DEPARTMENT OF DEFENSE AUTHORIZATION REQUEST FOR APPROPRIATIONS FOR FISCAL YEAR 2024 AND THE FUTURE YEARS DEFENSE PROGRAM

TUESDAY, MARCH 7, 2023

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

UNITED STATES SPECIAL OPERATIONS COMMAND AND UNITED STATES CYBER COMMAND

The Committee met, pursuant to notice, at 9:31 a.m., in room G–50, Dirksen Senate Office Building, Senator Jack Reed (Chairman of the Committee) presiding.

Committee Members present: Senators Reed, Shaheen, Gillibrand, Blumenthal, Hirono, Kaine, King, Warren, Peters, Manchin, Duckworth, Rosen, Kelly, Wicker, Fischer, Cotton, Rounds, Ernst, Sullivan, Scott, Tuberville, Mullin, Budd, and Schmitt.

OPENING STATEMENT OF SENATOR JACK REED

Chairman REED. I would like to call this hearing to order. Good morning. The Committee meets today to receive an update on the readiness and posture of U.S. Special Operations Command (SOCOM) and U.S. Cyber Command.

Our witnesses are Assistant Secretary of Defense for Special Operations and Low Intensity Conflict (LIC), Christopher Maier, Commander of U.S. Special Operations Command, General Bryan Fenton, and Commander of U.S. Cyber Command and Director of the National Security Agency, General Paul Nakasone.

On behalf of the Committee, I would ask our witness to convey our appreciation to the men and women you represent and their families for their service and professionalism. We live in a complex and dangerous global security environment. From Russia's aggression in Europe to China's malign influence in the Indo-Pacific, to persistent threats from Iran, North Korea, and violent extremist groups, prevailing in this environment will require the tailored and often clandestine capabilities that only our special operations and cyber forces can provide.

The United States has been reducing its footprint in conflict zones around the world. As such, the special operations community is at an inflection point, but is no less relevant to the future challenges we face. As the Defense Department's recently released

Joint Concept for Competing makes clear, the object of our Nation's adversaries is to win without fighting.

The Concept warns that if we do not adapt to the realities of long-term competition, the United States risks ceding strategic influence, advantage, and leverage, while preparing for a war that never occurs.

The skills, knowledge, or perhaps most importantly, the relationships with foreign partners that our special operations forces have developed over the past 20 years of combat make them well-positioned to contribute significantly to the strategic competition. Assistant Secretary Maier and General Fenton, I look forward to an update regarding your efforts to focus and prepare our special operations forces (SOF) for the challenges ahead.

In particular, I would ask that you discuss the capabilities we need to build an enduring advantage over our competitors, and what lessons can be drawn from the ongoing conflict in Ukraine. As part of this, I would like to know how you are shaping the force of the future through new recruiting and retention efforts, including building a culture of accountability.

A number of high-profile misconduct cases have reflected poorly on the special operations community and additional efforts to buildupon SOCOM's [Special Operations Command's] 2020 Comprehensive Review of Culture and Ethics, seems necessary. I also want to hear how you are addressing the unique challenges faced by special operations family.

The Office of the ASD [Assistant Secretary of Defense] SO/LIC plays a critical role in the oversight of and advocacy for our special operations forces, as the service secretary-like civilian for SOCOM. I believe more must be done to assure ASD SO/LIC is provided the necessary authority and resources, including manpower, to fulfill these responsibilities. I look forward to hearing more about the Department's efforts on this front.

Turning to Cyber Command, I would like to commend our cyber forces and the intelligence community for their performance over the past year in exposing Russia's activities and helping Ukraine defend itself against both kinetic and cyber-attacks. Intelligence officials are understandably cautious about revealing hardware insights on adversaries, but this current surge has proven highly effective in strengthening the international community's response and creating dilemmas for Vladimir Putin.

This is a great example of competing effectively in the information domain, and I hope we will continue to make this kind of creative use of intelligence. Some of the tools in our toolbox, like the section 702 authority from the Foreign Intelligence Surveillance Act, or FISA, are critical to our ability to counter our adversaries' malign activities.

The Committee would appreciate your views on the importance of Section 702 of FISA, which sunsets at the end of this year, and why you believe it is essential that we renew that authority. We would like also to know what guardrails are in place to give the public confidence that the authority is being used judiciously.

General Nakasone, you have been working to mature the cyber force in advance its capabilities to conduct offensive, offensive, and supporting intelligence operations. It is widely recognized that our

cyber mission forces are struggling with shortfalls in personnel numbers. We know that addressing this issue is your highest priority.

The military services must also ensure their personnel management provides qualified and trained personnel to your Command at the beginning of their tours, so both the personnel and the Command can take full advantage of the time of their assignment to your force. I would also note that the private sector has realized the immense value of our cyber operatives and offering them very high compensation to leave the military.

The services must adjust accordingly by providing a creative combination of incentives to compete for and retain these personnel. Finally, over the last decade, a recurring debate has been waged over whether to sustain the dual hat arrangement whereby the Commander of Cyber Command also serves as the Director of the NSA [National Security Administration].

Recently, an independent panel established by the Director of National Intelligence and the Secretary of Defense and led by former Chairman of the Joint Chiefs of Staff, General Joe Dunford, concluded that the dual hat arrangement should be sustained. We would welcome your thoughts on this issue.

Thank you again to all witnesses for your service and appearance before us today. I look forward to your testimony. Now, let me recognize the Ranking Member, Senator Wicker.

STATEMENT OF SENATOR ROGER F. WICKER

Senator WICKER. Thank you, Mr. Chairman, for that very fine and thorough statement. I very much appreciate that, and I want to thank our witnesses for being with us once again. The United States faces the most complex and daunting set of security challenges since the height of the cold war, and our witnesses today are on the front lines of those challenges.

From the Chinese Communist Party's (CCP) unprecedented military buildup, growing hegemonic ambitions, to Russia's brazen and unprovoked attack on Ukraine, our adversaries are testing American resolve. Our foremost adversary and competitor, the Chinese Communist Party, has stressed both SOCOM and CYBERCOM in ways we never imagined a decade ago.

Last year, General Nakasone said Chinese advances in cyber operations are unlike anything he has seen before. He also noted the People's Republic of China (PRC) is a more difficult adversary than the Soviet Union because they are much more tolerant of risk. This presents new challenges to our deterrence posture.

Although Beijing may be our foremost advisory, others are not far behind. The cyber capabilities of Russia, Iran, and North Korea have continued to surprise many. I would appreciate an update on DOD's work to implement a zero-trust architecture and provide defensive cyber tools across the Department and the industrial base.

I also look forward to discussing how collaborative cyber activities with our allies and partners such as hunt forward operations have helped to identify vulnerabilities, mitigate threats, and strengthen our network defenses. Military success in cyberspace depends on the readiness of our cyber mission forces. I hope to hear about how we can improve our cyber force readiness and accelerate

development of cyber capabilities, particularly on the offensive side. General Fenton is no stranger to the determination of the People's Liberation Army.

Having served as Commander of our Special Operations Forces in the Pacific, and the Deputy Commander of INDOPACOM [Indo-Pacific Command], his challenge is twofold, to build a force capable of enhancing our deterrence and warfighting in the Western Pacific, even as the threat environment facing our Nation demands that SOCOM should remain fully engaged in the fight against violent Islamic terrorist groups across the world, from Africa to South Asia.

His Command's work is critical to our country's security and is often the first to respond to our Nation's most pressing, unforeseen emergencies. In the 2022 National Defense Strategy. General Fenton's forces have been asked to assume significant risk.

I think this Committee will want to ensure his Command is fully resourced to mitigate that risk to the degree possible, and I would also ask General Fenton and Mr. Maier whether their authorities and resources in the upcoming year are sufficient for mission tasks. What is clear to me is that the role and importance of special operations forces is only increasing as the nature and complexity of threats facing our Nation increase.

The resources we provide to Special Operations Command should reflect that reality. Our first job in this community is to provide the tools our military needs to deter, and if not successful there, to defeat these threats. There is no doubt that continued real growth in the defense budget top line above inflation remains essential to our national security. This requires action now, not later.

Our adversaries are not waiting, neither should we. This Committee led the bipartisan charge to increase the defense budget in last year's cycle. Mr. Chairman, I frankly have little confidence that the Administration budget request this year will be sufficient. If it is not, this Committee will again need to step up to ensure that our military has the resources it needs to defend the Nation.

Thank you, Mr. Chairman, and thanks to our witnesses. Look forward to hearing from you.

Chairman REED. Thank you very much, Senator Wicker. We will begin with Secretary Maier, please.

STATEMENT OF THE HONORABLE CHRISTOPHER MAIER, ASSISTANT SECRETARY OF DEFENSE FOR SPECIAL OPERATIONS AND LOW-INTENSITY CONFLICT

Mr. MAIER. Chairman Reed, Ranking Member Wicker, and distinguished Members of this Committee, thank you for providing the opportunity to testify on the global posture of our Nation's Special Operations Forces, or SOF.

I am honored to appear alongside General Fenton and General Nakasone. I could not ask for better teammates than General Fenton and Command Sergeant Major Shane Shorter in ensuring your SOF enterprise is prepared to address the threats facing the United States today and in meeting the challenges to come.

I start with thanking Congress, and especially this Committee, for your enduring support of the men and women of SOF. I am particularly grateful for your assistance in building the organization I

lead, Special Operations and Low Intensity Conflict, or SO/LIC, with dedicated and gifted public servants.

Sitting before this Committee last year, I testified we were at an inflection point in SOF's transformation to focus more on the pacing challenge of China and the acute threat posed by Russia, while maintaining enduring capabilities to counter violent extremist organizations, address Iran's destabilizing behavior, and conduct no fail crisis response around the globe.

Today, in updating you on this progress and the work that remains I will highlight three areas, SOF's ongoing transition in support of the National Defense Strategy, the development of SO/LIC, and our continued emphasis on empowering and supporting our people.

First, we are transforming the SOF enterprise to achieve the goals of the National Defense Strategy (NDS). While SOF's role in counterterrorism is widely understood and appreciated, my team and I work daily to ensure the value proposition of SOF in integrated deterrence and campaigning against strategic competitors is accounted for and incorporated into the Department's processes.

As it has been in every major military challenge this Nation has confronted since World War II, your SOF will play an essential role. To start the deep relationship SOF has forged with allies and partners over the last 2 decades, often through shared challenges and sacrifice, has produced an international SOF enterprise that provides us unique, firsthand understanding of a global operating environment.

It also has enhanced the resilience of our allies and partners to resist aggression. Second, drawing on the resilience—second, drawing on those relationships and our ability to reach some of the most difficult locations on the globe, your SOF formations provide unique access and placement that creates options for our Nation's leaders, and SOF as adept at creating dilemmas for our adversaries.

Here, I would highlight the many years of our investment in transforming the Ukrainian forces into highly capable force that is consistently outperforming Russia on the battlefield today. Representing the value that SOF brings to the Joint Force is one of my primary responsibilities, and we continue to make progress institutionalizing SO/LIC's role as Congress has directed.

Through my role providing civilian leadership for the organized train and equip of SOF, we have established over the last year in the Department a series of recurring processes and delivered key outcomes for the SOF enterprise. For example, the Special Operations Policy Oversight Council, which I chair, provides a senior level forum to address SOF unique challenges across the Department.

We also have made progress on important initiatives to deter our adversaries and fill warfighting gaps, especially on irregular warfare and information operations. I am also proud that SO/LIC played a central role in the Department's landmark Civilian Harm and Mitigation Response Action Plan.

Finally, I would emphasize the first SOF truth remains truer today than ever, humans are more important than hardware. None of our efforts are possible without our most important resource, our people. With the strong support of Congress, we continue to evolve

the Preservation of the Force and Family, or POTFF Program, to address SOF unique challenges and to optimize physical, psychological, social, spiritual, and now cognitive performance.

We also continue to prioritize a diverse, capable force by removing barriers to participation and advancement of SOF, an operational imperative if we are to succeed in an ever more complex geopolitical environment. Recent publicized challenges remind us that we must continue to evaluate our approach to force employment, accountability, and most importantly, present and engaged leadership.

A healthy SOF culture that reflects our Nation's values is essential to readiness and core to ensuring we remain the most lethal SOF enterprise the world has ever known. Investing in our people is a cornerstone of ensuring your SOF are ready to take on our Nation's toughest challenges, because it is not a question of if, but when the call will come.

Mr. Chairman and distinguished Members of this Committee, I thank you again for your partnership and support, and for this opportunity to testify today. I look forward to your questions.

Chairman REED. Thank you, Mr. Secretary. General Fenton, please.

STATEMENT OF GENERAL BRYAN FENTON, UNITED STATES SPECIAL OPERATIONS COMMAND

General FENTON. Chairman Reed, Ranking Member Wicker, and——

Chairman REED. Could you bring that closer, General, the microphone as close as possible?

General FENTON. Thank you. How is this, Chairman? Chairman Reed, Ranking Member Wicker, and distinguished Members of this Committee, thank you for the opportunity to appear before you today. I am honored to testify alongside the honorable Chris Maier and General Paul Nakasone, and I am equally honored to be here on behalf of the dedicated men and women of U.S. Special Operations Command.

Joining me today is Command Sergeant Major Shane Shorter, USSOCOM's Senior Enlisted Leader. Command Sergeant Major Shorter is representative of the incredible USSOCOM team, particularly our noncommissioned officer corps.

Our noncommissioned officers are the backbone of our military and a decisive advantage within your special operations community, and they make us the envy of every military around the world. We are thankful for the leadership and support of this Congress, particularly this Committee, a committee with the legacies of Senators Nunn and Cohen, who had the vision and determination to establish USSOCOM almost 36 years ago.

Thank you for your decades of steadfast support ever since. Your special operations forces remain a national advantage, as we enter a decisive era, an era where the strategic competitors such as the People's Republic of China and Russia seek to reshape the rules based international order, and in response, your special operations forces strengthen and sustain deterrence globally as part of the Department of Defense's approach to integrated deterrence.

With SOF's World War II origins and DNA rooted in decades of experience in strategic competition, now drawing upon are 20 plus years of hard-won combat credibility and coalition experience, your SOF provide creative, tailorable, and asymmetric options for our Nation, while creating dilemmas for our competitors.

As part of the broader joint force, we campaign every day to deter and prevent aggression, counter coercion, close warfighting gaps, and tackle shared challenges alongside allies and partners, all in support of accelerating the Department of Defense's strategic momentum toward our NDS objectives.

Yet your SOF also remain vigilant in protecting our Homeland and United States interests from the persistent threats posed by global terrorist networks. In doing so, your SOF work tirelessly alongside a trusted network of allies and partners, U.S. interagency counterparts, and our Joint Force teammates to disrupt VEOs wherever they may be.

While we campaign for integrated deterrence and counter violent extremists, your SOF capability to respond to crisis represent a critical strategic edge and advantage for our Nation. Agile, tailored, modernized, and capable, they enable us to undertake sensitive, high-risk missions, crucial to safeguarding and rescuing our citizens, and protecting vital national interests.

Foundational to all these efforts remains our longstanding collaborative partnership with ASD SO/LIC [Assistant Secretary of Defense for Special Operations and Low-Intensity Conflict's] Chris Maier and his team. The oversight, policy guidance, and advocacy within the Department provided by AS SO/LIC are essential for the modernization, readiness, and well-being of our SOF units and their families.

Together, we are committed to placing people as our number one priority, and we are preparing for the future by investing in them and by leveraging our Nation's diverse talent to solve diverse challenges. To those listening today who are considering service to our Nation know the profound sense of calling and purpose that those of us serving in uniform share.

We know that a deeply rewarding journey lies ahead for those who choose to join. You will be part of an incredible team of men and women tackling the toughest challenges for our Nation. Just yesterday, I had the privilege of hearing from Colonel retired Parris Davis, our Nation's most recent Medal of Honor recipient, and a Green Beret.

At yesterday's ceremony to induct him into the Pentagon's Hall of Heroes, he summed up his military service and time with a Green Beret in three words, purpose, opportunity, and pride. As we speak here today, more than 5,000 servicemembers are USSOCOM are deployed, and they share his sense of purpose and pride.

They are defending our Nation and standing shoulder to shoulder with allies and partners in over 80 countries to make our world a safer place. The courage and commitment of our special operations community, our military inspires the CSM and me daily, and we are immensely proud to serve with them. I look forward to your questions.

[The joint prepared statement of The Honorable Christopher P. Maier and General Bryan P. Fenton follows:]

JOINT PREPARED STATEMENT BY THE HONORABLE CHRISTOPHER P. MAIER AND GENERAL BRYAN P. FENTON

INTRODUCTION

Chairman Reed, Ranking Member Wicker, and distinguished Members of this Committee, thank you for this opportunity to discuss the posture of our Nation's Special Operations Forces (SOF). We are honored to present an account of the priorities, activities, and investments that ensure SOF are prepared to meet today's challenges and those to come.

On behalf of the Special Operations community, we thank you for your leadership and steadfast support. Congress's support ensures our SOF remain the world's most capable and credible, contributing integrally to safeguarding and advancing U.S. national interests. Both U.S. Special Operations Command (USSOCOM) and the Office of Special Operations and Low Intensity Conflict (SO/LIC) were established through the foresight and determination of Congress. Your enduring commitment enables our force to tackle the Nation's most challenging security problems while building enduring advantages.

SOF remain a national advantage in this decisive decade, as they have been since their formation. This will be an era marked by dramatic geopolitical, technological, economic, and environmental changes globally. SOF combine decades of combat-tested and coalition experience to advance Department of Defense (DOD) efforts to strengthen and sustain deterrence with creative, tailorable, and asymmetric options for our Nation. Together, SO/LIC and USSOCOM directly contribute to DOD and broader U.S. efforts to deter aggression by our strategic competitors, counter acute forms of coercion, and tackle shared challenges alongside our Allies and partners. With our unmatched capabilities, SOF also remain vigilant and committed to protecting Americans and America's interests globally with enduring responsibility for countering violent extremist organizations and responding to crisis.

The National Defense Strategy (NDS) is clear that we will advance our priorities through integrated deterrence, campaigning, and actions that build enduring advantages. Integrated deterrence requires the United States to sustain strategic deterrence and its conventional military advantage, including in space and cyberspace—complemented by credible irregular warfare capabilities. Competitors continue to seek advantage through coercive and malign activities in the "gray zone" below a threshold they perceive as likely to prompt a U.S. military response. SOF are uniquely positioned to draw upon our joint, global, full-spectrum, all-domain capabilities to provide asymmetric options for our Nation and create dilemmas for competitors, allowing our Joint Force to gain warfighting advantage and close warfighting vulnerabilities.

To ensure SOF are well-prepared for current and future challenges, we are focused on supporting our shared priorities—People, Win, and Transform—to strengthen our force and families, succeed for the Nation, and modernize for the future.

Advancing Civilian-Military Partnership

The Assistant Secretary of Defense for Special Operations and Low-Intensity Conflict's (ASD(SO/LIC)) oversight, policy guidance, and advocacy within DOD are essential for the modernization, readiness, and well-being of SOF and their families. As ASD(SO/LIC) reports directly to the Secretary of Defense in exercising authority, direction, and control of special operations-peculiar administrative matters, SO/LIC maintains a seat at the table alongside Secretaries of the Military Departments in key decision forums, such as the regular Service Secretary meetings, the Deputy's Management Action Group, and the Joint Requirements Oversight Council. Participation in these forums empower ASD(SO/LIC) to provide effective and enduring civilian representation of SOF equities and competencies to DOD and national leadership—a voice that is even more important in this period of strategic transition for the Department and for SOF.

SO/LIC's unique role ensures key SOF-led capabilities are integrated into strategic concepts and associated investments are made to critical priorities such as irregular warfare, operations in the information environment, and undersea capabilities. SO/LIC ensures SOF concepts and capabilities inform and support DOD's broader planning, investment, capability development, and experimentation. For example, the Special Operations Policy Oversight Council (SOPOC) enhances integration between SOF, the Military Services, and the Combatant Commands, with the shared goal of ensuring SOF can meet Joint Force requirements with essential support from the Department. SO/LIC has instituted regular meetings of the SOPOC to integrate governance of SOF as well as SOF capabilities and processes across DOD as envisioned through the enactment of reforms in the Fiscal Year 2017 Na-

tional Defense Authorization Act (NDAA) and subsequent legislation. Additionally, senior leaders from SO/LIC, USSOCOM, and the Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)) co-chair a biannual SOF Acquisition Summit—with participants from each Military Department and several USD-level organizations—to address challenges impacting USSOCOM's acquisition, technology, and logistics efforts in order to enable agile and innovative support to SOF operations.

The SO/LIC–USSOCOM relationship is defined by multilayered collaboration, characterized by near-continuous engagement across all echelons from top leadership to working levels. Over the past year, this collaborative partnership has continued to deepen as we have been developing a co-authored future operating concept, detailing our vision for SOF operating alongside the Joint Force in the future and guiding near-term force design considerations. At the heart of this operating concept are our three shared priorities: People, Win, and Transform.

PEOPLE: STRENGTHEN OUR FORCE & FAMILIES

Our people are the competitive and comparative advantage of our SOF formations. The creativity and commitment of these men and women are essential to adapting tactics, technologies, and organizations for tomorrow's challenges. We believe unreservedly that the first SOF Truth endures: "Humans are more important than hardware." Together, we are committed to investing in our people through tailored education and training, leveraging our Nation's diverse talent, and enhancing readiness, resilience, and professionalism.

Investing in Our People

We continue to invest in our men and women by adapting SOF-peculiar education and training for both today's environment and future requirements, coupled with tailored talent management for our highly skilled personnel. In full partnership with the Services, SOF-focused recruiting, assessing, training, and education yields the most highly developed workforce within DOD—often with language, regional expertise, and cultural knowledge proficiency unique to SOF.

SOF's persistent, global campaigning efforts enable tactical units to cull the latest battlefield lessons learned—notably from Eastern Europe, the Indo-Pacific, and the Middle East—while continually adapting and improving the specialized training pipelines. SOF service components institutionalize these lessons and pair them with requirements to prepare the force to integrate new and emerging technologies.

As one example, USSOCOM's Joint Special Operations University (JSOU) provides the unique ability to offer SOF-peculiar, joint education and academic expertise for the force, bridging the gap between practitioners and academia. JSOU hones its educational offerings to complement Service-specific professional military education programs with tailored courses. Publications, such as the Resistance Operating Concept, ensure both SOF practitioners and Allied and partner SOF are equipped with academic resources relevant to current challenges.

As another example, the Army SOF component—via U.S. Army Special Operations Command's (USASOC) John F. Kennedy Special Warfare Center and School—has adapted its training enterprise for the evolving strategic environment. The Special Forces pipeline recently modernized portions of its heavy weapons, antiarmor demolitions, and long-range communications courses to better operate alongside local partners in contested environments—drawing upon the operational requirements and lessons learned in Eastern Europe. The Civil Affairs qualification course modernized its culmination exercise to focus on pre-conflict strategic competition and setting conditions for the rapid reconstitution of governance immediately following a near-peer conflict. The Psychological Operations culmination exercise now incorporates synthetic internet and real-time sentiment analysis to educate students on foreign malign influence techniques and activities in the information environment. Finally, USASOC recently established a robotics and unmanned systems integration course that teaches students how to fabricate, integrate, and employ unmanned systems—while also training how to counter these same technologies. With support from SO/LIC, these changes were informed by SOF experimentation in the Indo-Pacific, lessons learned in the Middle East, and observations from Russia's ongoing, brutal war in Ukraine.

To steward investments in education and training, SOF talent management enables USSOCOM to address distinct career needs and best use the skills of its talented, high-demand, low-density workforce. Specialized training and operational experience for personnel engaged in unique, and often sensitive, SOF activities require a more flexible career management system. A tailored career model optimizes operational employment potential for individuals with unique skill sets while providing incentives to attract and retain the most talented individuals to select SOF career

fields. Additionally, the increasing complexity of the operating environment and the realities of ubiquitous technical surveillance require a greater emphasis on identity management and expansion of advanced skill sets across the SOF enterprise.

Leveraging Diverse Talent

As the NDS highlights, our dynamic, diverse, and innovative society remains a core strength and source of American advantage. Maintaining the world's finest SOF in the decades to come requires leveraging all the dimensions of diversity within the Nation's deep pools of talent. Building a diverse force is both an operational and strategic imperative for SOF.

We continue reinforcing efforts to enhance diversity in our workforce and foster inclusive work environments through USSOCOM's Diversity and Inclusion Strategic Plan and the accompanying 2022 Implementation Action Plan—as outlined in the April 2022 presentation to Congress. The SOF enterprise is committed to welcoming all capable individuals, ensuring they are part of inclusive teams, and supporting their equitable career advancement. The SOF Executive Committee on Diversity and Inclusion—co-chaired by SO/LIC and USSOCOM—continues to provide senior-leader oversight and fosters accountability for sustained progress in implementation.

We continue to make essential progress in removing barriers to women's and minorities' participation and advancement within SOF while also working with the Services to attract the best talent. Women and minority servicemembers serve in key leadership roles throughout all four SOF components and within various SOF headquarters. Women have also continued to successfully enter SOF-specific career fields within our most elite units. Throughout SOF, women servicemembers' representation has increased approximately 40 percent over the past 5 years. While this progress is important and notable, it is not sufficient. Our sustained commitment to the Diversity, Equity, Inclusion, and Accessibility strategic goals and implementing successful best practices from across the enterprise will spur continued progress.

In 2022, USASOC released its "Women in Army SOF Study" to identify barriers female servicemembers encounter and establish best practices to recruit, integrate, and retain women in our formation. Based upon input from over 5,000 participants, the study's findings generated 42 recommendations related to education and training, equipment modernization, mentorship and sponsorship, healthcare, childcare and other matters. Though specific to the Army component, many of the findings are applicable across the joint SOF enterprise and will inform future joint implementation efforts.

Additionally, in August 2022, the Navy SOF component—Naval Special Warfare Command (NSW)—formally established its Assessment Command (NSWAC) to transform how its units compete for talent by building a sustainable architecture for diversified outreach, by conducting more rigorous pre-assessments for character, cognitive, and leadership attributes, and by strengthening NSW's culture of continuous assessment. NSWAC is taking a whole-person approach to identify, prepare, and mentor qualified candidates from diverse backgrounds to complete training programs and pursue a successful career in NSW. As this new command was being developed, NSW conducted 60 outreach events with more than half specifically focused on increasing force diversity and inclusivity with underrepresented demographics. These efforts will enhance the way NSW continuously assesses and selects its incoming officers and enlisted personnel.

The SOF enterprise similarly requires a highly skilled and diverse civilian workforce. Like our uniformed personnel, USSOCOM's civilian workforce includes women and minority members serving in key roles throughout its components and various headquarters, including in senior executive leadership positions.

At the same time, SO/LIC has continued to make progress in establishing and filling civilian positions for the Secretariat for Special Operations to support the ASD(SO/LIC)'s administrative oversight responsibilities. Over the past several years, these efforts have resulted in a team of highly skilled and experienced civilian personnel with expertise in capabilities development, budget, acquisition, civilian and military personnel, force management, legislative affairs, and special access programs. Given the relatively small size of the Secretariat, we continue to focus our hiring efforts on areas where civilian oversight can have the greatest impact on SOF readiness, resiliency, and transformation to meet future challenges.

Enhancing Readiness, Resilience & Professionalism

The Preservation of the Force and Family (POTFF) program—along with our Warrior Care Program (WCP)—continues to enhance readiness and resilience for our formation and their families. The POTFF program delivers a holistic, multi-

faceted approach to human performance, resilience, and rehabilitation through a combination of USSOCOM, Service, and DOD resources. The WCP provides recovery care coordination for those who have been challenged due to wounds, injuries, or illnesses. SOF commanders have overwhelmingly embraced both programs as critical to promoting career longevity, mitigating injury, enhancing retention, and increasing quality of life. The combination of POTFF and WCP provides a continuum of support for our personnel through performance enhancement, injury recovery, and transition assistance.

An increased focus on cognitive performance and brain health is necessary to prepare SOF to operate in an increasingly complex, information-rich environment. This focus complements POTFF's broader holistic approach to human performance across five domains—psychological, cognitive, physical, spiritual, and social and family. Cutting-edge work in the cognitive performance arena has also resulted in demonstrated improvements in self-regulation, cognitive processing speed, and sustained attention among the majority of those participating in cognitive training. Additionally, USSOCOM has partnered with DOD Health Affairs and the DOD Traumatic Brain Injury (TBI) Center of Excellence on brain health initiatives to include enhancing TBI prevention efforts, surveillance modalities, treatment protocols, and research studies. We are grateful for Congress's support in all these areas, including the fiscal year 2023 appropriation to continue a pilot study into the long-term effects of repetitive low-level blast exposure in SOF—another of USSOCOM's ongoing brain-health initiatives.

We remain determined to prevent suicide and other forms of self-harm. SOF leaders focus on underlying risk factors through continuous training and education. We have also engaged the Nation's leading experts to identify novel ways to address this problem. Through persistent efforts to destigmatize seeking care, we have witnessed an increase in servicemembers seeking preventative mental health resources. Thanks to a combination of POTFF and Defense Health Agency resources, access to both preventative and emergency mental health care has improved measurably.

The WCP provides valuable support and advocacy for wounded, injured, and ill SOF personnel. Over the past year, we have retained nearly 70 percent of wounded SOF in military service, keeping the talents and dedication of these highly trained, skilled, and experienced personnel in our formation. The WCP also remains a trusted partner and tireless advocate for expanding government and private capabilities to care for our servicemembers and their families, including through both increased access to programs at the Department of Veterans Affairs (VA) polytrauma facilities and novel partnerships with non-Federal entities. We appreciate Congress' support for Section 522 of the fiscal year 2023 NDAA which included a USSOCOM-initiated proposal to improve servicemembers' ability to receive charitable support in order to fill gaps in services that neither DOD nor the VA can provide.

Supporting families also remains a critical component of enhancing readiness and resilience within SOF. A range of family focused initiatives support our force and their families across all Service components. As one example over the past year, we have acted to expand childcare access by facilitating Service funding for the Child Development Center at Camp Bull Simons on Eglin Air Force Base, Florida. Our men and women of the Army's 7th Special Forces Group, and other units in the area, stand to benefit from this expanded support from both the Departments of the Air Force and Army.

Our enduring commitment to professionalism within SOF is critical to preserving the trust of our Nation and senior leaders that we have earned over decades. This commitment includes sustaining high professional standards, emphasizing engaged leadership, and maintaining accountability. We are nearing full implementation of the recommendations from the 2019 Comprehensive Review on SOF Culture and Ethics, on which we routinely report to Congress, including as detailed in the forthcoming biannual report. The Comprehensive Review Implementation Team has diligently overseen the continued efforts to codify institutional adjustments. USSOCOM's components have taken active roles in refining their processes to select key leaders, enhancing ethical training throughout the force, and ensuring accountability for lapses in conduct—all of which will continue.

Behavior that erodes hard-earned trust or threatens cohesiveness—especially harassment, assault, and extremism in any form—has no place in SOF formations. Period. We will continue aggressively implementing our prevention and response programs and vigorously investigating allegations of misconduct and holding personnel accountable, as appropriate. We continue to execute all DOD and Service policies, including the ongoing implementation of the Sexual Assault Independent Review Commission recommendations to improve reporting processes, victim advocacy, and prevention of harmful behaviors. We are fundamentally committed to removing be-

haviors that promote discrimination, hate, or harassment and that are inconsistent with the oaths to defend the Constitution against all enemies foreign and domestic.

WIN: SUCCEED FOR THE NATION

SOF are strengthening and sustaining deterrence globally as part of DOD's approach to integrated deterrence. Drawing upon decades of combat-credibility and coalition experience, SOF provide tailorable, asymmetric options for our Nation while creating dilemmas for strategic competitors. With a range of options to deter aggression and counter coercion, SOF support Joint Force deterrence, including by bolstering Allies' and partners' resilience and resistance, ensuring precision access, countering misinformation, and mitigating risk.

Our SOF enterprise supports NDS priority efforts to deter aggression by the People's Republic of China (PRC) and Russia—strategic competitors who threaten the rules-based international order. We continue to focus our campaigning activities to support these joint, interagency, and multinational efforts while also providing asymmetric approaches to compete as both the PRC and Russia seek resources and partnerships globally, including in Africa, the Middle East, and South America. By persistent campaigning, SOF actively compete for influence while identifying coercive and malign behavior in the "gray zone"—often offering options to judiciously counter such behavior.

SOF leverage unique authorities to collaborate and operate with Allies and partners—our greatest strategic advantage for tackling shared challenges and promoting effective integrated deterrence. Since September 11, 2001, the transnational shared challenge of violent extremism has necessitated deep integration with capable Allies and partners, often via their SOF units and their own interagency partners. Operations over the past 20 years have also necessitated leveraging the unique capabilities of our U.S. interagency community and integrating with the Joint Force across domains.

While the threat of violent extremism persists today and will continue in the years to come, we have honed our approach to conduct sustainable counter violent extremist organizations (C-VEO) operations and remain vigilant in protecting Americans and America's interests globally. The SOF enterprise stands committed to succeed for the Nation by strengthening our partnerships, campaigning for integrated deterrence, countering violent extremism, and leading in our DOD-wide responsibilities.

Strengthening Partnerships

Partnerships are fundamental to SOF and to all our missions and endeavors. We now benefit from unparalleled integration with our Allies and partners, the interagency community, and the Joint Force strengthened over decades and honed particularly over the past 2 decades of global operations. While the shared challenge of countering violent extremism facilitated unprecedented levels of operational partnerships, these mutually beneficial relationships have extended to the full range of SOF operations globally. Ever-expanding partnerships remain the cornerstone of SOF campaigning.

SOF benefit from our Nation's unmatched network of Allies and partners. We cannot surge trust in a crisis, so we work every day to sustain this distinct strategic advantage over our adversaries by reinforcing America's latticework of Allies and partners. At its headquarters alone, USSOCOM hosts exchange officers and foreign liaison officers from 27 Allied and partner nations, offering an unrivaled ability to provide options to understand and act worldwide.

Through persistent engagement over decades, SOF have fostered extensive interoperability and generational relationships with Allied and partner SOF, deepened by operating shoulder-to-shoulder during combat and other high-risk operations for over 2 decades. Authorities under 10 U.S.C. § 333 (Building Partner Capacity) and 10 U.S.C. § 322 (SOF Training)—the latter enabling the Joint Combined Exchange Training (JCET) program—are essential to further enhancing collaboration and promoting interoperability. In 2022, SOF formations executed 173 JCETs in 77 countries training over 2,000 U.S. SOF personnel alongside over 7,000 Allied and partner counterparts.

SOF's integration with our U.S. interagency partners is equally important to leverage our Nation's full capabilities to enhance awareness and provide expanded options. This set of trusted relationships facilitates information sharing, enables collaboration, improves decisionmaking, and enhances synchronization for effective whole-of-government responses. Routine collaboration with interagency partners—such as the Department of State, the Department of Justice, the Department of the Treasury, and the National Counterterrorism Center, among many others—has enhanced USSOCOM's response to a range of threats over the past year, including ad-

versary unmanned aerial systems, violent extremism, adversary misinformation, and near-peer malign activities.

As one example, Operation Gallant Phoenix (OGP)—a U.S. interagency and multinational C-VEO initiative launched by USSOCOM in 2014—has enabled international and interagency partners to share information and disrupt VEOs. Coupled with Counter Threat Finance authorities and expertise, information-sharing operations, like OGP, continue to provide expanded options to disrupt illicit financing and deter malign activities. Well beyond C-VEO efforts, the OGP model is applicable to countering coercive activities in the "gray zone" and deterring aggression.

USSOCOM also maintains collaborative, mutually supporting relationships across the Joint Force. Close coordination with Geographic Combatant Commands enables SOF to support both regional and transregional campaigning efforts—particularly important as competitors, like the PRC and Russia, pursue malign strategic objectives globally. USSOCOM's Theater Special Operations Commands—each aligned with a specific Geographic Combatant Command—coordinate SOF campaigning in their respective theaters, ensuring activities both support regional strategic objectives and maximize transregional efforts. Operating transregionally has proven critical for C-VEO efforts and is necessary to gain advantage over strategic competitors, particularly in countering coercive "gray zone" activities. Strong collaboration with Functional Combatant Commands also ensures synchronization across essential warfighting domains.

Special Operations, Cyber, and Space forces are unique in their global reach, persistence, endurance, and responsiveness. Each brings complementary capabilities to enable our respective missions. SOF often require cyberspace and space capabilities to see and sense the operational environment, or if required, to strike an adversary. Cyberspace operations may rely on SOF's physical access and placement to deliver effects. All of these capabilities can be integrated into campaigns, which enhance the effectiveness of the Joint Force. Our ongoing efforts to enhance SOF-Cyber-Space capabilities continue to evolve and now include integration with USSTRATCOM capabilities. This effort leverages quadrilateral coordination and synergy among USSOCOM, USCYBERCOM, USSPACECOM, and now USSTRATCOM in addition to other interagency partners. This partnership generated new options to bolster deterrence by building warfighting advantage and closing warfighting gaps across domains and regions—while providing options for escalation management. In this effort and others, USSOCOM's Space Force Service Element remains critical to integrating space-based capabilities and identifying SOF-peculiar space requirements.

Last, our efforts to promote opportunities for experimentation between SOF components and their respective Services have deepened ties, resulted in operational breakthroughs, and improved warfighting effectiveness. In 2022, USSOCOM participated in the Army's Project Convergence, experimenting with SOF, cyber, and space capabilities to disrupt near-peer adversaries. Further, SOF supported the USEUCOM-sponsored "Atreus" series of operations, conducting the first-ever demonstration of the palletized precision munition in Europe. Combining Air Force innovation efforts with the air-drop expertise of Air Force SOF and our MC–130 crews enabled the launch of multiple, long-range offensive weapons from non-traditional strike platforms, like cargo aircraft. Efforts like these create credible, strategic dilemmas for our competitors and deepen ties with our Allies and partners.

Campaigning for Integrated Deterrence

SOF campaign globally and across domains to strengthen and sustain deterrence, supporting DOD's integrated deterrence. SOF operations, activities, and investments can undermine adversary confidence that their aggression will succeed, shaping their decision calculus. The access, placement, and influence generated by SOF's long-term commitments to building partner capacity and improving interoperability provide expanded, low-cost options to gain awareness, shape the operating environment, and present adversaries with multiple dilemmas. Additionally, SOF remain ideally suited to identify a competitor's coercive activities in the "gray zone" and counter them with deliberate, credible options while managing escalation.

SOF's placement and access are unique in their breadth. Over 5,000 SOF are currently deployed to over 80 countries executing a range of activities that enable the Joint Force to campaign for military advantage. Our active duty force is bolstered by National Guard and Reserve SOF supporting wide-ranging operations globally in over 30 countries. This multifunctional reserve component also deployed domestically to 18 states last year, providing essential Defense Support to Civil Authorities and natural disaster relief.

Our SOF enterprise continues to refine its campaigning activities to support priority efforts to deter aggression by the PRC and Russia—with an emphasis on the PRC as our pacing challenge. Efforts to compete with the PRC are not limited to

the Indo-Pacific, and neither are the efforts to compete with Russia limited to Europe. Though SOF are active in both regions, these strategic competitors seek resources and partnerships globally, competing with us and our Allies and partners for influence in Africa, the Middle East, and South America.

Over the past 4 years, SOF's campaigning activities to counter coercion and deter aggression by strategic competitors have more than tripled—comprising nearly 50 percent of the deployed forces in fiscal year 2023. SOF also provide specialized expertise from our stateside forces to support Combatant Command priorities globally through U.S.-based operational support—a disciplined approach to provide tailored, low-density capabilities to support specific operational needs.

In the Indo-Pacific, SOF continue longstanding efforts to build partner capacity with Allies and partners, building generational relationships grounded in trust. We remain focused on honing the core maritime capabilities of the NSW and Marine Raider formations to preserve and strengthen U.S. warfighting advantage. Multiple SOF elements, including Air Force Special Operations units, leverage large-scale, joint exercises to experiment with emerging technologies and creative options to extend SOF's operational reach.

In Eastern Europe, SOF continue their decades-long commitment to enhancing interoperability with Allied SOF throughout Europe. Additionally, SOF operate alongside critical Allies to support whole-of-nation resilience efforts and enhance resistance capabilities if threatened with territorial aggression. SO/LIC and USSOCOM also actively support United States efforts to bolster Ukraine's defense following Russia's ongoing brutal and unprovoked invasion—fully aligning these activities with Security Assistance Group—Ukraine. Since 2014, following Russia's previous aggression in Crimea and Eastern Ukraine, SOF supported multinational training efforts with Ukrainian SOF forces and provided Military Information Support Operations assistance to illuminate and counter Russian disinformation.

Strategic competitors—specifically Russia—threaten established international rules in the Arctic and pose increasing challenges to North American security. SOF play a role in bolstering domain awareness and integrated deterrence in the Arctic as part of the Joint Force. Over the past year, SOF strengthened capabilities to operate and prevail in the austere Arctic environment. Large-scale, joint exercises and operations, such as Arctic Edge and Polar Dagger, provided venues for more than 500 U.S. and multinational SOF to experiment and operate in the North American Arctic region.

A critical way the Department is seeking to gain and maintain enduring advantage in strategic competition is through SOF-led, but not SOF-limited, irregular warfare (IW) operations, activities and investments. IW is a critical tool to campaign across the spectrum of conflict, enhance interoperability and access, and disrupt competitor warfighting advantages while reinforcing our own. To further institutionalize IW across the Joint Force, we are updating policy, informing doctrine, and modernizing IW education and training. Through the establishment of the Irregular Warfare Center, we will continue to strengthen our understanding of IW through research, analysis, and engagement with Allies and partners.

SOF continue to campaign in the information environment, exposing and countering adversary propaganda and disinformation to better compete in the cognitive dimension. The PRC and Russia continue to act assertively in the information environment to manipulate populations worldwide. As DOD's Joint Proponent for Military Information Support Operations (MISO) and the Coordinating Authority for Internet-based MISO, we are adapting our psychological operations forces for the evolving information environment. SO/LIC continues to improve guidance for and oversight of those who organize, train, and equip these specialized forces and those who conduct operations in the information environment. As part of the ongoing rebalancing efforts, MISO activities to counter strategic competitors have more than tripled over the past 3 years—comprising over 60 percent of the MISO activities worldwide in fiscal year 2022. The USSOCOM-hosted Joint MISO WebOps Center (JMWC) continues to coordinate Combatant Commands' MISO conducted via the internet and actively engage foreign audiences to illuminate and counter hostile propaganda and disinformation.

SOF's crisis response capabilities remain a critical strategic hedge and advantage for the Nation. Agile, tailored capabilities enable SOF to execute no-fail hostage rescue missions and to counter an adversary's efforts to produce or deploy weapons of mass destruction. Repeatedly during 2022, SOF provided vital forces and command and control for crises requiring rapid deployment, complex problem-solving, and synchronized effects—whether responding to regional crises or safeguarding Americans globally. USSOCOM continues to optimize its global posture while sustaining the ability to respond to crises worldwide.

Last, the critical authorities granted by Congress continue to allow SOF to campaign effectively against State and non-State actors, achieving an outsized impact across multiple mission sets. Operations supported by fiscal year 2018 NDAA Section 1202 (Irregular Warfare) have proven essential for applying SOF capabilities to expose malign activity and impose costs on malign actors. Operations supported by 10 U.S.C. § 127e (Counterterrorism) provide flexible options to apply counterterrorism (CT) pressure in otherwise inaccessible or contested areas—increasingly important as USSOCOM optimizes its C-VEO capabilities. Authorities under 10 U.S.C. § 127f (Clandestine Operational Preparation of the Environment) and Fiscal Year 2020 NDAA Section 1057 (Intelligence / Counterintelligence) support SOF activities with greater clarity and transparency, providing options to campaign for U.S. advantage.

Countering Violent Extremism

We remain vigilant in protecting Americans and America's interests globally through SOF's enduring C-VEO capabilities. SOF have played a critical role in degrading VEOs and disrupting innumerable plots to attack Americans and our interests since September 11, 2001. SOF formations continue to work tirelessly alongside trusted Allies and partners, our U.S. interagency counterparts, and Joint Force teammates, harnessing important capabilities to address the shared challenge of violent extremism and global terrorist networks that threaten our Homeland, our citizens, and our interests overseas.

As we focus our campaigning efforts to address the priorities of integrated deterrence, SOF continue to pursue a sustainable approach to C-VEO operations by prioritizing threats, working closely with international and interagency partners, and modernizing approaches to degrade VEO capabilities. Wherever feasible, SOF embrace a "partner-led, U.S.-enabled" campaign approach to C-VEO, built on a disciplined prioritization of risks to drive decisionmaking and avoid strategic distraction. This approach allows partner-led, unified action to pool resources and share responsibility for our shared security challenges, reducing our collective security burden. We will leverage and enable our partners' unique capabilities to provide an expanded array of options to disrupt VEO threats.

For example, during operations over the past year to counter the Islamic State of Iraq and Syria (ISIS), SOF have worked closely with international and interagency partners to disrupt illicit financing, interdict foreign fighters, and illuminate propaganda.

USSOCOM continues leading in its role as the DOD's Coordinating Authority for C-VEO through our Department-wide campaign planning, assessments, and recommendations. Its annual VEO threat assessment highlights its transregional approach involving multiple Combatant Commands.

Violent extremists will continue to use terrorism as a tactic to achieve their objectives. Drivers of extremist violence exist in deep, multigenerational ideological divisions that military force alone cannot overcome. Ongoing geopolitical, technological, economic, and environmental change often exacerbate regional instability, threatening effective governance and fueling radicalization. As a result, violent extremism and terrorism will persist in the future, representing an enduring threat to the United States, our Allies, and partners.

After sustained global pressure since 2001, the threat to the United States Homeland posed by VEOs based in the Middle East and Africa has diminished, yet persists. Further, the threat to United States citizens and interests overseas remains. The continued availability of safe havens and under-governed spaces perpetuate the risks of VEOs' external attacks. In East Africa, al-Shabaab presents an ongoing risk to United States interests both in Somalia and throughout the region. In West and Central Africa, the operations of Russian private military company Wagner are only exacerbating threats posed by al-Qaeda's affiliate JNIM and ISIS. In Afghanistan, ISIS-Khorasan is strengthening its connections to the wider ISIS enterprise and increasing attacks across the region. In Yemen, al-Qaeda in the Arabian Peninsula presents a continued threat of conducting or directing attacks externally. In Iraq and Syria, ISIS senior leaders demonstrate the intent and capability to target American interests despite the losses of critical operatives and personnel since 2019. Senior al Qaeda leaders also remain committed to attacking the United States Homeland and continue to encourage attacks by their affiliates.

Violent extremists continue to incorporate new technologies and adapt their tactics, posing an ongoing global threat to our citizens and a risk to the effectiveness of our CT efforts. Adversary unmanned aerial systems (UAS) pose a pressing challenge, exhibiting a rapid evolution in employment and lethality exceeding improvised explosive devices over the past 2 decades. While the evolving UAS threat from VEOs is troubling, capable State adversaries and their aligned paramilitary forces

have also successfully employed UAS to target American, Allied, and partner forces—most notably in Iraq and Syria over the past year. Given these trends, SOF must continue to modernize for the evolving CT environment.

Advancing Department-Level Responsibilities

In addition to USSOCOM's designation as DOD's Coordinating Authority for C-VEO and Internet-based MISO, the command also invests heavily in its longtime role as the Coordinating Authority for Countering Weapons of Mass Destruction (C-WMD) and its recently established role as Global Coordinator for Counter-Small UAS (C-sUAS) Prior-to-Launch efforts. USSOCOM continues to provide DOD-wide campaign planning, assessments, and recommendations in these capacities.

The command's role as DOD's Coordinating Authority for C-WMD draws upon its international, interagency, and joint relationships to counter WMD proliferation and deter aggressive actions by State and non-State actors. Aligned with DOD's strategic priorities, USSOCOM hosted a PRC-focused C-WMD Senior Leaders Seminar focusing on threats within the Indo-Pacific. This event bolstered support to DOD-wide strategies, plans, and policies while improving interoperability with our international partners. USSOCOM seeks to incorporate select Allies and interagency partners to an even greater degree in the planning efforts for the updated DOD Functional Campaign Plan to Counter WMD. The forthcoming, revised plan will drive deeper interoperability and strengthen deterrence to defend the Homeland and our Allies' and partners' interests.

In addition to DOD-wide responsibilities, USSOCOM supports Geographic Combatant Command planning efforts with critical expertise in this specialized C-WMD field. USSOCOM forward-positioned C-WMD subject matter experts to augment and assist USEUCOM contingency planning efforts prior to the Russian full-scale invasion of Ukraine. This proactive posture ensured critical chemical, biological, radiological, and nuclear defense readiness considerations were included in regional campaign plans.

Similar to its Coordinating Authority role for C-WMD, USSOCOM continues to expand and refine its efforts as the Global Coordinator for C-sUAS Prior to Launch efforts, by identifying opportunities to target and disrupt adversarial sUAS and the networks responsible for production, proliferation, and use. In this capacity, the command is actively coordinating with Combatant Commands to synchronize requirements for intelligence collection, technology development, operations, and plans—all closely aligned with interagency and intelligence community partners intended to disrupt sUAS prior to launch. Further, USSOCOM is working closely with SO/LIC and across the DOD on C-sUAS-related policy, authorities, and resources to enhance SOF's capability to lead in this role.

SO/LIC and USSOCOM continue to support DOD's civilian harm mitigation and response (CHMR) efforts. Both SO/LIC and USSOCOM played a central role in the development of the Civilian Harm Mitigation and Response Action Plan (CHMR-AP) and continue to support its ongoing implementation. SO/LIC leads CHMR policy efforts within DOD and serves as the executive secretariat for the CHMR Steering Committee, which is co-chaired by the Under Secretary of Defense for Policy, the Vice Chairman of the Joint Chiefs of Staff, and the Comptroller. In furtherance of that effort, ASD(SO/LIC) co-chairs regular sub-steering committee meetings with representatives from across the force to advance CHMR-AP implementation across DOD.

Finally, apart from Coordinating Authority roles, USSOCOM also serves as the DOD's lead component for synchronizing Counter Threat Finance activities, including integrating, standardizing, and advocating for this important capability. The 10 U.S.C. § 284 (Support to Counterdrug Activities and Activities to Counter Transnational Organized Crime) authorities and the associated Fiscal Year 2004 NDAA Section 1022 authorities remain valuable assets, supporting interagency partners to identify and counter competitors' illicit activities in the "gray zone." These authorities provide options to illuminate and counter malign activity by global terrorist networks and PRC-and Russian-affiliated transnational organized criminal networks, which are often closely tied to illicit networks associated with drug trafficking organizations.

TRANSFORM: MODERNIZE FOR THE FUTURE

We are building enduring advantage by the continued investment in our people, technologies, and organizations—marked by a commitment to evolve, modernize, and optimize for the future operating environment. Our future operating concept will guide this ongoing transformation through a focused force design effort that examines how we envision SOF operating as part of the Joint Force in the future.

With the direction and advocacy of SO/LIC, USSOCOM is accelerating its wide-ranging modernization efforts and leveraging its essential acquisition authorities that enable it to capitalize on our Nation's innovation ecosystem—with an emphasis on surface and subsurface maritime platforms; counter-UAS; next-generation intelligence, surveillance, and reconnaissance (ISR); mission command systems; and collaborative and autonomous unmanned systems. Modernization also requires strategic discipline and a complementary emphasis on divesting dated or obsolete platforms that are no longer operationally relevant or effective in the current and future environments.

We seek to set the gold standard for data-driven decisionmaking for our Service-like and Combatant Command responsibilities—focusing on the talent, architecture, and processes needed to capitalize on data and artificial intelligence (AI)-related technologies. This includes partnering with industry and academia to modernize our digital infrastructure, foster a data-literate workforce, and apply data analytics and AI for decision insight from the headquarters to the tactical edge.

To set resourcing priorities for future capability development, SO/LIC and USSOCOM jointly issued Capabilities and Programming Guidance which formed the basis of SOF's 5-year Program Objective Memorandum and the President's budget request. Additionally, ASD(SO/LIC) designated two "special interest" acquisition programs—undersea maritime platforms and Armed Overwatch—allowing us to identify and rapidly remedy issues for these essential investments. Both actions represent important steps in enhancing oversight and advocacy for SOF's transformation.

Building an Enduring SOF Advantage

The SOF enterprise continues to modernize its materiel and systems and incorporate emerging technologies to build enduring advantage. The command leverages its acquisition authority to modernize special operations capabilities in five focus areas: Next-Generation ISR, Next-Generation Mobility, Data and Networks, Precision Effects, and Hyper-Enabling the Operator/Biotechnologies.

Supported by SO/LIC, USSOCOM has coordinated closely with the Under Secretary of Defense for Research and Engineering (USD(R&E)) and the Services to collaborate on and experiment in each of these focus areas. USSOCOM's unique attributes of being inherently globally deployed, partnered, and joint while also possessing acquisition authorities position it to contribute to the overall modernization of the Joint Force. Specifically, the command is well-positioned to be the partner of choice supporting three of USD(R&E)'s technology priorities: within cyber, focusing on MISO capabilities; within directed energy, focusing on electronic warfare/electronic attack at the tactical edge; and biotechnologies.

Next-Generation ISR enables finding and fixing a target in a contested environment and consists of fusing three data streams from cyber-based ISR, space-based ISR payloads, and small autonomous and collaborative unmanned systems. In the cyber domain, we are integrating tools to provide an open architecture mission command system optimized for SOF's role in integrated deterrence. We are also leveraging the full range of open-source data to ensure SOF have access to timely, geo-rectified, and accurate data to inform their decisions. To better harness advances in space, USSOCOM has established a collaborative arrangement with the Space Force and the Space Development Agency to experiment with payloads that will provide its forces with space-based capabilities at the tactical edge. Finally, we are aggressively pursuing collaborative autonomy through our AI for small unit maneuver efforts across our portfolio of ground, air and maritime unmanned and unattended sensors.

As part of the Next-Generation Mobility efforts, we continue to modernize our platforms to prevail in contested environments while working closely with the Services. We are equipping our existing aviation platforms with advanced infiltration and penetration capabilities—such as the Silent Knight terrain-following/terrain-avoidance radar for our rotary-and fixed-wing fleets and radio-frequency countermeasures for our MC–130's. USSOCOM has partnered with both the Air Force and Defense Advanced Research Projects Agency for development of high-speed, vertical take-off and landing platforms and the Army for its Future Vertical Lift program. Finally, we are investing in modernized surface and undersea maritime platforms in close partnership with the Navy—including one of ASD(SO/LIC)'s "special interest" acquisition programs. These efforts in developing, testing, and fielding a range of maritime capabilities will strengthen deterrence in the Indo-Pacific and across the globe.

The Armed Overwatch program provides SOF with an affordable and deployable crewed aircraft system capable of conducting close air support, precision strike, and armed ISR. This program remains central to SOF's Precision Effects modernization

efforts that will provide critical situational awareness and force protection to SOF ground forces executing missions in austere and permissive environments.

Precision Effects are not limited to kinetic fires as USSOCOM modernizes its electromagnetic warfare capabilities—best exemplified by its C-UAS efforts. While the command hones capabilities to defeat UAS prior to launch, it is also closely teamed with SO/LIC and the Army's Joint Counter-UAS Office to detect and defeat UAS that pose a threat to deployed SOF and our partners. Through a System Integration Partner contract, USSOCOM has taken a unique software-centric approach to C-UAS which will enable it to effectively counter the evolving threat. The command is pursuing a system-of-systems, open architecture approach to C-UAS that will allow for the rapid integration of both emerging and proven technologies.

Within the Data and Networks modernization area, USSOCOM is advancing technologies across three broad capabilities: operations and intelligence fusion for its tactical commanders, protection of its operators from ubiquitous technical surveillance, and influence operations in the cyber domain. The Mission Command System/Common Operating Picture deployed after only 1 year of development by embracing agile software development techniques and is USSOCOM's gateway to DOD's Joint All-Domain Command and Control (JADC2). As SOF operate in increasingly contested environments alongside partners, we must provide identity management capabilities to protect them, their partners, and their families. Finally, USSOCOM will continue to modernize internet-based and other MISO efforts with automation and AI-enabled capabilities to operate more effectively in the information environment.

Acknowledging the criticality of its network infrastructure, USSOCOM continues to implement a zero-trust architecture, providing greater security across the SOF enterprise. To ensure alignment, we are working closely with partners across DOD during implementation, including the National Security Agency and the Defense Information Systems Agency. USSOCOM has already implemented many of the zero-trust principles, focusing heavily on the principles of least privilege, multi-factor authentication, and controlling access to moving forward. We are also seeking to accelerate the transition to cloud-based architectures with modern data science environments. These efforts are integral to advancing JADC2 and ensuring resilient networks now and in the future.

The final modernization focus area—Hyper-Enabling the Operator/Biotechnologies—focuses largely on developing emerging technologies, enabling SOF to rapidly deploy promising capabilities. Hyper-Enabling the Operator pursues technologies to provide decision advantages by optimizing information for individuals and teams conducting partnered operations—with the goal of enhancing effectiveness. Our biotechnology efforts are closely aligned with the Preservation of the Force and Family program to address the physical and cognitive well-being of SOF. Our ongoing brain health efforts remain a critical component of this effort—combining best-in-market, leading-edge data and AI industry partners with nutrition and health partnerships while leveraging state-of-science commercial and academic labs.

Across all areas, USSOCOM continues to steward the acquisition authority granted by Congress. The command leverages the additional flexibility provided through tools such as Commercial Solutions Openings, Other Transaction Agreements, and Middle Tier Acquisition. This acquisition agility enables USSOCOM to benefit from rapidly changing technologies—many of which are evolving quickly in the commercial sector and are often produced by small businesses.

Leveraging Data-Driven Technologies

USSOCOM continues to serve as a pathfinder within DOD for integrating data-driven technologies, leveraging AI powered by machine learning (ML), deep understanding, neural networks, and similar cutting-edge technologies. The command is working with partners across DOD and in close cooperation with industry and academia to identify and deploy data and AI capabilities across the SOF enterprise to enhance decisionmaking from the boardroom to the battlefield.

The SOF enterprise continues to maximize its involvement in DOD-wide initiatives, led by the DOD Chief Digital and AI Office, to identify opportunities to implement data-driven technologies. To this end, USSOCOM was among the first to welcome teams as part of the Deputy Secretary of Defense's Accelerating Data and AI Initiative in early fiscal year 2022. Additionally, USSOCOM's efforts to accelerate the adoption of Advancing Analytics (known as Advana) are enabling the command to link Service data and SOF data to illuminate the command's business operations in unprecedented ways. Notably, the command has linked approximately 300 disparate SOF and Service datasets together to create a "single source of truth" for

baseline data and performance-related insights for its personnel, financial, materiel, and education activities.

Other recent AI initiatives include capabilities developed for information operations, medical research, predictive maintenance, intelligence, and autonomous vehicles. As one example, USSOCOM's Intelligence Data Science Team is applying AI to intelligence problems across the SOF enterprise. AI/ML disciplines such as topic modeling, network analysis, natural language processing, and predictive modeling are being applied to publicly available information and sensitive intelligence data to address intelligence requirements. Promising opportunities exist to further leverage data analytics and AI technologies in additional areas to include financial planning, logistics, personnel management, cyber, and a variety of operational applications.

Across these efforts, we recognize the importance of deploying ethical and responsible AI capabilities. With partners in industry, academia, and U.S. Government agencies, we seek to employ explainable AI capabilities to ensure algorithms and models are aligned with our moral, ethical, and legal obligations. As the SOF enterprise explores the potential of emerging algorithmic technologies, to include natural language processes and large language models, we will remain closely aligned with DOD-wide initiatives to promote responsible and explainable AI to mitigate algorithmic risks, ensure traceability, and guard against unethical, illegal, or immoral outcomes.

CONCLUSION

From SOF's earliest history of strategic competition from World War II to the cold war through combat operations during the Global War on Terror, our SOF today stand ready to meet the challenges of this decisive era. Many decades of problem-solving, courage, and relentless determination attest to SOF's ability to succeed for the Nation today and in the future. SOF's unmatched, combat-tested capabilities provide options to prepare, prevent, and prevail in this era of strategic competition—whether creating dilemmas for our competitors, countering coercion, reassuring Allies and partners, disrupting VEOs, or responding to crises. As creations of Congress, SO/LIC and USSOCOM will continue to provide the leadership and advocacy necessary to ensure that SOF remains the world's most capable special operations force. With your continued support, we will confirm that our Nation's SOF are unquestionably a national advantage.

Chairman REED. Thank you very much, General Fenton. General Nakasone, please.

STATEMENT OF GENERAL PAUL NAKASONE, COMMANDER UNITED STATES CYBER COMMAND/ DIRECTOR, NATIONAL SECURITY AGENCY/ CHIEF, CENTRAL SECURITY SERVICE

General NAKASONE. Chairman Reed, Ranking Member Wicker, and distinguished Members of the Committee, I am honored to testify beside Assistant Secretary Christopher Maier and General Bryan Fenton.

Joining me today is Command Sergeant Major Sheryl Lyon, the U.S. Cyber Command and National Security Agency Senior Enlisted Leader. We are honored to represent the military and civilian members of U.S. Cyber Command. In the contested cyberspace domain, U.S. Cyber Command acts against foreign adversaries that threaten our Nation through malicious cyber activity and enables action by our Federal, private, and allied partners.

For instance, a combined U.S. Cyber Command NSA [National Security Agency] Election Security Group countered malicious cyber actors and oversaw measures to enable the Department of Homeland Security and the FBI, among other domestic partners, to defend the recent midterm elections.

The 2022 election cycle proceeded from primaries to certifications without significant impacts due in part to our effort. Going forward, success for U.S. Cyber Command will be measured by how

effectively foreign adversarial actors are prevented from achieving their strategic objectives.

Last year saw significant maturation for U.S. Cyber Command but our work is not done. In 2023, we must continue to focus on our people, our partners, and our ability to deliver a decisive advantage. We must improve readiness, bolster our resilience, and maintain a culture of continuous improvement.

We will continue to deliver warfighting advantage for the Joint Force and partners throughout competition, crisis, and conflict. We are doing so by executing our service like authorities to build and sustain campaigns in and through cyberspace and the information environment.

Through these efforts, we seek to counter adversaries in competition, to deter conflict, and prevail against aggression. Aligning efforts of both U.S. Cyber Command and NSA is essential to achieving these goals and is in the best interest of the Nation and national security. It all starts with people, the men and women of U.S. Cyber Command working with NSA and partners here and abroad.

We win with people. The men and women of the United States Cyber Command are grateful for the support of this Committee and Congress that has been given to our command. I look forward to your questions.

[The prepared statement of General Paul M. Nakasone follows:]

PREPARED STATEMENT BY GENERAL PAUL M. NAKASONE

Chairman Reed, Ranking Member Wicker and distinguished Members of the Committee, thank you for your enduring support and the opportunity to represent the men and women of U.S. Cyber Command (USCYBERCOM). I am honored to be here beside Assistant Secretary of Defense Christopher Maier and General Bryan Fenton. I look forward to describing how USCYBERCOM continues to deliver return on investment by using the authorities and resources provided by Congress and highlighting the work ahead for 2023.

Guided by the National Defense Strategy, USCYBERCOM focuses on building enduring advantages through campaigning to support Integrated Deterrence. USCYBERCOM acts against foreign adversaries that threaten our Nation and expands capability through cooperation with Federal, private and allied partners. We seek to outmaneuver our adversaries as they look for opportunities to exploit the United States' dependence on data and networks in critical infrastructure, the Defense Industrial Base and private industry.

USCYBERCOM is the Nation's premier military cyber force—one whose world-class talent and strategic partnerships defend U.S. interests while delivering warfighting advantage to the Department of Defense (DOD). It executes its mission along four lines of effort to create and maintain advantage against our adversaries:

- We generate insights and options in defense of the Nation;
- We secure, operate and defend the Department of Defense Information Network (DODIN), ensuring mission advantage for the Department of Defense;
- We develop options for full-spectrum cyberspace operations to assist Combatant Commanders and the Joint Force to achieve their objectives; and
- We boost the strength of America's allies and partners in cyberspace.

USCYBERCOM will buildup its people, partners and decisive advantage. The Command directs operations through its components. These include the Cyber National Mission Force (CNMF); Joint Force Headquarters-DOD Information Network (JFHQ-DODIN), the commander for which is dual-hatted as the Director of the Defense Information Systems Agency); Joint Task Force Ares and other Joint Force headquarters elements. The commanders of Army Cyber Command, Marine Corps Forces Cyberspace Command, Fleet Cyber Command/Tenth Fleet, Air Forces Cyber/16th Air Force and Coast Guard Cyber Command also lead their Service cyber components.

Operational success in the cyberspace domain demands speed, agility and unity of effort. Hence, the roles, missions and responsibilities of USCYBERCOM and Na-

tional Security Agency (NSA) must be mutually supportive in this mission space. A recent report on the dual-hat leadership structure completed by a Secretary of Defense and Director of National Intelligence-directed Senior Steering Group (comprising defense and intelligence leaders) found "substantial benefits that present compelling evidence for retaining the existing structure." The successes that USCYBERCOM and NSA have experienced in defending our elections, in engaging ransomware actors, and in many other missions with the other Combatant Commands, rest on the alignment of USCYBERCOM and NSA. The Senior Steering Group highlighted these accomplishments for the Secretary of Defense and Director of National Intelligence, finding that the dual-hat structure is in the best interests of USCYBERCOM, NSA and the Nation. Success in protecting the national security of the United States in cyberspace would be more costly and less decisive with two separate organizations under two separate leaders. The enduring relationship is vital for both organizations to meet the strategic challenges of our adversaries as they mature their capabilities against the United States.

Present and Future

USCYBERCOM persistently engages adversaries, countering cyber actors and their affiliates who are seeking to harm the United States, its interests and its allies. Skilled and dangerous cyber actors exist, many of them serving foreign military and intelligence organizations. USCYBERCOM provides options to counter malicious actors who exploit cyberspace to support their intelligence operations, steal intellectual property, promote violent extremism, impair democratic processes, coerce perceived rivals and fund transnational illegal conduct.

The National Defense Strategy named the People's Republic of China (PRC) as our military's pacing challenge. The PRC combines authoritarianism with a revisionist foreign policy and stands as the only competitor with both the intent and power to reshape the global order to its advantage. Its rapidly modernizing military is building capabilities far in excess of China's defense needs while supporting Beijing's coercive diplomacy. Competition with the PRC takes place on a global scale, and although that contest remains below the threshold of armed conflict, it is nonetheless strategic in its effects and its implications. PRC-sponsored cyber actors represent a sophisticated and growing threat to the United States' and allies' interests.

China is learning from Russian actions in Ukraine and elsewhere. The National Defense Strategy calls Russia an acute threat to the free and open global system, noting that Moscow flouts international norms with its destabilizing actions. Russia's aggression in Ukraine threatens the peace and stability of Europe. The United States and our allies are working to ensure the strategic failure of their attempt to change the status quo by violence.

Russia's military and intelligence cyber forces are skilled and persistent. Russia has attempted to influence elections, through malign activities, in the United States and Europe and has enabled intelligence collection on a global scale. Moscow has a high tolerance for risk and collateral damage in its cyber operations. This boldness is evident in Russia's indiscriminate cyberattack on Viasat satellite communications in Ukraine and across Europe in support of the invasion of Ukraine last year.

Russia and Ukraine are engaged in a complex struggle in cyberspace that includes significant support from independent actors. Before the crisis unfolded, USCYBERCOM partnered with United States European Command (USEUCOM) and Ukraine by deploying "hunt forward" cyber experts to assist Ukraine's efforts to harden their networks against Russian aggression. Since the crisis began, USCYBERCOM has focused on defending secure communications capabilities at USEUCOM and Ukraine—ensuring the posture of our Nation's nuclear command and control and strengthening DODIN defense.

The National Defense Strategy emphasizes our enduring commitment to deterring aggression in the Middle East and promoting stability in East Asia. Iran remains a destabilizing force in its region, and its cyber actors are proficient and aggressive. Tehran's paramilitary and intelligence forces sponsor a variety of malicious cyber activities against Iran's neighbors and against the United States, as we saw in last year's midterm election. Pyongyang also maintains cyber forces supported by North Korean information technology workers dwelling in other countries. They remain a threat, although much of their recent activity has been devoted to evading international sanctions by stealing cryptocurrency for the regime's use.

Non-State actors also remain a threat in cyberspace. International cybercrime, often organized or executed by actors in Russia, continues to be a concern. USCYBERCOM and NSA enable efforts by the Department of Treasury, the Federal Bureau of Investigation (FBI) and other partners to disrupt ransomware, cryptocurrency theft and other criminal activities. In addition, violent extremist groups are also active in cyberspace. The Islamic State in Iraq and Syria, al Qaida

and associated terrorist groups maintain the intent to target Americans, although their capabilities have been eroded. Our Marine component, JFHQ-C (marines), works with allies and partners to disrupt violent extremist group mobilization online and to support diplomatic efforts.

USCYBERCOM is fully engaged in its efforts to defend the DODIN, disrupt adversary campaigns to harm America and its interests, enhance our partners' defense, and support Joint Force objectives in cyberspace. Authoritarian adversaries feel threatened by the freedoms that democratic states regard as commonplace, and thus they not only deny such freedoms to their own people, they campaign in cyberspace to impugn the legitimacy of democratic societies and to intimidate opposition at home and abroad. As the National Defense Strategy suggests, it will take a whole-of-government—and indeed, a whole-of-nation—effort to bend this trajectory back toward international respect for the principles of the United Nations Charter.

