilitating experimentation with advanced concepts and technologies to deliver warfighting outcomes at speed. This requires the ability to conduct high-end, multi-domain experimentation events in a continuous campaign. A real world environment enables proper evaluation of promising technologies for potential implementation in the near term.

High-end training is an advantage for U.S. forces and our allies and partners. To maximize our training effectiveness, we are linking our ranges across all domains via a federation of interconnected live, virtual, and constructive effects, simulation centers, and mobile training support systems with the Pacific Multi-Domain Test and Experimentation Capability (PMTEC). PMTEC provides the combatant commander the capability to train joint and combined forces forward in theater at the highest levels. This initiative creates the largest coalition range complex in the world with the most advanced capabilities to support operational rehearsals and deliver integrated deterrence.

ADVANCED WARFIGHTING CAPABILITIES

The joint force currently enjoys the ability to deliver effects throughout the AOR, but we must continue to maintain and expand this advantage with new technologies across all domains. Maintaining our joint warfighting advantages will deter conflict and fulfill a decisive role should we need to fight and win. Advanced capabilities delivered by our maritime, air, expeditionary, land, cyber, space, and special operation components enabled by advanced concepts with our allies and partners deliver peace and stability throughout the AOR. To effectively counter competitor's anti-ac-

cess/area denial (A2/AD) strategy, USINDOPACOM requires joint capabilities that provide overmatch in the near, mid, and long-term.

Guam Defense System (GDS)

USINDOPACOM's priority mission is to defend the homeland. Establishing the GDS, a 360-degree, integrated air and missile defense on Guam, remains the highest priority. Funding for a single integrated weapon capability must be uninterrupted to provide an advanced, integrated, persistent, and enduring, layered defense against ballistic, cruise, and hypersonic missiles. This system must also be prepared to incorporate offensive capabilities as needed, and synchronize our logistics requirements from the island.

Decision Superiority

Decision superiority means the joint force can see, think, and fight faster than its adversaries. This requires an ability to operate in contested spaces, maintain persistent, all-domain battlespace awareness, and close kill chains with advanced munitions enabled by a Joint Fires Network.

To achieve decision superiority, the joint force must possess an ability to operate in contested spaces and deliver effects across multiple domains to deny, degrade, or defeat any threat. Our adversaries are developing and fielding A2/AD capabilities to constrain the U.S. military's ability to dominate all domains. To effectively deter our adversaries and counter any A2/AD strategy, USINDOPACOM requires joint warfighting capabilities in the near, mid, and long-term to ensure we can continue to operate our force anywhere we desire at the time and place of our choosing.

The joint force requires persistent, all-domain battlespace awareness through a suite of all domain sensors, distributed via a Persistent Targeting-Quality Common Operating Picture (PT-COP) to multiple nodes. An effective PT-COP requires exquisite intelligence to achieve its full potential. FISA Section 702 is a vital authority to keep our Nation safe and will lapse on 31 December 2023 if not reauthorized. Section 702 allows targeted collection on the communications of our most critical foreign intelligence targets outside of the United States who use U.S. infrastructure and services to communicate. A lapse of Section 702 authority will have a significant detrimental effect on foreign intelligence collection specific to USINDOPACOM's mission and result in a decrease of battlespace awareness.

A final, critical component of decision superiority is an upgraded network of all-domain sensors linked to an integrated fires network with advanced weapons capable of engaging all threats in the battlespace. JFN provides decision superiority by fusing land, maritime, air, and space-based sensors with nationally derived information to provide target guidance over a resilient and adaptable information technology-based architecture. JFN allows geographically dispersed commanders to simultaneously share a common understanding of the battlespace, fed by sensors from any platform which can provide targeting guidance to any weapons system. JFN, coupled with the lethality of current and future munitions, underpins conventional deterrence and provides the joint force with the necessary lethality to maintain combat credibility.

Mission Partner Environment (MPE)

Combined warfighting interoperability requires rapid, widespread sharing of information with like-minded nations to operate with our joint force. The MPE modernizes 13 separate coalition command, control, communication, computer, and information technology (C4IT) network systems into a single cyber safe system to deliver combined command and control (C2) capability throughout the theater. USINDOPACOM's MPE provides a resilient, secure, interoperable digital architecture that supports all-domain operations, provides real-time intelligence, and allows all participants to share a common operational picture.

Integration of Space and Cyber Domains

Our competitors seek to challenge U.S. dominance in all domains, including space and cyber. To maintain our warfighting advantages, USINDOPACOM requires resilient and flexible space and cyber capabilities, and we continue to integrate these capabilities into activities and exercises with our allies and partners.

ENHANCED NETWORK OF ALLIES AND PARTNERS

The U.S. network of allies and partners is our greatest asymmetric advantage, built upon shared values, mutual trust, and respect. Our alliances, multilateral arrangements, partnerships, friendships, and Five Eyes relationships are all essential components of this network and play an important role in regional security. USINDOPACOM continues to strengthen all layers through increased security co-

operation, advanced training, and more complex, multilateral campaigning. These activities in turn increase interoperability, build capacity, and enhance our shared security while reinforcing the rules-based international order. We are deliberately building theater-wide capabilities through information sharing that strengthen our alliances and partnerships.

Five Treaty Alliances

Australia

The United States-Australia alliance has never been stronger or more vital to regional security. Australia is a critical ally and an important leader in international efforts to promote a free and open Indo-Pacific. Similar to the United States, Australia communicates the importance of transparency and the maintenance of rules-based behavior and international law in its interactions with the PLA. Australia helps maintain regional and global security through U.N. sanctions enforcement against DPRK, and the hosting of United States forces.

Australia is increasing its collaboration across the region, building stronger relationships with India, Japan, and Indonesia. Australia's recently signed Joint Declaration on Security Cooperation with Japan, as well as its leadership in supporting the security and stability of Blue Pacific nations, exemplifies the country's priorities on collaboration.

Australia and the United States enjoy a robust relationship, and actively seek to deepen our partnership through military engagements, defense acquisitions, and force posture initiatives. The United States and Australia are working to enhance all-domain cooperation, integrate ranges, improve posture, and expand multilateral exercises across the theater. Australia and the United States have increased our cooperation throughout the Indo-Pacific, greatly improving our interoperability. Australia hosts the Marine Rotational Force-Darwin (MRF-D), and recently commenced deployment for its eleventh rotation through Northern Australia, demonstrating combined operational capability, to include two Bomber Task Forces.

Japan

The United States-Japan alliance remains the cornerstone of peace and prosperity in the Indo-Pacific Region. Japan's decision to significantly increase its defense budget will enhance the alliance's ability to deter conflict and set the example for other like-minded nations to defend the rules-based international order. Our nations are well aligned in our views of security challenges in the region, and in our efforts to deter conflict. To preserve our strategic alignment with Japan, we are working to complete the realignment of United States forces outlined in the DPRI.

At the January 2023 United States-Japan Security Consultative Committee meeting, our nations bilaterally announced the revision of the 2012 Roadmap for Realignment Implementation, which will transition the 12th Marine Regiment to the 12th Marine Littoral Regiment in Okinawa by 2025, optimizing alliance force posture.

The JSDF is highly capable and employs a large percentage of U.S. defense equipment, which is completely interoperable with U.S. forces. Additionally, Japan formally announced its decision to acquire defensive counterstrike capabilities and is currently looking at delivery platforms and munition options.

Japan is also a key security contributor in bilateral and multilateral efforts with partners across the region that support a free and open Indo-Pacific. In 2022, Japan signed a Joint Declaration on Security Cooperation with Australia, and a Reciprocal Access Agreement (RAA) with the U.K. to help facilitate military-to-military activities.

Republic of Korea (ROK)

The United States-ROK alliance has been the linchpin for maintaining a stable, security environment since 1953 and we remain ready to deter and respond to the DPRK regime's threats. A multinational, whole-of-government approach is required to effectively deter DPRK provocation and enforce U.N. Security Council Resolution (UNSCR) sanctions.

The military-to-military relationship between the United States and the ROK remains steadfast, and the alliance continues to focus on maintaining military readiness and a combined defense posture suited to address the dynamic challenges on the Peninsula. The return of the Extended Deterrence Strategy and Consultation Group (EDSCG), return of major exercises on the Korean Peninsula, the first United States deployment of 5th generation fighter aircraft to the Korean Peninsula, and first United States aircraft carrier port visit to Korea in 4 years were positive demonstrations of United States commitment. USINDOPACOM is resolute in executing

routine deployments of strategic assets to demonstrate the United States' unwavering extended deterrence commitment to the ROK.

At nearly $46.3 billion USD, the ROK's 2022 Ministry of National Defense budget is the ROK's largest defense budget ever, and reflects plans to restructure and modernize the ROK military and acquire the capabilities needed for wartime operational control (OPCON) transition. Progress continues to be made in meeting the bilaterally agreed upon conditions for OPCON transition and, once achieved, will yield a historic restructuring of the alliance and our combined defenses.

Republic of the Philippines

The Philippines is a strategic treaty ally, and our strong bilateral defense relationship is critical to our network of allies and partners in the Indo-Pacific. The United States is committed to continuing our persistent counter-terrorism efforts with the Philippines and is also increasing support for maritime security, a national security priority for the Philippines.

A United States firm, Cerberus, signed an asset purchase agreement in 2022 for the Hanjin Shipyard, now called Agila Subic, and finalized several lease agreements for the shipyard facilities. One of the agreements enables the Philippine Navy to use the shipyard and host United States ships for maintenance and voyage repair in this key strategic location.

We have made significant progress to improve interoperability of United States and Philippines forces through utilization and expansion of the EDCA. In April 2023, our governments announced four new EDCA sites. The EDCA expansion makes our alliance more resilient, and accelerates the modernization of our combined military capabilities.

This month, Balikatan 23 begins a 3-week, annual, joint command and control exercise (C2X) and field training exercise (FTX) with humanitarian civic assistance events conducted in the Philippines. It features Armed Forces of the Philippines (AFP) and United States forces exercising a mutual defense scenario with a focus on tactical interoperability. Its purpose is to demonstrate United States commitment to the 1951 United States—Philippine Mutual Defense Treaty.

Kingdom of Thailand

The United States-Thailand alliance, built upon a mutual interest in maintaining stability in Southeast Asia and throughout the region, continues to progress. The United States is working to build partner capacity in Thailand and support modernization of the Royal Thai Army, Navy, Air Force, and Special Operations Forces. USINDOPACOM supports Thailand's military modernization efforts to enhance Thai capacity and United States-Thai interoperability. Most notably, the United States is currently reviewing Thailand's request to purchase our most advanced fighter, the F–35.

Thailand is a critical partner for regional security and provides logistical nodes essential to United States military operations throughout the Indo-Pacific region. Efforts are underway to expand access to Utapao Air Base and additional new sites to support airfield dispersal, including Hat Yai and Nam Phong airfields.

Exercise COBRA GOLD (CG) has returned to full scale participation after reductions in previous years due to COVID–19. CG23 allowed us to improve the training and readiness of our forces by participating in a large multilateral exercise in Thailand. We expect CG to continue to expand in complexity and scale, as over 20 nations joined the exercise in an observer status this year. CG is the largest exercise in Southeast Asia, and highlights the multinational security architecture standing ready to meet future challenges.

Multilateral Cooperation

AUKUS

The 2021 establishment of AUKUS (Australia, UK, and the United States) intends to buildupon longstanding bilateral ties through the establishment of a trilateral, security partnership based on defense capabilities that support our mutual national defense objectives. The first initiative under AUKUS Pillar I was to determine the Optimal Pathway to deliver a conventionally armed, nuclear-powered submarine capability to the Royal Australian Navy, which concluded and findings were formally announced on March 13, 2023. AUKUS Pillar II efforts focus on building trilateral capabilities in areas of shared interest including undersea warfare, cyber, artificial intelligence, and quantum computing to provide pivotal, future high-end warfighting and enhance our combined force posture.

United States-Japan-ROK

The United States has strengthened our trilateral exercises and operations with Japan and the ROK to enhance interoperability, advance our intelligence sharing, and bolster efficient communication as we work to deter and respond to increasing DPRK provocations. Our ballistic missile defense exercises included detecting, tracking, and intercepting simulated targets. The United States, Japan, and the ROK also participated in an integrated air and missile defense exercise with Canada and Australia off the coast of Hawaii, which included a live fire intercept of a short-range ballistic missile. Additionally, we increased our anti-submarine warfare exercises to improve interoperability against undersea threats.

The United States remains dedicated to the complete and verifiable denuclearization of the Korean Peninsula, and USINDOPACOM will continue to focus on strong trilateral cooperation to this end.

The Quad

The Quad, comprised of Japan, Australia, India, and the United States, is an important diplomatic partnership in the Indo-Pacific region. While not a military alliance, the Quad nations cooperate on advanced technologies, developing better infrastructure, and improving cybersecurity as a demonstration of how four mature democracies can favorably shape the security environment for the region. All four nations participate in exercise MALABAR to advance the collective planning, integration, and employment of advanced warfare tactics between nations.

Strategic Partnerships

India

The United States and India continue to strengthen our strategic and unique Major Defense Partner relationship based upon our shared vision for maintaining a free and open Indo-Pacific and sustaining the rules-based international order. We are building an increasingly robust level of defense cooperation through exercises, information sharing, and efforts to establish greater co-development and co-production of military technology. With respect to the Line of Actual Control, we continue to support direct dialog and the peaceful resolution of border disputes amid provocative Chinese behavior.

USINDOPACOM is cooperating with the Indian Navy on increasing maritime domain awareness, specifically in the underwater domain, in order to address the growing threats in the Indian Ocean. Furthermore, we are supporting the India Navy's Information Fusion Center-Indian Ocean Region (IFC-IOR) with a Liaison officer to increase our information sharing. Our air domain cooperation is developing as B–1B Bombers participated in this year's AERO India and we look forward to participating in exercise COPE India as the bomber's presence sends a strong signal regarding the growth of our bilateral relationship.

Exercises like TIGER TRIUMPH, COPE India, YUDH ABHYAS and MALABAR facilitate progress toward interoperability and enhance our information sharing as we increase the complexity and scope of our training.

USINDOPACOM also seeks to deepen cooperation under the Logistics Exchange Memorandum of Agreement to enable more regular and flexible reciprocal access in the Indian Ocean Region, to include U.S. ship repair in Indian yards. In August 2022, the USNS *Charles Drew* became the first U.S. Navy ship to conduct a mid-voyage repair in an Indian shipyard.

India is currently considering purchases of the F–21 (formerly F–16), F/A–18 Super Hornet, F–15EX Eagle, MQ–9B guardian, and P–8I aircraft. In support of India's efforts to grow its defense industrial base, the Department has offered to explore proposals for co-production and co-development projects. These potential projects would support India's defense modernization and improve its capacity as a net security provider in the Indo-Pacific.

Singapore

Singapore is a highly capable partner, providing critical support for our air and naval forces in the vicinity of the Strait of Malacca and South China Sea, anchoring our presence in Southeast Asia. Demonstrating incredible flexibility, Singapore supported a short-notice United States aircraft carrier port visit in July enabling required ship maintenance and crew rest. The Singapore Armed Forces use four continental United States locations for training and in 2019, we signed a non-binding MOU for Singapore to establish a permanent fighter detachment on Guam.

Singapore also supports regional and global security initiatives, including hosting a multinational maritime Information Fusion Center, as well as a regional Counter-terrorism Information Facility (CTIF). The CTIF represents USINDOPACOM's first

collaborative, operational partnership with regional states to use network analysis and multilayer analytics to identify terrorist threats.

USINDOPACOM looks forward to identifying opportunities to collaborate with Singapore's fourth uniformed service, the Digital and Intelligence Service, inaugurated in October 2022.

Developing Regional Partnerships

NORTHEAST ASIA

Mongolia

Mongolia engages with the United States and other like-minded nations as part of its "Third Neighbor Policy," to balance Russian and PRC influence by developing relationships with democratic nations. Mongolia is a dedicated partner in global Peacekeeping Operations (PKO). Through their extensive U.N. PKO contributions and deployments, the Mongolian Armed Forces (MAF) have gained significant operational experience and increased interoperability with the United States.

Our active defense relationship with Mongolia is a key component of the Strategic Partnership, and contributes to shaping the regional security environment. USINDOPACOM continues to assist MAF with their defense reform: enhancing U.N. PKO capabilities, improving HA/DR response, developing a professional military education program for officers and Noncommissioned Officers, and expanding their Special Operations Forces capability growth. USINDOPACOM also co-sponsors Mongolia's KHAAN QUEST, an annual, multinational exercise designed to promote regional peace and security.

Taiwan

United States policy on Taiwan remains unchanged. We will continue to uphold our support for Taiwan's self-defense capabilities, consistent with the Taiwan Relations Act. Our support for Taiwan remains strong, principled, and in line with our one China policy, which is guided by commitments enumerated in the Taiwan Relations Act, the three United States-PRC Joint Communiques, and the Six Assurances. The United States will continue to support a peaceful resolution of cross-Strait issues, consistent with the interests and best wishes of the people on Taiwan. Our defense engagement with Taiwan helps ensure that Taiwan remains secure, confident, free from coercion, and able to engage in a peaceful and productive dialog.

Southeast Asia

The United States' engagement with Southeast Asia and with Association of Southeast Asian Nations (ASEAN) strengthens relationships and conveys the United States' commitment to the region and building multilateral partnerships. ASEAN currently consists of ten member states and in November 2022, they agreed in-principle to admit Timor-Leste as the 11th member.

ASEAN is the most influential multilateral institution in the Indo-Pacific. We support the principle of ASEAN centrality and understand its importance to building trust, avoiding conflict, and reinforcing the rules-based international order.

We continue to express our concern over the PRC's pressure on ASEAN members to conclude negotiations on the Code of Conduct in the South China Sea in a way that would impede lawful activities and undermine ASEAN parties' ability to engage in governmental or economic activities with foreign partners of their choosing. At the 2022 United States-ASEAN Summit, President Biden announced the launch of the United States-ASEAN Comprehensive Strategic Partnership. USINDOPACOM is integral to ASEAN's multilateral capacity building efforts and will continue to invest time and resources to enhance the United States-ASEAN Comprehensive Strategic Partnership.

Brunei

The United States-Brunei defense relationship is very strong with an expanding level of military cooperation. Brunei seeks increased cooperation with USINDOPACOM, and 2022 saw the establishment of the first United States-Brunei Land Forces Talks.

In September 2022, Brunei approved the first multilateral training event to occur on Brunei soil. The U.K. Special Boat Service joined United States Navy SEALs and the Brunei Special Forces Regiment during Exercise NEPTUNE WARRIOR.

USINDOPACOM is collaborating with Brunei and deepening cooperation in mutually beneficial areas, to include enhancing maritime domain awareness. Brunei's Integrator UAS, a Direct Commercial Sales purchase, is now operationally capable. The system will bolster maritime domain awareness and border security. Brunei has received six Integrator UAS platforms, and will receive a final three early in 2023.

Bilaterally, we incorporated UAS into our exercises for the first time in 2022 via PALAWAN WARRIOR and the Southeast Asia Cooperation and Training (SEACAT) Exercise.

Burma (Myanmar)

The Department of Defense condemns the Burmese military's 2021 coup deposing the democratically elected government in Burma, and the detention of government officials, journalists, human rights activists, and members of civil society. The military uses brutal and excessive violence while continuing to restrict basic freedoms. USINDOPACOM does not engage with the Burmese military.

Russia has taken advantage of the coup to increase its long-standing engagement with the Burmese military, through high-level visits, military-to-military exchanges, and sustained weapons and equipment sales.

The fallout from the coup has stalled efforts by ASEAN to resolve the resulting political and humanitarian crises and has led ASEAN to downgrade Burma's attendance at high-level ASEAN events.

Cambodia

In early 2017, Cambodia suspended all military-to-military exercises with the United States. USINDOPACOM continues to cooperate with Cambodia on humanitarian mine clearance and Missing-in-Action (MIA) personnel accounting.

USINDOPACOM holds serious concerns about the PRC's military presence and construction of facilities at Ream Naval Base in the Gulf of Thailand. While USINDOPACOM desires to engage military-to-military with Cambodia when and where policy allows, Cambodia's actions to limit democracy and its lack of transparency with regard to Ream Naval Base provide a weak foundation for rebuilding trust.

Indonesia

Indonesia occupies a key strategic position as regional leader and the third largest democracy in the world. Defense ties with Indonesia are strong. Indonesia is advancing its status as a regional maritime leader, increasing enforcement against illegal fishing and investing in defense articles to update and replace equipment.

Our exercise program continues to grow as demonstrated during GARUDA SHIELD 2023, the largest multilateral event to date designed to deliver joint and combined training. Future iterations will support Indonesia's newly developed Joint Transformation Initiative and is likely to include more like-minded allies and partners. We have expanded the Joint Exercise Program to include GARUDA SHIELD and will continue to build partner capacity with the Indonesian military.

Laos

Laos is one of the least developed countries in the region, with the PRC owning about 50 percent of its external debt. Laos seeks balance between its traditional relationships with Vietnam, the PRC, and Russia, and is seeking stronger ties with other ASEAN members and regional partners.

Reconciling legacy of war issues remains a focal point in our relationship with Laos as we aim to resolve Unexploded Ordnance and Prisoner of War/Missing in Action (POW/MIA) recovery issues by 2030. Laos repatriated two sets of remains in 2022.

Malaysia

The United States-Malaysia military-to-military relationship has steadily grown over the last decade. In recent years, Malaysia has transitioned the focus of its military toward external security, developing a viable coast guard, and improving maritime domain awareness through intelligence, surveillance, and reconnaissance (JSR) capabilities. We support Malaysia's maritime domain awareness by providing capabilities that can be dual-purposed for use in Counter-Terrorism (CT) and Maritime Security (MARSEC) contexts. Since 2017, the United States has invested approximately $220 million in Maritime Security Initiative/Building Partner Capacity (MSI/BPC) programs in support of MARSEC objectives. During the 2022 CARAT exercise, Malaysia hosted 7th Fleet sailors and marines, and the Malaysian Armed Forces operated their newly acquired Link–16 ground stations with United States forces.

Timor-Leste

Timor-Leste is a geographically strategic country within the Second Island Chain and an emerging partner that welcomes expanded United States security cooperation. The 5-year, $23 million Baucau airfield joint rehabilitation effort will provide expanded access to the airfield in support of military exercises. Additionally, the MARSEC program opens doors for expanded access and presence.

Timor-Leste was granted ASEAN special observer status in November 2022 and ASEAN has agreed in-principle to admit Timor-Leste as the 11th member of ASEAN.

Vietnam

Vietnam is a vocal supporter of adherence to international laws, freedom of navigation for all, and adherence to the rules-based international order in the South China Sea. The United States and Vietnam signed a Three Year Defense Cooperation Plan of Action for 2022–2024 as well as an updated Defense Memorandum of Understanding (MOU) Annex codifying new cooperation areas including defense trade, pilot training, cyber, and personnel accounting (POW/MIA).

SOUTH ASIA

Bangladesh

Bangladesh is an important security partner to enhance regional stability. We are seeking to conclude a General Security of Military Information Agreement (GSOMIA) that will facilitate cooperation between the United States and Bangladesh on defense matters. Conclusion of the GSOMIA will advance opportunities for Bangladesh to access high-end United States military equipment and we are investigating other ways to strengthen security cooperation. This creates an opportunity to increase bilateral engagement in areas such as information sharing, military hardware, maritime security training, doctrine development, communications training, and joint planning and operations. Bangladesh has prioritized the development of maritime domain awareness capabilities and is seeking to modernize and diversify its military equipment.

Maldives

Maldives is a valuable partner for the United States and an integral part of a free and open Indo-Pacific. In 2022, the Maldives National Defense Force (MNDF) sought increased engagement with the U.S. military and like-minded partners. Maldives co-hosted the 2022 USINDOPACOM Intel-Chiefs Conference, the USINDOPACOM Environmental Security Forum, and the Special Operations Command Tempest Wind exercise. Countering terrorism is an enduring area of mutual cooperation. In 2022, the MNDF affirmed they would participate in a trilateral CT exercise with the United States and the United Kingdom. Maldives also signed an arrangement with the Montana National Guard to join the State Partnership Program. The addition of a Deputy Security Cooperation Chief at United States Embassy Colombo dedicated for United States Mission Maldives will enhance this partnership even more.

Nepal

The United States has a strong partnership with the Nepali Army and conducts a range of security cooperation activities focused on HA/DR, PKO, military professionalization, and border security. Nepal is a regional and global leader in U.N. PKO. USINDOPACOM supports the development of Nepal's PKO cadre through Global Peace Operations Initiative (GPOI) funds provided by the Department of State.

Sri Lanka

USINDOPACOM seeks to ensure Sri Lanka is a capable regional partner with a professional military force supportive of the rules based international order. The Department of Defense continues to seek opportunities to expand exercises with Sri Lanka and encourages them to work with other like-minded nations to build partner capacity. Sri Lanka will host the fiscal year 2023 USINDOPACOM Environmental Security Forum to identify areas of cooperation and security impacts of climate change. Sri Lanka's recent announcement to reduce and restructure their Armed Forces suggests excellent opportunities for future security cooperation activities that focus on defense professionalization and building capacity in maritime security, HA/DR, and U.N. PKO.

BLUE PACIFIC

In 2022, Australia, Japan, New Zealand, the United Kingdom, and the United States established the Partners in the Blue Pacific, an inclusive, informal coordination initiative that effectively supports the Pacific region. Our efforts are informed by the 2050 Strategy for the Blue Pacific Continent, the Pacific Islands Forum's long-term strategy to achieve a free, safe, and prosperous region.

Blue Pacific cooperation is critical to a free and open Indo-Pacific, enabling coordination with allies and partners in the AOR through strategic sea lines of commu-

nication. Blue Pacific nations highlight the security impacts of climate change as the single greatest threat to their livelihoods, security, and well-being. Other security priorities for the Blue Pacific nations are countering illegal, unreported, and unregulated (IUU) fishing, transnational crime, cybersecurity, maritime domain awareness, and drug trafficking.

The Freely Associated States (FAS)

The Freely Associated States of RMI, FSM, and Palau, are the cornerstone of the United States security architecture in Oceania, linking the United States with the Blue Pacific and Southeast Asia. RMI, FSM, and Palau have the highest military service per capita in the U.S. military, and make significant contributions to our operations. Our Compacts of Free Association (COFAs) agreements with the FAS, establish U.S. economic assistance for the FAS, and provide defense posture opportunities in the Indo-Pacific. Under the COFAs, the United States has full authority and responsibility for security and defense matters related to each of these three countries, including special and extensive access to operate in these territories and the ability to deny access to these three countries by any third country militaries. MOUs supporting the COFAs were signed with RMI, FSM, and Palau in early 2023. USINDOPACOM engages in military construction projects throughout the FAS to improve air and maritime infrastructure, enhance domain awareness, and support FAS efforts to protect their economic interests.

Fiji

As a regional economic and defense leader, Fiji is integral to the security of the Southwest Pacific. We work with the Fijian forces through exercises, security cooperation, and activities with the Nevada National Guard State Partnership Program (SPP). Fiji's new training center, Blackrock, supports their U.N. PKO deployments across the globe. The Republic of Fiji Military Forces (RFMF) sent security forces in support of the Solomon Islands after riots in early 2022 and to the Sinai as members of the Multinational Force as well as other U.N. missions. Additionally the RFMF hosts USARPAC's multilateral exercise CARTWHEEL and will co-host the 2023 Chiefs of Defense Conference in Fiji.

New Zealand

New Zealand remains a steadfast partner and important leader in the Blue Pacific. The United States-New Zealand bilateral defense relationship is strong and continues to grow. In 2022, in coordination with our campaign plan, the RNZN HMNZS AOTEAROA participated in the RIMPAC exercise, conducted regional maritime patrols and Pacific Island engagements, and provided logistical support to United States, U.K., Australian, and JMSDF vessels sailing throughout the region. New Zealand also augments the DPRK U.N. Security Council Resolution enforcement efforts by providing maritime patrol aircraft and personnel to staff the Enforcement Coordination Cell.

Papua New Guinea (PNG)

PNG is an important emerging partner for the United States, with a shared history dating back to World War II. USINDOPACOM is in discussions with PNG leadership regarding several significant posture initiatives that are contingent on the signing of a bilateral Defense Cooperation Agreement (DCA). Negotiations with PNG on a DCA and a ship rider agreement are currently underway.

Security cooperation initiatives in PNG, though limited in scope, are important to grow the capability of the PNG Defense Forces (PNGDF), strengthen security ties with its institutions, and assist in military development. USINDOPACOM is supporting State Department implementation of the strategy under the Global Fragility Act by providing disaster response and gender equity training to PNGDF. We also support the burgeoning relationship between the Wisconsin National Guard and PNGDF.

Tonga

Tonga is a partner with a history of coalition participation and ties to the Nevada National Guard through the SPP. Defense engagement has returned to pre-COVID levels to build partner capacity. A leader in the region, Tonga hosted the 2022 Southwest Pacific Defense Minister's Meeting in November with senior defense delegations from Fiji, Papua New Guinea, Australia, New Zealand, Chile, and France including observers from the United States and Japan.

Other Indo-Pacific Nations

Canada

Canada is a key Indo-Pacific ally and staunch supporter of the rules-based international order who deploys highly capable forces to the Pacific to support UNSCR enforcement efforts. To support the principle of sovereignty and uphold freedom of navigation rights, Canada executed combined Taiwan Strait Transits with the United States. Canada recently released its new Indo-Pacific Strategy aligned to the principles of like-minded nations to ensure a free and open Indo-Pacific.

France

The United States maintains defense cooperation activities in the Indo-Pacific with France, America's oldest ally. France has the largest EEZ in the region, including commands located in French Polynesia (FAPF), New Caledonia (FANC), and South Indian Ocean Zone (FAZOI). France is a pivotal contributor to regional security efforts such as protecting fisheries, building community resilience, countering transnational crimes including trans-Pacific narcotic trafficking, and HADR. With key leader engagements and multiple deployments to the theater, France is increasing interoperability with the United States and other key allies throughout the theater. Additionally, the French-led multilateral exercise MARARA included participation by Australia, France, Japan and the United States in Bora Bora in 2022. Last month, France held the third LA PEROUSE exercise in the Indian Ocean Region to enhance naval planning and operations, with participation from Australia, India, Japan, the United Kingdom, and the United States. France also supports UNSCR sanction enforcement activities against North Korea. In 2022, France updated their Indo-Pacific Strategy to focus on increased cooperation with like-minded regional partners throughout the region.

United Kingdom (U.K.)

The U.K. remains committed to the region as a champion of the free and open Indo-Pacific. They continue to sustain a healthy defense posture in the region, having renewed the Brunei Garrison Agreement to maintain around 700 troops in the Sultanate since September 2019. In 2022, the U.K. continued its deployment of two Royal Navy offshore patrol vessels to the region through exercises in support of the Five Power Defense Arrangement (FPDA) with Australia, New Zealand, Malaysia, and Singapore, as well as a multitude of other bilateral and multilateral Operations, Activities, and Investments (OAIs). The U.K. also signed a Reciprocal Access Agreement with Japan in 2022. USINDOPACOM continues to benefit from basing and access to the British Indian Ocean Territory at Diego Garcia.

Other Areas of Cooperation

Women, Peace and Security (WPS) Program

WPS is codified in law as a national security imperative, and USINDOPACOM is focused on WPS implementation. USINDOPACOM appreciates Congress' continued support of our WPS efforts. The command's WPS program is a unique and unmatched competitive advantage that promotes a free and open Indo-Pacific by upholding international human rights and the rules-based international order.

In 2022, we continued to expand our work to meet the growing appetite for WPS training, engagements, and integration of WPS concepts into existing activities. To support an upcoming PKO deployment, USINDOPACOM conducted two WPS seminars with the Mongolian Armed Forces as part of exercise KHAAN QUEST. USINDOPACOM supported several ASEAN events, engaging with diverse stakeholders focused on a human security approach. We have also increasingly focused on supporting WPS work with Blue Pacific partners including the development of a WPS National Action Plan in Fiji and are similarly looking to assist the Solomon Islands this year.

In August 2023, USINDOPACOM will deliver a 10-day regional Gender Advisor training in coordination with Australia, New Zealand, and Japan and will continue tailored WPS initiatives with the Pacific Islands countries, including a multi-year program for Papua New Guinea, as well as Thailand, Malaysia, the Philippines, and others.

Red Hill

In the last year, Secretary Austin tasked USINDOPACOM to establish Joint Task Force Red Hill in recognition of the imperative to safely and efficiently defuel the Red Hill Bulk Fuel Storage Facility on Oahu. Through cooperation, openness, and transparency with the Environmental Protection Agency and the Hawaii Department of Health, we have made steady progress throughout the year. Our actions will continue to be guided by uncompromising commitments to the health and safety

of the people of Hawaii, including our military families, protecting the natural environment, and accomplishing our assigned missions.

Security Impacts of Climate Change and Disaster Preparedness

The security impacts of climate change present a significant challenge to allies and partners in the USINDOPACOM AOR. Pacific nations frequently cite climate change as their top concern. Nations in Oceania, South, and Southeast Asia are particularly vulnerable to food security, water security, and agricultural productivity challenges exacerbated by extreme weather impacts.

Addressing these issues can strengthen relationships as we recognize their greatest concerns. The military's role in disaster preparedness and response builds trust and resilience throughout the region. The annual Pacific Partnership mission delivers medical, engineering, and HA/DR projects to address these critical challenges. During the Pacific Partnership 2022 mission, the USNS MERCY brought the Pacific Partnership team to see over 15,000 patients and complete 10 major construction projects in Vietnam, Palau, the Philippines, and Solomon Islands.

Understanding security impacts from sea level rise, temperature changes, and extreme storms is essential to long-term planning for U.S. operating locations in the Indo-Pacific region. USINDOPACOM is committed to reinforcing infrastructure, increasing resilience of its facilities, and assisting allies and partners to do the same.

CONCLUSION

In the last year, the global security environment dramatically changed. The PRC accelerated their whole-of-government assault against the rules-based international order and partnered with Russia to advance their goals. Strategic competition with the United States now encompasses all forms of national power across all domains. We see increasing efforts to drive wedges between the U.S. and like-minded nations in an attempt to dominate the region.

Implementing the NDS in the near, mid, and long-term requires the United States to present a persistent, lethal, and integrated joint force west of the IDL that can deny adversary objectives while simultaneously demonstrating U.S. commitment and resolve to our allies and partners. Seize the Initiative is our approach, in support of the NDS, to deliver combat credible integrated deterrence by building a distributed force posture, improving our joint and combined operational campaign, advancing our warfighting capabilities and enhancing our network of allies and partners. To be successful, we all must execute with a sense of urgency.

I will continue to advocate for the most pressing and pertinent requirements in the near and mid-term, but I cannot emphasize enough the importance of passing timely appropriations. The Department cannot move faster in the current year or adequately plan or execute programming in the FYDP without the resources to initiate new starts or properly sustain required programs. Continuing resolutions (CRs) result in cumulative and detrimental effects on our buying power, which are exacerbated by inflation, and add to the increased levels of operational risk.

Conflict in the INDOPACOM AOR is neither imminent, nor inevitable. Nevertheless, we do not have the luxury of time, we must act now to maintain a free and open Indo-Pacific.

Chairman REED. Thank you very much, Admiral Aquilino.

General LaCamera, please.

STATEMENT OF GENERAL PAUL J. LACAMERA, USA, COMMANDER, UNITED NATIONS COMMAND / COMBINED FORCES COMMAND / UNITED STATES FORCES KOREA

General LACAMERA. Chairman Reed, Ranking Member Wicker, and the distinguished Members of the Committee, thank you for the opportunity to appear before you as the Commander of the United Nations Command, Combined Forces Command, and United States Forces Korea to discuss the current situation on the Korean Peninsula.

Korea is as important today as it was in 1950, when the international rules-based order was first challenged and successfully defended on the Korean Peninsula. Located on the Asian continent, the Republic of Korea is crucial to regional and global stability. When North Korean communist forces invaded South Korea, with

the blessing and assistance of the Soviet Union and China, the United States, along with the 22 members of the United Nations, stood together with the South Korean people to expel the aggressors. The Korean War taught us that we must always be ready and forward-postured with our allies.

To ensure continued peace and stability on the Peninsula, I have five priorities that are nested within the Indo-Pacific Commander's "Seize the Initiative" approach to ensure free and open Indo-Pacific.

My first priority is to defend the homelands, the United States and our allies. The Korean War has not ended—we are in an armistice—and the Kim regime has developed capabilities that can reach beyond Seoul, Tokyo, Washington, DC, and the capitals of the United Nations Command Sending States. By defending forward in this strategic location we better protect our people and the Korean people. Defending forward reinforces our iron-clad commitment to the Republic of Korea.

My second priority is to strengthen the United States and the Republic of Korea alliance. We must never take the alliance for granted. This is our center of gravity for deterring the Kim regime. The alliance has effectively deterred the Kim regime's resumption of large-scale aggression for almost 70 years, allowing security and stability to flourish and the Republic of Korea to develop into an economically prosperous, vibrant democracy.

In contrast, the Kim regime ignores the needs and rights of the great majority of its population and continues to invest its resources into developing weapons that it uses at a leverage. External leverage coerces concessions from the international community. Internal leverage maintains control of the people and ensures Kim regime survival.

My third priority is to prepare for combat. This is decisive. Our alliance alone cannot deter aggression. Our power of resistance deters. Maintaining the highest State of combat readiness is our main effort. Because readiness is perishable we must continue realistic training in order to respond to aggression and defend our Homelands.

My fourth priority is to build coalitions to dissuade aggression in the region. Our network of allies and partners with common interests on the Korean Peninsula represents our greatest asymmetric advantage.

My fifth priority is to ensure our personnel are taken care of and prepared to execute our mission on the Korean Peninsula. Mission first, people always. Our people serving on the Asian continent have the extraordinary responsibility of providing security and stability throughout the Republic of Korea and Northeast Asia. Our focus remains taking care of the mental, physical, and spiritual needs of our servicemembers, civilians, and families.

Since 1953, the United States and the Republic of Korea remain ready to deter and respond to North Korean aggression. Our mutual defense treaty expresses our common desire to live in peace with all people and governments. It also expresses our common determination to defend ourselves against external armed attacks so that no potential aggressor could be under the impression that the United States or the Republic of Korea stands alone in the Pacific area.

While the United States and the Republic of Korea alliance began out of military necessity, it has evolved to become the linchpin of stability and prosperity in Northeast Asia. The soldiers, sailors, airmen, marines, guardians, civilians, and contractors are proof of our iron-clad commitment to the alliance and ensure that the authoritarian regimes of North Korea, China, and Russia cannot unmake the international rules-based order.

Should the Kim regime resume hostilities, with your continued support we are ready. I am proud to serve with them and honored to represent them before you. Thank you, and I look forward to your questions.

[The prepared statement of General LaCamera follows:]

PREPARED STATEMENT BY GENERAL PAUL J. LACAMERA

INTRODUCTION

Chairman Reed, Ranking Member Wicker, and distinguished Members of the Committee, thank you for the opportunity to provide a written statement on the security environment in Northeast Asia, an update on the ironclad commitment of the United States to the Republic of Korea (ROK); an overview of the combined and joint readiness of the United States-ROK Alliance deterring the Democratic People's Republic of Korea (DPRK); an update on United Nations Command (UNC), Combined Forces Command (CFC), and United States Forces Korea (USFK); and resourcing needs of the Joint Force and our families living on the Korean Peninsula.

The soldiers, sailors, airmen, marines, guardians, civilian employees, and contractors of UNC, CFC, and USFK have the extraordinary responsibility of providing peace and security throughout the Republic of Korea and stability throughout Northeast Asia. My foremost responsibility is to ensure our personnel are taken care of and prepared to execute our mission on the Korean Peninsula. My specific priorities for the United States Joint Force forward stationed in Korea are: Defend our Homeland(s), Strengthen the Alliance, Prepare for Combat, Grow Coalitions, and Take Care of our People.

Almost 70 years ago, Congress ratified the mutual defense treaty between the United States and the ROK. The American people's commitment to the United States-ROK Alliance has never wavered in the years since. As stewards of this treaty, I appreciate your leadership and dedication as we work alongside our Korean allies, as well as our allies and partners represented by the United Nations (UN) Sending States. The support we have received from this Committee is instrumental in maintaining our ironclad commitment to the United States-ROK Alliance.

The United States-ROK Alliance was forged in the crucible of combat—the first test of the post-World War II international system. When North Korean communist forces invaded South Korea, the United States along with 22 members of the United Nations, stood together with the South Korean people to expel the aggressors. While the United States-ROK Alliance began out of military necessity, our Alliance has evolved beyond security issues to become the linchpin of stability and prosperity in Northeast Asia.

Our competitors and enemies seek to unmake this prosperity. It is imperative to remember that the Korean War has not ended—the Korean Peninsula is only in armistice—and that DPRK has capabilities which threaten not only the region but nations around the world. In confronting DPRK's aggression, the United States and the ROK will continue to stand shoulder-to-shoulder to maintain peace and security on the Korean Peninsula and stability throughout Northeast Asia.

THE SECURITY ENVIRONMENT IN NORTHEAST ASIA

The United States' commitment to the ROK reflects the importance of Northeast Asia and the Korean Peninsula to global peace and stability. Northeast Asia was, is, and will remain decisive terrain for allied primacy within the wider Indo-Pacific. History demonstrates the region is a nexus of strategic competition, with the Korean Peninsula repeatedly used as an invasion route from the Asian continent into the first island chain. As a result, four out of the top five major military powers have fought multiple wars in Northeast Asia over the last 125 years. This history has carried forward into the present, with four of the world's most powerful economies—the United States, ROK, Japan, and China—competing in the same region.

The ROK is an advanced, vibrant democracy critical to the resiliency of the regional and global economic engine. The ROK is, by GDP, the 10th largest economy in the world and a leading producer of semiconductors, cars, digital displays, smart phones, and other high-end electronics. It is also the 6th largest defense exporter in the world, and the President of the Republic of Korea, President Yoon Suk-Yeol, has set a goal for the ROK to become the 4th largest during his tenure. Furthermore, while the ROK was once a recipient of foreign aid, it has become a net contributor of foreign assistance.

The ROK's success is due to the hard work of the Korean people and our shared values, democratic ideals, and market-based economies within the rules-based international order. President Yoon articulated his vision for the ROK to become a "global pivotal state" and the ROK government has released an Indo-Pacific strategy of its own. The strategy is a comprehensive vision for the entire region—one not limited to just Northeast Asia or only to economics. It is reflective of a rules-based international order founded in cooperation rather than coercion. As the ROK aims to be the "hub for cooperation networks in the Indo-Pacific," protected under the security umbrella of United States military deterrence capabilities—including nuclear, conventional, and missile defense—as well as the capabilities of the United States-ROK Alliance, I expect Northeast Asia will remain vital to global stability and security.

These factors increase the potential for third party actor intervention and influence on the Korean Peninsula, specifically from China and Russia. While we remain in armistice with DPRK, we are also in competition with these two traditional Asian land powers. Both are mindful that there is a premier Joint Force of nearly 30,000 American servicemembers forward deployed to the Asian continent, 700 miles from Beijing. These geographic realities, combined with powerful economic interests, make the ROK the linchpin of security in Northeast Asia. In the current strategic environment, relative to the U.S. the "Far East" has become the "Near West."

THE DPRK THREAT

In the years since the Armistice was signed in 1953, DPRK has repeatedly and deliberately violated this agreement as the Kim Regime seeks concessions from the international community. Under Kim Jong-un (KJU), DPRK prioritizes regime survival over necessary reforms that could repair its economy and feed the North Korean people. Kim Jong Un uses perceived external and internal threats to eliminate competing sources of power and influence. Kim Jong-un's response to COVID–19 included measures unrelated to the pandemic, such as a rededication of communist education efforts which only serve to further consolidate his control over the population. Despite the suffering of the North Korean people, he pursues new military capabilities he believes will solidify his rule. Over the last 10 years, DPRK has increased its capabilities and capacities, and is no longer a regional nuisance or problem for only United States and ROK forces on the Korean Peninsula. In January 2021, DPRK codified a new "menu of weapons development," which it unveiled at the Eighth Congress of the Worker's Party of Korea and began to steadily work through to achieve KJU's stated goals.

As much as KJU and DPRK State their weapons development programs are in line with the right of any nation to develop self-defense capabilities, they have shown that they are unwilling to abide by international norms and abandoned any pretext for diplomacy. For example, when DPRK launches its missiles over Japan and into the surrounding waters, they do not issue notices to air missions (NOTAMs) or notices to mariners (NOTMARs), placing civilian populations at risk. Recently, their missile overflights of Japan caused Japanese civilians to seek cover. Furthermore, the December 2022 DPRK drone incursions into South Korean Airspace did constitute an Armistice Agreement violation. Since January 2022, DPRK has launched an unprecedented number of missiles with increasing capabilities, even testing long range systems that have no purpose other than to increase the credibility of its threat to the United States Homeland, the ROK, and other nations around the world.

Most concerning is DPRK's renewed threats of nuclear destruction against the United States and the ROK. Recently announced DPRK policies indicate a renewed intent to pursue nuclear delivery capabilities. In September 2022, DPRK announced a new Nuclear Forces Policy Law which states that the DPRK will use nuclear weapons against non-nuclear states if it deems the non-nuclear State is "colluding with nuclear states." This has been reinforced by statements made by Kim Jong-un's sister, Kim Yo Jong, and other authoritative sources affirming DPRK's first-use nuclear policy. Additionally, in remarks delivered at the beginning of 2023, KJU said North Korea needed to mass-produce tactical nuclear weapons and develop new

Intercontinental Ballistic Missiles (ICBMs) that would enable a "quick nuclear counterstrike." KJU believes a nuclear deterrent is the best means to preserve his regime and coerce the international community to lift sanctions. He is determined to operationalize his nuclear arsenal and is developing a credible second-strike capability. Right now, KJU is poised to conduct a 7th nuclear test; without outside influence, it is not a matter of "if" DPRK will detonate another nuclear device but "when."

I am concerned about DPRK leadership miscalculating or mistakenly believing they can control escalation. Contrary to DPRK's rhetoric blaming the United States and the United States-ROK Alliance for tensions on the Korean Peninsula, DPRK's actions demonstrate that if conflict were to resume it would be due to DPRK aggression. Such a conflict could immediately become a regional conflict and have a global impact, just as Russia's war against Ukraine has. We must remember that DPRK and China have a mutual defense treaty, which is the only defense treaty DPRK and China have with any nation. Finally, DPRK has shipment and transport lines of communication into Russia and China, allowing KJU to export his illegal weapons directly into Europe, as well as receive goods and services bypassing sanctions.

The best way to deter DPRK is to maintain our ironclad commitment to the United States-ROK Alliance which has endured for almost 70 years—and to never take it for granted. This requires us to shape the strategic environment during armistice through continuous validation of our extended deterrence capabilities and combat readiness, which remain our current focus. Our policy remains the denuclearization of the Korean Peninsula and deterring the use of nuclear weapons by the Kim Regime. Achieving this requires the proactive, coordinated, and concerted efforts of all three Commands in Korea: UNC, CFC, and USFK, along with our interagency colleagues, and international allies and partners.

THREE COMMANDS, ONE GOAL: PEACE AND SECURITY IN NORTHEAST ASIA

Since the Armistice was signed, the ROK and the United States have stood together to maintain peace and security on the Korean Peninsula and Northeast Asia. While we remain focused on a diplomatic resolution, the missions of UNC, CFC, and USFK are to be prepared to defend the ROK so our diplomats can negotiate from a position of strength. As President Biden has said, leading with diplomacy means standing shoulder-to-shoulder with our allies and partners. Our network of allies and partners with common interests that exists on the Korean Peninsula represents our greatest asymmetric advantage in maintaining regional stability. Additionally, effective collective action discourages the need for unilateral action by other states impacted by DPRK aggression.

Our collective action ensures we are strategically predictable to our allies and partners, while being tactically and operationally unpredictable to adversaries and competitors. Managing and responding to crisis is the most consequential thing we do as an Alliance. Each of the three commands has separate sets of authorities, separate chains of command, and each continues to adapt to meet emerging security challenges. Our goal is to prevent a resumption of hostilities and we remain prepared to respond to any form of aggression across all domains, using our extended deterrence and kill web capabilities.

ENFORCING THE ARMISTICE: UNITED NATIONS COMMAND (UNC)

The evolving security environment reinforces the inherent utility and importance of UNC. Since 1950, U.N. Sending States have collectively supported the ROK's security and sovereignty alongside United States forward deterrence. While UNC transferred its warfighting mission to CFC in 1978, it continues to represent the mechanism for collective security on the Peninsula through its three enduring functions. First, UNC enforces the Armistice Agreement. After the signing of the Armistice in 1953, UNC has executed the functions necessary to maintain and enforce the terms of the Armistice through close coordination between the United States, the ROK, and relevant U.N. member states. This also requires coordination with the Korean People's Army (KPA). Since 1953, UNC has had over 1,200 formal meetings with the KPA, adapting the terms of implementation of the Armistice Agreement to match the requirements of the security paradigm on the Korean Peninsula. Furthermore, UNC informs DPRK prior to the start of United States-ROK Alliance large-scale training exercises, such as the defensive FREEDOM SHIELD, WARRIOR SHIELD, and ULCHI FREEDOM SHIELD exercises, to ensure training events are not misinterpreted as aggressive actions.

Second, UNC coordinates the multinational contributions for securing the Korean Peninsula. The multilateral cooperation represented by UNC is essential to security on the Korean Peninsula, as the threats posed by DPRK will not be resolved by the

ROK alone. Today, 18 countries contribute to UNC's mission. These U.N. Sending States come from every corner of the globe, offering a visible reminder of the international community's resolve to defend the Republic of Korea and the global nature of the DPRK threat. I am thankful for their countries' contributions, and it is an honor to serve with their countrymen and women.

Finally, UNC executes functions as assigned by U.S. National Authorities through the Joint Chiefs of Staff. United Nations Command is not a U.N. peacekeeping organization, but a multinational military command under U.S. leadership. While resolving all the sources of conflict on the Korean Peninsula remains elusive, progress has been made due to the efforts of UNC in implementing the terms of the Armistice Agreement while maintaining a combat credible deterrent in CFC.

THE HEART OF THE UNITED STATES-ROK ALLIANCE: COMBINED FORCES COMMAND

Combined Forces Command has been the heart of the United States-ROK Alliance for over 44 years and is a unique, bilateral warfighting command charged with the dual missions of deterrence and defense. Previously located in the capital of Seoul, CFC recently completed its relocation to United States Army Garrison Humphreys. The bilaterally agreed upon Land Partnership Plan and associated Yongsan Relocation Plan provided the foundation for streamlining USFK's footprint while returning valuable land to the ROK for future development. These strategically analyzed and negotiated returns allow for continued economic growth on the Korean Peninsula, while the new headquarters on Camp Humphreys improves operational effectiveness and our combined defense posture. Co-locating USFK and CFC ensures we remain integrated and synchronized across all staff levels and domains.

Combined Forces Command receives its direction and guidance from United States and ROK national leaders, through ministerial and general officer level forums. During Armistice, I, as the Commander of CFC, have Combined Delegated Authority of designated ROK forces to maintain deterrence and to prepare forces to execute combined missions and plans. This starts and ends with tough, realistic training—executed in combined and joint environments alongside our interagency partners across all domains using live, virtual, and constructive environments.

Combined readiness is a no-fail mission. In just the last year, the United States-ROK Alliance completed numerous combined training events that demonstrated our ability to operate in multiple domains simultaneously. Off the shores of the Korean Peninsula, the ROK Navy and *Ronald Reagan* Carrier Strike Group executed multilateral exercises throughout the summer of 2022. These exercises included the participation of Japan, another important ally in Northeast Asia. Exercises such as PACIFIC DRAGON 2022 and PACIFIC VANGUARD 2022 saw the United States, ROK, and Japan train together on combined antisubmarine warfare and mine warfare exercises. I am greatly encouraged by these trilateral exercises and look forward to additional high-end complex maritime and air exercises in the future.

In the air domain, the deployment of United States Air Force fifth generation fighters and combined bomber escorts throughout Korean airspace demonstrated our ability to provide air superiority anywhere we choose. Again, I highlight our ability to coordinate with the Japan Self Defense Force, which provided fighter escort to our bombers before they transitioned into ROK airspace.

On land, our combined ground forces were enhanced with the arrival of a Stryker Brigade Combat Team and establishment of a permanent AH–64 Apache helicopter gunship squadron. The Stryker platform brings enhanced maneuverability and mobility to our land forces and increases our interoperability with ROK mechanized formations. Working alongside the ROK's Apache units, our Alliance demonstrated its lethality through multiple combined live fire exercises on the Korean Peninsula.

United States and ROK forces have increased our capabilities and capacities to operate in the space domain. Our United States Space Force guardians operating on the Korean Peninsula became a service component command in 2022. We now have the ability to synchronize with our other components to maximize space effects and to coordinate with the ROK's Space Program. Within CFC, our Space Integration Team works to ensure our interoperability with the ROK in this critical domain. The ROK Space Program, led by the ROK Air Force, plans to become a major space power by the end of the decade. We are encouraged by the ROK's requests to participate in United States Space Force and United States Space Command exercises and war games to bolster interoperability.

Finally, in the cyber domain, United States Cyber Command and ROK Cyber Command signed a memorandum of understanding this year, increasing our ability to conduct operations and counter third party intervention and influence on the Korean Peninsula.

Our demonstrated lethality in every domain of strategic competition supports our combined progress toward Operational Control (OPCON) Transition. When complete, OPCON Transition will ensure any response to DPRK aggression that leads to military operations is led by a ROK general officer, with a United States general officer acting as the Deputy Commander of CFC. This process has always been governed by, and subject to, bi-national decisionmaking. We appreciate the ROK government's support in progressing through the mutually agreed upon conditions required to complete this transition. The previous major defensive exercise on the Korean Peninsula, ULCHI FREEDOM SHIELD, demonstrated the progress being made toward Future CFC. ULCHI FREEDOM SHIELD included a Full Operational Capability evaluation of OPCON Transition, with ROK General Ahn Byung Seok acting as the Future CFC Commander.

Exercises such as ULCHI FREEDOM SHIELD and FREEDOM SHIELD are routine, defensive training events critical to our ability to provide extended deterrence in Northeast Asia. Combined Forces Command was precluded from conducting large scale exercises in recent years due to COVID–19 and the political environment. Going forward we are making a concerted effort to reintroduce live training into our combined exercise program with our ROK Allies. As we increase our combined training, however, a large portion of the training remains unfunded. Despite an increased demand, there have been no additions to fiscal year 2023 theater exercise programs. Training is perishable and must be continuously conducted to maintain an appropriate level of combat readiness.

RESOURCING THE UNITED STATES COMMITMENT: UNITED STATES FORCES KOREA

United States Forces Korea remains the premier Joint Force, capable of operating in all domains with our allies and partners, committed to defending the security of the ROK. It is a critical part of the United States' approach to providing extended deterrence in Northeast Asia. As United States Indo-Pacific Command's (USINDOPACOM) sub-unified joint force on the Korean Peninsula, USFK is primarily responsible for the Reception, Staging, Onward Movement, and Integration of reinforcing United States forces to the CFC, as well as the sustainment of those forces. As the USFK Commander, I support UNC and CFC by coordinating and planning among United States component commands in the ROK, exercising operational control of United States forces as directed by USINDOPACOM, and coordinating United States military assistance to the ROK.

Our ability to provide forward deterrence is dependent upon conducting regular, robust, and challenging training. Due to space constraints, collective live-fire training opportunities are limited. Any reduction in funding levels will degrade 7th Air Force and Eighth Army's ability to execute these types of training events on-and off-peninsula. Current funding levels, therefore, should be viewed as a "floor" rather than a "ceiling."

United States Forces Korea continues to demonstrate new and innovative capabilities that provide our forces advantages across all domains. Everything the Department of Defense (DOD) is doing to modernize is occurring on the Korean Peninsula—in a combined, joint, interagency environment in multiple domains. We are pursuing opportunities in artificial intelligence and machine learning. The DOD's Chief Data and Artificial Intelligence office prioritized USFK near the top of commands to invest in to enhance Sensor-to-Shooter and Combined Kill Web analytics. Our Digital Operational Plan (Digital OPLAN) will incorporate machine learning and artificial intelligence to move USFK forward in data analytics. Additionally, we are working with all United States military services on improving our aging network and cybersecurity posture for our Command, Control, Communications, Computers, Cyber, Intelligence, Surveillance, Reconnaissance, and Targeting (C5ISRT). Improving C5ISRT will enhance our situational awareness, decisionmaking, and communication readiness from our national command authorities to our forces in the field. To avert network isolation of our C5ISRT capability, we are pursuing replication of our coalition network off peninsula. Furthermore, USFK is collaborating with the DOD Joint Program Office for counter Unmanned Aircraft Systems (UAS) and established a counter small-UAS experimentation lab last summer. Our first experiments began in August 2022.

United States Forces Korea continues to enhance our existing capabilities, such as the Terminal High Altitude Area Defense (THAAD) ballistic missile defense system. This defensive capability provides protection for United States forces and the ROK against DPRK's ballistic missile program. President Yoon's administration has supported improved access to the THAAD site over the last year. The normalization of THAAD operations and unfettered access to this site are critical to maintaining

the overall readiness of the system, as well as the health and safety of the servicemembers at this location.

While we can operate across all domains, I am concerned about our ability to compete in the information environment in Northeast Asia. China, Russia, and DPRK's aggressive investments in information warfare technology and operational practices outpace DOD investments and challenge United States influence in Northeast Asia. As the largest United States force on the Asian continent, USFK is uniquely positioned to counter many of the disinformation, misinformation, and mal-information efforts of our competitors and adversaries, and defeat enemies during conflict. The price of operations during armistice to deter, degrade, and disrupt adversaries is orders of magnitude less than the cost of combat operations designed to challenge revisionist states and authoritarian regimes.

SERVING TOGETHER: TAKING CARE OF OUR PEOPLE

Servicemembers, civilians, families, and contractors who support the Joint Force are our most precious resource and taking care of our people is a no-fail task. Those who bring their families to the Korean Peninsula will spend at least 2 years here, defending the ROK and deterring DPRK. The families who live alongside their servicemembers in the ROK do so without many of the conveniences of living in the continental United States. Ensuring those personnel and their families are afforded the best quality of life while they are away from the United States Homeland is of paramount importance and is something I stress with leaders at every echelon. We continue to look for ways to build our community to ensure the ROK remains an assignment of choice for our personnel and their families.

Our people live and work across the entire ROK, from Panmunjom near the Demilitarized Zone to the port of Busan. Being a responsible ally means being good stewards of the Korean land and environment. United States Forces Korea continues to conduct bilateral engagements with the ROK to appropriately posture our presence while also returning valuable land for use by the Korean people. We could not do this without military construction support from Congress.

Thanks to congressional support, we have transferred the center of gravity for the United States-ROK Alliance out of Seoul and are actively improving our facilities across the Korean Peninsula. To help combat climate change, USFK is using the most current unified facility mechanisms to reduce downstream maintenance, improve quality of life, and maintain force protection. We are nearing the completion of Camp Humphreys' $10.6 billion transformation to the new center of gravity for the United States-ROK Alliance and the headquarters of UNC, CFC, and USFK. As we begin the third year (CY23) of a 5-year Special Measures Agreement with the ROK, we appreciate the Committee's continued support to ensure we can synchronize ROK funding and United States-appropriated funding to improve our facilities as quickly as possible. This support will ensure new facilities such as the United States Space Force Complex on Osan Air Force Base remain projected to break ground earlier than traditional military construction projects with the help of cost-sharing with our ROK Allies. It is also critical in improving our existing facilities, such as the ongoing repairs to the piers at the port of Busan.

Providing support and medical care to our servicemembers, civilians, and families at our installations across the ROK remains a challenge. For example, the Brian D. Allgood Community Hospital on Camp Humphreys is not sufficiently staffed to provide care for the installation's population. Very few of the staff are assigned solely to the hospital; most of the staff are borrowed from operational units which have frequent field training requirements. These shortfalls are exacerbated at smaller outposts and locations. To provide the highest quality and most reliable care for our servicemembers, civilians, and their families, additional permanent staff should be recruited, retained, and assigned to all our deployed locations in the ROK. Particular attention should be given to the fields of behavioral health, nursing, and primary care.

Finally, my focus remains on the well-being of our servicemembers. Our families include the dependents of U.N. Sending States who live on our installations. We are working with the DOD Education Agency to draft language into the future National Defense Authorization Act to allow these U.N. Sending State dependents status commensurate with United States servicemember dependents. The well-being of our servicemembers is also dependent on addressing systemic issues such as sexual assault and harassment in our ranks. I have a zero-tolerance policy for any action that harms unit cohesion. Our senior leaders continue to impress the importance of these initiatives upon their subordinates. This is not just about combat readiness—it is simply doing right by our people.

MOVING FORWARD

While DPRK prepares for a 7th nuclear test, our resolve remains unmoved: we will deter and, if necessary, defeat our adversary; and we are committed to the denuclearization of the Korean Peninsula. Our collective actions will advance a free and open Indo-Pacific that is more connected, prosperous, and secure. The men and women working toward that goal are motivated, capable, and postured to do so while forward deployed to the Asian mainland alongside our ROK Allies. Cooperatively, we are focused on maintaining a robust combined readiness cycle, strengthening deterrence through strategic asset deployments, and conducting multi-domain operations while DPRK continues its provocative weapons development activities.

I am grateful for this Committee's continued support. I am honored to serve this dedicated multinational, combined, and Joint Force deployed to the Asian mainland.

Chairman REED. Thank you very much, gentleman.

General LaCamera, your prepared testimony states that Kim Jong-un is determined to operationalize his nuclear arsenal and is developing a credible second-strike capability. Your testimony also states that without outside influence it is not matter of if North Korea will detonate another nuclear device but when.

In this situation, do you see China in any way affecting their decisionmaking about the inevitability of another nuclear detonation? What is the effect of the North Korean's having a credible second strike?

General LACAMERA. Thanks, Chairman. I think China can play a spoiler in this. They can be supportive or they can be non-supportive in what he is doing. What we are seeing right now, in any kind of U.N. sanctions votes in the United Nations, both China and Russia continue to veto that, and they continue to work against the things that we are trying to do to maintain peace and stability.

Chairman REED. With a second-strike capability, I presume that would immensely complicate your——

General LACAMERA. Yes, sir. I mean, it is clear that he has, in the last year plus, he has demonstrated a whole bunch of different capabilities, all of which could lead to a second-strike capability. I mean, he is clearly focusing on the theater ballistic missile capability, not just on the Peninsula regionally but globally.

Chairman REED. Thank you.

Admiral Aquilino, you have difficult steps to prioritize in terms of investments, and one area which seems critical is the electronic spectrum. I mean, to successfully conduct operations in the Pacific ideally you could disrupt the communication of our enemies and also their ISR [intelligence surveillance and reconnaissance], and at the same time, in a complementary fashion, disguise our assets and also have constant secure communication. Is that, in your view, like the number one priority?

Admiral AQUILINO. Thanks, Chairman. If you are talking about a prioritized list, the Guam Missile Defense System remains the Indo-Pacific's number one priority. That is based on the Homeland defense mission that is most critical. But immediately behind it, Senator, you talked about the capability to influence the electromagnetic spectrum, absolutely. We view it through this lens of decision superiority, which means we need to be able to operate in contested space, we need persistent battle space awareness of all things going on, and we need to be able to close our kill chains with the weapons and the network that allows that to happen, and the electromagnetic spectrum is critical to that.

Chairman REED. Are we putting enough resources in this budget to accelerate that process and accomplish that task?

Admiral AQUILINO. I am very thankful for the Department's budget. It certainly is strategy based. It is certainly focused on the Indo-Pacific. That said, as you know, Chairman, I have provided an unfunded list as it applies. The Secretary has got global responsibilities. As you have tasked in the authorization language, I am responsible to provide you with a list of what INDOPACOM assesses as the critical capabilities needed to both deter and defend, and we have provided both of those reports, as directed by law, to help inform.

But it has certainly been identified, and my requirements have been fed into the Department.

Chairman REED. Thank you very much. Final point, Admiral Aquilino, you point out in your testimony, this is the first time in history the United States is facing two major nuclear powers, so a lot of the theory, a lot of the institutional arrangements that we have made reflect the cold war, which was a Soviet Union and United States confrontation.

Just very quickly, how has this changed, to your thinking and the thinking of your colleagues in the Department of Defense?

Admiral AQUILINO. Thanks again, Chairman. So certainly the No Limits relationship by President Putin and President Xi is something we ought to be watching very closely, and what does that mean. My partner, General Cotton, at STRATCOM, is the lead for all the strategic nuclear portions. As it applies to INDOPACOM, he is a great supporting partner, and that means we have to understand what does that look like as we manage escalation and deliver deterrence, both conventionally and strategic in the strategic nuclear lens.

I think what makes sense to me, and I know he would advocate for, and that is the modernization of our strategic nuclear triad as a priority threat, to be able to compete in that new world.

Chairman REED. Thank you very much.

Senator Wicker, please.

Senator WICKER. Thank you, Mr. Chairman.

Admiral, let me just make sure I understand. With regard to the electromagnetic spectrum, that is highly important, right up there bumping up against the Guam Initiative. Is that right?

Admiral AQUILINO. Yes, Senator. I would say it is in my number two kind of pile of decision superiority, behind the Guam Defense Initiative.

Senator WICKER. Okay, so in order for us to take care of that we are going to have to fund some unfunded requirements. Is that correct?

Admiral AQUILINO. Senator, for consideration again I have provided the assets and the capabilities I think I need. There are certainly some capabilities I have asked for that provide benefit in the electromagnetic spectrum in order to execute our mission.

Senator WICKER. Is it highly important that we fund this, vitally important?

Admiral AQUILINO. Yes, sir. I believe it is.

Senator WICKER. Okay. Let me just ask both of you, there are some people who feel our support for Ukraine is taking away from

our capability and credibility in the Indo-Pacific, particularly with regard to Taiwan. Admiral, you first and then General. What do you say to that?

Admiral AQUILINO. Senator, I do not. The United States is the only global force capable of managing multiple threats. My partner in EUCOM is executing his mission sets. I have not been impacted at this point as it applies to my deterrence mission. So I do believe we can do both. I believe we have to do both to maintain the peace.

Senator WICKER. We have to do both. Okay. General, what would Ukrainian success in this war say to the world about the situation in the Indo-Pacific?

General LACAMERA. For us, we are taking what is going on in Ukraine as lessons learned, boiling it down. It does not necessarily translate to what a fight on the Peninsula would look like. I think the support that is being provided, the lessons learned coming off of that, I think it reinforces how we feel about sovereignty and a country's right to choose their future.

Senator WICKER. Okay. Well, let me then ask you to enlarge on that. What is it to us, what happens in Taiwan and South Korea? You spoke about an international rules-based order, and sometimes I am troubled that that terminology does not get through to the American people. What is it to us, living in Virginia and Maryland and Mississippi and Nebraska and Arkansas that the forces of Xi Jinping and Kim Jong-un not succeed in that area?

General LACAMERA. I think it is a history lesson for the American people. I mean, the blood and treasure that we put forth in World War II and international rules-based order that we established right after that was challenged in 1950. It has been bookended by what is being challenged in Ukraine right now, and I think what it is demonstrating is that we believe in the sovereignty of a nation, choosing their future. We believe in democracy, et cetera.

Senator WICKER. Okay. Admiral, do you see what I am saying? International rules-based order—what is it to us in Tupelo?

Admiral AQUILINO. Thanks, Senator. What it means is freedom of navigation. Think of goods and services flowing unencumbered through wherever they need to go to get to the people of the world.

Senator WICKER. Our ability to purchase the products we need for everyday life.

Admiral AQUILINO. I do not know if it is on the purchase side, but when we talk international rules-based order it is certainly on the delivery side. So two-thirds of the entire global economy flow through the South China Sea and the Straits of Malacca, and if you were to not have a rules set of orders and there was a country that believed they could meter, monitor, task, tax, or impact that set of prosperity, that is what it would mean to the people of America, when you talk about the international rules-based order.

The ability to fly anywhere that rules allow. The U.S. standing in the region as it applies to being an assured partner in the vicinity. Those are kind of the stakes and what it means when we talk about the international rules-based order.

Senator WICKER. The value of the word of U.S. leaders, you are saying.

Admiral AQUILINO. Absolutely.

Senator WICKER. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Wicker.

Senator Shaheen, please.

Senator SHAHEEN. Thank you, and thank you both for your service and for being here this morning.

India is a key partner. It is a member of the Quad. It is the only member of the Quad that maintains such a close and ongoing relationship with Russia, including continuing to acquire additional weapons from Russia.

Are there more steps we should be taking to discourage India from maintaining that relationship with Russia and encourage them to adopt more of the positions of other members of the Quad, Australia, Japan, with us?

Admiral AQUILINO. Thanks, Senator. India has been a tremendous partner. The partnership is only growing. It is strengthening. We have similar security concerns. We have people-to-people ties. We have certainly deep relationships with the Indians. They buy our equipment. We are interoperable in the military-to-military space. Their Chief of Defence, General Chauhan, and I have a terrific relationship.

I think what we need to do is keep fostering this. The world's largest democracy with similar security concerns, we have to continue to work together in order to ensure that the United States and India's relationship grows. We certainly support the increased multilateral aspect of it. So the Quad is not a military agreement. It is an economic and diplomatic relationship. But the Quad nations come together often to practice and rehearse, and will continue to do that.

Senator SHAHEEN. Well thank you. I agree. I think it is very important, and as we look at the growing relationship between China and Russia, it has an ever-increasing role to play. So thank you.

Can you speak to how the expanded security agreement between the United States and the Philippines enhances our posture and how it can serve as a model for other nations?

Admiral AQUILINO. Thanks, Senator. It is critically important. One of five mutual defense treaty allies in the region, the Philippines, our history goes back a very long way, as everyone knows. The increased EDCA [Enhanced Defense Cooperation Agreement], that have been concurred to—and I thank the Secretary for his work there as we have proposed those sites, that expands the areas that we can rehearse and exercise with the Philippines. But the critical nature of the Philippines, its strategic location, and the partnership that we have, those sites are critical. More than likely in next year's budget you will see and ask to do planning and design work in those sites. They have just been announced. There is no money in the 2024 budget to start work in those additional four sites, but you do see other requests to buildup the current sites in the Philippines. Our operations there, our partnership with the Philippines is critical.

Senator SHAHEEN. Is that helpful as we are looking at other partner nations in the region, to be able to show what is happening in the Philippines? Are they looking at that as something that they are willing to consider because they see that agreement?

Admiral AQUILINO. Thanks, Senator. I think all the nations in the region are looking at the threat and realizing they need to take additional actions, the Philippines, as a model for how we operate together, but it is certainly not alone. We are doing the same thing with the Japanese. General LaCamera is working with the South Koreans. We are working with our Australian counterparts. We are doing the same with our Thailand alliance.

It is a model, and it is expanding, and we are looking at all nations to deliver those same capabilities, together with the United States.

Senator SHAHEEN. Thank you. I really appreciate the leadership that INDOPACOM has taken on the Women, Peace, and Security Act, and I think it serves us well all around the world. But can you speak to the advantage that that gives us over China, when we are looking at how we can engage women more fully and the contrast that presents to what China is doing?

Admiral AQUILINO. Certainly, Senator. The contrast is clear when you think about Xinjiang and the treatment of the Uyghurs, and understand that that goes on, that is a problem set that China has to face, and one of our asymmetric advantages. Our ability to care for all people, no matter what, and the Women, Peace, and Security Initiative that was begun in INDOPACOM before me and that we continue has been helpful.

As a matter of fact, I was just in Papua, New Guinea, a couple of months ago with my counterpart, General Goina, and that is where our next seminar is coming up, followed by one in Japan.

It is about people, it is about respect, it is about treating people fairly. It is what we stand for in the United States and we will continue to do those things.

Senator SHAHEEN. Thank you very much. Thank you both.

Chairman REED. Thank you, Senator Shaheen.

Senator Fischer, please.

Senator FISCHER. Thank you, Mr. Chairman. Thank you both for being here today and thank you for your service to this country.

Admiral, on your unfunded requirements list you included a requirement for funding to accelerate the development of several munitions, including the FM–6, the Army's PrSM weapon system, and the Maritime Strike Tomahawks. What would those capabilities provide and why do you assess that it is necessary to make those investments in 2024?

Admiral AQUILINO. Thank you, Senator. As we always look at lessons learned, certainly one that came out of the Ukraine conflict was the ability to ensure that our stockpiles were correct, with the right number and the right types of weapons and capabilities. In the Indo-Pacific Command, we have those requirements identified. We can talk specific classified if we need to, but bottom line is the entire Joint Force is required to help deliver effects to both deter and fight and win.

So from the land component, Maritime Strike Tomahawk, PrSM Increment 2, those capabilities, to enable the MDTF [Multi-Domain Task Force] from the Army, their new formation, the Multi-Domain Task Force, and from the Marine Corps and the Littoral Marine Regiment, those are the capabilities that those forces need to bring

with them in the region to do the missions assigned. So that is why I have advocated for those, right types and right numbers.

Senator FISCHER. Right. Thank you, because it was a lesson learned from Ukraine. The much, much faster rate than planned for, especially in expending all those munitions there. So thank you for including those on the requirement list.

You also have on the unfunded priority list a requirement for an additional $511 million for INDOPACOM campaigning. Why is campaigning in the Indo-Pacific particularly valuable, and what types of exercises or activities would this additional funding be used for if Congress would authorize it?

Admiral AQUILINO. Thanks, Senator. The deliver of deterrence through the lens of INDOPACOM "Seize the Initiative" approach, campaigning is one aspect of it, and that means persistent forward forces operating with our allies and partners in the region forward every day.

When we talk about our operations and exercises, we do 120 exercises a year with our allies and partners, but that is not 365 days. So for the days we are not exercising I am also looking to ensure that our forces are forward, prepared, and operating with our allies and partners every day. That is what those campaigning dollars are requested for. That is to pick up the force and move it forward into the theater, in places where they can operate with our allies and partners. That money is not to do maintenance. It is not to do depot-level sustainment. It is for transportation costs to be able to move the force and sustain the force forward.

Senator FISCHER. Which is extremely important not just for the exercises but also for future planning. Correct?

Admiral AQUILINO. Yes, ma'am.

Senator FISCHER. Thank you. With AUKUS [Australia, United Kingdom, United States], the security partnership that allows us to share significant capabilities with our closest allies. We hear a great deal about Pillar 1 and the sharing of nuclear propulsion technology with Australia, and that is an important part of the agreement.

However, through Pillar 2, the AUKUS partnership allows for greater cooperation across multiple lines of effort. What do you assess to be the prime areas of opportunity to increase that coordination and extend partner capabilities and capacities?

Admiral AQUILINO. Senator, first, our partnership with the Australians is so critically important, again, a mutual defense treaty ally. The Australians have shared blood and treasure with us in every fight we have been in for over 100 years. So I commend my partner, Angus Campbell, and all of the Australian leadership.

They also are concerned about the security environment, which is why AUKUS is so critical for both peace and prosperity, as we share submarine technology and deliver U.S. *Virginia*-class submarines, and follow-on types of submarines.

But in Pillar 2 there is also a ton of capabilities that you highlighted. The most critical, and I think we can get at fast, there are some cyber capabilities, there are space-based capabilities, there are some undersea capabilities, and then there is some work in the form of artificial intelligence and machine learning. There are oth-

ers. Those, I think, have the most promise for near-term delivery of capability.

Senator FISCHER. The United States is stronger when our allies are strong as well. Correct?

Admiral AQUILINO. Always.

Senator FISCHER. Thank you.

Chairman REED. Thank you very much, Senator Fischer.

Senator Gillibrand, please.

Senator GILLIBRAND. Thank you. Admiral Aquilino, INDOPACOM is the first combat command to have a Space Force Regional Command Center. How is U.S. Space Force's Indo-Pacific integrating into INDOPACOM, and can you discuss how you build the guardian skill set into your regional exercises like Cobra Gold and Balikatan?

Admiral AQUILINO. Yes, Senator. Thank you. I really appreciate General Saltzman's team, along with General Dickinson to set up the first component at INDOPACOM. So General Mastalir is my component commander, and the criticality of his efforts to synchronize our effects, undersea, on the sea, above the sea, in space and cyberspace, is something that the U.S. can do better than anybody on Earth. The space component is critical. Their enabling capabilities are extremely valuable, and working with our allies and partners in this domain is also important.

In Cobra Gold, which is our most recent exercise, in Thailand, we actually put in place a space component as a part of that exercise. We are doing it in Balikatan. It will be included in all of our upcoming exercises, wherever and whenever we can. Talisman Sabre, as well, with the Australians. Northern Edge as a part of our event. So it is now just normal ops.

Senator GILLIBRAND. Great. The House Armed Services Committee earlier this week, you noted that the strategy and approach with regards to the PRC [People's Republic of China] is competition and not containment. Can you expand upon why that difference is important?

Admiral AQUILINO. I think for me, Senator, the ability to compete is really a non-adversarial type of relationship, which is, I think, what the United States seeks. The PRC believes we are trying to contain them. There is no doubt, despite the President's comments, the Secretary of Defense's comments, General Milley's comments, and my comments. We seek peace, not to provoke conflict.

So competition is important. There are things we are going to agree on. There are things we are not going to agree on. That is what competition looks like.

Senator GILLIBRAND. Well, relatedly, last month Secretary Austin testified before this Committee that he thought it was important that great powers have the ability to talk to each other and manage crisis. But reports indicate that his outreach was not answered by the PRC during the tensions in February over the high-altitude balloon.

Are you engaged with your counterparts in China's eastern and southern military districts, and from your perspective, why would such engagement be important?

Admiral AQUILINO. Senator, I certainly think it is valuable to have relationships and be able to have conversations, whether it is

for positive reasons or in times of concern. So it has been important for me. I have not had contact with my counterparts, either in the Eastern Theater Command or the Southern Theater Command, although I have had a standing request to have a conversation now since I have been in this position.

We have invited our counterparts to the Chiefs of Defense Conferences that we do two to three times a year virtually, and once a year in person, and we will continue to seek their attendance to those important events where we can come together with all of the regional military leaders to have conversations.

Senator GILLIBRAND. I would be grateful if you do establish that contact that you update the Committee, because this is a priority that we can deconflict.

Admiral AQUILINO. Yes, Senator.

Senator GILLIBRAND. Similarly, the Department has focused on One Health surveillance, meaning an integrated public health approach considering human and veterinary diseases, food, and environmental monitoring, for years, since well before the pandemic. COVID–19 focused us all on the intersection well-framed in the One Health concept.

Can you address any programs or initiatives within INDOPACOM based on the One Health concept and how those are serving to protect the health and security of the American people?

Admiral AQUILINO. Thanks, Senator. We certainly support CDC [Centers for Disease Control and Prevention] in this important initiative. We do not have any programs, but what we do have is exercises. So in 2021, we did an exercise directly focused on this issue. We will do it again in 2023, and we will remain linked with the interagency. Especially in the wake of COVID, the importance, I think, came to light.

Senator GILLIBRAND. Right, and the fact that we do not have any working relationship with China made the work with regard to COVID's beginnings, middles, and end really difficult. So that is why your role is so important in these long-term national security goals.

General LaCamera, Kim Jong-un has launched 12 rounds of missile tests since January. Some of these tests happened close in time to our Freedom Shield exercise with South Korea, but several of the tests predated that exercise. Can you fill us in on what your assessment is driving the recent surge in dangerous activity?

General LACAMERA. His Eighth Party Congress in 2021, Senator, he laid out a trajectory. He is doing that. Right now I think he is reacting to our training. Since President Un has come in we have increased our ability to not just do command post exercises but field training exercises.

The challenge is when we telegraph the timing of it, it gives him an opportunity to plan to use that as a reaction to us. But he is on a course that he set in 2021, and he is moving out on it.

Senator GILLIBRAND. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you very much, Senator Gillibrand.

Senator Cotton, please.

Senator COTTON. Admiral, I want to continue along the line of questioning about Taiwan's capabilities. I know that there is a backlog of weapons transfers to Taiwan that has to be addressed.

But not every kind of weapon in the world is backlogged. So while we work on that backlog I want your professional assessment of whether an appropriation of FMF [foreign military financing] funds to provide Taiwan with weapons that are not backlogged, weapons such as mines, might be helpful for them and also helpful to increase deterrence in the Western Pacific.

Admiral AQUILINO. Yes, Senator. The delivery capability to enable our responsibilities under the Taiwan Relations Act is important, and to get it to the people on Taiwan is critical. The capabilities we have laid out, that we have coordinated and identified inside the Department, there are many that could be done very quickly.

Senator COTTON. Could you just give us kind of a handful of the top priorities of what additional FMF funds could get to Taiwan of weapons that are not backlogged?

Admiral AQUILINO. I think what I would give you is the capability set. I cannot tell you which specific ones are backlogged.

Senator COTTON. That is fine.

Admiral AQUILINO. But if you think about anti-aircraft capability, if you think about anti-ship capability in a variety of forms, whether they be missiles, mines, but those capabilities would be critical.

Senator COTTON. There is also the possibility of a Taiwan-focused Presidential drawdown. Would your answer be the same for that, that that also could help surge some of the capabilities to Taiwan that they need to improve deterrence in the Western Pacific, just like FMF funds would?

Admiral AQUILINO. Yes, sir, absolutely, and I thank Congress for taking a look at that, and ultimately for the Presidential drawdown authority, not only for the authority to do it but ultimately to backfill it, if possible, is critical.

Senator COTTON. Okay. You have also expressed concern about the loss of any combat power in the theater. As the Ranking Member on the Air, Land, Power Subcommittee I have been particularly concerned about the fact that our Air Force is characterized by shrinking inventories and an aging fleet, going back 30 years now.

I want to be clear I am not talking about changing our global force posture. I know there has been a lot of angst, if you will, about moving aircraft around from the Western Pacific and from Germany and Alaska. So I am not talking about that. I am talking about adding more capability to the Air Force as a whole.

Given the importance of air power in any kind of conflict scenario in the Western Pacific, would additional F–15EXs and F–35s in the Air Force inventory enhance your efforts to deter conflict?

Admiral AQUILINO. It certainly would, Senator, especially when you talk about the increased capability and capacity that might come with that. Fifth-generation advanced and the fourth-generation capability that exists in the EX, those capabilities would absolutely help deliver deterrent effects.

Senator COTTON. Thank you.

General, North Korea continues to develop new capabilities and make new threats to the Republic of Korea and to the United States and other friends. They recently tested a solid-fueled intercontinental ballistic missile. How does that change your assess-

ment of their capability, and why would that be an important advance for North Korea over their traditional liquid-fueled missiles?

General LACAMERA. Thanks, Senator. It poses some challenges on the indications and warnings. Again, he laid out his plan. He is moving toward it. It is continuing to demonstrate a couple of things. One, he meant what he said, and two, he is continuing to be able to develop this capability. Even with sanctions and even with COVID and lockdowns and things like that, he has been able to continue this development.

Senator COTTON. Why, exactly, does the introduction of a solid-fueled missile reduce your indications and warnings?

General LACAMERA. I would rather move that to a classified setting, Senator.

Senator COTTON. Okay. I think sometimes we get kind of accustomed to these provocations from North Korea and we overlook the fact that they are, in fact, improving their nuclear forces capability, and it is not just the same-old, same-old.

General LACAMERA. I can assure you I am not distracted.

Senator COTTON. No, I know you are not, but I think some people here, and when they see the news in the United States are, and I think it is important that we be mindful that they are making technological progress that is alarming in both the nature of their nuclear forces and also the ranges of their missiles.

Thank you both, gentlemen.

Chairman REED. Thank you, Senator Cotton.

Senator Kelly, please.

Senator KELLY. Thank you, Mr. Chairman.

Admiral Aquilino, as we spoke about this morning, I just want to get a little bit more detail on the Compass Call electronic warfare mission. You know, there is no doubt that the next conflict that we are involved in will be heavily fought, and potentially won in the electromagnetic spectrum. As our adversaries evolve in their EW [electronic warfare] capabilities it is critical that we maintain our competitive edge here by being ready to protect our own assets and also attack our adversaries' capabilities in the electronic warfare spectrum.

So the EC–37B, the new Compass Call capability that I worked on on this Committee to increase the procurement will enhance blue force lethality and survivability. I am really proud that this capability is going to be hosted in Arizona, at Davis-Monthan Air Force Base.

Admiral, what impact would the Compass Call have in INDOPACOM if a crisis or conflict emerged?

Admiral AQUILINO. Thanks, Senator. It is absolutely a part of our set of capabilities that we believe we would need to employ. The new capability out of Compass Call is critical, along with all of the other electromagnetic support capabilities that come from all the services. Again, this is going to be a joint service fight. The Compass Call supports not only the Air Force but the rest of the Joint Force, so it is critical.

Senator KELLY. I know you are not an EW guy, you know, being a former F–14 pilot, who served, by the way, with my brother, I think aboard the Ike. But can you speak specifically about the EC–

37B and what critical capabilities that it can deliver that might not be available on any other platform?

Admiral AQUILINO. To keep it in the unclassified space, the ability for our force to operate in contested space is important. Our ability to have persistent battle space awareness is important, and then any capabilities to do any disruption actions that we would like to take are important.

Senator KELLY. Has it recently been used in any exercises?

Admiral AQUILINO. I will have to get back to you on that, sir.

Senator KELLY. Okay, and then, finally, in your professional military opinion how many Compass Calls do you think that your theater, INDOPACOM, needs to ensure blue force survivability if we were to be in a conflict, specifically with China?

Admiral AQUILINO. Sir, if it is okay I would get back to you in a classified setting on that.

Senator KELLY. General, can you also comment on the necessity for a strong electronic warfare attack capability on the Korean Peninsula?

General LACAMERA. Yes, Senator. Thank you. I need that but I also need the ability to train at that level on the Korean Peninsula, which we currently do not have, either on the ROK [Republic of Korea] Air Force or United States Air Force side. So we have got to go off-peninsula to get some of that training for our pilots to be able to operate in the EW threat area.

Senator KELLY. Admiral, back to you. On the Navy's EW capability, how do you currently assess where the United States Navy is specifically with aircraft carrier battle groups?

Admiral AQUILINO. Senator, as we talked about there is a critical importance for that electronic attack and electronic support capability. It is inherent and interwoven into the carrier strike group formation. It is also used to support the rest of the Joint Force, so those F–18G Growlers are critically important.

Senator KELLY. It is one area where Ukraine is currently struggling when the Russian electronic warfare capability is outmatching them at this point. I think it is indicative of how important electronic warfare is in any modern combat, so thank you, Admiral, and thank you, General.

Chairman REED. Thank you, Senator Kelly.

Senator Rounds, please.

Senator ROUNDS. Thank you, Mr. Chairman. Gentlemen, first of all let me begin by thanking both of you for your service to our country, and your families' as well. It is appreciated and sometimes we do not say it enough.

Gentlemen, to both of you, I would like to begin along the same lines with regard to spectrum issues. There has been a discussion about the separation or the sharing of certain parts of the electromagnetic spectrum, in order for our country to continue moving forward in 5G development. But the area in particular that I want to focus on is the area which is the 3.1 to 3.45 gigahertz band. It is especially sensitive because we have already had testimony by naval officials, including Secretary Del Toro, specifically regarding the use of that part of the electromagnetic spectrum with regard to radar.

I would like to continue that line of questioning and provide each of you an opportunity to discuss the importance of the 3.1 to 3.45 portion of the spectrum with regard to protecting our forces, and perhaps a little bit of additional color with regard to how critical that part is with regard to the physics of that area of the spectrum.

Admiral Aquilino?

Admiral AQUILINO. Senator, we certainly operate in that spectrum, so as we look at the potential sharing and how we are going to do that, we certainly do not want to have any place where either our capabilities are impacted by other use, and as always, as good stewards, we do not want to be impactful to any other use. So I think we would have to look at it very closely and figure out how we could make it work.

Senator ROUNDS. Fair to say that the current radar systems that our most advanced destroyers use is using radar systems that operate in that area. Correct?

Admiral AQUILINO. Yes, Senator. There are a variety of Joint Force capabilities that operate in that spectrum, to include missile defense, firm at sea, so there are certainly some critical capabilities there.

Senator ROUNDS. Does that include the island of Hawaii?

Admiral AQUILINO. The Aegis system on Kauai, in Kauai, certainly operates in that spectrum, along with other missile defense capabilities.

Senator ROUNDS. Thank you. General?

General LACAMERA. Senator, I am going to have to take that for the record. That is above my expertise.

Senator ROUNDS. That is fine. Thank you, gentlemen. I simply think that it is very important that we understand—we have a committee which is working right now on sharing that information. There are some people that would like to move forward with including a sale of that part of the spectrum, and I think it is just simply not responsible for us to allow that to happen until after the complete report is completed in September. That is the reason for asking the question.

Admiral Aquilino, cyber and space remain critically important domains to U.S. national security. Could you briefly explain how you integrate your operations with CYBERCOM and SPACECOM? Do you believe the fiscal year 2024 budget adequately supports our ability to effectively address the growing cyber and space threats in the Indo-Pacific?

Admiral AQUILINO. Thanks, Senator. I have a space component, as we just talked about, and I also have a cyber component. As a part of our operations development and planning and campaigning those teams are plugged directly into the physical domains, the ships, the submarines, the airplanes, the ground forces, and we synchronize all those operations.

General Nakasone, General Dickinson, and General Saltzman are great partners. They understand the missions that I have asked, they understand my priorities, and they are taking all actions to support our efforts.

Senator ROUNDS. Thank you. We have talked some about the use of land mines and other capabilities in which to shape a battlefield. General LaCamera, can you talk a little bit about the need to be

able to appropriately shape a battle positioning on land in the Korean Peninsula and the need to have those battle-shaping capabilities.

General LACAMERA. Thanks, Senator. I mean, the Demilitarized Zone is probably one of the most heavily mined areas in the world, and to be able to integrate, to prevent, shape, move, disrupt the enemy's ability to move over land is extremely important to the ground force commander.

Senator ROUNDS. Do you continue to have discussions about the deployment or the ability to deploy appropriate, treaty-appropriate capabilities? We are talking about land mines, basically, but those of a modern era that we can control in terms of when they are available and when they are neutralized?

General LACAMERA. Yes. As we go through on our exercises, mine clearing and mobility exercises is all part of the field training exercises that we do, not just in the digital world but on the ground.

Senator ROUNDS. Can you do your mission appropriately without access to those types of tools?

General LACAMERA. I do not believe so.

Senator ROUNDS. Thank you, sir. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Rounds.

Senator Ernst, please.

Senator ERNST. Thank you, Mr. Chair. Gentlemen, thank you very much.

Admiral Aquilino, let's talk a little bit about the Indo-Pacific. It absolutely is the priority theater and site of our pacing threat. Thank you for your defense. If, God forbid, the United States would ever cross swords with China, the defense of our Nation really does depend on you, so thank you.

I want to talk specifically, Admiral, about the land-based systems. DOD reports that China fields more than 1,250 ground-launched ballistic missiles and ground-launched cruise missiles, with ranges between 500 and 5,500 kilometers. How many ground-launched missiles of that range does the United States field?

Admiral AQUILINO. None that I am aware of at this time.

Senator ERNST. You are right. Zero, and of the programs under development, how many exceed 3,000 kilometers, which would be the outer ranges of your area of responsibility?

Admiral AQUILINO. Same.

Senator ERNST. Zero. You are right, Admiral. Thank you. And Admiral, what military advantages would this gap provide China with in any future conflict?

Admiral AQUILINO. Well, Senator, it certainly is in their strategy and their design is to keep us out of the theater. So, our ability to operate in that space is critical, as I discussed.

Senator ERNST. Admiral, would you agree that ground-launched theater-range strike systems could buy down some of that risk in your AOR [area of responsibility]?

Admiral AQUILINO. Senator, as we said, the entire Joint Force would be required both to deter and to fight and win if need be. The ability for the land component to deliver those weapons—and again, those are articulated in my 1254 Report, as requirements that I have identified that we need—it certainly expands our abil-

ity to provide multiple dilemmas, and they are directly involved in our approach.

Senator ERNST. Multiple dilemmas is a good thing. Admiral, would you further agree that DOD should study options for deploying those ground-launched, theater-range strike missiles in your AOR?

Admiral AQUILINO. I do not know about the study. I can tell you we are doing it right now, Senator. Our exercises, our operations as a part of the Multi-Domain Task Force and the Marine Littoral Regiment, the forces are preparing when that capability is delivered.

Senator ERNST. Very good. Thanks, and I am glad to be leading an effort to build the Rings of Fire in INDOPACOM along with Senator Manchin and Congressman Gallagher in the House. We feel that that is important for your capabilities.

Admiral, you spoke a little bit with Senator Wicker about some of the Ukraine tradeoffs, and I want to drill down a little bit on that and be a little more specific. So let's talk about Ukraine as it applies to Taiwan. Has our support to Ukraine depleted any munitions that are needed for Taiwan?

Admiral AQUILINO. Not at this time, Senator.

Senator ERNST. So a little different fight, a little different capabilities that are needed. Just to be very, very clear, the fight that is ongoing between the Ukrainians and the Russians, the munitions that we are providing to Ukraine at this time are not degrading capabilities that are necessary for the fight that might occur in Taiwan.

Admiral AQUILINO. That is correct, Senator.

Senator ERNST. Okay. Thank you. We do have a lot of discussion about this, ongoing, in the Senate and in the House. There are those that say we cannot complete both missions, we should not be helping in Ukraine. I agree with you, Admiral Aquilino, I agree with you, General LaCamera, that we must maintain our assistance to Ukraine. It will not, at this point, degrade what we are doing as we look toward the East.

I want to thank you both for making that very clear today, and I do hope that other Members of Congress understand this need, and plainly put, it is for the defense of our Nation and our global standing that we ensure success with the Ukrainians, but we also cannot take our eye off the ball when it comes to any fight that might occur, whether it is North Korea or whether it is China.

Thank you, gentlemen, very much for being here. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Ernst.

Senator Rosen, please.

Senator ROSEN. Well, thank you, Chairman Reed. I really appreciate you holding this hearing. Thank you both for your service to our Nation, for being here today, and I want to associate myself with my colleague, Senator Ernst, on how we have to do all of it. All of our standing, our safety around the world matters, and I appreciate your service there.

We are going to go right into it, Admiral Aquilino, and talk about maintaining our technological edge, because we are all talking about China. They are leveraging State funding to accelerate their

own military modernization efforts across key domains. They are rapidly advancing in areas like AI [artificial intelligence], robotics, cyber, and, of course, hypersonics.

Domestically, global competition for a skilled workforce, declining investment in R&D [research and development], DOD's contracting challenges, and the STEM [science, technology, engineering and mathematics] workforce gap, they are unfortunately all eroding and they are hurting our technological edge over China.

So it is why I am working to establish a public-private partnership program to accelerate the scaling, production, and acquisition of innovative defense technologies by creating incentives for investment right here in American small businesses working in this space. We have to be nimble.

Admiral Aquilino, how might a public-private partnership that spurs private sector investment and advanced defense capabilities, how do you think that could help us maintain our technological edge with China?

Admiral AQUILINO. Thanks, Senator. As I articulated in my testimony, the ability for the United States to go faster to deliver deterrent effects is critical. The innovation that exists in the United States is second to none anywhere on the globe, so any actions that would deliver outcomes in support of our deterrence effect would always be welcome.

Senator ROSEN. Thank you. I think using the imagination and innovation partner is always a good thing. And another place that we really have to do that is our cybersecurity, and our cybersecurity cooperation, in particular, with Taiwan, because we are acutely aware of the threat that China poses in the cyber domain. China has used Taiwan as a testing ground for its cyber capabilities, and its recent cyberattacks have forced Taiwan to harden their defenses.

It is why today I am introducing, with Senator Rounds—he is not here right now—Senator Rounds and Congressman Gallagher, bipartisan legislation to expand military cybersecurity cooperation with Taiwan. Again, Admiral Aquilino, how do you assess Chinese cyber threats to Taiwan and how is INDOPACOM working to expand military-to-military cybersecurity cooperation with Taiwan to strengthen the deterrence and raise the cost of escalation for Beijing?

Admiral AQUILINO. Thanks, Senator, again, in combination with my partner, General Nakasone from CYBERCOM, we always look to strengthen allies', partners', and friends' networks so that they are secure and that they can have a confidence that the things that they are putting out in their own networks are not being read or impacted by other nations, and we do that across the theater. We certainly have actions undergoing to ensure that.

As a part of our approach in INDOPACOM, and it is a part of my unfunded list, is something called the Mission Partner Environment. To talk to those allies and partners right now, I have 13 separate networks. That is costly. They are at risk, and what we are attempting to deliver is a single pane of glass that allows us to communicate securely, in a cyber safe way, with all of our partners across the region, no matter who, at the level at which we can share.

We have demonstrated already with one of our partners, and we will expand that our ability to scope and scale it. But it is the only way we will be able to operate with those allies and partners in a way that gives us confidence.

Senator ROSEN. I agree with you on the single point of entry because 13 separate networks leaves a lot of points of vulnerability, too much to manage.

In the few seconds I have left, I want to talk about your State partnership program. In Nevada, we have the Nevada National Guard, we have our partnerships with Fiji, Tonga, and most recently Samoa, to support INDOPACOM's mission. I am going to go pretty fast here. In the South Pacific we help you with maritime security and humanitarian assistance goals.

Given their strategic locations, the small island nations, particular again vulnerable to threats from China. How can our State partnership program, how can it be leveraged to bolster the cybersecurity programs in the Indo-Pacific, and the National Guard is?

Admiral AQUILINO. We view those relationships through the National Guard, and General Hokanson is also a great partner in support of that. As a matter of fact, we just signed a recent one—I was at the signing—in one of the Pacific islands not long ago.

So expanding that, building those relationships help build trust, and all of that leads toward increased interoperability and capability, in cyber and all the other domains.

Senator ROSEN. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Rosen.

Senator Budd, please.

Senator BUDD. Thank you, Chairman, and General, Admiral, thank you both for being here.

Admiral, in very real terms what is the strategic significance of the Taiwan Strait? More broadly, why is maintaining a free and open Indo-Pacific matter to Americans?

Admiral AQUILINO. Thanks, Senator. Certainly Taiwan itself is in a strategic location as it applies to the transfer of two-thirds of the global commerce around the world. It matters as it applies to the international rules-based order. In other words, if a single nation is allowed to describe what will be allowed to sail, fly anywhere that they choose. That is not what the like-minded nations of the world have signed onto. There is a coercive potential. There is increased cost potential. There is insurance hike potential. I mean, the second-, third-, and fourth-order effects are enormous. All of those things are what matter to the global nations.

Senator BUDD. Thank you for that. You know, when I think about this, I think about how important it is to work with and empower our allies and our partners to ensure that no one nation can dominate such an important region, militarily.

Sticking with you, Admiral, I have got a few questions I would like to ask about our foreign military sales process. I have asked questions of other geographic combatant commanders as well. I would appreciate, on the first part, just a simple yes or no, and then at the end I will give you a chance to expand, if you will.

Is the current FMS [Foreign Military Sales] process, is it fast and flexible enough to meet our foreign partner security needs, in

your AOR? That is a yes or no. Is it fast and flexible enough to meet——

Admiral AQUILINO. I would like it to go faster.

Senator BUDD. So that is a no, I take it?

Does the transfer of U.S. defense articles build our partners' capacity to provide for their own defense?

Admiral AQUILINO. It does.

Senator BUDD. Is the United States still the security partner of choice in your AOR?

Admiral AQUILINO. For almost all of the nations, yes, sir.

Senator BUDD. Thank you. Is the United States at risk of losing that security partner of choice status to China?

Admiral AQUILINO. I think it is an area of competition that we have to ensure that we execute our roles and make sure that we, in alignment with all those like-minded nations, are moving toward a region that supports the benefit of all those nations.

Senator BUDD. Is China increasing arms exports to any countries in your area of responsibility?

Admiral AQUILINO. They are.

Senator BUDD. Could you explain how foreign military sales challenges are impacting strategic competition with China in the Pacific?

Admiral AQUILINO. The FMS program for the United States, Senator, helps us ensure that we are interoperable with like-minded nations. We are certainly not going to plug in any of the PRC capabilities into our systems. It builds confidence. We have the best capabilities on the globe, also a lesson learned from Ukraine. Continuing to share, operate, coordinate, and exercise with those partners increases their ability to defend themselves and it increases our partnerships.

Senator BUDD. Thank you. Admiral, how comfortable are you with the defense industrial base ability to produce the munitions necessary to meet your requirements?

Admiral AQUILINO. I am extremely impressed with all the defense industrial base. I would like them to go faster.

Senator BUDD. Thank you very much. Chairman, I yield back.

Chairman REED. Thank you, Senator Budd.

Senator Hirono, please.

Senator HIRONO. Thank you, Mr. Chairman. Admiral Aquilino and General LaCamera, thank you very much for your service and for being here, and Admiral, always good to see you.

When we met recently, Admiral Aquilino, you made it very clear that you are the responsible person for missile defense of Hawaii. In this year's budget request there is money for a dual-use radar, and this is a good step forward, but certainly will not be the last.

As the supported commander for the mission, do you believe the services and your fellow combatant commanders are providing you the capabilities you need for the defense of Hawaii now and into the future?

Admiral AQUILINO. Aloha, Senator. Thank you. I am absolutely responsible for the defense of Hawaii. I am supported by a variety of great partners. They understand their roles. They understand the stakes. I certainly have an added concern since I live there. But bottom line is Hawaii is defended, and we will continue to defend

it. The additional capabilities we have asked for will enhance that defense.

Senator HIRONO. Thank you. The Compacts of Free Association (COFA) between the U.S. and the Republic of the Marshall Islands, the Federated States of Micronesia and Palau are currently up for renewal. You and I discussed the importance of the Compacts when we met, and they are vital to our ability to maintain a free and open Indo-Pacific.

The COFA agreements include support for COFA citizens who can come to our country without visas, a very special category of lawfully present people in our country. Until the policy changes in the late 1990's, these COFA citizens had access to Federal benefits. While the access to COFA benefits is not directly within your jurisdiction, effective Compacts are critical to our ability to operate in your AOR.

Admiral, do you agree that strong Compact agreements, including honoring our commitments to the people of the Compact states and nations, and particularly those who choose to live in the U.S., is critical to our ongoing operations in the Indo-Pacific?

Admiral AQUILINO. Thanks, Senator. So the Compact Agreements are absolutely critical to the defense of the United States. Those are partner nations that we have deep history ties with. As a matter of fact, the Compact states, per capita, send more servicemembers to the United States military than anywhere else. They have proven to be patriots, and they are tremendous friends. We defend them like they are our hometown, and we will continue to do that. That is critically important.

Now, as you articulated, not in my lane, but the United States takes care of people. Our ability to ensure the broad spectrum of human rights and taking care of people is a part of our DNA, so I certainly support that.

Senator HIRONO. Thank you very much, because as a totality of the commitments that we have to our Compact nations, the DOD, which very much, of course, in our country, very much benefits from these Compacts, that again, while it may not be in your lane as to their ability to access Federal benefits, that is a very important component of our partnership and our close relations with our Compact nations.

Admiral Aquilino, across your theater facilities in Hawaii, Guam, Japan, and Korea are in a State of disrepair, impacting our readiness and ability to mobilize forces quickly. Failing pipes, moldy barracks, intermittent blackouts, and frankly, lackluster repair facilities run counter to our military and community needs.

How does the deferred maintenance of our infrastructure, really resulting in massive facility failures such as at Red Hill, how does that impact your ability to conduct deterrence in your AOR?

Admiral AQUILINO. Thanks, Senator. As you know, the infrastructure and support and funding for the service infrastructure comes through service budgets, but when we took a look at the most recent, specifically the water main break on Hawaii, I took a look through the lens of readiness, on we ought to be able to identify where we are concerned, and not just in Hawaii. We did in Korea. We did it in Japan and the other places throughout the theater, for me to be able to understand our readiness.

So we undertook a study. My team is reviewing what that looks like, and Senator, when we complete that study I would be glad to come back and brief you. I have advocated for those investments into the infrastructure to deliver the readiness we need for the force. But again, I owe you an answer on that.

Senator HIRONO. I think it is really important because as we establish priorities for the DOD and for all of the services that the deferred maintenance is becoming ever, ever larger, and it results in the kind of catastrophes that cost billions of dollars. So I appreciate your leadership on this, and as far as I am concerned we need to have a much better plan on how we are going to keep up with maintenance of all of our facilities across our country, as well as, indeed, the world.

Thank you very much.

Chairman REED. Thank you, Senator Hirono.

Senator Scott, please.

Senator SCOTT. Thanks, Chairman.

General LaCamera, thanks for hosting me last Independence Day. I got to meet a lot of your troops, and a lot of them were from Florida, so thanks for doing that.

If North Korea invades and was able to take over South Korea, would it have any impact on the American family?

General LACAMERA. Yes, I believe it would.

Senator SCOTT. If you were going to say, hey, this is why we should have troops in South Korea, why we should make sure that South Korea remains as an independent country, what would you tell the American public?

General LACAMERA. I would tell it is an important piece of ground. It puts us on the Asian continent. It is a demonstration of our iron-clad commitment to the region and peace and stability in the region. I think South Korea's economy is important to our economy, and that regional stability. I believe that a challenge to that would have impacts on the United States.

Senator SCOTT. Are there any products or services that would be important that the American citizen would be without? Would it matter to the average person that wants to go buy something?

General LACAMERA. No. I believe in capitalism and competition, and I am sure they can find another product elsewhere. I think it is more of an intangible than it is a tangible.

Senator SCOTT. Admiral, what would you say about—would you say the same thing about Taiwan? If China invaded and they were able to win and took over Taiwan, would it have any impact on American families?

Admiral AQUILINO. Senator, first of all, the integration of the global economic network is critical, and there would be multiple touches on the Taiwan piece, specifically the high-end semiconductors is critical to many things we use. So there would be a drastic impact if we were not able to replace it in some other way. There is no doubt about that.

Senator SCOTT. Do you have any idea of what percentage of high-end chip are made in Taiwan and how much of an impact that would have on cars, any electronics we do?

Admiral AQUILINO. Almost all of them, and I do not know what that percentage of impact would be, but it would be broad.

Senator SCOTT. For both of you, for Korea and for Taiwan, are the governments of South Korea and Taiwan, are they doing everything they can to defend themselves? Because it is not the easiest thing in the world to, one, get to Taiwan, or two, to have the resources to be able to defend South Korea. So for each of you, could you just tell me how important it is, and do we have the right resources, are they doing the right things? I mean, as far as I can tell, Taiwan—I mean, what, do they have 8-month conscription? I mean, they have not armed their citizens. I mean, it seems to me that would be some of the simplest things to do, have a stronger military, arm their citizens. The same with South Korea.

Admiral AQUILINO. Yes, Senator. In the wake of the Ukraine invasion by Russia I think if you look at that and if you look at a variety of other actions that have gone on in the region, there is a real concern, to include on the island of Taiwan. If you look at Hong Kong, all right, who is next? If you look at Ukraine and the linkage between Russia and China, there is a real concern.

I have certainly been encouraged by recent actions for conscription and other things that have been taken. I think there is a real seriousness now.

Senator SCOTT. Is that true for South Korea?

General LACAMERA. It is a little bit complicated because right now we have a bilaterally agreed upon OPCON transition program to get them to where they would take over one of my commands, Combined Forces Command. They are on the right trajectory to do that. The agreement is that it will be standards based and not time based, so we are moving in that direction, to make sure that happens.

Senator SCOTT. Senator Budd brought up, and I think some others have brought up our military industrial complex ability to provide weapons. We are way behind, we know, in Taiwan. What do you think the Federal Government ought to be doing to make sure that our defense contractors move faster? Because it will make your lives easier, especially in Taiwan, if they had, what is it, $19 billion worth of arms that they have ordered that we have not provided to them.

Admiral AQUILINO. Yes, Senator. Certainly the President's Budget, as it was submitted, has got a component of a multi-year on the munitions piece, would be very helpful. I think sending that consistent demand signal is what industry needs. That said, as the most innovative Nation in the world, I would hope that the industrial base could take that, combined with other actions, and move faster.

Senator SCOTT. All right. Thank you. Thank you, Chairman.

Chairman REED. Thank you, Senator Scott.

Senator Duckworth, please.

Senator DUCKWORTH. Thank you, Mr. Chairman. Good morning, gentlemen.

I have been emphasizing the importance of our partners in Southeast Asia, in particular, with every chief and combatant commander that has come before this Committee today. I think we can do much more to bolster these key relationships to support the entire Indo-Pacific region, and there are some nations that we have

not managed those relationships in the last few decades in a way that we have in the past.

In August, I plan on taking several of my colleagues to the Philippines, Indonesia, and Thailand, in particular, where we will focus especially on this issue, the many important opportunities that our nations have to partner together.

Admiral Aquilino, in your testimony you highlighted INDOPACOM's enhanced exercises with 14 partner nations like Indonesia's Super Garuda Shield. But beyond these, Coral Gold, Garuda Shield, once-a-year, once-every-other-year exercises, in what other ways does your command plan to deepen cooperation with our allies and partners, in Southeast Asia in particular, including those nations that maybe we have not dealt with on a regular basis, like Vietnam or Cambodia, and some of the other nations?

Admiral AQUILINO. Yes, thanks, Senator. So the exercises certainly are a critical component, as you know. My partner, General Centino, in the Philippines—as a matter of fact, I am flying to the Philippines on Wednesday to go to an event with him and our Japanese counterpart. We have agreed to, across the region, the Chiefs of Defense and myself, to work toward more mini-and multi-lateral sets of engagements, whether they be meetings, tabletop exercise, or operations, for more consistent and more direct ability to operate the interoperable and to execute our mission sets. All for the defense of the region and to keep it safe.

We are doing a ton. There are almost no events we do unilateral anymore. Everything is done with allies and partners.

In Thailand, General Chalermpol is also a good friend and partner. I went to Cobra Gold kickoff, we spent some time together, we laid out what else we could do, and again, we continue to look for those opportunities.

We are always prepared and planning for any HADR [Humanitarian Assistance Disaster Relief] support that might be needed. That is us taking care of humanity should it happen to any of those partners.

So we are plugged in across the board, and I only see it getting more robust and more effective.

Senator DUCKWORTH. Yes, I think also there is intelligence sharing that is important. I know that Singaporeans kind of had a cell there that that helps with, limited intelligence sharing. There are so much that you can do.

My colleague, Senator Rosen, talked a little bit about cyber. I informed her that in 2021, we actually passed legislation that authorized a pilot program that enhances cybersecurity partnership with our forces, with those of Vietnam, Thailand, and Indonesia. I am now planning on introducing legislation to expand this important program to include Malaysia and the Philippines in this year's NDAA.

Admiral Aquilino, can you comment on the value of direct engagement with our overseas partners to help build their cyber skills? You sort of touched on this a little bit, but I think it is really critically important, beyond just speaking directly with us, but also sharing with each other within the region.

Admiral AQUILINO. Yes, thanks, Senator. Certainly our ability to share information and coordinate and cooperate is absolutely dependent on the cybersecurity of those systems. Otherwise, it is just getting to places where it should not go.

You mentioned the CTIF or the Counterterrorism Information Force in Singapore. It is also critical that that sharing gets directly into those facilities to prevent any violent extremism, multilateral, multi-nations, to deliver those effects.

So like I said, General Nakasone has taken great strengths to ensure those neighborhoods have the cybersecurity they need. Our investment in the mission partner environment contributes directly through this zero-trust mindset to ensure we can do it.

Senator DUCKWORTH. Thank you. General LaCamera, I am really interested also in United States-Korea cybersecurity partnerships, and you mentioned this in your testimony. Can you expand on that a little bit here?

General LACAMERA. We are also working with General Nakasone and his folks, and we are also working with the South Koreans. We have our own mission partner environment networks for us to be able to communicate. It is not only important when dealing with the South Korean military but also in the United Nations Command and the Sending States, and making sure that we can coordinate with those countries.

Senator DUCKWORTH. Thank you. I yield back, Mr. Chairman.

Chairman REED. Thank you very much, Senator Duckworth.

Senator Sullivan, please.

Senator SULLIVAN. Thank you, Mr. Chairman. Gentlemen, thank you. I think the country needs to know what an excellent job both of you two are doing in your respective theaters, so I want you to hear that from this Committee. I think both of you are doing exceptional work for our country.

Last year, in the NDAA, this Committee, by the way, unanimously, put in a provision for a floor of 31 amphib ships, 10 big-deck amphibs. The Commandant, a few days ago, testified just how important that was for force projection, crisis response, all over the world, for the Marine Corps and the Navy. How important is a robust complement of amphibs for your theater, both of you?

Admiral AQUILINO. Senator, thanks. The amphibious ready group as it applies with 3-ship ARGs is certainly important to our ability to deter as well as our ability to fight and win. I have articulated the requirements as it exists from INDOPACOM in to the CNO as part of his development approach. Now he owns the whole globe. So right now our requirements are met, and we have advocated to ensure that those requirements are not divested or they are somehow reduced.

Senator SULLIVAN. General? Amphibs, force projection, crisis response, MEU-ARGs [Marine Expeditionary Unit-Amphibious Ready Group]?

General LACAMERA. Yes. Thanks, Senator. We live on a peninsula. Having that capability available allows me to give multiple options or multiple dilemmas to any adversary who would try and disrupt peace and stability in the region.

Senator SULLIVAN. Admiral, we have talked about different kind of deterrence factors with regard to the CCP's [Communist Chinese

Party] decision whether or not to invade Taiwan. Of course, there is the ability, which has already been talked about here, for Taiwan to defend itself, which is in the Taiwan Relations Act, the ability for us, if need be, called upon by the President to help in that regard with our allies.

But there is also this, what I call a third level of deterrence, which is economic, financial, energy, to put forward a very comprehensive suite of sanctions with us and our allies to say to Xi Jinping and others, hey, if you actually undertake a violent military invasion of Taiwan, here are the massive sanctions that are going to crush your economy.

When you think about all instruments of American power, the way the Chinese do, how important do you think that third level of deterrence could be? Because we all want deterrence. No one wants a war in the Taiwan Strait. But we also know if it is going to be started, it will be started by the Chinese. How important is that to look at from the level of deterrence as well, on military factors?

Admiral AQUILINO. Yes, Senator. Again, so the military lens is certainly my lane as it applies to this, but as I look at the Chinese approach for an all forms of national power assault on the international rules-based order. I think it is critical that the United States, and it is also a part of this integrated deterrence strategy the Secretary has tasked us. That all forms of national power have to come together, and the economic lever is a pretty big one, so I concur.

Senator SULLIVAN. Admiral, you and I went to Northern Edge 2 years ago. Impressive. There was a carrier strike group there, a couple hundred aircraft doing night fighting in JPARC [Joint Pacific Alaska Range Complex], really great training for the whole Joint Force. Can you talk a little bit about how important you think Northern Edge is in Alaska for an exercise that brings together all of our services but also our allies, and what we can demonstrate up there in the great State of Alaska?

General LACAMERA. Yes, Senator. Northern Edge, as a matter of fact it is going to happen here again this year, in the not-too-distant future. It is certainly important for us to be able to operate in places that we are comfortable operating. We can train to high-end tactics and capabilities. That said, all of our exercises are important across the globe. Northern Edge is usually one of our largest.

Senator SULLIVAN. General, I was actually out, left the hearing here for a few hours. I greeted an honor flight from Alaska. They just arrived—World War II vet, Korean War vet, Vietnam vets. I love doing this. I never miss when the honor flights come in. We were at the Korean War Memorial. I want to publicly, and I have done it a few times, you and I have talked about, do a shout-out to the Korean Government and the Korean people who just spent over $20 million adding a very important element to the Korean War Memorial, which is the wall of honor, all the United States and Korean killed in action. I encourage all Americans to go look at that. I want to thank again the Korean Government, Korean people, because they paid for that. They paid for that. Pretty special.

How is it going with the new government—I had the opportunity to meet with the new president recently—in terms of their commitment to not only defense, but one thing that I have seen that looks very promising is a new focus on United States-Korea-Japan relations, training. The trilateral aspect of our defense in Northeast Asia is really important. How do you see that going? I want to compliment the new government. They seem to be really putting their shoulder into that, and I think it helps for our deterrence and defense in the region. What is your view on that?

General LACAMERA. Thanks, Senator. In the last year we have been able to increase our combat readiness and focus, not just in command post exercises but at the addition of field training exercise. We have been able to bring in two carrier strike groups. We have been able to do multiple ballistic missile defense exercises. We talked about the other exercises that the admiral does inside of the theater that we have been able to participate in.

President Yoon has really been focusing on combat readiness, and as you discussed with the trilateral piece, the threat is real to the region. KJU [Kim Jung-un], when he fires his missiles, you know, he sends messages to not only South Korea but to Japan and the United States on the capabilities. I think the President is showing tremendous leadership in the region to move forward to secure not just the Korean people but the American people.

Senator SULLIVAN. The trilateral relationship is deepening and getting better, from your perspective?

General LACAMERA. It is. Yes, sir.

Senator SULLIVAN. Great. Thank you, Mr. Chairman.

Chairman REED. Senator Schmitt.

Senator SCHMITT. Thank you, Mr. Chairman. Thank you both for your service.

Admiral, I wanted to ask, I know there has been some discussion, there is $19 billion worth of weapons systems that the Taiwanese have ordered that they have not gotten. I think you and I share the same belief that we need to have a greater sense of urgency with this, as they face a potential invasion from Communist China. What other weapons capabilities do you think, that are not going to take that long, are really important for the Taiwanese to have to defend themselves, that could get there in shorter order?

Admiral AQUILINO. Thanks, Senator. Again, without going into some specific systems, but again, anti-air capability, anti-ship capability, delivered in a variety of means, whether it is missiles, mines, or other things. I think there are some of those that, with some innovative work, could be delivered faster.

Senator SCHMITT. Okay. Admiral, a few days ago the Chinese Ambassador to the Philippines made some significant threats against Taiwan and the safety of 150,000 Filipinos living in Taiwan. This kind of egregious comment is exactly why many countries in the Indo-Pacific are deepening defense cooperation with the United States, as you are aware.

In addition, China continues to conduct provocative operations in the South China Sea, harassing Filipino vessels with lasers and sailing Chinese warships near Filipino holdings in the South China Sea. There has been a commitment, my understanding, to accelerating capability development of the Filipino Armed Forces during

the recent 2+2 meeting to include helping Manila acquire priority defense systems and platforms.

Admiral, in your view what are the next steps we should take with the Philippines?

Admiral AQUILINO. In support of our mutual defense treaty we are providing a variety of capabilities and training and actions with the Philippines. I think the posture initiatives are critical. For the United States to be successful in executing our responsibilities for the defense of the Philippines, those posture initiatives, the new EDCA sites, and delivering that capability and infrastructure is critical. Then we can always continue our operation together.

Exercise Balikatan is going on. It is the largest event in the region for the land component. We have also synchronized at sea. This particular exercise, it is led by the Marine Corps, but it is integral with the Army, the Navy, and the Air Force as a part of Balikatan.

Those continued demonstrations and interoperability is the next piece we can do.

Senator SCHMITT. I think it is just such a key and strategic alliance for us, the Philippines. Would you support—you mentioned infrastructure—would you support a permanent base on the Philippines?

Admiral AQUILINO. I think that decision, Senator, would be certainly critical for the Philippines. I do not think the Philippines are looking for permanent United States bases. That is their sovereign territory. I think what we would like to be able to do is operate with them in places that they would allow us to go at this point in time.

Senator SCHMITT. Okay. Admiral and General, Missouri, as you both know probably, hosts the entire operational fleet of the B–2 Spirit bombers. Could you both discuss, in general terms, the significance of the air leg of the nuclear triad to your deterrence missions?

Admiral AQUILINO. Yes, sir. Certainly the foundational aspect of our strategic nuclear deterrence lies in the triad. So the B–2s, the SSBNs and the ICBM–4s. That modernized force is critical to ensure that our conventional deterrent is foundationally based. For the China portion and the rest of the Indo-Pacific region, it is absolutely critical, and we demonstrate it, aligned with our STRATCOM partner, fairly frequently, and General LaCamera can talk to that.

General LACAMERA. Thanks, Senator. It poses multiple dilemmas. We get questioned about our ability on extended deterrence, and I think it is just another demonstration of the tremendous capability that we bring to any fight worldwide.

Senator SCHMITT. What has been the reaction from our friends and adversaries? What have you witnessed is their reaction to that capability?

General LACAMERA. For us, on the allies side, again, we are looking at this fight from a joint, combined interagency, multidomain, and this is just another arrow in our quiver that we continue to demonstrate. With the testing that KJU has been doing and the support that I get from Admiral Aquilino, and pushing assets,

again, it is just allowing us to build combat readiness, which we have not been able to do.

Admiral AQUILINO. I think for the rest of the region, Senator, it is also important for them. The Australians have allowed us to do two B–2 bomber detachments out of Amberley. So that shows, to me, that the capability is important for them, as well as the rest of the region. We operate, whenever possible, to demonstrating that bomber capability in the theater.

Senator SCHMITT. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you very much, Senator Schmitt, and gentlemen, thank you. I have one additional question.

We are currently at impasse in confirming general officers, including, I believe, the 7th Fleet Commander. Admiral Aquilino, what impact does this have on your readiness and the impact also on the offices involved in terms of their whole family situation and also their opportunities outside the service?

Admiral AQUILINO. Senator, thanks for that. Operationally, I am going to have no impact because the 7th Fleet Commander is not going anywhere until a proper replacement is in place. I think the real impact you articulated, right, it is the personal advancement, it is the personal development, it is the family understanding and predictability. Those are the places. So will it hinder our ability to continue to maintain the right people in the right jobs to be able to then potentially advance and take the next right job? Absolutely.

Chairman REED. Again, it seems a situation where, for the next several months, you could get by. But at that point people who are next in line to step up will consider other options outside the service. In fact, we have seen this situation in the Navy because of other situations. Tailhook froze an entire cohort of officers, other incidents in the Navy, and as a result, valuable individuals just could not be promoted and had to retire. If this persists, this will have a serious detriment on readiness eventually. Is that correct?