Defense of the Nation

Defending the Nation is paramount among our missions. It means defending our military systems, networks and the critical infrastructure that enable national security. Every Combatant Command's operational plan across the Department assumes that our commanders will be able to leverage data and communicate orders and data rapidly and securely across the battlefield. In this regard, USCYBERCOM plays a crucial role in the defense of military systems, networks and data.

USCYBERCOM and NSA collaborated in defense of the 2022 midterm election. Foreign attempts to meddle in our electoral process via cyber means escalated in 2016 and have persisted in every election cycle since. USCYBERCOM expects them to continue into the future as the prospect of distracting our leaders, pitting Americans against one another on divisive issues and undermining public trust in the democratic process is too tempting for foreign adversaries. USCYBERCOM seeks to render these campaigns inconsequential, in conjunction with the FBI and Department of Homeland Security Cybersecurity and Infrastructure Security Agency (DHS/CISA) partners.

In 2022, USCYBERCOM and NSA teams staffed a combined Election Security Group (ESG) to coordinate cybersecurity, intelligence and operations. The efforts of the ESG enabled DHS and the FBI, among other domestic partners, to defend electoral processes and take action against foreign actors working to subvert the midterms. The 2022 midterms progressed from primaries to certifications without significant foreign malign influence or interference.

The Cyber National Mission Force (CNMF) played an important role in the defense of the midterms and is vital to many of our other efforts as well. CNMF conducts missions to counter malicious cyberspace actors and covers both the offensive and defensive aspects of our defend-the-nation mission set. USCYBERCOM established the CNMF as a subordinate unified command on December 19, 2022 at the direction of the Secretary of Defense. Elevating the CNMF to the status of a sub-unified command not only recognized the importance of its enduring mission, it gave the CNMF greater ability to manage its personnel and readiness and to request manpower, funding and resources through DOD processes.

Since 2018, the CNMF has deployed hunt forward teams 40 times to 21 countries to work on 59 networks, generating insights and imposing costs on common adversaries. These partner-enabled operations have exposed malicious cyber activity by China, Russia, Iran and cyber criminals; made partner-nation networks more secure; increased our global cybersecurity partnerships; led to the public release of more than 90 malware samples for analysis by the cybersecurity community and ultimately kept us safer here at home. In competition, there is no substitute for sharing accurate, timely and actionable intelligence to expose adversarial activity with like-minded domestic and international partners.

Last year, we created a combined USCYBERCOM-NSA China Outcomes Group to oversee this shift. The China Outcomes Group aligns components in USCYBERCOM and NSA, enhances intelligence insights, improves cybersecurity and delivers operational outcomes for the Nation. Resources are prioritized and focused on deterring and countering the PRC's aggressive behavior.

Cyberspace is a global domain. Adversaries often penetrate privately owned networks and devices, using ever-increasing technical capabilities to disrupt operations or gain illicit value via activities such as intellectual property theft, targeting of personal information and installation of ransomware. USCYBERCOM is working under recently expanded statutory authorities and aligning efforts with NSA's Cybersecurity Directorate to bolster companies' ability to defend themselves against exploitation by cyber actors. This collaboration and broad sharing of insights with the private sector provides mutual benefits. An example of this is our UNDERADVISEMENT program, which links cybersecurity expertise across industry and govern-

ment, leading to several operational successes as well as pointing the owners of victim systems toward threats that they can eradicate. In conjunction, NSA's Cybersecurity Directorate runs its Cybersecurity Collaboration Center to share best practices with industry partners and gain additional insights into the technical challenges they are encountering.

Strategic Initiatives

The success of our operations to support the National Defense Strategy depends on training and readiness. We have prioritized improving the readiness of our cyber forces since USCYBERCOM became a unified Combatant Command in 2018, and there has been progress in the last several years. The staffing and training of our teams are improving. In addition, USCYBERCOM has enhanced its ability to monitor the status of the Cyber Mission Force (CMF) at the team, mission element and individual levels. USCYBERCOM is crafting standards for cybersecurity defenders across the DOD Cyberspace Operations Forces Service-retained cyber forces. The creation of these standards will improve the ability to defend networks while enabling our CMF teams to hunt foreign adversaries where they hide and foster a culture of innovation, collaboration and compliance that USCYBERCOM seeks to build.

Strong partnerships are crucial to cyberspace operations. When working in unison, our diplomatic, military, law enforcement, homeland security and intelligence capabilities make a powerful combination that can disrupt the plans of malicious cyber actors. As we saw in our collective defense of the 2022 midterm election, such effects become even more decisive when we include our allies and foreign partners. Their reach often exceeds our own, especially in host-nation systems. As part of our regional engagement strategy in the Indo-Pacific, we are working closely with partners such as Australia, Japan and South Korea to share information that will impose costs on foreign adversaries. Likewise, we continue to do the same with other partners in Europe and Asia. We are also working to enhance partnerships with academia and industry experts who assist us in concept and capability development.

Implementing USCYBERCOM's Service-like authorities will allow it to deliver priority capabilities with agility and at speed. In fiscal year 2024, USCYBERCOM will assume control of the resources for the Cyber Mission Force cyberspace operations and capabilities. Enhanced budgetary control (EBC) gives USCYBERCOM the ability to directly allocate resources for greater efficiencies during the Department's programming phase and ensure they remain aligned with priorities through execution. EBC will lead to better alignment between USCYBERCOM responsibilities and authorities for cyberspace operations.

Expanding USCYBERCOM's role in acquisition is another important step in the implementation of Service-like authorities. The Joint Cyber Warfighting Architecture (JCWA) is USCYBERCOM's premier platform that enables Cyber Operations Forces to conduct full-spectrum cyberspace operations. The Under Secretary of Defense for Acquisition and Sustainment is granting USCYBERCOM greater technical responsibility and authority to direct the development, integration and fielding of critical capabilities and infrastructure in the JCWA. Included in the Fiscal Year 2023 National Defense Authorization Act is a provision directing the establishment of a Program Executive Office (PEO) within USCYBERCOM. This PEO would assume Service-like acquisition decision authority for JCWA program components by fiscal year 2027.

USCYBERCOM depends on support from the National Guard and Reserve. Service cyber components employ Reserve Component personnel to support operations and reinforce relationships with government agencies, increasing the synergy between USCYBERCOM and these organizations. In addition, Army Cyber Command benefited from the expertise of civilian data scientists during their mobilizations to support research and development projects that would not typically be possible with traditionally trained active duty forces. National Guard components on State active duty, and in the State Partnership Program (SPP) work in various efforts to protect State, industry and foreign-partner systems. The SPP offers additional capacity to support increased cyberspace security cooperation activities in support of national defense strategy objectives. We gain valuable insights from the specialized expertise that Reserve Component personnel can bring from their civilian jobs in industry and academia, and such ties have helped us build partnerships across America.

USCYBERCOM recognizes its challenge to grow and develop its military and civilian workforces. Cyber Excepted Service (CES) allows USCYBERCOM to offer cyber professionals opportunities to use their skills and contribute greatly to the national security of the United States. Since CES implementation began, USCYBERCOM has seen positive improvements to the recruiting and hiring timeline.

Enhancing diversity, equality and inclusion is a priority. USCYBERCOM and NSA cannot afford to overlook or neglect talent wherever it resides nor can we allow workplace challenges of any sort to discourage professionalism or inhibit creativity. Our impact for the Nation depends on fostering a wide range of viewpoints and free-ranging debate to encourage innovation and problem-solving, and we will not tolerate harassment in any form or behavior that stifles civil discourse.

Conclusion

Success for USCYBERCOM will be measured by how effectively foreign adversarial actors are prevented from achieving their strategic objectives. USCYBERCOM will counter adversaries in competition to defuse crises, deter conflict and prevail against aggression. Aligning efforts of both USCYBERCOM and NSA is essential to achieving these goals and is in the best interest of the Nation. It all starts with people—the men and women of USCYBERCOM working with NSA and partners here and abroad—We win with People.

Last year saw significant maturation for USCYBERCOM, but our work is not done. In 2023, we must continue to focus on our people, our partners and our ability to deliver decisive advantage. We must improve readiness, bolster our resilience and maintain a culture of continuous improvement. We have and will continue to deliver warfighting advantage for the Joint Force and partners throughout the full spectrum of competition, crisis response and conflict. We are doing so by executing our Service-like authorities to build and sustain campaigns in and through cyberspace and the information environment.

USCYBERCOM's efforts to defend against and contest adversary campaigns in and through cyberspace have been enhanced by the support of this Committee. Designing our campaigns to stay in constant contact with foreign adversaries (persistent engagement) and synchronizing Offensive and Defensive Cyberspace Operations with DOD Information Network Operations are the critical initiatives that allow USCYBERCOM to maintain its advantage in cyberspace. These concepts will continue to be key to our effectiveness and are necessary to outmaneuver and outpace our adversaries wherever they are.

The men and women at U.S. Cyber Command are grateful for the support this Committee has given to our Command. We can only succeed with a strong partnership with Congress. Thank you, and I look forward to your questions.

Chairman REED. Thank you very much, General Nakasone. Gentlemen, thank you for your testimony. As I indicated in my opening statement, Mr. Secretary, we have made progress in strengthening the ASD SO/LIC to act as a service Secretary-like position regarding SOCOM, but there is more to do, particularly with respect to personnel, facilities, and other aspects of your office. Could you comment on what more must be done?

Mr. MAIER. Thank you, Chairman, and again, I would think this Committee in particular for the ongoing and very consistent support for the ASD SO/LIC position, and indeed my staff.

Mr. Chairman, I give you a quick snapshot to say that I think we have established a degree of momentum and a bit of irreversibility, which certainly wasn't the sense of things when I first took this role, and a lot of that has to do with the continued support of Secretary Austin, Deputy Secretary Hicks.

I think, as I have testified in this Committee before, the best snapshot I can give the Committee is when the Secretary of Defense convenes his service secretaries, it convenes the Secretary of the Army, the Secretary of the Air Force, and the Secretary of the Navy, and me as ASD SO/LIC to ensure that SOF voice and perspective is in the room.

To your question, Mr. Chairman, on areas of growth, I think we do need to continue to add staff. We have added about 20 or 25 people over the last 2 years with support from this Committee, and that is against about 50 people currently.

It is a very small staff compared to the services, even with our limited authorities relative to them, and then I think most impor-

tantly, leadership billets. We need more ability for people in a very hierarchical Defense Department to be able to participate in meetings at the right level of seniority, sir, so, I would highlight those.

Chairman REED. Thank you very much, Mr. Secretary. General Fenton, what is the value of SOCOM in having properly empowered service Secretary-like civilian like Secretary Maier?

General FENTON. Senator, thank you very much for that question, and I would say on a couple of fronts, very, very, very big value. First and foremost, as the Secretary Major just mentioned, his ability to be at the service, excuse me, of Secretary tables with the Secretary of Defense and represent issues for the SOCOM team along the lines of people, education, training, and even as he mentioned, where SOF will be and play a big role in terms of integrated competition. Excuse me, that is extremely important for the SOCOM enterprise.

I would say, next, his ability to be with the service secretaries and represent issues from SOCOM back to the services that we take our folks in from is very important for us, and we are very grateful for that.

Certainly, his direction, in many ways, throughout the Department in terms of how SOCOM views not only integrated deterrence but crisis response in counterterrorism has been a welcomed guidance for me.

I am very grateful to have a service Secretary, and as I told you. I think, Chairman, when I was that confirmation, I looked forward to testifying next to my service Secretary.

Chairman REED. Thank you very much, General. General Nakasone, the issue of readiness with cyber mission forces has been a persistent issue we have discussed at the Committee on numerous times.

The Cyber Mission Forces play a very key role and they have very demanding task. They require personnel with special aptitude, training, and experience. One of the ironies, of course, is when you develop such a person, he or she becomes very attractive for outside employers, so you have a retention problem as well as other problems.

In some cases, in the past, it has been indicated that the services are not providing you the skilled and trained individuals you need, which does not provide you with the maximum possible use.

Could you comment on the present situation with respect to Cyber Mission Forces, and also any steps that we should be taking to improve their readiness?

General NAKASONE. Chairman, as we take a look at the readiness of 133 teams, it really comes down to three Rs. It is the readiness piece of it—I am sorry, it is the recruiting piece of it. It is the training piece of it.

It is the retention piece of it, and so, when you look at that, where I see this right now is the fact that the services have done a good job of recruiting the forces that I need. Assigning the numbers are one of the things that we are working with right now to make sure that we have all of the folks that we need. We have worked very, very hard to get the training to a very simple and predictable level.

That continues to improve. The other piece that we need to work hand in hand with the services is the retention piece, which you highlighted. The challenge of someone that has this type of training is very, very attractive, to the outside.

But several of the Services, the marines included, have made tremendous progress in this, in being able to focus their marines on doing what these marines wanted to do, which is cyber operations. In being able to stay within our force for long periods of time, we see a reflective retention rate that is much higher.

Chairman REED. Well, thank you very much. Gentlemen, again, thank you for your testimony. Let me recognize Senator Wicker.

Senator WICKER. Thank you. First question to General Fenton, and this is about the naval small craft instruction and technical training school, NAVSCIATTS, which provides training to foreign forces on small boat operations and unmanned aerial systems. The annual operating cost is $14.8 million, and that is divided across multiple stakeholders, including the Navy, SOCOM, and our foreign partners.

General Fenton, let me ask you, do you agree with General Richardson, the Commander of SOUTHCOM, who said the school generates outside return on investments? Ukrainian troops were being trained there last year when President Putin launched his unprovoked and illegal attacks on their country.

Do you agree, sir, that NAVSCIATTS provides value to our Combatant Commanders and key foreign military partners?

General FENTON. Senator, thank you for that question. I am absolutely familiar with these NAVSCIATTS, as you refer to. I was more familiar with it when I was in INDOPACOM as a Deputy Commander, and there I saw value in that type of training, and I will say in many types of training, certain.

We thank this Committee for a number of efforts that SOCOM has at its disposal in terms of 333, the 1202, and 127-echo that increase the capability of our forces and create partnerships in the way that we need those partnerships, and in SOCOM we call those partnerships pacing——

Senator WICKER. And $14.8 million is a relatively modest investment, would you agree?

General FENTON. Senator, I am not familiar with the budget. I am familiar, again, with the type of training that NAVSCIATTS produces.

Senator WICKER. Okay. We have established that there is value there, so I appreciate that. Let me turn then to General Nakasone. Tell us about cyber in support of our Ukrainian allies and the Russian use of cyber in support of their illegal and aggressive invasion of Ukraine.

General NAKASONE. Senator, the story begins on the 3d of December 2021, when we deployed a hunt forward team to Kyiv. That began a 70-day journey for us to ensure that Ukraine was at a much higher State of cyber readiness.

As you know, we saw early attacks on specific Ukrainian sites within their government, and we also saw continued attacks as the invasion approached. What we were able to do during that time was work with a series of partners to bring the tools and tech-

nology to Ukraine that was able to assist them as Russia conducted continued attacks.

We continue today with support to a number of different Combatant Commands, United States European Command, and the training mission for Ukraine. Also too U.S. Strategic Command, as we take a look at ensuring that our NC3 network, our nuclear command and control and communications network, is the top and most important network and is fully secure.

As we move forward, we continue full spectrum operations with a series of partners to include Ukraine to provide them assistance as they battle the Russians.

Senator WICKER. Well, Okay. Do you expect Russia is able to intensify new capabilities in a spring offensive this year?

General NAKASONE. From the cyber perspective, we are watching this very carefully, Senator. They are a very capable adversary. We continue to work very tightly with our other partners within the U.S. Government, CISA [Cybersecurity and Infrastructure Security Agency], FBI [Federal Bureau of Investigation], to ensure that our U.S. critical infrastructure is protected, and NATO in general to ensure that they are aware of the tradecraft of the Russians might use.

Senator WICKER. Okay, Secretary Maier, what more do you need? You were asked and you said you need to add staff, and then you need more attention to the leadership billets.

Do you have what you need in terms of funding right now to do this and to deal with your enormous challenges, and if we give you the same amount you got this fiscal year with an inflation adjustment, will that be enough?

Mr. MAIER. Ranking Member, speaking just to my specific office, I think we are probably on a good pathway just in terms of funding. I already highlighted some of the other requirements.

In terms of the entire special operations enterprise, I think our priorities are represented, understanding full well that the challenge with inflation means that if our budget is flat, that reduces our buying power, so that is something we will need to keep a close eye on, sir.

Senator WICKER. Yet you need additional staff and you need increased leadership billets.

Mr. MAIER. Yes, sir. I think we are on a good trajectory with the leadership billets. We are part of that conversation in the Department. I think especially in outyears years, we are going to need to add more staff to build that capability to really help this transition I have described, from counterterrorism crisis response to also include the peer competition that we have talked about and I expect we will talk about more, sir.

Senator WICKER. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Wicker. Senator Shaheen, please.

Senator SHAHEEN. Thank you, gentlemen, for being here this morning, for your testimony, and for your service to the country.

I think I would start this question with you, Secretary Maier, because SOCOM and CYBERCOM really are at the nexus of DOD's efforts to address the weaponization of information, which I think

has become as much an issue for us as we are looking at our ability to be successful around the world as our military capability.

Can you, Secretary Maier, talk about DOD's role in addressing that misinformation, and how DOD coordinates with other agencies and Departments within Government to address disinformation?

Mr. MAIER. Yes, thank you for the question, Senator Shaheen. I would broadly start with describing DOD information as rooted in military objectives. As we talk about how this fits into the interagency, we have a distinct role and a value to play, but not for broad messaging, not for all the work that, say, the State Department or some other entities would do.

I think we have looked at significant components of the information operations enterprise and really tried to tighten and target it more so the value proposition and the measures of effectiveness are there. This is really a journey we are on, and I think it is one that the leadership of the Department is very, very focused on.

I would leave you with the idea that this is much more of a priority in the context of integrated deterrence that the national defense strategy calls out, because information is so critical, as you said, to all the aspects of success, especially as we start to think about adversaries we are trying to deter, ma'am.

Senator SHAHEEN. As you think about our efforts to recognizing—you are saying that we are trying to be more focused and how we address information at DOD. But clearly, what happens at State and in other Government agencies affects what DOD does. Are there policy changes? Are there resources? Is there coordination that should be done that we should be thinking about? I would ask General Fenton and Nakasone to respond to that as well.

Mr. MAIER. Briefly, ma'am, I think we need to invest more in the DOD information operations enterprise. It has not been one that has frequently been a focus, frankly, and I think with more capability in the Department and all hands, our ability to coordinate in an interagency standpoint. That is still very much a work in progress, ma'am.

Senator SHAHEEN. General Fenton.

General FENTON. Senator, I would echo all of Secretary Maier's comments. Then I would add that the integrated deterrence approach, I think, does demand a whole-of-government approach in information operations, and SOCOM is one part of that in the Department side, but we also coordinate with other agencies of the Government to ensure that we are integrated and that folks know that the SOCOM piece is a traditional military activity.

The information operation space, as I like to say, is a place we absolutely have to be as part of a military, traditional military activity, and to get effects for Commanders either to message an adversary, to see misinformation and provide that to a host nation.

Senator, I think our key message to the SOCOM enterprise as we move forward is, we remain aligned with the Department and certainly as part of the whole Government approach. It is a key part for us, and our State colleagues and other colleagues in the U.S. Government are very important as we do that.

Senator SHAHEEN. General Nakasone.

General NAKASONE. Senator, it begins overseas. We are very familiar in how to do these operations. We have seen it in the elec-

tions. We have seen it with Russia, Ukraine. We have seen it with Iran.

The same actors that are interfering in our elections are the same actors that are doing influence operations. We go after them. This is what persistent engagement is for U.S. Cyber Command and the National Security Agency. We find them and we continue to ensure that we understand exactly what they are doing.

We examine their tradecraft, and then we share it with a series of different partners. This is only done effectively, as both the Secretary and General Fenton have indicated, is with partners. Inside the United States, sharing signatures with the FBI who share it with social media companies, being able to work with allied partners who have a broader understanding.

But then I think it is also with, how do you bring the totality of our Government against them. Whether it is State Department, Treasury, FBI, being able to go after them.

The one thing we have learned, though, on this is that they never go away. They are always there, and you always have to be persistent.

Senator SHAHEEN. The Fiscal Year 2020 NDAA, trying to better focus the Department's efforts on information operations and then establish a principal information operations adviser, and ask the Secretary of Defense to conduct information operations and require a strategy and posture review that was due more than a year ago.

It still hasn't been delivered by the Department. Can you tell us what the status of that report is, Secretary Maier, and when we could expect delivery?

Mr. MAIER. Senator, yes, we understand both the strategy and the posture review are overdue. They both are now in senior level coordination, so above my level. They passed through my review.

I would expect in a matter of weeks they would come to you. I would say, in understanding the times out, that these have helped to animate a lot of the conversations and deep action within the Department to really focus down it in on posture, and then the strategy has prompted a relook at how we go about doing information operations, per your opening question, ma'am.

Senator SHAHEEN. Thank you, so, I should assume we would have it by maybe the end of April?

Mr. MAIER. That is our intent. Yes, ma'am.

Senator SHAHEEN. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Shaheen. Senator Fischer, please.

Senator FISCHER. Thank you, Mr. Chairman. General Fenton, in your nomination hearing last year, you agreed with your predecessor, General Clark, that without sustained counterterrorism (CT) pressure, we are going to continue to see terrorist groups that are more able to focus on planning and preparing for external attacks. Do you still agree with that statement?

General FENTON. Senator, I absolutely agree with that statement. There is a direction to the SOCOM team from the Secretary of Defense to have that as one of our three main priorities, integrated deterrence, counterterrorism, counter violent extremist organization (VEO), and crisis response.

Senator FISCHER. I remain highly concerned that we aren't seeing sustained CT pressure that we need in Afghanistan, especially with respect to ISIS-K [Islamic State of Iraq and Syria-Khorasan]. It is my understanding that we have only had one single strike in over a year.

I don't believe that that translates into sustained CT pressure against ISIS-K. Can you describe the challenges of conducting the over the horizon CT operations without the reliable partners on the ground, without basing it in neighboring countries, and without reliable access to airspace?

General FENTON. Senator, thank you for that opportunity to comment. On the first portion of that reference to Afghanistan, I would defer certainly to General Kurilla, his team. They have a more fulsome insight with a series of partners, than I would have, and additional challenges.

SOCOM being one part of a whole Government team, I am sure there are many others that would give you a different insights and probably some more fulsome data. But what I would tell——

Senator FISCHER. Do your insights, sir, differ with some of theirs that they have made to this Committee?

General FENTON. No, but what I would tell you, Senator, is that part of addressing ISIS [Islamic State of Iraq and Syria] in Afghanistan is addressing it globally. When I look at that question, I certainly view it through the Secretary's priority, and for us, defend the Nation, and I think counterterrorism and VEO, it is a very high priority for SOCOM.

As we think about it, we certainly, first and foremost know that your Special Operations Command team, in partnership with COCOM, because ISIS Islamic State of Iraq and Syria] is a global organization, can sense, see, and strike anywhere in the globe.

In essence, many of our operations are in places where we are not proximate to the target, and in fact, last year, an operation that went off in Northwest Syria to remove ISIS, number one, from the battlefield, we had to fly across Syria to get there. We are very far from that target.

But our ability to see it, sense it, and then strike it, unquestionable, and I think we have been able to do that globally throughout this year in places, Somalia with sustained pressure on ISIS, against an ops and communications node.

I would add also that that global pressure for SOCOM, in concert with partnerships, goes on even in the Indo-Pacific. So, my sense to you, Senator, is that we absolutely have to keep the pressure on ISIS, on any of those terrorist networks.

If I think about it with a number of the operations that have occurred, and I would be happy to talk more in a closed setting, it has been an extremely challenging year for these extremist operations, with a number of operations we put together, to include in Syria.

Senator FISCHER. Well, SOCOM has been primarily focused on counterterrorism mission for the last 20 years. The special operation forces have a lot of capability that they can bring to the Indo-Pacific. You earlier mentioned your experience there, and I value your knowledge and experience.

Can you provide an update on how you plan to rebalance your forces that you have through restructure, training, and exercises, or to develop any kind of unique capabilities in order to meet the increased demand signal that we are getting from INDOPACOM.

General FENTON. Thank you very much for an opportunity to comment on that. I think as we—Senator, as we look at our priorities across the when category of integrated deterrence, crisis response, and counterterrorism, it is an adjustment.

I have heard it referred to in other places as a pivot. I would tell you it is an adjustment for how we are going to address strategic competition, integrated deterrence. It is in our DNA. We have been doing it—we have, as your special operations forces, were really born to do this. In INDOPACOM, I think what it means is, through the lens of prevention, deterrence, and preparation, beginning with partnerships, partnerships with nations in that region that want the U.S. there.

They want to see a U.S. capability, and frankly, in many ways, when that U.S. capability shows up, through the lens of special operations forces, we are absolutely able to move a partnership toward the United States and away from the PRC [People's Republic of China].

I think that same type of partnership helped us in Ukraine with the training that we were doing there with the Ukrainians, from 2014 and on, saw the special operations way of warfare and the way of doing business. All of that is very applicable to what we are doing in the Indo-Pacific, but I defer certainly to Admiral Aquilino for a more fulsome of how he sees it, because I am always in line with his requirements.

We do that through our Theater Special Operations Command, our TSOC, Special Operations Command Pacific. We take lead from them at the SOCOM enterprise. But we are invested there, Senator Fischer, in a way to deter, prepare for, and then if needed, prevail in conflict.

Senator FISCHER. Thank you, and thank all of you, gentlemen, for your service.

Chairman REED. Thank you, Senator Fischer. Senator Gillibrand, please.

Senator GILLIBRAND. Thank you, Mr. Chairman. General Nakasone, we have been working together on helping to develop a greater cyber capability amongst new personnel, and we created this cyber academy for civilian workforce, which should be accepting its first class in 2024, applications in 2024 for a class in 2025.

We are using the universities that NSA has already assessed as having the correct cyber capability and cyber curriculum. But in light of your testimony, I wanted to ask, would it be helpful to you to have a dedicated cyber force training just for permanent Cyber Command personnel for the military side as well? If you did want that, what would that look like?

General NAKASONE. Senator, first of all, thank you for the work that you have done to build a greater population of cyber savvy folks. I am not sure that we need an academy yet. What I am very, very focused on is being able to look at the continued success we are going to have with the program that you have worked with in New York.

I am very interested in continuing the successes that we have had across the National Guard with State partnership programs. You are very, very familiar with the New York National Guard's work with Brazil, and other National Guard forces here.

I am also very, very focused on ensuring that the ROTC [Reserve Officer Training Corp] and academy programs continue to have strong growth in terms of the numbers of people that can be commissioned into our force.

Chairman REED. Thank you, Senator Gillibrand. Senator Cotton, please.

Senator COTTON. Thank you, gentlemen. Mr. Maier, you acknowledge in your opening statement that the shift away from counterterrorism is the primary role of our Nation's special operations forces.

But far from decreasing the need for those forces, I would suggest that the current threat environment calls for even more capability. The need to continue our counterterrorism missions, support foreign and internal defense activities to bolster allies, and engage in new types of operations that are going to counter Chinese and Russian aggression.

In that operating environment, would a decrease in force size or budget seem like a reasonable step to you?

Mr. MAIER. Senator Cotton, thanks for the question. Yes, this is the crux of the challenge, right. We are being asked to do more and our forces is probably static. So, I would not advocate for a reduction in forces, sir.

Senator COTTON. I regret that you are here today, and not 48 hours from now when we are going to get the President's budget. Because I am troubled that you may, in fact get a reduction in budget or forces. Have any thoughts on what we are going to see on Thursday?

Mr. MAIER. Senator, as I think you know, I can't talk to what is likely to be in the budget, but I think as General Fenton and I both said, the priorities that we have identified are represented in that budget.

Senator COTTON. That is Okay. Well, if my fears are proven out, I think you can count on many Members of this Committee, probably in both parties, to try to make sure that our special operations forces have the resources they need. General Fenton, do you agree that SOCOM requirements and your relevance are growing in this threat environment, not decreasing?

General FENTON. Senator, I would agree with that. I think that the SOCOM requirements to be in campaigning and competition are absolutely important and exceedingly asked for by Combatant Command teams, where I draw my requirements from. Certainly, in line with our Theater Special Ops Command, the TSOCs.

But we see it because much of this begins with partnerships. Partnerships that we forge through the SOCOM team and enable. The payoff in many ways can be looked at in the vicinity of Ukraine.

Senator COTTON. So, a decrease in either your budget or your personnel levels would add risk to your mission and therefore to our Nation.

General FENTON. Well, Senator, I—no one wants to see a decrease in the personnel or the budget. I would tell you that I think it would not reflect the requirements, number one, a decrease of that, and number two, we would be forced at some point to make hard choices, because each and every time I think you will see me give you the best Special Operations Command for the budget we get.

Senator COTTON. Okay. Mr. Maier, when you talk about your personnel, I want to return to something else you had in your opening statement because I want to make sure we are using this personnel budget the right way. You talked about the need for more staff. I got to tell you, that gets my hackles up pretty quickly.

I think we have plenty of staff in the Pentagon, way too much. Frankly, I think we have too many people dressed like you and me and not enough people dressed like the men to your right in your left, performing these jobs. Could you explain a little bit more about what kind of staff you are talking about and why you would need more staff?

Mr. MAIER. Senator, I was referring specifically to the special operations low intensity conflict staff that performs the title 10 responsibility of the organized train, equip for SOCOM.

Frankly, sir, a lot of what these staff do on a daily basis is try to articulate the SOF value proposition back into the Department with the services. Some of my concern is that as we go from the less intense environment of counterterrorism or go toward a less intense environment without the intense focus on counterterrorism, that some of what SOF has traditionally been afforded will be lost in that.

Sir, sometimes this is just as simple as making sure that we have the SOF value proposition represented in resourcing, training, planning. I have been frankly surprised at times of how that has been forgotten or too narrowly defined as being a counterterrorism problem.

My 40 some odd staff are very much in that business, and it is the analytics. It is supporting special programs, other things like, that that are very, I think, akin to the SOF value proposition, but don't have representation often within the broader Department, sir.

Senator COTTON. Okay. General Fenton, one final question. In your opening statement, you talked about the strategic transition for the special operation forces. Could you explain a little more about the role that special—that your force, the special operations forces, are going to be expected to play in the future fight? If so, if you can at an unclassified level, maybe help share that story.

General FENTON. Senator, thank you for that. I will focus on integrated deterrence, and where the Secretary and the Department have asked us to be aligned. When I think about that, I think about a long three, really three lenses, prevent, prepare, and then prevail.

I think on the prevention side, it is all about being forward, it is about being deployed, or our skills, cultural understanding, language, and a familiarity with many of these environments that come from organizations in our enterprise that know those places as well, such as our first Special Forces Group in the Indo-Pacific,

for instance, have a very deep familiarity with all things that go on in many of the partner nations.

I think it is key to keep that certainly thick and strengthened. Part of it is being out training, advising, assisting, building capabilities, and using many of the tools this Committee gives us in the form of security cooperation, 1202, and counterterrorism tools. That is a very key part.

I think it also allows us an opportunity to help the Joint Force and enable them as we are out in those environments and are able to prepare through our understanding of everything from seabed all the way to the space domain.

Then work in concert with General Nakasone and Jim Dickinson in a SOF space cyber triad. I think those are all very important. There is an acceleration toward that. It began before, certainly under General Richard Clarke, and we are accelerating that in the special operations team, while we stay vigilant on the counter-terror mission and certainly our crisis response duties as directed by the Secretary.

Senator COTTON. Thank you, gentlemen.

Chairman REED. Thank you, Senator Cotton. Senator Blumenthal, please.

Senator BLUMENTHAL. Thanks, Mr. Chairman. Let me begin by adding an exclamation point to the point that Senator Cotton just raised about the need for ample resources devoted to our national defense, most especially the kind of work that you are doing. I think your testimony today reinforces my hope that we will have bipartisan support for that kind of sufficient investment in our national defense.

I have been to Ukraine three times over the roughly last year, once before the invasion, and had an opportunity to talk to some of the special forces trainers who were there working with Ukrainian personnel. General Fenton, I am hoping that there has been continued training outside of Ukraine. I realize none of those special operations forces are located physically there now.

When I was there last, a number of weeks ago, none were there, at least visibly to us. But I am hoping that that training mission is continuing outside of Ukraine.

General FENTON. Senator, thank you for that. It absolutely is continuing outside of Ukraine in a number of locations, bringing the capability that continues to assist Ukrainians off as part of the entire Ukrainian military, and that training goes on, along.

A number of the lines you have seen before, the capability to defend themselves, the capability to mission plan and orient, an understanding of the intelligence, and certainly an understanding of creating dilemmas for the Russian formation.

The Ukrainian SOF is a key part of the Ukrainian military's approach. We do that, as your special operations team, certainly under General Cavoli's direction and watching in concert with his teammates in order that that is integrated with the entirety of the approach the SecDef directed.

Chairman REED. What is your assessment as to how well the Ukrainian special forces have operated?

General FENTON. Senator, I think they have been superb from the very beginning, and I will start the journey in the 90's when

Special Operations, and Special Forces in particular, or ten Special Forces Group made contact with Ukrainian forces after the fall of the Soviet Union.

That generational relationship, something that is very, very important to your special operations community, in my sense laid the pathway for in 2014 our ability to really get after it after the first invasion by the Russians.

Senator BLUMENTHAL. Thank you.

General FENTON. They have done superbly well and they have been extremely willing to prepare and to fight.

Senator BLUMENTHAL. And to learn.

General FENTON. And to learn, yes, sir.

Senator BLUMENTHAL. General Nakasone, I think a number of experts have been somewhat surprised that the Russians haven't been more aggressive in the cyber sphere against Ukraine in this past year.

What is your assessment as to why they haven't been more aggressive, why they have been somewhat apparently quiescent, or maybe the Ukrainians have just resisted and fended them off without our knowing it?

General NAKASONE. Senators, the Russians have been very active in Ukraine in terms of conducting a number of cyber-attacks, including destructive and disruptive attacks. I think there is several pieces of the story here that are important though.

First of all, when you begin the plan and you think it is going to be a very easy invasion, perhaps you don't do enough planning with regards to your enabling activities. Second, give full credit to the Ukrainians. They did a tremendous job in terms of building their cybersecurity resilience.

The third piece is, is that this is again for persistent engagement, my discussion previously, being able to enable and act with your partners. The Russians have not been as successful, and there is a number of reasons for that.

I would point also to the fact that we have been able to bring a series of partners, including the private sector, that have a tremendous capability and capacity against the Russians.

Senator BLUMENTHAL. I have been impressed when I have spoken to President Zelenskyy with his focus on cyber. Do you think that there is a greatly increased danger or risk of Russian cyber-attack if the counteroffensive anticipated this spring by Ukraine is successful?

General NAKASONE. We are watching this very carefully. This is the matter of vigilance that I spoke to earlier, because by no means is this done in terms of the Russia, Ukraine situation. As Russia looks at armaments coming into the country, as Russia looks at different support, how do they react?

One of the things that we are charged with is ensuring the security of the U.S. critical infrastructure and key resources with our partners in DHS [Department of Homeland Security] and FBI. This is something that we are working closely every single day on, Senator.

Senator BLUMENTHAL. Thank you. Thank you very much to you all and thank you for your service.

Chairman REED. Thank you, Senator Blumenthal. Senator Ernst, please.

Senator ERNST. Thank you, Mr. Chair. Thank you, gentlemen, excuse me, for being here today. Secretary Maier and General Fenton, I really do commend your submission of the joint statement to our Committee.

It reflects both alignments and oversight from civilian policymakers, as well as our uniformed leaders, so thank you for submitting that.

Secretary Maier and General Fenton, as outlined in your SOF vision and strategy, how does the SOF balance its various missions with great power, competition, counterterrorism, and crisis response, your three main missions? Because right now we are seeing great power competition increase, ever increasing with Iran, of course our pacing threat with China, and of course with the Russian incursion and war in Ukraine.

So, how do you balance those missions, and how should that great power competition affect your mission?

Mr. MAIER. Thank you, Senator. I will take it from a more strategic level, and then ask General Fenton to speak in more detail. I would say, first and foremost, it is a risk assessment and it is weighing against the requirements.

There is always more requirements from the Combatant Commanders than we can meet as a force and those numbers keep going up. But I think at the same time, we are very focused on the idea that while the strategic focus is, of course, on the pacing challenge of the PRC and the acute threat of Russia, we can't be surprised by an attack from another adversary.

I think managing that risk is many cases what the SOF enterprise does very well. We are in essence the hedge against that risk. It is a constant effort to look for areas where we can innovate, to be able to do more, do things on a more sustainable fashion, and in some cases look for where we are getting what my New England friends would call a twofer, where we are able to do counterterrorism work and have those partnerships and access that then helps us also on the National Defense Strategy (NDS) priorities, ma'am.

Senator ERNST. Yes, thank you. General Fenton.

General FENTON. Senator, thank you for that question. I think to your point on balance and adjustment, that is an—I am constantly focused on that in the Command. As you mentioned, integrated deterrence, crisis response, and counterterrorism operations, all of those extremely prior—extremely high priority for the SOCOM team.

I think on the integrated deterrence side, we take our lead from the Combatant Commands and their requirements for engagement in their regions, what they need for partnerships, how they need capabilities build, and Senator, in many ways our counterterrorism tools and the form factors that we have in terms of how we present forces.

Those are equally applicable in the integrated deterrence, the requirements from the COCOMs, for developing a force and competing with adversaries such as the PRC, as they are for actual

counterterrorism efforts that you know very well. I think it is a balance. Some of those tools are interchangeable.

We can bring them across a spectrum. Very often it is about the relationships that then turn into things that we have seen in Ukraine and we just have mentioned here, SOF investment early, and we have seen that in many other places as well.

Senator ERNST. Thank you. I appreciate that, and I know that my colleague, Senator Cotton, talked about your top line and strength cuts and how that would impact SOF. I am very, very concerned about that.

It doesn't matter what Commander it was, whether it was General Tony Thomas, or Rich Clarke, or now you, General Fenton, I have always brought this up in discussions and every SOCOM Commander I have visited with has said, ma'am, we are going to make do. You know, we will execute the mission regardless of the budget. I get that.

But I just need to stress to this Committee, how important it is that we continue to fund you at the appropriate levels. You give us the greatest bang for the buck with what you do all around the globe, so we won't question that.

But I do want to dig in a little more. I, General Fenton, I have supported Section 1202, irregular warfare authorities. That was done in the Fiscal Year 2018 NDAA, and your joint statement describes this as essential for applying SOF capabilities against malign actors.

In your personal opinion, would enabling those partner forces that are responding to hostilities enhance SOF's irregular warfare contribution to great power competition?

General FENTON. Senator, thank you for that, and I will thank this Committee for the 1202 authority. That is a very important tool in the arsenal of the special operations tools that we use to either develop partnerships, build capability and capacity of a nation, and certainly, then move forward.

Thank you very much for that. It is key for us to engage in partnerships at that level that involve irregular warfare, our ability to operate and buildup a capability of a nation, also have it able to look at any malign influences that is coming into it and identify those, and then address them.

Those forces that we work with provide options for their national command leadership, as well as dilemmas for any adversary. Senator, I would say of a very small investment in many ways.

Almost like your special operations team. It is a very small investment, but for a very high return on the dollar. So, I thank you very much for that and happy to talk more about it in closed session.

Senator ERNST. Very good. Thank you very much, gentlemen. Thank you, Mr. Chair.

Chairman REED. Thank you, Senator. Just let me recognize Senator Hirono and ask Senator King to preside while I attend the Banking Committee. Senator Hirono.

Senator HIRONO. Thank you, Mr. Chairman. Thank you all for your testimony today, and General Fenton and Secretary Maier, thank you for meeting with me earlier.

General Nakasone, I have been deeply concerned by the State of critical infrastructure on and off military installations, crumbling and out-of-date infrastructure lead to delays and maintenance schedules, and put communities at risk for environmental disasters, as we have seen in Hawaii.

But it also leaves infrastructure that is critical to our national security, but often as an afterthought, like wastewater treatment plants and pipelines, exposed to cyber-attacks. That is why I very much appreciate President Biden's National Cybersecurity Strategy's focus on defending critical infrastructure, i.e. things like wastewater treatment plants and pipes.

How would the Department of Defense collaborate with other Federal agencies to implement the infrastructure goals outlined in the President's National Cybersecurity Strategy?

General NAKASONE. Senator, from a cybersecurity perspective, we begin, first of all with a focus on DOD critical infrastructure. Two weeks ago, I was in Hawaii to see Admiral Aquilino and to work with him in terms of looking at the DOD critical infrastructure within the islands.

We work with a series of partners when requested to provide that assistance. That comes as a request for assistance from other agencies to the Department, of which then we would be part of that assistance.

Senator HIRONO. Don't you think that maintaining our—the physical aspect of our critical infrastructure is a very important part of your ability to do your mission?

General NAKASONE. Certainly, we need a platform upon which to operate. I agree with you, Senator. What we are focused on, though, is obviously the cyber elements of that and then working again through the Department to assist and answer those requests.

Senator HIRONO. I think it is all we need to look at these things in a much more total kind of an aspect. That is why it was really important for Admiral Aquilino to ask for an assessment of the infrastructure needs across the services in Hawaii, but I would say across the country.

For, again, you, General Nakasone and General Fenton, the Administration's NDS identifies China as the pacing challenge for our military, and to create enduring deterrence, it is critical that we remain the partner of choice in the Indo-Pacific area, which is why I have supported additional funding for exercises in the region and building on long standing relationships, like the compacts of free association, which we are concluding our negotiations on.

What opportunities have your respective Commands had for multilateral training last year, specifically in the Pacific AOR [area of responsibility], and how will you build from those going forward? This is for General Nakasone and Fenton.

General NAKASONE. Senator, we began with Cyber Flag, which is our annual keystone exercise. We invited a series of partners from the Pacific, that includes Korea, that includes Australia, that includes other nations within the Pacific that decided to come and exercise with us. That is one piece of it.

The second piece is what I had spoken to previously, which is a State partnership program, working very, very closely with Hawaii, the Hawaii Army National Guard, Hawaii Air Force Reserve and

National Guard to be able to assist them as they take a look at Indonesia and the Philippines, two countries that are partnered with the State of Hawaii. That is an area that I think has got tremendous potential in the coming year.

Senator HIRONO. General Fenton, I am particularly interested in really strengthening—I agree with your area of focus, General Nakasone, but also the Pacific Island nations such as Palau and Marshall Islands and Micronesia. Can you add to the response, please?

General FENTON. Senator, I can. I will start with your special operations team out there through the Theater Special Operations elements, SOCPAC, Special Ops Command Pacific, is part of all the INDOPACOM exercise events.

It is very key for us because our ability to build partners and allies, along with the entire INDOPACOM team for your special ops, is a pacing item. It is very important and certainly a high priority for this Nation and the Secretary of Defense.

Below that we also have our own either bilateral or multinational special operations training events in the region or back in places around bases that we have in CONUS. Our ability to be linked up with the INDOPACOM, desired in states for partners and allies, and really enable that, plus what we bring in, it is in our nature, it is in our DNA to be a partner force of choice, I think is very, very impactful for Admiral Aquilino and INDOPACOM.

I would say to your, partnering anywhere is important to us, so to the island nations, whether it be Oceania, Micronesia, Melanesia, Polynesia, your special ops team has relationships there already.

Some of that is not in exercise, but certainly in contact or in deployments as we have had throughout the years, and we will continue to do that, and strengthen it as the INDOPACOM team and Commander would want.

Senator HIRONO. Thank you. My time is up but I just wanted to mention, General Fenton, that I did appreciate that in your prepared remarks, you talk about diversity of thought and background in our people as a critical enabler of the American advantage. Thank you very much, and the focus on maintaining that kind of diversity, I completely agree with you. Thank you, Mr. Chairman.

Senator KING. Senator Tuberville.

Senator TUBERVILLE. Thank you, Senator King. Thank all of you for your service. Thanks for being here today. General Nakasone, I like what you said in your opening, we win with people. I think that is everything that we do, especially our country.

In your department, when you are looking to recruit people, obviously cyber is your purview, what other areas do you look for in young people? Information technology? I mean, what all areas do you look for in recruiting somebody for cyber?

General NAKASONE. You look for someone that can do critical thinking, Senator. That begins with—there are more than just information technology majors out there that are successful in cyber. There are linguists, there are mathematicians, there are liberal arts majors. What we are looking for is someone that has an interest, has a passion to do this type of work. That doesn't want to

leave work until they are able to get the access that is necessary for us to have an effect.

Senator TUBERVILLE. Is that growing? Is—are we losing more to the private sector? How is that going?

General NAKASONE. First of all, on the recruiting piece, the services have tremendous success in recruiting cyber forces. They are not having a problem filling it. I think the challenge becomes later on is there are a number of choices that young people have, and so, I think we have to think a bit differently here.

First of all, maybe we need to lengthen the obligation to become trained in cyber because it is so attractive. Second, I do believe that when you come to our forces, that is the only thing that you should do for your career.

Much in the same way I have watched special operations forces be successful. When you become a special operations force operator, that is what you are doing all the time, and that is what they want to do. Our force is the same way you.

Senator TUBERVILLE. Yes. How is retention in your Department of young people once they fill their duty? Do we have pretty good retention to re-up——

General NAKASONE. It is a mixed bag service. Senator, I can certainly come back to it with the numbers. But the challenge, of course, is that there are a lot of choices, and so that is what we have to make sure that we are on guard for.

Senator TUBERVILLE. How concerned are you about TikTok and the influence that they are having on Americans kids?

General NAKASONE. So TikTok concerns me for a number of different reasons. One is the data that they have. Second is the algorithm and the control, who has the algorithm. Third is the broad platform.

Influence operations, as we talked about previously, it is not only the fact that you can influence something, but you can also turn off the message as well when you have such a large population of listeners.

Senator TUBERVILLE. Yes, thank you for that. General, you don't have a recruiting problem, do you?

General FENTON. Senator, I will start that we are recipient of services and I would want all to know that we are very integrated with their recruiting efforts, and there are some challenges out there for the services.

Right now, your special operations team is not having a recruiting problem. We are aggregated at a very high level of recruitment. The Department has got a retention number, I think, that is one of the highest in decades, and we are right there along with them.

Senator TUBERVILLE. Yes, you require the most rigorous training standards in military, correct?

General FENTON. Senator, we require very high standards, and folks who want to come and be part of that journey, who have determination, grit, initiative, willingness to see something through, and frankly, what we really look for is somebody—a quiet professional. Maybe he will do this mission and succeed, and then get ready to do the next one.

Senator TUBERVILLE. Would you agree that it is also the most riskiest part in our military?

General FENTON. Senator, there is a lot of our teammates out there across the services that do some incredible feats of both their mission and bravery. I would say we are one part of what our Department has as the most incredible military formation in the history of mankind.

Senator TUBERVILLE. That is a pretty diplomatic way to put it, General.

[Laughter.]

General FENTON. They do some really tough mission.

Senator TUBERVILLE. Yes, very tough. You know, I think there is a lesson here for the rest of our military, and it is not everybody, but, America's youth want to serve an organization with purpose and patriotism. I mean, we all saw that growing up. In light, it seems people rise to standards that you set for them. I mean, I saw that in my former life of coaching.

I mean, you set a standard and most of the time, if you push them hard enough, no matter where they won't or not, they will reach that standard. I want to thank for what SOCOM does and everything that you all stand for, because you are on the front lines every day and you are usually the first one to get there and the last one to leave. Thanks to your group, and the people that stand up for this country, and patriotism that they have for us. Thank you very much. Thank you, Mr. Chairman.

Senator KING. On behalf of the Chairman, Senator Warren.

Senator WARREN. Thank you, Mr. Chairman. One of the primary purposes of this hearing is to evaluate your Command's budget requests. Most Federal agencies have to balance their must haves against their nice to haves when it comes to requests for money, and they have to account for long term costs.

For example, the maintenance of fleet vehicles that they want to buy, but not the Department of Defense. DOD submits its budget for the things it wants, and then it submits a second list of things that they want funded and they don't add what the long-term costs will be. DOD calls this second list unfunded priorities.

I call it a wish list. Now, last year, some parts of DOD stuck to their budgets and didn't put anything on a wish list, but not SOCOM, nope. SOCOM got $13.2 billion in its regular budget, then turned around and asked for $656 million additionally.

Now one of the items on SOCOM's wish list last year was $8.7 million to ensure that a SOCOM armament facility could meet blast exposure standards that protect servicemembers from traumatic brain injury.

General Fenton, do you agree that if SOCOM needs funding for a project that will ensure that it is in compliance with basic safety standards and help protect workers from brain damage, that project should be part of the Command's budget?

General FENTON. Senator, I put a high priority on safety.

Senator WARREN. Should it be part of your budget then?

General FENTON. Any budget I build will reflect my priorities, and priority is safety, and certainly align with the NDS.

Senator WARREN. So that means you think that something like this should be in the base budget?

General FENTON. Senator, I put a high priority on safety and my budget will——

Senator WARREN. But you are telling me your budget reflects your priorities and somehow this didn't even make it in the basic budget.

Look, let me ask it this way then. This armament facility improvements weren't funded last year, so are you going to put that in your base budget this year or are you going to count on Congress to add extra money for it? Which it didn't do last year.

General FENTON. Senator, the first thing I will do is get intimately familiar with the armament facility you are discussing right now. I am 6 months of the job. I am still working my way through a number of certainly locations in the special ops community.

I will take that for the record and get back to you, but my budget will be reflective of my priorities that are aligned with the national defense strategy, and safety of our entire force is certainly a high priority for me.

Senator WARREN. Well, I appreciate that, but I just want to make another point for the record. I wasn't born yesterday. You know, I get what is happening here. SOCOM and other commands are gaming the system.

They take costs that should be part of a base budget request's essential programs, like funding to come into compliance with brain injury prevention standards, and then put them on the wish list, daring Congress not to fund them, and that way they can boost their overall budget allocation.

In January, I sent a letter to Secretary Austin, along with Senators Braun, Lee, and King, telling DOD not to send Congress any wish lists as part of this year's budget. So, General Fenton, this is your first time submitting a budget as the Commander of SOCOM.

You will be sending it over to Congress this week, so you should be right on top of this. Will you pledge not to request any unfunded priority items on top of your annual budget request?

General FENTON. Senator, I will submit the budget that reflects my priorities aligned against the NDS, and I will submit that, and any UPL [unfunded priority list], required by law, that reflects facts of life changes, accelerated capabilities, and any additional NDS initiatives——

Senator WARREN. Let me stop you right there. I just want to be required—you need to submit a list, you are right. That is required by law. But you don't need to put anything in it or ask for any funding from it.

The list from European Command and Transportation Command were blank last year. That is, they lived within their budget. They did not come back for an additional bite at the apple.

I am just asking if you will agree to do the same thing. That is what budgets are about. They are about making your priorities clear, and I want to know if you are willing to live within the budget you have from the DOD and not come back here for more.

General FENTON. Senator, I would submit a budget that is aligned with my priorities and aligned with the NDS.

Senator WARREN. Is that a yes or a no?

General FENTON. Senator, as requested by law and by law, I will submit a UPL. I will take into consideration any facts of life——

Senator WARREN. Okay. That is, frankly, that is not even a very artful dodge. Look, we don't have any other part of the Federal

Government behave this way and for good reason. The budget process is about making tough choices and setting clear priorities.

Anything in the regular budget must include an analysis of the long-term costs, not things that are on the wish list. I have a bipartisan bill to eliminate waste like this, but DOD could shut it down voluntarily right now, and I urge you to do that. Thank you, Mr. Chairman.

Senator KING. On behalf of the Chairman, Senator Rounds.

Senator ROUNDS. Thank you, Mr. Chairman. Gentlemen, first of all, thank you for your service to our country. I have to admit, I like seeing options in the budget. I like seeing alternatives. It doesn't mean that everything that is on the budget is necessarily going to be funded by or recommended by this Committee.

But to see the other options out there, from my perspective, I appreciate seeing those others that sometimes may not make it all the way through the budget process. General Fenton, SOCOM has undoubtedly been reorienting from counterterrorism to preparation for a high end, near-peer fight.

Assume a situation in which we had to respond under Article 5 and support our NATO allies in Europe, and China concurrently took military action to claim Taiwan. What do you assess would be SOCOM's capability to support a two-theater war concurrently in Europe and the Pacific?

General FENTON. Senator, what I can tell you now is that your special operations team is already globally deployed, 5,000 personnel in 80 different countries at Combatant Command request, and at times a Departmental request.

Our ability to address the integrated deterrence piece, crisis response, and counterterrorism, we were absolutely able to do all that. We are able to do the front-end competition, integrated deterrence with training, building capability partners and allies, and at the same time, we are also ready to prepare an environment for the Joint Force and prevailing conflict.

Senator ROUNDS. I think what I am really trying to get at is, is it seems as though our policy here is not necessarily to win in two theaters. We need everything that we can do to be in a position to give the young men and women on the front lines every opportunity. We should be talking about now before it ever happens.

With regard to a budget which you will prepare, and bring in, and lay out, would it be fair to say that there are other items that could be done in the very near future that could help us do a better job of preparing for a two front defensive capacity?

General FENTON. Senator, I stay focused daily on readiness and training, and providing the President and Secretary a range of options for whatever conditions they may put in front of us.

As you describe, some level of potential two front, or we stay trained and ready to provide options across a number of contingencies that the Department has asked us to plan for, along with the Combatant Commands.

At the same time, also providing dilemmas for the adversaries, both either in integrated deterrence or in—high in conflict.

Senator ROUNDS. Thank you. General Nakasone, as we all know, the Cyber Mission Force comprises elements provided by all of the

services. Is there anything we should do to better execute this construct?

General NAKASONE. Senator, I will be coming back to the Committee under 1502, the NDAA section that came out in the recent NDAA, to talk about the shortfalls. That comes at the end of March.

That will be the first indicator that I will have to be able to communicate with the Committee. I suspect between that and section 1534, which requires me to come back at the end of June with the Secretary and the Chairman to talk about shortfalls in readiness, we will be able to outline exactly what we think are the areas.

There are some, and there are areas that we can work with the services to improve.

Senator ROUNDS. Thank you. Also, General, last year we discussed the benefit of an SPM13 and SPM21, and what they provided the Command to effectively conduct cyber operations, recognizing that they are both classified in nature, but basically, they have streamlined and lay out a collaborative effort in which to provide accelerated timeframes for cyber operations.

As you look over the year since, what, if anything, has changed in your assessment and the impact they have had on cyber operations?

General NAKASONE. Senator, really very little impact. If I can rewind the clock just a bit, 2018, as you recall, you assisted with us to make sure that within the NDAA that we saw cyber as a traditional military activity, that was a huge step forward for us.

I would also say that the policy memorandums that you talked about there, they are their foundation for what we do, any matter that is much more predictable, both for ourselves and for policymakers. So, we continue to work with it. We are continuing to move forward.

Senator ROUNDS. Thank you. Thank you, Mr. Chairman.

Senator KING. Thank you, Senator. General Nakasone, on a scale of one to ten, where ten is essential for the national defense and one is nice to have, where would you rank section 702?

General NAKASONE. Ten plus and let me talk a little bit about 702. Thank you, Senator, for that question. As you know, FAA 702 allows the U.S. intelligence community to collect the information and communications of foreign targets of interest operating outside the United States that use U.S. infrastructure services.

Outside the United States, the intelligence community can collect against foreign targets of interest. It is critical for what we do. What have we seen since FAA 702 was enacted in 2008 and reauthorized two times? It has disrupted terrorist plots. It has alerted us to cyber-attacks.

Finally, it has uncovered critical infrastructure (CI) threats. Last year, we are able to utilize this in a series of ransomware, in a series of being able to uncover what adversaries were trying to do to us against our critical infrastructure. Most importantly, as General Fenton can testify, is what we were able to do against—an essential piece that we need as a Nation.

Senator KING. I think the key word is essential. Thank you, General. Talk to me about the relationship between electronic warfare and cyber. Is elect—who is in charge of electronic warfare. Because

in a conflict, electronic warfare and cyber is going to be where it begins.

General NAKASONE. So traditionally the service has had electronic warfare capabilities that they deploy with their forces. I think what you speak to is a synchronization of this battlefield in cyberspace, which we are starting now to work very, very closely with the Combatant Commands.

Senator KING. I am concerned that if electronic warfare is scattered among the services, it is not going to have the attention, for example, that cyber has because we have Cyber Command.

Electronic warfare is definitely going to be part of the conflict, whether it is jamming or disabling satellite communications, those kinds of things. There is no central—what you are telling me is there is no—it is not part of your Command and there is no Central Command that controls it.

General NAKASONE. Is not part of my Command. But again, a lot of the electronic warfare that is done, is done in support of service requirements, and so, they have service forces that do this.

I think what you are speaking to, Senator, is much in the same way we have tactical forces that assist the services, is there some type of national capability that we might need? I think that is something that we have to look very carefully on.

Senator KING. I worry about coordination and duplication, two sides of the same coin. You mentioned briefly in your opening statement, election interference in 2022. Is election interference, in terms of cyber, an ongoing problem? It hasn't gone away.

General NAKASONE. It hasn't gone away. This is something we will deal with for as long as I can look at the future and we see cyberspace and the ability for adversaries to influence what goes on.

Senator KING. Is it things like hacking and meddling with the system, or is it more in terms of disinformation?

General NAKASONE. What we have seen, Senator, really, when you talk about infrastructure, that is more of an interference piece. We see the influence piece much more prevalent these days and being able to operate outside the United States, go after trolls and other different actors that are trying to create influence.

Senator KING. These can be Russia, Iran, North Korea, China. They are actively involved in trying to affect and interfere in our politics. Is that correct?

General NAKASONE. You have hit the top four plus proxies.

Senator KING. China cyber capability, is it on the rise? They have been not as aggressive in terms of elections and interference as the Russians have been over the last 10 years or so. Is China starting to become more aggressive or are you seeing more activity, less worry about reputational risk, and those kinds of things?

General NAKASONE. They have a different playbook, I think, than the Russians, from what we have seen. The other piece is that as I mentioned last year, this is a very capable, capable force. We can cover many of the areas that I can discuss in closed testimony, but again, a very formidable foe.

Senator KING. The new National Cyber Strategy was just issued last week. Any gaps? I don't expect you to criticize it, but do you have any suggestions you can share with us?

General NAKASONE. I am really pleased with the National Cyber Strategy. I think that this is something that we have long wanted in terms of what is the responsibility of both the Government and the private sector, and being able to meld that is critically important for us.

I think in the weeks to come, obviously the Department of Defense's cyber strategy will nest within that, and so I think for the first time, we will probably have, from the Government all the way down to our department something that is very effective.

Senator KING. Think of that as a coherent Government wide strategy.

General NAKASONE. Yes, Senator.

Senator KING. Thank you, General. Senator Budd.

Senator BUDD. Thank you all for being here. General Fenton, there has been a series of concerning incidents, suicides, murders, overdoses, drug trafficking arrests surrounding the special operations community at Fort Bragg.

But I think you and Members here of the Committee, we know that those reports, they are not indicative of the thousands of incredible men and women at USASOC. I am hoping that you can discuss some of the issues that we are actually seeing in Bragg, including those, and if you can describe what SOCOM is doing to combat these challenges.

I will just say that our office is here to help, and I am sure on both sides of the aisle, all of us are here, on your team in that regard.

General FENTON. Well, Senator, thank you very much for an ability to comment on that, for an opportunity. That very issue hits at the heart of our number one priority, our people, who are competitive in comparative advantage and who we place a lot of trust and confidence in.

This type of behavior, atypical to the 70,000 plus that are doing the right thing almost every single day, each and every day the majority are absolutely doing that, is first and foremost it disrespects that type of work that our SOCOM enterprise is known for. Second, it certainly, it is not behavior that is welcomed.

I want everybody to know that is not the type of behavior that is welcomed in this formation and is not indicative of an organization in whom the Nation has placed a lot of trust. We hold ourselves to a higher standard.

The Command Sergeant Major and I are—first of all, we are very angry when we get reports like that, and we are deliberately laser like focused on this. In fact, we talk about it as a corrosive.

These are corrosive toward the trust and confidence that this Committee, the Secretary, and certainly the Nation has in us, and we are we are laser focused on eradicating that from SOCOM enterprise. One is too many, but we recognize we are not immune. So, we look at it through a number of lenses.

First, it is a leader issue in preventing this, reinforcing the standards, the behavior of a drug, some type of other untoward illegal, not moral and ethical behavior. Not who we are, not who we want our formation. We asked our whole formation to be on alert and to help point that out for us and let us as leaders start to take action.

Second, it is reinforcement policies that tell folks this in the event they just came into this formation and they didn't know any better, and they are at risk of doing something like that that disrespects decades of successful operations of many, many who came before and those who come after.

Responding. I think a key piece in that one is holding folks accountable. You will see us do that because that sends a very big signal back, when appropriate, Senator, back to the enterprise about this behavior is absolutely not welcomed and not part of the SOCOM enterprise.

You have my commitment on this, Senator. I have been—in about 6 months, it has been a top priority because of what it does, not only to the trust that this Committee and others have in the SOCOM team, but to our overall readiness. That readiness is important because it needs to be a very lethal force each and every time the Secretary puts us on the job.

Senator BUDD. Thank you, and you have our commitment as well. Secretary Maier and also General Fenton, you have talked a little bit about this today, but can you please expand on balancing the need for special operations forces to continue conducting counterterrorism in the Middle East and Africa versus the important role they play in great power competition? Do we have the right mix of forces to accomplish both? We will start with you, Secretary.

Mr. MAIER. Senator, thanks for this point. This is maybe among the most important points that I focus on every day, and I think the answer is somewhat. I think we have a very lethal, very capable counterterrorism force.

What we are working to do is make that force more sustainable over time, because, frankly, many of the threat actors are still out there and we are still having to do this mission.

But being able to make it more sustainable so we can draw on the unique capabilities of the SOF enterprise to bring that to the fight against a potential PRC or Russia, certainly to establish that integrated deterrence we seek, sir.

Senator BUDD. Thank you.

General FENTON. Senator, I would just add that it is a balance, as we look at it across the enterprise with the three missions of the integrated deterrence and counterterrorism crisis response.

As I mentioned before and will reinforce, the capabilities we have in the counterterrorism marine arena transfer as well over into our integrated deterrence approach. But at the same time, we know that very often they are unilaterally asked for.

In this case in Africa, we work with AFRICOM Commander and our Special Operations Command Africa, our TSOC, is a way to address their requirements. Keep the pressure, as I mentioned earlier.

One of the things at SOCOM we look at is the threat has been disrupted, but it persists, and our job is to remain vigilant. When we can set, see, and illuminate, we take action in concert with the Combatant Commanders and certainly under SecDef direction.

Senator BUDD. Thank you all very much. I have some questions for the record, General Nakasone, I will submit for you, but I yield back. Thank you.

Chairman REED. Thank you very much, Senator. Senator Kaine, please.

Senator KAINE. Thank you, Mr. Chairman. Thank you to our witnesses. Secretary Maier, I want to talk to you about a previous job you had that I still think you are very involved in. I understand that you previously led the DOD defeat ISIS task force. Is that correct?

Mr. MAIER. Yes, Senator.

Senator KAINE. And that you continue in your role as Assistant Secretary of SO/LIC to focus on the anti-terrorism mission, including the defeat of ISIS, correct?

General FENTON. Correct, Senator.

Senator KAINE. That task force included international partners. I think there are about 80 international partners, and it is fair to say that in your work on that task force and currently it involved a lot of coordination with Iraqi defense forces, isn't that correct?

Mr. MAIER. It did, yes, Senator.

Senator KAINE. I know that my colleagues might have seen that Secretary Austin has paid an unannounced visit to Iraq. That news of that broke this morning. I just want to read a phrase, a quote from him, the United States forces are ready to remain in Iraq at the invitation of the government of Iraq, he said this following a meeting with Prime Minister Al Sudani.

Further, "the United States will continue to strengthen and broaden our partnership in support of Iraqi security, stability, and sovereignty." Do you think the United States being in partnership with Iraq for their stability and sovereignty, for their own sake and for the region, is an important priority?

Mr. MAIER. Senator, yes, I do, and I think it is critically important to managing a very challenging political situation, too, with obviously the Iranian and proxy threats there as well, sir.

Senator KAINE. Just for my colleagues, we have two war authorizations against the government of Iraq, our strategic partner who Secretary Austin is visiting today. We have 2,500 American troops in Iraq at the Iraqi Government's request. One of the war authorizations was passed in 1991. It is 32 years old.

The other war authorization was passed in the fall of 2002. The invasion of Iraq began on March 19, 2003, 20 years ago next week. I have a proposal that is very bipartisan, 12 Democrats and 12 Republicans have joined together to urge Congress to repeal the two Iraq war authorizations.

This is going to be marked up in the Foreign Relations Committee likely in the next few days, and hopefully will be on the floor for a vote soon, coincident in timing with the 20th anniversary of the Iraq invasion.

I just wanted to bring it to the attention of my colleagues. I urge that we repeal the Iraq war authorizations to recognize reality, an enemy that we were trying to push out of Kuwait in 1991, an enemy whose government we wanted to topple in 2002, is no longer an enemy.

They are a security partner of importance right now. Second, Congress should exercise our Article 1 authority over war, peace, and diplomacy and not allow it to be on autopilot. Third, an authorization that is no longer necessary becomes sort of a zombie author-

ization that can be grabbed and used for mischievous purposes if we are not careful.

Fourth, I even think we send a powerful message not just to allies and strategic partners, we even send a message to adversaries that you may be our adversary today, Iraq once was, but the United States specializes over time in turning adversaries into allies. Look at Japan, look at Germany, look at other nations.

We hold that hope out to everyone that we will defeat you should we need to, but we also hold out an olive branch and look for an opportunity to beat a sword into a plowshare and turn an adversary into a partner.

The proposal that I have, Mr. Chairman, that I hope will be voted on in the floor this month has the support of the Administration, and they have indicated that neither of the two authorizations are necessary for any current U.S. military operation, and thus their repeal will not endanger in any way the security of the United States or Americans anywhere in the world.

I would just urge my colleagues possibly to take a look at this once the Foreign Relations Committee acts, because I believe we will be taking this matter up on the floor very soon. With that, Mr. Chair, I yield back.

Chairman REED. Thank you, Senator Kaine. Senator Mullin, please.

Senator MULLIN. Thank you, Mr. Chairman. General Fenton, can you explain to us, and I know you have been asked this question before, but I just want it for context again, the value of the SOF community.

General FENTON. Senator, I think the value of the SOF community transcends all three mission areas that we have right now. Our integrated deterrence approach, which the previous was strategic competition the days before the tragic events of 9/11, when we were developing partners and allies, competing for relationships, building partners of force—of choice, and in many places with our security cooperation approach, actually strengthening nations across the globe. I think that is called for even more now.

As we come forward with 20 years of hard-earned combat credibility, a technology fluence, and an incredible formation. The SOF formation is a formation that knows the hard skill. It knows technology.

It deploys around the world on a moment's notice, and in that case, all that value transitions over to integrated deterrence. On the counterterrorism side, the center for 20 plus years. In places all over the world, your special operations command team, along with the rest of our military interagency partners, I think brought immense value to this Nation, disrupting degrading terrorist networks globally and figures, the names that many folks know here are no longer and have been removed from the battlefield and are no longer a threat to this Nation.

On crisis response, our ability at SOCOM to, within a very short notice, deploy forces and arrive in a country and either safeguard our U.S. diplomats, citizens, or rescue them if that is indeed the task, and then bring home safely. I think it is all part of this special Operations command value proposition.

I would add a very small investment on the budget that we are very grateful for, and I think a very high return on investment across all those and many more that in the interest of time, I can followup with you in a classified session.

Senator MULLIN. Appreciate it. One last quick question for you, and then if you could be brief on it, I would like to—you just kind of explain the partnerships that we have with our allies in Europe and how that is benefiting us, and I would say in the with Russia's illegal invasion of Ukraine.

General FENTON. Senator, I go back to a very specific part here of the very high value proposition I think your special operations teams bring. It started with a relationship, our ability in small teams to be with Ukrainians in the mid–90's developed a level of trust. Speed of trust is important in these, as you know very well.

Then in 2014 began in earnest a level of training that was about resistance and resilience, and those look like skills of developing a military—Ukrainian special operations that has an NCO corps, that knows about mission command, has initiative, and frankly has been, as I have seen and certainly talk a lot about, very valuable to the Ukrainian military effort writ large. I think we have also had the ability to learn from them.

They have got an incredible way that they take equipment off the battlefield and re-engineer it. That is really great for us because we learn as much from our partners as I hope they do from us.

I think in a very small way, that ability for the Ukrainian SOF and the Ukrainian military to resist, and now absolutely really fight against this aggression, and has paid dividends. Started with a high investment with the special operations team.

Senator MULLIN. Thank you so much. Mr. Chairman, I am going to kind of divvy here a little bit. General Nakasone and I know each other, and I just want to raise a point here.

The General is over a program that is very forward leaning, and I would ask that we would—we would ask the Senate Intel and the House Intel to brief us on a program that General Nakasone is over. It would reflect, in my opinion, his complete incompetence in his ability to lead this program.

I think it is important when we are talking about a budget that he is over, that it is important for us to know that we have leadership there that we can rely on to make sure the dollars are protected and the investment has a return. I think before we can do that, we actually need to know what has happened.

I was involved in a briefing when I was on the Intel Committee that turned into a hearing, and I think it is imperative for us to know the General's risk adverse approach to a program that needs to be extremely proactive.

Chairman REED. Thank you, Senator Mullin. Your comments are noted and we will followup.

Senator MULLIN. Thank you.

Chairman REED. At this point, let me recognize Senator Manchin.

Senator MANCHIN. Thank you, Mr. Chairman. Chairman Nakasone, let me just say I am sorry because I have all the confidence in the world in you and we have been working very close

together, and I am chairman of the Cyber Committee and also along with Mike, Senator Mike Rounds.

We both appreciate your service, and we are looking forward to any hearing you want to have. I can tell you, you have the support of a bipartisan group here, which is very, very deep.

Next of all, General Fenton, I would like to ask you a question, based on the publishing of the 2019 SecDef, DOD, CYBERCOM Operations Forces Memo, which directed the organization of the DOD Cyber Operation Forces, there has been substantial appropriation development of CYBERCOM organization and capabilities.

The question is what is the status of the current Special Operations Forces program developed within SOCOM, and what effort is needed in—to keep pace with CYBERCOM?

General FENTON. Senator. I will start by, we have got a very close relationship with General Nakasone and CYBERCOM, and it has progressed into an area that we now call a capability of SOF space, cyber triad.

At its heart, it is the ability to converge those capabilities, the SOF placement access, the cyber work, and certainly the space work in places for integrated deterrence effects that we would otherwise not get if we were doing it individually, and bring certainly a bigger sum back to not only the mission but to any partner we are working with.

That has been an incredible effort alongside General Nakasone's team. We are very grateful for that, and also, in the SPACECOM arena. We are moving that forward with exercises, experimentation, a number of senior leader huddles, and I think that you will see that progress, Senator. We would be happy to talk about the progress.

Senator MANCHIN. My final question is for all three of you, and I will start with Secretary Maier, General Nakasone, and then General Fenton, what can we do to help as Congress? What would be the greatest help we could be to you, all of us in the Senate and our Congress—or our cohorts over on the side, the other side of the House. That would be the greatest—and I think, if I am asking, the having a budget done on time, what does that mean for you?

Mr. MAIER. Senator, thanks for the question. I think we will probably all say that having a budget that is consistent, predictable, and——

Senator MANCHIN. Does it save you time? Does it save your money?

Mr. MAIER. It saves this time. It saves us money. It adds predictability. It allows us to put things on contract. Frankly, for——

Senator MANCHIN. We are talking September 30th.

Mr. MAIER. Yes, sir. I think from the perspective of enterprise and the special operations enterprise, it is going through transition. The ability to modernize is hurt by the fact that the budgets don't come predictably. So that is really where sometimes it comes home to roost, and it is——

Senator MANCHIN. So, a budget on time would be a pretty high priority?

Mr. MAIER. Yes, sir.

Senator MANCHIN. General Nakasone.

General NAKASONE. It is the same thing, Senator. It is on time. It really does——

Senator MANCHIN. Does it reduce your cost?

General NAKASONE. It is predictability. It is being able to actually spend the money when it is actually due as opposed to a shortened period of time. We also have new starts that will not be delayed, would actually be able to get on. So, we would welcome it.

Senator MANCHIN. When was the last time that you had a predictable budget on time?

General NAKASONE. Not since I have been the Commander.

Senator MANCHIN. General Fenton.

General FENTON. Senator, I will start first by, you already help in many ways with a number of the tools that we use at SOCOM, 33, 1202, now 127. But to your point on the budget, I will echo my colleagues here at the table, predictable, reliable, on time, and then I will just add that continuing resolutions (CRs) hurt.

In SOCOM, our priority, number three, is transform, and we think of ourselves as a pathfinder and a trailblazer. We need new capabilities to not only surpass adversaries, but always to be dominant.

That is not possible with new capabilities and new contracts with a CR. It is also we work with a lot of littles, little companies that want business with Special Ops Command because they know we are transformative, and that we are a trailblazer for the Department.

They can't wait forever to get their money, and many of them aren't there anymore as a result of—my sense is a number of CRs from——

Senator MANCHIN. This makes—does this sound reasonable to you all that I have been told by some retired Admirals and Generals that if we did our budget on time now, by the 85 budget, the budget law that we had—the President is supposed to have his budget submitted by the 1st of February, and here we are.

The House and the Senate are supposed to have theirs by April the 1st and reconcile by April the 15th, and then we are supposed to have a budget completed by September 30th. I have been told if all that happened, that the military could have a savings anywhere between 5 to 10 percent on today's cost.

You are talking $40 to $80 billion. Does that sound reasonable? That is, I mean, it is tremendous, and it is that type of effect—I don't know if you all looked at and evaluated it for per area of DOD. Secretary, do you have anything on that, or if you looked at it under those conditions, because the person never hesitated when they told me this.

Mr. MAIER. Senator, I can't account for that exact measure. I can tell you that it is more costly, and as I think my colleagues and I have indicated, there is a risk to it as well. That it is not only financial, it is the ability to execute and operate with some degree of predictability, which of course, the Nation looks at us to do.

Senator MANCHIN. Well, I know that we have many examples that you can look back on and find out when we did do one on time and everything, but if you could and give us an accurate account or close as accurate as you can be, what would be the savings?

Because we are in a position now, we are having debates and discussing, we can do things, we can change this year, change our ways and not commit the sins of the past. I am hoping we can do that.

It has a tremendous effect on our military, which is what we are depending. First of all, thank all of you, and all of you setting there, for your service. I appreciate it more than you know, and again, I want to thank you all. I yield my time back.

Chairman REED. Thank you, Senator Manchin. Senator Schmitt, please.

Senator SCHMITT. Thank you, Mr. Chairman. General Fenton, I appreciate the time we had to spend together and talk about some of the threats around the world, and your role and your team's role in combating those threats and getting ahead of those threats. To me, as I mentioned, there is no greater threat than China on the world stage.

In this great powers era that we have been discussing, the alliances in the Indo-Pacific, to me, are critical. You have mentioned it in my meeting with you. We have heard about that today. General Nakasone had mentioned Indonesia and the Philippines. We have talked about the Philippines.

What specifically would you like to see this Committee address as we move forward in this Congress to do everything, we can put ourselves in the best position to continue to cultivate and support those alliances?

General FENTON. Senator, first, thanks for the session with you the other day. I appreciate your time. I know how busy you are. I would comment on the extreme importance in the power of the partners and allies.

You and I spoke quite a bit about it, and in the Indo-Pacific, but certainly globally, as the Secretary has discussed with the Department and in many ways is doing that with NATO's alliance, vis-á-vis the Ukraine, and all the work that has gone into the entire whole-of-government team to make that stronger than ever, is a signal that aggression by adversaries like Russia will not be tolerated.

I think it is just important—just as important as we discussed in the Indo-Pacific. We have got a number of bilateral treaty allies out there. They are extremely important partners, as INDOPACOM goes ahead on its daily and certainly its overall mission.

In particular for the special operations team, we actually like to think that we are a premier partner force. We have longstanding ties throughout the region that we look to continue to strengthen and maintain.

We certainly each and every day don't take them for granted, and we look to reinforce them. I think that is important that that continues to grow. I think it is—as you think about this, Senator, it is about the growth of partners and allies, and the power in that. Not only for the rules-based order, but probably for the vision of where we go the next 3 to 5, even 10 years.

I would just recommend that it is a continue to focus on partners and allies, the power that comes with that, the partnering, the bur-

den sharing, and certainly the capability grows—growth that we have all experienced in that. I could talk certainly more——

Senator SCHMITT. Well, and I don't—listen, I don't want you to—I want to give you the time to be able to get back to my office with this, because this is something that to me is of paramount importance, particularly in the Indo-Pacific theater and will be a long-term commitment on my end.

as you work through—and by the way, you won't be the only one I am asking this question that comes before the Committee of what can we do, because I do think that is just critical, and in doing everything we can to guard against China's global domination ambition, which has been stated.

I want to work with you on that, and I guess, General Nakasone, if I could ask you this, and to the extent that you can share, what you can share with this Committee in the open setting here, just where we are at with China's capabilities, whether it is on cyber or artificial intelligence (AI), our defensive capabilities versus their offensive capabilities. This will be an ongoing discussion. But in the open setting, I certainly wanted to ask you about that.

General NAKASONE. Senator, they are a near, peer threat. They are very good. They have been able over the period of 2 decades to develop not only their military but also their industrial base.

As we look to the future, those capacity and capabilities, whether or not it is in artificial intelligence, machine learning. Whether or not it is looking at the capacity to grow cyber forces, they are very good, but they are not, they are not, first of all, as good as us and second, they are not ten feet tall.

We can get in closed session, more in terms of some thoughts on this, but I did want to make sure I hit that.

Senator SHAHEEN. Well, I will just close with this. I agree with the concerns that have been raised by other Committee Members and you with TikTok. To me, TikTok is a Chinese AI weapon aimed directly at the United States of America, and we better take it seriously, so, among other things. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Schmitt. Senator Duckworth, please.

Senator DUCKWORTH. Thank you, Mr. Chairman. I just have to say, I had a wonderful working relationship with Senator Blunt, who has recently retired. I would have to say, Senator Schmitt, I agree with you with your concerns on the Indo-Pacific region. In fact, my question, gentlemen, is going to followup a little bit on my colleague's line of questioning.

But I did want to start with saying that Mr. Assistant Secretary and General Fenton, your written testimony references the first SOF truth, humans are more important than hardware, and I couldn't agree with this more.

Two weeks ago, I led a Congressional Delegation (CODEL) to Japan and Indonesia. My interactions on that trip reinforced just how important those alliances and partnerships are. We must not forget that human ties are the United States strategic advantage in the Indo-Pacific region, and these human relationships are critical to countering malign Chinese Communist Party (CCP) activity in that region.

General Fenton, I appreciated our discussion last week. Can you please elaborate furthermore in that questioning line, and on an unclassified level, on how the SOF community fosters close relationships with our allies and partners?

Specifically, how does Special Operations Command's ongoing work with other nations, from the smallest unit operations all the way up through your leadership-to-leadership relationships with military leaders in some of these countries, reinforce our campaign plans in Southeast Asia?

General FENTON. Senator, thank you. I really appreciated our discussion as well, and I appreciate your reference in that. I will start with just emphasizing that partners and allies are absolutely a key focus for the Department, the Secretary, and for your Special Operations Command team.

I put that in contrast to what China's focus may be in terms of clients or customers. We are about partnerships, we are about friendships, we are about the power of many to make us all stronger. I think we see that in the way that we approach, first, your special operations team.

As you mentioned, we start very much from a perspective of, it is in our training and in our schoolhouses to work through these because we recognize it is the speed of trust. It is the speed of a relationships, in many ways with our partners and teammates around the world. You will see us at a very tactical level.

I won't mention any countries, and certainly, Senator, I could talk more in a closed session. You will see us at a tactical level doing events like training, shooting, jumping, driving, and building capabilities that use the tools that this Committee has honored us with.

I think at an organizational level, we will be showing folks how we have grown ourselves in the 20 plus years of combat, what it meant to weave in technology, how we understand our gathering of intelligence, how we understand mission type orders.

I think at the institutional level, what you will see your special operations team doing in any of the COCOMs is work with the COCOMs to ensure that the Nation we have a relationship with understands the special operations forces and what they can do, the types of missions, and if I may be the return on investment and the value that they will bring that nation in a way that I believe we certainly bring to this Nation.

Senator DUCKWORTH. Thank you, General. Turning now to General Nakasone. General, I just want to say I, too, have complete trust in your ability to do your job.

In fact, your forward leaning posture allowed us to keep tabs on the well-being of my constituent, who was held in Haqqani network hands and also in his safe return. So, thank you very much for the work of you and your subordinates in that. I want to talk about the cyber domain.

Of course, it has no boundaries. I included legislation in Fiscal Year 2021 NDAA authorizing DOD to establish a pilot program to enhance the cybersecurity of our allies, and in particular the readiness of military forces of Vietnam, Thailand, and Indonesia. This year I plan to expand that program to include Malaysia and the Philippines.

Could you elaborate on specifically why the cybersecurity of our allies and partners is important for U.S. overall, U.S. national security? If possible, can you comment on the value of direct engagement with our overseas partners to help build their cyber skills, and how that is important for our own national security?

General NAKASONE. Certainly, Senator. I think that there is no better example than Ukraine. We have watched this now for over a year. We are a very capable partner that was able to raise their level of cybersecurity, was able to fend off a much larger foe.

But it is not only that, it is also the ability for us to share information with that partner. We want to be able to share our information in the future. Being able to share information in cyberspace means that you have to have an assurance that the partner can secure your information.

That is a critical piece, and I know that the work that you have done to drive that type of cybersecurity, both in the element of the bar has to go higher for our partners to operate. Also, we have to have the confidence that we share information, that our information is between us and that partner.

Senator DUCKWORTH. Thank you. I yield back, Chairman.

Chairman REED. Thank you very much, Senator Duckworth. Senator Scott, please.

Senator SCOTT. Thank you, Chairman. I want to thank each of you for being here. General Nakasone, first, let's talk about China. The—is there anything that China sells us? We have cranes now at the Port Miami that they are worried that there was the ability for China to surveil what we are doing at our ports.

You look at what some of my colleagues have talked about, the risk of TikTok. Is there anything that China sells in this country that you don't believe creates a potential cybersecurity risk? What would it be, if they could sell us anything that wouldn't?

General NAKASONE. Senator, certainly you point to the challenge of cyber, which is a huge attack surface, right. Whether or not you trade in some type of good or you trade in some type of commodity, there is always an opportunity.

I think this points to the challenge that we have to be able to address, which is supply chain. To make sure that the elements of the supply chain that we operate, particularly within the Department of Defense, are secure.

Senator SCOTT. Do you think that Americans should have—do you think it puts America at risk if Americans have TikTok on their phone?

General NAKASONE. My concern with TikTok, Senator, really is from two pieces. One is the fact that there is tremendous amount of data and understanding where your data is, is critical, I think.

The second piece is the opportunity for influence. This is a means upon which you receive information or don't receive information. That is where I always look at that in terms of being able to measure that risk.

Senator SCOTT. If you were running a, let's say one of our electrical grids in the country, if you were responsible, knowing now what you know in the job that you have now, would you allow—would you buy anything from China?

Would you allow the employees have TikTok? Would you any business? Would you buy DJI drones? Would you do anything knowing what you now know in this job?

General NAKASONE. Senator, very difficult in the scenario that you point to our picture to imagine that you can really do that. I mean, there is so much of what we do is based upon international trade, and China has the corner on some things.

I think what I would do is ensure that the areas that are most sensitive to our operation are well censored, and I have the confidence that what is being utilized there, I understand where that information may be going.

Senator SCOTT. In a world where there was an alternative to every Chinese product and app and service out there, if there was an American alternative or American ally alternative to them, would you, at that point if you running one of these companies, would you guarantee that your company did no business with China if there was a good alternative? Would you think the same thing about our Government, knowing what you know?

General NAKASONE. So again, coming back as a prospective, perhaps future business owner, I would take a very, very hard look of anything that was coming from an adversarial nation and being able to understand that.

Senator SCOTT. General Fenton, can you talk about what other things you are doing to prepare your forces to deal with China, and where are they beating us, and where—and what do we need to do more and better, knowing that China doesn't like our way of life and wants to demolish our way of life?

General FENTON. Senator, I think the very first thing we are doing in Special Operations Command is focus the formation on the adversaries of China and Russia, but in particular China's. Reordering the formation in terms of focus.

There are a number of elements in our formation that understand the PRC and what they have been doing for years pretty well. But there is work that we have got to do to certainly bring in additional portions of the formation along. We do much of that through our education process in our schoolhouses that—all the components, our Army, Navy, Air Force, and Marine components.

Frankly, at our joint Special Operations university, understanding of the PRC and the PRC way of warfare. We knew that very well when we fought the ISIS threat. We understood how they were going to wage war, and now that is the understanding of the PRC.

Second, I would say is being present in any region and trying to understand their malign activities. As I mentioned before, diplomatic pressure from the Chinese—from the PRC, economic coercion from the PRC creates clients and customers. We are out there to build partners and allies.

I think that also allows us to get a sense of what PRC's malign activities are globally, and then on any given transfer, Senator, we are providing ranges of options for the Combatant Commanders and certainly for the Secretary to address either in deterrence, preparing, and if needed to prevail.

You have got the best special operations team in the world to do that, and that same time, we are presenting a lot of dilemmas to the adversary, the PRC.

Senator SCOTT. Thank each of you.

Chairman REED. Thank you, Senator Scott. Senator Rosen, please.

Senator ROSEN. Well, thank you, Chairman Reed. I really appreciate you holding this hearing. I would like to thank each one of the witnesses for being here and, of course, for everyone's service to our Nation. General Nakasone, I have quite a few questions for you on our cyber workforce and Nevada National Guard.

But I am going to get into cyber workforce first because the National Cybersecurity Strategy, which was released just last week, it calls for expanding the national cyber workforce. I know it is critical we continue to invest in innovative, nontraditional cyber capabilities and in talent to support the Department of Defense cyber mission requirements.

In last year's NDAA, as reported out of this Committee, it included my Civilian Cyber Reserve Act, bipartisan legislation I introduced with Senator Blackburn to create a civilian cyber reserve that ensures additional cyber capacity for CYBERCOM in greatest—times of greatest need.

So, this year, of course, I look forward to working with the chairman to ensure this critically important legislation will be included in the final conference. But I was hoping, General, that you could discuss the value of reserve models, including the value of a potential civilian cybersecurity reserve to support your cyberspace operations.

General NAKASONE. Senator, first of all, thank you for your support of U.S. Cyber Command, and in general, the work that we do in cyberspace. It begins with humans.

This idea of being able to have many more analysts, many more operators, many more developers is something that is part and parcel to our success in the future. It is not only with the civilian workforce that you have championed, but it is also this idea of how do you bring a larger base to bear?

How do we bring it from K through 12 that makes people very interested that science, technology, engineering, mathematics is the way of the future, and girls that code all these things that will provide a greater base for us to draw from are really important to us.

Senator ROSEN. Well, you are speaking my language. As a former software developer, now co-founder of the Women in STEM Caucus, and trying to promote STEM education all the time, this is music to my ears.

Of course, in fiscal year 2021, the NDAA required the Department of Defense to submit to Congress an evaluation of the reserve models to support these cyberspace operations, and the report was never submitted.

So could you update me on the status of the report and also the requirement I added in the fiscal year 2023 bill to have DOD enter into an agreement to assess the benefits of such a program. I would really like to see us be able to move forward on this.

General NAKASONE. Senator, if I might take that for the record, just to make sure I can leverage the Department of Defense for that.

Senator ROSEN. That would be perfect. I have some other questions, too, on auspices—excuse me, specifically for Nevada's National Guard. But, the National Cybersecurity Strategy rightly identifies a strengthening our international partner capacity. It is a pillar of our collective cybersecurity, our hunt forward operations in Ukraine in particular.

It really shows us the value of international partnerships. I have advocated for more funding for hunt forward as we identify more vulnerabilities, and so, our Nevada National Guard. We have three partner nations as a National Guard State Partnership Program, Fiji, Tonga, and Samoa.

How is the program promoting cyber partnerships with our allies and partners, and what challenges do you see—are you facing building these and where can we create a better strategy for this command?

General NAKASONE. First of all, I see very, very few—very, very few limitations on what we need to do in the future. The countries that you talk about there in the Southwest Pacific, we have worked very closely with our partners in Australia to look at how do we kind of incorporate all of them as we understand their needs, their requirements, their vulnerabilities, and then be able to assist them. A very, very small amount of money in a very, very small amount of time yields tremendous results, in my opinion.

Senator ROSEN. Yes, I agree. I want to tell you that I am also very excited because Department of Homeland Security recently announced another cyber strategy as it is going to expand the Abraham Accords collaboration among the United States, Israel, UAE, Bahrain, and Morocco to include cybersecurity.

As you work to promote multilateral partnerships between the Abraham Accords countries, how do you think this is going to help you with that?

General NAKASONE. Well, just think about hunt forward operations. We began those in 2018. Since 2018, 47 different missions, 22 countries, 70 different networks.

When we take a look at what has been able to be done—what we have been able to do is the fact that, one, it builds tremendous confidence between nations, right. When the United States deploys a hunt forward team to country x, country x knows that the United States cares, and it is for us being able to work with a partner to understand their requirements, and also build a higher bar of cybersecurity.

Senator ROSEN. Well, thank you for being there. We have heard that from our allies and partners. It means a lot when you are there. You show up and we work in partnership with others to help potentiate what they are doing to protect themselves. Thank you again. My time is up, Mr. Chairman.

Chairman REED. Thank you, Senator Rosen. The open portion of the hearing has concluded. For the benefit of my colleagues who might be listening, we have two votes. One is already underway.

We will adjourn here and convene our closed session, SBC217, immediately following this. I urge my colleagues to vote and then

join us. I would also like to commend the panel for their excellent testimony—our excellent testimony.

Senator Sullivan, please.

Senator SULLIVAN. Thank you, Mr. Chairman. I appreciate it very much. General Fenton and Mr. Maier, I know this has been touched on, but it is an issue that I think is really important.

How is the shift going from your rightful and exceptional focus on CT operations, primarily in the CENTCOM AOR, to the INDOPACOM region as our pacing threat? What is the kind of orientation of the strategy in that region? What I mean by that is, the CT, SOCOM focus post 9/11 was very kinetic, which our guys did an incredible job at. But the INDOPACOM strategy and focus is not kinetic, at least not now. We all hope it is never going to be kinetic.

It is a very different mission set. I don't know if that impacts morale. It is not as—well, I would like both of you to talk about that, because I have been concerned that it has been hard. You have done such a good job in that AOR, and that AOR is still important.

The issue of making sure that violent extremist organizations (VEOs) do not threaten our Nation, particularly with weapons of mass destruction, is still critical. But the pacing threat is China. Every day we see something.

You saw the foreign minister of China yesterday publicly saying, hey, we are on a collision course toward war. We don't want that, but we better well be ready for it. Your operators are the best in the world.

There are no Chinese forces that can hold a candle to the United States Special Operations enterprise, not even close. So, it is a giant strategic advantage we have over them. I want them to fear the hell out of it. So, what are we doing and how is that shift going?

Mr. MAIER. Senator, thanks for the question. Maybe I will start and then General Fenton can address some of the issues that are core to his force here.

I would say that the shift is very much underway, but I think it is a question of how do we maintain the counterterrorism capabilities, because if you look at the maps, sir, of course, many of the areas that were problems continue to be problems.

We are we are having to manage that risk. At the same time, we are doing, as you correctly said, sir, a different mission in the Indo-Pacific. I think the idea that we are not very kinetic or not kinetic at all in the Indo-Pacific is not necessarily something that means that the same kind of SOF skills are not relevant.

As we think of things like placement and access, and really relying on partners sometimes for that placement and access, but also the ability to work unilaterally go to places, that last tactical mile that at times only U.S. Special Operations can do, that is still relevant in the Indo-Pacific, even if the finish is not a kinetic or lethal finish.

I think, second Senator, I would highlight the by with and through approach, really working through partners, that has really been the hallmark of the counterterrorism efforts, especially the last decade or so, is very, very relevant again in the Indo-Pacific because we want our partners to be in the lead.

But we have demonstrated in places like Ukraine we can do that from a distance. So, it doesn't have to be the hand on the shoulder that we are always—we have been familiar with in the past.

I think these fundamental tools and the approaches we have used are still very relevant in the Indo-Pacific, sir.

Senator SULLIVAN. General Fenton, how is the reorientation of the INDOPACOM theater going?

General FENTON. Senator, I am going to start by agreeing with you that your special operations formation is the best, the very best in the history of mankind.

Senator SULLIVAN. Chinese don't have anything remotely close to it, and they know that. We know that.

General FENTON. I agree with that, and the same thing with Russia and any other adversary out there. That's right. The other part is that we exist and included with the entirety of the U.S. military, and the CYBERCOM team is exactly the best, and we have all that. I think, and I would want everybody that wishes this Nation harm, and if there is an adversary out there, China——

Senator SULLIVAN. I just want INDOPACOM theater to know that we are out there too, right.

General FENTON. Yes, sir.

Senator SULLIVAN. I sure I want the Chinese to wake up thinking they got Navy SEALs all over them, every day.

General FENTON. Yes, sir, and your special operations team is out there and in a very sustainable, durable way, in a concert with Admiral Aquilino's requirements. I would tell you that we can handle these challenges.

I will start by saying special operations really never left strategic competition and great deterrence. You and I talked about this a Senator, I think last year where I was the special ops commander responsible in the Pacific for the special operations forces that both did counterterrorism with one partner that we can I can talk more in a closed session about but competed with the PRC all day long by building partnerships, relationships, and capability.

That continues. At the same time, we will not take our eye off the persistent threat of global terrorism, and so, we will still handle the CT mission. There will be a number of forces that have the CT mission each and everyday hunting anybody that wishes harm to this Nation but can slide over to present some level of dilemma to an adversary in an integrated deterrence arena.

I would just add much of our counterterrorism experience is desired by these partners and nations as we go forward to train and becomes a key part of the partnership. So, Senator, I would just end with, your SOCOM team is absolutely ready to handle that challenge. I think there is a large portion of our force that is excited about this. They want to do what the Nation needs.

Right now, the Nation needs us to get very involved, and we are, and deter PRC, and certainly to address aggression by the Russians. They want to be knee deep in it. You know, your special operations team will, and at the same time handle the counterterrorism mission and any crisis response mission where a U.S. citizen or a diplomat needed to be safeguarded or rescued.

Senator SULLIVAN. Thank you. Thank you, Mr. Chairman, and I just want to say to General Nakasone, no question. I just think you

are—publicly because a lot of what you do is not public. I think you and your team are doing an exceptional job, General. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Sullivan. The open session has concluded again. We have two votes. I would urge my colleagues to go to the first vote. We will resume immediately in SVBC17 for the closed session, and to each of you gentlemen, thank you for your testimony.

General Fenton, Secretary Maier, General Nakasone, let me tell you, all have been extremely diligent, dedicated and offered superb service to this Nation over many years, and we are in your debt. Thank you all very much for that. I will adjourn the open hearing.

[Whereupon, at 11:55 a.m., the Committee adjourned.]

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JEANNE SHAHEEN

INFORMATION OPERATIONS

1. Senator SHAHEEN. General Fenton and General Nakasone, Russia conducts malicious information operations around the world and particularly in the context of the war in Ukraine. As the Department of Defense works across the interagency to counter Russian information operations, how can the United States improve its response time to malign information operations?

General FENTON. The U.S. requires a unified strategic communication plan to protect United States, Allies, and Partners, while globally engaging against Russian malign influence operations. Additionally, the Department will require investment in artificial intelligence and machine learning capabilities to detect Russian malign influence messaging, and conduct rapid counter-messaging. We need to increase our investments in Information Operations Forces to include Psychological Operations, Cyber, Space, Electronic Warfare, Civil Affairs, Public Affairs, and others to provide the Joint Force the right personnel and capabilities at the right levels to engage against this and other National Defense Strategy (NDS) challenges.

General NAKASONE. USCYBERCOM, by executing its operational approach of persistent engagement, aims to anticipate and preclude malign activity rather than responding after the fact. By actively campaigning, our cyberspace forces persistently counter malicious activity to include malign influence operations. Operating continuously below armed conflict denies initiative to adversaries; generates insight, opportunities, and options that preclude adversary freedom of maneuver; and defends DOD information networks, the defense industrial base and indirectly other elements of U.S. critical infrastructure.

2. Senator SHAHEEN. General Fenton and General Nakasone, what risks does a delayed response time to malign information operations pose to U.S. national security?

General FENTON. As we faced Violent Extremist Organizations (VEO) threats over the past 20 years, the U.S. Government had a unified plan against VEO malign information operations. The risk of a disjointed, delayed, or nascent response cedes the information space to our adversary. A proactive stance under a unified strategic communication plan which empowers the various departments to take timely action is required to reduce our adversary's ability to own the narrative. This is the most effective way to reduce United States risk, while undercutting Russian malign information and influence operations.

General NAKASONE. USCYBERCOM conducts military cyberspace operations and presents options to the Secretary of Defense and the President. The timing of a possible response is a decision for U.S. policy/decisionmakers.

QUESTIONS SUBMITTED BY SENATOR ELIZABETH WARREN

FUTURE USE OF UNFUNDED PRIORITIES LISTS (UPLS)

3. Senator WARREN. General Fenton and Nakasone, do you agree that if funding is needed for a project, it should be a part of the command/service budget?

General FENTON. Yes, I agree, and the Command's most critical requirements are resourced in the Command's Fiscal Year 2024 President's Budget Request. USSOCOM's fiscal year 2024 budget request allows Special Operations Forces (SOF) to remain fully capable of accomplishing USSOCOM's missions, while exceeding the Nation's expectations. However, sustaining, campaigning, and modernizing SOF forces must be balanced with an appreciation of both near-and long-term readiness risk to force and mission. This balancing act means some requirements cannot be fully resourced within available funding, and are subsequently deferred to a future year in lieu of near-term higher priority needs.

General NAKASONE. USCYBERCOM follows congressional and DOD's budgetary processes.

4. Senator WARREN. General Fenton and Nakasone, historically, have previous UPL items been included in the following year's base budget? Have UPL items from fiscal year 2023 been included in the fiscal year 2024 base budget? If yes, please provide detail including the requested item, funding amount, and vendor executing the effort. If no, why not?

General FENTON. Yes, if funded by Congress from USSOCOM's fiscal year 2023 C-UPL and not a one-time requirement. Examples from USSOCOM's fiscal year 2023 list include:

i. Counter Unmanned Systems Procurement Acceleration, $65.2 million, Anduril Industries

ii. Advana Authoritative Data Management and Analytics, $8.0 million, Booz Allen Hamilton

iii. Enterprise Data Stewardship Program, $18 million, Indefinite Delivery, Indefinite Quantity Contract (e.g., multiple vendors)

iv. Identity and Signature Management Modernization, $20.9 million, GDIT/ARMA, CACI/AFC, Thompson-Reuters Special Services, and others based on mission requirements

v. CV–22 & MC–130J Link–16 TacNet Tactical Receiver, $5.7 million, Lockheed Martin. Data Link Systems, Sierra Nevada Corporation, and VIASAT

Some requirements resourced via the UPL are one-time damage refurbishments or aircraft loss replacements that occurred after the close of the Program/Budget Review, and were subsequently added to the UPL. USSOCOM's Combatant Craft Medium Loss Refurbishment for $4.3 million was one such requirement funded in fiscal year 2023.

General NAKASONE. The first UPL request for which USCYBERCOM received funding was in fiscal year 2022. USCYBERCOM was unable to include the item in its fiscal year 2023 base budget, so another UPL was requested for fiscal year 2023. All of the USCYBERCOM fiscal year 2023 UPL items which received partial funding in fiscal year 2023 have been included in USCYBERCOM's Fiscal Year 2024 Presidents Budget (PB) request as appropriate.

Fiscal Year 2023 UPL ITEM	Amount Requested ($ millions)	Congressional Add ($ millions)	Vendor(s)
Cyber Mission Force Operational Support	167.9	66.0	NSA; FFRDC/UARCs; Booz Allen Hamilton; Accenture; SANS; other vendors TBD.
JCWA Integration	56.4	41.4	ManTech; other vendors TBD.

5. Senator WARREN. General Fenton and Nakasone, do you agree that Federal agencies should be required to work within the confines of base budget process?

General FENTON. Yes. The base budget process affords the Command and the Department the opportunity to ensure the most critical strategic requirements are resourced within the President's Budget Request. The C-UPL supplements provide an avenue for Combatant Commanders and Service Chiefs to communicate emerging requirements directly to Congress that would have been resourced if the requirement had been identified before the close of the budget process months earlier. Also, C-UPLs represent requirements we would have funded within the base budget if additional funds had been available for addressing "fact of life" changes. fiscal year 2024 examples in the latter category include acceleration of transformational investments in modern capabilities such as un-crewed platforms, autonomous capabilities, artificial intelligence, machine learning, and natural language processing capabilities.

General NAKASONE. USCYBERCOM follows congressional and DOD's budgetary processes.

INFORMATION ON UPLS

6. Senator WARREN. General Fenton and Nasakone, what was the cost of putting together this UPL list?

General FENTON. UPL compilation is a byproduct of building annual President's Budget Requests.

General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

For each item on the unfunded priorities list you submit in response to 10 U.S.C. 222a, please provide the following information:

7. Senator WARREN. General Fenton and Nasakone, please provide a detailed description of this UPL?

General FENTON. Responses have been retained in Committee files.

General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

8. Senator WARREN. General Fenton and Nasakone, what does the UPL purchase?

General FENTON. Responses have been retained in Committee files.

General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

9. Senator WARREN. General Fenton and Nasakone, please include detail on all end items with quantities, contractor FTEs, etc.

General FENTON. Responses have been retained in Committee files.

General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

10. Senator WARREN. General Fenton and Nasakone, what specific capability will the UPL provide?

General FENTON. Responses have been retained in Committee files.

General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

11. Senator WARREN. General Fenton and Nasakone, what gap will this fill that is not in the base budget?

General FENTON. Responses have been retained in Committee files.

General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

12. Senator WARREN. General Fenton and Nasakone, how will this capability support objectives outlined in current National Security, Military, and Defense Strategy documents?

General FENTON. Responses have been retained in Committee files.

General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

13. Senator WARREN. General Fenton and Nasakone, what is the operational requirement? How does this UPL support current or future operations?

General FENTON. Responses have been retained in Committee files.

General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

14. Senator WARREN. General Fenton and Nasakone, what is the operational impact if this UPL is not funded in fiscal year 2024?

General FENTON. Responses have been retained in Committee files.

General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

15. Senator WARREN. General Fenton and Nasakone, are there plans to include this item in the fiscal year 2025 base budget?

General FENTON. Responses have been retained in Committee files.

General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

16. Senator WARREN. General Fenton and Nasakone, why was this UPL not included in the fiscal year 2024 President's Budget submission?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

17. Senator WARREN. General Fenton and Nasakone, what is the name of the vendor(s) executing this effort? Sub-vendor(s)?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

18. Senator WARREN. General Fenton and Nasakone, how often has your command met with the vendor executing this effort? Please provide a list of all such meetings, and the agenda for these meetings?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

19. Senator WARREN. General Fenton and Nasakone, what is your history with this vendor? Please detail when the relationship began, the number of contracts applied for by this vendor, the number of contracts awarded to this vendor, and if you have had a personal relationship with the vendor?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

20. Senator WARREN. General Fenton and Nasakone, has anyone who formerly worked for your command represented the vendor in meetings? What is their name, what was their position, and when did you meet with them?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

21. Senator WARREN. General Fenton and Nasakone, in which city/State will the UPL be executed?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

22. Senator WARREN. General Fenton and Nasakone, is this requirement on an existing contract? If so, with who? What is the history of the contract?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

23. Senator WARREN. General Fenton and Nasakone, what is the anticipated contract award date if the UPL receives funding?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

24. Senator WARREN. General Fenton and Nasakone, what funding lines are associated with this UPL?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

25. Senator WARREN. General Fenton and Nasakone, if multiple appropriations fund this requirement, must all appropriations be funded simultaneously to source this requirement, or can each appropriation stand on its own to fund a portion of the requirement?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

26. Senator WARREN. General Fenton and Nasakone, how much was enacted and obligated (or expended for RDT&E) in fiscal year 2022–23 for this requirement?

General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

27. Senator WARREN. General Fenton and Nasakone, how much was requested in fiscal year 2024 for this requirement?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

28. Senator WARREN. General Fenton and Nasakone, is there a tail associated with this UPL?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

29. Senator WARREN. General Fenton and Nasakone, is any tail funded in the future years defense plan?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

30. Senator WARREN. General Fenton and Nasakone, please describe how much the requirement will cost per year for the next 5 years.
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

31. Senator WARREN. General Fenton and Nasakone, please provide in detail the previous funding requests and enacted for this requirement, including if it was in the base budget or UPL.
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

32. Senator WARREN. General Fenton and Nasakone, if the requirement is not included in the future years defense plan, will that be rectified in the next Program Objective Memorandum or the Program, Planning, Budget, and Execution (PPBE) cycle?
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

33. Senator WARREN. General Fenton and Nasakone, please provide photos of this requirement for visual aid.
General FENTON. Responses have been retained in Committee files.
General NAKASONE. USCYBERCOM did not submit an Unfunded Priorities List for fiscal year 2024.

QUESTIONS SUBMITTED BY SENATOR GARY PETERS

C-UAS

34. Senator PETERS. General Fenton, with SOCOM's designation as the lead for defeating UAS prior to launch, home and abroad. What recommendations can you offer DOD and the Army's Joint Counter-UAS office to increase collaboration between DHS and other interagency partners for illuminating and countering threats to homeland, and where does the lead coordinating authority fit into the process?
General FENTON. In our role as the DOD's global coordinator to counter the UAS threat prior to launch, we strive to ensure effective collaboration occurs within the DOD daily, between the Army's Joint C-UAS office, DHS, interagency partners and others.
In our coordinating role, we use an approach similar to the one we use for the Counter-VEO fight in the Combatant Command Areas of Responsibility (AORs)—protecting the homeland by disrupting the adversary primarily outside the U.S. (i.e., the Away Game). In order to execute this role, the Department engages with Law

Enforcement and interagency partners (including but not limited to, Department of Commerce, U.S. Customs and Border Protection, the Federal Bureau of Investigations, DHS, Treasury, and State), as well as coordinating with USNORTHCOM, the Joint Counter small Unmanned Aircraft Systems (sUAS) Office (JCO), and the National Intelligence Manager for Aviation to identify threats, priorities, and coordinate opportunities to counter risks to the Homeland.

To ensure domestic challenges are addressed, we continue to work by, with, and through USNORTHCOM and the Office of the Director of National Intelligence, National Intelligence Manager-Aviation partners, and we are in close coordination with JCO to ensure no seams exist between the mutually supportive "Right of Launch" and "Prior to Launch" efforts.

INTERNET OPERATIONS MANAGEMENT PROGRAM

35. Senator PETERS. General Nasakone, in your role, you are responsible for securing the sprawling ".mil" digital enterprise that our warfighters depend upon. Over the last several years, progress has been made to implement an Internet Operations Management Program that continuously monitors DOD's cyber infrastructure through the eyes of the adversary, identifies vulnerabilities, and empowers network operators to quickly remediate those issues before adversaries like Russia or China can exploit them. Despite some progress, this critical capability has yet to be deployed across the entire DOD Information Network. Over half of the Department's 45 Areas of Operation within the DODIN have yet to receive this capability. Can we expect full DOD-wide deployment of the Internet Management Operations Management capability in fiscal year 2023?

IF NOT, Today's threat environment seems misaligned to picking winners and losers across the DOD Information Network for proven capability. What do you need from us to push this critical effort across the finish line?

General NAKASONE. USCYBERCOM developed a phased implementation of the Internet Operations Management (IOM) capability based on operational focus and intelligence needs. So far in fiscal year 2023, the Department has expanded this capability to 27 of the 45 DODIN Areas of Operation (DAOs).

- Phase I included 18 DAOs that each completed a 60-day onboarding, ensuring success through live/recorded training sessions and concluding with a tabletop exercise to certify DODIN Areas of Operation initial operating capability meets operational direction.
- Phase 2 began on March 30 and will grant access to 9 more DODIN Areas of Operation who will complete the same 60-day onboarding cycle.

Full deployment of IOM capability to all 45 DAO's is planned for fiscal year 2024.

QUESTIONS SUBMITTED BY SENATOR KELLY

ARMED OVERWATCH

36. Senator KELLY. General Fenton, what is the development status of the of the AT–802U Sky Warden, to be designated OA–1K?

General FENTON. The Armed Overwatch OA–1K Program is integrating mature mission system technologies to include weapons, defensive systems, and secure communications onto the commercial AT–802U aircraft. This approach leverages proven technologies requiring little development. Presently, USSOCOM is working with L3Harris and the Federal Aviation Administration to certify the airworthiness of the AT–802U modifications that comprise the OA–1K. The first lot of seven aircraft is now in low-rate initial production with aircraft being modified at the L3Harris facility in Tulsa, okay.

37. Senator KELLY. General Fenton, when will you take delivery of the first aircraft?

General FENTON. We are scheduled to take delivery of the first aircraft by the end of October of this year.

38. Senator KELLY. General Fenton, is SOCOM working to identify training locations? What are the main considerations?

General FENTON. Yes, the training location is currently being coordinated by AFSOC through the Secretary of the Air Force's Strategic Basing Process. There are two main criteria for consideration: locations with existing similar-sized aircraft training, maintenance, and support infrastructure and training airspace for Armed Overwatch mission with air-to-ground range availability and accessibility.

39. Senator KELLY. General Fenton, how will SOCOM select basing locations for the anticipated 4 squadrons of these aircraft?

General FENTON. The OA–1K will be based with USSOCOM's Air Force Service Component. AFSOC is leading the effort to qualify candidate OA–1K bases through the Secretary of the Air Force's Strategic Basing Process. Once approved, the Secretary of the Air Force will notify Congress of the decision.

40. Senator KELLY. General Fenton, how can this Committee better support you in continuing to do the Armed Overwatch mission?

General FENTON. We appreciate the continued support we have received from the Committee as we maintain an aggressive schedule to field the Armed Overwatch aircraft. However, there are no additional steps the Committee can take at this time to accelerate the program.

41. Senator KELLY. General Fenton, are there steps Congress can take to accelerate progress through program milestones?

General FENTON. We appreciate the continued support we have received from Congress as we maintain an aggressive schedule to field the Armed Overwatch aircraft as quickly as possible. However, there are no additional steps Congress can take at this time to accelerate the program.

OA–1K OPERATIONAL IMPACT

42. Senator KELLY. General Fenton, armed ISR capabilities have played a pivotal role in the fight against global extremist threats worldwide. It's also critical to have a platform capable of doing Close Air Support missions and supporting our troops on the ground at a moment's notice. What specific capabilities will the new, dedicated light attack aircraft to be known as OA–1K provide?

General FENTON. The OA–1K will provide two high-definition, electro-optical/infrared full motion video (FMV) sensors for overwatch in support of troops on the ground. The aircraft will have encrypted line of sight (LOS) voice communications, as well as LOS FMV downlink to exchange real time voice and video imagery with a supported ground element. Additionally, the OA–1K will have Link 16 and Beyond Line-of-Sight full motion video capabilities to exchange battlespace awareness information with other aircraft and operations centers. For delivering kinetic effects against a target, the OA–1K will be armed with 2.75" laser-guided rockets (AGR–20 Advanced Precision Kill Weapon System (APKWS)) and AGM–114 Hellfire missiles. The OA–1K will have a 3.5 hour loiter time plus 30 minutes weapons delivery at a range of 225 nautical miles. Finally, the OA–1K is equipped with an external, podded modular multiple-sensor station and open mission system architecture to enable tailoring of platform capability to support force needs.

43. Senator KELLY. General Fenton, how do you anticipate using the OA–1K to support SOCOM operations?

General FENTON. Armed Overwatch will provide a cost-effective, multi-role, rapidly deployable, Irregular Warfare (IW) platform capable of austere operations in direct support of globally deployed, geographically isolated SOF units, and remains central to our Precision Effects modernization efforts, as it will provide responsive and available situational awareness, protection and fires to our ground forces executing C-VEO missions in permissive environments.

44. Senator KELLY. General Fenton, how will these aircraft impact the support SOCOM is able to provide to our Combatant Commanders around the world?

General FENTON. Combatant Commanders' requirements differ based on their missions, threats, and national policy in those regions. The OA–1K will conduct cost-effective IW missions, as well as enable other USSOCOM assets to pivot toward other priority mission sets. The Armed Overwatch primary focus is on the C-VEO mission by supporting combined ground teams for operations that require a low footprint, higher endurance, and austere capable aircraft.

QUESTIONS SUBMITTED BY SENATOR ROGER WICKER

DUAL-HAT ARRANGEMENT

45. Senator WICKER. General Nakasone, could you please comment on how your dual-hatted role at CYBERCOM and the NSA enhances U.S. national security and helps both agencies achieve success in their individual missions? If the dual-hat arrangement were to go away, how do you think it would impact cyber coordination

efforts between CYBERCOM and the NSA, and the execution of their individual missions?

General NAKASONE. [Deleted.]

CYBER WORKFORCE READINESS

46. Senator WICKER. General Nakasone, does CYBERCOM have the manpower it needs to fully execute its mission? Would personnel management tools such as extended tour lengths, geographic assignment stability, and increased special duty pay help in recruiting and retaining the cyber workforce the Department needs?

General NAKASONE. [Deleted.]

CYBER PARTNERSHIPS

47. Senator WICKER. General Nakasone, please comment on how CYBERCOM is leveraging partnerships with United States' international allies to strengthen our defenses against common threats and adversaries?

General NAKASONE. USCYBERCOM has increased its focus and engagement with international partners globally. These partnerships build resilience in partners' ability to harden their government and military networks and weapons systems, enhance interoperability in coordinating and executing cyberspace operations, and enhance partners' posture to confront cyber threats across the spectrum of competition and conflict.

Further information is in classified responses.

48. Senator WICKER. General Nasakone, the defense industrial base is often our first line of defense for cyberattacks in the United States. General Nakasone, how is CYBERCOM collaborating with the private sector to ensure that the private sector has the information and tools it needs to detect and respond to cyberattacks?

General NAKASONE. Cyberspace is a global domain. Adversaries often penetrate privately owned networks and devices, using sophisticated capabilities to disrupt operations or gain advantage via activities such as intellectual property theft, targeting of personal information and installation of ransomware. The collaboration and sharing of insights with the private sector provides mutual benefits. An example is the UNDERADVISEMENT program, which links cybersecurity expertise across industry and government, leading to several operational successes as well as collaborating with system owners in order to eradicate threats themselves.

ARTIFICIAL INTELLIGENCE AND CYBERSECURITY

49. Senator WICKER. General Nakasone, how is artificial intelligence (AI) changing warfare in the cyber domain, and what can we be doing to leverage AI to enhance our offensive and defensive cyber capabilities?

General NAKASONE. [Deleted.]

CYBER CAPABILITIES TO SECURE THE U.S. SOUTHERN BORDER

50. Senator WICKER. General Nakasone, I recently traveled to the U.S. southern border where we have a serious crisis. The border is clearly controlled by the cartels, which are trafficking humans, fatal drugs, and weapons. To what extent are the Mexican cartels using cyber capabilities to control the southern border, and what can you share about CYBERCOM's efforts to counter the cartels' cyber capabilities?

General NAKASONE. [Deleted.]

JOINT CYBER WARFIGHTING ARCHITECTURE

51. Senator WICKER. General Nakasone, please provide a status update on the migration of Joint Cyber Warfighting Architecture components from the Services to CYBERCOM.

General NAKASONE. USCYBERCOM is conducting the initial stages of the migration of the Joint Cyber Warfighting Architecture (JCWA) components from the Services to USCYBERCOM by working to define Service/USCYBERCOM roles and responsibilities, governance and authorities.

USCYBERCOM is drafting Memoranda of Understanding (MOU) with the Services outlining relationships and responsibilities. In addition, USCYBERCOM is working with the Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)) to define Commander USCYBERCOM's authorities for Systems Engineering and Integration (SE&I), enabling cross-JCWA enterprise interoperability functions for all JCWA program offices. USCYBERCOM expects to use

enhanced budget control (EBC) and SE&I authorities to manage JCWA programs at an enterprise level in fiscal year 2024.

USCYBERCOM is preparing to establish a Program Executive Office as directed in the fiscal year 2023 NDAA, Section 1509.

COMPETITION

52. Senator WICKER. General Nakasone, does the DOD have a strategy to ensure that no single vendor has a broad enough enterprise license agreement that it locks out "best of breed" cybersecurity solutions and thereby increases cyber risk? If so, recognizing that there are many components to a comprehensive cybersecurity solution, such as Endpoint Detection and Response, Vulnerability Management, Identity and Access Management, and Security Information and Event Management, what is your strategy to ensure that the Department incorporates the best of each component to reduce cyber risk?

General NAKASONE. I defer this question to the Department of Defense.

53. Senator WICKER. General Nakasone, does the DOD plan to issue a new department-wide acquisition strategy to meet Zero Trust requirements that includes a competitive process for multiple cybersecurity vendors?

General NAKASONE. I defer this question to the Department of Defense.

QUESTIONS SUBMITTED BY SENATOR JONI ERNST

IRREGULAR WARFARE

54. Senator ERNST. Secretary Maier and General Fenton, in your personal opinion, would enabling partner forces that are responding to hostilities enhance SOF's irregular warfare contribution to great power competition?

Secretary MAIER. Irregular warfare operations and activities increase pressure on adversaries that seek to compete with the United States by shaping the environment to prevent or deter hostilities, enhancing our allies' and partners' ability to respond to hostilities, and setting favorable conditions for potential future U.S. operations. Through these operations and activities, the U.S. can positively influence outcomes for partner defense forces and degrade adversarial resources and capabilities without overtly/openly escalating hostilities. This contributes to strategic competition by bolstering U.S. legitimacy as a dedicated and invested partner while simultaneously signaling to other adversaries the consequences of challenging a U.S. partner.

General FENTON. As evidenced by recent and ongoing events around the globe, competition between world powers spans the operational continuum, including armed conflict. U.S. SOF must be prepared to execute IW activities in support of Combatant Command requirements on both ends of the spectrum equally, especially as it relates to our interactions with foreign partners. Following through is critical to the sustainment and implementation of operational capabilities that were developed prior to hostilities. Perhaps more importantly, the demonstration of U.S. resolve enhances our credibility, which is crucial to the sustainment of relationships with current partners and to fostering future relationships. Our ability to enable like-minded partners through resourcing, training, and advising across the operational continuum is the key to achieving strategic effects designed to prevent—prepare—and ultimately prevail over a mutual adversary. Conversely, failure to follow through will result in outsized negative impacts to ongoing and future IW campaigns.

55. Senator ERNST. Secretary Maier and General Fenton, in your personal opinion, do you agree that extending this authority indefinitely and increasing its budget authorization would improve SOF's irregular warfare capability?

Secretary MAIER. Yes, codifying section 1202 of the fiscal year 2018 NDAA as a permanent authority and increasing its budget authorization will enable SOF to fund and plan long-term operations necessary to build resilient and capable partners and to compete successfully with adversaries. Section 1202 programs enable SOF to conduct activities below the threshold of armed conflict that develop and enable partners to counter our adversaries' malign interests around the globe. A temporary, or periodically renewed 1202 authority communicates to our partners and adversaries that U.S. support is bound by a timeline and that our support has an expiration.

General FENTON. Codifying and expanding the budget authorization for 1202 broadens the aperture and increases U.S. SOF's value proposition for Combatant

Commanders that are deterred from using 1202 by the current uncertain program lifespan and relatively low budget cap. Enhanced Combatant Command confidence in the efficacy of the 1202 program would result in increased opportunities and greater flexibility for U.S. SOF to enable and leverage foreign partners to achieve specific effects in support of our mutual IW objectives.

56. Senator ERNST. Secretary Maier and General Fenton, in your personal opinion, are there other modifications to this authority that could improve SOF ability to compete with great powers?

Secretary MAIER. We continuously evaluate existing authorities in coordination with USSOCOM to ensure SOF has the authorities it needs to effectively contribute to strategic competition.

General FENTON. We are currently assessing the benefit of combining the attributes of 127e (support of Special Operations to Combat Terrorism) and 1202 (support of Special Operations for Irregular Warfare) into a single fiscal authority that would allow for the provision of support to foreign partners to achieve effects when and where counter-VEO operations and integrated deterrence campaigning are complementary. This is an initiative that—if we determine it has merit—would be worked through the Department's legislative proposal/review process.

TRAINING

57. Senator ERNST. General Fenton, we need realistic training to build readiness for GPC. How has SOF adapted its training programs for GPC?

General FENTON. USSOCOM is executing an aggressive plan of reorienting SOF to address the global challenges that are impacting new strategies for campaigning throughout multiple regions and across all domains. Realistic training is key to building enduring advantage and critical to enhancing SOF's and our partners' capabilities against near peer challengers. USSOCOM continues to support and participate in Service, Joint, and multinational exercises synchronizing these activities through our Theater Special Operations Commands and the Combatant Commands to provide deterrent effects to our competitors whenever possible. USSOCOM continues to explore new training capabilities, live and virtual, in multiple domains to enhance our warfighting and crisis response capabilities.

58. Senator ERNST. General Fenton, does SOF have the resource it needs to adapted its training programs for GPC?

General FENTON. It is important to sustain funding for experimentation, training, and exercises for the entire Joint Force to build capabilities, readiness, and deter our competitors. Ensuring SOF is integrated with our joint and combined partners is accomplished through maintaining and enhancing our joint and combined exercises programs, especially with the Interagency, to address current strategic challenges and anticipate future challenges.

COUNTER NARCOTICS

59. Senator ERNST. Secretary Maier, how is SOF using existing authorities to conduct its counter-narcotics responsibility?

Secretary MAIER. In support of DOD's broader counternarcotics and countertransnational organized crime efforts, SOF leverage existing authorities to conduct exercises and training alongside foreign partners with responsibilities for disrupting drug trafficking and associated forms of transnational organized crime.

U.S. law and longstanding policy prohibits direct DOD participation in law enforcement activities such as searches, seizures, or arrests of civilians. In peacetime, U.S. law enforcement agencies, often in collaboration with their foreign counterparts, appropriately lead drug interdiction efforts, but DOD intelligence, training, and logistical support are often critical to successful law enforcement actions, including arrests, seizures, designations, etc. SOF's global presence and ability to support interagency, non-governmental, and foreign military partners enhances the development of holistic options to degrade transnational criminal organization networks. As the designated global coordinator for the Department's counter threat finance operations, USSOCOM provides essential support to U.S. Government efforts to identify and disrupt sources of illicit revenue that supports terrorist or other transnational criminal organizations.

60. Senator ERNST. Secretary Maier, are the SOF authorities to conduct its counter-narcotics responsibility sufficient at this time?

Secretary MAIER. I appreciate the serious threat that drug trafficking poses to our society, especially from fentanyl, which according to DEA kills nearly 200 Americans every day. In addition to the clear human and economic costs, illicit drugs provide financial support to violent extremist organizations and other threat networks that contribute to global instability.

SOF play an important role within DOD's broader counter-narcotics efforts, which are conducted through a broad range of authorities, both in support of U.S. and foreign law enforcement operations and by building the capacity of foreign partners to disrupt drug trafficking and associated forms of transnational organized crime. While current authorities have been essential to DOD's efforts in support of our law enforcement partners, the Department is seeking to amend 10 USC 284 to authorize planning support for counterdrug operations conducted by U.S. law enforcement agencies and to increase the cap on small-scale construction for bases of operations or training facilities in support of foreign law enforcement agencies. The Department is also seeking to codify Section 1022 of the Fiscal Year 2004 NDAA, which authorizes the use of counterdrug funds to enable joint task forces that support law enforcement agencies conducting counter-drug activities to also provide support to law enforcement agencies conducting counter-terrorism or counter-transnational organized crime activities, including the trafficking of people, weapons, money, and natural resources and wildlife.

QUESTIONS SUBMITTED BY SENATOR DAN SULLIVAN

SOF IN THE ARCTIC

61. Senator SULLIVAN. General Fenton, Assistant Secretary of Defense Maier, in your prepared remarks you noted that "[s]trategic competitors—specifically Russia—threaten established international rules in the Arctic and pose increasing challenges to North American security. SOF play a role in bolstering domain awareness and integrated deterrence in the Arctic as part of the Joint Force. Over the past year, SOF strengthened capabilities to operate and prevail in the austere Arctic environment. Large-scale, joint exercises and operations, such as Arctic Edge and Polar Dagger, provided venues for more than 500 U.S. and multinational SOF to experiment and operate in the North American Arctic region." Can you elaborate on how SOCNORTH is expanding SOCOM's role in the Arctic to deter China and Russia and defend the Homeland?

General FENTON. USSOCOM supports the Combatant Commands and their Arctic Strategies. SOCNORTH has expanded and continues to strengthen USSOCOM's role as part of USNORTHCOM's Campaign to deter and defend against the People's Republic of China (PRC) and Russian malign influence in the Arctic. The key Operations, Activities, Exercises, and Investments (OAEIs) SOF brings, combined with our strong relationships with numerous Allied and Partner nations in the Arctic, strengthens our capabilities, increases Joint Force domain awareness and enhances integrated deterrence.

SOCNORTH-led OAEIs across the challenging pan-Arctic environment and problem-set is increasing in support of integrated deterrence and Homeland Defense. Specific examples include:

- SOCNORTH deployment of a Special Operations Command Forward (SOCFWD) to both execute and provide Command and Control (C2) of USSOF military free-fall and combat-dive operations in extreme Arctic conditions during USNORTHCOM's Exercise VIGILANT SHIELD (April 2021) at Deadhorse, AK.
- Operation SPARTAN SENTRY (October 2021), which provided SOCNORTH an additional opportunity to extend its operational reach to plan, execute and assess Special Operations on a larger scale at Shemya Island, AK, as part of USNORTHCOM's Operation NOBLE DEFENDER.
- SOCNORTH further advanced SOF campaigning in the Arctic during Exercise ARCTIC EDGE 22 (February 2022) by establishing a forward-deployed Joint Force Special Operations Component Command to C2 subordinate Special Operations Task Forces (SOTFs) in the execution of multi-domain Special Operations with more than 500 U.S. and multinational SOF (the largest ever deployment of SOF to the North American Arctic).
- Operation POLAR DAGGER 1.0 (September 2022) during which SOCNORTH demonstrated U.S. SOF capability to operate in the Arctic on St. Lawrence—located 36 nautical miles off Russia's eastern coastline / military district. This exercise sent a clear deterrent message during parallel Russian strategic exercises in the Pacific region.

- Follow-on OAEIs (e.g., Exercise ARCTIC EDGE 23, Operation POLAR DAGGER 2.0, etc.) will provide opportunities for SOCNORTH to learn, experiment, develop, and evolve USSOF capabilities as part of the Joint Force, integrate with inter-organizational partners, and potentially message to adversaries that we can and will "win" against any threat in the Arctic in competition and conflict.
- SOCNORTH continues to focus on strengthening key partnerships with numerous Allied and Partner Nations that share security interests and equities across the pan-Arctic region. Specific examples include:
- In support of CDRUSNORTHCOM's Globally Integrated Layered Defense (GILD), and USNORTHCOM's designation in the UCP as the DOD Arctic Advocate for Arctic Requirements, SOCNORTH is collaborating directly with SOCPAC and SOCEUR to close operational seams across the transregional, pan-Arctic problem-set.
- SOCNORTH is also partnering with Joint Force Command Norfolk (JFC-NF) to assist NATO with planning for campaigning and contingencies in the High North and the trans-Atlantic approaches to the Homeland.
- In October 2022, SOCNORTH hosted the first "Special Operations in the Arctic Symposium," attended by more than 200 participants from more than 70 joint, interagency, intergovernmental, and multinational organizations to include the Ted Stevens Center (the Alaska-based DOD Regional Security Center focused on the Arctic), helped to build shared understanding, better define pan-Arctic challenges and share lessons learned across the Enterprise.

SOF is innovating and improving in order to fight and win in this challenging environment, through the execution of these OAEIs and building focused relationships.

Secretary MAIER. Special Operations Command North (SOCNORTH) plays a key role in the first Pillar of our Arctic Strategy, centered on security and developing capabilities for expanded Arctic activity. As an Arctic nation, and as an ally to Arctic nations, we have a responsibility to operate across our own gaps and seams and to strengthen partnerships. Special operations forces have always excelled at both. SOCNORTH works closely with Special Operations Command Europe (SOCEUR) and Special Operations Command Pacific (SOCPAC), finding opportunities to deepen cooperation with allies and partners to improve our understanding of the environment, and to ensure each combatant command is prepared to operate with our allies in the Arctic. One example is the Senior Leader Dialogue we recently held with leaders from Norway's defense ministry and special operations command. The commanders of SOCEUR and SOCNORTH outlined important ways for us to maximize our unity of effort through our key bilateral relationships, exercise presence, share awareness, and deepen our interoperability with allies like Norway. The Arctic is a challenging environment to operate in, and SOF leads the way, finding opportunities to address those challenges and further develop our own capabilities.

OCOM GLOBAL FORCE POSTURE

62. Senator SULLIVAN. General Fenton, Assistant Secretary of Defense Maier, the 2022 NDS establishes a clear hierarchy of threats, with the People's Republic of China at the top, followed by Russia. The focus on Great Power Competition involves a different mission than the counter-terrorism fight most SOCOM entities have conducted for the past 20 years. It also requires different capabilities. Can you explain, with examples, how SOCOM's global force posture has changed to reflect the shift from CT operations to deterring Chinese and Russian aggression?

General FENTON. USSOCOM has increased deployments of CONUS-based United States SOF to the Indo-Pacific and Europe to supplement forward-based forces normally available to United States Indo-Pacific Command (USINDOPACOM) and United States European Command (USEUCOM). These forces work with and assure regional allies and partners, set conditions in theater, and effectively enable U.S. SOF to integrate with and support the Joint Force during crisis. Even as we re-align SOF to the USINDOPACOM AOR—our SOF in other AORs such as U.S. Central Command—executes persistent deployments and engagements to deter, disrupt, and degrade Russian and Chinese influence and access. In USEUCOM, U.S. SOF along with Allied SOF, have rekindled traditional relationships with volunteer and territorial defense forces, which dramatically increase the resiliency of their nations. In addition, the Global SOF Posture Plan (GSPP) has been developed with a focus on supporting the integrated deterrence of Chinese and Russian aggression. The GSPP shifts posture focus from counter terrorism to integrated deterrence. An example is the U.S. Air Force Special Operations Command's development of Theater Air Operations Squadrons and their Non-Standard Aviation Growth, which were validated

by USSOCOM in 2022, and are currently being staffed for implementation into two key theaters. These units represent the first developed and validated to meet the NDS objectives.

Secretary MAIER. SOF are present in more than 70 countries at any one time. We have always deployed to address the needs of the Nation alongside our Allies and partners. Consistent with the 2022 NDS direction to address the People's Republic of China as our pacing threat, and Russia as an acute threat, we are focusing on establishing the access, placement, and relationships needed to counter these threats and prepare for conflict if required. A great example of these efforts is in the Philippines, where Exercise Balikatan 2023 will include forces from the 27th Special Operations Wing working alongside our Allies to enhance interoperability and demonstrate resolve in the critical Indo-Pacific theater. While we have not taken our eye off the counterterrorism fight, we are purposefully deploying and leveraging SOF to provide asymmetric advantages for the Joint Force and the Nation.

63. Senator SULLIVAN. General Fenton, Assistant Secretary of Defense Maier, do you think SOCOM is now properly aligned to execute the 2022 NDS or does more work remain to be done?

General FENTON. Yes. The men and women of USSOCOM stand ready to execute and support the requirements in our NDS; anytime and anywhere our Nation requires us. We have always changed shape to meet the requirements of the Nation and the SOF Enterprise's focus on "People, Win, and Transform" will continue to guide USSOCOM to support the NDS. SOF is laser-focused on the PRC as the pacing threat, while we continue C-VEO and ensure the readiness of our no-fail CR mission. We will continuously evaluate the enterprise moving forward to ensure we support the joint force through integrated deterrence, and are prepared to accomplish the most challenging missions at a time of high risk. All of this requires calibration and nuance to defend the Nation and build stronger relationships with our allies and partners.

Additionally, USSOCOM is accelerating its wide-ranging modernization efforts and leveraging its acquisition authorities with an emphasis on surface and subsurface maritime platforms; C-UAS; next-generation Intelligence, Surveillance, and Reconnaissance; mission command systems; and collaborative and autonomous unmanned systems. USSOCOM continues to build enduring advantages through investments in our people, technology, and organizations in support of the NDS.

Secretary MAIER. The SOF enterprise is aligned with the guidance set forth by the 2022 National Defense Strategy and continues work to implement the NDS. We are on the pathway to achieve NDS-defined strategic objectives through the programming, planning, and allocation of SOF resources to execute global SOF operations, activities, and investments. The guidance and direction that CDRUSSOCOM and I have published in our SOF Vision and Strategy and the fiscal year 2025 SOF Capabilities and Programming Guidance reflects SOF's alignment with the 2022 NDS. In addition, our co-authored future operating concept we are developing further aligns how SOF will operate in the future to the strategic direction outlined in the 2022 NDS. Together, these documents lay out the plan for aligning SOF with NDS priority initiatives, and we are providing regular progress updates to the Secretary.

USCYBERCOM SUPPORT OF INDOPACOM OBJECTIVES

64. Senator SULLIVAN. General Nakasone, in your prepared remarks you identified USCYBERCOM's fourth line of effort as "developing options for full-spectrum cyberspace operations to assist Combatant Commanders . . . to achieve their objectives." You also noted that China was "building capabilities far in excess of its defense needs." Deterring, and if necessary defeating, a Chinese invasion of Taiwan is certainly one of INDOPACOM's objectives. A key Chinese capability to conduct such an invasion is the PLAN (People's Liberation Army Navy). The Secretary of the Navy has acknowledged we cannot match the output of Chinese shipyards and the PLAN is already numerically larger than the United States Navy. The PLAN also uses civilian RO-ROs (Roll on/ Roll Off) ferry vessels to practice the same type of amphibious operations it needs to conduct to invade Taiwan. What capabilities does CYBERCOM bring to the fight to help INDOPACOM achieve its objectives, specifically deterring and defeating a PLA amphibious invasion of Taiwan?

General NAKASONE. Last year, I created a combined USCYBERCOM-NSA China Outcomes Group to oversee this shift. The China Outcomes Group aligns components in USCYBERCOM and NSA, enhances intelligence insights, improves cybersecurity and delivers operational outcomes for the Nation. Resources are prioritized

and focused on deterring and countering the People's Republic of China's (PRC's) aggressive behavior.

Further information is in classified responses.

QUESTIONS SUBMITTED BY SENATOR TED BUDD

INTERNET OPERATIONS MANAGEMENT PROGRAM

65. Senator BUDD. General Nakasone, how large is the total attack surface that CYBERCOM is responsible for defending across the DOD Information Network?

General NAKASONE. The DODIN attack surface being actively tracked and monitored by Internet Operations Management (IOM) consists of roughly 300 million Internet Protocol addresses for which USCYBERCOM is responsible for defending.

66. Senator BUDD. General Nakasone, how is CYBERCOM incorporating industry solutions, including automated monitoring through the eyes of the adversary, to help better defend that attack surface?

General NAKASONE. The Internet Operations Management (IOM) capability is the industry solution USCYBERCOM has been using since 2019 that performs monitoring through the eyes of the adversary. IOM has been leveraged to continuously discover, inventory, manage and monitor all commercial-facing DODIN cyberspace assets, both on-premises and in the cloud; to aggregate all DODIN commercial-facing asset data in a centralized location; and to streamline command and control of DODIN defensive cyberspace operations.

67. Senator BUDD. General Nakasone, reportedly over half of the Department's 45 Areas of Operation within the DODIN have yet to implement continuous monitoring and vulnerability identification through the Internet Operations Management Program. Do you expect Department-wide deployment of that capability this year? If not, when can we expect it?

General NAKASONE. USCYBERCOM developed a phased implementation of the Internet Operations Management (IOM) capability based on operational focus and intelligence needs. So far in fiscal year 2023, the Department has expanded this capability to 27 of the 45 DODIN Areas of Operation (DAOs).

- Phase 1 included 18 DAOs that each completed a 60-day onboarding, ensuring success through live/recorded training sessions and concluding with a tabletop exercise to certify DODIN Areas of Operation initial operating capability meets operational direction.
- Phase 2 began on March 30 and will grant access to 9 more DODIN Areas of Operation who will complete the same 60-day onboarding cycle.

Full deployment of IOM capability to all 45 DAO's is planned for fiscal year 2024.

DEPARTMENT OF DEFENSE AUTHORIZATION REQUEST FOR APPROPRIATIONS FOR FISCAL YEAR 2024 AND THE FUTURE YEARS DEFENSE PROGRAM

THURSDAY, MARCH 9, 2023

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

UNITED STATES STRATEGIC COMMAND AND UNITED STATES SPACE COMMAND

The Committee met, pursuant to notice, at 9:30 a.m., in room G–50, Dirksen Senate Office Building, Senator Jack Reed (Chairman of the Committee) presiding.

Committee Members present: Senators Reed, Shaheen, Gillibrand, Blumenthal, Hirono, King, Warren, Peters, Rosen, Kelly, Wicker, Fischer, Cotton, Rounds, Ernst, Sullivan, Cramer, Scott, Tuberville, Mullin, Budd, and Schmitt.

OPENING STATEMENT OF SENATOR JACK REED

Chairman REED. Let me call the hearing to order. Good morning. The Committee meets today to receive testimony from General Anthony Cotton, Commander of U.S. Strategic Command, or STRATCOM, and General James Dickinson, Commander of U.S. Space Command, or SPACECOM.

Gentlemen, thank you for your service to the Nation, and please extend my thanks, and thanks of all the Members of the Committee, to the men and women serving under your command. General Dickinson, I understand this is likely your last hearing before the Committee as Commander SPACECOM.

I want to thank you for your extraordinary leadership, and particularly to the first years of this command as you establish the norms that are carried forward. Thank you very much, sir. As in the past, we have asked the Commanders of STRATCOM and SPACECOM to testify together.