Admiral AQUILINO. That is absolutely right, Senator, or Chairman, and Glenn Defense Marine is the other example I would think you are inferring to. We did have impact to really quality people in a lot of cases.

Chairman REED. General LaCamera, any other comments in this regard?

General LACAMERA. No. I agree with Admiral Aquilino. I mean, the general officers that I have, I am not giving them up. But again, it does stagnate the next set of general officers or flag officers that are on current promotions lists that are not confirmed. The second and third or long-term effects, there will be impacts, and then when do people decide to leave and you might lose quality.

So I think there is a potential long term.

Chairman REED. I do too, and I hope that we can move quickly and return to regular order and the custom, which is that individuals who served the Nation for 30 years or more have been selected based on their merit as military officers, not any other reason, by panels of other military officers can be confirmed routinely by the Senate, unless there is some particular, specific issue with an individual candidate. That is my hope.

So thank you all, gentlemen, for your testimony today.

[Whereupon, at 11:17 a.m., the Committee adjourned.]

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR MAZIE K. HIRONO

H–2B VISA TEMPORARY RELIEF

1. Senator HIRONO. Admiral Aquilino, the Department of Defense has plans to build a significant amount of infrastructure in Guam as part of our ongoing realignment in the Pacific. The local construction capacity in Guam cannot keep up with the military's vast requirements, which is why the Department must be provided relief from the H–2B Visa temporary need requirement to allow foreign workers to work in Guam and support the construction needs. What will be the impact of not authorizing this H–2B visa temporary relief for Guam?

Admiral AQUILINO. Based on evolving program requirements in Guam, CNMI, and the recovery from typhoon Mawar we are requesting an extended relief from H–2B Visa limitations. If not authorized, the Department of Defense (DOD) Construction Agents (DCAs) will not be able to meet current or anticipated DOD timelines for construction on Guam and the CNMI, significantly degrading the Department's readiness posture and ability to respond to crisis or conflict within the Indo-Pacific area of operations. Costs increases well in excess of reprogramming thresholds are expected for currently planned DOD MILCON projects; although cost impact estimates are still evolving, total increased construction costs over the next 10 years were estimated at over 2 billion dollars prior to typhoon Mawar.

TRAINING, EXERCISES, AND CAMPAIGNING

2. Senator HIRONO. Admiral Aquilino, Campaigning in the Pacific plays a key role in our National Defense Strategy for deterring China. The Services are responsible for providing the forces and funds for your execution in the priority theatre, but based on your independent assessment there appears to be a significant need that the Services are not filling. Admiral Aquilino, there are never enough ships, planes, or battalions, but do you think the Services are appropriately prioritizing the Pacific with their Operations and Maintenance dollars?

Admiral AQUILINO. No, USINDOPACOM components lack the capability to project and maintain forward postured credible forces in the first island chain (FIC) to meet national and combatant command requirements to campaign and support integrated deterrence.

Funding the campaigning components UFR would provide the command and the service components the capability to conduct operations in the first and second island chains at the time of our choosing to reassure allies and partners while achieving integrated deterrence.

3. Senator HIRONO. Admiral Aquilino, in what ways are you using Campaigning to build partnerships in the region?

Admiral AQUILINO. We build partnerships using campaigning in two ways: 1) persistent and capable presence to assure our allies and partners of our commitment to regional security; and 2) consistent joint and multilateral operations and exercises with our allies and partners that build warfighting capabilities and interoperability. Together, presence and combined training and operations—particularly those west of the International Date Line—help sustain us as the partner of choice in the region.

4. Senator HIRONO. Admiral Aquilino, what range modernization efforts and expansion of dual-use facilities do you need to best support INDOPACOM's training?

Admiral AQUILINO. In fiscal years 2023 to 2027, the Pacific Multi-Doman Training and Experimentation Capability (known as "PMTEC") is investing in joint range modernization efforts at the Joint Pacific Alaska Range Complex, the K. Mark Takai Pacific Warfighting Center, and the Pacific Missile Range Facility, Hawaii. Fiscal years 2024 to 2028 investments are focused on extending mobile capabilities west of the International Date Line, as well as facility infrastructure improvements in Japan, Guam and the Philippines. Continued investments in range modernization, especially in joint live, virtual, and constructive capabilities, cyber and space, and integration of artificial intelligence and machine learning across all domains is required to realistically rehearse joint warfighting in highly contested all-domain environments. To achieve these objectives, current U.S. training areas and ranges in the Indo-Pacific require fast-tracking of updated environmental impact statements to

ensure that joint training can occur regardless of what service has title 10 responsibility for the care, maintenance, and operation of these facilities.

PARTNERS AND ALLIES

5. Senator HIRONO. Our partners and allies are our most critical advantage in any potential contingency with China. These relationships only work when they are mutually beneficial. General LaCamera, one of our most important allies is the Republic of Korea. How are we increasing interoperability between our two militaries, and between our other allies and partners in the region?

General LACAMERA. Our network of alliances and partnerships around the world is one of our greatest asymmetric advantages. The United States-Republic of Korea (ROK) Alliance serves as a stabilizing force, as well as an example to others of our Ironclad commitment. From individual and small unit training—developing true "expertise in the basics"—to large-scale combined, bilateral, trilateral, and multinational exercises, we continue to sharpen our warfighting and combat skills. This is the foundation for our combined and joint combat readiness to inflict lethal and non-lethal effects in all domains as necessary.

At the unit-level (2d Infantry Division (Combined) / United Nations Command Security Battalion—Joint Security Area), United States and ROK personnel exercise together often enough to make it truly routine. Additionally, the ROK has increased its participation in tactical exercises off the Korea Peninsula including 2023 events such as Red Flag Alaska, Service Level Training Exercise with the U.S. Marine Corps in 29 Palms, California, participation at the National Training Center with the U.S. Army, and the Rim of the Pacific Exercise (RIMPAC) along with several others. These events provide ample opportunities to improve interoperability and increase combat readiness. To achieve the highest State of combat readiness across the theater, however, we focus on exercising and improving our premier, semi-annual, theater-level command post exercises. These exercises allow us to evaluate combined capabilities, which in turn inform operational planning and allow us to improve our combined and joint effectiveness. Additionally, we seek every opportunity to increase multilateral training exercises in and around the region, incorporating like-minded nations and our other treaty allies.

The Combined and Joint Services actively pursue opportunities to conduct bilateral and multilateral training to respond to wartime contingencies, to enhance interoperability, and build partnership capacity in the Indo-Pacific region. Along with combined exercises in the Korean Theater of Operations, Combined and Joint Services engagements test its Multi-Domain Operations capabilities through leveraging annual and biannual Joint exercises and training. These opportunities ensure we are well-integrated into the greater Indo-Pacific theater. Our enhanced interoperability with strategic partners and Joint Service Allies is the linchpin in increasing the ability to fight and defend together coherently, effectively, and efficiently to achieve tactical, operational, and strategic objectives.

Between the United States, the Republic of Korea, and Japan, we continue to look for opportunities to bolster the trilateral relationship, as well as the ROK-Japan bilateral relationship. During the historic Camp David Summit between the United States, ROK, and Japan in August 2023, our leaders committed to deepening trilateral defense cooperation. Since then, the Department has delivered on this commitment by approving a multi-year, trilateral exercise plan and fully activating a real-time DPRK missile warning data-sharing mechanism. We are expanding exercises to include anti-submarine warfare, maritime interdiction, humanitarian assistance and disaster relief, and ballistic missile defense. Additionally, we continue to incorporate multinational contributions through the United Nations Command to serve as an enabler and force multiplier for the Alliance.

6. Senator HIRONO. Admiral Aquilino, what is the importance of programs like the Blue Pacific Cooperation Initiative and the International Security Cooperation Program?

Admiral AQUILINO. Through the Blue Pacific Cooperative Initiative, USINDOPACOM works directly with our Pacific Island partners in regional fusion centers to identify critical areas of improvement for multilateral information sharing and maritime domain awareness (MDA). Our partners emphasize climate change, illegal, unreported, and unregulated (IUU) fishing, and transnational crime as priority threats in their areas of responsibility. Increased MDA and operational/tactical information-sharing capabilities can create an enhanced network to address these threats and increase regional collaborative efforts. We understand the importance of bolstering—and working through—existing regional Pacific Island architectures and organizations, such as the Forum Fisheries Agency and the Fiji Maritime Sur-

veillance Rescue Coordination Centre, avoiding any duplication of efforts in the region. Therefore, we coordinate extensively to align ourselves with regional and overarching U.S. Government priorities and initiatives, such as the Pacific Islands Forum 2050 Strategy for the Blue Pacific Continent, the Indo-Pacific Maritime Domain Awareness (IPMDA) initiative, and the Partners in the Blue Pacific Initiative. Our enabling partner for this program, Joint Interagency Task Force West (JIATF West), is uniquely positioned to implement the Blue Pacific Cooperative Initiative since most Pacific Island nations lack military capacity and rely on coordinated efforts through a law enforcement and inter-agency nexus. Leveraging existing partner agency relationships—and experience in sharing law enforcement related information-JIATF West is a relevant partner who contributes to the overall U.S. Government vision for strengthening partnerships toward a resilient Pacific region.

7. Senator HIRONO. Admiral Aquilino and General LaCamera, how do you each leverage the State Department and other whole-of-government partner agencies to ensure we are the region's partner of choice?

Admiral AQUILINO. USINDOPACOM leverages each agency's unique authorities and integrates the collaborative efforts of mission country teams and USG departments and agencies in the National Capital Region (NCR) to achieve unity of effort in support of the National Security Strategy (NSS), National Defense Strategy (NDS), National Military Strategy (NMS), and INDOPACOM Theater Strategy and Campaign Plan. We accomplish this unity of effort through the resident Foreign Policy Advisor and his team for State Department coordination and with the other assigned Liaison Officers that represent 12 other agencies. All of the agency advisors and LNOs are members of the INDOPACOM Joint Interagency Coordination Group (JIACG) in the J5 that meets bi-monthly during competition and daily during Crisis response.

General LACAMERA. The United States-ROK Alliance encompasses not only the military, but the whole-of-government partnership. We work in concert with all elements of national power—including diplomatic, economic, and intelligence activities—as part of a whole-of-government effort to address threats to the Homeland, our allies and partners, and our interests in the Indo-Pacific. I believe that contributions of non-DOD departments and agencies are fundamental to achieving U.S. national security objectives and our diplomats should be in the lead for issues related to America's interests in the region and around the world. The U.S. military's presence on the Peninsula contributes to our diplomatic efforts to establish and maintain peace, to persuade and convince regional leaders, and to advance our goals for regional security and stability from a position of strength. We have an excellent relationship and interact daily with our Embassy Country Team counterparts and work very closely on shared issues to ensure our operations and activities are always nested within a broader U.S. Government approach. I speak with the United States Ambassador to the ROK on a weekly basis, and closely coordinate our actions so that we are able leverage our military and diplomatic efforts for a greater effect. Also, as the Commander, United Nations Command (UNC), I meet monthly with the Ambassadors of UNC Member States Through the monthly Ambassadors Roundtable, we foster and maintain a relationship with a network of 17 countries from 6 continents.

NORTH KOREAN MISSILE THREAT

8. Senator HIRONO. Within the last several months, North Korea has continued renewed its threats of nuclear destruction to both the United States and the Republic of Korea. Troublingly, this has been paired with new developments in nuclear and missile technology. This is one reason I remain so closely focused on the missile defense of both Hawaii and Guam. General LaCamera, what is your assessment of the credibility of such threats?

General LACAMERA. The Democratic People's Republic of Korea (DPRK) is capable of delivering on threats against Guam, Hawaii, and the continental United States. Since January 2022, the DPRK has launched 14 developmental long-range ballistic missiles, demonstrating the capability to strike Guam, Hawaii, and the entirety of North America. Pyongyang possesses tested nuclear devices that purportedly can pair with these missiles. Kim Jong-un views his nuclear missile capability as critical to guaranteeing the survival of his regime and almost certainly will resist efforts to force him to give up his arsenal now or in the future. A robust missile defense is one of the crucial components of deterring the DPRK's use of nuclear weapons. We intend to continue to reinforce the advances in missile defense of the ROK, as their capabilities enhance our combined abilities to effectively deter and respond to DPRK missile threats.

9. Senator HIRONO. Admiral Aquilino and General LaCamera, how have you prepared your respective commands for the defense of U.S. bases and territories against the possibility of hypersonic missiles?

Admiral AQUILINO. Our current BMD posture is designed to defeat ballistic threats from rogue actors like the Democratic People's Republic of Korea (the DPRK). United States missile defense policy states that we rely on strategic deterrence for defense of the Homeland from near-peer advanced threats like hypersonic missiles. However, policy states that we will develop missile defense capabilities to defend against any system that may threaten our United States and allied interests abroad, which is why I've strongly advocated to accelerate capabilities like the Guam Defense System and an advanced radar to replace the FAA radar in Hawaii.

General LACAMERA. United Nations Command (UNC), Combined Forces Command (CFC), and United States Forces Korea (USFK) balance the hypersonic threat against ballistic and cruise missile threats. The ROK government approved a plan in April 2023 to move forward with a hypersonic missile defense system. USFK continues to work with USINDOPACOM and OSD (R&E) to address hypersonic and other missile defense capabilities to defend our homelands and develop a United States/ROK alliance hypersonic kill web.

DOD SUBMARINE RESOURCE PRIORITIZATION

10. Senator HIRONO. Admiral Aquilino, I was pleased to hear details recently about the AUKUS submarine partnership with the UK and Australia, but note the key initiatives of the agreement are still several years away from fruition. Admiral Aquilino, with the loss of USS *Connecticut* to repairs until 2025 and continued delays in the *Virginia*-class construction, have you had any conversations with Navy leadership about permanently relocating, or rotationally deploying, East coast submarines to the your AOR to bolster deterrence until AUKUS is fully implemented?

Admiral AQUILINO. I will provide more detail in a classified response.

11. Senator HIRONO. Admiral Aquilino, in your professional opinion, do you have the requisite number of attack submarines to deter Chinese aggression in the Pacific region?

Admiral AQUILINO. I will provide more detail in a classified response.

QUESTIONS SUBMITTED BY SENATOR ELIZABETH WARREN

FUTURE USE OF UNFUNDED PRIORITIES LISTS (UPLS)

12. Senator WARREN. Admiral Aquilino, do you agree that if funding is needed for a project, it should be a part of the command/service budget?

Admiral AQUILINO. The funding for projects within the USINDOPACOM UPL does not fall within the command's annual budget; these projects are resourced by each of the military service budgets. USINDOPACOM advocates for the project funding, but does not determine funding levels within the services' budget submissions.

13. Senator WARREN. Admiral Aquilino, historically, have previous Unfunded Priorities Lists items been included in the following year's base budget? Have Unfunded Priorities Lists items from fiscal year 2023 been included in the fiscal year 2024 base budget? If yes, please provide detail including the requested item, funding amount, and vendor executing the effort. If no, why not?

Admiral AQUILINO. The funding for projects within the USINDOPACOM UPL does not fall within the command's annual budget; these projects are resourced by each of the military service budgets. USINDOPACOM advocates for the project funding, but do not determine funding levels within the services' budget submissions.

FF	Information Operations	36.5 (9 Funded)	37
FF	Asia Pacific Regional Initiative (APRI)	14 (3.7 Funded)	14

14. Senator WARREN. Admiral Aquilino, do you agree that Federal agencies should be required to work within the confines of base budget process?

Admiral AQUILINO. Yes, I do concur. However, USINDOPACOM capability requirement assessments are independent of the Department's budgeting process. As directed by Section 1254 of the Fiscal Year 2023 NDAA, the USINDOPACOM requirements for capability development and posture initiatives are outlined in our independent assessment.

15. Senator WARREN. Admiral Aquilino, Secretary of Defense Austin supports legislation that would repeal the requirement for individual leaders to submit unfunded priority lists under 10 U.S.C. 222a. He stated this publicly in a Senate Armed Services Committee hearing on March 28, 2023 and in a letter that Under Secretary Michael J. McCord sent on behalf on Secretary Austin to me on March 20, 2023. Do you plan to continue to submit unfunded priority lists?

Admiral AQUILINO. USINDOPACOM will continue to submit unfunded priority as required by 10 USC § 222a subsection (d) until legislation is pass to repeal such requirements.

16. Senator WARREN. Admiral Aquilino, if you plan to submit unfunded priority lists in the future, why are you doing so despite Secretary of Defense Austin's support for the repeal of these required lists?

Admiral AQUILINO. USINDOPACOM is required by law per 10 USC § 222a subsection (d) to submit the report of Unfunded priorities to Congress.

INFORMATION ON UNFUNDED PRIORITIES LISTS

17. Senator WARREN. Admiral Aquilino, what was the cost of putting together this Unfunded Priorities Lists?

Admiral AQUILINO. The estimate cost of the UPL report for the Department of Defense is approximately $42,637 in labor cost for fiscal year 2023.

For each item on the unfunded priorities list you submit in response to 10 U.S.C. 222a, please provide the following information:

18. Senator WARREN. Admiral Aquilino, please provide a detailed description of the Unfunded Priorities Lists.

Admiral AQUILINO.

- Guam Defense System—Accounts for the $147 million shortfall that would delay the deployment of integrated air missile defense to Guam. The Guam Defense System is a 360-degree persistent, layered, air and missile defense capability to defend Guam from ballistic, cruise, and hypersonic missile threats. At risk is the timely deployment of an initial IAMD deployment and enhanced IAMD deployment capability by 2027.
- Joint Fires Network—This funding request will develop an initial Joint Fires Network (JFN) prototype for the USINDOPACOM AOR that will provide dis-

tributed, resilient joint tactical fire command and control and enable a common joint network with resilient transport to maximize joint kill chains.

- Mission Partner Environment—The Mission Partner Environment (MPE) provides USINDOPACOM the ability to securely communicate, collaborate, plan, and execute with multiple allies and partners and modernizes our headquarters, command, control, communication, computer and information technology infrastructure to assure command and control in a contested environment.
- Maritime Strike Tomahawk (MST)—Tomahawk Land Attack Missile is a long-range, all weather, jet-powered, subsonic cruise missile. Blk V integrates advanced navigation and guidance, and includes a datalink that enables the missile to switch targets while in flight. The Blk Va, MST, has longer range and improved seeker technology for dynamic targeting and maritime strike capability.
- USINDOPACOM Campaigning—Additional funding for campaigning provides USINDOPACOM components the additional capability in terms of transportation and other support costs to mass air, ground, maritime, and special operations forces multiple times per year as part of a coordinated, synchronized, set of operations and activities west of the international date line.
- Persistent Undersea Targeting—Invests in the development and acquisition of fixed distributed systems that provide cuing information used in antisubmarine warfare.
- Military Construction-Design—Funds to be utilized for architectural and engineering services, and construction design in connection with military construction projects.
- Military Construction—Construction—Funds unspecified minor military construction (UMMC) to enable USINDOPACOM to leverage current authorities to develop and deliver footprint requirements in a timely manner.
- Joint Training Team—Resources to support administrative and logistical function of a joint training team conducting a variety of missions including bilateral engagements, travel, training, and support for foreign military sales.
- Joint Task Force Micronesia—Invests in a Joint Task Force to coordinate USINDOPACOM activities in Micronesia. JTF-M is responsible for developing and executing the Micronesia Master Plan by integrating posture plans, military construction projects, land use negotiations, and other joint support activities.
- Precision Strike Missile (PrSM) Increment 2 (USA)—Resources the surface-to-surface missile that replaces and improves upon ATACMS. PrSM will provide joint force commanders with a 24/7, all-weather, anti-ship capability to attack critical and time sensitive area and point targets including threat air defense, missile launchers, command and control centers, assembly/staging areas and high payoff targets.
- Joint Experimentation and Innovation—Funds the theater-wide campaign of joint experiments to inform and strengthen the ability of joint and combined forces to execute all-domain operations in contested environments.
- Standard Missile 6 (SM–6) 1B Variant—Provides the increased capability for ground-based and naval long-range weapons for extended range to target enemy anti-surface warfare capability. This capability is foundational to provide combat formations with precision-strike capabilities that are operationally decentralized and geographically distributed in theater.
- Clandestine Delivered Mine—Upgrades Clandestine Delivered Mine (CDM) systems with technology improvements to enable placement and integration with various delivery platforms.
- Hammerhead Mine—Funds the development of an offensive mining system delivered from an unmanned underwater vehicle to detect, classify, and destroy submarine threats.
- Powered Quickstrike—Resources a family of shallow water, aircraft laid mines used against surface and subsurface targets. Powered Quickstrike (QS-P) enhances component integration and accelerates development through a rapid acquisition pathway.
- Operationalize Near Term Space Control—Resources the next generation of national defense space architecture to enable U.S. military operations and responses to emerging multi-domain threats and adversaries.

- Offensive Cyber-Access and Effects—Resources to develop access and effects for cyberspace operations.
- All Domain Missile Warning and Missile Tracking Architecture—Upgrades the Terminal High Altitude Area Defense (THAAD) processing software with Enhanced THAAD Mission Support Element integration (eTMI) to greatly increase joint force integrated Air and Missile defense protections.
- Space-Based Persistent Custody Sensors—Accelerates the development of space-based sensors necessary to provide persistent and complete coverage of air, sea, and ground-launched missile threats.
- Cyber Security and Network Defenses-Funds USINDOPACOM theater tailored cyber sensors, tools, aids, platforms, and physical replication efforts to support key industrial control system vulnerability and mitigation efforts on DOD facilities.
- International Security Cooperation Program—Resources projects under Title 10 U.S.C Section 333, Train and Equip; U.S.C. Section 332, Institutional Capacity Building; and Maritime Security Initiatives (MSI) authorities. ISCP develops critical capabilities of allies and partners in theater to enhance integrated deterrence.
- Joint Task Force Indo-Pacific—Funds the integration of JTF-IP with USINDOPACOM components, and FVEY partners to maximize resources and information sharing to develop a cogent common intelligence and common operational picture.
- Asia Pacific Regional Initiative—Funds key theater engagements that advance both military-to-military and civil-military activities to counter malign influence in the Indo Pacific.
- HQ Manpower Enhancements—Resources relocation and recruiting incentives directly associated with USINDOPACOM's mission as detailed in the National Defense Strategy (NDS).
- Joint Training, Exercise and Evaluation Program—Resources the Joint Training Plan (JTP) and Joint Exercise Program (JEP), key elements of INDOPACOM's Campaign Plan to provide trained and ready joint forces. JEP events put aggregated combat formations in position to conduct operations and activities to strengthen deterrence, assure allies and partners, counter adversary coercive actions, and increase ally and partner interoperability.
- Service Tactical SIGINT Upgrades and Processing, Exploitation, Dissemination (PED) Enhancements—This request resources enhancements to the U.S. Army Pacific (USARPAC) Processing, Exploitation, and Dissemination (PED) Center to enable greater operational capacity to process, exploit, and disseminate intelligence mission data to the warfighter. The Pacific PED Center is focused on maintaining custody of Peer Adversary ground targets and Joint targets. It complements other PED Centers by providing federated and surge capacity during a crisis or conflict in the INDOPACOM area of responsibility and can support theaters.
- Resilient TS-SCI Warfighting Architecture—Establish a Secure and survivable TS/SCI Warfighter Architecture to provide resilient network connectivity, interoperability, transport, data storage, and forward edge processing to support all aspects of USINDOPACOM C5ISRT in a degraded or denied communications environment across the region.
- Information Operations—Effort provides resource to implement programs and tools to increase the command's focus on competition and domination in the information environment through sustained Information Operations Military Information Support Operations (MISO), Operational Security (OPSEC) and Military Deception (MILDEC).

19. Senator WARREN. Admiral Aquilino, what does the Unfunded Priorities Lists purchase?

Admiral AQUILINO.

- Guam Defense System—Live Fire Test from Guam; Initial IAMD Deployment (AN/TPX-X1) Aegis Guam System, Expeditionary Command Center, C2BMC Downloadable Client, Mk–41 Vertical Launching Station, MRC Prototype, Sentinel A4 radar, and IBCS; Coordinated Defense against HGVs, BMs, MaRVs, and CMs; 360-degree persistent integrated air and missile defense against all threat classes.
- Joint Fires Network—The request will field initial development and deployment of 28 prototype Joint Fires Network nodes across the USINDOPACOM AOR, to

include the integration of Assault Breaker II capabilities. It will also include funding to stand up a Joint Program / Integration Office to continue development and sustain the prototypes.

- Mission Partner Environment—USINDOPACOM is purchasing hardware components for Multi Domain Delivery and Mission Partner Environment zero trust hardening; a combination of COTS and open source software; and integration services for COTS and GOTS software and datasets already developed. Funding will also be used to handle development, integration, and deployment of the systems.
- Campaigning—This request will provide components the ability to conduct operations and vary the scale, size, and duration of these operations in the USINDOPCOM AOR. This funds the transportation and other support costs to mass air, ground, maritime, and special operations forces.
- Maritime Strike Tomahawk (MST)—This funding increases new production of Blk Va missiles and accelerates conversation of existing inventory, which includes both recertification and modernization of Blk IV missiles. It funds recertification of mechanical and electrical components and missile capsule, consumables, fuse components, armed firing devices (AFD). It also funds modifications for weapon modernization, to include: Navigation Communication (NAVCOMS) upgrade and integration of new seeker kit hardware (upgrades sensors, nosecone, ULTRA processing, cooling pump and plumbing, bulkhead, power and signal harnesses, power supply, electrical chase insulators, telemetry unit, wiring, hybrid homopolar permanent magnet generator, and primary power interface (PPI) unit).
- Persistent Undersea Targeting—The specific end item is a more capable set of undersea sensors that can detect adversary and regional maritime activity. In general, these funds are accelerating the cost profile to achieve IOC sooner than currently planned.
- Military Construction—Funds planning and design activities of PDI initiatives as well as projects of interest that close infrastructure gaps in the Guam Cluster, Australia, Philippines, Japan, and Hawaii projects to advance USINDOPACOM's posture requirements.
- Joint Training Team—Funds additional resources for administrative, transportation, and logistical expenses associated with the training team.
- Joint Task Force Micronesia—Funds personnel that will serve as the foundation for the JTF-M. Additional costs will support the renovation of office space on Guam, travel, per diem, and IT services required for the initial stand-up in Hawaii and Guam.
- Precision Strike Missile (PrSM) Increment 2 (USA)—Provides procurement for accelerated fielding of Increment 2 and RDT&E for Increment 4 development to enable fielding in operationally relevant quantities by fiscal year 2027.
- Joint Experimentation and Innovation—This funds the ability to conduct Joint International Experimentation. JIE is centered on Taiwan self-defense, taking existing or relatively mature technologies to demonstrate systems that Taiwan may obtain to bolster deterrence in the Taiwan Strait.
- Standard Missile 6 (SM–6) 1B Variant—Provide RDT&E for SM–6 Blk IB missile development and integration. Additionally, this request funds increase production startup cost, procurement of additional canisters (Mk–29 Mod 1), and production and engineering support.
- Clandestine Delivered Mine—CDMs are shallow-water mines that compliment aerial mining capabilities and are emplaced clandestinely via unmanned undersea and surface delivery platforms. Increment 1 enables delivery by unmanned systems and vessels of opportunity, to enable access to contested environments. Increment 2 enables remote arming and reverse arming.
- Hammerhead Mine—The Hammerhead Maritimes Mine is a moored encapsulated torpedo (Mk–54) that has the capability to detect, classify, and engage anti-submarine warfare targets. The funding request accelerates procurement of Hammerhead maritime mine components, integrates technology upgrades and increase production to enable fielding in operationally relevant quantities by fiscal year 2027.
- Powered Quickstrike—Powered Quickstrike (QS-P) is an enhanced standoff aerial variant of the Mk–62 Quickstrike mine that provides any JDAM-enabled aircraft with a long-range mining capability. Capitalizing on development and acquisition efficiencies of the Quickstrike-Extended Range (QS-ER) variant, QS-

P integrates upgraded technology, a powered wing kit, and alternate warhead to significantly increase range and lethality.

- Operationalize Near Term Space Control—This funding is for additional resourcing needed to expand two U.S. Space Force capabilities. Though the details are classified to protect our military advantages, each effort produces unique and complimentary advantages to USINDOPACOM Joint Force Commanders as well as to USSPACECOM's area of operations.
- Offensive Cyber-Access and Effects—The funding is for additional resourcing needed to operationalize and expand non-kinetic effects in and through cyberspace.
- All Domain Missile Warning and Missile Tracking Architecture—This funding will integrate the THAAD weapon system with the MSE effector to provide enhanced missile defense capabilities.
- Space-Based Persistent Custody Sensors—Funding accelerates the fielding of a classified capability. USINDOPACOM requires a network of space-based sensors necessary to provide persistent and complete coverage of air, sea, and ground-launched missile threats
- Cyber Security and Network Defenses—Funds additional resources needed to improve sensing in USINDOPACOM networks and enhance the ability to defend against the volume, velocity, and variety of threats to military networks.
- International Security Cooperation Program—The requested 11 fiscal year 2024 SSCI projects not marked with full funding cover a variety of capabilities for the partner nations.
- Joint Task Force Indo-Pacific—Funding will support the expansion of existing secure area capabilities by retrofitting what was built under Project P–200 and in 2010, and converting an unsecure area to a space suitable for secure mission operations, equipped with secured rooms and secured video teleconference (SVTC) capability. The proposed enhancement will increase capacity to (45) workstation, and facilitate expanded analysis, planning and synchronization.
- Asia Pacific Regional Initiative—APRI is a USINDOPACOM-specific initiative that utilizes Operations and Maintenance, Navy (OMN) funding for the expansion of U.S. military security cooperation activities with partner nations. The capabilities developed deepen mission partnership and interoperability through subject matter expert exchanges, exercises, and conferences.
- HQ Manpower Enhancements—Incentives and inducements to compel highly qualified talent to accept an employment opportunities at the USINDOPACOM headquarters.
- Joint Training, Exercise and Evaluation Program (JTEEP)—The $69.935 million will address discrete shortfalls in six priority joint exercises: Freedom Shield, Ulchi Freedom Shield, Balikatan, Cobra Gold, Tempest Wind, Garuda Shield.
- Service Tactical SIGINT Upgrades and Processing, Exploitation, Dissemination (PED) Enhancements—Resources will provide an increase in contracted labor at the Pacific PED Center.
- Resilient TS-SCI Warfighting Architecture—This investment will provide: (1) a TS//SCI Regional cloud enabled storage and compute capability in the theater; (2) a fixed Sub-Regional data storage;/compute nodes and expeditionary nodes; and (3) a secure satellite communications kits and associated support equipment for data transport. It will enable the Joint/Combined Force to leverage critical intelligence data essential to the Joint Targeting and Fires architecture across the theater.
- Information Operations—Enhances Military Information Support Operations (MISO) and interagency collaboration capacity, increases digital and print presence from 11 to 15 regional languages for the Indo-Pacific Defense Forum (IPDF), expands collaboration and capacity with Radio Free Asia, increases use of traditional media in Oceania, funds assessments of USINDOPACOM in the information environment, development of camouflage, concealment, and deception (CC&D) capabilities.

20. Senator WARREN. Admiral Aquilino, please include detail on all end items with quantities, contractor Full Time Equivalent, etc.

Admiral AQUILINO.

- Guam Defense System—This includes various integration efforts and quantities for the items associated with Guam Defense System.

- Joint Fires Network—This funding procures 28 prototype systems, the vendor is to yet be determined.
- Mission Partner Environment—

Item Type	Cost ($M)
Multi-Domain Delivery (Single pane of glass)	$17.5
Korea Data Center Hardware/Software	$4
Guam Data Center Hardware/Software	$6
FAK and Mobile Servers	$6
SATCOM / Transport Diversity	$5.5
Total	$39

- Campaigning—No specific end times are purchased with this request.
- Maritime Strike Tomahawk (MST)—This funding increases new production of Blk Va and accelerates conversation of existing inventory, which includes both recertification and modernization of Blk IV missiles. It funds recertification of mechanical and electrical components and missile capsule, consumables, fuse components, armed firing devices (AFD). It also funds modifications for weapon modernization, to include: Navigation Communication (NAVCOMS) upgrade and integration of new seeker kit hardware (upgrades sensors, nosecone, ULTRA processing, cooling pump and plumbing, bulkhead, power and signal harnesses, power supply, electrical chase insulators, telemetry unit, wiring, hybrid homopolar permanent magnet generator, and primary power interface (PPI) unit).
- Persistent Undersea Targeting—Undersea sensors
- Military Construction—

P&D UPR Requirement	Amount ($M)	Location
Logistics & CL III & IV Storage	12.5	Australia – Various locations
APOD, EDCA Expansion, Logistics	1.5	Philippines
CL II & IV Storage, Composite Watercraft	19.5	Japan
Class III & V Storage	7.7	Guam
MDTF/MLR	27.8	Hawaii
Total P&D MILCON	**69**	

UMMC UPR Requirement	Amount ($M)	Location
SPOD Shore infrastructure, Boat Ramp	10.9	CNMI
Joint Range Expansion & Mooring Installation	8.9	Palau
Port Improvements and Shore Infrastructure	6.3	FSM
Regional Maritime Training Center	3.3	PNG
Theater-Wide UMMC	32.7	
Total UMMC and ERC	**62.09**	

- Joint Training Team—Funds additional resources for administrative, transportation, and logistical expenses associated with the training team.
- Joint Task Force Micronesia—This will resource the labor, travel and per-diem of a 42-person Joint Task Force.

Item	Amount ($M)
Labor/Personnel	18.2
Operating Cost (renovations, travel, per diem, IT Services)	7.3
Total	**25.5**

- Precision Strike Missile (PrSM) Increment 2 (USA)—Provides procurement for accelerated fielding of Increment 2 and RDT&E for Increment 4 development to enable fielding in operationally relevant quantities by fiscal year 2027.
- Joint Experimentation and Innovation—Experimentation execution funds manpower for experiment planning, execution, and reporting. Second, it funds material, both commercial and government off the shelf items, required to execute international experiments to include support equipment and/or developmental software and systems for potential leave-behind capabilities. Finally, it funds the logistics required to deploy, install, and remove any equipment required for Joint International Experimentations.
- Standard Missile 6 (SM–6) 1B Variant—Upgrades to airframe, propulsion, and guidance systems, and redesigned 21-inch motor that substantially increases the missile range and speed.
- Clandestine Delivered Mine—This funding request accelerates both development and procurement efforts in order to field in operationally relevant quantities within the FYDP.
- Hammerhead Mine—The funding request accelerates procurement of Hammerhead maritime mine components, integrates technology upgrades and increase production to enable fielding in operationally relevant quantities by fiscal year 2027.
- Powered Quickstrike—The funding will enable accelerating of acquisition planning, systems engineering, contract, and procurement planning and integrate propulsion module and wing kits, conduct initial testing, and demonstrate early prototyping. These efforts, if funded in fiscal year 2024 will enable the service the ability to rapidly demonstrate early operational capability and meet the USINDOPACOM requirements and timelines for fielding and operational use.
- Operationalize Near Term Space Control—The specific end items are described in the classified USINDOPACOM Section 1254 annex, with specific fiscal year 2024 funding at $66 million and $209 million respectively. In general, these funds are expanding current efforts across two lines of effort by the U.S. Space Force.
- Offensive Cyber-Access and Effects—The specific end items are primarily software code and tailored mission-specific access-enabling hardware.
- All Domain Missile Warning and Missile Tracking Architecture—The end items are software modifications to existing THAAD weapons system baseline. No additional hardware items other than potential specific test equipment and/or assets, are required for the end item weapon system.
- Space-Based Persistent Custody Sensors—The specific end items are described in the classified USINDOPACOM Section 1254 annex. In general, these funds are accelerating the cost profile by 1 year to achieve Initial Operational Capabilities sooner than previous plans.
- Cyber Security and Network Defenses—Three types of end items:
  - o Alternate sensors
  - o Cyber navigation aids
- Analytical Collaborative Environment for Cyber
- Cyber Attribution at Scale
- Augury for threat hunting
- Packet Forensics
- SENTRYNODE
- Scaled defensive cyber support
- Pacific Ecosystem for cyber
- SIPRNet Hardening

- International Security Cooperation Program—Training, support equipment, infrastructure support, communications equipment, equipment recapitalization, cybersecurity, boats, vehicles, and airframes.
- Joint Task Force Indo-Pacific—Hardware components of the SCIT networks (servers, laptops, routers, firewalls, and network equipment) are already available and awaiting installation.
- HQ Manpower Enhancements—The ability to leverage and persuade prospective candidates to accept USINDOPACOM vacant civilian headquarters positions.
- Joint Training, Exercise and Evaluation Program (JTEEP)——

Joint Exercise Program (JEP) Event	Lead Partner	Alliance or Frontline Partner	Shortfall
Freedom Shied	ROK	A	$11.707M
Ulchi Freedom Shield	ROK	A	$11.705M
Balikatan	PHIL	A	$16.453M
Cobra Gold	THA	A	$10.116M
Garuda Shield	IDN	FP	$11.900M
Tempest Wind	Various	A/FP	$8.05M
Total			**$69.935M**

- Service Tactical SIGINT Upgrades and Processing, Exploitation, Dissemination (PED) Enhancements—Resources will provide an increase in contracted labor at the Pacific PED Center.
- Resilient TS-SCI Warfighting Architecture—Specific hardware is to be determined. This investment will provide: (1) a TS//SCI Regional cloud enabled storage and compute capability in the theater; (2) a fixed Sub-Regional data storage;/compute nodes and expeditionary nodes; and (3) a secure satellite communications kits and associated support equipment for data transport. It will enable the Joint/Combined Force to leverage critical intelligence data essential to the Joint Targeting and Fires architecture across the theater.
- Information Operations—Increased regional presence, IPDF content expansion, add Mongolian language services to Radio Free Asia while expanding Oceania coverage, create USINDOPACOM OIE assessments branch, establish a team of 3 planners to conduct and assess event series, CC&D equipment for U.S. and A&P use.

21. Senator WARREN. Admiral Aquilino, what specific capability will the Unfunded Priorities Lists provide?

Admiral AQUILINO.

- Guam Defense System—Provides MDA funding resources to remain on schedule for delivery of the following requirement:
  a) Live Fire Test from Guam
  b) Initial IAMD deployment (AN/TPY—X1), Aegis Guam System, Expeditionary Command Center, C2BMC Downloadable Client, Mk–41 Vertical Launching Station, MRC Prototype, Sentinel A4 radar, and IBCS.
- Joint Fires Network—The JFN will provide the Joint Force the prototype capability to plan, synchronize, and execute all-domain fires at speed and scale in a major conflict against a peer adversary.
- Mission Partner Environment—USINDOPACOM seeks to modernize our HQ C4IT by fielding a secure environment that delivers multiple information domains on a single pane of glass. This capability will be available to an initial 1,200 HQ users by December 2023. Without additional resources we cannot extend this environment to our Joint Intelligence Operations Center (JIOC) which currently operates legacy NIPR and SIPR services provided by the Defense Intelligence Agency (DIA)
- Campaigning—The land and maritime component forces can conduct long duration multi-domain activities inside the first island chain, including joint all-domain multi-integrated air missile defense live fire exercises. The air component can conduct USAF's distributed Agile Combat Employment (ACE) training and validation events. Special operations forces can establish special operation task

forces inside the FIC to conduct integrated deterrence activities that normalize the presence of special operations forces in theater.

- Maritime Strike Tomahawk (MST)—The Blk Va MST will integrate improved seeker technology for dynamic targeting and maritime strike capability.
- Persistent Undersea Targeting—This will provide the capability to detect maritime assets and provide a key input to all-domain battlespace awareness to the Joint Force Commander. More specific capability information is available at a higher classification level.
- Military Construction—Funds planning and design activities of PDI initiatives as well as projects of interest that close infrastructure gaps in the Guam Cluster, Australia, Philippines, Japan, and Hawaii projects to advance USINDOPACOM's posture requirements.
- Joint Training Team—This will allow for the synchronization of USINDOPACOM partner training, as well as for operations and the integration of critical capabilities to rapidly build the partner's defense capabilities across all seven joint functions.
- Joint Task Force Micronesia—JTF-M will coordinate USINDOPACOM activities in Micronesia and be responsible for developing and executing the Micronesia Master Plan. The JTF will serve as the operational commander responsible for joint support activities necessary to execute All Domain Command and Control, Assault Breaker II, and oversee the integration of associated developmental technologies.
- Precision Strike Missile (PrSM) Increment 2 (USA)—The PrSM Inc 2 and Inc 4 significantly enhance targeting, lethality, and range. Increment 2 adds a multi-mode seeker used to engage moving land and maritime targets. Increment 4 doubles the standoff distance of earlier increments and includes the capability to engage land and maritime targets.
- Joint Experimentation and Innovation—This funds the ability to conduct Joint International Experimentation. JIE is centered on Taiwan self-defense, taking existing or relatively mature technologies to demonstrate systems that Taiwan may obtain to bolster deterrence in the Taiwan Strait.
- Standard Missile 6 (SM–6) 1B Variant—The SM–6 Blk IB provide long-range capability by implementing upgraded software and replacing the existing Mk–104 Dual-Thrust Rocket Motor with a new 21-inch rocket motor. The upgrades enables an anti-surface warfare capability delivered at hypersonic speed and significantly increases range.
- Clandestine Delivered Mine—CDMs are shallow-water mines that compliment aerial mining capabilities and are emplaced clandestinely via unmanned undersea and surface delivery platforms. Increment 1 enables delivery by unmanned systems and vessels of opportunity, to enable access to contested environments. Increment 2 enables remote arming and reverse arming.
- Hammerhead Mine—The Hammerhead Maritimes Mine is a moored encapsulated torpedo (Mk–54) that has the capability to detect, classify, and engage anti-submarine warfare targets.
- Powered Quickstrike—Powered Quickstrike (QS-P) is an enhanced standoff aerial variant of the Mk–62 Quickstrike mine that provides any JDAM-enabled aircraft with a long-range mining capability.
- Operationalize Near Term Space Control—This funding is for additional resourcing needed to expand two U.S. Space Force capabilities. Though the details are classified to protect our military advantages, each effort produces unique and complimentary advantages to USINDOPACOM Joint Force Commanders as well as to USSPACECOM's area of operations.
- Offensive Cyber-Access and Effects—This capability focuses on four lines of effort that enhance cyberspace access and effect capabilities specific to USINDOPACOM needs.
  - o Near-term access operationalization: Specific classified access and effect capabilities that would be available to be operationalized in the near-term.
  - o Mid-term modification to Joint Cyber Access Platform: Leveraging USCYBERCOM's program of record to sustain key classified offensive cyber efforts.
  - o Acceleration and expansion of a key classified effort with a history of providing non-kinetic effects solutions to difficult problems.

- o Focused enabling options: The ORION platform (details classified) to expand the scale and utility of DOD cyber operations needed in the Indo-Pacific region.
- All Domain Missile Warning and Missile Tracking Architecture—Enhanced THAAD-MSE integration. This upgrade will greatly increase joint force integrated Air and Missile defense protection in the short-term with software upgrades.
- Space-Based Persistent Custody Sensors—Funds the development and operationalization of space-based sensors critical to providing battlespace awareness information in the Indo-Pacific. This UPL supports the acceleration of one key classified capability critical to meeting USINDOPACOM operational and tactical custody needs.
- Cyber Security and Network Defenses—USINDOPACOM theater tailored cyber sensors, tools, aids, platforms, and physical replication efforts to support key industrial control system vulnerability and mitigation efforts on DOD facilities.
- International Security Cooperation Program—Provides variety of capabilities for the partner nations and increase collaboration.
  - o Philippines Counter-Terrorism
  - o Thailand Border Security
  - o Thailand Counter Terrorism
  - o Timor Leste Maritime Security
  - o Papau New Guinea Maritime Security
  - o Sri Lanka Maritime Security
  - o Indonesia Asymmetric Maritime Domain Awareness
  - o Vanuatu Border Security
  - o Nepal Disaster Management Institutional Capacity Building
  - o Nepal Defense Professionalization Institutional Capacity Building
- Joint Task Force Indo-Pacific—Expansion of the existing Sensitive Compartmented Information Facility (SCIF) to adequately accommodate the necessary Special Operations Force (SOF), conventional and interagency personnel for planning, analysis and synchronization at the Top Secret (TS) level.
- Asia Pacific Regional Initiative—APRI is a USINDOPACOM-specific initiative that utilizes Operations and Maintenance, Navy (OMN) funding for the expansion of U.S. military security cooperation activities with partner nations. The capabilities developed deepen mission partnership and interoperability through subject matter expert exchanges, exercises, and conferences.
- HQ Manpower Enhancements—Incentives and inducements to compel highly qualified talent to accept employment opportunities at the USINDOPACOM headquarters.
- Joint Training, Exercise and Evaluation Program (JTEEP)—The $69.935 million will address discrete shortfalls in six priority joint exercises: Freedom Shield, Ulchi Freedom Shield, Balikatan, Cobra Gold, Tempest Wind, Garuda Shield.
- Service Tactical SIGINT Upgrades and Processing, Exploitation, Dissemination (PED) Enhancements—Resources will provide an increase in contracted labor at the Pacific PED Center.
- Resilient TS-SCI Warfighting Architecture—This investment will provide: (1) a TS//SCI Regional cloud enabled storage and compute capability in the theater; (2) a fixed Sub-Regional data storage;/compute nodes and expeditionary nodes; and (3) a secure satellite communications kits and associated support equipment for data transport. It will enable the Joint/Combined Force to leverage critical intelligence data essential to the Joint Targeting and Fires architecture across the theater.
- Information Operations—Military Information Support Operations (MISO) employment assures A&Ps, counter's adversary dis/misinformation and amplifies USG narratives that seek to gain and maintain information environment advantages while delivering integrated deterrence.

22. Senator WARREN. Admiral Aquilino, what gap will this fill that is not in the base budget?

Admiral AQUILINO.

- Guam Defense System—This will fill the requirement to continue the integration for various missile defense programs to provide a 360 degree layered defense against ballistic, hypersonic and maneuvering missile threats.
- Joint Fires Network—This will provide the rapid development of a capability to integrate joint fires command and control.
- Mission Partner Environment—This will provide secure mobile/deployable C4IT solution capable of delivering multiple information domains in support of USINDOPACOM operational requirements.
- Campaigning—This will provide USINDOPACOM components the resourcing to increase the size, scale, scope and duration of operations west of the international date line.
- Maritime Strike Tomahawk (MST)—This will provide joint long-range, multi-domain fires critical to conducting contingency operations in the Indo-Pacific, specifically engaging high priority adversary naval combatants at range from surface ships, submarines, unmanned systems and land based launchers.
- Persistent Undersea Targeting—The additional funding will provide upgraded undersea sensing arrays in the Indo-Pacific.
- Military Construction—This funds additional MILCON planning and design activities of PDI initiatives as well as projects of interest that close infrastructure gaps in the Guam Cluster, Australia, Philippines, Japan, and Hawaii projects to advance USINDOPACOM's posture requirements.
- Joint Training Team—Funds additional resources for administrative, transportation, and logistical expenses associated with the training team.
- Joint Task Force Micronesia—This funds personnel that will serve as the foundation for the JTF-M. Additional costs will support the renovation of office space on Guam, travel, per diem, and IT services required for the initial stand-up in Hawaii and Guam.
- Precision Strike Missile (PrSM) Increment 2 (USA)—PrSM increment 2 enables engagements with both land and maritime emitting targets and increment 4 doubles the range of earlier increments. Both increments help to address critical capability gaps and are key components of joint long-range, multi-domain fires critical to conducting contingency operations in the Indo-Pacific.
- Joint Experimentation and Innovation—Experimentation execution funds manpower for experiment planning, execution, and reporting. Second, it funds material, both commercial and government off the shelf items, required to execute international experiments. Finally, it funds the logistics required to deploy, install, and remove any equipment required for Joint International Experimentations.
- Standard Missile 6 (SM–6) 1B Variant—This provides U.S. Naval surface ships with highly capable hypersonic anti-ship missiles to respond to and engage high priority adversary naval combatants at range.
- Clandestine Delivered Mine—This capability addresses operational needs stated in USINDOPACOM Joint Emergent Operational Need (JEON) PC–0012, the Joint Maritime Mining (JMM) Initial Capabilities Document (ICD), the Navy's Subsea Seabed Warfare (SSW) ICD, and the last five USINDOPACOM Integrated Priorities Lists (IPL) submissions.
- Hammerhead Mine—A baseline Hammerhead Mine is currently in development. However, current funding is inadequate to procure and sustain mine components and effectors, incorporate technology upgrades to expand the target library to include surface targets, enable advanced command and control, integrate interface components for the unmanned delivery payload module, provide a surface delivery option, and field in operationally relevant quantities within the FYDP.
- Powered Quickstrike—Powered Quickstrike (QS-P) is an enhanced standoff aerial variant of the Mk–62 Quickstrike mine that provides any JDAM-enabled aircraft with a long-range mining capability. The joint force requires advanced maritime mines delivered at the significantly greater standoff distances than the current in-service mines critical to executing contingency operations in the Indo-Pacific.
- Operationalize Near Term Space Control—Funds the operationalization of vital near-term space system that greatly improves U.S. forces and platform survivability. This UPL item supports the expansion of two capabilities critical to integrated deterrence, and if deterrence fails, to ensure the joint force is postured to fight and win.

- Offensive Cyber-Access and Effects—This UPL supports programs resourcing offensive cyberspace operations access and effects capabilities needed in the USINDOPACOM area of operations. It focuses on the expansion of four areas of effect that enable the joint force to project power in and through cyberspace, which are needed to achieve integrated deterrence, and if deterrence fails, to ensure the joint force is postured to fight and win through non-kinetic effects.
- All Domain Missile Warning and Missile Tracking Architecture—THAAD limitations are held at the classified level to ensure our adversary cannot exploit them.
- Space-Based Persistent Custody Sensors—Current systems are baselined in PB24, funding is required to accelerate availability to critical time to deter adversary.
- Cyber Security and Network Defenses—This funding will improve the detection of current steady-State cyber threats to the Joint Force.
- International Security Cooperation Program—This funding will improve collaboration with Allies and Partners, enhancing the United States asymmetric advantage.
- Joint Task Force Indo-Pacific—USINDOPACOM requires the capability to adequately analyze, plan and synchronize activities among SOF, conventional force, and interagency partners, and will lose the ability to strengthen relationship with allies and partners, relationships that represent a key component of U.S. national power.
- Asia Pacific Regional Initiative—APRI is a USINDOPACOM-specific initiative that utilizes Operations and Maintenance, Navy (OMN) funding for the expansion of U.S. military security cooperation activities with partner nations. The capabilities developed deepen mission partnership and interoperability through subject matter expert exchanges, exercises, and conferences.
- HQ Manpower Enhancements—This is a critical headquarters manpower gap, which directly impacts our "to be 2025" vision that is strategically enables integrated deterrence.
- Joint Training, Exercise and Evaluation Program (JTEEP)—The $69.935 million will address discrete shortfalls in six priority joint exercises: Freedom Shield, Ulchi Freedom Shield, Balikatan, Cobra Gold, Tempest Wind, Garuda Shield.
- Service Tactical SIGINT Upgrades and Processing, Exploitation, Dissemination (PED) Enhancements—Resources will provide an increase in contracted labor at the Pacific PED Center.
- Resilient TS-SCI Warfighting Architecture—This investment will provide: (1) a TS//SCI Regional cloud enabled storage and compute capability in the theater; (2) a fixed Sub-Regional data storage;/compute nodes and expeditionary nodes; and (3) a secure satellite communications kits and associated support equipment for data transport. It will enable the Joint/Combined Force to leverage critical intelligence data essential to the Joint Targeting and Fires architecture across the theater.
- Information Operations—This will allow USINDOPACOM to operate in the information environment. Current funding does not account for strategic competition with two major powers and one rogue State.

23. Senator WARREN. Admiral Aquilino, how will this capability support objectives outlined in current National Security, Military, and Defense Strategy documents?

Admiral AQUILINO.

- Guam Defense System—GDS is critical to Defend the Homeland as directed in the National Military Strategy and protect United States capabilities in Guam allowing for increased power projection west of the international date line.
- Joint Fires Network—The JFN provides a significant warfighting advantage that will allows U.S. Forces to transition quickly from competition to contingency operations.
- Mission Partner Environment—The MPE provides the advanced technologies to improve coordination and collaboration with our allies and partners over secured communications infrastructure.
- Maritime Strike Tomahawk (MST)—This capability greatly increases the lethality of the Joint Force against peer adversary naval forces. It supports UNINDOPACOM's strategic approach to "Seize the Initiative" against near-peer adversaries through the presence of combat-credible deterrence and is a critical

capability needed to achieve the objectives set forth in the 2022 National Defense Strategy (NDS).

- USINDOPACOM Campaigning—Theater campaigning provides USINDOPACOM and Service Components the ability to conduct operations within the first and second island chains at the time of our choosing to influence and shape behavior throughout the theater to reassure our allies and partners, keep competitors guessing, and achieve integrated deterrence. This effort supports the National Defense Strategy's approach to strengthen alliances and attract new partners.
- Persistent Undersea Targeting—Undersea sensors are used to support USINDOPACOM decisionmaking throughout the competition, crisis, and conflict spectrum. Due to the large geographical area of the Indo-Pacific AOR, these sensors are critical to freeing up other resources that may otherwise be required to hold custody of key adversary capabilities. Funding the acceleration of this capability decreases the joint force commander's risk in executing assigned plans by freeing up additional resources.
- Military Construction—It enables the required design activities that ensure forward progress toward execution-ready designs and unspecified minor military construction projects that advance posture interests in the Guam Cluster, Australia, Philippines, Japan, and Hawaii. The capabilities provided by this UFR make forward progress in closing existing infrastructure gaps associated with USINDOPACOM's posture interests.
- Joint Training Team—This capability directly supports the National Defense Strategy and USINDOPACOM Theater Campaign Plan and will allow USINDOPACOM to rapidly develop critical partner capabilities by synchronizing and complementing USG efforts.
- Joint Task Force Micronesia—JTF-M will be organized to provide a single, responsible headquarters to provide Senior Military Officer oversight and alignment of operations; manage the expansion of U.S. capabilities through Guam, the Federated States of Micronesia, and the Compact of Freely Associated States; and provide the nucleus of a scalable command and control element that can address future sustainment and warfighting initiatives based in Micronesia.
- Precision Strike Missile (PrSM) Increment 2 (USA)—Fielding PrSM inc 2 and 4 will enable the ability to deter and deny adversary combat maneuverability, air defense operations, and maritime operations. This capability supports USINDOPACOM's strategic approach to "Seize the Initiative" against near-peer adversaries through the presence of combat-credible deterrence and is a critical capability needed to achieve the objective set forth in the NDS.
- Joint Experimentation and Innovation—JEI support the following objectives:
  - o Accelerate implementation of the Joint Warfighting Concept
  - o Enable Combatant Command Theater Security Cooperation Strategy
  - o Support collaboration and promote interoperability with the Joint Force and partner nations through Science & Technology (S&T)
  - o Experiment with leading edge, disruptive technologies, and proposed Concepts of Operation (CONOP), in a relevant, Indo-Pacific operations and exercise;
  - o Enrich technical assessments through integration into multinational coalition exercises
  - o Focus innovations efforts on Taiwan Self-Defense enhancements
  - o Accelerate Key USINDOPACOM programs.
- Standard Missile 6 (SM–6) 1B Variant—The capability greatly increases the lethality of Navy surface ships against peer adversary naval forces. It supports USINDOPACOM's strategic approach to "Seize the Initiative" against near-peer adversaries through the presence of combat-credible deterrence and is a critical capability needed to achieve the objectives set forth in the 2022 NDS.
- Clandestine Delivered Mine—CDMs will provide the Joint Force the capability to clandestinely emplace minefields in key areas of the battlespace in order to limit adversary submarine access and significantly reduce their capability to hold U.S. and allied naval forces at risk. This capability supports USINDOPACOM's strategic approach to "Seize the Initiative" against near-peer adversaries through the presence of combat-credible deterrence and is a key component needed to achieve the objectives set forth in the 2022 NDS.
- Hammerhead Mine—The Hammerhead mine provides the Joint Force the capability to mine key areas of the battlespace in order to limit adversary submarine

access and significantly reduce their capability to hold U.S. and allied Naval forces at risk. This capability supports USINDOPACOM's strategic approach to "Seize the Initiative" against near-peer adversaries through the presence of combat-credible deterrence and is a key component needed to achieve the objectives set forth in the 2022 National Defense Strategy (NDS).

- Powered Quickstrike—Advanced maritime mining options like QS-P can significantly disrupt adversary operational timelines, allow greater time for joint forces to flow into the theater, and provide an extended opportunity for joint force fires to attrite adversary maritime vessels. Additionally, the increased stand-off range and target selection performance will mitigate significant risk to force in a peer-competitor contingency. This capability supports USINDOPACOM's strategic approach to "Seize the Initiative" against near-peer adversaries through the presence of combat-credible deterrence and is a key component needed to achieve the objective set forth in the 2022 NDS.
- Operationalize Near Term Space Control—Operationalizing near-term space control capabilities will ensure the joint force has the ability to leverage cutting edge capabilities to enable joint force movement and survivability against a growing threat. Funding these capabilities decrease the Joint Force Commander's risk in executing assigned plans.
- Offensive Cyber-Access and Effects—These capabilities provide deterrence and response options throughout the spectrum of conflict and provide alternate ways to achieve desired effects. This enhancement will ensure the potential gain of these operations can be achieved in the near-and mid-term timelines as USCYBERCOM continues to build out its Joint Cyber Warfighting Architecture.
- All Domain Missile Warning and Missile Tracking Architecture—Improved THAAD capability support enhanced missile warning, tracking, and ultimately prosecution against advanced missile threats. This enhanced capability not only directly protects the joint force, but also provides deterrent value when demonstrating assured defeat capabilities of joint missile defense systems.
- Space-Based Persistent Custody Sensors—This space-based sensor will be used to support USINDOPACOM decisionmaking throughout the competition, crisis, and conflict spectrum. Due to the large geographical area of the Indo-Pacific AOR and threats to airborne systems, space-based sensors are optimum for providing coverage and increase revisit rate of key operational areas.
- Cyber Security and Network Defenses—Cyber security and network defenses underpin USINDOPACOM operations. These enhancements will address the top priority areas identified to secure USINDOPACOM network and enable cyberspace operations throughout the competition, crisis, and conflict spectrum.
- International Security Cooperation Program—Systematic engagements and training events associated with developing these capabilities will sustain critical bilateral relationships in the Indo-Pacific, supporting strategic objectives of strengthening Allies and Partners and aid in the Department's efforts by deterring strategic competitors in the Indo-Pacific region.
- Joint Task Force Indo-Pacific—The mission of JTF-IP is to conduct special operations in the Indo-Pacific, degrade regional threat networks, and support integrated deterrence, which supports the National Defense Strategy's guidance to employ irregular capabilities to increase a competitor's perception of risk, build ally and partner capacity to deny and remain resilient in the face of malign activities in the gray zone, and act directly and indirectly in low or non-attributable ways to complicate and compromise competitor actions.
- Asia Pacific Regional Initiative—APRI supports the National Defense Strategy and USINDOPACOM's approach to strengthen alliances and attract new partners through security cooperation initiatives.
- HQ Manpower Enhancements—Enables USINDOPACOM to hire critical civilian talent and skill sets who otherwise might decline opportunities to work on the USINDOPACOM headquarters. This supports integrated deterrence as outlined in the National Defense Strategy.
- Joint Training, Exercise and Evaluation Program—JTEEP is included in the Pacific Deterrence Initiative and is a key capability in USINDOPACOM's Seize the Initiative approach to prevent conflict through the execution of integrated deterrence, and should deterrence fail, be prepared to fight and win. JTEEP is a key DOD lever for strategic competition across the continuum of conflict, consistent with key National Strategic, Defense, and Military guidance.

- Service Tactical SIGINT Upgrades and Processing, Exploitation, Dissemination (PED) Enhancements—Additional resources will support targeting and joint fires by identifying, tracking, and maintaining custody of assigned targets.
- Resilient TS-SCI Warfighting Architecture—The proposed investment will enable USINDOPACOM to operate in a degraded communication environment.
- Information Operations—USINDOPACOM employs IO to assure A&Ps, counter adversary dis/misinformation, and amplify USG narratives that seek to gain and maintain information environment advantages and deliver integrated deterrence (PRC, North Korea, Russia, and violent extremists.

24. Senator WARREN. Admiral Aquilino, what is the operational requirement? How does this Unfunded Priorities Lists support current or future operations?

Admiral AQUILINO.

- Guam Defense System—GDS is a 360-degree, persistent, air and missile defense capability to defend Guam from ballistic, cruise, and hypersonic missile threats.
- Joint Fires Network—Joint Forces must be capable of planning, synchronizing, and executing all-domain fires at speed and scale against a peer adversary. Joint fires command and control must be distributed to the tactical edge and leverage all sensors and intelligence to form a persistent targeting common operational picture. The architecture must be joint, common, resilient, flexible, and responsive.
- Mission Partner Environment—The capabilities provide the ability to conduct combined warfighting command and control over common, secure networks.
- Maritime Strike Tomahawk (MST)—The joint force must be able to engage high priority adversary naval combatants at range from surface ships, submarines, unmanned systems and land-based launchers. MST is a key component of joint long-range, multi-domain fires critical to executing contingency operations in the Indo-Pacific.
- USINDOPACOM Campaigning—USINDOPACOM components lack the resourcing to project and maintain forward postured combat credible forces in the first island chain.
- Persistent Undersea Targeting—The joint force has a need for all-domain battlespace awareness across the UNINDOPACM AOR. This UFR directly supports future operations by ensuring commanders have full situational awareness of the maritime and undersea environment. This UFR ultimately ensure additional military options to lower the joint force commander's risk in execution operations in the Indo-Pacific.
- Military Construction—These unfunded requests directly support USINDOPACOM's posture interests in Australia, Philippines, Japan, Guam, and Hawaii. The request provides the funding to start critical design activities on large construction projects and UMMC construction funds, investments that make forward progress to closing existing infrastructure gaps associated with USINDOPACOM's posture interests in the these locations.
- Joint Training Team—The operational requirement is to rapidly develop a partner's capabilities. This UFR will allow for the creation of a Joint Training Team that will operationalize training objectives to allow for the rapid delivery of material and non-material capabilities.
- Joint Task Force Micronesia—This organization will:
  - o Integrate JADC2 effects and mission C2, including in conflicts that arise with minimal warning;
  - o Integrate the capabilities of Assault Breaker II, developed by the Defense Advanced Research Project Agency, and related development efforts as they transition to operational deployment;
  - o Exercise of other joint all domain command and control capabilities.
- Precision Strike Missile (PrSM) Increment 2 (USA)—PrSM provides joint force commanders with a 24/7, all-weather capability to attack critical and time sensitive areas, including adversary ships, air defense, missile launchers, command and control centers, assembly/staging areas, and high payoff targets. PrSM Increment 2 enables engagement with both land and maritime emitting targets, and Increment 4 doubles the range of earlier increments. Both increments help to address critical capability gaps and are key components of joint long-range, multi-domain fires critical to executing contingency operations in the Indo-Pacific.

- Joint Experimentation and Innovation—This supports two of USINDOPACOM's "Seize the Initiative" Lines of Efforts: strengthen relationships with allies & partners and increase warfighting advantage. JEI will provide assessments of technologies and concepts within Indo-Pacific operational environments for potential leave behind capability or integration into existing defense architectures. These capability improvements will increase warfighter advantage, defend and assure our allies and partners through science and technology (S&T) engagements, and support the combatting of trans-national challenges.
- Standard Missile 6 (SM–6) 1B Variant—the SM–6 Blk IB is a key component of Joint long-range multi-domain fires critical to executing contingency operations in the Indo-Pacific.
- Clandestine Delivered Mine—Studies and wargaming analysis repeatedly show that naval mines are efficient and cost-effective means to exercise strategic influence over naval and amphibious operations and timeline. CDMs will provide the joint force the capability to clandestinely emplace minefields in key areas of the battlespace in order to limit adversary submarine access and significantly reduce their capability to hold U.S. and allied naval forces at risk.
- Hammerhead Mine—Studies and wargaming analysis repeatedly show that naval mines are efficient and cost-effective means to exercise strategic influence over naval and amphibious operations and timeline. This capability addresses operational needs stated in USINDOPACOM Joint Emergent Operational Need (JEON) PC–0012, the Joint Maritime Mining (JMM) Initial Capabilities Document (ICD), the Navy's Subsea Seabed Warfare (SSW) ICD, and the last five USINDOPACOM Integrated Priorities List (IPL) submissions.
- Powered Quickstrike—The joint force requires advanced maritime mines delivered at significantly greater standoff distances than the current in-services mines. Studies and wargaming analysis repeatedly show that naval mines are an efficient and cost-effectives means to exercise strategic influence over naval and amphibious operations and timelines.
- Operationalize Near Term Space Control—The joint force must be able to conduct its range of military maneuver and execute operations at an acceptable level of risk, which includes its dependence on space-enabled information to provide position, navigation, and timing solutions, satellite communications, and intelligence, surveillance, and reconnaissance products. This ensures additional military options to lower the joint force commander's risk in executing operations in the Indo-Pacific.
- Offensive Cyber-Access and Effects—USINDOPACOM has a requirement for assured cyber effects and non-kinetic effects to be available should deterrence fail to hold adversary networks and platform at risk. With increasing technological sophistication of adversaries and increased reliance on information technology systems, these investments will continue to be of the utmost importance to advantages over our adversaries.
- All Domain Missile Warning and Missile Tracking Architecture—USINDOPACOM has THAAD systems in its theater and a requirement to protect the joint force. A classified requirement related to this capability was identified as a specific material solution that can mitigate the threat to the Joint Force
- Space-Based Persistent Custody Sensors—The Joint Force requires all-domain battlespace awareness across the UINDOPACOM AOR. This UPL directly supports future operations by ensuring commanders have the necessary information available to them to understand adversary actions at the operational-level of war, and if required, conduct decisive military operations at the tactical-level.
- Cyber Security and Network Defenses—The joint force must be able to conduct the full range of military maneuvers and execute operations at an acceptable level of risk, which includes resilient cyber security and network defenses that enable the military to achieve its objectives in crisis or conflict while depending on networks that face steady-State cyber threats.
- International Security Cooperation Program—The specific requirements are described in the classified USINDOPACOM Section 1254 annex V.
- Joint Task Force Indo-Pacific—Funding supports integration of JTF-IP with USINDOPACOM components, and FVEY partners to maximize resources and information sharing to develop a cogent common intelligence and common operational picture.
- Asia Pacific Regional Initiative—APRI is intended to support engagements with developing countries and may support both military-to-military and civil-to-mili-

tary activities (where the focus may be on humanitarian assistance). Proposed APRI events must support theater strategy found in USINDOPACOM's Theater Campaign Plan and relevant country engagement plans. APRI provides an opportunity to add developing nation participation in valuable theater security cooperation exercises by adding troops, bringing in specialized participants, or diversifying the audience with new attendees.

- HQ Manpower Enhancements—This is a critical headquarters manpower gap, which directly impacts our "to be 2025" vision that is strategically enables integrated deterrence.
- Joint Training, Exercise and Evaluation Program—USINDOPACOM joint exercises are key operations, activities, and investments (OAIs) to move combat credible forces and service critical capabilities forward in theater and interoperate with allies and partners. Furthermore, these forces are forward in locations that may not typically permit full-time basing and are postured in a persistent manner given timing and locations of exercises over the course of the year to deter near-peer, adversarial aggression and strengthen partners against coercion.
- Service Tactical SIGINT Upgrades and Processing, Exploitation, Dissemination (PED) Enhancements—The operational requirement is to support all-domain battlespace awareness with a joint fires network through enabling real-time PED of raw intelligence, collected from multiple sources, to enable fused analysis, and support indications and warnings and joint targeting.
- Resilient TS-SCI Warfighting Architecture—The following capabilities are required for both fixed and expeditionary mission during competition, crisis, and conflict: (1) establish a TS/SCI Regional cloud presence in the theater; (2) install and connect sub-regional and forward edge/expeditionary nodes and; (3) procure/connect an expeditionary multi-spectrum, multi-domain data transport service.
- Information Operations—USINDOPACOM requires additional IO capacity to execute OIE during strategic competition with regional near-peer adversaries. In addition, funding provides flexibility to engage dynamically in the information environment against emerging operational requirements or the activation of USINDOPACOM campaign and operation plans.

25. Senator WARREN. Admiral Aquilino, what is the operational impact if this Unfunded Priorities Lists is not funded in fiscal year 2024?

Admiral AQUILINO.

- Guam Defense System—In the event of a crisis or contingency Guam would experience a variety of missile threat capabilities to include increased risk against ballistic, hypersonic, and maneuvering threats from all axis (360-degree).
- Joint Fires Network—If the JFN is not funded, USINDOPACOM will continue to experience significant challenges with executing joint, long rage fires at speed and scale necessary for a conflict with a peer adversary.
- Mission Partner Environment—If MPE is not funded, there is an acceptance of higher risk by relying on older, more vulnerable technologies which USINDOPACOM will rely heavily upon to conduct future operations during contingencies.
- Maritime Strike Tomahawk (MST)—If MST is unfunded, it will not be delivered in operationally relevant quantities until well after 2030, significantly impacting the Joint Force's capability to deter and defeat aggression by near-peer adversaries. Unmitigated risk to force and, by extension, to mission could prove highly detrimental to the achievement of NDS-directed operational and strategic goals.
- USINDOPACOM Campaigning—If this item is not funded, the strategic preparation and theater-wide shaping operations necessary to support the Secretary of Defense-directed objectives will be significantly diminished. USINDOPACOM campaigning efforts are designed to convey U.S. resolve and contribute to integrated deterrence through sustained active presence across the wide expanse of the Indo-Pacific region continuously.
- Persistent Undersea Targeting—The current systems are baselined for improvement in future years, but his system will not available at the timeline directed by Commander, USINDOPACOM.
- Military Construction—Further delays for critical MILCON projects that directly support USINDOPACOM's posture requirements. MILCON projects take approximately 7–8 years from defined requirements to construction completed. If this request remains unfunded, it will further delay that timeline.

- Joint Training Team—Lack of funding will delay the delivery of critical self-defense capabilities.
- Joint Task Force Micronesia—Lack of funding places at risk the timely and effective execution of $12.8 billion in military construction across the FYDP associated with the Defense of Guam. A joint operational command is required within Micronesia to integrate requirements, coordinate lines of effort, plan supporting infrastructure where required, and ensure sufficient manning and resourcing are available to achieve mission success.
- Precision Strike Missile (PrSM) Increment 2 (USA)—If not funded, the PrSM Inc 2 and 5 will not be delivered in operationally relevant quantities until after 2030, significantly impacting the joint force's capability to deter and defeat aggression by near-peer adversaries in near to mid-term.
- Joint Experimentation and Innovation—Without funding, USINDOPACOM will not be able to execute joint experiments focused on developing capabilities for Taiwan Self-Defense as well as experimentation conducted with other allies and partners.
- Standard Missile 6 (SM–6) 1B Variant—If not funded, the SM–6 Blk IB will not be delivered in operationally relevant quantities until after 2030, significantly impacting the joint force's capability to deter and defeat maritime aggression by near-peer adversaries in near to mid-term.
- Clandestine Delivered Mine—If not funded, the CDM will not be delivered in operationally relevant quantities until after 2030, significantly impacting the joint force's capability to deter and defeat aggression by near-peer adversaries. Unmitigated risk to force and, by extension, to mission could prove highly detrimental to the achievement of NDS-directed operational and strategic goals.
- Hammerhead Mine—If this UFR is not funded, the Hammerhead Mine will not delivered in operationally relevant quantities until 2030, significantly impacting the joint force's capability to deter and defeat aggression by near-peer adversaries. Unmitigated risk to force and, by extension, to mission could prove highly detrimental to the achievement of NDS-directed operational and strategic goals.
- Powered Quickstrike—If not funded, QS-P will not be delivered in operationally relevant quantities until after 2030, significantly impacting the Joint Force's capability to deter and defeat aggression by near-peer adversaries.
- Operationalize Near Term Space Control—Each program identified is currently in development but the operational impact of these capabilities will be significantly reduced (<50 percent effective) in the near-team without these additional funds. These efforts ensure USINDOPACOM and USSPACECOM are synchronized in our ability to deliver integrated deterrence in the Indo-Pacific. Without the seamless integration of space capabilities into an all-domain approach to warfighting, the Joint Force Commander is at greater risk of accomplishing defined objectives.
- Offensive Cyber-Access and Effects—If not funded, the capabilities will be delayed for consideration in the fiscal year 2025 budget cycle, increasing the risks to the joint force commander.
- All Domain Missile Warning and Missile Tracking Architecture—THAAD currently has limitations that the classified level. If not funded, known limitations will remain until development effort is completed, posing a risk to the joint force commander.
- Space-Based Persistent Custody Sensors—The current systems are baselined in President's Budget 2024, but this systems will not be available at the timeline directed by Commander, USINDOPACOM.
- Cyber Security and Network Defenses—If not funded, the capabilities will be delayed for consideration in the fiscal year 2025 budget cycle, increasing the risks to network security for the joint force commander.
- International Security Cooperation Program—If not funded, the 11 listed programs will not execute in fiscal year 2024, reducing our ability to strengthening relationships with allies and partners.
- Joint Task Force Indo-Pacific—If not funded, USINDOPACOM will lose capabilities necessary for information sharing with regard to PRC activities and influence in the Indo-Pacific
- Asia Pacific Regional Initiative—USINDOPACOM will lose one of its primary tools to fund initiatives to strengthen relationships with its allies and partners, relationships that represent a key component of U.S. national power. Based on

historical requests, operational impact to projects under APRI include: reduction in support to Pacific Partnership missions, de-scoping or reduction in participation at bilateral dialogs and a reduction in component HQ security cooperation activities.

- HQ Manpower Enhancements—without additional funding, we will lose talent and the opportunity to hire highly skilled candidates who want to work here. This will impede INDOPACOM's ability to most effectively execute its mission as directed in the NDS.
- Joint Training, Exercise and Evaluation Program—USINDOPACOM will lose the ability to strengthen relationships with its allies and partners. USINDOPACOM will also lose the ability to adequately rehearse, assess, and improve warfighting missions.
- Service Tactical SIGINT Upgrades and Processing, Exploitation, Dissemination (PED) Enhancements—If left unsourced, USINDOPACOM will remain limited in its ability to process all sources of multi-domain data (GEOINT, SIGINT, Full Motion Video and OSINT), and support intelligence analysis. As the Department of Defense continues to invest in front-end sensor collection capabilities, there must be a corresponding investment in PED efforts in order to ensure the Joint Force is informed in real-time.
- Resilient TS-SCI Warfighting Architecture—USINDOPACOM intelligence operations is a "no fail" mission. Secure, resilient, and survivable architecture must provide the warfighter with a Regional, Sub-Regional, and Tactical Edge architecture to conduct all-domain battlespace awareness and store, compute, and movement of data in competition through crisis. These networks and the ability to operate in a denied, disrupted, intermittent, and limited (bandwidth) (DDIL) environment is imperative to supporting operations across all phases of conflict.
- Information Operations—USINDOPACOM's ability to operate in the information environment will be degraded, as it begins to lose current capabilities and capacities. USINDOPACOM currently uses baseline appropriations originally created in 2009 to counter violent extremism, without notable growth. Current funding does not account for strategic competition with two major powers and one rogue State.

26. Senator WARREN. Admiral Aquilino, are there plans to include this item in the fiscal year 2025 base budget?

Admiral AQUILINO. The funding for projects within the USINDOPACOM UPL does not fall within the command's annual budget; these projects are resourced by each of the military service budgets. USINDOPACOM advocates for the project funding, but does not determine funding levels within the services' budget submissions.

27. Senator WARREN. Admiral Aquilino, why was this Unfunded Priorities Lists not included in the Fiscal Year 2024 President's Budget submission?

Admiral AQUILINO. The funding for projects within the USINDOPACOM UPL does not fall within the command's annual budget; these projects are resourced by each of the military service budgets. USINDOPACOM advocates for the project funding, but do not determine funding levels within the services' budget submissions.

28. Senator WARREN. Admiral Aquilino, what is the name of the vendor(s) executing this effort? Sub-vendor(s)?

Admiral AQUILINO.

- Guam Defense System—Bluehalo, USAF, Northrop Grumman, DOD-Defense Information Systems Agency, Lockheed Martin, Johns Hopkins Applied Physic Laboratory, USN, Innovative Defense Technologies, MDA, USA, USTRANSCOM.
- Joint Fires Network—Lockheed Martin, Anduril, Palantir, J Johns Hopkins Applied Physic Laboratory, MITRE, Two-Six Tech, Raytheon, Northrop Grumman, Space-X, KBR, and Viasat.
- Mission Partner Environment—Multiple Services and OSD System Program Offices, and multiple vendors reachable through existing contract vehicles, including OTAs.
- Maritime Strike Tomahawk (MST)—Raytheon
- USINDOPACOM Campaigning—Multiple vendors across all services.
- Persistent Undersea Targeting—Lockheed Martin, NIWC PAC

- Military Construction—The Design and Construction Agent (DCA) will go through their acquisition process to determine vendor.
- Joint Training Team—N/A
- Joint Task Force Micronesia—N/A
- Precision Strike Missile (PrSM) Increment 2 (USA)—Lockheed Martin
- Joint Experimentation and Innovation—Multiple Services and OSD System Program Offices, and multiple vendors reachable through existing contract vehicles, including OTAs.
- Standard Missile 6 (SM–6) 1B Variant—Raytheon Missile and Defense
- Clandestine Delivered Mine—Lockheed Martin, Boeing, John Hopkins APL
- Hammerhead Mine—General Dynamics Mission System (GDMS) is the primary government contractor developing the Hammerhead mine prototype. Existing contracts can also be leveraged to support dependencies across multiple entities.
- Powered Quickstrike—Boeing
- Operationalize Near Term Space Control—USSF is the lead agency. Specific vendor details are at a higher classification.
- Offensive Cyber-Access and Effects—This effort is executed by multiple vendors, many are contained within existing USCYBERCOM or service contracts.
- All Domain Missile Warning and Missile Tracking Architecture—Lockheed Martin and Raytheon.
- Space-Based Persistent Custody Sensors—USSF is the lead agency. Specific vendor details are at a higher classification.
- Cyber Security and Network Defenses—This effort is executed by multiple vendors, many are contained within existing USCYBERCOM or service contracts.
- International Security Cooperation Program—A variety of vendors are used by the Implementing Agencies. It is unknown until the annual contracts are awarded.
- Joint Task Force Indo-Pacific—Vendor to be determined.
- Asia Pacific Regional Initiative—USINDOPACOM J5 has oversight of APRI and the Resource Program Manager (RPM) is responsible for managing submissions. The RPM works closely with Comptroller and General Counsel in implementing the program. Ultimately, all activities resources by APRI are prioritized and approved by the USINDOPACOM Deputy Director for Policy.
- HQ Manpower Enhancements—N/A
- Joint Training, Exercise and Evaluation Program—JTEEP uses both organic and multiple contracted strategic lift vendors.
- Service Tactical SIGINT Upgrades and Processing, Exploitation, Dissemination (PED) Enhancements—Multiple vendors are executing this effort through Department of the Army contracts.
- Resilient TS-SCI Warfighting Architecture—USINDOPACOM is working with NGA Warfighter Support (TEX) for the edge node and transport solutions; likely to be fulfilled by NGA's contract vehicle. The OCONUS Cloud solution will be coordinated through DIA CIO.
- Information Operations—Amentum, Booz Allen Hamilton, General Dynamics Information Technologies, Madison Springfield and Peraton, Radio Free Asia is a Grantee for some requirements.

29. Senator WARREN. Admiral Aquilino, how often has your command met with the vendor executing this effort? Please provide a list of all such meetings, and the agenda for these meetings?

Admiral AQUILINO. We defer to the services regarding contact with the vendors.

30. Senator WARREN. Admiral Aquilino, what is your history with this vendor? Please detail when the relationship began, the number of contracts applied for by this vendor, the number of contracts awarded to this vendor, and if you have had a personal relationship with the vendor.

Admiral AQUILINO. We defer to the services regarding their history with the vendors.

31. Senator WARREN. Admiral Aquilino has anyone who formerly worked for your command represented the vendor in meetings? What is their name, what was their position, and when did you meet with them?

Admiral AQUILINO. We defer to the services regarding previous employment with the vendors.

32. Senator WARREN. Admiral Aquilino, in which city/State will the Unfunded Priorities Lists be executed?
Admiral AQUILINO. We defer to the services regarding specific contract related inquires.

33. Senator WARREN. Admiral Aquilino, is this requirement on an existing contract? If so, with who? What is the history of the contract?
Admiral AQUILINO. We defer to the services regarding specific contract related inquires.

34. Senator WARREN. Admiral Aquilino, what is the anticipated contract award date if the Unfunded Priorities Lists receives funding?
Admiral AQUILINO. We defer to the services regarding specific contract related inquires.

35. Senator WARREN. Admiral Aquilino, what funding lines are associated with this Unfunded Priorities Lists?
Admiral AQUILINO.

36. Senator WARREN. Admiral Aquilino, if multiple appropriations fund this requirement, must all appropriations be funded simultaneously to source this requirement, or can each appropriation stand on its own to fund a portion of the requirement?

Admiral AQUILINO.

- USINDOPACOM Campaigning-This requirement funds Component operations and allows them to vary the size, scale, scope, and duration of those operations based on the resourcing available.
- Military Construction—Design. Yes. Each appropriation funds separate and distinct requirements and can stand on its own.
- Military Construction—Construction. Yes. Each appropriation funds separate and distinct requirements and can stand on its own.

- Precision Strike Missile (PrSM)—Yes. Each appropriation can stand on its own.
- Joint Experimentation and Innovation—Yes. Each appropriation can stand on its own to fund a portion of the requirement. However, failure to fund the O&M, Navy, will significantly hamper/delay the speed of executing the RDTE appropriation.
- Standard Missile 6 (SM–6) 1B Variant—Yes. Each appropriation can stand on its own.
- Hammerhead Mine—Yes. Each appropriation can stand on its own.
- Powered Quickstrike—Yes. Each appropriation can stand on its own.
- Resilient TS-SCI Warfighting Architecture. The appropriations between DIA and NGA do have to be simultaneous, however all NGA funding should be appropriated simultaneously and all DIA funding should be appropriated simultaneously to ensure capability delivery for UNINDOPACOM.

37. Senator WARREN. Admiral Aquilino, how much was enacted and obligated (or expended for Research, Development, Test, & Evaluation) in fiscal year 2022 to 2023 for this requirement?

Admiral AQUILINO.

43. Senator WARREN. Admiral Aquilino, if the requirement is not included in the future years defense plan, will that be rectified in the next Program Objective Memorandum or the Program, Planning, Budget, and Execution (PPBE) cycle?

Admiral AQUILINO. USINDOPACOM will continue to advocate for required joint force capabilities in the services future POMs.

44. Senator WARREN. Admiral Aquilino, please provide photos of this requirement for visual aid.

Admiral AQUILINO. Please reference the visual aids contained in the 2023 National Defense Authorization Act (NDAA) Section 1254 Independent Assessment.

DOD CIVILIAN PERSONNEL IN INDOPACOM

45. Senator WARREN. Admiral Aquilino and General LaCamera, how many civilian personnel and contractors are assigned to INDOPACOM and and United States Forces Korea?

Admiral AQUILINO.

Civilian	Contractor	Total
42460	7499	49959

General LACAMERA. U.S. Appropriated Funded Government Service Civilians: 2,670

U.S. Non-Appropriated Funded Service Civilians: 795

U.S. Invited Contractors: 2,909

46. Senator WARREN. Admiral Aquilino and General LaCamera, please provide a breakdown of many civilian personnel and contractors at each installation in INDOPACOM and are (1) teachers; (2) medical personnel, including those mental health services to military personnel; (3) Human Resources personnel; (4) law enforcement personnel; (5) science, engineering, or technical personnel; (6) communications personnel; and (7) contracts, supplies, and logistics personnel.

47. Senator WARREN. Admiral Aquilino and General LaCamera, how do civilian personnel and contractors in each of the following areas support military readiness in the region: (1) teachers; (2) medical personnel, including those mental health services to military personnel; (3) Human Resources personnel; (4) law enforcement personnel; (5) science, engineering, or technical personnel; (6) communications personnel; and (7) contracts, supplies, and logistics personnel.

Admiral AQUILINO.

Teacher: Teachers are skilled and adaptable, able to teach a diverse student population with varying educational backgrounds and needs. They have experience in education, bring a fresh perspective and are able to provide innovative and effective teaching methods to support the unique needs of our military children.

Medical: Civilian healthcare professionals provide mental health care, primary care, and other essential services to military members and their families. This helps keep servicemembers healthy, ready and deployable. Our employees in the medical and mental health fields bring a wealth of expertise and experience to military operations. They are skilled in their areas of specialization and provide valuable insights and innovative solutions to medical and mental health challenges.

Human Resources: Employees execute personnel related functions in a variety of roles; including recruitment, training and development, compensation and benefits, employee relations, and workforce planning. They help ensure military have the right people with the right skills in the right positions to meet mission requirements.

Law Enforcement: Employees bring a wealth of expertise and experience to law enforcement operations. Civilian law enforcement professionals help keep U.S. installations and communities in the AOR safe. They investigate crimes, enforce laws, and provide security for servicemembers and their families. By working together with military law enforcement personnel, civilian employees help maintain a secure and stable environment that supports military operations in the region.

Science, Engineering, or Technical: Civilian personnel and contractors from science, engineering and other similar technical fields deliver military readiness in the INDOPACOM AOR by serving as the institutional backbone of knowledge and experience across the total joint force. These personnel are particularly vital in technical fields as they often directly support warfighting platforms or the installations and associated infrastructure from which the warfighting platforms train and operate daily. Furthermore, civilians in the engineering field often provide the long-term strategic vision for installations and can maintain momentum for operational initiatives.

Communications: Effective communication in the USINDOPACOM AOR is essential for mission success, as it enables us to coordinate efforts, share information, and respond quickly and effectively to changing circumstances. Our employees work in a variety of roles, including network administration, radio and satellite communications, information technology, and cybersecurity. They help to ensure that our military has the communication capabilities it needs to operate effectively, particularly in our unique theater of operations.

Contracts, Supplies, and Logistics: Booth civilians and contractors provide essential support services to our military, including supply chain management, transportation, maintenance and repair, and other logistical functions. They work closely with our military personnel to ensure that logistics operations are running smoothly and efficiently both in armistice and in contingency planning.

General LACAMERA. Government civilians and contractors are a crucial support mechanism in the augmentation of military personnel in the Korean Theater of Operations. Military members depart Korea at a greater than fifty percent annual rotation rate. Therefore, the civilian community provides continuity in support of mission readiness. (1) Teachers in Korea play a vital role in supporting our military mission readiness as they are responsible for educating our DOD affiliated children, many of whom face unique challenges and stresses. Department of Defense Education Association (DODEA) personnel in Korea are skilled and able to teach a diverse student population with varying educational backgrounds. Education opportunities enable families to stay together thereby enhancing readiness and morale and enabling longer than 1-year tours which, in turn, increases continuity. (2) Medical Personnel: Civilian and contract medical providers enhance medical readiness for the force by filling the Specialty Care billets that are not organic to the combat medical mission of the 65th Medical Brigade, and by providing a significant percentage of the Primary Care delivered in the Family Practice, Physical Therapy, and Behavioral Health clinics. Additionally, about 80 percent of the staff at Brian D. Allgood Hospital is borrowed military manpower from the 65th Medical Brigade, which must maintain its primary mission of Tactical Field Care through regular unit-level training and field exercises. Civilians and contractors provide the continuity of care nec-

essary to maintain hospital operations during these required military training events. Last, military medical providers are limited to a 1-year or 2-year assignment on the peninsula. Civilians and contract staff on longer-term contracts provide the necessary longitudinal care essential in maintaining the accepted universal Standards of Medical Care and ensuring overall Patient Satisfaction in the Military Health System. (3) Civilian Human Resources Personnel augment our military personnel specialist by providing expertise and sustainability of human resource programs and personnel management. (4) Civilian Law Enforcement Personnel are skilled in their areas of specialization and provide valuable insights to ensure training and awareness regarding law enforcement challenges in Korea as well as continuity of operations. Working together with Military Police and Customs Personnel, civilian employees help to maintain security and properly inform the expat community regarding Korean law. (5) Science, Engineering and Technical Civilian Personnel assist in ensuring our military has the capabilities it needs to carry out its missions effectively. They play a critical role in maintaining sustained and continued technological superiority, essential for the success of military operations. (6) Civilian Communications Personnel provide expertise and continuity. Civilian employees in communications work in a variety of roles, including network administration, radio and satellite communications, information technology, and cybersecurity. (7) Civilian Contracts, Supplies and Logistics Personnel augment military specialists in support of supply chain management, transportation, maintenance and repair, and other logistical functions, ensuring that logistics operations are running smoothly and efficiently both in armistice and, if needed, during crisis and resumption of combat operations.

48. Senator WARREN. Admiral Aquilino, in September 2022, the U.S. Naval Hospital Yokusuka in Japan announced it would cease providing care to Department of Defense (DOD) contractors and civilians, leaving around 4,000 individuals uncertain about their healthcare access. In March 2023, DOD reversed this policy but there remain concerns about the quality and healthcare access for DOD-affiliated civilians and contractors. Please provide a breakdown of many civilian personnel and contractors at each installation in Japan are (1) teachers; (2) medical personnel, including those mental health services to military personnel; (3) Human Resources personnel; (4) law enforcement personnel; (5) science, engineering, or technical personnel; (6) communications personnel; and (7) contracts, supplies, and logistics personnel.

49. Senator WARREN. Admiral Aquilino, how do civilian personnel and contractors in each of the following areas support military readiness in Japan: (1) teachers; (2) medical personnel, including those mental health services to military personnel; (3) Human Resources personnel; (4) law enforcement personnel; (5) science, engineering, or technical personnel; (6) communications personnel; and (7) contracts, supplies, and logistics personnel.

Admiral AQUILINO.

Teacher: Teachers support military readiness by delivering a quality, accredited pre-kindergarten through 12th grade education to military-connected children around the world. DODEA's teachers ensure that all school-aged children of military families are provided world-class education that prepares them for postsecondary education and/or career success and to be leading contributors in their communities as well as our globalized society.

Medical: Civilian healthcare professionals provide mental health care, primary care, and other essential services to military members and their families. This helps keep servicemembers healthy, ready and deployable. Our employees in the medical and mental health fields bring a wealth of expertise and experience to military operations. They are skilled in their areas of specialization and provide valuable insights and innovative solutions to medical and mental health challenges.

Human Resources: Civilian and contracted H.R. representatives in Japan play a crucial role in managing civilian personnel programs and implementing policies that directly affect the total civilian workforce in country. Their contributions include influencing, developing, managing, and assessing the strategic direction of civilian

human resources plans, programs, and policies. Civilians comprise approximately 13 percent of the total force in Japan.

Law Enforcement: Employees bring a wealth of expertise and experience to law enforcement operations. Civilian law enforcement professionals help keep U.S. installations and communities in the AOR safe. They investigate crimes, enforce laws, and provide security for servicemembers and their families. By working together with military law enforcement personnel, civilian employees help maintain a secure and stable environment that supports military operations in the region.

Science, Engineering, or Technical: Civilian personnel and contractors from science, engineering and other similar technical fields deliver military readiness in Japan and the INDOPACOM area of operations by serving as the institutional backbone of knowledge and experience across the total joint force. These personnel are particularly vital in technical fields as they often directly support warfighting platforms or the installations and associated infrastructure from which the warfighting platforms train and operate daily.

Communications: Effective communication in the USINDOPACOM AOR is essential for mission success, as it enables us to coordinate efforts, share information, and respond quickly and effectively to changing circumstances. The C4 System Directorate provides coordinated communications systems support to the USFJ CDR and provide agile, resilient, and integrated C4 capabilities in support of the US-Japan Alliance and regional contingency operations. Our employees work in a variety of roles, including network administration, radio and satellite communications, information technology, and cybersecurity. They help to ensure that our military has the communication capabilities it needs to operate effectively, particularly in our unique theater of operations.

Contracts, Supplies, and Logistics: Booth civilians and contractors provide essential support services to our military, including supply chain management, transportation, maintenance and repair, and other logistical functions. They work closely with our military personnel to ensure that logistics operations are running smoothly and efficiently both in armistice and in contingency planning. Contracts and contractors lower the cost to the U.S. Government and allow us to operate in otherwise inaccessible areas. For supplying and sustaining the force, both AAFES and DeCA operate on every major U.S. installation and are completely civilian-run. These organizations provide vital support to both servicemembers and families by providing access to food and daily necessities that are not available outside the gate on the local economy.

50. Senator WARREN. Admiral Aquilino, does INDOPACOM provide standard information to new civilian personnel and contractor hires who are being stationed in Japan regarding the difficulty of healthcare access in Japan both in job listings and once they are hired? Please provide a copy of the information provided to new and prospective personnel.

Admiral AQUILINO. No, USINDOPACOM relies on the different service component's business practices as it relates to civilian/contractor hiring management. United States Navy and Army warn potential employee hires on the job announcement:

ACCESS TO MEDICAL AND DENTAL CARE IN JAPAN IS EXTREMELY LIMITED. Please see Additional Information section below.

Additional Information: Employees (and their family members) who require medical or dental care in Japan may experience severe limitations accessing medical care both on the military installation and the local economy, and also could incur costly medical expenses.

United States Air Force announcements do not carry this disclaimer in Japan.

Please see attached job announcement for copy of message.

SUPERVISORY ELECTRONICS TECHNICIAN

DEPARTMENT OF THE NAVY

U.S. Pacific Fleet

Summary

*****ACCESS TO MEDICAL AND DENTAL CARE IN JAPAN IS EXTREMELY LIMITED. Please see Additional Information section below.*****

You will serve as a SUPERVISORY ELECTRONICS TECHNICIAN in the SURVEILLANCE BRANCH of NAVAL SHIP REPAIR FACILITY.

This job is open to

Career transition (CTAP, ICTAP, RPL)
Federal employees who meet the definition of a "surplus" or "displaced" employee.

Family of overseas employees
Family members of a federal employee or uniformed service member who is or was, working overseas.

Internal to an agency
Current federal employees of this agency.

Land & base management
Certain current or former term or temporary federal employees of a land or base management agency.

Military spouses

Veterans

Clarification from the agency

Current and former permanent competitive federal employees and VEOA eligibles.

Duties

- You will be responsible for the administration, organization, staffing and operations of SRF-JRMC's C295 Branch.
- You will coordinate and manage Fleet Technical Assistance and recommendations ensuring the integrity of shipboard combat systems.
- You will plan, schedule, and set priorities for subordinate's work and assign technically capable personnel to the jobs.
- You will develop branch head performance standards and evaluate their work performance, advise all subordinates on work and administrative matters, resolve complaints and refer more serious unresolved complaints to upper level management.

Requirements

Conditions of Employment

- Must be a US Citizen.
- Must be determined suitable for federal employment.
- Must participate in the direct deposit pay program.
- New employees to the Department of the Navy will be required to successfully pass the E-Verify employment verification check. To learn more about E-Verify, including your rights and responsibilities, visit e-verify.gov
- Generally, current federal employees applying for GS jobs must serve at least one year at the next lower grade level. This requirement is called time-in-grade. Time-in-grade requirements must be met by the closing date of this announcement.
- This is an overseas position. You will be subject to and must be able to satisfy the overseas requirements of the 26Jul12 DODI 1400.25 V1230: http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/140025/140025v1230.pdf
- This position may require travel to places within and outside the contiguous United States which could include remote or isolated sites. You may be required to travel on military and commercial aircraft for extended periods of time.
- If eligible for permanent change of station, the appointee will be required to sign a transportation agreement to establish a Government time in service requirement of 12 months.
- Must be able to obtain and maintain a U.S. Passport.
- May be required to obtain a VISA dependent on the overseas country's laws/regulations.

- You will be required to sign the Statement of Understanding for Overseas Employment acknowledging receipt and understanding of the statement of living and working conditions for this location.
- Within the Department of Defense (DoD), the appointment of retired military members within 180 days immediately following retirement date to a civilian position is subject to the provisions of 5 United States Code 3326.
- Males born after 12-31-59 must be registered for Selective Service.
- You will be required to successfully complete a pre-appointment physical examination.
- You will be required to obtain and maintain an interim and/or final security clearance prior to entrance on duty. Failure to obtain and maintain the required level of clearance may result in the withdrawal of a job offer or removal.
- This position may require travel from normal duty station to CONUS and OCONUS and may include remote or isolated sites. You must be able to travel on military and commercial aircraft for extended periods of time.
- This position is considered Key/Emergency-Essential. You will be required to provide immediate and continuing support to ensure the success of combat operations or the availability of combat-essential systems.
- Supervisors in the executive branch have a heightened personal responsibility for advancing government ethics. You will be required to review the 14 General Principles of Ethical Conduct at 5 CFR 2635.101.
- This position is subject to work an uncommon tour, including nights, weekends, and holidays to meet mission requirements. Overtime or night differential pay and/or unusual duty hours may be required.

Qualifications

Your resume must demonstrate at least one year of specialized experience equivalent to the next lower grade level (GS-12) or pay band in the federal service or equivalent experience in the private or public sector one year of specialized experience equivalent to the next lower grade level (GS-12) or pay band in the federal service or equivalent experience in the private or public sector leading or directing the work of technical staff (e.g. reviewing work priorities and manpower resources, evaluating work and performance, etc.) AND coordinating the overhaul and repair of shipboard surveillance and combat systems.

Additional qualification information can be found from the following Office of Personnel Management web site:
https://www.opm.gov/policy-data-oversight/classification-qualifications/general-schedule-qualification-standards/#url=List-by-Occupational-Series
(https://www.opm.gov/policy-data-oversight/classification-qualifications/general-schedule-qualification-standards/#url=List-by-Occupational-Series)

Electronics Technical Series 0856 (opm.gov)
(https://www.opm.gov/policy-data-oversight/classification-qualifications/general-schedule-qualification-standards/0800/electronics-technical-series-0856/)

General Schedule Qualification Standards (opm.gov)
(https://www.opm.gov/policy-data-oversight/classification-qualifications/general-schedule-qualification-standards/#url=Group-Standards)

Experience refers to paid and unpaid experience, including volunteer work done through National Service programs (e.g., professional, philanthropic, religious, spiritual, community, student, social). Volunteer work helps build critical competencies, knowledge, and skills and can provide valuable training and experience that translates directly to paid employment.

Education

This job does not have an education qualification requirement.

Additional information

Employees (and their family members) who require medical or dental care in Japan may experience severe limitations accessing medical care both on the military installation and the local economy, and also could incur costly medical expenses.

This position is covered by the Department of Defense Priority Placement and Alternate Placement Programs.

Additional vacancies may be filled by this announcement.

Pay retention may be granted when certain conditions are met.

A tentative offer of employment will be rescinded if the selectee fails to meet the pre-employment requirements, including failure to report to any of the scheduled appointments.

If you are unable to apply online and request information about the Alternate Application process, please contact the Department of Navy's Employment Information Center.

Federal annuitant information: The selection of an annuitant is subject to the Department of Defense and Department of the Navy policy on the employment of annuitants. Policy information may be found at:
http://www.secnav.navy.mil/donhr/Documents/CivilianJobs/FedCivAnnuitants.pdf
(http://www.secnav.navy.mil/donhr/Documents/CivilianJobs/FedCivAnnuitants.pdf)

Tour of duty will be 36 Months.

To learn more about the living and working conditions at this military installation and additional Foreign Overseas information, please go to: https://www.secnav.navy.mil/donhr/Overseas/Pages/default.aspx
(https://www.secnav.navy.mil/donhr/Overseas/Pages/default.aspx)

Priority consideration will be given to military spouse preference and family member preference eligible residing in the commute area of the duty location for this position. Commute area is defined as the geographic area surrounding the duty location in which people can reasonably be expected to travel back and forth daily.

Military Spouses and Family Members may apply 30 days before their anticipated arrival date. However, they will not receive preference until arrival at the foreign location. Additional documentation may be required prior to granting preference.

Military spouses and family members who are appointed may not extend longer than 2 months following the transfer of the sponsor from the commuting area of the foreign duty station; 2 months beyond the separation of the appointee's sponsor; or any time beyond the time employee ceases to be a family member.

ICTAP Applicants: To be considered well-qualified and exercise selection priority as an ICTAP candidate, displaced Federal employees must satisfy all qualification requirements for the position and receive a rating in the highly qualified category (score 85) or higher. ICTAP candidates must provide copies of all of the following documentation at the time of application: 1) agency notice; 2) most recent performance appraisal; and 3) most recent SF-50 or notification of personnel action that includes position, grade level, and duty location. Applicants who do not provide this documentation will not receive consideration as an ICTAP candidate. For more information about ICTAP eligibility please review the following link: https://www.usajobs.gov/Help/working-in-government/unique-hiring-paths/federal-employees/ictap/
(https://www.usajobs.gov/Help/working-in-government/unique-hiring-paths/federal-employees/ictap/)

Certain incentives (such as Recruitment, Relocation or Student Loan Repayment) may be authorized to eligible selectees.

Benefits

A career with the U.S. government provides employees with a comprehensive benefits package. As a federal employee, you and your family will have access to a range of benefits that are designed to make your federal career very rewarding. Learn more about federal benefits
(https://www.usajobs.gov/Help/working-in-government/benefits/)
.

Review our benefits
(http://www.secnav.navy.mil/donhr/Benefits/Pages/Default.aspx)

Eligibility for benefits depends on the type of position you hold and whether your position is full-time, part-time or intermittent. Contact the hiring agency for more information on the specific benefits offered.

How You Will Be Evaluated

You will be evaluated for this job based on how well you meet the qualifications above.

In order to qualify for this position, your resume must provide sufficient experience and/or education, knowledge, skills, and abilities to perform the duties of the specific position for which you are being considered. Your resume is the key means we have for evaluating your skills, knowledge, and abilities as they relate to this position. Therefore, we encourage you to be clear and specific when describing your experience.

When the application process is complete, we will review your resume to ensure you meet the hiring eligibility and qualification requirements listed in this announcement. You will be rated based on the information provided in your resume and responses to the Occupational Questionnaire, along with your supporting documentation to determine your ability to demonstrate the following competencies:

- *ENGINEERING PROJECT MANAGEMENT*
- *MANAGING HUMAN RESOURCES*
- *ORAL COMMUNICATION*
- *PARTNERING*
- *TROUBLESHOOTING ELECTRONIC SYSTEMS AND EQUIPMENT*

You should list any relevant performance appraisals and incentive awards in your resume as that information may be taken into consideration during the selection process. If selected, you may be required to provide supporting documentation.

If after reviewing your resume and supporting documentation, a determination is made that you inflated your qualifications and/or experience, your score may be adjusted to more accurately reflect your abilities or you may be found ineligible/not qualified.

Please follow all instructions carefully. Errors or omissions may affect your rating or consideration for employment.

All eligibility, qualifications, and time-in-grade requirements must be met by the closing date of this announcement.

Required Documents

You are required to provide documentation that supports the eligibility and qualification claims made in your resume and assessment questionnaire. You must submit the applicable documents listed here and those listed with the eligibilities you select in the announcement questionnaire with your application package. Applicants who do not provide supporting documentation that fully support their claims will not be referred to the hiring manager. Cover letter is optional.

A complete resume is required. Your resume must show relevant experience, job title, duties and accomplishments. Your resume must show complete information for each job entry to support minimum qualifications. The following information should be provided in your resume, but it is acceptable to provide elsewhere in your application package: employer's name, starting and end dates (Mo/Yr), hours per week, and pay plan, series and grade level (e.g. GS-0201-09) for relevant federal experience.TIP: A good way to ensure you include all essential information is to use the Resume Builder in USAJOBS to create your resume.

Are you applying for a promotion? If you are a current GS employee applying for a higher grade than the grade that you currently hold you must provide an SF-50 that shows that you have held the next lower grade for at least one year. Some SF-50s effective within the last 52 weeks will not demonstrate you have held the next lower grade for at least one year (e.g. General Adjustment SF-50 from this year). In many cases, we need to see two (2) SF-50s to determine time-in-grade and eligibility for promotion. If you are a DoD employee, you can obtain a copy of your SF- 50(s) from MyBiz (https://compo.dcpds.cpms.osd.mil/)
.

Are you claiming membership in any professional organizations, or possession of a license, certificate or credentials? Check the **Conditions of Employment** section above to see if any are required. If you claim membership, license, certification, or credentials, you must submit a copy of said document in your application package.

Are you using education as a substitute for some or all of the experience requirement? Is there a basic education requirement for this position? Check the **Education** section above to see what is allowed and what is required. Any claims you make in your resume or assessment questionnaire regarding education or degrees MUST be supported by submitting with your application official or unofficial transcripts or a list of courses, grades earned, completion dates, and quarter and semester hours earned issued from your school. While unofficial transcripts are acceptable for initial application, an official transcript will ultimately be required if you are selected for the position. You may submit a copy your degree(s) if specific coursework does not have to be verified.

Are you a veteran claiming 5-point veterans' preference or **claiming sole survivorship preference?** You must submit a copy of your latest DD-214 Certificate of Release or Discharge from Active Duty (any copy that shows all dates of service, as well as character of service [Honorable, General, etc.] is acceptable) OR a VA letter that shows dates of service or service connected disability AND character of service. If you have more than one DD-214 for multiple periods of active duty service, submit a copy for each period of service. If you were issued a DD-215 to amend aforementioned information on the DD-214 you must submit that too. If you are not sure of your preference eligibility, visit the Department of Labor's website: Veterans' Preference Advisor (https://webapps.dol.gov/elaws/vets/vetpref/mservice.htm)

Are you a disabled veteran or claiming 10-point veterans' preference?
If you are eligible to claim 10 point veterans preference you must submit a DD-214 Certificate of Release or Discharge from Active Duty as described above for 5-point preference.

You must also provide the applicable supporting documentation of your disability (e.g. disability letter from the VA) as described on Standard Form-15 (SF-15). http://www.opm.gov/forms/pdf_fill/SF15.pdf (http://www.opm.gov/forms/pdf_fill/SF15.pdf)
.

Are you an active duty service member? Active Duty Service Members are required to submit a statement of service printed on

command letterhead and signed by the command. The statement of service must provide the branch of service, rate/rank, all dates of service, the expected date of discharge and anticipated character of service (Honorable, General, etc.).

Documents submitted as part of the application package, to include supplemental documents, may be shared beyond the Human Resources Office. Some supplemental documents contain personal information such as SSN and DOB and some documents such as military orders and marriage certificates may contain personal information for someone other than you. You may sanitize these documents to remove said personal information before you submit your application. You must provide an un-sanitized version of the documents if you are selected.

How to Apply

Click the Apply Online button to create an account or log in to your existing USAJOBS account.

To apply for this position, you must provide a complete Application Package which includes:
1. Complete resume with relevant experience, job title, duties and accomplishments. Your resume must show complete information for each job entry to support minimum qualifications. The following information should be provided in your resume, but it is acceptable to provide elsewhere in your application package: employer's name, starting and end dates (Mo/Yr), hours per week, and pay plan, series and grade level (e.g. GS-0201-09) for relevant federal experience.TIP: A good way to ensure you include all essential information is to use the Resume Builder in USAJOBS to create your resume.
2. Complete assessment questionnaire. For a quick preview of the assessment questionnaire click here:
https://apply.usastaffing.gov/ViewQuestionnaire/11854311
(https://apply.usastaffing.gov/ViewQuestionnaire/11854311)

3. Supporting documentation

Failure to submit a complete application package will result in an ineligible rating and loss of consideration.

Your complete application (resume, assessment questionnaire, and all supporting documents) must be received by 11:59 pm Eastern Standard Time (EST) on 03/02/2023. Applications received after 03/02/2023 will generally result in an ineligible rating and loss of consideration. If more than one resume is received, only the last resume received and processed will be reviewed.

NOTE: To check the status of your application or return to a previous or incomplete application, log into your USAJOBS account:
https://mydon.usajobs.gov/Account/Login
(https://mydon.usajobs.gov/Account/Login)
select Application Status, and click on the more information link under the application status for this position. Your uploaded documents may take several hours to clear the virus scan process so please plan appropriately.

You are encouraged to apply online. Applying online will allow you to review and track the status of your application.

Do not email or send hard copy resumes/applications to the Contact Information or Agency Information listed in this vacancy announcement. All resumes/applications received at the addresses listed in the Contact Information or Agency Information will be destroyed and will not be considered for this vacancy announcement.

It is the applicant's responsibility to verify that all information in their resume and documents are legible and accurate. HR will not modify answers/documents submitted by an applicant.

Next steps

When the application process is complete, your complete application (resume, assessment questionnaire, and all supporting documents) will be reviewed to determine if you meet the hiring eligibility and qualification requirements for which you requested consideration. You will be rated based on the information provided in your resume and responses to the questionnaire, along with your supporting documentation to determine your level of knowledge, skill, and ability related to the job requirements.

Generally, only best qualified candidates will be referred to the hiring manager. Sometimes well qualified andminimally qualified candidates are referred. Occasionally, candidates eligible for priority consideration are referred, and no other candidates are referred.

The hiring manager may choose to conduct interviews.

You will be notified of our rating and referral decision. If you are referred, you will be notified when a hiring decision is made.

NOTE: Due to COVID19, if you have any questions or need assistance, please email the DON Employment Information Center at DONEIC@us.navy.mil

CIVILIAN HARM MITIGATION AND RESPONSE ACTION PLAN

51. Senator WARREN. Admiral Aquilino, what steps has INDOPACOM taken to implement the Civilian Harm Mitigation and Response Action Plan (CHMR-AP) thus far?

Admiral AQUILINO. INDOPACOM's J5 staff spearhead our civilian harm mitigation and response (CHMR) effort across the command. A cross-functional team meets regularly to guide the hiring process and to prioritize and sequence implementation. Incoming CHMR staff will be able to hit the ground running. INDOPACOM staff have readily absorbed the intended elements of good practice for civilian harm mitigation that build on existing procedure. Notably, our Joint Fires Element has integrated additional civilian harm mitigation measures into command targeting policy and has begun regularly integrating civilian harm mitigation vignettes and lessons learned into joint fires and targeting working groups.

52. Senator WARREN. Admiral Aquilino, what steps will INDOPACOM take within the next year to implement the Civilian Harm Mitigation Response-Action Plan?

Admiral AQUILINO. Our CHMR priority is to tailor and adapt pre-and post-strike Civilian Harm Mitigation and Response (CHMR) requirements and capabilities to ensure mission success in potential large-scale, multi-domain, and high-tempo combat in the Indo-Pacific context. Our cross-functional effort will be led by a CHMR Officer empowered to prioritize and direct CHMR-AP implementation consistent with urgent command priorities for enhanced mission readiness. With this lens, we will continue to tailor command-specific procedures to theater-specific considerations and operational requirements. INDOPACOM's large command post exercises offer the best opportunities to comprehensively test and refine CHMR procedures in large-scale combat scenarios and, in so doing, make meaningful progress against several CHMR-AP objectives. As we do so, the perspectives and capabilities of our key allies and partners is critical. In the coming year, I anticipate a robust dialog with allies and partners to set the conditions for shared practice to mitigate and respond to civilian harm in multinational operations.

53. Senator WARREN. Admiral Aquilino, how do you intend to monitor and assess the efficacy of the current implementation plan?

Admiral AQUILINO. Our progress to implement the Civilian Harm Mitigation and Response Action Plan (CHMR-AP) warrants regular attention throughout the INDOPACOM battle rhythm. CHMR must be integrated across command policies, procedures, and plans; it is not merely a temporary program conducted on the margins of our core business. A critical indicator will be how civilian harm risks are anticipated and addressed in our most critical operational plans and addressed in conjunction with allies and partners. The comprehensive integration of civilian harm considerations and dedicated CHMR capabilities in our large exercises will offer the best insight into the efficacy of our implementation efforts.

54. Senator WARREN. Admiral Aquilino, what steps is INDOPACOM taking to tailor new civilian harm mitigation and response requirements and capabilities to possible large-scale combat operations, including through integration into strategy, doctrine, planning, professional military education, training, and exercises?

Admiral AQUILINO. Tailoring civilian harm mitigation and response (CHMR) capabilities for potential large-scale multi-domain combat operations is exactly our focus for CHMR-AP implementation at INDOPACOM. For example, the intelligence products of our Civilian Environment Team will need to be focused on high-density urban centers and life-sustaining urban infrastructure in close proximity to military targets. We will additionally need to tailor specific pre-and post-strike mitigation and response measures to keep pace with command decisionmaking and a high operational tempo in a variety of contingency and operational plans. Global integrated exercises are critical opportunities for INDOPACOM to rehearse, stress-test, and refine CHMR procedures and capabilities. In 2024, INDOPACOM's large command post exercises offer the best opportunities to comprehensively test and refine CHMR capabilities in large-scale combat scenarios. These exercises will also enable us to fully define the resource requirements for effective civilian harm mitigation and response in large-scale multi-domain combat operations. I have directed my team to ensure that CHMR-AP is fully integrated as an exercise objective in Exercise Keen Edge 24 and we are the first combatant command globally to have taken such a step.

IMPACT OF HOLDS ON MILITARY NOMINATIONS

55. Senator WARREN. Admiral Aquilino and General LaCamera, Senator Tuberville placed a blanket hold on high-level DOD military nominees. What are the impacts of the current holds on national defense strategy regarding INDOPACOM and United States Forces Korea, including China's actions in the Indo-Pacific region?

Admiral AQUILINO. The current hold on high-level DOD military nominees will significantly impact some of our highest levels of leadership in USINDOPACOM if it persists beyond the summer timeframe. Delays in nomination may lead to subsequent delays in senior leader rotations by 12 months or more. These actions bring to doubt some of our assurances in the region, particularly to those allies and partners who we are trying to persuade to choose the United States as the partner of choice.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR.

56. Senator WARREN. Admiral Aquilino and General LaCamera, what are the impacts of the current holds on continuity of U.S. military operations in INDOPACOM and United States Forces Korea?

Admiral AQUILINO. Without these leaders in place, the U.S. military will incur an unnecessary and unprecedented degree of risk at a moment when our adversaries may seek to test our resolve. Delays in confirming a large number of one-and two-star general and flag officers jeopardizes our current and future readiness status.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR.

57. Senator WARREN. Admiral Aquilino and General LaCamera, what are the impacts of the current holds on oversight of the U.S. military in INDOPACOM and United States Forces Korea?

Admiral AQUILINO. The importance of timely General and Flag officer confirmation is critical. These leaders are responsible for executing strategy, acquiring new technologies, enhancing tactical effectiveness, conducting joint training, and strengthening global alliances.

Furthermore, these general and flag officers also provide direct leadership and mentorship to thousands of enlisted servicemembers and junior and field grade officers across the Department.

General and flag officers have the authority to make decisions and commit resources, develop key policies, work with our allies and partners, and confront our rivals and foes.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR.

58. Senator WARREN. Admiral Aquilino and General LaCamera, what are the impacts of the current holds on military families and facilities in INDOPACOM and United States Forces Korea?

Admiral AQUILINO. The current confirmation holds are disrupting our senior military leader's families, specifically within USFK and our component commands. The confirmation holds are delaying moves needed to ensure we have the right talent in the right place during this period of increased tension. Additionally, families are feeling the stress and uncertainty, both of which may result in the loss of our best talent for opportunities that offer greater stability. Moreover, confirmation holds impacts decisionmaking on facility investments needed in the INDOPACOM AOR.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR.

59. Senator WARREN. Admiral Aquilino and General LaCamera, what high-level military positions within INDOPACOM and United States Forces Korea will be impacted by these holds if they last for another 3 months?

Admiral AQUILINO. At this time, we are fortunate to not have a direct impact within the headquarters but are closely tracking the impact the hold is having throughout the service components and USFK.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR.

60. Senator WARREN. Admiral Aquilino and General LaCamera, what are the impacts of these future holds on national defense strategy regarding INDOPACOM and United States Forces Korea, including China's actions in the Indo-Pacific region?

Admiral AQUILINO. If future holds are similar to this one, it will most certainly negatively affect the predictability and precedent in military leadership changes that our allies and partners have become accustomed to. A future hold could undermine the influence that we have on our allies and partners by projecting unreliability and uncertainty.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR.

61. Senator WARREN. Admiral Aquilino and General LaCamera, what are the projected impacts of these future holds on the continuity of U.S. military operations in INDOPACOM and United States Forces Korea?

Admiral AQUILINO. Delays in confirmation will soon foist vacancies on the most senior military positions across each of the Services, imposing new and unnecessary risks on U.S. warfighters across multiple theaters of operations.

Confirmation holds makes it harder for the United States to fulfil its global leadership responsibilities, including to our treaty allies and our valued partners around the world. Our smoothly running normal processes and predictable military transitions have long set helpful expectations among allies and partners. Now, however, this hold has created unnecessary uncertainty. That diminishes our global standing as the strongest military in the world, which is in large part based on our stable processes and orderly transitions.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR.

62. Senator WARREN. Admiral Aquilino and General LaCamera, what are the projected impacts of these future holds on oversight of the U.S. military in INDOPACOM and United States Forces Korea?

Admiral AQUILINO. General and flag officers have the authority to make decisions and commit resources, develop key policies, work with our allies and partners, and confront our rivals and foes. The full impact of this hold may not be immediately noticeable because of the resilience built into our military organizations, but over time, the hold will cause cascading impacts to our readiness and needlessly hinder our ability to meet our strategic objectives in the Indo-Pacific,

The absence of experienced and Senate-confirmed senior leadership limits our ability to deepen our cooperation with our allies and partners through multilateral training and cooperative engagements. Recent exercises, such as Balikatan 2023 with the Armed Forces of the Philippines or joint U.S.-Israeli naval activity in the Bab el-Mandeb Strait, may become even more difficult if delays in confirmation force other leaders to take on the responsibilities of officers held up by the Senate. This hold could force senior leaders to become dual-hatted, which would force them to juggle competing priorities and sap their ability to excel.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR."

63. Senator WARREN. Admiral Aquilino and General LaCamera, what are the projected impacts of these future holds on military families and facilities in INDOPACOM and United States Forces Korea?

Admiral AQUILINO. Continued holds in the senior leader promotion process will not only cause disruption to our senior leader families but the stress and uncertainty will be felt across the force. If promotion holds continue, we risk losing the diverse talent and skillsets needed to win.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR.

64. Senator WARREN. Admiral Aquilino and General LaCamera, what impacts do these holds have on military medical readiness in INDOPACOM and United States Forces Korea?

Admiral AQUILINO. The projected impact on military medical readiness in USINDOPACOM is minimal. Although there is one DHA/U.S. Army Medical Command dual-hatted FOGO position in the region that is affected, the successor is in position.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR.

65. Senator WARREN. Admiral Aquilino and General LaCamera, what impacts do these holds have on cybersecurity in INDOPACOM and United States Forces Korea?

Admiral AQUILINO. There is no immediate impact to INDOPACOM. However, general and flag officers provide oversight to the Department's military and civilian staffs, help decide how we employ our forces, and take care of our members, civilians, and families. The delays that we are seeing will have an overall impact to the force by imposing unnecessary risks to operations.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR.

66. Senator WARREN. Admiral Aquilino and General LaCamera, do any of these holds send a damaging message to our allies in INDOPACOM and United States Forces Korea?

Admiral AQUILINO. We continue to engage with our allies and partners at the senior military levels of leadership regardless of the hold on high level DOD nominees; however, inconsistency and unpredictability in routine leadership changes do not contribute to assuring our allies and partners that we are reliable in keeping our commitments.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR.

67. Senator WARREN. Admiral Aquilino and General LaCamera, what message do these holds send to China and North Korea?

Admiral AQUILINO. Secretary Austin stated that these holds are certainly disruptive to our normal way of doing business and very disruptive to the families to the officers affected by these holds, and I echo the Secretary's message. However, I can assure you that Indo-Pacific Command stands ready to deter aggression across our AOR and should deterrence fail, win decisively.

- INDOPACOM appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the INDOPACOM AOR.

General LACAMERA. USFK appreciates that the hold on senior military nominees was lifted allowing those individuals to fill critical billets across the joint force, including in the USFK AOR.

QUESTIONS SUBMITTED BY SENATOR GARY PETERS

COMMON OPERATING PICTURE

68. Senator PETERS. Admiral Aquilino, our adversaries have developed sophisticated anti-access & area denial capabilities, inclusive of long-range missiles, advanced air defenses, as well as offensive Cyber and Electronic Warfare weapons designed to degrade and deny the U.S., and our allies and partners, ability to respond to any contingency in your Area of Responsibilities.

Given these advancements, how are you characterizing and learning from the conflict in Ukraine to inform your employment of platforms and systems designed to provide you with an accurate Common Operating Picture (COP)?

Admiral AQUILINO. USINDOPACOM has reviewed the "lessons learned" from the Russia-Ukraine conflict and remains resolute in upholding our commitment to strengthen Taiwan's self-defense capabilities in accordance with U.S. policies. The Russia-Ukraine conflict further informs our requirement to develop advanced warfighting capabilities that outpace our challengers and bolster regional deterrence from a position of strength. These include improved command and control; decision superiority; and a persistent, target-quality, common operating picture (PT-COP) that allows us to integrate with allies and partners and deliver compound, all-domain, effects at a time and place of our choosing.

NATIONAL GUARD SECURITY COOPERATION TAIWAN

69. Senator PETERS. Admiral Aquilino, you have 12 Active State Partnership Programs operating in your A-O-R. The Strategy, Plans, and Policy is a tremendous force multiplier by allowing us to leverage the skills and capabilities resident with our National Guard to build ties and interoperability with nations around the world, especially in INDO-PACOM, our theater of priority.