Until 2019, Space Command was a part of Strategic Command. Now, as SPACECOM stands up as an independent command, it is important to identify any gaps or seams that have emerged during the transition.

On the global stage, Russia's illegal war in Ukraine has introduced risks to the nuclear stability we have maintained for the better part of a century. Vladimir Putin's behavior has been dangerously reckless. In February, he suspended Russia's participation

in the New START [Strategic Arms Reduction Treaty], the last remaining strategic stability agreement between our two countries.

General Cotton, it is important to the Committee to understand how this affects your planning, and I hope to hear more about it in the classified session. Further, Putin and his associates have made a series of nuclear saber-rattling statements to try to make the United States and our allies reconsider our support for Ukraine.

That strategy has failed. The United States nuclear deterrent, the bedrock of our national defense, is being relied upon more than ever, and our extended deterrence for our allies has proven effective. This has made Russia think twice about escalating hostilities against NATO [North Atlantic Treaty Organization]. We must be mindful, however, that as Putin's conventional arsenal grows weaker, he may rely more on his nuclear arsenal.

I would welcome our witnesses' thoughts on how we can best manage this extremely complicated dynamic. Our other near-peer competitor, China, continues to advance its ballistic missile capabilities. In addition to expanding its field of hardened missile silos, the PLA [People's Liberation Army] is building new air and sea nuclear delivery platforms.

General Cotton, you recently sent a letter to Congress reporting that while China has fewer warheads than the United States, it now has more launch platforms than we do. I would like to know the implications of this assessment.

Beijing's new land-based silos, along with the completion of its nuclear triad, and nuclear command and control and communications, or NC3, fundamentally changed the nature of its nuclear doctrine. This shift may have significant impacts on stability in the Indo-Pacific region and should inform how we design our own nuclear strategy to protect the Nation and maintain our extended deterrence and our commitment to our allies.

The United States is well under way in its cycle of nuclear modernization, a once in a generation effort to renew the aging legs of our nuclear triad. Each leg is a major defense acquisition program, and I understand that the Air Force and Navy are encountering workforce and supply chain problems similar to other Department programs. General Cotton, I would like to know how these delays could impact your planning efforts.

Further, I would ask for your views on the efforts of the National Nuclear Security Administration, or NNSA, to meet Defense Department requirements. In prior modernization cycles, the NNSA could rely on existing infrastructure, particularly with respect to uranium and plutonium, to meet these requirements.

That is not the case today, as the NNSA has to recapitalize the very production facilities needed to provide finished nuclear parts. It is essential that we understand what impacts this may have on your operations.

In the space domain, we are quickly gaining a clearer picture of the threats we face. With respect to Ukraine, we have learned a number of important lessons. For example, GPS [Global Positioning System] jamming is now commonplace and commercial space systems are regarded as enemy combatants by Russia. There are en-

tire regions of Ukraine that are GPS denied, and the conflict is creating unexpected consequences for commercial space operations.

General Dickinson, I hope you will share your perspective on using commercial space assets in a conflict as our current policy is ambiguous. Space Command's ability to want Strategic Command, Northern Command, and U.S. senior leadership of a missile attack on the Homeland remains critically important.

The Committee would appreciate an update on the progress SPACECOM has made in assuming control of the missile warning and NC3 functions it inherited from STRATCOM. Are there gaps in and how can these gaps be addressed? Finally, SPACECOM is responsible for integrating both ground and space sensors to achieve better space situational awareness, essentially becoming the Defense Department's sensor command.

General Dickinson, I ask that you share your vision for how to integrate this constellation of sensors which ranges from ground and sea radars to satellite sensors so that it provides the best support to the Force.

Thank you again to our witnesses for appearing today. I look forward to your testimonies. I would note for my colleagues that there will be a classified hearing immediately following this session in SVC–217 to continue our discussion. With that, let me recognize the Ranking Member, Senator Wicker.

STATEMENT OF SENATOR ROGER F. WICKER

Senator WICKER. Thank you, Chairman Reed, and thank you to our witnesses. I can think of no issue that demands the Committee's attention more than the nuclear threat posed by China and Russia. Despite its significant setbacks in Ukraine, Russia remains a major nuclear threat to the United States.

Moscow possesses a larger and more modern nuclear arsenal than we do. It can also build new and numerous additional nuclear weapons in short order. Russia has developed new nuclear weapons unlike anything in the United States inventory, including nuclear powered transoceanic, autonomous torpedoes and intercontinental cruise missiles.

These are weapons for which we have no defense. The story out of China is also very troubling. Beijing is modernizing and expanding its nuclear force at breakneck speed. It will likely outpace the United States in the early 2030's. The past 18-month period has given us a good idea of China's remarkable growth.

Over that time, China's nuclear arsenal has doubled in size. The Chinese have blown a missile that can drop nuclear warheads from orbit anywhere on earth with virtually no notice. China has become the third country to develop a strategic triad of nuclear missiles, bombers, and submarines.

General Cotton recently notified Congress that China now possesses more ICBM [intercontinental ballistic missiles] launchers than the United States. Just last week, news reports exposed Beijing's purchase of 28 tons of Russian uranium, which could be used to further its weapons production. In the space domain, China and Russia are openly developing and testing counterspace capabilities.

Each country has dangerously taken out satellite]s in orbit, creating thousands of pieces of debris and space junk, endangering

hundreds of other satellites, and frankly, those brazen and irresponsible acts of aggression only scratch the surface of their real capabilities.

Given these great threat conditions, one would expect a sense of urgency on the part of our Government, a fundamental reassessment of our assumptions and realignment of our resources. Instead, the Departments of Defense and Energy repeatedly delay programs to modernize our nuclear deterrence and restore the basic industrial capabilities we use to produce nuclear weapons.

The Administration downplays the reality that space is a war fighting domain. Space contains real threats and adversaries, and it needs military solutions. Refusing to acknowledge and prepare affects our country's ability to be ready for a future war that would extend into space.

This Administration needs plans and postures to account for the worsening security system. If we are to prevail in long term competition with China and Russia, we need to commit today to a program of sustained innovation and investment. This morning, we will begin to receive budget summaries, including the President's Budget Request.

This request once again is likely not to keep pace with inflation, and we already know of several significant shortfalls in naval shipbuilding, munitions, the key investments in the Western Pacific for example, to name a few.

I would look forward to working with my colleagues here in Congress on both sides of the aisle to build a bipartisan, adequate, strategy-based budget for the coming year. About the sense of urgency, I would like to hear from our witnesses about how this Committee can help create a sense of urgency to act, to accelerate the modernization of our strategic arsenal and adapt our forces. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Wicker. General Cotton, please.

STATEMENT OF GENERAL ANTHONY J. COTTON, USAF
COMMANDER, UNITED STATES STRATEGIC COMMAND

General COTTON. Good morning, Chairman Reed, Ranking Member Wicker, and distinguished Members of the Committee.

I appreciate this opportunity to testify next to General Dickinson, and I thank the Committee and Congress for its support to national defense. First, I along with my Command Senior Enlisted Leader, Sergeant Major Howard Kramer, want to assure you and the American people that the United States Strategic Command is ready today.

Ready to defend our Nation, defend our allies, and respond decisively if called upon. The men and women of United States Strategic Command are the foundation for the capabilities that underpin our Nation's strategic deterrence. They do this in an environment that continues to grow complex and challenging.

Russia's invasion of a sovereign Ukraine is an attempt to undermine the rules based international order by conventional forces backed with nuclear saber rattling. How this conflict unfolds and eventually ends will shape the strategic environment for decades to come.

We see the People's Republic of China (PRC) continuing to rapidly expand its nuclear capabilities. The PRC's actions are wholly inconsistent with the long-professed policy of minimal deterrence. I did report to Congress in January that the number of land-based intercontinental ballistic missile launchers in the PRC now exceeds those that we have in the United States.

Along with its significant modernization and expansion of conventional capabilities, the PRC is also investing heavily in lower yield precision systems with theater ranges, a new generation of mobile missiles, and hypersonic glide vehicles with fractional over bombardment systems.

The PRC nuclear modernization, provided with an alarming number of offensive options that can negatively shape the environment before and during a crisis or conflict. North Korea continues to be a rogue actor and poses a threat to the United States and our allies. North Korea conducted an unprecedented number of missile launches in 2022, and its new intercontinental ballistic missile, referred to as the KN–28, highlight that the security challenge continues to grow.

We are meeting today's challenges with integrated deterrence. It is the cornerstone of the National Defense Strategy (NDS). Our unmatched network of allies is a key component of integrated deterrence, and these relationships are underpinned by our extended deterrence commitments. These commitments are enabled by a safe, secure, effective, and credible nuclear deterrent.

The credibility of our extended deterrent commitments is not only part of the Nation's iron-clad commitment to our allies but is also essential in limiting proliferation of nuclear weapons. The nation's nuclear forces underpin integrated deterrence and enables the U.S., our allies, and our partners to confront aggressive and coercive behavior.

To ensure our continue ability to serve as the bedrock of integrated deterrence, we are recapitalizing every leg of the nuclear triad and the nuclear command, control, and communication systems. We are also addressing electromagnetic spectrum operations holistically and developing concepts to deploy conventional hypersonic strike capabilities.

We will need to continue partnering with industry to ensure flexibility, responsiveness, and capacity during recapitalization and modernization to ensure we can sustain our current systems while the new ones are being delivered.

Finally, I will end as I started, our people are the foundation of every capability that enables strategic deterrence. I am proud to serve alongside the soldiers, sailors, airmen, marines, and guardians, and civilians that make up U.S. Strategic Command. Thank you again for this honor, and I look forward to your questions.

[The prepared statement of General Anthony J. Cotton follows:]

PREPARED STATEMENT BY GENERAL ANTHONY J. COTTON

INTRODUCTION

United States Strategic Command (USSTRATCOM) is a global warfighting combatant command (CCMD). Our mission is to deter strategic attack and employ forces, as directed, to guarantee the security of our Nation and our Allies. Our people are the greatest enablers of this security, and it is my privilege to lead the sol-

diers, sailors, marines, airmen, guardians, and civilians who dedicate themselves to this mission 24 hours a day, 365 days a year. I want to thank the President, Secretary of Defense, and Chairman of the Joint Chiefs for their confidence in me to lead this command. I also thank Congress for your continued support to ensure that USSTRATCOM has the resources necessary to meet our critically important mission. We remain ready to face the complex deterrence challenges of today's global security environment while positioning the command for the future.

USSTRATCOM is responsible for strategic deterrence; nuclear operations; nuclear command, control, and communications (NC3) enterprise operations; joint electromagnetic spectrum (EMS) operations (JEMSO); global strike; missile defense; analysis and targeting; and missile threat assessment. These responsibilities will grow in prominence as we face the challenges identified in the National Defense Strategy (NDS): strategic competition with the People's Republic of China (PRC), Russia as an acute threat, threats to the United States Homeland, and complex escalation dynamics.

To meet these rapidly evolving challenges, the United States must provide a combat ready force able to deter any adversary, and if necessary, fight and win. While the command stands ready to execute its mission today, we need consistent, stable, and on-time congressional funding to sustain and modernize the nuclear enterprise. This will ensure our ability to pace current and future threats by providing capabilities to deter through the spectrum of conflict. Over the past decade, a cycle of continuing resolutions and late appropriations has hindered the Department's acquisitions, operations, and maintenance. As both the Chief of Staff of the Air Force and Chief of Naval Operations testified in 2022, continuing resolutions and late appropriations cost us time and money, causing potential delays in modernizing the nuclear enterprise and Joint Force.

The nuclear triad is the foundation of U.S. national security, and I thank Congress for fully funding our modernization programs: Sentinel intercontinental ballistic missile (ICBM), *Columbia*-class submarine, D5 submarine launched ballistic missile (SLBM) second life extension and modernization (D5 LE2), B–21 Raider bomber, and Long Range Standoff (LRSO) cruise missile. In addition to these systems, the U.S. must continue investment in sustainment of current systems and critical capabilities that support and complement the nuclear triad. These include nuclear weapons infrastructure overseen by the National Nuclear Security Administration (NNSA), NC3, nuclear security, and long-range conventional strike capabilities such as hypersonic weapons (HSWs). Alongside capability is capacity. We must expand our critical munitions stockpiles while working with manufacturers to make the defense industrial base as responsive as possible.

OUR PEOPLE

The greatest strength of USSTRATCOM is its people. Like the rest of the Department, our workforce is aging out and we are in a fierce competition for talent. My goal is to help personnel currently assigned to the command maximize their potential while continuing to attract capable individuals. USSTRATCOM is committed to deliberate development opportunities and career broadening. These opportunities include strategic deterrence education programs, and a strategic leader fellowship program. Additionally, we are committed to maintaining an inclusive environment where people are valued as well as fostering quality of life improvements for the military and civilian workforce. Finally, the need to fully recapitalize our nuclear enterprise has an important people component—as our systems continue to age, their increasing maintenance requirements fall squarely on our dedicated team of servicemembers and civilians.

We have an amazing team serving both in and out of uniform to protect our country. Investing in people yields dividends for national security. There are serious challenges with the production capacity of the defense industrial base, and to help mitigate this I encourage Congress to look at ways to increase the number of STEM (science, technology, engineering, and mathematics) and skilled trade workers throughout the U.S. workforce.

GLOBAL SECURITY ENVIRONMENT

For the first time in our country's history, the United States faces two major nuclear powers, the PRC and the Russian Federation, which have the capability to employ nuclear coercion as a way to achieve their national objectives. Russia presents a growing nuclear deterrence challenge centered on its potential perception that the threshold for regional nuclear employment is lower with low-yield systems. The PRC is also developing capabilities that would present a similar deterrence challenge, and it is unconstrained by any nuclear arms control treaty limitations. Additionally,

the activities of the Democratic People's Republic of Korea (DPRK) are regionally destabilizing and have global implications.

In the longer term, emerging technologies—including HSWs, fractional orbital bombardment (FOB) capabilities, anti-satellite capabilities, artificial intelligence (AI), autonomous systems, advanced computing, quantum information sciences, biotechnology, and advanced materials and manufacturing—pose a growing challenge to our national defense.

Meeting these near-term and longer-term threats requires a globally focused national strategy and commitment that spans decades.

People's Republic of China

As the NDS states, the PRC is our most consequential strategic competitor and pacing challenge; its significant nuclear force expansion reflects an increasing assertiveness and the capability to employ nuclear coercion. The PRC's rapid qualitative and quantitative expansion of military capabilities enables a shift in its strategy and requires the Department of Defense (DOD) to make immediate and significant alterations to plans and capabilities. The PRC is aggressively pursuing their global ambitions through a national strategy of "Military-Civil Fusion"—a comprehensive focus on advancing civilian research to develop and then apply new technologies toward military and defense innovations. For example, the PRC's development and construction of fast breeder reactors and reprocessing facilities allows the swift expansion of its warhead manufacturing capacity. The PRC believes that its robust nuclear weapons program is essential to counter the U.S. in the near future in order to achieve what its leaders have deemed "great power status."

Correspondingly, the PRC seeks to match, or in some areas surpass, quantitative and qualitative parity with the United States in terms of nuclear weapons. The PRC's nuclear capabilities already exceed those needed for its long-professed policy of "minimum deterrence," but PRC capabilities continue to grow at an alarming rate. Additionally, the PRC is making substantial investments to expand its inventory of land-, sea-, and air-based nuclear delivery platforms and is constructing the infrastructure necessary to support the significant expansion of its nuclear forces. Notably, the PRC is developing capabilities inconsistent with its historical minimum deterrence posture.

Within the past 3 years, the PRC has built hundreds of new ICBM silos, further indicating a move away from a minimum deterrence posture. The PRC's three new missile fields collectively provide it with more than 300 silos. Each of these silos can be equipped with the CSS–10 Mod 2 ICBM, which is capable of ranging the continental United States (CONUS) with multiple independently targetable reentry vehicles (MIRVs). Additionally, the PRC maintains other ICBMs, some of which are road-mobile. Unconstrained by arms control treaty limitations, the PRC is fielding a new generation of mobile missiles, with MIRV and penetration aid capabilities. The PRC's most modern road-mobile and MIRV-capable ICBM advanced from concept to deployed system in only a few years. The PRC is now projected to have over 1,000 warheads by the end of this decade. In accordance with statutory requirements, I recently reported to Congress that the number of land-based fixed and mobile ICBM launchers in the PRC now exceeds the number of ICBM launchers in the U.S.

Just like the ground leg, the air and sea legs of the PRC's nuclear triad are now armed with newly developed weapon systems. The air-refuelable H–6N bomber is armed with new nuclear-capable cruise missiles and air-launched ballistic missiles that may be nuclear capable, and the PRC is building a new stealth strategic bomber with global reach. The PRC's six JIN-class ballistic missile submarines (SSBNs) are now being equipped with the new third-generation JL–3 SLBM capable of ranging CONUS. PRC strategists also highlight their country's perceived need for lower-yield nuclear weapons. Significantly, the PRC's investment in lower-yield, precision systems with theater ranges points to investment in asymmetric capabilities that could be employed coercively during an escalation crisis, similar to Russia's irresponsible nuclear saber-rattling during its war against Ukraine. This presents the United States with a deterrence challenge that must be addressed with a range of U.S. capabilities, both conventional and nuclear. The PRC currently has an arsenal of approximately 1,000 medium- and intermediate-range ballistic missiles, many of which are dual capable (i.e., able to be armed by either conventional or nuclear warheads) and able to inflict significant damage to United States, Allied, and partner forces in the Indo-Pacific.

The PRC's 2021 test of a hypersonic glide vehicle (HGV) with FOB capability exemplifies its pursuit of weapons systems with implications for strategic stability. FOB systems use a low earth orbit to deliver a warhead most of the way to its target destination, deorbiting just before reaching its target. These systems represent

a more challenging threat because their non-ballistic trajectories complicate missile detection and tracking, and degrade the target country's ability to characterize the scale of an attack.

The trajectory of the PRC's nuclear advancements points to a large, diverse nuclear arsenal with a first-strike offensive capability and a high degree of survivability, reliability, and effectiveness. When considered in the context of its heavy investment in NC3, as well as increased readiness, the PRC's nuclear modernization highlights emergent capabilities that could provide it with a spectrum of first-strike offensive options before and during a crisis or conventional conflict. The PRC may believe that nuclear weapons represent a key component of its counter-intervention strategy and could use these weapons coercively against our Nation, Allies, or partners.

Russian Federation

Russia's brutal invasion of Ukraine is a violent attempt at territorial seizure that aims to undermine the rules-based international order with conventional force backed by nuclear coercion. Russia's nuclear rhetoric is underpinned by its nuclear arsenal, which is the largest and most diverse in the world. Russia continues to flight test its new heavy ICBM, the SS-X–29 Sarmat, with plans to begin fielding it in 2023 and eventually replace the legacy SS–18 heavy ICBM. With Sarmat, Russia joins the PRC in developing ICBMs that use at least partial orbital trajectories. Russia also continues to field new *Dolgorukiy*-class SSBNs, armed with the new SS-N–32 Bulava SLBM, and *Severodvinsk*-class nuclear-powered cruise missile submarines.

Russia's significant investment in launch platforms and systems not subject to the New START Treaty (NST) provides it with increasingly diverse and flexible nuclear deterrence options. Russia now fields nuclear-capable hypersonic systems such as the Avangard HGV, the Tsirkon land-attack cruise missile, and the Kinzhal air-launched ballistic missile, the last of which Russia has employed in Ukraine with conventional warheads. Russia also has a stockpile of approximately 2,000 theater nuclear weapons that does not fall under the limits established by the NST.

The continued degradation of Russian conventional capability in Ukraine will likely increase Russia's reliance on its nuclear arsenal. This phenomenon, along with the PRC's rapid breakout and development of capabilities that present a similar deterrence challenge, underscores the increased perceived utility of nuclear weapons in the contemporary environment. The United States faces a complex, multipolar nuclear world that requires concerted U.S. effort to address these deterrence challenges, strengthen assurance to our allies and partners, and prevent proliferation.

Democratic People's Republic of Korea

The DPRK, an increasing security challenge to the United States and our allies, is capable of striking regional allies with nuclear weapons and is an emerging threat to CONUS. The DPRK's advancing missile and nuclear programs are destabilizing and highlight the critical role of USSTRATCOM's deterrence and assurance mission.

The DPRK's nuclear-capable ballistic missile research and development has continued with an unprecedented number of missile launches in 2022. The DPRK's continued development of ICBMs, SLBMs, and Intermediate Range Ballistic Missiles demonstrates its intention to bolster its nuclear delivery capability. The DPRK is also developing new capabilities such as HSWs and MIRVs, and its new Hwasong–17 ICBM has the potential to reach CONUS. The DPRK is also diversifying launch platforms, and has tested rail, submarine, and ground-mobile missiles. These advancing nuclear capabilities place pressure on allied faith in our extended deterrence commitments. The DPRK illustrates that nuclear and weapons of mass destruction threats to the United States and our allies are not limited to the PRC and Russia.

INTEGRATED DETERRENCE

We are addressing these threats through integrated deterrence. As the NDS articulates, integrated deterrence spans all domains and capabilities and is backstopped by a safe, secure, and effective nuclear deterrent. USSTRATCOM's role, however, is not limited to nuclear plans and operations. USSTRATCOM's mission, to deter strategic attack—not just nuclear attack—against our Nation and allies, includes many components. Correspondingly, our new concepts and plans must account for nuclear, long-range conventional, space, electromagnetic spectrum, and cyberspace capabilities. Crucially, DOD's plans must integrate all capabilities across the spectrum of conflict.

USSTRATCOM also plays a vital role in assuring allies and partners. The North Atlantic Treaty Organization (NATO) calls the strategic forces of the Alliance, particularly those provided by the U.S., "the supreme guarantee of the Alliance's security." In the Indo-Pacific, our allies similarly acknowledge the importance of our strategic deterrent. Examples of operations and activities include U.S. bomber operations with allies, SSBN port visits, and exercises such as Steadfast Noon, NATO's annual nuclear exercise.

The war in Ukraine, combined with the PRC's rapid nuclear arsenal expansion and the DPRK's growing nuclear capabilities, will likely make longstanding United States nonproliferation goals more challenging. For 70 years, U.S. extended deterrence commitments have functioned as one of the most important factors limiting the proliferation of nuclear weapons. In the current environment, the credibility of U.S. extended deterrence commitments is even more vital to nuclear nonproliferation goals. Critically, there must be no perception of a threshold below which an adversary may believe it could employ nuclear weapons, such as non-treaty accountable, lower-yield, theater weapons, to obtain a benefit.

WHAT USSTRATCOM NEEDS TO ACCOMPLISH ITS MISSION

I urge Congress, the Department, and the services to sustain their decades-long support for critical national security capabilities, including the infrastructure needed to support these programs. The recapitalization of our triad is a once in every-other-generation event that will ensure we have capable forces into the 2080's to defend the U.S. Homeland and deter strategic attack globally. I am closely monitoring the transition of our major programs: *Ohio* to *Columbia,* D5 LE to D5 LE2, Minuteman III to Sentinel, B–2 to B–21, Air Launched Cruise Missile (ALCM) to LRSO, and modernization of NC3 capabilities. It is essential to sustain our current platforms until new systems are at full operational capability. Correspondingly, we are coordinating with the services on efforts to mitigate operational impacts should delays occur in the delivery timeline for new capabilities.

NUCLEAR COMMAND, CONTROL, AND COMMUNICATIONS (NC3)

The NC3 enterprise is essential to the President's ability to command and control the Nation's nuclear forces. Acknowledgement of this vital mission and the unique challenges facing NC3 modernization were the impetus behind the Secretary of Defense's establishment of my role as the DOD NC3 Enterprise Lead in 2018. With these responsibilities and authorities, we are taking a holistic enterprise approach to develop and deliver the next generation of NC3—a flexible, resilient, and assured architecture spanning all domains and enhancing strategic deterrence.

NC3 Next Generation / Modernization

The modernization of the NC3 enterprise underpins the nuclear triad and sustains assured command and control capabilities in the evolving threat environment. We are partnering with NC3 stakeholders in the Office of the Secretary of Defense and levying requirements on the services to modernize all NC3 capability areas, integrating global nuclear forces with the means to provide strategic deterrence.

In the next 5 years, we will transition from Milstar to the Advanced Extremely High Frequency satellite constellation, gaining greater capacity, survivable worldwide NC3 reach, and the ability to provide direction to our forces in degraded environments. Our national leadership conferencing, currently using a voice-only legacy technology, will transition to voice and video displays. In our warning layer, we are moving away from the Defense Support Program and toward the Space Based Infrared System to maximize warning time. Efforts are already underway on our submarines, E–6B aircraft, and bombers to replace previous generation radios with improved systems that are more resilient to jamming and other electromagnetic effects.

In the next 10 years, the launch and use of Next Generation Overhead Persistent Infrared geosynchronous and polar satellites will replace legacy systems with a space-based missile warning constellation to detect and track threats around the globe. The Space Development Agency's Proliferated Warfighting Space Architecture is aimed at building a constellation of satellites in low and medium earth orbit that can monitor maneuvering hypersonic missiles flying below the range of today's ballistic missile detection satellites and above the radar of terminal-phase targeting systems. These satellites will complement other efforts to detect and track maneuvering hypersonic missiles that are difficult targets for current missile warning capabilities. Finally, we will use polar satellite communications capability with the Enhanced Polar System Recapitalization program to provide message relay. Our submarines, E–6B aircraft, bombers, and missile fields will receive communication

systems that increase survivability of weapon systems in a crisis situation. We are focused on achieving our vision—a modernized NC3 enterprise that remains resilient, reliable, and available at all times and under the worst conditions.

NC3 Cybersecurity and Technological Improvements

We have confidence in our ability to protect, defend, and execute the nuclear deterrent mission. The resilience and redundancies of the systems comprising the Nuclear Command and Control System, combined with ongoing cybersecurity enhancements, ensure our ability to respond under adverse cyber conditions.

E–4B Nightwatch

The E–4B Nightwatch aircraft serves as the National Airborne Operations Center and is a key component of the National Military Command System for the President, Secretary of Defense, and Joint Chiefs of Staff. The E–4B recapitalization program—the Survivable Airborne Operations Center—will serve as the next generation airborne command center platform. In case of national emergency or destruction of ground command and control centers, the aircraft provides a highly survivable command, control and communications center to direct U.S. forces, execute emergency war orders and coordinate actions by civil authorities. For these reasons, we must continue to develop and deliver this platform on time to prevent any capability gaps associated with this important national asset.

E–6B Mercury

The E–6B Mercury accomplishes two missions: Emergency Action Message (EAM) relay to all legs of the nuclear triad (Take Charge and Move Out/TACAMO) and an alternate USSTRATCOM command center providing EAM origination and ICBM secondary launch capability (Looking Glass). E-XX is the follow-on platform to the E–6B airframe and will execute the TACAMO mission only. In coordination with the Office of the Undersecretary of Defense for Acquisition and Sustainment and the Joint Staff, USSTRATCOM and the NC3 Enterprise Center are conducting an evaluation of alternatives (EOA) to consider all missions and platforms to deliver the Looking Glass capabilities currently performed by the E–6B. Recommendations from the EOA should be available by mid-summer. We must complete recapitalization by the E–6B's projected end of service life in fiscal year 2038.

LAND-BASED TRIAD COMPONENT]

The ICBM remains our country's most responsive option for strategic deterrence. The Minuteman III (MMIII) force provides a responsive, highly reliable deterrent capability, supported by a secure command and control system. Geographically dispersed ICBMs deny potential adversaries the possibility of a successful first strike.

MMIII's weapon system replacement, the LGM–35A Sentinel ICBM, will deliver MMIII's key attributes while enhancing platform security, streamlining maintenance processes, and delivering greater operational capability needed for the evolving threat environment. Sentinel's program scope and scale cannot be overstated—our first fully integrated ICBM platform includes the flight system, weapon system, C2, ground launch systems, and facilities. The Sentinel program is pursuing mature, low-risk technologies, design modularity, and an open system architecture using state-of-the-art model-based systems engineering. Sentinel will meet our current needs, while allowing affordable future technology insertion to address emerging threats. USSTRATCOM is actively supporting the Sentinel engineering and manufacturing development process and looks forward to the first Sentinel developmental flight test. Sentinel will deploy with numerous advantages over MMIII and will provide a credible deterrent late into this century. Sentinel fielding is a whole-of-government endeavor. We appreciate continued congressional support, both for Sentinel and sustainment of MMIII.

SEA-BASED TRIAD COMPONENT

The Navy's *Ohio*-class SSBN fleet, equipped with the Trident II D5 SLBM, patrols the world's oceans undetected, providing an assured second strike capability in any scenario. Our SSBN fleet continues to provide a resilient, reliable, and survivable deterrent. However, the life of the *Ohio*-class SSBN fleet has been extended from a planned 30 years to an unprecedented 42 years. The average age of the SSBN fleet is now 32 years. As the hulls continue to age, the *Ohio*-class will face sustainment and readiness challenges until it is replaced by the *Columbia*-class. Similar to Minuteman III, we must maintain *Ohio*-class hulls until the *Columbia* is available. The Navy has already invested in the Integrated Enterprise Plan to shorten construction timelines for *Columbia* hulls two through 12 to meet

USSTRATCOM at-sea requirements. Continued investment in revitalizing our shipbuilding industry is a national security imperative.

The first *Columbia*-class submarine must achieve its initial strategic deterrent patrol in fiscal year 2031 with an initial loadout of D5 LE missiles and a steady transition to the D5 LE2. The program of record delivers at least 12 SSBNs—the absolute minimum required to meet sustainment requirements. A life-of-hull reactor and shorter planned major maintenance periods are intended to deliver greater operational availability. *Columbia* will deliver improved tactical and sonar systems, electric propulsion drive, and advanced hull coating to maintain U.S. undersea dominance.

The Trident II D5 LE2 program will field a modern, reliable, flexible, and effective missile capable of adapting to emerging threats and is required to meet *Columbia*-class SLBM loadout requirements. Stable funding for D5LE2 is vital to maintaining program benchmarks and ensuring a viable SSBN deterrent through the 2080's. *Columbia's* ultimate success depends on a missile that is both capable and flexible.

Additionally, shore infrastructure readiness is fundamental to supporting current *Ohio*-class SSBN and future *Columbia*-class SSBN operations. Provision of military construction and operation & maintenance funding facilitates the Navy's modernization of shore infrastructure supporting the nuclear deterrence mission. One immediate example is the modernization and expansion of the SSBN training and maintenance facilities in Kings Bay. These facilities are critical for maximizing the combat readiness of SSBNs and their crews daily, requiring a commitment to multiple years of funding.

Anti-Submarine Warfare

Anti-submarine warfare threats continue to evolve. The Navy's Integrated Undersea Surveillance System (IUSS) provides vital information concerning adversary submarine and surface ship operations, enabling U.S. forces to maintain favorable tactical and strategic positions while supporting deterrent patrol operations. Surveillance performed by IUSS also provides the theater undersea warfare commander situational awareness required for maritime defense of the Homeland. Advances in adversary submarine stealth underscore the importance of IUSS recapitalization.

Our submarines are formidable weapon systems; however, we must address potential adversaries' anti-submarine warfare advances to maintain an effective and viable SSBN fleet well into the future. Adversary investments in submarine quieting, acoustic arrays, and processing capabilities may challenge our acoustic superiority in the future and consequently, SSBN survivability. Development and employment of advanced sonar sensors, advanced materials science and coatings, and other efforts within the Navy's Acoustic Superiority Program are vital to maintain our undersea advantage.

AIR-BASED TRIAD COMPONENT

The bomber fleet is our most flexible and visible leg of the triad. We are the only country with the capability to provide long-range bombers in support of our allies and partners, enabling the U.S. to signal resolve while providing a flexible option to de-escalate a conflict or crisis. In a force employment model known as the Bomber Task Force (BTF), USSTRATCOM supports global deterrence and assurance objectives. BTFs allow dynamic employment of the Joint Force and clear messaging as potential adversaries watch these missions closely. As bombers conduct missions throughout the globe, they enhance national objectives by demonstrating unity with allies and partners, and testing interoperability. As a complement to the Air Force's Agile Combat Employment (ACE) concept, we must consider increasing forward-based maintenance capability to support persistent, episodic global presence while retaining the ability to increase nuclear readiness posture as needed. As we sustain legacy systems and field new capabilities, it will be important to invest in bomber support forces and infrastructure to adequately sustain flexibility and effective nuclear deterrence posture.

B–52H Sustainment

The B–52H continues on as the workhorse of our bomber fleet. The B–52's longevity is a testament to its engineers and maintenance professionals, but it must be modernized to remain in service into the 2050s. Essential B–52 upgrades include the Commercial Engine Replacement Program (CERP), Radar Modernization Plan, global positioning system military code signal integration, and survivable NC3 communications equipment. These improvements will keep the B–52 flying and able to pace the evolving threat. CERP will replace the B–52's 1960's-era TF–33 engines, which will enable longer unrefueled range, reduce emissions, and address supply chain issues afflicting the legacy engines. The B–52's very low frequency and ad-

vanced extremely high frequency modernization programs will provide mission critical, beyond-line-of-sight connectivity.

B–2 Sustainment

The B–2 fleet remains the world's only low-observable bomber, able to penetrate denied environments while employing a wide variety of munitions against high-value strategic targets. The DOD must protect this unique operational advantage as the Air Force transitions from the B–2 to the B–21 fleet. Successful transition requires full funding for B–2 sustainment and modernization programs until the B–21 completes development and certification for both conventional and nuclear missions, and is fielded in sufficient numbers to preclude any capability gap.

B–21

The B–21 Raider will provide both a conventional and nuclear-capable bomber supporting the triad with strategic and operational flexibility across a wide range of military objectives. The program is on track to meet USSTRATCOM operational requirements, and continues to successfully execute within cost, schedule, and performance goals. The B–21 will be the backbone of our future bomber force, providing a penetrating platform with the range, access, and payload to go anywhere needed in the world. Consistent funding of the Air Force's B–21 program is required to prevent operational shortfalls in the bomber force and ensure delivery of this critical combat capability.

Air-Delivered Weapons

The air-delivered weapons portfolio consists of the ALCM, the B83–1 gravity bomb, and the B61 family of weapons, providing a mix of standoff and direct attack munitions to meet near-term operational requirements. The ALCM provides current stand-off capability to the strategic bomber force, but is reaching its end-of-life. LRSO will replace the ALCM as our country's sole air-delivered standoff nuclear capability. It will provide the President with flexible and scalable options, and is capable of penetrating and surviving against advanced air defenses—a key attribute and important component in USSTRATCOM operational plans. The LRSO is complementary to the ICBM and SSBN recapitalization programs and an important contribution to strategic stability. The B61–12 will soon replace most previous versions of the B61, providing a modernized weapon with greater accuracy and increased flexibility. Finally, USSTRATCOM is actively supporting the National Defense Authorization Act requirement to conduct a study on options to hold at risk hard and deeply buried targets.

Tanker Support

A robust tanker fleet is essential to sustaining global reach for all USSTRATCOM missions. The 65 year-old KC–135 is the backbone of the Air Force's air refueling force but is facing increasing maintenance and sustainment issues. Limited air-refueling aircraft increases bomber response timing and constrains bomber deterrence posture agility. Concurrent mission demands between strategic, theater, and homeland defense require continued tanker modernization and expansion efforts. USSTRATCOM fully endorses and supports the Air Force's effort to modernize and sustain the tanker fleet, including certification of the KC–46 to support the nuclear mission. A conflict with a peer adversary would put previously unseen demands on the tanker force.

WEAPONS INFRASTRUCTURE AND NUCLEAR SECURITY ENTERPRISE (NSE)

Today's nuclear weapon stockpile remains safe, secure, and effective. However, our country has not conducted a large-scale weapons modernization in over 2 decades. Stockpile and infrastructure modernization must ensure our systems are capable of pacing and negating adversary threats to our Nation, Allies, and partners. Over the past 5 years we have made significant investments in the NSE, but most programs take a decade or longer to field a meaningful capability.

The NNSA, as part of and informed by the Nuclear Weapons Council (NWC), has developed a comprehensive plan to put these identified capacities and capabilities in-place. When realized, it will enable our country to sustain and modernize the nuclear weapons stockpile to meet strategic deterrence needs. In the interim, I look forward to working with NNSA and other NWC partners to find the best solutions to mitigate operational risks. I commend Congress for its support of the NNSA's budget for weapons activities for fiscal year 2023. Stockpile and NSE programs can take a decade or more to deliver and will require consistent, uninterrupted funding to provide the needed capacities and capabilities on time to sustain and modernize

the strategic deterrent force. We must continue to look for ways to accelerate our stockpile and NSE modernization and recapitalization programs.

As we shift focus beyond life extension to modernizing existing weapons and fielding new systems, we must overcome challenges that delay program execution. There are many NSE programs with just-in-time schedules or that are late-to-need, including pit production, uranium processing, and radiation case manufacturing. Failure to execute and deliver timely NSE modernization programs results in accumulation of operational risk by requiring the retention of aging weapons and components in the stockpile decades longer than intended. In fiscal year 2022, the NSE took action on a number of issues impacting the readiness and modernization of the nuclear deterrent force. Some areas—for example, the W93, B61–12, and W88 Alt 370—saw progress, while others such as the W80–4 and W87–1 stockpile modernization programs are experiencing milestone delays and increased schedule risk. I look forward to working with NNSA and other NWC partners to improve our rates of success in these latter areas.

Production of essential components is a critical issue. NNSA has identified critical capability gaps affecting components essential for stockpile modernization. It is also vital that the NSE re-establishes a plutonium pit manufacturing capability of no less than 80 pits per year as close to 2030 as possible. Weapon production is a multi-decade task that must address current enterprise limitations as we simultaneously modernize the stockpile, infrastructure, and platforms while sustaining the current force until it can be replaced.

For over a decade, our adversaries have dedicated significant resources to modernizing and expanding their nuclear capabilities. As our systems continue to age, funding a modern stockpile, supporting infrastructure, and a robust science, technology, and engineering base is essential.

NUCLEAR SECURITY

Nuclear security continues to be one of my top priorities; we will commit the resources required to protect our fielded weapons, weapon platforms, and personnel. Adhering to the Nuclear Weapon Security Standard ensures denial of unauthorized access to nuclear weapons and prevents loss of custody. A defense-in-depth strategy starts at every nuclear weapon and builds outward with a cohesive design to deter, detect, delay, deny, and defeat security threats.

MH–139A Grey Wolf Replacement Helicopter

The Joint Force achieved a significant ICBM security milestone with the Air Force's award of a contract to replace the UH–1N helicopter fleet with the new MH–139A "Grey Wolf." The MH–139A offers enhanced speed, range, endurance, payload, and survivability versus the UH–1N. We will continue to work with the Services to deliver this capability.

Countering Small Unmanned Systems

The rapid proliferation and growing technological sophistication of small unmanned systems is an increasing threat to the nuclear enterprise. To counter the threat, the Department continues to field Counter-small Unmanned Aircraft Systems (C-sUAS) capabilities and is refining tactics, techniques, and procedures. Similarly, the advancement of unmanned surface and underwater vehicles may soon emerge as a threat to our SSBNs and supporting infrastructure, requiring a comprehensive force protection system to defend both pier-side and in-transit SSBNs.

Weapon Generation Facility (WGF)

As we modernize nuclear weapons and platforms, the Air Force will replace aging weapon storage areas with new WGFs which are vital to security, sustainment, and fielding of the Sentinel, B–21, and LRSO triad modernization programs, and their associated weapons. The Air Force will conduct weapon maintenance, storage operations, and (as required) weapons generation activities in a single reinforced WGF facility at each strategic base. This will further increase security, recapitalize aging infrastructure, and enhance efficiency throughout the mission. The WGFs are a critical part of the larger nuclear modernization effort and must be fully funded to deliver on time in support of each program of record delivery schedule.

JOINT ELECTROMAGNETIC SPECTRUM OPERATIONS (JEMSO)

Per the Unified Command Plan (UCP), CDRUSSTRATCOM is responsible for advocating for JEMSO and electromagnetic warfare capabilities, providing contingency electronic warfare support to other CCMDs, and supporting CCMD joint training and planning related to controlling the EMS. Potential adversaries understand our dependency upon the EMS and have developed technology to effectively contest our

use of it. Additionally, increased civil and commercial use of spectrum bandwidth significantly congests the EMS and constrains DOD use. Multiple USSTRATCOM assessments have identified JEMSO readiness shortfalls, which are growing. Our adversaries have dramatically increased their offensive and defensive capabilities in recent years; the DOD must similarly improve our ability to operate in a degraded electromagnetic warfare environment.

We must continue to pursue a DOD-wide effort to achieve EMS superiority and mission success. To support the goals of the DOD EMS Superiority Strategy, USSTRATCOM is executing 12 assigned tasks, including establishing an organization, led by a 2-star, called the Joint Electromagnetic Spectrum Operations Center (JEC). The JEC will lead execution of the 11 other USSTRATCOM assigned DOD EMS Superiority Strategy tasks. Additionally, USSTRATCOM has led development of JEMSO cells at other CCMDs to enable these functions. We are also working with the DOD Chief Information Officer to develop a software system for use by CCMD JEMSO cells in planning, coordinating, and controlling the EMS. Following multiple assessments from Northern Edge—USINDOPACOM's tier 1 exercise—USSTRATCOM is pursuing accreditation authorities for Joint Force EMSO readiness that will help close capability gaps. USSTRATCOM is also establishing an EMSO training and education capability to coordinate DOD EMS joint training, streamline training processes, and promote standardization.

MISSILE DEFENSE

Missile defense capabilities are a key part of integrated deterrence to deny our potential adversaries coercive abilities or the benefit of attacks against the Homeland, Allies, and partners. The proliferation of missile technology and employment techniques designed to circumvent missile defenses demands a Department-wide missile defeat approach with continued investment in systems integration and collaboration with Allies and partners. This comprehensive approach uses the entire range of available activities to counter the development, acquisition, proliferation, and use of adversary offensive missiles of all types, as well as limiting damage from such use. An important element of this approach is integration of space-and terrestrial-based sensors for warning, attribution, and tracking of ballistic, maneuvering, hypersonic, cruise missile, and UAS threats to optimize the effectiveness of our limited inventory of kinetic interceptors. A comprehensive sensor architecture that gives commanders and civilian leaders situational awareness over all threats and incursions to our air and space domains is imperative.

Cruise missiles continue to offer adversaries ways to generate strategic effects. USSTRATCOM is working closely with NORAD/USNORTHCOM, USINDOPACOM, and USSPACECOM to explore capabilities to enhance homeland defense and deter attack. Additionally, the Missile Defense Agency, Services, and CCMDs continue to develop and field defenses that protect the Homeland and deployed forces while reassuring and defending our Allies and partners. We are committed to improving the Ground-based Midcourse Defense system and developing the Next-Generation Interceptor to augment and potentially replace the Ground Based Interceptor.

HYPERSONIC WEAPONS

Long-range conventional hypersonic weapons will provide senior leadership additional strike options to hold distant and/or defended high-value, time-sensitive targets at risk without crossing the nuclear threshold. Conventional HSWs ensure long-range power projection in contested environments and enables more efficient and effective application of the nuclear force. While HSWs are not a replacement for nuclear weapons, these systems show promise as the conventional complement that the nuclear force needs to expand integrated deterrence options.

The ability to quickly strike defended targets at long range is an important capability that the Joint Force and multiple CCMDs require. Rapid development and fielding of conventional HSWs is a top USSTRATCOM priority. The goal of fielding the first offensive hypersonic strike system is on the horizon with the Army scheduled to field a Long-Range Hypersonic Weapon battery in late 2023, followed by the Navy Conventional Prompt Strike program beginning in the mid–2020s. The Air Force has demonstrated successes in the Air-launched Rapid Response Weapon program and hypersonic cruise missile technology pathfinder efforts. A robust scientific and industrial base is vital to ensure that HSWs are fielded in sufficient quantities. Additionally, a program for continuous technological improvement is important to meet the evolving security environment over the coming decades.

USSTRATCOM is committed to ensuring HSWs are ready to employ on day one of fielding as these weapons directly contribute to USSTRATCOM's UCP-assigned strategic deterrence and global strike responsibilities. To operationalize these new

capabilities in the near term, we are working across the Department to develop a concept of operation for HSW support to integrated deterrence. USSTRATCOM is working through policy, planning, and C2 processes, and—in conjunction with the services and other CCMDs—is testing HSWs through a rigorous exercise program. Hypersonic weapons will have an immediate impact to operational plans by deterring and holding adversaries at risk while providing the Nation with credible, strategic, non-nuclear response options when faced with armed conflict. Additionally, HSW-related agreements with allies will further reinforce collective security, promote interoperability, and facilitate optimal deployment of these capabilities.

WARGAMES AND EXERCISES

Wargames, exercises, and rehearsals of concept continue to refine how we demonstrate joint capacity, capability, interoperability, and integrated deterrence across the globe. Last year, USSTRATCOM conducted over 380 NC3-focused exercises and wargame events focused on coordination with national-level civilian and military leadership, other CCMDs, allies, components, and the interagency. These events integrated advanced weapons, tested new capabilities, and improved interoperability while providing the opportunity to assess application of future force concepts.

DEFENSE INDUSTRIAL BASE

Across America, industries—including but not limited to the defense industry—are grappling with capacity issues stemming from shortages of skilled labor, global supply chain delays, inflation, and a shortage of manufacturing facilities. This, combined with a smaller specialized workforce, transition to offshore supply chains, the need to produce quickly in volume, and costs associated with modern technologies, creates additional program vulnerabilities. These program risks are simple: cost and schedule.

I applaud Congress for its work in attempting to mitigate these challenges with the defense industrial base, both in the near term and longer term. Congress, DOD, and industry must find ways to achieve requirements despite current challenges. As Undersecretary of Defense for Acquisition and Sustainment William LaPlante has said, "production is deterrence." Congress's efforts to on-shore critical components with national security implications, its attention to revitalization of the shipbuilding industry, and investment in infrastructure are all welcome developments. DOD and industry should deepen an already strong partnership. For example, the Department, through its Industrial Base Analysis and Sustainment program, established the National Imperative for Industrial Skills to invest in industrial workforce development needs. We should also design contracts, especially with large programs, to ensure industry accountability for performance, schedule, and cost, with shared risk for both DOD and industry. The B–21 program is an example of effective contract structuring which incentivizes industry to partner with government to identify, incentivize, and mitigate risks early to achieve mutually beneficial outcomes. For items such as critical munitions, we can speed production by taking advantage of new authorities such as multiyear procurement contracts. As Dr. LaPlante has noted, co-production agreements with Allies and partners are part of integrated deterrence. In the longer term, I encourage further work with the services to continue to expand industry's capability, capacity, flexibility, and responsiveness.

CONCLUSION

The cornerstone of our national defense remains deterrence, and we will continue USSTRATCOM's vital work during turbulent times. The post-cold war era is over and a competition is underway among major powers to shape the next chapter. In this environment, USSTRATCOM stands ready to face complex challenges in today's global strategic environment while positioning for the future. I am proud to lead an elite team that stands ready for a new era of strategic competition. Together with our people, capabilities, allies, and partners, there is nothing that we cannot accomplish.

Chairman REED. Thank you, General Cotton. General Dickinson, please.

STATEMENT OF GENERAL JAMES H. DICKINSON, USA COMMANDER, UNITED STATES SPACE COMMAND

General DICKINSON. Thank you, Chairman Reed and Ranking Member Wicker. Good morning, ladies and gentlemen of the Com-

mittee. It remains my distinct honor to represent the 18,000 military servicemen and women, civilians and families of United States Space Command, who are serving our great Nation around the world today.

Thank you for this opportunity to testify before this Committee. I am proud to lead such a talented and patriotic group of joint space professionals. Their expertise, diversity, and creativity underpin our strength and effectiveness. Of all the elements of military space power, our most valued asset is and always will be our great people.

My provisional headquarters achieved initial operational capability in just 2 years and we will reach full operational capability through the disciplined initiative of our great people. Spacepower enables our way of life and is a critical component of our national security.

I thank Congress for its support to advance America's primacy in space. We must maintain our position of advantage in the space domain and ensure it remains sustainable, safe, stable, and secure for all.

The Joint Force relies on space-based capabilities to project and employee power. China and Russia consider this dependency a soft underbelly and seek to exploit it. They intend to limit our access to space during crisis and conflict, and they are fielding capabilities to that effect.

Our strategic competitors' irresponsible actions have transformed space into a highly contested domain. We must prevent today's strategic competition from growing into a conflict in space. We achieve this by deterring aggression, defending national interests, and if necessary, prevailing in any domain.

U.S. Space Command contributes to integrated deterrence by preserving freedom of action in space and by providing critical support to the rest of the Joint Force. Our mission spans the spectrum of conflict and in every domain. For example, we are creating concepts to further integrate space, cyber, and special operations to generate asymmetrical advantages around the world.

Additionally, our Protect and Defend Mission involves all three segments of the space architecture, the ground link and space vehicle, an approach that requires and demands all domain solutions. So, my command's planning horizon is near term. We must be ready to fight today. The threat will not wait.

To this end, we are leveraging the Joint Force, our allies and partners to integrate and maximize the capabilities that we have today. At the same time, we look forward to the capabilities the services are developing for the future fight. As we observe in Ukraine, commercial space assets are a significant force multiplier.

For years, our commercial mission partners have augmented our satellite communications and provide enhancements to our Space Domain Awareness Sensor Network. Commercial integration is absolutely critical to our mission success. Today's hearing will emphasize the United States' resolve to maintain our leadership and position of advantage in the space domain.

But before I address the Committee's questions, I want to reiterate and emphasize to the American people my unwavering pledge

that U.S. Space Command will ensure that there is never a day without space. Thank you.

[The prepared statement of General James H. Dickinson follows:]

PREPARED STATEMENT BY GENERAL JAMES H. DICKINSON

INTRODUCTION

On behalf of the 18,000 men and women of the 11th combatant command, U.S. Space Command, it is my honor and pleasure to testify before the Committee. Our team is operating around the world providing satellite communication, space domain awareness, offensive and defensive space control effects, and positioning, navigation, and timing (PNT) services 24 hours a day, 7 days a week, 365 days per year. Space is fundamental to all joint military operations as outlined in the National Defense Strategy. It is also critical to our way of life enabling modern banking transactions, navigation, communication and so many other capabilities vital to our society and economy. Space touches our lives every day.

As the complexity of this domain grows, we must grow capability to provide the President and Secretary of Defense with options to deliver operational and strategic effects to achieve national objectives. Today, access to space is increasingly contested and congested. U.S. adversaries are developing, testing, demonstrating, and fielding a wide range of counterspace capabilities to degrade or deny the ability for the U.S. military to leverage critical space-based services. As of this year there are 8,225 satellites in low Earth orbit and nearly 1,000 satellites in geosynchronous Earth orbit (GEO).

My Command Strategy focuses on 3 areas to address the contested and congested environment: Strengthening Relationships and Attracting New Partners; Integrating Commercial, Interagency, and Academic Organizations; and, Building and Maintaining Competitive Advantage. The Command's disciplined focus on these areas has built irreversible momentum toward full operational capability and will ensure we deliver on our promise that there will never be a day without space.

CHALLENGES IN SPACE

Challenges to a safe, secure, stable, and sustainable space domain are increasing. Both the People's Republic of China (PRC) and the Russian Federation are fielding capabilities that aim to hold United States, Allied, and partner space assets at risk. North Korea and Iran are in the early stages of developing their space enterprise.

The PRC conducted the first fractional orbital launch of an ICBM with a hypersonic glide vehicle in mid–2021. This system could enable the PRC to rapidly launch weapons that challenge missile warning and missile defense architectures.

Russia's November 15, 2021 destructive anti-satellite (ASAT) missile test and its subsequent acts in connection with its further invasion of Ukraine threaten to foreshadow the future of warfare and national security. Assured space-based assets, commercial space capabilities, and space domain awareness are imperative to global security. Russian interference with space-based capabilities during its invasion of Ukraine and continued threats to carry out "retaliation" against commercial satellite infrastructure demonstrate a willingness to employ counterspace capabilities to gain military advantage. Russia's cyber attacks in late February 2022 against commercial satellite communications networks to disrupt Ukrainian command and control during the invasion and spillover impacts into other European countries—highlighted an important nexus between government and private sector equities in space.

These events exemplify the PRC and Russian commitment to fielding diverse counterspace capabilities across multiple domains including cyberspace, electronic warfare, directed energy, anti-satellite missiles, and potentially even space-to-ground weapons. Current PRC and Russian counterspace capabilities range from temporarily deceiving, disrupting, or denying space services, to permanently degrading or destroying space-based capabilities. All are designed to deter U.S. response to conflict or crisis and ultimately diminish U.S. influence and military effectiveness.

The Pacing Challenge—The People's Republic of China

The PRC aims to displace United States alliances and security partnerships in the Indo-Pacific region, surpass U.S. global influence and power, and revise the international order to advance its authoritarian interests. Beijing views the United States as increasingly determined to contain the PRC as it continues to modernize the People's Liberation Army (PLA) into a "world-class force" by the middle of the

century. PRC military strategy remains fixed on the concept of "active defense" in all domains, including space.

President Xi views space power as a key to "great power status" and a cornerstone of the PRC's economic, political, and military ambitions. China expects its future wars to be fought mostly outside its borders and in the maritime domain. PLA strategy emphasizes the role space-based systems will play in such conflicts. Chinese military doctrine states that space power is the essential "glue" that holds together air, sea, and land control and that "the dominance of space has been inseparable from the outcome of war."

The PRC continues to strengthen its military space capabilities, investing in space-based intelligence, surveillance, and reconnaissance (ISR), satellite communication, and navigation. It is also improving satellite meteorology, human spaceflight, and robotic space exploration.

The PRC employs a robust space-based ISR capability designed to enhance its worldwide situational awareness. Its ISR satellites provide electro-optical and synthetic aperture radar imagery as well as signals intelligence data. They are used for military and civilian remote sensing and mapping, terrestrial and maritime surveillance, and intelligence collection. The PLA owns and operates about half of the world's space-based ISR systems. These capabilities support the PLA's ability to monitor, track, and target United States and allied forces worldwide.

China's BeiDou navigation system, like the United States Global Positioning System (GPS), is operational and provides persistent, all-weather, and high-accuracy PNT services to users globally. The PLA uses BeiDou's PNT to enable force movement and precision-guided munition employment. This system also includes messaging and user-tracking capabilities that provide the PLA enhanced command and control (C2). China's delivery of BeiDou furthered a long-standing goal to reduce reliance on foreign satellite communications and navigation systems and to export its domestic alternative globally as part of its Belt and Road Initiative.

Today, China can hold United States, Allied, and Partner assets at risk in all orbits. The PLA is specifically pursuing capabilities to counter United States space assets to achieve space superiority and enable PLA freedom of maneuver. Chinese military academics advocate for defeating adversaries' PNT, electronic warfare (EW), and ISR to "blind and deafen the enemy." The PLA has an operational ground-based ASAT missile for low Earth orbit satellites, and is pursuing additional anti-satellite weapons capable of destroying satellites up to GEO. The PLA has also tested hypersonic glide vehicles aimed at defeating traditional missile warning systems and ballistic missile defenses.

The PRC developed the Shenlong and Tengyun spaceplanes to explore reusable technology with enhanced maneuverability. The initial prototype, launched in 2020, stayed in orbit for 2 days before returning to Earth. A second Shenlong, launched in August 2022, remains on orbit today. Payloads on operational versions of these spaceplanes could provide enhanced space services that the PLA could integrate into its weapons and C2 systems to erode the information advantage of the United States and our Allies.

China launched its SJ–21 satellite on 24 October 2021 and reported in open press that its mission was "to test and verify space debris mitigation technologies." On 22 January 2022, SJ–21 rendezvoused with a defunct and fuel-depleted BeiDou satellite. By 26 January, SJ–21 had captured the defunct satellite and pulled it several hundred miles into a higher graveyard orbit. The SJ–21 subsequently released the defunct BeiDou satellite and returned to geosynchronous orbit. While removing a defunct satellite to graveyard orbit may be innocuous, the SJ–21 could clearly serve in a counterspace role and hold our geosynchronous satellites at risk.

Russian Use of Space and Counterspace

Russia's use of space and counterspace capabilities during the Ukraine conflict validates the Department of Defense's long-held understanding of Russian doctrine. Russian space capabilities have supported Russian military ground operations and enabled deep precision strikes against Ukrainian infrastructure. Media reported on Russian jamming of radar observationsites and navigation signals (including GPS) serving the region, as well as cyberattacks on Ukrainian and European space-enabled communications.

Russia has developed a suite of counterspace capabilities including EW and directed energy weapons to deny, degrade, disrupt, destroy, and deceive communications, navigation, and space-based ISR. Its directed energy weapons include several ground-based, low-power lasers intended to blind satellites temporarily, and high-power lasers developed to damage other U.S. satellites permanently.

Russian cyber attacks in late February 2022 disabled very small aperture terminals in Ukraine and across Europe. This included tens of thousands of terminals

outside of Ukraine that, among other things, support wind turbines and provide internet services to private citizens. Today, we continue to see cyber actors focusing their efforts on our space architecture, that of our Allies, and of our international and commercial Partners.

Russia conducted a destructive direct-ascent ASAT missile test on 15 November 2021. The resulting explosion generated a debris field that will threaten satellites and crewed space stations for decades. In contrast to Russia's deeply irresponsible test, the United States Government announced in April 2022 that it will commit not to conduct destructive, direct-ascent ASAT missile testing, and that the United States seeks to establish this as a new international norm for responsible behavior in space. In its wake, in December 2022, 155 nations voiced their widespread concern at the United Nations General Assembly about the impact of destructive testing of direct-ascent ASAT missiles on the long-term sustainability of the outer space environment. One hundred and fifty-five countries at the United Nations joined the United States in calling upon all nations to commit not to conduct destructive direct-ascent ASAT missile tests.

The Defense Intelligence Agency's 2022 Challenges to Space Report highlighted that Russia tested a space-based ASAT weapon in 2020. Russia has continued to research and develop sophisticated orbital capabilities that could serve dual-use purposes.

PRC-Russia Cooperation

PRC and Russian cooperation on defense matters has increased in recent years. The PLA participated in Vostok last year—Russia's annual strategic forces exercise. Beijing has provided Moscow political and economic support throughout the full-scale invasion of Ukraine that began last year. In February 2022, the 2 countries announced 16 agreements including one to increase the interoperability of their respective nations' global navigation satellite systems. The new accord will align timing standards of China's BeiDou constellation and the Russian GLONASS architecture. A fully integrated system will provide greater precision, resiliency, and allow for more efficient allocation of service.

Russia possesses deep, decades long, expertise in space operations. Recently, however, its progress has been hampered by shortfalls in funding, a lack of qualified personnel, and other resource inadequacies. Dramatically reduced access to key electronic components from long standing international sanctions has negatively impacted Russia's aerospace industry.

Meanwhile, the PRC has committed considerable economic and technological resources to growing all aspects of its space program. It is operating a space station and is taking on a greater role in lunar and deep space exploration. In 2021, Moscow and Beijing agreed to an International Lunar Research Station and the PRC may attempt to conduct its first crewed landing on the surface of the Moon before 2030.

North Korean and Iranian developments

North Korea has demonstrated non-kinetic counterspace capabilities including GPS and satellite communication (SATCOM) jamming. It likely intends to deny space-based navigation and communications during conflict. North Korea seeks to develop its space capabilities and has placed 2 satellites in orbit. North Korea's space program has provided it with data applicable to its long-range and multi-stage ballistic missile programs. Additionally, North Korea conducted a record number of missile launches last year including intercontinental and submarine-launched ballistic missiles and has continued these activities in 2023.

Iran demonstrated a growing commitment to space with the launch of the Khayyam sensing satellite. This system, developed cooperatively by Iran and Russia, was launched by Russia on behalf of the Iranian government. Similar to North Korea, Iran could apply data from its space program to further the development of long-range missiles.

STRENGTHEN RELATIONSHIPS AND ATTRACT NEW PARTNERS

U.S. Space Command plans and executes space operations in coordination with other combatant commands, the Services, DOD agencies, Allies, and a diverse array of international and commercial Partners to achieve national security objectives. Space Situational Awareness (SSA) Data Sharing Agreements are one avenue that U.S. Space Command currently uses to support the safety of the domain. SSA Data Sharing Agreements provide a mechanism for U.S. Space Command to receive and share unclassified SSA information with agreement partners to enhance the materials maintained in the U.S. Government space awareness catalogue, promote greater transparency in space, and to enhance global space-flight safety. Agreement part-

ners are able to request support from U.S. Space Command in 7 advanced areas. The use of these services demonstrates our partners' desires to promote responsible use of the space domain and safety of space-flight for all satellite operators in the U.S. and around the world. Currently the United States Space Command maintains 169 SSA Data Sharing Agreements with 129 commercial companies, 7 academic institutions, and 33 governments or international organizations.

Moving from a focus on promoting safe and responsible space operations to the imperative of assuring the advantages of space for national security, U.S. Space Command's rapidly expanding network of international military-to-military partnerships provides tremendous strength and resiliency for long-term space security and stability. Together, we contribute to deterring aggression and supporting the security and stability of space that generates prosperity for all. Our Allies and Partners possess complementary capabilities and forces that both cover current U.S. gaps and free U.S. assets for alternate priorities. They also contribute unique perspectives, regional relationships, and information sharing opportunities that improve our understanding of the environment and expand our security cooperation options. U.S. Space Command's growing number of foreign liaison officers and exchange officers—29 in total—are an example of the Command's priority to maintain connectivity with our foreign counterpart commands and better understand their perspectives and priorities.

Interweaving space capabilities into the warfighting functions and domains of our fellow combatant commands contributes an agile, credible, and integrated deterrent. In addition to our longstanding close partnerships with U.S. Indo-Pacific Command, U.S. European Command, U.S. Northern Command, and U.S. Central Command, U.S. Space Command, in collaboration with U.S. Africa Command and U.S. Southern Command, is developing opportunities to increase space capabilities and cooperation in Africa and Latin America. U.S. Space Command's Global Sentinel 2022 exercise included 24 international partner nations in one location participating in a modeling and simulation event based on integrated systems. The exercise focused on space domain awareness to support the protection and defense of shared security interests in outer space. Global Sentinel 2022 provided a significant strategic shaping opportunity to strengthen partnerships while amplifying U.S. Space Command and partner nation deterrence and assurance messaging. Global Sentinel evolved from its inception in 2014 and is an ongoing annual effort, comprising 6 to 8 real-world events and a capstone. Global Sentinel remains the only event of its kind that includes multinational military partners from all major theaters, furthering collaboration focused on SSA and space domain awareness.

U.S. Space Command provides space planning and operations expertise, including integration, coordination, and deconfliction of capabilities to all combatant commands through our Joint Integrated Space Teams. These teams, combined with joint planning and targeting, ensure space capabilities are ready when needed. U.S. Space Command is fully integrated with United States European Command's response to Russian aggression in Ukraine. We are tightly aligned and synchronized with U.S. Indo-Pacific Command to deter, and if necessary, defeat our Nation's pacing threat. U.S. Space Command maintains close coordination with the Military Services as they develop future capabilities and competencies that will add to our decisive advantage.

U.S. Space Command is implementing the Mission Partner Environment (MPE) as our operating framework for communicating with Allies and Partners. The MPE enables C2 and information sharing across a range of military operations and enables information exchange between all participants within a specific partnership or coalition. The MPE supports execution of critical joint warfighting functions: C2, intelligence, fires, movement and maneuver, protection, information, and sustainment. Commanders require common services such as chat, secure voice, and email across the enterprise and expeditionary levels of operation for human-to-human collaboration. The MPE enables the DOD to appropriately share information with mission partners at the speed required for operations.

U.S. Space Command is continually planning to ensure we are prepared to respond to all contingencies. The command has developed the capacity to synchronize effects across combatant commands to achieve integrated operations in campaigning and contingency—a first for the command and the DOD. These efforts ultimately provide space enabled effects to enable and assure effective land, air, and sea operations.

INTEGRATING COMMERCIAL, INTERAGENCY AND ACADEMIA

Mutually beneficial alliances and partnerships provide an asymmetric strategic advantage unmatched by our competition. Our robust and growing team of Partners

includes commercial, interagency, and academic organizations. Together these Partners develop and deliver greater military space power that deters aggression and supports space domain stability. U.S. Space Command has published a Commercial Integration Strategy to enhance the command's overall military space power through the collaboration, integration, and partnership with U.S. commercial industry. The strategy sets priorities and synchronizes commercial integration efforts so that U.S. Space Command can mitigate capability gaps, improve space architecture resiliency, and gain and maintain a technological and operational advantage over adversaries.

Establishment of a New National Space Traffic Management and Coordination Capability

U.S. Space Command continues to develop partnerships with the U.S. Space Force and the Department of Commerce. As directed by the President in Space Policy Directive 3 and the United States Space Priorities Framework, civil and commercial space data sharing responsibilities will be led by the Department of Commerce. We also continue engagements with the broader interagency community and the civil and private sectors. These partnerships will endure and strengthen over time.

When the DOD began providing spaceflight safety data to global satellite operators in 2010, roughly 110 organizations flew a total of 890 satellites amidst a background of 21,000 pieces of trackable debris. Today, U.S. Space Command supports 680 organizations flying 7,500 satellites in all orbits. Two United States commercial companies have produced more than half of those 7,500 satellites currently on orbit. Since U.S. Space Command's inception in 2019, trackable debris has increased 60 percent from roughly 25,000 pieces to more than 40,600 pieces. The transformation of space architectures and economics, and the dramatic short-term increase in debris, highlight that space congestion will be the norm moving forward. Other countries could also grow their space operations, highlighting that a more comprehensive and sustainable approach is required for space operations and spaceflight safety coordination.

Human Space Flight Support Improvements

As the DOD lead for human space flight support, U.S. Space Command has a close and vibrant relationship with the National Aeronautics and Space Administration (NASA). Our most visible effort is the preparation for the terrestrial rescue, recovery, and retrieval of astronauts and spacecraft. U.S. Space Command and NASA also partner on issues such as space domain awareness, in-space and on-orbit applications and manufacturing, planetary defense, and hypersonic technology.

U.S. Space Command is fully committed to NASA's human space flight program. This crucial partnership will deepen as NASA's Artemis operations expand, the U.S. returns to the moon, and exploration and development of cislunar space continues.

National Reconnaissance Office and Commercial Integration Strategy

U.S. Space Command continues our exceptional working relationship with the National Reconnaissance Office (NRO) and other intelligence community (IC) Partners. This relationship improves our ability to gain actionable intelligence, establish priorities, and provide global support to the rest of the Joint Force. We developed a comprehensive operational deconfliction process with the NRO and IC that enables seamless integration while delivering combined space effects for contingency operations.

U.S. Space Command has developed a Commercial Integration Strategy to advance collaboration, synchronize integration, and expand partnerships with U.S. commercial industry. The Combined Joint Commercial Integration Office ties together commercial stakeholders across the spectrum and drives implementation of this strategy.

The Command leverages commercial space domain awareness data through our Joint Task Force-Space Defense Commercial Operations cell (JCO). The JCO provides operationally relevant commercial space domain awareness to the National Space Defense Center. We are rapidly moving toward around-the-clock JCO operations to optimize information sharing between Allies and commercial Mission Partners.

The Command also leverages commercial ISR, space domain awareness, and SATCOM through the Combined Forces Space Component Command's Commercial Integration Cell (CIC). The CIC works with industry through mutually beneficial collaborative partnerships. As the CIC continues to attract commercial Mission Partners, U.S. Space Command can share SSA data with these additional commercial providers across multiple classification domains.

BUILDING AND MAINTAINING COMPETITIVE ADVANTAGE

Our competitors have counterspace capabilities and military doctrines that extend their concept of warfighting to space. Consequently, we must develop and field capabilities to contribute to integrated deterrence in accordance with the National Defense Strategy. U.S. Space Command identified 5 priority requirements to accomplish the responsibilities assigned by the Unified Command Plan (UCP). These include: (1) Integrated Space Fires and Protection, (2) Resilient, Timely Space C2, (3) Enhanced Battlespace Awareness, (4) Space Systems Cyber Defense, and (5) Resilient Satellite C2 Architecture. Additionally, rapid investment in Global Sensor Management, Persistent and Resilient ISR, Operational Intelligence, Modernized and Agile EW Architecture, and Electromagnetic Battle Management will underpin long term success of our protect and defend mission. Relentless pursuit of these key integrated requirements will ensure we remain the dominant force in the space domain.

Integrated Space Fires and Protection Capabilities

Every day, civilians and the Joint Force depend on U.S. space capabilities. To assure the critical services provided by these capabilities, the DOD must have the infrastructure to deter aggression and protect these capabilities from attack. Resiliency is fundamental, but resiliency alone will not deter attacks or provide protection sufficient to assure our space assets. For U.S. Space Command to protect and defend U.S. and, as directed, Allied, Partner, and commercial space assets such as PNT, communications and missile warning/missile tracking, we require Congress' continued investment in joint military space capabilities, resilient architectures, and protection efforts.

Resilient, Timely Space C2

Resilient, timely C2 is key to deterring and defeating hostile action in space and terrestrially. Rapid and robust communication between space activities, space assets, and partner combatant commands enables decisive action. The increasingly dynamic space environment requires a resilient C2 architecture to synchronize space forces and effects for both operations in the contested space environment and as a critical enabler to traditional terrestrial maneuver forces. Congress's investment in the Combined Space Operations Facility addresses that need and will remain critical moving forward.

Enhanced Battlespace Awareness

U.S. Space Command relies on a near-real time, comprehensive understanding of the congested and complex space operational environment. Space domain awareness data, C2 automation, and machine learning allow us to better understand the threat in U.S. Space Command's astrographic area of responsibility (AOR). This critical task requires more accurate, robust, resilient, and timely space domain awareness and operational intelligence data from all interoperable sensors. This will produce highly accurate, rapidly available detection, tracking, and characterization of space objects, regardless of their origin. Current space domain awareness systems are stove piped, disaggregated, and lack the agility necessary for dynamic tasking. U.S. Space Command, the Missile Defense Agency, and the U.S. Space Force are partnering to enhance sensor integration into a C2 program. Congress' funding of programs to enhance battlespace awareness is crucial to ensuring U.S. Space Command can best protect and defend our vital space assets rapidly and dynamically.

Space Systems Cyber Defense

Digital superiority is key to building and maintaining a competitive advantage. The PRC, Russia, and other cyber actors are tirelessly working to infiltrate our cleared defense contractor, academic, and military networks. These adversaries seek to monitor and exfiltrate data, and reduce, degrade, and deny our ability to command, control, and communicate with on-orbit space assets and supporting ground systems.

Loss or compromise of U.S., Allied, or Partner space systems degrades the Command's ability to conduct operations in and through space and support terrestrial operations around the globe. Much of the digital infrastructure for these space mission systems requires modernization. As our adversaries' cyber capabilities are evolving, we need our defensive cyber systems to outpace their growth. We need to be agile and find ways to become more resilient. We continue to collaborate with U.S. Cyber Command, Combat Support Agencies, and other government partners to deploy and integrate defensive cyber systems and tactics to maintain safe, secure, and reliable network operations.

The Command's Joint Cyber Center continues to partner across the DOD and with the Department of Homeland Security to prioritize cyber defense efforts. In-

creased funding for cybersecurity systems, persistent defensive cyber capabilities, and cyber experts is critical to maintaining dominance in the space and cyber domains.

Resilient Satellite C2 Architecture

U.S. Space Command seeks to improve resiliency in our globally dispersed ground terminal architecture and the Satellite Control Network (SCN). The current SCN system and follow-on architecture must be hardened and modernized to be able to fight through a highly contested environment. Mobile assets fielded with emerging technology to augment our global ground C2 centers will increase resiliency and underpin achieving national security objectives. U.S. Space Command has several requirements for the Joint Space Communication Layer (JSCL), which is the space transport layer of the DOD Information Network for SATCOM. For example, it must be scalable to meet the growing military and commercial SATCOM demand and operationally flexible enough to respond to adversary threats. Further, the JSCL must be interoperable with Allied and Partner systems to synchronize communications in a rapidly changing, multi-domain environment.

Force Development

U.S. Space Command's most important asset is our people. We are rapidly onboarding and developing a very talented team of space professionals. Our strategic advantage comes through the diversity of experience and wisdom of our workforce. U.S. Space Command professional development programs boost our military promotion rates and our civilian employees' advancement potential. As our military members rotate out of the command and return to their parent service units, they bring invaluable space expertise back to the broader Joint and Combined Force. We visit colleges and universities to recruit recent graduates for civilian internships and job opportunities. We continue to advocate for hiring efficiencies that allow us to rapidly hire and onboard civilian employees. We recently established a command Academic Engagement Enterprise to partner with universities across the country to enhance workforce professionalization and improve U.S. Space Command's engagement in that critical space. We have full-time civilian advisors dedicated to building workforce resiliency and preventing discrimination, sexual assault, and harassment in the workplace to ensure our workforce remains empowered to reach its full potential.

As of 1 January 2023, we have 62 percent of our authorized military and government civilian end strength in place. If we include our contractor workforce, that number rises to 82 percent, a significant achievement 3 years into the command's 5-year programmed manpower growth plan.

Resilient Space Architecture and Rapid Reconstitution

Over the last 5 years, the threats to our space enterprise systems have increased. We must modernize our space enterprise to ensure resiliency and agility and to preserve freedom of action despite these advancing threats. The ability to rapidly reconstitute requires us to prioritize seamless integration between old and new space capabilities (such as networks, space assets, links, and ground systems). This is essential to optimizing our data collection, processing, exploitation, and dissemination. U.S. Space Command is conducting a series of review efforts to examine the resiliency of the space enterprise. We are identifying strengths and weaknesses of our current architecture, challenges to interoperability, and current policy limitations inhibiting shared space domain awareness. We are examining end-user interfaces, terrestrial systems, and communications links to orbital assets. In collaboration with the U.S. Space Force, our Allies, and Partners, U.S. Space Command is developing the requirements for a modern, integrated space architecture capable of operating in an increasingly contested space environment.

Dynamic Space Operations

Over the last 5 years, explicit and implicit threats to our on-orbit assets have increased. To preserve freedom of action, we must relentlessly pursue a new concept of employment—Dynamic Space Operations (DSO). Maneuvers by our current space systems are constrained by the fixed quantity of consumable resources on-board. This forces space warfighters to balance use of on-board resources to mitigate or counter current threats against the risk of insufficient resources to respond to future challenges.

Dynamic Space Operations includes the ability to restore consumables of on-orbit platforms or rapidly replace the platforms themselves. DSO will enable space operators to quickly respond to adversary operations, support readiness campaigns, and engage in self-defense, with less concern for future use implications. It will enable expanded multi-mission operations with less risk of depleting those limited

consumables and mission capabilities. DSO will dramatically increase our ability to support geographic combatant commanders' operational requirements across the entire spectrum of competition, crisis, and conflict. Programs are underway within the DOD, the national laboratories, and across industry to address the technological challenges associated with DSO. U.S. Space Command is actively engaged with developmental efforts and working groups like the In-space Servicing Assembly and Manufacturing Interagency Working Group. Our near-term DSO objective is to conduct an on-orbit demonstration to restore a satellite's maneuver capability by 2026. Our longer-term objective is to develop the necessary mission requirements and technical standards to ensure most capabilities delivered beyond 2030 will not be limited by consumables. We ask for Congress' support for these vital efforts as we develop and secure these crucial capabilities. Freedom to maneuver in space without concern for limiting future maneuverability will be an important capability for systems that are survivable against threats.

Maintenance and Hardening of Critical Infrastructure

U.S. Space Command's assigned AOR begins at an altitude of 100km—roughly 62 miles—above the surface of the Earth and extends indefinitely. Our operating domain extends around the globe and encompasses all 3 segments of our space systems: on-orbit assets, ground stations, and the cyber links connecting them. Updates to the ground segment are required to ensure our satellites can provide mission-critical information to the Joint Force and national decisionmakers. For example, our missile warning mission relies heavily on ground-based radar systems that require reliable power and cooling systems. Many of the facilities and infrastructure supporting U.S. Space Command exceed 60 years of service. It is increasingly difficult to maintain the necessary infrastructure for our assets to guarantee the resiliency, survivability, and endurability required for our critical space missions. Stop-gap measures are increasingly ineffective due to the lack of replacement parts and the inordinate time required to make repairs. We must modernize our aging infrastructure to keep pace with our competitors. I am grateful for Congress' continued support to ensure these facilities adequately support U.S. Space Command's no-fail missions.

Commercial space systems provide essential capabilities to our national security and civilian life. U.S. Space Command works with interagency and commercial space system stakeholders through the Critical Infrastructure Partnership Advisory Council to improve the security, resilience, and cybersecurity of commercial space systems.

At our provisional headquarters in Colorado Springs, the DOD has invested in existing on-installation facilities and off-installation federally leased buildings to meet U.S. Space Command requirements. Our provisional facilities on Peterson Space Force Bases are 30 years old. We accomplished major building system upgrades and repairs to meet mission requirements (such as power, communication/technology, and cooling). U.S. Space Command's provisional headquarters in Colorado Springs supports 1,230 personnel with the required communication, technology, and capabilities and will support full operational capability.

Exercises

U.S. Space Command executes the Presidentially assigned UCP responsibility for Joint Space Operations Training. As such, the Command is integrating joint and combined space scenarios and training across the Joint Force. We will conduct 2 mission centric exercises in fiscal year 2023 as building blocks to a full-scale Tier 1 exercise in fiscal year 2024 to emphasize the key transitions from competition through crisis and into conflict. This will highlight both the supported and supporting relationships between U.S. Space Command and the other combatant commands that will enable the Joint Force to overcome anti-access, area denial strategies.

Joint Warfighting Requirements

To maintain momentum, U.S. Space Command is developing joint warfighting requirements. We will continue to rely on the Services to contribute solutions that mitigate the capability gaps identified in these requirements.

Joint Space C2

The Joint Space C2 requirement established a set of threat-based requirements defining what the Command requires to comprehensively C2 forces across all mission areas. This includes deploying and connecting worldwide sensors and systems to national decisionmakers and all combatant commanders in near real time.

Space Effects to the Warfighter

To ensure space and space-enabled capabilities are available during conflict, U.S. Space Command is defining how to protect and defend space capabilities to guarantee space effects to the rest of the Joint Force. The Department will respond to hostile acts in space at the time, place, and domain of our choosing.

EW/Offensive Cyberspace Operation

U.S. Space Command is defining the required capabilities to integrate EW and offensive cyberspace operations. Close coordination with U.S. Cyber Command will enable joint fires to protect the space and cyberspace scheme of maneuver and provide the warfighting effects necessary to protect the rest of the Joint Force from adversary hostile uses of space.

Navigation Warfare (NAVWAR)/PNT

This NAVWAR/PNT requirement establishes the requirements that will inform future capability development by the services. This requirement is the initial step to informing the way the Joint Force, Allies, and Partners will keep pace with an advancing adversary threat. It will support the modern warfighter with scalable NAVWAR capabilities, integrate with our partners, and support a redundant and resilient NAVWAR/PNT architecture.

CONCLUSION

U.S. Space Command is rapidly approaching full operational capability. I am exceptionally proud of the progress the Command has made over the last 3-½ years. There is no combatant command, warfighting domain, nor element of national power that is not strengthened by the space capabilities and effects that U.S. Space Command provides or protects. I am grateful to Congress for your support that has enabled our success. I ask for your continued support for the necessary resourcing to ensure we maintain our competitive advantage in the increasingly contested space domain.

We will continue to grow our critical network of Allies and Partners to integrate joint military space power into all-domain global operations to deter aggression, defend national interests, and when necessary, defeat threats. On behalf of the most critical asset in our command, the soldiers, marines, sailors, airmen, guardians, civilians, and families of U.S. Space Command, thank you for your support to our mission.

Chairman REED. Thank you very much, General Dickinson. General Cotton, we are facing a first in the history-of-the-world situation of a trilateral nuclear competition at a serious level.

As you have indicated, in addition to Russia, which has since the late 1940's maintained a robust nuclear arsenal, China is expanding its nuclear capability with additional missile fields, the new Jin-class submarine, and is upgrading its H–6 bomber to carry cruise missiles.

How is STRATCOM adapting to this new trilateral nuclear competition?

General COTTON. Chairman, thank you for the question. It is fundamentally based around our—what we see is a sound strategic model; and that is the triad. The ability for the triad and the systems that we have to be able to cover and understand how to cover and still offer options, flexible deterrent options, to the President is key.

One, the triad is fundamental and foundational for that to happen. Two, I believe that we are going to have to have a conversation in regards to strategy and force posture. I am absolutely in a good place today with our systems and where we stand, and foundational to that is the modernization of our current system.

But to your point, Chairman, 2010 and the basis of which we did our modernization efforts was on a 2010 threat. We are going to have to have that conversation to ensure that the modernization systems, the proportions of the triad, and other effects that can

bring strategic deterrence to bear is right moving forward post-2030.

Chairman REED. Thank you, General Cotton. There is another issue that I would like to touch on with both you and General Dickinson, is that as the lead combatant command for spectrum operations, General Cotton, your standing of a Joint Electromagnetic Spectrum Operations Center (JEC).

There are several questions here. Given the amount of electronic attacks we are seeing in Ukraine as well as operations in the Indo-Pacific, when do you expect the center to become operational? Also, your comments on the proposed sale of the S-Band spectrum that is now being discussed.

General COTTON. Sir, thanks for that question, Chairman. So, as you know, the overall objective of the JEC is to raise overall readiness of the Joint Forces to prevail in that mission space.

We are actually doing really good work and we are in the final steps: working our way through the Deputy Secretary of Defense for her to sign out the memorandum and actions on the tasks that we have to move forward. I look forward to seeing that pretty soon.

In regards to STRATCOM and how do we rely on spectrum, I will say it to you this way: EMS [electromagnetic spectrum] superiority for the employment of our forces to maintain situational awareness, to assure communication through all domains, and assure PNT, position, navigation, and timing, is critically important for not only myself as a combatant command, but for all combatant commanders.

Chairman REED. General Dickinson, again, your perspective on the value of the S-band to the military, and also the knowledge that you and your colleagues in uniform have with respect to what parts can be shared, or what cannot be shared.

General DICKINSON. Thank you, Chairman, for that question. So, I would have to categorize it as foundational. That spectrum piece that you are discussing, you mentioned, is foundational to what U.S. Space Command does, as we have the responsibility of providing space and able capabilities to the Joint Force.

What I mean by that, PNT communications, missile warning, all of those types of capabilities that I am responsible for providing are dependent upon the use of the spectrum. As I look at it, I think it is foundational to it and in everything we do.

Chairman REED. There would be a certain degree of risk aversion that you would bring to disposing with that S-band at this point.

General DICKINSON. Yes.

Chairman REED. That is fair, General?

General COTTON. That is fair, sir.

Chairman REED. Thank you very much. Senator Wicker, please.

General COTTON. Thank you, Mr. Chairman. First, before I begin my questions, I want to thank Senators Fischer and King, and recognize their bipartisan and significant work on the Strategic Forces Subcommittee. They are going to be very busy and we are going to look to them in the future, as we already have, for leadership. General Cotton, we have a nuclear modernization plan, is that correct?

General COTTON. That is correct, sir.

Senator WICKER. When was it written? When was it developed?

General COTTON. Probably in 2010 timeframe is when the modernization effort——

Senator WICKER. Okay. Now, when it was developed, this trilateral threat that the chairman just talked about was not so significant, was it?

General COTTON. China was seen as a nascent threat.

Senator WICKER. So, things are different now from the time the plan was developed?

General COTTON. That is correct.

Senator WICKER. Okay. Is it a fact that since 2010, every Department of Defense and Department of Energy nuclear program has been delayed or reduced in scope?

General COTTON. I don't know if I can go back to the timeframe of 2010, sir——

Senator WICKER. But for the most part, that is a correct statement.

General COTTON. It is——

Senator WICKER. Okay. Well, how are we going to meet the rapidly growing threats from China and Russia with a force that smaller and delivers later than we planned some 13 years ago?

General COTTON. Senator, I think the way I would couch that is: the legacy system that we currently have is a credible system today. The fact that for—since 2016, we have been modernizing that legacy system and are underway with that legacy system. I think what I would tell you is I just want to ensure that the modernization programs that we have today, we can't—we have lost all margin, and we must ensure that those programs are fully funded and executed so I can have replacement and updated systems to the legacy system today. It is still hard.

Senator WICKER. Has it made sense then that these programs, for the most part, have all been delayed or reduced in scope?

General COTTON. Sir, that is a policy question from that position. From my perspective——

Senator WICKER. But we rely on you for expertise and for advice——

General COTTON. We always forward, Ranking Member, we always forward our best military advice, as well as our requirements on what we think and can meet the requirements of executing the objectives that are laid upon us by the President.

Senator WICKER. Okay. Your predecessor testified last year and agreed with nearly every other senior U.S. military officer that we need to provide Presidents with more nuclear options than we have today. Do you agree with that sentiment?

General COTTON. I do agree with that.

Senator WICKER. Okay. Let me ask you then about my, the way I ended my testimony, where I said I would like for you to share your feeling as to whether we should have a sense of urgency and whether we should communicate that to the Commander-in-Chief and also to the American public.

General COTTON. That is a wholehearted "yes." We need to be able to articulate the sense of urgency to ensure that we can modernize the systems that we currently have funded and also look at future posture on what other things throughout the inventory. I would say for affects conventional and nuclear to make sure that

I can meet the objectives that are given to me for strategic deterrence to the President.

Senator WICKER. We should make it clear to the taxpayers and the American citizens that we need to up our game in this regard?

General COTTON. Continuing beating of the drum so folks understand that our legacy systems need to be modernized. Absolutely, sir.

Senator WICKER. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Wicker. Senator Shaheen, please.

Senator SHAHEEN. Thank you. General Cotton, General Dickinson, thank you both for being here this morning and for your service. General Dickinson, I liked your quote, "never a day without space". As you think about the challenges that Space Command is facing, what is your biggest concern with respect to readiness?

General DICKINSON. Thank you, Senator. Let me just kind of paint a picture of where the Command is today. Within 2 years, we achieved initial operational capability—on a very solid path to achieve full operational capability very soon.

Resources, the Department has done a great job giving me the resources that I do need. For example, the infrastructure today, as well as the people, the personnel. The most important part of the Command is our people.

That is our asymmetric advantage, if you will, in the space domain as well, all things space. When I look at what we have done over the last three and a half years in terms of identifying requirements to the Department, it has gone very well. We have deliberately and thoughtfully provided requirements to the Department, and the Department is, in fact, giving us those resources.

As I said earlier the Department kind of works on 5-year terms, if you will, with budgets and POMs [Program Objective Memoranda] and those kinds of things. Combatant Commander, I look to what is happening today, and I am required to do that by the Secretary. When I look at that, to answer your question, I look very hard at space domain awareness. How are we doing that today?

We are taking steps to make sure that we are leveraging sensors around the world, that our U.S., and allies, and partners that traditionally haven't been used for space domain awareness but do have capabilities. We look at those particular assets and understand how we can pull them in and integrate them into a comprehensive architecture.

Then we also look to how do we develop the requirements to improve upon those in future years. That is one way we were doing it, trying to solve that situational awareness or improve the situational awareness issue I have in the space domain.

The second part of that is leveraging commercial companies, commercial companies that want to participate in that with the capabilities that they build themselves and provide that data to us. Through integration of nontraditional sensors, as well as commercial sensors, we are getting better at space domain awareness. But as the congestion in space continues to grow, we will need better capabilities.

Senator SHAHEEN. Well, you mentioned the expertise of the personnel who work at Space Force, and I understand that you have

been successful in hiring a number of civilians to address the milestones that you have set.

That is why I continue to be concerned about the proposed relocation of Space Force to the Redstone Arsenal. When the Missile Defense Agency was relocated to Alabama and they lost 80 percent of their workforce who didn't want to leave and make that move. What would be the impact if you lost a significant portion of the workforce in a move of Space Force?

General DICKINSON. Well, Senator, so today, as I mentioned, the Command itself right now is about 62 percent, if I count military, as well as a Department of the Air Force civilians.

I have got a contractor base, too, in addition to that, that pulls us up a little bit over 80 percent in the total for the Command. There is really no way to know how many of those civilians would move to Huntsville, for example, until that decision is made. Lots of those folks are great civilian workforce.

They have made life choices and that is why they live, for example, in Colorado Springs. The military, you know, we are soldiers, sailors, airmen, marines, and guardians. If told to move, we'll move. But there is really no way of knowing what percentage would actually move.

Senator SHAHEEN. But the report that took a look at the spacing decisionmakes some assumptions about what would happen if there were a move and what the impact of that would be. Is that correct?

General DICKINSON. Yes.

Senator SHAHEEN. Is there a reason why that report is not available to the public?

General DICKINSON. I believe the Department of the Air Force, the Secretary of the Air Force is doing some additional analysis before he makes his final decision.

But to your point, ma'am, I would just offer that whether it is Colorado Springs or Huntsville, I think, you know, both those locations have the talent pool, if you will, of professionals, space professionals that could support the mission of the U.S. Space Command.

So, again, I wouldn't know the percentage, but I do know that the work base, workforce that is available in Huntsville is very good as well.

Senator SHAHEEN. But am I correct that the workforce in Huntsville has not had the same expertise on operating satellites that the workforce in Colorado has had?

General DICKINSON. Well, so the workforce that I have, ma'am, in the headquarters itself, the Combatant Command (COCOM) headquarters, we don't necessarily do that level of technical flying the satellites, if you will. That is resident within subordinate units within U.S. Space Command, and those units are not moving.

Senator SHAHEEN. So, they will stay in Colorado regardless.

General DICKINSON. I am sorry?

Senator SHAHEEN. They will stay in Colorado regardless of what happens with everybody else.

General DICKINSON. So, the only part of that basing decision that is under review right now for the decision to relocate is the headquarters, my headquarters.

Senator SHAHEEN. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Shaheen. Senator Fischer, please.

Senator FISCHER. Thank you, Mr. Chairman. General Cotton and General Dickinson, before I begin my questions, I want to strongly encourage both of you to make greater use of the unfunded priorities list.

That process helps you to convey your needs to Congress. The Department's budget request is the product of a 2-year long process. Many of the assumptions baked into fiscal year 2024 budget were made in 2021. The geopolitical environment has significantly changed over the last 2 years.

This Committee views unfunded priority list as a valuable tool that allows us to make more responsible resourcing decisions based on the current needs that we have and the operating environments.

So please use that tool. General Cotton, in your recent letter to the Committee, you noted that you have a capability gap that needs to be filled by a low-yield, non-ballistic capability that can respond without generation. Would a nuclear sea-launched cruise missile fill that gap?

General COTTON. Thank you for the question, Senator Fischer. To address the adversaries' perceived advantage on limited nuclear use, when I was here amongst the Committee and was tasked with the question and I said I owed you a response on being able to make that assessment on where we stood. I did a deep dive as soon as I took command.

During that deep dive and review of our capabilities, I, in fact, am in agreement that there is a strategic gap or challenge when it comes to that regime. So, I fully support the fact that—and the support that we have with this Committee in pursuing the opportunities to look at low-yield, non-ballistic, non-generating effects moving forward. Absolutely concur with that.

Senator FISCHER. Thank you, General, and thank you for looking in that and getting back to us. I appreciate that. Sometimes when you take a new command, I know you have a lot put on your shoulders in making sure that you have a full understanding of everything that you are in charge of, and I appreciate you taking the time to get that to us.

Last year, the Administration sought to retire the B–83 nuclear gravity bomb despite having no replacement program in place to address hard and deeply buried targets such as underground facilities in China and North Korea.

What is your best military advice on whether the United States needs to maintain a capability to hold those hard and deeply buried targets at risk?

General COTTON. Thanks for the question, Senator. I will answer that in two parts. Right now, the B–83 is still part of my arsenal, with the NDAA language that limits the reduction of that, so I still have that capacity and capability, pending the results of the hard and deeply buried study that the Department is currently doing, of which we are a part and are giving our inputs to that.

That being said, we are going to have to figure out how we are going to continue to have capability that gets after HDBTs [hard and deeply burried targets] and what effects can actually do that. Whether conventional or nuclear, we are going to have to have a

strategy to figure out how to do that. I look forward to seeing what the study brings us from the Department to make sure that we can close that.

Senator FISCHER. When do you anticipate that study to be completed?

General COTTON. Ma'am, I was told that we should see that in the spring.

Senator FISCHER. Thank you. Could you please keep us updated on that?

General COTTON. I absolutely will.

Senator FISCHER. Thank you, sir. I appreciate the conversation that we had earlier this week on the importance of moving forward quickly with NC3 modernization and building out a road map with clear, achievable, near and long-term goals. Can you tell this Committee more about NC3, the road map that STRATCOM is developing?

General COTTON. Senator, I absolutely look forward to having that conversation, not only in open but in closed session as well.

The conversation that we had was one of the things that—that was the second thing that I did upon taking command was get with the team to understand how we take a conceptual ideas and what might be seen as concepts with all the dollars and support that we are getting from the Congress and turn those into what you had alluded to, a road map that I can, you can, and my bosses in the Pentagon can actually see in phases of what we are doing with an NC3 modernization.

So, what we are doing is we are translating what was once seen as a conceptual piece and talking through the concept. Now we are having 0 to 5, 5 to 10, 10 to 15 year roadmaps where I can describe to you within those phases of time what is actually being done with the taxpayers' money moving forward to modernize the NC3 modernization program.

Senator FISCHER. Thank you. I think it is extremely important to be able to have roadmaps, checklists to stay on time so that we can be prepared for the future. Thank you, sir.

Chairman REED. Thank you, Senator Fischer, and let me also join Senator—in commending you and Senator King for your leadership for the Strategic Forces Subcommittee. With that, let me recognize Senator King.

Senator KING. Thank you. Thank you, Mr. Chairman, and thank you for the recognition. General Cotton, just a brief note.

Sentinel, the replacement of the ICBM system essentially from the—literally from the ground up is one of the most important and also complicated and major development projects in the history of this country in terms of budget and schedule and the necessity of getting this done.

I want you to know that we are watching you because I want the contractors to know that you are watching them. I hope this is a high priority in terms of the management and implementation of that program, which is going to be a massive undertaking.

General COTTON. Senator, thank you, and you are absolutely right. I am watching the contractors and I am watching the Air Force to ensure that we close that gap as well.

Senator KING. Thank you. I want to talk about deterrence, which is really the basis of our entire strategy to defend this country, and we talked about, you talked with Senator Fischer about communications, NC3.

It seems to me that NC3—I believe NC3 should be part of the triad. It should be the quad, because it is really as important. If our communication system isn't credible then our deterrent isn't credible, which is what could lead to a precipitous strike from one of our adversaries.

I hope that you agree with me. I don't want to make you go through all you went through with Senator Fischer. But NC3 security and absolutely zero-defect reliability is critical to the deterrent posture of this country.

General COTTON. Sir, it is the foundation of everything we do when we talk the triad. I often use your slogan of saying that it is a quad, if you will, NC3. One of the things that we are also doing is General Nakasone is interwoven in everything that we are doing in his team in Cyber Command.

I mean he is interwoven in everything we are doing with current NC3, the legacy systems, as well as when we are building out the next generation of NC3. So, security is fundamentally——

Senator KING. We put a lot of our time, effort, and focus on cyber over the last few years. I am a little worried that electronic warfare is sort of over here and cyber is over here. Electronic warfare, the ability of our communication systems, of our satellites to—we will talk about this General, but that is a part of—maintaining that as part of our deterrence strategy. It has to be.

General COTTON. It absolutely is, sir. As you know, I am the lead command in ensuring that we get after the EMS [electromagnetic spectrum] problem and what we saw as an atrophy over the past couple of decades—not with the NC3 systems within the Department.

Senator KING. No, but the whole system, electronic—if there is a conflict, electronic warfare is going to be the first 2 hours or 2 days before anything else happens. Well, let me move from that to General Dickinson.

Are we developing alternatives to space-based resources? For example, the simplest one to think of as GPS [global positioning system]. We have got to be able to have ships and planes and troops, for that matter, and know where they are absent GPS, because I believe GPS will be one of the first targets in a conflict. Yes, I know you are you are not Navy, but I want ships to be able to do celestial navigation.

General DICKINSON. Thanks, Senator. To answer your question—I do believe we will be degraded at some point in the GPS world, position, navigation, and timing. With that, I know there are efforts underway, even in my previous command before you as Space Command, looking to alternative PNT, alternative position, navigation, and timing, and how we can develop those types of capabilities. So that is the kind of the technical side of it. There are programs that are working on that right now.

Senator KING. That is a high priority. That—you know, we could have a $100 million aircraft that gets lost because it can't navigate.

We have got to have a high priority on having alternatives to GPS, it seems to me.

General DICKINSON. Yes, I agree, and the Departments are working on that right now. But what I would also offer to you, Senator, is efforts within the Department and each of the services to kind of go back to how we used to do things. When I was a Second Lieutenant many, many years ago, I had a lensatic compass and a map in my hand. Many people did in this room, I am sure.

We can't lose that skill. We have to continue to train that skill. If you are on a Navy ship, I might get this wrong, you have a sextant that you can use to utilize stars to do your navigation. But I think we all have to prepare for that, and I know, like, for example, in the Army, if you go out to one of the CTCs [combat training center] or training centers, they are actually training in that kind of a degraded environment because we know that we might see that. Of course, we have seen that in Ukraine as well.

Senator KING. Preparing and training are the key words. Thank you very much, General. Thank you both for your service. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator King. Senator Rounds, please.

Senator ROUNDS. Thank you, Mr. Chairman. Gentlemen, let me begin by just thanking you and your teams for standing on the front line, and in some cases having to make some very difficult decisions. I appreciate the work that both of you do.

As you know, there is an effort and a significant discussion going on with regard to spectrum and spectrum sharing. It is important as a country because there are lots of people that want 5G. It is critical to our country and to expansion.

But at the same time, 5G means that there are parts of the electromagnetic spectrum which have to be dedicated toward that. At the same time, spectrum is limited, and part of what that limited spectrum is, is being used by the Department of Defense.

Over the years, there has been more and more of a move by folks who want to be able to provide more services to the general public to take parts of the spectrum and that which is used by the Department of Defense.

I am concerned about this, and as you know, right now, there is a discussion about that part of the spectrum that is between 3.1 and 3.45 gigahertz. There is a desire because this is a very desirable part of the spectrum.

Now, on the political side of things, and we don't expect you to get into the politics of it, there is a real push to try to move some of that away from the Department of Defense on a shared basis. At the same time, there is a reason why the Department of Defense uses this part of the spectrum in that it has some very, very special qualities.

I am going to get into the part of this in which we need your professional military advice. I am making it that way because there are folks that clearly understand the value of 5G, who would prefer to have this moved in an expeditious fashion out and away from DOD uses or shared uses, and into the private sector.

I understand their desire to do so, but I believe that the national defense of this country is critical and must be maintained. So, what

I am going to ask in terms of your professional military opinion, is to work our way through this in a discussion with me about the critical needs of this country for parts of the spectrum that could be at risk if we make the wrong political decision.

I am going to begin, General Cotton, within 3.1 to 3.45 and in very close proximity to that, is it true that we have significant radars that we have to maintain?

General COTTON. That is a correct statement.

Senator ROUNDS. Is it true that those radars that we are dependent on protect our country, Alaska, Hawaii and the mainland from the possibility of attack by aggressors, with regard to intercontinental ballistic missiles, short range missiles, drones, all sorts, or I would say almost the vast majority of those types of weapons systems, including aircraft, that may very well be coming at us or directed at our shores.

General COTTON. Senator, that is a true statement.

Senator ROUNDS. If you were to lose part of this spectrum, would it be true, or if they were to look at using part of this spectrum, would it be true that some of those radars that we rely on could be at risk?

General COTTON. They could be at risk, sir.

Senator ROUNDS. Thank you. General Dickinson, space is the name of the game for you, and you not only have satellites and so forth, you are responsible also for early warning in some cases as well. Is that not true?

General DICKINSON. That is true. I have UCP responsibility as the global sensor manager.

Senator ROUNDS. In those sensors, are there critical aspects that include very sensitive parts of the spectrum that are in or near this particular part of the spectrum?

General DICKINSON. Yes.

Senator ROUNDS. What would happen if you were to lose access to those or to be limited to those, in terms of your ability to provide adequate warning should an attack occur?

General DICKINSON. It would be impacted, possibly degraded.

Senator ROUNDS. If you were required to move away from the assets that you currently have in that part of the spectrum, can you give us any kind of an estimate as to the costs involved?

General DICKINSON. Senator, I can't give you an accurate cost estimate. I would say it would be very expensive.

Senator ROUNDS. Thank you. General Cotton, are you familiar with the Aegis?

General COTTON. I am, sir.

Senator ROUNDS. Is it clear that the Aegis system has significant parts of its radar systems within this very sensitive part of the spectrum?

General COTTON. It does, sir.

Senator ROUNDS. Do you have any idea as to what the cost would be to try to move or to try to allocate spectrum away, or in areas other than this, if it is even available for the Aegis system that protects our coasts?

General COTTON. I don't have a cost, but I know it is extremely expensive.

Senator ROUNDS. Thank you. Do you believe that it is very important—I am going to ask this of both of you, and then, Mr. Chairman, my time, I realize, is up, but I would like to have this question.

Do you believe it is important that uniformed officers of the Department of Defense have a say or at least have an opportunity to express to those who make these decisions your professional military opinion about how serious the loss of these particular parts of the spectrum could be if the decision is being made to share or to release that part of the spectrum?

General COTTON. I would at least like to have my best military advice heard.

Senator ROUNDS. Thank you. General Dickinson.

General DICKINSON. As a combatant commander, I would ask—I would say the same thing. I would ask that my best military advice would be considered.

Senator ROUNDS. Thank you. General Cotton, I am just going to finish with this. Have you been able to offer your best professional military advice to anyone on the release of the spectrum to date?

General COTTON. Sir, most of those discussions happened prior to December, so I don't know what the disposition was done, but I haven't had that discussion since the command.

Senator ROUNDS. Thank you very much. Look, I really appreciate this.

This is a difficult situation because there really is going to come a point at which your professional military advice has got to be shared with those individuals that are looking at making this decision and should not be made.

I am just going to finish with this. I believe that it should not be made until after the study, which is being completed by the Department of Defense and the NTIA [National Telecommunications and Information Administration] is completed. Would you agree with me that nothing should be done with this until after that study is completed?

General COTTON. I agree, and we are part of that study.

Senator ROUNDS. Thank you. General, would you agree with that?

General DICKINSON. I would agree, and we are part of that study.

Senator ROUNDS. Do you believe that there should absolutely be an appeals process that we have currently got in law, should that be continued on in its current form? General Cotton?

General COTTON. Yes.

Senator ROUNDS. General Dickinson?

General DICKINSON. Yes.

Senator ROUNDS. Thank you. Thank you, Mr. Chairman, for your patience.

Chairman REED. Thank you, Senator Rounds. Just to make sure we are clear, the S-band is the band that Senator Rounds and I were both talking about. Thank you. Senator Gillibrand, please.

Senator GILLIBRAND. General Cotton, the All-domain Anomaly Resolution Office (AARO) was created to synchronize the Department of Defense efforts to study and assess unidentified aerial phenomenon. How is STRATCOM liaising with AARO to help the office do its job?

General COTTON. So, ma'am, formally UAP [unidentified anomalous phenomenon], so we are part of that along with other combatant commands. So, I have a team, as well as myself and in the senior leadership positions, that liaison with that organization as well as the other COCOM responsible for that responsibility.

Senator GILLIBRAND. Great, and do you foresee that AARO needs additional resources or additional sensors or additional detection to be able to do their job more thoroughly?

General COTTON. I would probably have to defer that to my partner in NORTHCOM [United States Northern Command] to be able to answer that question. So, I don't—with what I know, I don't have a good answer for you in that regard, ma'am.

Senator GILLIBRAND. I will followup for the record on that. While Canada has promised to invest $38 billion over the next 20 years in NORAD updates, our radars in the North Warning System are pretty old and are in known locations. Can you update us, in this setting on how you are modernizing our defenses in Alaska and north of our border?

General COTTON. So, if you are talking NORAD [North American Aerospace Defense Command], NORTHCOM systems, I would have to defer to NORAD NORTHCOM Commander.

Senator GILLIBRAND. Then how is STRATCOM adjusting our missile defense capabilities to respond to the threats you mentioned in your opening statement of hypersonic glide vehicles and hypersonic cruise missiles, to the extent you can answer that in this setting?

General COTTON. I would prefer if we could, ma'am, in a closed setting to be able to address those.

Senator GILLIBRAND. That is fine. General Dickinson, the Space Force is working on a commercial augmentation space reserve, which would give us a civil reserve space fleet if we needed one during a conflict or crisis. How is SPACECOM supporting Space Force's efforts to build this reserve?

General DICKINSON. Thank you, Senator. So that is a great initiative. I think it is—we need that, especially as I described earlier, our leveraging commercial industry to augment, provide additional capabilities to us.

The way we are working with them is, as the combatant command warfighter, we are providing our perspective in terms of requirements for those types of relationships.

In other words, we will have the operational piece in terms of what those contractors could or could not face in the space domain. We participate in that way.

Senator GILLIBRAND. As we plan for peer-on-peer or near-peer conflicts, we have been able to ensure that our forces know how to use our Nation's capabilities, and that they have the opportunity to train with those capabilities.

But most of our space based systems are classified as special access programs. At current classification levels, are lower-level commanders able to understand the full scope of capabilities available to the force and able to conduct military planning with an understanding of space based capabilities and limitations?

General DICKINSON. Thank you, Senator. Over classification is a challenge within the Department right now, but one that we are

aggressively working and looking at refining, to make sure that we can start bringing systems and capabilities to a lower classification level so that we can optimize their employment as well as training of the operators and the forces that they support.

In other words, the classifications, we look across those and are revisiting those documents, those capabilities to see whether or not we can pull them down to a lower classification level. This also allows us to do more integration, better integration with our allies and partners.

Senator GILLIBRAND. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you very much, Senator Gillibrand. Senator Ernst, please.

Senator ERNST. Thank you, Mr. Chair, and thank you, gentlemen, very much for being here today. General Cotton, thank you for speaking with me last month regarding your Commander's assessment, including on the SLCM–.

I do appreciate the letter that you responded with to the Chairman and Ranking Member, affirming that SLCM-N offers additional options and supports and integrated deterrence approach. I brought a copy of the letter today. Really appreciate you responding to my colleagues and I. Mr. Chairman, I request that the General's letter be entered into the record.

Chairman REED. Without objection.

OFFUTT AFB NE 68113-6000

6 Feb 23
SM# 1022-23

Senate Armed Services Committee
United States Senate
Washington DC 20510

Dear Chairman, Ranking Member, and Members:

Thank you for your continued support of United States Strategic Command. During my confirmation, Senators Reed, Inhofe, Hirono, Hawley, Ernst, and Blackburn each asked for my assessment of the Sea Launched Cruise Missile – Nuclear (SLCM-N).

Today's security environment is dynamic and marked by the Russian invasion of Ukraine, Putin's nuclear coercion, and the ongoing nuclear expansion from the People's Republic of China (PRC). For Russia, we have a growing nuclear deterrence challenge centered on Putin's potential perception that the threshold for regional nuclear employment is lower than treaty-limited systems. The PRC is also developing capabilities that would present a similar deterrence challenge, and they are unconstrained by any treaty limitations.

As the Commander of United States Strategic Command, it is my responsibility to advocate for nuclear capabilities and present options to the President that preserve or restore strategic deterrence. Nuclear and conventional capabilities, combined with strategic messaging, are required to demonstrate U.S. stake and resolve to deter, and if deterrence fails impose unacceptable costs and deny benefit the adversary seeks should they employ any nuclear weapon.

A low-yield, non-ballistic nuclear capability to deter, assure, and respond without visible generation (similar to the characteristics of SLCM-N) offers additional options and supports an integrated deterrence approach. It is one of several possible nuclear or conventional capabilities the U.S. could develop to enhance strategic deterrence. I support funding to assess the full range of possible options to address this challenge in a rapidly changing security environment with the backdrop of multiple nuclear adversaries.

Thank you for allowing me the opportunity to provide my view on this deterrence challenge.

Very Respectfully,

ANTHONY J. COTTON
General, USAF
Commander

cc:
House Armed Services Committee
Senate Appropriations Committee, Subcommittee on Defense
House Appropriations Committee, Subcommittee on Defense
The Honorable Lloyd J. Austin, Secretary of Defense
General Mark A. Milley, Chairman of the Joint Chiefs of Staff

Senator ERNST. The President's budget request should reflect this assessment. We feel that that is very, very important, and again, thank you very much for doing your commander's assessment.

General Cotton, the 2022 China Military Power Report estimates that China will field 1,500 nuclear weapons by 2035 and that rivals U.S. deployments under New START. I know we have been hammering down on this.

This is such an important topic for all of us. Do you agree that we must reassess our strategic deterrence requirements given China's nuclear breakout?

General COTTON. Senator Ernst, thanks for the question. Absolutely, I think we need to reassess our strategy or at least take a look at our strategy, our current strategy, and have a force posture conversation.

Senator ERNST. Thank you, and after New START, the U.S. and Russia, and of course China too, might be without strategic arms constraints. Would you agree that the U.S. should prepare to upload its non-deployed nuclear weapons to shore up deterrence?

General COTTON. Senator, I always have flexible deterrence options.

Senator ERNST. Very good. I hope everybody hears that loud and clear. How quickly can we upload each leg of the triad?

General COTTON. Ma'am, I rather have that conversation in the closed setting.

Senator ERNST. Thank you. We look forward to that classified answer, and General Cotton, and I am just going to go into generals here, kind of general answers, because you are Generals. We might need to consider additional measures to ensure the credibility of our deterrent. So, in general, would you agree that placing a por-

tion of the bomber force on day-to-day alert would increase its flexibility?

General COTTON. As a former Joint Forces Air Component Commander, I would like to have that conversation in closed session because I can actually do that without putting them on alert.

Senator ERNST. Okay, and in general, would you agree that moving some of the ICBM force to mobile platforms would increase survivability?

General COTTON. In general.

Senator ERNST. In general. In general, would deploying SLCM-N expand our at sea deterrent?

General COTTON. I think it would address our adversaries' perceive advantage of limited use.

Senator ERNST. Thank you, and in general, would deploying ground-based theater-range nuclear forces bolster our deterrent?

General COTTON. I would like to talk to you about that one in closed session.

Senator ERNST. Okay. Well, I appreciate that. I think that it is important that we continue to have those discussions and understand what our flexibility and options are as we continue to support our nuclear triad.

Thank you very much for that, and General Dickinson, just in the time that I have left. In your efforts with the Combined Space Operations Initiative member nations, I did notice that you had met recently with space leaders from South Korea and Japan. How is this space integration improving with these non-five eyes members?

General DICKINSON. Thank you for the question. That is a great initiative, the Combined Space Operations Initiative board that we have. We just met in New Zealand a few months back, and that is the five eyes plus France and Germany.

But outside of those South Korea and Japan in particular, we are very—working very closely with them. In fact, to the point where we are doing exercises with them, so we have an exercise program called Global Sentinel, which is an unclassified exercise program where we do space domain awareness training.

They are included in that plus 22 other nations as well, and that has been very successful. We also have the Space Force, as well as U.S. Space Command, have personnel serving on the peninsula—now, not large numbers, but small numbers. But we are integrating with the forces, the Korean forces on the ground in Korea as well as in Japan.

Senator ERNST. Thank you. I think it is incredibly important that we continue to work with nations around the globe. Mr. Chairman, I want to associate myself with the comments that Mr. Rounds had as well. I think it is very important that we listen to our military leadership, and based on your best military advice, to make those decisions that are best for the defense of our Nation. Thank you, gentlemen.

General COTTON. Thank you, Senator Ernst. Senator Warren, please.

Senator WARREN. Thank you, Mr. Chairman. So, the Biden administration is requesting $835 billion in the largest, one of the largest Pentagon budgets in history. Despite that gigantic request,

I am expecting that we will receive a torrent of letters from the services and the combatant commands asking for billions more through the so-called unfunded priorities list.

That is the Pentagon's term for it, but I just call them wish lists. The DOD doesn't have to follow the same rules as every other Federal agency, which is other agencies have to balance their must-haves against their nice-to-haves and come up with a budget. Instead, each part of DOD also submits a second list of things that didn't go through the budget process that they still want funded.

In January, I sent a letter to Secretary Austin, along with Senators Braun and Lee and King, telling DOD not to send Congress any wish lists as part of this year's budget process. Last year, some parts of DOD did not put anything on their wish list.

So, my questions today are about whether or not the two of you will choose that route this year. So, General Dickinson, you run Space Command. Will you be submitting additional funding requests on top of the budget that DOD sent to Congress this morning?

General DICKINSON. Thank you, Senator. I will submit a list, and there is a couple of reasons why I will. So being a Combatant Command that is only about three and a half years old, we are continuing to evolve. We are continuing mature. I described a little bit earlier how we are getting more people, our infrastructure is growing, and what we have facing us right now is a very dynamic threat in the space domain, our pacing challenge being China.

With that, we find ourselves in a situation where we try to grow a little bit quicker, and sometimes when we do that because of the threat, it will cost a little more money and money and money that I haven't forecasted because I wasn't able to look at that inside of the budget cycle. That is the first piece of that.

The second piece of it is as I look to round out some of the capabilities that I need. Specifically space domain awareness, we are finding in the commercial market that there are companies that can provide that type of capability to us, and we are taking that capability in our commercial integrations strategy and bringing those partners on board.

Sometimes I don't have that, how much that is going to cost in a contract, inside of a 2-year budget cycle that we are in. So those are some things that I am doing that would be in my UPL [unfunded priorities list]. One would be, how do I grow my command faster to meet the threat? Second, how do I bring on capabilities that I might not have forecasted, that I have come to realize—.

Senator WARREN. So the budget that has just been submitted this morning, you are telling me, is already out of date for your command and that you want to go outside the budget process. You don't want to have to do the 10-year cost estimates. You want to go outside that to just plus up your budget. Is that right?

General DICKINSON. It is. The reason I would submit a UPL is to make sure that I can grow as the threat—.

Senator WARREN. Well, but that is the point of the budget process, is that you go to the Department of Defense, you say, "here is how I need to grow." They give you a number, and then you make the appropriate choices within that number. You are just saying they didn't give you a big enough number, so you want to do an

end run in order to plus up your budget? Is that what you are saying, General?

General DICKINSON. I am saying that the space domain, the characterization of what I see going on in space with the advancements of the threat from the Chinese in space warrent me to be able to account for that—.

Senator WARREN. Well, but that is the point of going through the DOD budgeting process. You have been given a number by DOD and you have just decided to go outside that. I want to also be sure to get to General Cotton. You run our Nation's Strategic Command, responsible for our nuclear weapons arsenal.

Now, during your confirmation, you told me, "as the Commander, my job is to ensure that I can execute my mission with the dollars I have been given." General Cotton, same question to you as General Dickinson. Will you be submitting additional funding requests on top of the budget that DOD sent to Congress this morning?

General COTTON. Thank you, Senator. I think I had that caveat there, too, as far as talking about emerging responsibilities and emerging threats. No different than what General Dickinson said. The 2-year cycle, things change within a 2-year cycle.

I have been asked this morning on how am I going to handle looking at the new emerging threats that we have just seen in probably the last 60 days of what is going on within the strategic threat picture.

So right now, we are going to have to look to see if we are going to submit an UPL to be able to get after some of the threats that we are seeing today. I am responsible for EMS, the spectrum management piece.

We are right there on a 2-year cycle where we didn't do that 2 years ago for the 2024 budget to understand how we are going to be able to set that up, to be able to get after some problems. I stand by what I said as a commander, I will always try to make sure that I get—I can be able to do my job within my means. But I always, as all commanders, we all have emerging threats or needs that might change the calculus on what our previous budget had.

Senator WARREN. Well, I appreciate that, and I am out of time, but I just want to say I think we should be asking DOD to write budgets that reflect their actual priorities, and that they should know as much about these emerging threats as the individual commanders do, and that we should not be doing a dual estimate here of budgets where you have one number and then you just come in and ask for a lot of additional money. I think that is wrong. Thank you, Mr. Chairman.

General COTTON. Thank you, Senator Warren. Senator Scott, please.

Senator SCOTT. Thank you. I sympathize with what Senator Warren is saying. I mean, it is hard to figure out what the budget should be, and so there ought to be a way where we know—we hear everything and then try to make a decision.

Thanks for what you do. Can you just talk about—first off, you watch all the stuff that China is doing. Clearly the public should know, the fentanyl coming across the border, the Chinese spy bal-

loon, the surveillance with DJI drones, they have got TikTok and all that stuff.

So take—what could we do? What could the public do? What should we do on things like that? Is there anything that we could do that would impact and make your jobs and what you are trying to do as part of our defense easier? Both of you. Thanks. Whoever wants to go first.

General COTTON. Senator Scott, thank you. I think public advocation, the advocacy of—for my portfolio, for example, the advocacy of the modernization of the nuclear triad, the modernization of the weapons complex, the modernization of infrastructure. Those are the things that on the surface, I don't know that the American people will truly understand on the effects of not having those things are and the effects to the national security of our Nation for not having those type of things. So, advocacy in the public light from yourself and others to be able to articulate the needs that we have I think makes a big difference for us.

General DICKINSON. I think it is advocacy and education and awareness of how important for my portfolio-space, is to not only military operations, but just our way of American life and really the global economy.

As we watched Artemis I launch here not too long ago, and we see the excitement of going back to the moon and beyond, I think that really has motivated the American public and the world, for that matter, that we are going back to the moon and beyond.

But when you look at that, and you look at what the Chinese are doing today with their own space station on orbit, their own ability to go to the moon. Go to the moon and scoop up some rocks and come back, demonstrating their technology advancements.

We need to understand that that has a military application too, and that the same assets or similar assets that we depend upon in everyday life here in the United States and around the world is dependent upon space.

Space fuels the economy. Space fuels our lifestyles. I think just understanding that space is exciting from a civil commercial piece, we also need to be able to say it could be held at risk. That risk is what I am doing each and every day, is to try to mitigate that risk or reduce that risk.

Senator SCOTT. So how can you or how can we or how can the Biden administration, any of us, take what we watch what China is doing every day that we all get to see, right, to do a better job of explaining what we need to do on nuclear deterrence and what we need to do on space. How can we put those together where the public will get it?

Because you are right, it is going to be—we got to advocate for this stuff. The public doesn't believe in it. It is going to be hard for us to, to get the money to funded, right. Because we represent the people in our State. So how would—what should each of us be doing better?

General DICKINSON. I think talking about what they are doing, in space right now in terms of, you go back to 2007 when they conducted that direct decent ASAT [anti-satellite] test.

That test, we are still tracking more than 2,000 pieces of debris from a test that happened in 2007. That type of messaging and

that type of conversation, where appropriate, I think is very important to do. From my perspective, that is how you get—a constant conversation about how are they improving in space.

Senator SCOTT. Okay.

General COTTON. Senator Scott from my portfolio, I think is actually educating folks to understand that what does it mean when the Department of Defense says that China is a pacing threat? What does that really mean to folks that are in Melbourne, Florida?

Being able to describe that and understand what does that mean when we say that there is a nuclear breakout and then the first time in the history of the United States since the advent of nuclear weapons, that the United States has two nuclear peers. That is the education that needs to happen for our American people.

Senator SCOTT. Right. Thank you. Thank you, Chairman.

Chairman REED. Thank you, Senator Scott. Senator Kelly, please.

Senator KELLY. Thank you, Mr. Chairman. General Dickinson, since we left off with Senator Scott's question about your answer a little bit about commercial space, I want to start there.

In February, the president of SpaceX revealed that the company had taken active steps to prevent Ukrainian forces from using Starlink technology with their drones. SpaceX admitted they had not foreseen the weaponization, their words, of their capabilities. I was personally disappointed to see discontinuation of full services at such a critical time for Ukraine's self-defense.

General, as SPACECOM moves forward in deepening its partnership with industry and foreign partners, how are you approaching the agreements with industry on military use of commercial capabilities?

General DICKINSON. Senator, there is no question that SpaceX's Starlink system has been used extensively by Ukraine in its response to the Russian aggression. I think the use of Starlink has been described in numerous media accounts almost since the beginning of that conflict. I think this demonstrates that commercial space capabilities can play a significant role in our modern high intensity conflicts.

The concerns, I think, SpaceX representatives recently expressed about Ukraine's use of Starlink highlight the importance of shared understanding between commercial service providers and their customers and users. So, these issues, in my mind, bear on contracts in all operational domains, not just specific to space.

Senator KELLY. Do you feel there is a connection between the availability of this capability to our partners, being Ukraine in this conflict, and relationships we have with companies like SpaceX?

General DICKINSON. Yes.

Senator KELLY. How are we going to ensure that DOD and our partners will have all the capabilities available throughout the range of military operations? If you have any specifics about this going forward, I would love to hear them.

General DICKINSON. Yes, there is an initiative that is working right now within the Department, within the Space Force, that is actually looking at what you just described there. How do we make

sure during times of conflict that if we are relying on commercial companies for certain services, that they will be available to us?

There are models like that right now, for example, the craft model that we use in the Department right now, the civilian reserve air fleet. You know, there are—so that may serve as a model as they go forward in their work, and we participate, U.S. Space Command, in that process.

Senator KELLY. General, I am going to have my office followup. If you need assistance there, we are here to help.

General DICKINSON. Thank you.

Senator KELLY. General Cotton, In the years since Russia's unprovoked assault in Ukraine, the United States has been forced to rethink our nuclear posture and how we think about deterrence. Just a few weeks ago, Russia announced that it would suspend its participation in the New START Treaty.

But even prior to that, I mean we all knew that Russia was refusing inspection of nuclear facilities, which was a key condition of the agreement. This behavior, along with increased Chinese aggression and the influence from China, but also North Korea's regular testing of ballistic missiles, and Iran's, I would say, undisputed progress to enrich uranium, it underscores the importance of having a strong deterrence.

The long-range standoff weapon (LRSO), the long range standoff missile system being developed by Raytheon in Tucson, Arizona, is going to play a critical role in the deterrence of our top four adversaries in the future. The ability to forward deploy this missile on U.S. bombers sends a powerful message to our adversaries, but also to our allies. So, General, can you expand on why this is such a critical asset for our Nation?

General COTTON. Senator, thank you for the question. LRSO is a replacement for the air-launch cruise missile, which is the air-launch cruise missile nuclear leg of our triad. That weapon is still a reliable weapon and it is a safe and secure weapon, but it is well past its life as far as capability sustained, so we need to replace it with the LRSO.

You are absolutely right. I am quite pleased with what I have seen with the contractor on the work that they are doing. It is fundamental because that is fundamental to long range standoff for the air leg of the nuclear triad.

Senator KELLY. Well, thank you, and my understanding, without going into anything, you know, classified, that we will get more capability out of this weapon than we had with the prior, I think it was AGM–86, was it?

General COTTON. Yes, and we could talk more about that in closed, if you would like.

Senator KELLY. Thank you, and thank you, Mr. Chairman. I am going to submit another question for the record on traveling wave tubes. Specific capability that we don't have a lot of depth in here, in our industrial base. Thank you.

Chairman REED. Thank you, Senator Kelly. Senator Budd, please.

Senator BUDD. Thank you, Chairman. General Dickinson, General Cotton, thank you both for being here today. You know, last

year, President Biden's defense budget was woefully insufficient to keep pace with China and Russia and also inflation.

I think many of us are concerned with this upcoming budget, particularly when it comes to nuclear modernization. So, General Cotton, other than budgetary constraints, we have talked a lot about that today, what barriers exist to nuclear modernization efforts?

General COTTON. Senator, thanks for the question. I think fundamental to me is ensuring that we don't have any slips in any of the modernization programs that we have as far as timelines in terms of being able to get to completion.

The industrial base and supply chain—we hear many people talk about that. It is a thing, and that is worrisome to me because that is external to even what folks might think our technical challenges, but when you throw that on top of what we are trying to do and what we are seeing, that becomes a challenge.

Senator BUDD. Thank you, and for both of you, to the extent that you can discuss it in this setting, and maybe we will hear more later on, how destabilizing is China's development, of their nuclear capable hypersonic fractional orbital bombardment capability?

I know that is a concept that has been around for decades, but we are seeing with new technology their redevelopment of that. So, are there certain systems? First of all, how destabilizing is that? Is there something that the U.S. should field in response?

General COTTON. It is destabilizing. You are right, it is something that folks have been thinking through for decades, but because of the destabilization, results of what that weapon can bring forth, others decided not to go in that direction. I think for our perspective in Strategic Command, it is about warning.

As my fellow COCOM Commander in NORTHCOM and NORAD would tell you that becomes a problem in being able to understand what your timelines are on when something might be coming into the Homeland.

General DICKINSON. From my perspective as the global sensor manager, being able to see it is the first thing we have to be able to do. As I have mentioned earlier in a previous response, these are emerging type of threats, that we need to be able to address.

We are looking very closely at it in terms of how do we use capabilities that we didn't traditionally use for that type of activity, in this case, the fractional overall bombardment capability.

Do we have things that we can better leverage today to help us maintain custody of it, when it is in flight? So, for me, it is an area that I am aggressively working today with the assets that I have and we are looking to the future to bring on increased capability.

Senator BUDD. Thanks. We will pick up the discussion of that in the other setting. General Dickinson, how would you characterize the current resilience of our military satellite constellations, and what efforts are being made to improve resilience in the near and the short term? The concern is that because these systems are so expensive, we buy less of them, thus making them more vulnerable. So, if you would comment on that, please.

General DICKINSON. Certainly. So, as I look at the architecture that we have today and the resiliency of that architecture, we are

looking at ways today that we hadn't looked at in the past in terms of making them more resilient.

Our ability to develop tactics, techniques, and procedures for our assets that are on orbit in order to make them more resilient. Maybe able to move, maybe point in a different direction, are examples of that, or actually doing—so as I mentioned in my opening comment, that we look at it from a link, ground station, and satellite perspective.

Those are the three segments. In order to increase our resiliency, we look very carefully at how we can harden, not only the satellite vehicle, but the link to the ground, and then the ground station through cyber protection back to wherever the command-and-control facility is.

So, we look at it from that approach. How can we better—how can we increase the resiliency on orbit, as I mentioned earlier, and then those two other links.

Senator BUDD. Is there a scenario where you would have less expensive but so many more of them that we would thus reduce our vulnerability?

General DICKINSON. As we go to the future, the department is looking very closely at doing mega constellation, similar to what we have seen with some of the commercial companies here in the United States where we have thousands of satellites on orbit.

The resiliency there is very good in terms of thousands of satellites not knowing which satellite does necessarily what function or the ability of that network to self-heal itself if you lose two or three or four of them.

This type of resiliency actually causes some of our adversaries to pause because it is very difficult to defeat something like that or even degrade it. So that is where we are going in the future, and that is exactly what we need to be doing.

Senator BUDD. Thank you both. Chair, I yield back.

Chairman REED. Thank you very much, Senator Budd. Senator Hirono, please.

Senator HIRONO. Thank you, Mr. Chairman. Thank you, General Cotton and General Dickinson. Hawaii holds a strategic position in the Pacific with many integral Department of Defense equities, which makes the threat of missile attack particularly acute for the people of Hawaii. I have been asking for many years now how DOD will ensure Hawaii is defended from a missile attack.

Recently the cost assessment and program evaluation, CAPE, conducted a study on how best to meet the current and future missile defense needs of Hawaii. I have still not received a brief on the results of that study or the Department's plan for how it intends to protect Hawaii from all types of missile threats, from current and future potential adversaries. Is it fair to say that each of you has roles to play in missile defense?

Yes? I am not hearing anything. Yes, you do. It is fair to say. So, can you just briefly describe what these roles are that you have a missile defense?

General DICKINSON. Thank you, Senator.

Senator HIRONO. General Dickinson.

General DICKINSON. Thank you, Senator. So yes, in U.S. Space Command, I have got a responsibility to provide space enabling ca-

pabilities to the Joint Force, in this case INDOPACOM [United States Indo-Pacific Command]. Those space enabling capabilities are missile warning as well as position, navigation, timing, satellite communications. Those are the pieces that we provide to the missile defense architecture.

Senator HIRONO. General Cotton.

General COTTON. For mine, ma'am—thank you for the question. For us, above all else, it is about providing warning and future architectures and protection of the Homeland. So that is the oversight that we have as far as homeland defense, providing effective protection of U.S. against rogue nations.

Senator HIRONO. So, you both have responsibilities regarding missile warnings. I do have serious concerns that there is not one dedicated person in the Department of Defense with the responsibility to ensure that there is a plan for missile defense of Hawaii, as there are many roles and responsibilities doled out across the Department of Defense for this one issue.

That is why I expressed frustration, because every time I ask about missile defense or Hawaii, I don't get a response. So, as we have seen in the continuing challenges regarding the regional crisis, where there is not one ultimate person ultimately responsible over the planning and execution of an issue as it relates to what needs to happen with Red Hill—and it adds to the lack of trust within the community that the military will get things right with regard to Red Hill.

So, there is room for mishaps to occur. I await someone to tell me how Hawaii will be defended from missile attacks. Moving on, to continue in the line of missile defense, there is robust conversation occurring in Congress to look for ways to more effectively use the microwave spectrum to support developments in wireless telecommunications technologies while protecting national security.

The development of 5G communications will have a great impact on the U.S.'s ability to remain a world leader, in both the commercial and defense spaces. The Department of Defense is currently conducting a study, in conjunction with NTIA, on how it can more effectively and efficiently use the spectrum, and how spectrum sharing would impact current systems.

I believe this analysis will be critical to making an informed decision about this very important national issue, and I believe it is critically important Congress extend the FCC [Federal Communications Commission] spectrum auction authority until September 2023, while the DOD concludes this important study.

As I am sure you are aware, the current auction authority will expire tonight, March 9th, unless Congress agrees to a short-term extension. With negotiations ongoing, we should agree to a 60-day extension, at least in my view, and not let spectrum authority, auction authority lapse.

So, it is critical that DOD and NTIA thoroughly conduct this study contemplating all options, including vacating and sharing the spectrum band. It will be imperative that the study is not only comprehensive but is submitted in a timely matter.

Clearly, I share the concerns expressed by Senator Rounds on this issue. In the meantime, General Dickinson and General Cotton, what types of impacts do you anticipate the study will identify,

and do you see opportunities for greater sharing of the spectrum for civilian usage? My time is up, so perhaps you can be very brief.

General DICKINSON. Yes, Senator. So, we are part of that ongoing study that the Department of Defense is doing. I can't—I won't try to guess what the outcomes will be from that. I know as being part of that study that my concerns and my voice will be heard in that study in terms of how important that part of the inspector spectrum is to my mission every day. My mission every day supports the rest of the Joint Force as well.

General COTTON. Senator, the same with STRATCOM. We are part of that team that is part of that study, so I am awaiting the results of that as well.

Senator HIRONO. It is going to be very important that the study gets done on time because there are other things that are happening with regard to this issue, as you all know. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Hirono. Senator Schmitt, please.

Senator SCHMITT. Thank you, Mr. Chairman. I had a question to General Cotton on modernization. Clearly, you know Whiteman Air Force Base in Missouri, we are very proud of that, which I know you are very familiar, and part of the nuclear triad and the B–2 stealth bomber.

I guess you mentioned, one of your focuses is to make sure that as we approach this modernization, that there aren't any there aren't any gaps along the way. I guess the focus of my question would be, what is the level of concern that there might be, and what can we do to make sure that that doesn't happen?

So along the way, as we move forward in this, what are some things to look out for and what can we be doing to help out with that?

General COTTON. Senator, thank you for the question, and yes, the incredible men and women of the 509 there are Whiteman Airforce Base. I think fundamentally, as any—if we start seeing delays in programs and delays on getting to completion of a program, because what I don't want and what I have articulated is I need to make sure, the B–2 is a good example, that I have sufficient forces in play all the time.

Even during the transition, we must ensure that I have the legacy systems in place where I can still present options to the President of the United States. If you start getting slips, then folks start saying, "well, okay, so when can I start. Is there a is there when can I start divesting and do I slow down divestiture? What do I do about divestiture as a component commander, I need to make sure that I have those sources available."

I am constantly watching to make sure that those future roadmaps for your area, the bomber force, for example, for *Columbia,* for example, ICBMS, every portfolio that I own, is being modernized right now. So, as we look to those and make sure that we don't build gaps because of delays in——

Senator SCHMITT. Are you confident there aren't those gaps right now, wherever we are at in that process 0under your command?

General COTTON. Well, as I said earlier, my bigger concern is what we are seeing with the industrial base and what we are seeing with the supply chain.

Senator BUDD. Okay. General Dickinson, I guess my question to you is on the space race. I do feel like whether it was the Chinese spy balloon, whether it is the fentanyl, that has been mentioned. TikTok. The public is becoming much more aware, right now, in real time, the real threat that China poses.

I mean, they are not messing around. They mean business, and I am a new member here, and the briefings that we have had in my 2 months here are sobering in many ways. That is, a big focus of mine and my office: to make sure that we are doing everything we can to be ready to challenge that threat. I guess Senator Scott asked the question about what we can do.

I want to drill down on that a little bit more. Specifically, what are two or three things that you don't think from a space perspective, you don't think the public might be aware of as it relates to China in space that are terrifying?

General DICKINSON. A couple of things. If you just look at the sheer number of launches, space launches that they do in a year—that is a statistic that most people don't know. I will give you a statistic there. In 2022, last year, there were 186 space launches. Of those, 64 were Chinese, United States was 87, the rest before. Just putting things on orbit, whatever they may be.

They have rounded out their equivalent of our GPS satellite network. They call that the BeiDou. They have accurate position, navigation, and timing capabilities worldwide. If you look at the just the sheer number of satellites that are in orbit and what their intended use is everything from ISR [intelligence, surveillance and reconaissance] satellites to communications satellites to PNT [positioning, navigation and timing] satellites.

So, they are moving in a direction where they want to be, peer to us in terms of capabilities in space. They are still—we are still the best in space. But what we need to make sure is that that gap does not close and that we continue to keep the gap or increase it.

Senator BUDD. I guess just a final question. What are a couple of those capabilities, do you think, outside of the launches? A couple of those capabilities that, again, most folks might not be that aware of.

General DICKINSON. Well, it would be ISR satellites, so they can—they have observations in terms of being able to see around all around the globe in a persistent manner. Then the other piece is that position, navigation, and timing. That is, PNT is a critical component of any military operation and quite frankly, any commercial or civilian operation as well. Having accurate PNT is very fundamental to that, and they have that.

Senator SCHMITT. Thank you. Thank you, Chairman. Senator Rosen, please

Senator ROSEN. Well, thank you, Chairman Reed. I really appreciate you holding this hearing. I would like to thank General Cotton and General Dickinson for, of course, your great testimony today and for your service to our country.

Of course, we have the Nevada National Security Site right here in southern Nevada. I want to speak a little bit about the upgrades

that it needs. So, General Cotton, I want to followup on a question I asked at your nomination hearing now that you have taken command. It is an issue I have raced to the Committee several times.

At the Nevada National Security Site, we oversee the Stockpile Stewardship Program, principally the U1a facility—that underground lab where scientists conduct the subcritical experiments to verify the safety and reliability of our nuclear stockpile without explosive testing.

U1a is undergoing major construction. It is a project that will soon house the most capable weapons radiographic system in the world. However, NNSA [National Nuclear Security Administration] currently faces significant infrastructure delays, including at the Nevada National Security Site.

So how will the upgrades to the Stockpile Stewardship Program, like the U1a, affect STRATCOM certification of the nuclear stockpile? How do these infrastructure modernization challenges overall delay your impact to fully fulfill your responsibilities?

General COTTON. Senator, thank you for the question. As I had said earlier to the Committee, making sure that we have the proper funding, the proper insight on the modernization of the weapons complex writ large, to your point, is absolutely critical for us in the modernization of our programs, when we have been talking about the weapons system platforms themselves. So that is going to be critically important.

When we talk about NNSA and the problems that—or the challenges that they are facing in regards to infrastructure, I monitor that daily.

Senator ROSEN. So that is how you are addressing these structural delays, just monitoring? Is there something else you—.

General COTTON. I continue to push—the requirement, ma'am, for pit production for me, for example, has not changed.

Senator ROSEN. Okay. Thank you. I am going to move on to you, General Dickinson, for cyber mission and space, because we know cyber operations, you have been mentioning of course, they play a critical role, well not just in our space capabilities, but honestly, I believe in every aspect of our capabilities.

We see our adversaries increasingly developing their counterspace capabilities that really undermine our interests. So, China, they have emphasized the offensive cyberspace capabilities, that they are critical to their cyber warfare capabilities. Are you concerned about the increasing threat of cyber-attacks from China and how they could jeopardize the United States space operations?

You spoke about doing the constellation mode, some of the other things that you might be doing, you can speak to in an unclassified setting. So, are these some of the best tools you can use against—kind of counter the space cyber aggression, if you will?

General DICKINSON. Thank you, Senator. Cybersecurity is a top priority within the Command because we understand the challenges and the threats, just as you mentioned there. The Command is actively working cybersecurity every day.

So as the Command has matured over the last three and a half years, we have built cyber, cyber protection, in from the very beginning. An example of that, we have a joint cyber center that resides within the Command, now that is that operational capability.

Senator ROSEN. I am sorry to interrupt, are you using machine learning and artificial intelligence to maintain the digital superiority in the new centers?

We use that type of—those types of capabilities to do as I described in terms of our JCC, Joint Cyber Center, as well as the new Space Force Delta 6 that stood up that does cyber protection for our satellites, satellite communications control networks, as well as the integration of General Nakasone's integrated planning element within my command as well.

We participate in the greater cybersecurity and the cyber deterrence process with USCYBERCOM [United States Cyber Command] as well, through their cyber priority effects list. Every day one of my top command priorities is doing—securing the terrain, doing digital superiority. Part of that is making sure that we are hard in terms of cyber defense.

Senator ROSEN. Thank you. I am going to in the really quickly and I will probably take the answer off the record because I ask everybody this. STEM [science, technology, engineering, and mathematics] outreach programs, how are we going to reach these goals if we don't have the workforce, the pipeline folks coming in or being trained?

So, I will take it off the record is my time is expiring, but I want to know about your STEM outreach efforts, particularly in cyber. How do you plan to grow them? How do you plan to retain good people because it really is—it is critical. So, thank you, Mr. Chair. I will take that off the record. Thank you.

Chairman REED. Thank you very much, Senator Rosen. Senator Tuberville, please.

Senator TUBERVILLE. Thank you, Chairman Reed. Generals, thanks for being here, and service for all of you here in this room today. General Dickinson, I know you talked about Starlink a little bit in Ukraine. Give your personal assessment really how that has worked for Ukraine and for all of us in the future.