Would you benefit from streamlined authorities and lines of funding to help strengthen the ability of the National Guard to support security cooperation efforts with Taiwan?

Admiral AQUILINO. INDOPACOM has the authorities it needs to conduct security cooperation (SC). What INDOPACOM presently lacks are the requisite funding authorities for non-State Partnership Program partners to optimize the resources needed, particularly funding of National Guard personnel to support missions away from home station.

There should be a total force review of the funding available to the Reserve component to align their capabilities to emergent and focused SC missions. The State Partnership Program (SPP) is tied to Section 341 and affiliate partner countries. I need the National Guard to have access to greater levels of funding for the SPP-affiliates and a mechanism to access funds to support non-SPP countries. For example, any assistance with speeding up the process or funding to help build Taiwan's capacity and further develop our long-term relationship would greatly help with their ability to conduct self-defense.

QUICK STRIKE-POWERED JOINT DIRECT ATTACK MUNITION

70. Senator PETERS. Admiral Aquilino, your unfunded priorities list this year, again includes funding—almost $100 million this year—for the Quick strike-Powered Joint Direct Attack Munition standoff naval mine system.

Can you please explain the importance of this capability—and its related Maritime Strike Weapons—to your plans? Why are standoff munitions like this so important to the defense of Taiwan?

Admiral AQUILINO. The Quickstrike is a family of shallow-water, aircraft-laid mines that expand flexible deterrence and response options to support our allies and partners across the region. Powered Quickstrike mines provide cost-effective risk reduction to force while shaping battlespace from safe stand-off ranges. The 2023 National Defense Authorization Act (NDAA) Section 1254 Independent Assessment calls for a significant increase in maritime munitions that include missiles, mines, and torpedoes because they are required to deter and disrupt all forms of PRC maritime aggression in competition, crisis, and contingency operations.

JOINT FIRES NETWORK

71. Senator PETERS. Do you have any concerns with DOD's ability to field Joint Fires Network solutions on a timeline you are comfortable with? How would you characterize the progress of these efforts so far?

Admiral AQUILINO. USINDOPACOM, in partnership with USD R&E, remains on track to develop a Joint Fires Network (JFN) that provides actionable targets, real-

time battlespace awareness, and advanced all-domain joint fires to create compound effects in concert with our allies and partners. Through recent experimentation, we have demonstrated a nascent capability to provide joint battle management.

QUESTIONS SUBMITTED BY SENATOR TOM COTTON

TRAINING WITH PARTNERS

72. Senator COTTON. Admiral Aquilino, what are the benefits to INDOPACOM from U.S. training of foreign partners on weapon systems such as the F–16 and F–35?

Admiral AQUILINO. Joint and combined fighter aircraft training promotes interoperability and enhances overall defense capabilities while strengthening INDOPACOM's strategic relationships with allies and partners.

- Interoperability. Training with foreign partners increases interoperability which yields increased efficiency and effectiveness during contingencies (conflict or humanitarian assistance/disaster response (HA/DR) events). Allies and partners with F–35s/F–16s will pursue participation in funded INDOPACOM field training exercises (FTXs) to advance their joint/combined proficiencies in fighter skillsets with the U.S. Air Force. The U.S. Air Force's willingness to train alongside and be interoperable with allies and partners is one of the leading factors in a country's view of their security partner of choice.
- Messaging. All training with foreign partners provides an inherently positive message about U.S. solidarity with countries in the region.
- Access, Basing, and Overflight (ABO). Common training throughout the AOR builds the needed level of trust and cooperation to operate modern weapon systems from varying locations. This expands U.S. Forces' familiarity with and normalizes U.S. fighter presence at new operating locations in addition to advancing efforts for access in contingencies. As ABO is a critical concern in the event of conflict, training engagements are a substantial tool in INDOPACOM's toolkit to increase the likelihood of conflict-phase ABO.

73. Senator COTTON. Admiral Aquilino, are there any impacts to INDOPACOM if Singaporean F–16, and later F–35 training is delayed?

Admiral AQUILINO. INDOPACOM works closely with the Singapore Armed Forces to meet our bilateral objectives through numerous exercises and training opportunities both inside and outside the United States. Should there be delays that impact Singapore F–16 or their future F–35 training, INDOPACOM will work closely with our Singapore military counterparts to ensure sustainment of Singapore's training and readiness requirements.

Training between USAF and RSAF is critical to INDOPACOM in two key areas:

- Interoperability with Partners and Allies. RSAF is one of the more capable partners in the region and our joint training efforts allow participants the opportunity for "high-end" training scenarios that are currently available with only a select few countries in the region.
- Posture and Deterrence Support. RSAF currently has one squadron of F–16s stationed at Luke AFB, AZ, and this unit will be relocated to Ebbing Air National Guard Base, AR in fiscal year 2025. RSAF is also one of the few countries in the region that was approved to receive the F–35s. The RSAF initial order of F–35s will be delivered to Ebbing in fiscal year 2028.

RSAF has also agreed to provide expanded space/access at Changi Airbase East (CAB-E) to INDOPACOM. This will greatly enhance our force posture options in the region. Additionally, since 2019, DOD has had a Memorandum of Understanding with Singapore to bed down an RSAF fighter squadron at Andersen AFB, Guam. The co-location of RSAF fighters at Andersen will greatly enhance INDOPACOM's combined deterrence posture at Andersen AFB by complicating targeting calculus for our adversaries considering offensive action against that strategic location.

Singapore is funding a portion of the Ebbing and Andersen expansion through FMS cases. They are funding all of the expansions at CAB-E, including the areas that will be allocated for U.S. use. Delaying the training/basing location at Ebbing could adversely impact the Andersen and CAB-E programs which are critical elements of INDOPACOM plans. All locations will enhance our partnership and add additional training opportunities for these two aircraft (F–16/F–35) and others.

74. Senator COTTON. Admiral Aquilino, can you please explain the benefits realized from joint military exercises with partner nations? Is there a need to train to-

gether if we expect to conduct operations together? What are the risks of not conducting this training?

Admiral AQUILINO. One of Secretary Austin's priorities is to strengthen our relationships with allies and partners in the region. An effective approach is to incorporate allies and partners into our joint exercises. It is critical that our allies and partners realistically rehearse, with us, warfighting against a peer adversary in highly contested all-domain environments to deliver Integrated Deterrence, and if required, transition to combat operations if deterrence fails. The sheer size of our area of responsibility requires a coalition of warfighters who are able and willing to not only fight and win but allow U.S. forces to be staged forward and distributed throughout the Indo-Pacific region. Enhanced training requires conducting complex, multi-domain exercises with our allies and partners to continue to deliver interoperability and to operate at the high end and serves to further solidify our relationships.

75. Senator COTTON. Are there any currently conducted or planned training exercises with the Taiwanese? Can you provide any specifics on those exercises? Can you explain how training with the Taiwanese improves the ability to deter and if necessary, defeat Chinese aggression?

Admiral AQUILINO. Training engagements are a key tool through which we work with Taiwan and other partners to bolster deterrence across the Indo-Pacific, including vis-á-vis PRC aggression. More details about exercises with Taiwan are available at a higher classification level.

COMMERCIAL INTEGRATION

76. Senator COTTON. Admiral Aquilino, how has INDOPACOM worked with industry partners to integrate commercial technological advances with our warfighting capability?

Admiral AQUILINO. USINDOPACOM works with industry partners to explore innovative concepts and emerging technologies through limited objective experiments (LOEs) to expand warfighting capabilities, improve operational readiness, and ensure credible war plans.

77. Senator COTTON. Admiral Aquilino, what are your largest challenges to integration of commercial technologies? Are there any actions Congress can take to help alleviate those challenges?

Admiral AQUILINO. The USINDOPACOM innovation ecosystem processes a continuous stream of valuable yet un-delivered experiments and prototypes to the joint warfighter. USINDOPACOM can cost-effectively and rapidly leverage commercial tech experiments and prototypes. As a combatant command, USINDOPACOM is ideally suited to partner with the Defense Innovation Unit (DIU) to introduce game-changing capabilities to the warfighter and Congress can help through its continued support of the DIU.

INTELLIGENCE SHARING AND CLASSIFICATION ISSUES

78. Senator COTTON. Admiral Aquilino, we saw the vital need for the expeditious dissemination of sensitive information to allies and partners in the lead up to the conflict in Ukraine. Does INDOPACOM believe similar sharing of information would be required to counter Chinese mobilization and galvanize international support prior to an invasion of Taiwan? Is INDOPACOM prepared for such a possibility?

Admiral AQUILINO. Sharing of sensitive information with our allies and partners is absolutely critical in developing a common understanding of threats that will lead to a coordinated response to coercive behaviors and actions. We continue to work diligently across the Intelligence Community (IC) and Department of Defense (DOD) to share lessons learned from the Russia-Ukraine conflict and apply them as applicable to the Indo-Pacific theater.

79. Senator COTTON. Admiral Aquilino, is INDOPACOM satisfied with the extent of information sharing from the national and military intelligence community (DIA, CIA, others) to operational and tactical units? What, if any, do you see as the main challenges to effective intelligence sharing? Is INDOPACOM evaluating any mechanisms to speed up getting the right information into the hands of those conducting operations?

Admiral AQUILINO. We rely heavily on the collective efforts of the Intelligence Community to arm us with the information we require to understand and defeat any enemy. We continue to work to overcome classification restraints that impede

our ability to provide this information to those who need it and to innovate and develop mechanisms to increase the efficiency and effectiveness of sharing.

80. Senator COTTON. Admiral Aquilino, are there any classification barriers that inhibit or degrade testing, training, or operations within your command by preventing necessary information from reaching operators and/or partners? Specifically, OSD has recently raised concerns that over classification and SAPs prevent sharing of information with Allies and industry that harms our ability to deter. Do you share that concern? What steps should be taken to ensure the United States can share and synthesize needed information across the force to achieve joint multi-domain effects in your theater?

Admiral AQUILINO. We recognize the need to balance safeguarding of sensitive information with the need to get that information into the right hands. We do effectively share information, but we can and must do more to streamline the flow of the information to ensure we can operate with our allies and partners in times of crisis.

QUESTIONS SUBMITTED BY SENATOR MIKE ROUNDS

SPECTRUM

81. Senator ROUNDS. Admiral Aquilino and General LaCamera, there is an effort by some in Congress to require sharing of all or some of the 3.1–3.45 band of the electromagnetic spectrum, also known as the S-band, between the Department of Defense and commercial interests in the private sector.

As I understand it, the 3.1–3.45 band is primarily used by Department of Defense ground-, air-and sea-based radars and sensors to detect airborne and missile threats. For example, the Navy's Aegis Combat System's AN/SPY radar uses that band and is one of the few systems able to track the new threat posed by low flying, highly maneuverable hypersonic missiles.

Can you confirm that U.S. forces assigned to you in INDOPACOM and USFK rely upon systems critical to our national security that reside on this portion of the spectrum? If so, can you share examples of either specific systems that currently operate there or some of the missions and capabilities which rely on this portion of the spectrum?

Admiral AQUILINO. Yes, there are currently Aegis ships deployed in the INDOPACOM AOR providing missile defense which operate using an S-Band radar. This band is critically important to DOD missions and the recent Emerging Mid-Band Radio Spectrum Sharing (EMBRSS) Feasibility Assessment found that spectrum sharing in this band is not feasible unless certain conditions are met.

General LACAMERA. United States Forces Korea currently operates four systems in the S-band (3.1–3.4GHz) frequency range in support of air, ground, and sea radars and sensors to detect airborne and missile threats. First, the Airborne Warning and Control System (AWACS) aircraft operates two radars in the S-band to conduct command, control and surveillance for air and maritime operations. This aircraft provides detection and tracking of enemy aircrafts and relays datalink information to friendly forces. Second, a Counterfires Mobile Radar (TPQ–53) is operated by our ground forces to detect and track mortars, artillery, and rocket launches and determine the point of origin. This radar allows for quick acquisition of enemy artillery allowing our forces to seek shelter and rapidly engage threats. Third, Counter Rocket, Artillery, and Mortar (C-RAM) system is used to detect and track incoming rockets, artillery, and mortars to include small unmanned aerial systems. C-RAM is capable of engaging targets and destroying threats before impact. Fourth, U.S. Navy cruisers and destroyers operate in the vicinity of Korea and utilize the Navy's Aegis Combat System's AN/SPY radar for ballistic missile defense and tracking low flying, highly maneuverable hypersonic missiles. The four systems are either currently operating or have authorization to operate in the Korean Theater, allowing the United States to rapidly detect and engage aerial threats including aircraft, missiles, and small munitions.

82. Senator ROUNDS. Admiral Aquilino and General LaCamera, providing this Committee with your best military advice, can you characterize the risk to mission and the risk to the force if action were taken to enable the auction of portions of this band prior to the analysis of the results of the statutorily required DOD-NTIA study, which is required to be completed by September 2023?

Admiral AQUILINO. At the UNCLASSIFIED level, I can tell you that there would be significant operational risk to our electromagnetic spectrum capabilities that pro-

vide critical EMS advantage and defensive posture were we to lose the use of this portion of the spectrum.

General LACAMERA. The phaseout of the S-band would hinder United States Force Korea mission to defend the Republic of Korea and our forces. These systems currently operate in the S-band to deliver operational capabilities to U.S. Forces. Limitations to the S-band would impact early warning notifications, missile defense, and counterstrike capabilities across the theater. Further analysis would be needed capture a holistic view of capabilities effected and conduct a proper risk to mission.

QUESTIONS SUBMITTED BY SENATOR JONI ERNST

COUNTERING HYPERSONIC WEAPONS

83. Senator ERNST. Admiral Aquilino, what are the current and future hypersonic threats you face in your Area of Responsibilities?

Admiral AQUILINO. Russia claims to have fielded at least three systems, the Avangard hypersonic glide vehicle (HGV) carried by ICBMs, the Tsirkon ship-launched cruise missile, and the Kinzhal air-launched missile; Russia has employed small numbers of Kinzhal missiles in Ukraine. Russia is almost certainly developing additional hypersonic systems.

The PRC has one fielded hypersonic missile system, the medium range DF–17 and is actively developing and testing a number of others. In July 2021 a hypersonic ICBM circumnavigated the globe and the developmental DF–27 IRBM has the potential to range Hawaii. The PRC almost certainly desires to expand and diversify its hypersonic capabilities across multiple classes which could be employed by land, air and sea-based delivery platforms.

The DPRK claims to have successfully flight tested hypersonic missiles earlier this year. It is likely the DPRK is, in fact, pursuing this capability but is unlikely to have reliable, fielded hypersonic missile systems for some time.

84. Senator ERNST. Admiral Aquilino, do you have the intermediate and long-range defensive capabilities needed to counter current and future hypersonic threats?

Admiral AQUILINO. Our current BMD posture is designed to defeat ballistic threats from rogue actors like the DPRK. U.S. missile defense policy states that we rely on strategic deterrence for defense of the Homeland from near-peer advanced threats like hypersonic missiles. However, policy states that we will develop missile defense capabilities to defend against any system that may threaten our U.S. and Allied interests abroad, which is why I've been strongly advocating for the acceleration of defensive capabilities like the Guam Defense System and an advanced radar to replace the FAA radar in Hawaii.

MUNITIONS INDUSTRIAL BASE CONCERNS

85. Senator ERNST. Admiral Aquilino, what industrial base investments do we need to make now to make sure that we and our allies have what we need to deter China?

Admiral AQUILINO. Recent analysis on the industrial base highlights constraints that impact all munitions procurement, including long-lead times of critical components/subcomponents that range from 12 to upward of 28 months. To maintain our competitive advantage, investments to improve the energetics, survivability, and effectiveness of existing weaponry is necessary, along with authorities that enable advanced and multi-year procurement of critical components, and funding to support the DIB with increased production capacity for critical munitions.

TAIWAN FORCE READINESS

86. Senator ERNST. Admiral Aquilino, some of Taiwan's military is not trained on key asymmetric systems like Javelins, Harpoons, and Stingers. Which of Taiwan's forces do you think should train on these key asymmetric systems?

Admiral AQUILINO. In accordance with the Taiwan Relations Act, INDOPACOM works in conjunction with the American Institute in Taiwan and the partner to identify and subsequently advise and assist the appropriate Taiwan forces on asymmetric capabilities, which remains a priority of the Department of Defense. We believe all of Taiwan's forces, including conscripts and reserves, need to be trained in the use of asymmetric systems—to include systems like Javelins, Harpoons, and Stingers.

87. Senator ERNST. Admiral Aquilino, please describe the current status of Taiwanese military recruiting efforts, any shortfalls, and any efforts INDOPACOM is taking to support these efforts.

Admiral AQUILINO. The National Guard Bureau is assisting INDOPACOM in identifying gaps in Taiwan's recruiting efforts, Taiwan's own reserve reforms, and the extension of its conscription requirements from 4 months to 1 year. We applaud Taiwan's efforts thus far and will continue to assist as requested by the partner.

88. Senator ERNST. Admiral Aquillino, since Taiwan has recently announced an expansion of mandatory service time for its citizens to 1-year of training, how soon do you assess that this new service requirement will be implemented and to what extent?

Admiral AQUILINO. Taiwan started implementing this requirement in January 2024, with a growing proportion of conscripts serving for 12 months in each subsequent year. In the interim, we are coordinating through the American Institute in Taiwan to better understand and assist where necessary. We know that Taiwan is taking this expansion seriously and is working to ensure the training is meaningful and substantive as it relates to Taiwan's self-defense requirements.

89. Senator ERNST. Admiral Aquilino, what percentage of Tier 1 units covering asymmetrical capabilities are less than 80 percent staffed? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

Admiral AQUILINO. Specific details are available at a higher classification.

90. Senator ERNST. Admiral Aquilino, what are the operational consequences of this gap? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

Admiral AQUILINO. Specific details are available at a higher classification.

FOREIGN MILITARY SALES TO TAIWAN

91. Senator ERNST. Admiral Aquilino, in your personal opinion, how does the $19 billion backlog on Foreign Military Sales to Taiwan affect risk in your Area of Responsibilities?

Admiral AQUILINO. The Harpoon Coastal Defense System and F–16s account for a large portion of the $19 billion of foreign military sales in delayed delivery. These are critical capabilities that would greatly benefit Taiwan's self-defense and we are acutely monitoring how challenges across the U.S. defense industrial base may impact the implementation of these FMS cases with Taiwan and other partners.

92. Senator ERNST. Admiral Aquilino, are there any restrictions on exporting High Mobility Artillery Rocket System (HIMAR) launchers to Taiwan through Foreign Military Sales? If so, why?

Admiral AQUILINO. I am not aware of any restrictions on exporting HIMARS to Taiwan. Taiwan has an active FMS case for 29 HIMARS launchers that we are keenly monitoring to ensure they are delivered on-time.

TAIWAN ABSORPTION

93. Senator ERNST. Admiral Aquilino, would Taiwan's inability to absorb United States military assistance in the form of equipment within 1-year increase risk within your Area of Responsibilities?

Admiral AQUILINO. INDOPACOM is working with the Department and the partner to mitigate absorption capacity and rate concerns through advice and assistance on non-materiel requirements, such as training and sustainment, prior to delivery of equipment. The goal is that Taiwan's forces cannot only absorb the delivery of defense articles materially, but also operationally. Increasing Taiwan's capability and capacity thereby would reduce risk within my AOR.

94. Senator ERNST. Admiral Aquilino, would you support a requirement to certify Taiwan's absorption capacity?

Admiral AQUILINO. In accordance with the Taiwan Relations Act, U.S. military assistance to Taiwan also includes non-materiel defense services, including working with Taiwan on how its forces can most quickly and effectively absorb the capabilities they acquire through security cooperation programs and military-to-military engagement.

UNFUNDED REQUIREMENTS

95. Senator ERNST. Admiral Aquilino, you requested $1 billion in long-range strike programs, including the SM–6, Precision Strike Missile, and the maritime-strike Tomahawk Land Attack Missile. If Congress fails to fund, and the defense industrial base fails to execute, these programs, how does your risk increase?

Admiral AQUILINO. The 2023 National Defense Authorization Act (NDAA) Section 1254 Independent Assessment advocates for accelerated investment in certain anti-ship missiles, such as Maritime Strike Tomahawk, Precision Strike Missile Inc 2 and Inc 4, and SM–6 Blk IB, that are needed to hold adversary maritime forces at risk. Accelerated investments in the development and timely delivery of advanced maritime mines, including Clandestine Delivered Mine, Hammerhead, Powered Quickstrike, are essential elements of the joint force's capability to deter and defeat maritime aggression. USINDOPACOM's strategic approach, "Seize the Initiative," requires these specific munitions for combat-credible deterrence and are critical enablers for achieving the strategic goals and objectives set forth in the 2022 National Defense Strategy (NDS).

96. Senator ERNST. Admiral Aquilino, would you agree that ground-launched, theater-range strike systems could buy-down some risk in your AOR?

Admiral AQUILINO. Agree, and the systems in my 2023 National Defense Authorization Act (NDAA) Section 1254 Independent Assessment articulate capabilities that enable a layered, integrated defense system. Investment recommendations include the Aegis Weapon System, Lower Tier Air Missile Defense, and the Strategic Mid-Range Capability weapon system. We're also working non-kinetic solutions and shifting currently fielded systems to mitigate risk in the AOR.

COMPACTS OF FREE ASSOCIATION (COFA)

97. Senator ERNST. Admiral Aquilino, since the states are critical partners spanning the length of the Western Pacific, could you please elaborate on the importance of these three Compact (COFA) Pacific Island partners for broader Indo-Pacific military operations? What are the importance of the, specifically in defense of Taiwan?

Admiral AQUILINO. U.S. relationships with Palau, the Republic of the Marshall Islands, and the Federated States of Micronesia, collectively known as the Freely Associated States (FAS), are governed by the COFA agreements. The FAS are a critical part of the strategic sea lines of communication, linking the United States with our allies and partners in Oceania and Southeast Asia. The COFA agreements are a cornerstone of the U.S. security architecture in the Indo-Pacific region, and provide the U.S. guaranteed and unfettered access to the countries, including the right to establish defense sites, and the right to limit third country military access to the FAS. COFA Title III allows for the designation of U.S. defense sites, which enable execution of force posture projects. The rights afforded to the United States by the COFA agreement are unparalleled in the Indo-Pacific and are well worth the defense obligations incurred. The exclusive military access in these countries provided to the U.S. via the COFA agreements commits the U.S. to the defense and security of the FAS.

Countries in the second island chain, including the FAS, provide a critical logistical network that enables U.S. troops to move through and within the FAS uncontested. Our ability to strengthen our defenses and capabilities in the Western Pacific greatly increases our ability to project military power in the region, enhance Taiwan's self-defense, and deter authoritarian nation-states (PRC) that possess the military and economic capacity, and intent, to change the current rules based international order.

98. Senator ERNST. Admiral Aquilino, do you believe that more work needs to be done in coordinating activities to counter China's malign influence in the Compact of Free Association nations?

Admiral AQUILINO. We have an extremely close relationship and partnership with the Freely Associated States (FAS). There are foreign malign actors conducting subversive, undeclared, coercive, or criminal activities worldwide affecting every nation and the COFA states are no exception. The People's Republic of China (PRC) has pursued closer ties with Pacific Island countries (PICs) for several decades and has significantly increased engagement in the region. Two of Taiwan's four Oceania diplomatic allies are COFA nations: Palau and RMI. Under Title III of the COFA, we need to ensure the FAS are aware of foreign malign influence threats to empower our partners and collectively counter these attempts and protect their sovereignty. Therefore, information sharing is extremely important with our COFA nation part-

ners and an area we hope to buildupon in the future to mitigate foreign malign influence attempts.

It is clear that there is a perceived threat to our influence and economic interests in the region. Over the past decade, the PRC has cemented itself as the leading trade and investment partner of the Pacific Island nations and a major provider of foreign assistance and loans. China is actively pursuing gray zone measures to advance their interests. They view the Pacific Island region as a low-investment, high reward opportunity to advance their agenda in a region where the U.S. is not paying sufficient attention. Recently, former President Panuelo of the Federated States of Micronesia (FSM)'s released a letter describing multiple instances of bribery, threats, and interference in local elections. More needs to be done to explore what our different instruments of national power can do to fight back against this type of gray zone behavior.

99. Senator ERNST. Admiral Aquilino, do you think that the current level of coordination between Compact of Free Association nations and the Department on malign activity and other grey zone issues is sufficient?

Admiral AQUILINO. My teams have excellent coordination with our embassy and Department of Defense (DOD) teams working inside the COFA states. They help keep us up to date on the changing operational environment and we continually work with them to modify our efforts to meet the changing threat. Competing priorities and limited resources remain a limiting factor in the amount and degree of support provided. In this regard, we strive to work by, with, and through our allies and partners with like-minded objectives to achieve mutual goals.

The level of coordination between COFA nations and DOD on malign activity and other grey zone issues has increased over the past 5 years. In 2019, the Department established Defense Attaché Office Kolonia in the FSM to assist coordination efforts in this matter. Additionally, during our semi-annual Joint Committee Meetings with each COFA nation, we share regional threat information and areas of concern. However, as the threat environment increases, there is always more coordination and work to be done. Information sharing with our partners is an extremely effective tool in this space.

100. Senator ERNST. Admiral Aquilino, since Palau has recently established the position of National Security Coordinator to coordinate with the Department, do you believe this is a model that should be supported in the other Compact of Free Association states?

Admiral AQUILINO. In Palau the national security coordinator (NSC) is the primary liaison for all DOD activity in the host nation. This position works daily with the President and is able to provide consistent guidance and feedback for all military operations within the country.

Each COFA State is uniquely distinct from one another; however, the establishment of the national security coordinators across all the COFA states will greatly benefit the Department. As you are aware, the United States Armed Forces is the military for the Freely Associated States. Therefore, there is no direct host nation counterpart for the U.S. Military to coordinate operations, activities, and investments. Due to the high volume of DOD activities in the COFA states, this model should be supported and replicated to streamline our efforts. The NSC as a touchpoint is vital.

101. Senator ERNST. Admiral Aquilino, what efforts has your command taken to support the development of National Security Coordinators or similar positions on the three Compact of Free Association states?

Admiral AQUILINO. The Department made the initial recommendation to the Republic of Palau to establish the national security coordinator position—independent from the Ministry of Justice—due to the high volume of DOD activities. In the Federated States of Micronesia (FSM), we have led discussions with FSM senior leadership to evaluate creating a similar position there. A dedicated individual or (wider national security council) could act as a forum to consider national security and advise the President on defense and foreign policy matters. Outmigration of qualified personnel and resource limitations have constrained efforts for further development of this structure in FSM. For the Republic of the Marshall Islands (RMI), we have noted that the appointment of a National Security Coordinator would increase our coordination and cooperation efforts between U.S. Army Garrison Kwajalein and the host nation.

102. Senator ERNST. Admiral Aquilino, in your professional opinion, do you support increased engagement with the Compact of Free Association States on mari-

time domain awareness, including to combat illegal, unreported, and unregulated fishing, as well as the return of Civic Action teams to all three Compact of Free Association states?

Admiral AQUILINO. Yes. In addition to illegal, unreported and unregulated (IUU) fishing, the COFA states have concerns regarding PRC research vessels surveying undersea communication cables and deep seabed mineral deposits posing threats to critical infrastructure and economic security. We have increased our engagement in maritime domain awareness and recently signed the expanded shiprider agreement with the Federated States of Micronesia (FSM). Through remote coordination, this agreement, the first of its kind, will enable the U.S. to act on behalf of the country to combat illicit maritime activity when an FSM law enforcement officer is not present. The shiprider agreement bolsters maritime law enforcement operations and maritime domain awareness and provide a mechanism to conduct integrated operations within the Pacific.

Palau is the only COFA State with a Civic Action Team (CAT) Camp. Active in Palau since the late 1960's, they serve the community by taking on important construction projects, providing ongoing medical assistance, tutoring for students, and planning multiple community events throughout the year. The Civic Action Team in Palau and the uniforms seen around town are a constant reminder that the U.S. is present and has not forgotten their commitment to Palau. In 2003, the CAT sites in the FSM were closed. In the October 2022, during the Joint Committee Meeting, FSM requested the return of all the CAT Camps to each of the four states of the FSM. The CAT Camps provide valuable support to the COFA states, especially through their Medical Civic Action Program (MEDCAP) and Apprentice Training Program. The MEDCAP provides an in-camp clinic, outreach to outlying areas, and health education programs for local residents. The Apprentice Training Program assists the development of general engineering skills and certifies local residents in skilled trades. Graduates of the Apprentice Training Program contribute to the overall infrastructure development of these nations and lessen dependence on foreign assistance. The CATs are vital for all of the Freely Associated States.

INDEPENDENT ASSESSMENT

103. Senator ERNST. Admiral Aquilino, in your 2023 National Defense Authorization Act Section 1254 independent assessment to Congress, you include an increase for U.S. Special Operations Command funding for your Area of Responsibilities from $80.5 million to $356.75 million from fiscal year 2026 to fiscal year 2027. Why there is a 443 percent increase in funding between these two fiscal years, a significant increase from assessed costs in fiscal year 2024 and 2025?

Admiral AQUILINO. Specific details are available at a higher classification.

104. Senator ERNST. Admiral Aquilino, why does fiscal year 2027 include this increase instead of other fiscal years?

Admiral AQUILINO. The increase stems from the funding required for DOD wide MILCON projects. Specific details are available at a higher classification.

QUESTIONS SUBMITTED BY SENATOR DAN SULLIVAN

INDOPACOM RESOURCING

105. Senator SULLIVAN. Admiral Aquilino, as you pointed out in your testimony, this decade presents a period of increased risk including from the People's Republic of China nuclear and conventional buildup and its malign behavior and "no limits" partnership with Russia. While INDOPACOM has done much to posture our Nation to counter China's aggression, there is still more to do. What do you need to better posture INDOPACOM to counter the People's Republic of China growing aggression?

Admiral AQUILINO. The 2023 National Defense Authorization Act (NDAA) Section 1254 Independent Assessment outlines the capabilities and posture that is required to achieve integrated deterrence as outlined in the 2022 National Defense Strategy. This report prioritizes the investments that are needed in INDOPACOM to maintain or restore the comparative military advantage of the United States with respect to the PRC. Specific details are included in the report at a higher classification.

INTEROPERABILITY

106. Senator SULLIVAN. Admiral Aquilino, in your testimony you spoke of the value of a robust network of allies and partners and detailed how INDOPACOM is strengthening relationships with our AUKUS and Quad partners. So much of each

service's strategy in the event of a conflict with China depends on our capability to forward stage personnel and equipment. How are exercises in your AOR enhancing interoperability with allies and partners?

Admiral AQUILINO. Exercises are the cornerstone of enhancing joint and combined multinational military interoperability and demonstrate our mutual commitment to maintain a free and open Indo-Pacific. USINDOPACOM continues to encourage complex multilateral exercises that bring large groups of countries together to increase interoperability among our allies & partners, and to demonstrate unified resolve. Additionally, our exercise program advances integration of all-domain operations, to include space effects and defensive cyber activities. Enhanced training requires conducting complex, multi-domain exercises with our allies and partners to continue to deliver interoperability and to operate at the high end and serves to further solidify our relationships. We strive to include our AUKUS and QUAD partners in almost every exercise we conduct.

We have made significant progress improving interoperability of U.S. and allies and partners. Examples include: the Enhanced Defense Cooperation Agreement with the Philippines, which permits the United States to build infrastructure and preposition equipment at agreed upon locations; and our Mission Partner Environment that modernizes 13 separate coalition command, control, communication, computer, and information technology network systems into a single secure cyber system to deliver combined command and control capability throughout the theater. The outcome of our efforts enhances combined warfighting interoperability through rapid, widespread sharing of information with like-minded nations to operate with our joint force. Our joint exercises are rehearsals that test these locations and/or technologies to enhance our ability to deter and defend the region with our allies and partners.

107. Senator SULLIVAN. Admiral Aquilino, how are exercises in your Area of Responsibilities advancing Joint warfighting concepts?

Admiral AQUILINO. The USINDOPACOM innovation ecosystem processes a continuous stream of valuable yet un-delivered experiments and prototypes to the joint warfighter. USINDOPACOM can cost-effectively and rapidly leverage commercial tech experiments and prototypes. As a combatant command, USINDOPACOM is ideally suited to partner with the Defense Innovation Unit (DIU) and other organizations to introduce game-changing capabilities to the warfighter and Congress can help through its continued support of the DIU.

MARINE LITTORAL REGIMENTS IN INDOPACOM

108. Senator SULLIVAN. Admiral Aquilino, in February 2023 Secretary Austin announced that a Marine artillery regiment based in Okinawa would be reorganized as a Marine Littoral Regiments by 2025. 3d Marine Littoral Regiments, stationed in Hawaii, participated in Exercise Balikatan 2022 and 2023 in the Philippines. Under Marine Corps Force Design 2030, MLRs are postured to serve as a Stand-in Force and execute Expeditionary Advanced Base Operations. This requires them to disperse along the First Island Chain to provide strike and surveillance capabilities. What feedback have you received on MLRs from allies and partners in the region?

Admiral AQUILINO. During the January 2023 U.S.-Japan Security Consultative Committee meetings, the Government of Japan expressed support for the activation of a Marine Littoral Regiment (MLR) in Okinawa and committed to continued cooperation with the United States to improve the defensive posture in Japan with improvements to both Japanese and U.S. military capabilities.

The Armed Forces of the Philippines (AFP) have been very receptive to 3d MLR deployments to the Philippines for bilateral training and exercises, as well as to assist in developing the capabilities of the Philippines Marine Corps' nascent Coastal Defense Regiment through subject matter exchanges. The AFP and its naval services have embraced opportunities to work with 3d MLR to identify sites for MLR employment and exchange skills as both nations' Marine Corps develop new units with anti-ship, anti-air, and maritime domain awareness (MDA) capabilities. Of note, the Marine Corps' participation in Balikatan 2022 and 2023 was extremely well received by the AFP. With additional Enhanced Defense Cooperation Agreement (EDCA) sites agreed to, as well as other non-EDCA sites, USINDOPACOM hopes to gain additional employment options for MLR in the Philippines.

109. Senator SULLIVAN. Admiral Aquilino, what United States and allied military capabilities do the Chinese believe are most threatening to their ability to conduct a successful military invasion of Taiwan?

Admiral AQUILINO. A potential PRC invasion of Taiwan would be among the most difficult endeavors the PLA could possibly undertake, with enormous vulnerabilities that would threaten operational success. The PRC would correctly find many U.S. and allied capabilities to be of concern, including our ability to provide precision fires against all types of targets; our multi-dimensional undersea warfare capabilities; our expeditionary ability to rapidly deploy and employ advanced capabilities; our ability to disrupt PRC intelligence systems, command and control, and logistics; our vastly superior experience and sophisticated approach to training and readiness; and our ability to integrate and employ these capabilities alongside a coalition of like-minded and similarly capable allies and partners.

U.S. SUPPORT TO UKRAINE AS MESSAGE TO INDOPACOM PARTNERS

110. Senator SULLIVAN. Admiral Aquilino, during this year's posture hearing you were asked if the U.S. could simultaneously support Ukraine and Taiwan in preparation for a potential cross-Strait conflict. You affirmed the U.S. had the capability, which I believe is correct. I also believe our stance with Ukraine is a message to the lengths we will go to support our partners in the INDOPACOM Area of Responsibilities. Have you seen a positive response from our Indo-Pacific partners for our support to the Ukrainians?

Admiral AQUILINO. I think our support of Ukraine sends an important message. The United States is a global power with global responsibilities and strategically, it's critically important that we support Ukraine because doing so sends a message to both our partners and potential adversaries.

PRC-RUSSIA DRILLS AND EXERCISES

111. Senator SULLIVAN. Admiral Aquilino, the People's Republic of China and Russia have conducted several air and naval exercises in the Indo-Pacific over the last 2 years. How are those exercises evolving over time?

Admiral AQUILINO. The frequency of PRC-Russian naval and air exercises has increased over the past several years. However, we have seen little progress in the advancement of tactical integration between forces. Although recent activities indicate an incremental change to air integration, it is not to an extent which would force change to our already robust operational responses. The United States enjoys a vast network of allies and partners across the Indo-Pacific who work closely together daily and can operate seamlessly in both peacetime and in conflict. Russian and PRC forces do not enjoy the same level of interoperability and their exercises demonstrate that their forces lack the coherence and trust that true partnerships enjoy and require.

SOUTH KOREAN MILITARY SUPPORT TO UKRAINE

112. Senator SULLIVAN. General LaCamera, South Korea has been reluctant to provide the Ukrainians with military aid despite their robust defense industrial capacity. On April 19, 2023, South Korean President Yoon stated if the humanitarian disaster continues in Ukraine it might be hard for Seoul to continue its decision to not provide military assistance. Ukraine expends large numbers of artillery shells and is in need of more, a key capability gap that South Korea can help fill. What is your perspective on South Korea's willingness to supply arms to Ukraine?

General LACAMERA. The Republic of Korea is responding to Russia's premeditated, unprovoked, and unjustified war by providing various types of assistance. Our joint actions demonstrate the unity and resolve of the United States and the Republic of Korea. We will continue to consult and coordinate with the ROK on how best to support Ukraine.

113. Senator SULLIVAN. General LaCamera, South Korea has concluded several larger foreign military sales to European countries in the last few years. In 2022, South Korea's arms exports rose 140 percent to a record $17.3 billion, including deals worth $12.4 billion to sell tanks, howitzers, fighter jets and multiple rocket launchers to Poland, one of Ukraine's closest allies. The contracts for Poland's tanks and howitzers were signed in late August with South Korea's top defense contractors. It took little more than 3 months for the first shipment to arrive. What is your assessment of South Korea's capacity to provide modern military equipment to allies and partners?

General LACAMERA. The Republic of Korea has had success in initial shipments to U.S. allies and partners with follow-on deliveries scheduled out until 2030. It remains to be seen whether their industry can keep pace, especially due to existing challenges regarding availability of sub-components, some of which come from U.S.

suppliers. Nevertheless, it is promising that the ROK intends to open localized production facilities by 2026 in the countries with which it is signing major defense export deals, such as Poland. The ROK is already establishing production facilities for the K9 self-propelled howitzer in Australia. These activities present potential opportunities to integrate U.S. subcomponents and munitions on Korean platforms, which will enhance interoperability among our allies and partners. These trends also highlight the ROK's potential to contribute to a regional sustainment framework in support of our National Defense Industrial Strategy.

SOUTH KOREAN SUPPORT TO TAIWAN

114. Senator SULLIVAN. General LaCamera, since the New Year, North Korea has launched several ballistic missiles around the Korean peninsula. This rise in activity coincided with some of the largest joint United States and South Korean military exercises in the last 5 years. As South Korea's share of the global arms export market increases, and it acquires F–35s and ballistic missile submarines, its military power will rise substantially. Do advances in South Korea's military power factor into its decisionmaking should a conflict occur in the Taiwan Strait?

General LACAMERA. Any Taiwan-related crisis would have a regional impact, but the Republic of Korea's specific actions in such a scenario would be a sovereign decision. USFK's top priority is to deter the DPRK and to defend the ROK from external aggression. Our ironclad commitment to the Alliance is based not only on shared interests, but also shared values, including the importance of preserving peace and stability in a free and open Indo-Pacific.

115. Senator SULLIVAN. General LaCamera, is South Korea's military expansion aimed solely at deterring and defeating an attack from the Democratic People's Republic of Korea?

General LACAMERA. Response to this is more appropriate in a classified setting. The mutual defense treaty with the ROK does not name an adversary. Similarly, the ROK's Indo-Pacific Strategy expands the ROK's foreign policy beyond the Korean Peninsula and embraces the fact that peace and stability in the Indo-Pacific is directly related to the ROK and active participation in regional affairs is vital to its own national interests. The ROK's Indo-Pacific Strategy is forward-leaning and includes non-military elements, including engaging the global community on climate change, supply chain, digital economy, cybersecurity, non-proliferation, counterterrorism, and other emerging regional and global issues. The Yoon Administration has made it clear that it wants the ROK to become a "global pivotal state" that builds its bilateral and multi-lateral ties across the region and world. We welcome the Yoon Administration's Indo-Pacific Strategy, which aligns well with and parallels the United States' vision for a free, fair, and prosperous Indo-Pacific.

DEPARTMENT OF DEFENSE AUTHORIZATION REQUEST FOR APPROPRIATIONS FOR FISCAL YEAR 2024 AND THE FUTURE YEARS DEFENSE PROGRAM

WEDNESDAY, APRIL 26, 2023

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

THE DEPARTMENT OF ENERGY AND NATIONAL NUCLEAR SECURITY ADMINISTRATION ATOMIC ENERGY DEFENSE ACTIVITIES

The Committee met, pursuant to notice, at 9:31 a.m., in room G50, Dirksen Senate Office Building, Senator Jack Reed (Chairman of the Committee) presiding.

Committee Members present: Senators Reed, Shaheen, Blumenthal, Kaine, King, Warren, Peters, Manchin, Rosen, Kelly, Wicker, Fischer, Cotton, Rounds, Ernst, Sullivan, Scott, Tuberville, Mullin, Budd, and Schmitt.

OPENING STATEMENT OF SENATOR JACK REED

Chairman REED. Good morning. Let me call the hearing to order. The Committee today meets to receive testimony on the Department of Energy's atomic energy defense programs. I would also like to welcome our witnesses, Secretary of Energy Jennifer Granholm and Administrator of the National Nuclear Security Administration (NNSA), Jill Hruby.

I also want to thank your department's workers for their service to our Nation. Maintaining the effectiveness, safety, and reliability of the United States nuclear deterrent is fundamental to our national security.

Today, our nuclear deterrent consists of a triad of ballistic missile submarines, heavy bombers, and land based intercontinental ballistic missiles. This triad is the bedrock not only of our national defense, but also the security of our allies and partners who depend on the United States nuclear umbrella. Critical to the triad's effectiveness is its modernization.

The technology materials required to maintain our nuclear capabilities, especially warheads and delivery systems, are constantly evolving. However, the National Nuclear Security Administration, or an NNSA, is struggling to keep pace with these modernization demands.

The NNSA is experiencing a tremendous workload as it strives to modernize not just all three legs of the triad, air, sea and land, but also five major warhead programs. Each of these triad legs and warhead programs require considerable resources, personnel, and time to be successful. Further compounding this challenge, the NNSA is undertaking a major rebuilding of its nuclear infrastructure.

Much of our nuclear infrastructure dates back to the Manhattan Project in World War II, and while the original facilities held up well through the first two cycles of triad modernization in the 1960's and 1980's, they have essentially aged out for a third cycle currently underway. It is critical that the NNSA successfully balance the workload of its infrastructure and production facilities modernization.

With that in mind, the fiscal year 2024 budget request for the defense functions of the Department of Energy is $32.6 billion. This figure accounts for about 63 percent of the Department of Energy's overall budget request.

Within this proposal, the NNSA has requested $23.8 billion, a 7.6 percent increase over last year's enacted level. One of the key challenges facing NNSA is finding skilled workers. This difficulty is being felt across the defense enterprise and indeed across the entire economy but is it particularly acute when it comes to nuclear security.

Construction of our nuclear facilities requires specialty steel and concrete, as well as highly trained electricians and welders to handle these materials, which exacerbates the problem. I would ask for an update on the NNSA's efforts to recruit and retain these skilled workers. Another key challenge for NNSA is a requirement to achieve a plutonium pit production rate of 80 hits per year by 2030.

This production is intended to be accomplished at Los Alamos National Laboratory, as well as a second site at Savannah River. However, the plant at Savannah River was originally built to convert mixed oxide fuel and therefore must be converted for pit production. The cost of this conversion had risen significantly from $4 billion to between $6 billion and $11 billion.

Furthermore, the project timeline has stretched from the 2030 target to between 2032 and 2035. The Committee would like an update on this issue and when the Department will have an integrated master schedule that accounts for all aspects of the pit production enterprise to meet this longstanding defense requirement of 80 plutonium pits per year. I would also note that the 2024 budget request increases the defense portion of environmental cleanup to $7 billion.

I hope our witnesses will update us on our efforts to continue cleaning up former defense productionsites, particularly at the Hanford Nuclear site. These are commitments that have been made to local communities that we cannot neglect.

The Hanford site has 177 million gallons of radioactive waste stored in underground tanks, some of which are leaking. The Energy Department is working to remove the first 40 percent of the low activity radioactive waste from these tanks, and I commend these efforts.

I understand there are discussions underway on how to remove the highly—high activity radioactive waste from this site and others and would ask our witnesses to share how you are working with the State and local communities on these efforts.

Again, I want to thank our witnesses for appearing today. I look forward to your testimony. As a reminder for my colleagues, there will be a closed session immediately following this hearing in room SVC–217. Now, let me recognize Ranking Member, Senator Wicker.

STATEMENT OF SENATOR ROGER F. WICKER

Senator WICKER. Thank you, Mr. Chairman, and thank you, Madam Secretary and Madam Administrator, for being here. I want to especially thank the Chair for his very clear opening statement.

It is obvious to me, based on the facts that he outlined, that we are nowhere near where we need to be and this Committee needs to take action in our NDAA [National Defense Authorization Act] to catch up. The United States prevailed in the cold war largely because we maintained a strong and credible nuclear deterrent.

Today, the United States and its allies have entered a dangerous new era of nuclear competition. For the first time in history, we must contend with two nuclear armed peer adversaries, each intent on undermining America's interests. Just a few years ago, Beijing was something of an afterthought in the nuclear world.

Since then, China has expanded its conventional and nuclear forces at an unprecedented rate. China has built hundreds of new ballistic missile silos, completed the world's third nuclear triad, and massively expanded its nuclear weapons stockpile. Xi Jinping also directed the Chinese military to develop missiles that can put nuclear warheads into orbit around the Earth, the so-called fractional orbital bombardment system.

Such a capability would allow China to attack at any point on the planet with almost no warning—a terror weapon, if ever there was one. For its part, Russia continues to maintain the largest, most modern, and most diverse nuclear arsenal in the world. Vladimir Putin has shown us during his invasion of Ukraine that he believes nuclear weapons are still a powerful tool for keeping adversaries in check.

Considering the conventional losses Moscow has endured in Ukraine, it seems plausible that Russia might grow even more dependent on the security its nuclear arsenal provides. We have also seen recent evidence that China and Russia are now cooperating on nuclear issues. This year, China purchased over 28 tons of highly enriched uranium from Russia, which is likely to be used to produce plutonium for additional nuclear weapons.

Not to be outdone, North Korea may now possess enough missiles to overwhelm our Homeland missile defenses, and they show no sign of slowing down. Half a world away, Iran continues to expand its stockpile of nuclear weapons as it inches closer to its own nuclear weapon. Unlike our adversaries, the United States has not been urgently adapting our nuclear forces. Instead, we see long overdue modernization program simply plodding along.

I see an Administration intent on defending policies that grow increasingly out of touch with reality, rather than doing the hard

work to adapt our forces to current and future threats. For example, the Biden administration again chose to eliminate funding for the sea launched cruise missile program, SLCM–N [nuclear-armed sea-launched cruise missile], even as China, Russia, and North Korea field thousands of tactical nuclear weapons to threaten the United States and its allies.

This move directly conflicts with clear, bipartisan direction from Congress last year to continue this effort. We would like to hear the logic behind such a move. Beyond the SLCM–N, every single United States nuclear modernization program has been delayed, reduced in scope, or canceled over the past decade.

In particular, the National Nuclear Security Administration has an extensive backlog of projects to update its Manhattan Project area infrastructure. Much of which is over 70 years old, as the distinguished Chairman just told us.

The inability of the National Nuclear Security Administration to meet the statutory requirement to produce 80 plutonium pits per year by 2030 is also deeply disturbing. The inability to do so is deeply disturbing.

This Committee has been told there is nothing that can be done to rectify this, but considering the rising threats from China, Russia, North Korea, and Iran, complacency is unacceptable. We cannot effectively compete with and deter our adversaries with a nuclear capability that is undersized, under prioritized, and incapable of adapting to changing threats.

Thank you, Mr. Chairman.

Chairman REED. Thank you very much, Senator Wicker. Before I recognize the Secretary, there is a quorum present—and such a quorum is now present. I ask the Committee to consider the list of 1,279 pending military nominations.

All these nominations have been before the Committee the required length of time. Is there a motion to favorably to report this list of 1,279 pending military nominations to the Senate?

Senator WICKER. So, moved.

Chairman REED. Is there a second?

VOICE. Second.

Chairman REED. All in favor say aye.

[Chorus of ayes.]

[The list of nominations considered and approved by the Committee follows:]

MILITARY NOMINATIONS PENDING WITH THE SENATE ARMED SERVICES COMMITTEE WHICH ARE PROPOSED FOR THE COMMITTEE'S CONSIDERATION ON APRIL 26, 2023.

1. **MG John W. Brennan, Jr., USA to be lieutenant general and Deputy Commander, US Africa Command** (Reference No. 386)
2. **VADM Karl O. Thomas, USN to be vice admiral and Deputy Chief of Naval Operations for Information Warfare, N2/N6, Office of the Chief of Naval Operations/Director of Naval Intelligence** (Reference No. 387)
3. **LTG Michael S. Cederholm, USMC to be lieutenant genera9and Commanding General, I Marine Expeditionary Force** (Reference No. 457)
4. In the Army Reserve there is 1 appointment to the grade of colonel (Jorge M. Arzola) (Reference No. 466)
5. In the Army there is 1 appointment to the grade of major (James F. Cantorna) (Reference No. 467)

6. In the Army there are 2 appointments to the grade of major (list begins with Sandeep R. Rahangdale) (Reference No. 468)
7. In the Army there is 1 appointment to the grade of major (Song Qu) (Reference No. 469)
8. In the Army there is 1 appointment to the grade of major (Timothy S. McKiddy) (Reference No. 470)
9. In the Army Reserve there are 6 appointments to the grade of colonel (list begins with Kevin J. Huxford) (Reference No. 471)
10. In the Army there is 1 appointment to the grade of major (Jerome C. Ferrin) (Reference No. 474)
11. In the Army there is 1 appointment to the grade of major (Nathan D. Morris) (Reference No. 475)
12. In the Navy there are 2 appointments to the grade of lieutenant commander (list begins with Ryan E. Dinnen) (Reference No. 476)
13. In the Navy there is 1 appointment to the grade of lieutenant commander (Jillian M. Mears) (Reference No. 477)
14. In the Navy there is 1 appointment to the grade of captain (Mary J. Hessert) (Reference No. 478)
15. **BG Derin S. Durham, USAFR to be major general** (Reference No. 487)
16. **In the Army Reserve there are 3 appointments to the grade of brigadier general (list begins with Brandi B. Peasley)** (Reference No. 488)
17. **BG William Green, Jr., USA to be major general** (Reference No. 489)
18. **MG Mark T. Simerly, USA to be lieutenant general and Director, Defense Logistics Agency** (Reference No. 490)
19. **MG Ryan P. Heritage, USMC to be lieutenant general and Deputy Commandant for Information, Headquarters, US Marine Corps** (Reference No. 491)
20. **VADM Craig A. Clapperton, USN to be vice admiral and Commander, Fleet Cyber Command/Commander, TENTH Fleet/Commander, Navy Space Command** (Reference No. 492)
21. **Col. Brian R. Moore, USAF to be brigadier general** (Reference No. 501)
22. In the Army there is 1 appointment to the grade of major (Chet M. Korensky) (Reference No. 506)
23. In the Army there is 1 appointment to the grade of major (Anthony L. Ghezzi) (Reference No. 507)
24. In the Army there are 464 appointments to the grade of lieutenant colonel (list begins with Matthew Acosta) (Reference No. 511)
25. In the Army there are 433 appointments to the grade of lieutenant colonel (list begins with Mark P. Adams) (Reference No. 512)
26. In the Army there are 304 appointments to the grade of lieutenant colonel (list begins with Alexander Acheampong) (Reference No. 513)
27. In the Army there are 35 appointments to the grade of lieutenant colonel (list begins with Emmanuel T. Adeniran) (Reference No. 514)
28. In the Navy there is 1 appointment to the grade of lieutenant commander (list begins with Matthew A. Bubnis) (Reference No. 523)
29. In the Air Force there is 1 appointment to the grade of colonel (Brian J. Bohenek) (Reference No. 524)
30. In the Navy there are 2 appointments to the grade of lieutenant commander (list begins with Andrew R. Flora) (Reference No. 526)
31. In the Space Force there are 2 appointments to the grade of colonel (list begins with Micah R. Kelley) (Reference No. 527)
32. In the Space Force there are 2 appointments to the grade of lieutenant colonel and below (list begins with Erica J. Balfour) (Reference No. 528)
33. In the Space Force there is 1 appointment to the grade of colonel (Craig E. Frank) (Reference No. 529)
34. In the Space Force there are 2 appointments to the grade of lieutenant colonel (list begins with Marouane Balmakhtar) (Reference No. 530)

TOTAL: 1,279

Chairman REED. The motion carries. Thank you very much. Madam Secretary, you are recognized.

STATEMENT OF THE HONORABLE JENNIFER M. GRANHOLM, SECRETARY OF ENERGY, DEPARTMENT OF ENERGY

Secretary GRANHOLM. Thank you so much, Chairman Reed, and Ranking Member Wicker, and esteemed Members of the Committee. I am honored to be here representing the Department of Energy before you today, along with NNSA Administrator, Jill Hruby.

I thank you for the strong and consistent and bipartisan support this Committee has shown the Department and our weapons enterprise. Over the last 2 years, Congress has entrusted the Department of Energy with significant resources to buildup America's clean energy manufacturing and to vault our country into the lead of global clean energy markets, and these endeavors are critical to energy independence and economic competitiveness in the 21st century.

At the same time, the American people have long counted on the Department to meet national security missions that are essential. The geopolitical circumstances of the day make clear that these national security missions are as urgent as ever.

Russia's invasion of Ukraine, China's nuclear expansion have reinforced the imperative to maintain a safe, secure, and effective nuclear deterrent. Amid rising saber rattling and active aggression against our allies, we cannot afford to lose an edge.

As countries around the world begin to turn toward civil nuclear power for greater energy and climate security, we face a need for deeper investment in nonproliferation and counterterrorism measures. As the future of nuclear technology comes into view, we must remember and uphold our pledges to the communities that live alongside our research and production programs and have done so for decades.

The President's Budget Request for fiscal year 2024 recognizes and responds to each of these priorities. It would position the Department of Energy to advance clean-up of legacy nuclear activities, to promote American leadership on the safe and peaceful use of clean energy, and to strengthen our national defense. Let me take just a minute to detail some key elements, starting with NNSA.

The budget calls for a $1.7 billion increase over the amount enacted for the NNSA in fiscal year 2023. That includes a 10 percent increase for weapons activities. It is the largest requested funding level in the history of the NNSA. It reflects the Biden-Harris administration's ironclad commitment to enhancing our national security, defending our citizens, and standing with our allies.

Along with the modernization of the nuclear stockpile and restoring production capacity, this request would empower the NNSA to respond to new threats and opportunities in nuclear nonproliferation and counterterrorism.

It will allow us to maintain the Navy's current nuclear propulsion systems, while developing the next generation of nuclear-powered warships. Both of which are vital to the United State's contributions to the new Australia, the United Kingdom and the

United States (AUKUS) partnership, and to our technological advantage over adversaries. Importantly, the budget will also allow the NNSA to build the Federal workforce that is necessary to meet our increasing mission requirements.

Further, the President has requested necessary resources for our Office of Environmental Management, which oversees the largest environmental cleanup program in the world. In particular, the request enables us to ramp up our work in tackling tank waste. We have treated over 400,000 gallons of tank waste at the Hanford site.

We are now processing record amounts of waste at Savannah River, 6 million gallons. The request also funds infrastructure upgrades at the—and the operation of treatment systems in South Carolina, in Idaho, and Washington State, so we can build on those results to date. It supports further efforts to address contamination issues across our sites, while tending to the communities and tribal nations that are impacted by these issues.

This budget will help the office recruit and train a new cohort of legacy management workers and leaders. Over the last 2 years, we have made important progress on each of these crucial missions, yet we know that challenges remain.

This budget request prepares us for the depth of the work still ahead. I am proud to lead such a gifted and dedicated team, and we are all grateful to have your partnership and support on these indispensable matters. Thank you once again for the opportunity to speak with all of you, and I look forward to your questions.

Chairman REED. Thank you very much, Madam Secretary. Madam Administrator, please.

STATEMENT OF THE HONORABLE JILL M. HRUBY, ADMINISTRATOR, NATIONAL NUCLEAR SECURITY ADMINISTRATION

Administrator HRUBY. Thank you, Chairman Reed, Ranking Member Wicker, and Members of the Committee for the opportunity to appear before you. It is an honor to be here alongside Secretary Granholm to discuss the Department of Energy's enduring National Security missions.

NNSA appreciates the consistent, strong support from the Secretary and from Members of this Committee for our work and our workforce. The deteriorating international security environment is a constant reminder of the importance and urgency of NNSA's mission.

NNSA's fiscal year 2024 budget request of $23.8 billion allows us to respond to today's challenging global environment. NNSA is executing five weapon modernization programs while revitalizing our infrastructure and investing in our scientific and engineering capabilities.

The refurbished B61–12 and the W88 Alt 370 weapons are being delivered on time. The other three systems, the W80–4, the W87–1, and the W93 are progressing well in their developmental phases.

All modernization activities are closely coordinated and synchronized with the Department of Defense (DOD), and we appreciate their strong partnership. Infrastructure investments in the NNSA complex have been prioritized, with some work ongoing at each of our labs, plants, and sites.

The large-scale nuclear infrastructure projects are facing the most challenges due to supply chain bottlenecks, inflation, and labor shortages common throughout the construction industry and the United States right now. These unique NNSA nuclear capabilities take more time to design and build and require specialized knowledge and skills.

I want to assure you that we are actively taking steps to address the issues that have arisen on these projects. We are also making meaningful investments on our nonproliferation, counterterrorism, emergency response, and naval nuclear propulsion programs.

These programs play a vital complementary role to our weapons program—activities, reduce global nuclear risk, provide critical support to Ukraine, and are a key part of the AUKUS partnership. We remain committed to achieving our objectives across all our priorities. Thank you. I look forward to your questions.

[The prepared joint statement of Ms. Jennifer Granholm and Ms. Hruby follows:]

JOINT PREPARED STATEMENT BY SECRETARY JENNIFER GRANHOLM AND MS. JILL HRUBY

Chairman Reed, Ranking Member Wicker, and esteemed Members of the Committee, thank you for the opportunity to appear before you today on behalf of the Department of Energy (DOE) and the National Nuclear Security Administration (NNSA). We recognize and appreciate the Committee's consistent support for DOE's enduring national security missions.

As the Secretary of Energy and Under Secretary for Nuclear Security, we recognize the unique challenges posed by a deteriorating international environment and remain committed to strengthening our nuclear deterrent while reducing global nuclear risks, promoting the peaceful use of nuclear technology to combat climate change, and engage in responsible environmental stewardship and cleanup.

The Nation's nuclear weapons stockpile remains the cornerstone of our deterrent and a key tool in reassuring our allies. The Department is aware that we have no margin for error and that we must increase the pace of our nuclear modernization efforts. This heightened pace must be paired with further progress on nonproliferation and counterterrorism measures to prevent terrorists from acquiring nuclear and radiological material and expertise. This is especially significant as the global civilian nuclear power sector expands, and new nuclear technologies are introduced as a means of fighting climate change. Additionally, the Department will continue to provide the U.S. Navy's submarines and aircraft carriers with militarily effective nuclear propulsion plants and is looking forward to being an effective contributor to the new AUKUS partnership.

The fiscal year 2024 budget reflects the Administration's commitment to these priorities, allowing the Department to enhance our national security, engage in cleanup from our legacy nuclear activities, and promote American leadership on the safe and peaceful use of clean energy.

NNSA'S FISCAL YEAR 2024 BUDGET OVERVIEW

The President's Fiscal Year 2024 Budget Request for NNSA is $23.8 billion, an increase of $1.7 billion, or 7.6 percent, above the fiscal year 2023 enacted level.[1] This funding request reflects the requirements in the nuclear weapons program of record, the National Security Strategy, the Nuclear Posture Review, and other national security strategies and requirements. The funding request supports an expanded mission due to the global environment and takes into account increased costs and delays in construction projects. We are mindful and deeply appreciative of the sustained support from Congress, multiple administrations, and the American people.

[1] Fiscal year 2023 enacted levels throughout this document do not reflect the mandated transfer of $99.7 million from Naval Reactors to the Office of Nuclear Energy for operation of the Advanced Test Reactor.

The fiscal year 2024 budget request for the *Weapons Activities* account is $18.8 billion, an increase of $1.72 billion, or 10 percent, above the fiscal year 2023 enacted level. The request will be supplemented with prior year balances of $61.6 million.

The budget request represents the Administration's firm commitment to a safe, secure, reliable, and effective nuclear deterrent underpinned by world-class science and modern resilient infrastructure and protected with advanced physical and cybersecurity measures. The fiscal year 2024 request reflects the increased urgency needed to modernize weapons and refurbish, revitalize, and reinvest in the nuclear enterprise and workforce.

Stockpile Management

The fiscal year 2024 budget request for Stockpile Management is $5.2 billion, an increase of $251 million, or 5.1 percent, above the fiscal year 2023 enacted level. Activities include: (1) weapons modernization, (2) stockpile sustainment, (3) production operations, (4) weapons dismantlement and disposition, and (5) nuclear enterprise assurance.

W88 Alt 370: The W88 Alt 370 program has entered Phase 6.6, *Full-Scale Production,* and is currently on schedule to meet Department of Defense (DOD) deployment schedules. The budget request of $179 million is $17 million higher than the fiscal year 2023 enacted level, with the increase needed to mitigate risks encountered in Pantex production.

B61–12 LEP: The B61–12 LEP has entered Phase 6.6, *Full-Scale Production.* The B61–12 LEP consolidates multiple variants of the B61 gravity bomb and improves the safety and security of the weapon. Production is currently on schedule to meet DOD deployment schedules. The budget request of $450 million, $222 million lower than the fiscal year 2023 enacted level, is informed by carryover and reflects completion of production of many components.

W80–4 LEP: The W80–4 LEP has entered Phase 6.4, *Production Engineering.* NNSA revised the first production unit (FPU) schedule in response to COVID–19 impacts, slower than planned hiring and increased attrition, and increased component technical challenges. NNSA's revised schedule is fully aligned with the U.S. Air Force's (USAF) Long Range Standoff Missile's schedule for initial and full operating capability. The budget request of $1.01 billion is $113 million lower than the fiscal year 2023 enacted level, consistent with long-standing plans and with typical warhead program profiles, with expenditures ramping down from the current peak as the program moves through its remaining phases.

W87–1 Modification Program: The W87–1 will replace the aging W78 warhead using a modification to the existing W87–0 design. The W87–1 will deploy new technologies that improve safety and security, address obsolete designs and materials, and simplify warhead manufacturability. The W87–1 has entered Phase 6.3, *Development Engineering,* and expenditures are ramping up accordingly. The fiscal year 2024 request of $1.07 billion is $389 million higher than the fiscal year 2023 enacted level. This request fully supports the increased activity needed to execute Phase 6.3 in fiscal year 2024. The request is informed by the recently completed Weapon Design Cost Report, the associated Independent Cost Review by the Office of Cost Estimating and Program Evaluation, and analysis of achievable execution rates by the enterprise.

W93 Program: The W93 is a third warhead for our submarine launched ballistic missiles and is a new warhead. The key nuclear components will be based on currently deployed and previously tested nuclear designs that will not require nuclear explosive testing to certify. The W93 program is a separate but parallel program to the replacement warhead program in the United Kingdom. In February 2022, the W93 entered Phase 2, *Feasibility Study and Design Options.* The budget request of $390 million, an increase of $149 million over the fiscal year 2023 enacted level, reflects the ramp-up associated with Phase 2 and is informed by improved cost estimates.

Stockpile Sustainment

Sustaining today's stockpile is the top priority for NNSA. The Stockpile Sustainment program executes warhead maintenance, limited life component exchanges, minor alterations, surveillance, assessments including annual assessments and significant findings investigations, surety studies and capability developments, and management activities for all weapons systems in today's stockpile. The fiscal year 2024 budget request for Stockpile Sustainment is $1.28 billion, a decrease of $44.6 million, or 3.4 percent, below the fiscal year 2023 enacted level.

Production Modernization

The production modernization program re-establishes and modernizes the manufacturing capabilities for nuclear weapons that degraded or were eliminated after the cold war. The fiscal year 2024 budget request for Production Modernization is $5.6 billion, an increase of $439 million, or 8.6 percent, above the fiscal year 2023 enacted level. This funding is focused on the timely establishment of nuclear weapon production capabilities for primaries, secondaries, tritium and depleted uranium, and non-nuclear components.

Primary Capability Modernization includes plutonium pit production and the High Explosives and Energetics (HE&E) Program. NNSA's most pressing recapitalization effort is reconstitution of plutonium pit production. NNSA is statutorily required to produce no fewer than 80 plutonium pits per year (ppy) by 2030. The Department and the Nuclear Weapons Council have previously notified Congress that NNSA will not meet the 80 ppy by 2030 requirement. However, NNSA remains firmly committed to achieving 80 ppy as close to 2030 as possible. The Department remains in close coordination with DOD to maintain the reliability and effectiveness of the nuclear stockpile until pit production capabilities are fully established.

NNSA is proceeding with a two-site approach for producing at least 80 ppy, with the Los Alamos National Laboratory Plutonium facility set to produce 30 ppy and the Savannah River Plutonium Processing Facility (SRPPF) set to produce at least 50 ppy. At LANL, fiscal year 2024 funds will be used to support an increase in engineering evaluations and certification activities to produce war reserve (WR) plutonium pits in tandem with increased equipment purchases and installation activities. NNSA expects the first WR pit to be produced near the end of calendar year 2024 and an increased number of WR pits to be produced each subsequent year. At SRPPF, fiscal year 2024 funds will continue to support design activities and earlier work onsite preparation, demolition and removal of old equipment and materials from the main process building, and long-lead procurements.

NNSA is also restoring, modernizing, and enhancing its enriched uranium, depleted uranium, and lithium manufacturing processes to meet requirements for nuclear weapon secondary stage production. NNSA is making significant, long-term investments in each of these areas while remaining mindful of current difficulties in large-scale construction. For example, NNSA is relocating its enriched uranium processing capabilities into the Uranium Processing Facility (UPF) at the Y–12 National Security Complex (Y–12) and other enduring facilities to reduce mission dependency on building 9212, which is over 75 years old. UPF will provide for the long-term viability and security of enriched uranium processing while improving worker and public safety and promoting environmental stewardship. Ongoing supply chain issues, delayed equipment delivery, contractor performance, inflation, and shortages of qualified labor have contributed to cost growth and schedule delays beyond the originally scheduled completion date of December 2025. In addition to UPF, NNSA is refurbishing buildings 9215, 9204–2E, and 9995 to establish modern processes and extend their operational lifetimes into the 2040's. A key change will be the establishment of electrorefining to provide purified uranium metal and eliminate the current high-hazard chemical process. NNSA is also continuing investments in the Depleted Uranium (DU) Modernization Program initiated at Y–12 in fiscal year 2021. This program will reconstitute lapsed DU alloying and component manufacturing capabilities at Y–12 while investing in new technology to improve efficiency, reliability, and capacity. The equipment at Y–12 formerly used in this process has been inoperable for the last 15 years, and its reconstitution is a critical component of successful weapons modernization.

To address increased mission demand for future mission requirements, NNSA has developed a lithium modernization strategy that includes restarting processes while constructing the Lithium Processing Facility (LPF). LPF will replace the lithium manufacturing processes within Y–12 buildings 9204–2 and 9202, which are lithium recovery, purification, component fabrication operations and salvaging. These buildings are in disrepair and do not possess the capabilities or capacity to meet demands beyond 2035. LPF will provide modern technologies and a safer environment for both workers and the public.

Multi-year modernization plans for tritium reflect increased future demand. NNSA is already increasing production levels at the Tennessee Valley Authority and extracting produced tritium at the Savannah River Site (SRS). NNSA is designing and initiating site preparations for the Tritium Finishing Facility (TFF) at SRS, which will replace a 1950's-era facility. The fiscal year 2024 budget request reflects a prioritization decision to complete the site preparation subproject but move the remainder of the project out in time to focus resources on SRPPF and other higher-priority construction projects. NNSA also supports a Domestic Uranium Enrichment (DUE) program to provide sufficient capacity of unobligated Low Enriched Uranium

(LEU) for tritium production and Highly Enriched Uranium (HEU) for naval propulsion fuel, as well as obligated or unobligated High Assay LEU (HALEU) for research reactors. New funding is requested to begin conceptual design activities for an unobligated enrichment technology pilot plant.

The Non-Nuclear Capability Modernization (NNCM) program funds the capability and capacity for non-nuclear components (external to the primary or secondary stage of the nuclear explosive package) in weapon systems. Non-nuclear components provide arming, fuzing, and firing functions and safety and use control features, among others. Providing these functions requires a wide range of technologies and components including radiation-hardened microelectronics, neutron generators, gas transfer systems, power sources, electrical assemblies, cables, connectors, structural elements, pads/cushions, and a multitude of other parts that are incorporated into the systems that support or weaponize the nuclear explosive package. NNCs make up more than half the cost of weapons due to the number and complexity of the elements, and the need for qualification in extreme environments over the warhead life. The fiscal year 2024 request includes funding to provide equipment for increased manufacturing capacity at the Kansas City National Security Campus (KCNSC); reconstitute thermal spray capability at Sandia National Laboratories; recapitalize radiation and major environmental test facilities at Sandia National Laboratories for design and qualification; and provide tools and equipment for the Microsystems Engineering, Science, and Applications (MESA) Complex at Sandia National Laboratories as the only approved source of trusted, strategically radiation hardened microelectronics. Fiscal year 2024 funding will also be used to develop production modernization strategies for weapon staging and warhead assembly operations at Pantex.

Stockpile Research, Technology, and Engineering

The fiscal year 2024 budget request for Stockpile Research, Technology, and Engineering (SRT&E) is $3.2 billion, an increase of $246.6 million, or 8.4 percent, above the fiscal year 2023 enacted level. The SRT&E portfolio covers activities that serve as the foundation for science-based stockpile activities, including the capabilities, tools, and components that are used every day to assess the active stockpile and to certify warhead modernization programs without the need for underground nuclear testing. NNSA's unparalleled science and technical capabilities, and commitment to their constant improvement, helps cultivate the knowledge and expertise to maintain confidence in the stockpile.

The Enhanced Capabilities for Subcritical Experiments (ECSE) fiscal year 2024 request is $292.3 million, an increase of $15.1 million, or 5.5 percent, above the fiscal year 2023 enacted level. ECSE will produce experimental data in underground tunnels at the NNSS that enables high fidelity assessment of the current stockpile and certification of the future stockpile without the need to return to underground nuclear explosive testing. ECSE experiments are designed to remain subcritical throughout the experiment to adhere to the current U.S. policy of a "zero yield" nuclear testing moratorium.

The fiscal year 2024 budget request for the Stockpile Responsiveness Program (SRP) is $69.8 million, an increase of $6.1 million, or 9.6 percent, above the fiscal year 2023 enacted level. SRP is responsible for exercising and enhancing capabilities through the entire nuclear weapons lifecycle to improve the responsiveness of the United States to future threats, technological trends, and international developments not addressed by current warhead modernization programs. SRP is investing in efforts to address issues in design for manufacturability, digital engineering, component, and system prototyping and testing.

The fiscal year 2024 budget request for Weapons Technology and Manufacturing Maturation (WTMM) is $327.7 million, an increase of $41.5 million, or 14.5 percent, above the fiscal year 2023 enacted level. The WTMM program invests in system-agnostic technology development and advanced manufacturing capabilities to reduce the technological risks and life-cycle costs of maintaining and enhancing the stockpile. Technology and manufacturing maturation enables the development and delivery of design-to-manufacturing capabilities to meet the current programs of record and future nuclear weapons design and production needs of the nuclear security enterprise.

The fiscal year 2024 budget request for the Inertial Confinement Fusion Program (ICF) is $601.6 million, a decrease of $28.3 million, or 4.5 percent, below the fiscal year 2023 enacted level, reflecting the use of projected carryover for fiscal year 2024 requirements. The ICF program provides high energy density (HED) science capabilities and expertise that support research and testing across the breadth of the Stockpile Stewardship Program. Its twofold mission is to meet immediate and emerging HED science needs to support the deterrent of today, and to advance the

R&D capabilities necessary to meet those needs for the deterrent of the future. In a breakthrough on December 5, 2022, the ICF Program reached fusion ignition and achieved net energy gain for the first time in history.

The fiscal year 2024 budget request for Advanced Simulation and Computing (ASC) is $782.5 million, a decrease of $7.5 million, or 1.0 percent, below the fiscal year 2023 enacted level. ASC will provide NNSA with leading edge simulation capabilities to support weapons design, science-based stockpile stewardship, and stockpile certification activities. The fiscal year 2024 budget request will continue funding maturation of next-generation simulation and computing technologies. Additionally, *El Capitan,* the first exascale computer for national security, is expected to come online at LLNL for classified computing in 2024. At over two exaflops, it will be the world's fastest supercomputer.

Academic Programs and Community Support

Starting in fiscal year 2024, NNSA is proposing to elevate Academic Programs from a congressional-control level within SRT&E to a stand-alone Government Performance and Results Act (GPRA) Unit/control level, and to also establish a Community Capacity Building Program to provide benefits to disadvantaged communities, including Tribal Nations and rural communities, that are affected by activities at NNSA's sites. These changes will enable improved program integration, agility, development, and alignment to critical workforce needs, promote the President's goal of advancing diversity, equity, inclusion, and accessibility through the Federal Government, and bolster underserved communities affected by activities at the NNSA sites in the areas of job creation, community restoration, infrastructure projects, and educational resources. The fiscal year 2024 budget request is $152 million, an increase of $40 million, or 36 percent, above the fiscal year 2023 enacted level. [2]

NNSA depends on a strong and diverse base of national expertise in specialized technical areas such as nuclear science, radiochemistry, materials at extreme conditions, high energy density science, advanced manufacturing, and high-performance computing. This budget supports managing academic solicitations and competitive awards in these disciplines, enabling connections between these academic research communities and the nuclear security enterprise, and attracting and retaining this pipeline of developed talent to ensure the future workforce of NNSA can meet the evolving needs of the enterprise. NNSA is also building the pipeline for technicians and skilled craft trades to meet ongoing and emerging needs at national laboratories, plants, and sites. The Apprenticeships for Complete and Committed Employment for Specialized Skills (ACCESS) program—outlined in the fiscal year 2020 NDAA—was motivated by the need to support apprenticeships for specialized skills that are vital to the nuclear security enterprise.

INFRASTRUCTURE AND OPERATIONS

A well-organized, well-maintained, and modern infrastructure system is the bedrock of a flexible and resilient nuclear security enterprise. NNSA's infrastructure consists of $134 billion in assets and facilities. More than 60 percent are beyond their life expectancy, with some of the most important dating back to the Manhattan Project. When the cold war ended NNSA was left with large and aged buildings, environmental contamination, and the need to close facilities for some key weapon components such as plutonium pits. Going forward, NNSA needs to be creative in facility design and cultivate capabilities that can rapidly scale up or down depending on the international environment and mission need while being minimally disruptive to contracts, workforce, facilities, and the environment. This includes developing strategic partnerships with industry and using new acquisition approaches to purchase facilities rather than pursuing traditional Federal construction projects. NNSA is increasingly exploring the use of its real eState authority to achieve timely acquisition of modern, non-complex infrastructure to support the mission.

The fiscal year 2024 budget request for Infrastructure and Operations is $2.77 billion, an increase of $164.5 million, or 6.3 percent, above the fiscal year 2023 enacted level. This increase will enable NNSA to operate and modernize NNSA's infrastructure to support expanded mission objectives and future enterprise resilience. A significant portion of the requested increase will support the Kansas City Non-Nuclear Expansion Transformation plan. NNSA is currently pursuing acquisition of 245 acres of land immediately adjacent to the Kansas City National Security Campus (KCNSC), because the current KCNSC manufacturing capacity is inadequate to support the modernization program of record. The increase also enables NNSA to address external factors such as supply chain delays, inflation, and labor shortages

[2] Comparison made using a comparable budget structure to that proposed for fiscal year 2024.

which have raised costs and extended timelines for projects, making it difficult to deliver projects within the baselines established. To address these challenges, NNSA is focused on improving early stage project and portfolio level planning, identifying and applying lessons learned through independent project reviews, and taking actions to streamline project delivery and increase buying power. NNSA is grateful for the additional authority in the National Defense Authorization Act (NDAA) for fiscal year 2023, which raised the minor construction threshold from $25 million to $30 million and provided a 3-year pilot program to raise the threshold to account for inflation. This will make a critical difference in NNSA's ability to further innovate minor construction and complete low-risk projects on time even during a period of higher-than-normal inflation.

Using data-driven risk-informed tools, NNSA pinpoints when and where infrastructure investments are needed and develops innovative execution initiatives to streamline processes, accelerate delivery, and increase buying power. For example, in fiscal year 2019 NNSA established the EMC^2 pilot program to streamline commercial-like construction projects. The initial program quickly expanded from four projects to ten in 2021, including the addition of five office buildings at LANL to support plutonium pit production. In fiscal year 2022, NNSA completed the LLNL's Emergency Operations Center in just 13 months after receiving full construction funding, the first project under this pilot program. This year, NNSA held the ribbon cutting for the Y–12 Fire Station and the Y–12 Emergency Operations Center. Both projects began construction in 2021 and were ready for full operations in just 2 years.

DEFENSE NUCLEAR SECURITY

Defense Nuclear Security's fiscal year 2024 budget request is $1.02 billion, an increase of $144.7 million, or 16.6 percent, above the fiscal year 2023 enacted level. The Office of Defense Nuclear Security's primary mission is protecting the facilities, assets, and people responsible for successfully carrying out NNSA's national security missions. Growth in NNSA's mission portfolio, and the associated growth in projects in secure areas such as LAP4, UPF, and SRPPF, along with increased resources necessary to meet core security requirements, has led to increased program requirements for Defense Nuclear Security.

Full funding of the fiscal year 2024 budget request will support these larger requirements as well as high-priority initiatives for the Physical Security Center of Excellence and the Center for Security, Technology, Analysis, Response, and Testing. Additionally, this increase includes additional funding for the West End Protected Area Reduction (WEPAR) project at Y–12 to address cost increases associated with contractor performance, delays in other projects outside WEPAR's scope, and external factors affecting projects enterprise wide.

INFORMATION TECHNOLOGY AND CYBERSECURITY

The fiscal year 2024 budget request for information technology and cybersecurity is $578.4 million, an increase of $132.7 million, or 29.8 percent, above the fiscal year 2023 enacted level. This request funds current operations and continues investments across NNSA to modernize both unclassified and classified systems and the execution of a robust and effective cybersecurity capability.

The fiscal year 2024 budget request supports the cost necessary to maintain a secure and resilient cyber program. The request invests in operations, mission support, infrastructure modernization, labor growth, and associated investments to execute statutory requirements, Executive Order 14028, policy requirements, and Office of Management and Budget memorandums. The fiscal year 2024 requested increase reflects investments in endpoint detection and response, zero trust architecture, operational technology, enterprise cybersecurity tools and services, and cyber workforce growth at the labs, plants, and sites.

The request funds cybersecurity programs at NNSA's laboratories, plants, and sites to address the significant increase in technology use and keep pace with expanded NNSA mission requirements. The funding increase supports the ongoing modernization of NNSA's network architecture and classified systems, including the Emergency Communications Network. The fiscal year 2024 request includes the costs associated with classified infrastructure and capabilities, implementation of cloud infrastructure, and unclassified IT services. These improvements reflect NNSA priorities in improving both unclassified and classified collaboration tools and network services, as well as providing redundancy and improved performance for mission partners around the world.

DEFENSE NUCLEAR NONPROLIFERATION

From its inception, the Office of Defense Nuclear Nonproliferation (DNN) has developed and implemented policy and technical solutions to minimize or eliminate proliferation sensitive materials and limit or prevent the spread of materials, technology, and expertise necessary for nuclear and radiological weapons. Longstanding and growing cooperation with partner governments; international organizations such as the IAEA, the World Customs Organization, and INTERPOL; and the private sector help develop and implement solutions. These programs work side-by-side with both NNSA's Weapons Activities and Naval Reactors programs to implement best practices for nonproliferation and materials security in our own programs. The fiscal year 2024 budget request for the DNN account is $2.51 billion, an increase of $19 million, or 0.8 percent, above the fiscal year 2023 enacted level. The request will be supplemented with prior year balances of $20 million. This account funds all nonproliferation-related activities in the offices of Defense Nuclear Nonproliferation (DNN), Emergency Operations (EO), and Counterterrorism and Counterproliferation (CTCP).

DNN is working in a global landscape that has radically changed in the last 12 months. Russia's unprovoked full-scale invasion of Ukraine; the expansion and diversification of Russian and Chinese nuclear arsenals; the destabilizing activities of Iran and the Democratic People's Republic of Korea (DPRK); the expected growth in nuclear material, technology, and technical expertise resulting from the global expansion of nuclear power and nuclear technology adoption; and the associated risk of illicit smuggling and procurement networks all complicate nuclear nonproliferation missions and demonstrate the need for additional resources and deeper engagement with allies and partners. DNN will utilize these resources to improve capacity and capabilities, develop and incorporate cutting-edge technology required to address future threats, and deepen cooperation with partners.

Globally and domestically, DNN has had success in reducing and eliminating nuclear materials. To date, DNN has removed or confirmed the disposition of nearly 7,300 kilograms of weapons-usable nuclear material from 48 countries and Taiwan, eliminated the need for weapons-grade material at 108 civilian research reactors and isotope production facilities, and converted a cumulative 1,298 kilograms of plutonium to an oxide form in preparation for final disposition. Additionally, DNN has overseen the first three shipments of downblended surplus plutonium from the K area at SRS to the Waste Isolation Pilot Plant in New Mexico and removed 101 cesium blood and research irradiators form U.S. facilities. Working with domestic and international producers, DNN also provided financial and technical assistance for the conversion of the medical isotope molybdenum–99 (Mo–99), which is used in over 40,000 procedures in the U.S. every day, production facilities from using highly enriched uranium to low enriched uranium. As a result, all major global Mo–99 production facilities now use low enriched uranium, eliminating a proliferation threat from a major global industry.

DNN's Nonproliferation and Arms Control Program (NPAC) continues to cooperate closely with the International Atomic Energy Agency (IAEA) to provide subject matter expertise and bolster the international verification regime through technology development and implementation for safeguards, arms control, and emerging challenges. The greater use of nuclear technology is an issue of increased salience for NPAC. In particular, nuclear energy programs are rapidly expanding as countries seek sources of zero-carbon electricity to combat climate change and enhance energy security. Promoting stringent safeguards and security policies and developing new monitoring and verification technologies all in partnership with like-minded countries are key to preventing proliferation. Additionally, NNSA provided technical advice to the interagency and our AUKUS partners on the full suite of requirements that underpin nuclear stewardship to implement the strongest possible safeguards and verification measures while achieving the overall objectives of AUKUS.

DNN also sustains a robust research program that is vital in the development of technical capabilities which support nonproliferation, counterterrorism, and emergency response missions. This program also sustains and develops the foundational nonproliferation technical competencies that promote the agility needed to support a broad array of nonproliferation missions and potential threats. Our DNN R&D program additionally sustains experts in labs and universities, including people and test beds, and develops ways to get ahead of emerging threats.

DNN also recently established a Bioassurance program which coordinates closely with DOE's Office of Science in leveraging national laboratory capabilities and technical expertise by making complementary investment in biological sciences and engineering, computational capability, and classified workspaces to advance funda-

mental understandings of biology and adapt those understandings to bio-resilience and advancing capabilities for detection and attribution of biological weapons development activities. The Department appreciates Congress' support for the establishment of this program.

NUCLEAR COUNTERTERRORISM AND INCIDENT RESPONSE

The fiscal year 2024 request for Nuclear Counterterrorism and Incident Response (NCTIR) is $493.5 million, an increase of $23.6 million, or 5 percent, above the fiscal year 2023 enacted level. The NCTIR program supports two subprograms: Counterterrorism and Counterproliferation (CTCP) and Emergency Operations (EO).

The CTCP subprogram advances the Nation's technical capabilities to understand, defeat, and attribute nuclear threat devices, including INDs and lost or stolen nuclear weapons; provides technical guidance on physical security requirements for nuclear materials; and conducts Nuclear Threat Reduction exchanges with the United Kingdom and France to prevent, counter, and respond to nuclear terrorism and nuclear proliferation.

CTCP also manages NEST, NNSA's multi-mission emergency response capability comprised of scientific and technical experts who are trained and equipped to respond rapidly in the event of a nuclear or radiological incident or accident worldwide. NEST includes nuclear forensics capabilities that enable technical personnel to identify the origin of nuclear material interdicted outside of regulatory control or used in a nuclear attack.

Russia's full-scale invasion of Ukraine has resulted in an increased operational posture for CTCP since February 2022. In fiscal year 2023, CTCP received supplemental appropriations of $110.3 million to support the U.S. Government's response to Russia's ongoing war in Ukraine. CTCP is using these funds for radiation detection and monitoring of Ukrainian nuclear facilities; personal protective equipment; emergency diesel generators; and procurement of diesel fuel and consumables for Ukraine's nuclear power plants. CTCP will continue to deliver incident response training and build capacity among responders in Ukraine and other partner nations.

The EO subprogram provides both the structure and processes to ensure a comprehensive and integrated approach to all-hazards emergency management across the Department. The EO program aims to improve readiness and effectiveness of the DOE Emergency Management System and the nuclear security enterprise response regardless of the nature or location of the emergency. Fiscal year 2024 funding provides for 24/7/365 Consolidated Emergency Operations Center communications and coordination support to the DOE/NNSA Emergency Management Enterprise, nuclear security enterprise, and Departmental senior leadership.

NAVAL REACTORS APPROPRIATION

With 79 ships, or more than 40 percent of the Navy's major combatants,[3] relying on nuclear propulsion technology, maintaining a qualitative edge in this area remains critical to our national security posture. Providing the Nation's submarines and aircraft carriers with unparalleled mobility, flexibility, responsiveness, and endurance is vital in today's complex geopolitical environment. The ability to maintain robust fleet capabilities on long-term missions is essential for the security of global trade and our allies. The Office of Naval Reactors remains the foundation of this national achievement in global security. Continuous progress in the Naval Nuclear Propulsion Program gives the U.S. Navy a decisive edge in naval warfare and enhances the security and reliability of the sea-based leg of our nuclear triad.

The fiscal year 2024 budget request for *Naval Reactors* is $1.96 billion, a decrease of $117.3 million, or 5.6 percent, below the fiscal year 2023 enacted level. This decrease reflects the revised funding profile for the Spent Fuel Handling Recapitalization Project that was recently re-baselined, and near-complete refueling and overhaul of the S8G Prototype land-based reactor in New York. The budget request supports the continued safe and reliable operation of the nuclear-powered fleet and provides for the continued maintenance, oversight, and operations at the four Naval Nuclear Laboratory sites and the associated contractor workforce. Funding also supports requirements for the office's major initiatives: *Columbia*-class ballistic missile submarine reactor systems development; development of the next generation SSN(X) attack submarine; and continued progress on base technology development, infrastructure recapitalization at program sites, and decontamination and decommissioning efforts.

[3] Major combatants, in this instance, include aircraft carriers, submarines, and surface combatants based on the "Active in Commission" column from the Naval Vessel Register

Consistent, sustained funding is vital for the support of these efforts and will allow Naval Reactors to meet current and future force needs; this foundational support of Naval Reactors is critical to our ability to deliver on AUKUS. The *Columbia*-class lead ship remains under construction and the Spent Fuel Handling Recapitalization Project at the Naval Reactors Facility in Idaho is ongoing. Additionally, work is underway to invigorate long lead-time technology development for the current and future nuclear fleet while supporting specific requirements to meet the Navy's timeline for the next-generation attack submarine ship authorization.

NNSA WORKFORCE

NNSA's workforce represents the backbone of the Nation's nuclear security enterprise. The fiscal year 2024 budget request is $539 million, an increase of $64 million, or 13.5 percent, above the fiscal year 2023 enacted level. The fiscal year 2024 request supports staffing levels sufficient to provide oversight and leadership for our growing mission requirements in the modernization, recapitalization, nonproliferation, and counterterrorism programs. NNSA seeks to recruit and retain top talent in a wide array of fields including science, engineering, crafts and trade, business, foreign affairs and social sciences, and project and program management.

NEW AND CRITICAL PHASE OF THE ENVIRONMENTAL MANAGEMENT MISSION

As important as the missions of today and tomorrow are, the cold war left an indelible mark on America. It is the mission of the Office of Environmental Management (EM) is to address the legacy of nuclear weapons development and government-sponsored nuclear energy research that has played a significant role in domestic security and prosperity.

As the largest environmental cleanup program in the world, EM plays a key role in the Department's overarching mission to protect the planet. The Department's fiscal year 2024 budget request of $8.3 billion will help EM continue to make progress in fulfilling the government's responsibility to clean up the environment in communities that supported nuclear weapons programs and government-sponsored nuclear energy research. EM's vital mission also helps to support and enable DOE's ongoing national security and scientific research missions.

Over the last 30 years, EM has achieved significant progress for the environment, completing cleanup at 92 out of a total of 107 sites. That progress continues today. In 2022, EM teams across the country crossed the finish line on key demolitions, treated and relocated millions of gallons of waste, and deepened our engagements with local Tribes and communities all while curbing pollution and contributing to climate solutions.

Deactivation and demolition work at the Oak Ridge National Laboratory and the Y–12 National Security Complex is reducing environmental risks and enabling research and national security missions. At the Hanford site in Washington State, EM has cocooned the seventh reactor along the Columbia River leaving just one more to go. EM has also treated over 400,000 gallons of radioactive and chemical waste from large underground tanks at the Hanford Site where work is progressing toward startup of a system that will convert this waste into glass for disposal. This Spring, the EM team in Idaho met a key commitment to the State of Idaho by completing the transfer of EM-owned spent nuclear fuel to onsite dry storage and marked a historic achievement with the startup of a new tank waste treatment capability that will address one of the Department's greatest challenges at the site.

At the Savannah River Site in Aiken, South Carolina EM is processing record amounts of tank waste and continues to advance the Advanced Manufacturing Collaborative facility which will help meet the needs of the Department's cleanup mission and help develop a diverse and talented next generation workforce.

More than 200 transuranic waste shipments were received last year at the Waste Isolation Pilot Plant (WIPP) in New Mexico from five generator sites. In addition, EM has launched demolition of the West Valley Demonstration Project's Main Plant Process Building, a priority that will continue this year and will further advance under the fiscal year 2024 budget request. The Nevada National Security Site is preparing to demolish four Test Cell C buildings this year and will continue to reduce the cleanup footprint there in fiscal year 2024.

The fiscal year 2024 request include $7.5 billion for defense environmental cleanup activities, which covers most major EM sites and includes the Uranium Enrichment Decontamination and Decommissioning Fund contribution. The request builds on recent progress, reflects the Department's strong commitment to protecting the environment, enabling national security and scientific research missions, as well as delivering for communities most impacted by the legacy of the past. The request supports a ramp up in EM's ability to tackle tank waste—one of the Department's

largest environmental challenges and financial liabilities. The request will also enable continued progress in infrastructure improvements at the Waste Isolation Pilot Plant and support waste shipments from across the EM program. In addition, EM will continue to advance facility demolition and risk reduction projects across the program.

The request of $1.97 billion for the Office of River Protection will enable EM to advance commissioning and startup of the Direct Feed Low Activity Waste system and includes a $600 million investment to ramp up work on the Waste Treatment Plant's High Level Waste facility. Also at Hanford, the request of $1.02 billion for the Richland Operations Office will enable continued risk reduction activities including advancing the transfer of cesium and strontium capsules to dry storage and treating another 2 billion gallons of contaminated groundwater.

At the Savannah River Site, the request of $1.74 billion supports utilization of capabilities to accelerate the tank waste mission. The request will also maintain a high State of readiness for H Canyon, the only chemical separations facility remaining in operation in the United States.

At the Idaho Cleanup Project, the request of $447 million supports operations of the Integrated Waste Treatment Unit which will ultimately treat about 900,000 gallons of liquid waste by turning it into a granular solid.

Along with providing for continued Waste Isolation Pilot Plant operations, the budget request supports key modernization and infrastructure recapitalization priorities. Shipments of legacy transuranic waste to the Waste Isolation Pilot Plant will progress from sites across the DOE complex, including the Los Alamos National Laboratory in New Mexico.

EM's fiscal year 2024 budget also facilitates the Department's broader national security and scientific research missions. With the first-ever demolition of a reactor in the central campus area at the Oak Ridge National Laboratory and the successful cleanup of a portion of the Y–12 National Security Complex that will be utilized by the NNSA for a new Lithium Processing Facility, EM's steady progress is a part of a broader vision focused not only on cleaning up the past, but also helping prepare for expanding national security and research missions in Oak Ridge, Tennessee. The request builds on that progress with $519 million for Oak Ridge to continue cleanup operations at the Oak Ridge National Laboratory and Y–12 National Security Complex excess facilities.

In addition to enabling impactful progress at EM sites, the fiscal year 2024 request reflects a planning approach that will boost the Department's ability to complete its cleanup mission and deliver for impacted communities. Today, the environmental management mission is at an important crossroads. After 30 years of mitigating the most pressing risks, the program is embarking on a new and critical phase of the mission that requires addressing some of the toughest challenges.

To address these challenges, the Department will need a deep and diverse bench of Science, Technology, Engineering, and Math talent. The fiscal year 2024 request invests in building a workforce for the future that promotes diversity, equity, inclusion, and accessibility. That includes high-quality jobs in environmental cleanup where workers from all backgrounds can make a living and make a difference. The budget request includes $56 million to continue EM's recently expanded Minority Serving Institutions Partnership Program.

While the mission is rooted in the environmental legacy of the past, EM is also focused on the possibilities for the future. As cleanup progresses, EM is opening up possibilities for a clean energy future, good paying jobs and thriving communities and Tribal Nations. The fiscal year 2024 request represents a significant investment in helping the communities grow and thrive. The budget request includes support for the Tribal Nations, Alaska Native communities, and communities near EM sites ensuring they are safe, providing opportunities for local input into clean up priorities and helping build a vibrant future. The request includes Payment in Lieu of Taxes funding for communities near Hanford and Savannah River to support schools, roads and other local priorities. A $40 million investment is included for the Community Capacity Building initiative as well as support for EM's participation in the Department's cross-cutting Justice40 Initiative. This initiative has led to expanded grants to support community and Tribal engagement as well as STEM and Community Based Education programs.

The Department will continue to work hand-in-hand with workers, unions, Tribal Nations, local communities, and Congress to protect the environment, plan for continued cleanup and foster successful visions for the future.

ENHANCING CYBERSECURITY

Cybersecurity Threats to the Energy Sector

Within the United States energy sector, an incredible transition is underway. New sources of energy generation are coming online; new digital tools and technologies are being leveraged to improve reliability and efficiency; and new market forces are shaping how we interact with energy daily, in vehicles, homes, and businesses across the country. With these changes come new risks and new opportunities to advance our cybersecurity posture.

The Department's Office of Cybersecurity, Energy Security, and Emergency Response (CESER) is focused on securing the Nation's energy infrastructure against all hazards, reducing the risks and impacts of cyber and other disruptive events, and supporting State, local, tribal, and territorial governments (SLTT), as well as industry, with response and restoration when a disruption occurs.

As this Committee knows well, DOE has tremendous expertise both at headquarters and across the 17 National Laboratories to help us tackle cyber threats to the U.S. energy sector. DOE, through CESER, leads numerous efforts to push the boundaries of what is possible in energy cybersecurity.

I will highlight three initiatives that CESER is leading to enhance energy cybersecurity: 1) the Energy Threat Analysis Center (ETAC) pilot efforts; 2) Energy Cyber Sense; and 3) additional efforts to integrate cybersecurity into next generation energy systems.

Enhancing Cyber Threat Collaboration

The congressionally chartered Cyberspace Solarium Commission and the recently released National Cybersecurity Strategy (NCS) call out the need for shared responsibility between the public and private sectors, as much of the Nation's energy infrastructure is privately owned and operated. The NCS specifically highlights DOE's pilot of the ETAC as an example of the new and innovative capabilities that the Nation needs to build to effectively collaborate at the scale and speed needed to defend critical infrastructure. In coordination with CISA and the private sector, the ETAC pilot will bring experts from government and industry together to analyze and address cyber threats to the energy sector. The work of the pilot will inform a feasibility study, which will provide a roadmap for the future of the ETAC. Through this new, persistent, operational approach to cyber collaboration, we will close gaps in our collective situational awareness of threats, improve our ability to mitigate and defend against them, and support the Nation's response to incidents within the energy system.

Securing Energy Sector Supply Chains

The Infrastructure Investment and Jobs Act (IIJA) made crucial investments in the cybersecurity of our energy sector supply chains. The IIJA called upon DOE to establish an Energy Cyber Sense program to strengthen the cybersecurity of hardware and software the sector depends on to operate the energy systems of today. Energy Cyber Sense will serve as a hub for CESER activities related to development of supply chain policies, standards, testing, educational awareness, and others to allow the Department to take a broad view of addressing this cyber risk. Lessons learned from this program will be shared with energy sector asset owners and manufacturers who are best positioned to address them. A flagship initiative of Energy Cyber Sense is the Cyber Testing for Resilient Industrial Control Systems, or CyTRICS TM program, which leverages the best-in-class test facilities and analytic capabilities of the DOE National Laboratories to inform improvements that strengthen the security and resilience of hardware and software in the energy sector. CyTRICS TM partners with top manufacturers and utilities in the sector to identify systemic supply chain vulnerabilities that can help us engineer out cyber weaknesses in next-generation energy systems.

Building in Security into Energy Systems

It is far more efficient and effective to build in security measures as new technologies are designed than it is to bolt on cybersecurity solutions once hardware or software is in use. In addition to our supply chain investments focused on security, CESER is also focused on a number of efforts to realize security by design in the energy sector including the development of cybersecurity baselines for owners and operators and investments in research, development, and demonstration (RD&D) to bring new solutions to the market.

In 2022, several states began exploring the development of cybersecurity baselines for utilities operating within their jurisdiction. To prevent a patchwork approach to the implementation of cyber baselines, CESER provided funding to the National Association of Regulatory Utility Commissioners (NARUC) to kick off an effort to es-

tablish a set of cybersecurity baselines for distribution electric systems and distributed energy resources. The focus of this engagement is to establish cybersecurity best practices that will demonstrably buy down the cyber risk to our country's energy infrastructure. This effort will help create a more stable, more predictable business environment for energy innovators over time while having a real impact on the overall cybersecurity of our energy systems.

DOE is also actively working to reduce risks to the electricity, oil, and natural gas systems through threat-informed RD&D of next generation tools and technologies that provide U.S. energy companies cutting-edge cyber protection, monitoring, detection, response, containment, forensics, and recovery capabilities. Last year, CESER released a $45 million Funding Opportunity Announcement (FOA) to strengthen the cybersecurity of next generation energy systems that will create, accelerate, and test technology to protect our energy systems from cyber attacks. Further, CESER executed a $12 million FOA to establish a network of university-based, regional cybersecurity research and development centers across the Nation. Finally, CESER awarded $12 million for six university-based RD&D projects focused on the development of cutting-edge cyber-physical platform tools and technologies that can detect and mitigate incidents in electric power systems. DOE will also continue to implement the Cybersecurity for the Energy Sector Research, Development, and Demonstration Program pursuant to Section 40125 of the IIJA. This $250 million program is designed to support the development and deployment of advanced cyber applications, technologies, and threat collaboration efforts through cooperative agreements and contracts with utilities, the National Labs, manufacturers, and vendors. The first Lab Call for this program is expected in the coming weeks.

CONCLUSION

At DOE, we continue to make progress in fields that enhance American national security during a time of significant global challenges. NNSA's weapons activities, nonproliferation and counterterrorism, and naval reactors programs all play key roles in reducing global nuclear threats and supporting our nuclear deterrent which remains the cornerstone of our national defense. The Department faces an expanded mission at a time of supply chain disruptions, inflation, great power competition, and increased impacts from climate change. We are determined to succeed and continue providing for the American people. We appreciate the trust and resources the Committee has placed in us to meet this moment and are thankful for the continued support of the public and the rest of Congress.

Chairman REED. Thank you very much, Administrator. Madam Secretary, in my opening statement, I mentioned, and indeed you have all referenced as the difficulty in accelerating or even keeping on schedule with construction projects because of the increase in costs due to shortage of skilled laborers, specialty materials, especially for these nuclear projects.

How serious is this problem across the entire Department of Energy, and what are you doing about it?

Secretary GRANHOLM. Thank you, Mr. Chairman. It is a serious problem. I mean, as Administrator Hruby just acknowledged, those three issues, workforce, inflation, and supply chain have impacted not just the NNSA projects, but projects all across our enterprise, at our labs, for example. It is impacting construction across the country as we are seeing.

There is no doubt that it is a challenge, and so, the question is how can we, particularly on the workforce side, how can we recruit and train a new cadre of employees for these very important missions? Especially as we are competing with the private sector, and full-on increases in manufacturing projects all across the country.

You know, in large measure, a lot of these are newer projects, thanks to what Congress has given through the Inflation Reduction Act. That competition will be real. Fortunately, the NNSA has done a lot of work on reaching out to—across the country, trying to incentivize a new workforce, trying to do a better job, a big job of recruiting.

They have been fortunate that their attrition rate has dropped to about 3 percent, which is much better than it had been. But there is no doubt that we are looking at all measures to be able to do that.

Chairman REED. Thank you. Administrator Hruby, you mentioned, and I also mentioned, the Ranking Member, of the challenge of synchronizing all of these different projects, particularly at Los Alamos and in Savannah with respect to the 80-pit production objective, which is the law of the land.

One of the aspects of this is coming up with an integrated master schedule for reduction, and you have not done so yet. Can you give us an idea of when this integrated master schedule will be ready?

Administrator HRUBY. Yes. Thanks, Senator Reed. We have, in fact developed and integrated master schedule. We rolled it out in October 2021. The issue that has been cited by the GAO [Government Accountability Office] about our integrated master schedule is it isn't in enough detail to help to be as useful as possible, and we agree with that.

But the reason it isn't detailed is because we are still in the design phases for both of these projects. We have activities going on, and the activities that are going on are completely in the schedule.

But until we finish design phases, it is hard to have the integrated master schedule at the level of detail that the GAO would like to see to make that tool as effective as possible, and we will continue to populate the integrated master schedule with more detail as the designs mature.

Chairman REED. Thank you very much. Madam Secretary, I have got about a minute plus. Can you highlight some of the efforts that you have been engaged with helping Ukraine? Because one of the critical issues they have is keeping the lights on, literally.

Secretary GRANHOLM. Yes, very briefly. We, at the Department of Energy, both at the NNSA and in the non-defense side, have one, made sure that we have been in touch with all of the utilities across the country to ask them for donations to help send equipment to shore up the energy grid in Ukraine.

We are now about to send our ninth plane of equipment that the utilities have been either donated or that we have purchased from them. Number two, with the NNSA, we have made sure that we have installed sensors in Ukraine to detect radiological activity.

We have been training people in Ukraine in the event—in how to respond to a radiological action. We have been focused on as well, the next step.

What does the grid look like? How should we design a grid in partnership with Ukraine that is war proofed as we buildup? In the postwar environment, hopefully that happens soon, what should the next grid look like? Consistent with what President Zelensky has said, which is that he would like to see a distributed grid that would make it safer.

Chairman REED. Well, thank you very much. When I was there in January and spoke with President Zelensky, he specifically asked for what you are doing, and I commend you for doing it, which is to get our private utilities to donate equipment that they had available. I think that is a remarkable contribution. Thank you. Senator Wicker, please.

Senator WICKER. Thank you for pointing that out, Mr. Chairman. I share the commendation of that move by our American Government. Let's talk, Administrator Hruby, about China. Before we considered them a major nuclear power, the United States entered into agreements with Russia with regard to orbital nukes.

As I mentioned earlier in my statement, China is not bound by that, and I think it comes as a shock to many of us that China is pursuing this never before path that is very risky. Would you tell us and the American public about this orbital idea that China has, how far along are they, and how it affects us?

Administrator HRUBY. Well, thanks, Senator Wicker. This fractional orbital bombardment concept has existed for decades, and as a result with Russia and others, we have discouraged its development.

China and Russia are modernizing their delivery systems, and this is just one of many things that they are considering. We have got to figure out a way to get back into dialogs to talk about these types of systems and the instability that results if they are deployed.

I don't want to say a lot about the assessment of how far along this is in an open session, but clearly, it is concerning and it is something that we are keeping a close eye on.

Senator WICKER. Well, is it fair to say that there were developments last year that became public that were more troubling than before?

Administrator HRUBY. Yes.

Senator WICKER. Okay. Last year, Madam Secretary and Madam Administrator, you asked for unfunded request. This year you didn't. Why on earth did we not hear an unfunded request this year?

Secretary GRANHOLM. Senator, the unfunded request last year was associated with the Savannah River pit production facility, and we greatly appreciate having received the request and is being put to great use there to accelerate activities.

This year, the Department, as verified by the Nuclear Weapons Council, has submitted a budget request that fully funds the activities that we think we need to conduct—to meet all the requirements and to conduct our mission.

Senator WICKER. So, all of the requirements that you need were approved by OMB [Office of Management and Budget], and you don't need to go beyond that for modernization programs to be delivered on time, that is your point of view?

Secretary GRANHOLM. Yes.

Senator WICKER. Okay. Well, if somebody else may want to talk about sea launched cruise missile programs, SLCM. But does the Administration persist in telling this Committee and this Congress that we do not need to pursue a sea launch cruise missile program?

Secretary GRANHOLM. The Administration is following the NPR [Nuclear Posture Review], and they have not recommended it. However, we know that Congress has also provided funding for some studies through NNSA and the Department of Defense, and those are being undertaken.

Senator WICKER. Okay. Well, is it the Administration's position that we should press ahead on sea-launched cruise missile pro-

grams as an important priority, or is the Administration simply going along with what they feel they need to do without violating the statute?

Secretary GRANHOLM. I think the Administration respects the decision of the NPR and will follow that recommendation.

Senator WICKER. Would you rather we not fund the SLCM–N?

Secretary GRANHOLM. It would—it is the Department of Energy, obviously would fund the nuclear capability. But we are following the direction of the Department of Defense.

Senator WICKER. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Wicker. Senator Shaheen, please.

Senator SHAHEEN. Good morning. Thank you, Secretary Granholm and Administrator Hruby, for being here this morning and for your testimony. Secretary Granholm, you mentioned AUKUS in your opening remarks, and the Department of Energy's Naval Reactors Program is the lead entity for the development and operational support for the use of naval nuclear propulsion systems.

Obviously, the AUKUS agreement is a very important opportunity for us to work with Australia and the United Kingdom on ensuring that we all have the technology that we need as we face the threat from China.

But can you tell us what the status of AUKUS discussions are that are associated with the transfer of naval reactor technology? Are there timelines that have been established, and are there obstacles in transferring that technology that we need to in order to cooperate?

Secretary GRANHOLM. We have had very positive initial agreements with Australia. We want to make sure we meet the milestones that are in those agreements.

The Navy is very confident that it can do so and is very encouraged by the cooperation we have had so far, including on ensuring that the Australian Navy is capable of being trained and operating these facilities.

We are in—right now, training some of the Australian members of the navy to be able to understand what it is like to operate a nuclear navy—naval ship. We want to make sure that we are continuing a pace and are very encouraged by how it is going.

Senator SHAHEEN. So, you are not concerned that there are obstacles that are preventing that transfer of technology that could delay the cooperation that we need as part of that agreement?

Secretary GRANHOLM. They are working through all of the pieces. I mean, some of the questions that have been raised on both sides, what happens at the end of life, et cetera, those are all being worked on, but it is not delaying or deterring the project from going forward.

Senator SHAHEEN. Thank you. You, in talking about what the Department of Energy is doing to help Ukraine, I understood you to say we are training people. Is that for the threat of an attack against the nuclear plants in Russia, or is it for the potential that Russia might use a tactical nuclear weapon?

Secretary GRANHOLM. It is both. Wherever there may be some sort of radiological activity, we want to make sure that people are

trained in both response and detection, and so, the training has been ongoing in that regard.

We have, as I mentioned, put sensors in and around Ukraine to ensure that we know what is going on as well. We are very lashed up with both the operators of nuclear plants, as well as folks on the ground to ensure that they are safe.

Senator SHAHEEN. Thank you. Well, that is encouraging. I am not going to ask you whether you think there is—we should be concerned about Putin's statements, since I will let DOD respond to that.

But, in the past year, Putin has decided to suspend Russia's participation in the New Srategic Arms Reduction (START) treaty. That means we are no longer going to have the ability to inspect Russia's nuclear arsenal, and it will limit what we know about what they are doing.

Can you talk, Administrator, about the impact that this has on nonproliferation and norms for mutual inspections, and whether you see any way for us to get back on track and whether there are any future opportunities with Russia and China?

Secretary GRANHOLM. Certainly, Senator. The—well, I would just say it is deeply disappointing that Russia has suspended their participation and New START for several reasons.

The most important is it is the only treaty we have that limits the number of nuclear weapons, and that is a stabilizing that, you know, it provides predictability, it provides—the treaty provides transparency through inspections and regular notifications.

We lose a lot by their suspension from this treaty in terms of stability, precautions. We would absolutely like them to come back into compliance with that treaty and, or begin the discussion of another treaty that limits the number of nuclear weapons for all those reasons.

Senator SHAHEEN. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Shaheen. Senator Fischer, please.

Senator FISCHER. Thank you, Mr. Chairman. We all recognize that NNSA is balancing multiple life extension programs, along with facility and infrastructure modernization. It is a workload NNSA hasn't seen since the cold war.

However, during the cold war, we were able to prioritize the production of nuclear weapons and delivery systems because we recognized the existential threat and the role that nuclear deterrence plays in addressing that threat.

I believe we have to return to that mindset. As Senator Wicker said, complacency is unacceptable. Administrator, NNSA's core mission is delivering nuclear weapons to the warfighter. Can you discuss ongoing efforts to accelerate delivery of projects and programs, please?

Administrator HRUBY. Thank you, Senator Fischer. I could not agree more, complacency is not acceptable. We are working hard to return the NNSA complex to what I am calling the era of responsiveness.

So, with respect to our programs, as you know and as I commented, the programs are on schedule and synchronized with the Department of Defense.

We feel we know—having said that, we know there are some high-risk activities in those programs, and we are putting lots of effort buy, to lower that risk in terms of a few components that are pacing the schedule. But we feel confident about those programs and the synchronization with the DOD.

Senator FISCHER. Can you give us just a couple examples of what you are looking at to accelerate those programs? This Committee has had deep concerns about the tightness of the schedule and being able to have all the components we need in order to meet the demands that we are facing out there. So, can you give me just, short, couple of examples?

Administrator HRUBY. I will. On the W80–4, there are a few components in that system that by historical standards, we would not have on schedule.

So, we have placed a priority on those components. We have increased the number of people, we have increased the way we track those programs to make sure that we don't realize any risk. The W87–1 is a program worth all newly manufactured parts. That is a program where we have to make sure that we have the production capabilities on time to build the parts on time.

Very challenging. It is pacing everything we do in construction. Getting Los Alamos up and making pits is our top priority for that, accelerating that activity.

Senator FISCHER. Last week when you testified before the Strategic Forces Subcommittee, you said the most challenging programs that you have are those large nuclear construction projects. You also added that this is really the first enterprise rebuild since the Manhattan Project.

Can you talk about how you have changed your approach there? You also were saying that NNSA is breaking projects into chunks. Can you give me some examples there, how you are addressing those large, very large projects?

Administrator HRUBY. Yes, thank you. On the construction projects, because of supply chain challenges, we are explicitly designing equipment, but as pacing the facility design, so that we can get the equipment purchased.

A good—so we don't have a facility without equipment. The best example of this is glove boxes, which we have talked about before. There is a limited number of glove box suppliers in the United States, and we are buying a lot of glove boxes for all of our nuclear facilities.

So, we are designing—these are very specialized. It sounds like they are a box, but in fact, they are very specialized designs. We are working with U.S. industry to purchase those glove boxes and to make sure that they understand the demand that is coming so they will be able to meet it. That is an example of a chunk.

Senator FISCHER. Is that going to help with pit production——

Administrator HRUBY. Absolutely.

Senator FISCHER.—on Savannah River?

Administrator HRUBY. Both Los Alamos and Savannah River. We are working that as a collective. We have a working group that includes all of our projects that are going to need glove box and U.S. industry, so that we can send a clear signal of what we need and

we can prioritize the equipment to be ready when the facility is ready.

Senator FISCHER. Great. Thank you.

Chairman REED. Thank you, Senator Fischer. Senator Manchin, please.

Senator MANCHIN. Thank you, Mr. Chairman, and thank you, Secretary Granholm and Administrator Ruby for being here. I appreciate it. I recently went to Ukraine, saw firsthand the impact of the war on their energy infrastructure. Russia is targeting with missiles and drones on a daily basis, making it almost impossible, and also, Ukraine's energy grid leading to outages not only for the compromises their Zaporizhzhia nuclear power plant, but it is also compromising the three other electric producing nuclear power plants in Ukraine.

They all require external power to operate their reactor cooling systems, and they were very much concerned about that and essential nuclear safety and security functions that go with it.

I understand that DOE [Department of Energy] and NNSA has supported rebuilding Ukraine's grid and integrating it with Europe as well, so helping monitor and reduce the nuclear risks that go with that. So, can, Madam Secretary, you could start with how do you describe DOE's involvement in this and their support for Ukraine? Then, Administrator Hruby, you can tell me from NNSA, where are you all.

Secretary GRANHOLM. Thank you so much, Senator Manchin. Number one, it is really important that Ukraine remain synchronized with the European grid. The DOE has worked with their grid operators to ensure that synchronization can occur.

It has been, and it has been very important to achieving a level of stability of the grid. Number two is making sure that they have the grid components necessary to rebuild. Since you were there, you are probably aware that they have a particular problem with transformers.

The transformers on their system are a Soviet era type. Our grid operators don't have that type of transformer. However, they have provided us with pages of lists of grid components that they need, whether maybe switch boxes, circuit breakers, et cetera, and this is where we have gathered——

Senator MANCHIN. Are you concerned—I am sorry to interrupt you. Are you concerned that maybe—I mean, if they are not able to have the additional power to keep cooler their nuclear system, we could have a real catastrophe over there.

Are you concerned about that? That is the reason we are working, trying to backfill. How about our European NATO [North Atlantic Treaty Organization] allies that have those same European—are you able to connect that?

Secretary GRANHOLM. Yes. In fact, our allies have been tremendously helpful and some of them actually do have access to the kind of transformers that they need.

I will say, and I know Administrator Hruby will say this too, we have also included sending generators to ensure that the power that is feeding Zaporizhzhia and the other plants that are operating are not going completely cold.

Administrator HRUBY. Yes. Just to add on to that, the nuclear power plants in Ukraine, all and on around the world, have diesel generators as backup power. Those diesel generators are also Soviet era, at Zaporizhzhia, and they have been—they are not designed to be—go off and on as often as they have had to because of problems with the electric grid.

So, we have been concerned about them and what we have done in NNSA, in partnership with the Department of Energy and the other things they have done for the grid, is we have supplied truck mounted diesel generators that could be used at the power plant. We have also supplied additional diesel fuel.

Senator MANCHIN. Let me ask you another question then. Saudi Arabia has the desire to go into the civil nuclear arena, and they have reached out, as I understand. We have not been receptive. I believe it is imperative that we have that relationship with Saudi. I rather them working with us than any other country in building their civil nuclear programs. Where do you stand on that and are you all involved?

Administrator HRUBY. Well, both the Secretary and I have talked to people, the leaders in Saudi Arabia, about their civil nuclear program. We would very much like to be involved in the supply of, you know, the plant——

Senator MANCHIN. I understand they have reached out and not only asked you to help, but also oversee the program, and have not got a positive or got any answer from you all.

Administrator HRUBY. Well, I don't think that is an accurate statement.

Senator MANCHIN. Okay. I can report back, and you give me the accurate statement and I will make sure it is carried back.

Administrator HRUBY. Yes, we are asking the Saudis to be consistent with nonproliferation standards that we have for every other country that we work with on civil nuclear power. They have been avoiding making those commitments, so it makes it very hard for us to continue.

Senator MANCHIN. I promise in a more classified setting, we can go into detail. I am happy to be. I just think it is imperative that we repair our relationship. It is imperative for all of us, and it is really the safety of the world.

Administrator HRUBY. I agree, and we met with the new United States Ambassador to KSA [Kingdom of Saudi Arabia] last week before his departure there and had discussions on these topics with him, so.

Senator MANCHIN. Maybe you and I can followup.

Administrator HRUBY. Okay. Thank you.

[The information referred to follows:]

Administrator HRUBY. The United States and Kingdom of Saudi Arabia (KSA) have been in discussions about a 123 agreement since 2012. The United States has emphasized the need for the highest international safeguards and security standards in a potential agreement, including prohibitions on enrichment and reprocessing, and the conclusion of an Additional Protocol with the International Atomic Energy Agency. KSA has not yet agreed to such requirements in a 123 agreement. Such an agreement would allow U.S. nuclear industry participation in the development of the Saudi nuclear energy sector and continue to further U.S. nonproliferation objectives in the region. The Atomic Energy Act of 1954, as amended (AEA), notes that the U.S. Department of State is the lead negotiator of 123 agreements for the United States. Furthermore, the law notes that the U.S. Department of En-

ergy (DOE) provides technical support to 123 agreement negotiations. Once a 123 is brought into force, the Department of Energy National Nuclear Security Administration leads technical implementation of such agreements.

Under Section 57 b. (2) of the AEA, DOE has statutory responsibility for authorizing the transfer of unclassified nuclear technology and assistance to foreign atomic energy activities, both within the United States and abroad. Part 810 of Title 10, Code of Federal Regulations implements this requirement. As of May 23, 2023, there are two outstanding requests pending with DOE from U.S. companies seeking specific authorization from the Secretary of Energy under Part 810 to transfer technology to KSA. Both requests require KSA to provide government-to-government peaceful use assurances to the United States to proceed. To date, KSA has not provided the required assurances after repeated requests.

Senator MANCHIN. Thank you. Thank you, Secretary.

Chairman REED. Thank you, Senator Manchin. Senator Ernst, please.

Senator ERNST. Thank you, Mr. Chair, and Secretary Granholm, I would like to start this morning by asking about the Biden administration's energy policies and their impact on our national security.

The President has been cheerleading for green tech, and I feel that this has harmed the DOD's operational energy approach. It is enriching our adversaries and boosting harmful players on the forced labor supply chain.

Last year, the President proposed to mandate the Department of Defense's non-tactical vehicle fleet in exchange for an all-electric vehicle fleet by 2030. The Senate intervened last year on a bipartisan basis to prevent the directive from becoming law because, number one, we recognize that China controls mining and production for electric vehicle components.

Number two, this Administration has hamstrung a number of aggressive permitting reforms for mining and processing of renewables right here in the United States, domestic mining and energy.

Secretary Granholm, you have been one of the Biden administration's leading advocates for green energy, and you have even praised China's work on climate change. Do you believe China is a reliable partner in achieving and stabilizing United States energy independence and security?

Secretary GRANHOLM. First, I was comparing China's investment in renewable energy to the rest of the globe, and they have invested four times as much as the United States has. Even as, they are not a reliable partner with respect to their human rights abuses.

Number two, though, I just want to respond to the electric vehicle issue. China does control a big amount of the critical minerals, but that is exactly what the President's Invest in America agenda is slated to overturn. We want to see responsible extraction here. We want to see processing here.

We want to see the critical minerals integrated into battery packs here and put into vehicles. In fact, since the Inflation Reduction Act was passed, 150 battery companies have announced they are coming or expanding battery supply chain, including extraction—have announced they are coming to the United States.

Senator ERNST. That is great, and I can't wait to see that happen. I hope it happens before 2030, because that is a very aggressive mandate. I know that the permitting process for a number of

these operations will take years and years and years. So, if we don't streamline that, it is not going to happen.

Secretary GRANHOLM. I think we would—I don't know anyone who wouldn't disagree with you on that.

Senator ERNST. Okay. So, we will watch for that in the next year or so. I hope that this really takes on a much faster approach than what we have seen in the past. I know your department also has ongoing consideration of a $200 million grant to a China based lithium battery company.

I don't want to see American dollars going toward Chinese investment. I think that is really irresponsible. Let's invest in domestic energy production and mining. The Administration's failure to greenlight year-round, low cost, low carbon fuel like E15, is another concern that I have, and I think that all of these things combined are negatively affecting the DOD.

I believe the proposed swapping of the military's non-tactical vehicles for an all-electric fleet, again, by 2030 really is putting the climate crusade ahead of our department's lethality. We need to focus on that first. Do you support the military adopting that EV fleet by 2030?

Secretary GRANHOLM. I do, and I think we can get there as well. I do think that reducing our reliance on the volatility of globally traded fossil fuels, where we know that global events such as the war in Ukraine can jack up prices for people back home, it does not contribute to energy security.

I think energy security is achieved when we have homegrown clean energy that is abundant like you see in Iowa. We think that we can be a leader globally in how we have become energy independent.

Senator ERNST. Well, and when it comes to the EV [electric vehicle] fleet, I don't support it. I think we have got a $10 billion price tag here on a very expensive, unreliable product. We need reliability, and I am going to make a plug again for our homegrown energy.

We have a fleet right now that can use ethanol products, that can use biodiesel, right now. We don't have to invest that $10 billion. Any one of our non-tactical vehicles can pull up to a pump, fill up with biodiesel, and we are good to go, right now, at no additional cost to the DOD. At a time when we are constrained by dollars, we need to take what we have right now and utilize it.