General DICKINSON. Thank you, Senator. So I think the lessons that I take from watching that capability, the Starlink capability, is I think it demonstrates what those large constellations can provide in terms of thousands of satellites providing a service or a capability to a certain entity, in this particular case, Ukraine, I think, shows: one, is the maturation of our commercial space industry enabled to build something as technically sophisticated as that on scale, and put it on orbit, and maintain it. I think that is a big lesson learned or takeaway for me from the Ukraine-Russia conflict.

Senator TUBERVILLE. Thank you. General Cotton, a lot of people talk about tactical nuclear weapons but don't know what that really means. If Putin were to use a tactical weapon in Kyiv, what damage would that do and what would be the fallout?

General COTTON. Sir, so when we talk about non-strategic nuclear weapons, just for a definition, non-strategic nuclear weapons are any weapons that are currently not under the New START treaty. So, for Russia, that is approximately 2,000 weapons. For the effects, I would like to hold off and have that answer to you during a closed session, if we could.

Senator TUBERVILLE. Okay. Thank you very much. General Dickinson, it probably wouldn't be—it would be unfitting for me not to ask you about Space Command in your last hearing here, since the Senator from Colorado, I mean New Hampshire brought it up a little bit.

We have heard a lot about in the last few years about basing decision of the command headquarters. I didn't want to get back into this back and forth, but when my colleagues bring it up, I want to make sure the facts are correct.

General, in 2019, the Air Force identified six suitable locations for Space Command, is that correct? In 2020, when the Secretary of Defense, Mark Esper, testified before this Committee, he instructed the Air Force to allow for communities to self-nominate. That resulted in the Air Force examining 66 communities across any 26 states, correct?

General DICKINSON. As best I can recall.

Senator TUBERVILLE. It was an exhaustive selection process that weighed 21 different factors and involved site visits, interviews, input from up and down the chain of command. That process took 8 months, correct?

General DICKINSON. As best I can recall.

Senator TUBERVILLE. Thank you. Which community ranked number one in your—in that analysis at the end of the day?

General DICKINSON. I don't recall exactly which one.

Senator TUBERVILLE. Well, I will refresh your memory, Huntsville. Do you recall which base ranked second?

General DICKINSON. I don't recall.

Senator TUBERVILLE. Offutt Air Force Base in Nebraska. You recall third? You probably don't—which was the Joint Base in San Antonio. Commander-in-Chief selected the location that the Air Force ranked number one.

Yet since the President selected Huntsville, the location, the Air Force study ranked number one in January 2021, we have had 2 years of delay and the world is on fire right now. We need to catch up. The Colorado delegation asked for an investigative report and the GAO [Government Accountability Office] reported on the process.

Ironic, Colorado wasn't in second or third, but they asked for a report. So, when the GAO examined this process, they said, I am going to quote here, "the Redstone Arsenal ranked as the highest scoring location in the evaluation phase, the highest ranked location in the selection phase, and the location with the most advantages in the decision matrix.

Air Force official stated that the decision to identify Redstone Arsenal as a preferred location stemmed from Air Force analysis showing it was the strongest candidate location." We are going back and forth with this, and I know Secretary Kendall is going back and forth and hopefully we get this done.

Hopefully we get it done before your term is up. I know that we have got commercial people that are involved in this. I know commercial people are going to be hugely involved in our—in Space Command in years and years to come, and we look forward to all of that coming together in one location in the very near future, and hopefully that is Huntsville.

So, General, thank you for your service, really. Thank you for your service. What you have done for Space Command. You have been the only one there. You brought it from infancy. You have done a great job. Thank you.

General DICKINSON. Thank you.

Senator TUBERVILLE. Thank you.

Chairman REED. Thank you, Senator Tuberville. Senator Cramer, please.

Senator CRAMER. Thank you, Mr. Chairman. Thank you to both Generals for your service and for being here. I want to start, maybe start and end with you, General Cotton. I want to ask you, your predecessors had some luxuries you don't have.

Of course, they had six B–52 bases in the Northern tier capable of taking off and landing that great big legacy machine, six of them between Michigan and Montana. There are only two that remain that have the cement, and one, of course, in Minot, which you are more than a little bit familiar with.

The other being Grand Forks. The base in Grand Forks has narrowed the 300-foot-wide runway to 150 by moving the lights in but all the concrete remains. As you look forward—and I was interested in one of your previous answers about LRSO, the importance of LRSO in the legacy systems, particularly in the context of a potential gap.

But when it comes to bomber combat employment base that we have talked about a few times, how useful would more runway space be for the disbursement of those B–52s and maybe other large aircraft, especially while we still have some of them intact that could be prepared quickly.

General COTTON. Senator Cramer, thank you for the question, and our baby the buff, the B–52, I just recently looked at an article that was published on the Air and Space Forces Magazine that showing the testing that is underway for the re-engineering of the B–52. So I am knocking on wood that everything is going well in regards of serving the commercial and your replacement program for that venerable, incredible machine.

To your point, you are absolutely right. We used to have numerous airfields throughout the United States of America that could act as dispersal sites for a lot of our strategic forces and weapons. Not permanent locations, but the places where you can disperse.

Over the decades that has eroded. Many communities will look and see and say, I don't understand why I have an 11,000-foot runway at my regional airport, and then it is no longer a 11,000 foot runway. So, we are looking into it. I am actually having the Commander of Air Force Global Strike take a look at dispersal locations again, because now, once again, as we have been discussing, we have two near peers.

First time in the history of what STRATCOM has had to deal with. So we are looking into that right now, sir, so to answer your question.

Senator CRAMER. No, I appreciate that, and as you know, the folks up in Grand Forks are capable of moving a lot of snow fast so that 300-foot runways ready to be deployed. With regard to those two near-peer adversaries or threats.

China's capabilities, of course, are growing at an unprecedented pace, as you guys have already referenced. Russia, of course, becomes more unpredictable and dangerous all of the time. Some of the programs that we are relying to maintain that deterrence were created with different threats in mind, obviously, or at least different scales of those threats.

I often joke with Senator King that the reason I accepted the ranking position on the Seapower Subcommittee was so I could get my hands on the third leg of the triad. But do you think, are 12 *Columbia*-class submarines enough? I guess that is the bottom line. I know we have a lot of challenges, but given this threat, particularly from China, are 12 enough?

General COTTON. Senator, thank you for that question. I think it goes back to the original statement that I made in regards to I think we have to have a conversation and look at force posture. Force posture is all three legs of the triad to ensure that we have what we need moving forward into the 2030's, 2040's, 2050's.

Senator CRAMER. Since I have about half a minute left, I do want to ask both of you a really basic question that I know requires just a simple answer. It is really in response to Senator Warren's line of questioning regarding the budget and unfunded priorities. Do you consider national security as a like to have or a must have in today's threats? General Cotton first, and then. General Dickinson.

General COTTON. It is a must have.

Senator CRAMER. General Dickinson.

General DICKINSON. It is a must have.

Senator CRAMER. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Cramer. Senator Sullivan, please.

Senator SULLIVAN. Thank you, Mr. Chairman. Gentlemen, good to see you. General Cotton, thanks again for coming to the Alaska Day event. Native people in my State were very honored by your presence, and I think it was a really good event, so thank you very much on that.

I want to ask you about the recently conducted CSIS [Center for Strategic and International Studies] Taiwan scenario war game that I am sure you are familiar with. It recommended that the B–1s not be retired until the full complement of B–21s and modernized B–52s are fully on hand. Did you see that, and do you agree with that assessment?

General COTTON. So I haven't seen the assessment that articulates B–1 perspective.

Senator SULLIVAN. What do you think about that general statement? I am sure it is not the first time you have heard something along those lines. We need to look at mitigating the risk of B–21 delivery time going to the right——

General COTTON. Senator, I absolutely agree that—and what I want to ensure is that we have enough of the bomber force available that is a legacy until we have a fair amount of B–21 brand new modernized systems. So I don't see a huge dip in my capability and capacity moving forward.

Senator SULLIVAN. Okay. Let me ask another issue. I had a very senior U.S. Air Force officer when he was on his way out retiring and he was talking about force posture for some of the strategic

forces. Mentioned, and I wasn't pushing it, but he mentioned that with regard to looking at where the B–21 should be placed, that one place that would certainly get our adversaries' attention, particularly China and Russia, is having a certain element of those homeported in Alaska, given our strategic location.

As you know, Billy Mitchell called Alaska the most strategic place in the world. With B–21s in our closeness to Russia, and Japan, and Korea, and the Taiwan Strait, this was a recommendation that he thought made sense.

A lot of the INDOPACOM theater generals and admirals always talk about West to the international dateline. I try to encourage them to not use that. It is kind of a lazy term. A lot of what is further North is actually closer to key theaters of engagement, whether or not you are West or East of the international dateline, it's all about miles.

If you are North, our times are closer. For example, forces in Alaska are closer, for the most part, the key theater areas than Darwin, Australia. A lot of people don't know that. A lot of four star generals and admirals don't know that. So what is your thought about something like that in terms of force posture, especially as it relates to near-peer—it is not even near-peer competition. It is clearly peer competition, in my view, no?

General COTTON. Senator, thank you for that. We actually had a discussion about that in my last role as a Commander of Global Strike Command in regards to, I think from the location of where the forces are postured, I look to my JFACC, my Joint Forces Air Component Commander to figure out where they can best maximize where that would be.

As you know, we would always consider and have considered and do use the bases in Alaska for dispersal locations for our bomber forces even today when we are doing our bomber task forces.

So, that is a conversation that I think should continue, that we should continue to have. But it would be with the Air Force in regards to location.

Senator SULLIVAN. Thank you. My final question, I am going to ask for both of you. I think the Chinese spy balloon has raised a lot of issues. But one of the issues that I know that General VanHerck is looking at, and to his credit, he has been really pressing for a couple of years now, is domain awareness.

Domain awareness, particularly as it relates to hypersonics, to cruise missiles, and even to slow moving objects. A lot of our detection devices—in as you know, Alaska, again, is key here because anything coming into the lower 48 to strike Chicago or New York City is going to come through the airspace in Alaska.

But we have traditionally been focused on ballistic missiles tracking and in bombers. So how do we get on the whole issue of domain awareness as it relates to hypersonics, cruise missiles, and then even slow-moving entities like balloons, spy balloons?

General DICKINSON. Senator, in my portfolio in terms of space domain awareness, that is a critical capability that we continue to look at, continue to develop requirements, and also continue to leverage assets that we haven't necessarily used in the past to do that very function. Of course, Senator, you know, you have got two great sensors that are in your home State.

We are looking forward to the LRDR coming on here soon. That will be obviously a big asset in addition to our architecture itself. But I think as we look at the evolving threats that we are seeing now, our approach has to be a layered approach in terms not only particularly with missile defense, but also in sensing.

So, one sensor doesn't do it all, so we have got to figure out and we are figuring out where those gaps are, where those seams are, and how to get better at understanding the threat.

Senator SULLIVAN. Great. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Sullivan. Senator Cotton, please.

Senator COTTON. Thank you, gentlemen. Welcome back. General Cotton, I can't remember if we have addressed this before at your confirmation hearing, but I have addressed with a lot of your predecessor, so I want to raise with you again.

Sometimes we hear criticism about our nuclear forces along the lines of that we shouldn't spend so much money on weapons that we never use. I sometimes point out that we don't actually spend that much money on our nuclear forces in the grand scheme of our defense budget.

We do happen to be going through a somewhat expensive modernization right now, but in general it is in the low single percentiles. I also point out that we actually do use our nuclear weapons.

We have used them every single day since August 1945 to deter the kind of war that we had from 1939 to 1945. Would you agree with that assessment?

General COTTON. I would agree with that, Senator.

Senator COTTON. That every single day our nuclear weapons deter our adversaries not just from nuclear warfare, but from the kind of conventional warfare that we saw so often in the first half, even in some cases, at a lower intensity level, the second half of the 20th century.

General COTTON. I do agree.

Senator COTTON. So, we have to have a credible nuclear deterrent to achieve those continued effects. Right now we have one nuclear arms control treaty, in effect, the New START treaty. However, Russia has recently suspended its cooperation with that treaty. Is that right?

General COTTON. They have suspended, yes, sir.

Senator COTTON. What do you think are the prospects for Russia returning into compliance with that treaty, given their history of cheating on other treaties like the Intermediate Nuclear Forces Treaty and the Open Skies Treaty?

General COTTON. I would hope that they would come back and try to get in compliance, but hope is not a plan.

Senator COTTON. Right. So over time, there is really no way to know if they are actually complying with the limits on warheads or delivery systems under that treaty.

General COTTON. That is correct.

Senator COTTON. I just want to talk a little bit about Russia's nuclear forces that are sometimes known as tactical nukes or strategic nukes or low yield nukes, whatever you want to call it. To put it simply, smaller nuclear warheads, maybe something akin to

what we used to in World War II as opposed to four megaton city killers. Is that a fair characterization?

General COTTON. That is correct, and to define it, non-nuclear strategic weapons are defined as any weapon that is not under the New START treaty. It is about 2,000 weapons.

Senator COTTON. So all these, all these weapons, whatever their yield, were not covered by the New START Treaty and therefore not covered by any treaty, correct?

General COTTON. That is correct.

Senator COTTON. Do you want to say how many of those kinds of weapons we have? If you don't want to in this setting, that is fine.

General COTTON. We can talk about that in a closed session, sir.

Senator COTTON. I think we have a little bit fewer than 2,000 is the way I would put it. You might say, well, we have, you know, four megaton city killers. Why do we need it?

So the logic here is that if all you have are giant city killers and your adversary has thousands of smaller nuclear weapons, they might believe that they can detonate one of the smaller weapons and you won't retaliate because you are not going to trade a four megaton city killer with a nuclear weapon that took an artillery battalion off the battlefield, is that right?

General COTTON. There is a potential for that, exactly.

Senator COTTON. Yes. Totally unconstrained—and Russia is totally unconstrained in building this and using them if they choose under arms control treaties. How many arms control treaties do we have with communist China?

General COTTON. Zero.

Senator COTTON. Zero. So China is not constrained at all in building every kind of nuclear weapon it wants. In fact, it is on a crash course, especially in building missile fields in China. Is that correct?

General COTTON. That is correct.

Senator COTTON. What do you think China's appetite is to enter some nuclear arms control agreement, say, like the New START treaty?

General COTTON. I would hope they would want to come to the table, but my first comment stands.

Senator COTTON. They haven't. Yes, so hope is not a strategy and they haven't manifested much desire to come to the table. Even if they did, do you think China would ever accept an arms control agreement that left them with fewer warheads and delivery systems than either Russia or the United States had?

General COTTON. No, that I couldn't answer.

Senator COTTON. I mean, if I were the leader of China, I don't think I would accept that, and if you did assume that let's say China accepted some constraint like the New START treaty, that would mean by definition that China and Russia together had significant overmatch against the United States in warheads and delivery systems.

So I just think that the idea that we are restraining ourself from building the nuclear forces that we need to deter both Russia and China is the height of folly. I know you are not responsible for that,

but I think your question—your answers here have illuminated. General Dickinson, I want to turn to you.

I have a question about the commercial integration cell. I think as the security environment has grown more complex, it is necessary for our military to work with partner to share information—partners in industry to share information and collaborate on new capabilities.

You have led the way with your commercial integration cell. Could you just discuss the status of that cell, and the successes you have had, and the lessons you have learned that we might buildupon, especially in the other combatant commands.

General DICKINSON. Senator, that is a bright spot within the command. Over the last three and a half years, we have taken our relationships with commercial industry and have expanded it.

We have actually had such a bow wave, of commercial companies wanting to come participate with us and be part of the team. We actually had to rewrite our strategy so we would have the appropriate framework in order to onboard commercial companies that want to be part of the Command. They perform two primary functions within the Command from a commercial perspective.

One is satellite communications, and the other one is space domain awareness. So currently we have got ten partners, commercial partners out at Vandenberg Space Force Base, traditional satcom type of capabilities that they provide to us. In Colorado Springs, we have what we call the Joint Task Force Space Defense commercial operation cell.

They are a group of contractors that provide space domain awareness, telescopes, radars that can look deep into space and report back to us what they see. That has actually been a very promising enterprise there as we continue to grow that. That is actually where we have actually had a lot of growth with our allies and partners.

So, our allies and partners around the world want to participate in that particular space domain awareness function. What is good about that particular capability is it is unclassified. So, our obstacles to classification barriers, etcetera, we don't see that with that particular cell.

It is growing. We are getting more and more partners, and allies and partners as well as commercial companies. We actually exercise that capability during an exercise we call Global Sentinel, which actually has 24 of our partners and allies around the world that participate in that.

We go through various scenarios on space debris mitigation, but it is growing and we have got interest in the allies and partners to participate and contribute more to it.

Senator COTTON. Okay. Thank you. Gentlemen, thank you both for your service, and thanks to you and all the troops who serve in your commands. What you do is deadly serious business.

Chairman REED. Thank you very much, Senator Cotton. We will adjourn the open hearing and reconvene in SVC–217, and let's say in 15 minutes, so give everybody a chance to rest and recuperate. Also, we have to vote. With that, the open portion of the hearing is adjourned.

[Whereupon, at 11:37 a.m., the Committee adjourned.]

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JEANNE SHAHEEN

NUCLEAR MODERNIZATION

1. Senator SHAHEEN. General Cotton, a January 2023 GAO report expressed concerns with the lack of a scheduled risk analysis for the Navy's *Columbia*-class ballistic missile submarine (SSBN) program. Is it your understanding that this analysis will be performed and what role would STRATCOM's equities be represented in addition to the Navy's?

General COTTON. Defer to the Navy for specific *Columbia* programmatic schedule risk issues. United States Strategic Command (USSTRATCOM) is following the *Columbia's* construction status very closely, and routinely engages the Navy on risk mitigation efforts and challenges to meeting *Columbia's* delivery schedule. If *Columbia* experiences a delay, there is a moderate risk the Navy will be unable to meet USSTRATCOM's SSBN at-sea requirements for a period of time during the *Ohio* to *Columbia* transition in the 2030's.

2. Senator SHAHEEN. General Cotton, can you provide an update on the expected timeline for the *Columbia*-class ballistic missile submarine program?

General COTTON. Defer to the Navy for specific programmatic timeline issues. As I understand, the Navy is pursuing an accelerated 78-month hull construction schedule. Current construction progress, while behind this 78-month accelerated schedule, is still ahead of the 84-month threshold schedule. I anticipate the Navy will meet *Columbia's* first operational deployment of calendar year 2031.

3. Senator SHAHEEN. General Cotton, if delays to the program are anticipated, what do you understand are the causes of the delays and how is USSTRATCOM prepared to address the delay to maintain a reliable nuclear deterrent?

General COTTON. Defer to the Navy for specific programmatic issues. I have established a Nuclear Recapitalization and Transition Cross-Functional Team to assess and identify options to reduce the risks associated with the Triad and nuclear command, control, and communications (NC3) modernization transition. USSTRATCOM will continue to work with the Services to mitigate operational impacts resulting from possible timeline delays. Potential mitigation measures include multiple independently targetable re-entry vehicles on intercontinental ballistic missiles (ICBMs) and/or extending select *Ohio*-class submarines for an additional 36 months through Pre-Inactivation Restricted Availabilities (PIRAs). PIRA should be seen as an opportunity to extend select candidate *Ohio*-class hulls if there are delays in *Columbia* fielding.

USSPACECOM BASING

4. Senator SHAHEEN. General Dickinson, has USSPACECOM been successfully achieving hiring milestones for the command's civilian hiring process?

General DICKINSON. U.S. Space Command (USSPACECOM) headquarters grew from 137 funded civilian positions in fiscal year 2021 to 681 funded civilian positions in fiscal year 2023. Currently, 417 civilian positions in the headquarters are filled, or 61 percent. We have 103 hiring actions in work that will be completed in the next 6 weeks, yielding 520 in place (76 percent) with 4 months left in the current fiscal year. The lack of a final basing decision has caused some individuals to turn down job offers, and the command has a 5 percent civilian attrition rate over the last 12 months due to people leaving for other positions in the Colorado Springs area.

5. Senator SHAHEEN. General Dickinson, do you expect a USSPACECOM Headquarters basing move from Colorado Springs, Colorado to Huntsville, Alabama to pose a challenge to USSPACECOM's ability to effectively meet civilian workforce hiring needs?

General DICKINSON. Once a final decision is made, I anticipate no shortage of qualified civilian or contractor employees wherever the headquarters is based. If the decision is to relocate, then we will be smart and deliberate about the process to avoid the potential and/or mitigate the impact of an involuntary separation of civilian personnel.

6. Senator SHAHEEN. General Dickinson, does the existing workforce in Huntsville have capabilities needed to support a basing Headquarters move?

General DICKINSON. I believe it does. Given the large science, technology, engineering, and math (STEM) base in Huntsville, I anticipate no shortage of qualified civilian or contractor employees in Huntsville.

QUESTIONS SUBMITTED BY SENATOR ELIZABETH A. WARREN

FUTURE USE OF UNFUNDED PRIORITIES LISTS (UPLS)

7. Senator WARREN. General Cotton and Dickinson, do you agree that if funding is needed for a project, it should be a part of the command/service budget?

General COTTON. Yes. USSTRATCOM works with the Department of Defense (DOD) to identify priorities for inclusion into the annual budget process.

General DICKINSON. The President's Budget represents the highest Department of Defense (DOD) priorities and includes many of my own priorities. However, the need to fund critical investments in other domains meant several space priorities fell below the cutline, and it is my duty to communicate what space capabilities are delayed or at risk due to insufficient resourcing. Space currently represents a small fraction of the defense budget—easily overshadowed by the budgets of the other services, but all the services, our Allies, partners, and the civilian sector rely on space. This dependency is irreversible, and our adversaries are fully aware of this reliance on space. Space is critical to operations globally, demonstrated by the strong overlap with ADM Aquilino's U.S. Indo-Pacific Command UPL. These investments in space will also benefit our partners in Europe, Africa, the Middle East, and the Americas.

8. Senator WARREN. General Cotton and Dickinson, historically, have previous UPL items been included in the following year's base budget? Have UPL items from fiscal year 2023 been included in the fiscal year 2024 base budget? If yes, please provide detail including the requested item, funding amount, and vendor executing the effort. If no, why not?

General COTTON. USSTRATCOM did not submit a specific UPL item for fiscal year 2023.

General DICKINSON. USSPACECOM's fiscal year 2023 UPL requests were included in the fiscal year 2024 base budget.

Fiscal year 2023 UPL items included in fiscal year 2024 budget (executing vendors TBD): National Space Defense Center Service Responsibilities:

FISCAL YEAR 2023 UPL ITEMS INCLUDED IN FISCAL YEAR 2024 BUDGET (EXECUTING VENDORS TBD):

National Space Defense Center Service Responsibilities:

APPN ($ K)	Fiscal Year 2023 UPL	Fiscal Year 2024	Fiscal Year 2025	Fiscal Year 2026	Fiscal Year 2027	Fiscal Year 2028	FYDP
O&M	$36,900	$14,872	$15,385	$15,897	$16,410	$17,436	$80,000

Consolidated Space Operation Facility Fit-out:

APPN ($ K)	Fiscal Year 2023 UPL	Fiscal Year 2024	Fiscal Year 2025	Fiscal Year 2026	Fiscal Year 2027	Fiscal Year 2028	FYDP
O&M	$19,200	$12,964	$12,610	$11,761	$11,136	$17,635	$66,106
Proc	$9,400	$26,994	$79,529	$28,017	$7,530	$2,547	$144,617

9. Senator WARREN. General Cotton and Dickinson, do you agree that Federal agencies have to make tough decisions in regards to their priorities and budget?

General COTTON. Yes. However, changes in the strategic environment may drive emerging requirements outside of the normal budget cycle. In this case, the DOD would need to assess the requirement and determine if additional funding is required.

General DICKINSON. My ability to conduct operations in space are directly linked to the readiness of forces presented to USSPACECOM by the Service Chiefs and

other agencies. We acknowledge Service and Agency Chiefs must balance manpower, facilities, and weapon systems readiness with fiscal responsibility. I commit to being a good steward of the forces presented to me and will execute my responsibilities in the space domain.

INFORMATION ON UPLS

10. Senator WARREN. General Cotton and Dickinson, what was the cost of putting together this wish list?

General COTTON. The estimated cost of this report for the DOD is approximately $6,400 in DOD labor. The USSTRATCOM UPL was developed and submitted in accordance with existing law, and the anticipated workload is planned as part of our normal business operations and program prioritization process.

General DICKINSON. There were no additional costs to complete the USSPACECOM UPL beyond the personnel time devoted to this effort.

For each item on the unfunded priorities list you submit in response to 10 U.S.C. 222a, please provide the following information:

11. Senator WARREN. General Cotton and Dickinson, what is the description of this UPL?

General COTTON. USSTRATCOM submitted two unfunded priority items for fiscal year 2024 related to NC3: Enhanced Polar System—Recapitalization (EPS-R) Strategic Capability and a classified program. Please see classified response for additional information.

General DICKINSON. [Deleted.]

12. Senator WARREN. General Cotton and Dickinson, what does the UPL purchase? (Include all end items with quantities, contractor FTEs, etc.)

General COTTON. [Deleted.]

General DICKINSON. [Deleted.]

13. Senator WARREN. General Cotton and Dickinson, what specific capability will the UPL provide?

General COTTON. [Deleted.]

General DICKINSON. [Deleted.]

14. Senator WARREN. General Cotton and Dickinson, what gap will this fill that is not in the base budget?

General COTTON. [Deleted.]

General DICKINSON. [Deleted.]

15. Senator WARREN. General Cotton and Dickinson, how will this capability support objectives outlined in current National Security, Military, and Defense Strategy documents?

General COTTON. If funded, both USSTRATCOM UPL items will support NC3 modernization, which enhances strategic deterrence.

General DICKINSON. [Deleted.]

16. Senator WARREN. General Cotton and Dickinson, what is the operational requirement? How does this UPL support current or future operations?

General COTTON. The operational requirement is to provide assured command, control, and communications to nuclear forces. Both capabilities expand and modernize our ability to execute, terminate, and recall nuclear forces.

General DICKINSON. [Deleted.]

17. Senator WARREN. General Cotton and Dickinson, what is the operational impact if this UPL is not funded in fiscal year 2024?

General COTTON. [Deleted.]

General DICKINSON. [Deleted.]

18. Senator WARREN. General Cotton and Dickinson, are there plans to include this item in the fiscal year 2025 base budget?

General COTTON. United States Space Force (USSF) and the United States Navy (USN) are responsible for funding these programs. Based on requirements, USSTRATCOM is aggressively advocating for these UPL item capabilities in their ongoing fiscal year 2025 budget discussions.

General DICKINSON. [Deleted.]

19. Senator WARREN. General Cotton and Dickinson, why was this UPL not included in the fiscal year 2024 President's Budget submission?

General COTTON. As the Commander of USSTRATCOM, it is my responsibility to set requirements for the capabilities we need; however, the Department must balance requirements across the joint force with finite resources. The final list of what is included in the fiscal year 2024 budget is ultimately determined by the President and is then transmitted to the Department via the Office of Management and Budget.

General DICKINSON. [Deleted.]

20. Senator WARREN. General Cotton and Dickinson, what is the name of the vendor(s) executing this effort? Sub-vendor(s)?

General COTTON. As the Commander of USSTRATCOM, I have no acquisition authorities.

Raytheon is the vendor that would support the EPS-R Strategic Capability. Defer to USSF for specific vendor questions.

The classified UPL item is not yet a program of record and is currently managed by the USN. Defer to USN for specific vendor questions.

General DICKINSON. [Deleted.]

21. Senator WARREN. General Cotton and Dickinson, how often has your command met with the vendor executing this effort?

General COTTON. As the Commander of USSTRATCOM, I have no acquisition authorities. However, Command subject matter experts may attend program meetings sponsored by USSF related to the EPS-R Strategic Capability UPL item, at which vendor representatives may be present. Defer to USSF for additional information.

General DICKINSON. USSPACECOM works with Program Offices for program information and does not meet directly with vendors to discuss programmatic details. Information on vendor relationships is provided from the perspective of the Program Office and is contained in the classified annex.

22. Senator WARREN. General Cotton and Dickinson, what is your relationship history with this vendor?

General COTTON. As the Commander of USSTRATCOM, I have no acquisition authorities. It is my responsibility to set requirements for the capabilities we need; however, I depend on the Services to execute acquisition authorities to deliver these capabilities.

Over the course of my career, I have likely interacted with Raytheon or its subsidiaries on a number of DOD programs as part of my official duties. As the Commander of USSTRATCOM, I have not had any relationship with Raytheon regarding EPS-R Strategic Capability.

The classified UPL item is not yet a program of record and is currently managed by the USN. Defer to USN for specific vendor questions.

General DICKINSON. USSPACECOM works with Program Offices for program information and does not meet directly with vendors to discuss programmatic details. Information on vendor relationships is provided from the perspective of the Program Office and is contained in the classified annex.

23. Senator WARREN. General Cotton and Dickinson, has anyone who formerly worked for your command represented the vendor in meetings? What is their name, what was their position, and when did you meet with them?

General COTTON. USSTRATCOM does not formally track whether anyone who formerly worked for the Command has represented a vendor in meetings related to EPS-R Strategic Capability conducted by program offices that are not part of USSTRATCOM. To date, we have not received inquiries from a contracting officer within the program offices noting concerns related to the representational activities of former USSTRATCOM personnel in the context of the EPS-R Strategic Capability. USSTRATCOM has a robust ethics training program to help current and departing employees understand post-government employment rules, financial conflicts of interests, and rules regarding meetings with industry. USSTRATCOM attorneys routinely provide ethics counsel to current and former employees about these matters.

The classified UPL item is not yet a program of record and is currently managed by the USN. Defer to USN for specific vendor questions.

General DICKINSON. USSPACECOM works with Program Offices for program information and does not meet directly with vendors to discuss programmatic details. Information on vendor relationships is provided from the perspective of the Program Office and is contained in the classified annex.

24. Senator WARREN. General Cotton and Dickinson, in which city/State will the UPL be executed?
General COTTON. Defer to the USSF and USN.
General DICKINSON. [Deleted.]

25. Senator WARREN. General Cotton and Dickinson, is this requirement on an existing contract? If so, with who? What is the history of the contract?
General COTTON. Defer to the USSF and USN.
General DICKINSON. [Deleted.]

26. Senator WARREN. General Cotton and Dickinson, what is the anticipated contract award date if the UPL receives funding?
General COTTON. Defer to the USSF and USN.
General DICKINSON. [Deleted.]

27. Senator WARREN. General Cotton and Dickinson, what funding lines are associated with this UPL?
General COTTON. The research, development, testing, and evaluation (RDT&E) funding line for EPS-R Strategic Capability is 1206432SF.
For the classified UPL item, there are two funding lines: (1) RDT&E line 0604280N and (2) Other Procurement, Navy funding lines 0742 and 3130.
General DICKINSON. [Deleted.]

28. Senator WARREN. General Cotton and Dickinson, if multiple appropriations fund this requirement, must all appropriations be funded simultaneously to source this requirement, or can each appropriation stand on its own to fund a portion of the requirement?
General COTTON. All appropriations must be funded simultaneously to complete the capability.
General DICKINSON. [Deleted.]

29. Senator WARREN. General Cotton and Dickinson, how much was enacted and obligated (or expended for RDT&E) in fiscal year 2022 to 2023 for this requirement?
General COTTON. Defer to the USSF and USN.
General DICKINSON. [Deleted.]

30. Senator WARREN. General Cotton and Dickinson, how much was requested in fiscal year 2024 for this requirement?
General COTTON. The USSTRATCOM fiscal year 2024 UPL requested $17.9 million for EPS-R Strategic Capability, and $28.3 million for the classified item.
General DICKINSON. [Deleted.]

31. Senator WARREN. General Cotton and Dickinson, is there a tail associated with this UPL?
General COTTON. Yes.
General DICKINSON. [Deleted.]

32. Senator WARREN. General Cotton and Dickinson, is any tail funded in the future years defense plan?
General COTTON. No.
General DICKINSON. [Deleted.]

33. Senator WARREN. General Cotton and Dickinson, please describe how much the requirement will cost per year for the next 5 years.
General COTTON. Please see table below.

Program Name	Fiscal Year 2024 ($ millions)	Fiscal Year 2025 ($ millions)	Fiscal Year 2026 ($ millions)	Fiscal Year 2027 ($ millions)	Fiscal Year 2028 ($ millions)	Fiscal Year Defense Plan Total ($ millions)
EPS-R Strategic Capability	$17.9	$33.3	$21.9	$7.4	$0.0	$80.5
Classified Item	$28.3	$119.7	$140.1	$146.1	$135.6	$569.8

General DICKINSON. [Deleted.]

34. Senator WARREN. General Cotton and Dickinson, please provide in detail the previous funding requests and enacted for this requirement, including if it was in the base budget or UPL.

General COTTON. USSTRATCOM has not submitted either item in a previous UPL request. Defer to the USSF and USN for base budget details.

EPS-R Strategic Capability UPL item request leverages an existing program. No previous budget—request exists for this particular UPL item issue. Please see classified response for additional information.

The fiscal year 2023 budget provided $20.0 million in RDT&E funding to develop and test the classified UPL item.

General DICKINSON. [Deleted.]

35. Senator WARREN. General Cotton and Dickinson, if the requirement is not included in the future years defense plan, will that be rectified in the next Program Objective Memorandum or the Program, Planning, Budget, and Execution (PPBE) cycle?

General COTTON. This will be determined during future DOD budget deliberations.

General DICKINSON. [Deleted.]

36. Senator WARREN. General Cotton and Dickinson, please provide photos of this requirement for visual aid.

General COTTON. EPS-R Strategic Capability

Figure 1: (U) Family of Advanced Beyond Line-of-Sight Terminal

No picture available for the classified UPL item.

General DICKINSON. [Deleted.]

QUESTIONS SUBMITTED BY SENATOR JOE MANCHIN III

ARTIFICIAL INTELLIGENCE

37. Senator MANCHIN. General Cotton, how are novel technologies like artificial intelligence, unmanned systems, hypersonic, cyber, and space-related systems changing the worldwide nuclear risk environment? How is the growing prevalence of these technologies affect U.S. nuclear strategy, deterrence, and R&D?

General COTTON. Novel technologies challenge our traditional warning paradigms, constrain our decision space, and present a risk of strategic surprise. Our adversaries are making large investments in these areas because they know that it can create unique challenges for the United States and its Allies. As the ubiquity of data and speed of decisionmaking continue to increase, Allies and adversaries alike could feel pressure to delegate key decisionmaking functions to machines, which could produce unpredictable results if systems are not appropriately designed, tested, and used. An adversary who devises an unanticipated means of threatening our strategic capabilities or our homeland may lose its incentive for restraint and become emboldened to act in a future crisis or conflict. While the risk of miscalculation has been a concern of strategic conflict since the beginning of the nuclear age, the rapid evolution and application of novel technologies over the coming decades could increase that risk. DOD has been a leader in trying to ensure novel technologies do not undermine strategic stability. For example, in February the United States announced a Political Declaration on the Responsible Use of Artificial Intelligence in

the Military Domain that creates strong norms surrounding the development and use of AI and autonomy in all military systems. It reiterates the commitment we publicized in our Nuclear Posture Review to have a human "in the loop" for all actions critical to informing and executing decisions by the President to initiate and terminate nuclear weapon employment.

The fundamentals of deterrence have not changed, and our tailored approach remains sound. We will deter though safe, secure, and effective nuclear forces enabling country-specific strategies and plans, extended deterrence commitments, and an integrated deterrence approach incorporating suitable non-nuclear capabilities tailored to specific threat scenarios.

As our Allies and adversaries invest in these novel technologies, so must we. The National Defense Strategy states the Department will support innovation and fuel R&D for advanced capabilities, such as directed energy, hypersonics, and cyber, as well as seed opportunities to include biotechnology, quantum science, and advanced materials. DOD will follow market forces driving military-relevant capabilities (e.g., artificial intelligence, microelectronics, space) and continue to develop operational models that expand U.S. options and constrain those of potential adversaries. Furthermore, the Department will explore employment concepts, integrate new technologies, experiment with creative applications, and share, as appropriate, asymmetric capabilities with Allies and partners.

FOREIGN INTELLIGENCE SURVEILLANCE ACT (FISA)

38. Senator MANCHIN. General Dickinson, I understand that SPACECOM is developing a series of contingency plans for protecting the U.S. and allied satellites and tasking the intelligence community for an increased emphasis on foreign space intentions, especially by Russia and China. This year, Title VII of the Foreign Intelligence Surveillance Act (FISA) will be up for reauthorization. Title VII established procedures governing the targeting, for intelligence-gathering purposes-of non-U.S. persons located abroad. They also established statutory and procedural protections regarding surveillance of U.S. persons located outside the United States. What impact would a failure to reauthorize Title VII have in SPACECOM's collection requirements for the IC on collection against foreign space intentions?

General DICKINSON. Section 702 allows the Intelligence community to collect the communications of many of our most critical foreign intelligence targets located outside of the United States who use U.S. infrastructure and services to communicate. It has helped us to understand the strategic intentions of the foreign governments we are most interested in, like the People's Republic of China, Russia, Iran, and North Korea. This authority is vital to keeping the Nation safe and I urge Congress to re-authorize Section 702 prior to it lapsing this coming December.

39. Senator MANCHIN. General Cotton, it is my understanding that China's nuclear force, while still smaller in size compared to the U.S., is modernizing and expanding faster than any other country. Also, China appears to be pursuing other potentially destabilizing systems, such as a nuclear-capable hypersonic fractional orbital bombardment capability. What role does intelligence play in helping us understand China's capabilities and how does Title VII play a role in enabling us to closely assess China's nuclear force structure and posture?

General COTTON. [Deleted.]

SPACE DOMAIN AWARENESS

40. Senator MANCHIN. General Dickinson, you mentioned utilizing civilian assets for space domain awareness. Can you confirm SPACECOM is utilizing the Green Bank Telescope for this purpose, and if so how has this asset performed for so far?

General DICKINSON. USSPACECOM has used the Green Bank Telescope to support space tracking efforts. A contract is not currently in place for further use; however, the Telescope has proven valuable to the space domain awareness mission. The command is in contact with the Green Bank Telescope for future space tracking discussions.

QUESTIONS SUBMITTED BY SENATOR JACKY S. ROSEN

STEM OUTREACH PROGRAMS

41. Senator ROSEN. General Cotton and General Dickinson, what are STRATCOM and SPACECOM's current STEM outreach efforts, particularly in cybersecurity, and how do you plan to grow them to keep up with the defense workforce needs of the future?

General COTTON. STEM talent is in high demand across the country. My human capital team leads several initiatives to include innovative hiring practices and a robust intern program to attract talent for our important mission. USSTRATCOM is considering adopting Cyber Excepted Service, a personnel framework that allows added flexibility in hiring and compensation to attract and retain top cyber talent. Similarly, we have a legislative proposal to obtain Acquisition Demo authority. If approved, this authority would provide simplified job classification, streamlined hiring processes, and pay flexibilities. Our Joint Warfare Analysis Center uses its designation as a "lab demo" to compete for talent in the National Capital Region with pay flexibility, a laboratory bonus program, and expedited hiring practices that reduce hiring times by 84 percent.

Not only does USSTRATCOM compete for proven talent, we expanded our STEM opportunities for college students through multiple internship programs. Several of our previous internships have led to full-time positions for young, innovative talent, giving us the opportunity to grow top talent from the ground up.

From an outreach perspective, my technology leaders have pushed hard to highlight the important work we're doing and the need for industry and academia to be a part of our future success. We published our science and technology top issues to academia, national laboratories, and industry, leading to a highly productive industry day with some of the top minds in the business looking for innovative solutions to our toughest challenges. Through the Services, we pursue opportunities to advance the use of artificial intelligence and machine learning to accelerate our ability to analyze the risk of strategic deterrence failure and more quickly leverage changes in adversary force posture. We continue to seek methods to improve our decision advantage through cutting-edge technologies and a talented workforce that can lead the way.

We have a collaborative relationship with a number of research entities comprised of universities, federally funded research and development centers, and national laboratories through the Department of Energy. As an example, we work with the University of Nebraska to identify innovative possibilities that can accelerate advancements in NC3 and cybersecurity. Through my strategic engagement process, I personally support inspiring the next generation of strategic force leaders who will need strong STEM skills to oversee modernization of the Triad, and my staff is active in many off-base organizations that promote STEM.

General DICKINSON. People are the most important part of any organization, and we are recruiting from the broadest talent pool available to enable the strategic advantages derived from diversity of thought and perspective. Our command partnering with National Security Space Institute, U.S. Space Force's Space Training and Readiness Command, and other space training stakeholders. These partnerships help develop a Command Cyber Workforce training pipeline in accordance with DOD Manual 8140.03 Cyberspace Workforce Qualification and Management Program guidance. Similarly, my team recently stood up USSPACECOM's Academic Engagement Enterprise, akin to U.S. Cyber Command's Academic Engagement Network, this enterprise will enhance workforce professionalization through participation in space and STEM academic programs and increase space applied research and innovation through university partnerships. To date we have 20 member institutions, including Tier–1 research universities like the University of Arizona, the University of Colorado-Boulder, Georgia Tech, and Purdue University.

QUESTIONS SUBMITTED BY SENATOR MARK E. KELLY

SPACE-QUALIFIED TRAVELING WAVE TUBES (TWTS) AND TRAVELING WAVE TUBE AMPLIFIERS (TWTAS)

42. Senator KELLY. General Dickinson, the Administration's "Space Priorities Framework" set a strategic goal of making sure our domestic space industrial base is secure by strengthening the supply chains it supports. Over the last few years, the DOD has found that the U.S. domestic industrial base for a key satellite component is insufficient. Those components are called space-qualified Traveling Wave Tubes (TWTs) and Traveling Wave Tube Amplifiers (TWTAs). They are highly engineered components and are critical to many essential national security, civilian, and game-changing commercial satellites. While China has greatly expanded its ability to produce these components, in the West only two companies produce them. One is a small American company, and the other is a much larger foreign provider that is heavily subsidized by its government. This prevents the American company from competing for opportunities, and impedes the development of a broader United States domestic industrial base for these components—creating supply chain risk.

Last year, to help establish a globally competitive U.S. domestic source for next-generation, space-qualified tubes and amplifiers, I introduced an amendment to the NDAA that would leverage the National Technology & Industrial Base (NTIB)—a construct that Congress developed precisely for reasons like this. Despite support from the Defense Department, process hurdles prevented us from adopting it. Do you agree that establishing a globally competitive U.S. domestic source for next-generation, high-powered, space-qualified traveling wave tubes and amplifiers is necessary for the DOD to obtain these critical components at high quality, on time, and at a reasonable price?

General DICKINSON. Obtaining high quality critical space components on time is necessary to maintaining a resilient space architecture. Whether critical components are sourced domestically or through our closely aligned Allies and partners, timely and affordable acquisition is essential to the development and integration of space capabilities. While domestically sourced components can reduce both timelines and costs, expanding critical component access by leveraging our international Allies also adds to our Nation's supply chain resiliency.

43. Senator KELLY. General Dickinson-do you agree Congress can be a partner in supporting DOD's access to a strong supply chain?

General DICKINSON. Supply chain strength and security are critical pieces of ensuring the resilience of future space architectures. We support all efforts by Congress and the services in acquiring those capabilities and working with industry to ensure the security of our supply chain. The ingenuity of America's space industry is one of our greatest strengths, and we should take the necessary steps to secure it.

SPACE FORCE NATIONAL GUARD

44. Senator KELLY. General Dickinson, how many Air National Guard Space Professionals are currently deployed or on a status supporting Combatant Command Requirements?

General DICKINSON. There are 34 Air National Guard members on long-term Active Duty for Operational Support (ADOS) orders with Headquarters, USSPACECOM, 16 of whom are Space Professionals. USSPACECOM currently employs 109 total Guard and Reserve Joint servicemembers on ADOS orders to effectively meet the command's requirements. The Air National Guard has 11 organizations with a total of 729 authorizations performing mission support for USSPACECOM. Currently, there are 17 Space Professional Guardsmen deployed overseas in direct support of USSPACECOM missions.

45. Senator KELLY. General Dickinson, what would be the mission impacts if you did not have Air National Guard Space Professionals supporting Combatant Command Requirements?

General DICKINSON. Active, Guard, and Reserve components bring important capabilities to bear in defense of the Nation. All USSPACECOM missions are inherently Federal missions, so forces presented to us come to us as Title 10 forces. From my perspective as the commander operationally employing those forces, it is transparent to me whether any particular servicemember comes to us as an Active Duty member, as a Title 10 reservist, or as a Guardsman mobilized to Title 10. At USSPACECOM, they are all Title 10 space professionals. I defer to the services and the department on how best they organize the components that present forces to USSPACECOM.

QUESTIONS SUBMITTED BY SENATOR JONI K. ERNST

DETERRENCE POSTURE

46. Senator ERNST. General Cotton, in a post-New START environment, should the United States prepare to upload its non-deployed nuclear weapons to shore up deterrence? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General COTTON. The 2022 Nuclear Posture Review (NPR) recognizes that, depending on the security environment, changes in U.S. strategy and force posture may be required to sustain the ability to achieve deterrence, assurance, and employment objectives. As the strategic environment changes, we must continue to reexamine our strategy and force posture to ensure the Triad and related capabilities are appropriately configured.

We must sustain and modernize the Triad, NC3, and infrastructure (to include our forward-deployed stockpile and North Atlantic Treaty Organization dual-capable aircraft). We must maintain a viable, flexible, and full-spectrum strategic deterrent that paces the threat and is able to respond to changes in the security environment.

47. Senator ERNST. General Cotton, how quickly can the United States upload each leg of the Triad? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General COTTON. [Deleted.]

48. Senator ERNST. General Cotton, are there policies or regulations related to how quickly the United States can upload each leg of the Triad? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General COTTON. The 2022 NPR states that while we retain the capability to upload a portion of the ICBM force, we continue to configure these missiles with only one warhead day-to-day. The NPR also affirms that we will field and maintain strategic nuclear delivery systems and deployed weapons in compliance with New START. Beyond this, there are no policies or regulations limiting our ability to upload weapons on any leg of the Triad, as long as the aggregate totals do not exceed the New START central limits.

49. Senator ERNST. General Cotton, in your personal opinion, in general, would placing a portion of the bomber force in heightened alert statuses increase its flexibility? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General COTTON. Absent a crisis or conflict, no. The cost of placing a portion of the bomber force into a heightened alert status decreases overall readiness with marginal increase in responsiveness/survivability. Any long-term heightened alert status would drive significant costs, stretching the maintenance force and air crews to unsustainable limits. Additionally, based on the current force structure, ongoing modernization efforts, and the integrated deterrence strategy of the United States, placing bombers on alert would actually decrease overall flexibility as it limits my ability to support other operations across the spectrum of competition. The Department, in conjunction with the intelligence community, will continue to fully exploit the indications and warning network to ensure the Nation can flex and respond to any crisis in a timely and decisively manner.

Please see classified response for additional information.

50. Senator ERNST. General Cotton, in your verbal testimony, you said you could increase the bomber force's flexibility without adjusting alert statuses; what other measures would you use to increase the flexibility of the bomber force? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General COTTON. Measures to increase the flexibility of the bomber force without adjusting alert status include: increasing the number of B–2 and B–52 crews to increase operational flexibility; increasing the number of available tankers; and increasing forward-based maintenance capability to support persistent and episodic global presence while retaining the ability to increase nuclear readiness.

51. Senator ERNST. General Cotton, in your personal opinion, in general, would forward stationing dual capable aircraft increase the flexibility of the nuclear deterrent? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General COTTON. These actions could offer an increase in flexibility. More detailed research across multiple departments is necessary to weigh the gains in flexibility against impacts to strategic stability and financial costs to the DOD (in aircraft, required supporting infrastructure, etc.).

52. Senator ERNST. General Cotton, in your personal opinion, in general, would moving some of the ICBM force to mobile platforms increase survivability? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General COTTON. This type of analysis was conducted previously and resulted in a decision to pursue the silo-based Sentinel system.

However, a mobile capability could potentially increase ICBM survivability. We must take a holistic perspective regarding how the survivability of the system may

evolve over its lifetime and then balance those findings against the operational concept and associated costs to make an informed decision.

53. Senator ERNST. General Cotton, in your personal opinion, in general, would deploying SLCM-N expand our at-sea deterrent? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General COTTON. A low-yield, non-ballistic nuclear capability to deter, assure, and respond without visible generation (similar to the characteristics of SLCM-N) offers additional options and supports an integrated deterrence approach. It is one of several possible nuclear or conventional capabilities the U.S. could develop to enhance strategic deterrence. I support funding to assess the full range of possible options to address this challenge in a rapidly changing security environment with the backdrop of multiple nuclear adversaries.

54. Senator ERNST. General Cotton, in your personal opinion, in general, would deploying ground-based, theater-range nuclear forces bolster our deterrent? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General COTTON. I am currently satisfied with U.S. strategy and capabilities with respect to forward-deployed nuclear forces on Allied territory. As the strategic environment changes, we must continue to reexamine our strategy and force posture to ensure the Triad and related capabilities are appropriately configured.

55. Senator ERNST. General Cotton, in your personal opinion, would you recommend retaining the B83, at least until identifying a capability that meets requirements for hard and deeply buried targets?

General COTTON. I support retaining the B83–1 as stipulated in the Fiscal Year 2023 National Defense Authorization Act (NDAA) until a suitable replacement capability for defeating hard and deeply buried targets (HDBTs) can be identified. We can maintain the B83–1 for a few years; however, when the B–2 retires, it will no longer have a delivery platform. My staff is participating in the Department's response to the Fiscal Year 2023 NDAA mandated HDBT study, which will examine the full range of capabilities required to counter HDBTs. We look forward to the results.

SCLM-N

56. Senator ERNST. General Cotton, the 2018 NPR started an Analysis of Alternatives for the SLCM-N. Could you describe that analysis and whether any alternatives fit military requirements better than SLMC-N? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General COTTON. The Navy completed an Analysis of Alternatives (AOA) and the Office of Cost Assessment and Program Evaluation determined the AOA was sufficient. I support any option that provides a low-yield, non-ballistic nuclear capability to deter, assure, and respond without visible generation.

Defer to the Navy for specific outcomes related to the SLCM-N AOA.

SPACE POLICY

57. Senator ERNST. General Dickinson, what are the current policies in place to identify what behaviors and actions in space constitute an act of war? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General DICKINSON. The issue of what constitutes an "act of war" in space is governed by international law, just as it is in every domain. Like cyberspace, space is a newly contested domain with few historical examples available to make such determinations. Article 2(4) of the United Nations Charter prohibits the use or threat of force against territorial integrity and political independence, except under certain circumstances like self-defense under Article 51 of the Charter. In the space domain, determinations of what constitutes an unlawful use of force can be difficult. This is primarily due to the unique nature of the space domain and associated challenges in developing situational awareness to identify actions and discern intent.

USSPACECOM is an active participant in supporting the Assistant Secretary of Defense for Space Policy and Department of State in establishing norms of responsible behaviors in Space. While not legally binding as rules under international law, the Secretary of Defense's Tenets of Responsible Behavior in Space and the recently released Tenet-Derived Responsible Behaviors are designed to help mitigate the risk

of miscalculation and improve communication and predictability. pace-faring nations could help to ensure the safety, security, and sustainability of the space domain.

58. Senator ERNST. General Dickinson, how can the United States improve policies to address behaviors and actions in space to determine acts of war?

General DICKINSON. First and foremost, adherence to the rule of law in outer space is paramount. The existing legal framework, notably, the Outer Space Treaty and the United Nations Charter, govern space-faring nations' activities in outer space and prohibit the unlawful use of force. The recently issued Department of Defense Tenets of Responsible Behavior for Outer Space and the United States' commitment to not conduct destructive direct ascent anti-satellite missile tests will help with determinations of acts of war in space.

USSPACECOM is working closely with the office of the Assistant Secretary of Defense for Space Policy to develop meaningful policy recommendations that support the establishment of norms and responsible behaviors, ensure the National Space Policy imperative to preserve space for peaceful use, and allow for flexible military employment within the domain, when necessary.

CAPABILITY REVELATION

59. Senator ERNST. General Dickinson, what is the framework by which the Department of Defense evaluates U.S. national security space capability revelations for deterrence?

General DICKINSON. The DOD or Administration determine the policy for when the United States reveals capabilities, including national security space capabilities, to deter our competitors.

USSPACECOM implements those policies at the right time and place to achieve strategic objectives.

60. Senator ERNST. General Dickinson, what is the process by which USSPACECOM executes declassification of certain U.S.

General DICKINSON. When the DOD or Administration make a policy decision to reveal a national security space capability, USSPACECOM will work with the original classification authority for the specified capability to declassify the information necessary to achieve the strategic objectives.

61. Senator ERNST. General Dickinson, where does the decision authority rest for declassification or revelation of certain U.S. national security space capabilities for deterrence?

General DICKINSON. The decision to reveal a certain U.S. national security space capability is a policy question and rests with the DOD or Administration. The decision to classify or declassify information related to the capabilities of a national security space asset rests with the original classification authority.

62. Senator ERNST. General Dickinson, how can the United States improve the declassification and revelation of certain U.S. national security space capabilities to deter aggressive adversary behavior?

General DICKINSON. As stated previously, the overall decision to reveal national security space capabilities rests with the DOD or Administration. The DOD and Administration synchronize these decisions with other strategic level choices to achieve deterrence and national goals.

QUESTIONS SUBMITTED BY SENATOR DAN S. SULLIVAN

B–52J

63. Senator SULLIVAN. General Cotton, what new capabilities will the Commercial Engine Replacement Program bring to the B–521 platform?

General COTTON. The Commercial Engine Replacement Program (CERP) engines will provide increased range, more endurance, approximately 30 percent better fuel efficiency, and will require far fewer maintenance hours. Along with new engines, CERP will replace associated subsystems, such as engine struts and nacelles, the electrical power generation system, and cockpit displays.

64. Senator SULLIVAN. General Cotton, will the B–521 be able to employ the entire Air Force inventory of anti-ship missiles?

General COTTON. Defer to the Air Force for specifics on ordnance load-out.

CHINESE NUCLEAR-CAPABLE BOMBERS AND SUBMARINES

65. Senator SULLIVAN. General Cotton, how are the PRC's investments in nuclear capable bombers and ballistic missile submarines impacting your approach to deterrence?

General COTTON. Per the NPR, our tailored strategy for China is that the United States will maintain a flexible deterrence strategy and force posture that continues to clearly convey to the People's Republic of China (PRC) that the United States will not be deterred from defending our Allies and partners, or coerced into terminating a conflict on unacceptable terms. We are addressing this challenge through integrated deterrence—which spans all domains and capabilities backstopped by a safe, secure, and effective nuclear deterrent.

This approach necessitates the modernization and sustainment of our nuclear forces, NC3, and weapons infrastructure, and this remains the Department's highest priority. The programmed modernization efforts are the minimum necessary to meet the Nation's global security challenges. Further, without proper sustainment of our legacy systems throughout the modernization period, our nuclear deterrent will degrade.

B–2 RETIREMENT TIMELINE

66. Senator SULLIVAN. General Cotton, is B–2 retirement tied to the complete delivery of the B–21 order?

General COTTON. Defer to the Air Force on planning for the B–2 retirement.

67. Senator SULLIVAN. General Cotton, if B–2 retirement is not tied to the complete delivery of the B–21 order, how may B–21s will be operational when the last B–2 is retired?

General COTTON. Defer to the Air Force on planning on B–2 to B–21 transition milestones.

SPACECOM DETECTION AND TRACKING CAPABILITIES

68. Senator SULLIVAN. General Dickinson, how are SPACECOM's detection and tracking capabilities changing to keep pace with adversary threats?

General DICKINSON. My number one operational priority is enhancing existing and advocating for new Space Domain Awareness capabilities allowing us to assess activities across the space domain. We are working through the Department's requirements processes to communicate our unique space domain awareness requirements that will allow us to monitor potential threats and provide the necessary time to take actions that protect our critical space assets. A key part of our strategy is working very closely with industry partners who are developing space domain awareness capabilities and leveraging their investments.

69. Senator SULLIVAN. General Dickinson, how can SPACECOM assets to identify objects, determine if they are threats like cruise or hypersonic missiles, and hedge against Chinese attempts to confuse ground-based missile defense radars?

General DICKINSON. Space Domain Awareness is my highest priority, and we have taken dramatic steps to improve our understanding of the domain and guard against advanced threats.

USSPACECOM is designated as the Global Sensor Manager for the DOD. In that role, we synchronize and prioritize sensors like space-based satellites and ground-based radars assigned to the command. To improve our coverage of advanced threats like cruise or hypersonic missiles, USSPACECOM developed a strategy to integrate non-traditional sensors, such as theater missile defense radars (e.g., AN/TPY–2), sea-based X-band radars, and Aegis afloat capabilities. Proliferating information sources and fusing those together cohesively is part of that strategy to provide timely, accurate, and decision quality information to the chain of command.

DEPARTMENT OF DEFENSE AUTHORIZATION REQUEST FOR APPROPRIATIONS FOR FISCAL YEAR 2024 AND THE FUTURE YEARS DEFENSE PROGRAM

THURSDAY, MARCH 16, 2023

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

UNITED STATES CENTRAL COMMAND AND UNITED STATES AFRICA COMMAND

The Committee met, pursuant to notice, at 9:29 a.m., in room G–50, Dirksen Senate Office Building, Senator Jack Reed (Chairman of the Committee) presiding.

Committee Members present: Senators Reed, Shahee, Gillibrand, Blumenthal, Hirono, Kaine, King, Warren, Peters, Rosen, Kelly, Wicker, Fischer, Cotton, Rounds, Ernst, Sullivan, Cramer, Scott, Tuberville, Mullin, Budd, and Schmitt.

OPENING STATEMENT OF SENATOR JACK REED

Chairman REED. Let me call the hearing to order. Good morning, and the Committee meets today to receive testimony from General Michael Eric Kurilla, Commander of the United States Central Command (CENTCOM), and General Michael Langley, Commander of United States Africa Command (AFRICOM).

Thank you both for your service, and I am grateful to the men and women serving under your command. While CENTCOM has many responsibilities, the top priority remains deterring the Iranian regime's destructive and destabilizing activities without undue provocation. This is a complicated and urgent mission.

Iran is conducting malign activities across multiple arenas, including continuing its own nuclear development, launching drone and missile attacks on neighboring States, supporting proxy groups, violently repressing its own citizens, and deepening a military alliance with Russia, and these threats are likely to increase.

In an unexpected turn, last week, Saudi Arabia and Iran announced they have restored diplomatic relations in a deal brokered by China. Press reports indicate the key parts of the agreement were a commitment by Iran to stop further attacks on Saudi Arabia and cut back on support for Iranian linked groups that have targeted the kingdom.

The two nations plan to reopen their embassies and reimplement a security pact to cooperate on several issues to benefit their mu-

tual national security. As The New York Times stated, the deal is, "a shift that left heads spinning in capitals around the globe."

General Kurilla, given the unpredictability of the Iranian regime, I would like your thoughts on how best to respond to its malign behavior in the region, taking into account the new dynamic of their restoration of relations with Saudi Arabia. What opportunities do we have to collaborate with our allies and partners to counter drone and missile attacks, and how can we address Iran's closer alignment with Russia and China?

Turning to Afghanistan, although we have transitioned all forces out of the country, the Biden administration has maintained its commitment to ensuring that Afghanistan cannot be used as a base for ISIS [Islamic State of Iraq and Syria], al Qaeda, or other terrorist groups to conduct attacks against the United States or its allies.

I would ask for an update on our posture and capabilities, and whether additional regional agreements have been reached to ensure we maintain a robust regional counterterrorism architecture to address the threat from these groups. General Langley, AFRICOM's area of responsibility (AOR) is becoming increasingly important in the United States strategic competition with China and Russia.

Many African countries have longstanding military ties with Russia and even deeper economic ties with China. As the United States manages relationships across the continent, we must be mindful of these preexisting ties and avoid taking a with us or against us approach, or we will risk alienating the very nations we seek to engage with.

I would welcome your thoughts on how best to calibrate the U.S. approach to strategic competition in light of these factors. The security situation in East Africa remains dangerously unstable. Since last fall, roughly 500 United States servicemembers have been redeployed to Somalia to support the Somali Government's fight against Al-Shabaab, one of al Qaeda's most powerful global affiliates.

Our renewed presence is an effort to stabilize the Somali Government and train their forces, after our departure in December 2020 allowed Al-Shabaab to grow in size and strength. I hope you will share your views on the status of our engagement with Somali partners and the whole-of-government strategy to ensure battlefield successes can be effectively translated into longer term gains.

Finally, the security situation in West Africa also continues to decline. Violent extremist operations have expanded across the Sahel, including pushing down into littoral states in the Gulf of Guinea. At the same time, Russia and China are seeking to increase their engagement in this region.

The Wagner Group continues to seek opportunities to exploit instability in the region, and China has made no secret about exploring basing operations on the West African coast. Both countries are also investing in natural resource extraction across the continent, often at great expense to the long-term health of African partners' ecosystems and economies.

Given these challenges, General Langley, I would like to hear how AFRICOM is seeking to engage with partners in Africa to ex-

pose these harmful and manipulative practices. I want to thank you again and look forward to your testimony.

As a reminder for my colleagues, there will be a closed session immediately following this hearing and room SVC–217. Now, let me turn to the Ranking Member, Senator Wicker.

STATEMENT OF SENATOR ROGER F. WICKER

Senator WICKER. Thank you, Mr. Chairman. I would like to thank our witnesses for being here. In recent weeks, the Committee has heard from top military and civilian leaders about the significant security challenges facing our Nation.

Our top adversaries, including China and Russia, are testing American resolve, not just in East Asia and Europe, but also across the Middle East, South Asia, and Africa. In the Middle East, Russia and Iran grow closer. Recently, Iran agreed to purchase 24 advanced Su–35 fighter jets. Today, Russia is deploying Iranian drones to kill Ukrainians.

Meanwhile, China works to displace the United States as the partner of choice for many of our longtime friends in the region. The Chinese Communist Party (CCP) offers more streamlined arms sales and Huawei 5G networks that would undermine our operational security in the Middle East. In Africa, the Russian mercenary group Wagner does—Wagner does Putin's bidding.

They sow instability across the continent by supporting coups and spreading lies. They use exploitative practices to get critical minerals. They pressure African governments to move away from the West. At the same time, China is using economic coercion to gain leverage and expand its military footprint in the basing, something former AFRICOM Commander General Steven Townsend called his number one global power competition concern.

We are right to focus on the growing Russia and Chinese threats, but we cannot take our eyes off the other security challenges coming from the Middle East, South Asia, and Africa. In Afghanistan, the disastrous withdrawal of United States troops nearly 2 years ago left a security vacuum the Taliban, al Qaeda and ISIS have filled.

The Biden administration assured us that the Department of Defense (DOD) would conduct counterterrorism operations in Afghanistan even without a limited number of United States troops on the ground, but the United States has only conducted one strike in more than a year. The withdrawal from Afghanistan emboldened ISIS and al Qaeda's affiliates around the world, not just in Afghanistan.

The terrorist threat is real and growing. As a result of the Biden Administration's policies, the world's number one State sponsor of terrorism, Iran, presents an increasing threat to our personnel and partners in the region.

President Biden should have focused on countering Iran's missile program and its support for terrorism. Instead, he focused on returning to the flawed 2015 nuclear agreement. In the process, this Administration has given them practically everything and got absolutely nothing.

According to the Department of Defense, Iran could now produce enough fissile material for a bomb within just 12 days, and its

proxies are on the march nationwide. These facts make it clear continued significant real growth in the defense budget top line above inflation remains essential to our national security.

I will be looking closely to ensure our security assistance funding remains strong in these theaters and that our counterterrorism and contingency forces are fully resourced. This includes additional force protection measures in both theaters, particularly to protect against more complex Iranian backed attacks.

I would also note that the budget zeroing out of LPD [low probability of detection] amphibious ships is the exact wrong move, when we did not even have the capacity to send one amphibious ship to Turkey to help with their earthquake. Finally, I am interested in how the Office of Strategic Capital might be leveraged to push back against the CCP in these theaters and elsewhere as they seek to buy ports and raw materials across the globe.

I thank our witnesses and look forward to their testimony. Thank you, Mr. Chairman.

Chairman REED. Thank you very much, Senator Wicker. General Kurilla, please.

STATEMENT OF GENERAL MICHAEL E. KURILLA, USA
COMMANDER, UNITED STATES CENTRAL COMMAND

General KURILLA. Chairman Reed, Ranking Member Wicker, ladies and gentlemen of the Committee, I am joined today by Command Master Chief Derrick Walters, the Command Senior Enlisted Leader of U.S. Central Command.

On behalf of the soldiers, sailors, airmen, marines, coast guardsmen, and guardians who serve this Command, the Central Region, and this Nation every day, thank you for allowing me to testify regarding the posture of U.S. Central Command, alongside my ranger buddy, Mike Langley.

CENTCOM serves as the security integrator for an area of responsibility that encompasses 21 nations, almost 600 million people, and serves as the strategic nexus of the world's most important corridors of trade. I am now 11 months into command.

In that time, I have made 14 trips to the region, and those visits have allowed me first person insights that have informed my strategic approach, which is best summarized in three words, people, partners, and innovation.

People are our greatest asset and our most critical resource. Our servicemembers and civilians in the United States and across the region are our Nation's best. I know this body keeps them top of mind that right now in the CENTCOM region, thousands of troops are in harm's way.

Our people who are closest to the problem understand the opportunities available to solve the region's most complex challenges. That is why we rely so heavily on our partners. Our partners are the Nations comparative advantage against competitors like China and Russia.

Across CENTCOM, we cultivate deep abiding partnerships that can serve as a hedge against the threats in the region, while deterring Iran from its most destructive behavior. We have the kind of relationships that elicit candid, sometimes tough, conversations

that result in solutions. These kind of relationships make us the partner of choice in the region.

A critical component of that partnership is innovation, innovation of thought, innovation of process, innovation of concept and technology extends the value of the partnerships. Innovation allows us to move faster, operate more efficiently, and increase progress across all operational efforts.

This is more important now than any time in our history. Forty years ago, the Department of Defense established CENTCOM to counter the malign influence of a revolutionary regime that seized power in Tehran and to compete with a great power in the region, the Soviet Union. The organization's charter, directed by this body, was to direct and enable military operations and activities with allies and partners to increase regional stability in support of enduring U.S. interests.

That mission remains essentially unchanged to this day. Iran still remains the focus. We now battle violent extremist groups who threaten the region and beyond. The Soviet Union has been replaced with China and Russia as strategic competitors. With these challenges, the CENTCOM region holds the greatest risk of derailing the National Defense Strategy with a flashpoint international incident that may demand a response using unplanned resources and attention.

Today, CENTCOM priorities are to deter Iran, counter violent extremist organizations, and compete strategically with China and Russia. Four decades after CENTCOM's formation, Iran remains the primary destabilizing element in the region. We have seen rapid advances in Iranian military capability over time.

The Iran of 2023 is not the Iran of 1983. In fact, today, Iran is exponentially more capable than they were just 5 years ago. Today, Iran possesses the largest and most diverse missile arsenal in the Middle East, thousands of ballistic and cruise missiles, many capable of striking anywhere in the Middle East. Iran also maintains the largest and most capable UAV [unmanned aerial vehicle] force in the region.

The regime continues to enrich and stockpile uranium far above what is needed for commercial use, and Tehran can enrich uranium far faster than it could even 2 years ago. An Iran with a nuclear weapon would change the Middle East overnight and forever. Iran's vast and deeply resourced proxy forces spread instability throughout the region and threaten our regional partners.

As Iran continues to stabilize the region, we continue to fight against violent extremist organizations. In Syria, we put pressure on ISIS alongside our Syrian Democratic Forces partners. In Iraq, we advise, assist, and enable the Iraqi security forces in their fight against ISIS. While ISIS has significantly degraded in Iraq and Syria, the group maintains the capability to conduct operations within the region and has the desire to strike outside of it.

Our progress in Iraq and Syria contrasts with the security situation in Afghanistan. In Afghanistan, the Taliban's hold on security is maintained through ideology, continued humanitarian aid, and the persistent abuse of human rights to dissuade unrest.

Extremist groups see opportunity and ISIS-Khorasan (ISIS-K) grows emboldened, seeking to expand its ranks and inspire, enable,

and direct attacks in the region and beyond, with the ultimate goal to strike on the American Homeland.

Amidst these challenges, strategic competition is deeply manifest in the region. The People's Republic of China (PRC) has chosen to compete in the region. The PRC is aggressively expanding its diplomatic, informational, military, and economic outreach across the region.

China, dependent upon the region for half of its imported oil, is also moving beyond energy-based investments to encompass physical and telecommunication infrastructure that advances its Belt and Road initiatives.

Over half the oil and more than a third of all the natural gas imported by China is supplied by CENTCOM countries. Nineteen of twentyone CENTCOM countries have signed a Belt and Road initiative with China. We are in a race to integrate with our partners before China can fully penetrate the region.

Russia looks to expand its influence in Syria, seeking permanent basing there and undermining our efforts toward stability and security in the region. The United States Central Command juts up against Russia with a border six and a half times longer than the Russian border with NATO [North American Treaty Organization].

Putin seeks to take advantage of this proximity with a foothold of influence in the Central Asian States, leveraging historical relations and a perceived decline in United States engagement to challenge our influence in that critical part of the world. With all these challenges and opportunities, the CENTCOM region looks to the United States for assurances of our commitment.