I appreciate your optimism when it comes to developing mining opportunities here in the United States. We will see if that actually materializes under this Administration. Thank you very much, Mr. Chair.

Chairman REED. Thank you, Senator Ernst. Senator Kaine, please.

Senator KAINE. Thank you, Mr. Chair, and Administrator Hruby, Governor Granholm, we met when we were Governors together. You were Governor at a very challenging time, the fiscal collapse of 2008, 2009. All of us, all 50 of us really, really had our hands full. Nobody had their hands full more than you.

I grew to admire your leadership greatly at that moment and since. I want to ask you about two items. First, I know Senator Shaheen has already had a discussion with you about AUKUS, and

I was at another committee hearing, but I wanted to dig into it a little bit.

The subs that are made in the United States are made in Virginia and Connecticut, and all the reactors that go into those subs are made in Virginia at Lynchburg. What in—in the AUKUS discussions with Australia and the UK [United Kingdom], what have been the discussions thus far about production of the reactors that will go into the subs?

Secretary GRANHOLM. Well, obviously we will be producing those reactors and the subs themselves, and our—a lot of the discussions have been around milestones that Australia has to achieve, as well as milestones on workforce and on how to operate safely these subs and the respect for the nuclear reactor that is within. I am happy to ask Administrator Hruby, who has been in these discussions, if she had anything further to add——

Senator KAINE. That would be helpful, and just sort of as a preface, I had a meeting with the UK defense minister last week and he sort of said the same thing. But I know there has been some press suggesting that Rolls-Royce might build the reactors and build them in the UK.

I know that we are sort of at the front end of working this all out, but it is very relevant to workforce issues in Virginia. Administrator Hruby, if you have anything to add on that, that would be great.

Administrator HRUBY. Yes. One thing we know for sure is that the materials that we use for fuels in these reactors is a U.S. designed material specifically for the life of the boat, right? Which is a very big advantage that we have.

I think as part of AUKUS, we opened the door to potential, over the long run, not over the short run, over the long run for other allied supplies of reactors, but not reactor materials.

I would just say that what we do for reactors—the other one very important part of the AUKUS Agreement is that the Australians have agreed to keep the spent fuel and that will be an important element, but they need to step up as well.

Senator KAINE. Well, just to paint the picture about the magnitude of the challenge, we are trying to get *Virginia*-class subs back to two a year.

We are doing *Columbia*-class subs, we are doing carriers, and now it is likely for the foreseeable future that the reactors in AUKUS subs will be—the material be in the United States, other weapon systems will as well, all with workforce challenges.

While the President's Budget increases the NNSA budget overall by 7.6 percent, there is actually a decrease of 5.6 percent in the nuclear reactor space, so that may be something we need to talk about.

Second issue I just wanted to raise with you, Secretary Granholm, and this isn't really in this Committee's bailiwick, but it is in yours, and I don't have another committee where I can ask you this. I am so excited about what DOE is doing around the Administration of the clean energy tax credits and the Inflation Reduction Act.

I know it is sort of a new job for the DOE. The tax credit and other programs have come out of Commerce. They have come out

of other agencies. But the additional 10 percent tax credit, for example, for manufacturing our clean energy production in energy communities, the set aside of $4 billion of the $10 billion tax credit for energy communities.

I have been in two such communities in Virginia the last 2 weeks. I was in Appalachia 2 weeks ago. They are so excited about the prospect of attracting manufacturing businesses that might qualify for the 30 percent tax credit, but then have the 10 percent boost on top of it.

I was in Danville, which recently—which has a wonderful megasite recently, and they recently lost a prospect before the IRA passed. But because their site is in a census tract adjacent to where a coal plant was converted to gas, they are now an energy community.

That additional 10 percent tax credit is inspiring interest that is really exciting to the community leaders. I know it is a lot to take on because it wasn't as if the DOE was sort of in the Administration of tax credits business in a huge way.

But now with these tools, I can tell you that in my two regions of Virginia, that fit squarely in the kind of energy community space, there is a level of excitement about economic development prospects that I haven't seen since I got into politics in 1994. So, I just encourage you to keep the pedal to the metal on that.

Secretary GRANHOLM. Super excited to do so. As you know, the stackable nature of these credits make the United States the irresistible nation to invest in, and that is what the Invest in America agenda is all about.

Chairman REED. Thank you, Senator Kaine. I think you understand that every submarine in the United States begins construction in Rhode Island.

Senator KAINE. I am going to be in the doghouse with the Chair for a while.

Chairman REED. Senator Tuberville, please.

Senator TUBERVILLE. Thank you, Mr. Chairman. Thanks for being here today, both of you. Secretary, good to see you. You know, since you and I have been in our roles, I have been asking you about thorium and uranium 233. School year late, but I was happy to read your department report on thorium. Have you read it?

Secretary GRANHOLM. I am aware of it.

Senator TUBERVILLE. Okay, thank you. It is fairly long. Very thick here. Took me a while to get through it. Not being a rocket scientist, it took me a while to read all the words. In your opinion, after looking at, what is the two biggest hurdles to nuclear power in the minds of most Americans right now?

Secretary GRANHOLM. In the minds of most Americans, I think it is waste and the fear—the issue of safety.

Senator TUBERVILLE. Yes. Thank you. Let's talk about nuclear waste for a second. The thorium report the DOE just submitted says that traditional light water reactors the kinds in operation across the U.S. aren't so efficient. A plant that burns 250 tons of uranium ends up with 35 tons of spent fuel. Is that correct?

Secretary GRANHOLM. Yes.

Senator TUBERVILLE. Yes. But a thorium powered nuclear plant can produce the same amount of energy with one ton of thorium and end up with a fraction of that in waste that is harmless for 300 years or less. Is that correct?

Secretary GRANHOLM. I think—I believe so.

Senator TUBERVILLE. Thank you, and now let's talk about the larger worry, as you said, which is safety to the American people.

I am going to quote from the DOE report here, "liquid fluoride, MSR [molten salt reactor] thorium reactors may be designed to be meltdown resistant by using a plug at the bottom of the reactor that melts in the event of a power failure, or if temperatures exceed a set limit, draining the thorium fuel salt coolant mixture into an underground tank for safe, non-critical geometry storage."

Basically, that means thorium power plant, it can't melt down like a normal uranium plant, and there are a whole host of other benefits. Right now, the United States is reliant on Russia for uranium. That is where we get it from. Moving to a thorium cycle would free us of that dependency. Correct?

Secretary GRANHOLM. Yes.

Senator TUBERVILLE. Creating a thorium cycle could help the United States catch up to China when it comes to rare earths because thorium is a waste byproduct of mining rare earths, correct?

That was an excellent part of the report. With so many advantages to thorium, Madam Secretary, my question to you is this, doesn't it make sense to preserve the Nation's stockpile of physical material, uranium 233, so that if the DOE can pursue a thorium strategy, we have that option? What do you think?

Secretary GRANHOLM. Well, the current stockpile that you are referring to at each canyon is very expensive. The facility that it is housed—of course, it is a proliferation concern, uranium 233 or uranium 229, that comes from. It is a proliferation concern.

We spend $50 million a year, I think, in just housing that, and then the process for extracting is very, very expensive. So——

Senator TUBERVILLE. How much are we spending in destroying the uranium?

Secretary GRANHOLM. We are——

Senator TUBERVILLE. It is pretty expensive also.

Secretary GRANHOLM. Yes, it is expensive, but the thought is that the Nation's nuclear reactors now have a different fuel cycle, right?

There is hope that this Committee, as well as the entire Congress, will help with a uranium strategy that gives us a supply that is not reliant upon Russia. Meaning that we should have enrichment and conversion processing of uranium here in the United States so that we can do that.

The thorium, we have some investments in thorium and doing some research on it. We just don't have any right now reactors that are up and running. We do have a molten—salt reactor, but it is a uranium reactor, a small one in Idaho, Idaho lab, which we can learn a lot from.

We don't want to shut down any possibility. But I will say from a rapid movement point of view, because we feel like there is a sense of urgency, especially since so many of our allies are really interested in nuclear power as well, that we have a reliable process

that has been up and running for over 50 years, and we want the advanced reactors obviously coming online.

We are doing some research in it, but given the current infrastructure that we have, we think it is best use to be able to get a fuel cycle that is consonant with the existing fleet.

Senator TUBERVILLE. It looks like to me it would be a small investment of $50 million when we are talking more times, in billions and trillions, $50 million to save our uranium—or thorium, over the years.

Secretary GRANHOLM. Well, I will say that the rough order of magnitude cost for the uranium recovery and production of HALEU [high-assay low-enriched uranium] from that is about 680 million to 1.3 billion for one metric ton. That is a lot.

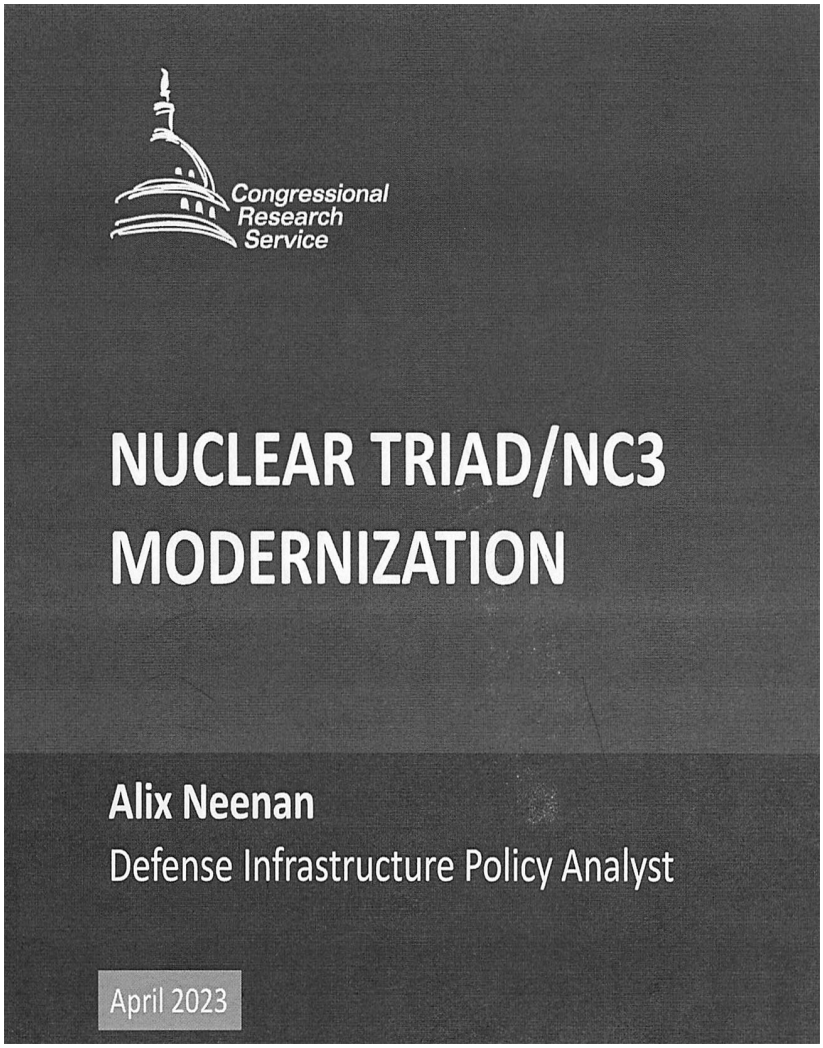
Senator TUBERVILLE. Over how many years though?

Secretary GRANHOLM. That is for one metric ton.

Senator TUBERVILLE. For one ton, yes. We already have the thorium though. Now, the thing that I am concerned about is China is building thorium reactors, and they are building them not just in China, but also in the Belt and Road Initiative.

They are doing something right. It is cleaner, it is safer, and it gives us an opportunity for us to at least look into it. Because if we are going to do away with coal and fossil fuels, there is no doubt that the answer to the problem we have right now is nuclear.

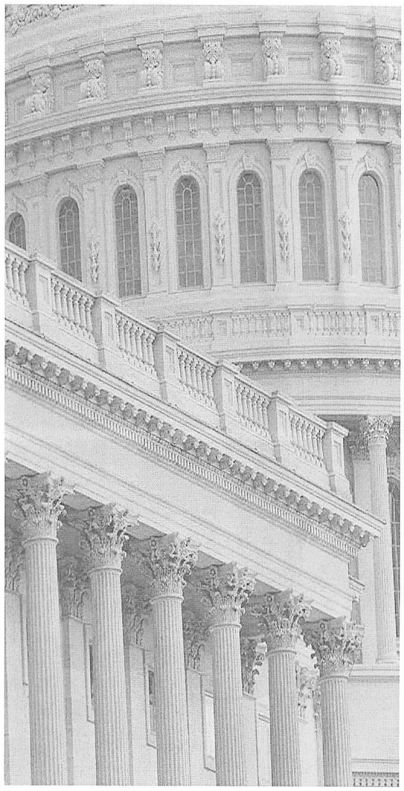
If we are going to do nuclear safety and the option of being able to store the waste, a lot less waste over the many, many years would be much better for what we are doing other than uranium reactors as we speak. Hopefully we will continue to talk about that over the years and make some progress. Thank you, Mr. Chairman.



Chairman REED. Thank you, Senator Tuberville. Senator King, please.

Senator KING. Thank you, Mr. Chairman. First, I would like to ask unanimous consent that a congressional Research Service report called the Nuclear Triad NC3 [nuclear command control and communications] Modernization by Alex Neenan be included in the record.

I want to recognize Ms. Neenan and her team for conducting a cross-cut analysis of the funding and contracts associated with a major nuclear delivery systems, including NC3. This has been a hugely helpful report to myself and Senator Fischer on the Strategic Forces Subcommittee.



Chairman REED. Without objection, so ordered.

Senator KING. Thank you. First, Mr. Chairman, I think it is important to talk about a little bit of the context of what is going on here.

We are trying to do a very difficult and expensive thing at once, which is to entirely modernize the nuclear triad and NC3—and by the way, I consider it a quad because I think NC3 is an essential part of the triad, and rebuild the infrastructure of the entire nuclear enterprise, all at once.

I call it the pig in the python of the budget. It is a major expenditure that probably should have been done over the past 40 years in increments, but we are doing it all at once. I think that is a problem that we need to understand here in the context of the budget. Ms. Granholm, did I articulate it accurately—Administrator?

Secretary GRANHOLM. You do.

Senator KING. Well, I think that is something that we really need to think about. I want to talk a minute about the cloud, and by the way, the first person to download data from the cloud onto a tablet was Moses.

[Laughter.]

Senator KING. Sorry, I couldn't resist. Everybody is moving to the cloud. Private enterprise and Government entities, intelligence agencies, Defense Department, everybody is moving to the cloud.

The advantage, obviously, is a large repository which we can adequately protect. The disadvantage is there is so much data there that if somebody can get in it, they have really hit the jackpot.

Madam Secretary, I hope that as we are working in this direction, that due consideration is given to the cyber risks of cloud storage of data.

Secretary GRANHOLM. Absolutely. It is one of the top priorities of our office of cyber, CESER [Office of Cybersecurity, Energy Security and Emergency Response].

Senator KING. CESER——

Secretary GRANHOLM. Yes. To be able to make sure the cloud, as well as the hard infrastructure associated with our energy grid, et cetera, are protected.

Senator KING. Well, I am not sure who actually has the specific responsibility, but I hope that you will have CESER pay special attention to this because it—I see it as a—as I say, the cloud is definitely more secure, only if it is adequately protected, and if it isn't, then it could be a catastrophe.

Secretary GRANHOLM. Agree 100 percent.

Senator KING. Workforce. Senator Shaheen asked you about workforce. I understand in the budget that there is—there are raises for the nuclear enterprise workforce. Administrator Hruby, is that important?

I mean, if—all jobs are important, but the work that you are doing is critical to national security and we have just got to have the right people.

Administrator HRUBY. Yes. Thank you, Senator King. It is extremely important in the nuclear security enterprise to have the best workforce, and we have to compete with the tech industry and the private sector.

Senator KING. Are you doing it? Are you getting people?

Administrator HRUBY. We are. We had a couple of tough years but at the moment we have turned the—we seem to have turned the corner on that.

We took some aggressive actions. We actually authorized the mid-year salary adjustment at our labs, plants, and sites that was targeted toward the places where we were seeing the highest attrition.

Senator KING. Well, cutting attrition is as good as recruiting. Every person that doesn't——

Administrator HRUBY. Absolutely——

Senator KING.—you don't have to fill, and you, I gather you have significantly cut your attrition rate.

Administrator HRUBY. We have. At this point, and we are going to watch it closely, but at this point, our attrition has returned to close to normal levels at our labs, plants, and sites, which is around 3 percent.

I will say that we are still experiencing a high attrition in our Federal workforce. Actually, the highest attrition in over a decade is around 12 percent. We now need to really focus on what we can do about that. The mission, our mission helps a lot. So, we will pay what the private sector pays and sort of the full package, but this mission is important and people recognize it.]

Senator KING. Well, I think the mission is important, and for that reason, you can hold people to some extent, but you also have to be sure that we fill those critical positions.

I understand that Senator Fischer talked about budget and pit production, so I am not going to replough all that ground. But I think clearly this Committee is very concerned about meeting that 80 pits per year schedule.

You have to come to us and tell us how we can help, how we can—whether it is Defense Production Act or what are the elements that are needed in order to meet that critical need.

Because as the Chairman indicated at the beginning of the hearing, we are facing an entirely new strategic situation with two highly nuclear-armed potential rivals. So let us know how we can help you to meet those—that schedule.

Administrator HRUBY. Thank you. We really appreciate your full support on this, and the things that you have done to date have been very useful, including funding our pipeline programs. A lot of this is about people, and we have to increase the number of people who can do these jobs in the United States.

We can't do that overnight, but the funding of our trade and crafts programs, our university programs, along with pay, transportation, and housing incentives for craft workers, all of those things are helping us and pre-buying equipment, so we appreciate your support and we will continue to look for ways that we can accelerate.

Senator KING. Thank you. Thanks to both of you. Thanks for your service.

Chairman REED. Thank you, Senator King. Senator Scott, please.

Senator SCOTT. Thank you, Chairman. First, thanks, both of you for being here. Secretary Granholm, last year in this Committee, you made a commitment that the Biden administration would not

import oil from the horrible regimes in Iran and Venezuela. Can you make that same commitment today?

Secretary GRANHOLM. Yes. We don't take in oil from sanctioned countries.

Senator SCOTT. Good. I have been disappointed with the way the Biden administration has deployed appeasement tactics with some of these dangerous regimes.

Some of us have been concerned, and I have been very concerned about—but that is going to go beyond these appeasement tactics with what they have tried to with Iran and Cuba and Venezuela and Nicaragua, places like that, and I am glad that you made the commitment.

Nuclear power is a two-sided coin. There is a lot of potential for good, but it can be in the wrong hands. It can be catastrophic, as we all know. We have got enemies like Russia and China that have already seen the potential in nuclear recycling.

Last year, Russia fueled a reactor with a 100 percent recycled plutonium, and China is about to start a reactor with similar capabilities. Americans seem like we are absent from the cutting edge on these technologies, which will seriously hamper our ability to have a seat at the table to negotiate.

It looks like our enemies are ahead of the game on this. What are we doing right now to deal with and what are you doing to deal with recycling?

Secretary GRANHOLM. Yes, thank you for asking this. It is obviously, historically, this has been a proliferation, nonproliferation question. But I think there is an awakening sense that if not just the countries that you identified, but France can do recycling of spent nuclear fuel, then the United States should be doing that as well—at least looking at it, which is what is happening now at the Idaho National Lab.

They have a program now and several experiments that they are working on to be able to prove its efficacy, and one of the big challenges has been that it has been very expensive to recycle nuclear fuel. However, it is obviously very expensive to store nuclear waste as well. So, I agree that we should be pursuing this as an efficiency strategy as well.

Senator SCOTT. Do we have the same capabilities as Russia and China?

Secretary GRANHOLM. Not right now. We do not.

Senator SCOTT. Okay, and what are you doing with the private sector? Historically in this country the private sector has come up with the innovation rather than Government. What are you doing with the private sector, and are there companies that you are working with out there that you could help accelerate, you know, to hopefully where we got an advantage?

Secretary GRANHOLM. Yes, I mean, as I mentioned that at Idaho, which is of course where we have a great expertise in nuclear and advanced nuclear reactors, they are working with a couple of companies that are doing this and that are taking it to the next level. So excited to see the results from that, but I feel that is a promising point of acceleration too.

Senator SCOTT. Do you need more private sector companies to show up? Is there something you would expect, you would ask in the private sector to do now that would help accelerate this?

Secretary GRANHOLM. Well, we would like to see this done in the confines of a space that can handle nuclear and fissile material. Many of our labs, our user facilities, and in this case, Idaho National Lab is as well. We encourage folks to seek out that opportunity and to be able to make use of the facility as well.

Senator SCOTT. What is the Department of Energy doing with the Department of Defense to make sure we have military capabilities in this area? Is it the same thing—is it the same area?

Secretary GRANHOLM. Well, I mean, obviously, Idaho works with the Department of Defense as well. You are talking about from weapons?

Senator SCOTT. Right.

Secretary GRANHOLM. Right, so most in the defense side, and Administrative Hruby can speak to this as well, most of the storage—it is being stored and not recycled. We were just having this conversation with Senator Tuberville for different—obviously for thorium reactor.

It is expensive to store it there as well. But we are trying to treat the material and ensure—and there is some nascent research that is happening on repurposing. I don't know if you want to add anything to that.

Administrator HRUBY. Let me just say, on the nuclear weapons side, these materials last a long time and we don't use them, right? I mean, so we can recycle our nuclear materials and we do. We reuse our plutonium, our uranium, and most of our nuclear materials.

When we talk about making pits, we are purifying and reusing the plutonium that we have used in previous weapons.

Senator SCOTT. Thank you. Thank you, Chairman.

Senator KING. On behalf of the Chairman, Senator Warren.

Senator WARREN. Thank you, Mr. Chairman. It is good to see you, Secretary Granholm. Now, as you know, Bitcoin mining involves companies using powerful computers to verify transactions to win a Bitcoin reward.

You may remember that at the same hearing a year ago, I asked you about the immense energy consumption of Bitcoin mining. Since then, the issue has aroused more public concern. A recent New York Times investigation found that just 34 Bitcoin mines in the U.S. are using as much electricity as 3 million households.

That is the equivalent of the entire State of Arizona or the entire State of Tennessee. That is a lot of energy and most of it is dirty. Fully 85 percent of this power comes from coal or natural gas plants. That causes as much carbon pollution as 3.5 million gasoline powered cars.

For every one new electric vehicles sold in the U.S. last year, these Bitcoin miners did the climate equivalent of putting four additional gasoline powered cars right back on the road. Now, I should note that my own investigation shows there are more mines than just the 34 that The New York Times analyzed.

The problem is even worse than reported. Secretary Granholm, when you came before this Committee last year, I asked you if the

Federal Government knew how many crypto miners were operating in the United States and how much energy they are consuming, and you said that wasn't being tracked and that more data would be needed. So here we are a year later. Is the Department of Energy formally tracking crypto miners yet?

Secretary GRANHOLM. Great. First of all, thank you so much for your leadership in this, because I do think that you have unearthed a massive problem. We don't know how many miners there are. We don't know where they are. We—all of them. I mean, some of them you do, but some of them—many of them you don't.

A lot of them are just underground. Some of them are small operators. As you and I have discussed, we have charged our Energy Information Administration with figuring out how to mandate a reporting of these entities.

Now, that is complicated, as you know, because they are—many of them are underground, and even the utilities may not know right where the draw is coming from.

Senator WARREN. So, let's talk about that. Given that crypto mining undermines all of our other climate work, we can't afford to delay on this. There is a lot of urgency around this. I want to talk for just a second about the authority you have to gather information on this.

Let me ask, Secretary Granholm, do you have the authority to mandate that crypto miners disclose information about their energy consumption?

Secretary GRANHOLM. We have the mandate authority.

Senator WARREN. Good. In your response to a letter, I sent you in February, you indicated that the Energy Information Administration will first need to develop a new survey program to begin collecting information from crypto miners.

By when do you expect to field this survey and use it to gather data from crypto miners on a mandatory basis?

Secretary GRANHOLM. Yes, we are—we, first of all, are looking at creating the survey from a regular report that is an electricity gathering report that we have now asked to include crypto as part of it. That report from NREL [National Renewable Energy Laboratory] will be completed by the end of this year on which the Energy Information Administration can base its survey.

It is going to take some time for them to be able to craft the survey from the information that they receive from the NREL report, but know that that is happening and we are pushing to accelerate the timeline——

Senator WARREN. Okay, so by the end of this year, you will have a report on mandatory reporting?

Secretary GRANHOLM. We will have——

Senator WARREN. I want to make sure I know what we are getting.

Secretary GRANHOLM. Yes, no, no, we will have a report that will have gathered not fully but enough information to be able to craft the framework for the survey. We won't be able to get the survey out, the mandatory survey by the end of this year, but we will have the report done and the survey will be constructed from that.

Senator WARREN. Okay, and we are certain we are going to get that mandatory survey out then sometime in 2024?

Secretary GRANHOLM. I hope so, but I don't want to——
Senator WARREN. It is tick tock——
Secretary GRANHOLM. I know.
Senator WARREN. Okay. I mean, look, we are running out of time here. Crypto mining's energy use truly undermines our efforts to fight climate change and we are out of time. We need to understand the full scope of the problem, and that starts with the authorities you have.

I hope that the next time we come back, you will tell me that you now have that survey in place and we are getting mandatory reporting from the crypto mining companies.

Secretary GRANHOLM. I hope so too.
Senator WARREN. Going to hold you to it. Thank you.
Senator KING. On behalf of the Chairman, Senator Budd.
Senator BUDD. Thank you, Chairman, and again, thank the witnesses both for being here today. The NNSA's work is a no fail mission and that is why it is vital to secure supply chains and eliminate single points of failure throughout the nuclear security enterprise.

Secretary Granholm and Administrator Hruby, I would like to ask you about the importance of lithium in the nuclear modernization process. Over the last 3 decades, the United States lost its capacity to produce lithium, where it accounted for over one-third of global production as recently as 1995.

Now, the United States represents less than 1 percent of production, and China and Russia are dominating the race to secure supplies of lithium worldwide. I understand that the NNSA is currently obtaining the lithium it needs for nuclear weapons modernization by recycling material from dismantled warheads. I see you are nodding your head.

But that is insufficient long term. So, what is the Department and the NNSA doing to guarantee assured access to lithium for all of our needs? Secretary Hruby, we will start with you—Administrator Hruby.

Administrator HRUBY. Yes, thank you. At the—our analysis, does not indicate that we are going to run out of lithium in the timeframes that we have looked at. I will go back and I will take this question back to see if there is a date that we are concerned about.

But the recycling program, given that we recycle our lithium for our weapons, and our newer weapons are not using more lithium, I think we are in good shape on this, but I promise to confirm that.

Senator BUDD. Thank you. If you would, please. Secretary.

Secretary GRANHOLM. Yes. We were concerned about supply of lithium for a variety of reasons, but obviously, defense being one of them. More urgent is making sure that we have enough lithium for batteries for electrification purposes, and therefore, the efforts that the loan programs office is making. For example, to provide conditional commitments for mining of lithium is one of the strategies, the commitments that are being made around the country for the full supply chain of batteries, including extraction and processing of lithium.

Very exciting to see how many companies are raising their hands, saying that they are interested in this, and then we have also given a conditional commitment to companies that are recy-

cling batteries, not just from vehicles, but from phones, et cetera, to be able to reprocess more, even a purified lithium. So, on all of these vectors, we want to increase our domestic supply.

Senator BUDD. Thank you, Madam Secretary. What are some of the impediments if you want to do more extraction, and I appreciate your efforts there, what are some of the impediments to sourcing it from U.S. suppliers?

Secretary GRANHOLM. Yes, clearly permitting has been a challenge and we are all hopeful that there will be some bipartisan movement on that. We believe strongly that you can sustainably mine for critical minerals in the United States and permitting reform might be required.

Senator BUDD. Thank you. So, what other critical materials or parts do we need assured access to that we don't currently have? Either one of you.

Administrator HRUBY. On the top of our list in NNSA is to begin uranium enrichment in the United States again, and in particular unencumber all U.S. technology and uranium enrichment. This is a need that we will have for defense purposes.

To make tritium, we need LEU [low enriched uranium], and for naval reactors, we need new highly enriched uranium, and so, we have been planning that program in concert with the needs in the civil nuclear sector and the U.S. for enriched uranium.

That is—at the moment, that is our highest priority.

Senator BUDD. Thank you. One area Congress and the Department have made critical investments in is the workforce, especially authorities and resources to ramp up recruiting. But we are still at risk of losing nuclear know how with the aging and retirement of some of our best and brightest, talented scientists.

Administrator Hruby, what is the NNSA doing on knowledge management to ensure that we don't lose that know-how? I would also ask, when I am talking to younger people in North Carolina, what careers or associate a career should I encourage them to go into?

Secretary GRANHOLM. Great questions, thank you. We do have a knowledge management program that includes oral interviews, that also includes mentorships. We have made sure that we have programs that allow our retirees to come back and mentor new workforce in the complex, and that is happening around the complex every day.

We hope that we have—we do need knowledge management. We have a very new workforce. The average age in our—the average experience time in our workforce is about 9 years, and for those businesses, that is still quite new.

I think, in terms of encouraging people. Frankly, any STEM field is great, including craft workers. But we really need more electrical engineers in the United States, and but like I said, in any STEM field, our doors are open.

Senator BUDD. Thank you both. I yield back.

Chairman REED. Thank you, Senator Budd. Senator Rosen, please.

Senator ROSEN. Well, thank you, Chairman Reed, for holding this really important hearing. I would like to thank both of you for testifying today, for your service to the country. Thank you, Sec-

retary, for meeting with me the other day. It was a really productive conversation.

Before I ask my questions, I do want to start off again by offering my condolences to the families of the U1a miners that were just recently killed in an accident at the Nevada National Security site, and to our entire NNSS community. It is really tough. I want to build on what Senator Budd was talking about, education, education and workforce. It is really important.

We understand that in Nevada, because last month, my Nevada delegation colleagues and I, we wrote to you to support the College of Southern Nevada's application for the National Nuclear Security Administration's minority serving institution partnership, specifically for the community and junior college trade occupational programs.

We need miners down there, too. That is—you know, they are going way underground, lots of really great jobs. We are enthusiastic about the proposed Nevada National Security Site Fast Start Program and its potential for recruiting, educating, training those entry level workers, mentoring them, like you said.

We want them to begin careers in the nuclear security enterprise, and specifically in all the great jobs we have in Nevada. I know the Fast Start program will support the NNSS as it identifies its ongoing need to recruit those highly skilled employees who we were just speaking about, from diverse backgrounds, who have really good technical skills, and we need them to work on our national security programs, our construction, our maintenance, our business operations, science, engineering, technology, all of it.

I guess that Secretary Granholm, I will ask you the first question, and followup with you, Administrator Hruby, is, the Department has done for other states hosting a DOE facility to ensure local students receive the necessary education and training to find a job supporting the nuclear security enterprise.

Can you commit to working with me and the Nevada delegation to establish these pathways to invest in our local talent because we know they stay?

Secretary GRANHOLM. Yes, Senator, I think it is really important to develop place-based strategies for our workforce as—especially as all of these projects are coming on board and there isn't a ready workforce to take them on, to be able to have the pipeline is so important. So, yes.

Senator ROSEN. Yes, this is where their support systems are. So, you train them there, where they grow up, where their families are, they stay. So, Administrator Hruby, can I get the same commitment from you?

Administrator HRUBY. Absolutely, and I just also—yes, thanks for your keen interest in the workforce all the time. We really appreciate it. I just also want to say explicitly this tragic accident is very hard for our enterprise, and so I appreciate your acknowledgment of that.

We, in the 2024 budget request, the NNSA has a new line-item request for community programs. In addition to our regular education programs, MSIPP [minority serving institution partnership program] and others that you have mentioned, we are increasing

our attention to the local communities that host our labs, plants, and sites.

Senator ROSEN. Well, that is great because that really answered my next question. Would you consider expanding the MSI program all around our State so we can get talent from everywhere? So, I have a minute left.

Since you have already answered that, I am going to talk a little bit about our wonderful remote sensing lab that we have in Nevada, because we need to prevent a nuclear disaster in Ukraine. The remote sensing lab is at Nellis Air Force Base and Joint Base Andrews here provides that radiological emergency response teams that are ready to deploy anywhere in the world.

These personnel and those of the Nevada National Security Site, they are our Nation's experts in dirty bombs, loose nukes, sources of radiation, and determining the origin. I have had a lot of interesting discussions, as well as my team, about the radiological sensors at the remote sensing lab, things they have provided to Ukraine as Russia seized control of several, we know, several Ukrainian nuclear power plants as part of its unprovoked invasion.

They are going to continue to threaten us, and of course, we know a nuclear disaster can threaten so many. Administrator Hruby, can you talk about the interagency multinational effort that is going to prevent any nuclear, I guess, disaster, event, however you want to call it, from happening in Ukraine, that will spread, of course, around to everyone?

Administrator HRUBY. Yes, thank you. I hope we can prevent. We can certainly discourage. But what we are really aimed at is making sure we understand and respond to events so that the Ukrainians, along with all the support that we and our allies will supply, can limit the damage due to any event, and understand it, and we can attribute it.

You are absolutely right, the people in Nevada, in fact, last time I was there at that laboratory, they were packaging sensors at that moment to send to Ukraine. Those sensors have been sent.

They are installed. They continue to help us train the Ukrainians and supply additional materials to make sure that we are in the best position possible in the unfortunate event that anything nuclear happens in Ukraine.

Senator ROSEN. Well, thank you. I am going to give them a great plug because they are everywhere in the community promoting STEM education, going to schools, going to high schools. They are a great asset. The workers at the—we still call it the test site—at the remote sensing lab, they are everywhere. We are very proud of them. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Rosen. Senator Mullin, please.

Senator MULLIN. Thank you, Mr. Chairman. Madam Secretary, in 2018, one of your predecessors implemented a policy to restrict China's access to United States civil nuclear technologies based on several cases of China illegally diverting these technologies for military purposes. Can you tell me that this policy is still in place?

Secretary GRANHOLM. I believe it is.

Senator MULLIN. Is there a way to know for sure that policy is——

Secretary GRANHOLM. I will get back to you——
Senator MULLIN. Would you do that?
Secretary GRANHOLM.—can follow the thread, yes.
[The information referred to follows:]

Secretary GRANHOLM. United States civil nuclear technology exports (aka "transfers") to China are governed by the United States Department of Energy's export control regulations at 10 CFR Part 810 (Part 810), Assistance to Foreign Atomic Energy Activities. All such transfers require the Secretary of Energy's explicit (aka "specific") authorization to proceed. The Secretary's authority is rooted in Section 57 b.(2) of the Atomic Energy Act of 1954, as amended, and implemented by Part 810.

Such transfers are further restricted by the 2018 whole-of-U.S. Government export licensing policy, "U.S. Policy Framework on Civil Nuclear Cooperation with China" (aka "the Framework"). This policy framework restricts exports of nuclear technology to China based on the nature of the technology and the end-user. Specifically, the Framework outlines presumptions of denial and approval for such transfers. Approvals are, in part, contingent on non-derogatory end-user checks performed by the U.S. Intelligence Community.

Additionally, the U.S. Department of State (DOS) seeks government-to-government peaceful use assurances from the People's Republic of China as a condition of DOS' legally required concurrence on Part 810 transfers. Any known or suspected diversions of such technology to non-peaceful end-uses would not be authorized by the Secretary of Energy, regardless of destination.

Senator MULLIN. Thank you. Is the United States still involved in civil nuclear cooperation with China? If so, what is the nature of that involvement?

Administrator HRUBY. Let me address this question. We have definitely been involved with China in design—helping them design systems to secure their civil nuclear power—safeguard and secure their civil nuclear power plants. That involvement is either very small or nonexistent right now. But this is a pause, I mean——

Senator MULLIN. I guess—sorry—I guess I am kind of concerned here because we should know for sure if we are still helping them. Obviously, China is a huge threat. They are—I would consider them an adversary at this point.

We are talking about a nuclear program that they have stolen technology, they have taken intellectual property. They are transferring stuff that was supposed to be used for civil and use it for military.

I just want to know, are we still involved in this? It is no slight to anybody, ma'am. It is no slight to either one of you. I am just—we are—this is important for us to know. I am a little bit concerned that we don't know this for a fact, if we are still assisting or not.

Administrator HRUBY. The effort that we had involved with the establishment of the China Center of Excellence is complete. What I don't know is if there is any small ongoing support for that effort. But let me just say this.

What we have done with China is associated with making sure that they understand the technology available that needs to be put in nuclear power plants for safeguarding material and for securing the plant.

This is not associated with helping them develop the power plant technology, but it is in the best interest, the global interest to have those power plants be well safeguarded and secure, that is technology that we are willing to share and help them with.

Senator MULLIN. I just take a different approach. I mean, if they were friendly nation to us and not threatening our friends and al-

lies, if they were a country to which we could trust, that hasn't been known to steal intellectual property from businesses, I would say yes.

I would agree with that. But they are not and they haven't behaved in such a manner, and for us to be spending one single taxpayer dollars to assist them in this in any way. I am sure, Madam Secretary, I am sure you are aware about Russia selling China seven times more highly enriched uranium in the last 4 months of 2022 than the United States and the International Atomic Energy Agency has eliminated worldwide in the past 30 years. I am sure you are aware of that, right.

Administrator HRUBY. Yes.

Senator MULLIN. Do you know what additional steps we can take to stem the flow of this material?

Administrator HRUBY. Well, clearly, we are very concerned about the purposes for that purchase.

Senator MULLIN. I think we know what the purpose—or the purpose of the purchases are the materials for.

Secretary GRANHOLM. Clearly, China is developing its—and continuing to ramp up its own nuclear arsenal on the defense side. The issues really are relative to how you stop that. You have to get in—you have to get into agreements with countries that are developing nuclear weapons so that when Russia exits the New START agreement, for example, it is dangerous for the whole world.

We need to pressure countries to report, to allow inspections, so that we know where the lay of the land is, and we don't have that with China. We don't have that with Russia anymore, and that is very dangerous. It is a dangerous situation.

Senator MULLIN. I agree. But that goes back to my original question is, why are we still assisting them in any fashion?

Secretary GRANHOLM. But the assistance is for making sure there is nonproliferation and that it is safe. I mean, if I don't—you know, as she says, she doesn't know if that is still happening now. We want to make sure that it is—that they have—we want this technology to be safe, to be universally available. We want countries to adopt it.

Senator MULLIN. I agree. But we do that with friendly nations, not adversaries——

Secretary GRANHOLM. Well—I think it is more important to do it with adversaries.

Senator MULLIN. If it is an adversary we can trust.

Secretary GRANHOLM. Well, I think that any country that doesn't want its own citizens to be jeopardized by exposure to radiological material, we want to be able to share that no matter where they are. Because it is not proprietary technology that we are afraid of being stolen and somehow monetized. We want that technology to be used everywhere.

Senator MULLIN. Right. I yield back. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Mullin. Senator Schmitt, please.

Senator SCHMITT. Thank you, Mr. Chairman. Madam Secretary, I have a few questions. Earlier this year at a music festival in Austin, you noted that climate change is an existential threat. Is that correct?

Secretary GRANHOLM. Yes.

Senator SCHMITT. Okay, and by existential threat, you mean it threatens the very existence of humanity right now. Is that your belief?

Secretary GRANHOLM. Well, right now, I would say no. We know that we have a goal to get to net zero carbon emissions by 2050. But we also know that every single year we see escalating weather events that are existential threats to communities around the globe, including in the United States.

Senator SCHMITT. What is the timeline?

Secretary GRANHOLM. Well, we want to reduce. We want to make sure that we do not see more than one and a half degrees of increase because the rising sea levels, the impacts on the ecosystems around the world.

Senator SCHMITT. Okay. So even if you accept the premise that human beings can sort of control the weather here long term, right, that there aren't larger forces, that the earth is either cooling or it is warming, and that has happened since the existence of our planet, that has happened.

You have this net zero goal by 2050, you would agree, though, that if China and India are not on board, it is a fool's errand, correct?

Secretary GRANHOLM. We want China and India——

Senator SCHMITT. No, but they are not.

Secretary GRANHOLM. Well, they are moving in that direction. I mean, China——

Senator SCHMITT. Well, actually, and this is leads to the second question, you have said that there is a lot to learn from what China is doing. China accounts for a full 25 percent of the world's emissions, correct?

Secretary GRANHOLM. Correct, and we want them to stop that.

Senator SCHMITT. Okay. But they are not—they are not stopping that. India is not stopping that.

I think the concern that I have and the folks back home have is that the United States of America, which has all the natural resources it will ever need, okay, is tying one arm behind our back for reliable energy, while China, the world's biggest polluter, you give a free pass to and you praise to at the same music festival saying we have got a lot to learn from China.

When the reality is, if China is not on board with your plan, even if you agreed with that being the goal. It is not going to make a difference at all.

So, all we are left with is higher costs here at home, and we are less secure at home because we are relying on other countries for energy, like Venezuela, like Saudi Arabia. I want to ask you, since Biden, Joe Biden has taken office, he has drawn down 40 percent of that Strategic Petroleum Reserve, correct?

Secretary GRANHOLM. It is. It has been drawn down by about 180 million barrels.

Senator SCHMITT. I think that is 40 percent. But we haven't had sort of an emergency that would cause it, other than I think he wanted to probably try to get gas prices lower.

Secretary GRANHOLM. The war on Ukraine is the emergency that caused it.

Senator SCHMITT. That is why we shipped those petroleum reserves to China, because of the war in Ukraine? I am sorry——

Secretary GRANHOLM. No. We released 1 million barrels per day for 6 months to stabilize the global production——

Senator SCHMITT. But we shipped those to China.

Secretary GRANHOLM. No, we——

Senator SCHMITT. China was the highest bidder and those—the strategic petroleum went to China.

Secretary GRANHOLM. The Strategic Petroleum Reserves are released on a global market——

Senator SCHMITT. So, Ukraine, Ukraine is the reason then why we drew down by 40 percent our strategic petroleum reserves and sent them to China.

Secretary GRANHOLM. Russia's invasion of Ukraine pulled barrels, millions of barrels of oil off the market, causing a constriction in supply——

Senator SCHMITT. Madam Secretary, I am sorry. I would argue that this President and this Administration's war on American energy started well before Ukraine. It started well before a year ago and you are right in the middle of that, telling people that they have to live with less——

Secretary GRANHOLM. We are not telling people that they——

Senator SCHMITT. Absolutely you are.

Secretary GRANHOLM. No, we want energy to be abundant. We want it to be made in the United States. We want——

Senator SCHMITT. If you really believed in an all of the above approach, if you—I would believe you, but you don't. That has certainly not been the direction of this Administration and your agency. It just hasn't.

I do want to ask you, so we talked about China. I want to ask you about Microvast, which is a lithium battery company that operates primarily out of the People's Republic of China. Your agency granted $200 million worth of grant to this company. You are aware of this, correct?

Secretary GRANHOLM. There were awards that were—there were selections that were named, and all of those country—companies are going through vetting process to ensure that there are not—there is no money flowing to countries of concern, and so that—those vetting process are going on. Not a dollar has gone out the door yet.

Senator SCHMITT. Okay. I think you have gotten—you got a letter from a Member of the Senate asking what those security protocols are and what the tests—you could see how concerning it would be that Chinese owned businesses or companies——

Secretary GRANHOLM. We don't want to see the dollars going to any countries of concern. We want them to be——

Senator SCHMITT. So, is it your commitment that no dollars will go to any company, any energy company taking advantage of either tax credits or grants that are owned by China, by a Chinese company?

Secretary GRANHOLM. No state-owned enterprise will get funding from the bipartisan infra——

Senator SCHMITT. What about companies that have material operations in China, which we know, of course, that intellectual property——

Secretary GRANHOLM. That is why we are using this CFIUS [Committee on Foreign Investment in the United States] vetting program to be able to identify exactly where the control is of a particular technology and country. We want to make sure——

Senator SCHMITT. Okay. Well, I look forward to working with you.

Secretary GRANHOLM.—that we are the beneficiaries of those acts and not others.

Senator SCHMITT. Thank you.

Chairman REED. Thank you very much, Senator Schmitt. Senator Cotton, please.

Senator COTTON. Thank you. Thank you both for your appearance. Secretary Granholm, Norway is one of our oldest and best partners. They have a very strong military and defense industry.

A company known as Nammo, a Norwegian ammunition company, is vital for the security of Europe. They produce a lot of munitions, for instance, that are being used in Ukraine. They currently face constraints that prevent them from expanding. Are you aware of this situation?

Secretary GRANHOLM. I am not.

Senator COTTON. This is not an urban legend. It is not some myth on social media. This comes directly from their CEO [Chief Executive Officer]. In central Norway, Nammo cannot expand its production to meet the demands in Ukraine because there is not enough electricity on Norway's grid.

The reason there is not enough electricity on that portion of Norway's grid is it is all being used by nearby data servers for TikTok. As he said, we are not able to supply troops in Ukraine because of cat videos. I am even more concerned that, and the CEO of Nammo suggested this is a concern of his as well, that TikTok may have intentionally sited their data servers near critical defense factories in Norway.

This raises concern for me about whether this is happening in the United States. My staff recently inquired with your office for some information about the potential for this risk. They were told that our inquiries needed to be on official letterhead and signed by me.

Is it the policy of your office that you only respond to Senators and Congressmen when the request run official letterhead and signed by the Senator?

Secretary GRANHOLM. No, no.

Senator COTTON. Okay, thank you. I hope now and, in the future, whenever our staff sends what are not hostile questions simply by an email, we can get more prompt responses. Now, are you aware of any risk in the United States through our defense industry because of the siting of large data servers, whether owned by TikTok or other companies, near defense industrial factories?

Secretary GRANHOLM. I am concerned about making sure that we have enough electricity to be able to fund not just defense entities, but regular households as well.

Whether it is this, which I am eager to look into, or Bitcoin mining, which also is a huge energy suck, I want to know what can be—first of all, how we can add additional energy to the grid, but also how do we provide incentives for efficiency of those enterprises as well.

I am concerned about the overuse of energy for players in America when we don't have the infrastructure necessary to be able to withstand——

Senator COTTON. I am very worried about that as well. I am going to come to you in a moment, but can I get your commitment that your department will look at this specific issue——

Secretary GRANHOLM.

Senator COTTON.—about——

Secretary GRANHOLM. Absolutely.

Senator COTTON.—and it may be done in cooperation with the Department of Defense——

Secretary GRANHOLM. Sure.

[The information referred to follows:]

Secretary GRANHOLM. The Department of Energy's Office of Cybersecurity, Energy Security, and Emergency Response (CESER) works with energy industry owners and operators to identify and assess potential risks to the reliable operation of domestic energy infrastructure assets and systems.

The growth of electricity demand from data centers is an issue that the Department continues to track, but at the current time, the growth in data center loads has been identified and addressed by electric industry planners and system operators through short-term operational guidance and long-term planning forecasts. The Federal Energy Regulatory Commission oversees compliance with electric reliability standards issued by the Electric Reliability Organization that govern operational and planning requirements for entities at operating under Federal jurisdiction. For systems not subject to Federal electric reliability oversight, the Department works closely with State regulatory bodies to provide information and technical assistance to assess potential impacts to systems.

Additionally, the Department, through CESER, maintains, regular and frequent engagement with colleagues across the Department of Defense (DOD) to provide technical assistance or subject matter expertise on issues that could occur from cyber, physical, or climate risk to energy infrastructure assets and systems.

Senator COTTON.—that we are not constrained in our defense industrial base at a time it needs to expand because of the location of large data servers, especially large data servers owned by foreign companies like TikTok.

Now to the broader point, it would be an issue at least as big an issue if there was sufficient electricity on the grid to meet all of our needs, not just now, but as our Nation grows in the future.

I am very worried that at a time when the Administration is taking action after action to take off reliable baseload power from coal and natural gas and nuclear power, it is also vastly expanding the demand for electricity, trying to replace the vast majority of cars, for instance, with so-called electric vehicles, which really should be called coal powered vehicles, because the electricity has to come from somewhere. Considering things like banning use of gas appliances.

This at a time when your department has stated today, it has for some time now, that you can't meet, for example, the congressionally mandated requirement of 80 new plutonium pits a year just to sustain our nuclear force. Is it really the best use of the Department's time to be continuing to push electric—so-called electric ve-

hicles that our grid can't support when we can't even maintain our nuclear deterrent?

Secretary GRANHOLM. We want to get to 100 percent clean electricity by 2035, and the auto industry itself has said that by 2030, half of all electric vehicles, they intend to sell because this is where the market, they see going will be electric.

Senator COTTON. That is so, I mean, that s fine as a goal. I disagree with the goal. I don't think it is practical. But I would also like to still be in a free and independent safe nation by 2035 as well.

Secretary GRANHOLM. We will be.

Senator COTTON. Our nuclear arsenal has underpinned our safety and our independence for 80 years now, and China is producing plutonium and uranium at much greater rates right now than we are.

Again, this is a question about the plutonium pits. It is not about expanding our nuclear forces, which is what we need to do given the threat we face from Russia and China's combined overmatch, but just maintaining it.

Like, I would think that this would be the most urgent question that your department faces, because it is about our survival as a Nation, not our simple mix of what kind of cars we use 12 years from now.

Secretary GRANHOLM. Well, clearly, making sure that we have a safe, secure, and effective nuclear deterrent is a top priority of the Department and of NNSA.

Senator COTTON. Okay. My time has expired but thank you for your commitment to get back to me on that question about electricity strains, especially from foreign companies on our defense industry.

Chairman REED. Thank you, Senator Cotton, very much. Thank you, Madam Secretary and Madam Administrator. There has been some discussion throughout about energy production. I would say it is my understanding that oil and natural gas production are both higher now than at any time in the past 6 years, and that we are on track to set new records on crude oil and natural gas production this year. Is that correct?

Secretary GRANHOLM. That is correct.

Chairman REED. We are doing a lot more in terms of extracting oil and natural gas than the preceding Administration.

Secretary GRANHOLM. That is correct.

Chairman REED. But that still does not alleviate, at least in my view, the need to move to a cleaner technology. That is the direction the President's headed for. So, it seems sometimes in Congress, the criticisms of the Administration for not being attentive to the fossil fuels when we are producing more fossil fuels than we have in 6 years——

Secretary GRANHOLM. Right. We will be—I want to correct—we will be at record production for oil this year, 12.4 million barrels is what is projected, which is a record, and the same thing with LNG [liquefied natural gas]. We are at record exports of liquefied natural gas and we also want to be at record production of solar, and wind, and geothermal, and nuclear.

Chairman REED. Understanding that the fossil fuels are a bridge to, but a necessary bridge to alternative fuels that would be more compatible with the environment.

Secretary GRANHOLM. Right. We want to get to 100 percent clean by 2035.

Chairman REED. Thank you very much, and I know, too, that your comments about the automobile industry. I think they have concerns about the environment, but I think they also have more concerns about products that they can sell and efficiently service and will be in demand by the American public. If I was on the board, I think I would be looking at those issues.

Secretary GRANHOLM. Because it is so much cheaper to actually operate and own an electric vehicle, and the prices of the new models coming out are much less than the models that you may currently see.

Chairman REED. All right, thank you. Well, this will conclude the open session and we will reconvene at 11:45 a.m. in SVC–217 for the closed session, and thank you very much. With that, I will declare the open session closed.

Secretary GRANHOLM. Thank you.

[Whereupon, at 11:22 a.m., the hearing was adjourned.]

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR ANGUS KING

ENERGY STORAGE

1. Senator KING. Secretary Granholm and Administrator Hruby, energy storage is the key to our Nation's clean energy future and is fundamental for improved resilience and readiness on our military installations. Leadership by the Department of Defense (DOD) can have significant spillover benefits for our broader society. The Energy Policy Act of 2020 established the Joint Long-Duration Energy Storage Demonstration Program between DOD and Department of Energy (DOE) for precisely these reasons. As the legislation stated, the program aims "(i) to demonstrate promising long-duration energy storage technologies at different scales; and (ii) to help new, innovative long-duration energy storage technologies become commercially viable." The Bipartisan Infrastructure Law appropriated $150,000,000 for this program and a related program at DOE. What is the current status of this Joint Demonstration Program?

Secretary GRANHOLM and Administrator HRUBY. As part of the overall "Joint Long-Duration Energy Storage Demonstrations Program," DOE released a $30 million Lab Call to demonstrate the resiliency advantages of LDES technologies at the U.S. DOE National Laboratories on October 12, 2022. This Lab Call was released, with acknowledgement from the Department of Defense (DOD). DOE selected six projects across two topic areas: Greater than 100kW and can discharge for 10+ hours and Greater than 500kW and can discharge for 24+ hours. These projects will help accelerate the commercial viability of innovative, state-of-the-art technologies and effectively demonstrate their benefits to facilitate wider commercial adoption for stakeholders that have similar energy goals for their facilities or campuses.

Additionally, on May 17, 2023, DOE and DOD signed a Memorandum of Understanding (MOU) in which DOE and DOD will coordinate with one another on selecting one or more military installation and technology provider to demonstrate energy resiliency at a U.S. military installation. DOE and DOD are currently developing requirements and scope for potential projects.

2. Senator KING. Secretary Granholm, what projects have been funded or are in the pipeline to be funded?

Secretary GRANHOLM. DOE selected six projects from the Lab Call across two topic areas. Topic area one was for technologies greater than 100kW and can discharge for 10+ hours and Topic Area two covered technologies greater than 500kW and can discharge for 24+ hours. Under Topic Area one projects at Argonne National Lab and Idaho National Lab, Sandia National Lab, and the National Renew-

able Energy Lab were selected for Award Negotiation. Under Topic Area two projects at Sandia National Lab, Pacific Northwest National Lab, and the National Renewable Energy Lab were selected for Award Negotiations. Those negotiations are ongoing. For more information on the selections please see *https://www.energy.gov/oced/long-duration-energy-storage-demonstrations-selections-lab-call.*

3. Secretary Granholm and Administrator Hruby, what benefits can energy storage programs across the DOD confer to our military's warfighting capabilities?

Secretary GRANHOLM and Administrator HRUBY. This question should be addressed to DOD.

TUNGSTEN

4. Senator KING. Secretary Granholm, in 2018 the Department of Defense formally restricted the sourcing of tungsten from China, Russia, North Korea, and Iran for products, programs, and systems funded or used by the DOD. In addition to reducing national security and industrial base risks, this has helped spur investment at the last 100 percent U.S.-owned and fully integrated tungsten producer (based in Maine). Has the DOE considered formally restricting where it sources critical materials such as Tungsten in a similar way?

Secretary GRANHOLM. Yes, DOE has considered formally restricting where it sources critical minerals, but at this time we do not believe it is in U.S. interests to do so. Nevertheless, DOE takes sourcing of its critical materials very seriously. Programs that DOE administers, such as the Section 48C Advanced Energy Project Credit, will prioritize projects that build and secure domestic supply chains, including obtaining critical materials from domestic sources and friendly nations.

5. Senator KING. Administrator Hruby, Given tungsten's unique shielding capabilities, the National Nuclear Security Administration (NNSA) and DOE require large amounts of specialty-engineered tungsten materials. The last U.S.-owned and fully integrated producer of tungsten-heavy alloy is in Maine and has found it exceedingly difficult to find staff at the NNSA or DOE that are interested in considering alternatives to the current foreign-owned sources (even on programs that require U.S. clearances). With most of this tungsten produced by foreign-owned and non-North Atlantic Treaty Organization (NATO) country-headquartered companies, would the NNSA consider looking into creating more competition and ensuring that the U.S. does not find itself reliant on domestic-owned suppliers?

Administrator HRUBY. Today, NNSA is procuring tungsten alloys through domestically produced sources who use both recycled scrap and imported ore to produce these alloys. There are other U.S. based organizations that use either recycled scrap or imported ore to make the tungsten powder used in tungsten alloys. Depending on the process used to make the alloy, it can be very difficult to meet the strict NNSA technical requirements needed for these procured alloys, such as non-magnetic requirements. NNSA continues to monitor, assess, and mitigate risks where warranted for continuity of supply and increased supply chain flexibility. As various threats and opportunities present themselves in this evolving global market, NNSA will continue to look for ways to reduce risk within its supply chain using a systematic and cost-effective strategy to its supply chain design.

QUESTIONS SUBMITTED BY SENATOR MIKE ROUNDS

SANFORD UNDERGROUND RESEARCH FACILITY (SURF)

6. Senator ROUNDS. Secretary Granholm, the SURF in Lead, South Dakota has been an important partner for the Department of Energy in conducting critical research in the fields of particle physics and dark matter. Can you please discuss the importance of continued funding for this facility and how it fits into the Department's broader scientific research goals?

Secretary GRANHOLM. The Sanford Underground Research Facility (SURF) located in Lead, South Dakota, is supported by a cooperative agreement with the DOE Office of High Energy Physics (HEP) with the goal of supporting underground science, especially high energy physics experiments that need to be shielded from cosmic rays. In fiscal year 2023, HEP will provide $35 million for the operation of the facility and refurbishment of critical infrastructure. The LUX-ZEPLIN (LZ) experiment at SURF is currently searching for dark matter and has set the most stringent limits in the world. The LBNF/DUNE project is currently under construction at SURF.

When completed, it will be the foremost neutrino experiment in the world. As the largest initiative in the HEP strategic plan, LBNF/DUNE is crucial for attracting the world's best physicists to the U.S. and is critical to maintaining a U.S. leadership role in particle physics. HEP is also an early adopter and science driver for many key advanced technologies that support the Department's broader scientific research goals, not only in particle accelerators and instrumentation, but also Artificial Intelligence, Quantum Science and Microelectronics. Scientists in other fields like geology and biology are also Working at SURF, supported by the Department or other agencies.

QUESTIONS SUBMITTED BY SENATOR JONI ERNST

DEPARTMENT OF ENERGY GRANTS

7. Senator ERNST. Secretary Granholm, what is the status of the Department of Energy's (DOE's) consideration of a $200 million grant to Microvast, a China-based lithium battery company?

Secretary GRANHOLM. Microvast is a majority U.S.-owned company, traded on NASDAQ (MVST) and headquartered in Stafford, Texas, with additional locations in Tennessee, Florida, and Colorado. Microvast proposed to build a polyaramid separator material production plant in Hopkinsville, Kentucky, with funding from the Infrastructure Investment and Jobs Act (IIJA) and the company's matching financial investment. The new battery separator material was developed in China and is currently manufactured in China. In the funding opportunity announcement and selection letters provided to the applicants, DOE reserved the right to terminate award negotiations at any time for any reason. In this case, DOE conducted and reviewed multiple risk assessments conducted before and after the selection and determined the potential risks could not be sufficiently mitigated for this project and it was not in the government's interest to proceed to an award. Microvast was notified of DOE's decision to not move forward with negotiations on May 22, 2023. The IIJA funds allocated to this selection will be applied to future competitively awarded funding opportunities.

DEPARTMENT OF DEFENSE (DOD) NON-TACTICAL VEHICLE FLEET

8. Senator ERNST. Secretary Granholm, what operational energy risks would DOD adoption of an electric vehicle (EV) non-tactical vehicle fleet create?

Secretary GRANHOLM. Electric vehicles are quieter, more powerful, can accelerate faster, and have a lower heat signature compared to existing combustion non-tactical vehicles. Electric vehicle technology is advancing rapidly and is being quickly adopted by all commercial manufacturers around the world. Like fossil fuels, electrical power is ubiquitous throughout the world, and has been used for propulsion for over a century. Determining overall impact (positive or negative) to operational energy risk would require analysis of a combination of variables tied to each individual mission.

FUEL SUPPLY CHAIN IMPACTS

9. Senator ERNST. Secretary Granholm, on Monday, May 1, without action from this Administration on an emergency waiver, we will see summer sales of E15 go away in 90 percent of gas stations that sell E15 and every single station in my State will lose this ability to sell E15. Do you agree that the ongoing war in Ukraine is creating global pressures on energy markets and disrupting the fuel supply chain?

Secretary GRANHOLM. Russia's full-scale invasion of Ukraine in February 2022 exacerbated challenges in global energy markets, particularly as energy demand recovered from the economic impacts of the COVID–19 pandemic. Disruptions to global fuel supply chains were particularly challenging. However, Russia's full-scale invasion and the energy market challenges connected to it also motivated a major shift in thinking, propelling the international community to accelerate the energy transition, both for climate and for geopolitical reasons.

In the months following Russia's full-scale invasion, alternative suppliers stepped in to meet energy demand in regions that historically relied on Russian oil imports. In early 2022, oil prices rose in anticipation of supply disruptions and the world saw significant shifts in oil trade flows. However, prices began to moderate toward the latter half of 2022, and crude oil prices are now lower than they were at the start of the full-scale invasion. Crude prices have moderated because Russia has maintained output, strategic inventories have been released with efforts led by the United States, alternative suppliers have increased production, and markets are

bearish about oil demand growth. Though prices have moderated, Russia's full-scale invasion has led to longer trading routes, which strain oil tanker availability and influence commodity prices during periods of supply disruption or strong demand.

In response to Russia's full-scale invasion of Ukraine and broader weaponization of the energy exports to Europe, Europe sought to significantly reduce its consumption of natural gas and to find non-Russian suppliers to meet its natural gas demand. Europe increased its imports of natural gas from Norway, Algeria, the United States, and others.

Natural gas prices surged in Europe as Russia curtailed its exports in the months that followed its full-scale invasion of Ukraine. As a result, Europe's industrial demand for natural gas shrank by 26 percent from 2021 to 2022. The pace of industrial demand destruction in 2022 and its insensitivity to more recent short-term lower prices indicate that the natural gas price surges and overall supply disruptions have likely led to structural changes in European industrial gas consumption. These structural changes include improved efficiency, consumer behavior adjustments, and the loss of manufacturing output in certain gas-intensive industries like base metals, chemicals, and non-metallic minerals production. S&P Global estimates more than one-quarter of this demand destruction will be permanent due to improved efficiency, factory closures, and relocation of production to locations like the U.S. with cheaper energy costs.

As Europe faced piped gas supply disruptions from Russia, the United States became a critical supplier of gas to Europe via LNG deliveries. In 2022, 64 percent of U.S. LNG exports sailed to Europe. France, the U.K., Spain, and the Netherlands accounted for 74 percent of European imports of U.S. LNG.

To support European partners in their efforts to enhance their energy security and reduce their reliance on Russian energy imports, the U.S. Department of Energy has focused on two goals: diversification of Europe's energy supplies away from Russia and the decarbonization of Europe's energy systems. The United States and its partners seek to advance collaborative measures and policies to strengthen Europe's energy systems to relieve pressures in global energy markets.

10. Senator ERNST. Secretary Granholm, do you agree that the U.S. has a domestically produced, readily available, lower cost, lower carbon fuel in the form of E15?

Secretary GRANHOLM. The United States is the world's largest producer and consumer of biofuels. The domestic ethanol industry has over 200 operating ethanol plants with production capacity of more than 17 billion gallons per year of ethanol. These ethanol production facilities support nearly 70,000 jobs, many in rural areas, and produce low-carbon fuel that is used widely across the United States. In fact, 98 percent of all gasoline sold in the United States is actually a 10 percent ethanol blend, or E10. The Environmental Protection Agency (EPA) has approved blending ethanol into gasoline at 15 percent ethanol by volume (E15) for use in vehicles of Model Year (MY) 2001 and more recent. However, E15 is not widely available due to the need for separate fueling infrastructure to avoid concerns over "misfuelling" or using E15 in older vehicles that are not approved to use E15.

The most recent comprehensive DOE study,[1] published by Argonne National Laboratory in 2021, found that U.S. corn ethanol has 44 percent–52 percent lower GHG emissions than gasoline. This analysis found that carbon emissions from U.S. corn ethanol fell 20 percent between 2005 and 2019 due to increased corn yields per acre, decreased fertilizer use, and improved ethanol production processes. Existing technologies and agricultural practices have the potential to make further, significant improvements in the reduction of lifecycle GHG emissions of ethanol from approximately 40 percent today to over 70 percent as compared to a petroleum baseline.

NUCLEAR INFRASTRUCTURE

11. Senator ERNST. Administrator Hruby, has the Nuclear Weapons Council comprehensively reviewed its nuclear infrastructure to account to two nuclear peers?

Administrator HRUBY. The Nuclear Weapons Council (NWC) has reviewed capabilities needed to deter two nuclear peers simultaneously and recognizes a continuous re-evaluation process is necessary due to the current global dynamics. One of the most challenging aspects of deterring two nuclear peers is the nuclear infrastructure capability and capacity constraints in NNSA. NNSA is re-establishing, modernizing, and expanding the capacity of its infrastructure needed for the current Program of Record. If the infrastructure plan receives the funding requested and NNSA can find qualified personnel to conduct the work, the most critical infrastructure investments will be complete in the late 2030's. Our priority in infrastructure

[1] https://www.anl.gov/article/corn-ethanol-reduces-carbon-footprint-greenhouse-gases

planning is to build a flexible and resilient enterprise. If the Program of Record changes, additional infrastructure changes may be necessary and there are other infrastructure needs to accomplish the Program of Record in the longer term. We have learned that infrastructure investments need to be more continuous going forward than they have been in the past.

12. Senator ERNST. Administrator Hruby, are you aware of any complications that would delay or disable the United States from doing so?

Administrator HRUBY. Ongoing NNSA efforts to modernize the nuclear security enterprise's infrastructure are challenged by ongoing supply chain issues, equipment delivery delays, contractor performance, inflation, and shortages of qualified labor. However, NNSA remains committed to modernizing capabilities across the enterprise to enable us to continue to meet Department of Defense requirements, and we are prioritizing investments across multiple laboratories, plants, and sites. As Secretary Granholm and I testified, funding interruptions or inconsistencies would significantly delay major infrastructure projects and increase the difficulty of delivering projects and meeting requirements within previously established baselines.

13. Senator ERNST. Administrator Hruby, what are the requirements of developing a flexible nuclear infrastructure that can reset the hedge after uploading extant non-deployed nuclear weapons?

Administrator HRUBY. NNSA is responsible for modernizing the facilities, infrastructure, technologies, and manufacturing methods to meet stockpile program of record capacities defined by the Nuclear Weapons Council. Multiple strategic material streams and component production capabilities are necessary to sustain the Nation's nuclear deterrent. As the 2022 Nuclear Posture Review (NPR) describes, the plan for a resilient and adaptive nuclear security enterprise has three pillars: (1) a Nuclear Deterrent Risk Management Strategy, (2) a Production-based Resilience Program, and (3) a Science and Technology Innovation Initiative. NNSA is responsible for the second and third pillars and is coordinating with DOD on the first. NNSA's Production-based Resilience program includes development of a nuclear infrastructure with the flexibility to respond to changes in requirements, including potential changes in hedge requirements should they come to pass. Detailed requirements for this infrastructure, such as flexibility, are developed as future production facilities and equipment that form the future production infrastructure are designed. As an example, for pit production capabilities, NNSA is doing two things to provide flexibility: (1) minimally building out some unused space in the building if requirements increase so more equipment could be installed, and (2) designing so that the capacity could be obtained in one shift so that additional shifts could be added if production demands increase. Any increased production through additional shifts likely would come at a cost of decreased preventative maintenance.

14. Senator ERNST. Administrator Hruby, do you agree that a review of infrastructure plans should account for the need to reset the hedge?

Administrator HRUBY. I believe the NWC should continue to review the capabilities and capacity of the nuclear security enterprise while planning active and inactive stockpile composition to ensure Presidential Guidance can be achieved. The NWC, including NNSA, considers current and future risks to the nuclear stockpile and plans accordingly. Any updates to Presidential Guidance would be accompanied by an assessment of the abilities and capacities of the nuclear security enterprise to meet such guidance. NNSA must prepare to deliver and sustain safe, secure, reliable warheads under a variety of possible future scenarios, including possible changes in hedge requirements, and is working accordingly to develop a flexible production infrastructure.

QUESTIONS SUBMITTED BY SENATOR DAN SULLIVAN

AUSTRALIA-UNITED KINGDOM-UNITED STATES (AUK) NUCLEAR WASTE STORAGE

15. Senator SULLIVAN. Administrator Hruby, in your joint testimony you stated "NNSA provided technical advice to our AUKUS partners on the full suite of requirements that underpin nuclear stewardship to implement the strongest possible safeguards and verification measures while achieving the overall objectives of AUKUS." The AUKUS agreement requires Australia to store fuel from decommissioned reactors. Can you update the Committee on your work with Australian partners to identify possible storage options?

Administrator HRUBY. As part of its commitment to nuclear stewardship, Australia has committed to managing all radioactive waste generated through its nuclear-powered submarine program, including spent nuclear fuel, in Australia. The United Kingdom and the United States will assist Australia in developing this capability, leveraging Australia's decades of safely and securely managing radioactive waste domestically. Australia will manage these materials in accordance with its nuclear nonproliferation and other international obligations and commitments. We have had some preliminary discussions with Australian counterparts on these issues. Australian delegations have visited the Naval Reactors Facility at Idaho National Laboratory to better understand how our naval nuclear spent fuel is safely and securely stored. Australian officials also visited Savannah River National Laboratory where issues related to community engagement on spent nuclear fuel issues were discussed. We will continue to engage with Australian counterparts on this issue going forward.

MAINTAINING OUR NUCLEAR CAPABILITY WHILE WORKING TOWARD BUILDING AUSTRALIA'S

16. Senator SULLIVAN. Secretary Granholm and Administrator Hruby, I strongly support AUKUS and believe it will strengthen Australia's military deterrence in the Indo-Pacific. The recently announced details on the Australian submarine acquisition plan have raised some questions about whether the U.S. and Australia have the industrial base capacity to build the number of submarines both countries require. We also shouldn't forget the significant learning curve for Australia to become a nuclear Navy, an undertaking that requires the Australian Navy to rapidly train a cadre of personnel in nuclear submarines operations. How are we ensuring that our Australian partners develop the nuclear expertise to safely maintain and operate nuclear submarines?

Secretary GRANHOLM and Administrator HRUBY. Since the inception of the AUKUS initiative, DOE/NNSA has had a leading role in intensively examining the full suite of requirements that underpin nuclear stewardship, with a specific focus on safety, design, construction, operation, maintenance, disposal, regulation, training, environmental protection, installations and infrastructure, industrial base capacity, workforce, and force structure.

DOE/NNSA has done so by emphasizing the concept of "stewardship", which includes the development of the entire ecosystem to oversee, sustain, and safely operate nuclear technology. It also includes governance and regulatory structures, growing operational proficiency, and developing the engineering and technical depth and experience to safely own, operate, support, and dispose of nuclear-powered submarines. A focus on stewardship will be foundation as the U.S., UK, and Australia work to deliver the optimal pathway under AUKUS.

AUKUS NUCLEAR REACTORS

17. Senator SULLIVAN. Secretary Granholm and Administrator Hruby, in your joint testimony you stated "sustained funding is vital for the support of these efforts and will allow Naval Reactors to meet current and future force needs; this foundational support of Naval Reactors is critical to our ability to deliver on AUKUS." Do you have any concerns about the availability of Naval Reactors to meet the demands of AUKUS?

Secretary GRANHOLM and Administrator HRUBY. No, we do not have concerns about the availability of Naval Reactors to meet the demands of AUKUS. Naval Reactors has been an active participant since the inception of AUKUS owing to its expertise in all matters pertaining to naval nuclear propulsion including what it takes to provide proper stewardship for nuclear propulsion technology from "cradle to grave." Additionally, Naval Reactors has been assisting the United Kingdom with developing and sustaining their nuclear propulsion program since 1958. AUKUS will now require similar assistance to Australia which will add a significant, enduring workload to the Naval Reactors program. We anticipate that Australia and the UK will provide funding for the support that Naval Reactors provides, pending the conclusion of appropriate legal arrangements. DOE/NNSA is fully committed to working with the Department of Defense and Congress to ensure Naval Reactors is appropriately postured to fully support U.S. national security requirements as well as AUKUS, building on the nearly 75 years of expertise and talent the Naval Reactors program has cultivated to meet the generational challenge of coordinating and sustaining the naval nuclear propulsion programs of all three nations.

QUESTIONS SUBMITTED BY SENATOR ERIC SCHMITT

KANSAS CITY NON-NUCLEAR EXPANSION TRANSFORMATION (KCNEXT) EXPANSION TRANSFORMATION PLAN

18. Senator SCHMITT. Administrator Hruby, I understand that the KCNExT plan calls for a nonstandard approach to procure land and facilities for the expansion. Can you provide information on the lease-purchase agreement plan, and what benefits to the government you expect to achieve through this approach?

Administrator HRUBY. NNSA is pursuing the non-traditional development and acquisition of the land adjacent to the Kansas City National Security Campus (KCNSC) Botts Road Main Campus to support the growing nuclear modernization demands. Specifically, NNSA is in the process of negotiating a series of lease-purchase agreements with the current landowner. Should negotiations continue to progress well, we could see execution of an initial agreement in fiscal year 2024. This involves the landowner development of the property, including the construction of office space. Once completed, NNSA would lease the property for a period to ensure it meets agency needs and Federal acquisition requirements before purchasing the property. This multi-year, multi-phase acquisition could provide up to an additional 1.12 million square feet of manufacturing space and 675,000 square feet of office space to accommodate KCNSC's expected long-term growth. NNSA expects that this approach will meet the site's demonstrated space needs more quickly and efficiently than Federal construction on federally owned land. The phased approach also provides agility in the event we need to adjust scope or change strategies throughout the expansion process.

MITIGATING CHALLENGES AND STAYING ON-TIME

19. Senator SCHMITT. Administrator Hruby, I appreciate yours and National Nuclear Security Administration's (NNSA's) novel approach to solving capacity needs at the Kansas City National Security Campus. What do you perceive as the challenges associated with this approach and how are you preparing to mitigating risks to stay on timeline?

Administrator HRUBY. Pursuing innovative approaches inherently carries risk as our teams are combining their expertise in new ways to overcome challenges that could not be solved with our traditional mindsets. The decision to negotiate a multi-phased deal with the landowner was designed to mitigate the schedule risk we know would exist if we pursued a government land purchase followed by government construction. This new approach is being designed in a phased manner to give us the opportunity to learn and adjust throughout the project to mitigate risk. We believe this agile approach will allow NNSA to deliver the infrastructure needed on time while integrating stakeholder feedback, maintaining oversight over construction timelines, and collaborating with the developer as they progress through each phase.

DEPARTMENT OF DEFENSE AUTHORIZATION REQUEST FOR APPROPRIATIONS FOR FISCAL YEAR 2024 AND THE FUTURE YEARS DEFENSE PROGRAM

THURSDAY, APRIL 27, 2023

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

UNITED STATES EUROPEAN COMMAND AND UNITED STATES TRANSPORTATION COMMAND

The Committee met, pursuant to notice, at 8:04 a.m., in room G50, 112. Senate Office Building, Senator Jack Reed (Chairman of the Committee) presiding.

Committee Members present: Senators Reed, Shaheen, Gillibrand, Blumenthal, Hirono, Kaine, King, Manchin, Duckworth, Rosen, Kelly, Wicker, Fischer, Cotton, Rounds, Ernst, Cramer, Scott, Budd, and Schmitt.

OPENING STATEMENT OF SENATOR JACK REED

Chairman REED. Senator Wicker is on his way, but indicated we should begin. Good morning. The Committee meets today to receive testimony from General Christopher Cavoli, Commander of United States European Command and NATO's [North Atlantic Treaty Organization's] Supreme Allied Commander Europe, and General Jacqueline Van Ovost, Commander of United States Transportation Command.

Thank you for your service to the Nation, and I thank the men and women serving under your commands at this critical time. The security challenges of European Command or EUCOM have never been clearer. For more than a year, Russia has waged a brutal, unprovoked war on Ukraine, inflicting terrible suffering on the people of Ukraine and threatening European stability.

Ukrainians have fought with incredible courage and skill to repel Russia's vicious assault, defending the same values and freedoms that we cherish. Ukraine has achieved some very notable successes, but there is hard fighting ahead and more to be done. Throughout this conflict, the NATO alliance has shown remarkable unity and resolve.

A formidable coalition of our allies has joined together to provide military and humanitarian support to Ukraine and impose severe cost on Russia's economy. If Putin thought his war would drive a

wedge between NATO and members, and within the international community, he was badly mistaken.

NATO unity has never been stronger, and many European nations are taking steps to invest greater proportions of their budgets and institutional energies to improve their military capabilities. Indeed, in a triumphant moment for NATO, Finland recently joined the alliance. This was an utter rejection of Russia's strategic goals, and I know the Finns will contribute significantly to the alliance.

I hope we will soon welcome Sweden as well. President Biden deserves great credit for marshaling these efforts. His Administration continues to provide critical military equipment and training to Ukraine, including combat vehicles like Abrams tanks, Strykers, and Bradleys, as well as weapons like HIMARS [High Mobility Artillery Rocket System], Howitzers, Patriot air defense systems, and various types of ammunition.

This equipment, in concert with contributions and training from across the alliance, has provided an important mix of capabilities to bolster Ukrainian effectiveness on the battlefield. Let there be no doubt the United States will continue to help Ukraine succeed on the battlefield. America's assistance to Ukraine is also an investment our own national security interest. Beyond repelling Putin, we know China is watching closely and we must succeed.

General Cavoli, the NATO alliance has made important progress in its ability to generate and maintain the collective force posture, operations, and investments necessary to deter Russian aggression against its members, and the United States has played a key role in those efforts. At the same time, the security environment in Europe has experienced a tectonic shift.

I would like to know your views on plans for United States military activities and investment in the EUCOM [European Command] area of responsibility in light of these changes. General Van Ovost, TRANSCOM [United States Transportation Command] is also playing a crucial role in our support to Ukraine.

American troops continue to operate forward logistics centers to receive, identify, and transport the majority of security aid intended for Ukraine and across, and from the international community.

This has been an enormous task, executed with impressive skill on little notice. I would appreciate an update on these efforts and any lessons learned that you may have to share. Keeping an eye to the future and the pacing threat of China, an important reality we are learning is that any potential adversary is going to attack our logistic support system.

This idea of contested logistics will include obvious threats to our forward basis, as well as the aircraft and ship that resupply those bases. But it could also include cyber-attacks against information technology systems that support our deployments, both government and commercial, and possible kinetic attacks against ports and airfields supporting our deployments.

I am concerned that our thinking about logistics during conflict has too often defaulted to our uncontested military dominance since World War II. We have always owned the sea and air lines of communication, and have only had to worry about logistics efficiency, not effectiveness. General Van Ovost, I would like to know what

steps TRANSCOM is taking to prepare for such threats to our logistics, and how the military services can alter their acquisition programs to take these concerns into account.

Thank you again to our witnesses and I look forward to your testimoneys. As a reminder for my colleagues, at the conclusion of the open session of this hearing, we will recess for the joint session of Congress.

We will then reconvene for the closed session at 12:30 p.m. in room SVC–217. We are committed to allowing all of our colleagues to ask questions, so if the assembly time arrives, we will continue in the open session until everyone has an opportunity to do so. In lieu of Senator Wicker's arrival shortly, I will ask General Cavoli to begin.

PREPARED STATEMENT BY SENATOR ROGER WICKER

Good morning. I thank our witnesses for being here and for their flexibility on scheduling this hearing.

Today's witnesses highlight the importance of properly resourcing the National Defense Strategy to deter regional aggression and to prevent that aggression from becoming a global conflict. European Command's area of responsibility covers 50 countries and territories, but Ukraine is the command's primary focus today. Transportation Command is the linchpin for equipment distribution in Ukraine's fight against Russia and is crucial in supporting the Indo-Pacific Command against the Chinese Communist Party.

These are two different commands with two very different mission requirements, but they support one single goal: to deter Russia and China.

Over 1 year has passed since Russia's unprovoked, illegal, and brutal invasion of Ukraine.? The courage and ingenuity shown by Ukrainian troops, many of whom were civilians before the war, continues to be nothing short of heroic. EUCOM leads United States military assistance efforts, in coordination with allies and partners, to support Ukraine.

The war has entered a new phase as Ukraine prepares to go on the offense after beating back months of relentless Russian attacks. I welcome General Cavoli's thoughts on the current conditions of the war and its possible trajectory and the role Congress can play in helping Ukraine win. I would also appreciate General Cavoli's best military judgment on what more could be done to sharpen the military capabilities of the Ukrainian Armed Forces.

Congress has already stepped up by providing significant funding to assist Ukraine, and more may be needed in the future. Accountability is essential to maintaining bipartisan support for Ukraine and the trust of the American people. The current accountability requirements seem to be working, but we would be interested in General Cavoli's views.

In addition, I hope General Cavoli will describe the significant role allies and partners play in supporting Ukraine—I am especially interested in learning about the contributions of our European friends and the impact they are making. This war matters greatly to the United States, but it is being fought in Europe's backyard.

Ukraine is EUCOM's primary focus but not its only one. I welcome General Cavoli's thoughts on how EUCOM and INDOPACOM are sharing lessons learned from the war. We also need an update on EUCOM efforts to counter Chinese moves in Europe.

TRANSCOM has a unique mission set in that it supports U.S. Forces around the world. In its work helping with the Afghanistan evacuation, delivering crucial weapons to Ukraine, or planning for contested logistics in the Pacific, TRANSCOM has shown it is key to the implementation of the National Defense Strategy.

Late last year, General Van Ovost gave an interview on logistics in which she said, "I don't like to be a miracle worker, I like a very stable plan that we can actually execute." I am also in favor of an executable plan. Unfortunately, I do not believe that plan exists as of now. The Department of Defense has struggled to develop a coherent strategy when it comes to joint contested logistics. We must be proactive and thoughtful on this issue, not reactive and shortsighted.

EUCOM has seen firsthand how difficult it is to supply a major modern war. Contested logistics in the Western Pacific should not just be a combat-credible capability, it must be seen by our adversaries as a force deterrent.

We are moving too slowly at almost every point of our logistics infrastructure—including fuel supply and sealift and airlifts fleets. I would appreciate an update today on what resources or authorities TRANSCOM needs to support contested logistics.

I thank our witnesses and look forward to their testimony.

STATEMENT OF GENERAL CHRISTOPHER CAVOLI, USA COMMANDER, UNITED STATES EUROPEAN COMMAND/ NORTH ATLANTIC TREATY ORGANIZATION SUPREME ALLIED COMMANDER EUROPE

General CAVOLI. Thank you, Mr. Chairman. Chairman Reed, to Ranking Member Wicker, of course, as well, distinguished Members of the Committee, it is a privilege to testify before you today, and in many cases to see you again. On behalf of the men, women, and the families of USEUCOM first of all, I thank you for your steadfast support to their mission, to their safety, and to their well-being.

I would also like to recognize and thank my Command Senior Enlisted Leader, CSM Rob Abernathy, sitting behind me here, who accompanied me here today. He is representing our noncommissioned officers, our enlisted soldiers, and our families who remain America's asymmetric advantage against any adversary.

Thank you, Rob, for being here. I am very pleased to appear today beside my good friend and colleague, Jackie Van Ovost, whose U.S. Transportation Command is unlike anything else on the globe and who works miracles every day. Thank you, Jackie, to your whole command.

This is, as the Chairman noted, an unprecedented time in Europe-Atlantic area. Fourteen months ago, Russia's illegal, unprovoked invasion of Ukraine dramatically shifted perceptions of European stability and our broader global security. It galvanized European governments' resolve. Last year's NATO summit in Madrid was a turning point for the alliance.

Nations committed to a new strategic concept that put collective territorial defense at the top of the alliance task list for the first time in 35 years, and for the first time since the cold war, set into motion a series of efforts that will profoundly change the military structure and activities of NATO. We have been creating new plans.

That is, allied command operations has been creating new plans for the General defense of the alliance, and these will drive higher levels of readiness and more targeted national defense investments, especially on the part of our allies.

Nations agreed to accelerate defense spending increases, to establish enhanced force posture on the Eastern flank of NATO, to turn unprecedented numbers of troops and weapons over to NATO command and control, and critically, to bring two new members into the alliance. Happy to note, as the Chairman did, that Finland has already joined and we hope soon to see of Sweden as a member as well.

Over time, these efforts inside the alliance will lead to significantly increased European military capabilities and will continue to deter aggression against the alliance. That deterrent posture has allowed us to work intensively in the past year or so to assist Ukraine. In the past year, thanks to your support, United States

donations of arms, ammunition, equipment, vehicles, and supplies have enabled Ukraine to halt Russia's invasion.

We have not been alone in this effort. The DOD {Department of Defense] and USEUCOM [United States European Command] lead an international effort represented by the 50 plus member UDCG, Ukraine Donors Contact Group. We have an effort together to identify transport and deliver equipment and ammunition to Ukraine, along with the training to use that equipment in combat.

This material support and the training provided by international donors has been huge and fundamental to the Ukrainian military's success so far. Over the winter, our coalition has enabled the Ukrainian military to generate the military capabilities necessary to defend and regain parts of their sovereign territory, and we are confident our Ukrainian partners are good stewards of donated aid.

Our embassy team in Kyiv, led by Brigadier General Garrick Harmon and the security assistance group in Ukraine, located in Germany, worked diligently to monitor and keep a close eye on all lethal aid to ensure it is getting to and staying in the right hands. Although we remain optimistic for Ukraine's future and sovereignty, this war is far from over.

Russia will remain an acute threat to Euro-Atlantic security, and the National Defense Strategy rightly calls our attention to that. Russia is not the only problem in Europe. The People's Republic of China (PRC) continues to increase its access and influence in our theater, and its activities pose risks to United States allied and partner interests.

The PRC uses foreign direct investment, government backed business ventures, and loans to gain access to technology and to gain control over vital European infrastructure and transportation routes.

Finally, Europe continues to face transnational challenges as well. Such as violent extremist organizations, uncontrolled immigration, organized crime, and even climate change. EUCOM trains and cooperates with allies and partners to help counter those challenges as well. Our strategic approach fortifies our allies and our partners.

It strengthens alliance interoperability and enhances our collective combat capability, which deters our adversaries, and as always, should deterrence fail, USEUCOM, alongside our allies and partners, is ready to fight and win.

Your continued support for our efforts, the authorities and the funding you give us, are critical to our ability to do this. Ladies and gentlemen, thank you for having me here today. I look forward to your questions.

[The prepared statement of General Christopher G. Cavoli follows:]

PREPARED STATEMENT BY GENERAL CHRISTOPHER G. CAVOLI

Chairman Reed, Ranking Member Wicker, and distinguished Members of the Senate Armed Services Committee, on behalf of the dedicated men, women, and their families preserving stability in the European theater, it is a privilege to testify before you as the Commander, United States European Command (USEUCOM). It is my distinct honor to serve alongside our Allies and partners, soldiers, sailors, airmen, marines, guardians, coast guardsmen, civilians, and defense contractors as we work to deliver peace and secure U.S. interests.

This is an unprecedented time for Euro-Atlantic security. Russia's illegal, unprovoked, brutal invasion of Ukraine upended many aspects of European security. It has forced us to recognize the imperative of collective territorial defense, which has altered North Atlantic Treaty Organization (NATO) force posture requirements. In this dynamic and uncertain environment, U.S. leadership remains indispensable; our actions must signal strong and unwavering resolve. We must maintain and buildupon our existing commitment to NATO and ensure the Alliance remains the foundation of European security and deterrence.

Russia is not the only challenge in the USEUCOM AOR, however. The People's Republic of China is working to weaken democratic processes and undermine the rules-based international order. Violent extremist organizations also foster instability, while transboundary challenges, such as climate change, affect the operational environment. To address these challenges, we campaign in all domains—air, sea, land, space, and cyber—to deter aggression and build enduring strategic advantage.

The National Security Strategy states that a free and prosperous Europe, defended by NATO, remains fundamental to United States national security. Further, the National Defense Strategy (NDS) describes mutually beneficial alliances and partnerships as the United States' greatest strategic advantage. The NATO Alliance is more unified now than it has been in its 74 years of existence. The combined response to Russia's invasion of Ukraine has demonstrated this. USEUCOM's strategic approach strengthens Alliance interoperability, fortifies Alliances and partnerships, and thereby enhances all-domain combat credibility. Should deterrence fail, USEUCOM, alongside our Allies and partners, is ready to fight and win.

Congress has provided authorities and funding for security assistance to Ukraine on an unprecedented scale. Presidential Drawdown (PD) Authority and the Ukraine Security Assistance Initiative (USAI) have proven key to Ukraine's success. Coupled with the bravery and ingenuity of the Ukrainian people—and robust support from our NATO Allies and other partners—security assistance has changed the course of the conflict. We remain committed to supporting Ukraine's urgent needs and increasing their combat capabilities over the long-term. Specifically, USEUCOM supports Department of Defense (DOD) efforts to transition Ukraine toward a western-style military with advanced and interoperable equipment. We appreciate the supplemental funding from Congress that has enabled our progress toward this goal. Ensuring accountability of United States security assistance remains a top priority and we continue to work with Ukrainian authorities to ensure appropriate end-use monitoring.

Congress has also provided critical support to the full range of investments in our posture and activities in Europe. We will continue to build on successes funded by the European Deterrence Initiative (EDI) as associated operations, activities, and investments are rolled from the former Overseas Contingency Operations budget to the base budget. These operations, activities, and investments allow us to deter Russia, assure our Allies, and strengthen NATO interoperability. Congressional appropriations support rotational forces, infrastructure, and prepositioned stocks, all of which increase operational efficiency and speed. These investments improve United States and NATO readiness by enabling exercises, training, and building partner capacity across all domains in the Euro-Atlantic area. We appreciate continued congressional support for our posture and activities in Europe; this funding is critical to the deterrence and defense of United States interests in Europe.

RISKS AND CHALLENGES IN THE USEUCOM AREA OF RESPONSIBILITY (AOR)

The USEUCOM AOR encompasses 50 countries, each with varying strategic aims. The theater contains vast maritime and air domains, including a large part of the Arctic region; the north and central Atlantic Ocean; the Mediterranean, Black, and Baltic Seas; and multiple strategic chokepoints. The European Union (EU) is the world's largest trading bloc and accounts for over 16 percent of global imports and exports. We continue to address security challenges across the AOR through force presence, pre-positioned stocks, and engagement and exercises with Allies and partners.

Russian Federation

Russia remains Europe's core security challenge. Russia continues to wage its brutal war on Ukraine, target critical infrastructure, and threaten escalation. The Kremlin seeks to outlast the West by manipulating energy markets and influencing states to curb support to Kyiv. Due to the resilience and heroism of the Ukrainian people, with assistance from like-minded nations, Russian ground forces have suffered significant losses in Ukraine. Despite these setbacks, and their diminished stockpiles of equipment and munitions, Russian ground forces still have substantial

capability and capacity, and continue to possess the ability to regenerate their losses.

Russia remains a formidable and unpredictable threat that will challenge United States and European interests for the foreseeable future. Russian air, maritime, space, cyber, and strategic forces have not suffered significant degradation in the current war. Moreover, Russia will likely rebuild its future Army into a sizable and more capable land force, all while suspending its implementation of the Treaty on Conventional Armed Forces in Europe, as it has done since 2007. Russia retains a vast stockpile of deployed and non-deployed nuclear weapons, which present an existential threat to the United States Homeland, our Allies, and partners, and is failing to comply with several of its legal obligations under the New START Treaty. President Putin's dangerous nuclear rhetoric introduces strategic uncertainty. All of these factors indicate that Russia remains an immediate and persistent threat to American interests in Europe and around the world.

Russia pursues a military modernization program that prioritizes a range of advanced conventional, hybrid, and nuclear capabilities to coerce the West. Its primary focus is on development of six specific systems: a nuclear-powered cruise missile; a nuclear-armed hypersonic boost glide vehicle; a more capable heavy Intercontinental Ballistic Missile (Sarmat); a nuclear-armed, nuclear powered underwater drone (Poseidon); hypersonic cruise missiles; and lasers. These weapons provide Russia asymmetric threats to NATO and present new challenges to Western response options.

Russia employs a range of tools to advance its foreign policy objectives to coerce neighboring states, divide the Alliance, and expand its global influence. Beyond its war of aggression in Ukraine, Russia also retains a military presence in 20 percent of Georgia's sovereign territory, and in Moldova against the will of those states. Russia also uses disinformation, cyber operations, and energy supply manipulation to coerce our Allies and partners. Russian private military contractors operate in Syria, Ukraine, and multiple African nations, working to advance Russian State interests.

People's Republic of China (PRC)

The PRC seeks to increase its access, presence, and influence in Europe to refashion the international system to suit its interests and authoritarian preferences. The PRC threatens enduring United States, Allied, and partner interests in Europe through its foreign direct investment, government-backed business ventures, and infrastructure deals. Of particular concern are the PRC's investments in European ports, transportation nodes, and other critical infrastructure, which provide potential dual-use functions for the PRC. The PRC pursues bilateral engagement in these ventures through PRC-led forums such as the 14+1 Cooperation Framework with Central and Eastern European nations. These and other PRC activities have created dependencies and sources of leverage to influence our Allies and partners.

PRC leaders remain focused on using both licit and illicit means to seize a dominant position in critical and emerging dual-use technology sectors—artificial intelligence, advanced robotics, quantum technologies, directed energy, and hypersonic systems—and using that dominant position to advance their authoritarian agenda. To increase adoption of PRC developed technology, the PRC is pursuing acceptance of its national technology standards across the globe. The PRC's efforts to expand Huawei 5G networks throughout Europe via PRC state-sponsored firms pose security risks to our Allies and partners. These activities allow the PRC to access and exploit intellectual property, sensitive information, technology, and private personnel information. Beyond economic impacts, these technology-related activities provide the PRC a military capacity that put United States national interests in the USEUCOM AOR at risk. We must remain vigilant, and work with our Allies and partners, to combat the PRC's activities related to critical and emerging technologies.

We are also concerned about the destabilizing effects of deeper alignment between the PRC and Russia. Beijing's continued diplomatic support for Russia's illegal war against Ukraine is detrimental to European peace and stability. The PRC's amplification of Russian disinformation on the war in Ukraine undermines trust in Europe's democratic institutions. There are indications that Beijing is considering materially supporting Russia's war effort, while at the same time, Beijing and Moscow are deepening their defense engagements and interoperability, including joint maritime and air patrols. This increased cooperation has implications for European security as both Beijing and Moscow seek to change the existing rules-based structure in their favor.

USEUCOM coordinates with our European defense counterparts to establish a common understanding of PRC actions and the associated risks. We support the U.S. whole-of-government effort to highlight the Trans-Atlantic shared values, inter-

ests, and transparent business practices of the current rules-based international order. NATO's Strategic Concept recognizes that the PRC's ambitions and coercive policies challenge NATO's interests, security, and values. Several European countries have removed Huawei from their networks, imposed investment screening mechanisms, reversed investment authorizations, and avoided investments by PRC-based companies due to the threats to European security. Together, the United States and Europe must continue to call out and work to counter the PRC's predatory and unfair practices.

Eastern Flank

NATO's Eastern Flank—which USEUCOM defines as Estonia, Latvia, Lithuania, Poland, Slovakia, and Hungary—remains a strategic focal point. The closer cooperation of the "Bucharest Nine"—Bulgaria, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania, and Slovakia—has been a welcome outcome of the current crisis. Many have provided both lethal and non-lethal assistance to Ukraine, opened their borders to refugees, closed airspace to Russia, and supported economic sanctions against Russia. We remain encouraged by the positive actions of our Allies along the Eastern Flank, but these countries remain at risk for Russian coercion and aggression.

The Baltic States continue to face a chronic threat from Russia. Russian ground forces from the Western Military District retain a size advantage over regional military and NATO forces on the eastern flank. Furthermore, Russia has substantial air and maritime capabilities in the region. The Baltic States lack the geographic depth of Ukraine—meaning these states cannot trade space for time in the event of a Russian attack. These factors underline the importance of maintaining the capability to get timely indications and warnings, and of posturing combat-credible forces, joint capabilities, and stocks to support the Eastern Flank.

The NATO Alliance is renewing its focus on collective territorial defense. Following Russia's invasion of Ukraine, NATO bolstered its posture on the Eastern Flank by establishing four new Battle Groups in Romania, Bulgaria, Hungary, and Slovakia. NATO also expanded air policing operations and air defense exercises. NATO continues to assess the distribution of forces along the Eastern Flank to identify the appropriate posture for collective defense.

Poland is a critical Ally in deterring and responding to Russian aggression. Poland has annually increased its defense budget and is undertaking a significant modernization program. This Ally is buying Abrams tanks, Patriot air defenses, and F–35s. Poland contributes critical infrastructure and logistics support to the joint force through an Enhanced Defense Cooperation Agreement. Additionally, Poland hosts the United States Army's Fifth Corps forward headquarters. This first-ever permanent basing of United States forces in Poland provides command and control for United States and multi-national tactical units in Europe. Our continued close collaboration with Poland strengthens NATO activities along the entire Eastern Flank.

EUCOM has also built United States capacity in the AOR to support deterrence of Russian aggression. The United States deployed fourth and fifth generation aircraft, a carrier strike group, a Corps and Division headquarters, and two additional Brigade Combat Teams (BCT) to assist in NATO's defense at the outset of this conflict. In addition, we deployed our USEUCOM organic forces to the Eastern Flank, including the 2d Cavalry Regiment, 173d Airborne Infantry BCT, Patriot forces and 12th Combat Aviation Brigade. Collectively, these forces bolstered the Alliance and demonstrated the United States' commitment to collective defense.

Black Sea Region

The countries of the Black Sea Region—which USEUCOM defines as Bulgaria, Moldova, Romania, and Ukraine—have long pushed back against Russian aggression. NATO Allies Romania and Bulgaria invited NATO Battle Groups to their territories, increased defense spending, and invested in military and logistics infrastructure. USEUCOM continues to work with Bulgaria and Romania to increase regional security, including the improvement of maritime domain awareness. Important work remains to strengthen regional security, increase economic prosperity, and reduce vulnerabilities to Russian manipulation. Moldovan President Sandu called for the withdrawal of the 1,500 Russian so-called "peacekeepers" in the Transnistria region who have been present on Moldovan land without consent or a United Nations mandate since 1990. We support peaceful resolution to the Transnistria conflict without Russian interference.

Türkiye

Türkiye's military capability and unique geographic location make it a key member of the NATO Alliance and vital to United States responses to regional events.

We applaud Türkiye's strong support to Ukraine during Russia's invasion and will continue to increase our cooperation with Türkiye bilaterally and within the Alliance. We recognize Türkiye's critical leadership role in hosting United States servicemembers who conduct a wide array of NATO, bilateral, and unilateral missions including missile defense. Türkiye contributes forces to NATO missions in Iraq, Kosovo, Baltic Air Policing, and Standing NATO Maritime Group Two in the Mediterranean Sea. Additionally, Türkiye supports United States Bomber Task Force missions in the Black Sea and Eastern Mediterranean regions with tanker and fighter assets. Our longstanding relationship enabled USEUCOM to respond to Türkiye's devastating earthquakes this year with humanitarian assistance and disaster relief forces. USEUCOM continues to execute valuable security cooperation activities with Turkiye such as Professional Military Education, exercises, and F–16 Fleet Modernization and F–16 Viper acquisition via Foreign Military Sales. These actions will strengthen NATO interoperability and enable U.S. Force projection.

South Caucasus Region

In the South Caucasus Region—which USEUCOM defines as Armenia, Azerbaijan, and Georgia—Putin's military and political failures in Ukraine have spurred states to reassess their relationships with Russia. Moscow has long employed economic levers, pervasive information activities, and "frozen" military conflicts to exert influence over South Caucasus countries. However, we have observed a marked shift in the relationships of Armenia and Azerbaijan with Russia. Both Yerevan and Baku appear to be making progress—albeit uneven—toward a peace settlement in the decades-old Nagorno-Karabakh conflict . Armenia has criticized Moscow's and the Collective Security Treaty Organization's failure to come to their aid against Azerbaijani attacks in September. In Georgia, however, we are concerned about the pace of Euro-Atlantic integration. Moscow continues to use domestic political division between the population at large and powerful oligarchs to its advantage. However, we continue to see the benefit of strong military-to-military relations in Georgia and support the Embassy's efforts to showcase the benefits of transparent governance. As these states take action to pursue independent goals, we will continue to foster positive momentum in this region.

Western Balkans

In the Western Balkans we continue to see Russian malign activities and observe emerging PRC influence among our Allies—Albania, Croatia, Montenegro, North Macedonia, and Slovenia. Our regional partners—Bosnia and Herzegovina, Kosovo, and Serbia—remain most at risk. Russia continues to fan existing ethnic tensions to impede Euro-Atlantic alignment and integration. The PRC has emerged as an alternative for economic and defense cooperation. PRC loans and investment in the Western Balkans focus on large-scale transportation, energy, and information infrastructure, which contribute further to disruption in the region. Despite these vulnerabilities, Balkan nations have joined Western efforts to provide support and assistance to Ukraine. The Western Balkans will require our continued commitment to address these vulnerabilities to Russian and PRC malign influence.

The security environment in Bosnia and Herzegovina remains unstable. Russian influence fuels political and ethnic instability. Ethno-nationalist politics prevent Bosnia and Herzegovina from adopting much-needed political, rule of law, and economic reforms that would advance its Euro-Atlantic integration. Bosnia and Herzegovina's Serb-majority entity, Republika Srpska, seeks to weaken State authorities and prevent further alignment with the EU and NATO while maintaining close ties to Russia. We will continue to work with Bosnia and Herzegovina to counter Russia's malign activities. The United States maintains robust ties with the Armed Forces of Bosnia and Herzegovina, as the country progresses toward NATO-standard capability targets.

In Kosovo, Russia promotes uncertainty and seeks to block Kosovo's path to joining international organizations. Since 2008, Russia, the PRC, and other regional states have not recognized Kosovo's independence. We support the EU-facilitated dialog between Kosovo and Serbia to work toward the normalization of relations and enable enduring peace and stability. NATO's Kosovo Force (KFOR), a peacekeeping effort since 1999 under a United Nations Security Council mandate, retains a small but significant United States contribution that bolsters deterrence on the Southern Flank. KFOR enhances security, which helps set the conditions for a political solution and normalized Serbia-Kosovo relations. USEUCOM continues security cooperation activities that assist the Kosovo Security Force's transition to a limited territorial defense force, which will allow Kosovo to assume responsibility for its own territorial security.

Serbia maintains its strategic goal of joining the EU and trending toward stronger Euro-Atlantic relations. Serbia joined 140 other nations of the United Nations General Assembly in condemning Russia's aggression in Ukraine. Serbia historically seeks to balance between East (Russia and the PRC) and West, so its willingness to condemn Russia's invasion of Ukraine is a positive step. However, Russia continues to foster malign activity and leverage tensions between ethnic Serbs and other groups in Montenegro and Bosnia and Herzegovina. The PRC is expanding its influence into the defense and security sectors through arms sales and exercises. Economic challenges in the region render nations vulnerable to the PRC's predatory lending practices, which put at risk critical strategic infrastructure security for EU and NATO member states. The United States and our Allies have improved bilateral defense ties with Serbia in recent years, and increased cooperation in military exercises, training, and international peacekeeping to combat Russia's influence. Serbia's movement away from Russia toward our European Allies and partners is promising.

The Arctic Region / High North

In the Arctic Region—which USEUCOM defines as the Kingdom of Denmark, Finland, Iceland, Norway, Sweden, Canada and Russia—we use operations, activities, and investments to support the United States National Strategy for the Arctic Region. Collaboration with adjacent combatant commands and our Arctic Allies and partners is critical to Homeland defense and NATO collective defense. USEUCOM coordinates with United States Northern Command on Homeland Defense threats originating in or transiting through the Arctic region. USEUCOM co-chairs the Arctic Security Forces Roundtable with Norway, a forum where the Arctic nations plus the United Kingdom, France, the Netherlands, and Germany discuss Arctic challenges. These meetings enable shared understanding, and demonstrate Arctic nations' resolve to commit capable and credible forces to deter aggression. We also train alongside our Allies in this region to enhance NATO's ability to operate in cold environments. For example, United States marines train in the Arctic and High North with our NATO Allies, and the Army's 11th Airborne Division deployed forces from Alaska over the North Pole to Finland. The accession of Finland and potentially Sweden to NATO would bring added capabilities and experience to the Alliance.

Climate Change

Climate change presents a growing challenge to United States national security interests and defense objectives in the AOR. Climate change affects states with already strained governments, which increases the probability for internal instability and conflict. It exacerbates security risks due to additional stress on populations and infrastructure. Climate hazards can displace people and increase the number of refugees seeking asylum in Europe. We are observing the effects of the warming Arctic, from thawing permafrost to fish migration further north. Europe is already affected by climate change—increased wildfires, reduced agricultural production, and flooding—which could worsen over time. Widespread droughts in Europe last summer elevated cross-border wildfire risks, depleted fresh water supplies, and limited inland river mobility. The changing climate may impact access to training areas vital to readiness due to flooding or erosion. Along with our Allies and partners, we continue to monitor these changes to assess the impacts in the security environment.

USEUCOM collaborates with our interagency partners to enhance Ally and partner resilience to climate change, reduce the requirement for military assets during humanitarian emergencies, and ensure access to critical training areas. In Southwestern Europe, USEUCOM partnered with the U.S. Forest Service to address regional firefighting vulnerabilities, improve regional emergency response, and deliver first responder training. In partnership with the U.S. Army Corps of Engineers Army Geospatial Center, USEUCOM analyzes the climate impacts and resiliency of key routes needed for troop and material mobilization. To ensure long-term access to training areas in Poland, Romania, Albania, Slovenia, and Croatia, USEUCOM is partnering with United States Army Corps of Engineers Construction Engineering Research laboratory (CERL) to analyze climate impacts and environmental management options. These efforts will pay long-term dividends to regional stability and Ally and partner ability to generate credible combat readiness.

Violent Extremist Organizations (VEO)

NATO Heads of State codified terror groups as a threat to the Alliance in the newest NATO Strategic Concept. With decentralized command and control and facilitation networks, VEOs spread from conflict zones into Europe. Isolated refugee and migrant communities increase the possibility for VEO recruitment. VEOs capa-

ble of external operations threaten to attack the United States from Europe. The actions of lone actors inspired by VEO ideology present the primary terrorist threat in Europe. Successful VEO-inspired or organized attacks in Europe complicate NATO integration efforts; these attacks force our Allies and partners to focus on internal security, driving resource competition for domestic security forces instead of NATO collective security force commitments. USEUCOM supports U.S. interagency counter-VEO initiatives and those of our NATO Allies and partners. Through security cooperation events such as key leader engagement and foreign military sales and financing, we help our Allies and partners balance domestic security requirements and meet NATO capability targets.

USEUCOM STRATEGY

USEUCOM deters aggression in the AOR and—should deterrence fail—we remain ready to respond alongside our Allies and partners to prevail in conflict across all domains. Our strategy strengthens the Alliance's interoperability, fortifies Alliances and partnerships, and enhances all-domain combat credibility. We advance NDS priorities by implementing integrated deterrence, campaigning, and building enduring advantages in Europe. As the coordinating authority for the Russia Problem Set, the Commander of USEUCOM advises the Secretary of Defense on force structure, resources, and synchronization of DOD activities to deter Russia and counter its global malign activities. Through collaborative planning, we contribute to NATO's ability to respond in crisis and conflict. Ultimately, USEUCOM's strategy supports national strategic guidance and advances U.S. policy goals.

Enhance All-Domain Combat Credibility

USEUCOM's combat credibility in all domains is the foundation of our deterrence of Russia. In the land domain, improvements in key capabilities, posture, and partnerships improve our ability to deter future Russian aggression. USEUCOM ground forces are serving in NATO Battle Groups on the Eastern Flank, and rotational Brigades have led Operation ATLANTIC RESOLVE since 2014. USEUCOM posture additions include a forward Corps headquarters (HQ), an air defense artillery brigade HQ, an engineer brigade HQ, and a combat sustainment support HQ. These forward headquarters provide command and control of assigned and rotational forces in the USEUCOM AOR, and also serve to integrate Allies' contributions to large scale operations. Additional enablers such as a short-range air defense battalion, United States Army Garrison Poland, and the 405th Army Field Support Battalion Poland provide key defense, force protection, and sustainment capacity. Continued investment in Army Prepositioned Stocks equipment and facilities enables rapid integration of rotational combat units into USEUCOM and NATO operations.

USEUCOM exercises ground forces to demonstrate combat credibility. During Exercise DEFENDER-Europe 21, United States Army Europe and 26 participating nations demonstrated the ability to conduct large-scale operations at the battalion and brigade levels. In Exercise DEFENDER-Europe 24, we will assemble a division-level formation on NATO's eastern flank for the first time since the end of the cold war. USEUCOM's enhanced posture with combat credible forces are essential for theater deterrence and our readiness to respond to crises alongside our Allies and partners.

In the maritime domain, we execute integrated, all-domain naval operations and theater security cooperation alongside our Allies and partners. In response to Russia's invasion of Ukraine, USEUCOM conducted the unprecedented Transfer of Authority of two carrier strike groups from the United States to NATO in support of NATO enhanced Vigilance Activities. In addition to our Forward Deployed Naval Forces, we continue to leverage Carrier Strike Group and Amphibious Ready Group/Marine Expeditionary Units to contribute to the maritime force. The U.S. Sixth Fleet provides maritime command and control capability while the U.S. Second Fleet complements and contributes to reinforce NATO's western flank. With exercises Formidable Shield, Northern Challenge, and BALTOPS, we enhance partner capabilities and further deter Russian aggression. Additionally, we are committed to a robust prepositioning program in coordination with our Allies to build agility and resilience for the combined and joint force. Our operational maritime forces provide an essential capability in strategic competition.

In the air domain, we continue to improve our sensors, fighter aircraft, and ground-based air defense systems. These advanced systems enhance Integrated Air and Missile Defense, support Allies' collective air defense, and increase long-range strike capability. The Aegis Ashore program highlights a key U.S. contribution to NATO's missile defense. With a site in Romania and one under development in Poland, this capability protects the continent from Iranian ballistic missile attack. United States Air Force bombers launched from bases in the United States and Europe integrate with Ally and partner forces in Bomber Task Force missions.

USEUCOM continues to build the first U.S. multi-role 5th Generation F–35 capability in-theater at RAF Lakenheath. Our air component is implementing the U.S. Air Force's Agile Combat Employment concept which, supported by Combined Joint All Domain Command and Control, demonstrate a credible, networked combat force from potential airfields across the continent. Through this model, we enhance posture, complicate adversary decisionmaking, and impose costs. This expansion of European air operations and deployable air bases enhances our forces' survivability. These capability enhancements are critical to our deterrence posture.

In the space domain, maintaining assured access to space capabilities is vital to USEUCOM and NATO operations. USEUCOM coordinates with U.S. Space Command (USSPACECOM) to leverage space capabilities that ensure our ability to execute multi-domain operations and protect Allied space capabilities from malign actors. We host a USSPACECOM Joint Integrated Space Team and coordinate USSPACECOM posture initiatives at five locations in Europe. USEUCOM coordinates space-related activity with our Allies and partners to expand space partnerships within our AOR and integrate space capabilities into joint and combined operations. We reinforce the Secretary of Defense's Tenets of Responsible Behavior in Space and continue work with the U.S. Space Force, Joint Staff, and Office of the Secretary of Defense to establish a space service component to USEUCOM. A networked joint, combined space architecture is critical to all-domain combat credibility for the Alliance.

In the cyber domain, USEUCOM coordinates with Joint Forces Headquarters—Cyber and U.S. Cyber Command (USCYBERCOM) to counter malign cyber activity and enhance Allied and partner capabilities. Recognizing the worldwide cyberspace capabilities of Russia, the PRC, Iran, and North Korea, USEUCOM works to enhance global cyber defenses and impose costs on malicious adversary behavior. USEUCOM identifies cyber options for USCYBERCOM to complement operations, activities and investments, and support response operations. USEUCOM also invests in sharing information on foreign malign and cyber activities with the interagency, Allies, and partners to improve our collective cyber defense. Persistent USCYBERCOM engagement activities, synchronized with USEUCOM operations, enhance warning of adversary actions, enable defense, and build trust with Allies and partners.

Enhance All-Domain Combat Credibility: Functional Areas

As long as nuclear weapons exist, NATO will remain a nuclear Alliance. The nuclear capability of NATO-member Nuclear Weapons States deters aggression, prevents coercion, preserves peace, and instills confidence in the Trans-Atlantic bond. The U.S. continues to make available its strategic nuclear forces to defend NATO, serving as the Alliance's supreme guarantor of security. With key Allies, we maintain the capability to deploy strategic nuclear forces that support Alliance security. In addition to strategic forces, the United States forward deploys nuclear weapons to Europe. These weapons, combined with U.S. and Allied dual-capable aircraft and supporting infrastructure, demonstrate Alliance cohesion and resolve. NATO continues to adapt its nuclear posture to ensure these capabilities remain credible, resilient, and adaptable. USEUCOM supports modernization and recapitalization of our nuclear forces. Sustained congressional funding for these programs demonstrates commitment to our operations and NATO solidarity.

USEUCOM conducts activities in the information environment to promote both deterrence and assurance, contest Russian malign narratives, and build resilience among foreign audiences to counter disinformation. We coordinate with interagency and regional partners to execute targeted messaging activities in NDS-prioritized countries. USEUCOM leverages industry-leading assessment techniques to monitor and analyze malign foreign influence across the AOR, including tracking areas where Russian and PRC narratives converge. The Russia Influence Group, co-led by USEUCOM and the State Department, is a key enabler of our Information Operations and focuses on countering Russian malign influence. Through the Russia Influence Group, we synchronize United States Government efforts to challenge adversary malign narratives and disinformation. Congressional funding enables several efforts for unique cybersecurity and hybrid warfare programs (i.e., electromagnetic warfare, special operations, and operations in the information environment) through the State Department's Countering Russian Influence Fund—Foreign Military Financing. USEUCOM continues to work across Allies and partners to build capability and capacity to gain better understanding and deliver effects in the information environment.

Special Operations Command Europe (SOCEUR) provides a persistent special operations presence throughout Europe that works with European Allies and partners to build capacity; identify, attribute, and counter malign activity; and improve resil-

ience. SOCEUR leads and participates in bilateral and multilateral exercises to improve interoperability with Allies, build partner capacity and resilience, and strengthen deterrence messaging. AOR-wide exercises like TROJAN FOOTPRINT set conditions for better integration between SOF and conventional forces during combined, joint, and multi-domain warfare. Our Special Operations personnel also provide invaluable sensing capabilities in the operational environment, which enhances our ability to deter through indications and warnings. Our SOF delivers exquisite capabilities that provide unique options to counter malign activity and increase our Allies' and partners' resilience.

Our Joint Interagency Counter Trafficking Center supports whole-of-government efforts to combat Russian malign activities by assisting Federal law enforcement activities. USEUCOM leverages a range of interagency-driven efforts—criminal investigations, convictions, seizures, sanctions, and designations through these programs. These actions help vulnerable Allies and partners resist Russia's malign activity, reinforce the rule of law, and strengthen self-governance without Russian influence. We appreciate Congress and the Department for the continued support of the counter-narcotics funding that supports this activity.

Strengthen Alliance Interoperability

NATO's approved strategic framework for Deterrence and Defense of the Euro-Atlantic Area, abbreviated as "DDA", has sparked the largest transformation of the Alliance's military in the post-cold war period. DDA resets the Alliance for Collective Defense after two decades of out-of-area deployments by our Allies. Domain-specific plans are being developed to better organize Alliance forces for multi-domain collective defense against Russia and terror groups. DDA also calls for geographic-specific regional plans to describe how and where the Alliance will defend. These plans together will drive force structure and readiness requirements—the first time in over 30 years that the Alliance will have an objective, plans-based guide for national defense investments.

The Alliance continues to invest in critical military capabilities contributing to collective defense and support. For the past 7 years, Allies have increased their total defense spending, and future projections remain positive. Although munitions stocks have decreased with donations to Ukraine, Allies and partners are increasing interoperable combat power through major acquisitions. These acquisitions include cyber capabilities; M1 Abrams and Patriot missiles in Poland; fourth and fifth-generation aircraft in Belgium, Bulgaria, Germany, Finland, Italy, the Netherlands, Norway, Poland, Slovakia, and Switzerland; Patriot air defense batteries in Switzerland and Sweden; and High Mobility Artillery Rocket System (HIMARS) capability in Romania, Poland, Estonia, Latvia, and Lithuania. Ultimately, these capabilities are the key to combat credibility. Going forward, national governments will face competing priorities, but the importance of the capabilities required for collective defense cannot be overstated.

Military exercises with Allies develop NATO's interoperability and remain essential elements of deterrence. USEUCOM deployed assigned Army forces to the Eastern Flank during exercises Saber Strike, Swift Response, and Defender beginning in February 2022. United States marines trained alongside 26 militaries during Cold Response in Norway to enhance NATO's ability to operate in cold environments in March 2022. USEUCOM deployed naval forces to the Baltics Sea to train on maritime security operations during exercise BALTOPS in June 2022. Additionally, enhancements to multinational information sharing systems enable our coordination with our Allies and partners. These exercises provide a key deterrent effect in our dynamic security environment and demonstrate Alliance combined and joint interoperability.

The proposed increase in funding for the Joint Training, Exercise, and Evaluation Program (JTEEP), both in the near-term and across the Future Years Defense Program (FYDP), are a key enabler of USEUCOM campaigning. USEUCOM's joint exercise program integrates advanced capabilities, demonstrates freedom of maneuver, and increases interoperability with our Allies and partners to showcase the Alliance's strength. Additional JTEEP resources allow USEUCOM more flexibility to campaign, enhance integrated deterrence, and demonstrate United States commitment to Euro-Atlantic security.

USEUCOM participation in NATO operations directed by the North Atlantic Council demonstrates U.S. commitment to the Alliance. The U.S. "dual hatted" the United States Army Europe-Africa Commander as Commander, NATO LANDCOM. This change allows for seamless Transfer of Authority of United States Forces in support of NATO operations. United States ground forces are serving in Battle Groups in Poland, Hungary, Slovakia, Romania, and Bulgaria. United States Air Forces in Europe support NATO Enhanced Air Policing and Icelandic Air Surveil-

lance missions to safeguard the sovereignty of Allied airspace against Russian incursions. A U.S. Navy Rear Admiral has commanded Standing NATO Maritime Group Two, with attached United States naval capabilities, to counter challenges in the Atlantic, Mediterranean, and the Baltic Sea since July 2022. Operation ATLANTIC SENTRY—conducted by U.S. Aegis destroyers based in Rota, Spain and the Aegis Ashore system in Romania—provides the foundation of NATO's ballistic missile defense (BMD) capability. Participating in NATO operations demonstrates USEUCOM leadership and commitment to the Alliance.

Additionally, rotational Army, Marine, and Special Operations Forces (SOF) further demonstrate United States commitment to NATO interoperability. These forces work alongside Allies and partners to deter aggression, counter malign activities, build host nation defense capabilities, and enhance interoperability. In Eastern Europe, three rotational Brigade Combat Teams and a Combat Aviation Brigade lead land force efforts to support Atlantic Resolve. Deliberate deployments of United States Marines to Norway reinforce the Alliance's northern periphery and provides exceptional training opportunities. Force commitments outside USEUCOM assigned forces enhance deterrence and hone the Alliance's warfighting skills.

Fortify Alliances and Partnerships

Europe and the United States remain the foundation for upholding a free and open international order. The shared ideals, values, and longstanding relationships we have in Europe strengthen integrated deterrence and enable worldwide operations in support of shared national interests. USEUCOM's unique geographic location enables global operations, including U.S. interagency and multinational operations. We work within a whole-of-government framework to maintain essential access, basing, and overflight permissions under bilateral agreements and resist Russian and PRC strategic investment. These agreements enable the United States to protect our vital national interests and meet treaty obligations.

Allies and partners bolster U.S. initiatives through national contributions and provide critical host nation support to U.S. Forces operating across the region. Allies and partners contribute forces to ongoing NATO and United States-led coalition missions in order to advance our common interests in Kosovo, Iraq, and Syria. Allies underwrite infrastructure investments and defray costs of United States military construction through the NATO Security Investment Program. The EU, in consultation with NATO, committed to invest 1.69 billion euros over the next 7 years for civilian and military dual-use transportation infrastructure improvements. This infrastructure investment will enhance military mobility, increase individual nations' crisis response, and improve Alliance combat capability. Our Allies and partners continue to be critical in supporting USEUCOM while we defend United States interests in Europe.

U.S. National Guard forces maintain vibrant relationships and unique access with Allies and partners through the State Partnership Program (SPP). USEUCOM now has 25 active programs with the addition of the Cyprus—New Jersey and Norway—Minnesota partnerships. The SPP conducts over 500 engagements a year in USEUCOM's AOR. These engagements cultivate regional expertise, strengthen personal relationships and improve readiness across the AOR. Programs such as the Black Sea Maritime Domain Awareness Initiative and enhancing Baltic Integrated Air and Missile Defense represent potent, regionally focused components of a resilient theater posture developed from SPP relationships.

The accession of Finland and potentially Sweden to NATO would represent the most significant expansion of the Alliance since the 1990's. The United States Senate backed the expansion by an overwhelming 95–1 vote and President Biden signed instruments of ratification endorsing Finland and Sweden's accession. Finland's accession to NATO brings added capabilities and experience to the Alliance, and so would Sweden's. The United States and Sweden have a long history together in training, bilateral and multilateral security cooperation, and operations. USEUCOM recognizes the significant capability this Nation would bring to NATO and we look forward to deeper planning and coordination in the future.

CONCLUSION

United States leadership in Europe remains indispensable, and our commitment to NATO ensures the Alliance continues to serve as the foundation of Transatlantic security. Russia remains a chronic threat to European security despite its losses in Ukraine. Nevertheless, the West is more united than it has been in years. We have demonstrated our commitment to European stability through our collective support to Ukraine in response to Russia's brutal war of aggression. Maintaining an all-domain combat credible United States presence in Europe is the foundation of our de-

terrence of Russia, strengthens Alliance interoperability, and supports NATO's collective defense.

The PRC also challenges Transatlantic security. The PRC aims to supplant the rules-based international order to suit its interests and authoritarian preferences. Such efforts threaten enduring United States, Allied, and partner interests, security, and values in Europe. PRC investment in critical infrastructure, and acquisitions in emerging technology sectors, allows access to our Allies and partners and provides the PRC a military capacity that places United States and Alliance interests in the AOR at risk. USEUCOM, alongside our Allies and partners, will continue to resist the PRC's malign influence and activity to preserve a secure, prosperous, and free Europe.

We appreciate Congress' active engagement and support to address these challenges through funding and authorities. European Deterrence Initiative-associated investments supported the United States response to Russia's invasion of Ukraine. The United States reinforced NATO members' security more quickly than any other Ally because of our forward presence, repositioning of theater forces, and prepositioned stocks. Your continued support for our posture investments in Europe, the Ukraine Security Assistance Initiative, Presidential Drawdown Authority, Foreign Military Sales and Financing, and International Security Cooperation Programs remains critical to USEUCOM's strategy. These authorities and funding enhance U.S. and NATO and strengthen our ability to respond in crisis or conflict. Together with the soldiers, sailors, airmen, marines, guardians, coast guardsmen, civilians, and defense contractors of USEUCOM, your support demonstrates our Nation's continued commitment to defend the Homeland and protect the peace for the one billion people living in the Euro-Atlantic region.

Chairman REED. Thank you very much, General Cavoli. General Van Ovost, your statement, please.

STATEMENT OF GENERAL JACQUELINE D. VAN OVOST, USAF COMMANDER, UNITED STATES TRANSPORTATION COMMAND

General VAN OVOST. Chairman Reed, Ranking Member Wicker, distinguished Members of the Committee, good morning. It is my honor to join you today with my Senior Enlisted Leader, Fleet Master Chief Donald Myrick, to represent the m]en and women of United States Transportation Command as we defend the Nation, take care of our people, and succeed through teamwork.

I am extremely proud of our team of logistics professionals who lead the joint deployment and distribution enterprise, continually exceed expectations, and ensure hope, deterrence, and victory are assured as we contribute to our Nation's defense.

From competition to crisis, the entire enterprise proudly delivers for our Nation, our allies, and our partners. We know our success in the European theater and beyond would not be possible without the steadfast support of this Committee and the whole of Congress.

To maintain the unrivaled strategic advantage, to project and sustain the Joint Force over global distances through natural disasters, pandemics, conflicts, peace and war, while defending our Homeland, we must preserve our logistical dominance.

Our organic fleet, along with our commercial transportation partners, must continue to present credible deterrence and requires proactive efforts to recapitalize and modernize. My highest concerns lie in reductions in capacity and readiness in both sealift and air refueling. We are a generation late in recapitalizing already sealift fleet to meet our national objectives.

The average age of our 44 roll on, roll off ships we use to surge from the Continental United States is 44 years old. In fact, 17 of the 44 ships are 50 years or older. TRANSCOM supports the Navy's strategy to acquire used sealift vessels from the commercial market, and further request to provide Secretary of Defense discre-

tionary authority to purchase foreign built used ships under favorable market conditions without limitation on number.

I greatly appreciate your support for stabilized funding toward our sealift recapitalization effort, and I am heartened by the current progress on the first five ships. We have also taken steps to address the department's shortfall in meeting wartime fuel delivery demands and the vulnerable position of continued reliance on the use of foreign flagged, foreign crude tanker vessels.

We are working with MARAD [Maritime Administration] to implement the tanker security program, which will provide assured access to U.S. flag tankers and begin to reduce risk in sealift tanker capacity. In addition to the tanker security program, we fully support the Maritime Security Program, the Jones Act, and cargo preference that all work together to ensure we have the necessary U.S. flag capability and U.S. mariners during peacetime, and ready to move sensitive defense materials during a national emergency.

In every domain, American workers are critical to the Joint Force transportation and logistics. In particular, maritime stakeholders have been experiencing challenges with recruiting and retaining mariners. We support MARAD and industry efforts to identify strategies that address the Mariners shortage and ensure their readiness.

In the air, the air refueling fleet is the backbone of rapid global mobility and is our most stressed capability. TRANSCOM supports the Air Force's continued efforts toward focused modernization of the fleet, uninterrupted tanker recapitalization, and accelerated pursuit of the next generation air refueling system to ensure our capacity and readiness remains credible to cover simultaneous global requirements.

Future operations will also require high degrees of battlespace awareness and leveraging data to align scarce mobility resources with the greatest strategic needs. Integration into battle networks, resourcing cryptographic modernization, cybersecurity, and ensuring resilient positioning, navigation, and timing are among my top priorities.

Section 702 of the Foreign Intelligence Surveillance Act expires at the end of this year, which provides essential and irreplaceable insights on the activities of critical foreign targets. The loss of this authority, or renewal and diminished or unusable form would profoundly damage the department's ability to see and mitigate some of the most profound threats against the United States and our allies and partners.

Therefore, reauthorization is a matter of utmost priority. Just as we are engaged globally in our flagship transformational effort, the global household goods contract will bring accountability that does not exist in the current program of dispersed vendors. We owe it to our members and their families to ensure that they have the very best relocation experience that we can provide.

I am honored to join General Cavoli today, where we are in lockstep to provide critical aid to enable Ukraine's national defense that in turn delivers success for the United States, our allies, and our Nation. I would like to thank you once again for your leadership and for the support you provide our workforce, and I look forward to your questions.

[The prepared statement of General Jacqueline D. Van Ovost follows:]

PREPARED STATEMENT BY GENERAL JACQUELINE D. VAN OVOST

WHO WE ARE—OUR MISSION

U.S. Transportation Command's (USTRANSCOM) enduring purpose is to project and sustain combat power whenever and wherever our Nation chooses. Within the ever-changing strategic and operational landscape, our logistics and mobility enterprise continue to play an integral role in assuring our Nation's defense as well as provide our national leadership strategic advantage. We must ensure the Joint Force can defend the Nation, take care of our people, and succeed through teamwork. To deter and win, the 2022 National Defense Strategy (NDS) directs the Future Joint Force to be lethal, resilient, sustainable, survivable, agile, and responsive.

As one of eleven combatant commands, our warfighting team is a diverse force, comprised of our component commands, subordinate commands, interagency and commercial partners of the broader Joint Deployment and Distribution Enterprise (JDDE). The entire enterprise works together to move the right capabilities to the right place, at the right time. Our assigned Unified Command Plan responsibilities are executed through three component commands (U.S. Army's Military Surface Deployment and Distribution Command, U.S. Navy's Military Sealift Command, and U.S. Air Force's Air Mobility Command), and two major subordinate commands (Joint Enabling Capabilities Command [JECC], and the Joint Transportation Reserve Unit). Our key mobility mission areas include sealift, strategic seaports, air refueling, airlift, aeromedical evacuation, domestic rail, and motor and barge freight. The JDDE operates as a Total Force, harnessing the unique skills of Active Duty, Reserve, National Guard, Merchant Marine, and civilian teammates who are vital to our ability to bolster warfighting readiness.

The Department of Defense's (DOD) ability to project military forces is inextricably linked to commercial industry. Our industry partners provide critical transportation capacity and global networks to meet day-to-day and wartime requirements. Annually, USTRANSCOM spends approximately eight billion dollars in organic and commercial transportation services to execute DOD mission requirements. USTRANSCOM also partners with other U.S. Government Departments and Agencies, such as the U.S. Department of State, U.S. Department of Transportation (DOT), especially the Maritime Administration (MARAD) as they operate and maintain the government-owned sealift fleet. We also partner with the Federal Highway Administration within the DOT, the Defense Logistics Agency (DLA), the General Services Administration, and other key logistics partners who provide the funding for deployment and distribution operations. These partners also establish the policies which guide our efforts and are also customers of the Defense Transportation System.

USTRANSCOM has assumed the role as the DOD's single manager for Global Bulk Fuel Management and Delivery. This mission represents a different approach to managing bulk fuel within the JDDE, synchronizing a complex system-of-systems to achieve unity of effort. Partnering with DLA's capability and expertise, USTRANSCOM will synchronize posture, planning, execution, and provide advocacy for capabilities and resources to meet the energy needs of the Joint Force in competition and conflict. In accordance with Section 352 of the fiscal year 2022 National Defense Authorization Act (NDAA), USTRANSCOM achieved initial operating capability in February. We expect to achieve full operational capability by the end of fiscal year 2024.

WHERE WE ARE—STRATEGIC ENVIRONMENT

Strategic competition is a reality today, and the JDDE's competitors are maneuvering fluidly between conventional and gray-zone activities. Mobility obstacles are encountered at every step in the deployment and distribution process, from the Homeland to the destination. Over 85 percent of the Joint Force is in the Continental U.S., and our competitors are on a trajectory that will present persistent threats across multiple domains simultaneously. Since 2018, we have acknowledged that the Homeland is not a sanctuary. Our adversaries conduct espionage and malign influence campaigns, leverage public investment and state-owned enterprise activities, and utilize cyber and space-based capabilities to gain access to, obtain placement within, and to target U.S. national security interests—including the JDDE and associated dependencies. Adversarial diplomatic, information, commercial, and economic threats are now also complemented with their increased long-range ki-

netic-denial capabilities. If these threats are not mitigated, our power projection capabilities will be put at further risk and the mobility enterprise will be forced to "fight to get to the fight."

The President's National Security Strategy (NSS) makes clear that the People's Republic of China (PRC) and Russia are working aggressively to undermine democracy and export a model of governance marked by repression at home and coercion abroad. In their own ways, both seek to erode the legitimacy of established international norms and laws that have persisted for almost a century. Geopolitically, the PRC remains our most consequential pacing challenge; followed closely by Russia, an acute threat. Other persistent threats including North Korea, Iran, and violent extremist organizations are developing or acquiring new capabilities and pursuing strategies that could challenge our ability to deploy and sustain the Joint Force.

Furthermore, strategic competitors such as the PRC continue to leverage their economic position to diminish United States influence and present increased risk to access, basing, and overflight (ABO) across the globe. Regional instability in places such as Africa, the Middle East, and Latin America, as well as transborder issues like natural disasters and pandemics, will continue to challenge the Joint Force and drive requirements for USTRANSCOM support. The JDDE is accustomed to sustaining forward-deployed forces across largely uncontested environments.Logistics realities are changing and the JDDE cannot presume it will enjoy similar freedom of maneuver and execute operations with full access to our lines of communication on the ground, in the air, at sea, and in space. Our ability to project, maneuver, connect, and sustain are critical capabilities for the Joint Force. The supporting infrastructure must be protected and strengthened to achieve our National Security goals.

The JDDE must accelerate the momentum it has generated to meet these challenges. We cannot rest on past successes, nor cede an advantage to our competitors. Our Nation's strategic network of Allies and partners provides capacity, logistical capabilities, intelligence, and ABO agreements that empower the U.S. to successfully compete against global challenges. The command's ABO permissions are the lifeblood of global mobility and must be nurtured. Access, basing, and overflight is not guaranteed, can change anytime, and can even be denied for humanitarian assistance. Assured access to and through foreign nations is accomplished through sustained engagement and agreements with our Allies and partners.

This network of Allies and partners enables assured force projection and freedom of maneuver, reducing the challenges associated with maintaining operational reach over extended distances. The JDDE relies on the diverse and expansive capacity of global infrastructure, both government-owned and commercially owned and operated, to deliver an immediate force tonight and a decisive force when needed. We must also be cognizant of impacts that transnational issues, such as climate change, have on our readiness. We will make our supporting systems more resilient and agile in the face of transnational threats to preserve operational capability and protect key systems. The collective influence of our enterprise and Nation to shape the strategic environment can provide competitive advantage, senior leadership decision space, and complicate the decision matrix of any potential adversary.

WHERE WE ARE GOING

For decades, most transportation and logistics activities were conducted in uncontested environments; clearly the strategic environment has changed. We must grow our capabilities to ensure that logistics never becomes the weak link. We will set the conditions for a strategic environment where the JDDE can project and sustain the Joint Force, at a time and place of the Nation's choosing, under persistent, all domain attack. While our competitors are not invincible, the threats are real and the imperative to change is urgent. This decisive decade demonstrates the importance of the NDS's priorities of defending the U.S. Homeland; deterring strategic attacks against the U.S., Allies, and partners; deterring aggression and being prepared to prevail and building a resilient Joint Force and defense ecosystem. USTRANSCOM's capabilities will be the engine that propels the NDS by underwriting the lethality of the Joint Force ensuring the viability of deterrence operations and providing our national leadership with strategic flexibility. The command will enable our national priorities through the NDS's strategic ways of *Integrated Deterrence, Campaigning, and Building Enduring Advantages.*

By nesting our strategic priorities and campaign objectives within the NDS framework, USTRANSCOM is focused on ensuring the JDDE is ready and effectively postured to accomplish its mission when called upon. Integrated deterrence is predicated on making the adversary doubt they can achieve their objective. This relies

on USTRANSCOM's readiness to fight, deliver, and win through our global mobility posture. USTRANSCOM force posture will focus on the access and warfighting requirements that enable our Nation's efforts to deter potential PRC and Russian aggression. Strengthening relationships with Allies, partners, and commercial industry will expand ABO options, thus creating positional advantage across all domains. When used in concert, posture and capacity provide a true asymmetric and strategic advantage for the Nation.

Our *active campaigning* includes the Globally Integrated Exercise, Pacific Sentry, Air Mobility Command's Exercise Mobility Guardian 2023, and other joint exercises that put a premium on closing operational gaps to strengthen deterrence and develop new concepts to prevail. Our efforts to recapitalize mobility fleets, modernize systems, and employ new operational concepts will enhance enterprise capabilities that we can deploy rapidly in time and space. Large-scale exercises, fleet readiness activations, and focused wargames will enhance interoperability and trust across the Joint Force, with Allies, partners, and the commercial industry. For example, in preparation for standing up the Tanker Security Program (TSP), Military Sealift Command initiated a wargame series with MARAD, labor, and other industry stakeholders to better understand their capabilities and ability to expand and meet the bulk fuel demand at time of need.

Building enduring advantages begins by addressing critical vulnerabilities. Investing in and hardening a resilient defense ecosystem will strengthen our commercial and military transportation networks across multiple domains, especially space and cyber. We expect disruption in our operations and are focused on cyber mission assurance and digital modernization to ensure our ability to conduct globally integrated command and control and to generate decision advantage. With significant volumes of data and advanced analytics, we expect to posture efficiently, recover quickly, and accelerate the application of our capacity.

Finally, our people will make the difference between victory and defeat. We continue to develop our warfighting team with a competitive mindset and acknowledge the challenges present today. By embracing the imperative to be ready now and in the future, our people understand the mission and are continually adapting to maintain our Nation's competitive advantage in power projection.

HOW WE WILL GET THERE—WARFIGHTING FRAMEWORK

USTRANSCOM is focused on shaping and directing the capabilities and concepts necessary to operate in the future contested environment, which includes multimodal solutions for transloading cargo, fuel, and personnel, including patients, between commercial and military capacity and delivering the last 1,000 tactical miles in a contested environment. Our analysis goes beyond the mobility platforms and integrates key warfighting functions, current wartime demands, and future concepts entailing maneuver and distributed operations. We have advanced significantly in our analytic framework to better conduct globally integrated mobility operations and the synchronization of our Global Mobility Posture, Global Mobility Capacity, and Global Command, Control, and Integration. These critical elements create USTRANSCOM's warfighting framework through which we carry out our missions.

Global Mobility Posture

Global Mobility Posture is the foundation of our ability to project power. It starts here at home, with installations and infrastructure, such as ports, highways, railways, and pipelines to mobilize and deploy forces. The ability to leverage a global distributed and scalable logistics network is highly dependent on our deep bench of diplomatically aligned Allies and partners. Their support, garnered through diplomacy and combatant commander relationship building, secures the critical ABO that enable our freedom of maneuver. This requires a whole-of-government approach, including commercial industry efforts, to solidify and amplify our established nodes and routes. These dense layers of contacts and contracts—military and commercial—are critical to our ability to set the globe. They also enable regional agreements that expand the availability of critical resources in remote locations, especially fuel. The command has already initiated a campaign to close gaps in the Joint Petroleum Enterprise and implement storage and distribution improvements in priority theaters.

We must expand and strengthen our global transportation networks to facilitate our ability to aggregate force packages to fight during periods of domain superiority, and then disaggregate to survive. We will continue to expand access and protect our lines of communication through the collaborative pursuit of technologies to improve the agility and flexibility of the JDDE, while also advocating for key infrastructure investments. USTRANSCOM supports the Services' efforts to invest and improve the Nation's overseas airbase and seaport defense as well as protection measures

for our lines of communication. While we don't own protection forces, we advocate in conjunction with other Combatant Commands and Services to ensure our equities are not at unacceptable risk, thereby ensuring the success of our operations.

To successfully execute our deployment mission, USTRANSCOM also relies on a collection of both DOD and commercially owned U.S. Strategic Seaports. The primary mission of the Strategic Seaport Program is to ensure DOD has access to sufficient seaport infrastructure to meet the Nation's objectives. Military Ocean Terminal Concord (MOTCO), on the West Coast, is the sole strategic ammunition seaport that serves the Indo-Pacific area of operation. The Department has made appropriate and significant investments in MOTCO to replace failing infrastructure and is endeavoring to acquire and install two ship-to-shore cranes to preserve the ability to meet ammunition demands. At Military Ocean Terminal Sunny Point (MOTSU) on the East Coast, major enabling infrastructure components including the operational wharfs are ammunition throughput requirements. We continue to work with the Department of the Army to preserve and modernize both seaports by securing and applying resources to reduce risk and prevent capability gaps.

USTRANSCOM assesses that our Nation's infrastructure is currently capable of supporting military transportation requirements, but we must continue necessary investment to keep it that way. The recently passed Infrastructure Investment and Jobs Act presents opportunities to reinforce and modernize strategic components of our national transportation system and increase resiliency. Through the established Highways, Railroads and Ports for National Defense Programs, USTRANSCOM will continue to proactively engage both civil and private sector partners to address identified concerns and challenges.

Global Mobility Capacity

Global Mobility Capacity includes sealift, air refueling, airlift, aeromedical evacuation, rail, motor transport, bulk fuel, and the ability to fully mobilize the Total Force at the time and point of need. When necessary, we can rapidly increase capacity through our emergency preparedness programs, which include the Civil Reserve Air Fleet (CRAF), Voluntary Intermodal Sealift Agreement (VISA), and Voluntary Tanker Agreement (VTA). All our available capacity, including emergency preparedness programs, must continue to represent a credible option for delivering fuel, munitions, personnel, evacuating patients, and materiel—regardless of the environment. The JDDE relies on an integrated and balanced approach between government-owned and commercial capacity at a tempo necessary to achieve national end states, and in tight coordination with interagency partners, the Joint Staff, Services, other combatant commands, and our commercial partners.

Global Command, Control, and Integration

Our third warfighting element, Global Command, Control, and Integration is of high concern because the exercise of authority and direction to plan, coordinate, synchronize, and control operations at echelon is critical to our success. We need platforms that are securely connected and have an appropriate level of battlespace awareness to align scarce mobility resources with the highest strategic needs. Cyber mission assurance and digital modernization will enable our ability to conduct globally integrated command and control and generate decision advantage for leadership. To do so, we must begin by treating data as a strategic asset which is why we are committed to becoming a data-driven organization with the capabilities, tools, and culture to gather and analyze data to inform better business and operational decisions.

Our military and commercial platforms will require integration into the battle networks, resourced cryptographic modernization, and a resilient Positioning, Navigation, and Timing ecosystem. We must be linked into the distributed command and control constructs and resources to identify and mitigate any adversary's malicious cyber activity against our networks and systems. Last year, we completed implementation of Zero Trust capabilities on our classified network, a cyber security framework that embeds security throughout the architecture to prevent malicious actors from accessing our most critical assets. We reached baseline maturity level, and we will continue to advance this initiative—especially in the unclassified environment.

USTRANSCOM also partners with commercial transportation service providers to share threat information and best practices to ensure mission success. We work closely with the commercial transportation service providers to enforce cyber security standards in our contracts. Those cybersecurity standards are in place to safeguard defense information and call for annual assessments of their networks. We collaborate with interagency partners on information sharing and initiatives to en-

sure shared understanding of emerging threats and improve voluntary avenues to harden commercial networks.

USTRANSCOM has embraced the 3-year DOD Artificial Intelligence and Data Accelerator Initiative to help improve the command's data posture and set the foundation for future advanced analytic opportunities. Building on lessons from Afghanistan and Ukraine, USTRANSCOM established a community space within Advana, dubbed Pegasus, to provide a data repository and analytic tools to modernize our analysis capabilities. This is the first crucial step in our utilization of advanced visualization, analytics, and machine learning capabilities to create decision advantage.

YEAR IN REVIEW

In the last year, we once again demonstrated the positive impact a dedicated logistics combatant command can have on global operations. USTRANSCOM's logistical prowess remains on full display as we balance the rigors of our global mission, while ensuring Ukraine receives the aid necessary to defend their nation. In fiscal year 2022, USTRANSCOM delivered over 299,000 passengers and over 236,000 short tons (STONs) by airlift and over 11.6 million square feet of cargo by sealift.

USTRANSCOM began delivering security assistance cargo for Ukraine in January 2022 and continues to deliver hope and aid to the Ukrainian people on an expedited basis. Since then, the command has delivered more than 377 million pounds (a/o 17 Mar 23) of security assistance equipment to Ukraine that is enabling critical success on the battlefield against the Russian force that invaded on February 24th of last year. Even while USTRANSCOM moved troops and security assistance to Europe, it continued to support operations and exercises around the globe.

The command supported Operation FLY FORMULA and moved 76 STONs (47 pallet position equivalents) of specialty infant formula from Europe to the United States during a severe shortage in May 2022.

The command also supported USINDOPACOM's Exercises Iron Storm and Keen Sword by airlifting 1,052 servicemembers and 841 STONs of cargo. These large-scale events are a series of joint and bilateral field training exercises designed to increase combat readiness and interoperability between U.S. and Allied nations. USTRANSCOM also delivered 1,484 servicemembers and 93 STONs of cargo in support of Exercise Native Fury, a bilateral training exercise held with USCENTCOM and Saudi Armed Forces. The exercise enabled increased strategic access within the Trans-Arabian Transportation Network and refined our command-and-control processes.

To enable an agile and effective planning process, USTRANSCOM deployed 278 communicators and planners from the Joint Enabling Capabilities Command in support of each combatant command, NATO, the Joint Staff, and numerous military and government organizations. These personnel deployed in support of defense support of civil authorities five times including support to COVID–19 response and Hurricanes Ida and Ian. Additionally, they answered the call 25 times in support of crises around the globe, including support to our USEUCOM partners in response to Russia's full-scale invasion of Ukraine.

Throughout fiscal year 2022, USTRANSCOM conducted extensive global operations, delivering over 99.2 million gallons of fuel during air refueling missions, which resupplied over 56,000 receiver aircraft on over 26,000 missions (33,641 sorties). Furthermore, USTRANSCOM supported 40 bomber task force missions, reassuring our partners across all six theaters, and reminding adversaries how quickly we can project combat power. These missions in the Indo-Pacific displayed combat credibility and furthered multi-lateral integration, ABO efforts, and deterrence. USTRANSCOM also supported multiple fighter aircraft movements and intelligence, surveillance, reconnaissance support missions for USINDOPACOM, USEUCOM, and USCENTCOM solidifying our global campaign plan and signaling support to our Allies.

USTRANSCOM also created a fuel bridge and delivered 120,000 gallons of diesel fuel to sustain the United States Embassy and USAID operations in Haiti in response to the health and security crises on the island. Globally, USTRANSCOM safely conducted 5,381 patient movements.

RECAPITALIZATION AND MODERNIZATION EFFORTS

Proactive mobility recapitalization efforts are crucial for us to effectively operate in a future contested logistics environment. USTRANSCOM's assessment of mobility sufficiency under the NDS found our current mobility capacity sufficient, but at increased levels of risk due to our adversaries' focused and persistent efforts. Risk is further heightened by an erosion of readiness and capacity in key mobility areas.

Sealift

Sealift is vital to delivering the decisive force. In wartime, 90 percent of military cargo will be transported via sealift. The average age of the 44 Roll-on/Roll-off (RO/RO) ships we use to surge from the Continental U.S. is 44 years old. In fact, 17 of the 44 ships are 50 years or older. Therefore, USTRANSCOM supports the Navy's strategy to recapitalize the government-owned fleet by acquiring foreign-built used sealift ships from the commercial market and further requests to provide the Secretary of Defense discretionary authority to purchase foreign built ships to expeditiously replace the aging ships under more favorable market conditions. This includes removing the overall limit on the number of used sealift vessels DOD can procure, sealift fleet to meet our national objectives.

Working with MARAD, we have purchased two used RO/RO vessels and are in the process of purchasing three used roll-on/container ships with over one million useful square feet capacity. However, the process must be accelerated if we are to keep pace with the retirement schedule. To maintain sealift capacity and preserve sealift readiness, we are advocating to accelerate used vessel purchases and to reconsider the current retirement plan to retain a number of viable ships. Furthermore, we have taken steps to address the Department's shortfall in meeting wartime fuel delivery demands, and the vulnerable position of continued reliance on the use of foreign flag tankers. We are working jointly with MARAD to implement the Tanker Security Program (TSP). These efforts will provide assured access to U.S. flag tankers and begin to reduce risk in sealift tanker capacity. With the assured access provided by the 60-ship U.S. flag sealift vessel Maritime Security Program, and increased funding to preserve the operational readiness of the United States Government-owned ships in the Ready Reserve Force, we will bolster our ability to conduct operations at sea and meet DOD requirements with the most useful capacity while maintaining a U.S. flag presence in international trade. This capacity and global reach through integrated networks provided by our industry partners is critical when we consider a theater such as USINDOPACOM.

The health of Merchant Mariner Readiness requires continued assessment to ensure an adequately trained supply to crew our surge fleet while minimizing impacts to commercial industry. The supply of contract mariners is sufficient to meet the initial sealift surge when government Reserve ships are activated but will be challenged with the ability to sustain crewing requirements over an extended period. The post-COVID recovery has highlighted significant workforce concerns to maritime stakeholders to include recruiting and retention.

We are encouraged by MARAD's efforts to collaboratively identify issues, potential solutions, and support a whole-of-government approach to address this national security matter. We will employ Navy Reserve tactical advisors on commercial vessels and expand our consolidated cargo capability. This will include providing regular training opportunities to expand mariner proficiency in consolidated cargo operations and utilize multi-modal solutions to deliver across dispersed locations in compressed timelines.

Air Refueling

The air refueling fleet is the backbone of rapid global mobility and the foundational component enabling the Nation's asymmetric advantage in global force projection. USTRANSCOM supports Air Force efforts to continue air refueling recapitalization and funding over the long term to replace aging aircraft and sustain fleet capacity while pursuing modernization. The September 2022 declaration of worldwide employability for the KC–46 aircraft placed us a step closer to being fully mission capable. Building depth of trained operators and maintainers to sustain sufficient daily and wartime capacity as units undergo conversion is critical as recapitalization continues.

Credible air refueling capacity must simultaneously cover multiple high-priority global demands, which causes daily and wartime concerns within the air refueling fleet. USTRANSCOM's recent assessment of mobility sufficiency under the NDS indicates an inventory of 466 total aircraft as sufficient, but at elevated risk. When the last KC–46 on contract is accepted into the Air Force, the average age of the remaining KC–135s will be 67 years old, emphasizing the need for continued recapitalization and investment in the Next Generation Airdemand continues to emphasize the utility of comparably higher quantities of platforms to ensure sufficient quantities of booms and drogues are in the air at any given time to meet the significant number of simultaneous requirements. It is critical that the Air Force continues a full recapitalization program and invest in the NGAS to maintain credible capacity and provide the persistent connectivity, improved survivability, and increased agility necessary to operate in future contested environments.

Strategic Airlift

The strategic airlift fleet remains vital to rapid global mobility, which the Joint Force relies on extensively to meet both daily competition and wartime demands. The three most recent DOD-level mobility studies have each validated our current capacity achieves strategic airlift requirements (30.5 million-ton-miles per day). Our ongoing efforts using a mix of organic and commercial capabilities to airlift time-sensitive aid to Ukraine, in largely uncontested environments, and the USEUCOM effort in support of our NATO allies illustrates this capability. The requirements to move outsized and oversized cargo early in future high-end conflicts underscores the demands for a sizable and healthy organic strategic airlift fleet to fulfill the requirements that the CRAF cannot. The C–5M aircraft is essential to these efforts and requires increased resourcing to achieve required readiness levels. The Joint Force's continued high demands for strategic airlift requires capable and ready fleets to ensure the U.S. maintains its asymmetric advantage in this critical area.

Intra-Theater Airlift

C–130 aircraft provide airlift support necessary to operate within any theater to support a sizable, deployed force engaged in combat operations. This includes transload movement from commercial aircraft, and time-sensitive movement of forces, supplies, and battlefield aeromedical evacuation—all of which emphasize the need for tactical airlift capability. The USAF planned retirement of C–130H aircraft has reduced inventory from 300 total aircraft to 279 total aircraft in fiscal year 2022. The Fiscal Year 2023 NDAA allows for the divestment of eight C–130 aircraft in fiscal year 2023 to decrease the total aircraft inventory to 271 and then maintain a fleet of 271 total aircraft across the Future Years Defense Program, which USTRANSCOM supports at an elevated, but acceptable risk. Future Joint and Service operating concepts entail the maneuvering of forces across broad distances via airlift and sustaining of forces across broadly distributed operating locations, which elevates demands for theater lift.

Patient Movement

The importance of our Patient Movement enterprise cannot be overstated. The casualty evacuation requirements in current planning scenarios demonstrate the same number of patients evacuated in all of 2022 will likely require evacuation every week during a future near-peer conflict. USTRANSCOM will continue to align the Patient Movement enterprise within the command's warfighting framework to support command authorities, scale forces, develop innovative capabilities, and posture scarce aeromedical evacuation mobility resources globally to conduct patient movement in support of the highest strategic priorities. The future of patient movement depends on in-theater treatment capacity, expanding access to Allies' and partners' regional hospitals, improved surface and air options, innovative training to meet future casualty stream requirements, and development of effective and efficient multi-modal patient movement platforms.

Defense Personal Property Program (DP3)

Our Defense Personal Property Program (DP3) team is moving forward on transforming how DOD provides moving services to customers. Servicemembers, DOD civilians and their families are our most critical asset, and we continually seek to improve our DP3 processes through all venues possible. There are multiple initiatives in work to transform and improve the Department's relocation program with the Global Household Goods Contract (GHC) being our flagship DP3 reform effort. With the November 2022 Court of Federal Claims' (COFC) decision to uphold the contract award to HomeSafe Alliance, our work on the GHC transition has officially resumed in full force. GHC will bring the biggest reform to how we move our servicemembers and families in the history of the program.

Our coordination with HomeSafe Alliance, the Services, and the DOD professionals who provide counseling to our servicemembers and families is underway and we are gaining momentum. The GHC is expected to deliver quality, on-time packing, shipping, and delivery of customers' household goods through improved centralized management of the DOD's approximately 310,000 annual household goods shipments. It fundamentally restructures our relationship with the household goods moving industry to deliver the quality servicemembers and their families deserve with the accountability Congress demands. We are currently working to refine a measured, conditions-based phase-in of domestic shipments after the 2023 peak moving season beginning in September. International household goods and accompanied baggage shipments transitions will follow and move under GHC in 2024. We owe it to our customers to ensure they have the best relocation experience the enterprise can provide, and that remains our focus.

CONCLUSION

To remain successful, USTRANSCOM must be ready to project power today and tomorrow, and we will only achieve this together. Recent successes in Operation ALLIES REFUGE and delivery of substantial aid to Ukraine have validated our reputation and generated momentum. While we have achieved success over our 35-year history as a combatant command, we know we must continue to innovate and accelerate the changes necessary to remain ready now and into the future. We cannot rest on our laurels—the risks are too great. Our competitors are watching our every move and quickly digesting lessons learned to improve their own power projection capabilities while also enhancing their ability to disrupt, degrade, or deny our capabilities. Contested logistics highlights that our actions to deliberately recapitalize organic mobility capabilities, and to modernize the JDDE, must continue for the DOD to maintain asymmetric advantages and deliver on our national security requirements.

Our command has always met challenges with innovation, determination, and professionalism to deliver success. Time after time, when our Nation called, we delivered. To deliver in the future requires focused attention today. Powered by dedicated men and women, USTRANSCOM underwrites the lethality of the Joint Force, advances American interests around the globe, and provides our Nation's leaders with strategic flexibility to select from multiple options, while creating multiple dilemmas for our adversaries. I thank Congress for your continued support to the men, women, and mission of USTRANSCOM. We remain dedicated to fight, deliver, and win!

Together, We Deliver!

Chairman REED. Thank you very much, General Van Ovost. Senator Wicker has suggested that we proceed with questioning, and when he is called upon, he will have opportunity to submit his statement and also ask his questions.

So let me begin. Both General Van Ovost and General Cavoli have absolutely critical positions. In fact, General Cavoli, the Ukrainian situation is the most pressing military situation in the world at the moment.

Unfortunately, here in the Senate, we have reached an impasse in terms of the promotion of noncontroversial General officers on a routine basis, usually by unanimous consent. Could you indicate what effects this will have on your operational capacity, but also on the morale and personal dynamics of families?

General CAVOLI. Thanks, Mr. Chairman. Yes, in an operational sense, if I have officers who are scheduled to retire, General officers who are scheduled to retire and do so, but I don't have somebody to replace them, I will suffer a gap in that. Some of those are in fairly critical positions right now.

For example, the Chairman's military representative to the Military Committee, General John Diedrich, is scheduled to retire this summer. His replacement hasn't been confirmed so we would have a gap in the Chairman's representation at that rank at the Military Committee and NATO, which in my U.S. role is a vital connection between me and the Chairman to influence activities in NATO, and in my role as SACE, of course, it is very useful to have a line to the U.S. military representative. So that is one example, sir.

Chairman REED. Well, thank you. General Ovost, your perceptions?

General VAN OVOST. Thank you, Chairman. Besides any operational impacts from not being able to rotate General officers into positions of significant responsibility, the United States Transportation Command is responsible for moving 311,000 families every year around the globe.

It is important to continue these movements so that the children can be enrolled in schools, they can find adequate housing, and ensure that they are ready to succeed in their new responsibilities.

So, these delays add additional stress to our military families who already sacrifice enough.

Chairman REED. Thank you very much, General Van Ovost. General Cavoli, there has been some discussion about the relative contributions of NATO countries and other countries to this fight.

If we look simply at the dimension of military equipment, military supplies, that is one measure. But overall, in terms of accepting refugees, in terms of supporting those refugees, the Kiel Institute has analyzed that total input and indicates that the U.S. would rank 12th in terms of the amount of GDP [gross domestic product], the 11 preceding countries are European countries.

It raises the question of how important these contributions are to the battlefield, even though they don't represent military equipment or military advice.

General CAVOLI. Mr. Chairman, thanks for the opportunity to comment on this topic. So, first of all, the United States can and should be extremely proud of the quantity of aid that we have given and the leadership role we have taken. I think that is absolutely imperative to note up front.

In gross numbers, I think it is very fair by whichever mode of calculation we arrive at a gross number, that the U.S. clearly is the leader. In terms of proportion, though, you are right. I mean, more than half a dozen allies have given greater—a greater share their GDP in military aid to the Ukrainians.

I can't speak to all the other types of aid, but maybe I can give a couple of illustrations. Five hundred fourteen tanks have been given by the West to the Ukrainians in the past few months. None of them have come from the United States yet. Our Abrams won't get there until later in the year. Sixteen mid-level or high-level air defense systems have been given.

Two of those were given by the United States. So, there are some genuine donations. More than a third of our allies have given over half of their capacity in a given category to the Ukrainians. I would be reluctant to be really precise in public, but I would be delighted to be precise in closed session later today, if you would like, sir.

Finally, in nonmilitary ways, there is a lot going on. Our allies have treated or are treating about 2,400 wounded, grievously wounded Ukrainians in their hospitals, largely in their national defense systems—national health systems. We have treated four at Landstuhl—so there are some genuine contributions being made, sir.

Chairman REED. Well, thank you very much, General. Let me recognize Senator Wicker. Thank you very much, both.

Senator WICKER. Thank you, Mr. Chairman, and I do ask unanimous consent that my opening statement be included after yours in the record.

Chairman REED. Without objection.

Senator WICKER. I thank the Chairman for bringing up the point about burden sharing. I think it is helpful to reemphasize the 5 million Ukrainian refugees that are being cared for by Europeans

at some considerable cost, 1.5 million in Poland, 920,000 in Germany, 177,000 in the Baltic states, 500,000 in the Czech Republic.

I am glad to see the Chairman bring that up in his first round of questioning. I think one thing that could really harm public opinion here in the United States would be if we found that there was some corruption and siphoning off of money or weapons sold or donated by the United States.

I had a chance to ask you about that earlier. But would you give us your take and any assurance that you could give us that our friends who are actually carrying the fight in Ukraine are mindful of this possibility and how serious it would be if it were to occur?

General CAVOLI. Thank you, Senator. Of course. First of all, just with the general statement, my colleagues, my interlocutors in Ukraine assure me that they understand how important this issue is to the American people, and I believe it is sincerely so.

But as usual, military people put into action systems to try to verify things, so, we are doing enhanced end-use monitoring. If you would permit me, I would like to describe that for you for a second.

Senator WICKER. Please do, yes.

General CAVOLI. The first thing we do is, whenever we receive U.S. equipment that is going to go into the country, it comes through one of a couple of ports of entry. The main one is in Southeastern Poland, and a number of the Members have visited there.

At that location, we inventory everything by serial number so that we know exactly what is going into the country. A couple of months ago, about 6 months ago, we gave the Ukrainian military a NATO standard logistics tracking software system called LOGFAS [Logistics Functional Area Services]. It is what we use to track our own system.

So, we ingest all of that inventory into LOGFAS, and then the Ukrainians use that to track and to distribute their equipment around the country, and we have access to that in real time. That helps us to a certain degree. But then, of course, once you get inside the country, we have a responsibility to go lay eyes on things and check them.

That enhanced end use monitoring is done by the defense attaché office in Kyiv, led by Brigadier General Garrick Harmon. They go out to sites and they inspect. They went to Odessa yesterday to inspect and to inventory, and they will go to another location next week as well.

When they can't get to a location, they have barcodes placed on things and Ukrainians self-report by clicking on the barcode, and then we ingest that information into LOGFAS so we can track it as well.

Senator WICKER. Perhaps you could supplement that answer on the record, but you have confidence that there are safeguards for our weapons and donations.

General CAVOLI. Yes, I do, Senator.

Senator WICKER. General Van Ovost, we are not where we need to be at all in the Pacific, if conflict breaks out there, are we?

General VAN OVOST. Senator, we are not yet fully set in posture in the Indo-Pacific, I would agree.

Senator WICKER. You mentioned on page 15 of your testimony, in particular the importance of the tanker security program. In

your verbal testimony, you mentioned the importance of the Jones Act.

Now, we are aware that in some circumstances the consumers pay more because of the Jones Act. But in a previous conversation with you, you were, I believe, very compelling in explaining why the Jones Act is so important to our national security in case conflict breaks out. If I might, Mr. Chairman, let General Van Ovost expand on that.

General VAN OVOST. Certainly, Senator. Thank you. The United States, we only have 85 U.S. flagged, U.S. crewed ships in international trade right now. We have less than 2 percent of the foreign trade that passes using U.S. flagged U.S. crewed ships.

In other words, 98 percent foreign flagged. Is not enough for our national security. We have actually already reserve force because there is not enough U.S. flagged U.S. crewed shipping.

It is very important that we have maritime security program, tanker security program, cargo preference laws, and the Jones Act to ensure that we keep U.S. flagged U.S. crewed vessels available for our national security needs.

Senator WICKER. What if we didn't have those?

General VAN OVOST. Senator, if we didn't have those, we perhaps would have to grow our organic fleet of sealift ships requiring 100 percent of the burden being on the U.S. military.

Senator WICKER. Thank you very much. Appreciate that.

Chairman REED. Thank you, Mr. Chairman—Ranking Member. Senator Fischer, please.

Senator FISCHER. Shaheen.

Chairman REED. Shaheen, I am——

Senator SHAHEEN. You know, I know we all look alike, but——

[Laughter.]

Chairman REED. No, Roger does not look at all like——

Senator WICKER. Like a chairman perhaps——

[Laughter.]

Chairman REED. No, it is just—I apologize. It is early, and my coffee has not yet taken hold. Forgive me. Senator Shaheen of New Hampshire.

Senator SHAHEEN. Thank you, Mr. Chairman, and thank you, General Cavoli and General Van Ovost for being here this morning and for your service. General Van Ovost, I would like to begin with you because in your opening statement, you talked about the stressed capacity of our air refueling and the importance of that.

I know you have been to—we have been delighted to host you at the former Pease Air Force base where Pease Air National Guard 157th Air Refueling Wing has KC–46 tankers to do refueling.

But can you talk about, when you talked about the stress capacity, how important the KC–46 is, and what else we need to do in order to address our needs?

General VAN OVOST. Senator, thank you. As I mentioned, our ability to project and sustain the force, the foundation of that is our air refueling capability.

It makes us a global superpower. So, it is really critical that we continue to recapitalize the KC–135s and KC–10's with KC–46. I appreciate this Committee's support in continuing that recap and thinking about the next generation air refueling.

As far as the KC–46, it brings new capabilities to the fight, capabilities we have not had previously. That aircraft is what I call connected to the battlespace. It can see battlespace maneuvers and it can assist the Joint Force in ways that we haven't even fully explored yet.

So, it is a force multiplier. It can do probe and drogue as well as boom refueling, and it can receive and it can take on gas in flight. It is a multi-capable airplane and we intend to use it that way to augment the Joint Force.

Senator SHAHEEN. Thank you. You also talked about the importance of section 702 in terms of intelligence gathering. Senator Budd and I were with a number of other Senators in Latin America a couple of weeks ago, and at every stop we heard about the importance of reauthorizing 702.

Can you and General Cavoli both speak to what that allows us to do when we don't have people on the ground in terms of collecting information that we need?

General VAN OVOST. Yes, Senator. Signals intelligence is critical to my ability to understand the threats around the world, where they are moving to, what their intentions are, and how we can mitigate those threat. That is for the open session. I am happy to expound in a classified section.

Senator SHAHEEN. Thank you.

General CAVOLI. Senator, of course, a full answer is best done in closed session, but I can assure you that an enormous amount of the intelligence that I rely on in the current crisis is derived from the authorities under 702.

Senator SHAHEEN. Thank you. Thank you both. I think, General Cavoli, this question is probably for you because we see Iran continuing to supply Russia with critical support in this war against Ukraine.

There are reports now that Iran is providing artillery and ammunition to Ukraine as well as drones. Has that been confirmed and how are we working with our counterparts in CENTCOM to track and respond to that Iranian equipment? Also, are we seeing other countries provide weapons and ammunition to Russia as well?

General CAVOLI. First, more broadly, Senator, we see other countries considering it. We see precious few actually doing it right now, and we are gratified by that. But it is because of significant efforts on the part of the United States and our allies to discourage them.

You have seen some of that in the open press. We can discuss some more in closed session. With regard to the Iranian threat specifically, we have seen and the Ukrainians have reported to us the presence of Iranian drones especially.

That has been pretty well covered in open sources but I can go into some details in closed session with you if you would like. I am in significant contact with my good friend and colleague Eric Kurilla in Central Command, and some of the things we are thinking about in terms of handling this situation, I can address with you in closed session as well, if you will permit me.

Senator SHAHEEN. Well, thank you. You may want to address this in closed session, but do we think they have an unlimited sup-

ply of the weapons] that they are providing to Russia, or are we seeing challenges within their industrial base?

General CAVOLI. They have a significant supply, but it is certainly not unlimited, ma'am.

Senator SHAHEEN. Thank you. I have only a little time left, but could both of you speak to the importance of the air defender exercises that NATO is going to be doing? Again, I am pleased that the 157th from New Hampshire is going to participate in those. But how important are those? I understand it is the biggest exercise, that air exercise NATO has done.

General CAVOLI. If I could start, as the commander of allied command operations, Senator, extremely important. Air defense is one of the things that most of the nations in the alliance are challenged on in terms of capacity.

Then the integration is something that has to be done and repetitively exercised constantly because systems change and the technology gets updated and the soft, and then you have got to bring it back together. These are absolutely vital exercises.

General VAN OVOST. Our teams are fully engaged. This is a critical exercise for us, for interoperability with our allies and partners, growing their capabilities, including command and control.

Senator SHAHEEN. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Shaheen. Senator Fischer, please.

Senator FISCHER. Thank you, Mr. Chairman. General Cavoli, what do you assess to be the impact of Russia's assertions that it would deploy tactical nuclear weapons in Belarus, along with its handling over Iskander mobile short range ballistic missiles to the Belarusian forces?

General CAVOLI. Senator, thank you for the question. As a military matter, I do not think that it is a particularly concerning development. We can go into the specifics of that in closed session, of course. Therefore, I think it is mainly a gesture, and——

Senator FISCHER. Do you think it is more saber rattling again?

General CAVOLI. I do. I think it is a gesture and it is a gesture that we will handle through our policy means, etcetera. I have less to comment on in that regard.

Senator FISCHER. Okay, thank you. Also, can you discuss what your demands are for both manned and unmanned ISR [intelligence, surveillance, and reconnaissance]?

General CAVOLI. Yes, absolutely, Senator. Of course, like all the combatant commanders, ISR is what we depend on, especially during peacetime, to maintain situational awareness. There is a demand for ISR, both manned and unmanned, aerial ISR, that far exceeds the supply across the Department of Defense, and we are grateful when we get our share of it.

Right now, it is extremely important for a variety of reasons. We can't do everything with other means. It is our ability to collect and analyze depends on using a layered approach with a variety of systems, and we depend on those.

We are grateful for the advances that the services are making, from the Army with its new Artemis system, which has been doing great work in Europe for the last couple of years, to the Air Force's

advances, and to the Navy's P–8 program, all a very valuable, ma'am.

Senator FISCHER. How do you believe the threats are going to change in EUCOM in the coming decades? In your crystal ball, what do you see?

General CAVOLI. Do you mean in General, Senator?

Senator FISCHER. In General.

General CAVOLI. Well, I think Russia is quite likely to remain the core security challenge in Europe for some years to come. Their military has suffered significant losses in this conflict, but they have mainly been in the ground domain.

The air force, the tactical air force has lost about 80 fighters and fighter bombers, but they have more than 1,000 of them left. The long-range aviation has not been touched. The navy has barely been touched, lost a ship or two. The strategic nuclear forces, the cyber, the space have not been touched.

I think Russia will continue to be the core security challenge. But there are others. China is gaining influence and China continues to press for influence. Then there is always instability in the Balkans. You know, we are not done with that. So, I think perhaps we will see more of the same, Senator.

Senator FISCHER. You brought up where Russia hasn't touched many of their capabilities currently, and so, they have those in reserve for the next decade. When we look at munitions that are being used, especially in the conflict in Ukraine, and the amount of munitions that are being expended, do you think that we need to increase our production capacity here in this country? Would you encourage our allies to do the same?

General CAVOLI. Absolutely, Senator, to both. Our allies are very aware of the shortfalls that they have in munitions in certain cases, where they do exist.

Senator FISCHER. You were talking about the number of tanks and the—our allies have already shared with the Ukrainians.

General CAVOLI. Right, and so inside NATO, in my other role as the Supreme Allied Commander, I have been responsible to deliver a new set of operational plans. We turned them in on the 14th of April.

They are very specific regional plans for collective defense, and they have a level of specificity that is going to drive a force structure requirement, which will be the first time in 35 years that the alliance has a plans based force structure requirement. This will guide national defense investments across the alliance.

Senator FISCHER. Thank you. General Van Ovost, you talked a little bit about the sealift and being able to fuel, have that fueling capability. You mentioned working with MARAD. Can you kind of focus in, especially on the MARAD point there, on how important that is?

General VAN OVOST. Sure, Senator. We have a great relationship with the Maritime Administration who oversees our ready reserve force, those ships that are in reduced operating status. When we need to activate them, they wake up and they come to TRANSCOM [Transportation Command] and we fight them.

So, it is really important that we keep that relationship going, and especially when it comes to our mariners, because the same

mariners that crew ships that do foreign import and export, they are also the same mariners that are on our great haul ships. It is really important that we continue to support them.

Senator FISCHER. Thank you. Thank you, Mr. Chair.

Chairman REED. Thank you very much, Senator Fischer. Senator Hirono, please.

Senator HIRONO. Thank you, Mr. Chairman. Thank you both for being here. General Cavoli, China is sending a special representative, an envoy to Ukraine and other countries for talks on regulating the Ukrainian crisis. Not sure what that means.

The special envoy has been selected and Ukraine is sending a special envoy to China. Do you consider this a significant development, and what does that portend?

General CAVOLI. Thank you, Senator. I am not sure we know yet the significance of the development, but what we do know is that China should begin by condemning Russia's illegal and unprovoked invasion of Ukraine. That should be the first step in my mind to any productive role for China in the conflict or its resolution, ma'am.

Senator HIRONO. I think that—yes, well, this also signifies China's engagement in Europe. I think that it remains to be seen, but to me, it is possibly a positive sign that perhaps there will be an end to this terrible conflict. General Van Ovost, we have spoken at length about Red Hill and your plan for the fuel currently stored there.

I understand there is a plan for where the fuel will go once de-fueling begins. With over half the required repairs at Red Hill complete, de-fueling remains on track to be completed in June 2024. Is your plan for fuel distribution in the Pacific complete?

General VAN OVOST. Senator, we are lockstep with INDOPACOM [Indo-Pacific Command] and the Navy Task Force Commander on the de-fueling of Red Hill. We have assets ready to support and we are on track to meet all of their needs.

The posture in the Indo-Pacific is still under assessment. We are in our role as the global bulk fuel manager for the Department of Defense. We are looking very closely at the posture requirements, the requirements to ensure that we can buy fuel or store fuel, and also what needs to be afloat and what should be in in various areas.

We are still doing that assessment. We are working with INDOPACOM on the section 333 report that should highlight the key aspects of that posture.

Senator HIRONO. As you are assessing how you are going to complete the safe de-fueling of the 100 million gallons or so that is that Red Hill, if you require anything further at this time to ensure that de-fueling happens in the way that we would want it to happen, will you let me and this Committee know.

General Cavoli, in war, it is often the most vulnerable who pay the highest cost, the elderly, women, girls. While it is vital that we continue to provide Ukraine with the military equipment it needs to continue to bulwark democracy in Europe, our support of the civilian population also speaks to our country's values and stands in sharp contrast with Russia and other malign actors.

What is the EUCOM doing to support and protect the people of Ukraine? How is EUCOM working with Ukraine and other United States Government agencies to monitor human rights abuses by Russia?

General CAVOLI. Thank you, Senator. First of all, we support NATO's and other European efforts in this regard. The first one, of course, was the acceptance by our allies of large numbers of refugees who were in the main—women and children. They have very successfully done that, and they did it spontaneously.

Our initial thought was we were going to have to help significantly, but the societies absorbed them. As they have done so, we have worked with them carefully through non-DOD entities, but advised by EUCOM—to make sure that rights are established. Then as we talk to our Ukrainian colleagues, we do keep our gender advisers and everybody involved as we develop plans with them.

The Ukrainians are remarkably sensitive to civilian casualties, of course, because those are Ukrainian civilians who will be inadvertently wounded in their operations. We routinely, in exercises here, even junior Ukrainian servicemen, saying, hey, wait a minute, you know, I know people in that town.

What are we going to do about this? It is a complex question, ma'am, but those are some of the things that we are doing to help. We do provide support to those organizations that are attempting to figure out war crimes as well, although we have not put people on the ground to do that.

Senator HIRONO. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Hirono. Senator Cotton, please.

Senator COTTON. Thank you both for your service and your appearance today. General Cavoli, you testified earlier that 31 Abrams tanks would arrive in Ukraine later in the year. Estimates I have seen say that we are still about 8 months away from that. Is that correct?

General CAVOLI. No, Senator. The first thing we are going to do is put a training set in——

Senator COTTON. That starts next month in Grafenwoehr, correct?

General CAVOLI. That is correct. Then the next set, the dates are moving right now. We are trying to accelerate as much as we can be——

Senator COTTON. The same tanks at Grafenwoehr are going to be the tanks that go to Ukraine?

General CAVOLI. The first set will not. Those will be training tanks that we keep and then will send a different set in. We did the same thing with Bradleys earlier this year, sir.

Senator COTTON. Okay. General Van Ovost, have you received an order to transport that second set of tanks to Ukraine yet?

General VAN OVOST. Senator, I worked very closely with European Command to meet all of their requirements in a priority manner. Certainly, we are in coordination on the tanks, as well as all the other significant equipment.

Senator COTTON. Is that a, no?

General VAN OVOST. We anticipate the movement. From an order perspective, we are ready to move it.

Senator COTTON. Sounds like a no. General Cavoli, you look like you have something to say here.

General CAVOLI. Yes. My command has not issued a specific date for movement for those yet. As soon as we have the exact sourcing pinned down with the timeline, we will issue the actual order for the aircraft.

Senator COTTON. Why has your command not issued that order?

General CAVOLI. Can I take that for the record, Mr. Cotton? Because I would like to give you the exact—the exact status of it.

Senator COTTON. I mean, we our country has thousands of main battle tanks. It would seem like it's not that hard to find 31 and get them there.

General CAVOLI. Senator, some of the reasons for that I could cover in closed session, but if I could——

Senator COTTON. I guess. I think the main reason for that is the main reasons why we didn't even agree to supply the tanks for a year, which is that President Biden didn't want to supply them.

Again, I think we could supply them faster than 8 or 9 months if there was the political will. It is not a decision for you or General Van Ovost to make. I think it is just reflected from the political decision to continue to drag our feet in what we are supplying to Ukraine. It is just a repeated story we have seen over and over again throughout the course of this war.

I want to get to one of the potential reasons for that as well. You talked earlier about submitting new OPLANs [Operational Plans] for NATO. It came to my attention earlier this year that we have not changed our OPLANs or our warfighting requirements in EUCOM for Russia. Is that correct?

General CAVOLI. Senator, I am in consultation with the Secretary of Defense on that question right now. The question that has been posed to me and we are working our answer with the staff.

I believe I have a date with the Secretary of Defense later this month or next month to discuss in detail and to come to a conclusion on what timeline we will or will not adjust for the answers.

Senator COTTON. So that is a no then. Once again, that is a no, we haven't changed our requirements in the OPLAN to fight Russia.

General CAVOLI. Could we discuss exactly what we have done with OPLANs in closed session, sir?

Senator COTTON. Again, we can, but I think the question has been answered now, and the reason I highlighted is the Committee is continuously told that, by the Administration, not by uniformed military officers, that we can't provide this, that, or the other weapon to Ukraine because we need it for our own requirements.

I understand that, special requirements in the Western Pacific against China, but if we still have the same requirements in place to fight Russia in April 2023 that we had in February 2022, after we have seen the performance of their military in Ukraine and after the known degradation of their military in Ukraine, then I think that is just a pretext that the Administration is using for not supplying more capabilities to Ukraine.

We can get into more detail in closed setting, but I think it is very troubling that the Administration is still stuck in the pre-Ukraine war mindset of what it would take for us to adequately deter or defeat Russia in a conflict in EUCOM.

One final point I want to raise is the flying of our MQ–9 drones in the Black Sea. Russia dangerously downed one a few weeks back. The reports I have seen and what I have heard from my sources is that we have now altered our flight patterns in the Black Sea, that we are no longer flying in the same airspace where we were flying before that negligent incident with the Russian aircraft. Is that correct?

General CAVOLI. Yes, Senator. It was not just negligent. It was not competent. The Russian pilot bumped into the MQ–9, which is not something pilots typically do on purpose. Again, on ISR operations, especially in the Black Sea, I would be delighted to answer you in detail in closed session.

Senator COTTON. Well, I asked the Secretary of Defense this recently, and he repeatedly said, we will fly the paths we felt necessary to collect intelligence information.

General CAVOLI. Those have been his instructions to me.

Senator COTTON. I understand that. But again, that is not a—that is not a no, when I was asking him that. That is—to me, that is him saying we are not flying where we were anymore because we don't want to be provocative, which again, is a political decision, is not a military decision. This is not some secret.

I mean, Russia knows where we are flying these aircraft like anybody here could find out we are flying them for the most part just by going on open-source information. If we are flying those aircraft in certain airspace in the Black Sea before that incident, because that is where we thought we needed to get intelligence, and now we are saying we can get that intelligence by flying them somewhere else, well we shouldn't have been flying there in the first place.

If we needed to get in there to get that intelligence in the first place, then we should be back there, otherwise we are simply ceding that airspace to Russia. My time has expired. I guess we will address more of these in closed setting.

Chairman REED. Thank you, Senator Cotton. Senator Gillibrand, please.

Senator GILLIBRAND. General Cavoli, last year we passed the Justice for Victims of War Crimes Act, improving the Department of Justice's ability to prosecute war crimes committed in Ukraine. However, prosecutors, whether in the United States or in an international tribunal, cannot proceed with cases without evidence.

How is EUCOM working with Ukraine and with our allies to preserve evidence of war crimes? If your personnel discover evidence of a war crime through classified systems, are you ensuring that the evidence is flagged for declassification and eventual used by prosecutors?

General CAVOLI. Senator, thank you. We don't have the lead on this question, on this initiative, obviously. We do support it, as requested. When we find evidence of war crimes, whether in open sources or any other way, we do refer those and we do keep track of them. Yes, ma'am.

Senator GILLIBRAND. Thank you. The war in Ukraine has allowed the world to observe wartime operations in the cyber and space domains. As a combatant commander in the theater where this conflict is occurring, what have you learned from the conflict about the employment of military forces in the cyber and space domains?

General CAVOLI. We have learned a ton, both in terms of adversary capability and capacity, Senator, as well as our defensive needs. We are working hard to improve where we need to improve.

Most of all, we are working to help our allies defend their networks and to help our partners who are vulnerable also to defend their networks. We have a very tight cooperation with Paul Nakasone and his U.S. Cyber Command to do this.

There are some specific things, of course, that at a classified level would be interesting to talk about. In general, we have seen a significant employment of cyber, both inside the conflict zone and outside the conflict zone, on the part of our adversaries, ma'am.

Senator GILLIBRAND. General Van Ovost, TRANSCOM is turning over responsibility for servicemembers' permanent change of station moves to a private contractor. How will the Department ensure the servicemembers' experience actually improves under this contract? How does the Department intend to respond if military families' experience worsen rather than improve?

General VAN OVOST. Senator, thanks for the question. We are focused on delivering the quality, service, transparency, and accountability that is not existent in the current series of contracts.

So, we are partnering with Home Safe, and we have a measured phasing plan with 28 separate metrics monthly that we will be reviewing for which we own the data. So, we are going to continue to watch them as they bring along the capacity, as they begin right after peak season, September 2023.

We have a spouses group where we are getting feedback from, actively seeking from them their experiences. Our first sample rate is going to be about 50 percent. We are going to definitely be understanding how they are bringing on the capacity and are they delivering on the quality that we desire.

Senator GILLIBRAND. Thank you. Part of your strategy for TRANSCOM has involved the increased use of commercial contracts for defense missions rather than military aircraft and crews.

Can you discuss how you are ensuring that these contracts are implementing appropriate and aggressive cybersecurity protocols? How are you including cybersecurity in these contracts, and how are you verifying that these contractors are not endangering the security of our military personnel or allies?

General VAN OVOST. Senator, cyber is a consistent discussion point amongst us and our transportation service providers. We are collaborating with industry. We have contract cybersecurity standards to safeguard defense information in those contracts. They annually assess them and we review those assessments.

We are working throughout the department with Paul Nakasone on sharing and collaboration initiatives with our industry partners. I appreciate Congress's support of the no cost cybersecurity offerings offered in the Cyber Collaboration Center and the defense industrial based cyber security program.

Our transportation service providers are taking advantage of these, and we are assessing them almost constantly.

Senator GILLIBRAND. General Cavoli, following up on Senator Shaheen's question and Senator Hirono's question about Iran and China, can you talk a little bit more about what the impact of Iranian involvement and Chinese involvement in the conflict create, and what recommendations you have to the Administration?

General CAVOLI. Yes, ma'am. So, the first complication is diplomatic and political, right? The fact that they don't condemn. The fact that in some cases they affirm Russia's position. Second, Iran, as we noted a few minutes ago, has provided some material support, specifically drones.

Those have had an effect. Those do two things. First, when they succeed, they strike targets, and second, they have to be countered. Sometimes they are countered with air defense missiles.

As Chairman Milley and Secretary Austin have made very plain, the primary requirement the Ukrainians have right now is ground based air defense to control their skies. It is a cost imposition strategy that should go after with that. Chinese aid has been non-material and it has not had a direct physical effect on the battlefield yet, ma'am.

Senator GILLIBRAND. Are there any other impact non-material?

General CAVOLI. In closed session, I could discuss one specific one, ma'am.

Chairman REED. Thank you, Senator Gillibrand. Senator Rounds, please.

Senator ROUNDS. Thank you, Mr. Chairman, and thank you to both of you for your service to our country and to your families as well. Thank you also for your teams that are with you today, and their families as well for their service to our country.

I just want to followup a little bit. The line of questioning that Senator Cotton began here is one that I think I would like to understand a little bit more clearly. There—I believe there were 31 Abrams tanks that were committed to by our country to Ukraine's defense. Are those—in that 31, do those include the training tanks that are already in, you know, in Europe today?

General CAVOLI. Senator, there will be 31 Abrams as of right now, donated to Ukraine. The training set will be a separate set.

Senator ROUNDS. Okay, and so, you have got some there in Europe right now. Do you have the 31 identified as being already in Europe or are they in the United States?

General CAVOLI. Senator, if I could, I would like to take that for the record so I can give you the exact location.

Senator ROUNDS. I don't need the exact location. I was just curious if they were within your area of operation today in Europe.

General CAVOLI. Senator, again, I would want to give you an accurate answer, and I don't have it off the top of my head, sir.

Senator ROUNDS. It would seem to me that if we have committed for those tanks to be made available, what is the length of time from when you are notified that it is time to deliver them? How long does that take—and perhaps this is a better question for General Van Ovost—how long does it take to actually deliver the Abrams tanks once you have been notified or requested to deliver them?

General VAN OVOST. Senator, we have multiple avenues to deliver Abrams tanks, by air or by sea. We consistently look not just at Abrams tanks, but the significant amount of aid that is being provided to Ukraine.

We source that from around the globe, not necessarily just out of CONUS [Continental United States] or just out of Europe. As we determine where the sources are going to be, we match it to the best resource to move it to meet the timelines as needed by the priorities set out by the European zone.

Senator ROUNDS. So, you are prepared to make that move as expeditiously as possible once you have been given the orders to transport the tanks?

General VAN OVOST. Yes, Senator.

Senator ROUNDS. Where would those tanks be located at today if you were to do them? Can you share that in an open session?

General VAN OVOST. Senator, again, I don't know where all the tanks are and which ones would be viable for this donation. I would leave that up to Army Materiel Command and——

Senator ROUNDS. So, it hasn't gotten that far yet.

General VAN OVOST. Not to my awareness, has gotten that far.

Senator ROUNDS. All right. Thank you, and, General, once again, the orders, or at least your authorizations to move tanks over. You will play a part in that, but you have not been given the authorizations yet to do that at this time?

General CAVOLI. Right. When the exact tanks are identified and their location. They could come from stocks in Europe, as General Van Ovost just pointed out. They could be reconstructed.

When I have got the set identified, then I place an order with General Van Ovost, and it usually goes fairly quickly, sir. They can be moved by air or better by sealift.

Senator ROUNDS. I think it is fair to say that we probably have the best logistics capabilities of any country in the world, and that is a testament not just to the men and women that serve within that, but also because we do a good job of planning.

I think the reason why I am following up on this, and I recognize this is not a line of questioning that you really want to go down, but I think it is important to point out that this is not a case of where we just simply can't deliver 31 Abrams tanks.

Bottom line is that this has been a policy decision that they are not prepared to deliver 31 Abrams tanks at this time. It is not within your authorization. General, would that be a correct statement on my part?

General CAVOLI. Senator, there is an intention to deliver the 31 tanks. I think there are some technical things that we have to go through in terms of exactly which tanks, that we are working on.

Senator ROUNDS. But the bottom line is, is if we needed those tanks, it shouldn't take 8 months for the United States Army to be able to access 31 Abrams tanks. If we needed them tomorrow, we would get them very, very quickly. If you needed them, you could get them.

Or if you were authorized to get them, you could get them. This is not a case of us not being able to get them. It is a matter that somebody has got to make a decision on when they want those tanks delivered. Is that a fair statement, General?

General CAVOLI. Sir, I think the key is exactly which tanks and which capabilities, and their levels of classification that the Army has to wade through on that question for releasability, sir.

Senator ROUNDS. Fair to say, though, sir, that should never take 9 months. If you needed those tanks, you could get those tanks.

General CAVOLI. Sir, if I needed those tanks for the U.S. Army, I certainly could.

Senator ROUNDS. Yes, Okay. That is very helpful. Thank you, General. I recognize this was not the line of questioning that I wanted to go down today, but this, I think, is important to understand that those decisions need to be made and that this is not within your area of operation.

You are ready to go. You can get it done, but someone has got to tell you, it is time to go. I want to thank you for those very frank answers. I also, I am mindful that my time is expiring, but I just have to also say, I want to take home just to thank you and your staff for resolving an issue that the South Dakota Army National Guard's 129th Mobile Public Affairs Detachment had in getting its meals paid for while deployed in support of Atlantic resolve.

It takes a total force to defend the Nation. The Guard is a key component to that force, but sometimes the pieces just simply don't fit together very well. I want to thank you for going the extra mile to take care of these soldiers, even while tending to the strategic issues that you are responsible for. I want to just publicly say thank you for getting involved and getting that fixed for these young soldiers.

General CAVOLI. Senator, my command was wrong in that case. We appreciate your care for your constituents, and for bringing it to our attention, and we are rectifying it.

Senator ROUNDS. Thank you, sir. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Rounds. Senator Kelly, please.

Senator KELLY. Thank you, Mr. Chairman. Thank you both for being here today. I have a question for each of you. First, I want to start with General Van Ovost on the tanker recapitalization plan.

The Air Force has modified this approach in order to accelerate the next generation air refueling system, NGAS. Having a modern and survivable tanker plan is critical to any future fight. It is also part of strategic deterrence.

As you know, the Arizona National Guard provides a significant amount of support for rapid mobilization, worldwide deployment, airlift, aeromedical evacuation, and sustained aerial refueling operations for both our Air Forces and the Navy, and partner nations air forces. The 161st air refueling wing fleet is now more than 50 years old, and it remains in really high demand.

General, what can you share about the Air Force's plan to recapitalize Arizona's National Guard tanker mission, as well as the other Air National Guard units supporting this mission across the country?

What I am getting at is what is the plan here, and for Arizona specifically to get either a KC-Y bridge recapitalization tanker, or to continue with the KC–46 until NGAS comes online?

General VAN OVOST. Senator, thanks for that question. You know, our ability to project and sustain the Joint Force without fail is a deterrent to our aggressors, and it assures our allies and partners we will be there, and air refueling is the backbone to that. Along those lines, thank you for your support.

The Total Force, we could not do our job in in logistics and mobility without the total force, the strength of the total force. I use them every day, so I thank them for their service. As far as the recapitalization, as we work with the Secretary of the Air Force, the Air Force staff, they are committed to a continuous recapitalization program, because when we get the last KC–46 on the current contract, 179th aircraft, we will still have 287, 67-year-old KC–135s.

They have committed to a very targeted modernization program for the KC–135, which need to last us out into the 2040's, to ensure the safety of the airplanes and the survivability of those airplanes out into the future.

Meanwhile, they have committed to a continuous recapitalization program with capabilities that are relevant to the KC–46 Block 1, because as they accelerate next generation air fueling system to the left to the mid–2030's, we will have a gap of 6 or 7 years there where we won't have any production of airplanes.

I look forward to their plan. They are doing an analysis of alternatives. I look forward to their plan to continue to seed and recapitalize with all of our air refueling units, because in the end, all of those KC–135 need to be recapitalized.

Senator KELLY. Okay. Can I get your commitment to work with me to ensure that the Guard will receive modernized tankers in a timely fashion comparable with Active Duty units?

General VAN OVOST. Yes, Senator. I will work with you and the Air Force on that.

Senator KELLY. Thank you. Thank you. General Cavoli, good seeing you again. We met in Munich and I just got back in Kyiv a couple of weeks ago, met with President Zelensky for over an hour. We had a very productive talk about what he thinks he needs to defeat Russia. I am more than ever committed to support Ukraine.

We can't let Russia win this thing. Last week, Congress was notified of a Presidential drawdown authority for more HIMARS, 155-millimeter artillery rounds, and a series of other equipment.

Just for me to get to the point here, in your military assessment, is the equipment of the United States and our partners providing enough to pave the way for a decisive victory against the Russians by Ukraine?

General CAVOLI. Thank you, Senator, and thank you for the notes on your recent trip to Kyiv as well. They were very helpful to me. We went into a planning process with our Ukrainian colleagues last winter, and we developed with them a number of courses of action, wargaming them carefully.

When we came down to the key courses of action for an offensive, we calculated the amount of equipment and the various types that they required, and we have fulfilled that. We have nearly gotten everything into Ukraine, and I am confident they have what they need for the offensive that we have planned with them. I can go into significant detail in a closed session with you, sir.

Senator KELLY. Okay. We will pick it up then. Thank you. Thank you, General.

General CAVOLI. Sir, thank you.

Chairman REED. Thank you, Senator Kelly. Senator Ernst, please.

Senator ERNST. Thank you, gentlemen, very much for—or excuse me, ma'am. Thank you, sir, General Cavoli, for being here today, and General Van Ovost, thank you very much, ma'am, for coming in front of the Committee today.

I am going to start with you, General Cavoli. A number of my colleagues have raised the issue of Ukraine and Russia, and what we hear in the news, and this has been a hot button topic with the Administration as well, is that we are afraid of escalation. As the war continues to go on, we will escalate, Russia will escalate.

General Cavoli, how do you assess the prospect, or excuse me, the prospect of Russia escalating to a point of a nuclear weapons use in this conflict? Can you talk in open session just broadly about what you see, what you have heard, and what would that be that tipping point for Vladimir Putin?

General CAVOLI. Thank you, Senator. It is nice to see you again. Of course, this is a complicated and difficult question. There are an enormous variety of things that go into successful deterrence and successful escalation management. It is something we work on every single day.

I am in constant communication with the Department as well as my subordinate commands, as well as our allies in terms of what we are doing, where we are located, what is happening inside of Ukraine, what is happening outside of Ukraine.

To include with my fellow combatant commanders, many of whom have Russian presence in their AORs [area of responsibility] as well, successful so far, right. We have managed to control every incident to the extent possible, and I think that is due to a lot of hard work and learning as we go along.

With regard to nuclear escalation specifically, ma'am, it is very difficult to talk about in an open session, but I have traveled back to the United States to deliver testimony, so I obviously have a certain degree of confidence that we, the United States and the alliance are in a good, strong position in deterring such things.

Senator ERNST. Yes, thank you very much. I appreciate that. We hope that we continue on a strong path of deterrence in that area. With the other assessments out there of President Zelensky's wishes to not only expel the Russians from Eastern Ukraine, but also to retake Crimea, what is your assessment of their ability to retake Crimea, and what would the posture be coming from the United States and our partners and allies?

General CAVOLI. Thanks. The question of retaking any specific piece of ground depends on a variety of things. Crimea is pretty tough. Crimea has got a mountainous center.

Of course, Crimea is pretty hard to keep resupplied if you are the adversary as well. It really depends on the situation at the time. If Crimea were empty of Russian soldiers, it would be easy. If Crimea were defended at a certain level, it would be harder, and it is hard to see where things go.

What we do know is that any such question would be answered sequentially with the activities—after the activities that the Ukrainians are planning to undertake in the next months. It is hard to say from here.

Senator ERNST. Yes. Thank you very much. As we look to the future, and I know we don't know when this conflict will end, we hope it would be soon, but General Cavoli, would NATO's military requirements in EUCOM increase if there is a political decision to extend a security commitment to Ukraine?

General CAVOLI. Our posture, the U.S. posture has shifted over time, of course, ma'am. In the initial phases, we went up about 103,000 uniform. We have adjusted that over time. We are about 82,000 in uniform right now, and that depends on what we see going in the AOR.

It is a constant back and forth with the Department and the situation. If we were to extend some form of security guarantee to Ukraine, it would clearly depend on exactly what the nature of the security guarantee was. It would also depend, importantly, on what approach our allies took to that.

Our allies are increasing their defense commitments. Many of our Eastern flank allies, such as Poland, have made massive investments, 3.94 percent of GDP right now, which exceeds U.S. expenditures on defense.

It depends on what role they would take as well, and that would certainly be our choice, our preference to have them lead in such a situation.

Senator ERNST. I see that my time is expiring, but part of that equation as well, I would like to discuss further at another time, but our continued participation in the State Partnership program, especially with a number of our European partners.

Obviously, Iowa is partnered with Kosovo. There is a lot of concern with some of those nations as well with Russian influence. I think they can be an extremely important part of that solution.

General CAVOLI. Ma'am, I am the biggest fan of the State partnership program.

Senator ERNST. Thank you very much. Thank you, Mr. Chair.

Chairman REED. Thank you very much, Senator Ernst. Senator Blumenthal.

Senator BLUMENTHAL. Thanks, Mr. Chairman. Thank you both for being here and for your extraordinarily service to our Nation.

To each of your teams, some of them behind you, my thanks as well. General Cavoli, I have been to Ukraine three times over roughly the last year, plus. I have also, by the way, visited the training area in Grafenwoehr, and I have been just immensely impressed not only by President Zelensky on the three occasions that I have spent time with him and everyday Ukrainians, but his military team, and our team training Ukrainians.

Their dedication, their bonding, in fact, in providing the hands-on skill they need to operate the Bradley and Stryker vehicles. I think it is a great tribute to our military that we have committed in the way that we have, not just at the 30,000-foot level, but literally person to person, hands on in the way that we have.

I am deeply troubled as I view the assets they have and the assets that we could provide. You have just testified in response to

Senator Kelly that your belief is that they have what they need to be successful in the counteroffensive this spring in the South and in the East. Is that correct?

General CAVOLI. That is correct, Senator.

Senator BLUMENTHAL. Our mantra is that we never want to see a fair fight. Do they have what they need to have an unfair advantage in this offensive going forward?

General CAVOLI. Sir, they have to be better than the Russian force they face, and there are great weaknesses in the Russian force they face right now. Those weaknesses are temporary and the Russians will improve their posture and their capabilities over time. Time and the enemies, the Ukrainians' enemies' capabilities is an important factor in this.

Senator BLUMENTHAL. Don't they need more?

General CAVOLI. I believe that they will have what they need.

Senator BLUMENTHAL. Sorry to interrupt—don't they need more air defense? Couldn't they use planes? What about more of the armored vehicles, even more tanks? Where would you assess the platforms that we can do more to provide to give them greater strength at this critical moment, because I assume you agree that if this counteroffensive is unsuccessful, it will be a significant setback for the Ukrainians.

General CAVOLI. Sir, yes, of course, there are things we continue to give them and that we will need to continue to give them over time. I may have mischaracterized things. We haven't delivered a force, and then that is it.

We continue to build with them and we have plans to continue to build with them over the summer and into the autumn. Then eventually we intend to help them restructure their entire military.

In the short term, ground-based air defense remains important. We have made some important advances in the last couple of months. I could be very specific about them in closed session, of course, sir, but I feel pretty comfortable about where we are and I am comfortable about where we are going in the next couple of months, sir.

Senator BLUMENTHAL. What about——

General CAVOLI. An army can always use more.

Senator BLUMENTHAL. Understood. What about planes? What is your assessment?

General CAVOLI. Sir, they have just received a bunch of MiG–29s from two of our allies. They have begun to employ some of those MiG–29s. They have a few dozen aircraft right now. They are conducting offensive as well as defensive operations with them right now. I think they are key to controlling their own airspace right now. However, it is ground based air defense, as you pointed out a minute ago, sir.

Senator BLUMENTHAL. The Washington Post reported yesterday that leaked United States intelligence indicated that the Russians can fund the war in Ukraine for at least another year. Do you agree with that assessment?

General CAVOLI. Sir, I can't talk specifically to the undisclosed—to the unauthorized disclosures. Clearly, there are investigations going on and everything like that. However, it is important to note that, as General Milley has said on a number of occasions, the Rus-

sians have strategic depth, they have manpower, and they are not to be underestimated in terms of their ability to endure.

Senator BLUMENTHAL. So, you don't disagree with the conclusion that they could fund the war for another year, which again heightens the importance of the counter offensive.

General CAVOLI. As completely separate from what may or may not be in any documents——

Senator BLUMENTHAL. Yes——

General CAVOLI. Yes, no, I think they can fund for another year, sir.

Senator BLUMENTHAL. One last question, sir, just following up on Senator Cotton's question.

You may not be aware, but four of us wrote to the Secretary of Defense on March 21 asking that our warfighting requirements in Europe be updated to reflect the degradation of Russian forces, 200,000 or more of their troops killed, significant damage to their armored vehicles, and so forth, because obviously it is a different force than it was when those warfighting requirements were devised.

Putting aside the timing, wouldn't you agree in your professional capacity that those warfighting requirements do have to be updated?

General CAVOLI. Absolutely. When we can assess the exact status, Senator, of the capabilities, the capacity, and the disposition of whatever Russian army emerges from this, absolutely, we will update that stuff.

I am in contact, as I mentioned to Senator Cotton a moment ago, with the department about this. I would point out one or two things, though. The Russian army inside Ukraine today is bigger than it was at the beginning of the conflict. We have to make sure we got the right-side picture, and that is what I am working on.

Separately, sir, I thank you for your visits to Grafenwoehr, your kind words about our soldiers and our NCOs who are absolutely putting the ball over the left field fence every day. All components, all three components every day, and I invite all Members to please come visit those soldiers at Grafenwoehr and see what they are doing for our country.

Senator BLUMENTHAL. Thank you.

Chairman REED. Thank you, Senator Blumenthal. Senator Scott, please.

Senator SCOTT. Thank you, Chairman. Thank each of you for being here. Thank you for what you do.

I just had the opportunity to go to Greece and Cyprus a couple weeks ago, and that was with Admiral Sciretta and some other sailors. You really have to admire what people are doing. General, can you talk about the importance of Cyprus and the importance of making sure we continue to allow them to get the military equipment that they need?

General CAVOLI. The Eastern Mediterranean in General, Senator, thank you for bringing it up, it is a complicated area and it is an area that has seen greatly increased competition, as well as Russian naval presence in the past few years.

The establishment of the naval base in Tartus has been an important part of that. In my NATO role, we devote a lot of attention

to that, and we have a couple of operations, maritime operations and air operations, that help us with that.

In my United States role, Naval Forces Europe, work extensively down there. One of our requirements is to be able to project power into the Eastern-Med, and Cyprus is ideally located to do that, as you know, and does figure into some of our thoughts in that regard. We keep a strong military to military relationship with Cyprus, sir.

Senator SCOTT. Cyprus—it is in our best interest if Cyprus continues to buy American equipment rather than rely on Chinese and our Russian equipment.

General CAVOLI. Sir, American equipment sharing and equipment set with another nation creates a strategic bond as well as a practical bond that is very useful.

Senator SCOTT. Yes. I want to thank you and everybody in Europe for all their efforts to make sure Ukraine wins.

You ever talking to just somebody that is not very political and doesn't really think about geopolitics? What would you tell them is a reason why we ought to be involved in the Ukraine more with—as, and all the help we give them? What would your pitch be?

I mean, just think about it for a second. Americans are saying, we have spent—I think we have committed $100 billion plus to this, and that is clearly a lot of money. So how would you—what would you say to people?

General CAVOLI. Sir, thank you for the incredibly important question, right. The first thing I would tell just one of my cousins or something like that is that America does not like bullies and having bullies around does not help America.

That is step one, and Russia is a bully, and we need to deal with that. We need to help those who stand up to bullies to deal with that. Second, the United States doesn't let adversaries control things that are valuable to us, and that part of Europe is valuable to us, and so is Europe in General.

If Ukraine loses, then more at Europe is at stake, and we don't let that happen. Then finally, I would say just in a self-interest sense when I was a lieutenant and came in the Army in the 1980's, we had more than 300,000 United States servicepeople stationed overseas because of Russia, because of the Soviet threat, and we don't need to return to that. We don't need to return to that.

Ukraine deserves help so we don't have to.

Senator SCOTT. General, when you look at, and like on this chart, do you see where your troops are, your servicemen and women are stationed, is there any logic to moving more people out of places like Italy and Germany, and closer to where there is more risk?

General CAVOLI. Thanks, Senator. Yes, of course, there is. We have done that as the risk has gone up. We have shifted forces on temporary deployments out to the East, and all of the reinforcement just about that have come in have gone out to the East.

Moreover, in the past year, the Department has announced the intent to station some new organizations in Europe, the Fifth Corps headquarters forward is in Poland. A new special logistics base has gone straight into Poland. We have shifted a combat aviation brigade on rotation out to Poland.

We have a permanent rotation—we have an enduring rotational presence in each of the three Baltics. We have a division head-

quarters and a brigade combat team in Romania. So, we have done a significant shift to the East.

The forces that are left in places like Italy and Germany are well positioned for deployment to reinforce the correct location. They have Got Good Readiness facilities, training facilities, and they have good infrastructure for deployment. They give us flexibility as we go forward, sir.

Senator SCOTT. Thank both of you.

Chairman REED. Thank you, Senator Scott. Senator King, please.

Senator KING. Senator Scott, when people ask me that question, why are we there, my short answer is Google Sudetenland, 1938. Hitler could have been stopped and 55 million lives could have been saved.

To me, that is the most compelling argument. If Putin is successful in Ukraine, then we are going to be facing threats in the Baltics, Poland. He has said that he wants to rebuild the Soviet Union. General, I just want you to know that the concern about tanks is bipartisan. I am very frustrated that those tanks, they ought to be sitting in Chechlo, Poland right now, ready as soon as the training is done.

This counteroffensive that everybody is talking about, it is the longest wind up for a punch in the history of the world, is going to be trench warfare and it is going to involve tanks. That is why the tank was invented at the end of World War I. If our tanks don't get there until August or September, it may well be too late.

I just want to urge you to urge—I know it is—you have done, you both have done an amazing job of logistics and working with the Ukrainians and integrating and supplying them with what they need. This tank story is not satisfactory. The decision has been made, okay. Then let's get ready to execute it and cut through whatever the red tape is. I know we have got to do the training, but the tanks should be sitting there in the Polish border ready to go when that training is done.

I just hope you will take back that this is a bipartisan concern on this Committee that, you know, coming in at the end, after the counter offensive is just—that will be looked on as a tragic mistake. I learned 5 years ago that the Russians have a doctrine called escalate to deescalate.

That they will use tactical nuclear weapons if they believe that they are about to have some kind of catastrophic loss on the battlefield. You were asked earlier, but I want to put a finer point on the question, isn't it at least within the realm of the thinkable, that Putin would use tactical nuclear weapons if indeed he felt that Crimea was at risk, or if there is a significant breakthrough by the Ukrainians in the South and East?

General CAVOLI. Thanks, Senator. It has certainly been mentioned by members of the Russian Government as well as by observers on the Russian political scene, that is the potential or the possibility for using nuclear weapons.

Senator KING. This is part of their military doctrine, going back before this invasion.

General CAVOLI. Yes, sir. The exact conditions under which they would do that, I think, are not completely known and might not be

completely known to them. They might look good on paper, but then when the moment comes, it might be harder to decide.

We have some insights into it, Senator, that I would be, of course, eager to share with you in closed session. As I said a few moments ago, our deterrence, our escalation management so far, as well as our deterrence, have held very well so far, and I feel comfortable where we are right now.

Senator KING. Deterrence is the key. They have to understand that there will be a response that would be very costly to them. Deterrence is the heart of our, as you know, of our entire military strategy. Iron Dome. Wouldn't Iron Dome help? Why don't we have Iron Dome in Ukraine?

General CAVOLI. Sir, Iron Dome clearly could help, and the things that we have provide help also.

Senator KING. Oh, I agree. Iron Dome seems to be particularly calibrated to the kind of low-level attacks that are coming in by drones and missiles.

General CAVOLI. Yes, I can't speak to exactly why Iron Dome in particular is not there, sir. If I could defer that to the working group that develops those solutions.

Senator KING. I would—if you could take that for the record, I would really like to know. Because we certainly help to fund the development of Iron Dome, and it just seems to me that it fits in this situation.

We have moved Patriots in, and as you mentioned earlier, air defense is one of the most crucial things that the Ukrainians need. I would like if you could take for the record some thoughts on how we could move forward with Iron Dome.

General CAVOLI. I sure will, Senator King. Thanks.

Senator KING. You have talked about China. It seems to me China can play either a useful role or a destructive role, and the jury is out on which direction. We have seen some hopeful diplomatic moves in the last 24 hours, but if they start supplying significant material to the Russians, that also could tip the balance in the wrong direction. Would you agree to that?

General CAVOLI. I absolutely agree with that, Senator.

Senator KING. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator King. Senator—I believe Senator Budd.

Senator BUDD. Thank you, Mr. Chairman. Again, thank you both for your service. It is great to have a former deputy commanding General of the 82d Airborne Division before the Committee, so thank you for your service, especially in North Carolina. General Cavoli, I have a few questions I would like to ask about our foreign military sales process.

I have asked these questions, similar questions of other geographic combatant commanders, and I am hoping to finish this up with you. I would appreciate on the first part, just yes or no on each one.

Then at the end, I will have an opportunity for you to expand, if you would. Is the current foreign military sales (FMS) process, is it fast and flexible enough to meet our foreign partners' security needs in your area of responsibility?

General CAVOLI. No, Senator.

Senator BUDD. Does the transfer of U.S. defense articles build our partners' capacity to provide for their own defense?

General CAVOLI. Absolutely, Senator.

Senator BUDD. Does the FMS increase the interoperability between the U.S. military and those countries we sell defense articles to?

General CAVOLI. Absolutely, Senator. It is one of the most important aspects of our foreign military sales.

Senator BUDD. Thank you. Given the outstanding performance of United States defense systems in Ukraine versus the lackluster performance of Russian systems, are you seeing an increase in FMS requests from our European allies and partners?

General CAVOLI. Without a doubt, Senator, there is an enormous appetite around the world for U.S. armaments right now.

Senator BUDD. Thank you. What particular systems are in demand right now?

General CAVOLI. Sir, the ones that have been on display. The HIMARS system, the GMLRS [Guided Multiple Launch Rocket System] rockets, radar systems, the Patriot missile system is in high demand. But I would point out that just about all U.S. armaments are looked upon around the world with great desire. There is great appetite for them.

Senator BUDD. Thank you, General, and from your view, how are these FMS challenges impacting strategic competition with China and Russia on the European continent?

General CAVOLI. Well, sir, in Europe specifically, they don't impact too much because the Chinese and the Russians aren't selling too much war materiel inside Europe. Clearly not to NATO, for example.

In fact, our European allies with our assistance are in the process of divesting their Soviet era stuff. However, as you may know, I used to be the Commander of United States Army Europe and Africa.

In places like Africa, it is very difficult for us to compete if it takes us a long time to deliver a set of Humvees to a nation, but it takes China 6 months to put them on a boat and roll them in there. It gets hard to compete in that regard.

So, speed is, I think, your point, speed in foreign military sales is an essential part of delivering the influence that we seek when we conduct those sells.

Senator BUDD. Thank you, General. General Van Ovost, in North Carolina, we couldn't be more proud of the military ocean terminal, Sunny Point, and I had a chance to visit recently, and the 596 Transportation Brigade, the unit who ever sees it.

In the past, there have been concerns about staffing and funding shortages at Sunny Point and the Nation's other terminals. Can you please provide an update on those issues and what resources, if any, are needed to ensure these critical transportation nodes are prepared to support the Nation's needs?

General VAN OVOST. Thank you, Senator. Thank you for visiting MOTSU [Military Ocean Terminal Sunny Point]. It is a critical ammunition outlook location for America. As we look at both MOTSU, and MOTCO [Military Ocean Terminal Concord] in California, we are working closely with the Army and the Department of Defense

to ensure that they have the resources they need so that we can protect and keep the capabilities there.

As you probably know, infrastructure. I think about that, especially with contested logistics, that there—that those would be a point of interest for our aggressors to try to slow down. From a cyber perspective and infrastructure perspective, the berthing perspective, we want to make sure that they are working well.

The 596, I couldn't be prouder of the work that they have done to support General Cavoli and the outload to Ukraine. That is a really critical point for us. Their readiness, again, when I think about day-to-day readiness and readiness to the future, the number one thing you can do for us to ensure our readiness is to pass an on-time budget, because that cedes both time and money to the enemy.

Senator BUDD. Thank you, General. Chairman, just a question. I didn't see the time reset. Do I have time for one more question? Thank you. General Van Ovost, do you have any concerns about cyber-attacks that could slow down the flow of forces or material in crises or conflict? If so, what is TRANSCOM doing about it?

General VAN OVOST. Senator, cyber is one of the major concerns that we have because we have a large, what we call surface attack area, across the logistics network from end to end.

We are looking very closely at cyber hardening practices, not just in the U.S., not just under Department of Defense systems, but our civilian systems within the defense industrial base, and with our allies and partners. It is critical that we stay focused on that, and we have.

The other thing is our ability to command and control. We must have secure command and control, secure communications, and updated cryptographic materials so that we can maintain a consistent flow of logistics at a time and place of our choosing.

Senator BUDD. Again, thank you both. Chairman.

Chairman REED. Thank you, Senator Budd. Senator Peters, please.

Senator PETERS. Thank you, Mr. Chairman. Thanks to both of you for your service to our country. General Cavoli, nowhere in the world is the power of our alliances clearly more evident than what we are seeing in NATO right now.

Through the National Guard's bureaus State Partnership program, the Michigan National Guard has supported the alliance through our partnership with Latvia for now nearly 30 years.

One of the advantages of these State partnership programs is that it provides NATO an opportunity to utilize CONUS based facilities for training purposes. A complaint that I have heard from other combatant commanders is the lack of suitable training facilities in their AOR, and how that is going to—how oftentimes a complement or complicates partner force training. My question for you is, what is your current capacity for training in your AOR?

Given the renewed focus on our NATO allies, on defense issues, would you benefit from having a CONUS location that could be used for training similar to what the Latvians have been doing in Northern Michigan for many, many years?

General CAVOLI. Thanks, Senator. Again, as I mentioned a couple of moments ago to one of the other members, the State partner-

ship program is just invaluable to us in USEUCOM. I think the other geographic combatant commanders share my opinion.

Inside Europe, we have plenty of training capacity right now for the United States forces as well as for our allies. There is quite a bit in Western Europe of training capacity, training facility capacity, that existed for larger armed forces during the cold war. In our Eastern European allies, however, there are some things that we need to get done.

As you know, Latvia has been building quite a bit, has been improving quite a bit. Throughout the Baltics, it is necessary. It is necessary for a couple of reasons, not just for the host nation, but because in order to reinforce that host nation with NATO forces at a time of need, those forces would need to continue to train in place in the country to maintain the readiness necessary.

All three of our Baltic, as well as our Polish allies, are working hard on their training areas in that regard. Latvia's activities in the United States have been very useful to Latvia. They have other ones throughout Europe, and I think a good mix is a useful thing.

It is a useful thing, especially because it is useful for countries like Latvia to get a chance to go back to the states and to interact with their State partners on their State partner's home ground and see the way our systems work there as well. As a matter of strict capacity, not as necessary, but as a matter of benefit, it has been huge.

Senator PETERS. Great. Thank you. My next question for you, sir, is in your opening statements, you mentioned EUCOM's efforts to conduct activities in the information environment, in cyberspace, and electromagnetic spectrum to counter Russian aggression and other malign activities in Europe.

My question is, as the Joint Force moves toward data centric concepts to synchronize common operation pictures for the Joint Force, are you comfortable with DOD's current platforms for crowd management and the capacity to display an accurate common operations picture for not only our Joint Forces, but for our allies and our partners as well?

General CAVOLI. Thanks for the question, sir. I don't think you would find any of my combatant commander colleagues who is anything but eager for the advances that we are working on inside the Department right now, specifically the JADC2, the joint all domain command and control system, which is intended to link any sensor to the best shooter as quickly as possible.

In my case, being the Commander of European Command, as well as the Allied Command Operations Commander, it is imperative that that JADC2 be combined JADC2 so that we can share it with our allies.

In the allied space, no, sir, I am not satisfied. We have work to do, and I am eager for the efforts of the department to continue to bear fruit.

Senator PETERS. Thank you. General Van Ovost, during your testimony to the House Armed Services Committee and with me in our discussion in my office, you highlighted the ongoing challenges with contested logistics and the task to conduct air refueling missions within that contested and degraded environment.

Given these challenges and persistent threats, how are you working with the services to prioritize and really replicate training scenarios similar to potential threats from China, Russia, North Korea, and Iran?

General VAN OVOST. Thank you, Senator, for that question. Contested logistics is first and foremost in our minds on all of our development, our requirements development, and our exercise development out into the future, especially in things like air refueling, which is my most stressed ability.

We are working to try to first understand ourselves. We are using, what we just talked about here, with JADC2 to understand where our data is, the ITV [in transit visibility], to understand what is going on, what is in motion.

We are beginning to develop predictive analytics, to understand what needs to be moved in a predictive manner so we can marry up our scarce resources with the highest priority, something that we are doing today with Ukraine, being agile enough to change out our priorities.

I think about the exercise, as we lay down the exercise, we are trying to get after those gaps, giving them hard problems to solve, loss of command and control, loss of precision navigation and timing, trying to get understanding of commander's intent all the way down to the tactical echelon.

We are doing this not just in Europe, but across all of the continents, and with heavy, heavy emphasis in the Indo-Pacific.

Senator PETERS. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Peters. Senator Schmitt, please.

Senator SCHMITT. Thank you, Mr. Chairman. In 2014, after Russia moved into Crimea, NATO countries agreed to raise defense spending to at least 2 percent of their GDP by 2024.

Last year, 8 years after that pledge, only 7 of the 30 NATO countries met that goal. Prosperous nations like France and Germany still lag well behind that goal.

I know there has been some discussion about when we are delivering tanks, but we are talking about over the course of that period of time, billions and billions and billions of dollars from NATO countries that seemingly refuse to ante up to protect themselves and Europe.

General, I want to ask you a question. If those additional billions of dollars would have been designated for defense, wouldn't that have gone a long way in deterring Russian aggression?

General CAVOLI. Sir, thanks for the question. You know, first of all, you would have to look pretty far to find somebody who was a bigger advocate than me of all our allies spending 2 percent. In fact, in my confirmation hearings, I made clear that I consider 2 percent to be a floor.

Senator SCHMITT. Right.

General CAVOLI. There are shopping lists that have to be filled out there. There are readiness requirements that have to be filled out. They are going to require money, and I believe 2 percent is a floor, not a ceiling. Where we are right now—so in 2014, we had an average spending of 1.4 percent of GDP, sir, across the alliance.

Now we are at 1.8 percent, which is still short. We have got 10 allies, with the addition of Finland this year. We have got 10 allies who currently spend 2 percent or more. We have got 11 allies who have a credible plan to get there, some of them enshrined in law, to get there by 2024, which was the goal. But that leaves 10.

Senator SCHMITT. Yes, and I just, I have to tell——

General CAVOLI. I encourage them to do——

Senator SCHMITT. Yes, and I know you are in kind of a unique position with your role, but I have to tell you, you know, in the United States, I think it is like 54 percent of the share of the GDP of all those NATO countries, and we provide 70 percent of the funding. I think the American taxpayer is getting a little weary, essentially, of subsidizing these Western democratic socialist states.

When they are not investing in their military to defend their backyard, they are using that money on social programs that we may or may not agree with. But yet the United States continues to have to hold the bag. We are having legitimate questions today about delivery of weapons systems.

But I would argue that if they were actually meeting what they should be doing on their own continent, Russian aggression would have either been deterred or Ukraine would have what they need. I want to ask about one country in particular, France.

President Macron recently visited communist dictator Xi and said that it is not in Europe's interest to strongly support Taiwan and stand allied with the United States. I find this comment, by the way, totally insane.

Do you have a sense that France is on their way to meeting their NATO obligations, this amount of funding? Because that is a pretty bold statement for the president of a country that kind of refuses to live up to their own commitments.

General CAVOLI. Senator, I, of course read the coverage of those comments and everything. I think I will leave commentary on them to my civilian leadership.

Senator SCHMITT. Fair enough.

General CAVOLI. I am a huge advocate of burden sharing, sir, and I believe the plans that we are working in NATO will create the blueprint to get to that.

Senator SCHMITT. Well, that is probably a question more for Secretary Blinken. General Van Ovost, I want to ask you, after the disastrous withdrawal from Afghanistan by President Biden, what was left behind was $48 million worth of ammunition, 80 aircraft, 23,000 Humvees, 250,000 automatic rifles, 95 drones, 42,000 pieces—42,000 pieces of night vision, surveillance, biometric, and positioning equipment.

I mean, this is unbelievable, and of course, you were charged with scrambling and saving over 19,000 people from perhaps one of the most embarrassing moments in American foreign policy history. My question to you is, where did all that equipment go? Where is it? Do we know?

General VAN OVOST. Senator, I am not familiar with where the equipment is, but I can tell you that the Afghanistan retrograde presented a really unprecedented situation. We had a rapidly evolving security deterioration there on the ground, and I am proud

of how the United States servicemembers were able to evacuate and take care of our Afghan citizens.

Senator SCHMITT. No, I agree, and I applaud you for that. In fact, a serviceman from Missouri, Jared Schmitz, lost his life that day. I don't think we talk about it enough. I mean, and I believe this would be bipartisan.

What happened there is inexcusable. I just mentioned the equipment, not the loss of life, to compound all of that. I know you were charged with that, and just finally—well, I am out of time. I just—appreciate what you do, but the idea that we left all of that behind and lost those lives, and there is not a word of it.

In fact, I guess the most recent report was trying to blame a previous Administration and inject politics into this, which was just an abject failure by this Administration and we ought to get to the bottom of it and make sure it never happens again. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Schmitt. Senator Kaine. Excuse me. All right, Senator Rosen. Thank you.

Senator ROSEN. Thank you, Chairman Reed. I appreciate you holding this hearing. I would also like to thank Generals Cavalier and Van Ovost for testifying today, and for your service to our country. We really appreciate you.

General Cavoli, I want to talk a little bit about Ukraine, obviously, with both of you and a potential Ukrainian counteroffensive, because Russia has committed significant manpower and equipment to launch offenses in Ukraine this past winter.

We know that. Their gains have been limited and their losses, we also know, have seemed to be significant. Nonetheless, the defense of these towns has not come without cost to Ukraine.

My colleagues have been asking about sending equipment to Ukraine. Talking about the counter-offensive, you have been speaking about that, and I just want to buildupon that for a moment.

Let's just include drones in the conversation, right. What is your assessment of the use and effectiveness in the Ukrainian conflict of the short-range drones, the one-way attack anti-tank munitions that are being used right now?

Can you also speak to what lessons we have learned about these kinds of weapons for our own force going on in the future and our defense industrial base?

General CAVOLI. Thank you, Senator. That has been one of the most interesting developments in this conflict. It was prefigured a little bit during the Azerbaijan, Armenia war 2 years ago, when Azerbaijan used unmanned aerial vehicles extremely effectively. Both sides are using them very extensively.

Both sides are using surveillance drones, as well as armed drones, as well as one way attack drones. They meet varying degrees of success. They can be shot down. They can be shot down with small arms.

They can be shot down with standard machine guns. They can mostly be shot down with missiles as well. They can also be stopped with electromagnetic interference, and we see that going both ways.

That is providing a very good learning experience for us as we consult with the Ukrainians, and we are incorporating those

through our services and through our commands—we are incorporating those lessons to stay ahead of that EMI [electromagnetic interference], especially.

Some of them have been proven very effective and—as weapons, and some of them have proven pretty effective. We have been in an area of improvement, a cycle with regard to U.S. supplied drones, ma'am.

Senator ROSEN. Well, that is great. I am glad to—see, I like to followup with you on being sure we have enough R&D [research and development] and enough dollars in programs there for public partnerships, wherever that is, with Department of Defense, to expand these UAS [unmanned aircraft system] programs. They are really important.

That leads me into my next question about defense innovation, because in 2021, NATO launched the Defense Innovation Accelerator for the North Atlantic. We call it DIANA. The goal of DIANA is to sharpen our technological edge by working with the private sector to integrate emerging dual use technologies and rapidly scale these innovations, because things are happening right as we speak, right on the battlefield.

Lives are being lost and maybe these can help save that. The U.S. Government doesn't have the authority to contribute to R&D initiatives which received funding from other nations, so we would need to provide specific authority to allow the U.S. to make contributions to NATO DIANA by this October for us to have the opportunity to be a full participant.

General Cavoli, again, would you support Congress providing the authority for us to contribute to DIANA and really be that innovator? Can you speak of the value for us to be part of this group with the entire NATO alliance?

General CAVOLI. As you know, Senator, DIANA is emerging right now. So far, they have got about 54 initiatives that they are working on, but the budget is fairly small. Defense innovation and then procurement is national business for the most part in NATO, but especially for allies without significant defense budget bases, it is useful to collaborate. I think the U.S. collaboration with them is great, and I would advocate such authority, ma'am.

Senator ROSEN. Well, thank you, and I am going to build on that, too, because we know things are happening technologically faster than we can keep up oftentimes.

As the war in Ukraine obviously has progressed, we have seen proliferation of the relatively cheap, easy to use, all the commercial drones that are out there. You can just buy them off—I mean, an internet website, right, for both intelligence, reconnaissance, for surveillance and kinetic missions.

Can you maybe expand on us working again in whatever sectors we can here, public, private, to deliver advanced capabilities using some of these technologies that are emerging in the private sector?

General CAVOLI. Yes, ma'am, absolutely. I would advocate any way for us to innovate quicker and adopt things more quickly. With regard to the commercial drones, they have been very, very present on the battlefield in Ukraine. They tend to have a fairly limited lifespan, however.

It is harder to find commercial drones that are adequately hardened against electromagnetic interference, for example. They have been enormously effective at the lowest levels for squads and things like that, to spot things.

Senator ROSEN. Well, thank you. I appreciate it. We will followup with you on all of these. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Rosen. Senator Kaine, please.

Senator KAINE. Thank you, Mr. Chair, and to each of our witnesses for your service, I so appreciate it. General Cavoli, I want to sort of flag an issue that I don't really want you to answer.

It may be inappropriate. It could be appropriate in the followup session that we will have that will be classified, but here is a concern. In my time on the Committee, and particularly in the last couple of years, I have sometimes been struck by blue skies scenarios being painted that turn out not to be accurate.

A blue-sky case scenario about the capacity of the Afghan security force in the aftermath of the withdrawal turned out to be vastly overstated, and there was somewhat of an overestimation of the likelihood of Russia being dominant in the early days of the Ukraine investigation.

Thank goodness that proved not to be true. In each instance, sort of what we were being told, the capacity of—our intelligence about the capacity of another military turned out to be overstated.

The reason I am just flagging this now in the EUCOM domain is I have been part of three classified briefings about Ukraine one—two, and one in Foreign Relations on January 25th, two in SAS [Senate Armed Services] on February 2d and March 2d, where certain predictions or assessments were made about Ukrainian capacities' potential for the counteroffensive.

When the leaked documents have come out, I have not looked at those documents, but I followed the public accounts of it, a lot of the accounts of the documents suggest internally in the Pentagon, maybe more skepticism than we were being messaged in the meetings that we had.

Again, I don't think the right time is to talk about this now, but I hope during the next session that we have, we may dig into that a little bit because I want to make sure that the assessments being given to this Committee are the best current information so that we are not led to believe one thing, when there may be a lot of folks in the Pentagon thinking something else.

I will leave that there, if I could, but I do think it is something we ought to discuss in the classified setting.

General CAVOLI. I look forward to that, sir.

Senator KAINE. Great. General Van Ovost, I have got a couple for you. In the INDOPACOM, our ability to access logistics support is going to be absolutely critical, and there are some challenges because of distances across water that are not necessarily challenges elsewhere.

How is TRANSCOM considering supporting the Joint Force in a contested logistics environment like the INDOPACOM?

General VAN OVOST. Thank you, Senator. When you think of every day we are postured to operate on a global scale, but our adversaries are growing in their capabilities to disrupt, degrade, or

deny our ability and our freedom of maneuver that we haven't so enjoyed around the globe.

In fact, as I think about European Command, in Europe, we enjoy very robust ground lines of communications and we are able to use essentially all of them, frankly, without impedance. As I think about the Indo-Pacific, we are going to be using more of fast sealift and air than we would be in ground like we are seeing.

We have to change our tactics, techniques, and procedures. We are working with the services on their concepts to ensure that we can integrate and end across the entire deployment distribution enterprise, so we can deliver where and when Admiral Aquilino needs it.

Senator KAINE. Then one other question in that space, global bulk fuel. Again, in the INDOPACOM, that can be particularly challenging. What are you doing to do planning around fuel accessibility to INDOPACOM missions?

General VAN OVOST. Senator, U.S. Transportation Command has been designated the single manager for global bulk fuel in this latest unified command plan that just came out. What we are doing is we are taking a new approach of synchronizing end to end fuel so that we can assuredly deliver where and when we need it in a contested environment.

So, we are taking the very best of what DLA energy does to combine it with what we do for global command and control and prioritization and managing in this new environment. We are relooking in the posture of the fuel in the Pacific. That includes not only the stations, the places we are going to keep it both on land and on the water, as well as how we are going to maneuver fuel around that area.

Let me just to add to that we have robust fuel capability in the European theater, as we did in the Central Command Theater. This is a concern we have right now.

We are getting right after it with our tanker security program, with movement of fuel, and also with our ability to really look and give feasibility assess—a real feasibility assessment on the ability to do that war fight to the INDOPACOM Commander.

I could not do it without your support for the Pacific Deterrence Initiative, which allows us the additional funds to do exercising interoperability, and to lay out the logistics posture that we are going to need in the future.

Senator KAINE. Thank you both very much. I yield back.

Chairman REED. Thank you, Senator Kaine. Senator Duckworth, please.

Senator DUCKWORTH. Thank you. Good morning to our witnesses. General Van Ovost, thank you for your discussion last week highlighting all the great work TRANSCOM is doing at Scott Air Force Base in Illinois.

TRANSCOM is a linchpin of projecting and sustaining the force, key to our strategic deterrent. I also recognize that Joint Force sustainment is a Whole-of-Government and Whole-of-Nation effort.

TRANSCOM must coordinate and balance equities across multiple Government agencies, numerous industry partners, and diverse allies and partners in order to project and sustain combat power.

General Van Ovost, I don't think enough people realize how complex your mission really is and how critical that message is, and how critical the people in TRANSCOM are to tackle their everyday mission.

Can you speak just one example to the efforts that your Command is supporting right now, both at headquarters at Scott Air Force Base and around the world, just to paint a picture of how complex your mission is?

General VAN OVOST. Thank you, ma'am. We have discussed our key priority of supporting a European Command in supporting Ukraine and their defense. But beyond that, we have we have supported down the State Department with Sudan, with the with the support for moving the diplomats out of Sudan in this recent crisis.

We were inside 24 hours of the devastating a series of earthquakes in Turkey. Our ability to launch out within 24 hours, the urban search and rescue teams with the dogs and the cement breaking equipment to get to their rescue, as well as deliver a 100-bed field hospital.

We are doing extensive exercises around the globe in almost every continent to increase the interoperability with our allies and partners, and to ensure access basing and overflight and agreements that is going to keep our freedom maneuver into the future.

We are also, of course, doing the global bulk fuel mission, and of course, I can't forget our families. We are moving 311,000 families a year all around the globe to achieve our mission.

Senator DUCKWORTH. Thank you. Your witness testimoneys both underscore your combatant command's effort to exercise the Joint Force. In EUCOM Exercise Defender Europe 24, General Cavoli and General Van Ovost.

Defender Europe 24 assembled a division level formation on NATO's Eastern flank for the first time since the cold war, and I quote your testimony, "TRANSCOM is regularly wargaming with partners and stakeholders to identify and close operational gaps, to strengthen deterrence, and develop new concepts to prevail."

If both of you could answer this question, can you explain how your combatant commands exercise with each other and other combatant commands? What is the relationship between geographic and functional combatant commands as the Joint Force looks to exercise, experiment, and integrate new tools and capabilities? I know I am very macro today.

General CAVOLI. Thank you, Senator. That is a great question because it gives me an opportunity to talk the moment about TRANSCOM. Geographic combat commands are responsible for delivering military results in a specific AOR.

There are other commands that are in charge of a specific function, usually globally. General Van Ovost oversee obviously does transportation. Everything in USEUCOM depends on the reinforcement that Jackie's forces can provide from CONUS.

It is remarkable. We exercise it literally every day, ma'am, for routine movements, for rotational force movements, as well as for exercises. I said in my opening statement, there is literally nothing in the world like U.S. Transportation Command.

General VAN OVOST. Thanks, ma'am. We are participating in extensive series of exercises across the joint portfolio that allow us to

increase our capabilities to test new concepts, and frankly, old concepts like convoy operations with not only the United States and our allies and partners.

I appreciate the comments from General Cavoli. Functional combatant commanders do bring extensive experience in our specific areas of space, strategic nuclear deterrence, and in transportation, and it is an honor to work with them.

Senator DUCKWORTH. Thank you. General Van Ovost, we had a good conversation about aeromedical evacuations, and I would like to expand on that a little bit, especially as it applies in a contested environment and the vast distances of our Nation's Joint Force that we might be facing in the future, especially in the Indo-Pacific region.

Can you speak to efforts currently underway at U.S. TRANSCOM to bolster the critical aeromedical evacuation capability? Also, what are you doing to provide our wounded servicemembers rapid access to medical care?

Because we talked about maybe they have to go someplace in between, especially when you are in a place like the South Pacific.

General VAN OVOST. Thank you, ma'am. This is a critical question. You know, we performed brilliantly over decades, with the golden——

Senator DUCKWORTH. I know.

General VAN OVOST.—and countless people saved, ma'am, yourself included. But, in a near-peer, a global power contest, we expect high casualty rates. In fact, I expect to be able to have to move the same amount of patients I moved in 2022, the entire year, on a weekly basis.

We have got to do something differently, and here is what we are going to do. We are working with other partner nations to try to understand what capabilities that they have, both in theater and their movement capabilities.

We are working with the services on a multimodal platform to move patients in mass form. We are working on innovative capabilities for patient movement items, and we are also looking at ability to have smaller crews of people work on larger numbers of patients via using wireless and talking to doctors that are on the ground while we are in the air.

We want to bring all of this together to try to reduce the risk. To your point on allies and partners, where there is capacity with allies and partners, we are looking into agreements to try and ensure that they will be able to support us as an interim location until we can get them back to the United States.

Senator DUCKWORTH. Thank you.

Chairman REED. Thank you, Senator Duckworth. Senator Manchin, please.

Senator MANCHIN. Thank you, Senator. Thank you all for your service, everybody here. I appreciate it very much. General Cavoli, I just had the pleasure of being able to go to Ukraine and speak with Zelensky, and I was with Senator Kelly and Senator Murkowski.

It was a great trip. We learned an awful lot about them, and we talked directly to them. Our main concern was transparency. For every dollar that we are sending in, for every bullet that we are

sending, they are making sure it is being accounted for and used properly. That was our biggest concern.

We took it to everybody we talked to in Poland. Also, we went to the staging area in Poland and they told us that after it leaves there, that the tracking is not as good from once they leave it in Poland, put in the theater.

We are trying to work with our Ambassador there, Brink. She has, and with a little bit of help there, some personnel, she will be able to track it much better, but they are staying on top of it. I left very satisfied knowing that we have good grasp, and they, knowing how sensitive this is, because the naysayers that we have, and you have them everywhere to a certain extent, but they are a minority.

I don't want to give them any credence whatsoever or credibility that something happened wrong. We shouldn't be sending equipment, we shouldn't be supporting, and we shouldn't be financing it. How do you feel about that, and you are, I am sure, tracking the same thing.

General CAVOLI. Thank you, Senator, and thank you for your recent trip, and thanks to your staff for sharing your after-action review of your trip. It also was very useful to us. I feel confident that there has not been specific illicit transfer or pilfering of material.

I believe we are aware of one case reported to us by the Ukrainians of a couple of automatic rifles that were attempted to be diverted and those guys have been arrested there. By and large, this is an extremely strong effort that we are putting out.

We recognize how challenging it is. However, a couple of things about the way we do it. When things go to the staging base in Uchanka, Poland there, we inventory all of that at that point.

Senator MANCHIN. Right. I saw the clipboard. I saw those pasties on the board.

General CAVOLI. We ingest it into a computer software system that we have given to the Ukrainians that we maintain access to. So, we can track their tracking of it.

Senator MANCHIN. Where they are putting the equipment.

General CAVOLI. Exactly, and, you know, so it—we track it.

Senator MANCHIN. Let me just say—I know our time is limited. I want to say a couple of things here. I truly believe that we are not telling our story. With the amount of support that we are putting in and all of our allies, there is always going to be a hiccup.

Something is going to go wrong. We haven't built a base of how well we are regulating and staying on top of this and monitoring and the transparency. Zelensky said it once to me in an hour and a half we were there. He said that 10, 15 times. Bring a hundred people and observe what we are doing.

We are happy to share. Do whatever you want, and if you see something wrong, let me know, because we are looking for it, too. We are not telling that from our side of it and it is not being—and I just think that we need to get ahead of this because that way—there is an old saying, tell your story before they tell one on you.

As soon as they see something wrong, they are going to blow it out of proportion. There is so much good support that we are giving him and so much valiant fighting that they are doing, I just don't want to lose that.

General CAVOLI. Thank you for giving me the opportunity to tell part of the story, sir. Our defense attaché office has been diligently going——

Senator MANCHIN. Tell the press—tell your press people to start putting things out. We are happy to work with them. We are happy to coordinate with you all to put out what we saw firsthand, and the confidence we had, I will put a statement out. I am happy to continue that.

General CAVOLI. Thanks, Senator.

Senator MANCHIN. Let me throw this at you, too. I am concerned now about our Baltic allies and Albania, Bulgaria, Croatia, Montenegro, Northern Macedonia, Romania, and Slovenia. They are all kind of tied into this TurkStream, Okay.

The same as the Nord Stream is tied into Europe. They are tied in TurkStream. We know exactly what Putin will do. He used energy as a weapon. Are we doing anything so that they don't get caught in the same thing that our allies did up in Europe?

General CAVOLI. Sir. Thanks. Of course, the closure of Nord Stream and the weaning off of Russian gas through much of Europe has been an incredible success story of the last year. It is not universal, however, as you point out.

Senator MANCHIN. We have got a lot of vulnerability down here and he will have the same playbook.

General CAVOLI. Exactly, sir, it is the exact same playbook. So, we worked with them to wean off it. We are not the lead agency on that. I defer to the Secretary of State or the Department of State for specifics on what exactly they are doing. But we are operationally not dependent——

Senator MANCHIN. Okay. I will reach out to them because being chair—I am chairman of their Energy Committee——

General CAVOLI. Yes, sir.

Senator MANCHIN. We want to do everything we can to basically back them up so they don't get caught exactly like how our European allies did.

General CAVOLI. It strategically would be very welcomed by EUCOM and NATO.

Senator MANCHIN. Can you briefly comment on developments regarding Turkey's relationship with NATO? I just can't believe that here they are holding up the Swedes, Okay. Made it very difficult for the Finns and they are playing footsie with the Russians. It makes no sense to me at all.

General CAVOLI. Sir, clearly there is a lot of policy wrapped in there and I will defer to my civilian leaders on those questions. I would point out, sir, that there is a sharp difference between our military relationships and our other relationships when it comes to some countries.

I was just down in Antakya with the minister of defense in the Turkish charter a couple of days ago, looking at the humanitarian assistance that we have provided through the U.S. and NATO for the earthquake. I would just point out there is a pretty distinct difference between our military relationship——

Senator MANCHIN. Well, they—I am so sorry, Mr. Chairman. But they didn't they acquired the S–400 from the Russians?

General CAVOLI. Oh, yes, sir.

Senator MANCHIN. Canceled the F–35?

General CAVOLI. That is exactly right.

Senator MANCHIN. Yes. So, you are saying I need to take this in a different direction? I got you——

General CAVOLI. The policy issues, sir——

Senator MANCHIN. I got it, sir. I got it. I will too. Thank you both and thank all of you for your service. I appreciate it more than you know.

Chairman REED. Thank you, Senator Manchin. General Cavoli, General Van Ovost, thank you for your testimony. I look forward to the closed session, in which will reconvene at 12:30 p.m. in SVC–217, after the address by the South Korean President, I am sure one of the issues that might come up is the Abrams tank.

I understand that there are some significant issues involving transferring Abrams tanks to any place in the world, one of which I think can be publicly discussed here is that it operates on something closer to jet fuel than diesel, which makes the creation of independent supply lines by the Ukrainians essential to use.

There is also the issue of training, and the fact that our European allies, I believe, just brought thousands of tanks which are more familiar to the Ukrainian forces, which obviates the training issues related to the Abrams tank.

I think all those issues have to be explored in the closed session. I think also, General Van Ovost, a real serious discussion about contested logistics, particularly in the Pacific, would be appropriate. So let me see if there is anything else. No, I believe that—oh, one other point, General Cavoli is that there has been discussion about reevaluating, which you are, our plans for Europe, looking at the depletion of Russian forces.

But I think you are also considering the fact that many of our NATO forces have depleted themselves of equipment, and other factors that have to be included in the evaluation. So, it is not simply looking at Russia and saying, well, they are much weaker now than they were. Is that correct?

General CAVOLI. Absolutely, and it is very difficult to speak about it in open session for operational security reasons.

Chairman REED. I understand. Well, I think we have got a lot to talk about. So, I will adjourn this open hearing and look forward to seeing you at 12:30 p.m. in SVC–217. Thank you.

[Whereupon, at 10:20 a.m., the Committee adjourned.]

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR ANGUS S. KING, JR.

TECHNOLOGY

It's clear to me that we're witnessing the future of warfare in Ukraine. The United States Army, Security Assistance Group-Ukraine, and Ukrainians have harnessed commercial technology and successfully integrated and deployed Artificial Intelligence-powered software on the battlefield.

1. Senator KING. General Cavoli, how much of a role is software playing in the current conflict and what lessons should the U.S. learn about adopting and deploying new technology at a pace required by the warfighter?

General CAVOLI. We are at a turning point in the role of Artificial Intelligence (AI) on the battlefield. The Ukrainian Armed Forces have incorporated new technology and AI applications with impressive speed and agility. They have proven

highly adept in the deployment of AI applications to enhance battlefield intelligence, and to improve the lethality of weapons and tactics used against Russian forces.

AI technology is advancing rapidly; our culture must adapt with equal speed. We must train our workforce to utilize these new tools and increase experimentation to test and refine new technologies alongside Allies and partners in the European theater. Significant investments will be needed in the future to upgrade the digital infrastructure necessary to support and leverage these new capabilities. As demonstrated by the Ukrainian Armed Forces' successes, early adoption, integration and cultural acceptance are all critical components to future success in fielding potentially disruptive new technologies.

QUESTIONS SUBMITTED BY SENATOR ELIZABETH WARREN

FUTURE USE OF UNFUNDED PRIORITIES LISTS (UPLS)

2. Senator WARREN. General Cavoli, do you agree that if funding is needed for a project, it should be a part of the command/service budget?

General CAVOLI. Yes. USEUCOM works with the Department of Defense (DOD) to identify priorities for inclusion into the annual budget process.

3. Senator WARREN. General Cavoli, historically, have previous unfunded priorities list items been included in the following year's base budget? Have Unfunded Priorities Lists items from fiscal year 2023 been included in the fiscal year 2024 base budget? If yes, please provide detail including the requested item, funding amount, and vendor executing the effort. If no, why not?

General CAVOLI. USEUCOM did not submit an unfunded priority list for the fiscal year 2023 budget; instead we thanked Congress for Ukraine Supplemental Funding.

4. Senator WARREN. General Cavoli, do you agree that Federal agencies should be required to work within the confines of base budget process?

General CAVOLI. Yes. However, there are instances where the Administration seeks our advice for supplemental appropriations such as Ukraine Supplemental funding.

5. Senator WARREN. General Cavoli, Secretary of Defense Austin supports legislation that would repeal the requirement for individual leaders to submit unfunded priority lists under 10 U.S.C. 222a. He stated this publicly in a Senate Armed Services Committee hearing on March 28, 2023 and in a letter that Under Secretary Michael J. McCord sent on behalf on Secretary Austin to me on March 20, 2023. Do you plan to continue to submit unfunded priority lists?

General CAVOLI. I intend to comply with the requirements as written in 10 U.S.C. 222a. If the requirements change, I will comply with the new requirements.

6. Senator WARREN. General Cavoli, if you plan to submit unfunded priority lists in the future, why are you doing so despite Secretary of Defense Austin's support for the repeal of these required lists?

General CAVOLI. As directed by 10 U.S.C. 222a, if requirements are identified that the Department is unable to resource within the base budget, I will submit an Unfunded Priority List.

INFORMATION ON UNFUNDED PRIORITIES LISTS

7. Senator WARREN. General Cavoli, what was the cost of putting together this Unfunded Priorities Lists?

General CAVOLI. The cost of creating the fiscal year 2024 list of unfunded priorities was approximately $36,000 in DOD Labor.