For CENTCOM, that commitment is unwavering. In closing, let me thank you for your support to our servicemembers. I would also like to thank the soldiers, sailors, airmen, marines, coast guardsmen, and guardians who serve and sacrifice in CENTCOM, and all those who have done so for the last 40 years. It is the greatest honor of my lifetime to be their Commander. Thank you.

[The prepared statement of General Michael Kurilla follows:]

PREPARED STATEMENT BY GENERAL MICHAEL "ERIK" KURILLA

I. INTRODUCTION: A LANDSCAPE OF INCREASING COMPLEXITY

In 1983, United States Central Command was formed to serve as a hedge against the expansionist goals of Iran—then in the nascent days of its new anti-American regime—and to serve American interests in the Middle East, Levant, and Central Asia amidst strategic competition with the Soviet Union. On November 14th 1982, Caspar Weinberger, the 15th Secretary of Defense, who oversaw the creation of CENTCOM, said: "the central region is among the most important regions in the world as far as we're concerned and as far as the free world is concerned." The Senate Armed Services Committee's January 17, 1982 legislation authorizing this new command explained that "U.S. Central Command, alongside local and regional forces, will be America's security guarantor in the world's central region."

Forty years later, while much of geopolitics and policy has transformed, the security landscape of this part of the world remains largely unchanged. In many important ways, the region's most vexing problems have grown more complex.

Now, as then, the world's geographically central region remains critical to American security interests, global trade, global energy, and global security. Today, more than a third of global container traffic transits the Suez Canal and more than a quarter of global oil transits the Strait of Hormuz. The region is home to almost 50 percent of the world's known oil reserves and more than 40 percent of the world's national gas. This part of the world produces 37 percent of the world's oil, 18 per-

cent of its gas, and houses four of the world's top five OPEC oil producers: Iraq, Kuwait, Saudi Arabia, and the United Arab Emirates.

The central region remains among the most important regions in the world. A disruption in the maritime choke points flowing through the Middle East or the spread of instability throughout the region could threaten vital national interests and hold the global economy at risk.

Four decades after revolutionary students overran the American embassy, Iran possesses the largest and most diverse missile arsenal in the Middle East, with thousands of ballistic and cruise missiles, some capable of striking the entire Middle East and Levant. The Iranian regime now holds the largest and most capable Unmanned Aerial Vehicle force in the region. The advancement of Iranian military capabilities over the past 40 years is unparalleled in the region; in fact, the Islamic Revolutionary Guards Corps of today is unrecognizable from just 5 years ago. Even more concerning, Iran has advanced its nuclear program such that Tehran can now produce sufficient fissile material for a nuclear weapon in less than 14 days. In addition, the regime invests heavily in information operations, including broadcasting, coordinated inauthentic activity, and cyber-attacks.

Alongside the State threat posed by Iran, violent extremist groups continue to threaten the security and stability of the region. For example, ISIS, long past its 2014 pinnacle of capability, remains able to conduct operations within the region with a desire to strike beyond the Middle East. Though degraded, the group's vile ideology remains unconstrained.

In Afghanistan, the reduction in collection, analytical resources, and Intelligence, Surveillance, Reconnaissance assets means our campaign against al Qaeda and ISIS-Khorasan is challenged; while we can see the broad contours of attack planning, we lack the granularity to see the complete threat picture. ISIS-Khorasan has increased attacks in the region and desires to export those attacks beyond Afghanistan to include the United States Homeland and our interests abroad.

The group also seeks to expand its operational presence and influence regionally and beyond. We are addressing this through the development of innovative Intelligence, Surveillance, and Reconnaissance platforms and increasing additional collection methods to build out a more fulsome threat picture.

While Afghanistan's security situation deteriorates, the United States has a moral obligation to safely extract the tens of thousands of Special Immigrant Visa holders, many of whom aided United States troops as interpreters, translators, and advisors during our longest war.

Meanwhile, strategic competition in the central region has grown more urgent over the past 40 years. Only now, the Soviet Union is replaced with Russia and the People's Republic of China, both of whom seek to undermine American interests in the region. Russia looks to aggressively expand its foothold of influence in the region amidst its war in Ukraine. Moscow leverages its military presence by propping up Syria to garner influence in the Middle East. The People's Republic of China aggressively expands its diplomatic, informational, economic, and military outreach in this part of the world.

These challenges and complexities, combined with the opportunities offered by our partnerships in the region, form the basis of CENTCOM's three strategic priorities.

II. CENTCOM STRATEGIC PRIORITIES: DETER, COUNTER, COMPETE

Strategic Priority 1: Deter Iran

Deterring Iran is arguably more urgent than at any time in CENTCOM's history due to Iran's cutting-edge missile and UAV capability as well as its uranium enrichment program. As it was at the time of CENTCOM's formation, Iran is the most destabilizing actor in the region. Today, Iran is undeterred from its malign activities, which include conventional threats to neighbors, support to violent proxy groups that spread chaos and instability throughout the region, and support to Russia's war in Ukraine.

The evolution of the Iranian threat—the primary threat against which this command was born—is a story that runs the full timeline of CENTCOM history. Early in the Iran-Iraq war, the regime realized its armed forces could never fully recover from the crippling losses suffered during that ruinous conflict. Instead, to develop an asymmetric advantage against regional militaries, the regime invested in precision missiles with extended reach. It now commands an imposing measure of missile capability it uses to coerce, intimidate, and bully its neighbors.

Tehran has also manufactured increasingly sophisticated Unmanned Aerial Vehicles. The regime now commands an arsenal of drone systems, ranging from small, short-range systems to modern intelligence, surveillance, and reconnaissance systems to long-range One-Way Attack platforms. They are building larger drones that

can fly further with increasingly deadly payloads. Until the United States helped secure the Yemen truce, Iran was regularly using Yemen as a testing ground for these weapons, threatening both United States partners and tens of thousands of Americans in the Gulf.

Meanwhile, Tehran continues to furnish weapons, support, and direction to proxies across the region who engage in acts of terror and undermine local governments, all advancing Iranian interests. The proxy forces are more emboldened and dangerous through the increased proliferation of these Unmanned Aerial Vehicles, which allow them to target U.S. and partner interests with increased speed, range, accuracy, and explosive capacity.

This story grows more foreboding. Today, Iran continues to enrich and stockpile uranium far above what is needed for commercial use. Increasingly more centrifuges are the advanced IRN–6 models, capable of enriching uranium far faster and more efficiently than Iran's first-generation centrifuges. The regime is now stockpiling highly enriched uranium under the guise of commercial use. The International Atomic Energy Agency report released on February 28th on Iran's enrichment program reveals that Iran's stockpile of uranium enriched up to 60 percent has grown substantially in less than 3 months and that Iran now has sufficient nuclear material for manufacture of several nuclear explosive devices. The region is increasingly worried about a nuclear-armed Iran.

Iran also puts itself increasingly further outside of international norms; Tehran continues to ignore United Nations Security Council resolutions, violate sanctions and embargos, proliferate weapons to its network of proxies and affiliates, and attack shipping vessels in international waters. The regime continues the brutal beatdown of the rights of its citizenry, crushing dissent, protest, and human rights. Iranian-aligned groups routinely strike at American troops and our partners in Iraq and Syria.

Recently, Iran's advanced weapons are seen on the battlefield of Ukraine alongside their Russian partners. Iran often aligns information operations with or in support of Russia. An internationally isolated Iran has clearly thrown in its lot with an also isolated Russia.

Strategic Priority 2: Counter Violent Extremist Organizations

While Iran poses the most ominous threat to the central region, Violent Extremist Organizations (VEOs) operating in the Middle East, Levant, and Central Asian States also represent a danger to security and stability. The Central Command Area of Responsibility serves as the epicenter of violent extremism, with 19 of 21 top tier terrorist groups operating across the region. ISIS and al Qaeda are the principal Sunni violent extremist organizations in the Middle East and Levant. Both groups maintain numerous affiliates pursuing local, regional, and global objectives.

ISIS continues to organize attacks throughout the Middle East and must not be allowed to operate uncontested. Alongside our Syrian Democratic Forces partners, we continue to put pressure on ISIS in Syria. In Iraq, we continue to advise, assist, and enable the development of the Iraqi security forces in their fight against ISIS.

We see ISIS in Iraq and Syria in three groups:

1. *ISIS At Large.* This is the current generation of ISIS leaders and fighters we face in Iraq and Syria today. While we have significantly degraded this group's capability, it retains the ability to inspire, direct, organize, and lead attacks in the region and abroad.

   This group offers the most straightforward solution: partner with Syrian Democratic Forces and advise, enable, and assist Iraqi Security Forces until ISIS At Large is defeated. The two other groups represent far more complex problems.

2. *ISIS In Detention.* These are the roughly 10,000 ISIS fighters in detention facilities throughout Syria, and approximately 20,000 in detention facilities in Iraq. We rely on the Syrian Democratic Forces and our Iraqi partners to secure these sites, keeping this population off the battlefield. The Government of Iraq has sufficient infrastructure to keep these fighters in detention. The only long-term solution in Syria, however, is transfer of these detainees to the custody of their countries of origin.

   Last week, during my sixth visit to Syria since taking command 11 months ago, I again visited the Hasakah detention facility, which houses more than 5,000 detained ISIS fighters predominately from the terror group's tactical defeat at the March 2019 battle in Baghuz. I observed the structural damage incurred during the January 2022 ISIS attack on the facility in which more than 1,000 ISIS fighters escaped. The vast majority were later recaptured by SDF forces. During that 10-day battle involving SDF and United States forces, more than 400 ISIS fighters and 121 SDF soldiers were killed.

This population of detainees represents a looming threat to Syria, the region, and beyond. Syrian Democratic Forces leaders securing the site as well as camp administration officials described the detainee population as unrepentant and subject to further radicalization. One Syrian Democratic Forces official referred to the more than 5,000 detainees as a "ticking time bomb."

Unlike the first group, there is no military solution to this ISIS detainee population. We must support the Syrian Democratic Forces who continue to secure these sites while working with the countries of origin of these ISIS detainees to repatriate and rehabilitate or find a judicial solution.

3. *The Potential Next Generation of ISIS*. This, the most concerning group, includes the more than 30,000 children in the al-Hol camp for internally displaced persons and the more than 1,000 children in the al Roj camp who are in danger of ISIS indoctrination on a daily basis.

Last week, while in the al Roj camp, I spoke with dozens of residents from at least 16 countries, including: Russia, Egypt, Türkiye, Uzbekistan, Kyrgyzstan, Turkmenistan, Morocco, Pakistan, Afghanistan, Lebanon, Yemen, Tunisia, Iraq, Syria, Canada, and the United States. These residents told me that the vile ISIS ideology remains a threat throughout the camp. To a person, they all expressed a desire to return to their country of origin.

During four trips to the al Hol camp in 11 months, I've seen first-hand that these children are prime targets for ISIS radicalization. The al-Hol camp is a flashpoint of human suffering, with more than 51,000 residents, more than 90 percent of them women and children, living in tents. These children have little meaningful education, no access to the outside world, limited hot water, and few constructive outlets to develop their potential. They are at risk of becoming casualties to an ideological war within the camps: ISIS leaders want their minds.

As with the second category of ISIS, there is no military solution for this group. Our long-term goal must be the successful repatriation, rehabilitation, and reintegration of the camp residents back into their country of origin.

While progress against ISIS in Iraq and Syria continues apace, the underlying conditions that led to the group's 2013 and 2014 expansion remain. The ruinous effects of Assad's rule and civil war in Syria lingers, employment and educational opportunities remain scarce for many young men, and millions live in appalling conditions. ISIS' vile ideology remains uncontained and unconstrained, and a seething hatred remains open to exploitation.

Our continued, limited presence in Iraq and Syria allows us to assist the Syrian Democratic Forces and the Iraqi Security Forces in maintaining pressure on ISIS to prevent the group's resurgence to 2014 levels. The minimal United States troop strength in those countries allows us the ability to advise, assist, and enable partner forces with the goal of the enduring defeat of ISIS and the prevention of external attack plots against the United States and nations throughout the region. Our support is essential to ensuring regional stability as well as protecting the Homeland.

In Afghanistan, the Taliban's hold on security is maintained through ideology, continued humanitarian aid, and persistent abuse of human rights to dissuade unrest. Extremist groups see opportunity and ISIS-Khorasan grows emboldened amidst the chaos, seeking to expand its ranks and inspire, enable, or direct attacks in the region and beyond. ISIS-Khorasan is building a capability in Afghanistan from which to strike Western interests worldwide, with the ultimate goal of a strike on the American Homeland.

Al Qaeda remnants remain in Afghanistan. While the July 2022 death of Ayman al-Zawahiri set the group back, al Qaeda desires to rebuild. Though this will take time, al Qaeda remains a long-term threat to American interests and citizens as well as the Homeland.

Strategic Priority 3: Compete Strategically

In addition to its primary role as a redoubt against the spread of Iranian-directed instability across the region, this command was established in 1983 to maintain a military advantage over the Soviet Union amidst Great Power Competition. This was, after all, in the moments after the surprising 1979 Christmas Eve Soviet invasion of Afghanistan—the first major combat operation involving Soviet troops outside of Warsaw Pact territory since the close of World War II. Today, CENTCOM's role in Great Power Competition, clearly defined in the 2022 National Defense Strategy, is more urgent and complex.

Strategic Competition with PRC

China's goal to serve as the world's leading superpower by 2049 puts this region squarely in its crosshairs. The United States Central Command area of responsibility shares a 2,200-mile border with the People's Republic of China—larger than the United States border with Mexico. China looks across that border and sees only opportunity for advantage in influence. Beijing's willingness to take on higher-risk projects threatens American preferential ties and unfettered access. On its current trajectory, the increased technological and military presence serves as a growing strategic challenge to U.S. partnerships, access, force presence, and security in the region.

The People's Republic of China aggressively expands its diplomatic and economic outreach across the region. Last week's PRC-brokered reestablishment of relations between Iran and the Kingdom of Saudi Arabia underscores the emergence of China's diplomatic role in the region.

China, dependent on the region for half of its crude oil, is also moving beyond energy-based investments to encompass physical and telecommunications infrastructure. Beijing also encourages greater military cooperation in the Middle East and Central Asia, aiming to challenge our standing in the region. More than half of all the oil and more than a third of all the natural gas imported by China is supplied by countries within the CENTCOM area of responsibility.

Expanding regional arms sales by Beijing provides economic opportunities, expands influence and increases People's Republic of China interoperability in the region. China seeks to under-mine American economic, commercial, and security interest in this part of the world to be-come the region's leading power.

Beijing has reason for optimism here. China is often viewed by regional partners as more accommodating than the United States, offering lower costs, favorable financing, faster delivery times and no end-use monitoring agreements. During my trips to the region and calls with regional Chiefs of Defense, I routinely hear how much faster and easier China's foreign military sales program is than ours. While the American foreign military sales process involves multiple steps going through multiple layers of government bureaucracy, the PRC can move much faster, often mak-ing us non-competitive by comparison. Although this multi-layered process is a reflection of our form of government and U.S. law, it often has a deleterious effect on our ability to compete for the sorts of long-term relationships that the sales of major defense systems create.

The Belt and Road Initiative remains a strategic lever to supplant U.S. leadership in the region under the guise of benign economic initiatives and broadening security relationships. Of the 21 countries comprising the CENTCOM area of responsibility, 19 have Belt and Road Initiative agreements with China.

Regional powers see the Belt and Road Initiative as an opportunity to modernize their cities and societies to advance regional economic and social reform programs including Saudi Arabia's Vision 2030, Oman's Vision 2040, Qatar's Vision 2030, Kuwait's Vision 2035, and Egypt's Vision 2030. Three Belt and Road Initiative land corridors and one of the three maritime corridors transits the CENTCOM area of responsibility.

As the United States reduced force posture in the region, Chinese investment and influence grew steadily. Consider the following:

- The 8-year period from 2013 to 2021 represented the largest investment period in the CENTCOM region in PRC history with $408.7 billion in commercial investments;
- From 2015 to 2021, just as it was accelerating commercial investment, the PRC devoted $2.6 trillion in trade with CENTCOM countries;
- In 2021, in Israel's largest shipping hub, the PRC opened a new, $1.7 billion modern technological port which is significantly larger than Israel's three international ports and supports large shipping vessels capable of carrying more than 18,000 containers;
- The PRC is building and operating a container terminal in Abu Dhabi;
- The 10-year, $62 billion China-Pakistan Economic Corridor, begun in 2015, is the BRI flagship;
- Saudi Arabia is China's largest supplier of crude oil and with December 2022s comprehensive strategic agreement, PRC reliance on Saudi crude is set to increase;
- Huawei has 5G contracts with 19 of the 21 countries in the CENTCOM region; and
- The PRC targets Iraq for influence and resources—Beijing invested $10.1 billion in BRI projects in Iraq in 2021 alone.

China's economic interests, transactional approaches and perceived lack of Chinese bias in in-ternal and regional affairs, will continue to provide inroads in the region.

Strategic Competition with Russia

Today, 32 years after the fall of the Soviet Union, Russia's objectives are to weaken Western security structures in the Middle East and Central Asia and continue to challenge United States security interests and critical relationships in the region.

The United States Central Command region holds a 4,750-mile border with Russia—more than six times the length of NATO's border with Russia—through the Central Asian States. Since Catherine the Great in 1762, Russia has sought this region as part of its empire. The Kremlin has viewed the Central Asian States as its territory since the 1922 Treaty on the Creation of the Union of Soviet Socialist Republics. The emphasis on ownership over Central Asia took on a fever pitch after World War II, when Stalin used the region for resource extraction and strategic depth. Putin seeks to take advantage of this proximity and history by establishing a foothold of influence leveraging long-established relations and a perceived decline in United States engagement to challenge our influence in that critical part of the world. Russia retains extensive interests in Central Asia, spanning energy, military sales, counterterrorism, counter-drug efforts, and others.

Today, Putin's interests in the Middle East range from energy transit to security relationships to military sales. His overall strategy in the region remains largely unaffected by the war in Ukraine. Despite the recent damage to its reputation and influence, Russia continues apace on several fronts to preserve its influence and access in the Middle East. This includes sustaining military support in Syria that is indispensable to Assad and influential with Syria's neighbors.

Russia has more than 2,500 Russian troops in Syria, which Putin views as a base from which to project power and influence throughout the region and into Europe and Africa. Russian maritime forces maintain a permanent presence in Syria's coastal city of Tartus. In 2019, the two countries signed a 49-year lease for rights to Tartus' Mediterranean deep-water port. Just as CENTCOM was formed to serve as the "security guarantor" of the world's central region, Russia views itself as the security guarantor of the Central Asian States. However, as a result of the invasion of Ukraine, the Central Asian States increasingly view Russia as a threat to their sovereignty.

III. CENTCOM'S STRATEGIC APPROACH: PEOPLE, PARTNERS, INNOVATION

As it enters its fifth decade, CENTCOM requires a new Strategic Approach to guide all operations, activities, investments, and initiatives against these complex and confounding challenges. That Strategic Approach is defined by three words: People, Partners, and Innovation.

People

Throughout CENTCOM's lifespan, its People have served the region, our Nation, and this command. Since our 1983 inception, our People have fought for and provided assistance to the citizens of the world's central region. Over the course of 4 decades, they have displayed the grit, discipline, compassion, and empathy that the United States expects out of its military force.

Today, our People—our servicemembers, civilian workforce, contractors, and supportive Families—serve as the bedrock of everything we do and how we succeed. They underpin all aspects of our strategic approach and drive us along our strategic priorities.

Our People at CENTCOM are our greatest asset and our most critical resource. We hire, invest in, retain, and care for our People and their families.

Partners

Partners are our Nation's comparative advantage against competitors like the People's Republic of China and Russia and serve as a barrier against the ramifications of Iran's most destructive behavior. No nation can face the complexity described above alone. We therefore cultivate deep abiding relations with forces in the region that can serve as a hedge against threats in the region while deterring Iran from its worst, most destabilizing activity. We are in a race to integrate our partners before China and Russia can deeply penetrate the region.

For China and Russia, partnerships are transactional relationships. For CENTCOM, our partnerships are based in our values and our commitment to the region. China views regional countries as possible customers and clients, while we seek partners and allies. Our values and our commitment make us the partner of

choice in the region. We must always hold true to our commitments to partner forces and nations as our actions speak for us to the region.

CENTCOM was formed to serve in support of and alongside Partners—the "local and regional forces" referenced by the legislation directing the formation of U.S. Central Command. Today that focus is more urgent than ever in our 40-year history.

For a period of almost 20 years, CENTCOM served as the priority resourcing requirement for the U.S. Department of Defense. This was an anomaly in America's national security history: the only period in which the Nation was committed to two simultaneous wars since World War II. With the conclusion of the wars in Iraq and Afghanistan, we have significantly reduced our force posture in the Middle East. Without the large volume of planes, ships, and troops we had in the region just 5 years ago, we must integrate our partners into all security constructs to foster regional security and stability.

Referring back to the Senate Armed Services Committee legislation guiding CENTCOM in 1983—this command was established to serve as a "security guarantor of American interests in the world's central region." Today, we uphold that responsibility by serving as a security integrator: integrating our Partners into a framework of operations, activities, investments, and initiatives that will ensure sufficient regional security to protect our vital national interests.

The kind of deep, abiding partnerships CENTCOM seeks is exemplified by the Coalition Maritime Forces, a multinational maritime partnership led by U.S. Naval Forces Central. The Combined Maritime Forces, the world's largest international maritime partnership, exists to uphold the rules-based international order. Through this mutually supportive partnership, the 38 CMF participant countries counter illicit non-State actors on the high seas and promote security, stability, and prosperity across international waters.

The realignment of Israel from European Command to Central Command 18 months ago has immediately and profoundly altered the nature and texture of many of CENTCOM's partnerships for the good. Back in 1983, the boundaries of the CENTCOM Area of Responsibility excluded Israel; Secretary Weinberger and National Security Advisor William Clark were concerned that CENTCOM leaders would be challenged to build enduring, trust-based relations with Arab military leaders while also partnering with the Israel Defense Force. While that concern may have been well-founded then, CENTCOM today readily partners with Arab militaries and the Israel Defense Force alike. In fact, the inclusion of Israel presents many collaborative and constructive security opportunities. Our partners of 4 decades largely see the same threats and have common cause with Israel Defense Forces and the Arab militaries in defending against Iran's most destabilizing activities.

Innovation

Through Innovation we multiply the capability of our People and strengthen our partnerships to deter Iran, counter VEOs, and compete with China and Russia for influence across the region.

Innovation will strengthen our partnerships, assist our operations, and allow us to increase progress across all efforts. In so doing, it will allow us to serve as that security integrator on behalf of regional security and stability.

Innovation is not just about technology for us; it is innovation of thought, innovation of concept, innovation of process. We are building a culture of innovation and our partners are with us on this journey. For example, across all domains, through employment of systems on hand and newly acquired systems, we are building an interconnected mesh of sensors that transmit real-time data. When viewed together through data integration and Artificial Intelligence platforms, this real-time data builds a clearer picture of the operating environment. Across CENTCOM, our formations use unmanned systems paired with Artificial Intelligence to give us better information faster. This allows us to employ our manned systems more efficiently and strategically and thereby achieve decision dominance. We're able to cultivate information and use Artificial Intelligence to make decisions faster than our adversaries and use our manned systems more efficiently.

The U.S. Central Command theater holds almost no assigned forces, and with the declining emphasis on defeating violent extremist organizations and the National Defense Strategy shift in primary focus to U.S. strategic competitors, our forces decreased 15 percent over the course of 2022 alone. CENTCOM force posture saw a reduction of 85 percent from its 2008 peak. With so many looming and existential threats in the region and such a strong possibility of chaos spreading and driving the region to again become a strategic distractor, we must innovate to expand our

presence beyond those allocated forces. This is enabled by the creative application of technology and innovation.

CENTCOM's three innovation task forces—Task Forces 59, 99, and 39—apply these concepts to specific domains. For example, the most advanced—Task Force 59, our maritime innovation task force—operates a fleet of unmanned vessels, both on the surface of the water and under the water. These unmanned vessels carry sensors which are collecting vast amounts of data. That data, pushed through data integration and artificial intelligence platforms, helps build a clearer picture of the operating environment. Through Task Force 59, 99, and 39 CENTCOM is rapidly improving maritime threat detection and maritime domain awareness and building an integrated, unmanned, and artificial intelligence network to achieve safer seas and stronger protection for global trade.

Just this month, Task Force 59 completed a 3-week International Maritime Exercise involving 7,000 personnel, 50 partner nations and organizations, 35 ships, 30 unmanned systems, and more than a dozen AI tools. The exercise, which took place in the Arabian Gulf, Arabian Sea, Gulf of Oman, Red Sea, Indian Ocean, and East African coastal regions, strengthened participants' interoperability and command and control.

More importantly, our international and regional partners are right there with us. Task Force 59 has established hubs in Bahrain and Jordan. Four months ago, Bahrain participated in a naval drill in the Gulf during which seven crewed ships from Saudi Arabia, Bahrain, United Kingdom, and the United States teamed with unmanned systems. By the end of this year, our goal is a Task Force 59 fleet of more than 100 vessels—at least 75 from partner maritime forces—operating together, communicating together, and providing a common operating picture to all participating militaries.

In addition to Task Force 59, which operates at sea in the maritime domain, we have Task Force 99, based in Qatar, operating in the air domain. Through implementation of Commercial Off-The-Shelf Technology and collaboration with industry and academia, Task Force 99 creates a technology transition ecosystem that allows increased awareness and faster decisionmaking and places cutting-edge tools in the hands of warfighters and decisionmakers. The task force's three lines of effort (LOEs) are: increasing awareness of the air domain, accelerating the speed of the targeting cycle, and imposing dilemmas on adversaries.

Task Force 99 also focuses on aerial drones complete with tailored payloads and other capabilities operating together to observe, detect, and gather data that feeds into an operations center. This increases our air domain awareness and rapidly accelerates the speed of our decisionmaking. Task Force 99's fleet of unmanned aircraft will impose dilemmas on our adversaries and detect and defeat threats to our systems and to our partners.

Finally, we have Task Force 39, our newest innovation task force. Task Force 39 tests concepts and technology in the land domain with a heavy focus on testing new technology to defeat adversary drones. In the coming months, this task force will experiment with robotic sustainment vehicles.

Through these innovation Task Forces, CENTCOM seeks to serve as the experimentation center for new drone-defeat systems, ideas, and technology, to include directed energy. At CENTCOM, we consider opportunities for innovation as limitless. They are boundless and cross all realms of possibility.

CENTCOM is also accelerating the employment of Joint All Domain Command and Control solutions to combat operations to achieve vertical integration from the Joint Task Force and

Components, all the way to the Joint Staff and National Command Authority. Every day, we drive Joint All Domain Command and Control capability forward to allow our People to make faster, more informed decisions in combat's critical moments.

As a data-centric warfighting headquarters, we've transformed our targeting process from PowerPoint slides to the employment of live data. Our goal is a Single Pane of Glass that builds better situational understanding and allows commanders to achieve decision advantage like never before.

In late January and early February of this year, our headquarters led Scarlet Dragon Oasis, our Joint All Domain Command and Control live fire exercise on the eastern seaboard, the mid-Atlantic Electronic Warfare range, and across the U.S. Central Command region. The operation successfully passed digital targeting data and mission threads between multiple commands across the United States, from Nevada to Utah to Tampa and our operations centers in South Carolina and Bahrain. From computer vision, full-motion video, and synthetic aperture radar algorithms identifying targets, to digital workflow tools improving speed and precision of tar-

geting teams, to optimizing machine-to-machine communication flow, the exercise marked a critical step toward digital warfighting.

Each of these tools, concepts, initiatives, and task forces are singularly focused on providing our People with the best tools, the most comprehensive rapid situational awareness, and the fastest and most accurate decisionmaking capability. This, in turn, serves a great benefit to our Partners and to the security and stability of the region. Innovation is about linking our People and our Partners with ideas and capabilities that enhance all efforts to deter Iran, counter violent extremist organizations, and compete strategically with Russia and China.

People, Partners, and Innovation and the National Defense Strategy

The strategic approach outlined above is heavily nested underneath the 2022 National Defense Strategy. By empowering our People, building out abiding Partnerships, and embracing Innovation, CENTCOM looks to allow the National Defense Strategy to manifest across the Joint Force. A flashpoint with Iran, a crisis in the region, a successful large-scale attack on a partner country, or an attack on the Homeland by a VEO all will likely require a response, drawing resources not forecast away from higher priority theaters to the Central Command region. Therefore, a modest investment in People, Partners, and Innovation serves as a hedge against National Defense Strategy derailment.

Furthermore, the Central Command region is literally and figuratively central to competition with Russia and China—a National Defense Strategy priority for all of the Joint Force. Our strategic approach aligns People, Partners, and Innovation against Strategic Competition with the People's Republic of China and Russia, which the National Defense Strategy identifies as the priority across all global regions.

IV. CONCLUSION: A VISION AND A PROMISE

United States Army General Robert Kingston saw the future.

At the pinnacle of a career leading troops in heavy combat—Kingston fought in some of the heaviest fighting of both the Korean and Vietnam wars and was among the most decorated military officers of his generation—he was selected as the first commander of United States Central Command. A soft-spoken, battle-hardened warfighter, Kingston knew the central region from his time leading a contingency force focused on Iran during the early moments of the hostage crisis. He understood the unique set of challenges facing the new command and he knew that the answers to all of them relied on an enduring CENTCOM commitment to regional forces.

In assuming responsibility for United States Central Command in a ceremony on MacDill Air Force Base in Tampa, Florida on January 3d, 1983, Kingston told the assembled crowd: "CENTCOM will require regional military forces to accomplish its mission for the Nation."

This posture statement is informed by my 14 trips to the region and the hundreds of calls, video teleconferences, and meetings with partnered Chiefs of Defense and their military component leaders in my 11 months in command. Those engagements crystallized in my mind that 40 years after Robert Kingston spoke those words, one thing is clear: CENTCOM requires regional military forces [i.e. Partners] to accomplish its mission for the Nation. So it will into the future.

The challenges faced by Kingston and his staff and component leaders have only grown more complex. The threats, more capable. The competition for influence with external powers, more urgent.

People, Partners, Innovation is our glidepath to deter Iran, counter VEOs, and compete strategically, allowing us to meet the challenges posed by these threats, complexities, and adversaries and ensure regional security and stability.

We employ this strategic approach along a foundation of regional stability earned by American servicemembers over the course of 4 decades. In peace, in war, in years and years of sustained combat, in the toughest conditions faced by American servicemembers since the

Vietnam War, these men and women bought time and space for American leadership and preserved our vital national interests in this critical region. From the Tanker War to the Gulf War to the Global War on Terrorism and many contingency and humanitarian assistance operations in between—CENTCOM troops have fulfilled the original promise of this command: "U.S. Central Command, alongside local and regional forces, will be America's security guarantor in the world's central region." Today's CENTCOM servicemembers have transitioned this command to a security integrator.

Those troops are the forebears of the soldiers, sailors, airmen, marines, coastguardsmen, and guardians who serve in CENTCOM today—the greatest men and women in the country, thousands of them in harm's way as you read this, advancing

American policy and representing the Nation. It is my life's greatest honor to lead them.

Armed with the right strategic approach and the right measure of resources, I know they will succeed.

Chairman REED. Thank you, General Kurilla. General Langley, please.

STATEMENT OF GENERAL MICHAEL E. LANGLEY, USMC
COMMANDER, UNITED STATES AFRICA COMMAND

General LANGLEY. Chairman Reed, Ranking Member Wicker, distinguished Committee Members, it is an honor to appear before you today to testify on the State of affairs of the United States Africa Command.

I am proud to testify, along my good friend, General Eric Kurilla, the Commander of the United States Central Command. Now, I assumed command last August, and since then, I embarked upon a campaign of learning over the last 7 months to inform our discussion here today.

I undertook this campaign of learning to fulfill my commitment to this Congress to complete a holistic assessment upon confirmation. I made that assessment, and I will continue it throughout my tenure of command.

Upfront, I want to make one thing crystal clear. The team of servicemembers and civilians at AFRICOM is a talent and dedicated body. I am honored to serve among them. I am joined here today by my State Department foreign policy advisor, Mr. Phil Nelson, who represents the exceptionally skilled diplomatic team embedded in our headquarters.

Our entire team is laser focused on implementing our whole-of-government approach, with our partners from the Department of State, USAID [United States Agency for International Development], the intelligence community, and other U.S. Government organizations. We campaign with our allies and partners to advance mutual interest and to promote stability and prosperity on the African continent.

You should be proud of their efforts, I certainly am. Now, Africa is a vast and dynamic continent of sovereign nations. Collectively and individually, these nations are increasingly important players on the global stage. As such, AFRICOM's contribution to American security must be viewed through a global lens.

Threats once contained on the continent are transforming into worldwide threats. Terrorism, poverty, food insecurity, climate change, and mass migration shadow African lives. They sow the seeds of violent extremists and Russian exploitation. The Kremlin's invasion of Ukraine has aggravated the food insecurity crisis in Africa by blocking vital food shipments to the same nations that feel the deepest impact of climate change.

Russia's Wagner mercenaries turned chaos into cash. It destabilizes entire regions across Africa and cuts at American interests worldwide. The expansion of the Middle East based violent extremist groups such as ISIS and al Qaeda, including now the biggest franchise Al-Shabaab, threatens American lives.

Solutions to these colossal problems must be a shared burden. African nations need to be at the helm of a concerted international effort to produce sustainable results, sustainable outcomes.

Assisting African nations to achieving the goals while advancing American interests can only be accomplished through a synchronized whole-of-government approach, a whole-of-government strategy.

We call it a 3-D approach, which is a toolkit of diplomacy, development, and defense, but one tool does not succeed without the whole kit. So, I will advocate for my State Department and USAID partners to receive the resources they need to succeed. Now, Africa faces many other challenges.

How we are putting African needs at the forefront of our campaign, reinforced by multilateral and whole Government engagement, will help AFRICOM and our partners work toward a sustainable peace, stability, and prosperity.

Chairman Reed, Ranking Member Wicker, and distinguished Members of this Committee, thank you for having me here today. I look forward to your questions.

[The prepared statement of General Michael E. Langley follows:]

PREPARED STATEMENT BY GENERAL MICHAEL E. LANGLEY

AFRICAN SECURITY IN A GLOBAL CONTEXT

INTRODUCTION

Chairman Reed, Ranking Member Wicker, distinguished Committee members, Africa's impact on the world is greater now than at any point in recent history, so United States Africa Command (USAFRICOM) sees our mission through a global lens. The vast potential of African peoples to lead the way in worldwide growth is up against a rising tide of existential challenges. Threats from within the continent are transforming into threats to America's interests and allies. Terrorism, poverty, food and water insecurity, protracted conflict, climate change, and mass human migration disproportionately shatter African lives. Solutions to these colossal problems must be a shared burden, with African nations at the helm of concerted international efforts and a United States whole-of-nation contribution that produces sustainable outcomes. Since 2008, USAFRICOM has been proud to defend American interests and lead the United States Department of Defense's inclusive approach to helping African peoples achieve positive outcomes for all.

Crises in Africa set the stage for violent extremist organizations (VEOs) to grow, and for America's strategic competitors to bid for international allies. As the home of some of al-Qaeda's and ISIS's largest and most active branches, Africa is now the epicenter of international terrorism. Russia is expanding its African operations, including via the Kremlin-supported private military company Wagner; destabilization, democratic backsliding, and human rights abuses follow in their wake. Russia's full-scale invasion of Ukraine impaired Africa's food supply, compounding the lingering challenges of the COVID–19 pandemic. Meanwhile, the People's Republic of China's (PRC's) economic and military presence poses challenges for both African nations and American interests. Climate change-related shocks drove a surge in African natural disasters last year, killing and displacing millions though protracted droughts, mass flooding, disease outbreaks and tropical storms. All of these crises combine with protracted regional conflicts to impede progress toward a stable continent and a prosperous planet where democracy, human rights, and the rule of law flourish.

The world needs a stable African continent of sovereign nations pulling together toward the universal goals of peace and prosperity. Africa's six maritime chokepoints carry a third of the world's shipping. Economic growth on the continent has accelerated in recent decades, and Africa is increasingly an engine of the global economy. This engine is partly fueled by vast deposits of rare earth minerals—critical ingredients of the world's transition to clean, sustainable energy—and by the human capital of a swelling population that will account for a quarter of humankind by 2050. Sub-Saharan Africa is the UN's largest regional voting bloc, and three of

our African partners currently sit on the United Nations Security Council: Gabon, Ghana, and Mozambique. Africa's national voices increasingly harmonize in organizations like the African Union, regional economic communities, and multinational security forces that welcome American support. Africa is a continent of opportunity.

The servicemembers and civilians of USAFRICOM are dedicated to helping our African counterparts seize that opportunity. USAFRICOM promotes security and prosperity in collaboration with the U.S. Departments of State (DOS) and Justice (DOJ), the U.S. Agency for International Development (USAID), U.S. Coast Guard, Department of Homeland Security (DHS), U.S. Fish and Wildlife Service and others. By aligning our defense efforts with diplomacy and development, USAFRICOM teams with African and international partners to campaign across the spectrum of diplomacy, development, and defense. By convening those partners in major multilateral exercises like AFRICAN LION, FLINTLOCK, and the ACCORD and EXPRESS series, USAFRICOM tests and shares institution-building best practices—including implementing the 2017 Women, Peace, and Security Act and advocating for strict adherence to the law of armed conflict. By working daily with U.S. embassies and units throughout the Joint Force, USAFRICOM stands ready to deliver lifesaving rapid response to flashpoints in remote and unpredictable parts of the world.

America's tools for defense in Africa include military education, intelligence sharing, maritime and cyber domain awareness, medical training, DOS's foreign military sales, and—when warranted and authorized—lethal force to protect American lives and support partner-led counterterrorism missions. This toolkit of security cooperation and operational authorities helps African partners to fight 21st century terrorists and criminals, providing clear alternatives to unfavorable and opaque deals with Russia or the PRC. Whole of nation investments in Africa are opportunities for America to demonstrate global leadership while reinforcing the international rules-based system across all domains of commerce and defense. USAFRICOM is continually innovating fresh ideas with our partners and fielding new solutions for a peaceful and prosperous Africa—an outcome that will underpin America's long-term security.

Underinvestment in African security raises the risk of an unexpected crisis that would abruptly strip United States resources away from our top national security challenge of strategic competition. It has happened before. In the late 20th century, al Qaeda grew unchecked in Africa culminating in the 1998 bombings of our embassies in Kenya and Tanzania. More recently, the Benghazi, Libya attack in 2012, the Tongo Tongo, Niger attack in 2017, and the Manda Bay, Kenya attack in 2020 claimed American lives. These tragedies drew U.S. defense capital away from enduring strategic objectives. USAFRICOM's mission is to mitigate the risk of such tragedies while guarding NATO's southern flank and protecting the brave Americans who defend our great Nation.

TERRORISM IN AFRICA

The most immediate threat to both American lives and our partners in Africa is terrorism. Al Qaeda and ISIS sprouted in the Middle East but quickly transplanted onto the African continent where they flourished. Terrorist attacks in the Sahel region accounted for over a third of the world's terrorism deaths in 2021, up from just 1 percent in 2007. Today, Africa's VEOs vary in their tactics, resources, and specific goals, but all aspire to target American interests and African governments. These VEOs are dynamic networks that hide in vast under-governed spaces and bustling population centers, creating immense challenges for surveillance and disruption. Their attacks leave countless civilians dead, maimed, and destitute while undermining governance and already struggling economies, which in turn contributes to mass migration into Europe. As VEOs grow, the risk of terrorist plots against U.S. citizens, embassies, and ultimately the Homeland are likely to rise.

USAFRICOM is on the job to counter VEOs in Africa.

Last May, President Biden directed USAFRICOM to move a small force back into Somalia to help its people fight al-Qaeda's biggest and richest franchise, al-Shabaab. Al-Shabaab dominates swathes of territory that feed their coffers, replenish their ranks, and provide springboards to attack neighboring countries. Without relentless suppression and ultimate pacification, al-Shabaab will seek to attack United States embassies and eventually the Homeland itself. Somalia's Government under President Hassan Sheikh Mohamud is waging a heroic war against al-Shabaab in collaboration with an array of local and foreign supporters, including the United Kingdom, TUrkiye, the United Nations, the European Union, and the African Union Transition Mission in Somalia (ATMIS). ATMIS is mandated to gradually draw down until its final exit at the end of 2024.

USAFRICOM plays a supporting role in the fight against al-Shabaab, but our contributions are unique and irreplaceable. Last year, we conducted 15 collective self-defense airstrikes against al-Shabaab, saving the lives of Somali soldiers engaged in combat with our mutual enemy. These airstrikes played a critical role in supporting Somali partners undertaking offensive operations. We also conducted a precision airstrike that resulted in the death of a high value al-Shabaab terrorist, demonstrating our commitment to acting decisively to degrade al-Shabaab's threat to United States persons in the region and beyond. Alongside our DOS colleagues, we are providing financial, materiel, training, logistical and medical support to Somalia's counterterrorism forces. This support includes training and equipping Somali special operations via the Danab Advanced Infantry Brigade, which spearheads missions alongside other Somali and ATMIS forces to clear al-Shabaab strongholds. Enabled by USAFRICOM, a Somali-led offensive has slowed al-Shabaab's offensive momentum. Al-Shabaab has responded with a wave of reprisal attacks against Somali combatants and civilians alike, and Somalia's progress against the group is fragile. To preserve their battlefield progress and degrade al-Shabaab on an enduring basis, Somalia needs United States governance and development support more than ever.

The need for USAFRICOM in West Africa is also acute. Associates of al-Qaeda's second-largest and fastest-growing branch in Africa—Jama'at Nusrat al-Islam wal-Muslimin (JNIM)—kidnapped an American citizen in Burkina Faso last year. Her safe release was thanks to our African partners and a United States whole-of-government effort, but JNIM continues to hold another American kidnapped in 2016 and increasingly threatens Americans in West Africa. They are wreaking havoc with our regional partners as their reach outgrows rural havens in Mali and Burkina Faso and now projects into the Gulf of Guinea littoral states. JNIM has dramatically increased attacks on civilians and security forces alike and expanded territory under its influence. The outcome has been thousands of dead and millions of displaced West Africans along with acute political strain that fostered military takeovers of democratic governments in Mali and Burkina Faso. Wagner mercenaries have been quick to turn this turmoil into opportunity. Wagner's draconian operations with its partner in Mali both add to the human cost of terrorism and create more openings for terrorist groups. USAFRICOM is assisting our West African partners to limit JNIM's activity and prevent JNIM's expansion. We are ever vigilant in monitoring for plots against Americans or the Homeland. As JNIM grows, the likelihood of such plots emerging also grows.

ISIS's seven branches on the African Continent also aspire to attack American interests and partners. From the Mediterranean Sea to Mozambique Channel, ISIS cells heed the call of Middle East-based leaders to kill Africans, destroy Africans' infrastructure, and spread violent jihadist ideology. This ideology feeds off government instability and human rights violations, but our partnership has enabled incremental progress against ISIS. Governments in North Africa and their professional militaries have succeeded in limiting ISIS expansion and crippling the recruitment and outflow of ISIS foreign fighters; United States security cooperation has been key to those efforts, and we must maintain these critical partnerships to prevent ISIS and other VEOs from reemerging. In east, west, and southern Africa, a combination of multinational counter-VEO operations and ISIS's competition with rival VEOs is stymying their growth. At President Biden's direction, in January USAFRICOM took down global ISIS finance leader Bilal al-Sudani, which has already yielded new intelligence insights into ISIS's global operations and its plans and intentions in Africa. The credit for successes against ISIS goes to the local peoples, but USAFRICOM has been a crucial partner in this progress by providing training, funding, and intelligence.

However, ISIS cells throughout Africa are finding ways to adapt and reconstitute. ISIS continues to kill and displace thousands in West Africa, Mozambique, and the Great Lakes region. Former ISIS franchise Boko Haram is wreaking similar damage in Nigeria and the Lake Chad Basin. In concert with national, multilateral, multiregional, and U.N. forces, USAFRICOM is America's eyes and ears to provide warning and options to disrupt ISIS developments before they threaten the Homeland or United States citizens.

STRATEGIC COMPETITION IN AFRICA: RUSSIA

As a producer of food, fossil fuels, and military hardware, Russia has the opportunity to join with the international community in helping African nations overcome terrorism and poverty.

Instead, the Kremlin tramples African interests by leveraging Wagner, a United States-designated transitional criminal organization, to aggravate weak governance and feed instability. The Kremlin's motives are power and profit. Recent coups

d'etat have triggered U.S. restrictions that hinder USAFRICOM engagement, forcing those military regimes to double-down on their dependence on Wagner. Although well intended, United States coup restrictions can inadvertently incentivize the most at-risk African countries to dig themselves deeper into the mire of militancy and corruption.

The Kremlin disregards African interests by withholding fuel and food to create political leverage, under-delivers on military hardware and security commitments, and exploits existing friction points to spread Russia's influence. Wagner exploits political fractures in Libya, where Russia seeks to threaten NATO's southern flank. Wagner benefits from Libya's fragmentation, and its interference in parts of Libya risks hindering efforts to form the unified national government and security forces that the Libyan people want and deserve. Wagner lacks accountability to the rule of law and norms of ethics and human rights, making them a deceptively attractive option for some regimes. Wagner's short-term promises can be enticing, but the long-term outcome for African clients are nations mired in corruption and crime that stunt economic growth. Wagner's financial price tag is exorbitant. The full Wagner bill is even worse: the failure of government institutions, the withdrawal of stalwart security allies, the extraction of mineral wealth, and long-term resource concessions and debt that chips away at Africans' future.

In addition to Wagner's damage, Russia's February 2022 invasion of Ukraine sent African food markets into a crisis. Food prices skyrocketed as grain and fertilizer shipments from Eastern Europe dropped. Without doubt, Africans are victims of the Kremlin's ongoing aggression in Ukraine.

STRATEGIC COMPETITION IN AFRICA: PRC

In contrast to Russia's overwhelmingly harmful influence in Africa, the PRC's deep and diverse investment on the continent is a mixed bag. All sovereign nations are free to evaluate and choose their security and trade partners, and the PRC sees the same promise in Africa's future that the whole world recognizes. The PRC has prioritized Africa for years—and that will not change anytime soon. In January, the PRC's new Foreign Minister used his first overseas trip to visit several African countries—just like every PRC Foreign Minister has done annually for the past 3 decades. Last year, the People's Liberation Army Navy (PLAN) made its inaugural port call at the PRC's first overseas base: Doraleh, Djibouti. Also in Djibouti, the PRC is planning to construct a permanent spaceport. The PRC seeks to establish additional military and space facilities in multiple African countries, notably on the West Coast. This could sustain PLAN combatants in the Atlantic and secure unimpeded circumnavigation of the continent.

USAFRICOM works with United States Indo-Pacific Command (INDOPACOM) to discern the long term outcomes of PRC activities in Africa, which are intensive despite temporary decreases in financial lending and military engagement due to COVID–19. In itself, Chinese basing in Djibouti—or any future basing project—poses a marginal threat to United States interests on the continent. In the event of armed conflict, however, the PRC may leverage its expanded military footprint to project power against the United States, our allies, or global commerce. They already leverage their economic power in Africa to influence U.N. policy and protect their access to natural resources like minerals and fisheries. At least a third of the world's ships engaged in illegal, unreported, and unregulated (IUU) fishing—a problem that disproportionately harms African communities—are Chinese. Too often, Chinese companies harm African environments and peoples through irresponsible mining and harvesting operations that ignore sustainability and shun local stakeholders and job seekers.

USAFRICOM does not offer any nation an "us-or-them" ultimatum. The PRC is on the continent to stay, and they fill a role in Africa's modernization. USAFRICOM does not seek to block the benefits that the PRC can bring to the continent's nations. Yet all nations must take a clear-eyed approach to dealing with the PRC. African nations must be equipped to enforce laws that protect their fisheries and mineral resources, ensuring the benefits of these national assets accrue first and foremost to their own peoples and economies. The long term outcomes of PRC activity in Africa will be an uneven mix of much-needed infrastructure, equipment, and trade alongside depleted natural resources, polluted ecosystems, corruption and deficient military hardware.

HUMANITARIAN AND ENVIRONMENTAL CRISES IN AFRICA

Climate change-related crises and conflicts rank alongside Russia's war of choice in Ukraine as top catalysts of suffering for millions of Africans. Africa contributes a small fraction of the total greenhouse emissions, but changes in global tempera-

ture, combined with highly erratic precipitation, disproportionately hurt the continent. Climatic changes are accelerating the weather processes that create environmental disasters in Africa—partly by raising ocean temperatures. These rising temperatures are pressuring Africa's coastal fisheries, a crucial food source that is already pressured by overfishing. Rainfall patterns are also shifting. Last year, East Africa's current drought—its worst in 40 years—destroyed crops and livestock, displacing millions. Central and West Africa, by contrast, suffered deadly flooding that displaced millions more. The Lake Chad region saw its most intense rainfall in 3 decades. Flooding in southern Africa was largely due to a series of tropical storms from the Indian Ocean early last year, and we're seeing that trend continue this year. Desertification is constraining water and food resources in many parts of the continent, exacerbating interethnic fighting and interState friction.

Tragic in their own right, climate-related shocks in Africa also foster broader population vulnerabilities. The protracted drought in East Africa exacerbated suffering amid a 2-year civil war in Ethiopia. Climate-related shocks in places with weak infrastructure lead to deadly infectious disease outbreaks, like the cholera outbreak Malawi is currently battling in the aftermath of a devastating cyclone. VEOs like al-Shabaab and Boko Haram have become adept at exploiting the consequences of humanitarian crises to recruit new members and degrade the legitimacy of African governments. The costs of climate change in Africa are numerous, devastating, and often unpredictable, but one thing is predictable: the price tag—in both human suffering and in dollars—will only grow in coming years.

WHAT USAFRICOM NEEDS

The security challenges of Africa are complex and dynamic. Only a whole-of-government strategy can maximize USAFRICOM's effectiveness and efficiency in securing American advantage and promoting African development. Therefore, the requirements of our three whole-of-government tools—diplomacy, development, and defense—are intertwined and mutually supporting. One tool cannot succeed without the whole toolkit.

Diplomacy is the first tool. Fully staffed and resourced diplomatic missions in Africa would multiply USAFRICOM's opportunities. Therefore, USAFRICOM appreciates Congress's work to confirm Ambassador nominees and increased staffing for embassies. This boosts our collective ability to implement development and counterterrorism programs under the U.S. Strategy to Prevent Conflict and Promote Stability. Congressional and Cabinet-level delegations to Africa go a long way to reassuring our partners of American commitment, as did the United States-Africa Leaders' Summit in December and two Cabinet member visits in January. USAFRICOM is a key node in protecting United States facilities in Africa, and out of the State Department's 31 designated high threat/high risk posts, 16 are under USAFRICOM's purview. Protecting our diplomatic engagements in conflict areas and preparing for short-notice military assisted departures of our diplomats is vital insurance for America's work on the continent. USAFRICOM lowers risk to American diplomatic missions by maintaining operational readiness to conduct hostage rescue, personnel recovery, and rapid response to large-scale emergencies. Yet the DOS-USAFRICOM tie runs far deeper. Our diplomats, defense attachés, and USAFRICOM military leaders work together daily to pursue a seamless policy on the continent.

Development is the second tool. Three of the five designated beneficiaries of the United States Strategy to Prevent Conflict and Promote Stability are in Africa—Libya, Mozambique, and Coastal West Africa—but all of Africa needs development assistance. In contrast to Russia and the PRC, nearly 95 percent of America's annual assistance to Africa is delivered through grants to both government and nongovernmental organizations, not debt. Expanded funding flexibility would enable USAID to review, reorient, and respond to the ever-changing constellation of African needs. USAFRICOM appreciates the support from Congress to USAID through its $11 billion per year purse focused on Africa. However, this funding is hamstrung by targeted allocation. In fiscal year 2021, over 95 percent of USAID's non-humanitarian assistance funding was directed toward a specific allocation. Years in advance, no one can foresee and allocate funding for fleeting windows of opportunity to provide aid where Africans are most in need. USAFRICOM and its partners must be able to act quickly and decisively in response to rapidly changing security concerns and constraints; a sluggish response is harmful to both victims and America's standing as Africa's external partner of choice. Adversaries like al Qaeda and Wagner are fast and flexible in responding to opportunities, and USAID must have the agility to optimize its budget in ways that maximize America's decisive advantage. U.S. investments focused on stabilization, conflict prevention and peacebuilding, de-

mocracy, governance, economic growth and public health attack the roots of terrorism and tyranny more than bullets and air strikes ever will. Working together with DOS and USAID, we ensure America gets the credit for the United States tax dollars that flow to African needs. These dollars are a testament to the generosity of the American people and a critical piece of our informational competition with adversaries.

Defense is the third tool in our whole-of-nation approach. The first key to defense is security cooperation because this is how we win against VEOs and strategic competitors alike. USAFRICOM engages in direct military-to-military engagement and collaborates on U.S. support to U.N. peacekeeping operations. USAFRICOM drives partner capacity building via train and equip programs and working closely with the DOS International Military Education and Training program. USAFRICOM administers DOS programs like Excess Defense Articles, Foreign Military Sales, and Foreign Military Financing. USAFRICOM is the face of United States security cooperation in Africa. If we do not continue to strengthen our African security cooperation, our partners on the continent will be more likely to pivot toward Russia and the PRC to meet their defense needs.

The second key to defense is operational readiness, which USAFRICOM achieves by providing physical and informational spaces for African, international, and United States interagency partnerships to grow. USAFRICOM's headquarters is a hub of interconnectivity linking representatives from 13 U.S. Government departments and liaison officers from 18 countries. That number is even larger on the continent, where USAFRICOM's activities through Joint Task Forces in Djibouti, Somalia, and Niger bring even more nations together. Protecting these deployed troops is a sacred duty. To succeed in this duty, USAFRICOM needs the resources to provide timely rescue response and defend against the full spectrum of threats, including the alarming proliferation of weaponized unmanned aircraft systems. Last year, this Command deployed or put forces on alert over 20 times, and with unrest on the rise in West Africa, the demand for crisis response will also trend upwards.

USAFRICOM works in concert with the U.S. State Department to facilitate direct training through Security Forces Assistance Brigades, the State Partnership Program (SPP) and health programs. All these efforts show high return for the investment in Africa and USAFRICOM stands ready to scale them up. This training works to modernize and professionalize African security forces that are desperately under-resourced. All USAFRICOM training for partner forces emphasizes respect for human rights, law of armed conflict, avoidance of civilian casualties, and civilian control of the military. Our commitment to African forces will span decades. The United States National Guard Bureau's SPP connects Americans and Africans in ways that create long-term ties of mutual benefit. Africa is fertile ground for SPP growth; we're seeing strong demand from both African partners and United States States. Sixteen partner nations currently pair with 14 State National Guards. Most recently, New Hampshire joined forces with Cabo Verde last year, and more partnership are in the works. These partnerships in Africa will yield long-term benefits in advancing our shared security and prosperity.

Institution-building is central to the USAFRICOM contribution to our partners' defense. Through various engagement channels we assist African security forces and defense ministries establish and strengthen processes for logistics, financial reporting, and communications. Not only does this capacity building help our partners secure their borders, coastlines and vulnerable populations, it also enables many to take on the role of regional security anchors, providing security assistance to other partners and peacekeeping operations on the continent. USAFRICOM invests in a growing cadre of states that leverage United States military training to, in turn, train fellow African partners, multiplying USAFRICOM's efforts. USAFRICOM is doing this through multilateral exercises and USAFRICOM's Africa Distribution Network Forum, which enables the community of African and external partners to pool airlift logistics capabilities, creating financial efficiencies in supplying missions across a continent that is over three times the land mass of the continental United States.

This Command is not alone. Our international partners—including Brazil, the European Union, France, Germany, Japan, South Korea, and the United Nations—bolster African partner forces maritime awareness and enforcement capabilities. African sea lines of communication are the highway of world commerce, but illicit income from IUU fishing, piracy, arms smuggling, wildlife trafficking, and human trafficking bankroll VEOs and enable narcotics flows through Africa to Europe and the Americas.

Our partners in the Gulf of Guinea and the Horn of Africa need robust and interoperable maritime security infrastructure to protect their borders and marine resources. USAFRICOM engages and trains with coastal forces by leveraging two

naval assets: the USS Hershel "Woody" Williams and the USNS Trenton. The U.S. Coast Guard (USCG) augments these vessels with temporary cutter deployments; the USCG Cutter Mohawk made numerous port calls and patrols last year, and this year USCG Cutter Spencer flew Old Glory off Africa's West Coast. Our naval and coast guard ships in the USAFRICOM AOR reinforce America's friendship with littoral countries, bolster food security, and deter crime, including PRC-linked IUU fishing.

USAFRICOM's challenges go beyond the African continent. Our headquarters staff stretches over two overseas locations: Kelley Barracks, Germany and RAF Molesworth, United Kingdom. USAFRICOM's component commands base in multiple European countries and in two enduring Forward Operating Sites in Africa: Camp Lemonnier, Djibouti, and Ascension Island. The Command also operates out of 12 other Posture Locations throughout Africa. These locations have minimal permanent United States presence, and have low-cost facilities and limited supplies for these dedicated Americans to perform critical missions and quickly respond to emergencies. With the exception of Special Operations Command-Africa, USAFRICOM's components are dual-hatted, dividing their time and assets between USAFRICOM and United States European Command (USEUCOM). USEUCOM's role in Ukraine's defense draws from the same resource pool as USAFRICOM requirements.

To expand reach, USAFRICOM relies on developing deeper partnerships; National Guard involvement through the SPP; naval assets, including USCG deployments. Most of all, USAFRICOM needs to maintain funding and training for African partners that are poised to becoming regional security drivers in their own right. These partnerships have track records of producing consistent return on investment for America's security objectives in Africa.

CONCLUSION: THREATS AND OPPORTUNITIES

USAFRICOM's priority is maximizing America's global advantage. The dangers in Africa- terrorism, strategic competitors, climate change, political conflict, and infectious disease—threaten the international community as much as they threaten our partners on the continent. These threats merge into a symbiosis that generates outcomes of violence, resource scarcity, State fragility, and unrealized economic potential. The only way to counter this toxic alliance is through the collaboration of a team of partners: sovereign African nations, the international community, and United States Government institutions. Africa remains a continent of opportunity. Its nations and peoples want freedom and democracy and a level economic playing field. These shared values underpin our ocean-crossing ties.

The ties between Africa and our Nation date back to the Founding Fathers. After the Revolution, Morocco and Tunisia were among the first countries to sign treaties of friendship and trade with the United States, and today they are Major Non-NATO Allies and critical security partners for AFRICOM. Societies on both sides of the Atlantic continue to grapple with the painful past of a vast African slave trade. USAFRICOM seeks to secure a bright future by fostering positive outcomes for Africans and Americans alike. To keep terrorists out of the Homeland, we must fight them in Africa. To compete effectively with strategic adversaries, we must do it in Africa. To protect the flanks of our neighboring Geographic Combatant Commands, we must do it in Africa. To energize the world's struggle for human rights, individual liberty, the rule of law, democratic governance, and free commerce, we must do it in Africa. In this struggle, USAFRICOM and our partners are on the job.

Chairman REED. Thank you very much, General Langley. General Kurilla, you have rightly emphasized the critical importance of leveraging allies and partners to counter threats from Iran and Iranian linked groups.

Does our posture change with respect to the new agreement between Saudi Arabia and Iran, and how will it impact our allies in the region or across the globe?

General KURILLA. Thank you, Chairman. Appreciate that question. This agreement between Iran and Saudi Arabia is the culmination really of 3 years of discussions that have been going on, but just recently by China.

I would say an agreement is not implementation. While these discussions were going on, in the last 90 days, we have interdicted

five major weapons shipments coming from Iran to Yemen, which those weapons are then used against Saudi Arabia.

One of those shipments included components of navigation systems for short range ballistic missiles. Again, I think the implementation is a completely different matter on this.

Chairman REED. Will China be held accountable by the Saudis if they cannot limit attacks against the kingdom and weapon transfers, as you described?

General KURILLA. I think that remains to be seen, Chairman. What is concerning on this is China's penetration into the region. In the national instruments of power, they already have their economic in the region, their information, their military with the increase in sales of at least 80 percent over the last 10 years in terms of their foreign military sales. Now we are seeing for the first time really their diplomatic.

Chairman REED. Thank you. General Langley, you mentioned the presence of the Wagner group in Africa and their behavior, which is contrary to any decency at all in the world.

How are we trying, through the information domain, to expose them and what they are doing, and also obviously expose the Russian Government that is supporting them and sponsoring them?

General LANGLEY. Chairman, from the mil-to-mil perspective in engagement with our partners, we do use information operations to effect and address the negative sentiment in their message, that destabilizes in countries in which they enmeshed themselves in, especially in Mali.

That is very—has been very much present, that they have this destabilizing activities. It has been—it is reinforced by the United Nation force there, illuminating and amplifying some of the atrocities that the Wagner Group is guilty of. So therein lies the whole-of-government approach.

Since I don't have mil to mil, because of sanctions at this point, but we still have a whole Government approach that can take that mantle and still be able to do information operations.

Chairman REED. Thank you. General Kurilla, when we spoke about China, we also speak about Russia.

The aid that Iran is giving to Russia now in the Ukraine fight and what would presumably be the reciprocation by the Russians in many different ways is another factor that has recently emerged.

What is your response to that? What advice can you give to us, and how can we limit this—the impact of this arrangement?

General KURILLA. Chairman, thank you for the question on that. It is very concerning any time we see adversaries working together. We do know that they have shipped hundreds of their advanced unmanned aerial vehicles to the Ukraine.

These are the same ones that have hit our servicemembers in both Iraq and in Syria. They are improving upon them based on what they are learning inside the Ukraine. I am concerned then with the support that Russia can give back.

As you know, the Iran State media announced the approval of—don't know the exact number yet what will come out of the agreement, but the Su–35 is a fourth generation plus fighter, which has a lot of our partners in the region concerned as well.

Chairman REED. What types of steps are you contemplating or we should be contemplating to try to disrupt or diminish this threat that is emerging?

General KURILLA. Chairman, I think this will take a whole-of-government approach to include all of the instruments of national power on this to be able to prevent that.

Chairman REED. With respect to the Iranian nuclear program, they have made significant steps since the termination of the JCPOA [Joint Comprehensive Plan of Action]. Is there any indication that either Russia or China would encourage them, sponsor them, or on the other hand, discourage them from moving further?

General KURILLA. Chairman, I will be able to talk about that in the classified session immediately following this.

Chairman REED. Thank you very much, General. Thank you both. Again, thank the men and women. Glad to see the Master Chief is here, so you are well supervised, General Kurilla. Thank you very much. Senator Wicker, please.

Senator WICKER. Thank you, Mr. Chairman. Let's stay with Iran, General Kurilla. You can tell us in a non-classified setting, can't you, whether the threat from Iran has grown stronger or lesser in the past 2 years.

General KURILLA. Iran's malign behavior has increased in the last 2 years, Senator.

Senator WICKER. Okay, and what do you need from the Congress of the United States to meet this threat?

General KURILLA. As we look at the threat mainly that we face is the ballistic missile and their UAV threat in the region. One of the ways that we are countering that is through regional agreements and a regional architecture.

As we go toward an integrated air and missile defense in the region, we are making progress on that. So, what we need is the continued resourcing, and I want to make sure that I have a sufficient and sustainable posture in CENTCOM so that I can accomplish the missions I have been given to make sure I can mitigate the risk. If there is one area in the world, I believe that can derail the National Defense Strategy, it is that currently the CENTCOM AOR.

Senator WICKER. The resources to help you facilitate these agreements?

General KURILLA. It is the resources, Senator.

Senator WICKER. Okay. Will—help us be specific about that. Now, after the disastrous Afghan withdrawal, the Departments assured this Committee that countering terrorist groups would still be possible over the horizon. We have only done that once. Is that correct?

General KURILLA. Senator, we—actually all kinetic—all finishes in the methodology of find, fix, and finish on counterterrorism targets are not kinetic. There is two that are non-kinetic that we disrupted and I will talk about that in setting that involved over five combatant commanders to disrupt those finishes.

Senator WICKER. Okay, so two non-kinetic and one kinetic.

General KURILLA. Right.

Senator WICKER. Do you think we should be doing more of those?

General KURILLA. It is difficult right now, as I said in my confirmation hearing. It is a difficult but not impossible. One of the

things that we are trying to do is increase our intelligence, surveillance, reconnaissance over that.

We are putting an investment into long duration, high altitude, alternative airborne ISR [intelligence, surveillance, and reconnaissance] that can go up for days and weeks, because right now I am spending 80 percent of my time transiting to the region to be able to collect over the top.

Senator WICKER. Okay. General Langley, tell us what China is doing. How far along are they on their base in Djibouti? Where do you think they might likely be making their strongest effort for a military base in West Africa?

General LANGLEY. Thank you, Senator, for that question. China's aspirations, especially at Doraleh, they are coming across a thinly veiled front that is all for goodwill. But we know that they are establishing, especially with the destroyer that visited Doraleh last March, shows that they have indications that——

Senator WICKER. Tell us where that is.

General LANGLEY. Duraleh is in Djibouti. I am sorry. Ranking Member, their aspirations are pretty clear. That is a strategic line of communication, especially as it embarks upon the Suez Canal and Bab-el-Mandeb, if they wanted to fully militarize that. Duraleh is of concern.

They are saying it is all about goodwill, but I think the other. They do have other aspirations, and in closed session, Ranking Member, I know that I can be able to lay that out where in West Africa is their next military base aspiration.

Senator WICKER. Okay, but tell us then if you can, and I think you can, how that would affect our security as Americans, and particularly to North America, if the Chinese are able to establish a base in West Africa.

General LANGLEY. It would put us—it would change the whole calculus of the geostrategic global campaign plans of protecting the Homeland. It would shorten—if they build any capacity on the West Coast, geostrategically it will put them at an advantage. Right now, we have the decisive advantage. They cannot—we can't let them have a base on the West Coast because it would change the dynamics.

Senator WICKER. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you very much. Thank you, Senator Wicker. Senator Shaheen, please.

Senator SHAHEEN. Thank you, Generals Kurilla, Langley, thank you both for being here this morning. General Kurilla, I want to pick up on a conversation that we had when we met a couple of weeks ago, and I appreciated that opportunity.

One of the things we talked about was the situation in the ISIS detainee camps in Syria. Can you give us an update on what the current conditions are and what you are doing in CENTCOM to help destabilize what is happening there, and what you need from us in order for us to be more successful there?

General KURILLA. Thanks, Senator. I have been to Syria six times. I was in Syria last week. As we look at ISIS in Syria, it has three categories. The first category is ISIS at large. That is the ones that we are fighting right now with our Syrian Democratic

partners, and I think we have contained ISIS, but the ideology is uncontained and unconstrained.

The second category is what you may refer to as the ISIS in detention. I refer to them as an ISIS army in detention. There are over 10,000 ISIS detainees spread across 26 different prisons in Northeast Syria. I went inside the Hasaka prison last Thursday.

That is the same prison that January 2022, last year, there was 4,400 ISIS detainees in there. They broke out. Over 1,000 made it outside the walls. In a 10-day battle that involved both our United States forces, air power, and Syrian democratic forces, over 400 were killed. Some escaped, the exact number unknown, and then the rest were captured.

But 121 of our SDF [Syria Democratic Forces] partners were killed in that prison breakout. What we are doing specifically about the detention facilities is we are trying to consolidate them now. This body provided funding for us to build another prison, which we think can consolidate the vast majority of the rest of the prisoners.

We also train the guards that are on these detention facilities and the CTF [counter-terrorist financing] funds help facilitate that. The last category is the potential next generation of ISIS. I had an opportunity to go into the Al Roj camp and into Al Hol inside and talk to residents. I talked to women from 16 different countries last week inside the camp to include the woman from Alabama.

I also went inside the Al Hol camp and I met three teenagers who had been there for 6 years, and remember, ISIS really didn't come to Al Hol until about late 2018. These were people that went there to escape ISIS and escape the regime.

With the fall of ISIS's territorial caliph in really March 2019, it swelled from about 35,000 to 70,000, and currently right now there is about 51,000 inside of Al Hol. Over 30,000 of them are children, and they are at risk from radicalization.

About 50 percent of the camp holds or espouses some form of ideology, according to the camp guards, the camp administrators, and the residents, and the other half are trying to escape ISIS.

Really, the only role there is that we can do, is there is no military solution, is the repatriation, rehabilitation, and reintegration back into the society.

Senator SHAHEEN. Are we having any luck getting some of the countries to repatriate those detainees who came from their countries?

General KURILLA. Absolutely, ma'am. We have actually had more success in the first few months of this year than the last 6 months of last year. About half of those IDPs [internally displaced people] that are in Al Hol are from Iraq.

We work with our Iraqi security partners in the Iraqi Government to repatriate them. They have done 1,200 in the last 2 months. At that pace, it would be about 4 years to get everybody back. So, we are working with them on how they can increase the throughput.

But right now, it is their ability to go through the Jeddah 1 camp, which is South of Mosul, as they bring them back. What they don't want to do is just move one IDP camp to another, so they are working through that process.

Senator SHAHEEN. Thank you. Well, I hope you will let this Committee know if there are additional resources or other supports that you need. General Langley, the map of Africa shows where the Wagner Group is operating, but it doesn't speak to the success or not that they are having with recruitment.