For each item on the unfunded priorities list you submit in response to 10 U.S.C. 222a, please provide the following information:

8. Senator WARREN. General Cavoli, please provide a detailed description of the Unfunded Priorities Lists.

General CAVOLI. European Communications Infrastructure (ECI) funds the modernization of communications infrastructure and facilities at United States Air Forces Europe (USAFE) air bases that eroded over the last two decades. Total fiscal year 2024 request: $81.24 million.

Air Base Air Defense (ABAD) funds require capabilities to defend USEUCOM's air bases from air and missile threats with a scalable, deployable, and readily transferable system. Total fiscal year 2024 request: $78.27 million.

9. Senator WARREN. General Cavoli, what does the Unfunded Priorities Lists purchase?

General CAVOLI. (ECI) If funded, ECI would modernize communications infrastructure at USAFE air bases throughout the USEUCOM theater, in order to reduce single points of failure at Technical Control Facilities (TCF) and Point of Presence (POP) facilities. Communications fiber infrastructure requires significant upgrades to support operational needs at both Main Operating Bases (MOBs) and Geographically Separated Units (GSUs). Many of USAFE's MOBs and GSUs are unable to fully support communications requirements and suffer from severe network outages, lack of bandwidth, and periodic degradation of network services. Funds would procure fiber optic cables, routers, switches, firewalls, and uninterruptable power supplies. Additionally, ECI funds would specifically purchase Secret Internet Protocol Router Network (SIPR) Service Delivery Point servers, terminal application processing systems, Non-Classified Internet Protocol Router Network (NIPR) delivery point servers, high speed data transfer capabilities, and data center connection redundancy.

(ABAD) Additional funding for ABAD would be leveraged to enhance close-in protection for aircraft and personnel operating in bases throughout Europe. This funding would purchase multi-mode radars similar to those currently used in the National Capital Region (NCR), and operator consoles with communication and data packages. These systems enable defense of critical infrastructure, and U.S. Forces. All equipment and software is Technology Readiness Level 9 and is ready to purchase off the shelf.

10. Senator WARREN. General Cavoli, please include detail on all end items with quantities, contractor Full Time Equivalent, etc.

General CAVOLI.

ECI	Description	Cost of Equipment	Appropriation ($K)	Total Cost ($M)
Upgrade Technical Control Facilities Bandwidth (5 sites) **Cost per site is $4.623M:** **Incirlik, Turkey** **Ankara, Turkey** **Moron, Spain** **Sigonella, Italy** **Rota, Spain**	Upgrading antiquated technical control facilities with fiber inside and outside the plant, uninterruptible power sources, switches, routers, and data encryption hardware to handle increased bandwidth to mitigate latency issues. This requires power upgrades to the facility as well as increased heating, ventilation, and air conditioning (HVAC) power to keep the systems at the required temperature. Current facilities overheat, resulting in equipment damage. The HVAC and power system is a critical limiting factor (LIMFAC) throughout the theater and continues to negatively impact our ability to meet communications requirements for increased mission sets.	Fiber: $1.0M per site x 5 = $5M Cooling upgrade: $1.1M per site x 5 = $5.5M Power upgrade: $985K per site x 5 = $4.925M Switches: $12K x 5 = $60K Routers: $24K x 5 = $120K Uninterruptible Power Sources: $1.5M x 5 = $7.5M	3080: $12,500 3400: $10,615	$23.115
eLMR Modernization	Modernize Enterprise Land Mobile Radio (eLMR) systems that support flight line operations, first responders, and air base defense. Upgrading switches and routers that connect 18 sites to enterprise LMR assets throughout the theater. **Sites:** Ramstein 15 switches and 2 routers; Spangdahlem 7 switches and 2 routers; Aviano 7 switches and 2 routers; Incirlik 9 switches, 2 routers; Moron 7 switches, 2 routers; Lakenheath 10 switches and 2 routers; Mildenhall 7 switches 2 routers; Croughton 4 switches 2 routers; Wellford 1 switch; Fairford 1 switch, 2 routers; Alconbury 3 switches; Molesworth 3 switches 2 routers; Feltwell 1 switch; Lajes 5 switches 2 routers	Switches: 81 x $12K = $972K Routers: 22 x $24K = $528K	3080: $1,500	$1.5

ECI	Description	Cost of Equipment	Appropriation ($K)	Total Cost ($M)
Secondary boundary upgrades: **Alconbury and Molesworth $1.1M** **Akrotiri $532K** **Aviano $2.5M** **Croughton $1.6M** **Incirlik $1.6M** **Lajes $1.6M** **Lakenheath $2.9M** **Mildenhall $1.9M** **Moron $532K** **Ramstein $1.7M** **Spangdahlem $1.9M**	Address secondary or backup base boundaries at all MOBs and GSUs on NIPRNet and SIPRNet: Servers for firewall, console switches, routers, cyber security boundary monitoring.	SIPR Service Delivery Point Servers 12 x $217.7K ≈ $2.6M SIPR Terminal Apps Processing System 12 x $146.7K ≈ $1.8M NIPR Service Delivery Point Servers 18 x $390.7K ≈ $7.0M C9500 Switch 8 x $111.4K = $891.2K C9300 Switch 16 x $11.8K ≈ $189K Firewall 15 x $23.6K = $354K Fiber Optic Readers 31 x $116.7K ≈ $3.6M Console Switch 326 x $7.4K ≈ $2.4M Dual AC Power Supply 38 x $5K = $190K	3080: $18,843 3400: $190	$19.02
Commercial Solutions for Classified at three locations: Ramstein Aviano Lakenheath	Purchase and install NSA's Commercial Solutions for Classified program including the Mobile Access Capability Package. Provides a secure, mobile, multi-classification capability to support three sites in the European theater. This capability allows end users to have one device that runs NIPR, SIPR, Air Control Battle Network and Battlefield Information Collection and Exploitation System. Expands current usage from 250 users to 5,000 per enclave to allow interoperability and communication with our Allies and partners. The end-state solution provides mobile access for maximum flexibility for Eastern Flank operations, as well as continuity of operations (COOP) for contingencies supporting the Air Operations Center.	Commercial Solutions Software $2.156M per site x 3 ≈ $6.5M Remote access to multiple networks $2.292M x 3 sites ≈ $6.9M High Speed Data Transfer Capability $562.4K Connect all three data centers together for redundancy $400K End User system upgrade $2.0M per site x 3 = $6.0M Installation $1.461M Annual sustainment costs $210K	3400: $22,033	$22.03
Deployable Air Base System (DABS) **Communications Support**	Extends base networks to DABS facilities	NIPR Service Delivery Point Servers 8 x $390.7K ≈ $3.1M C9300 Switch 8 x $11.8K ≈ $94K Firewall 8 x $23.6K ≈ $189K Fiber Optic Readers 8 x $116.7K ≈ $934K Console Switch 32 x $7.4K ≈ $237K Dual AC Power Supply 16 x $5K = $80K	3080: $4,660	$4.66

ECI	Description	Cost of Equipment	Appropriation ($K)	Total Cost ($M)
Tactical to Enduring Standard Communications Package (3 Sites): Campia Turzi, Lask, and Grafenwohr	Standardized communications package including primary and alternate terrestrial circuits, manhole distribution system, base fiber ring, and wiring. Operations and Maintenance Costs	Network Sustainment, Contractors, Flight Plan Service	Network Sustainment 1 x $1.05M = $1.05M Flight Plan Service 20 x $0.3M = $1.2M Contractor Support (25) 25 x $0.4M = $9.55M	3400: $11,800K	$11.80

11. Senator WARREN. General Cavoli, what specific capability will the Unfunded Priorities Lists provide?

General CAVOLI. (ECI) ECI will enable Forward Operating Locations (FOLs) to reliably communicate with supporting forces, command structures, as well as Ally and partner forces. ECI will also enhance infrastructure resiliency at Main Operating Bases (MOBs), while providing forward deployed forces reach-back support through resilient and survivable communications services.

(ABAD) The ABAD system will provide active defense and enhance the passive defense of fixed and deployed assets in theater to discourage and deter future attacks. Strategic guidance and threat assessments available at higher classification levels document the operational imperative to develop and/or acquire ABAD capabilities. ABAD is intended to protect bases and critical infrastructure in order to project combat power and minimize risk to Joint Force Commanders.

12. Senator WARREN. General Cavoli, what gap will this fill that is not in the base budget?

General CAVOLI. (ECI) Our ECI funding request is intended to help build a more robust, resilient, and survivable Command, Control, Communications, Computers, and Intelligence (C4I) System in the USEUCOM theater. This C4I investment would build greater domain awareness and enable agile combat coordination. ECI's multi-domain critical infrastructure network provides ISR and C2 mission assurance for weapon systems and OPLAN execution, enables Combined Joint All-Domain Command and Control (CJADC2) and Agile Combat Employment (ACE) to support USEUCOM operations and NATO Allies and partners' interoperability.

(ABAD) Funding this submission contributes to the air base air defense capability gap. USEUCOM's air bases have limited options to identify and eliminate air and missile attack threats, which pose significant operational risk. They require advance warning to implement their resource-limited dispersal plans. Critical missions such as air superiority, global strike, ISR, rapid global mobility, and C2 will be impeded at USEUCOM bases that lack the ability to defend themselves against adversary aircraft, missile, and unmanned aerial systems.

13. Senator WARREN. General Cavoli, how will this capability support objectives outlined in current National Security, Military, and Defense Strategy documents?

General CAVOLI. My unfunded priorities are firmly nested within the National Security (NSS), National Defense (NDS), and National Military (NMS) strategies, and directly support the NDS's priorities to deter strategic attacks and aggression.

(ECI) ECI supports the NSS's objective to provide a tailored deterrence approach to mitigate the risk of strategic attacks. ECI will reduce risk by increasing our ability to seamlessly integrate Joint, Alliance, and partner Command and Control (C2) architectures into our networks. It will deter aggression through the development of increased C2 resiliency, which undermines Russia's ability to achieve their objectives through coordinated Joint, Allied, and partner action. It will also improve the C2 infrastructure required to support and expand intelligence capabilities that provide decisive information and decision advantage to the U.S., Ally, and partner leadership. This contributes to integrated deterrence, both within the Department and alongside our Allies.

Additionally, ECI directly supports the NDS's objective to build a more resilient Joint Force. ECI addresses one of the key operational problems, Command, Control, Communications, and Computers systems with a diverse and resilient C2 capability. This effort will help to build agile, resilient, and survivable Command, Control, Communications, and Computers, Intelligence, Surveillance, and Reconnaissance architecture that supports the Alliance and Joint Force.

(ABAD) ABAD supports the NDS's priority to deter strategic attacks, protect forces, and integrate with Allies and partners. ABAD provides defense of air operations, ensuring USEUCOM will be able to withstand, fight through, and recover from disruption to air operations. Cooperation with Allies and partners will enhance our collective integrated air and missile defense efforts. Such cooperation strengthens our collective efforts to increase protection from regional missile threats, coercion, and potential attacks.

ABAD also helps to deter Russian aggression through the improvement of our ability to project, generate, and sustain combat power. This capability introduces uncertainty and risk to the adversary's decision calculus, adds resilience to the Joint Force, and better prepares our forces to prevail in conflict.

If funded, both of these capabilities will contribute greatly to the safety of the Homeland, United States troops stationed in Europe, and our NATO Allies and partners.

14. Senator WARREN. General Cavoli, what is the operational requirement? How does this Unfunded Priorities Lists support current or future operations?

General CAVOLI. ECI enables Forward Operating Locations to reliably communicate with supporting forces, command structures, as well as Allies and partners. It will also enhance infrastructure resiliency at Main Operating Bases, while providing forward deployed forces reach back support through resilient and survivable

services. Most of USAFE's MOBs and GSUs currently support Eastern Flank operations. This funding request is intended to address single points of failure and facility issues to avoid major IT outages that could potentially affect current operations.

ABAD was identified in the 2022 Chief of Staff of the Air Force's Strategic Requirements Document, to protect critical mission capabilities and infrastructure from growing air and missile threats. This requirement is intended to improve our ability to project, generate, and sustain combat power in contested environments. This unfunded priority list submission provides an organic, self-defense capability for U.S. airbases now, while simultaneously baselining a model for future employment. Establishing a baseline base defense capability will hasten the development of airspace control de-confliction and coordination processes between U.S. base defense authorities and their respective NATO host nation civilian authorities.

15. Senator WARREN. General Cavoli, what is the operational impact if this Unfunded Priorities Lists is not funded in fiscal year 2024?

General CAVOLI. (ECI) Our current communications infrastructure provides insufficient support to permanent and rotational forces supporting NATO operations. Without near term action to improve the resiliency of USEUCOM's aging and inadequate network infrastructure, reliable C2 operations and air superiority will remain at risk. Ultimately, this translates into greater risk to both force and mission throughout the spectrum of conflict.

(ABAD) Without adequate resourcing, USAFE operations, infrastructure, personnel, and C2 will remain vulnerable to theater missile and air attacks. USEUCOM air bases have limited options to mitigate the strategic air and missile attack threat, requiring advance warning to implement resource-limited dispersal plans, retaining significant operational risk and reduced capability and flexibility.

16. Senator WARREN. General Cavoli, are there plans to include this item in the fiscal year 2025 base budget?

General CAVOLI. (ECI) Project completion and sustainment funding will be pursued in the fiscal year 2025 budget.

(ABAD) While funding to address the ABAD shortfall is being pursued, it is not included in the USAF fiscal year 2025 POM at this time.

17. Senator WARREN. General Cavoli, why was this Unfunded Priorities Lists not included in the fiscal year 2024 President's Budget submission?

General CAVOLI. Both requirements were submitted to the Department of the Air Force, and considered by OSD CAPE, but ultimately fell below the funding cut line.

18. Senator WARREN. General Cavoli, what is the name of the vendor(s) executing this effort? Sub-vendor(s)?

General CAVOLI. (ECI) All hardware, services, and support purchased via contract will use full and open competition. USAFE expects multiple vendors to be involved. Many MOBs and GSUs require local vendors or contractors to accomplish outside plant work, which will have to be taken into consideration. Examples of vendors that would be used include Defense Infrastructure Organization (for UK sites), Huntington Ingalls Industries, Defense Logistics Agency, and General Services Administration. Some work may be accomplished using organic (active duty or National Guard) resources or support from the Defense Information Systems Agency.

(ABAD) Commercial vendors include Parsons using existing USAFE Indefinite Delivery, Indefinite Quantity (IDIQ), and sub-vendors Raytheon, Trident Corp, and Mercury Solutions.

In academia, MIT Lincoln Labs contributes via federally Funded Research and Development Centers.

Within Government, the Army Aviation and Missile Command, Air Force Research Lab Strategic Development Planning and Experimentation, and NORAD-USNORTHCOM also contribute.

19. Senator WARREN. General Cavoli, how often has your command met with the vendor executing this effort? Please provide a list of all such meetings, and the agenda for these meetings?

General CAVOLI. (ECI) USAFE A6 has cost estimates that were accomplished for various sites by multiple vendors. There are a variety of meetings to track these critical funding requirements, including monthly project management reviews and cross organizational synchs with multiple stakeholders.

(ABAD) USAFE has a day-to-day relationship with the prime vendor due to the existing IDIQ. Meetings with other industry, academia, and Government vendors occur at least weekly as USAFE develops it's first-ever Ground Based Air Defense-Self-Defense Capability.

20. Senator WARREN. General Cavoli, what is your history with this vendor? Please detail when the relationship began, the number of contracts applied for by this vendor, the number of contracts awarded to this vendor, and if you have had a personal relationship with the vendor.

General CAVOLI. I do not have a personal relationship with the vendors. The United States Air Force manages the contracts and maintains relationships with vendors that could execute, or are currently executing those projects.

(ECI) USAFE representatives manage contracts with the vendors listed above and have used their services to support many of the Eastern Flank site stand up efforts.

(ABAD) The USAF representative overseeing the contract is Ms. Nancy Andrews, Program Executive Officer for Combat and Mission Support, Office of the Assistant Secretary of the Air Force for Acquisition. IDIQ is with Parsons (Prime) and a team of sub-contractors (see #18). This contract began in late 2021 and continues for the next 7 years.

21. Senator WARREN. General Cavoli, has anyone who formerly worked for your command represented the vendor in meetings? What is their name, what was their position, and when did you meet with them?

General CAVOLI. No former employees have formally represented any vendors at meetings or other forums. Furthermore, contracting procedures require us to identify and avoid potential conflicts of interest.

22. Senator WARREN. General Cavoli, in which city/State will the Unfunded Priorities Lists be executed?

General CAVOLI. (ECI) All locations for support are located in USEUCOM's theater, to inlude: Ramstein AB, Germany; Aviano AB, Italy; Spangdahlem AB, Germany; Incirlik AB, Turkey; RAF Lakenheath, UK; RAF Mildenhall, UK; and associated geographically separated units.

(ABAD) Rhineland Palatinate, Germany is the site of final system assembly, integration and installation related to this unfunded priority. However, procurement of the primary systems come from Fullerton, California; Fulton, Maryland; Huntsville, Alabama; Panama City, Florida, and a variety of other nationwide locations hosting Industry and Government.

23. Senator WARREN. General Cavoli, is this requirement on an existing contract? If so, with who? What is the history of the contract?

General CAVOLI. (ECI) Depending on the commodity or service, USAFE has numerous options for contract support.

(ABAD) Yes, USEUCOM would use the existing IDIQ contract for USAFE, specifically for this purpose. Oversight for this IDIQ is provided by Ms. Nancy Andrews, Program Executive Officer for Combat and Mission Support, Office of the Assistant Secretary of the Air Force for Acquisition. The IDIQ is with Parsons (Prime) and a team of sub-contractors. This contract began in late 2021 and continues for the next 7 years.

24. Senator WARREN. General Cavoli, what is the anticipated contract award date if the Unfunded Priorities Lists receives funding?

General CAVOLI. (ECI) Contract award date would be approximately 90–120 days following receipt of funding.

(ABAD) Contract award date would be approximately 90 to 120 days following receipt of funding.

25. Senator WARREN. General Cavoli, what funding lines are associated with this Unfunded Priorities Lists?

General CAVOLI.

(ECI)

Appropriation (APPN)	Line Item (LI)	Program Element (PE)	Sub-Activity Group (SAG)
Other Procurement, Air Force (3080F)	54	0303055F	011Z
Operations & Maintenance, Air Force (3400F)	090	0303055F	011Z

(ABAD)

Appropriation (APPN)	Line Item (LI)	Program Element (PE)	Sub-Activity Group (SAG)
Other Procurement, Air Force (3080F)	34	0207522F	012C
Operations & Maintenance, Air Force (3400F)	110	0207522F	012C

26. Senator WARREN. General Cavoli, if multiple appropriations fund this requirement, must all appropriations be funded simultaneously to source this requirement, or can each appropriation stand on its own to fund a portion of the requirement?

General CAVOLI. (ECI) Each sub-project we have identified above must be completed simultaneously, for example the Tech Control Facility should be funded simultaneously (e.g., Other Procurement, USAF, 3080: $12,500K; Operations & Maintenance, USAF, 3400: $10,615K) because of dependencies in the project. However, separate projects can stand on their own.

(ABAD) This project requires the appropriations to be funded simultaneously.

27. Senator WARREN. General Cavoli, how much was enacted and obligated (or expended for Research, Development, Test, & Evaluations) in fiscal year 2022 to 2023 for this requirement?

General CAVOLI. (ECI) In fiscal year 2022, $3.409 million was enacted and obligated in the Ukraine Supplemental funding to address equipment requirements supporting Forward Operating Locations. An additional $48.405 million was enacted and obligated in Ukraine Supplemental funding during fiscal year 2023 for modernization efforts that addressed ECI requirements.

(ABAD) USAFE realigned and obligated $31.45 million (3400F) and $27.78 million (3080F) from within the fiscal year 2022 and fiscal year 2023 budgets to initially design and conduct risk-reduction work to prepare for a full-up ABAD capability.

28. Senator WARREN. General Cavoli, how much was requested in fiscal year 2024 for this requirement?

General CAVOLI. ECI total fiscal year 2024 request: $81.24 million.

ABAD total fiscal year 2024 request: $78.27 million.

29. Senator WARREN. General Cavoli, is there a tail associated with this Unfunded Priorities Lists?

General CAVOLI. (ECI) Yes, the tail associated with this UPL is $3 million per year in operations and maintenance, Air Force costs.

(ABAD) Yes, to operate and maintain the systems USAFE is anticipating a $10.5 million annual sustainment tail.

30. Senator WARREN. General Cavoli, is any tail funded in the future years defense plan?

General CAVOLI. (ECI) No, the $3 million tail funding has not been funded in the future years defense plan, but will be addressed from within existing funds enacted for theater Air Force communications capability sustainment.

(ABAD) No, the $10.5 million annual sustainment tail is not funded in the future year's defense plan.

31. Senator WARREN. General Cavoli, please describe how much the requirement will cost per year for the next 5 years.

General CAVOLI. (ECI) In addition to the total fiscal year 2024 request of $81.24 million, an additional $12 million is required to sustain the project out to fiscal year 2028 for a total cost of $93.24 million.

(ABAD) In addition to the total fiscal year 2024 request of $78.27 million, an additional $42 million is required to sustain the project out to fiscal year 2028, for a total cost of $120.27 million.

32. Senator WARREN. General Cavoli, please provide in detail the previous funding requests and enacted for this requirement, including if it was in the base budget or Unfunded Priorities Lists.

General CAVOLI. (ECI) fiscal year 2022 NDAA included authorization for $55 million in response to a USEUCOM UPL for modernizing IT infrastructure, but was not appropriated.

Fiscal Year 2022 Shortfall ($K)	Appropriation (APPN)	Line Item (LI)	Program Element (PE)	Sub-Activity Group (SAG)
$55,000	3080F	07–837300	303055F	011Z

(ABAD) No previous requests to fund this requirement were accepted or included in the base budget.

33. Senator WARREN. General Cavoli, if the requirement is not included in the future years defense plan, will that be rectified in the next Program Objective Memorandum or the Program, Planning, Budget, and Execution (PPBE) cycle?

General CAVOLI. (ECI) Yes, the USAF fiscal year 2025 to fiscal year 2029 POM includes funding to address this effort by fiscal year 2029.

(ABAD) No, the USAF fiscal year 2025 to fiscal year 2029 POM does not include funding to address and sustain this effort.

34. Senator WARREN. General Cavoli, please provide photos of this requirement for visual aid.

General CAVOLI.

(ECI)

(ABAD)

EUROPEAN DETERRENCE INITIATIVE

35. Senator WARREN. General Cavoli, the Department of Defense finally submitted the previous reports on European Deterrence Initiative (EDI) required by Section 1243 of the Fiscal Year 2020 National Defense Authorization Act. Has United States Europe Command submitted the information necessary to project the future years plan on European Deterrence Initiative activities and resources for the fiscal year 2024 budget request as required under the Fiscal Year 2020 National Defense Authorization Act?

General CAVOLI. Yes.

36. Senator WARREN. General Cavoli, what does United States European Command project to be future spending in European Deterrence Iniative over the next 5 years given the ongoing conflict in Ukraine?

General CAVOLI. We currently project EDI associated funding to be:

Fiscal Year 2024: $3.6 billion
Fiscal Year 2025: $3.4 billion
Fiscal Year 2026: $3.4 billion
Fiscal Year 2027: $3.3 billion
Fiscal Year 2028: $3.3 billion

Additionally, future spending in the EDI should remain flexible and adaptable to accommodate potential changes in the security landscape. The conflict in Ukraine is dynamic, and new developments will arise over the next 5 years that could require adjustments in resource allocation. We will continue to conduct robust assessments and reviews to ensure that funding aligns with the evolving security needs across EDI's five lines of effort. It is important to note that this appears to be an enduring problem that will not be resolved in the near term.

QUESTIONS SUBMITTED BY SENATOR JOE MANCHIN III

UKRAINE CODEL

37. Senator MANCHIN. General Cavoli, based purely on your military experience and advice, are you satisfied that Ukraine is a good steward of the equipment and funding that United States taxpayers are providing to them?

General CAVOLI. Ukraine continues to demonstrate their commitment to effectively and responsibly employ United States-provided security assistance to counter Russian aggression. Equipment and donated materiel are monitored with the best in-transit visibility available, utilizing numerous systems, data bases, coordination cells, and auditing backstops. In light of this robust monitoring regime, we have not seen any credible evidence that would suggest the diversion of United States-provided weapons from Ukraine.

38. Senator MANCHIN. General Cavoli, based off of Putin's thirty-year history of destabilizing Russia to put himself in power then using the same tactics in Crimea, Georgia, Moldova, Syria, and Libya, what risk does Putin pose to our allies and the United States directly if we allow him to succeed in Ukraine?

General CAVOLI. Putin has had clear geo-political objectives for the past 30 years—to reassert a Russian sphere of influence in the former Soviet space and re-establish itself as a world power. Russia's success in Ukraine could embolden Putin to exert increased pressure on Russia's periphery and over its claimed sphere of influence, including our NATO Allies and partners in the Baltic and Black Seas. If left unchecked, Putin's long process of annexation could continue to create a series of frozen conflicts—to include vulnerable NATO Allies—that would continue to undermine Euro-Atlantic and global security. This includes interference in democratic processes, political and economic coercion, widespread disinformation campaigns, malicious cyber activities, use of paramilitary and private military contractors to exert hard military power across the periphery and abroad, and continued illegal and disruptive activities of Russian intelligence services. Domestically in Russia, a victory in Ukraine will justify and normalize the militarization of Russian society that will outlive Putin, ensuring Russia retains sufficient military will and capability to pose a near, mid-, and long-term threat to the Alliance.

SMALL MODULAR REACTORS IN CONTESTED LOGISTICS

39. Senator MANCHIN. General Van Ovost, are you familiar with this program and the benefits it offers to our fuel logistics and resiliency in the Pacific?

General VAN OVOST. We are aware of the Small Modular Reactor program and continue to monitor progression through the Joint Capabilities Integration and Development System (JCIDS) process, specifically the work of the Logistics Functional Capability Board (LOG FCB) led by the Joint Staff J4. While the capability has great implications for how the Joint Force may operate in the future, its implications on bulk fuel requirements, which remains the near-term primary fuel source for combat power, are not as well understood. My new Global Bulk Fuel Management and Delivery team will remain linked with the LOG FCB as Project Pele matures to ensure we are ready to leverage this capability if/when it becomes viable.

40. Senator MANCHIN. General Van Ovost, if not, could I get your commitment to receive a briefing from the Program Manager that oversees Pele [Pay-Lay]? We'll ensure your staff are directly connected with him.

General VAN OVOST. As mentioned previously, we are aware of Project Pele and continue to monitor its development primarily through the efforts of the Joint Staff J4-led LOG FCB. No briefing is required at this time, however we will not hesitate to request additional information if/when it becomes a mature capability.

ENERGY SECURITY IN EUROPE

41. Senator MANCHIN. General Cavoli, do you share my concerns with our Balkan allies, and how can European Command get out ahead of them?

General CAVOLI. I share your concerns. Many of our Balkan Allies are dependent on Russian sourced fossil fuels. Energy security should be viewed in the larger context of moving our partners and Allies away from Russian and Chinese influence and toward EU and Atlantic integration. We have recently seen some encouraging signs of our Balkan Allies moving away from energy dependence on Russia. For example, Croatia has developed a liquefied natural gas terminal in Krk. This terminal has the potential to supply Croatia's natural gas requirements and serve the southeast Europe region. USEUCOM will continue to encourage our Allies in the region to diversify their energy sources.

DELAYED BUDGETS AND CONTINUING RESOLUTIONS

42. Senator MANCHIN. General Cavoli and General Van Ovost, can I have each of your commitments to get Congress as accurate an estimate as possible on the financial impact previous and future Continuing Resolutions have on the Department of Defense?

General CAVOLI. Yes, you have my commitment.

General VAN OVOST. USTRANSCOM has three primary funding sources, the Transportation Working Capital Fund (TWCF), Operation and Maintenance (O&M), and Research, Development, Test, and Evaluation (RDT&E).

TWCF—Continuing Resolutions (CRs) have minimal direct impact on TWCF funded operations if cash is maintained within established thresholds. The longer the CR, the greater potential for cash to diminish when customers are unable to pay bills.

O&M—The Joint Enabling Capabilities Command (JECC) and USTRANSCOM O&M programs will have sufficient funding to operate in the event of a CR.

RDT&E—CRs have significantly impacted RDT&E programs. Although existing projects receive sufficient funding to continue during a CR, new starts, which are approximately 25 percent of the annual innovation program, would be delayed. The late receipt of funding hinders our ability to meet obligation and expense goals. The perceived under execution translates to an out-year top line reduction. Since 2020, USTRANSCOM has been taxed $15+M for under execution directly related to CRs. This jeopardizes our ability to collaboratively pursue contested logistics technology innovation with the Services, Combatant Commands, OSD, Joint Staff, DLA, other government agencies, industry, and academia.

QUESTIONS SUBMITTED BY SENATOR MARK KELLY

LONG TERM UKRAINE STRATEGY

43. Senator KELLY. General Cavoli, I understand that some of the equipment we would like to provide Ukraine right now comes with a lot of training and a big sustainment tail. But I also think we need to be looking at the long game, in addition to providing Ukraine what they need to win the war as soon as possible. Long-term planning doesn't happen all at once. It needs to start now. What type of equipment do we need to be looking at long-term for Ukraine as the battlefield dynamics change? Does it differ from the more immediate needs?

General CAVOLI. We remain committed to both supporting Ukraine's urgent needs and increasing their combat capabilities over the long-term. Specifically, USEUCOM supports DOD efforts to transition Ukraine toward a western-style military with advanced and NATO-interoperable equipment. I am thankful for the supplemental funding already provided by Congress to enable our progress toward this goal. Ukraine will need a combination of legacy and Western-provided equipment in the short to midterm. However, the types of equipment Ukraine requires now for ongoing combat operations are often the same type of equipment that will make the Ukrainian Armed Forces successful in the future. Of particular importance, air defense systems and interceptors will continue to be a high priority to protect civilian populations and infrastructure, while contributing to the security required to encourage economic recovery after the cessation of hostilities.

44. Senator KELLY. General Cavoli, what type of force do we need to start planning for now from a long-term deterrence perspective?

General CAVOLI. Ukraine's long term force requirements will depend in large measure on the outcome of the current counteroffensive, intended to expel Russian forces and restore Ukraine's territorial integrity. Assuming these efforts are successful, Ukraine will require an advanced, multi-domain force of sufficient size and capability to deter and, if necessary, respond decisively to future Russian aggression.

EXERCISE LESSONS LEARNED

45. Senator KELLY. General Cavoli and General Van Ovost, the Joint Force is doing a great job with large-scale exercises worldwide. I'm eager to hear the readout from DEFENDER 23 in United States European Command as it concludes. United States Indo-Pacific Command has a number of joint and multi-national exercises throughout the year. It's a great time to deepen our partnerships, practice the way we will fight, and prepare for an exceedingly complex wartime environment. We've seen through the Russia-Ukraine conflict the importance of logistics in war. Additionally, with advanced long-range weapons, the risk of cyber-attacks, and a complex electronic warfare environment, it's more important than ever to closely evaluate and practice contested logistics. What are these exercises highlighting about any logistics or supply chain challenges we have?

General CAVOLI. The DEFENDER 23 series highlighted the need for USEUCOM to continue its close coordination with our Allies and partners to expand the throughput capacity of ports, roads, railways, and airfields in the European theater. We will also work together to further develop the assembly areas needed to conduct large-scale reception, staging, onward-movement, and integration operations. Finally, the DEFENDER 23 series experimented with the use of non-standard ports in an effort to diversify and provide options to succeed in a contested logistics environment. Our integration with Allies and partners during these exercises have enabled us to leverage their expertise to mitigate many of these challenges in their respective operating areas.

General VAN OVOST. The challenges we confront from today's complex wartime environment include the fact logistics support to global operations may be at risk from the Homeland to the destination. Exercises, conducted with the other Combatant Commands, other U.S. Government departments and agencies, along with our commercial partners and allied nations when appropriate, enable us to gain a deeper understanding of these challenges so we are better prepared to face them. The exercises also highlight that we must continue to recapitalize organic mobility capabilities and modernize the Joint Deployment and Distribution Enterprise (JDDE) in order for the DOD to maintain asymmetric advantages and deliver on our national security requirements.

46. Senator KELLY. General Cavoli and General Van Ovost, what are these exercises telling us about how well we operating jointly, and what areas do you think we're doing the best, and what can we improve on?

General CAVOLI. Although we could always use more inter-theater strategic lift, USEUCOM planners do a tremendous job of coordinating closely with subject matter experts from USTRANSCOM to move approximately 3,000 and 5,000 troops into and out of theater every year in support of the Defender series of exercises. One area for future improvement is in Joint Force planning for port and airfield openings in a contested European theater. Once those details are included in future exercise plans, we will need to exercise these activities across the Joint Force and with allies and partners. At the tactical level, we will continue to improve our integration of naval surface fires into our ground force schemes of maneuver during the Defender series.

General VAN OVOST. Exercises validate that today's Joint Force is integrated and effective, however they also show us how to further improve globally integrated operations. We can no longer presume the JDDE will have complete freedom of maneuver with full access to our lines of communication on the ground, in the air, at sea, and in space. The Joint Staff is enabling Combatant Command understanding of the global war fight challenges through the Globally Integrated Exercise (GIE) series, Globally Integrated Wargame (GIWG) series, and the Advancing Globally Integrated Logistics Effort (AGILE) series. The Joint Staff has recently proposed a single exercise event, supported by multiple Combatant Commands, to explore global integration within a realistic and relevant global logistics problem set. Recognizing the logistics operating environment extends beyond purely DOD lanes, we are expanding our approach to include a holistic perspective. This enables the Joint Force, industry, interagency, and our allies & partners to collaboratively work toward advancing solutions to identified gaps. We have found, through exercises and wargames, that improving awareness of authorities and processes have enhanced our joint ability to understand available options. We have also identified areas where we lack capability or authority. The DOD has prioritized Contested Logistics as an analytic focus area.

QUESTIONS SUBMITTED BY SENATOR TOM COTTON

EXTENDED DETERRENCE

47. Senator COTTON. General Cavoli, please provide more details on enhanced deterrence requirements. This is a followup to discussion in the closed session. Please refer to that session for details of the exact question.

General CAVOLI. [Deleted.]

CONTESTED LOGISTICS

48. Senator COTTON. General Van Ovost, you've spoken about the need to ensure the U.S. command and control apparatus will be sufficiently robust and resilient to coordinate logistical operations across the globe in event of a conflict. General Minihan of Air Mobility Command lists "command and control" as one of the four main capability gaps he is most concerned with filling. Please provide an update on U.S. Transportation Command efforts to modernize the command and control of our logistics fleet.

General VAN OVOST. USTRANSCOM efforts to ensure command and control of the Logistics enterprise have been focused on increasing the real time visibility of forces, status of capabilities and assets, improving redundancy in communication avenues, monitoring and securing systems, and increasing awareness of impacts to USTRANSCOM entities. We have accomplished this through the establishment of a robust Knowledge Management team integrated across multiple directorates within USTRANSCOM that have integrated over 100 capabilities into a Common Operating Picture. The most visible aspects of this effort have combined different information feeds across the civilian and military enterprises to provide a holistic situational awareness tool, delivering accurate, and relevant information to entities across the Joint Deployment and Distribution Enterprise. Additionally, annual exercises such as TURBO CHALLENGE and ULTIMATE GUARDIAN challenge USTRANSCOM's ability to project and sustain the joint force in a degraded operating environment. These exercises further inform our ability to test, develop, and codify resilient business practices across the global logistics enterprise as well as enhance our ability to sense and provide decision advantage for our global mobility posture and capacity. Finally, to thwart adversary attempts to gain information ad-

vantage, USTRANSCOM continues to develop, test, and acquire technologies that ensure secure and resilient command and control capabilities.

49. Senator COTTON. General Van Ovost, the Services are focusing extensively on the concept of contested logistics in the Pacific, whether Army's new cross functional team for contested logistics or the Air Force's agile combat employment (ACE) concept. These actions recognize the massive challenge posed to our logistics forces by China. What most concerns you have China's growing military power in regards to your ability to fulfill United States Transportation Command's mission?

General VAN OVOST. USTRANSCOM relies on robust access, basing, and overflight (ABO) to deploy and sustain United States Forces in time of conflict. The PRC may use their growing influence and military power to pressure allies and partners to decline or limit ABO to United States Forces, as well as to threaten or deny freedom of movement through logistics chokepoints. This challenge is compounded by vulnerable cyber and information domains in our many networks, global Command and Control constructs, and global integration that also require Allies and Partners to fulfill our mission. China's growing military power, to include highly networked anti-access capabilities, could potentially allow them to interdict our lines of communication that link our global supply chains, reducing the US' relative advantage in global speed and reach. Furthermore, improvements in PRC military capabilities, such as their missile forces, also allows them to hold United States Forces at risk in the Western Pacific. This may reduce strategic and operational options in crisis or conflict. The PRC is likely to continue refining and improving this capability.

To maintain our ability to project power at a time and place of our choosing, including in contested environments, we must continue to build a robust, resilient, and highly effective global logistics command and control structure, with integrated prioritization and governance processes to maximize decision advantage. Furthermore, our new Unified Command Plan mission set as the Single Manager for Global Bulk Fuel Management and Delivery is critical to meeting Combatant Command requirements and assure efficient distribution for the entire enterprise. To execute this responsibility amidst China's growing military power, USTRANSCOM will continue to closely coordinate with the Combatant Commands, the Services, and Defense Logistics Agency to ensure we are appropriately postured to assure bulk fuel distribution to the point-of-need through escalation from competition to armed conflict.

50. Senator COTTON. General Van Ovost, how is Transportation Command working with each of the Services to ensure these concepts are mutually supportive?

General VAN OVOST. As USTRANSCOM conducts planning and analysis in support of the CCMDs, we work collaboratively with the Services and CCMDs to understand and incorporate their capabilities and concepts into sustainment plans. USTRANSCOM communicates capability requirements to each of the Services and the Joint Force through the Joint Capabilities Integration and Development System, which includes various Functional Capability Boards. We contribute to assessing, prioritizing, and making recommendations on capability requirements and associated investments to address Concept Required Capabilities needed to execute the Department's Joint Warfighting Concept. We provide an annual Integrated Priority List to communicate USTRANSCOM's top capability and budgetary gaps to the Joint Force and employ the program budget review process to collaborate with Services on portfolio issues not addressed in their POMs.

51. Senator COTTON. General Van Ovost, what more can be done to accelerate our ability to supply our troops in contested or denied environments?

General VAN OVOST. We must remain focused on this Nation's unique capability to project power. That is primarily accomplished by USTRANSCOM. We must focus on improving the readiness of mobility forces and recapitalizing mobility assets while continuing to invest in our strategic Airlift, Aerial Refueling, and Sealift fleets, as well as our smaller intra-theater assets and enablers.

Increased bi-lateral government to government agreements with allies and partners will greatly enhance our Nation's ability to rapidly deploy and sustain the force and all classes of supply in a contested logistics environment. This effort requires a U.S. whole-of-government approach, utilizing diplomatic channels as well as military-to-military engagements to build resilient relationships. Where possible, we must reduce the requirement for movement of equipment and sustainment supplies. This can include prepositioning of equipment and supplies where militarily useful and diplomatically possible, pursuing common platforms and systems with allies and partners, and logistics sharing agreements.

QUESTIONS SUBMITTED BY SENATOR MIKE ROUNDS

SPECTRUM

There is an effort by some in Congress to require sharing of all or some of the 3.1–3.45 GHz band of the electromagnetic spectrum between the Department of Defense and commercial interests in the private sector.

52. Senator ROUNDS. General Cavoli and General Van Ovost, as I understand it, the 3.1–3.45 GHz band is primarily used by Department of Defense ground-, air- and sea-based radars and sensors to detect airborne and missile threats. For example, the Navy's Aegis Combat System's AN/SPY radar uses that band and is one of the few systems able to track the new threat posed by low flying, highly maneuverable hypersonic missiles. Can you confirm that U.S. Forces assigned to you in EUCOM and TRANSCOM rely upon systems critical to our national security that reside on this portion of the spectrum? If so, can you share examples of either specific systems that currently operate there or some of the missions and capabilities which rely on this portion of the spectrum?

General CAVOLI. We confirm U.S. forces assigned to USEUCOM utilize critical national security systems residing in the 3.1–3.45 GHz spectrum. Specifically, the following systems occupy the spectrum in question:

- Aegis Combat System's AN/SPY radar systems are deployed to Poland and Romania as part of AEGIS Ashore. Additionally, Navy ships entering the North Sea, Mediterranean Sea, and the Black Sea will also have active AEGIS systems.
- The APY–1/APY–2 is the primary radar system of the E–3A airborne warning and control system and is routinely deployed to theater for training. U.S. provided airborne warning and control systems are also assigned to NATO for active missions.
- AN/TPQ–53 Quick Reaction Capability Radar are actively deployed to Latvia, Romania, Germany, Poland, Slovakia, and Hungary.
- AN/RPS–42 Tactical Air Surveillance Radar Systems are currently deployed to Italy and Germany.
- AN/TPS–80 Ground/Air Task Oriented Radar (G/ATOR): Although we do not currently have any assigned to USEUCOM, the United States Marines frequently deploy to our theater with these systems.

General VAN OVOST. Yes, USTRANSCOM forces rely on systems that reside in this portion of the spectrum. For example, Air Mobility Command's C–130 aircraft use an avionics formation positioning system, known as Stationkeeping Equipment, to train for flying in close contact between aircraft. Another example is the Surface Deployment and Distribution Command's use of the RPS–42 air surveillance radar system at the Military Ocean Terminals.

53. Senator ROUNDS. General Cavoli and General Van Ovost, providing this Committee with your best military advice, can you characterize the risk to mission and the risk to the force if action were taken to enable the auction of portions of this band prior to the analysis of the results of the statutorily required DOD-NTIA study, which is required to be completed by September 2023?

General CAVOLI. USEUCOM has identified significant operational and readiness impacts if the Spectrum Innovation Act is passed. At the unclassified level, these systems cover short and medium range surveillance and counter air, rocket, mortar, missile, and ground missions. Vacating these spectrums will necessitate further research, development, integration, and fielding of weapons systems capable of operating within a different frequency band.

General VAN OVOST. It is important to preserve DOD operational equities in this portion of the spectrum to enable the Department to protect the Homeland and train for all types of overseas contingencies. These operational equities involve hundreds of air, sea, and land-based radars that DOD uses for a wide range of missions.

QUESTIONS SUBMITTED BY SENATOR JONI ERNST

THE WAR IN UKRAINE

54. Senator ERNST. General Cavoli, how do you assess the prospect of success of a Ukraine offensive to retake Crimea this spring or summer?

General CAVOLI. As long as Russian soldiers continue to occupy Crimea, retaking the region will prove a challenge.

55. Senator ERNST. General Cavoli, Russia has declared that it would use nuclear weapons in existential circumstances. Do you believe Ukraine's recapture of Crimea would increase the risk of nuclear escalation?

General CAVOLI. Yes. Russia has considered Crimea legally part of the Russian Federation since its annexation in 2014, and extends the same theoretical nuclear weapons protection to Crimea as to Russia proper. Russia's June 2020Nuclear tDeterrent Policy reaffirmed its willingness to use nuclear weapons to respond to nuclear or conventional attacks threatening "the very existence of the State," and was referenced in a March 2023 interview by Russian Security Council Deputy Chairman Medvedev in connection with a potential Ukrainian effort to retake Crimea. Furthermore, at the St. Petersburg Internal Economic Forum in June 2023, President Putin also reiterated threats to the existence of the Russia Federation are grounds for the use of nuclear weapons.

56. Senator ERNST. General Cavoli, would North Atlantic Treaty Organization's military requirements in the United States European Command increase if there is a political decision to extend a security commitment to Ukraine and would European allies be capable of meeting those requirements?

General CAVOLI. Yes, a political decision to extend a security commitment to Ukraine would increase NATO's military requirements. In the near term, many of our Allies have donated a large relative portion of their military capacity to support Ukraine. Replenishment of this equipment and munitions will require a strong and robust defense industrial base with resilient supply chains. In the mid-to long-term, a security commitment to Ukraine would expand NATO's military requirements as defined within a newly approved family of plans. At the 2023 Vilnius Summit, Allies approved the implementation of NATO's new concept for the deterrence and defense of the Euro-Atlantic area based upon new regional plans that address the Alliance's core task of collective defense. This family of plans will provide a framework for future requirements that our NATO Allies have committed to meet as we work together to improve readiness, capacity, and interoperability.

57. Senator ERNST. General Cavoli, Admiral Aquilino told this Committee that United States support to Ukraine has not undermined military readiness in the Indo-Pacific. Have munitions provided to Ukraine decreased United States military requirements to execute operational plans in the United States European Command? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General CAVOLI. No. Munitions provided to Ukraine have not decreased United States military requirements to execute operational plans in USEUCOM.

U.S., Ally, and partner support to Ukraine has helped to reinvigorate collective defense and to refine the development of a new family of NATO defense plans. While Ally and partner defense investments may reduce future U.S. munitions and force requirements in theater, USEUCOM requirements remain unchanged during this perilous time.

58. Senator ERNST. General Cavoli, have we used the battlefield in Ukraine to reveal new capabilities that could deter adversaries like China? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General CAVOLI. No.

RUSSIAN EFFORTS IN THE BALKANS

59. Senator ERNST. General Cavoli, what is the risk of ongoing Russian efforts to foment unrest in the Balkans, especially in Kosovo?

General CAVOLI. Any effort by Russia to foment unrest in the Balkans is concerning, particularly given the volatility of the situation in Northern Kosovo and Bosnia and Herzegovina. Russia has continued to support Republika Srpska President Dodik and promote his unhelpful rhetoric in Bosnia and Herzegovina. The EU Force (EUFOR) mission in Bosnia and Herzegovina is essential to maintaining peace and security within the country. Russia's seat on the UNSC provides them an opportunity to block EUFOR's annual renewal, placing Bosnia and Herzegovina at greater risk for instability and associated potential violence. This instability could threaten regional stability. USEUCOM will continue to closely monitor the situation.

NORTH ATLANTIC TREATY ORGANIZATION JOINT LOGISTICS

60. Senator ERNST. General Cavoli, where are the gaps to allied contributions to North Atlantic Treaty Organization's joint logistics concept?

General CAVOLI. NATO's joint logistics concept will drive needed investments by the U.S. and our Allies in force mobility, sustainment, and mission assurance within contested environments. We need to ensure our forces are postured and able to deploy at the speed and scale required to deter and if necessary defend against aggression. Once in place, Allied forces must have the collective capability, backed by munitions and fuel stockpiles, to sustain high-end combat operations until we achieve our strategic objectives. Finally, Allies must be prepared, individually and as an Alliance, to execute these critical functions while under kinetic and non-kinetic attack.

QUESTIONS SUBMITTED BY SENATOR DAN SULLIVAN

WHAT IS THE UNITED STATES LEARNING FROM UKRAINE WAR?

61. Senator SULLIVAN. General Cavoli, in remarks at a Swedish defense conference in January of this year, you pointed to the scale of combat in Ukraine as "out of proportion with all of our recent thinking." You noted the importance of the defense industrial base to producing equipment at scale. You also referenced Ukraine's battlefield success, saying "precision can beat mass," but it takes time for quality to beat quantity. Can you expand on those remarks and discuss what else have you learned from the war in Ukraine?

General CAVOLI. As we have witnessed in Ukraine, it takes time for precision weapons to blunt and destroy mass at scale in major combat operations. This presents a unique challenge to many of our Eastern Flank NATO Allies, who would be unable to cede large swaths of territorial control for the time necessary for precision to defeat massed Russian aggressors. United States and European defense industrial bases will need to strike a balance between the production of exquisite weapons systems and the sheer volume that allows quantity to have a quality of its own.

62. Senator SULLIVAN. General Cavoli, how are we using what we have learned in Ukraine to refine requirements and modernize doctrine?

General CAVOLI. We are currently incorporating observations from the conflict into our assumption for Air Defense, weapons expenditures and sustainment, just to name a few. We are not only gathering those lessons from this conflict but we are disseminating those lessons to the appropriate agencies for action and dissemination, including the Joint Staff via the Joint Lessons Learned Information System. Consequently, Lessons learned that could potentially drive changes in joint requirements or joint doctrine are considered by the Joint Staff and Service components for action. Finally, as Ukraine conflict is still ongoing, it is still too early to see exactly how those lessons will drive changes to joint requirements or doctrine.

Moving Ukrainian Equipment to a North Atlantic Treaty Organization Standardization (General Cavoli)

63. Senator SULLIVAN. General Cavoli, in your opening statement you stated your support for the Department of Defense's efforts to transition Ukraine toward a western-style military with advanced and interoperable equipment. Since the beginning of the war, Ukraine has slowly incorporated more Western-origin and North Atlantic Treaty Organization-spec weapons to augment its supply of Soviet-era weapon systems. This has significantly increased Ukraine's lethality but it has also created a logistical and maintenance headache as Ukraine seeks to maintain and repair multiple types of artillery, Infantry Fighting Vehicles, and tanks. How is United States European Command working within the Department of Defense and its European partners in ensuring a long-term training and procurement plan to transition Ukraine from Soviet-spec to North Atlantic Treaty Organization-spec weapons?

General CAVOLI. Ukraine's transition to a NATO-interoperable force has already begun, but the transition will require sustained materiel, training, advising and institutional capacity building support from the U.S. alongside our Allies and partners. In the short term, USEUCOM has prioritized sustainment to improve readiness to meet Ukraine's security assistance needs. This emphasis on sustainment extends the longevity of the NATO-interoperable equipment that will form the foundation of Ukraine's future force. Over the mid to long term, USEUCOM support a whole-of-government and whole of Alliance approach to ensuring Ukraine is able to

operate and maintain a NATO-standard force capable of defending its territorial sovereignty.

PREVENTING SUPPLY CHAIN WARFARE (GENERAL VAN OVOST)

64. Senator SULLIVAN. General Van Ovost, the People's Republic of China (PRC) has the largest commercial shipping fleet in the world, builds approximately half of the world's largest commercial ships, and produces 96 percent of the world's dry shipping containers. As you mentioned in our meeting, there are only 85 United States flagged and United States crewed ships involved in international trade. China has over 4,500 People's Republic of China-flagged commercial vessels. During a potential conflict over the Taiwan Strait, the People's Republic of China can leverage its vast commercial shipping fleet and control of marine terminals and infrastructure to disrupt the United States supply chain. We discussed the Tanker Security Program as a way for the United States to not rely on People's Republic of China-flagged tankers to ensure a mobile supply of fuel within the First and Second Island Chain. Can you explain how the Tanker Security Program helps the Joint Force execute contested logistics and what steps we can take to reduce our vulnerability to intentional supply chain disruptions by working with allies and partners?

General VAN OVOST. As detailed in the Tanker Study delivered to Congress in June 2021, USTRANSCOM validated the need for the Tanker Security Program (TSP) to address the gap in meeting strategic, inter-theater bulk fuel distribution during wartime demands, while increasing the U.S. flag presence within the international trade market. The first set of 10 medium-range U.S. flag tankers is expected to be fully crewed and operating in TSP by early next year. Furthermore, USTRANSCOM appreciates Congress's vision to expand TSP with the authorization of 20 tankers in the Fiscal Year 2023 NDAA. The second/additional set of ten tankers is expected to be composed of shallower draft/coastal tankers. This will allow greater theater port access in support of fuel distribution within the first and second island chains. Going forward, the expectation is for the additional tankers to reach initial operating capacity in fiscal year 2024. In parallel with the implementation of TSP, USTRANSCOM in partnership with the Maritime Administration renewed the Voluntary Tanker Agreement (VTA) in November 2022. Together we have developed VTA contingency contracts that will provide assured access to the U.S. flagged tanker fleet in support of Joint Force requirements. To continue mitigating contested logistics risk, USTRANSCOM is working within the DOD and the Department of State to build assured access agreements with critical Indo-Pacific allies for access to host nation commercial tankers and terminals directly countering PRC regional assertiveness.

REMOVING CAP ON SEALIFT RECCAP (GENERAL VAN OVOST)

65. Senator SULLIVAN. General Van Ovost, in our conversation on Tuesday, you mentioned the need to lift the caps on acquiring used Roll-on/Roll off (RO-ROs) because of the timelines associated with the retirement of ships we currently have in the fleet. Over 70 percent of our Surge Sealift vessels are approaching the end of their service life in the next 10 years. In fact as you stated in your testimony, the average age of the 44 Roll-On/Roll-Off ships we use to surge from the Continental U.S. is 44 years old, with 17 of them being 50 years or older. There are cost and timeline advantages with acquiring these used, foreign-built ships given there is no market of domestically built ships available today. How do the current caps on acquiring used roll-on/roll-off vessels constrain United States Transportation Command and how can we use the expected retirement dates of ships in the surge fleet to stimulate demand for domestically built roll-on/roll-off ships?

General VAN OVOST. Procuring used Roll-on/Roll-off (RO/RO) vessels is the fastest and most cost-effective recapitalization approach to meet surge sealift requirements. USTRANSCOM's top priority is the swift recapitalization of the fleet with four (4) used vessels for a target capacity of 800,000 square foot annually. The current authorized limit of nine used vessels will be reached by fiscal year 2024 with the planned purchase of the next four vessels, essentially ending the buy-used program. The flexibility to purchase used vessels without a cap on quantity allows us to act when market conditions are favorable and provides greater opportunities to acquire multiple vessels of the same class. This would potentially offer us lower purchase prices, lower lifecycle costs, and improve overall readiness for the RRF. MARAD anticipates continued volatility in the market for future purchases so flexibility without limitations will be critical.

Domestic new sealift vessel construction, if funded, could complement the current used vessel acquisition program to recapitalize the capacity and readiness of the RRF. The process of designing and constructing a new ship would likely take up to 5 years and potentially cost up to four times the amount compared to a used ship purchase. Nevertheless, I do recognize the importance of a robust and healthy domestic vessel construction and repair capability supported by the U.S. maritime commercial sector, and it remains paramount to assure the availability of the skilled professionals and modern facilities needed in time of war or national emergency. Finally, the Navy supports construction of new auxiliary vessels to recapitalize the Maritime Prepositioning Force (MPF) to align with planned retirements beginning in 2030.

DEPARTMENT OF DEFENSE AUTHORIZATION REQUEST FOR APPROPRIATIONS FOR FISCAL YEAR 2024 AND THE FUTURE YEARS DEFENSE PROGRAM

TUESDAY, MAY 2, 2023

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
WASHINGTON, DC.

AIR FORCE POSTURE

The Committee met, pursuant to notice, at 9:28 a.m., in room G–50, Dirksen Senate Office Building, Senator Jack Reed (Chairman of the Committee) presiding.

Committee Members present: Senators Reed, Shaheen, Gillibrand, Blumenthal, Hirono, King, Warren, Peters, Duckworth, Rosen, Kelly, Wicker, Fischer, Cotton, Rounds, Ernst, Sullivan, Cramer, Scott, Tuberville, Budd, and Schmitt.

OPENING STATEMENT OF SENATOR JACK REED

Chairman REED. Good morning. The Committee meets today to receive testimony on the President's Budget Request for the Department of the Air Force for fiscal year 2024. I would like to welcome Secretary of the Air Force, Frank Kendall, Chief of Staff for the Air Force, General Charles Brown, and Chief of Space Operations, General Chance Saltzman.

Thank you, gentlemen, for your leadership, and please share the Committee's gratitude with the men and women under your command for their service and to their families for their continued support. The Air Force and Space Force play a fundamental role in our strategic competition with China and other adversaries. The United States air and space power remains the finest in the world, and the entire joint force relies on these capabilities each day.

This is a challenging mission, as the Air Force must strike a balance between supporting its continuous global operations, while providing adequate resources to modernize its aircraft and maintain our technological edge.

To that end, President Biden's Defense Budget Request for Fiscal Year 2024 includes approximately $260 billion in funding for the Air Force, an increase of $12.4 billion over the 2023 enacted budget. This budget request includes considerable investments in platforms such as advanced battle management systems, Air Force joint all domain command and control, next generation air domi-

nance, the B–21, hypersonics, and air and ground moving target indication.

These are important initiatives that will contribute significantly to modernizing the service. Indeed, the Air Force's success in the coming decades will be its ability to manage and control data. The initiatives outlined in this budget would enable the Air Force to detect, analyze, and act on information across the battlespace quickly using automation, artificial intelligence, and predictive analytics.

In turn, these systems will help our forces acquire targets as early as possible and rapidly deliver information to the best shooter on air, land, or sea. The Committee would appreciate an update on these and other programs that are receiving increased emphasis and resourcing.

The budget request also proposes to retire or realign various elements of the Air Force with a net reduction of roughly 214 aircraft in fiscal year 2024. This would include reducing or altering the force structure for F–22s, A–10's, F–16s, F–15s, C–130's, KC–135s, KC–10's, JSTARS [Joint Surveillance Target Attack Radar System] aircraft, AWACS [Airborne Warning and Control System] aircraft, HH–60 helicopters, and training aircraft. Any proposal of this sort deserves careful consideration.

Discussions must be had about whether any of these weapons system retirements are necessary or appropriate in the near term. We also need to evaluate our domestic industrial base to avoid making decisions that undercut our production and manufacturing capabilities. I would ask the witnesses to provide us with reasoning for the proposed retirements and assure us that any decisions are well thought out before any changes to the force structure begin.

General Saltzman, Congress established the Space Force in order to consolidate the numerous space activities in the Department of Defense. Given that the Space Force is only 3 years old, I understand it is still becoming institutionalized within the Department and there are many challenges in that process.

General, I would like to know how you are growing the service in terms of personnel and structures like the Space Development Agency, and how you are working to foster a service culture that can succeed in the dramatically evolving space environment.

Finally, now that the Space Force is up and running, it is important to present a trained force with substantive capabilities to the combatant commanders. One of the capabilities for the combatant commands now under discussion is tactical space intelligence, surveillance, and reconnaissance, or ISR.

As our satellite constellations and sensors continue to improve, space based on ISR technologies will be able to provide global continuous information to units operating in every domain. Space is a rapidly evolving domain for the Defense Department. I want to ask the witnesses to discuss what resources are necessary to ensure its success.

Secretary Kendall, General Brown, and General Saltzman, thank you again for appearing today. I look forward to your testimony. As a reminder for my colleagues, there will be a closed session immediately following this hearing in room SVC–217. Let me now turn to the Ranking Member, Senator Wicker.

STATEMENT OF SENATOR ROGER F. WICKER

Senator WICKER. Thank you, Mr. Chairman. I join you in welcoming our distinguished witnesses, and I want to thank them for their years of service. This past year has highlighted several growing challenges confronting both the Air Force and the Space Force.

For example, Vladimir Putin's brutal and unprovoked war in Ukraine has demonstrated the significance of air and missile defense in denying the effective use of air power. Russia maintains a high level of capability in space, but communist China is much further ahead in comparison.

Meanwhile, the State of competition to use or deny the use of space capabilities is rapidly evolving, and Beijing rapidly continues to develop and field capabilities that could test our own assets in the air and in space. Although we face challenges, there are good signs of progress in this year's budget request. For example, I am encouraged to see that the Department of Air Force continue to modernize.

In particular, the Air Force is finally building out its fleet of fighter aircraft at a rate much closer to what we need. It does so while continuing to develop the next generation of advanced fighters and bombers.

I hope our witnesses will provide an update regarding plans for the next generation of tanker aircraft, considering that the KC–46 delivery is still in progress. I am also glad to see adequate resourcing for programs such as the Sentinel B–21 and Long Range Standoff Missile. However, there are alarming reports that indicate the ICBM [intercontinental ballistic missile] replacement program could be delayed.

We simply cannot afford to fall behind on nuclear modernization. So perhaps we will talk about that. I commend the Space Force for the effort it has put into building a hybrid architecture for missile warning, secure communications, and resilient navigation. I hope our witnesses will identify steps Congress can take to improve space capabilities more rapidly.

I am concerned that the Air Force is still assuming risk in the near term, particularly—in the air domain, particularly during the years of concern to operational commanders and the national defense strategy. Mr. Secretary, there remains a large gap between warfighting needs and capability.

Many of the platforms Congress has supported continue to be delayed, including the F–35 Block 4 upgrades, and T–7 trainer aircraft. This is particularly troubling since those delays indicate we may not have these assets to deploy them when we would need them the most. I am also bothered by—excuse me, I don't want to have a ring tone here. I am also bothered by potential failure to accelerate programs such as the E–7 command and control aircraft, despite the clear congressional signal of support last year. Other challenges stand in the way of agile combat employment.

To make that a reality, we need to make progress in the electromagnetic spectrum, in munitions production, and in building out the posture of basing and logistics. Further delays in these programs could have disastrous consequences.

The Air Force and Space Force have essential roles to play in deterring conflict in the Western Pacific. As I have said in other pos-

ture hearings, complacency is not an option. Complacency undermines deterrence. We need to proceed with urgency to get our forces the capabilities they need.

Thank you for our witnesses, and I look forward to an important discussion. Thank you, sir.

Chairman REED. Thank you very much, Senator Wicker, and now let me recognize the Secretary of the Air Force, Secretary Kendall.

STATEMENT OF THE HONORABLE FRANK KENDALL III, SECRETARY OF THE AIR FORCE

Secretary KENDALL. Mr. Chairman. Chairman Reed and Ranking Member Wicker, Members of the Committee, thank you for the opportunity to testify today on the Department of the Air Force's fiscal year 2024 budget submission.

Approximately 1 year ago, I began my testimony before this Committee with a quote from General Douglas MacArthur, reminding us that the history of failure in war can almost always be summed up in two words, too late.

That warning is even more valid today. Over the past year, under the rubric of 7 Department of the Air Force operational imperatives, the Department of the Air Force has worked to define the capabilities and technologies we need, along with the programs and resources required, to deter, and if necessary, prevail over our pacing challenge, China, China, China.

In fiscal year 2024, we are requesting approximately $5 billion as a direct result of this work, and over $25 billion for operational imperative related investments. War is not inevitable, but successfully deterring conflict is heavily dependent on our military capabilities.

In our fiscal year 2024 budget request, there are approximately 20 completely new or significantly reskilled program elements, some of which are classified, that we must develop, produce, and field if we desire to maintain the air and space superiority that America and our allies have counted on for decades.

In order to proceed with any of these programs, the Department of the Air Force needs timely authorizations and appropriations. The Department of the Air Force is ready to move forward with the next generation of capabilities we need, and there is no time to lose.

In addition to these new start or enhanced efforts, the fiscal year 2024 budget includes a request for additional resources to increase production and accelerate development of programs essential to the Department of the Air Force's missions, as defined in the National Defense Strategy (NDS).

For the Strategic Triad, we have fully funded the Sentinel ICBM, the B–21 radar bomber, the long range standoff weapon, and our nuclear command and control programs. For the conventional force, we are increasing production of both the F–35 and the F–15EX. The next generation air dominance program is funded to move forward, and as indicated last year, an uncrewed collaborative combat aircraft program of record is fully funded in fiscal year 2024 request.

We are also continuing the acquisition of essential programs like the E–7 Wedgetail and the new resilient missile warning and

tracking space system. As we indicated last year, hard choices have been required to move the Department into the future. We deeply appreciate the support of Congress for the divestitures we requested last year. This year, we must continue the divestment of our over 40 year old A–10 Warthog.

This program has served us well, but it is becoming increasingly obsolete and absorbing resources needed for higher priorities. We ask for Congress continued support for this and other identified changes we must make to field the forces we need to be successful against our pacing and other challenges.

But of course, it isn't all about the equipment we need to perform our missions. It is also about the men and women who serve in the total force, Active, Guard, Reserve, and those who support them. We appreciate Congress's support for a 4.6 percent pay raise last year. This year we are asking for a 5.2 percent pay increase, the largest 1 year increase we have ever requested.

In line with Secretary Austin's taking care of people initiative, we are continuing to invest in child development centers and housing to meet the highest priority needs of our airmen, guardians, and their families. Like the other services, with the exception of the Space Force, the Air Force faces challenges in recruiting in a generation where the propensity to serve is the lowest that we have seen in decades.

We are removing barriers to service to ensure that anyone with the capability and desire can serve to their full potential. Under the National Defense Strategy, we are also strengthening teams, both in the joint force and with our allies and partners. Building these relationships and investing in our ability to work together is the essence of integrated deterrence.

The effectiveness and importance of these relationships are on display in Europe today, where NATO [North Atlantic Treaty Organization] is stronger than ever. I recently returned from the Pacific, where I met with a number of our teammates who participated in the groundbreaking event for the Enhanced Defense Cooperation Agreement Air Bases in the Philippines.

Our budget request also supports strengthening our partnerships around the world, especially when we confront our pacing challenge and most acute threats. I started by talking about the value of time, and I will finish by highlighting a legislative proposal that can save up to 2 years of that valuable time.

Our proposal would expand rapid acquisition authority so that Military Departments can more quickly respond to emerging threats and take advantage of evolving technology. Within reasonable constraints, this legislative proposal would allow progress on compelling National Security needs that would otherwise be delayed until the next submission and approval of the President's Budget.

I have been pushing this reform for many years and we look forward to working with the Congress on this proposal. In closing, I believe the Department of the Air Force is well-postured to move into the future. Our work to define that future is not complete but has produced compelling results that are reflected in our fiscal year 2024 budget submission.

We look forward to your questions today. I would like to offer a more complete briefing on the classified details of our submission. Chairman, I appreciate the opportunity to do that after we finish this session. Thank you.

Chairman REED. Thank you very much, Mr. Secretary. General Brown, please.

STATEMENT OF GENERAL CHARLES Q. BROWN, JR. USAF
CHIEF OF STAFF OF THE AIR FORCE

General BROWN. Good morning, Chairman Reed and Ranking Member Wicker, and distinguished Members of this Committee. I am proud to represent the 689,000 total force airmen serving our Nation. I want to thank you for your steadfast support for our airmen and their families. It is an honor to join Secretary Kendall and General Saltzman to testify on the fiscal year 2024 budget submission.

This budget builds on the progress made in fiscal year 2023 and marks the next milestone toward the transformation of the Air Force to address the evolving security challenges outlined in the National Defense Strategy. As I emphasized last year, we must continue to accelerate change or risk losing our strategic advantage.

The Department of Air Force's operational imperatives describe key capabilities that must be attained to enable the Air Force's modernization in the face of a rapidly changing threat environment.

Remain dedicated to ensuring our investments and resources outlined in this budget submission are in line with the National Defense Strategy so the Air Force can continue to deter adversaries, prevail in conflict, and execute our mission to fight, fight, and win air power anytime, anywhere—not some time, in some places, but anytime, anywhere.

This budget ensures the Air Force continues to provide the Nation the assurance of air superiority, the advantage of global strike, the agility of rapid global mobility, and you combine that with the adaptability of intelligence, surveillance, and reconnaissance, and authority in our command and control capabilities, providing the ability to sense, make sense, and act.

This is what we must be do today and we must be prepared to do tomorrow. In order to provide these core functions to the Nation, we must accelerate development of programs essential to our mission with this budget submission.

To provide the assurance of air superiority, we are increasing production of the F–35 and F15EX while the next generation air dominance program and family assistance continues development.

To provide the advantage of global strike, we have fully funded ICBM and the B–21 bomber. To provide the agility of rapid mobility, we instituted recapitalization of KC–135 fleet, KC–46 ——

[There was a technical problem with 4 minutes of the audio recording of this transcript.]

General BROWN.—thank you for the opportunity to be here with you today. I look forward to your questions.

The CHAIRMAN. Thank you, General Brown. General Saltzman, please.

STATEMENT OF GENERAL B. CHANCE SALTZMAN, USSF CHIEF OF SPACE OPERATIONS

General SALTZMAN. Chairman Reed, Ranking Member Wicker, distinguished Members of the Committee, thank you for your continued support and for the opportunity to testify on the fiscal year 2024 budget submission——

[Technical problems.]

General SALTZMAN. Sorry. I will be as loud as I can——

[Technical problems.]

Chairman REED. We had a coup.

General SALTZMAN. No, no——

[Laughter.]

General SALTZMAN. How is that?

Chairman REED. Much better.

General SALTZMAN. That is why he is the Secretary of the Air Force.

Chairman REED. No, no, that is right.

General SALTZMAN. As the fiscal year 2024 budget will allow us to further efforts to develop a resilient space order battle and prepare for rapid transition to a wartime posture against any potential adversary to fight and win a high intensity conflict.

In conjunction with ongoing modernization projects, the Space Force has several new starts for fiscal year 2024 to support those efforts. Investing in these modernization projects will allow us to execute our assigned missions as we move forward to better posture for the emerging complexities of the space domain.

Space is now undeniably a contested warfighting domain. China and Russia define space as such and are investing in technology meant to undermine United States advantage in the domain. China, our pacing challenge, is our most substantial threat into and from space. But Russia also remains an acute threat.

Both present serious challenges with space capabilities that can track and target U.S. military forces on land, at sea, and in the air. Both can hold U.S. space assets at risk with cyber and electronic warfare, lasers, ground to space missiles, and space to space orbital engagement systems.

These systems threaten the space architecture the Nation relies on for prosperity and security. To meet this challenge, the Space Force will prioritize three lines of effort. First, we will field ready, resilient, and combat credible forces. Second, we will amplify what I am calling the guardian spirit.

Third, we will partner to win. These are directly in line with Secretary Austin's mission, people and team priorities. In sum, this budget request is designed to deliver the forces, personnel, and partnerships the Space Force requires to preserve U.S. advantages in space.

To build resilient, ready, combat credible space forces, we are accelerating the pivot toward modern, more defendable satellite constellations and support infrastructure. We are conducting transformational force design analysis based on threats, operational needs, and costs so that we can maximize our budget while investing in effective missile warning, space domain awareness, communication and navigation systems.

Additionally, we are investing to ensure our networks are hardened to defeat cyber threats, and that we have the operational test and training infrastructure necessary to prepare guardians for high intensity conflict.

With our second line of effort, we are amplifying the guardian spirit by recruiting, developing, and retaining the best talent and empowering guardians to succeed. Investment in space centric curriculum for entry level schools will build guardians laser focused on space operations in both competition and conflict.

Guardians will be empowered through mission command to innovate and execute in those scenarios. Notably, and with congressional support, we plan to integrate the space mission elements of the Air Force Reserve into the Space Force to offer guardians flexible career paths, including both full time and part time duty to retain talent and bring private sector experience to the force.

The third line of effort acknowledges that the Space Force relies on partnerships to accomplish our mission. We are investing in training, education, data sharing, and integrated capabilities with our allies and partners. The Space Force will strengthen our presence in all combatant commands where guardians are already making solid connections with allies and partners.

Because of its critical importance, the Space Force is collaborating with commercial space partners to build resilient capacity and leveraging emerging technologies. To enhance this partnership, the Space Force is working to eliminate barriers to such collaboration so that we can build enduring advantages and field these capabilities more rapidly.

In conclusion, thank you for the opportunity to discuss the Space Force's Fiscal Year 2024 Budget Request. The Space Force continues to be the preeminent military space organization in the world.

Our adversaries seek to challenge our advantage in space, but with the support of this Committee, our guardians will be able to out-work, out-innovate, and out-compete our potential adversaries to ensure that we maintain that advantage.

The fiscal year 2024 budget request will make this possible, but only if the Congress passes timely appropriations. I look forward to your questions.

[The joint prepared statement of The Honorable Frank Kendall, General Charles Q. Brown, Jr., and General B. Chance Saltzman follows:]

JOINT PREPARED STATEMENT BY THE HONORABLE FRANK KENDALL, GENERAL CHARLES Q. BROWN, JR., AND GENERAL B. CHANCE SALTZMAN

OVERVIEW

The Department of the Air Force (DAF) remains focused on implementing the National Defense Strategy (NDS) and the priorities of the Secretary of Defense: mission, people, and teams. Our ability to perform our missions comes first, and everything we are doing to support and develop our people and build strong teams supports that goal. One year ago, we submitted a posture statement in which the need to modernize the Air and Space Forces, especially to meet our pacing challenge—the People's Republic of China (PRC)—was highlighted. Over the past year, we have provided threat briefings to Congress on the severity of that challenge. A year ago, we also outlined seven operational imperatives the DAF must meet to be successful, but we were only beginning our work to analyze and define the solutions to those imperatives. We are pleased to report we have made significant progress in identi-

fying the capabilities the DAF will need to prevail against the PRC and in defining new programs and resources to develop and field these capabilities. That progress is reflected in over a dozen new efforts, including a mix of completely new or significantly re-scoped program elements, in our fiscal year 2024 budget submission. With our budget submission, the DAF's ability to execute these plans and to keep pace with the threat is now in your hands, and we urge you to act promptly on our fiscal year 2024 request.

Within the NDS, there are four priorities: defending the homeland, deterring strategic attacks, deterring aggression, and building a resilient joint force. The Nation's Air and Space Forces have key roles to play in each of these, and this is reflected in our fiscal year 2024 budget request.

The need to defend the homeland is paced with the growing threat from the PRC. We have just seen a manifestation of this threat in the high-altitude surveillance balloon destroyed by an Air Force F–22 fighter aircraft. While the recent high-altitude balloon incursion into our airspace may have garnered significant attention, there are other, more concerning threats to the homeland. PRC and Russian satellites observe the United States continuously. Cyber-attacks focused on intellectual property theft, penetration of critical infrastructure, espionage against national security networks, and disinformation, from both the PRC and Russia, are a constant reality. As the PRC increases the range of its conventional strike capabilities, the potential for missile strikes of various types against the homeland is increasing. In our fiscal year 2024 budget, we are once again requesting F–15EX and F–35 fighter production. We are also accelerating our acquisition of a new space-based missile warning architecture to improve our warning and enable defenses against missile threats.

To deter strategic attacks against the United States, our allies, and partners, the DAF continues programs to recapitalize the intercontinental ballistic missile (ICBM) and bomber legs of the nuclear triad. The Sentinel program, our ICBM replacement, is continuing in development. The Minuteman III, first deployed in 1970, is the oldest land-based strategic missile system in the world. Fiscal year 2024 budgets more than $4.4 billion for its replacement, Sentinel, which is critical for our nuclear modernization. For the bomber leg, we recently rolled out the B–21 Raider, which is scheduled to achieve its first flight this calendar year. Complementing our new bomber is the modernization of the B–52 and development of the Long-Range Standoff Weapon. Stable and consistent congressional support remains vital to ensuring a safe, secure, and effective nuclear deterrent. These programs and others that contribute to this priority are all fully funded in the fiscal year 2024 budget request.

Our biggest challenge is maintaining and strengthening our capacity to deter aggression, and to prevail, if necessary, with priority to the PRC and the Indo-Pacific followed by the Russian challenge in Europe. While there is overlap with other priorities, the focus of our seven operational imperatives described in last year's posture statement has been on this challenge. The Nation's ability to project power, in the western Pacific in particular, is being challenged aggressively. The fiscal year 2024 budget request includes approximately $5 billion in funding focused directly on achieving the seven operational imperatives and includes several new initiatives. The DAF's Future Years Defense Program (FYDP) request includes nearly $35 billion in funding to continue our investments designed to address the operational imperatives. The criticality of these efforts highlights the importance of an on-time appropriation.

Space has been recognized as a military domain of crucial importance to the joint force, allies, and partners, and to our ability to project power. The first operational imperative is to define the Space Force that we will need and to put the programs in place to field that force. The Space Force has two fundamental missions: to provide essential services to the joint force and to protect the joint force from adversary hostile uses of space systems. The ability to perform these missions is at risk today and that risk is increasing over time. Our space systems are threatened by a variety of growing anti-satellite capabilities, and the joint force is threatened by increasingly sophisticated adversary space-based systems intended to target the joint force. Our fiscal year 2024 budget request continues the work on a resilient missile warning constellation initiated last year. Our budget also builds out a more resilient space communications capability for the joint force, based on diversity and dispersion of communication satellites. This development work includes programs being managed by the Space Development Agency (SDA), now a part of the DAF and the Space Force, continuing to field distributed communications architectures. The total Space Force budget in the fiscal year 2024 request is $30 billion, 15 percent above the enacted fiscal year 2023 Space Force appropriation. It includes over $2 billion and seven new efforts for this imperative. Other initiatives in this portfolio can be discussed at a higher level of classification.

The Air and Space Forces play crucial roles in Joint All Domain Command and Control (JADC2). The second operational imperative is intended to ensure the totality of DAF Command, Control, Communications, and Battle Management (C3BM) programs provide an integrated capability with the resilience and performance needed to provide the Air Force and Space Force, the joint force, allies, and partners, with timely information and the systems to communicate, manage, and employ that information. Providing this capability resiliently is critical to enable our warfighters to make effective decisions in a high-speed, complex fight against our pacing challenge. The Advanced Battle Management System (ABMS) is one part of this overall effort, which has now been brought under the technical management of a recently created Program Executive Officer (PEO) for Integrated C3BM. Additionally, our Nuclear Command, Control, and Communications (NC3) capability investments will be synchronized with the PEO for Integrated C3BM efforts. The fiscal year 2024 budget submission includes a net of roughly $500 million for DAF C3BM, including an additional $65 million for one new effort in this area.

If the United States is to deter aggression and prevail should conflict occur, we must have the ability to track and engage advancing enemy forces in the air, on the sea, and on land. The third operational imperative addresses this need with a combination of space-and air-based systems. For space-based systems, the Space Force is working in close collaboration with the intelligence community to ensure that the joint force has the support it needs from integrated intelligence and operational support systems located in space. This will include operational space sensing, coupled with tasking and data management, designed with joint tactical warfighting as a primary mission. For airborne systems, the DAF is continuing the acquisition of the E–7A replacement for the E–3 airborne warning and control system. Other initiatives can be discussed at a higher level of classification. Overall, the fiscal year 2024 budget requests $431 million for moving target related systems (exclusive of the Intelligence Community and classified funding) and includes six new efforts.

For over 75 years, the Air Force has dominated opponents in the air. The PRC is challenging that dominance, and we cannot afford complacency, nor can we afford Air Force capability and capacity composed largely of fighters that cost as much as or more than the F–35. The fourth operational imperative addresses the family of-systems needed to sustain our dominance in the air. The centerpiece of this effort is the Next Generation Air Dominance (NGAD) platform, but this platform will be too expensive to be purchased in large numbers. The fiscal year 2024 budget enhances funding to field uncrewed Collaborative Combat Aircraft (CCA) to complement the NGAD, F–35, and possibly other current and new crewed platforms. Concurrent with CCA development, the DAF will acquire assets for experimentation and testing to explore organizational structures, maintenance concepts, and operational tactics. CCA inventory goals have not been established, but for planning purposes, we are assuming an initial inventory of 1,000 CCAs, with nominally two CCAs paired with each NGAD aircraft, and a portion of the F–35 inventory. In addition to the CCAs, this operational imperative has addressed other aspects of the NGAD family of-systems. In total, the fiscal year 2024 budget submission requests approximately $490 million for air dominance, with the entire CCA program and supporting elements encompassing three new efforts.

The PRC and Russian investments in long-range precision strikes have put our forward airbases at risk. The Air Force's Agile Combat Employment (ACE) concept partially addresses this threat. The fifth operational imperative team analyzed additional steps to enhance forward air base availability and resiliency. In the fiscal year 2024 budget request, the DAF prioritized actions that could be taken quickly to increase the overall resiliency of our forward-deployed air assets, including building hardened shelters and pre-positioning equipment and supplies needed to implement ACE. The fiscal year 2024 budget includes $1.2 billion to strengthen the resiliency and expand the availability of our forward airbases in the Indo-Pacific region. While not a new start, it represents a significant increase over fiscal year 2023 funding levels.

The Air Force's global strike capabilities provide a powerful conventional and strategic deterrent. The sixth operational imperative examined ways to improve the cost-effectiveness of the family of-systems surrounding the B–21 bomber. As noted above, the B–21 Raider is fully funded in the fiscal year 2024 request, and it continues to make progress toward production and fielding. The Raider is more than a new platform, and this imperative identified new weapons, sensors, and communications that can make the B–21 more effective in the joint tactical fight. The fiscal year 2024 request includes $80 million to modernize our global strike capabilities and includes two new efforts.

Both the Space Force and the Air Force have a number of systems and facilities on which they depend to mobilize and transition to wartime operations. The final operational imperative addressed the need to ensure these systems and facilities would function as needed in wartime. Much of the work to date under this imperative focused on the cyber-security of our critical information systems and infrastructure, especially modernizing and hardening our network infrastructure and giving our cyber operators new tools for cyber defense. Air and Space forces must also be capable of operating in a contested cyberspace environment. Our current budget reflects initial investments to achieve these objectives by cyber hardening networks, weapon systems, and priority defense critical infrastructure, and we recognize that there is much work to do in this area. The fiscal year 2024 budget request includes $613 million in this area to strengthen the DAF's cybersecurity posture. This represents a significant increase in enterprise information technology and cyber defense funding over fiscal year 2023 levels.

The work on the operational imperatives over the past year has informed the fiscal year 2024 request, but it has also indicated some areas in which more effort is required. In just the last year, the threat has become more severe. As a result, the DAF is continuing and expanding our efforts to define solutions to the challenges we face. We are continuing the work of the seven operational imperatives to refine resource needs and plans across the lifecycle of these capabilities. In addition, we have started work on three cross-cutting operational enablers. These are mobility, electronic warfare, and munitions. These combined efforts will inform our fiscal year 2025 request, but they have already influenced our fiscal year 2024 plans.

In the DAF mobility portfolio, the tanker recapitalization effort has been our highest priority. The KC–46 is still working to meet all its requirements, but we believe they will be achieved. As the threat continues to increase the range at which it can engage our aircraft, we are being forced to reexamine how we will operate these platforms. The mobility study we have initiated will identify new ways to achieve more mission resilience and effectiveness with existing platforms and will define the requirements for the next generation of tanker and transport aircraft. While it is too early to provide any results, one outcome seems probable: the next tanker must be much more survivable than current designs and is unlikely to be a derivative of a commercial aircraft design. The DAF will conduct an Analysis of Alternatives to determine the requirements and concept for the Next Generation Air-Refueling System and we will evaluate our future mobility platform needs.

Russia's war against Ukraine, Korea Readiness Review, and the experience combating the Islamic State of Iraq and Syria (ISIS) have taught us that munitions planning, production capitalization, and stockpiling must account for the possibility of a longer and more intense conflict than previously assumed. The munitions cross-cutting operational enabler analysis will inform our fiscal year 2025 budget, but we are not waiting to address our highest-priority munitions requirements. The target set for which we must be prepared is evolving. We must build a munitions inventory that is more diverse with greater capacity while accelerating design and production capability, which includes advanced weapons. In the fiscal year 2024 budget, we are increasing our procurement of munitions and partnering aggressively with the other services, allies, partners, and industry.

The combat support area of electronic warfare (EW) must be reevaluated in light of emerging threats. Historically, EW development has been stove-piped for the sole purpose of providing enhanced survivability of individual platforms. As our adversaries have advanced their long-range sensing and targeting capabilities, we need to examine new ways to use EW as an offensive capability designed to defeat adversary kill webs. While most of this analytical work is classified, we expect new programs as well as some program restructuring in our fiscal year 2025 budget.

Last year we indicated that hard choices would have to be made. Often those choices are between current and future capabilities. The DAF fiscal year 2024 budget provides an acceptable level of operational risk for the current force in order to fund the future force. Affording the investments necessary to implement the operational imperative-derived recommendations requires both divestitures from the current force and an acceptance of risk in the level of readiness of the current force. Make no mistake: your Air Force and Space Force are ready and able to confront and defeat any adversary, but they are not being maintained at as high a level of readiness as might be possible. The fact is that the threat is racing to make those existing forces obsolete. The DAF must move as rapidly as possible to the future set of capabilities we need to sustain our deterrent and our ability to project power. There is not a moment to lose.

We deeply appreciate the support of Congress in fiscal year 2023. Congress largely supported our divestiture requests in fiscal year 2023 with one exception—the divestiture of 32 of our oldest and least capable F–22s. A year later, the threat is more

severe, and the need to modernize is more pressing. This year we hope to continue the divestitures that were requested last year as we transition the force to one that is relevant to the threat. In particular, we are requesting the retirement of an additional 42 A–10's. This 40-plus-year-old fighter has served the Air Force and the Nation well, but it does not deter or survive against our pacing challenge, and we need to move forward.

The Air and Space Forces are working to fulfill the NDS priority of building a resilient joint force and defense ecosystem. All our mission capabilities rest on one single foundation—our people. The hard work and dedication of over 700,000 military and civilian airmen and guardians across the Active, Guard, and Reserve components power our department. In fiscal year 2024, we vow to continue supporting them by ensuring they can serve to their fullest potential. We demand a culture of respect, will promote accountability, and aim to end harmful behaviors, such as sexual harassment, sexual assault, racial, ethnic, and gender disparities, domestic violence, domestic abuse, and suicide as well as hazing, bullying, and other forms of discriminatory harassment. We will also promote initiatives that improve diversity and inclusion, ensure quality healthcare access, advance recruitment and retention, and improve our talent management processes to strengthen readiness. Every current and potential airman and guardian should understand their value and the importance of service to our Nation.

As we move forward to meet our challenges, we do so as members of a much larger team. First, the Air and Space Forces are critical members of the joint team. We are also members of an international team with our allies and partners who collectively ensure our success at achieving integrated deterrence against any threat, but first and foremost against our pacing challenge.

Our people and our missions are successful because of teamwork. The fiscal year 2024 budget continues numerous investments, such as $194 million for Pacific Deterrence initiatives, to strengthen our relationships and interoperability with our joint force, allies, partners, and interagencies. The North Atlantic Treaty Organization (NATO) is stronger than ever, and the ever-increasing F–35 community provides strong interoperability. In the Pacific, we are expanding our relationship with traditional partners like Japan, South Korea, and Australia, while strengthening our cooperation with nations like the Philippines and other Pacific Island nations. Our united resolve against Russian aggression and our combined focus on the pacing challenge in the Indo-Pacific highlight the incredible partnerships we have with democracies around the globe that share our values. As we research, test, acquire, and build the military capabilities of tomorrow, we strengthen and expand the Defense Industrial Base, and we do so in concert with our allied and partner nations.

UNITED STATES SPACE FORCE

The United States Space Force was created in recognition of the space domain's critical importance to national prosperity and the need to contest the domain for national security purposes. Recently, the U.S. has seen dramatic changes in the domain with an exponential increase of launches, on-orbit active payloads, space debris, and proliferation of counter-space threats. This reality presents new risks and opportunities to national objectives across diplomatic, information, military, and economic instruments of power. Consequently, ensuring our Nation's ability to operate in, from, and through a stable space domain is a vital national interest for the Space Force to address.

Spacepower is not simply "important" in modern competition and conflict—it is foundational. Russia's war against Ukraine continues to validate this assertion in several ways. First, Russian counterspace attacks since the outset of the war reinforce the reality that space is a warfighting domain. Second, proliferating constellations and disaggregating space missions are proving to be far more resilient and effective, especially with commercial augmentation. Third, equipment alone cannot win in the modern fight. Winning takes space-enabled, multi-domain operations and a joint force trained on the most current operational concepts. In this environment, we must shift to a resilient and effective Space Order of Battle and ensure we have the tools, talent, and experience to be ready to face the challenges to our missions of providing space superiority so that we can enable and protect the joint force, our allies, and partners.

SPACE FORCE'S ROLE IN DEFENDING THE NATION

A primary responsibility of the Space Force is to field ready, resilient, and combat-credible forces. To be ready, guardians must be trained, exercised, and postured. To be resilient, our architectures must be designed to render threats operationally impractical or self-defeating. To be combat-credible, space forces need systems for

full spectrum operations utilized by competent warfighters practiced in their tradecraft.

Through the operational imperatives, we are defining the space systems and capabilities we need to prevail against the pacing challenges—the PRC and, secondarily, Russia. Through the work in the first operational imperative, we are focused on increasing resilience for space architecture by addressing the risks facing people, platforms, and processes through systems proliferated across multiple orbits. Resilient systems will allow us to prevent, respond, and campaign through competition and aggression. When operated by a ready, combat-credible force, resilient systems will disincentivize would-be aggressors.

The fiscal year 2024 budget includes critical investments for meeting all four priorities demanded in the NDS and the DAF's first operational imperative by evolving toward more resilient space architectures. Building resilience must first consider the continuous operation of over 50 legacy platforms, which necessitates investing $172 million in fiscal year 2024 for additional cyber protection, evaluating select legacy systems for upgrades, and integrating space capabilities from several allies and partners. These upgrades will broaden the resilience of several mission areas, including military Positioning, Navigation and Timing (PNT), Command, Control, Communications, and Battle Management (C3BM) systems, and NC3 by migrating the Evolved Strategic SATCOM (ESS) system to a proliferated architecture that will be more resilient during a strategic attack.

Still, the surest way to lessen long-term risk is through the generational replacement of legacy platforms. This year's budget requests $102 million to continue our analysis of the force design for how space-based systems support several critical warfighter needs, including delivering communications to the tactical edge, providing secure PNT information, and enabling data links that connect sensors, warfighters, and weapons. The insights gained from comprehensive force design analyses ensure we make effective and cost-effective transitions from legacy to next-generation space systems.

The first mission area to undergo this transformation will be Missile Warning/Missile Tracking (MW/MT), with the last legacy Space-Based Infrared System launch having occurred in 2022. In the fiscal year 2024 budget, we turn the page into a new era of MW/MT with over $2.3 billion to ramp up research, development, test, and evaluation of the first tranche of proliferated satellites, ground segment development, and interoperability testing which sets the way for a complete constellation in the years to follow. Additionally, we are on track to deliver the first Next-Gen Overhead Persistent Infrared geosynchronous space vehicle by 2025 to reduce risk and improve the transitional resiliency and effectiveness of MW/MT, missile defense, battlespace awareness, and technical intelligence.

Recognizing that joint warfighters need to sustain and expand SATCOM capabilities, this budget pursues new solutions. MeshONE, for example, is a $151 million effort that will deliver a novel approach to a modern, scalable, resilient, cyber-secure Wide Area Network available to the joint force at the tactical edge. We are also leading the transformation of communications via the emerging space data transport layer. Beginning in fiscal year 2024, our investment of $1.8 billion will deliver an initial warfighter capability that will provide low-latency data transport and beyond-line-of-sight targeting, with persistent regional access to the joint force. Once fully operational, this capability will serve as the backbone of data transport in support of C3BM and JADC2.

We must also provide protection to the joint force and our allies from adversary space systems that threaten our forward-deployed forces and those of our partners. The fiscal year 2024 budget includes funding for critical counter-space capabilities intended to fulfill this mission need. Specific budgetary information is available at a higher level of classification.

Our ability to use space effectively requires assured access, being first to field the necessary capabilities, and the ability to reconstitute them, if necessary. This budget ensures the National Security Space Launch (NSSL) program is equipped to place essential capabilities in orbit when needed. The NSSL program is preparing for a new phase in which we are pursuing a dual-lane, hybrid approach that maximizes the use of the Nation's robust commercial launch market. Recognizing the exponential growth of the commercial space industry, we are investing $99 million in fiscal year 2024 and over $1 billion over the FYDP into the Range of the Future vision, which aligns us with the accelerating domestic space launch market, and maintains safe and assured launch for commercial, civil, and Department of Defense users.

SPACE FORCE'S ROLE IN TAKING CARE OF PEOPLE

The Space Force is implementing a more modern talent management approach based on a competency framework that optimizes individual contribution. Over the past year, we have made progress toward achieving our end State described in the Guardian Ideal. The result has been tangible impacts on retention and the development of guardians of all ranks. Our future hinges on recruiting and retaining a diverse and innovative force of highly talented guardians, and we are proud to have met our recruiting targets. Guardians will soon be leading an innovative approach to holistic health by emphasizing a continuously healthy lifestyle rather than episodic fitness testing. We are retooling how we measure healthy living and providing guardians and leaders with the resources they need to uphold the highest standards expected of military professionals.

We are also advancing opportunities and education for all ranks and phases of a guardian's career. Starting with Basic Military Training, fiscal year 2024 will see graduation standards fully established, with guardians being held to service-specific requirements, while Air Force Officer Training School and Reserve Officers' Training Corps Space Force cadets will see increased space-related academic content. This budget will mature the University Partnership Program to inspire and recruit the right talent and provide additional opportunities for guardians to obtain advanced academic degrees in essential Science, Technology, Engineering, and Math subjects. Reflecting our continued commitment to professional military education, this budget funds the program with our first graduates in 2024. With congressional support, we intend to innovate by pursuing a personnel system with full-to part-time fluidity that will improve career flexibility and enhance retention tools.

Recruiting initiatives are only the beginning for guardians as space professionals. To develop professional warfighters, this budget commits to enhancing readiness by increasing the quality and quantity of realistic testing of new systems and training of guardians on them. By incrementally instituting Operational Test and Training Infrastructure and the National Space Test and Training Complex, fiscal year 2024s investment of $21 million will continue progress in delivering more realistic testing and training against a thinking adversary, much like the high-end fight our Nation may face in a future contingency. To do this, the Space Force will build agile operational capabilities and execute orbital experimentation to rapidly expand our technological prowess.

SPACE FORCE'S ROLE IN SUCCEEDING THROUGH TEAMWORK

Teamwork for the Space Force starts internally within the DAF, where the Space Force relies upon support from the Air Force. For example, the Air Force supports the six Space Force Bases with over 8,000 Total Force Airmen providing numerous activities to the Space Force. This includes, but is not limited to, finance, contracting, education and training, child and youth services, dining, fitness, lodging, manpower, logistics, communications, medical, emergency services, and base security. Externally, the Space Force is building teams in four key areas: joint force, commercial industry, the intelligence community, and internationally.

With congressional support, the Chief of Space Operations is formally designated as the Force Design Architect for Space Systems of the Armed Forces. This is important because our closest partnering efforts are inside the joint team. We are exercising our role as the integrator of all space requirements from and for the joint force as we merge and integrate requirements through more-responsive processes from sister services and Combatant Commands. Moreover, this budget requests to restructure the Space Force's organizations responsible for this important analytic work, namely by redesignating the Space Warfighting Analysis Center as a direct-reporting unit, which will increase responsiveness to warfighter needs.

In coordination with the Intelligence Community (IC), guardians are also taking the initiative and exploring joint service intelligence, surveillance, reconnaissance, and targeting needs and opportunities. Inherent coordination in integration with the IC ensures that operational and intelligence requirements are being met efficiently, especially when they overlap and use shared assets. For example, the IC and DAF are similarly seeking new means for moving target engagement, the fourth operational imperative.

To best partner with our industrial base and commercial space, we must improve space acquisition to be more dynamic, cost-sensible, and effective. In the past 3 years, several significant improvements have been made to the structure and relationships comprising space system acquisitions. For example, all major stakeholders in space acquisitions are collaborating to define resilient architectures, assess risks to identify needs, and drive rapid change that aims to deliver results faster than the threats can react. The nine acquisition principles developed by the Assistant

Secretary of the Air Force for Space Acquisition and Integration will revamp acquisition strategy to epitomize responsive acquisitions that apply state-of-the-art commercial best practices.

Expanding the use and future of the commercial space industry and academia across all mission areas organic to the Space Force and the joint force remains critical. These include satellite communications (SATCOM), space domain awareness (SDA), launch, PNT, and more. A strategic advantage for the United States is our robust, innovative, and responsive industrial base, which includes the highly specialized traditional defense industrial base and the highly innovative new commercial space industry segment. We are embracing a hybrid architecture of commercial solutions across many mission areas. Our approach to hybrid architectures affords several benefits including resiliency, cost competition, responsive surge capacity, rapid technology refreshment, increased innovation, improved diversification to industry, and more expedient integration with international partners.

We continue to expand the team of allies we cooperate with across all mission areas. Space Systems Command recently delivered two SDA sensors on Japanese satellites to build SDA capacity and relations with a key ally in the Indo-Pacific region. In the European theater, our partnership with the Norwegian Ministry of Defense led to Enhanced Polar SATCOM payloads on two Norwegian satellites that will provide communications from highly elliptical orbits. The Space Force continues to address partnering challenges by implementing new classification guidance and sharing agreements, investing in more accessible hardware and software such as the Unified Data Library, and supporting DAF-and Department of Defense-wide solutions, particularly the Mission Partner Environment. The Space Force recognizes that the best solutions are preventative, such as the implementation of the Combined Space Operations Vision 2031 and the successful maturation of the NATO Space Centre. These structural improvements will help us to develop and operate resilient, interoperable architectures by and for coalitions.

UNITED STATES AIR FORCE

The United States Air Force is critical to our national defense, is committed to airmen and families, and succeeds by teaming with our joint teammates, allies, and partners as we execute our mission to "Fly, Fight, and Win . . . Airpower Anytime, Anywhere." Our speed, agility, and lethality are exponential force multipliers to any global military operation. Our capabilities underwrite the entirety of the joint force, and we are uniquely suited to provide this cornerstone of the Nation's defense.

To meet the threats facing the force of today and in the future, we must implement the programs that have been defined by the analysis of the seven DAF operational imperatives and continue the momentum of Accelerate Change or Lose. We are orienting our decisionmaking processes and shaping investments around resilience and lethality against the pacing challenge, long-range kill chains, and the elements supporting them. We remain dedicated to ensuring our investments and resources are properly aligned with the NDS to deter our adversaries and prevail in conflict. As the combat environment and the character of war continue to evolve, our determination to be the leader in speed, agility, and lethality remains an irreplaceable role for the joint team and our allies and partners.

AIR FORCE'S ROLE IN DEFENDING THE NATION

As stated above, we must continue to make hard choices in Airpower modernization to keep pace with our strategic competitors while balancing risk. The difficult decisions are far from over, and the measured near-term risk decisions which prioritize essential modernization and acceptable current readiness continue. Airpower modernization is critical to address the four NDS priorities: defending the homeland, deterring strategic attacks, deterring aggression, and building a resilient joint force.

The NDS priorities depend upon platforms and capabilities that support effective command and control and are survivable in the threat environment of both today and tomorrow. In fiscal year 2024, we continue our modernization efforts while divesting platforms and capabilities that have decreasing relevance against our pacing challenge. Current airborne platforms, such as the E–3 and E–8, are not adequately survivable against emerging threats, are not optimal for joint or coalition operations, and need to continue divestiture as we look to the future. These airborne capabilities play a critical role in meeting the operational imperative to track and engage enemy forces at scale. A combination of space-and air-based systems will be needed to maximize lethality and close kill chains. We remain committed to balancing current, mid-term, and longer-term capability and capacity by divesting the E–3 while rapidly acquiring and fielding the E–7A to modernize efficiently.

A focused redesign of the C3BM network, being pursued under the second operational imperative, is overdue and a top-priority modernization effort that will define and field ABMS capabilities. The establishment of the C3BM Integrating PEO will align command and control modernization efforts across the DAF and with the joint force. ABMS will fulfill the Air Force's integral contribution to JADC2 and the fiscal year 2024 budget focuses on building and maturing ongoing programs.

Air superiority for the joint force demands affordable Airpower modernization, which includes NGAD. The fiscal year 2024 budget continues NGAD development. The NGAD family of-systems operational imperative will provide an innovative suite of capabilities that allow us to establish and maintain air superiority, a precondition for the joint force's freedom of maneuver. The uncrewed CCA program included in this budget is a significantly enhanced activity for air superiority and is targeted to support both NGAD and the F–35. The CCA program will have three simultaneous lines of development—the platform, autonomy, and unit construct.

In addition to the longer-term operational imperative programs described above, the modernization decisions we are making consider the entirety of the Air Force's capability and capacity mix. As we work to develop a new generation of capabilities, we are also working to improve current and mid-term capability and capacity. This process includes replacing some legacy platforms, namely the MH–139A replacing the UH–1N, and the Survivable Airborne Operations Center replacing the E–4B. It also includes modernizing existing platforms that will remain in operation for many years, including the B–1, B–2, B–52, C–17, C–5, F–16, F–15E, F–22, and F–35 fleets. Within the fiscal year 2024 budget, we have committed over $12 billion to modernize these existing platforms. These modernization efforts are designed to improve mid-term capability and reduce risk while providing needed capacity to complement the improved capabilities provided by the programs defined by the operational imperatives and the new families-of-systems such as the B–21 and NGAD.

As noted earlier, capable, improved, and complementary munitions are needed for both our new and existing platforms. We are prioritizing investments in munitions and technology to counter pacing threats in highly contested environments. This includes investments in both air-to-air and air-to-surface capabilities to engage mobile targets from standoff ranges in adverse weather. Investments into hypersonic munitions will enable us to hold high-value, time-sensitive targets at risk in contested environments from standoff distances. The fiscal year 2024 budget invests over $5 billion to support Small Diameter Bomb II, Joint Air to Surface Standoff Missile, Hypersonic Attack Cruise Missile, Air-Launched Rapid Response Weapon, and more munitions' facilitation across the defense industrial base. These investments will shorten the kill chain while supporting the moving target operational imperative.

For the current force, we are pursuing improved readiness through multiple channels, including the Air Force Force Generation model (AFFORGEN). AFFORGEN enables the presentation of sustainable, predictable capacity and capabilities while ensuring operational preparedness and required readiness. AFFORGEN balances risk between Combatant Command requirements, Air Force readiness, and modernization by deploying pre-identified units and/or teams who have trained together to improve performance. AFFORGEN will meet initial operational capability in fiscal year 2024.

Agile Combat Employment (ACE) increases readiness by dispersing operations from large bases to networks of smaller locations and provides the basis for the operational imperative of resilient forward basing. We are standardizing the concepts and terms of ACE in Air Force Doctrine as well as incorporating them into ongoing exercises and worldwide training. There is $1.2 billion to fund the resilient forward basing operational imperative this fiscal year in addition to funding for ACE. Additional work is being done to identify and create capabilities and formalized training programs to field an agile force that sets the theater and establishes distributed command and control.

The Flying Hour Program (FHP) and Weapon System Sustainment (WSS) budget requests ensure our airmen have the training and equipment necessary to "Fly, Fight, and Win." The $9 billion in fiscal year 2024 funds our FHP to levels that can be reasonably executed and meet our readiness requirements. Our WSS fiscal year 2024 funding of over $19 billion is aligned with our FHP but is challenged by requirements growth due to an aging fleet, the fielding of more complex weapons systems, increasing operational requirements, and increasing organic and contract costs.

Execution of our mission requires appropriate infrastructure support and resilient basing. The Facilities, Sustainment, Restoration, and Modernization (FSRM) efforts focus on prioritizing existing quality-of-life requirements and maintaining our operational and training infrastructure. In addition to new mission builds for Military Construction (MILCON) projects, we are pursuing improvements for our airmen,

supported guardians, and their families to our Child Development Centers (CDC) and dorms with targeted investments totaling $107 million in fiscal year 2024 MILCON and $294 million in FSRM. Since 1990, we have 60 percent fewer fighter squadrons, 40 percent fewer airmen, but only 15 percent fewer installations in the continental United States. Our fiscal year 2024 budget reflects our commitment to right-sizing our facilities and infrastructure footprint through consolidations, demolitions, and optimizing our space utilization.

AIR FORCE'S ROLE IN TAKING CARE OF PEOPLE

Taking care of our people begins with recruiting the best military and civilian airmen of tomorrow. In fiscal year 2023, the Active Duty component of the Air Force is projected to miss military enlistment requirements by about 10 percent, over three thousand individuals. The Air Guard and Reserve components are projected to miss their goals by even higher margins. To maximize our pool of eligible individuals and to recruit the best our Nation has to offer, we are working to reduce barriers and connect with young people and communities. While maintaining our established standards, we are reviewing and removing barriers to service and offering enhanced financial opportunities to those who wish to serve. Additionally, we are taking a targeted approach to open our bases to local communities to strengthen connections and help influencers and potential recruits see the many possible opportunities we have to offer for a rewarding career and personal development. We are also highlighting, particularly online, the positive experiences of Air Force veterans who have moved on to successful careers outside the military.

Once airmen join our team, the focus shifts from recruitment to retention. Congress provided critical retention tools to the Services last year with increases in basic pay, housing, and subsistence rates—providing a viable compensation package. Our focus on improving the quality of life for our airmen includes improving the childcare availability for our members. The fiscal year 2024 budget includes new CDC construction, existing CDC facility improvements, staffing initiatives, and additional childcare providers.

Military housing is another important way we have focused on retention. Our fiscal year 2024 budget includes funding for continued investment in DAF's government-owned and government-leased housing based on the need to support mission requirements, address health and safety concerns, and modernize housing for unaccompanied personnel. Our fiscal year 2024 budget also includes Family Housing Construction funds for prioritized investments in DAF's Military Housing Privatization Initiative (MHPI) portfolio to improve the safety, quality, and habitability of select privatized housing projects and ensure their long-term financial viability. We remain committed to providing continued oversight of the private sector MHPI companies that own and operate privatized housing projects on DAF installations to hold MHPI companies accountable for project performance, problems with property management, and inappropriate business practices. In addition, we will continue to engage with local civic leaders to increase the availability of affordable, quality off-base housing options for our servicemembers and their families.

Retention efforts must also ensure military members and families have access to the care and support they need—including mental health. As the Nation struggles with a shortage of mental health providers, we are employing various innovative means to provide this care to airmen and guardians. The Targeted Care program improves access to care by connecting people to the most appropriate resource given their needs. Additionally, we are implementing the recommendations of the Independent Review Commission on Sexual Assault in the Military, as approved by the Secretary of Defense, and leaning forward on exploring the co-location of victim support services. Furthermore, we are implementing groundbreaking military justice reforms to establish the Office of Special Trial Counsel, which will provide expert, independent, and specialized support for the investigation and prosecution of serious crimes such as sexual assault. We are also ready to begin implementation of the Department of Defense's Suicide Prevention and Response Independent Review Committee recommendations and have leaned forward on restructuring prevention training, increasing emphasis on lethal means safety and behavioral health workforce development.

Retention also requires that our talent management decisions are optimized for both the member and the Air Force. The Airmen Leadership Qualities we value must be reflected in our systems and transparent to our members. We are in the process of categorizing 161 specialties and approximately 19,000 functional skills to map flexible designs which align with the talent of our airmen and are adaptive to emerging technologies and threats.

To develop the airmen of tomorrow, our evaluation systems and supporting data systems must be modernized. Fiscal year 2023 saw the beginning of new officer and enlisted evaluation systems which will generate over 17 million data points to drive enhanced talent management decisions and reduce administrative burdens in the future. The new processes, enabled in part by the fiscal year 2024 investments into digital infrastructure and tech refresh, will increase agility and flexibility to build the talent management structure we need. Concurrently, we are also implementing a dual-track "Civilians We Need" career model identifying functional expert and enterprise leader tracks on a model designed to allow flexible career paths based on the members' evolving needs.

AIR FORCE'S ROLE IN SUCCEEDING THROUGH TEAMWORK

Teamwork for the Air Force begins within the DAF, where the Air Force relies upon and supports the Space Force. The Air Force and Space Force are inextricably linked through shared history, current activities, and future operations. The Air Force relies heavily on Space Force for the technical development and execution of each of the operational imperatives and other necessary capabilities. Neither the Air Force nor the Space Force alone has the situational awareness and decision support tools to close hundreds of kill chains on relevant timelines in all domains in a highly contested environment. We can only be successful through teamwork to provide survivable, long-range, persistent families-of-systems across multiple modalities and as a part of a full joint and combined force. The Air Force depends upon a ready, resilient, and effective Space Force.

Our teamwork extends to the entirety of the joint force and Combatant Commands. Each of the operational imperatives and our broader capability investments supports the joint force by providing the capabilities necessary to deter and, if necessary, defeat any challenger. We play a vital role in homeland defense through air domain awareness and the provision of Airpower. We are also leveraging the capabilities of the mission and system level cyber risk assessment components of the Strategic Cybersecurity Program, led by the Under Secretary of Defense for Acquisitions and Sustainment, to help inform investments in cyber risk mitigation. The joint force's ability to effectively mobilize, deploy, and sustain forces cannot be accomplished without the mobility assets we provide. This fiscal year 2024 budget includes $252 million of investment in support of the integrated priority lists of the Combatant Commands. All our platforms and airborne capabilities contribute to joint force combat power, and we remain committed to providing capabilities to the Combatant Commands in the execution of their missions.

Beyond the joint force, we are seeking to expand how we team with our international allies and partners. Investments in readiness, human capital, infrastructure, and relationships with allies and partners remain foundational to balance present-day demands and set conditions for the future. This budget request, coupled with support from our allies and partners, enables responses to imminent threats while also seeking to improve the teamwork and interoperability of the allied and partner forces to win the fight of the future.

To ensure maximum teamwork with our allies and partners, we are seeking to expand interoperability through an Integrated by Design process. Integrated by Design is not a replacement for our current security efforts, but it ensures that we collaborate and make decisions together on interoperability, resource investment, information sharing, force development, and strategy from the very beginning of our programs with the end State constantly in mind. Conversations with allies and partners about developing capabilities that are complementary instead of competitive will also better align us to face future challenges in unity. That unity will be a comparative advantage against threats that seek military, technological, or economic means to challenge our collective national security.

CONCLUSION

The Department of the Air Force fiscal year 2024 budget prioritizes defending the Nation, taking care of our people, and succeeding through teamwork by balancing the risk between maintaining current readiness, mid-term improvements, and longer-term modernization. Current readiness is being maintained at acceptable levels to support combatant commanders while investments are made in mid-and longer-term modernization that is critical to developing, building, and fielding the force needed for the future. The modernization efforts defined by the operational imperatives are not optional; they are called imperatives for a reason. No one can predict when a war with any potential threat may happen, and war is not inevitable. Nevertheless, the PRC, our pacing challenge, is actively and effectively developing the capabilities it believes are needed to defeat the American ability to project

power. The PRC is also expanding and improving its strategic forces and experimenting with destabilizing novel concepts. The DAF must move forward as quickly as possible, or we will fall behind. No one should doubt our current capabilities, which remain the strongest the world has ever seen. Nevertheless, we are in a race for technological and operational superiority more challenging than anything we have ever experienced. In this environment, timely and soundly balanced investments in current, mid-term, and longer-term Air and Space Forces are essential to our continued security. Our most sacred duty to our airmen and guardians is to provide them with the tools they need to be successful. We believe the budget we have submitted for fiscal year 2024 meets that need, but time is our most precious asset, and we urge Congress to move quickly to fund and authorize our proposed budget to enable the new starts, significantly rescoped program investments, and required capabilities that will allow us to keep pace with the threat.

Chairman REED. Thank you very much, General. I have been informed we have something more than just a microphone issue. We have a system issue. So, they are working on it right now.

But in the interim, we will have to share microphones. So, you can sit close together, or—let me begin my questioning by touching on a point that was raised by Senator Wicker. That is the E–7. All of my trips to the Pacific particularly have emphasized the importance of getting this system.

Last year, we were able to include $200 million extra to accelerate the production, and it was hoped that we would get one aircraft in testing by 2027. But Secretary Kendall and General Brown, what is the earliest point we think we can get the E–7 into testing?

Secretary KENDALL. We looked hard at trying to accelerate the program, Mr. Chairman, to move the initial stages faster. We didn't find a way to do that. So, I think we are basically on track with the same schedule that we showed you last year.

The one thing that could be done would be to add funding that would accelerate the production of the follow-on units, not the first one, but the follow-on ones. But we were not able to afford that in our budget.

Chairman REED. Now, there was, I think, a presumption that we would buy the Australian version of the E–7. They are already flying the aircraft. Have we abandoned that approach?

Secretary KENDALL. No, we are still using—there are some modifications that have to be made for use in U.S. airspace, to comply with some of our communications requirements and so on, but they are relatively modest. We are also working with the Australians on follow on upgrades to the E–7 that would enhance its capabilities.

Chairman REED. You are asking for $633 million this year, which will be, as you indicated, to acquire long lead time items and accelerate the production of succeeding aircraft. Again, I think this is absolutely essential program, given what I have heard out in the Pacific. General Brown, I think, would you concur?

General BROWN. I would, and one of the things I would highlight is that in our relationship with the Australians, we are going to be able to send here in June, close to 50 to 60 of our airmen to actually start training on the E–7s. When we do get the aircraft, we will have trained operatives and maintainers to help accelerate bringing the E–7 into our inventory.

Chairman REED. Very good. Another issue is the collaborative combat aircraft, which I think makes a great deal of sense. That essentially a manned aircraft would be operating unmanned aircraft.

One of the constraints I think we have is the number of missiles available for our aircraft right now, and creating this autonomous capability with multitudes of other aircraft would compound our missile problem. Can you just comment, Secretary and General Brown, on the missile issue?

Secretary KENDALL. We are trying to do a balanced set of investments, and that includes the weapons as well as the platforms. The budget request includes three multi-year requests for weapons systems, for missiles, for AMRAAM [Advanced Medium-Range Air-to-Air Missile], JASSM [Joint Air-to-Surface Standoff Missile], and LRASM [Long Range Anti-Ship Missile].

We are also trying to increase the production capacity that you have when we get it in production. We added, I think, about $1.5 billion for munitions procurement in this budget over last year's just for the reasons that you stated.

Chairman REED. Thank you, and General Brown, any further comments?

General BROWN. That extra funding will help the facilitate, so we actually—as we, you know, funding, we can actually increase the production rate not only for AMRAAM, but JATM, which is the follow on to AMRAAM, is also going to be important aspect to support the collaborative combat aircraft.

Chairman REED. This has sent a positive signal to the industrial base that you are here for the long run?

Secretary KENDALL. Absolutely.

General BROWN. That is correct.

Chairman REED. Thank you, Mr. Secretary. General Saltzman, you referred to this in your testimony, but can you give us a quick update on the status—and please try a microphone. I think——

General SALTZMAN. Did it work?

Chairman REED. Thank you. It was the Air Force and the Space Force that combined in a few seconds and fixed it, so, here we go. Question, tests and training ranges. You are at a point now where you have to develop them.

They will be quite different than hundreds of acres of land someplace in the Midwest or the far West. Can you give us an idea of where you are on your range and your infrastructure for range testing?

General SALTZMAN. Yes, sir. Thank you, Senator. We, of course, have simulators and we have some very nascent early models of what I will call "virtual ranges" to accomplish our training. I just don't think they are sufficient yet. Primarily because they don't replicate the threat effectively.

So, the budget proposal adds several hundred million, about $340 million across the FYDP [Future Years Defense Program] in order to increase the fidelity of our simulators and allow us to inject threats into the environment so that our crews can validate their tactics and validate their training against a thinking adversary.

Chairman REED. Thank you very much. Senator Wicker, please.

Senator WICKER. Okay. Thank you very much. Secretary Kendall, thank you for starting off with the MacArthur quote about too late. It does segue right into a number of things I mentioned in my opening statement, sir.

The ICBM replacement program could be delayed. That would cause us to fall further behind on nuclear modernization. Delays in the F–35 Block 4 upgrades. The T–17 trainer aircraft.

The Chairman has also—has already gone into the E–7 command and control aircraft, which would replace the 1975 era AWACS. What happened to the $200 million that we provided last year to accelerate this program, which ended up not getting accelerated?

Secretary KENDALL. Sir, are you referring to the E–7?

Senator WICKER. Yes, the E–7, command and control aircraft. I am sorry, did not make that clear.

Secretary KENDALL. That program has been moving as fast as we are able to move it. I did a personal review of the steps that are necessary to get it into the first phase of testing, and we couldn't find a way to do that. I am not sure about the $200 million that you are referring to and what was done with that——

Senator WICKER. All right, well, the Chairman mentioned in his question that at the Air Force's request we appropriated another $200 million above the President's Budget Request to accelerate this program. It did not get accelerated, and we wonder where the $200 million went.

Then there is a larger question that the Chairman alluded to, there is the E–7 Wedgetail that is being used by our allies in Australia. That is being used very effectively by them, and so, General Brown, do you know where the $200 million went?

General BROWN. Some of that aspect, the money went into the initial development and getting things on contract. So, you start—also the long lead items to develop the aircraft.

Senator WICKER. Okay. Well, now, Secretary Kendall was asked when this E–7 will now be ready, and I don't think we got an answer to that, Secretary Kendall. You said it would just still be on the original schedule. When would that be ready?

Secretary KENDALL. 2027, is the year we will be fielding, because it takes 2 years to build the new airplane. Then we have to take another 2 years, roughly, to modify it and put it into testing——

Senator WICKER. Okay, and why——

Secretary KENDALL.—so the first aircraft—2027.

Senator WICKER. Why is it necessary for an aircraft that is already functioning well for one of our allies?

Secretary KENDALL. Because we are getting new production aircraft. Their commercial aircraft but then modified to put the radar system and the command and control systems inside them.

In order to preserve airworthiness, you have to actually acquire the commercial aircraft and then open it up to insert the other things that you need to put in it.

Senator WICKER. Okay.

Secretary KENDALL.—and that whole process takes a period of time.

Senator WICKER. Okay. Well, it is a fact, though, that Congress at the request of the service provided an extra $200 million for acceleration, and we didn't get any acceleration. That is correct, is it not?

Secretary KENDALL. I think what General Brown indicated, what you got with that was some long lead items being purchased to reduce risk in the program.

Senator WICKER. We didn't get any acceleration, did we?

Secretary KENDALL. I would have to check that for the record. I am not aware that you got acceleration.

[The information referred to follows:]

Secretary KENDALL. The fiscal year 2024 budget requests a total of $228.2 million for the T–7 program; an increase of $165.8 million above the fiscal year 2023 request for $62.4 million. Specifically, the fiscal year 2024 budget request includes: $44.4 million in aircraft procurement funding for long-lead items; $77.3 million in Research, Development, Test & Evaluation; $49.7 million in Operations & Maintenance; $39.5 million of MILCON; $12.9 million of other procurement at beddown bases; and $4.3 million of MilPay. If authorized and appropriated, the fiscal year 2024 budget will fund T–7 program efforts to meet the revised projected Milestone C production decision in the first quarter of fiscal year 2025.

Senator WICKER. Okay. You get back to us on the record. Secretary Brown, how important is this T–7 air training aircraft and to what sort of a disadvantage are we at that this has been delayed once again.

General BROWN. The importance of the T–7 is to replace an aircraft for a 60's era T–38 aircraft. As we bring it on, one of our challenges is continue the maintainability of the T–38 or the delays that right now we have with the T–7.

It is a better aircraft, the T–7 is a better aircraft. I had a chance to personally fly it in a simulator to see how it operates, but that is going to help us reduce our pilots at a—because of a glass cockpit as well, at a better rate and to be able to transition to the current capabilities we have today.

Senator WICKER. Another delay. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Wicker. Senator Shaheen, please.

Secretary KENDALL. Could I clarify a point for Senator Wicker? When we have talked about acceleration of E–7, generally we have talked about getting more inventory sooner, not getting the first airplane sooner.

I think there may have been some confusion because of the way we have used the word accelerate. We get more inventory in the hands of people faster than we would have with the profile we initially proposed, but you don't get the first airplane faster.

Senator WICKER. Inventory. What do you mean by that?

Secretary KENDALL. We, instead of going a profile of one, two, three, for example, we go one, three, three. So, you get additional aircraft sooner than you would have otherwise. So, the total deliveries are accelerated, but not the first aircraft.

Senator WICKER. Thank you, sir.

Chairman REED. Thank you, Secretary. Senator Shaheen.

Senator SHAHEEN. Thank you, Mr. Chairman. Secretary Kendall and General Brown—Secretary Kendall, you talked about timely authorizations and appropriations in your opening statement.

General Brown, you also referred to on time appropriations as being critical. What will happen to your role, the role of the Air Force and the Space Force, for that matter, if the United States defaults on its debt?

Secretary KENDALL. That is a very big question, Senator. I am not an economist. I am trained in business. For any creditors to default on their debt causes a number of reactions, right. It is more expensive for you to get money.

Your creditors aren't as willing to lend money. People are not as willing to lend money to you. All the economists that I have seen suggest that it would be an absolutely devastating impact.

When you have—the closest thing I have seen to this is the 2008 crisis, when the Congress was asked to pass several hundred billion dollars of funds to shore up the financial system. I remember watching the screen as the stock market completely collapsed as that bill was being voted down in the Congress.

That is the sort of thing that we are talking about. I think most people would predict a severe recession, at least. Then going forward, one of the biggest parts of our Federal budget is the interest on the debt.

If those interest rates go up, which is what happens to you when you default, if you can borrow money at all, then that expense becomes much greater and the interest on the debt is already roughly at the level of defense budget.

The short answer to your question is, it would be devastating.

Senator SHAHEEN. You talked about the threat from China, which I think we would all agree is our major competitor. What would China's reaction be to that kind of catastrophic financial outcome in the United States?

Secretary KENDALL. That is probably beyond my expertise to comment on intelligently. But obviously, anything that damages us would be a benefit to China.

Senator SHAHEEN. Thank you, so, it is probably not good for us to default on our debt.

Secretary KENDALL. That is a significant understatement, I think.

Senator SHAHEEN. Thank you. General Brown, during the recent appearance before the Appropriations Defense Subcommittee, we had a conversation about the deficiency with the KC–46's slow guidance system, and you said you had not heard anything about that. Have you had a chance to look into that? Do you have an answer for what the impact of that will be?

General BROWN. I regret that I haven't been able to dig into the details on that. But just in my conversations with our operators and also with AMC [Air Mobility Command], the aircraft is going fairly well right now despite some of the deficiencies that we are finding. As I think, I highlighted before, is operating and supporting all of our aircraft with the exception of the A–10.

[The information referred to follows:]

General BROWN. Air Force Operational Test and Evaluation Center submitted a Category I (CAT-I) Deficiency Report (DR) for multiple cargo issues in January 2022, many of which were tied to insufficient/complex weight and balance and cargo loading tools, manuals, and procedures. The load guidance system in question is referring to this multi-faceted cargo DR, which was adjudicated and downgraded to CAT-II in November 2022. Until the deficiencies are resolved, there is potential for delays in loading and unloading KC–46A missions. The Air Force and Boeing are currently working through short-and long-term solutions, providing incremental capability improvement and resolution.

Senator SHAHEEN. Well, I will continue to ask you, so hopefully you will be able to get an answer for how that is affecting the operations of the KC–46. General Saltzman, in Ukraine, we have seen the role of commercial satellite companies and how important those

are, and obviously that is going to continue to be critical in terms of the Space Force.

You talked a little bit about the training and how to incorporate dealing with those commercial satellites. Can you talk about how important it is to adapt our training and to really make use of the commercial innovation that is going on?

General SALTZMAN. One of the areas that I think is ripe for exploitation is the idea of virtual augmentation or virtual reality as we have seen it.

There is a lot of very promising technologies associated with how you could do virtually augmented reality training so that the operators can experience something that day to day they don't get to experience in space.

Sometimes the orbital mechanics are hard to visualize, but you can use these tools to help you understand proximity between spacecraft, proximity of how solar arrays are turned. There is a lot of exploitation that we can do with those kinds of technologies, and we are looking into those with commercial industry.

Senator SHAHEEN. Good. I have actually had one of those demonstrations. They are very impressive. You also, General Saltzman talked about the opportunities for full and part time availability in Space Force to bring private sector talent to the force.

As the co-chair of the National Guard Caucus, I know that the National Guard has a lot of interest in participating in Space Force in some capacity, and there is still a fair amount of confusion about how that is going to work. Can you talk about the progress that we have been—we have made on how we are going to incorporate the National Guard into Space Force?

General SALTZMAN. Well, it is two different things at this juncture. First is the legislative proposal that we have put forward that helps establish the Air Force Reserve space elements into the Space Force proper, a single component that would have both full time and part time.

We think that is a very innovative way to establish this career path flexibility that will have retention impacts for us. The second situation is the Space National Guard or the Air National Guard capabilities that are performing space, separate and distinct from the legislative proposal.

The most important thing to me is that we retain the capabilities that are currently in the Air National Guard. It is about a 1,000 people. It is seven different states with tremendous space capabilities that we rely on every day.

So, it is important that we maintain that expertise and those capabilities. What we have said is there is probably multiple ways where we can retain those, but we have to move away from the status quo because we have got this disconnect between my responsibilities for the mission, but General Brown's responsibilities to currently OT&E [Organize, Train and Equip] those space capabilities in the Air National Guard.

Where status quo causes problems, there are other ways to evaluate those, and we are going through all the costing and analysis to make sure that we can provide decisionmakers with the right balance between the two.

Senator SHAHEEN. Well, thank you. I look forward to hearing the outcome of those discussions. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Shaheen. Senator Fischer, please.

Senator FISCHER. Thank you, Mr. Chairman. Mr. Secretary, I want to ask you about an underappreciated but absolutely integral part of our nuclear enterprise, and that is NC3 [nuclear command, control and communications] modernizations. Senator King often refers to that as the fourth leg of our triad, and I agree with him on the absolute importance of that. Can you please describe how this budget request supports NC3 modernization and why it is so important that we get this effort right?

Secretary KENDALL. Thank you, Senator. The NC3 is an essential part of the triad. It actually has to be secure and resilient so they can function in an emergency. What we are doing is we are replacing and getting the next generation of AEHF [Advanced Extremely High Frequency] satellites for secure communications. We are investing in that.

We are also investing in the radios that are carried by some of our aircraft that are nuclear capable, and we are investing in some of our software systems that are used to manage nuclear functions.

We have fully funded investment accounts in each of those areas to make sure we stay current and provide the secure nuclear communications that are necessary.

Senator FISCHER. Would you say we are on schedule in that modernization? Do you feel pretty confident that we are where we need to be?

Secretary KENDALL. I am never 100 percent confident in schedules. Every new program, every development program in particular, entails risk. I am not aware of anything that—there is nothing that is keeping me up at night in that area right now.

Senator FISCHER. Okay. Good to hear. General Brown, I would like to ask you about the Sentinel program. The Sentinel in placement is one of the largest and most complex projects that the Department has undertaken in decades. What efforts are currently being undertaken to ensure that this program remains on schedule?

General BROWN. There are several things that we are doing to keep Sentinel on schedule. Part of that is the dialog between the Department of the Air Force with our industry partners. I meet with the CEO [Chief Executive Officer] on a quarterly basis where we walk through where they are.

One of the key aspects we are looking at is trying to be more proactive than reactive on this and really thinking ahead to ensure we are doing things to drive down risk as far as supply chains, workforce. To stay ahead of, and then on top of that, as we are working through right now for the land acquisition, our working that process as well.

Right now, I think the dialog is important and that is what is really helping us keep things on track. There are no surprises or minimizes surprises, and being able to engage and mitigate well in advance of any type of event that might impact the critical path.

Senator FISCHER. As you look ahead, and you are talking about mitigation on disruptions that can occur, what keeps you up at night?

General BROWN. Well, just the size of this particular program and the aspect of how important is to our strategic deterrence. Because of the size of the program and the time it is going to take, those are the things that concern me, because there is a lot of things going to happen between now and when we fully field. But our goal here is to stay ahead of those and ensure that we mitigate any type of challenge.

Senator FISCHER. Are we on track for that goal?

General BROWN. We are now, and that is part of the yard work between ourselves and industry partners.

Senator FISCHER. Okay, thank you. Secretary Kendall, I was with you on the rollout for the B–21 Raider. Can you provide us with any updates or new developments on that program?

Secretary KENDALL. There haven't been any fundamental changes since we were there, Senator. We are still, as far as I know, on track to have our first flight later this year.

Senator FISCHER. Can you tell me how the budget request this year is going to help to expand munitions production capacity?

Secretary KENDALL. Yes. We are asking for multiyear production for three systems, JASSM, LRASM, and AMRAAM. We are also entering production, hopefully for JDAM [joint direct attack munitions], the new air to air missile. We are going to be asking for funds to increase the size of that production line, the capacity of that production line from what we had originally planned.

Senator FISCHER. Okay, good. Also, Secretary Kendall and General Brown, I was pleased to see that there is full funding for the RC–135 program in the budget request for this year.

The RC–135 is highly capable ISR [intelligence, surveillance, and reconnaissance] platform that provides critical intelligence to decisionmakers and enables the United States to maintain a strategic advantage over potential adversaries.

We see those efforts and how important they are in Ukraine and also with our NATO allies. Thank you for getting that in there, and I expect to see continued full support for the RC–135 fleet in future years as well. Thank you both very much. Thank you, Mr. Chair.

Chairman REED. Thank you, Senator Fischer. Senator King, please.

Senator KING. Thank you. Secretary Kendall, which do you consider a more serious immediate threat to National Security, China, or the failure of this Congress to pass a budget and go with a 1-year continuing resolution?

Secretary KENDALL. They are not the same category, Senator, but I take your point. I mentioned time in my opening statement. It is the thing that I am most obsessed about. We can't get it back. That is irreplaceable.

Senator KING. How serious would it be if we had a yearlong continuing resolution instead of the passage of the budget?

Secretary KENDALL. It would be very serious. All the new starts that I talked about earlier, all the increased efforts that I talked about, all the work—we spent a year roughly working on what we called "operational imperatives," which were the seven operational

problems that we needed to solve given what the threat is doing, particularly China.

Senator KING. Would it compromise National Security?

Secretary KENDALL. Absolutely.

Senator KING. You mentioned earlier, and this is sort of in the same lane, in your testimony, in your opening statement about an advanced procurement or an advanced approval for some of the work that you are undertaking. Could you expand on that a bit?

Secretary KENDALL. Senator King, you are of an age similar to mine, I think, and when I make a reference to the movie Casablanca, you will know what I am talking about. But the movie starts——

Senator KING. I am shocked, shocked that there is——

Secretary KENDALL. There you go.

Senator KING.—going on.

Secretary KENDALL. The movie starts with a comment about refugees who come to Casablanca and wait and wait and wait. I am waiting right now. We spent the first year I was in office defining what we needed to do to stay ahead of the pacing challenge, ahead of China.

I had to wait a year to get that into the budget, get the budget submitted. Now I am waiting another roughly a year for, under normal circumstances, that budget to be passed. If there is a year continuing resolution, I will wait yet another year.

That is all time that we are giving away to someone who is racing to be ahead of us technologically and field the capability. We cannot afford that time.

Senator KING. You are proposing a technique——

Secretary KENDALL. What I am proposing is we wouldn't have to wait even the normal one, 1½ year. We will be able to do the low-cost initial stages of a program, do the system engineering, do the preliminary design work, do maybe a little risk reduction, maintain competition, make no long-term commitments, only go up to the point of preliminary design review, one of the earliest milestones.

All that is relatively inexpensive, but it takes time. Then Congress would have full authority to decide whether we could proceed beyond that point or not. We would probably use reprogramming for this and Congress would have authority over that.

There wouldn't be any real loss of the authorities that the Congress has over what we do, but we will gain a year and a half at least of time, lead time to getting things fielded.

Senator KING. We are headed for a markup of the National Defense Authorization Act (NDAA) in about a month. I hope that you will submit your suggestion so that we can consider it as part of that process.

Secretary KENDALL. It has been submitted, Senator. We came over from OMB [Office of Management and Budget]. It was approved by OMB.

Senator KING. You have it in our process. Thank you. General Brown, Senator Cramer and I submitted a letter some time ago to the uniformed leadership about the transition program in the military from Active Duty to veteran status. We got a response from the Secretary, but I view this as a uniformed issue.

I want the senior leadership to take this issue very seriously. Transition for veterans is an incredibly important situation because we have learned that suicide, for example, is most likely in the first 2 or 3 years after separation.

I hope I can have your commitment to pay particular attention to this process. We should be attending to be sure that our soon to be veterans have all the information and contacts that they need to reintegrate into the larger society.

General BROWN. You have my commitment, and, you know, I do take it very seriously because as you might imagine, I have a number of friends that have served, and at some point, I will also transition as a veteran.

The aspect of how we do a very smooth handoff in collaboration with the Veterans Affairs. But it is not only how we transition into new careers, it is also how they emotionally transition into a new life out of uniform, and I think that is a key aspect that helps. If we focus on that, I think it will also help us prevent the suicides of our veterans.

Senator KING. Thank you. I will be submitting a question for the record in the classified session with regard to GPS [Global Positioning System] denied environment. I think that is something we really need to pay close attention to.

The first step in any conflict is going to be an attempt to blind us, so I hope that—I have the same recommendation to the Navy that they will relearn how to use sextants. Space Guard, General Saltzman. Where does that stand? We have been discussing that on the Committee. What is your recommendation with regard to a Reserve Force or space guard to augment the capabilities of your organization?

General SALTZMAN. My recommendation at this point is to make sure we have good, validated numbers that can help us assess each of the various courses of action that would allow me to retain the kinds of capabilities that currently live inside the Air National Guard. Again, that is my most important point.

The expertise and the capabilities that are currently in the Air National Guard need to be harvested so we don't create an operational gap in any kind of transition. So, my recommendation is, make sure that the costing, the number of billets, all of that data is assessed and evaluated as we look at the course of actions.

Senator KING. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator King. Senator Cotton, please.

Senator COTTON. Gentlemen, thank you for your appearance here and your decades of service to our Nation. Secretary Kendall, you have spoken some about accepting near term risk to fund the future force. I have gone back and looked historically at Air Force budgets for about 20 years. Are you aware that the Air Force has received $1.3 trillion less than the Army since 2002?

Secretary KENDALL. I was not aware of that.

Senator COTTON. Almost $1 trillion less than the Navy since 2002.

Secretary KENDALL. No, I was not aware of that either, Senator.

Senator COTTON. That is after accounting for the so-called pass through budget, which I believe causes many people to include

Members of Congress to misperceive the Air Force's total budget. Could you share with us your thoughts about how that works?

Secretary KENDALL. The pass through budget is budget that is included in the submission under the Department of the Air Force, but it is money that doesn't actually go to the Air Force. It is about $40 billion.

For people who are familiar with the budget and used to working with it understand that they realize what that is. For people who are not as familiar, it can be a little confusing in terms of what our total budget is.

Senator COTTON. To be clear, this is pass through budget is not for Air Force classified programs, are not only for Air Force classified programs. It is simply your budget is used as the vehicle to fund these other programs.

Secretary KENDALL. That is correct. It goes to different Departments.

Senator COTTON. That is why I say, I think some people misperceive the top line Air Force budget, and I worry that that might be contributing in part to why your service has had to accept this near-term risk now to fund the future force. I think we as a Congress should try to address this situation to make sure this misperception doesn't continue.

Secretary KENDALL. Senator, what I look at is the adequacy of our budget to allow us to meet our missions. I am comfortable with the money that we are asking for this year to be able to do those functions. There is risk always, and we have tried to balance that risk, taking into account the pacing challenge in particular and trying to respond to that.

Senator COTTON. I want to return to both your opening statement and a question from Senator Reed about collaborative combat aircraft or CCAs. You called them an operational imperative. Can you discuss in a little more detail about how significant these CCAs are for both deterrence and your combat capability?

Secretary KENDALL. Our analysis shows that they are very cost effective. That they basically, by augmenting crewed aircraft with relatively inexpensive CCAs, you get a net combat capability, which is much more significant than if you tried to do it with all fully crewed aircraft.

Our current anticipation is that the cost with CCA will be a fraction of the cost of, say, an F–35. The other advantages for overall affordability, it can make the force much more affordable. You get a lot more combat power for the same total dollars that you might be committing. It has big benefits in both ways.

Senator COTTON. You said again today in your opening statement that the history of failure in warfare can almost always be summed up in two words, too late, a famous Douglas MacArthur quote, but I think you have said it enough that maybe one legacy of your tenure is that people think it is a Frank Kendall quote, and I think that is apt today as it was in MacArthur's time.

What would be the significance if China were to field such unmanned aircraft along with its manned fleet before the United States? How could delays in CCA funding impact that possibility?

Secretary KENDALL. China is aggressively trying to field the capability to defeat our ability to project power. They have been

working on it for at least 20 years. Their long range weapon systems targeting our airfields, our carriers, our satellites, et cetera, are a threat that we really have to cope with.

But they are also modernizing their air capability. I think, Senator Cotton, you have seen the classified briefing that we have been providing. I can't go to great details here, but they have analyzed carefully how we fight and what we fight with, and they have been thoughtful about what they need to invest in to try to circumvent that or defeat it.

That is the reason that I am so obsessed with getting on with the next generation capabilities. Holding onto things that are becoming obsolete over time just doesn't make any sense. We have got to get to the next generation.

Senator COTTON. It is my understanding that this fleet of unmanned aircraft would be a mix of aircraft with both weapons, kinetic weapons, let's say missiles, bombs, that sort of thing, but also other sensors or electronic warfare systems. Is that correct, Mr. Secretary?

Secretary KENDALL. Yes, that is correct. One way to think about it is that the pod or the weapon that might have been under the wing of a crewed aircraft is now flying in a separate aircraft and managed by the commander of that aircraft.

The analysis that we have done shows that the adversary has to honor each of those aircraft as it is a full threat. That gives you a great advantage relative to the cost of having those things in the air.

Senator COTTON. So, it creates a targeting problem for our adversary to have so many aircraft up in the air.

Secretary KENDALL. It both increases the targeting problem, but also gives them tactical dilemmas that he doesn't have to face right now. We can sacrifice one of these aircraft, put it well out in front, use it to draw fire and force the other side to expose itself and then be subject to engagement. So, they are—we call them attritable. They are not expendable, but we can afford to lose some of them operationally. There is nobody in them that we are going to lose. So, it changes our tactical options substantially.

Senator COTTON. While therefore enhancing survivability of our manned aircraft.

Secretary KENDALL. Exactly right.

Senator COTTON. Thank you.

Chairman REED. Thank you, Senator Cotton. Senator Hirono, please.

Senator HIRONO. Thank you, Mr. Chairman. The Joint Base Pearl Harbor-Hickam faces significant infrastructure challenges due to consistently deferred maintenance.

For the Air Force specifically, Hickam Airfield is in urgent need of almost $1 billion over the next several years to repair the taxiways our planes take off and land on. Secretary Kendall, is this budget request adequately prioritizing maintaining Air Force facilities in the Pacific?

Secretary KENDALL. We are prioritizing our facilities in the Pacific, largely because of the threat that we face out there. One of the operational imperatives was resilient forward basing.

So, the thing that we are prioritizing is improving the hardening and the equipage, if you will, of our bases so that we can make agile combat employment a reality. I believe that Hickam specifically falls under our Joint Base construct, which is operated by the Navy. We are working with the Navy to try to have our priorities funded.

Senator HIRONO. That is why I have a question for General Brown. Repairing the Hickam airfield will require support from the Navy and the Joint Base. Are there issues of prioritizing Air Force needs of the Joint Base?

General BROWN. Having served as the Commander of Pacific Air Forces and being stationary at the Joint Base, there has to be collaboration between the Air Force and the Navy.

We have been able to highlight more recently our real concerns with the airfield pavement, and so, it has gotten the attention of the Navy and other parts of the Department, so I think we are on a good path to actually ensure that aspect because it is going to help us project combat power.

Senator HIRONO. Thank you. The Agile Combat Employment Strategy requires the appropriate posture and supporting infrastructure at locations throughout the Pacific, like the islands of the Compact of Freely Associated States.

That will be Palau, Marshall Islands, Micronesia, Guam, and Northern Australia. Secretary Kendall, does the Air Force have the appropriate forward air basing it needs to execute agile combat employment?

Secretary KENDALL. We are working to increase that air basing in places that you mentioned, in Japan, wherever we are based in the Pacific. Our operational success out there depends on making the concept of agile combat employment a reality.

That includes, and it is a priority for us in the budget because it is something we can do fairly quickly relative to other things that we might want to do that would take a development program, for example.

We do have quite a bit of money in the budget focused on adding capability to support agile combat employment, including in the locations that you just mentioned, Senator.

Senator HIRONO. General Brown, what would be the impact to deterrence capabilities in the Pacific if dispersed infrastructure in the places that I am mentioning are not prioritized?

General BROWN. It decreases their options, and by having more and more options to be able to operate, that complicates the calculus for our adversaries. By having and being able to show different locations we can operate from, project combat power from, a credible combat force that adds to deterrence. Having that ability is important.

Senator HIRONO. I am sure both of you acknowledge the importance of the compacts of free association that we are currently concluding.

I just want the two of you to be aware that not only should we be funding the appropriate amounts to the compact nations themselves, but when their citizens come to our country and they are living in states throughout the United States, that they are able to access the social service programs that they should be entitled to,

and I would like those kinds of provisions to be included in the compact.

I am mentioning this to you because the compacts involve not just the DOD [Department of Defense], but Interior, as well as State. General Saltzman, the Department of Defense is increasingly turning to space-based systems for its ballistic cruise and hypersonic missile defense sensing needs. This is of particular interest to Hawaii.

So, what are you doing to ensure that these programs remain on time and on budget? Also, these space systems come with their own unique risks. How is the Space Force ensuring these capabilities are resilient in the face of disruption, whether through a cyber or kinetic attack?

General SALTZMAN. Yes, Senator, I think you will see that this particular budget submission addresses those concerns. First, the missile warning, missile tracking layer that we are pivoting to is a proliferated constellation, which means it is more resilient by design as there are more satellites performing the mission.

Because they are in lower Earth orbit, they are actually more high fidelity, so it is better tracking for some of the threats that we are seeing come out of our pacing challenge. Also, we are investing heavily in the cyber defense capabilities of the networks that are required to maintain and operate those systems as well. So, this budget definitely addresses your concerns.

Senator HIRONO. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Hirono. Senator Rounds, please.

Senator ROUNDS. Thank you, Mr. Chairman. Gentlemen, first of all, thank you all to you and to your families for your service to our country. I would also like to thank General Brown and Secretary Kendall for your most recent visit to Ellsworth Air Force Base.

Ellsworth is very excited to be the first bed down for the B–21 training squadron and the first operational squadron in the entire community. In fact, the entire State of South Dakota is very excited to see that coming their way.

I would also like to take this opportunity to recognize the Tigers of the 37th Bomb Squadron in their recent win of the STRATCOM's coveted Omaha Trophy. Shows that they are the best of the best and we are proud of them.

General Brown and General Saltzman, there have been efforts most recently regarding an attempt to utilize a part of the electromagnetic spectrum for purposes other than DOD purposes, and specifically the 3.1 to 3.45 gigahertz band or the S-band of the spectrum.

I would like for the record, if you could confirm for us that your forces do utilize that portion of the spectrum and that, at this unclassified level, could you share with us just how significant that part of the spectrum is to your forces regarding radar communications and so forth? General Brown.

General BROWN. Senator Rounds, we do use that part of the spectrum for our operational capabilities, and there is a number of weapon systems that operate within that band. I will just give you one example, our C–130 station keeping.

If that band was actually moved and we had to redesign, it would cost roughly about $2 billion just for that one platform. We have a number of platforms that operate within the S-band, so it is critical that we understand the impact on our security, not only for us to be able to operate, but also if we had to redesign systems, if we lost access to that part of the electromagnetic spectrum.

Senator ROUNDS. Thank you, General. General Saltzman.

General SALTZMAN. That particular band is a radar band that allows us to look into deep space. We currently have a developmental radar that is going to significantly enhance our ability to do space domain awareness.

If we were not able to use that piece of spectrum, not only would we lose the time that we have already invested in, as much as several hundred million dollars that we have already put into development, but it would also mean that we have to use a different portion of the electromagnetic spectrum, which isn't as capable in determining and discriminating capabilities in deep space.

Senator ROUNDS. Physics still count, don't they?

General SALTZMAN. They do, sir.

Senator ROUNDS. Thank you. General Brown, multiple independent studies, as well as at least one by the Air Force, indicate the numbers of bombers needed to meet requirements greatly exceed the minimum number currently being planned for.

In your professional military judgment, what is the approximate number of bombers needed to maintain a credible deterrent against two near-peer competitors?

General BROWN. Senator, the couple of things I think about is not only the number but also the capability of the bombers. The two bombers that we are—right now, the three bomber fleet, going to two bomber fleet, the B–21, as you highlighted that will start out at Ellsworth, but also as we upgrade the B–52, and so there will be 100 B–21s and 75 B–52s.

We will continue to do analysis. I mean, that is what we—the analysis we have right now, based on the threat. We will continue to pay attention to the threat, and that will also influence if we have to go beyond those numbers from a bomber capacity standpoint.

Senator ROUNDS. It sounds like a lot of bombers until you realize that not all of them are capable at all times. They are all undergoing maintenance at one point or another. What percentage of the bombers would you normally expect to be operational at that point?

General BROWN. Ideally, when we look at our day-to-day operations, not only for our bombers, but really all of our fleet, an 80 percent aircraft availability because you are going to have some aircraft down for maintenance, down for depot type operations. That is the goal of what we want to get to or above, not only for our bombers, but really across all of our platforms.

Senator ROUNDS. Thank you, sir. General Saltzman, as you know, I have concerns about the DOD's approach to providing space based, ground moving target indication capabilities to tactical DOD users following the divestment of the JSTARS platform.

Can you share with me how you are making sure that the JROC validated requirements are captured in the acquisitions process of

a platform whose acquisition is executed by the intelligence community? Will the DOD maintain milestone authority?

General SALTZMAN. Currently milestone decision authority, obviously that is acquisitions, and it will be a collaborative effort with the IC [Intelligence Community]. But Mr. LaPlante in USD A&S [Acquisition and Sustainment] does have that milestone decision authority, or portions of it.

From my vantage point, in terms of requirements and meeting those requirements, the Space Force is responsible for writing the capabilities development document, which documents those high-level requirements to make sure that the JROC validated requirements are satisfied in the program.

Then perhaps most importantly is the concept of employment. U.S. Space Force has responsibility to right that concept of employment to make sure that operationally it is a DOD mission that meets the warfighter requirements regardless of who develops the sensor.

Senator ROUNDS. Thank you, and Secretary Kendall, just one very quick comment. I hope that in the future, with the help of this Committee, when asked what keeps you up at night, I hope there will be a point here shortly where you can respond the same way that Secretary of Defense Mattis did, and said, "it is not things that keep me up at night. I keep other people up at night." I think that is our goal. Thank you.

Secretary KENDALL. I share that with you, Senator.

Senator ROUNDS. Thank you, sir. Thank you, Mr. Chairman.

Chairman REED. Thank you, Stand Rounds. Senator Ernst, please.

Senator ERNST. Yes, thank you, Mr. Chairman. Thank you, gentlemen, for your testimony and your service to our great nation. I want to continue the discussion about our bomber force and the future of it.

In a conflict with China, Air Force bombers will need to go after hundreds of targets over the vast distances of the Pacific. Yet today's Air Force is very much centered on fighters, with about 15 fighters for every one of our bombers.

If you look back to the 1960's, the Air Force had to deliver long range strikes against the Soviets, and the make-up of the Air Force at that time was about three fighters to every bomber. So, we just need to make sure that the mix is appropriate for today's fight. Again, if we are looking at a fight with China, we want to make sure that we are appropriately balanced.

General Brown, we will start with you. Tell us a little bit more about the critical role of the bomber in projecting power, especially as we are looking toward the east and a potential fight with China.

General BROWN. One of the key areas when you think about our bomber fleet, is that to be able to do—come from long distances away from where the airfields that you would take off from, would be under attack by and large.

The overall capacity of our bombers to do a number of missions, to be able to carry how long they will be able to stay airborne. So, it provides that capability to carry a number of long range standoff weapons in support of operations.

That is the viability of the bomber, and it is the capability that provides to be able to help us generate combat power.

Senator ERNST. Yes, very important. Thank you, sir. To the extent you can speak to it, how would the B–21 modular design allow the bomber to take on a wider range of missions, whether it is a strike, mission, ISR, or even electronic warfare?

General BROWN. I think one of the areas as we start going down the path of digital engineering and looking at how we do mission systems, many things are more software based today than they were back in history.

So that ability to be able to rapidly reprogram vis-á-vis the threat, to bring in additional capability from a weapon standpoint as well, that is a part of the modular aspect and how we are able to work the aspects of the engineering to bring in capability much faster than we have in the past.

Senator ERNST. Yes, exactly. I am intrigued by modular designs in this platform and many others as well. Secretary Kendall, with our major increases in the Air Force budget, then would increasing the B–21 buy require divesting legacy aircraft?

Secretary KENDALL. Senator, I share your concern about the future size and structure of the Air Force. I am not sure that the future Air Force will look all that much like the one we have today.

One of the things that may change, this shift in the balance that you talked about between shorter range tactical air capabilities and longer range strike capabilities the bombers provide. Within whatever constraint we have, we will probably end up, I think, at some point talking about adjustments to what the current ratio is.

We don't have many options to make those changes right now. We are preserving the bomber fleet pretty much as much as we can. We are fortunate that the B–52 was so robustly designed that we can keep it pretty much forever. So, we are using it as a bus, essentially, and we keep upgrading it, putting new engines on it, new radar.

The B–1 continues to service. It has got a lot of capacity. B–2s have been harder to maintain. B–21 is our option in the near-term to bring in new capability, and we are just starting to get it into production. Current number is 100. I don't know what it will end up being. It may be larger than that. I would not be surprised by that.

Senator ERNST. Secretary, thank you for that. Is there a way that the Air Force could control unit costs if it ramps up production of the B–21?

Secretary KENDALL. Cost and quantities are always connected, and you do reduce cost by increasing the production rate, definitely.

Senator ERNST. Okay.

Secretary KENDALL. The B–21 is being built on a line that was built for the development program and just be continued to use for production at a relatively modest rate. I think if we were going to significantly increase our production, we have to go relook at how we retool for manufacturing B–21. But that is not a near-term decision.

Senator ERNST. Wow. Well, I appreciate it, gentlemen. My grandfather built bombers in Middle America during World War II. It is

amazing that here we are all those years later, and yet we are still heavily reliant upon its capabilities. But thank you all very much for being here today. Thank you for your service.

Chairman REED. Thank you, Senator Ernst. Senator Cramer, please.

Senator CRAMER. Thank you, Mr. Chairman, and thank you to all of you for your service and for being with us today. Since bombers are the topic of the moment, General Brown, I want to talk a little bit about not so much bombers, but disbursement of bombers and taking advantage of some opportunities, particularly as it relates to BASE, or bomber agile combat employment, and the distribution of the nuclear capabilities.

As you know, of course, there used to be six big bases in the northern tier between Michigan and Montana. Today, there are two and one of them being Minot, the other one being Grand Forks in North Dakota.

The Grand Forks course was a bomber base. It had a 300-foot-wide runway. It has been reduced to 150-foot runway, based on the movement of the lights. It is due for improvement in 2025, and I am just wondering if you would be open to looking carefully at perhaps widening that runway for base type of use in the future.

Again, keeping in mind that in 2025, it is due for some improvements anyway. Because we are down to the last two in that tier.

General BROWN. Senator, we can definitely look at that. Particularly as you said that they are already going to be doing some modifications. Any time you are doing, it is probably a good time to take a look at and make sure we do not miss any options to provide us opportunities and capabilities in the future.

Senator CRAMER. Well, I always like it when my state's interests match up with common sense and the military. So, all I can ask is you take a good look at it. Thank you. General, I also want to talk to you about, you and I a couple of years ago talked about the deliveries of the MH–139A helicopter.

Secretary Kendall happened to be in Minot around Christmas time, and so he saw those drafty old, Vietnam era helicopters that our airmen, and particularly the security forces, have to use in Minot, and we couldn't go for a ride that day because of weather. Not uncommon in Minot.

The delay at that time, couple of years ago, the delay in delivery was due to FAA certification, as you no doubt recall and know. That is now done, but we see that there may be a delay again, and I am just wondering if you have some sort of an update on the MH–139As and when we might expect to see them?

General BROWN. Yes, we just finished up the production development phase and then in fiscal year 2024, we expected four of the MH–139s. They start their initial operational testing as well, so we will be beyond that FAA certification and then that will help us start to the path of a follow-on procurement to start fielding the aircraft.

Senator CRAMER. Well, is four enough? I mean, is there a way to escalate? Is there any chance we can accelerate that? I would even question whether the Hueys, the old ones, are mission capable at this point.

General BROWN. We will always take a look to see if there are ways to accelerate, you know, bringing on a capability and at the same time balance the rest as we bring that capability on to the force.

Senator CRAMER. I understand. Maybe one of the things that could help and inspire you would be a ride in February. But anyway, we will work on that another time. Thank you very much. Thank you, all three of you. Thank you, Mr. Chairman. I yield back.

Chairman REED. Thank you very much, Senator Cramer. Senator Tuberville, please.

Senator TUBERVILLE. Thank you, Mr. Chairman. Thanks for being here today, gentlemen, and your service. General Saltzman, U.S. policy is to have at least two space launch vehicles to launch DOD and NRO [National Reconnaissance Office] satellites. Space has changed a lot in 20 years. That law was written in 2004.

Meanwhile, the demand for launch vehicles, commercial, civil, and defense, has skyrocketed. Given the dramatic changes that have occurred in space, the increase in demand and the need for greater resiliency, redundancy, and responsiveness, what would be your best military advice for policymakers when it comes to space launch vehicles? Would you like to see at least three?

General SALTZMAN. Well, assured access to space is a critical capability that we have. The way I would characterize it is for me to say that we have assured access to space, I need at least two providers capable of putting satellites on orbit.

But it is to the advantage of the U.S. Government, it is to the advantage of the U.S. Space Force to have as many viable launch providers as possible. It creates a level of agility. It creates a level of resiliency that is important, which is why our NNSL, National Security space launch phase three contract that we have out for comments, is looking at two lanes.

One that maximizes the number of emerging launch providers to participate, while preserving that assured access that are our most highly risk averse mission sets. I think we have struck that balance appropriately.

Senator TUBERVILLE. Thank you. Secretary Kendall, the U.S. Air Force wants its next generation air refueler tanker KC-Z to reach additional operational capabilities by 2040. Clearly, that creates a gap in critical wartime capability. Where are we on the KC–46 Pegasus procurement to ensure we have full capabilities?

Secretary KENDALL. Senator, we have fundamentally changed our tanker acquisition strategy, where we need to move to a next generation taking capability which is resilient enough to survive against a pacing challenge.

So basically, the current plan is to go from the KC–46 into what we call the Next Generation Aerial Refueling System, or NGAS, which will be a new design, designed to be resilient enough to survive in the environment that we anticipate. We want to get to that design as quickly as we can.

So, there will be some gap between the currently contractual options that we have for KC–46, to when we can get the NGAS system into production. We would like to make that gap as small as possible. So, what we are requesting in this budget is the funding

to start down the road toward this program and do the analysis of alternatives to define that design and its requirements.

But we need to get on with this as quickly as we can. It is one of the areas in which time is very important to us. It won't be 2040. It is going to be much sooner than that. But we don't know—until we define the design and move it forward, we don't know exactly what that date will be. I am shooting for the early 2030's.

Senator TUBERVILLE. General Brown, your thoughts on that?

General BROWN. As the Secretary described it, you know, our tankers are very important to be able to generate that combat power. By changing the strategy to move things further left and get to next generation air refueling system is a way to move a bit faster to—that capability is going to be a bit more survival and to be able to create greater combat power.

Senator TUBERVILLE. Yes, especially for the Indo-Pacific. I mean, it is going to be a greater need, obviously. Secretary Kendall, it wouldn't be a hearing if I hadn't asked you about Space Command.

You and I have talked about this quite a bit. Are we getting closer? I would hate that this—we are on the verge in our lifetime of a dangerous world.

We might be fighting this thing from space if we don't watch it, and we want to make sure that we are doing the right things. I hope this thing doesn't get political. It looks like it is. We have been waiting for 2 years for a decision.

Give me your thoughts on what is going on with the Space Command. General Dickson said in his last hearing here that he needed a decision. So, what are your thoughts?

Secretary KENDALL. I don't have anything new to report today, Senator. I am really hopeful that we will be able to get a decision out as soon as possible, but I don't have any new information to provide.

Senator TUBERVILLE. None whatsoever? Are we even thinking about it or was this—we just—it just goes in and out? I mean, it is——

Secretary KENDALL. I just don't have anything more to provide.

Senator TUBERVILLE. But do you do you think it is important for us to have a permanent base?

Secretary KENDALL. Yes.

Senator TUBERVILLE. Yes. I think we all do. Nebraska, who is on the list, number two, and then San Antonio, number three, I think we all are kind of sitting around waiting to see what is going to happen.

But we sure would like to get this decision made and moved on down the road and have the opportunity to build on it instead of having guesswork. Thank you. Thank you very much.

Chairman REED. Thank you, Senator Tuberville. Senator Warren, please.

Senator WARREN. Thank you, Mr. Chairman, and thank you to our witnesses for your service. We often talk about the role of bombers and fighter jets in National Security, but our greatest strength as a Nation is our people.

The Senate approves thousands of military promotions every year, and typically this vote is a formality. But the Senator from Alabama has weaponized a policy disagreement about abortion to

politicize the military and place holds on all, all military nominations.

This brings the careers of nearly 200 officers, people who have served their country for decades, to a screeching halt. General Brown, can you explain what steps does a colonel or a brigadier General have to go through before the president sends a promotion over to the Senate for approval?

General BROWN. Well, each one of those offers goes through a thorough review that actually starts initially in the Department of the Air Force. We ensure there is no adverse information.

That same process gets repeated through the Joint Staff, through the Office of Secretary of Defense, over at the White House, before that member's record comes and is delivered to the Senate for promotion. It takes several months before it actually gets to here to the Senate.

Senator WARREN. Okay. So, you are not just sending these promotions over on a whim—it looked like a good idea. I take it that these individuals are being recommended for higher rank because they are our military's best, and they have proven themselves to the highest degree. Is that fair?

General BROWN. It does. It also shows that they have future potential.

Senator WARREN. Future potential as well. Now, recruitment has been a challenge for most of the military services, but retention levels have stayed quite high. The Air Force currently retains about 90 percent of its people at critical decision points.

That means that they complete a commitment, and the vast majority are choosing to re-enlist and stay with the Air Force. That is really good news. Secretary Kendall, does it worry you that if our men and women in uniform see that their promotions can get held up indefinitely because one Senator has an issue with one DOD policy, that that might hurt your ability to retain the best and the most qualified people in the Air Force?

Secretary KENDALL. Senator Warren, it does have an impact, definitely. I also want to mention it has an impact on families, too. We generally rotate people through the summer months and people need to plan for that.

They have to plan to get their children to schools, where they are going to be established and in their new homes. So, there is a very personal toll this takes as well. One of the things that motivates our people in terms of retention or not is how they feel that their families are being treated.

Things like childcare and education and health care are all very important factors. We ask our military families to move multiple times during their career. It is something that they accept. But when they are planning for that, and it is disrupted, it has very negative impact and it definitely impacts on retention as well.

Senator WARREN. Do you think these families want to be made a political football?

Secretary KENDALL. I know that they do not.

Senator WARREN. Secretary Kendall, what is the National Security impact of these holds for the Air Force?

Secretary KENDALL. The biggest impact is that people who should be coming into leadership roles don't arrive on time. So,

someone who is already there has to step up, either someone—Generally people, if they are going to retire, they are still going to retire. So, a junior person will step up and be acting for a period of time.

Those people are limited in what they can do. They generally are not going to make any major initiatives or make any major changes because they know they are not going to be there very long. They expect that they will be replaced very shortly.

So, they will keep the trains running, but they are not going to move the organization forward as much as they might be otherwise.

Senator WARREN. Well, the Senator from Alabama is holding up promotions across all of the services. But I took a look at the Air Force nominees in particular, and one thing that was really striking to me is that the vast majority of them studied at the Air War College in Alabama.

The State of Alabama has invested a lot in these leaders and the Senator from Alabama doesn't seem to care about that. So, Secretary Kendall, unlike many of the other services, the Space Force is meeting its recruiting goals.

The Space Force is obviously still very young. These are defining years for your service. What are the readiness impacts of these holds on Space Force?

Secretary KENDALL. I am not aware of any General officers that are being held for the Space Force at this time. But the same generic impact would happen there as would happen on the Air Force. The Space Force is meeting its recruiting goals because it is an exciting new opportunity for people, and it is relatively small, and it is relatively modest numbers that it is seeking.

Senator WARREN. Well, thank you very much. You know, holding the promotions of every single senior military nominee is not democracy, it is extortion, and this kind of extortion has serious consequences for our national defense.

This actively hurts our ability to respond quickly to threats around the world. As you point out, Secretary Kendall, this is really painful for military families who have already been called on to give so much. We need to lift these holds. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Warren. Senator Budd, please.

Senator BUDD. Thank you, Mr. Chairman. Again, thank you all for being here, for those behind you and those you represent as well. Considering the Senator from Massachusetts's remarks, Secretary Austin can solve this with a single stroke of the pen.

I was able to make that several weeks ago very clear. Change the policy, solve the problem. Secretary Kendall, based on the President's Budget, the Air Force is requesting $2.9 billion, or about $317 million more than last year to purchase 24 F–15EXs, and that is to replace the remaining C and D model F–15s. Does that sound about right? Thank you——

Secretary KENDALL. Yes, sir. It is replacing another incremental of F–15Cs.

Senator BUDD. Yes, sir. Thanks. I think the Air Force budget makes it very clear, so, again, I appreciate you clarifying that.

What is not clear to me is the Air Force's plan for the F–15E, Echo, fleet, including the squadrons at Seymour Johnson Air Force Base in North Carolina.

I know Ranking Member Wicker was able to spend time there during his service, though it is a special place for many of us. The Air Force just completed major upgrades to the F–15E fleet, including replacing the outdated radars.

This investment by Congress and the Air Force drastically improves the aircraft's air to air, and air to ground targeting capabilities. Does that sound about right?

Secretary KENDALL. Yes, sir.

Senator BUDD. Thank you. The Air Force is now in the process of adding the Eagle Passive Active Warning and Survivability System, or E-PAWSS, to these aircraft, which will offer improved defensive situational awareness and electronic attack capability. Correct?

Secretary KENDALL. Yes, Senator.

Senator BUDD. So now, reading from page 261, this is volume two of the aircraft—excuse me, the Air Force's Aircraft Procurement Justification book, which states that F–15 E-PAWSS procurement plans have been applied to the Air Force F–15E divestment plan and will result in 99 E-PAWSS modified aircraft.

Now, one can read this to mean, and it has been reported that the Air Force plans to shrink the size of the F–15E fleet from 218 aircraft to just 99 aircraft by fiscal year 2028. Is that a correct interpretation of the Air Force divestment plan for the F–15E?

Secretary KENDALL. I would have to check to confirm that, Senator, but I have no reason to believe it is not correct.

Senator BUDD. Thank you. I would ask you to check. Mr. Secretary, will you commit, after you check, to providing my staff a detailed briefing on the Air Force long term plan for the F–15E within the next 2 weeks?

Secretary KENDALL. I can promise to give you that. I can't assure you that it will be within 2 weeks. But I will do my best to do that.

Senator BUDD. As soon as able, thank you. So, in addition to the F–15E divestment, you want to divest 32 F–22s Block 20 aircraft, all of the U–2s, all MQ–9 Reapers, all RQ–4 Global Hawks of the Block 40 aircraft, and F–16 modernization would be cut. The F–15EX procurement objective was 144 aircraft, but now it is just 104 aircraft. Sound right?

Secretary KENDALL. Some of that is correct. I am not sure about some other parts. We are not divesting all the MQ–9s, for example.

Senator BUDD. Okay.

Secretary KENDALL. I believe your numbers on the EX were correct.

Senator BUDD. If you would check on those numbers, if you would, please. What is going to replace all these fighter aircraft in the ISR platforms? The question really is on what schedule?

Secretary KENDALL. Over the FYDP, we do come down about 14 percent in total number of fighters. The problem we have is that the oldest fourth generation fighters are just not capable against the threat. When they go up against fifth generation aircraft, they do not do well at all. We have got a lot of exercises that demonstrate that to us.

The F–15E, which you are concerned about, we are going to be keeping that for some time. As you mentioned, there is some upgrades still underway. We are not as with the numbers I think that you indicated.

As far as you mentioned, Seymour Johnson, I am not aware of any near-term plans to change anything at Seymour Johnson, but we can give you more details on that when I give you the details that you asked for.

Senator BUDD. The question, please. fiscal year 2028, if you would. Thank you.

Secretary KENDALL. I will let you know. Overall, we are trying to move toward a next generation set of capabilities. So F–35, NGAD [Next Generation Air Dominance] to replace the F–22s, and F–15EX, and F–16s, more modern F–16s are basically going to be the fighter fleet of the future. We are going to add to that the CCAs that we talked about earlier in the testimony.

Senator BUDD. Thank you. So, I understand the divesting to invest concept, but I am alarmed at the risk and the timing. Roughly you have about 5,100 aircraft and it is going to shrink to about 40—a little over 4,400 by 2028.

Most of those reductions are fighters. So, my concern is that this represents an invitation to China to be even more aggressive. Any comments on that or concerns?

Secretary KENDALL. We look at total combat capability of the fleet and we are increasing that as we buy fifth generation aircraft.

Senator BUDD. Thank you. I yield.

Chairman REED. Thank you very much, Senator Budd. Senator Rosen, please.

Senator ROSEN. Well, thank you, Chairman Reed, and thank you for all of you for being here, for your service to the Nation, and for everyone that works with you. I want to build on what Senator Warren was talking about a little bit, about our military families, about how much they sacrifice, how much they do to really keep us safe and protect us, and it is important that we take care of them, too.

Nellis Air Force Base in Southern Nevada, there is a housing shortage. General Brown, I have raised this before in Committee several time. Our wonderful junior enlisted airmen and airwomen stationed in Nevada's Nellis Air Force Base, their average only 12 months in the dormitories, being forced to move off base into very expensive private housing in the community due to these on-base housing shortage.

In Nellis, the dormitory master plan reflects a shortage of about 500 rooms. The base has identified a need for two more dormitories. I am really disappointed that neither a new dormitory is in the Air Force's fiscal year 2024 budget, or in the Future Years Defense Program, or even on your unfunded priorities list.

General Brown, how are you going to help our youngest service men and women here at Nellis, and of course at other places around the country, provide more support for them to do their jobs and serve our country?

General BROWN. Senator, as you highlighted, it is very important. We need to take care of our—most importantly, our junior airmen, because that actually impacts our retention. We do have two

dorm projects that were going through the initial stages for Nellis, in addition to money we are putting into renovating the many of the dorms that already exist.

Having been in Nellis several times, most recently in January, and the conversation on not only the dorm capacity but how we work as well with the community to find affordable housing. One of the areas that I would also highlight as we focused on not only affordable housing, but the difference in how we raised the basic allowance for housing for a junior airmen.

It was raised by about 21 percent. This is something we are paying close attention to, not only at Nellis, but I would say around the Air Force as we are seeing areas from housing standpoint, housing prices have gone up. But really working closely with the communities to try to find opportunities, particularly when we have a bit of a deficit in our dorms at specific locations.

But we are going to continue to work to put more energy into the dorms at Nellis to do those renovations, but also the couple of dorm projects that I mentioned.

Senator ROSEN. I would be remiss if I didn't say thank you in responding to our letters, for improving the speed and access for the base housing allowance when servicemen, airmen do transition to off base housing.

Getting that money quickly, faster. They are paid the least among everyone and they are often the youngest, so it is very challenging. So, I appreciate the cooperation and attention you have been paying to that. Then I want to move on to some of our military families that actually have children.

They need childcare. It is really important. Missions go 24 hours a day, 7 days a week, right. In the military, doesn't rest. Secretary Kendall, our airmen stationed at Creech Air Force Base just outside Las Vegas, now they do the MQ–9 Reaper program, amongst other things. They struggle to find adequate childcare because their shifts are often outside the normal business hours due to the drone programs and other things they do.

It is 24-hour support, and the DOD's new in-home childcare fee assistance pilot program, it was launched to help provide in-home childcare solutions for our servicemembers, especially in regions with high demand. I am happy to see that you extended this pilot program to Las Vegas. However, I am understanding now that the program has a lot of red tape, that it is really difficult requirements, and essentially is rendering in-home childcare reimbursement unavailable to Nevada's military families.

Secretary, can you commit to me to work to make this program better for Nevada families? They have to show up 24 hours a day, 7 days a week to complete the mission. We have to be there for their families. What can we do?

General BROWN. Senator, I couldn't agree with you more. I have made that commitment. I have driven from Nellis off to Creech, so I know what those people have to do, and I can really appreciate the childcare difficulties associated with having to provide childcare near your home and then make that commitment to go back and forth.

We have the pilot program, as you mentioned. I was not aware of the red tape issues until you highlighted them. But we will take

a look at that and see if we can do something to make it much more accessible to people.

Childcare is the problem that I hear most about from our families. There is a shortage of childcare staff around the country. We are trying to address that with a number of initiatives to improve our paying compensation, provide, in the case of the Air Force, free childcare for staff members, first child, and then deductions for the rest.

We are working hard to have more in-home childcare providers to increase the availability of childcare. We are doing a number of things in that area. I will take a specific look at the problem you mentioned about the pilot program and see if we can reduce the red tape.

Senator ROSEN. Perfect, thank you. We will look forward to following up. Thank you, Mr. Chairman. I yield.

Chairman REED. Thank you, Senator Rosen. Senator Schmitt, please.

Senator SCHMITT. Thank you, Mr. Chairman. I would like to, from the outset here, ask unanimous consent to submit for the record this Washington Post investigative story entitled, Pentagon Buries Evidence of $125 Billion in Bureaucratic Waste from 2016.

Chairman REED. Without objection.

Democracy Dies in Darkness

INVESTIGATIONS

Pentagon buries evidence of $125 billion in bureaucratic waste

By Craig Whitlock and Bob Woodward
December 5, 2016 at 6:47 p.m. EST

The Pentagon has buried an internal study that exposed $125 billion in administrative waste in its business operations amid fears Congress would use the findings as an excuse to slash the defense budget, according to interviews and confidential memos obtained by The Washington Post.

Pentagon leaders had requested the study to help make their enormous back-office bureaucracy more efficient and reinvest any savings in combat power. But after the project documented far more wasteful spending than expected, senior defense officials moved swiftly to kill it by discrediting and suppressing the results.

The report, issued in January 2015, identified "a clear path" for the Defense Department to save $125 billion over five years. The plan would not have required layoffs of civil servants or reductions in military personnel. Instead, it would have streamlined the bureaucracy through attrition and early retirements, curtailed high-priced contractors and made better use of information technology.

The study was produced last year by the Defense Business Board, a federal advisory panel of corporate executives, and consultants from McKinsey and Company. Based on reams of personnel and cost data, their report revealed for the first time that the Pentagon was spending almost a quarter of its $580 billion budget on overhead and core business operations such as accounting, human resources, logistics and property management.

The data showed that the Defense Department was paying a staggering number of people — 1,014,000 contractors, civilians and uniformed personnel — to fill back-office jobs far from the front lines. That workforce supports 1.3 million troops on active duty, the fewest since 1940.

The cost-cutting study could find a receptive audience with President-elect Donald Trump. He has promised a major military buildup and said he would pay for it by "eliminating government waste and budget gimmicks."

For the military, the major allure of the study was that it called for reallocating the $125 billion for troops and weapons. Among other options, the savings could have paid a large portion of the bill to rebuild the nation's aging nuclear arsenal, or the operating expenses for 50 Army brigades.

But some Pentagon leaders said they fretted that by spotlighting so much waste, the study would undermine their repeated public assertions that years of budget austerity had left the armed forces starved of funds. Instead of providing more money, they said, they worried Congress and the White House might decide to cut deeper.

So the plan was killed. The Pentagon imposed secrecy restrictions on the data making up the study, which ensured no one could replicate the findings. A 77-page summary report that had been made public was removed from a Pentagon website.

"They're all complaining that they don't have any money. We proposed a way to save a ton of money," said Robert "Bobby" L. Stein, a private-equity investor from Jacksonville, Fla., who served as chairman of the Defense Business Board.

Stein, a campaign bundler for President Obama, said the study's data were "indisputable" and that it was "a travesty" for the Pentagon to suppress the results.

"We're going to be in peril because we're spending dollars like it doesn't matter," he added.

The missed opportunity to streamline the military bureaucracy could soon have large ramifications. Under the 2011 Budget Control Act, the Pentagon will be forced to stomach $113 billion in automatic cuts over four years unless Congress and Trump can agree on a long-term spending deal by October. Playing a key role in negotiations will probably be Trump's choice for defense secretary, retired Marine Gen. James Mattis.

The Defense Business Board was ordered to conduct the study by Deputy Defense Secretary Robert O. Work, the Pentagon's second-highest-ranking official. At first, Work publicly touted the efficiency drive as a top priority and boasted about his idea to recruit corporate experts to lead the way.

After the board finished its analysis, however, Work changed his position. In an interview with The Post, he did not dispute the board's findings about the size or scope of the bureaucracy. But he dismissed the $125 billion savings proposal as "unrealistic" and said the business executives had failed to grasp basic obstacles to restructuring the public sector.

"There is this meme that we're some bloated, giant organization," he said. "Although there is a little bit of truth in that . . . I think it vastly overstates what's really going on."

Work said the board fundamentally misunderstood how difficult it is to eliminate federal civil service jobs — members of Congress, he added, love having them in their districts — or to renegotiate defense contracts.

He said the Pentagon is adopting some of the study's recommendations on a smaller scale and estimated it will save $30 billion by 2020. Many of the programs he cited, however, have been on the drawing board for years or were unrelated to the Defense Business Board's research.

Work acknowledged that the push to improve business operations lost steam after then-Defense Secretary Chuck Hagel was replaced by Ashton B. Carter in February 2015. Carter has emphasized other goals, such as strengthening the Pentagon's partnerships with high-tech firms.

"We will never be as efficient as a commercial organization," Work said. "We're the largest bureaucracy in the world. There's going to be some inherent inefficiencies in that."

'Dark matter'

Work, a retired Marine officer, became deputy defense secretary in May 2014. With the military budget under the most pressure since the end of the Cold War, he sought help from the Defense Business Board, an advisory panel known for producing management studies that usually gathered dust.

Work told the board that the outcome of this assignment would be different. In a memo, he directed the board to collect sensitive cost data from the military services and defense agencies that would reveal how much they spent on business operations.

Pentagon officials knew their back-office bureaucracy was overstaffed and overfunded. But nobody had ever gathered and analyzed such a comprehensive set of data before.

Some Defense Business Board members warned that exposing the extent of the problem could have unforeseen consequences.

"You are about to turn on the light in a very dark room," Kenneth Klepper, the former chief executive of Medco Health Solutions, told Work in the summer of 2014, according to two people familiar with the exchange. "All the crap is going to float to the surface and stink the place up."

"Do it," Work replied.

To turn on the light, the Pentagon needed more outside expertise. A team of consultants from McKinsey was hired.

In a confidential August 2014 memo, McKinsey noted that while the Defense Department was "the world's largest corporate enterprise," it had never "rigorously measured" the "cost-effectiveness, speed, agility or quality" of its business operations.

Nor did the Pentagon have even a remotely accurate idea of what it was paying for those operations, which McKinsey divided into five categories: human resources; health-care management; supply chain and logistics; acquisition and procurement; and financial-flow management.

McKinsey hazarded a guess: anywhere between $75 billion and $100 billion a year, or between 15 and 20 percent of the Pentagon's annual expenses. "No one REALLY knows," the memo added.

The mission would be to analyze, for the first time, dozens of databases that tracked civilian and military personnel, and labor costs for defense contractors. The problem was that the databases were in the grip of the armed forces and a multitude of defense agencies. Many had fought to hide the data from outsiders and bureaucratic rivals, according to documents and interviews.

Information on contractor labor, in particular, was so cloaked in mystery that McKinsey described it as "dark matter."

Prying it loose would require direct orders from Work. Even then, McKinsey consultants predicted the bureaucracy would resist.

"This is a sensitive exercise conducted with audiences both 'weary' and 'wary' of efficiency, cost, sequestration and budget drills," the confidential memo stated. "Elements of the culture are masterful at 'waiting out studies and sponsors,' with a 'this too shall pass' mindset."

Overstaffed chow hall

From the outset, access to the data was limited to a handful of people. A $2.9 million consulting contract signed by the Pentagon stipulated that none of the data or analysis could be released to the news media or the public.

Moreover, the contract required McKinsey to report to David Tillotson III, the Pentagon's acting deputy chief management officer. Anytime the Defense Business Board wanted the consultants to carry out a task, Tillotson would have to approve. His office — not the board — would maintain custody of the data.

"Good news!" Work emailed Tillotson once the contract was signed. "Time to cook."

In an Oct. 15, 2014, memo, Work ordered the board to move quickly, giving it three months to produce "specific and actionable recommendations."

In a speech the next month, Work lauded the board for its private-sector expertise. He said he had turned it into "an operational arm" of the Pentagon leadership and predicted the study would deliver transformational results.

In an aside, he revealed that early findings had determined the average administrative job at the Pentagon was costing taxpayers more than $200,000, including salary and benefits.

"And you say, hmmm, we could probably do better than that," he said.

The initial results did not come as a surprise.

Former defense secretaries William S. Cohen, Robert M. Gates and Chuck Hagel had launched similar efficiency drives in 1997, 2010 and 2013, respectively. But each of the leaders left the Pentagon before their revisions could take root.

"Because we turn over our secretaries and deputy secretaries so often, the bureaucracy just waits things out," said Dov Zakheim, who served as Pentagon comptroller under President George W. Bush. "You can't do it at the tail end of an administration. It's not going to work. Either you leave the starting block with a very clear program, or you're not going to get it done."

Arnold Punaro, a retired Marine general and former staff director for the Senate Armed Services Committee, said lawmakers block even modest attempts to downsize the Pentagon's workforce because they do not want to lose jobs in their districts.

Without backing from Congress, "you can't even get rid of the guy serving butter in the chow hall in a local district, much less tens of thousands of jobs," he said.

'Time to hunt!'

The Defense Business Board assigned five members to conduct the study alongside consultants from McKinsey. Scott Rutherford, senior partner at McKinsey's Washington office, declined to comment.

The team ran into resistance as several Pentagon offices delayed requests for data, according to emails and memos. Work and Tillotson had to intervene to get the data flowing. At one point, more than 100 people were feeding data from different sectors of the bureaucracy.

Laboring under its tight deadline, the team hashed out an agreement with Pentagon officials over which job classifications to count in their survey. The board added a sixth category of business operations — real property management. That alone covered 192,000 jobs and annual expenses of $22.6 billion.

On Christmas Eve, Klepper emailed Work and Tillotson to thank them for putting their muscle behind the project. Without it, he said, "this would all have been DOA and the naysayers would all have been right."

He hinted the board would make some eye-catching recommendations and expressed relief its work had not been torpedoed.

"I have to admit, with all the caution, negative reaction and pushback," Klepper said, "I had a bit of concern at the end of the analysis some form of censorship would stop us from showing the true opportunity."

Work replied that he could not be happier.

"Time to hunt!" he said in an email, adding that he was "very excited about 2015" and ready to make "some bold moves."

The year kicked off with promise. On Jan. 21, 2015, the Pentagon announced Stein, the private-equity investor, had been reappointed as the board's chairman and praised him for his "outstanding service."

The next day, the full board held its quarterly public meeting to review the results of the study. The report had a dry title, "Transforming DoD's Core Business Processes for Revolutionary Change," and was packed with charts and jargon. But it began plainly enough.

"We are spending a lot more money than we thought," the report stated. It then broke down how the Defense Department was spending $134 billion a year on business operations — about 50 percent more than McKinsey had guessed at the outset.

Almost half of the Pentagon's back-office personnel — 457,000 full-time employees — were assigned to logistics or supply-chain jobs. That alone exceeded the size of United Parcel Service's global workforce.

The Pentagon's purchasing bureaucracy counted 207,000 full-time workers. By itself, that would rank among the top 30 private employers in the United States.

More than 192,000 people worked in property management. About 84,000 people held human-resources jobs.

The study laid out a range of options. At the low end, just by renegotiating service contracts and hiring less-expensive workers, the Pentagon could save $75 billion over five years. At the high end, by adopting more aggressive productivity targets, it could save twice as much.

After a discussion, the full board voted to recommend a middle option: to save $125 billion over five years.

Hordes of contractors

Afterward, board members briefed Work. They were expecting an enthusiastic response, but the deputy defense secretary looked uneasy, according to two people who were present.

He singled out a page in the report. Titled "Warfighter Currency," it showed how saving $125 billion could be redirected to boost combat power. The money could cover the operational costs for 50 Army brigades, or 3,000 F-35 Joint Strike Fighters for the Air Force, or 10 aircraft-carrier strike groups for the Navy.

"This is what scares me," he said, according to the two people present. Work explained he was worried Congress might see it as an invitation to strip $125 billion from the defense budget and spend it somewhere else.

A few weeks later, Carter replaced Hagel as defense secretary. Carter sounded as though he would welcome the kind of revolutionary change the board was urging.

"To win support from our fellow citizens for the resources we need, we must show that we can make better use of every taxpayer dollar," Carter said in an inaugural message in February 2015. "That means a leaner organization, less overhead, and reforming our business and acquisition practices."

In briefings that month, uniformed military leaders were receptive at first. They had long groused that the Pentagon wasted money on a layer of defense bureaucracies — known as the Fourth Estate — that were outside the control of the Army, Air Force and Navy. Military officials often felt those agencies performed duplicative services and oversight.

But the McKinsey consultants had also collected data that exposed how the military services themselves were spending princely sums to hire hordes of defense contractors.

For example, the Army employed 199,661 full-time contractors, according to a confidential McKinsey report obtained by The Post. That alone exceeded the combined civil workforce for the Departments of State, Agriculture, Commerce, Education, Energy, and Housing and Urban Development.

The average cost to the Army for each contractor that year: $189,188, including salary, benefits and other expenses.

The Navy was not much better. It had 197,093 contractors on its payroll. On average, each cost $170,865.

In comparison, the Air Force had 122,470 contractors. Each cost, on average, $186,142.

Taking fire

Meantime, the backlash to the $125 billion savings plan intensified.

On Feb. 6, 2015, board members briefed Frank Kendall III, the Pentagon's chief weapons-buyer. Kendall's operations were a major target of the study; he oversaw an empire of purchasing agents and contractors that were constantly under attack from Congress for cost overruns and delays.

Kendall put up a stiff fight. He challenged the board's data and strenuously objected to the conclusion that his offices were overstaffed.

"Are you trying to tell me we don't know how to do our job?" he said, according to two participants in the meeting. He said he needed to hire 1,000 more people to work directly under him, not fewer.

"If you don't believe me, call in an auditor," replied Klepper, the board's restructuring expert. "They'll tell you it's even worse than this."

In an interview, Kendall acknowledged he was "very disappointed" by the board's work, which he criticized as "shallow" and "very low on content." He said the study had ignored efforts by his agencies to become more efficient, and he accused the board of plucking the $125 billion figure out of thin air.

"It was essentially a ballpark, made-up number," he said.

Still, Kendall knew that lawmakers might view the study as credible. Alarmed, he said, he went to Work and warned that the findings could "be used as a weapon" against the Pentagon.

"If the impression that's created is that we've got a bunch of money lying around and we're being lazy and we're not doing anything to save money, then it's harder to justify getting budgets that we need," Kendall said.

More ominously, board members said they started to get the silent treatment from the Pentagon's highest ranks.

Briefings that had been scheduled for military leaders in the Tank — the secure conference room for the Joint Chiefs of Staff — were canceled. Worse, the board was unable to secure an audience with Carter, the new defense secretary.

Stein, the board chairman, accused Carter of deliberately derailing the plan through inaction. "Unfortunately, Ash — for reasons of his own — stopped this," he said in an interview.

Peter Cook, a spokesman for Carter, said the Pentagon chief was busy dealing with "a long list of national security challenges." He added that Work and other senior officials had already "concluded that the report, while well-intentioned, had limited value."

The fatal blow was struck in April. Just three months after Stein had been reappointed as board chairman, Carter replaced him with Michael Bayer, a business consultant who had previously served on the panel and clashed with Stein. Bayer declined to comment.

A few weeks later, Klepper resigned from the board. The $125 billion savings plan was dead.

In an interview, Tillotson, the Pentagon's acting deputy chief management officer, called the board's recommendations too ambitious and aggressive. "They, perhaps, underestimated the degree of difficulty we have in doing something that in the commercial sector would seem to be very easy to do."

Yet he acknowledged that its overall strategy for scaling back the bureaucracy was sound and that, given more time, it would be possible to realize huge savings.

"If we had a longer timeline, yes, it would be a reasonable approach," he said. "You might get there eventually."

Ending the debate

Frustration, however, persisted in some corners over the Pentagon's unwillingness to tackle the inefficiency and waste documented by the study.

On June 2, 2015, Navy Secretary Ray Mabus delivered a speech at the American Enterprise Institute, a conservative think tank. He complained that 20 percent of the defense budget went to the Fourth Estate — the defense agencies that provide support to the armed forces — and called it "pure overhead."

He singled out the Defense Finance and Accounting Service and the Defense Logistics Agency, which together employ about 40,000 people, as egregious examples.

When a reporter in the audience asked whether he thought the agencies should be abolished, Mabus resisted the temptation to say yes.

"Nice try on getting me into deep trouble," he replied.

But trouble arrived in Mabus's email the next day.

"Ray, before you publicly trash one of the agencies that reports through me I'd really appreciate a chance to discuss it with you," wrote Kendall, the Pentagon's chief weapons-buyer, whose management portfolio included the Defense Logistics Agency.

He said that if Mabus had a complaint, he should raise it directly with their mutual bosses, Carter and Work, and copied the email to both.

In his interview with The Post, Kendall said he was "completely blindsided" by the Navy secretary's criticism, "so I sent him what I thought under the circumstances was a pretty polite note."

Mabus did not back down. In an emailed retort to Kendall, he referred to the ill-fated Defense Business Board study.

"I did not say anything yesterday that I have not said both publicly . . . and privately inside this building," he said. "There have been numerous studies, which I am sure you are aware of, pointing out excessive overhead."

That prompted a stern intervention from Work.

"Ray, please refrain from taking any more public pot shots," Work said in an email. "I do not want this spilling over into further public discourse."

Evelyn Duffy contributed to this report.

Senator SCHMITT. Thank you, Mr. Chairman. Secretary Kendall, I would want to ask you about this, because you play a starring role in this article, as it turns out. There was a report that the Pentagon actually commissioned in the business—or the Defense Business Board, as you are aware, as you are nodding here, identified over $125 billion worth of bureaucratic waste.

You were instrumental in burying that report, and I want to ask you about this, but before I do, and you deserve an opportunity to explain yourself here, but fundamentally, in this report or the reporting on the report that was buried, DOD employed—employs more than 1 million people in back-office positions, and we have 1.3 million troops on Active Duty.

That is almost a 1 to 1 ratio. The report also laid out that there was a clear path to saving over $125 billion in the next 5 years by trimming that bureaucracy. The greatest contributors to the savings are early retirements and reducing services from contractors.

But that $125 billion, whether it is $125 billion or some factor below that is a startling number, and just to put that in context, that amounts to 50 Army brigades, ten naval carrier strike group deployments, or 83 F–35 fighter wings for a full 5 years.

I want to ask you, what was your role in this? Is there anything to be learned from this report that never saw the light of day?

Secretary KENDALL. The report definitely saw the light of day. It was published, and nobody tried to suppress it, Senator. So, that is completely incorrect.

Senator SCHMITT. Well, there are some emails from you, actually, that you were very aggressive in making sure that this wasn't given any credibility.

Secretary KENDALL. It has no credibility.

Senator SCHMITT. Okay.

Secretary KENDALL. I am very familiar with that report. It was a very amateurish effort. It essentially made analogies between the Government and the Department of Defense, and companies that were selected in the commercial role, which had no real valid comparison.

Then it said that because these companies could save x percent of their cost, therefore, the Department of Defense must be able to save the same percentage. It was nonsense.

Senator SCHMITT. Okay. When you were in that procurement role—you are now Secretary of the Air Force. I want to ask you, let's just say you are right. Let's say that it has no validity, which I don't believe.

Whether it is 100 percent or 20, whatever that number is, what are you doing right now as the Secretary to cut out waste? Are you doing anything? If you identified anything, have you done anything?

Secretary KENDALL. We have set a number of management initiatives in place to try to introduce well-defined metrics for each part of the Air Force, each part of the enterprise—all the different functional pieces.

Senator SCHMITT. Have you realized any savings from this? Have you realized any savings from this?

Secretary KENDALL. Yes, we have.

Senator SCHMITT. Okay. I would like to followup then to find out exactly what that is.

Secretary KENDALL. Certainly.

Senator SCHMITT. Okay, and the reason why I am asking is we are clearly, whether you want to call it a pacing challenge or a chief adversary with China, they are not messing around.

I just don't think there is—we have to have a sense of urgency, I think, in making sure that every dollar the taxpayers are putting forward, and I am somebody that is going to be advocating for an aggressive posture here, that we are not letting any of that go to waste.

Sort of following up on that, in March, I sent a letter to Secretary Austin asking him some fairly simple questions about civilian workforce. There are recruitment issues. There is readiness challenges.

I was asking him specifically how many DEI [Diversity, Equity, and Inclusion] related positions exist in the Department of Defense. I want to ask you, how many DEI positions exist under your purview?

Secretary KENDALL. I would have to get you that for the record.

Senator SCHMITT. Okay. Will you be responsive? Secretary Austin has not been responsive, so I want to just find out what we are dealing with here, the number of jobs. I also want to ask you, how many mandatory DEI training sessions were conducted last year?

Secretary KENDALL. I would have to get that for the record also. Our DEI training sessions are prescribed by law. I think they are in the NDAA from 2019, if I remember. They are prescribed certain numbers of hours in different aspects of our training.

Targeted Trainee	D&I Module Duration
Experienced Supervisor Training	1 hour
New Manager Course	1 hour
Experienced Manager Course	1 hour
Senior Manager Course	1 hour
D&I Program Manager or Chief Diversity & Inclusion Officer	On-going

Senator SCHMITT. Okay. We would like to get those materials actually too. We have had a hard time actually getting those materials.

Secretary KENDALL. We can get that for you.

Senator SCHMITT. Okay. Thank you, and then Secretary Kendall and General Brown, last, I do want to ask, I saw today actually it was reported that the Air Force announced that the Davis-Monthan (DM) Air Force Base will be fielding a new special operation wing that will offset the impact of the loss of the A–10 mission there.

I know you mentioned the A–10 in your introductory comments, Mr. Secretary. You are aware that the 442d fighter wing out of Whiteman Air Force Base in Missouri houses some of the best and most experienced fighter pilots and maintainers in the world, yet we and they have yet to learn what their follow-on mission will be once the A–10 is divested.

Given the ongoing pilot shortage and recruitment challenges we have, it is important to ensure that the 442d get a follow-on mission. Secretary Kendall, do you agree it makes sense to leverage those existing talents, the fighter aircraft experience, the fighter pilots, the maintainers at the unit, the 442d, as you divest from the A–10?

Secretary KENDALL. Senator, our approach to divesting the A–10 is to try to replace fighter mission—another fighter mission, if possible. If not, then a flying mission, and if we can't do that, there are a number of other missions that are very important to the Department.

We have talked about electronic warfare here. Cyber is another one. ISR, intelligence. All of those things matter. So, in every case where we are taking aircraft out, we are trying to make sure that a viable long term mission replaces that mission.

Senator SCHMITT. When do you expect to announce that follow on mission for the 442nd?

Secretary KENDALL. I would have to get that for you. I don't know when——

Senator SCHMITT. Okay. We are very interested in that. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Schmitt. Senator Kelly, please.

Senator KELLY. Thank you, Mr. Chairman. Secretary Kendall and General Brown, General Saltzman, good morning. Thank you for being here. For Secretary Kendall and General Brown, I want

to thank you for your continued collaboration as we secure a long-term future for the Davis-Monthan Air Force Base in Tucson.

I have lost count of all the meetings that we have had, but I think our work together has brought real progress, and I am encouraged by the current plan to bring new, enduring missions to Davis-Monthan that would keep the base at the center of our National Security for years to come, as it should be.

The new plan would bring in additional search and rescue presence and brand-new electronic warfare platforms to DM that are important as the Air Force modernizes. The electronic warfare platforms, which is the new Compass Call aircraft, would be entirely based at DM, and the new Special Ops power projection wing would bring additional new flying missions and some exciting capabilities to DM under this plan.

General Brown, can you comment on this wing's importance in the context of the Air Force's overall strategy?

General BROWN. Sure, Senator. Just as the name implies, the aspect of power projection. With our SOF [Special Operations Forces] force from Air Force Special Operations Command, that will be part of the base, in addition to the electronic warfare capability from the EC–37B, helps us be able to execute that power projection aspect.

I think the other beauty of coming into Davis-Monthan is being able to bring special operation capability out to the Southwestern United States, and the range capability, and the ability—they are able to train in the Western United States, not only in Arizona, but in other parts of the United States, will also help us with that power projection.

Senator KELLY. Yes, thank you. We have a very unique kind of weather situation, combination of weather and ranges. Also, this plan does have important aspects for our National Security.

Importantly, it retains the same number of quality, high paying jobs in Tucson, and I am glad to see that the site activation task force has now begun its work at DM to make preparations for these new missions, and I know you requested some site and environmental review funding in the budget request.

For my part, I will be working to ensure that that gets over the finish line in this Committee, as well as strong funding to advance the procurement of our new electronic warfare aircraft for DM and other assets in this plan.

Secretary Kendall, this plan is ambitious, and I support that, but bringing this new mission and modernizing the others has a lot of moving parts here. What assurances can you provide me that you will be able to manage all these elements and stick with the timeline?

Secretary KENDALL. I can assure you that we will be paying a lot of attention to this and doing everything we can to assure that it happens as planned. I was just at Davis-Monthan. Got some great people there, and we want to make sure we do what we have laid out in order to support them.

Senator KELLY. Anything specifically that you are doing to avoid any potential delays?

Secretary KENDALL. I think we are working with all the affected organizations right now to make sure that that planning is in

place. I know the Special Operations people in particular are leaning forward to try to be prepared for this. We talked about the E–37s earlier and what is going on there. So, I think we are in generally good shape, Senator.

Senator KELLY. Full transparency is very important for me. Could you please make sure you highlight any potential issues to Congress, to this Committee, as soon as they are encountered? That would help us get through this as expeditiously as possible.

Secretary KENDALL. I will do that. General Brown, are you aware of anything that is—?

General BROWN. No particular issues, and having just finished the first SAG activation task force, I think we will be able to identify if there is any critical aspects that we need your support on. Also, we also appreciated the opportunity to meet with the community leaders as well. That happened roughly about the same timeframe.

I think a good dialogue, and we want to continue that dialogue, and work—collaborate to make sure we make DM successful.

Senator KELLY. Right. Thank you. I look forward to working with you both through this process and making sure we stay on track. I also want to flag a totally separate issue in the SOUTHCOM region that I think could become a serious problem.

China is looking to sell fighter aircraft to Argentina, potentially use that sale to create a foothold for future military basing in the Western hemisphere, and I think we need to be very vigilant on this.

We can counter their pitch here by facilitating the transfer of Danish F–16s to Argentina. That is a possibility. This is not just a transfer of aircraft. It has real geopolitical and strategic importance.

I just want to make you aware of this and just get your thoughts. I am already over my time, but I have had a series of conversations about this with U.S. Southern Command, with a number of our allies, and I think the Air Force has a real role to play here.

If I could just get another 30 seconds, if Secretary Kendall or General Brown can comment.

Secretary KENDALL. I am aware of the case, Senator Kelly, and I agree with you that it is important. I think it is working its way through the interagency process right now. But I think there is an understanding of the importance of it for the reasons that you said.

Senator KELLY. All right. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Kelly. Senator Scott, please.

Senator SCOTT. Thank you, Chair. Secretary Kendall, can you just want to talk about what you do, you know, every day to try to save money and how the process works and—because I assume it is part of what you have to do every day, because you have you probably have a lot of requests. So how do you go through the process?

Secretary KENDALL. We try to discipline ourselves, obviously, about how we operate. Generally speaking, we are operating the current force at what I would call an acceptable level, and we look at things like sustainment and readiness and so on.

There is no place that I can think of, frankly, where we are fat. The number that was mentioned earlier, if I could just find—it assumed there was a $25 billion saving per year over the 5 years to get the $125 billion. If I could find $5 billion, I would be thrilled.

We had to work very, very hard to find the $5 billion that we put in with the operational imperatives. The Department of Defense is not sitting there with a lot of excess cash lying around waiting to be found. That is not the way we are operating. I don't think there is any part of the Department that isn't operating on the edge of where it would like to be.

I know General Brown or Saltzman may talk about that, but when you look at weapons systems sustainment accounts, you look at facility sustainment we are doing, I think, reasonably well by our people. In terms of compensation, we have got the pay increase and I don't think anyone should fault us for that.

That comes first. But we are operating in a way which is designed to use our funds as efficiently as we possibly can. We are constantly looking for efficiencies and savings, but when we find them, there are many uses for those funds that are immediately available in a reasonable priority.

The perception that there is a lot of waste in the Department and there is money laying around to be found is just simply not valid. I would let my colleagues comment if they would.

Senator SCOTT. Do you guys want to add anything?

General BROWN. What I find is we have more requirements than we have on resources.

Senator SCOTT. It is like running a company. Same thing.

General BROWN. Same—and this is the part where the Secretary, myself, and General Saltzman spend a lot of time with our staff determining how best to apply those resources to get us to not only take care of airmen, guardians, and their families, but the broadest, the most combat capability that each of those dollars will buy.

Senator SCOTT. Yes.

General SALTZMAN. I would just add, it is a continuous process to scrub requirements, whether that is hardware software requirements, whether that is personnel requirements, whether that is policy requirements.

We are in a continuous evaluation of those, and one thing I will give Secretary Kendall for is we don't show up to his conference rooms without data to support our decisionmaking process.

I think that has been valuable as we have—as we look at different alternatives or different ways of doing our day to day business, we have to show up with data to make sure we get it right.

Senator SCOTT. Thanks. Secretary Kendall, first off, I appreciate what you said about A–10's, so hopefully we are making progress on that. I think it is the right thing to do for the country. Can you talk about Homestead? I guess there are rumors that there is an interest in closing Homestead. Is there anything happening on that?

Secretary KENDALL. I have not heard that rumor, Senator Scott. I am not aware of any—Homestead.

Senator SCOTT. All right. If there is, if somebody would just call me and let me know. It is a big deal, as you expect. It is a big deal for Florida, right. Next, could you guys just talk about, do you have

adequate resources to deter just two things if you want, and I know we don't have a lot of time, so two things.

Do you have adequate resources to deter China? All right. When you talk to your friends and try to explain why we should help Ukraine and why should we be in position to deter China and Taiwan, what do you say to them?

The global order doesn't sound very interesting to people. So, how do you say it to the just a layperson.

Secretary KENDALL. The answer to the first question is yes, but we are being challenged. I have not seen as aggressive or as capable a strategic competitor ever and that includes the Soviet Union. I had 20 years as a cold warrior.

We have got to stay ahead of China, and our deterrence in the region depends upon our relative capabilities. China has been pretty smart about their investments and trying to attack what they see as our dependencies.

As far as Ukraine is concerned, China is watching Ukraine, and they are watching to see if Russia can get away with naked aggression and if there is a united response against it that is effective or not.

They are watching the economic consequences. They are watching how the alliance plays out in terms of its solidarity and other support. I have a litany of things that I think Xi Jinping that I would like him to learn from the Ukraine experience.

One is that the short war you expect may not be the war you get. One is that your military may not be as good as they think—as they are telling you they are. Another is the economic consequence of aggression may be more than you can stand.

I hope those are all lessons he is getting, but we are not through this yet. We have a ways to go, and I think it is admirable that the NATO [North Atlantic Treaty Organization] alliance is now stronger rather than weaker. That is not what Mr. Putin expected to have happen, and we need to continue down that path.

It is definitely being watched by China very carefully, and we want them to get the right lessons from this.

Senator SCOTT. Anybody else want to add anything?

General BROWN. Senator, I think we just take a look at history, and you think about the global order. It was in the interwar years and into World War II. Small events of any type of crisis can start a firestorm and this is something we have got to pay attention to.

This is why it is important for our own security, for economic security, and our National Security, that we pay attention to what is going on around the world.

It is probably, as the Secretary highlights, probably the most complex environment we have been in, in a number of years.

General SALTZMAN. Just very quickly, I would add, as Secretary Kendall mentioned, that it is one of the asymmetric advantages of the United States that it can build a coalition of like-minded nations. It is a tremendous power, strength, and showing a demonstrated commitment to our allies and partners, and I believe China is taking notice.

Senator SCOTT. Right. Thanks for what you guys do.

Chairman REED. Thank you, Senator Scott. Senator Peters, please.

Senator PETERS. Thank you, Mr. Chairman. Secretary Kendall, during Operation Desert Storm, the Air Force fielded 139 fighter squadrons spread out across the entire service, 49 of those squadrons belonged to the National Guard.

According to Air Force numbers, the total fighter fleet has been reduced now to 81 squadrons, with the Air Guard only fielding 26 of those. That means that over the past 30 years, we have seen nearly a 50 percent reduction in Air Guard fighter fleet.

This comes at a time when global tensions are at their highest in 50 years, and as we just heard from your answers to the previous Senator, the complexity is significant.

We have a hot war in Eastern Europe. We have a looming threat of conflict in the Pacific. So bottom line, I am concerned about the fact that we have a declining fighter plane fleet, and we are at a time where we need every single plane that we can possibly get our hands on. We have let our fighter fleet shrink significantly and are now continuing to reduce the number of fighters in order to, "divest to invest."

As you are aware, Selfridge Air National Guard Base is home to A–10's that will be divested by the end of the decade with no replacement mission yet stated. You and I have spoken considerably about this issue and will continue to do that in the future. But my question is a little broader about procurement and actually having aircraft that will be stationed in various places, and certainly related to modernization.

I have a specific question. How is the Air Force actually budgeting for the procurement of aircraft across the service necessary to ensure the full recapitalization of the Air National Guard fighter fleet? What support specifically do you need from Congress in order to accomplish that procurement budgeting that you are working on?

Secretary KENDALL. Thanks, Senator Peters. I was in the Pentagon for the first Gulf War, and what we had at the time was a legacy force essentially left over from the cold war. So, the numbers were quite a bit higher than they ultimately came down to be.

The way we are budgeting is to try to balance the near, mid, and long term capabilities of the Air Force. What we look at is total combat capability. What we are trying to get to is the next generation of capabilities as quickly as we can, while we sustain the current force which is adequate to meet our needs.

The A–10 in particular is an aircraft that has been—it is over 40 years old now. It was a fantastic aircraft in its day, but it is aging out and we are going to have to replace it. We are working with you and the other communities to try to do that in a way which has a minimal impact and preserves some of our capabilities.

You mentioned the Guard. I have had a job opportunity now to visit a lot of Guard units, including yours in Michigan. They are highly capable units, and they are very important and cost-effective part of the force. We want to sustain the right balance between Active Guard and Reserve and have the right mix of mission capabilities.

That mix is changing over time, and as war becomes more about information dominance than it does necessarily about kinetic power, we need things like ISR [intelligence, surveillance, and re-

connaissance] and intelligence and cyber and EW, electronic warfare.

We are trying to move toward that world and get that mix right. the recapitalization of the fighter fleet, if you will, is one part of a much deeper and richer fabric of things that we are trying to do.

We also, of course, have the Space Force, which introduces a whole new set of capabilities as well. In some cases, space capabilities are going to be taking over for some of the traditionally air capabilities that we have had. Areas like communications and surveillance, for example.

That is the picture that we are dealing with, and we are trying to get to the new capabilities that we want to field in greater numbers in the future as quickly as we can. That is a priority for us. While we sustain a reasonable sized current fleet. Does that help?

Senator PETERS. It is. Thank you. Secretary, for more than 13 years, the Air Force has been investigating PFAS [Per- and Polyfluoroalky Substance] contamination at the former Wurtsmith Air Force Base in Oscoda, Michigan.

As a result of the contamination, the Michigan Department of Health and Human Services has issued five separate public health warnings to the community. Unsafe fish, venison, small game, as well as for unsafe shoreline foam—and foam, as well as unsafe drinking water. However, there is still, still no cohesive cleanup plan in place, and the residents of Oscoda are understandably frustrated at what they perceive as being unnecessarily dragged-out process on the part of the Air Force rather than dealing with the problem directly.

So instead of waiting for additional studies to be completed by either the Air Force or the EPA [Environmental Protection Agency], and before seeing any progress, the community is right now seeking urgent action to stop the flow of PFAS contaminated groundwater into the public waterways in the Oscoda area.

These are called interim remedial actions, and there is a plan that has been submitted by the State of Michigan and local experts outlining exactly what needs to happen. My question for you, sir, is, can I get your commitment to taking these interim remedial actions now, now without any further delays?

Secretary KENDALL. Senator, I would have to take a look at that plan. I am not aware the details of it. What we have been doing with PFAS is, first of all, making sure people have safe water to drink. We have had a program to make sure that that was the case. In some cases, providing bottled water to people.

We have stopped the use of PFAS for the most part. We are getting it out of all of our installations where it has been a fire suppressant. We haven't found a replacement for PFAS to put out fires yet, aqueous firefighting foam, but we are still doing research on that.

As you know, I think EPA has come out with what we think will be a final criteria, four parts per trillion, which would then be the basis for cleanup efforts. In the meantime, we have been trying to understand the extent of pollution around our bases so that we could fully appreciate the depth of that as far as a health hazard, but also so that we could do cleanup effectively.

We are making progress, even though it seems very slow. I am not aware of the interim plan that you described, but we will take a look at that. If there is an Air Force responsibility there, we will meet that responsibility.

Senator PETERS. Could you make a commitment to look at that plan so that we can have another discussion in the near future?

Secretary KENDALL. I will look at it and have a followup conversation with you, yes, sir.

Senator PETERS. Thank you.

Chairman REED. Thank you, Senator Peters. Senator Sullivan, please.

Senator SULLIVAN. Thank you, Mr. Chairman. Gentlemen, thank you for your testimony. General Brown and Secretary Kendall, I want to just get your assessment. I am going to do a little bragging here on behalf of the Active Duty and Guard Forces in Alaska, with the spy balloons and the Russian bear bomber incursions, and the rescue mission, and the search and rescue mission on some really challenging weather events where they are saving lives.

Our Air Forces in Alaska have just been, in my view, doing exceptional work over the last several months. They do it all the time. These are hard missions, right, going to intercept a spy balloon or unidentified aircraft in the middle of the night over the North Slope of Alaska.

It takes a lot of work in darkness and crummy weather. Can you talk to the importance of how they are doing, and including the JPARC [Joint Pacific Alaska Range Complex] training ranges and the future you see for them in the Air Force?

Secretary KENDALL. I have had a privilege to visit Alaska bases multiple times in my tenure, and I am incredibly impressed by the quality and capabilities up there. I also hear about missions people do, and as you mentioned, in extreme conditions to do rescues and to do intercepts and so on.

It is an enormously effective part of our force. Alaska's strategic position matters a great deal, too. You have got good access to a lot of parts of the globe that are very important to us. Your forces participate in some key missions, both for homeland defense and to support in the Indo-Pacific region.

So Alaskan JPARC in particular, is a range kind of capability that we don't have anywhere else in the U.S. So, all very, very valuable to us. We are investing in these capabilities. There are investments in our budgets to improve JPARC, to make it more effective as a training range.

I am looking forward to coming up there in the summer and being there for one of those exercises.

Senator SULLIVAN. Good. Thank you, Mr. Secretary. General, do you want to talk—any lessons learned on—maybe you can't do it in the hearing right now. But, you know, our Active Duty Forces were quite busy, the F–22s, the F–35s, with these bare bomber incursions, which are kind of normal. But the Russian—the spy balloons and things like that. Any lessons learned that you can reveal right now or maybe in the closed session?

General BROWN. Senator, what I would like to, and you have you have already addressed it in some of your comments here, just the value of the teamwork across the force, because it is not just the

fighter mission, but it is also our maintainers that get the aircraft in some pretty tough weather conditions, as well as our early warning with the E–3 and how all that command and control comes together to be able to execute the missions.

You know part of that skill set comes from their day to day training they are able to get on JPARC, a very, you know, capable range that we continue to invest in. So, it is a combination of all those together that provide us that capability, that is in a very important part of the country.

Senator SULLIVAN. Right. Thank you. Let me turn to kind of a related question. This year's budget includes a request for 72 new fighters, 48 F–35As, 24 F–15 Eagles. We have over 100 5th Gen fighters in Alaska, F–22s, F–35s.

In the event of a conflict with the PRC [People's Republic of China], probably most, if not all of those aircraft, would be deployed there under the INDOPACOM's control, currently INDOPACOM Commander's control. This would require other aircraft to backfill the homeland defense mission in Alaska, which we just saw was so important.

How will the Air Force fighter acquisition plan improve homeland defense, and what risks will the Air Force incur if the procurement timeline is interrupted, given that scenario I just kind of talked about?

General BROWN. Senator, it would—as we have looked at not only the procurement aspect but also how we would execute the mission. I do think we are on a good path for procurement for this particular budget.

It is something we want to continue to pay attention to, not only the aspect of the aircraft themselves, but also the capabilities that support and complement those aircraft, whether it is munitions, whether it is command and control.

As we have operational scenarios that is the beauty of air power, the flexibility that we would have to do in order to move some of our 5th Gen capability and munitions to combat our adversaries.

At the same time, how we would flex our total force to take care of the Homeland mission, the Homeland defense mission as well. So, this is where, you know, I think we have pretty good capability to be able to be responsive in a crisis with air power.

Senator SULLIVAN. Thank you, and, Mr. Chairman, just a real quick final question for General Saltzman. General, you know, Alaska is also the cornerstone of America's missile defense in terms of ground-based missile interceptors at Fort Greely, and the radar systems that we have throughout the State.

Recently, NORTHCOM completed its testing of the long-range discrimination radar (LRDR) system at Clear Space Force Station in Alaska. Can you talk to the Committee about how this LRDR system has dramatically improved our missile defenses and domain awareness? Is it on track, the way in which you want it to be?

General SALTZMAN. Well, it is a very important radar in a very important location. It is highly discriminating in terms of target. It produces high fidelity it tracks, that enable our missile defense system and secure the homeland from missile threats.

Day to day, it also will be capable of supporting the space domain awareness mission, which I am heavily invested in, and so,

the number of tracks from that part of the sky is a significant contribution to our overall space domain awareness.

Senator SULLIVAN. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Sullivan. Senator Duckworth, please.

Senator DUCKWORTH. Thank you, and good morning to each of our witnesses. I had a very engaging 20 whole minutes, actually, thanks to the Subcommittee Chairman Kelly discussion with—on Air Force design at the Airland Subcommittee hearing last week. As the entire Joint Force reorganizes and modernizes, Congress has to play an active role in oversight to ensure that the DOD is equipped for competition with the best weapon systems and the most effective organization of our troops.

The Marine Corps published a Force Design 2030 document, which provides a detailed roadmap and vision of what its future force will look like. The Navy published its Force Design 2045 document, which looks—which goes through its shipbuilding aspirations.

I understand from today's testimony that the Space Force is also working on a force design effort, though it doesn't sound like that has been completed quite yet. In contrast, the Air Force published its future operating concepts, which does not feature the level of detail that the other services have articulated.

Mr. Secretary, I know that the Department of the Air Force has operational imperatives to help orient it to services' investments, but if neither service has an explicit roadmap for force design, the Air Force or Space Force, what is informing recruiting and retention goals, or specific RDT&E [Research, Development, Test and Evaluation] investments? Mr. Secretary, is your Department truly organized for competition?

Secretary KENDALL. That is a great question, Senator. The short answer is yes, but we have basically limited maneuverability over the next few years in terms of what the ultimate force structure will be. But there are some efforts—General Brown and I have talked about this several times, and I have had a similar conversation with General Saltzman.

We need to be thinking about the long-term future and what the future looks like given the strategic competitors that we have, particularly China. As you can see from the initiatives we started with the operational imperatives, we are moving toward modernization that will be effective against that threat, but that is a dynamic threat. It is constantly changing. It will respond to what we do.

We need to think very carefully about the future, what our future posture might look like, and create some options at this point that will be fleshed out as we move further along. We also need to look at how we are structured.

I have asked my scientific advisory board to take a look at this. The posture the Air Force has evolved into over time is one that was essentially derived from the kinds of operations it was conducting, which were largely counterinsurgency, with a lot of deployments overseas for people, and a certain kind of tactical combat operations.

That is not what our future looks like. We have got to look at how we are training the R–4 Generation. The R–4 Generation

model that General Brown is using is a piece of that to get us to a better cycle for how we utilize the force and how we prepare for more stressing operations.

But we have also got to look at how we are structured to do acquisition. We are not transitioning science and technology as quickly in the products as we should be, or as efficiently as we should be. There are a number of things that we need to take a look at.

On my list of to do is at this point in time is to work with my teammates here to try to define the structure we are going to need for the long-term strategic competition we are in, and that is a work that we really haven't completed yet.

I am very comfortable with where we are going over the next few years, but we need to posture ourselves for a longer-term competition.

Senator DUCKWORTH. So, there will be some sort of a document in the future, because you understand, we have to do our jobs here, right. At some point, decisions are required to shape these investments going into the future. For example, the Marine Corps says that they required 31 amphibious ships.

Congress and this Committee can authorize and advocate for those ships and hold leaderships at all levels accountable. I do think that Air Force and Space Force needs to work constructively with Congress to appropriately allocate the resources and measure its modernization success.

But how can we do that if neither the Air Force nor the Space Force has an explicit modernization roadmap based on some sort of future looking force design effort?

Secretary KENDALL. There is a well-known aphorism, Senator that plans are nothing and planning is everything. We have started the planning work, but we don't have the plan yet. But I think, I agree with you that would be a valuable document to have, to lay out where we are going to go.

We will be working on that for our own purposes, but I agree with you that it will be valuable probably for the Congress as well.

Senator DUCKWORTH. Thank you. I am going to followup on this and keep at it, just so you know. I wanted to also talk about recruiting, retaining, and effectively leveraging the organic talent within the services.

For example, we have the ability for servicemembers to test out on a language and say, I am a native Spanish speaker, I am a native Thai speaker, I speak French, and you can actually get that designation by taking the language test and then the force knows that you have those airmen—those guardians that have those resources, those capabilities.

But I believe that we risk overlooking the skills of servicemembers, particularly those in the Reserve component, who have critical digital skills from their civilian careers. I introduced the Managing Active and Reserve Tech Talent Effectively Act—it is a mouthful, I know—to fix that.

My bill directly directs the services to establish career field policies and processes to identify members across the total force who have skill sets in advanced technology areas such as computer programing, coding, AI [artificial intelligence], ML [machine learning].

It gives the Department discretion and flexibility to figure out the best way to do that. But my bill requires that the Reserve component servicemembers be able to use their skills and experiences from their civilian jobs to qualify for these military career fields.

General Brown, General Saltzman, I would like to hear from each of you about the benefits to your services that come from leveraging the digital skills of its total force servicemembers, particularly those in the Reserve component who have tech skills from their civilian careers.

General BROWN. They are very important. There are a couple of programs that we are looking at to deal—one was out of DIU [Defense Innovation Unit] back in December entitled GigEagle. It is an aspect of identifying those who have those specific skill sets that you can bring on for a short period of time to work for you. A complex issue because of their civilian expertise.

The other part we are also looking at is how we get better visibility on their certifications, and how we use that information and for promotion boards and other areas. Not just your academic degrees, but you are certified in areas that don't require an academic degree.

How we have better visibility on those and how we track that particular talent with the special experience identifiers so we can tap into and provide those opportunities for those outstanding servicemembers that can help us in areas, just because of the work they do in the civilian sector.

Senator DUCKWORTH. Thank you.

General SALTZMAN. I agree, they are critical. In fact, they are so critical, I am trying to make sure that the Space Force has a Reserve, has the part time workforce integrated into it, so that we can continue to leverage it.

One of the things I have found is that those part time guardians, airmen now, guardians in the future, would be able to stay at the highest levels of those competencies because they are integrated into the commercial sector, and they can bring those skills readily in when we need them. So, it is a critical effort that I support.

Senator DUCKWORTH. I mean, you need to know where all you're MCSCs or CCNAs are, and know how many you have and say, hey, I need that guy. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Duckworth. Mr. Secretary, General Saltzman, and General Brown, thank you for your testimony and for your service. At this point, let me, for the benefit of my colleagues, remind them there is a vote ongoing. We will reconvene at 12:15 p.m. in SVC–217 for the closed session. With that, I will adjourn the open session.

[Whereupon, at 11:47 a.m., the Committee adjourned.]

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JEANNE SHAHEEN

COMPASS CALL

1. Senator SHAHEEN. Secretary Kendall and General Brown, the war in Ukraine has shown the importance of modern electronic warfare systems, and this is why I applaud the Air Force's development of the latest Compass Call aircraft. What role do you see for Compass Call in terms of conducting electronic warfare alongside our combat aircraft in a modern contested environment?

Secretary KENDALL and General BROWN. While we can't get into many specifics of the Compass Call here, it is designed to be a rapidly adaptable electromagnetic spectrum (EMS) dominance aircraft and to provide commanders with asymmetric advantages in targeting enemy communication, navigation, data links, Unmanned Aerial Vehicles (UAVs), and advanced radar systems.

The Compass Call's principal mission is to manipulate the EMS through precision Airborne Electronic Attack (AEA) allowing other forces to accomplish their missions. Its primary responsibility is to minimize the effectiveness of adversary threat systems while maximizing the effectiveness of our own. The EC–37B supports both defensive and offensive counter air by providing a safe space from which friendly forces can operate, while also defending lines of communication and denying the adversary the ability to effectively carry out air and missile operations. The new airframe offers increased performance in range, speed and altitude, power generation, and sustainability for an overall lower operating cost. We view the Compass Call as a very capable, survivable, and essential force multiplying asset and a key player on the modern contested environment.

2. Senator SHAHEEN. Secretary Kendall and General Brown, following last year's appropriations bill, Congress has now funded ten Compass Call aircraft. Are the 10 Compass Call aircraft funded by Congress sufficient to meet the challenges in Europe and the Indo-Pacific?

Secretary KENDALL and General BROWN. The additional four (4) EC–37B Compass Call aircraft added into fiscal year 2023 appropriations bring our current program of record number up to 10 aircraft. The 10 aircraft in our initial program of record was what the Air Force could support and utilize at the time and will provide great capability for the USAF in supporting Joint Force solutions to challenges in both Europe and the Indo-Pacific theaters.

I initiated an Electromagnetic Spectrum Operations (EMSO) Cross-cutting Operational Enabler (COE) Team to provide a holistic assessment of EMS capabilities and capacity necessary to support my seven Operational Imperatives and win in the EMS. The 10 EC–37B Compass Call aircraft are part of the solution. An assessment of the future number and mix of assets is ongoing.

3. Senator SHAHEEN. Secretary Kendall and General Brown, will you provide an update on the status of developmental testing of the EC–37 Compass Call aircraft?

Secretary KENDALL and General BROWN. [Deleted.]

ADDITIVE MANUFACTURING

4. Senator SHAHEEN. Secretary Kendall and General Brown, as you know, the Air Force stood up its Rapid Sustainment Office under Air Force Materiel Command in 2018. Its purpose is to address sustainment issues, including supply chain shortfalls that negatively affect fleet readiness. In particular, I understand many challenges exist with acquiring parts for our older aircraft. I am pleased, however, that the Air Force has been an early leader in adopting additive manufacturing to address these challenges. Can you discuss how the lack of available parts affects the readiness of our aircraft?

Secretary KENDALL and General BROWN. The Air Force Fleet has an average age of 29 years, with some of our aircraft being more than 60 years old. As aircraft age, the original equipment manufacturers may discontinue support or even go out of business, making it very difficult for Air Force personnel to find replacement parts in a timely manner. Delays in acquiring parts directly impacts maintenance schedules, ultimately reducing the mission capable rates of the affected aircraft fleets.

5. Senator SHAHEEN. Secretary Kendall and General Brown, is the issue of the lack of parts magnified at overseas bases and smaller bases?

Secretary KENDALL and General BROWN. The Air Force does not specifically differentiate between small bases and large bases in terms of readiness and parts support. Rather we measure parts availability by average stocking and issuing effectiveness. Parts availability is an average of 8 percent lower among smaller supply accounts. Overseas supply support is comparable to CONUS bases, with 2 percent higher average issuing and stocking effectiveness (77.0 percent for overseas bases vs. 74.7 percent for CONUS bases) and is not magnified in comparison to smaller parts supply accounts.

It is also important to note that parts availability is directly related to the Air Force and Office of Secretary of Defense readiness priority designations, which are used to increase parts availability at locations specifically outlined in the National Military Strategy objectives.

6. Senator SHAHEEN. Secretary Kendall and General Brown, how do you envision using additive manufacturing to solve some of these problems?

Secretary KENDALL and General BROWN. Additive Manufacturing (AM) is an effective tool that provides substantial design and manufacturing flexibility. The Air Force is using A to mitigate diminished manufacturing sources of supply and long lead time supply chain shortfalls associated with our legacy aircraft fleets. Additionally, AM empowers our airmen to create innovative solutions for the myriad of sustainment challenges they face.

7. Senator SHAHEEN. Secretary Kendall and General Brown, can you describe any successes with using additive manufacturing?

Secretary KENDALL and General BROWN. The Air Force has achieved many successes using additive manufacturing. Recent examples of these successes include:

C–5M Super Galaxy Blocks and Wedges: The Advanced Manufacturing Program Office, in coordination the C–5 System Program Office out of Robins AFB, Georgia, recently modified an aerodynamic fairing (an aerodynamic fairing is a structural element that helps to reduce drag on an aircraft) for a C–5M Super Galaxy by incorporating printed 3-D polymer blocks and wedges made using an "Antero 800NA" printer. The repair process involved completely removing the old parts from the plane, and re-bonding the new 3D printed blocks and wedges to the aircraft. Integrating 3-D printing technology has expedited C–5M Super Galaxy repair cycle times and reduced costs. Three aircraft to date have been upgraded with the new 3-D printed parts.

B–1 Fairing Slip Joints: The Centralized Air Force Manufacturing Center (CAFMC) at Ellsworth AFB has generated huge advancements in Cold Spray repairs, 3-D printing, and locally developed technological improvements that not only enable increasingly agile maintenance for all platforms, but also extend the service life of legacy platforms while reducing their maintenance and operating costs. The team recently developed a first-ever on-aircraft Additive Manufacturing Cold Spray restoration for a B–1 aircraft over wing fairing slip joint that resulted in a savings of over $500,000 and 8 weeks of Non-Mission Capable time.

QUESTIONS SUBMITTED BY SENATOR MAZIE K. HIRONO

SPACE NATIONAL GUARD

8. Senator HIRONO. Secretary Kendall and General Saltzman, Hawaii has one the few Air National Guard units with a space aligned mission. I am concerned that by not making a definitive decision on how these units will fit within the National Guard, these critical units will fall by the wayside as their facilities and training needs are prioritized below those of the Space Force and the wider Air National Guard. For both of you, what is the best way to ensure the long-term success of these space aligned National Guard units?

Secretary KENDALL and General SALTZMAN. Today, the USSF relies on the space capabilities in the Air National Guard. These units are an important part of our space capabilities and highly valued. The Air Force continues to organize, train, and equip ANG units, however, the primary responsibility for the missions those units support has moved to the Space Force. This arrangement is not sustainable over the long term, therefore the best way to ensure long-term success is to align these space units more directly to the USSF. We recommend enacting the Space Force Personnel Management Act while transferring the ANG missions to the Space Force, without establishing a Space National Guard.

9. Senator HIRONO. Secretary Kendall and General Saltzman, the final decision to base Space Control Squadrons 4 and 5 in Hawaii has been released. Squadron 5 was originally intended to be stationed at Anderson Air Force Base. What was the reason to change the basing from Guam to Hawaii?

Secretary KENDALL and General SALTZMAN. Based on the increased threat and the scope of military capabilities resident on Guam today, our need to ensure resilient warfighting capabilities across the joint force led me to determine that Joint Base Pearl Harbor-Hickam is the most suitable location for Space Control Squadron 5.

10. Senator HIRONO. Secretary Kendall and General Saltzman, how will these two units engage with existing space mission units on Hawaii, like the Air National Guard's 293d Space Control Squadron?

Secretary KENDALL and General SALTZMAN. The 293d Space Control Squadron, recently re-designated as the 293d Electromagnetic Warfare Squadron (EWS), is one of two EWS units standing up under the HIANG in partnership with USSF Space Delta 3, which is responsible for the space electromagnetic warfare mission, and in direct support of U.S. Space Command and U.S. Indo-Pacific Command objectives. These units will interact with Space Delta 3 to coordinate training, mission system sustainment, and other responsibilities.

MAINTENANCE VERSUS MODERNIZATION

11. Senator HIRONO. Secretary Kendall, I have also heard that for the many projects on the Air Force's facility repair backlog it will be more cost-effective to replace these buildings than to continue to repair them. The Marine Corps is taking this approach for the use of their Facilities Sustainment, Restoration and Modernization funds. Would it be useful for the Air Force to adopt the use of the Marine Corps' readiness maximization tool?

Secretary KENDALL. The DAF is evaluating the United States Marine Corps' (USMC) Facilities Sustainment, Restoration and Modernization (FSRM) optimization model to see how we may be able to incorporate aspects of it to improve our processes, but at this time we do not intend to adopt it full scale.

The USMC and Department of the Air Force (DAF) models differ based on fundamental employment of installations and the associated operational risk. While both models utilize data to predict asset condition over time in a similar manner, the DAF approach empowers operational commanders to a greater degree, which is critical to the success of air and space missions.

The DAF is confident in our current methodology, and that a fully funded FSRM mix of sustainment, restoration, and modernization dollars, coupled with divestment/demolition will significantly reduce our deferred maintenance and repairs (DM&R) backlog and improve mission resiliency and quality of life.

12. Senator HIRONO. Secretary Kendall, to do this, would the Air Force need additional authorizations to re-capitalize its facilities in this manner?

Secretary KENDALL. Legislation to authorize replacement of facilities with Operations and Maintenance funds would provide the DAF with needed flexibility, and we welcome your support of the DOD Legislative Proposal to accomplish this. There are various examples where replacement of a failed facility is more economical than repair/renovations to bring the antiquated facility up to current life, health, and safety codes. For example, we have many assets over 50 years old across the enterprise which are in failing condition that would benefit from a modification to existing authorizations, which would provide a more optimized and economical solution than repair.

Support and enactment of the Legislative Proposal would provide DAF and sister services the capability to maximize taxpayer dollars and simultaneously optimize facilities and infrastructure to address future challenges from peer adversaries.

E–7 PROCUREMENT

13. Senator HIRONO. General Brown, INDOPACOM has identified the urgent need for E–7 fielding as soon as possible. Yet, the Air Force included advanced procurement for the E–7 in its unfunded priorities list. Will the E–7 be late to need without this additional funding?

General BROWN. Gaps in the Airborne Moving Target Indicator (AMTI) capability exist today. The E–3's failing engines with diminishing sources of supply and aging radar technology can no longer be mitigated by upgrades. The Air Force funded two E–7 prototypes in fiscal year 2023/fiscal year 2024. If the fiscal year 2024 E–7A Unfunded Priority List (UPL) is funded, long-lead items for two E–7A production aircraft would begin production in fiscal year 2024 pulling delivery on those first two production aircraft forward into fiscal year 2028 and posturing the DAF to further mitigate the current AMTI capability gap.

DELIVERY OF THE NEW AERIAL REFUELING AIRCRAFT (KC–46)

14. Senator HIRONO. General Brown, the Air Force continues to struggle with recapitalizing its tanker fleet. Though the KC–46 has made some milestones this year it still has not met all its operational requirements, and analysis already suggests the need for a next-generation air refueling platform. When can we expect the KC–46 to reach full mission capability? How have you prepared your respective commands for the defense of U.S. bases and territories against the possibility of hypersonic missiles?

General BROWN. The KC–46A Pegasus has been meeting the warfighting needs of combatant commanders since August 2021. Air Mobility Command (AMC) is confident in the KC–46A's ability to project and connect the Joint Force. The KC–46A provides lethality and additional options to the Joint Force with its ability to extend reach and increase battlespace awareness. The KC–46A acquisition presents challenges, but there are fixes underway, and aircrew and maintainers are developing proficiency and confidence in the aircraft.

Starting in Summer 2021, through its Interim Capability Release (ICR) Process, AMC progressively made KC–46As available for employment and tasking as operations with receiver aircraft were adequately tested and evaluated. Through this effort, AMC has cleared KC–46As to carry out operational refueling on nearly all required aircraft, except for the A–10 Thunderbolt II and other receiver aircraft without an approved technical compatibility assessment.

In September 2022, the AMC commander approved KC–46A for worldwide use in support of combatant command taskings, including combat operations. This is a major milestone on the road to declaring Full Operational Capability (FOC). That said, AMC is not planning to declare FOC until after the solutions for the current Remote Vision System (RVS) and "Stiff Refueling Boom" deficiencies have begun fielding. These solutions are currently expected to begin fielding in fiscal year 2026.

The DAF will continue to rely on the U.S. Army, Joint Force, and Allies to provide ground based air defense, particularly against emerging hypersonic threats. In accordance with the Agile Combat Employment scheme of maneuver and Operational Imperative 5, the USAF will complicate the adversary's ability to target our bases by distributing operations to dispersed locations and will enhance the resilience of base infrastructure against attacks through selective hardening, rapid airfield damage repair, prepositioning of fuel and war reserve materiel, agile communications, and development of expeditionary multi-capable airmen.

15. Senator HIRONO. General Brown, will the need for a next-generation tanker affect KC–46 acquisition?

General BROWN. The DAF is currently in the process of completing its acquisition of 179 Program of Record KC–46As. To date, the Air Force has awarded contracts to procure 128 KC–46As and has delivered 69 aircraft to five bases. The final KC–46As are being procured in fiscal year 2027 with deliveries in fiscal year 2029. The need for a next-generation tanker and the DAF's plans for continuous KC–135 tanker recapitalization will not affect the remainder of the current KC–46A acquisition program.

In the fiscal year 2024 budget, the DAF initiated and accelerated the next-generation tanker program, known as the Next Generation Air-refueling System (NGAS), by funding an Analysis of Alternatives (AoA). Once completed, the AoA will influence NGAS technology maturation and requirements development. Meanwhile, the DAF will continue uninterrupted tanker recapitalization during the gap period between the end of the KC–46A contract and NGAS with a program called Tanker Recapitalization. The DAF's goal is to use Tanker Recapitalization to replace up to 15 KC–135s per year as they retire and until the NGAS solution is ready to field. The DAF intends on buying fewer commercial derivative, air-refuellable tankers than previously envisioned due to NGAS's acceleration.

QUESTIONS SUBMITTED BY SENATOR TIM KAINE

UNACCOMPANIED HOUSING

16. Senator KAINE. Secretary Kendall and General Brown, current USAF policy defines unaccompanied housing as specifically designated for airmen E1 to E3 and E4s with less than 3 years of service. As of 2021, there was not enough unaccompanied housing to support this policy at Joint Base Langley-Eustis (JBLE), and in March 2021 the Air Force signed a record of decision assigning an F–22 Formal Training Unit to JBLE, which further adds to this problem. Brand new airmen are currently asked to seek housing off-base after just 9 months at JBLE. What is the Air Force's plan to provide sufficient unaccompanied housing at Langley AFB?

Secretary KENDALL and General BROWN. We anticipate a 565-bed deficit at JBLE. We currently have a MILCON project for a 144-room dormitory that is already 35 percent designed and we are looking to program into a future MILCON FYDP year. An on-going update to the Dormitory Master Plan will provide additional recommendations to address the deficit requirements through future planning and programming. The Dormitory Master Plan will be complete by November 2023 and will address the remaining 421 room deficit at Langley AFB. Currently, the installation

has two dorms under renovations in fiscal year 2023 and fiscal year 2025, both pending funding. Unaccompanied airmen are not being asked to seek off-base housing after their first 9 months. The installation moved its most senior airmen into a converted lodging facility and helps them graduate to off-base housing accommodations when ready, which can take approximately 9 months.

HVAC CHILLER REPLACEMENT STANDARDIZATION PROJECT

17. Senator KAINE. Secretary Kendall, in 2019 the Air Force Civil Engineering Center (AFCEC) issued a class justification and authorization (Class J&A) for other than full and open competition titled the HVAC Chiller Replacement Standardization Project. The Class J&A limits chiller purchases to a single company on each Air Force installation, eliminating competition for new purchases through the end of fiscal year 2024. In response to a provision included in the Senate Armed Services Committee Report (SASC) to accompany the Fiscal Year 2023 NDAA, the Air Force completed both a Category Intelligence Report (CIR) and congressionally Requested Report (CRR) on this project. Both indicate that the Air Force intends to continue the Class J&A for another 5–10 years, even without performance metrics or collected data to prove that limiting competition is generating total cost of ownership (TCO) savings. Furthermore, the Air Force approach to calculating TCO does not appear to include a methodology for comparing the cost of initial chiller and ancillary equipment under the Class J&A with the cost of initial chiller and ancillary equipment with competition. The CIR acknowledges that the Air Force has not yet developed the metrics and data to support the TCO model, although it suggests that initial purchase price is one factor the Air Force is considering. What is the Air Force's methodology for comparing the cost differential between initial procurement costs of chillers and ancillary equipment with and without competition?

Secretary KENDALL. The Category Intelligence Report (CIR) from 2018 analyzed procurement cost from fiscal year 2012 to fiscal year 2016 contract data. Metrics and data to support the Total Cost of Ownership (TCO) model have not yet been fully developed, including comparing the cost differential between initial procurement costs of chillers and ancillary equipment with and without competition.

However, the DAF is committed to developing metrics and tracking mechanisms that inform the TCO for its chiller inventory. There are three current initiatives in place to begin acquiring real time data supporting chiller TCO: improving inventory data in the BUILDER Sustainment Management System (SMS) to provide standardization progress (fiscal year 2023 to fiscal year 2024), implementing and assessing a mobile device pilot program at five installations allowing technicians to accurately record near real-time maintenance and repair history (started in fiscal year 2023), and centrally funded vendor training (started in fiscal year 2021).

18. Senator KAINE. Secretary Kendall, it is my understanding that the greatest cost drivers in a TCO model for chillers are likely to be operating costs (i.e., energy usage) and the initial procurement of chillers and ancillary equipment. However, in the CIR, the Air Force states that 80 percent of TCO is attributable to sustainment costs. How did the Air Force arrive at this figure and what is the methodology for calculating sustainment costs?

Secretary KENDALL. The Category Intelligence Report (CIR) from 2018 found Heating Ventilation and Air Conditioning (HVAC) Facility Related Services (sustainment) accounted for 80 percent of HVAC spending. This figure came from analyzing Air Force contracting data and work management history of maintenance and repair activities from fiscal year 2012 to fiscal year 2016. The CIR further defines HVAC "Services", as maintenance, repair, and other sustainment activities performed by a trained workforce.

19. Senator KAINE. Secretary Kendall, in the CIR on the HVAC Chiller Replacement Standardization Project, the Air Force states that advanced training on HVAC systems cannot be delivered virtually. Please explain why the Air Force believes this training cannot be completed using a blended learning approach?

Secretary KENDALL. The HVAC Chiller standardization coupled with commercial off the shelf training greatly enhances the workforce's technical competencies to service HVAC systems. This manufacturer instructed advanced training is predominantly performance-based (troubleshoot/repair) tasks on HVAC equipment. While blended learning offers advantages, the hands-on experience and equipment specific training received is very difficult to duplicate in a virtual environment.

QUESTIONS SUBMITTED BY SENATOR ELIZABETH WARREN

ACQUISITION WITHOUT CONGRESSIONAL APPROVAL

20. Senator WARREN. Secretary Kendall, in April of this year, you called for a policy that would allow the Pentagon and Air Force (USAF) to start initial phases of an acquisition program without prior congressional approval. If this policy change is enacted, oversight processes, reporting to Congress, and reporting to the public will be put in place to assess the effectiveness?

Secretary KENDALL. The intent for these "quick-start" programs is to leverage the successful notification and oversight mechanisms currently in use for DOD's Rapid Acquisition Authority (RAA). Congressional defense committees would be notified by the Service Secretary within 15 days of the determination by the SecDef or DepSecDef to exercise the authority. The Service Secretary would include information such as a description of the high priority effort, rationale for prioritizing the effort, and an explanation as to why source funds are available for this higher priority effort. The Service would also identify RAA-funded (and sourced) efforts in subsequent budget exhibits and briefings provided to the congressional defense committees in support of DOD budget requests. The ability to assess and react to new information or threats within the year of execution via open dialog with Congress is critical to meeting the pacing challenge.

21. Senator WARREN. Secretary Kendall, if Congress approved the Department's rapid response to emergent technology advancements or threats proposal how much does the Air Force expect to spend each year over the next 5 years?

Secretary KENDALL. This proposal would modestly expand existing authorities to respond to and act upon emergent development requirements in the year of execution. There is no precise estimate for the exercise of this proposed authority in the future. The $300 million DOD threshold among the Services was set to accommodate unique situations where multiple Services may have emergent requirements that require prompt action in the year of execution. The scope and scale of individual efforts is likely to be limited since the work being pursued would be entirely pre-Preliminary Design Review (PDR) authorities.

22. Senator WARREN. Secretary Kendall, would there be any requirement to produce a cost estimate or schedule for programs approved under the rapid response to emergent technology advancements or threats proposal?

Secretary KENDALL. Consistent with existing regulations for RAA, to the extent that it is readily available at the time of a request under this authority, cost and schedule information would be included in the request submitted for consideration by The Secretary of Defense.

23. Senator WARREN. Secretary Kendall, would you recommend programs approved under the rapid response to emergent technology advancements or threats proposal be implemented through other transaction agreements or FAR-type contracts?

Secretary KENDALL. The Air Force will consider all contract types and other transaction agreements available and evaluate them on a case-by-case basis to identify the most effective means to allow for the rapid response to an emergent threat or technology. The type of arrangement would be chosen in accordance with the nature of the vendor, the urgency of getting work underway, and the nature of the work.

24. Senator WARREN. Secretary Kendall, programs approved under the rapid response to emergent technology advancements or threats proposal include requirements for companies to produce cost or pricing data when requested by the government?

Secretary KENDALL. Like the existing RAA, the activities performed under this authority will be executed in full compliance with all applicable laws, rules, and regulations.

25. Senator WARREN. Secretary Kendall, would programs approved under the rapid response to emergent technology advancements or threats proposal need a sound business case prior to approval?

Secretary KENDALL. Like the RAA, the activities performed under this proposed expansion of RAA will be executed in full compliance with all applicable laws, rules, and regulations. The early nature of the work being performed pursuant to this authority means that many elements of formal programmatic review will come as the effort is subject to the regular budgeting and approval processes.

26. Senator WARREN. Secretary Kendall, would programs approved under the rapid response to emergent technology advancements or threats proposal need a plan to off-ramp capabilities when needed to prioritize schedule?

Secretary KENDALL. This proposal would allow for system development and demonstration activities to be resourced and conducted up to Preliminary Design Review (PDR). This enables a level of maturity that would be warranted just prior to entry into a milestone B program initiation decision. The early work performed under this authority would enable exploration of multiple options, consider tradeoffs, perform risk reduction activities, and inform decisions to off ramp initially desired capabilities potentially.

27. Senator WARREN. Secretary Kendall, how will the Air Force provide reporting to Congress on other program details including cost and success under the rapid response to emergent technology advancements or threats proposal?

Secretary KENDALL. Like the existing RAA, the congressional defense committees will be notified of any actions under this authority within 15 days of approval by the Secretary of Defense. The Services will actively engage the Congress on the long-term plans to transition the effort to the normal budget and appropriations process.

DEFENSE INDUSTRY MERGERS

28. Senator WARREN. Secretary Kendall, how have defense industry mergers and acquisitions affected contracts within the Air Force?

Secretary KENDALL. Recent defense mergers and acquisitions have generally had a marginal impact on companies that competed for DAF contracts. When performing reviews of defense mergers and acquisitions, we consider past contracts and potential competition concerns. We continue to see that competition exists in almost all instances with DAF equities. However, growing the defense industrial base is key to our long-term success against the pacing challenge and acute threats. We are working to expand the defense industrial base through various means, including attracting new small business entrants via our AFWERX efforts and promoting establishment of vendor pools early in acquisition programs to stimulate competition and increase long-term flexibility. Further, we continually monitor and take steps to address the health of our defense industrial base. For example, DOD is investing in trusted domestic printed circuit board manufacturing through the Defense Production Act (DPA) Title III Program to counter contraction in the circuit board market.

29. Senator WARREN. Secretary Kendall, would there be any benefit to reviewing past mergers and acquisitions to inform future recommendations for remedies or anti-trust agencies' decisions on whether to approve mergers and acquisitions?

Secretary KENDALL. The DOD has successfully worked with the Federal Trade Commission and Department of Justice to provide insight on the national security implications of potential mergers and acquisitions, and to challenge them when necessary. Our focus is on how the defense industrial base is poised to support the execution of our missions, including the work of the Operational Imperatives.

30. Senator WARREN. Secretary Kendall, how many Air Force personnel support merger and acquisition reviews?

Secretary KENDALL. The DAF has a robust workforce to manage all aspects of the defense industrial base including coordination with experts from across the DOD and the interagency to assess and address the national security implications of mergers and acquisitions.

31. Senator WARREN. Secretary Kendall, do you think DOD has sufficient authority and access to information in the process to review mergers and acquisitions?

Secretary KENDALL. The DOD has sufficient authority to review mergers and acquisitions. The information needed to conduct our review is readily available. When needed, the DOD can enter confidentiality agreements to access further details on a potential transaction to better assess the near-term and long-term implications to national security. Additionally, the DOD continues to successfully work with the Federal Trade Commission and Department of Justice to challenge mergers and acquisitions.

32. Senator WARREN. Secretary Kendall, do you still view the consolidation of defense contractors to be an issue of national security?

Secretary KENDALL. The consolidation of defense contractors is an issue of national security because of its potential effect on competition and innovation. Over

the years, prime contractors and aircraft and engine manufacturers have established robust teaming and supplier relationships with their lower tier suppliers. We are monitoring for contraction in opportunities for competition that requires action. For example, in some rapidly contracting markets, such as the printed circuit board market, the DOD is taking steps to bolster it via DOD authorities, policies, and regulations. Specifically, the DOD is investing in trusted domestic printed circuit board manufacturing through the Defense Production Act (DPA) Title III Program.

FUTURE USE OF UNFUNDED PRIORITIES LISTS (UPLS)

33. Senator WARREN. General Brown and General Saltzman, do you agree that if funding is needed for a project, it should be a part of the command/service budget?

General BROWN. Referencing DODD 7045.14 Planning, Programming, Budgeting, and Execution (PPBE) Process, Services shall develop and execute the programs and budgets necessary to achieve national objectives. If a project has been deemed a requirement that supports the Joint Force in meeting national objectives, we do believe it should be funded and executed with its respective command/Service budget. Further, as we modernize to prepare for a potential conflict against People's Republic of China, our budgets have numerous competing priorities and some of the priorities cannot be funded. In accordance with Title 10, U.S.C., section 222a, a list of top Service unfunded priorities included in the President's Budget is provided to Congress. The projects/bills listed on the Unfunded Priority List (UPL) are valid requirements and provide Congress with the ability to direct funding to expand or accelerate programs to meet mission needs and take care of our airmen and guardians.

General SALTZMAN.

34. Senator WARREN. General Brown and General Saltzman, historically, have previous UPL items been included in the following year's base budget? Have UPL items from fiscal year 2023 been included in the fiscal year 2024 base budget? If yes, please provide detail including the requested item, funding amount, and vendor executing the effort. If no, why not?

General BROWN. Yes, when possible. The Department of the Air Force (DAF) sends the Office of the Secretary of Defense (OSD) Director, Cost Assessment and Program Evaluation a list of unfunded but priority items that cannot be included in the DAF budget for that fiscal year. Items on the regrets list that are not funded by OSD are the starting point for developing the required Air Force UPL to Congress. UPL items from one fiscal year are evaluated and may be added to the next fiscal year budget request aligned with are DAF priorities to support the current National Defense Strategy against the evolving threats. The Air Force is happy to provide more details on the specific examples.

General SALTZMAN. Yes, some requirements included in the UPL have been included in the following year's base budget. In the case where a capability is funded over multiple budget years and the capability can be accelerated, it may be included on the UPL and in the following year's base budget. Funding the UPL allows for additional capabilities to be funded in the outyears. In the case of DCO-S, it is included in both the UPL and the budget year baseline because we are prioritizing the acceleration of this capability to reach FOC sooner. Due to the nature of the certain space programs in the fiscal year 2023 UPL, the Space Force would be happy to provide additional information in a classified setting.

35. Senator WARREN. General Brown and General Saltzman, do you agree that Federal agencies should be required to work within the confines of base budget process?

General BROWN and General SALTZMAN. The DAF Force utilizes the PPBE Process outlined in DODD 7045.14 guided by strategy to develop the Program Objective Memorandum (POM) for each fiscal year encompassed in the FYDP for the Service. We formulate our budget request and submit to the Office of the Secretary of Defense (OSD). The DAF provides solutions to fulfill National strategic priorities as articulated in the NDS within fiscal constraints. The DAF, along with the other service departments, provide solutions to National challenges. The civilian leadership at the White House and in the Congress determine the amount of funding that the Nation can spend on defense.

36. Senator WARREN. General Brown and General Saltzman, Secretary of Defense Austin supports legislation that would repeal the requirement for individual leaders to submit unfunded priority lists under 10 U.S.C. 222a. He stated this publicly in a Senate Armed Services Committee hearing on March 28, 2023 and in a letter that

Under Secretary Michael J. McCord sent on behalf on Secretary Austin to me on March 20, 2023. Do you plan to continue to submit unfunded priority lists?

General BROWN and General SALTZMAN. The Chief of Staff of the Air Force (CSAF) and the Chief of Space Operations (CSO), in accordance with Title 10, U.S.C., section 222a, submit their respective UPLs to the Secretary of Defense (SecDef), Chairman of the Joint Chiefs of Staff (CJCS), and congressional defense committees, as required by law. It is important for SecDef and CJCS to have awareness of the CSAF and CSO UPLs and we will continue to submit to both offices. We will follow the law and congressional guidance on delivering the USAF and USSF UPLs to the congressional defense committees.

37. Senator WARREN. General Brown and General Saltzman, if you plan to submit unfunded priority lists in the future, why are you doing so despite Secretary of Defense Austin's support for the repeal of these required lists?

General BROWN and General SALTZMAN. The Chief of Staff of the Air Force (CSAF) and the Chief of Space Operations (CSO), in accordance with Title 10, U.S.C., 222a, submit their respective UPLs to the Secretary of Defense (SecDef), Chairman of the Joint Chiefs of Staff (CJCS), and congressional defense committees to ensure some of the urgent but unfunded programs are considered for funding. It is important for the SecDef and CJCS to have awareness of the USAF and USSF UPLs and we will continue to submit shortfalls to both offices. However, we will follow the law and congressional guidance on whether to deliver the UPL to the congressional defense committees.

INFORMATION ON UPLS

38. Senator WARREN. General Brown and General Saltzman, what was the cost of putting together this UPL list?

General BROWN and General SALTZMAN. Creating the UPL is one of the many duties of Federal employees and military personnel in the Air Force and Space Force during budget preparation. It emerges as part of our normal budgeting process. No additional personnel were hired, and no additional work outside standard duty hours was required to create the UPL, therefore the financial cost of creating this list is essentially zero.

39. Senator WARREN. General Brown and General Saltzman, for each item on the unfunded priorities list you submit in response to 10 U.S.C. 222a, please provide the following information:

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. The seven programs included in the Space Force's fiscal year 2024 unfunded priorities list represent critical research and development efforts focused on providing the Space Force with the capabilities necessary to address new emerging threats and developments that could not be addressed within the regular budget process. What follows are responses to your specific questions to the Space Forces' unfunded priorities list for the one unclassified program included on the list, Defensive Cyber Operations Capabilities Space (DCO-S).

Due to the nature of Programs A-F, I would be happy to provide additional information in a classified setting.

40. Senator WARREN. General Brown and General Saltzman, please provide a detailed description of this UPL?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. The fiscal year 2024 UPL funds requested accelerate the delivery of defensive cyber operations capabilities to protect the network enclaves of USSF mission systems. The urgency of these funds is driven by commander's requirements from various combatant commands and require protection from evolving threats and changes to the cyber environment.

Delta	Fiscal Year 2024 (SM)
Labor	$32.33

Total	$41.12

41. Senator WARREN. General Brown and General Saltzman, what does the UPL purchase?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. The UPL will be used to accelerate and expand software development and mission deployment teams to increase the rate in which product line suites are integrated with mission partner mission systems, to include the following prioritized mission sets: Protected Communications, Missile Warning, Military Strategic Communications (MILSATCOM), Position Navigation and Timing (PNT), Ballistic Missile Command and Control, Space Domain Awareness (SDA), Nuclear Command Control and Communications (NC3), and Command and Control Satellite Operations (C2 Sat Ops).

42. Senator WARREN. General Brown and General Saltzman, please include detail on all end items with quantities, contractor FTEs, etc.

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. The FTE Breakout below is based on POM Option: Balance of Development & Fielding w/ O&M Costs

- Software Development = 47 FTE
- Mission Deployment and Support = 45 FTE
- 2 Acq Support Team

Delta	Fiscal Year 2023	Fiscal Year 2024	Fiscal Year 2025	Fiscal Year 2026	Fiscal Year 2027	Fiscal Year 2028	Fiscal Year 2029
Labor	138	94	137	157	160	187	157

43. Senator WARREN. General Brown and General Saltzman, what specific capability will the UPL provide?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. Fiscal year 2024 UPL funds are requested to accelerate delivery of defensive cyber operations capabilities to protect the network enclaves of USSF mission systems. The urgency of these funds is driven by the list of prioritized mission systems identified by the Space Operations Command Center. Additionally, commander's requirements from various combatant commands require protection from evolving threats and changes to the cyber environment.

44. Senator WARREN. General Brown and General Saltzman, what gap will this fill that is not in the base budget?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. The UPL will provide the manpower to accelerate and integrate the DCO-S Hardware that was within the base budget as well as increase software development to keep up with the growing requirements of Delta 6.

45. Senator WARREN. General Brown and General Saltzman, how will this capability support objectives outlined in current National Security, Military, and Defense Strategy documents?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. DCO-S directly supports the National Defense Strategy (NDS), National Military Strategy (NMS), and the National Security Strategy (NSS) by contributing to the security and resilience of the cyber and space domain in support of the Joint Force. Per the NDS, a key defense priority is to

achieve deterrence of strategic attacks through resilience. Further the cross-cutting NDS priority missions direct the DOD to gain and maintain information advantage, particularly in cyberspace, space, and the electromagnetic spectrum. Through the introduction of the notion of joint combined arms, the NMS directs the Joint Force and its leaders to be as comfortable fighting in space or cyberspace as they are in the other three traditional domains of land, sea, and air. And finally, the NSS designates securing cyberspace as a global priority. DCO-S supports all these directives and priorities by:

- Enhancing USSF's ability to secure mission networks adhering to DOD Instruction 5000.90, "Cybersecurity for Acquisition Decision Authorities and Program Managers," December 31, 2020, and JP 3–12, "Cyberspace Operations," December 19, 2022.
- Supporting the USSF Cyber Strategy by directing protection for network enclaves of USSF mission systems, to include their associated computer systems, software applications and sensitive operational information against unauthorized intrusion, corruption, and/or destruction.
- Enhancing USSF's ability to close the gap on key USSPACECOM and USINDOPACOM commander cyber priorities.

46. Senator WARREN. General Brown and General Saltzman, what is the operational requirement? How does this UPL support current or future operations?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. This UPL accelerates software development work and advances prototyping of cyber capabilities that protect the network enclaves of USSF mission systems, to include their associated computer systems, software applications and sensitive operational information against unauthorized intrusion, corruption, and/or destruction. This UPL accelerates the deployment and integration timeline of critical DCO capabilities that provide Space Delta 6 with protect and defend capabilities for: launch and early warning, positioning, navigation, and timing, protected/survivable MILSATCOM/NC3, and satellite control networks.

47. Senator WARREN. General Brown and General Saltzman, what is the operational impact if this UPL is not funded in fiscal year 2024?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. If not funded, the timeline will be delayed by 12 months for critical USSF assets to gain mission assurance from a cyber perspective. The space missions impacted include all USSF missions.

48. Senator WARREN. General Brown and General Saltzman, are there plans to include this item in the fiscal year 2025 base budget?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. The Service is currently prioritizing fiscal year 2025 budget requirements including DCO-S.

49. Senator WARREN. General Brown and General Saltzman, why was this UPL not included in the Fiscal Year 2024 President's Budget submission?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. The requirements within the Fiscal Year 2024 President's Budget submission were met to a certain extent. However, the high demand for cyber capabilities has increased the rate in which mission partner systems are connected and need to be protected against cyber threats. This is increasing the need to accelerate development and delivery of cyber capabilities across the USSF.

50. Senator WARREN. General Brown and General Saltzman, what is the name of the vendor(s) executing this effort? Sub-vendor(s)?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN.

51. Senator WARREN. General Brown and General Saltzman, how often has your command met with the vendor executing this effort? Please provide a list of all such meetings, and the agenda for these meetings?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. I do not participate in the acquisition decisionmaking process for the Space Force. Acquisition decisions reside with the Secretary of the Air Force and subordinate acquisition authorities within the Department of the Air Force. The protections in place that identify and address conflicts of interest in the acquisition decisionmaking process also apply to the programs contained within the Space Force UPL for fiscal year 2024.

52. Senator WARREN. General Brown and General Saltzman, what is your history with this vendor? Please detail when the relationship began, the number of con-

tracts applied for by this vendor, the number of contracts awarded to this vendor, and if you have had a personal relationship with the vendor?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. I do not participate in the acquisition decisionmaking process for the Space Force. Acquisition decisions reside with the Secretary of the Air Force and subordinate acquisition authorities within the Department of the Air Force. The protections in place that identify and address conflicts of interest in the acquisition decisionmaking process also apply to the programs contained within the Space Force UPL for fiscal year 2024.

53. Senator WARREN. General Brown and General Saltzman, has anyone who formerly worked for your command represented the vendor in meetings? What is their name, what was their position, and when did you meet with them?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. I do not participate in the acquisition decisionmaking process for the Space Force. Acquisition decisions reside with the Secretary of the Air Force and subordinate acquisition authorities within the Department of the Air Force. The protections in place that identify and address conflicts of interest in the acquisition decisionmaking process also apply to the programs contained within the Space Force UPL for fiscal year 2024.

54. Senator WARREN. General Brown and General Saltzman, in which city/State will the UPL be executed?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. The UPL be executed in Colorado Springs, Colorado.

55. Senator WARREN. General Brown and General Saltzman, is this requirement on an existing contract? If so, with who? What is the history of the contract?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. This requirement is on a variety of existing contracts, we also plan to put this requirement on the upcoming Digital Bloodhound contract.

Digital Bloodhound Scope—The contractor will support all software development capabilities included in, but not limited to, the Defensive Cyber Software Solutions development and support activities. The support provided will include, but will not be limited to, the development of the cyber capabilities of the application suites, mission deployment activities, documentation and agile software deliveries, material management within the confines of the change control board, deployment of required hardware to mission systems, and continued support of the program office. Software solutions shall be intuitive for users, allowing for the mission to be conducted using applications on computing systems, i.e., tablets, desktops, or connected devices, to simplify mission execution and maintain mission success. The contractor shall collaborate across the various agile software efforts to test, integrate, and deliver developed software to the USSF.

56. Senator WARREN. General Brown and General Saltzman, what is the anticipated contract award date if the UPL receives funding?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. The UPL will be executed through various existing contracts and the projected award date of Digital Bloodhound is August 2023.

57. Senator WARREN. General Brown and General Saltzman, what funding lines are associated with this UPL?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. The following funding lines are associated with this UPL:

APPN 3620, PE 1203040SF, R–1 Line #56 and APPN 3410, PE 1203040SF, SAG 13C.

58. Senator WARREN. General Brown and General Saltzman, if multiple appropriations fund this requirement, must all appropriations be funded simultaneously to source this requirement, or can each appropriation stand on its own to fund a portion of the requirement?
General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.
General SALTZMAN. The UPL requests only RDT&E appropriation to fund this portion of the requirement.

59. Senator WARREN. General Brown and General Saltzman, how much was enacted and obligated (or expended for RDT&E) in fiscal year 2022 to 2023 for this requirement?
General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.
General SALTZMAN. The following was enacted and obligated (or expended for RDT&E) in fiscal year 2022 to fiscal year 2023 for this requirement: $6.156 million in fiscal year 2022, $28.16 million (Budget) in fiscal year 2023.

60. Senator WARREN. General Brown and General Saltzman, how much was requested in fiscal year 2024 for this requirement?
General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.
General SALTZMAN. The following was requested in fiscal year 2024 for this requirement: $172.202 million in the fiscal year 2024 President's Budget, $76.003 million in RDT&E, $96.199 million in O&M.

61. Senator WARREN. General Brown and General Saltzman, is there a tail associated with this UPL?
General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.
General SALTZMAN. No, there is not a tail associated with this UPL.

62. Senator WARREN. General Brown and General Saltzman, is any tail funded in the future years defense program?
General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.
General SALTZMAN. No, there is not a tail associated with this UPL request. This request is specifically to fund manpower to integrate the systems procured in Fiscal Year 2024 President's Budget.

63. Senator WARREN. General Brown and General Saltzman, please describe how much the requirement will cost per year for the next 5 years.
General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.
General SALTZMAN. The following table is based on the Fiscal Year 2024 President's Budget Request: Balance of Development & Fielding w/ O&M Costs for current baseline program ($M).

Fiscal Year 2024	Fiscal Year 2025	Fiscal Year 2026	Fiscal Year 2027	Fiscal Year 2028	Fiscal Year 2029
172.202	158.812	154.971	161.186	146.856	149.793

64. Senator WARREN. General Brown and General Saltzman, please provide in detail the previous funding requests and enacted for this requirement, including if it was in the base budget or UPL.
General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. The details of previous funding requests and enacted funding for this requirement is as follows:

All RDTE ($M):

Fiscal Year 2022:
- Request $2.150
- Reprograming $4.006

Fiscal Year 2023:
- Request $28.162
- Congressional General Reduction $–0.075

Fiscal Year 2024:
- Request $76.003

65. Senator WARREN. General Brown and General Saltzman, if the requirement is not included in the future years defense plan, will that be rectified in the next Program Objective Memorandum or the Program, Planning, Budget, and Execution (PPBE) cycle?

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. DCO-S is included in the FYDP; adjustments will be considered as needed during the Service's budget review process.

66. Senator WARREN. General Brown and General Saltzman, please provide photos of this requirement for visual aid.

General BROWN. To address the series of questions regarding the Air Force's unfunded priorities list, Attachment 1 (please see Appendix) has been developed to provide responses to each of the questions.

General SALTZMAN. N/A.

SEXUAL ASSAULT IN THE AIR FORCE AND SPACE FORCE

67. Senator WARREN. Secretary Kendall and General Brown, I am deeply concerned and disturbed that reports of sexual assault in the Air Force increased by 13 percent in fiscal year 2022 and is at the highest level in the history of the Air Force Sexual Assault Prevention and Response program. What recommendations from Independent Review Commission on Sexual Assault is the Air Force implementing and when does it expect implementation to be complete?

Secretary KENDALL and General BROWN. We are implementing all the recommendations of the IRC. The Department of the Air Force's IRC Task Force convenes monthly to track the status of the 47 IRC requirements that are in progress with no issues; seven have been completed to date and are listed below:

- 1.6—Expedite processing of proposed Executive Orders regarding military justice, including those currently awaiting issuance related to sexual assault, sexual harassment, and other special victim crimes.
- 1.7c—The Joint Service Committee on Military Justice has drafted a proposed Executive Order to establish a preponderance of the evidence standard for nonjudicial punishment.
- 2.2b—USD(P&R) should develop a professional credential for the prevention workforce.
- 2.5a—The Services and the NGB should institute a pilot program to link servicemembers with resources and support.
- 3.4a—Elevate and standardize the gender advisor workforce
- 4.1c—Explore the co-location of SAPR and SHARP with other special victim services, such as FAP, to improve coordination, collaboration and consistency in victim support.
- 4.2e—Amplify victims' rights and services in the post-trial period.

By the end of 2023, we will have 31 recommendations completed, with eight additional recommendations completed in 2024, and the remaining recommendations on track to being completed through 2028.

Our primary initiative is a significant investment in creating sustainable integrated prevention and response workforce structures. DAF is adding 324 pre-

vention personnel, 197 victim advocates and an Independent Office of Special Trial Counsel (IOSTC). Together, they will drive data-informed, evidence-based and victim/survivor centered decisions. Meaningful change relies on a complex systems approach with robust evaluation and analysis efforts to identify root causes, intended outcomes, and effectively address individual and systematic harms. The IRC lines of effort inform DAF strategies and sexual assault prevention and response priorities, engaging a holistic and multi-disciplinary approach to address sexual assault.

68. Senator WARREN. Secretary Kendall, the Government Accountability Office released a report in March 2022 on "Sexual Assault: DOD and Coast Guard Should Ensure Laws Are Implemented to Improve Oversight of Key Prevention and Response Efforts." The recommendations for the report included (1) the Secretary of the Air Force ensuring all required information is included in the annual reports; (2) the Secretary of the Air Force reviewing and updating guidance and setting a timeframe for the completion of requirements relating to command climate information required under Section 508 of the fiscal year 2015 NDAA; (3) ensuring compliance with Section 535(a)-(b) of the fiscal year 2018 NDAA; and (4) ensuring that the Superintendent of the Air Force takes steps to document actions taken in accordance with Section545(a)-(c) of the fiscal year 2019 NDAA. I appreciate that DOD has concurred with these recommendations. Please provide an update on their status and expected time of completion.

Secretary KENDALL. The DAF has completed all corrective action plans pertaining to the GAO recommendations: (1) the DAF developed an internal NDAA tracking mechanism that ensures that the annual report includes all of the required information and adds any missing requirements, if necessary (Completed July 1, 2022); (2) Command climate information was added back into DAFI 36–2406, Officer and Enlisted Evaluations and commander's evaluation require a statement regarding whether the commander has conducted the required command climate assessments (Completed March 16, 2022); (3) Air Education and Training Command developed training that included sexual assault response, prevention, and instruction on the proper use of social media to all enlisted members under the delayed entry program (Completed December 1, 2022); and finally, the Superintendent of the United States Air Force Academy has put processes in place to ensure dissemination of the SAPR Resource Guide (completed April 15, 2022).

69. Senator WARREN. Secretary Kendall and General Brown, in the sexual assault cases that DOD received in fiscal year 2022, out of the unrestricted reports that were filed commanders only had "sufficient evidence to take disciplinary action in 66 percent of the accused members' cases." What were the challenges to gathering sufficient evidence, and what steps are the Air Force and Space Force taking to address these gaps?

Secretary KENDALL and General BROWN. There are a number of reasons why a case may not have sufficient evidence to proceed to trial by court-martial. Victims may not wish to engage with a criminal investigation or participate in a court-martial proceeding and, by DOD and DAF policy, the victim's preference is respected to the maximum extent possible. Even with victim participation, the lack of corroborating evidence, the presence of contradictory testimonial, documentary, or digital evidence, or presence of affirmative defenses may also preclude the government's ability to secure and sustain a conviction.

While the DAF can and does take challenging cases to trial, the interests of justice and the well-being of all parties are best served by declining to prosecute when the evidence is insufficient to obtain and sustain a conviction. In some cases, accused individuals may be punished for related misconduct by lesser forms of discipline when the State of the evidence does not warrant trial by court-martial for sexual assault.

Steps:

The DAF endeavors to reduce barriers to victim participation through a range of initiatives.

The DAF has instituted a "Safe to Report" policy whereby sexual assault victims are shielded from punishment for minor misconduct they may have committed related to an incident of sexual assault (e.g., underage drinking).

Additionally, the DAF has implemented a "No Wrong Door" policy, (an IRC recommendation) ensuring that victims will receive a warm handoff between helping agencies after a report of sexual assault. This policy is intended to ensure continuity of care and minimize the number of times a victim must recount their story.

Finally, the DAF provides Victims' Counsel as soon as possible after the report of a qualifying offense, ensuring victims receive independent and confidential legal advice throughout the entirety of the military justice process. Endearing trust with victims encourages early reporting, which allows criminal investigators to obtain and preserve forensic evidence that is often critical for successful prosecutions of sexual assault cases.

The DAF as of 1 July 2023 has stood up the Office of Special Trial Counsel (OSTC), which is comprised of the DAF"s most experienced and specialized prosecutors. They will guide investigations of certain victim-centric offenses and serve as the lead prosecutor when such offenses go to trial. The OSTC will implement Investigation and Prosecution Support Teams (IPST), which are designed to integrate senior prosecutors with investigators and installation judge advocates at the inception of an investigation to increase the discovery of corroborating evidence. Through the use of IPST, the DAF aims to enhance criminal investigations and victims' trust in the process.

70. Senator WARREN. Secretary Kendall, General Brown, and General Saltzman, the percentage of sexual assault reports that remain restricted has been increasing since fiscal year 2017 and almost 45 percent of reports remained restricted at the end of fiscal year 2022. What trainings does Air Force and Space Force provide to commanders and servicemembers regarding supporting a command climate that supports reporting on sexual assault and creates a zero-tolerance climate for sexual misconduct?

Secretary KENDALL, General BROWN, and General SALTZMAN. The DAF mandates Initial Wingman Intervention Training (IWIT), which is a mandatory foundational course focused on the prevention of sexual assault, sexual harassment and domestic violence. The course is required for all airmen and guardians, to include newly hired civilians, at their first duty station and/or accessions training. This 60-minute module is designed to equip participants with the necessary skills to establish positive norms and develop wingman intervention behaviors. After this initial training, airmen and guardians receive mandatory annual training to address sexual assault and sexual harassment prevention.

As airmen and guardians progress in their careers, the DAF ensures our members are receiving relevant education and training at each stage. In each of the DAF's Professional Military Education (PME) courses, to include accessions schools, learning objectives are designed to provide prevention and response skills and knowledge and is tailored to the individual's responsibilities and rank. Additionally, based on IRC requirement 4.4c, the DAF is updating PME by September 2025 to ensure leaders are equipped to deliver informed prevention messages in formal and informal settings, training that better resonates with today's airmen and guardians, and education on cyber—harassment and technology-facilitated sexual harassment and sexual assault.

Commanders at all levels (MAJCOM/FLDCOM, Wing, Delta, Group, and Squadron) receive individual and group training from SAPR personnel which addresses response, victim advocacy services, and tools for creating environments that are supportive of sexual assault reporting.

Additionally, Article 137(c), UCMJ, requires that all new commanders receive training on certain aspects of military justice. By service regulation, the Article 137 training covers the role of commanders in all states of military justice in connection with sexual assault. This includes training on ensuring sexual assault victims are protected from the offender, can obtain all available assistance, and are protected against retaliation for reporting. It also includes specific training on the role of commanders in maintaining a healthy command climate in connection with reporting sexual assault.

71. Senator WARREN. Secretary Kendall, General Brown, and General Saltzman, I am alarmed by the gap between servicemembers reports to DOD and the number of servicemembers who experienced unwanted sexual contact according to surveys. What protocol does the Air Force and Space Force follow if commanders do not take action toward a report if a commander was told about an incident of sexual assault, sexual harassment, or other sexual misconduct?

Secretary KENDALL, General BROWN, and General SALTZMAN. Commanders are bound by DAF policy to take affirmative action to ensure investigation and disposition for every report of sexual assault, sexual harassment, and other sexual misconduct is taken in accordance with DOD policy and the law. Commanders who fail to fulfill their obligations, whether imposed by statute or policy, are subject to potential administrative discipline, up to and including punitive ac-

tion, for dereliction of duty under the Uniform Code of Military Justice, as well as potential removal from command.

Likewise, Commanders are also obligated to ensure victims of these crimes are protected from retaliation. Retaliation against any person for reporting a criminal offense is specifically actionable under Article 132, UCMJ.

72. Senator WARREN. Secretary Kendall, General Brown, and General Saltzman, there are concerns regarding incidents of sexual assault being linked to incidents of hazing within the military. What steps is the Air Force and Space Force taking to prevent hazing incidents and how many incidents of hazing did the Air Force and Space Force find during fiscal year 2022?

Secretary KENDALL, General BROWN, and General SALTZMAN. In fiscal year 2022, there were 17 (16 Air Force and 1 Space Force) complaints of hazing that were processed though the DAF Equal Opportunity (EO) Office. Any allegation of hazing that includes a sexual assault component, would be reported as a sexual assault rather than hazing. The Department of Defense Sexual Assault Incident Data base (DSAID) does not have a mechanism to identify these allegations separate from the sexual assault.

The DAF EO Program provides awareness-based training on harassment, to include hazing, for servicemembers and civilian employees at their first permanent duty assignment and as a refresher training at each of their subsequent duty stations. These trainings provide information about the DAF EO Program, definitions of unlawful and prohibited discrimination and harassment (including hazing), and complaint processes. Commanders (installation, group, squadron) and senior enlisted leaders, including Space Force equivalents, also receive a key personnel briefing that addresses specific leadership roles and responsibilities within the EO program, complaint processes, and identified command climate trends at their local level.

73. Senator WARREN. Secretary Kendall and General Saltzman, how many of these hazing incidents involved elements of sexual assault or harassment?

Secretary KENDALL and General SALTZMAN. Of the fiscal year 2022 hazing complaints processed though the DAF EO Office, only one complaint involved or referenced elements of sexual assault or sexual harassment. Per DOD and DAF policy, sexual assault allegations are not handled or investigated by DAF EO and are referred to the military criminal investigation organizations for investigation. Any allegation of hazing that includes a sexual assault component would be reported as a sexual assault rather than hazing. The DOD Sexual Assault Incident Data base does not have a mechanism to identify these allegations separate from the sexual assault.

SEXUAL ASSAULT IN MILITARY ACADEMIES

74. Senator WARREN. Secretary Kendall, in the 2021 to 2022 Academic Program Year, out of the 155 cadets/midshipmen survivors who reported a sexual assault incident during military service, 57 of these were at the U.S. Air Force Academy. The total number of formal reports of sexual assault that DOD received for this academic year is expected to be missing hundreds of unreported incidents, with an anonymous, mandatory survey finding that 21.4 percent of female students and 4.4 percent of male students experienced unwanted sexual conduct in the past year. This indicates that over 1,100 students were victims but only 14 percent of them reported the incident. How is the Air Force and engaging with students to hear further information on reporting impediments and what immediate actions is it taking to address a climate and culture that causes students to feel they cannot come forward?

Secretary KENDALL. The DAF and specifically the U.S. Air Force Academy (USAFA) are taking several actions to address reporting impediments and culture. These efforts will amplify the SecDef actions announced this past March when the reports were released. In April 2023, the USAFA Commandant of Cadets signed and put into place an "Encouraged to Report" policy building off the NDAA-mandated Safe to Report policy, (which originated at USAFA). Encouraged to Report provides commanders discretion in addressing collateral misconduct for cadets who witness a possible sexual assault or report an instance of hazing, harassment, or bullying as a witness or victim and hazing. The original Safe to Report policy applied to victims of those offenses and the updated policy extends consideration for both witnesses and bystanders. Last year, USAFA conducted training for commanders, cadets and staff about both policies

and will continue to train on the policy and publicize it. In addition, SAPR personnel and Victims' Counsel discuss the policies during their intake process.

More broadly, over the past months, the USAFA Superintendent created the "Let's Be Clear" campaign as a culture reset with several lines of effort to drive down the prevalence of Sexual Harassment and Unwanted Sexual Contact. The design and execution of the "Let's Be Clear" campaign is based on a cross-functional approach made up of external/internal Subject Matter Experts (SMEs), academy leadership, and professors, cadets, alumni, etc. to understand the data, cultural issues, and chart a way forward focused on improved outcomes.

Finally, USAFA continues to provide cadet-specific training throughout their time at USAFA including, but not limited to: Sexual Assault Prevention and Response; Interpersonal and Self-Directed Harm/Violence Prevention; Bystander Intervention; Diversity, Equity, and Inclusion; and Healthy Relationships Education (HRE). HRE teaches the dynamics of relationships with parents, roommates, friends, teammates, superiors, co-workers, romantic partners etc., to build skills and reduce sexual assault and other interpersonal and self-directed harm/violence risk factors. Training will also include information developed in coordination with the Office of Special Trial Counsel, concerning the importance of recent military justice reforms and how this impact castes and USAFA personnel.

75. Senator WARREN. Secretary Kendall, this same report found that there are decreasing levels of trust among both men and women that the military would "protect their privacy and treat them with 'dignity and respect' after an alleged incident." What protocol does the Air Force follow if a commander violated the privacy of the survivor after reporting an incident?

Secretary KENDALL. USAFA treats the privacy of any survivor with the utmost seriousness, ensuring we take the appropriate steps to guard against improper release of information. A commander who violates the privacy rights of a survivor is subject to potential administrative discipline, up to and including punitive action, for dereliction of duty under the Uniform Code of Military Justice, as well as potential removal from command.

76. Senator WARREN. Secretary Kendall, is the Air Force aware of any instances in the past 10 years of commanders violating the privacy of survivors after they reported an incident? What disciplinary actions were taken as a result?

Secretary KENDALL. USAFA is unaware of any military criminal report or military administrative investigation complaint of a violation of a survivor's privacy rights by a commander in the last 10 years.

77. Senator WARREN. Secretary Kendall, what protocol does the Air Force follow if a student has expressed concerns that no action was taken even after telling a commander or authority that an incident of sexual assault, harassment, or other sexual misconduct has occurred?

Secretary KENDALL. USAFA commanders consider all appropriate options before making a disposition decision on an allegation of sexual assault in accordance with the Rules for Courts-Martial, Secretary of Defense's Non-Binding Disposition Guidance, and applicable service regulations. For sexual harassment cases, complaints are processed in accordance with 10 U.S.C. § 1561 and Department of Defense Instruction 1020.03, Harassment Prevention and Response in the Armed Forces.

In sexual assault cases and certain other sexual misconduct cases, survivors also have the option to request civilian authorities with jurisdiction review and potentially prosecute their case. In every case of sexual assault related offenses, the survivor is notified of this option and provides an election regarding whether they would prefer the Air Force or civilian authorities to exercise jurisdiction.

For sexual assault cases, the Staff Judge Advocate advises the Special Courts-Martial Convening Authority (SPCMCA), who is the initial disposition authority over sexual assaults and certain other sex-related offenses. If the SPCMCA considers taking no action or disposition by means other than a court-martial, the SPCMCA will solicit the victim's input before making a final decision. If the allegation is not referred to trial by court-martial, other options such as a Board of Inquiry, Nonjudicial Punishment, Administrative Action, and/or Letter of Notification discharge processes are considered. For sexual assault cases, if "no action" is taken, this information is provided to the Victims' Counsel (if the victim is represented) to relay to the survivor and a Judge Advocate from the base legal office offers to meets with the survivor to answer any questions they might have. SPCMCAs are also required to provide written notice of initial disposition

of sexual assault offenses to their superior general court-martial convening authority (GCMCA) within 30 days.

For sexual harassment cases, pursuant to DAF regulations, the commander makes final notification of the results of the commander directed investigation to the survivor, in writing. The survivor will also be notified of the measures taken to resolve the matter, subject to applicable privacy laws, regulations, and policies, including the Privacy Act of 1974. In addition, the survivor will also be informed of the availability of an executive summary of the response to the allegation of harassment. If a survivor is unsatisfied with the final determination, a request for further review may be made to the command.

Currently, after the investigation, all sexual assault related, and sexual harassment allegations are reviewed by the servicing Staff Judge Advocate who advises command on appropriate actions. In accordance with Fiscal Year 2022 NDAA, beginning with offenses committed on/after December 28, 2023, all sexual assault-related offenses will be reviewed by the Office of Special Trial Counsel (OSTC), which is separate from the chain of command and reports directly to the Secretary of the Air Force. Specially trained attorneys will review cases and make binding disposition determinations. Beginning in 2025, OSTC will also have exclusive authority to make prosecution decisions concerning formal and substantiated reports of sexual harassment.

Finally, any cadet can ask the next commander in their chain of command should they have concerns regarding non-action. This was recently addressed by the Commandant of Cadets to the Cadet Wing permanent party to re-emphasize the importance and ability for all cadets to understand their rights within the chain. The Superintendent and Commandant of Cadets are also available to speak with the survivor, to answer any questions, and address their concerns.

78. Senator WARREN. Secretary Kendall, the report found that those identifying as "lesbian, gay, or bisexual cadets and midshipmen were significantly more likely to experience unwanted sexual contact than their heterosexual peers." What steps is the Air Force taking to support the LGBTQ+ community in preventing experiences of unwanted sexual conduct and what plans does it have to improve this support at the U.S. Air Force Academy?

Secretary KENDALL. The USAFA Integrated Prevention and Response office is actively engaged with the USAFA Diversity and Inclusion office and the Cadet Spectrum (LGBTQ+) club to conduct feedback and incorporate the LGBTQ+ perspective in the Sexual Assault and Violence Prevention efforts at USAFA. The USAFA Superintendent recently conducted a listening session with the cadet LGBTQ+ community to better understand the issues and concerns. USAFA leadership is examining disparities specifically impacting the LGBTQ+ community of cadets as part of USAFA's holistic "Let's Be Clear" campaign to reduce sexual assault.

79. Senator WARREN. Secretary Kendall, the report also found that Hispanic women and men identifying as some other race were "more at risk for unwanted sexual conduct than their Non-Hispanic White peers." What steps is the Air Force taking to prevent experiences of unwanted sexual conduct among communities of color and what plans does it have to improve this support at the U.S. Air Force Academy?

Secretary KENDALL. The USAFA Integrated Prevention and Response office is actively engaged with the USAFA Diversity and Inclusion office to combat unwanted sexual conduct, especially in our communities of color. As an example, the Integrated Prevention and Response office is actively engaged with the USAFA Diversity and Inclusion office and the Cadet Hispanic Heritage Club to conduct feedback and incorporate the Hispanic Community perspective in the Sexual Assault and Violence Prevention efforts at USAFA. USAFA leadership is examining those disparities specifically impacting the Hispanic/Latino cadet community of cadets as part of USAFA's holistic "Let's Be Clear" campaign to reduce sexual assault.

QUESTIONS SUBMITTED BY SENATOR GARY C. PETERS

PFAS CONTAMINATION

80. Senator PETERS. Secretary Kendall, the former Wurtsmith Air Force Base in Oscoda, Michigan is the first DOD installation in the country at which PFAS contamination was publicly reported—back in 2010. In past statements to the

local community, Air Force officials have expressed reluctance to take swift cleanup actions at Wurtsmith for fear of setting precedents at other PFAS-contaminated installations around the country. Last August, Air Force officials testified at a field hearing that I held in East Lansing, Michigan and committed to taking a new direction at Wurtsmith. Will you commit to making Wurtsmith a model that demonstrates how PFAS clean-ups are an urgent priority for the Air Force?

Secretary KENDALL. As stated at the August 2022 field hearing, DAF is committed to collaborative clean-up with enhanced community engagement at the former Wurtsmith AFB. Our partnership with the Michigan Department of Environment, Great Lakes and Energy (EGLE) resulted in many successes. We installed multiple pump and treat systems to remove PFAS from groundwater and removed PFAS impacted soil at a former fire training area. These actions removed approximately 72lbs of PFAS material. A series of onsite engagements with EGLE, Restoration Advisory Board and community members resulted in enhanced data sharing and positive feedback.

Additionally, our 2023 remedial investigation plans include a PFAS fingerprinting initiative with Battelle as well as an innovative "organo clay-mat" study at "three pipes drain" focused on treating impacted groundwater at the groundwater / surface water interface.

Wurtsmith AFB clean-up is a top priority. We are committed to expediting interim remedial actions while maintaining consistency with EPA and DOD guidance. The DAF shares your commitment to protecting human health and the environment at Wurtsmith, and we look forward to working together and continuing our efforts for environmental stewardship and building community confidence and trust.

QUESTIONS SUBMITTED BY SENATOR JOE MANCHIN

OPERATIONAL ENERGY JOINT WORKING GROUP

81. Senator MANCHIN. General Brown, thank you for speaking with me last week. I wanted to followup on the program I mentioned from last year's NDAA. Specifically, Section 320, created a Joint Working Group for Future Operational Energy Needs of the Department of Defense. This joint working group is instructed to limit their investigation to energy sources and technologies that only increase our readiness, and specifically calls out small nuclear reactors and hydrogen. Is this joint working group something you and Secretary Kendall are working with your counterparts in the Services and the Secretary of Defense's office to complete?

General BROWN. The DAF has been holding bi-weekly working group meetings with the other Services and OSD to develop a response that addresses the Section 320 language.

82. Senator MANCHIN. Secretary Kendall and General Brown, I cannot overState the need for energy security of our military installations and forces both at home and abroad. In a recent briefing we were told that fuel per servicemember had increased almost tenfold between the Vietnam War and the Global War on Terror. Can you both commit to making the report from this Joint Working Group a top priority?

Secretary KENDALL and General BROWN. Yes, we are committed to making this report from the Joint Working Group a priority.

SPACE NATIONAL GUARD

83. Senator MANCHIN. Secretary Kendall, in your testimony to the House Armed Services Committee last week, you stated "the guard elements in the Space Force are not going anywhere, they are an essential part of the Space Force and we are going to keep them. The argument we are having is about what label we are going to put on them. They are definitely going to stay". What are the current options in moving these Air National Guard personnel who are conducting space missions?

Secretary KENDALL. The CSO recommends enactment of the SFPMA, while transferring the ANG missions to the Space Force, without establishing a Space National Guard. This ensures unity of command over all Department of the Air Force (DAF) space forces, maximizes flexibility for organize, train, and equip

(OT&E) and operational responsibilities, and ensures access to part-time forces for surge capacity. The total transfer would be modest.

84. Senator MANCHIN. General Saltzman, in your previous testimony you have expressed that the Air National Guard space capabilities are critical must haves. With regards on how to organize those space capabilities, you recommended choosing the option that "minimizes the operational impact in any kind of transition" and "maintains the operational capabilities that are currently there". What are the estimated costs associated with the two options that you are considering? (establishing a space national guard or rebuilding those missions in the Space Force)

General SALTZMAN. My strongest possible recommendation is to enact the SFPMA, while transferring the ANG missions to the Space Force, without establishing a Space National Guard. This ensures unity of command over all Department of the Air Force (DAF) space forces, maximizes flexibility for organize, train, and equip (OT&E) and operational responsibilities, and ensures access to part-time forces for surge capacity. The total transfer is modest, and was not driven by costs.

85. Senator MANCHIN. General Saltzman, do both those options maintain the same level of readiness for these troops?

General SALTZMAN. My strongest possible recommendation is to enact the SFPMA, while transferring the ANG missions to the Space Force, without establishing a Space National Guard. This ensures unity of command over all Department of the Air Force (DAF) space forces, maximizes flexibility for organize, train, and equip (OT&E) and operational responsibilities, and ensures access to part-time forces for surge capacity. The total transfer is modest and would include 734 positions (of which only 242 are full time) across 6 states and 11 units. The transfer would also include the resources associated with the ANG space missions (funding, billets, equipment, and facilities). I would be happy to walk through the resourcing details with you if you would like.

DELAYED BUDGET AND CONTINUING RESOLUTIONS

86. Senator MANCHIN. Secretary Kendall, General Brown, and General Saltzman, I have repeatedly asked the Pentagon for as concise a number as possible to put a figure on the damage these delays are causing to our national security, but have so far only received an estimate from General Brown in the Air Force who just told me that a Continuing Resolution would see the Air Force and Space Force lose $9 billion in purchasing power. Can I have each of your commitments to encourage your counterparts in the other Services and the Secretary of Defense to get Congress as accurate an estimate as possible on the financial impact of previous and future continuing resolutions to our national security?

Secretary KENDALL, General BROWN and General SALTZMAN. I will encourage my counterparts in the other Services and the Secretary of Defense to get Congress as accurate an estimate as possible on the financial impact of previous and future continuing resolutions.

The Department will continue to message the impact of Continuing Resolutions on our progress in modernization and readiness, while our Pacing Challenge faces no such impediment. For fiscal year 2024, the Department's lost purchasing power in a year-long CR would be over $11.3 billion when accounting for fiscal year 2023s $1.4 billion Ukraine supplemental and further exacerbated by potential impacts of a 1 percent reduction in defense spending limits called for in the Fiscal Responsibility Act of 2023.

We make significant modernization investments in the Operational Imperatives in fiscal year 2024. A long-term CR stops 19 efforts, costing $4.8 billion, that close key capability gaps, accelerate development, and assure U.S. advantage against pacing challenges. It hinders investments critical to the high-end fight such as Kill Chain Automation, CCA development, Moving Target Engagement and Joint Strike Missile. Finally, a long-term CR stalls Space Force acceleration, canceling $2.8 billion in new space architectures, survivable, long-range, persistent sensors and kill chain automation tools necessary for the success of the Joint Force in a contested environment.

DAF's operational success depends on timely congressional action to pass a budget.

CYBER INTEGRATION WITHIN AIR FORCE PROGRAMS

87. Senator MANCHIN. Mr. Kendall, the past few years have demonstrated very publicly the threat posed to our critical infrastructure from malign cyber actors, and part of that critical infrastructure is our defense industrial base. I see that there has been a significant increase in the Air Force's cyber defense funding request for fiscal year 2024. How does the budget reflect your plans to integrate cyber security measures into each new and legacy system within the Air Force?

Secretary KENDALL. The Department of the Air Force has initiated action to address cyber security measures identified by mission assurance and self-initiated assessments. The funding request is indicative of the needs to address the areas identified and to update our review standards and procedures for legacy system maintenance, upgrades, and replacement as appropriate. We have also put requirements into new systems to integrate into enterprise cybersecurity systems, and for legacy to upgrade their measures (IT infrastructure, crypto, etc.) as appropriate.

CYBERSECURITY POSTURE

88. Senator MANCHIN. General Brown, there has been a considerable increase in the fiscal year 2024 Air Force budget request in cyber defense funding compared to the enacted budget in fiscal year 2023. Can you go into detail on how this significant increase in cyber defense funding will improve the Air Force's cybersecurity posture?

General BROWN. The requested plus up in Defensive Cyber funding in fiscal year 2024 provides urgently needed defensive cyber capabilities to Department of the Air Force operators and provides key cyberspace situational awareness to local Commanders and Higher Headquarters.

The funding develops a cloud-based, containerized, integrated capability including modular interoperable sensors for collecting, transporting and analyzing relevant data from information systems, weapon systems, and control systems for enhanced situational awareness and cyberspace defense.

The new resulting Defensive Cyber architecture provides common data availability and increased interoperability between Cybersecurity Service Provider, Security Operations Center, Cyber Protection and Mission Defense Team operators, enabling data integration, increased automation, more efficient training pipeline and modular, common Hardware/Software for efficient sustainment.

89. Senator MANCHIN. General Brown, in your testimony you mention "MeshOne" that is a $151 million effort to modernize and secure the Joint Force Wide Area Network, do you believe this system will strengthen our cybersecurity posture enough to give us an edge against our adversary's attacks in the coming future?

General BROWN. Yes, the meshONE program will strengthen our cybersecurity posture to the level required by our adversaries. As part of the DAF BATTLE NETWORK, meshONE integrates zero trust capabilities, network redundancy, and mission prioritization, which are all key to operating in a contested and degraded environment. The design mirrors that of our existing cybersecurity units, enabling integration into USCYBERCOM defensive cyber operations.

QUESTIONS SUBMITTED BY SENATOR TAMMY DUCKWORTH

FORCE DESIGN

90. Senator DUCKWORTH. Secretary Kendall, General Brown, and General Saltzman, I'm concerned that, without an explicit roadmap for force design, your two Services may be at a disadvantage. The Congress relishes an opportunity to advocate for and support modernization efforts for the Air Force and Space Force. I find these efforts difficult however when the Services' future force design and force presentation goals are opaque. Can the Services provide a brief (up to TS) for me and my staff to better understand the end goal for force design?

Secretary KENDALL, General BROWN and General SALTZMAN. Yes. We welcome the opportunity to brief you on the force design guidance, concepts, and attributes the Air Force and Space Force have developed to maintain a competitive advantage, as well as the associated process and analyses informing that work.

QUESTIONS SUBMITTED BY SENATOR JACKY ROSEN

C–130J RECAPITALIZATION

91. Senator ROSEN. Secretary Kendall, the Nevada Air National Guard's 152d Airlift Wing in Reno flies its legacy C–130's in some of the hottest temperatures, highest elevations, and in the most challenging mountainous environments of any C–130 unit. Critical to their mission is flying the Modular Airborne Fire Fighting System (MAFFS) in support of the U.S. Forest Service. Upgrading the Nevada Air National Guard's C–130H fleet with C–130Js would have a substantial impact on their readiness and firefighting capabilities in Nevada and the western United States, where every year we are plagued by devastating wildland fires. I appreciate your commitment to me to update the basing criteria to now include specialty missions like MAFFS and am excited that Reno is under consideration for the latest round of basing decisions. Can I have your commitment to work with me to ensure that the 152d Airlift Wing receives C–130Js so that it can better carry out its dangerous firefighting mission in Nevada and throughout the western United States?

Secretary KENDALL. Reno is one of four Air Reserve Component units that performs the firefighting mission. The 152d Airlift Wing has been critical to the U.S. Forest Service and the interagency wildland fire management community, broadly. We appreciate the hard work and dedication of the men and women of the 152d in performing this mission.

Regarding the C–130J, the Air Force currently has a basing action to recapitalize four Air National Guard C–130H squadrons with eight aircraft each. The 152d Airlift Wing at Reno, NV is one of eight candidate locations, and as a C–130H unit performing the firefighting mission it will be given additional consideration under "Mission Criteria." The candidate locations for this basing action were approved in March 2023, and I am committed to ensuring the 152d Airlift Wing receives due credit for performing this special mission.

I look forward to working with you as this action moves through the strategic basing process.

COMMUTING ASSISTANCE FOR CREECH AIRMEN

92. Senator ROSEN. Secretary Kendall, I'd like to ask about a problem facing airmen stationed at Creech Air Force Base and servicemembers stationed at other rural or remote installations who have to commute many miles to base from where they live. Creech has very limited housing nearby, so the vast majority of airmen live in Las Vegas, which is about 45 miles away. It's an even longer commute for those who have to drop off their kids at the child development center or utilize other services at Nellis Air Force Base, which is on the opposite end of town. Does the Department of the Air Force have the existing authorities to provide these airmen with a gas stipend or something similar to make their commute less expensive as they deal with rising costs? Or is this something the services would need help from Congress to address?

Secretary KENDALL. The Department has various mechanisms to compensate individuals for their assignment location. For example, potential assignment incentive pay or other pays (e.g.-increased Basic Allowance for Subsistence) if warranted based upon specific circumstances. With respect to this specific location, Nellis AFB does provide daily round trip shuttle bus service from Nellis to Creech AFB. There is no current authority to provide a gas stipend or other type of transportation allowance for the purpose of routine commuting from a member's home to their duty location. This would require congressional support if pursued.

NEVADA TEST AND TRAINING RANGE MODERNIZATION

93. Senator ROSEN. Secretary Kendall and General Brown, Nevada is proud to host the "Crown Jewel" of the Air Force, the Nevada Test and Training Range, which provides the largest air and ground military training space in the lower 48 for testing and evaluation of weapons systems, tactics development, and advanced air combat training—without interference from commercial aircraft. The Air Force has identified NTTR modernization as one of its top priorities to ensure our high-end training keeps pace with current and emerging threats and capabilities. Each of you has emphasized the escalating threat from China to the U.S. military, especially as you continue to modernize the Air Force. Can you discuss the importance of modernizing the Nevada Test & Training Rang for training our fighter pilots to meet the threats identified by the National Defense Strategy?

Secretary KENDALL and General BROWN. DOD capabilities and those of peer, near-peer, and potential adversaries are advancing at a rate that challenges our ability to provide relevant and realistic training. We must maintain a qualitative advantage through superior training in multi-domain, full-spectrum employment. It is a DAF imperative to train as we intend to fight by constructing a relevant training environment that allows weapon systems and operators to interact in a highly dynamic, realistic manner including multi-domain command and control.

We are modernizing the Nevada Test and Training Range (NTTR) to enable warfighters to train for the peer fight in an all-domain contested environment against relevant and realistic threats with training assets that can be continually upgraded at the pace of our adversaries.

The Department has substantial, planned investments during the next FYDP to sustain, modernize, and add training infrastructure to achieve this capability in the 2030 timeframe. The effort establishes requirements for threats, targets, adversary air, multi-domain integration, and airspace capable of providing training to counter a peer adversary.

- Advanced Digital Array based Class Representative Threats
- Non-proprietary open architecture threat systems
- Software defined solutions allow iterative/evolutionary equipment use
- C, S, X, UHF, VHF, L, KU, KA, and Long Wave Infrared Bands
- Next Generation Airborne Instrumentation Pods (P6 Combat Training System)
- Live Mission Operations Capability (LMOC)
- Multi-range Distributed Integrated Air Defense System

One critical need to execute the modernization plan at NTTR is the passage of Legislative Proposal 404 which clarifies and allows the Department of Defense to conduct specific activities at NTTR. These activities include emergency response, gravel equipment pads that would be used to hold mobile threat emitters to better train to the pacing threat, and use and maintenance of existing roads to allow for the placement and movement of the threat emitters. The provision would also clarify the membership and role of the Interagency Committee and Intergovernmental Executive Committee, which are both integral to the safe modernization of NTTR.

The DAF is approaching Operational Training and Test Infrastructure at NTTR holistically across all domains and spectrums in the modernization of NTTR to replicate a peer adversary environment, to include development of the Nellis Virtual Test and Training Center (VTTC) for level 4+ high-end advanced training and tactics development in the synthetic environment. AF is integrating the Joint Simulation Environment, a simulation environment for test and training, into the VTTC. This will enable 5th Gen warfighters the capability to present complex, multi-domain, peer-adversary scenarios for integrated warfighter training, tactics development, and capability tests.

Most of the infrastructure required for Level 4, including version 1 of the Advanced Radar Threat System (ARTS), will be in place by fiscal year 2026. The final step to achieving Level 4 is fielding the ARTS v3. While the ARTS v3 will provide significantly greater capability, it is not projected to field until –fiscal year 2030.

The Department also recognizes that an airspace expansion is required at NTTR to fully achieve Threat Matrix Framework Level 4 training. An analysis is ongoing to determine airspace requirement shortfalls and assess impacts with a simultaneous effort to conceptualize a potential expansion. Efforts to expand the airspace normally takes 5+ years and in this instance will prove more challenging since FAA heavily uses the airspace surrounding NTTR.

94. Senator ROSEN. Secretary Kendall, the fiscal year 21 NDAA authorized the establishment of Intergovernmental Executive Committees (IEC) to help facilitate the exchange of views, information, and advice relating to the management of resources at NTTR with Federal, State, local, and tribal stakeholders. Can you speak to the Air Force's efforts to advance the NTTR modernization plan through the IECs? For example, what has worked and what hasn't when using the IECs as a forum to resolve differences with stakeholders?

Secretary KENDALL. The USAF recently used this forum to brief tribes and stakeholders on the NTTR's modernization needs and requirements and will continue to do so, taking into consideration the opinions, concerns, and knowledge of various stakeholders to ensure natural and cultural resources are part of the USAF"s proposal shaping and decisionmaking.

Participants at the April 4, 2023, IEC meeting included staff from your office, the Center for Biological Diversity, Friends of Nevada Wilderness, and the Fraternity of the Desert Bighorn. Through coordination in the IEC, the Friends of Nevada Wilderness, expressed thanks for the USAF sharing its proposal and expressed their interest in finding a way forward that addresses USAF's needs and congressionally designates the proposed wilderness in the Desert National Wildlife Refuge. The Friends of Nevada Wilderness offered to "help this process move forward so that there can be a win for everyone."

Although this is a positive note and the IEC does provide a venue for NGO's, tribes and others to contribute to the shaping of USAF proposals, the IEC is not a decisionmaking body.

We regularly invite the non-governmental members, but we do not have authority to mandate participation. Therefore, all tribes with equity are regularly consulted and coordinated with through Nellis AFB's Tribal Meetings and through Government-to-Government consultation to ensure we engage with these important stakeholders.

Last, the IEC does provide an additional venue to have reinforcement discussions on topics such as cultural and natural resources management and consultation under the National Environmental Policy Act.

95. Senator ROSEN. Secretary Kendall, do you think there are other forums that could be better utilized to find innovate solutions to existing NTTR land management issues?

Secretary KENDALL. The DAF is currently involved in several forums that address land management issues at the NTTR. These include the Intergovernmental Executive Committee (IEC), Interagency Committee (IC), the Nevada Joint Military Affairs Committee (JMAC), and the Civilian Military Council (CMC). These bodies are comprised of representatives from DOD, DOI, tribal governments, State agencies, civilian organizations, and the public.

The DAF does not believe additional forums are necessary to effectively manage land at the NTTR, but the DAF is working with and through stakeholders to strengthen existing forums, particularly the IEC and the IC, to enhance their membership and utility. As these bodies are congressionally mandated, we look forward to working with Congress on these initiatives.

QUESTIONS SUBMITTED BY SENATOR MARK KELLY

SPACE NATIONAL GUARD/RESERVE COSTS

96. Senator KELLY. General Saltzman, you have testified before HASC, SASC, and SAC-D about the critical capabilities that are provided by Air National Guard members supporting the space mission. While I understand that the Space Force is still evaluating the best course of action for organizing Air National Guard members, what are the estimated costs for each of your courses of action?

General SALTZMAN. My strongest possible recommendation is to enact the SFPMA, while transferring the ANG missions to the Space Force, without establishing a Space National Guard. This ensures unity of command over all Department of the Air Force (DAF) space forces, maximizes flexibility for organize, train, and equip (OT&E) and operational responsibilities, and ensures access to part-time forces for surge capacity. The total transfer is modest, and was not driven by costs.

97. Senator KELLY. General Saltzman, of the options you are considering for organizing the Air National Guard space capabilities, do either of the courses of action you are considering have a loss or degradation of mission capability?

General SALTZMAN. My strongest possible recommendation is to enact the SFPMA, while transferring the ANG missions to the Space Force, without establishing a Space National Guard. This ensures unity of command over all Department of the Air Force (DAF) space forces, maximizes flexibility for organize, train, and equip (OT&E) and operational responsibilities, and ensures access to part-time forces for surge capacity. The total transfer is modest and would include 734 positions (of which only 242 are full time) across 6 states and 11 units. The transfer would also include the resources associated with the ANG space missions (funding, billets, equipment, and facilities). I would be happy to walk through the resourcing details with you if you would like.

PFAS

98. Senator KELLY. Secretary Kendall, the EPA has issued a new proposed drinking water standard for six PFAS chemicals. What steps will the Air Force take to comply with these new standards?

Secretary KENDALL. The Department of the Air Force (DAF) supports EPA's recent actions to propose a regulatory drinking water standard for PFAS that, once promulgated, will apply to all drinking water suppliers, including DOD. The Department respects and values the public comment process on this proposed rule and looks forward to the clarity that a final nationwide standard will provide. We are reviewing existing data and conducting additional sampling where necessary on and off our installations, to prepare to implement the EPA's drinking water standard once it is promulgated. We continue to invest in the research and development of new technologies to accelerate clean-up of PFAS and reduce costs.

99. Senator KELLY. Secretary Kendall, will Air National Guard facilities with national missions follow the same steps to comply with these new standards as Air Force facilities? If not, how do they differ?

Secretary KENDALL. Yes, the Air National Guard facilities will follow the same steps as the DAF to comply with the new Maximum Contaminant Levels once finalized.

100. Senator KELLY. Secretary Kendall, how many Air Force bases are their own purveyor of drinking water for servicemembers?

Secretary KENDALL. As of May 19, 2023 the Air Force has 389 drinking water systems. This number includes both regulated and unregulated systems and changes based on mission and infrastructure.

101. Senator KELLY. Secretary Kendall, how will the Air Force address contaminated wells in nearby defense communities where PFAS levels exceed the new drinking water standards?

Secretary KENDALL. The DAF will respond in the same manner we did for private wells that exceeded the EPA's lifetime health advisory of 70 parts per trillion, individually or combined for PFOS/PFOA. We will investigate private wells and take action if concentrations exceed the promulgated maximum contaminant level for the applicable compound. Actions could include providing bottled water, a home or sink filtration system, or connection to a municipal water system.

102. Senator KELLY. Secretary Kendall, how will Air Force bases incorporate these new standards into clean up plans at bases undergoing remediation?

Secretary KENDALL. The Department is reviewing existing data and conducting additional sampling, where necessary, to prepare to implement the EPA's final drinking water standard once promulgated. We remain committed to fulfilling our cleanup responsibilities under the Federal cleanup laws and based on recent data from our ongoing investigations, will implement interim actions as necessary to address PFAS impacts to drinking water.

QUESTIONS SUBMITTED BY SENATOR TOM COTTON

MUNITIONS

103. Senator COTTON. Secretary Kendall, are there additional actions Congress can take to support your expansion of munitions production? Is there any excess capacity on the AMRAAM or AIM–9 production lines?

Secretary KENDALL. The DAF appreciates the support in our efforts to expand munitions production. This year's budget request shows a renewed commitment to munitions procurement throughout the FYDP by the Department. There are no additional actions necessary to support that expansion.

AMRAAM would be at maximum production rate if the fiscal year 2024 DON and USAF President's Budgets are fully funded (includes potential Foreign Military Sales). AMRAAM is entering a multiyear procurement contract and is planned to be at maximum quantity for fiscal year 2024 to fiscal year 2027 which makes plus-ups or reductions in those years impractical.

The DON is the lead service for AIM–9X procurement. We understand they are working to increase AIM–9X capacity.

CCA

104. Senator COTTON. Secretary Kendall, we've heard some express concern about a lack of munitions for CCA, with some going so far as to claim that CCAs would "compound our missile problem." Does the manufacturing of CCAs in any way negatively impact the production of munitions?

Secretary KENDALL. The Air Force is committed to quickly increasing the depth of the munitions inventory by continuing the efforts started in fiscal year 2023 and evidenced in the Fiscal Year 2024 President's Budget Request. While the Air Force has not yet started to manufacture CCA, we do not anticipate that it would negatively impact the production of munitions once it does begin.

105. Senator COTTON. Secretary Kendall, would unarmed CCAs enhance the mission effectiveness and survivability of manned platforms?

Secretary KENDALL. The Department of the Air Force (DAF) envisions CCA to span a range of cost, capabilities, and missions as the technologies mature over time. The crewed platforms' mission effectiveness and survivability when teamed with CCA provide commanders with significant operational flexibility. Further details are available via classified channels.

106. Senator COTTON. Secretary Kendall, what impacts do you assess delayed funding for CCAs would have on U.S. deterrence and combat capability in the late 2020s?

Secretary KENDALL. General Douglas MacArthur said, "military failure can almost always be summarized in just two words: 'Too late.'" Time is an asset that can never be recovered or replaced. Delayed funding for CCA would delay our ability to add the strategic depth to our fighter inventory that can effectively deter, and if necessary, defeat our pacing competition. For example, we need on time fiscal year 2024 funding to stand up the Experimental Operations Unit (EOU) and begin the Viper Experimentation and Next-gen Operations Model (VENOM) effort. These fiscal year 2024 New Starts are critical to working the tactics, techniques, and procedures (TTPs) and CONOPS necessary to deploy CCA capability on our accelerated timeline.

107. Senator COTTON. Secretary Kendall, with the Navy also working on CCAs is there any coordination for interoperability of these platforms with the Navy?

Secretary KENDALL. The DAF and the Department of the Navy (DON) are in close communication on CCA and plan to leverage common mission systems, architectures, datalinks, and other technologies to ensure interoperability across the Services.

108. Senator COTTON. Secretary Kendall, what is the extent and status of that coordination? Is any joint testing planned to help expedite CCA development and fielding?

Secretary KENDALL. The DAF and the Department of the Navy (DON) are finalizing a partnership agreement that will outline the specifics of the two Services' coordination on CCA development and fielding. The DAF plans to initiate a new effort called the Experimental Operations Unit (EOU) (This is a New Start effort in the Fiscal Year 2024 President's Budget Request). The EOU will explore areas such as updates to doctrine, organizational structure, training, force structure and integration, basing requirements, sustainment concepts, and other non-materiel categories. We expect the EOU to learn and operate existing uncrewed air vehicles alongside the USN and the Royal Australian Air Force to develop tactics, techniques, procedures, and standard operating procedures. This early learning will help inform CCA development and fielding.

E–7

109. Senator COTTON. Secretary Kendall, last year you stated that "there are things that we could do . . . to maybe get access to E–7 aircraft earlier one way or another." Boeing executives at the Farnborough International Airshow last year stated that their company was "ready and willing to accelerate the Wedgetail schedule" ahead of the 2027 timeline. Congress provided a $200 million congressional add to specifically accelerate the delivery of initial E–7s. With that money having been provided to Boeing, has Boeing been able to realize any of the advertised acceleration to their initial E–7 delivery schedule? If yes, when is the first E–7 now assessed to be delivered? If not, how is the service ensuring accountability for those funds not achieving their stated purpose?

Secretary KENDALL. While the Air Force still expects the first E–7 prototype aircraft to deliver in 4QFY27, the fiscal year 2023 congressional adds acceleration of requirements, engineering, and design work has reduced schedule and supply chain risk while offering the potential for additional risk reduction.

The fiscal year 2023 congressional add enabled the DAF to send Boeing a Pre-Contract Cost Authorization in September 2022. With that letter in hand, Boeing leaned forward hiring personnel 6-months early to support proposal preparations and contract award. Specific benefits of those actions included:

- Ordered long-lead items for two E–7A Rapid Prototyping aircraft 5-months earlier than otherwise possible.
- Pulled the System Requirements Review (SRR) and System Functional Review (SFR) 3-months left from July 2023 to April 2023. Both SRR and SFR were held within 43-days of contract award.
- Began Software (SW) development. First SW capability demonstration and program increment (PI) conducted 6-months earlier than otherwise possible.
- Started SW co-development 6-months earlier than otherwise possible.
- First iterative design review (Preliminary Design Review-like event) will be held in June 2023, 3-months earlier than original date (September 2023).
- Boeing awarded contract with Northrop Grumman and Collins 3-months earlier than otherwise possible.

For fiscal year 2024, an opportunity exists to expedite the fielding of the first two production E–7As. This was presented in the fiscal year 2024 E–7A Unfunded Priority List (UPL). If the UPL is funded, long-lead items for two E–7A production aircraft would begin production in fiscal year 2024 pulling delivery on those first two production tails into fiscal year 2028. On the baseline plan, the first two production aircraft will deliver in fiscal year 2029 and fiscal year 2030.

110. Senator COTTON. Secretary Kendall, in February you met with top British defense officials and discussed accelerating E–7 test and evaluation through joint testing using the U.K. E–7. Are there plans to leverage U.K. E–7s to expedite test and evaluation of the E–7?

Secretary KENDALL. Yes. The Air Force is working closely with both the UK and Australia to leverage existing data and to collaborate in ongoing testing, training, exercises, and operations to expedite the test and evaluation portion of the E–7A acquisition program.

111. Senator COTTON. Are there any other steps being taken by the department to expedite the E–7 as a fielded capability?

Secretary KENDALL. The Air Force is executing an aggressive rapid prototyping acquisition strategy as its baseline plan and is continuously evaluating opportunities for additional schedule savings. For fiscal year 2024, an opportunity exists to expedite the fielding of the first two production E–7As. This opportunity was presented in the fiscal year 2024 E–7A Unfunded Priority List (UPL). If the UPL is funded, long-lead items for two E–7A production aircraft would begin production in fiscal year 2024 pulling delivery on those first two production tails into fiscal year 2028. On the baseline plan, the first two production aircraft will deliver in fiscal year 2029 and fiscal year 2030. Additionally, to expedite our operational capability once USAF E–7s are delivered, the Air Force is leveraging the Military Personnel Exchange Program with the Royal Australian Air Force (RAAF) E–7A Wedgetail program to build a foundation of operations and maintenance knowledge to accelerate a smooth transition from the E–3 to E–7. From fiscal year 2023 to fiscal year 2026, the Air Force is sending 25 operators (Pilots, Electronic Warfare Officers, Air Battle Managers) and 25 maintenance personnel (mix of Crew Chiefs, Avionics, Radar, and Computer) to train and fully integrate with the RAAF for 3 years. The Air Force plans to repeat this process from fiscal year 2027 to fiscal year 2030 with a different pool of personnel.

ACQUISITION TIMELINES

112. Senator COTTON. Secretary Kendall, you brought up the concept of "Too Late"—A DARPA study showed that Test and Evaluation times have ballooned over 1000 percent since the 70's and is the largest source of timeline growth in fielding new systems. I applaud the department's aggressive stance on digital engineering to decrease production times but with the urgent need to modernize our current systems and field the next generation of aircraft as quickly as possible—what steps is the Department taking to decrease Test and Evaluation times not just for future systems but also in modernizing current systems?

Secretary KENDALL. Weapon systems of 50 years ago were orders of magnitude less complicated. Hardware and software were far simpler than their modern counterparts, and contemporary challenges like robust cross-system integration and the cyber domain did not exist. These dramatic increases in complexity have driven the Air Force to fundamentally reevaluate how we view and execute Test. To provide a coherent and enduring path that builds on improvements already made, the Air Force has begun an initiative termed "Accelerate Test or Lose." This initiative will explore how to leverage best practices in digital engineering, modeling and simulation, and digital ranges to accelerate development and delivery of safe, reliable, and sustainable capability to the war fighter. While currently still in progress, the "Accelerate Test or Lose" initiative has uncovered several potential changes with high impacts to fielding capabilities faster. The Air Force will begin implementation of easy change/high-impact options as early as late fiscal year 2023.

QUESTIONS SUBMITTED BY SENATOR JONI ERNST

B–21 REQUIREMENTS

113. Senator ERNST. General Brown, would you agree that DOD should reevaluate its B–21 requirement upward of 100 bombers?

General BROWN. The fiscal year 2024 budget proposal supports both the B–21 program and B–52 modernization, to realize our currently planned bomber force of 100 B–21s and 75 B–52s. As we approach force structure decision points in future budgets, the Air Force will continue to assess the strategic environment to inform our long-range strike capacity investments.

NUCLEAR BOMBER ALERT

114. Senator ERNST. General Brown, do you have high confidence that Air Force nuclear bombers have readiness to maintain an extended day-to-day alert posture, if a policy decision is made in that regard? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General BROWN. Due to classification, I will provide my answer to this question in classified document.

115. Senator ERNST. General Brown, for how long could bombers maintain an extended day-to-day alert posture? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General BROWN. Due to classification, I will provide my answer to this question in classified document.

116. Senator ERNST. General Brown, would you support a requirement that the Air Force must maintain readiness to execute an extended day-to-day alert posture, if directed?

General BROWN. Due to classification, I will provide my answer to this question in classified document.

SPACE SENSORS

117. Senator ERNST. General Saltzman, how would fully funding the Ground Moving Target Indicator program help DOD execute its Title 10 responsibility to win war if deterrence fails? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General SALTZMAN. Joint and coalition forces must overcome adversary anti-access/area denial capabilities to prosecute surface moving targets on compressed timelines. The USSF space-based GMTI systems will provide detection, tracking, and weapons data links to close long-range kill-chains for ground and maritime targets at scale in highly contested environments and will afford the warfighter 100 percent of sensor allocated capacity. GMTI is critical due to Joint Surveillance Target Attack Radar System (JSTARS) divestiture and ISR modernization. The Joint Force must be able to perform the MTI mission on a global scale in near real-time. GMTI will replace some of the capability provided by JSTARS aircraft due to deficiencies in JSTARS survivability, speed, range, and sensor performance. Additionally, GMTI is being designed for maximum resiliency and survivability in a near-peer conflict. This capability will increase survivability of the Joint Force and enable weapons employment on tactically relevant timelines.

Funding of the space segment in fiscal year 2024 enables long-lead procurement for payload hardware required to support GMTI launch dates in fiscal year 2027 and fiscal year 2028. The USSF's partnership with the Intelligence Community en-

ables the service to field this warfighter capability much faster than originally planned. An fiscal year 2024 funding shortfall delays initial launch capability by over a year, decelerates the pace of system delivery, and delays deployment of an operationally relevant full warfighting capability.

QUESTIONS SUBMITTED BY SENATOR DAN SULLIVAN

RECENT E–7 WEDGETAIL

118. Senator SULLIVAN. Secretary Kendall and General Brown, approximately 1 year, ago the Air Force conducted its first training exercise with Royal Australian Air Force E–7 Wedgetails. As you well know, our procurement of the E–7 Wedgetail will ensure interoperability with our allies and provide us with a robust ISR and battlefield management tool. Speaking before the Committee earlier this year, NORTHCOM Commander Gen. VanHerck's reiterated the importance of the E–7 Wedgetail and his hope that the Air Force could procure them faster to give NORAD greater domain awareness. Your Unfunded Priority List indicates you agree with Gen. VanHerck. As we have all seen over the last several months, Chinese Spy Balloons, high altitude flying objects, and Russian Bear bombers all require greater domain awareness in the Arctic. Upgrading from the E–3 to the E–7 is essential to enhancing our domain awareness. What steps are you taking to accelerate E–7 training and procurement?

Secretary KENDALL and General BROWN. The Air Force is leveraging the Military Personnel Exchange Program with the Royal Australian Air Force (RAAF) E–7A Wedgetail program to build a foundation of operations and maintenance knowledge to accelerate a smooth transition from the E–3 to E–7. From fiscal year 2023 to fiscal year 2026, the Air Force is sending 25 operators (Pilots, Electronic Warfare Officers, Air Battle Managers) and 25 maintenance personnel (mix of Crew Chiefs, Avionics, Radar, and Computer) to train and fully integrate with the RAAF for 3 years. The Air Force plans to repeat this process from fiscal year 2027 to fiscal year 2030 with a different pool of personnel. The USAF/RAAF E–7A exchange is an essential first step in establishing an initial cadre for Air Force E–7A operations and maintenance. Additionally, it strengthens strategic partnerships in INDOPACOM while increasing future interoperability through Tactics, Techniques and Procedures refinement. Finally, this exchange will accelerate USAF E–7A initial training capacity to maximize the E–7A's operational impact once USAF aircraft are delivered.

Regarding procurement, the Air Force is executing an aggressive rapid prototyping acquisition strategy as its baseline plan and is continuously evaluating opportunities for additional schedule savings. For fiscal year 2024, an opportunity exists to expedite the fielding of the first two production E–7As. This opportunity was presented in the fiscal year 2024 E–7A Unfunded Priority List (UPL). If the UPL is funded, long-lead items for two E–7A production aircraft would begin production in fiscal year 2024 pulling delivery on those first two production tails into fiscal year 2028. On the baseline plan, the first two production aircraft will deliver in fiscal year 2029 and fiscal year 2030.

119. Senator SULLIVAN. Secretary Kendall and General Brown, what steps are you taking to accelerate E–7 deliveries to the operating forces?

Secretary KENDALL and General BROWN. The Air Force is executing an aggressive rapid prototyping acquisition strategy as its baseline plan and is continuously evaluating opportunities for additional schedule savings. For fiscal year 2024, an opportunity exists to expedite the fielding of the first two production E–7As. This opportunity was presented in the fiscal year 2024 E–7A Unfunded Priority List (UPL). If the UPL is funded, long-lead items for two E–7A production aircraft would begin production in fiscal year 2024 pulling delivery on those first two production tails into fiscal year 2028. On the baseline plan, the first two production aircraft will deliver in fiscal year 2029 and fiscal year 2030.

120. Senator SULLIVAN. Secretary Kendall and General Brown, in your conversations with Boeing, have they identified specific bottlenecks to accelerating E–7 production and delivery?

Secretary KENDALL and General BROWN. The DAF and Boeing are already executing the E–7A Rapid Prototyping effort at maximum speed to support accelerated production. The fiscal year 2024 Unfunded Priorities List addresses one of the limiting factors by accelerating long lead procurement of material, but the two primary limiting factors are the timelines for green aircraft production and the production process of the Multifunction Electronically Scanned Array radar. The ability to ac-

celerate the learning curve for the high-skill, high touch-time radar production process has challenged efforts to accelerate the UK E–7 radar delivery to date.

AIR FORCE FIGHTER ACQUISITION

121. Senator SULLIVAN. Secretary Kendall and General Brown, this year's budget includes a request for 72 new fighters—48 F–35As and 24 F–15EX Eagle IIs—to modernize the fleet. Over the last few months, the Alaska-based fighter fleet has been active in the homeland defense mission, intercepting Russian Bear bombers, Chinese spy balloons, and other high altitude flying objects. These Alaska-based fighters are under INDOPACOM control however. In the event of a conflict with the People's Republic of China (PRC), they would likely be deployed into combat, requiring other aircraft to backfill the homeland defense mission in Alaska. How will the Air Force's fighter acquisition plan improve homeland defense?

Secretary KENDALL and General BROWN. The Homeland Defense Mission is the #1 DAF mission priority and will always be covered, so there is minimal risk. If Alaska Homeland Defense assets forward deploy in the Indo-Pacific, we will fleet manage aircraft from other units to Homeland Defense and accept risk in other mission areas. Our fighter acquisition plan is critical to modernizing our aging Air National Guard fighter fleets that perform the majority of our daily homeland defense alert duties. With the help of Congress, we have fielded modern capabilities like Active Electronically Scanned Array (AESA) radars in our F–15C/D and F–16 Block 30 aircraft; however, the aircraft themselves are among the oldest in our inventory and are nearing or exceeding service life. Replacing these aircraft with F–16 Block 40, F–15EX or F–35 will ensure our homeland defense fighters can detect and mitigate threats while reducing the risks and costs of operating legacy aircraft.

122. Senator SULLIVAN. Secretary Kendall and General Brown, what homeland defense risks will the Air Force incur if the fighter procurement timeline is interrupted?

Secretary KENDALL and General BROWN. The Homeland Defense Mission is the #1 DAF mission priority and will always be covered, so there is minimal risk. However, if procurement of F–15EX or F–35 aircraft is interrupted, we will fleet manage aircraft from other units to Homeland Defense and accept risk in other mission areas. The F–15C/D aircraft averages nearly 40 years of age, has exceeded its service life, and can't be extended without significant risk to our aircrew.

HOMELAND DEFENSE

123. Senator SULLIVAN. Secretary Kendall and General Brown, what different capabilities do the F–15EX and F–35 bring to the homeland defense mission compared to the F–15C/D and F–16?

Secretary KENDALL and General BROWN. The F–15E/EX, F–16, F–22 and F–35 all possess the weapons and sensors required to execute the Homeland Defense mission. The F–15E/EX and F–16s with Active Electronically Scanned Array (AESA) radars are preferred platforms for Homeland Defense because our stealth F–22 and F–35 aircraft can be preserved for operations in more contested environments. Although not stealthy, the F–15E/EX offers significant sensor, range, and payload capabilities over the other fighters, while the F–16 is our most affordable fighter and provides capacity in meeting all our Homeland Defense requirements.

F–15Cs have reached the end of their useful service life and are not able to survive in a contested environment. The fiscal year 2024 President's Budget (PB) divests the remaining 54 F–15C/Ds in fiscal year 2024.

SPACE FORCE RECRUITMENT

124. Senator SULLIVAN. General Saltzman, unlike some of the other services, Space Force had no issues meeting recruitment goals over the last 2 years. Last year General John Raymond, the former Chief of Space Operations, stated you have more people looking to join than you can take on. In fact, when the Space Force went looking for cyber professionals who had worked in private industry, hundreds of people applied but your service only took six of them. Why has Space Force recruitment been so successful over the last 2 years?

General SALTZMAN. We are seeking the best and the brightest with a passion to serve. During our first 2 years, over 1500 qualified recruits raised their hands to volunteer for nearly 900 enlisted positions. We have expanded bonuses and removed barriers to entry, through relaxed tattoo policies, modified THC waivers, modified body fat composition, and other efforts which have expanded our talent pool. We are also engaged in robust "STEM to Space" and "Guardian Enhanced Active Recruiting" or "G.E.A.R" outreach programs, which place guardians in communities to mes-

sage and advocate the USSF mission. "STEM to Space" was designed to facilitate virtual connections between guardians and K–12 classrooms to share the importance of STEM careers related to space. Volunteers represent the Space Force in online forums, high school and college visits, and participate in marketing and other events that aid in raising awareness.

125. Senator SULLIVAN. General Saltzman, do you think direct commissioning opportunities are helping recruit the talent you need?

General SALTZMAN. We believe the program can help in expanding the breadth of talent needed to compete in the space domain, however, is too early in the pipeline to declare success. We will continue to review our ability to attract talent, monitor their performance on active duty and, as one of the areas to improve, expedite necessary clearances.

126. Senator SULLIVAN. General Saltzman, can you elaborate on the details of the targeted recruiting strategy you mentioned during the hearing?

General SALTZMAN. In addition to the outstanding support from Air Force Recruiting Service, removal of accession barriers, and our robust outreach programs, we have observed high interest from the Air Force Academy and ROTC cadet cohorts. We implemented our Constructive Service Credit program for Cyber professionals and received over 400 applications, which went through a very rigorous screening and qualification process, resulting in six candidates who successfully completed the process. The six individuals were commissioned as Cyber officers in the grades of 1st Lieutenant to Lieutenant Colonel. Moreover, the Space Force University Partnership Program creates a pipeline for future Space Force officers and civilians through ROTC and internship programs. We will recruit from a diverse group of universities to ensure the strongest possible field of future guardians and STEM talent including from underrepresented populations. We currently have 14 partner universities.

QUESTIONS SUBMITTED BY SENATOR TOMMY TUBERVILLE

SPACE COMMAND HEADQUARTER LOCATION

127. Senator TUBERVILLE. Secretary Kendall, we need a decision on Space Command's headquarters. Many of us are worried the next war is going to start in space and that the U.S. is behind. If this were a track race, we'd still be on the starting blocks and China and Russia would be halfway around the track. Redstone Arsenal in Huntsville, Alabama has, by every quantitative metric, proven to be the best location for SPACECOMM HQ. This is an objective fact not in dispute. Last year, General Dickinson said his biggest hurdle to reaching full operational capability is the basing decision. The Secretary of the Air Force has final basing authority, correct?

Secretary KENDALL. Yes. The Secretary of Defense has delegated the decision to the Secretary of the Air Force. Space Command will reach full operational capability later this summer, independent of the basing decision.

128. Senator TUBERVILLE. Secretary Kendall, would you agree that the major source of the delay has been congressional objections? If not, what is the primary source of delay at this point?

Secretary KENDALL. The Department of the Air Force took appropriate action to support oversight reviews of the USSPACECOM headquarters basing process and to complete the recommendations those reviews contained. These actions required additional time.

129. Senator TUBERVILLE. Secretary Kendall, the number two preferred location was Nebraska. Were any objections raised by elected Members of Congress from Nebraska?

Secretary KENDALL. On January 12, 2021, my predecessor, Secretary Barbara Barrett, selected Huntsville, Alabama as the preferred location for USSPACECOM headquarters and designated all other candidates as reasonable alternatives. The reasonable alternatives were not rank ordered. As part of congressional notification, we provided selection process information to the elected Members of Congress from Nebraska, who did not formally object to the process.

130. Senator TUBERVILLE. Secretary Kendall, the number three location was Texas. Were extra studies requested by and Members of the Texas delegation?

Secretary KENDALL. On January 12, 2021, my predecessor, Secretary Barbara Barrett, selected Huntsville, Alabama as the preferred location for USSPACECOM headquarters and designated all other candidates as reasonable alternatives. The reasonable alternatives were not rank ordered. As part of congressional notification, we provided selection process information to the Members of the Texas delegation, who did not request additional studies.

131. Senator TUBERVILLE. Secretary Kendall, which State delegation initiated a congressional inquiry?

Secretary KENDALL. As documented in public record, the delegates from Colorado requested the House Armed Service Committee Investigator, the Government Accountability Office, and the Department of Defense Inspector General review the process used to select the USSPACECOM headquarters.

132. Senator TUBERVILLE. Secretary Kendall, the Colorado congressional delegation, a State that was, at best, determined to be the number four location preference, has unnecessarily delayed confirmation of Huntsville as the choice for Space Command's new headquarters for more than 2 years. What is the current status of that decision?

Secretary KENDALL. The Department of the Air Force is completing the recommendations contained in the reviews by the Government Accountability Office and the Department of Defense Inspector General. We anticipate a final decision after a thorough review of all current information.

133. Senator TUBERVILLE. Secretary Kendall, how many more reviews need to be conducted in order to further confirm Redstone Arsenal as the preferred location for SPACECOM's headquarters?

Secretary KENDALL. We anticipate a final decision after a thorough review of all current information.

QUESTIONS SUBMITTED BY SENATOR ERIC S. SCHMITT

MANAGEMENT INITIATIVES AND OUTCOMES

134. Senator SCHMITT. Secretary Kendall, you referenced management initiatives that you have implemented to "introduce well-defined metrics for each part of the Air Force." Can you provide a summary of the initiatives you were referencing and direct us to the relevant initiative implementation guidance?

Secretary KENDALL. The Management Initiatives (MIs) were initiated in November 2021 to outline organizational changes and management initiatives necessary to improve the efficiency and effectiveness of how the Department of the Air Force headquarters staff operates. The 11 MIs included many of the business functions to include: Tech Debt, Cyber, Organizational Assessments, Financial Management, and Metrics. The purpose of the Metrics initiative was to establish the baseline for Department of the Air Force (DAF) performance metrics and measures. While this effort is just beginning, the DAF has laid the foundation for a performance management effort that will support leaders at all levels in making timely and informed decisions; decisions that are measurable, attainable, and supported by accurate and timely data.

135. Senator SCHMITT. Secretary Kendall, you stated that the above-referenced initiatives have allowed the Department of the Air Force to realize cost savings. Can you provide a summary of those savings and supporting documentation?

Secretary KENDALL. The DAF is making smart investment decisions with a focus on long-term benefits freeing funds to deliver Enterprise capabilities that enable the warfighter to counter characteristics unique to the China threat, while facilitating true collaboration with our allies and partners. Using the Management Initiatives as the backdrop, we embarked on the whole of DAF approach to identify investments for prioritization and funding advocacy.

In the fiscal year 2024 budget submission, the DAF invested approximately $209 million in six projects to realize future management efficiencies. Based on these investments, the DAF will be able to: scale essential DAF Data investments for operational warfighting requirements, business efficiency, and decision advantages; deploy session controllers to support Voice over Internet Protocol (VoIP) transition from the legacy infrastructure; and replacing legacy contract writing and manage-

ment systems with one interoperable system. Further, the DAF anticipates these additional benefits from the investments:

- Improved Financial Improvement and Audit Readiness (FIAR) compliance;
- Enhanced Category Management disciplines for DAF Information Technology (IT) Assets, Strategic Sourcing, and Demand Management; and
- Increased use of Development Design System across the DAF for software development, including classified environments and weapon systems.

The DAF has begun implementing the recommendations from Management Initiatives (MIs). For example, the DAF is consolidating software buys into enterprise license agreements (ELA). The first of our ELAs is for ServiceNow and is expected to be awarded before the end of this fiscal year. It will consolidate approximately 40 instances of ServiceNow into a much more compact architecture and will combine separate contracts under one umbrella. Once complete, this action will save $17 million across the DAF in fiscal year 2024 and will grow each year after as more functions are added.

The DAF is positioning itself for the future fight, however changes of this scope and magnitude will not be accomplished overnight. The DAF is taking steps to improve processes that are expected to result in efficiencies and cost savings, and to streamline decisionmaking to enable DAF leaders to better execute their respective missions. As Secretary, I will continue to drive efficiencies at all levels of the DAF in support of our airmen and guardians.

DIVERSITY EQUITY AND INCLUSION (DEI) RESOURCE EXPENDITURE

136. Senator SCHMITT. Secretary Kendall, in mid-March I sent a letter to Secretary Austin asking about his civilian workforce and about his training priorities for the force. I have yet to receive a response from Secretary Austin, so I am hopeful that you can answer these questions for me about the Department of the Air Force. How many DEI-related positions exist in the Department of the Air Force?

Secretary KENDALL. The DAF has approximately 70 Diversity, Equity, Inclusion and Accessibility (DEIA) related positions.

137. Senator SCHMITT. Secretary Kendall, can you identify the job titles, number of positions that exist for each job title, and salary range for each DEI-related position in the Department of the Air Force?

Secretary KENDALL. The table included below includes Service, MAJCOM, unit, salary, grade, and title.

BOS	MAJCOM	UNIT DERIVED	Salary	GRADE	DEI Title
USAF	ACC	AIR COMBAT COMMAND (OL CS00)	$137,469	GS14	CHIEF DIVERSITY AND INCLUSION OFFICER
USAF	ACC	70 INTL-SURVEIL-RECON WING	$94,199	GS12	DIVERSITY AND INCLUSION MANAGER
USAF	ACC	688 CYBERSPACE WING	$109,066	GS12	DIVERSITY AND INCLUSION MANAGER
USAF	AETC	AIR EDUC AND TRNG COMMAND (OL A1A1)	$86,693	GS12	RATED DIVERSITY IMPROVEMENT (RDI) PROGRAM ANALYST
USAF	AETC	AIR EDUC AND TRNG COMMAND (OL A1A1)	$99,764	GS13	RATED DIVERSITY IMPROVEMENT (RDI) PRGRAM ANALYST
USAF	AETC	AIR EDUC AND TRNG COMMAND (OL A1A1)	$116,390	GS13	RATED DIVERSITY IMPROVEMENT (RDI) PRGRAM ANALYST
USAF	AETC	AIR EDUC AND TRNG COMMAND (OL CD01)	$125,750	GS14	CHIEF DIVERSITY AND INCLUSION OFFICER
USAF	AF TAC	709 SUPPORT SQUADRON	$86,179	GS12	DIVERSITY AND INCLUSION MANAGER
USAF	AFCCT	AF CIV CAREER TNG—FOA (OL FR)	$57,853	GS07	DIVERSITY & INCLUSION PROGRAM MANAGER/ CAMPUS LIAISON
USAF	AFMC	AF INST MSN SPT CENTER (OL DP00)	$126,366	GS13	CHIEF DIVERSITY AND INCLUSION OFFICER
USAF	AFMC	AF MATERIEL COMMAND (OL A1)	$153,851	NH04	CHIEF, HQ AFMC EQUAL OPPORTUNITY AND DIVERSITY

BOS	MAJCOM	UNIT DERIVED	Salary	GRADE	DEI Title
USAF	AFMC	AF NUCLEAR WPNS CENTER (OL DPHL)	$115,320	NH03	DIVERSITY AND INCLUSION OFFICER
USAF	AFMC	AF RESEARCH LAB	$146,722	DR03	DIVERSITY AND INCLUSION OFFICER
USAF	AFMC	75 AIR BASE WING	$117,286	NH04	DIVERSITY, EQUITY AND INCLUSION CHIEF
USAF	AFMC	78 AIR BASE WING	$139,759	NH04	DIVERSITY, EQUITY AND INCLUSION CHIEF
USAF	AFMC	88 AIR BASE WING	$105,696	NH03	INSTALLATION DIVERSITY AND INCLUSION OFFICER
USAF	AFMC	96 TEST WING	$52,185	NH02	DIVERSITY AND INCLUSION SPECIALIST
USAF	AFMC	96 TEST WING	$79,780	NH02	DIVERSITY AND INCLUSION OFFICER
USAF	AFMC	96 TEST WING	$86,541	NH03	DIVERSITY AND INCLUSION SPECIALIST
USAF	AFMC	412 TEST WING	$153,010	NH04	DIVERSITY, EQUITY AND INCLUSION CHIEF
USAF	AFOSI	AF OFF SPEC INVEST—FOA	$145,604	GS14	DIVERSITY AND INCLUSION OFFICER
USAF	AFR	HQ AF RESERVE COMMAND	$128,031	GS14	CHIEF DIVERSITY AND INCLUSION OFFICER
USAF	AFSOC	AF-SPEC-OPNS COMMAND (OL A100)	$108,345	GS13	CULTURE AND DIVERSITY SPECIALIST
USAF	AMC	MOBILITY COMMAND (OL CD00)	$130,889	GS14	CHIEF DIVERSITY AND INCLUSION OFFICER
USAF	AMC	6 AIR REFUELING WING	$121,477	GS13	CHIEF DIVERSITY AND INCLUSION OFFICER
USAF	AMC	60 AIR MOBILITY WING	$102,489	GS12	DIVERSITY AND INCLUSION COORDINATOR
USAF	AMC	62 AIRLIFT WING	$92,123	GS12	DIVERSITY AND INCLUSION MANAGER
USAF	AMC	87 AIR BASE WING	$115,118	GS13	CHIEF DIVERSITY AND INCLUSION OFFICER
USAF	GLOBAL STRKE	AF GLOBAL STRIKE COMMAND (OL DS00)	$131,911	GS14	CHIEF DIVERSITY AND INCLUSION OFFICER
USAF	GLOBAL STRKE	377 AIR BASE WING	$144,941	GS14	DIVERSITY AND AFFIRMATIVE EMPLOYMENT SPECIALIST

138. Senator SCHMITT. Secretary Kendall, can you estimate the number of mandatory DEI-related training sessions conducted in 2022, and the total number of hours those sessions consumed?

Secretary KENDALL. The Department of the Air Force has implemented training at various stages of members' careers and developmental paths in accordance with Executive Order (EO) 14305. Line (a) in section 9 of EO 14305 states "The head of each agency shall take steps to implement or increase the availability and use of diversity, equity, inclusion, and accessibility training programs for employees, managers, and leadership. Such training programs should enable Federal employees, managers, and leaders to have knowledge of systemic and institutional racism and bias against underserved communities, be supported in building skillsets to promote respectful and inclusive workplaces and eliminate workplace harassment, have knowledge of agency accessibility practices, and have increased understanding of implicit and unconscious bias."

The following table identifies training implemented by Air Force Instruction 36–7001 dated 19 February 2019 (currently in re-write) and executed IAW EO 14305. Time spent for each training requirement is included on the following table.

Diversity & Inclusion Training Courses (IAW DAF Instruction 36–7001)

Targeted Trainee	D&I Module Duration
Basic Military Training (BMT) trainee	3 hours total
Enlisted member on his or her first permanent duty assignment	1 hour
Airman Leadership School (ALS) student	2 hours
Non-Commissioned Officer Academy (NCOA) student	2 hours
Senior Non-Commissioned Officer Academy (SNCOA)	1.5 hours
Enlisted Professional Enhancement (PE) Course (NCO/SNCOPE) student	1 hour
First Sergeant Academy student	2 hours
Chief Master Sergeant	2 hours
New Installation/Center Commander(s) (director), Group Commander(s), Squadron Commander(s), Detachment Commander(s), Section Commander(s), Command Chief Master Sergeant(s)	1 hour
Officer Training School (OTS) trainee	3 hours
Reserve Officer Training Corps (ROTC) cadet	16 hours over 4 years

Diversity & Inclusion Training Courses (IAW DAF Instruction 36–7001)—Continued

Targeted Trainee	D&I Module Duration
United States Air Force Academy (USAFA) Preparatory School cadet	2 hours total
USAFA cadet	16 hours over 4 years
Squadron Officer School (SOS) student	2 hours
Air Command and Staff College (ACSC) student	1 hour
Air War College (AWC) student	1 hour
New Flag or General Officer (F/GO) and SES personnel	1 hour
Recruiter as defined in DODI 1304.33	2 hours
Military Training Instructor (MTI)—when selected to become a training instructor)	2 hours
New Employee Orientation	1 hour
New Supervisor Orientation	1 hour
Experienced Supervisor Training	1 hour
New Manager Course	1 hour
Experienced Manager Course	1 hour
Senior Manager Course	1 hour
D&I Program Manager or Chief Diversity & Inclusion Officer	On-going

APPENDIX
ATTACHMENT 1

Table 1. Plan Choices for Military Beneficiaries Compared to Federal Civilians

#	QFR	Air Force UPL Item #1	Air Force UPL Item #2	Air Force UPL Item #3	Air Force UPL Item #4	Air Force UPL Item #5	Air Force UPL Item #6
39	General Brown, for each item on the unfunded priorities list you submit in response to 10 U.S.C. 222a, please provide the following information:	Accelerate E–7 delivery ($633.3 million)	Prioritized MILCON List ($1,223.4 million)	Post-block F–16 AESA radar ($174.4 million)	Fund ISR Digital Infrastructure ($129.8 million)	F–15EX Conformal Fuel Tank ($63.6 million)	(OI–5) Agile Communications Equipment ($227.8 million)
40	General Brown, please provide a detailed description of this UPL?	The funding would procure long lead items for the production of two E–7s. Long lead items include the basic 737 aircraft and the Multifunction Electronically Scanned Array (MESA) radar. The funding increases the fiscal year 2025 procurement profile from 1 to 2, and mitigates risk in the procurement to delivery schedule. The funding also adds research and development funds for rapid prototyping aircraft to reduce risk in the Middle Tier Acquisition schedule.	The MILCON UPL is a list of construction projects of varying scope and cost at various CONUS and OCONUS locations. The increaseing costs of contruction projects exceed orignally programmed MILCON amounts. Each project is unique, but each project is aligned with Air Force priorities that improve mission capabilities and Quality of Life.	The request funds the APG–83 AESA radar, enabling the post-block F–16 fleet to execute Homeland Defense missions.	The funds underlying classified commercial cloud based capabilities provided as metered on-demand services from the Intelligence-governed and secured to meet DAF SCI requirements. Focus is on TS/SCI capabilities as shared enterprise services for Air Force and Space Force and bridges IC applications and data with the DAF solutions in support of multi-domain operations. This will also modernize DCGS capabilities and provide enterprise architecture experts and environment at TS/SCI levels to continue to accelerate change and create mission value.	Procures 12 CFTs for previously procured F–15EX aircraft. CFTs add critical capability: increased fuel/range, 12 additional weapons stations (wired for advanced smart munitions) and enables the F–15EX to perform full range of air-to-air and air-to-ground missions.	Funding this program will enhance the Air Force's capability to conduct operations from forward operating locations and enhance air base resiliency. USAF combat unit's ability to operate and communicate from dispersed locations within the Second Island Chain will be enabled by connections in the development and fielding of hardware and software for future open mission systems platforms and the ability to develop new/modify existing communication pathways. Funding for Agile Communications Equipment supports the NDS's Resilient Future Force design with decision advantage.

APPENDIX
ATTACHMENT 1—Continued
Table 1. Plan Choices for Military Beneficiaries Compared to Federal Civilians

#	QFR	Air Force UPL Item #1	Air Force UPL Item #2	Air Force UPL Item #3	Air Force UPL Item #4	Air Force UPL Item #5	Air Force UPL Item #6
41	General Brown, what does the UPL purchase	The funding will accelerate delivery of two E–7 aircraft and supports Combatant Command's Air Moving Target Indicator requirements. The acceleration of E–7 delivery supports NDS objectives and will enable the Joint Force to deter, and if needed prevail, in a high end conflict.	An approximate understanding of what the MILCON UPL could purchase can be obtained from each project title. A small sampling from the UPL includes antiterrorism gate upgrades at F.E. Warren AFB, an F–35 Maintenance Facility at Hill AFB, a Cyber Operations Center at JBSA, and Military Family Housing improvements at Yokota AB. For additional details on each project and operational impacts please reference the DD 1391s previously transmitted.	Funding this program ensures over 25 percent of the F–16 advanced combat fleet will be able to execute Homeland Defense missions. The project improves the Department of Defense's ability to protect the Nation, partners, and assets. The request supports the NDS priority to Defend the Homeland.	The funding would provide: -an extension of the ecosystem of commercial cloud-based software capabilities from the IC and DOD to a regional edge infrastructure allowing for temporary disconnected Air Force operations with a critical subset of capabilities specifically geared toward more sensor to shooter automation; -new high-speed, resilient Intelligence network transport meshed with ABMS-provided black network backbone to optimize use of available capacity to improve resilience and reduce latency; -Air Force Intel managed Infrastructure as a Service (IaaS), Platform as a Service (PaaS) services and DevSecOps platform that includes IC security governance and controls -Air Force Intelligence big data platform, which is the TS/SCI portion of the DAF Data Fabric, integrates other IC data platforms with the DAF; -the complementary services to Platform One that provide DAF classified DevSecOps and cloud based enterprise services necessary for the operational imperatives; -security services for cloud-based capabilities; -enterprise artificial intelligence model development and management environment with a marketplace at all three classifications; -Air Force ISR capability inside the DCGS program as one of the primary customers of the AF ISR DI to refactor into a cloud-native model and integrate with national capabilities -enterprise architect and tools in TS/SCI environment that continue designing innovative improvements to the ISR Sensing Grid environment to continue accelerating change and keep ahead of pacing challenges.	Funding the CFTs increase both range and payload for the F–15EX. This increase allows the F–15EX to patrol longer and farther, as well as carry the appropriate amount and mix of armament to defend the homeland and deter the pacing challenge in the Indo-Pacific. Funding for F–15EX CFTs supports the NDS priority to Defend the Homeland and Deter/Prevail in Conflict	(U) Funding this program will procure 66 Agile Comm Packages (ACP) and 99 Fly Away Communications Terminals (FACTs) for MAJCOMs for Agile Combat Employment (ACE) communication requirements needed to support AF Force Generation (AFFORGEN) Model. This includes standardized equipment that allows airmen to access critical mission data on NIPR, SIPR, and Top-Secret networks (deployable JWICS) through resilient and redundant connectivity paths, training, and sustainment. Current Air Force expeditionary communications alignment and capacity is insufficient to support AFFORGEN.

42	General Brown, please include detail on all end items with quantities, contractor FTEs, etc.	Funding this program will accelerate delivery of 2 E–7 aircraft and meet Combatant Command's Air Moving Target Indicator requirements. Funding accelerated E–7 delivery supports the Joint Force to deter, and if needed, prevail, in a high end conflict.	An approximate understanding of what the MILCON UPL could provide can be obtained from each project title. A small sampling from the UPL includes antiterrorism gate upgrades at F.E. Warren AFB, an F–35 Maintenance Facility at Hill AFB, a Cyber Operations Center at JBSA, and Military Family Housing improvements at Yokota AB. Additional details are provided in the DD 1391s previously transmitted.	Funding the program ensures over 25 percent of the F–16 advanced combat fleet will be able to execute Homeland Defense missions; improving the Deparment of Defense's ability to protect its territory, partners, and assets. The project supports the NDS priority to Defend the Homeland.	Funding this priority transitions prior Intelligence investments to long-term sustainable programs united under C3BM for C2 to encompass all Air Force ISR and DAF SCI cloud-based requirements. Current customer programs include DAF RCO, Space RCO, Rhombus Guardian (A8 financial data), UDL (space data), ELICSAR (cyber data), and 135 others. Custody engine and sensor to shooter are all dependent on AF ISR DI capabilities foundationally.	The CFTs increase both range and payload for the F–15EX. This increase allows the F–15EX to patrol longer and farther, as well as carry the appropriate amount and mix of armament to defend the Homeland and deter our pacing challenge in the Indo-Pacific. Funding for F–15EX CFTs supports the NDS priority to Defend the Homeland and Deter/ Prevail in a conflict	Funding this program will increase the USAF's capability to conduct operations from forward operating locations and enhance air base resiliency. This equipment enables dispersed units to connect with hubs, airborne aircraft, and the JADC2 framework to provide field conditions, received and distribute intelligence information, provide resupply requirements, and coordinate medical support requirements.
43	General Brown, what specific capability will the UPL provide?	Funding this program will accelerate delivery of 2 E–7 aircraft and meet Combatant Command's Air Moving Target Indicator requirements. Funding accelerated E–7 delivery supports the NDS priority to Deter/ Prevail in Conflict.	An approximate understanding of what the MILCON UPL could provide can be obtained from each project title. A small sampling from the UPL includes antiterrorism gate upgrades at F.E. Warren AFB, an F–35 Maintenance Facility at Hill AFB, a Cyber Operations Center at JBSA, and Military Family Housing improvements at Yokota AB. Additional details are provided in the DD 1391s previously transmitted.	Funding the program ensures over 25 percent of the F–16 advanced combat fleet will be able to execute Homeland Defense missions; improving the Deparment of Defense's ability to protect its territory, partners, and assets. The project supports the NDS priority to Defend the Homeland.	Funding this priority transitions prior Intelligence investments to long-term sustainable programs united under C3BM for C2 to encompass all Air Force ISR and DAF SCI cloud-based requirements. Current customer programs include DAF RCO, Space RCO, Rhombus Guardian (A8 financial data), UDL (space data), ELICSAR (cyber data), and 135 others. Custody engine and sensor to shooter are all dependent on AF ISR DI capabilities foundationally.	The CFTs increase both range and payload for the F–15EX. This increase allows the F–15EX to patrol longer and farther, as well as carry the appropriate amount and mix of armament to defend the Homeland and deter our pacing challenge in the Indo-Pacific. Funding for F–15EX CFTs supports the NDS priority to Defend the Homeland and Deter/ Prevail in a conflict	Funding this program will increase the USAF's capability to conduct operations from forward operating locations and enhance air base resiliency. This equipment enables dispersed units to connect with hubs, airborne aircraft, and the JADC2 framework to provide field conditions, received and distribute intelligence information, provide resupply requirements, and coordinate medical support requirements.
44	General Brown, what gap will this fill that is not in the base budget?	The E–3 is increasingly limited in its ability to provide the Airborne Moving Target Indication and Airborne Battle Management Command and Control (BMC2) capability needed by combatant commanders. The fiscal year 2024 base budget seeks to close that capability gap by funding the rapid prototyping of two E–7 aircraft to serve as the Department of the Air Force modern BMC2 node for a high end fight, with initial production slated to begin in fiscal year 2025. The fiscal year 2024 UPL request doubles initial production from 1 tail to 2, and procures long lead items 1 year early, mitigating risk to the delivery schedule while closing the capability gap more rapidly.	The MILCON UPL is a list of construction projects that represents vetted DAF priorities that support the objectives of the National Security, Military, and Defense Strategies. Additionally, many of the projects increase Quality of Life and security at our installations.	The fiscal year 2024 base AESA budget is zero. fiscal year 2024 will fail to support spares, installs, Interim contract support repairs, continued AESA radar software development to reach full validated capability requirements, and begin depot stand-up/activation for AESA radar sustainment.	The base budget does not include non-intelligence provided central funding for these Air Force ISR capabilities that can support DAF SCI requirements today; capacity is elastic and scalable with Air Force ISR DI tenants funding just what they needed when needed.	CFTs, along with the increased weapons carriage capabilities they provide, fill "Other System Attribute" requirements from the 1 Feb 2019 F–15EX Rapid Fielding Requirements Document.	(U) The operational need at the Wing level for temporary (i.e., one to several weeks) and sustained (i.e., far into foreseeable future) on-scene expeditionary communications to provide decentralized execution, speed tactical action against fleeting opportunities, shorten kill chains, support time-sensitive targeting, and drive the dynamic targeting process through tactical operators following mission type orders. Current Air Force expeditionary communications alignment and capacity is insufficient to support AFFORGEN.The base budget procures an initial tranche of this capability but does not fully equip INDOPACOM units and follow-on forces from other MAJCOMs.

APPENDIX

ATTACHMENT 1—Continued

Table 1. Plan Choices for Military Beneficiaries Compared to Federal Civilians

#	QFR	Air Force UPL Item #1	Air Force UPL Item #2	Air Force UPL Item #3	Air Force UPL Item #4	Air Force UPL Item #5	Air Force UPL Item #6
45	General Brown, how will this capability support objectives outlined in current National Security, Military, and Defense Strategy documents?	The E–7 supports the NDS priority to deter, and if needed, prevail, in a high end conflict. The E–7 also supports the NDS priority for Homeland Defense by providing wide area detection capabilities able to counter modern air and cruise missile threats.	The MILCON UPL is a list of construction projects of varying scope and cost at CONUS and OCONUS locations. Each project is unique, but represents vetted DAF priorities that support the objectives of the National Security, Military, and Defense Strategy documents in a variety of ways. This includes projects in the United Kingdom to support posture setting activities with increased munitions capability and positioning of Deployable Air Base Systems. Support to F–35 beddown at Hill AFB and multiple projects to improve the quality of life of our airmen and guardians. All projects are in line with the top four defense priorities outlined in the NDS.	Funding the program ensures over 25 percent of the F–16 advanced combat fleet will be able to execute Homeland Defense mission, improving the Department of Defense's bility to protect its territory, partners, and assets. Funding supports the NDS priority to Defend the Homeland.	More warfighting has shifted to dependance on TS/SCI data and capabilities in peer competition and conflict than ever before. Fighting on JWICS, SAP-based SCI, data aggregation all bring additional requirements above intelligence requirements. The expansion extends to new modern technology delivery methods in commercial cloud taking advantage of mature options based on the long standing Intelligence community (IC) work. National Intel data and applications seamlessly meshed with DOD data and applications is foundational to countering adversary capabilities at the scope and scale required, ultimately shortening the long range kill chain.	Funding for F–15EX CFTs supports the NDS priority to defend the Homeland and deter, and if needed prevail, in a high end conflict	[Deleted.]

46	General Brown, what is the operational requirement? How does this UPL support current or future operations?	The requirement is to provide Air Moving Target Indicator (AMTI), Airborne Battle Management, and Command and Control (BMC2) to counter advanced and emerging air threats fielded or in development by adversaries. The requirement also answers Joint and coalition forces requirement for a mix of space and airborne next-generation sensors, weapons, and decision support for C2 in the air domain. Our ability to project airpower is directly tied to our ability to execute agile command and control of those forces. Airborne C2, currently provided by our rapidly aging E–3 fleet, is our best way to do this. The E–7, as the replacement for the E–3, will provide airborne C2 with improved capability and mission effectiveness that will directly enable our capacity to meet the challenge of our pacing threat.	An approximate understanding of how the MILCON UPL supports current or future requirements can be obtained from each project title. A small sampling from the UPL includes antiterrorism gate upgrades at F.E. Warren AFB, an F–35 Maintenance Facility at Hill AFB, a Cyber Operations Center at JBSA, and Military Family Housing improvements at Yokota AB. Additional details are available in the DD 1391s for each project previously transmitted.	Funding the program ensures over 25 percent of the F–16 advanced combat fleet will be able to execute Homeland Defense missions; improving the Deparment of Defense's ability to protect its territory, partners, and assets. The project supports the NDS priority to Defend the Homeland.	The operational requirement is to prosecute more moving targets faster in a dispersed resilient, manner in a contested AOR. This will require automation, and eventually AI, to meet the operational capability need. Only by harnessing the agility of software can solutions be provided at the speed of need at scale supported through commercial hyperscale cloud capabilities securely and resiliently.	CFTs, along with the increased weapons carriage capabilities they provide, fill ''Other System Attribute'' requirements from the 1 Feb 2019 F–15EX Rapid Fielding Requirements Document.	(U) The operational need for temporary (i.e., one to several weeks) and sustained (i.e., far into foreseeable future) on-scene expeditionary communications will continue to be a military requirement to provide decentralized execution, speed tactical action against fleeting opportunities, shorten kill chains, support time-sensitive targeting, and drive the dynamic targeting process through tactical operators following mission type orders. Current AF expeditionary communications alignment and capacity is insufficient to support AFFORGEN. Furthermore, the AF previously divested of these capabilities in a 2013 Deployable Communications Program Action Directive.
47	General Brown, what is the operational impact if this UPL is not funded in fiscal year 2024?	The Air Force and Joint Force are challenged to execute long range kill chains in highly contested environment with forward operating locations and for Homeland Defense. If the UPL is not funded, we miss an opportunity to close the capability gap more rapidly. Further, any delay to E–7 procurement will materially impact our capacity to execute airpower and consequently our ability to enable joint, all-domain operations. This puts our forces at a disadvantage and empowers our adversaries as a result.	If the MILCON UPL is not funded, execution of these requirements will be delayed.	Currenlty, 67 AESA radars will not be fielded and will remain on the shelf, uninstalled, unavailable for combat forces.	If left unfunded, the capability will be delayed until later in the FYDP and potentially not be there in time for a high end conflict. Capabilities require time to build, mature, and stabilize for programs to learn to depend on them and modify their traditional methods of IT delivery. Lack of capability in fiscal year 2024 will have programs building duplicate services internal to their programs vice using a centrally created set which standards with their resourced requirements; complicating integration in the joint war fight.	If this UPL is not funded, only 12 of 24 Lot 5 aircraft will deliver with CFTs, reducing weapon system capability and extending the time the AF would need to operate a mixed-configuration of the F–15EX fleet. Additionally, the F–15EX will be constrained to primarily employing air-to-air munitions (as large air-to-ground weapons can otherwise only be carried on Station 5).	[Deleted.]
48	General Brown, are there plans to include this item in the fiscal year 2025 base budget?	The AF is still preparing the fiscal year 2025 budget and content is pre-decisional.	The Air Force is still preparing the fiscal year 2025 budget and content is pre-decisional.	The Air Force is still preparing the fiscal year 2025 budget, and content is pre-decisional.	The AF is still preparing the fiscal year 2025 budget, and content is pre-decisional.	The AF is still preparing the fiscal year 2025 budget, and content is pre-decisional.	The AF is still preparing the fiscal year 2025 budget, and content is pre-decisional.

APPENDIX

Table 1. Plan Choices for Military Beneficiaries Compared to Federal Civilians

#	QFR	Air Force UPL Item #1	Air Force UPL Item #2	Air Force UPL Item #3	Air Force UPL Item #4	Air Force UPL Item #5	Air Force UPL Item #6
49	General Brown, why was this UPL not included in the Fiscal Year 2024 President's Budget submission?	The fiscal year 2024 President's Budget prioritized many critical future capabilities, and includes significant investment in the E–7 program. The fiscal year 2024 UPL request will help close the capability gap more rapidly	The Air Force has a long range MILCON that plan spans several years This UPL contains projects we could accelerate if the funding were made available.	While this upgrade is important, the Air Force prioritized funding future capabilities over upgrading legacy fighters to achieve NDS objectives.	This digital infrastructure improvement is absolutely important. However, we must balance and prioritize funding future capabilities and needs. This is an area we can accelerate work for consistent and secure IT for our networks and our weapons systems.	While this upgrade is important, the Air Force prioritized funding future capabilities over upgrading legacy fighters in order to attempt to achieve NDS guidance.	While this capability is important, the AF needed to prioritize funding future capabilities over funding the Agile Comms Equipment (ACE) to the full requirement.
50	General Brown, what is the name of the vendor(s) executing this effort? Sub-vendor(s)?	Vendor: Boeing Defense, Space & Security. Major Sub vendors: Northrop Grumman and Collins	The Air Force utilizes multiple vendors for MILCON projecst. We are available to provide a briefing on specific projects.	Installation: Lockheed Martin OEM: Northrop Grumman	Booz Allen Hamilton; CACI; SAIC; LEIDOS; iCR	Prime: Boeing Sub-vendor: Israeli Aerospace Industries (current Qatari F–15QA conformal fuel tank supplier)	There are multiple vendors. The Air Force is able to provide a briefing to provide additional details. Baseband: Iron Bow / Sub PACSTAR MILSATCOM: TBD Commercial SATCOM: TBD (USSF Contract) Tactical Data Links: TBD JWICS Transport: TBD
51	General Brown, how often has your command met with the vendor executing this effort? Please provide a list of all such meetings, and the agenda for these meetings?	I do not participate in the acquisition decisionmaking process for the Air Force. Acquisition decisions reside with the Secretary of the Air Force and subordinate acquisition authorities within the Department of the Air Force. The protections in place that identify and address conflicts of interest in the acquisition decisionmaking process also apply to the programs contained within the Air Force UPL for fiscal year 2024. Acquisition decisions reside with the Secretary of the Air Force and subordinate acquisition authorities within the Department of the Air Force. The protections in place that identify and address conflicts of interest in the acquisition decisionmaking process also apply to the programs contained within the Air Force UPL for fiscal year 2024.

52	General Brown, what is your history with this vendor? Please detail when the relationship began, the number of contracts applied for by this vendor, the number of contracts awarded to this vendor, and if you have had a personal relationship with the vendor?	I do not participate in the acquisition decisionmaking process for the Air Force. Acquisition decisions reside with the Secretary of the Air Force and subordinate acquisition authorities within the Department of the Air Force. The protections in place that identify and address conflicts of interest in the acquisition decisionmaking process also apply to the programs contained within the Air Force UPL for fiscal year 2024.	I do not participate in the acquisition decisionmaking process for the Air Force. Acquisition decisions reside with the Secretary of the Air Force and subordinate acquisition authorities within the Department of the Air Force. The protections in place that identify and address conflicts of interest in the acquisition decisionmaking process also apply to the programs contained within the Air Force UPL for fiscal year 2024.	I do not participate in the acquisition decisionmaking process for the Air Force. 54	General Brown, in which city/ State will the UPL be executed?	If the UPL is funded, the Air Force anticipates awarding a contract to Boeing Defense, Space & Security. Components for E–7 long-lead parts come from many states. The major contributors are Washington, Kansas, Ohio, Maryland, and Oklahoma.	The UPL MILCON projects would execute in multiple states and countries. Please reference the UPL MILCON prioritized list for locations.	Baltimore, MD; to be delivered to Active, Guard, and Reserve Air Force bases.	There is work being done on this effort across mutliple states and cities with remote workers. Primary hubs are in San Antonio, Texas; Rome, New York, and Washington DC.	St. Louis, MO; to be delivered with Lot 5 aircraft.	Contract details are to be determined and executed from Hanscom AFB, MA

#	QFR	Air Force UPL Item #1	Air Force UPL Item #2	Air Force UPL Item #3	Air Force UPL Item #4	Air Force UPL Item #5	Air Force UPL Item #6
55	General Brown, is this requirement on an existing contract? If so, with who? What is the history of the contract?	The Research, Development, Test and Evaluation (RDT&E) requirement ($37.2 million) is on an existing contract. The Advanced Procurement ($596.16 million) requirement is not currently on contract. The RDT&E dollars ($37.2 million) would fund requirements on the existing E–7 Rapid Prototyping Contract. That existing contract was awarded to Boeing Defense, Space & Security on 28 Feb 2023 initiating the E–7 Rapid Prototyping effort. It was an undefinitized contract award with a not to exceed value of $1.2 billion. The Air Force anticipates definitizing that contract in the 2QFY24. The APAF dollars ($596.16 million) would fund a production requirement, which is not currently on an existing contract. The APAF dollars ($596.16 million) would fund Advanced Procurement for E–7 long-lead components and would go on a new production contract with Boeing Defense, Space & Security.	There are no existing contracts.	Yes, contract is with Northrop Grumman to procure radars and Lockheed Martin is contracted to perform installs.	There are multiple existing service contracts utilizing commercial cloud services, but a more detailed data call would be required in order to furnish this information.	No. The requirement is not on an existing contract.	This is a new contract awarded Dec 2022.
56	General Brown, what is the anticipated contract award date if the UPL receives funding?	The anticipated production contract award date is 3-months after UPL funding is appropriated.	The anticipated award date is 3-months after UPL funding is appropriated.	Contract to be awarded 1Q FY2024 to fund AESA installs.	The contracts are already in place; the Air Foce can quickly obligate the funding and execute the work.	To be awarded with the Lot 5 contract in Jun 2024.	NLT 2d quarter fiscal year 2024
57	General Brown, what funding lines are associated with this UPL?	The funding line associated with the E–7 is Air Force Line, R–41 (R–1 E–7) Program Element Code (PEC) 0604007F – RDT&E.	The Air Force submitted 21 prioritized MILCON projects. We can provide additional details for each project as requested.	The funding line associated with F–16 AESA is Program Element Code (PEC) 0207133F.	This would execute in Program Element Code (PEC) 027431F and 0305208F. A request has been submitted to establish a new PEC to track execution.	This would execute in Program Element Code (PEC) 0207146F.	This would execute in Program Element Code (PEC) 0207422F and 0207431F.

58	General Brown, if multiple appropriations fund this requirement, must all appropriations be funded simultaneously to source this requirement, or can each appropriation stand on its own to fund a portion of the requirement?	The UPL is comprised of both RDT&E and Aircraft Procurement Air Force (APAF) funding. Each appropriation can stand on its own to fund certain aspects of the requirement.	The projects can stand on their own.	The project can stand on its own.	This project can stand alone and does not rely on other projects.	The project would fall under aircraft procurement (3010 Approp) only.	The projects vary and some can stand on their own.
59	General Brown, how much was enacted and obligated (or expended for RDT&E) in fiscal year 2022 to fiscal year 2023 for this requirement?	As of 30 April, $22 million has been oblicated in (FY22) for RDT&E funding, with $2.1 million expended. In (FY23) $320.2 million has been obligated in RDT&E funds, with $43.9 million expended for the E–7A.	No MILCON funding was enacted or obligated related to this project.	Fiscal year 2022 $317.164 million; fiscal year 2023 $286.141 million	No funding was enacted or expended. Funding for ISR Digital Infrastructure pilots and projects was sourced from PECs 35022F and 35208F.	No RDT&E was enacted or obligated for F–15EX CFTs in fiscal year 2022 to fiscal year 2023.	RDT&E funded for in fiscal year 2023 was $16,000.
60	General Brown, how much was requested in fiscal year 2024 for this requirement?	The Air Force (DAF) requested $681 million in fiscal year 2024 as the baseline budget for the E–7.	None	We requested $174.5 million for this program in fiscal year 2024.	No funding was requested in the fiscal year 2024 President's Budget due to fiscal constraints.	$70.8 million was requested within the AME line for 12 CFT sets, $17.9 million was requested within Initial Spares line for CFT spares, and $16.6 million was requested within the Support Equipment line for CFT SE.	The Air Force requested $1.269 billion in fiscal year 2024. The request represents the maturation of ACE concepts and evaluation of potential distributed locations that require significant infrastructure improvements.
61	General Brown, is there a tail associated with this UPL?	The UPL funds long lead time parts such as the green Boeing 737 aircraft and the MESA radar. Procurement funding is required in fiscal year 2025 to complete the integration of the mission systems on these aircraft.	MILCON projects require feasibility studies and design money prior to executing a project.	Yes, funds are needed fiscal year 2024 to fiscal year 2029 to complete the full F–16 AESA program.	Additional details can be provided if Congress appropriates the funds.	There is no tail accociated with F–15EX CFTs.	The FYDP will continue to request funding to mature ACE concepts.
62	General Brown, is any tail funded in the future years defense program?	The AF is still preparing the fiscal year 2025 budget and content is pre-decisional.	There is no projected tail funding for the MILCON.	The AF is still preparing the fiscal year 2025 budget and content is pre-decisional.	Additional details can be provided if Congress appropriates the funds.	No CFT tail is funded in the FYDP.	The FYDP will continue to request funding to mature ACE concepts.
63	General Brown, please describe how much the requirement will cost per year for the next 5 years.	DAF is continuing to refine its requirements in the future years defense program (FYDP) through our formal processes. The Air Force will continue to communicate those requirements of the E–7 with Congress and the committees over the next few years. Currently, the service cost position (SCP) is being drafted.	The requriements will be determined by force structure changes and environmental assessments.	AESA radars have already been purchased. fiscal year 2024 UPL request is to fund installation of the new radars. If this UPL item is chosen for funding, the estimated FYDP funding requirements would be: fiscal year 2025 $102.6 million; fiscal year 2026 $81.6 million; fiscal year 2027 $51.1 million; fiscal year 2028 $31.3 million; fiscal year 2029 $21.9 million	The Air Force would like to offer a brief on the ISR Digital Infrastructure initiative in order to provide additional funding details once the fiscal year 2025 budget is released.	The Air Force has not yet determined if CFTs are required for the entire F–15EX fleet; however, a report was delivered to Congress detailing the costs and options to outfit the F–15EX fleet with CFTs.	The fiscal year 2025 POM and FYDP associated is pre-decisional. The Air Force can provide a brief to offer additional details on ACE concepts.

64	General Brown, please provide in detail the previous funding requests and enacted for this requirement, including if it was in the base budget or UPL.	In fiscal year 2022, the DAF requested $22.2 million (RDT&E) New Start to stand up the E–7 program office and its personnel. Congress appropriated $22.2 million. In fiscal year 2023, the DAF requested $226.8 million (RDT&E) for the E–7A program, and Congress appropriated $426.8 million.	The Air Force would like to offer a brief to provide additional funding details.	All prior funds were base budget or a congressional add (for ANG requirements); nothing has been funded on a prior UPL.	Fiscal year 2024 was the first year the Air Force tried to source funding for this requirement.	No funding requests for F–15EX CFTs have been requested in previous budgets or UPLs	A total of $77,000 was enacted for the ACE program in fiscal year 2023. There are other capabilities funded seperately that funded ACE.
65	General Brown, if the requirement is not included in the future years defense plan, will that be rectified in the next Program Objective Memorandum or the Program, Planning, Budget, and Execution (PPBE) cycle?	The Air Force will continue to fund E–7 capabilities in future years. However to accelerate procurement funding, the Air Force must invest in fiscal year 2024 to increase future capabilities and mitigate delivery delays.	The Air Force is preparing the fiscal year 2025 budget, and content is pre-decisional.	The Air Force is preparing the fiscal year 2025 budget, and content is pre-decisional.	The Air Force is preparing the fiscal year 2025 budget, and content is pre-decisional.	The Air Force is preparing the fiscal year 2025 budget, and content is pre-decisional.	The Air Force must invest in additional capabilities and formalize training programs to field an agile force that sets the theater and establishes distributed command and control. Funding requests will decrease in the FYDP but there will be additional investments.
66	General Brown, please provide photos of this requirement for visual aid.	Please see photos below.	N/A	Please see photos below.	N/A	Please see photos below.	N/A