Can you speak to that, and maybe Senator Reed asked about the success that information or disinformation efforts that they have underway. Can you also talk about what we are doing to respond to that in a little more detail?

General LANGLEY. Senator, first and foremost, I mean, talk about Wagners intentions. They are all about power and profit. If they are going to give a false offering of security, it is only for the elites in a particular country.

We are seeing that in Mali. Wagner failed in Mozambique. They tried to entrench upon it, and that government, albeit developing, did not like that false value proposition. They have continuing actions in Dakar, a Central African Republic. In that vein, I think Central African Republic is kind of getting fed up.

So, there is no recruiting going on. It is all about profit, making their way to gold mines, diamond mines, or rare earth mineral mines. That is extension of the Russian Federation.

Senator SHAHEEN. Thank you. I will submit a question for the record on the disinformation efforts.

Chairman REED. Thank you, Senator Shaheen. Senator Fischer, please.

Senator FISCHER. Thank you, Mr. Chairman. Thank you both for being here today and thank you for your service to our country. General Kurilla, how long would it take ISIS-K to generate the capability to conduct external operations?

General KURILLA. Specifically, ISIS-Khorasan, Senator? It is my Commander's estimate that they can do an external operation against U.S. or Western interests abroad in under 6 months with little to no warning. In the classified session, I will talk about why I make that assessment. It is much harder for them to be able to do that against the Homeland.

Senator FISCHER. Senator Wicker talked to you quite a bit about over the horizon and our capabilities that we have there, or don't have there in Afghanistan. Do you think that you need any additional resources in our upcoming budget to increase or improve those capabilities?

General KURILLA. We have been funded, like I said, for some alternative airborne ISR that will help us get longer duration. But it is not just about ISR. We are also increasing our other intelligence efforts to get penetration into the networks that we want.

A part that goes unseen a lot of times is the analytical back side. These are the analysts, the linguists, and the production capability that help us make the decisions. There has been a significant decrease shifted from the NDS [National Defense Strategy] to go against higher priority targets, but I would like to see to make sure that we don't lose so much of that capability that we cannot see the threat.

Senator FISCHER. Because knowing that threat is obviously very important, as you have stated, for the existence that we still see in Afghanistan of the terrorist groups that are there.

General KURILLA. Correct, ma'am.

Senator FISCHER. Thank you. Have you requested authority to conduct any strikes in Afghanistan against the ISIS-K targets that have been identified?

General KURILLA. In a classified study, ma'am, I can talk about where we are in terms of the find, fix, and finish on them.

Senator FISCHER. Okay. Do you still have a need for munitions that can hit hard in deeply buried targets?

General KURILLA. I do, ma'am.

Senator FISCHER. Do you have specific requests in that area?

General KURILLA. That was in my unfunded priority list (UPL) last year.

Senator FISCHER. Do you plan to include it this year?

General KURILLA. It depends on the full funding, ma'am.

Senator FISCHER. Would it be your recommendation and your best military advice to this Committee that it would be—that it should be included?

General KURILLA. We did receive funding in my fiscal year 2023 to include the additional procurement of the—its the Massive Automated Ordinance Penetrator, which goes against hardened, deeply buried targets.

Senator FISCHER. Which are growing in number with our adversaries. Is that correct?

General KURILLA. That is correct, ma'am.

Senator FISCHER. What is your assessment of Iran and Saudi Arabia reestablishing diplomatic ties? You talked about that a little bit. But how does that affect our mil-to-mil relationships that we have with Saudi Arabia?

General KURILLA. We have a very strong mil-to-mil relationship with Saudi Arabia. I think this agreement is, again, is the culmination of 3 years of talks between them. The more concerning part is that China is the one that was mediating this.

Senator FISCHER. As we look at Iran and their proxies throughout CENTCOM AOR, do they continue to pose a significant threat to our partners and to our own forces in the region? What more can be done to deter Iran from those malign activities?

General KURILLA. We see Iran as the largest malign actor in the region. Less than 60 hours ago, we had rockets attacked from Iranian aligned militia group against one of our bases in Syria.

Senator FISCHER. What more can be done to deter them?

General KURILLA. One of the things that we are doing is increasing our defensive posture in these areas. I want to thank the services for providing a capability. So particularly the Army has given us some tremendous capability in terms of counter-UAS and counter rocket mortar at our bases.

Senator FISCHER. With Syria and Iraq, what do you assess to be the situation in Syria right now? Have you seen any change in Russia's presence in Syria, or has that remained pretty steady since the invasion of Ukraine?

General KURILLA. Senator, Syria is very important to Russia. They have taken very little out of Russia since their invasion. They have taken a small number of forces, some munitions, but generally has stayed about the same. What we are seeing, though, is

an increase recently in the unprofessional and unsafe behavior of the Russian air force in the region.

Senator FISCHER. Can you give us an example of that here?

General KURILLA. I can. They fly over our bases with ground attack aircraft with weapons on them in an attempt to try and be provocative. But really, it is unsafe, unprofessional, not what we expect of a professional air force. They want to try and renegotiate the deconfliction protocols that they violate every day.

Senator FISCHER. This is not new Russian behavior, is it, sir? Especially with regard to the drone incident that we recently have seen.

General KURILLA. It is not new, but we have seen a significant spike since about March 1, in Syria.

Senator FISCHER. Okay. Thank you.

General KURILLA. Thank you, ma'am.

Chairman REED. Thank you, Senator Fischer. Senator Gillibrand, please.

Senator GILLIBRAND. Thank you, Mr. Chairman. I would like to continue Senator Fisher's line of questions with regard to Iran. If this was a 3 year of talks, how recent was China engaged in those talks?

General KURILLA. Ma'am, I understand that it is in the last several months.

Senator GILLIBRAND. Well, obviously, that raises serious concerns, because I just took—I just joined a delegation to visit the Abraham Accords countries, and the interest of those countries, UAE [United Arab Emirates], Bahrain, Morocco and Israel, is to broaden and strengthen the Abraham Accords, and they were hopeful that they could engage Saudi Arabia in that context.

This seems to me that that would make that extremely problematic, because if China is involved, it would be very difficult to have the kind of technology shared in the Abraham Accords if they are now in alliance with China.

Second, if they are in an alliance with Iran, the whole point of the Abraham Accords is to counter Iran's malign threats. So, does this make the possibility of extending or expanding the Abraham Accords impossible? What do you recommend that this Committee do to focus on how we create more regional alliances?

General KURILLA. Ma'am, I believe this is a—the talks about opening diplomatic relations so much as this is not an alliance between Saudi Arabia and Iran. They have had diplomatic relations in the past while they were still shooting at each other in the past.

This is really about opening embassies and opening diplomatic relations when they closed the embassies back in 2016. What this does do, though, is that with China, the most concerning part about this is that China is the one brokering this because it shows that they are bringing the diplomatic aspect of their national instruments of power.

What we see with China on the military side is that they have a significant increase in bringing their equipment into the region and their foreign military sales. If there is Chinese equipment there, we cannot integrate it with United States equipment.

As we try and build the regional partnerships, and we have been there for the last 75 years, when we try and build these regional

partnerships. You want to be able to integrate with your partner. If there is Chinese equipment there, we are not going to be able to integrate it.

Senator GILLIBRAND. Understood. Can you, in this setting, give us more detail on where China has integrated its equipment in the region?

General KURILLA. China has sold equipment all over the region inside the Middle East. I can take that for the record and give you a specific followup for that, ma'am.

Senator GILLIBRAND. Do you have a focused plan on what to do about that?

General KURILLA. One of this is to increase our partnership with these elements. Again, this is a race to integrate before China can penetrate.

Senator GILLIBRAND. Would you recommend expanding and deepening the Abraham Accords?

General KURILLA. I would, ma'am.

Senator GILLIBRAND. Thank you. With regard to Afghanistan, I would like an update on what we are doing to get our partners out and whether those operations are continuing, and what are the barriers that you are facing currently.

General KURILLA. Ma'am, the getting the partners out through special immigrant visas. That is a State Department run program. But from the United States, from the military side, we are responsible for bringing them into a place called Camp As Sayliyah in Qatar.

We currently have about 2,600 there right now. We provide the in processing, the security, and the basic life support. The State Department runs the actual immigrant visa side. They are averaging about 60 days there before they are moved on.

In my understanding right now in the pipeline is about 85,000 special immigrant visas, but I would defer to the State Department on the exact number.

Senator GILLIBRAND. Again, with regard to Iran, we know that Russia and Iran have escalated their military cooperation over the last year. How is CENTCOM coordinating with EUCOM [European Command] to ensure that our forces are able to respond to threats that touch both areas of responsibilities?

General KURILLA. I talked to Chris Cavoli often, the EUCOM Commander in the SACEUR [Supreme Allied Commander, Europe]. We have done several operations that I can talk about in a classified setting to create additional dilemmas for Russia.

Senator GILLIBRAND. My last question for you, sir, is you activated the U.S. Space Force Central, which is responsible for space operations within the CENTCOM area of responsibility. How are you incorporating the space domain into planning and training so that your subordinate commanders can effectively integrate space into their operations?

General KURILLA. We think this is a very big positive of actually having a component of Space Force. Space has always played a large role in the CENTCOM AOR, but now I have a Commander that sits at the table that is able to then integrate more effectively because he has a seat at the table to be able to do that.

We actually just finished a large with all the Combatant Commands in the region to talk about the lessons we have learned over the last decade of doing space operations in CENTCOM.

Senator GILLIBRAND. Thank you. General Langley, despite the size and growing importance of the continent, the 21st century wars in CENTCOM, the Russian invasion of Ukraine, and the strategic competition with China have dominated much of our focus on this Committee. What might we be missing about Africa that you think this Committee should take note of in the coming years?

General LANGLEY. Senator, I would say just aspirations of China. The aspirations of China is threefold, one from a geopolitical. They are trying to change the international norms and they are using some of the African countries within the U.N. construct, whether it be General Assembly or the Security Council, trying to affect votes to change those international norms and the international system writ large.

Then there is the geostrategic operation. Their aspiration for military bases on the continent of Africa. Just talked to my African partners, they don't want to be militarized in a strategic sense.

The last piece, Senator, is geoeconomic. Our future economy is dependent upon a number of rare earth minerals. Some of our clean energy technologies depend upon the rare earth minerals. About 30 to 40 percent of those minerals are on the continent of Africa. That is forward thinking by the PRC.

They are trying to harvest and leverage upon that through shaky deals, engaging with some of these countries so they can corner a market, if you will. That is what I am concerned about, Senator. Thank you.

Chairman REED. Thank you, Senator Gillibrand. Senator Cotton, please.

Senator COTTON. Welcome, gentlemen. General Kurilla, I want to return to your answer to Senator Fischer about the threat of terrorist attacks originating from Afghanistan. If I heard you right, you said you believe that such attacks could occur in a mere 6 months out of Afghanistan against American citizens or allies or partners in Eurasia. Is that right?

General KURILLA. Senator, I said abroad, which I would also include Europe in that.

Senator COTTON. Eurasia. But you said less than—more than that against the American Homeland.

General KURILLA. It would be harder for them to do that against the American Homeland.

Senator COTTON. If you assessed 6 months against Europe or Asia, what would you assess would be the timeline against the Homeland?

General KURILLA. I think it is hard to put a timeline on that. But again, I assess that they could in as little as 6 months with little to no warning, and I will talk about that in the closed session as to why assess that.

Senator COTTON. How likely do you think a terrorist attack on the United States or one of our allies is originating from Afghanistan?

General KURILLA. I think it is a higher probability overseas than it is in the Homeland.

Senator COTTON. When you add up all the troops you have in your area-of-responsibility and American citizens who are there for business or tourism or pilgrimages on any given day, what are we talking about? Probably hundreds of thousands, right?

General KURILLA. At least.

Senator COTTON. Hundreds of thousands within range of a terrorist attack, in your assessment, in a mere 6 months from Afghanistan. Okay, I want to turn to Iran.

Senator WICKER. I don't think we heard the answer.

General KURILLA. Yes, I do assess it.

Senator COTTON. I want to turn to Iran. You said in your written statement they can produce sufficient fissile material for a nuclear weapon in less than 14 days. You also say that deterring Iran is arguably more urgent now than any time in CENTCOM's history due to one, their cutting-edge missile and UAV capability. Two, their uranium enrichment program. That is correct?

General KURILLA. That is correct, Senator.

Senator COTTON. Yet you also say Iran is undeterred from its malign activities. So that is not good. That it is more urgent to deter them than in any time in Central Command's history, but they are undeterred. Why is Iran undeterred right now?

General KURILLA. Currently, right now we see them, that their malign activity is increasing. We see them again in the last 90 days. We have some of the highest numbers of our advanced conventional weapons and munitions that we have seen going from Iran to Yemen.

We see their attacks on our United States forces in Iraq and Syria increasing, and we see the threat streams that I can talk about in a higher classification.

Senator COTTON. I mean, those are more the results of the lack of deterrence against Iran. Do they feel undeterred because they feel safe that neither the United States or our partners are going to threaten anything they hold dear?

General KURILLA. I can't say the exact reason why they feel that, but I know right now when I look at them, I believe they are undeterred.

Senator COTTON. I mean, there is a history—you are right throughout your statement. There is a history of Iran being deterred by the credible threat of military force or actual military force. That is right, isn't it?

General KURILLA. I think that deterrence is always temporal, so you can deter for a period of time and then it will wane. I do believe the Suleimani strike was a deterrence.

Senator COTTON. We can go back much further than that. Iran waged war with Iraq for 8 years and Ronald Reagan sunk half their navy in the spring of 1988, and surprisingly, that war ended just a few months later.

Iran also stopped its enrichment program in 2003, after the United States had invaded and toppled governments on both its East and its Western border. Then, as you say, they took only very tentative steps toward higher enrichment in 2019.

After we killed Kassam Soleimani, they did nothing at all for most of 2020 is that right?

General KURILLA. They—it was a higher level of deterrence after that.

Senator COTTON. Last week on the Intelligence Committee, we had our annual worldwide threats briefing and the director of National Intelligence cited the killing of Mohsen Fakhrizadeh, a notorious Iranian nuclear scientist, in November 2020, as the reason Iran accelerated its enrichment program. Do you agree with that assessment?

General KURILLA. Senator, I think any talk of the Iran nuclear program would be best in a classified setting.

Senator COTTON. I pointed out there is also something that happened in November 2020 besides the killing of Mohseh Fakhrizadeh that might have emboldened Iran, and that was the election of Joe Biden that gave the Iranians confidence that they were no longer going to be held militarily at risk.

Speaking of that timeframe, I think it was December 2020, didn't we face threats to our personnel in Iraq from militias and the Former President tweeted what he called some friendly health advice to the Ayatollahs that if a single American was harmed in Iraq, he would hold them responsible?

General KURILLA. I am not familiar with that specific tweet.

Senator COTTON. That did happen. It is okay. There are a lot of them. You don't have to be familiar with every one of them. But I also don't think those attacks happened. So, I think what we can learn here whether it's from Kassim Soleimani or the tanker wars or anything else, that the only thing that will deter Iran is the credible threat of military force.

One final question, I know you have added Israel to your AOR, and you right in your statement that you readily partner today with Arab militaries and the Israel Defense Force alike. In fact, the inclusion of Israel presents many collaborative and constructive security opportunities.

One of the opportunities I see is having Israeli Air Force personnel training alongside American personnel on KC–46 tankers, which we expect to be providing them in the future, and that is training that we can provide them so they will be ready to operate those aircraft as soon as they get them.

Do you think that would be what you call a collaborative and constructive opportunity between the United States and Israel?

General KURILLA. I think when they get closer to getting their aircraft, starting to train those pilots so they can retain that training and go right into the execution of operating them.

Senator COTTON. Thank you.

Chairman REED. Thank you, Senator Cotton. Senator Hirono, please.

Senator HIRONO. Thank you, Mr. Chairman. I would like to turn to another part of your missions. In both Central Command and in Africa Command, United States diplomatic efforts are—diplomatic efforts are at the forefront of your missions. The military-to-military engagement is one very important aspect of your responsibilities, but your organizations are just one part of a whole-of-government approach.

General Langley, I note your team's work in implementing the 2017 Women Peace and Security Act. Amid the many extremist

threats in both of your areas of operations, it is more important than ever, as far as I am concerned, to work for equality for women and girls around the world. Generals, how are your commands supporting and protecting women and girls in your AOR?

General LANGLEY. Senator, thanks for that question. As Women's Peace and Security Act passed in 2017, I have seen from afar what AFRICOM has started to do. We didn't wait for the plan or the construct over years.

CENTCOM—excuse me, AFRICOM got after it. I saw this because I was at CENTCOM and I was at the J5, and we got out there as well at that time. But how far that CENTCOM and AFRICOM has gone in the vein of the intent of women's peace and security—Senator, I would like to just make note, we have it—we have been to our Africa campaign plan to effect in working with the Department of Defense to finish out the construct.

But we just didn't—we didn't wait for the word to go. Just for your information, Senator, across the Horn of Africa, our JTF [joint task force], we have a Major General Shawley, and she is affected that in every exercise that we do all the way down from Djibouti down to Kenya.

Even her, Valerie Jackson, Brigadier General, the United States + Corps, as they work with other countries, they get it. President Assad Sheik Mohammed sees a representation of our talent base in our military and in our U.S. military, that 50 percent of the talent base are women, and they are showing that it is effective.

It is—and for partners on the African continent, they realize that. So, it is changing culture.

Senator HIRONO. General, I think we have to be very intentional about the support we provide to women and girls, because wherever there is instability, and certainly both of your AORs are characterized by what I would call instability, women and girls are the ones who bear the brunt of the challenges. General Langley, would you like to add to what General Kurilla said? Because you are doing a, I would say, a pretty good job.

General KURILLA. Ma'am I think——

Senator HIRONO. Please.

General KURILLA. Ma'am, I think you are referring to me on that. So, the—I value the program.

Senator HIRONO. I am sorry. Yes, I was referring to you, General Langley. Go ahead.

General LANGLEY. Yes, Senator. In execution, as we work with even in the West in our exercises, we ensure that we do represent and within the spirit and a letter of intent, of the Act of WPS [women, peace, and security], that we—that our partners ensure that their culture is changing and women and girls get meaningful opportunities within the overall governance and society.

That is why I brought up Major General Shawley as she makes her travels across. They see that America gets it and they start to get it as well. It is very compelling, Senator.

Senator HIRONO. Thank you. General Langley, further question for you. You noted in your testimony the climate as a challenge in Africa. Can you describe the destabilizing impact of climate change on African nations and what we can do to counter this impact, or these impacts?

General LANGLEY. Absolutely, Senator. That is a driver of instability, especially with irregular patterns across the Sahel. We are seeing that. Across a whole-of-government approach as I work with USAID, I would say just more flexibility, trying to predict where the effects are going to go.

We need to stay ahead of this, and that is why Administrator power is action for non-humanitarian actions, so she can move resources, so we can address the effects of climate change, because it is hard to predict. Even the USAID being an evidence-based organization can't predict where the next, 2 years out, where the next atrocity is going to happen as a result of climate change.

There needs to be flexibility across State Department and USAID, then backed up by military, by building a capability, adaptability within our partners and our military so they can go out and assist the affected people as a result of climate change.

Senator HIRONO. Thank you. Mr. Chairman, I am particularly interested in what we are doing to counter climate change impacts in Africa, because I agree that this is a very destabilizing situation. So, I will continue to pursue inquiries along these lines. Thank you.

Chairman REED. Thank you, Senator Hirono. Senator Rounds, please.

Senator ROUNDS. Thank you, Mr. Chairman. Gentlemen, first of all, thank you both for your service to our country and to your teams as well. A question for both of you.

With regard to our country's refocus with regard to the threat that we see from both the other major powers in the world, specifically China, Russia to some degree as well, what impact has that had in terms of the discussion and the clear evidence that we have turned from literally more than 20 years of fighting terrorism to where we are now focusing on this major power competition.

What is the impact in terms of the countries within your AORs, and how are they perceiving the United States interest in your regions of the world? General Kurilla.

General KURILLA. Senator, we are concerned. Again, as I said, this is about a race between integration with our partners and Chinese penetration into the region. There has been a significant increase both in their economic $460 billion in infrastructure development in the last 5 years, $2.6 trillion in trade.

Really, we see their military capability where they are trying to sell military equipment and foreign military sales. In the last 10 years, we have seen a 30 percent decline in the United States, but an 80 percent increase in Chinese on foreign military sales. When they buy a Chinese system, we cannot integrate it into our systems.

Senator ROUNDS. General Langley.

General LANGLEY. Senator, as Eric just alluded to, we had the same effects on the continent as well, as far as investments by—from a military standpoint, both the PRC and Russia. How we partner—that really segways into the main issue as far as how slow our 333 program of our arm, train, and equip our partners. So, they do know that they have choices.

Now, as we saw down in South Africa, they want to show the world that they have choices and that is why they had Mosi II exercise. But up in our partners in the Gulf of Guinea region, they

are pressurized by all kinds of—by extremist organizations threatening their borders.

They come in, they asked, and they said, hey, General Langley, we don't want your boots on the ground. We want your equipment. We need help so we can put up a good fight and take care of these violent extremist organization across all the affiliates.

But as slow as our processes are, we have 333 and also 332, our other title 10 authorities is moving to slow, Senator. Just moving too slow, and they make the wrong decisions.

Senator ROUNDS. Let's dive into that just a little bit more for both of you. The foreign military sales, or FMS, is a critical part of our foreign policy. It requires not just the availability but also the approval process. Could each of you share with me your opinion about the approval process and whether or not there needs to be a more expedited process in order to allow us to continue with FMS? General Kurilla.

General KURILLA. Senator, they say about 95 percent of all FMS goes according to plan. Five percent doesn't, 80 percent of those 5 percent are in the CENTCOM AOR. The challenge we have is the time it takes to get equipment to our partners.

There is the DOD, Department of State, Congress, and industry all have a role in that. But what China does is they come in, they open their entire catalog, they give them express shipping, they give them no end user agreement, and they give them financing, which at the end of the day can end up being some type of predatory financing.

But they are much faster to need, and our security partners have real security needs and we are losing our ability to provide our equipment so that it can integrate into the region.

Senator ROUNDS. They would prefer to have our equipment, wouldn't they?

General KURILLA. Absolutely. When you buy U.S. equipment, you buy—you get the quality, you get the training, the sustainment, the upgrades, but you are also buying into the bureaucracy, right now.

Senator ROUNDS. They just can't get it because of our bureaucratic processes is delaying the delivery of that product. If it is available, it is still a bureaucratic mess to get it there.

General KURILLA. There is some that goes very fast and some that goes very, very slow.

Senator ROUNDS. General Langley.

General LANGLEY. Absolutely, Senator. We see that just all along, and I fully concur with Eric about our training and the capacity is more of a quality. But the sense of urgency, especially in West Africa, across the Sahel, across Ghana, Cote d'Ivoire and Benin, and Togo, they need equipment. They need weapons now.

So even with our significant security cooperation initiatives, that process is not any faster. It is designed to be faster, so they make choices, and they make the wrong choices in siding with—going with either PRC or Russia for especially lethal aid.

Senator ROUNDS. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Rounds. Senator Warren, please.

Senator WARREN. Thank you, Mr. Chairman. The Biden administration announced last week that it is requesting $842 billion for the Pentagon budget. It is one of the largest budget requests ever.

Despite this already massive number, every year DOD pushes to get even more money by using unfunded priority lists or what I call wish lists that don't go through the other budgeting screens. The services and Combatant Commands ask Congress for billions more in funding for programs from these lists.

Other Federal agencies have to balance their must haves and their nice to haves, but DOD doesn't. Instead, it games the system by submitting a second list of items that they want so that their budget can grow even bigger. I know that there are colleagues on both sides of the aisle who are concerned about this and want to see this practice stop.

Last year, both your predecessors at AFRICOM and CENTCOM submitted these wish lists. So, what I am asking today is about whether you plan to do the same. General Langley, AFRICOM requested an additional $353.6 million in unfunded priorities last year.

In its submission, AFRICOM argued that if some of these programs weren't funded, it would result in, "unacceptable risk." So, my question is, this year will AFRICOM be putting all of its priority projects, if it is that important, if it is putting us at unacceptable risk, will you put that into your base budget request?

General LANGLEY. Senator, and just be transparent, I will be submitting an unfunded priority list and here is why. Because of the emerging threats. When President Biden directed us back in last May to return to our persistent presence in Somalia, and I took command a few months after that.

I asked, being a former programmer, I said, okay, what is the fully burdened cost? I need to communicate to Congress what the fully burdened costs. I need to communicate to the Department first.

I did that. I did that after budget submittal to—from the services to the Department. So that emerging cost was informed by the risk that we have——

Senator WARREN. So, you are telling me that this request, the ink is not dry on the budget request from Congress and from the President, and you are already saying that you know that it is not enough.

I want to remind you about emerging threats. DOD already has transfer and reprogramming authorities to deal with emerging threats. You have the ability to come back to Congress if you can justify an emerging threat.

We have a panel looking at whether or not there are more changes that are needed. But these unfunded priority lists are just another way to game the system. If it is a priority to cover something like this, then I think you should be covering it.

Are you telling me that the only things that will be on your unfunded priority list are things you couldn't have known about when you submitted your budget?

General LANGLEY. Senator I—even my predecessor also put the other piece of that cost on there on ISR. We never had enough.

Senator WARREN. I am not hearing a yes or no. Are you telling me that your unfunded budget priority list will have nothing on it except things that you could not have known about when you submitted your budget?

General LANGLEY. There is a persistent threat that we have to account for. On that, on the list it will include that.

Senator WARREN. That is what your budget is for, accounting for the persistent threat. Let me ask General Kurilla the same. Last year, CENTCOM submitted a request for $35 million in its unfunded priority list. Are you planning to submit a wish list again this year?

General KURILLA. Senator, I am. But on last year's, I am the one who signed last year. That was for the Massive Ordnance Penetrator for heavy, deeply buried targets. I do not have procurement dollars in my baseline budget, that is why I requested it.

Senator WARREN. What you are really telling me is that this unfunded priority list is just a way to say I need a bigger base budget.

General KURILLA. I don't have that color of money, Senator, to ask to request that, but what I what I do as a commander is I mitigate risk and I go through my priorities and the missions I have, and then when I have any risk left over, by the law, I will submit per the UPL.

Senator WARREN. You know, look, I appreciate this—you all know I have raised this issue before. If we are going to have a budget, we ought to have a budget. There is no reason that DOD shouldn't be able to work within the budgeting process like every other part of Government.

I am out of time on this, but I am going to be submitting more questions for the record, Mr. Chairman, on what these commands are doing to prevent civilian harm. DOD is on the right path, but I remain concerned about whether or not we are getting accurate and honest reporting. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Warren. Senator Mullin, please.

Senator MULLIN. Thank you, Mr. Chairman. Thank you both for being here. General Kurilla, I just want to personally tell you how much I appreciate your service.

Upon reading more about you, I was even more impressed. Any of us that have been in situations like you were in Mosul. Being able to keep your head in the fight after being shot three times and still be able to direct fire, I commend you for that.

That is while it should be common, everyone in front of you or, and behind you knows that is not always common. So, thank you for doing that. I want to talk about Afghanistan a little bit. The American withdrawal from Kabul in 2021, as you know, was a complete disaster. It brought in systematic failures from the top down across multiple agencies. But it is not enough to just say this was a disaster and move on.

Lives were lost and our posture on the world stage has been forever changed. As you reach 1 year in your current position, can you explain what you have learned in the aftermath of the Afghanistan withdrawal and how we can prevent these types of failures moving forward?

General KURILLA. Senator, just for clarity, specifically about the withdrawal or overall?

Senator MULLIN. The lessons we learned from the withdrawal, and how we can prevent this from happening again, and how this has changed your position.

General KURILLA. In terms of the actual withdrawal, one of the top lessons we learned is the importance of partners' access, basing, and overflight. We would not have been able to execute the actual execution of the withdrawal without all of our partners that we have in the Middle East——

Senator MULLIN. I think executing would be a hard word to say.

General KURILLA. It would not have been possible, at the scale at which we did it, without our partners who provided the access, basing, and overflight. I think one of the other big lessons learned initially, it was just the mission was given to CENTCOM. It became a five Combatant Command mission, and then also with our partners, bringing them all into that planning session.

Senator MULLIN. Do you think people should be held accountable from that withdrawal?

General KURILLA. I think anybody should be held accountable if there is a failure in something.

Senator MULLIN. As you know, there was a tit-for-tat going on between a couple of people during that whole situation. Gerald Mackenzie, General Donoghue. I found myself caught in the middle of that as we were trying to get—out with the team that I was part of. At the day we did end up getting over 300 Americans out. But it wasn't from the assistance of our Government.

In fact, I found that it was easier to work for the Taliban because I knew the price, I was going to have to pay for each one, than it was to get them out dealing with, unfortunately, us. In fact, Ambassador Pommersheim that was over Tajikistan literally told me, Mr. Mullin, I was told not to assist you or your group in any way. Unfortunately, it cost the life of a 3-year-old young girl.

At the same time, I see no one, not a single person held accountable. In fact, General Donahue is now over 18th Airborne. The irony of that is he is looking over Europe now and deterrence in Europe. General Mackenzie retired. No one in the State Department has been held accountable. What does that say to our partners?

Our partners that lost lives. I was with His Highness in UAE and he was even upset about it. He said that if America is willing to walk away from the billions of dollars that they spent in Afghanistan, what does that say about our region?

He went on to say that I fought, him, his Royal Highness fought in Afghanistan, his two sons fought in Afghanistan, and every single soldier that they lost, he visited their house personally. Yet we pulled out, loss of lives of—that didn't have to be lost. Not to mention our 13 soldiers, marines. No one, not a single person, has been held accountable. You think that is right?

General KURILLA. Well, Senator, if I could. I have great respect. I have known Frank McKenzie and Chris Donahue——

Senator MULLIN. I know you do. I am very familiar with the relationship. It doesn't make any differences underneath their command, and no one was held accountable.

In fact, the only person that was chastised about it was the one Colonel that came out and chastised the withdrawal mechanism, and how dare him speak out negative about something. I get it. I get the chain of command.

I remember he broke protocol. Don't you think someone—you cannot sit here and tell me that that was successful withdrawal. Don't you think that someone should be held accountable? It was an absolute disaster.

General KURILLA. Senator, I served 5 years in Afghanistan every year from 2009 to 2014.

Senator MULLIN. I know. I am aware of it.

General KURILLA. I am vested in there.

Senator MULLIN. So am I.

General KURILLA. The actual thing. I was not part of the——

Senator MULLIN. I know.

General KURILLA.—force provider. But I would say that the execution——

Senator MULLIN. You were there before Donahue and you came back. You know it intimately. I am just asking you, once again, shouldn't someone be held accountable. If someone is below your command, and they went through this, and they had an absolute disaster like this, losing marines. Don't you think someone at that point would be held accountable?

General KURILLA. I think it is an absolute travesty that we lost those 13 marines at Abbey Gate——

Senator MULLIN. But you don't think anybody should be held accountable?

General KURILLA. I don't know if accountability has been assigned to anyone, Senator.

Senator MULLIN. Well it hasn't. I mean, I get what you are saying, but you know there hasn't. At some point, we have got to—our adversaries and our allies are both taking a look at this and we look weak.

I know you are dealing with this and we are dealing with this. It is time for someone to be held accountable. What I am looking for is your help and your assistance in moving forward. We got to right this wrong. With that, I yield back. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Mullin. This issue of accountability is a serious one, but it would take in a 20-year history of the struggle in Afghanistan. Based on the operation, NEO [noncombatant evacuation operation] was one of the most difficult operations, General Kurilla. Evacuating over 120,000 people was something I think was remarkable. Would you concur?

General KURILLA. I absolutely agree. Again, I think the execution of bringing the people out was done very effectively in terms of the numbers. We would not have been able to do the numbers.

Chairman REED. Thank you. Senator Kelly, please.

Senator KELLY. Thank you, Mr. Chairman. General Langley, good to see you again. Thank you for being here.

As you know, I recently returned from a bipartisan CODEL [Congressional Delegation] to Africa, where I had the opportunity to travel across the continent to Niger, Zambia, South Africa, Morocco, Botswana, Cote d'Ivoire, and had conversations with a lot of

experts, senior leaders on a wide variety of topics that we care about, including food security, conservation efforts, critical minerals and defense.

While we, the United States, is doing a lot of great work across the continent, I worry that it is not well known that we are providing this. At the same time, it is clear that China and Russia have a lot of influence in Africa. This concerns me a lot, and I know it does concern you, too.

I mean, Africa has strategic importance to us for a number of reasons, including that many critical minerals that our defense industry requires are mined in Africa. This is something that China knows and they have begun to exploit.

Last year, Senator Cotton and I introduced the Reshore Act to reduce our reliance on China for these critical minerals. But the important work on securing U.S. supply chains need to continue.

So, General Langley, what are you seeing in Africa with respect to China's mining activities and their infrastructure development?

General LANGLEY. First of all, Senator, thanks for that question. Thank you for going on the CODEL, as I saw in Munich when you were on your way down there. That that really matters. That shows—those are assurance actions of our Nation's leadership going on to the continent, and I thank you for that.

It pressurizes and it makes—causes hesitation in countries that are thinking about picking the PRC or even Russia as their partner of choice, because those are assurance actions that matter and resonate.

Yes, I agree, we are not telling our story well enough. That is why, when the CODEL came through, right after I took command on their way to the continent, they asked what was being done on the continent. Show us—we know what the PRC is doing, their investments. Show us what we do. That is why I provided a blue map just to show our investments. So, all that falls into collectively across our whole-of-government approach as I engage across the interagency and also State Department, USAID, how we can be able to coalesce this into actions that resonate.

Senator KELLY. General, can you talk a little bit about what China is doing and how it is impacting countries that we have had relationships with. I don't want to lead you into, but I am really interested in the negative impact that China's mining and infrastructure activities have had on the continent.

General LANGLEY. Yes, Senator. So, yes, I also provided to the foreign actor reliance on the African metal stores, and that is a very compelling story.

For economic reasons and also how they go about striking deals with some of the countries on some of our critical assets for not only for our rare earth minerals that feed into our clean energy, but also into the military side, as far as our high technical type of our arsenal and equipment.

China is trying to harvest that. So, it is their engagement with countries laid out on the slide, the last slide we have, on the critical reliance on foreign minerals. This is our new economy. This is going to be a big demand as we start to modernize our forces and China realizes that.

Those are actions they are trying to take on the illustrated countries that we have highlighted on here. So, yes, it is a strategic consequence that we need to be able to face and in turn to these countries to ensure that they have a partner of choice.

Senator KELLY. General, how do we do a better job telling our story? Because you got China in there making bad deals, building bad infrastructure. This isn't good for the African nations. You know, at the same time, the Russians have Wagner in there supporting essentially terrorism. What can we do to better tell our story on the African continent?

General LANGLEY. Senator, illuminate and amplify. I saw a good story this morning in the press about the Kenyans have gone to the street tired of some of the stuff that the PRC is doing for them, how they are taking advantage of their economy and taking advantage of their environment.

News stories like that resonate. They change ideas. I guarantee you the rest—if it happened in Kenya, is happening all across the continent of Africa, and people read these stories and it resonates. People are taking action.

Senator KELLY. Thank you, General, and Mr. Chairman, I will have a couple of questions for the record. Thank you.

Chairman REED. Thank you, Senator Kelly. Senator Scott, please.

Senator SCOTT. Thank you, Chairman. The—first, I agree with Senator Mullin that we need to have some way to hold people accountable for what happened in Afghanistan.

So, I have had a bill that would have a bipartisan committee that would investigate exactly what happened there. I want to thank the military for what they did, but the decisions that were made don't seem to make much sense.

What does the American public not know about China that if they knew would change—because I assume you spend a lot of your time thinking about what China is doing all over the world.

What does the American public need to know about China that they don't know right now that maybe would impact, would have a positive impact on impacting their ability to spend the resources to impact Africa anywhere in the world? For both of you.

General KURILLA. Senator, so I would go to what one of the chiefs of defense told me. He says, you have no idea how much they have closed the gap on you and your technology. This is someone who is buying Chinese equipment.

I also think that the American public don't have an understanding of how much they have penetrated into the Middle East in terms of their diplomatic, informational, military, and their economic instruments of national power.

Senator SCOTT. General Langley.

General LANGLEY. Senator, I agree with my good friend Eric here. China, we have enjoyed for a number of years a decisive overmatch. But that gap is closing because of China's advancements or stealing our technology, you name it. How they are—the procedures they are executing to close that gap.

That is what has me concerned, and even in the economic realm, as they are trying to harvest a lot of the critical minerals on the continent of Africa, all that falls into them being able to, from an

economic standpoint, to actually try to close the gap on that decisive overmatch as well.

Then also changing the international order and international system as they try to get some of the African countries to vote or abstain, something that is not along social norms or the right thing to do in voting, especially with mining or other things that—or humanity, or human rights, because they commit some of those atrocities back in China or some activities they do in Hong Kong.

So just changing the economic system. In those three areas is where it is most pressing of the list of the activities of the PRC.

Senator SCOTT. So, if elected leaders spend more time explaining exactly what China was doing with the end result that every American would call out China for their human rights violations or stop buying their products or not putting their devices on our phones.

Would that, you think that would impact their ability to do the bad—you know, to spend their money on the resources to counteract our military, not be able to go into places around the world and lend money at unreasonable terms?

General KURILLA. Senator, I think education is very important that people understand what China is doing.

General KURILLA. Senator, I think it will impose costs on them as well that they will have to reckon with.

Senator SCOTT. Yes. General Kurilla, what is the optimal cooperation you envision among United States, Israel, and the Arabian, or Abraham Accords members? Is it air defense? What would you hope out of that?

General KURILLA. I think there are several areas, Senator, that we can do. The Abraham Accords are also economic, and I think that is going to—the economic benefit you get in terms of job creation also is a—reduces instability and some of the Abraham Accords countries. We do have, we talked about Middle East air defense. We talked about maritime security and cyber defense as well.

Senator SCOTT. General Langley, you talked about what is happening in Kenya. On top of the public being up in arms about what is going—what China is doing, are the governments pushing back at all in Africa?

General LANGLEY. Senator, that is part of the problem, because what they invest in, and when they strike these deals, they are striking the deals for mostly autocratic or authoritarian type of governance. Those of democracies have a voice because they know that the people are watching. I think it really matters what particular country that they are pressurizing.

Senator SCOTT. General Kurilla, do you have the resources and personnel that you need to conduct your counterterrorism mission that is laid out in the National Defense Strategy?

General LANGLEY. Senator, we are currently balancing the missions that we have with the resources we get, and I am adjusting risk every day dynamically with the resources that I have. I am requesting the additional resources I would need to be able to accomplish all of my tasks.

Senator SCOTT. Is what you requested is adequate?

General LANGLEY. What I have requested is adequate, and then it is up to the allocation of those resources in accordance with the national defense priorities.

Senator SCOTT. Thank you. Thank you, Chairman.

Chairman REED. Thank you very much, Senator Scott. Senate Rosen, please.

Senator ROSEN. Thank you, Chairman Reed. Appreciate it. Appreciate you holding this hearing. I would really like to thank Generals Kurilla and Langley for your service and for being here today. I am just going to kind of get right into it about Iranian aggression, of course, top of everyone's mind.

General Kurilla, the Pentagon estimates that hundreds of American troops have been killed by Iranian backed militias in Iraq and Afghanistan, yet Iran's regime has never been held accountable for orchestrating attacks against Americans. The men and women who gave their lives are taken by these State forces. There are thousands of families there without their loved ones as a result.

So today, Iranian aligned militias, they are increasingly targeting United States installations, servicemembers in Iraq and Syria via rocket and drone attacks. On a regular basis, we know Iran, the world's leading State sponsor of terrorism, is threatening the United States and our allied interests in the Middle East and around the world again via both direct attacks and also through their support for Hezbollah and the Islamic Republic's other terrorist proxies.

So, could you discuss in this setting some specific threats the Iranian aligned militia groups pose to the United States and our coalition forces? What can we do to proactively not just defend against them, what can we do to proactively maybe push them back?

General KURILLA. Thanks, Senator, for the question. So, again, Iran is the number one malign actor in the Middle East. The latest attack we just had was less than 60 hours ago on one of our bases in Syria that we know that was Iranian aligned militia groups that conducted this attack.

We do see the threat that we face from them are from rockets, from unmanned systems that are increasingly longer range and more accurate. Just in January, we had three UAVs attack our base in on Al-Tanf garrison in Syria.

That was Iranian drones that did that. So, we do see that across the region, and also against our allies and partners, whether that was from the Houthis coming out of Yemen against Saudi Arabia and the UAE, or from Lebanese Hezbollah against Israel, or from elements coming out of Iraq and Syria against Iranian aligned militia groups.

What we can do is it is going to take a whole-of-government approach to be able to go after this problem set. It is not just a military solution.

Senator ROSEN. So, we can work with you on the resources we need to take care of that. Because I want to get to something we talked about a little bit earlier, Task Force 59 and some other interesting things we are doing, but really, Israel's transfer to CENTCOM. It is now within your area of responsibility.

It is my sincere hope that this realignment is going to potentiate even greater military cooperation between the United States and

our shared goals, as well as greater cooperation between our Arab and Israeli partners, as we see with things like the Abraham Accords coming forward.

So, I know that I am pleased to see the increasing pace of joint exercises between the United States, Israel, Arab partners. Can you tell us a little bit about the progress you have made in advancing the integration of Israel into your multilateral maritime partnerships, like the very exciting task force, the development they are doing. I was able to learn about them when I recently visited NAVCENT [Navy Forces Central Command] in Bahrain.

General KURILLA. Thank you, Senator. We think it is going very well with the integration of Israel into the CENTCOM AOR, including our exercises and our training as well. We did have a bilateral exercise called Juniper Oak that we just did in January, which was the largest exercise with 142 aircraft that we participated with them in January.

When you talk about Task Force 59, that is our Maritime Security Innovation Task Force. Is an unmanned and undersea unmanned vessel task force, where we basically are enhancing the manned platforms that we have.

One police car—one destroyer in the Red Sea is the equivalent of one police car patrolling the State of California. When we take a bunch of unmanned platforms like sail drones and other unmanned surface vessels and undersea vessels, they act as a series of indications and warnings with sensors out there in a mesh network.

They can feed it back into a structured data base that then we run algorithms against to help us make decisions. Is that normal behavior, abnormal behavior, to then use our manned platforms better to be able to get after the problem set.

Senator ROSEN. I am going to—hopefully you will come and show us all a briefing on what you are doing there. It is pretty exciting. In the few seconds I have left, we are talking about the region integrated air missile defense, naval maritime partnerships.

How is CENTCOM reassuring our regional partners that the United States is really committed to regional stability and security? When we were there leading the Abraham Accords caucus delegation when I was there, this was the number one thing people wanted to know. Are we committed to the region? How are you showing them that?

General KURILLA. I spend 50 percent of my time in the region. We have a series of exercises and training events. So last 41 training and exercises that we do multilateral and bilateral, and that is the way we are trying to buildup our partner capacity with them by integrating them into the systems that we have as well.

Senator ROSEN. Thank you. I see my time is up, Mr. Chairman.

Chairman REED. Thank you very much, Senator Rosen. Senator Budd, please. Oh, excuse me, Senator Tuberville has arrived. Senator Tuberville.

Senator TUBERVILLE. Thank you, Mr. Chairman. Generals, thanks for being here, and thanks for your service. You have got your hands full. General Kurilla, in your organization, Task Force 59, has had some great success building unmanned systems. I am familiar with one of their platforms, Saildrone.

It seems like these systems have a lot of potential for both CENTCOM and the Navy, and it is encouraging to see your command taking advantage of cutting-edge technology commercial sector. What do you think has contributed to the success of Task Force 59 work with systems like Saildrone?

General KURILLA. I think what is successful is the people. It is the people that we hire that are innovative and creative and critical thinkers. When we push these systems into their hand, they are using them in ways that we never thought possible. A lot the systems in the unmanned and the undersea that we use, they are used for commercial fishing.

When fishermen go out, they are not going out to find fish, they are going out to catch fish. So, we use a lot of these systems with their integrated sensors.

I think Saildrone initially was used for maritime oceanographic capabilities, and we have turned that into something they can act as indications and warnings with the sensors that are on it.

Senator TUBERVILLE. Yes, we almost lost a couple a couple of Saildrones. I think Iran tried to load a couple on one of their ships. Was that during your——

General KURILLA. It was.

Senator TUBERVILLE. Yes. How did that go out?

General KURILLA. We got him back.

Senator TUBERVILLE. You got them back? Good. Well, that is good to know. At one time, we had 60 balloons over Kabul, Afghanistan. Our ISR is very limited. How confident are you in the intelligence you have to see new threats rising from the Taliban?

General KURILLA. Currently our intelligence has degraded since we are no longer in Afghanistan. I believe we can see the broad contours of an attack. Sometimes we lack the granularity to see the full picture. We are working to close that gap with our alternative airborne ISR and some of our other intelligence that we are working to penetrate into those networks.

Senator TUBERVILLE. It seemed like for some reason this Administration is going to accept Iran developing a nuclear weapon. If Iran does develop a nuclear weapon of mass destruction, which the United States spent trillions trying to keep out of the hands of dictators in the Middle East, how will that scramble your AOR?

General KURILLA. It would change it overnight and forever.

Senator TUBERVILLE. General Langley, I am aware of several vacancies in key diplomatic posts. I was in South Africa recently. China is there daily, trying to move in. Is that important to you, the diplomatic post being filled?

General LANGLEY. Senator, absolutely it is. It builds capacity. As I talk about the 3-D construct, having full-fledged bolstered capacity at our diplomatic posts is essential and it makes a difference of us being able to maintain our partnership and capacity. Moreover, ensuring our strategic access.

Senator TUBERVILLE. Could you talk a little bit about South Africa and what you have done since you have been there, your relationship that you have made and what you see coming from China, and maybe even Russia?

General LANGLEY. Senator, I haven't been to South Africa yet. I will be going there in the coming months. But right now, what I

am really concerned about is Mosei II, that exercise, that naval exercise. That was just a messaging campaign by the Russian Federation and also by the PRC. So, I have been having discussions with Ambassador Brigety down there and saying, what is South Africa's story?

South Africa, they are—they have been a good partner. We are building that relationship, but they don't want to be pressurized in who they choose. So, I have to use assurance actions to compel them that we are the partner of choice.

Senator TUBERVILLE. Don't you think it is vital that we keep China from overtaking that port there in South Africa?

General LANGLEY. Absolutely, sir, because as we look at the Cape of Good Hope and look at how much transit that our commerce goes across, and it can also be a power projection point as well. So, we can't ill afford, from a geostrategic opposition, allow either the PRC or even Russia to use that as a platform.

Senator TUBERVILLE. Yes, I know it is not your purview, but they are trying to do the same thing in Argentina, you know, which is the point of South America. We definitely don't need to lose those two contacts in terms of navigation. Thank you. Thank you very much. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Tuberville. Senator Peters, please.

Senator PETERS. Thank you, Mr. Chairman. General Kurilla, welcome. Good to have you here. I, along with my colleagues on the Committee, have worked to strengthen our partnership with Israel.

In particular the collaboration and synergies between our two countries in the innovation space, I believe probably has never been greater, and it certainly is an area that I believe the United States must do more to take advantage of our friendship with like-minded, I guess you could call them techno democracies that are highly sophisticated in that area.

I was proud to sponsor legislation creating a United States, Israel Operations Technology Working Group to help further the DOD efforts in that area. My question for you is, if you could please speak to the strategic advantage that our relationship with Israel offers in a global environment where rapid innovation and the fielding of emerging technologies rapidly is absolutely key to our national security.

General KURILLA. Thank you, Senator. Israel is one of the world leaders in technology in terms of the innovation and how to take that to the areas of national security. I have been over there several times. I have seen how they are implementing that. I do find that the relationship that we have with them is already bearing fruits in terms of that.

I look at that in the counter United States field where I have been all the way down from Iron Dome, all the way up to the exoatmospheric Arrow 3. It is the ability to understand their technology and be able to proliferate that as well.

Senator PETERS. Right. General, at the end of this month, we will mark the 8th year of the war in Yemen. This conflict has been a humanitarian catastrophe for hundreds of thousands of deaths, millions displaced, and tens of millions Yemenis suffering from both famine and disease.

The war has been exacerbated by the role of a proxy conflict between Saudi Arabia and Iran and has been the people of Yemen who unfortunately have been the victims and have suffered as a result of this geopolitical strategizing. Congress has been active in ensuring that United States support is not the cause for any innocent suffering in Yemen.

A June 2022 GAO [Government Accountability Office] report regarding civilian impacts of United States military support for the Saudi coalition provided recommendations to the DOD on measures to help mitigate civilian harm from our support.

So, my question for you, sir, is has the Department developed and implemented guidance for reporting any indications that United States made defense articles were used in Yemen by Saudi Arabia or the UAE against anything other than legitimate military targets?

General KURILLA. Senator, I am aware of that GAO report. I have read it. I have seen it. My understanding right now is the Department is working through any implementation instructions from it.

Senator PETERS. Very good. General Langley, drug trafficking and the cartels profiting from that trade are without question a global threat. AFRICOM is certainly not immune to these issues with West Africa in particular now serving as a popular vector for cartels to move products from Latin America to Europe.

The drug trade destabilizes lawful governments, undermines public safety, and provides critical funding and resources for other transnational criminal organizations. So, my question for you, General, is what efforts is AFRICOM making to strengthen the ability of local governments to conduct counter-narcotics operations and to attack this insidious trade?

General LANGLEY. Senator, thanks for asking that question, because that is of particular concern with our partners. The Gulf of Guinea is like the wild, wild West of illicit activity, especially the drug trade.

Two exercises that just happened in the past month. Obangame Express. Obangame Express is where we—it had a number of countries that come together to focus on illicit activity across the Gulf. The drug trade is one of it, smuggling is another, and transiting citizens as well across that region.

But it is inextricably linked to South America as well. So, I work with General Richardson on that, and I thank this Congress for legislation that gave us $200 million to address this issue. But building partnership and capacity with African nations, especially in the Gulf of Guinea, addresses that issue as they build their maritime capacity. But that is also an opportunity for another ask.

Hershel Woody Williams and even the Coast Guard when they bring a cutter in, it makes a difference. This is naval diplomacy at its best. If we can get assignment to another ship, I wish I had another *Hershel Woody Williams* to cover the other side of Africa continent. But just naval activity and bolstering our partners' ability for their maritime expertise. To buildupon that building capability is essential going forward. Thank you.

Senator PETERS. Thank you, General. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Peters, and now, Senator Budd.

Senator BUDD. Thank you, Chairman. Good morning, gentlemen. I want to thank you both for your leadership and your service, particularly your commands of units in North Carolina at Fort Bragg and Camp Lejeune. So, I recently returned from both of your overseas areas of responsibility.

A common complaint from our allies and our partners is that the foreign military sales process is overly complicated and slow. It is just downright bureaucratic. So, in that vein, I have a series of questions.

If you would, just if you would give me a simple yes or no to the answer, and then at the end hopefully we will have a little more time and I will give you some time to elaborate. General Kurilla, is the current FMS process fast and flexible enough to meet our foreign partners' security needs in your respective AORs?

General KURILLA. In CENTCOM, no.

Senator BUDD. General Langley.

General LANGLEY. AFRICOM, no.

Senator BUDD. Does the transfer of U.S. defense products build our partners' capacity to provide for their own defense and respond to threats? General.

General KURILLA. Yes, Senator.

General LANGLEY. Yes, Senator.

Senator BUDD. Given the success of Western arms against Russian equipment in Ukraine, is there an increased interest in United States defense products in your AOR?

General KURILLA. There is a very strong interest in U.S. products.

General LANGLEY. Very strong in Africa as well, Senator.

Senator BUDD. Thank you. Thank you. Is China increasing arms exports to any countries in your AOR? General Kurilla.

General KURILLA. Yes, Senator.

Senator BUDD. General Langley.

General LANGLEY. Senator, it is kind of flatline right now.

Senator BUDD. But they have been before.

General LANGLEY. They have been before in the past.

Senator BUDD. Thanks. Is the United States still the security partner of choice in your AORs?

General KURILLA. It is, Senator.

General LANGLEY. Absolutely, Senator. It is in Africa.

Senator BUDD. Is the United States at risk of losing that security partner of choice status to either China or Russia?

General KURILLA. China is making inroads. I do not assess Russia is.

General LANGLEY. It is a risk, Senator.

Senator BUDD. So, if you—elaborate that, if you could each explain how FMS challenges are impacting strategic competition with China and Russia in your AORs. If you would elaborate on that, please.

General KURILLA. Sure, Senator. In the CENTCOM AOR, with the number of attacks that we see in there, our partners have real security needs, and so they want to have the equipment they need fast.

What China is able to do is come in very quickly, open up their catalog, let them pick from anything in it, very quickly to deliver it. There is no end user agreement. But what they don't do is they don't followup with it and they don't have the training, the expertise, the sustainment, the upgrades.

What we do find with our partners is when they buy Chinese equipment, a vast majority of it becomes non-mission capable. A year or so after they have that equipment and we do see a complaint from that. They want to buy U.S. equipment, but sometimes it is the timeline to get it that is a hindrance.

Senator BUDD. And the process——

General KURILLA. The process is what takes the time to do it. There are I know that the Department of Defense has a Tiger team to look specifically at what the Department of Defense can do to increase it. There is four levers, Department of Defense, State, Congress, and industry, and I know the Department of Defense is looking at their lever.

Senator BUDD. Thank you. General Langley.

General LANGLEY. Senator, I have characterized in my assessment since taking command that West Africa is at a tipping point. What I mean is how these extremist groups, whether we are talking about ISIS, West Africa, or even JNIM [Jama'at Nusrat al-Islam wal-Muslimin] or Boko Haram, they are all at the door, especially at the Gulf of Guinea states.

As I have done my travels, and I was in Ghana, they said, we don't want your boots on the ground, but we would like your equipment. All we need, in Ghana all we need to affect quad initiative, which is a coalition of willing of states of Togo, Benin, and Cote d'Ivoire, but they want equipment.

Before they go across the line of departure, they need equipment. They want U.S. equipment but they know how long it takes. So, there they are considering because these affiliates are at their back door, they need something now.

They want to come with us, Senator, but the process is too slow, and they need to be able to affect a viable offense to help Cote d'Ivoire—excuse me, to affect Burkina Faso save their own country.

So, we are showing a good—what we would like to see, partner led, U.S. enabled, but we need to step up the U.S. enabled at this point.

Senator BUDD. You know, that matches conversations with our allies recently. Can you please discuss how your requirements for Special Operations Forces has grown, and what cuts to SOF in strength would have on your operations?

General KURILLA. Senator, I rely very heavily on our Special Operations Forces in the CENTCOM AOR. They are doing tremendous work. Any cuts to in the CENTCOM region would affect me significantly.

General LANGLEY. It would take the heart out of our efforts, both in the East and the West with our Special Operations Forces of AFRICOM.

Senator BUDD. Thank you both. Chairman, I yield back.

Chairman REED. Thank you very much, Senator Budd. Senator King, please.

Senator KING. Thank you, Mr. Chairman. General Langley, we have been having a lot of discussion today about China's activities in Africa. Is there any buyer's remorse? China has sort of scaled back on Belt and Road to some extent, and some of the debt issues are now coming to the fore. Are there countries in Africa starting to rethink some of those commitments? Buyer's remorse is probably the best term.

General LANGLEY. Senator, great question, and in I traverse for that, for any indicators of that, and I low and behold I saw a story this morning out of Kenya. They have taken to the streets of how China has been taking advantage of them in the deals that they strike. Now, there are other indicators across the continent, other stories of debt trap diplomacy that——

Senator KING. They call it debt colonialism.

General LANGLEY. Oh, yes, absolutely, Senator.

Senator KING. So, let me followup if that is the case, and it appears that it is, does this create an opening for us to be more active in infrastructure projects, support for development in these countries, that we can come in and show that it can be done in a much more efficient and skilled way.

General LANGLEY. Absolutely, Senator. That we do have—that we see that as an opportunity. As we call it, a consolidated strategic opportunity, and we need to match it up with key strategic activities.

Whereas we can use a whole-of-government approach, we can use Prosper Africa, Digital Africa, and get these programs off the ground and going. I know that I have met with Assistant Secretary Molly Phee last week and also, I was over at USAID, and they we have a plan of action collectively, whole-of-government to be able to put it in motion.

Senator KING. You use the term whole-of-government, and I think the private sector also has to be included in this in terms of development of resources. You used a phrase earlier that I noted about the Chinese efforts to monopolize and get a hold of these rare earths and minerals. Forward thinking by the PRC.

We haven't been doing that forward thinking. We have allowed them to take control of, for example, lithium, an essential element for EV batteries. Eighty-seven percent of the process to lithium that goes into EV batteries in this country comes from China. We haven't been doing that forward thinking.

I am suggesting that that is something we should start to think about and it should be a combination of Government action, but also the private sector. We don't do everything by the Government here.

General LANGLEY. Senator, that is correct. We don't tell the good news story enough, and that is why I provided—well, this, the blue chart here. But on legislation passed affect us such as Prosper Africa is also a message to our private industry to invest in Africa. That is what I talk about when I talk to the country teams as they are heavily recruiting back in the United States for investment in the African nations and states.

Senator KING. Thank you. General Kurilla, King Abdullah was here about a month ago and he said the this was the most dangerous moment in Israeli-Palestinian relations that he would seen

in decades. Give me your analysis of the status of that. It seems like it is a very heightened sense of danger in terms of open conflict.

General KURILLA. Senator, I agree with the statement of King Abdullah on that, and we watch this very closely. We think the conditions are there, the tinder and the kindling is there, and we don't know what it could take for what spark to be able to start a larger conflict in the West Bank.

Senator KING. Let me just ask a sort of parenthetical question. Often, we get the question about Iran's nuclear capacity. Do you have a military analysis of what a strike, an air strike, a significant substantial airstrike on Iran's nuclear capacity would actually—what would be the impact of that on their ability to move toward a nuclear weapon?

General KURILLA. I do, Senator, but I best believe that would be in a classified setting.

Senator KING. Okay. Thank you. One other question in your AOR about stability, and that is Pakistan, a nuclear armed country. They have had a lot of political issues lately. An assessment of the stability and long-term prospects for stability in Pakistan.

General KURILLA. They have an idea of what the military relationship is there. I have a great relationship with the Chief of the Army Staff, General Munir. I think the concerns right now in Pakistan are their budget, their financial situation, the current political situation, and the counterterrorism situation as they see the three key Taliban, Pakistani, the TTP [Tehrik-e Taliban Pakistan], the attacks are significantly increasing with the end of a cease-fire there.

Senator KING. Are you confident of their nuclear security procedures?

General KURILLA. I am confident of their nuclear security procedures.

Senator KING. Thank you. That may be the first good news we have heard today. Thank you, General. Thank you, gentlemen.

Chairman REED. I thank you, Senator King. Senator Schmitt, please.

Senator SCHMITT. Thank you, Mr. Chairman. Thank you all for being here. Appreciate it. I want to followup a little bit on the question that Senator Scott asked. I think part of our challenge right now is, as the newest or one of the newest members of this Committee, it has become very clear to me that China is an immediate threat, long term threat, intermediate threat.

How are you going to characterize it? China should be a very important focus of ours. So, one of their tools, obviously, that they deploy around the globe is the debt trap. I would like for both of you if you could help us communicate back home to the folks who are wondering what are the most pressing needs of the country, what is the most concerning thing from a national security perspective, how that affects what you guys do, and what are some of the most egregious examples that you have seen in your roles.

General KURILLA. So, Senator, thank you. What I see again is the penetration economically where they go in and they provide infrastructure with the financing that goes with it, and I can use an

example in one country where they went in, they provided infrastructure, and it was almost like a balloon mortgage payment.

In the peak of the COVID crisis overseas, at the worst point of their economy in this one country, they came and they demanded their payment and it absolutely crushed that country to do that. It caused them to see the way that China does in terms of their debt trap.

There are several other examples also in the Central Asian states as well. It is important to understand, though, what China is doing. They are doing it for their own benefit, not for the other's benefits.

General LANGLEY. Senator, the same thing has taken place on the continent of Africa as well. Whether in the vein of debt trap diplomacy—here is the difference that makes us a partner of choice. We go off aid first, financing last.

China does financing first, and that financing puts at a disadvantage of those that are asking for the funds. Very few times will they actually do any type of aid. So that is the assurance action that it causes our partner countries on the African continent to side with us.

There is a number of initial deals struck in a memorandum of agreement in the Belt and Road Initiative across 40 countries across the continent of Africa. That is very compelling. It hasn't matured yet to actually show the negative effects. But in aggregate, we do communicate cautionary tales from signing such agreements.

Senator SCHMITT. Eighteen months ago, Israel was integrated into CENTCOM, and I just wanted to find out how that has gone. What your—is there, you know, fully integrated into that theater. How you view that?

General KURILLA. It is going exceptionally well and we view it as a net positive, Senator.

Senator SCHMITT. Okay, that is great. I guess finally, because I have got about a minute and a half here, we talked about the debt trap, but I think that the building of the islands in the South China Sea being fully weaponized with the spy balloon that traversed over Alaska and the Continental United States, it has certainly raised awareness, I think, at a point now that we have not seen before.

I think and these are terrible things that have happened. But I think the American people now recognize the threat that China poses to the United States, and not just I think, obviously economically, some of the theft from an intellectual property perspective has been well documented for a while.

But clearly, as they try to project that strength into the Indo-Pacific and the South China Sea, and those islands are fully weaponized. Beyond the debt trap that you, illuminated, what are a couple of other examples that you see that maybe most people don't know about, that certainly raises a lot of concerns and the alarm bells are going off about how serious China is about global domination.

General LANGLEY. Senator, I will focus just on them trying to change the international order, trying to change the international system. That is very compelling, and how they engage with African

nations on the continent, and how they vote in the U.N. General Assembly. That is an indication that they cannot gain a strategic advantage unless it is along their norms, what they consider their norms.

Then the economic piece is very compelling of how they are trying to corner the market on what we call some of the rare earth minerals or even resources that are on the continent of Africa, and how they are trying to strike bad deals with these countries, extracting these resources without the benefit of the African nations. That is a cautionary tale that needs to be told.

General KURILLA. Senator, we see 19 of 21 countries in the CENTCOM AOR have signed Belt and Road Initiative agreements with China. That is for China's benefit. We have also seen 20 of 21 countries have Huawei contracts in them. They are building smart cities and a lot of this is for Chinese advantage.

Senator SCHMITT. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Schmitt. Senator Blumenthal, please.

Senator BLUMENTHAL. Thanks, Mr. Chairman. Thank you both for your extraordinary service to our Nation. I want to focus on the Wagner Group, which I think is kind of the elephant in both of your rooms, so to speak.

I am a strong supporter of designating the Wagner Group as a foreign terrorist organization, which will have a constructive impact. I would think, in both of your commands. General Langley, if I remember correctly in your testimony, you talk about the price of the Wagner Group in Africa as being, "the failure of government institutions, the withdrawal of stalwart security allies, the extraction of mineral wealth, and long-term resource concessions and debt that chip away at Africans' future."

In Ukraine, as we well know, the Wagner Group poses a very severe and immediate threat, not only in Bakhmut but throughout the country. It is probably one of Putin's most effective fighting forces right now, a mercenary, murderous organization.

The argument that I have heard against it is that designating Wagner as a foreign terrorist organization complicates our interests in Africa because governments doing business with the Wagner Group could suffer sanctions as a result of that business.

I think that is totally a bogus argument. I see no valid reason not to designate Wagner as foreign terrorist organization. Please give me your views. General Langley, and then General Kurilla.

General LANGLEY. Thank you, Senator, for asking that question because I do need to message some of the atrocities going on with the Wagner Group, not only in the Central Africa Republic, but also in Mali since this past summer. They have been reported on by the U.N. multinational force there of the atrocities and egregious actions that are taken on the public. This is very serious.

The Wagner Group, even though we know that to Yevgeny Prigozhin, everything is about power and profit, but they are inextricably linked to the Russian Federation. So, the further they are on—the more they are on the continent, preying upon fragile governance will be a problem and destabilizing across the African continent.

Senator BLUMENTHAL. So, would you feel they should be designated as a foreign terrorist organization?

General LANGLEY. Well, Senator, I will just—I will say this, collectively——

Senator BLUMENTHAL. They are foreign terrorist organization, are they not?

General LANGLEY. Senator, I think that is—if we have a policy representative, you know, I will stay out of that. I would like to just focus on what we need as AFRICOM to be able to do this, and we do it in the information space. But across all other—the rest of the whole-of-government, we do have pressurizing things. I can take that into, if you—or let me bring this up in closed session.

Senator BLUMENTHAL. Of course. Let me ask you both. Maybe I can ask General Kurilla first. Israel is going through domestic unrest, protests. I have been visited by a number of members of the Israeli military on a number of occasions, some personally, who feel that this unrest is impacting their readiness. Do you have any views on that topic?

General KURILLA. I talk to the Israeli chief of defense often, I talked to him yesterday morning. What we talk about is he is trying to ensure that his military stays out of the political conversation.

Senator BLUMENTHAL. Do you think that the recent proposals for changes in their judicial system is in any way undermining their readiness or preparedness?

General KURILLA. I think as you look at the Israeli system, they have reserve units and that is where we are seeing some of this manifest itself. But I do not want to make a statement really on the judicial system without knowing all the facts of what they are doing.

Senator BLUMENTHAL. Let me ask to followup, I think it was Senator Mullin who was asking you about our Afghan at risk allies. I have been a leading advocate of the Afghan Adjustment Act. I have played a part in trying to extract the translators, guards, security personnel.

My own son served there in the Marine Corps. Actually, was able to get his translator out of Afghanistan. But there are thousands still at risk with targets on their backs. Having served there repeatedly with great distinction, are we doing enough to get them out?

General KURILLA. I think we have a moral obligation to get those out. Again, we think the number is, you know, I would defer to the State Department the exact number. The State Department works the aspect of getting them out. Once they come to us in Camp As Sayliyah, we provide the in-processing, security, and basic life support for them.

Senator BLUMENTHAL. I agree totally. We have that moral obligation. Veterans groups agree steadfastly and passionately about it. I am hoping that not only we will pass the Afghan Adjustment Act, but also take greater measures to enable them to escape the persecution, torture, and death that many of them are at risk.

General KURILLA. I do applaud our veterans groups that are doing—taking that action on as well.

Senator BLUMENTHAL. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Blumenthal. Senator Ernst, please.

Senator ERNST. Thank you, Mr. Chair, and gentleman, thank you very much for your service and your leadership. General Kurilla, just a few quick questions.

Some of this has been covered briefly by a number of other Senators, but we do have the great powers that are out there putting a lot of pressure on us in Asia and in Europe. We also have competing priorities here at home. We have got a financial crisis. We have got Southern border issues.

Then the very sobering of fiscal outlook right now. We are entering into an era where being able to support defense with everything we have got has really slowed down significantly. The belt is tightening and you have heard concerns today.

I know that the NDS has directed the Department to right size your forward military presence in your AOR. Of course, doing that, accepting prudent risk as necessary. So how has CENTCOM improved the economy of force in your theater?

General KURILLA. Thank you, Senator. CENTCOM is 85 percent smaller than at the peak in 2008. That was in the midst of two conflicts. After the withdrawal from Afghanistan, even in 2022, we reduced by 15 percent, post-Afghanistan withdrawal.

What we require in CENTCOM is a sustainable and sufficient force structure to be able to accomplish the missions we have been given. Again, I go back to if there is one place that can derail the NDS, it could come out of CENTCOM with a flash point.

Senator ERNST. Yes, I absolutely agree with that. I know the President, during the Afghanistan withdrawal, told us that if we withdrew from Afghanistan, there would be a windfall of resources to prioritize China. So, what resources did this action free up in our budget, and then how did DOD reinvest those?

General KURILLA. I really, Senator, would defer to OMB [Office of Management and Budget] and the Department of Defense on any cost savings. But I believe those resources were then moved to against the higher priority of INDOPACOM and EUCOM.

Senator ERNST. Okay. Thank you, and I would be willing to bet there weren't as many cost savings maybe as we would have thought. Different topic, but you have heard a lot of discussion about the Abraham Accords today.

I also am a co-chair with Senator Rosen on the Abraham Accords caucus. I am very proud that our legislation on air and missile defense cooperation did get passed last year in the NDAA, and it does help our partners with their security burden.

So, you have talked a little bit about this, but when you are implementing this or trying to implement this integration framework, what challenges are you running into now that we might be able to iron out without legislation, and is there an area where we might need legislation?

General KURILLA. I can tell you where we are right now. We are making progress. We are going toward a shared air picture between a group of countries. The challenge we have, though, is if there is Chinese equipment that we cannot integrate.

So, whether that is a radar or whether that is an actual air defense system, we can't let that touch our network based on the—

on what we know about the Chinese equipment. So, it just is not compatible with it either. So that is the one challenge that we have to be able to do that.

I am not sure what legislation—the legislation that could help us potentially is how do we get FMS faster so they don't have to choose to buy a Chinese system.

Senator ERNST. Excellent, and this has been a discussion as well about FMS and whether it should be the jurisdiction of Armed Services or another committee here in the U.S. Senate. That is something for us to iron out. So, you don't necessarily need additional authorities for implementation then, that you are aware of?

General KURILLA. I believe I have all the authority they need right now, ma'am.

Senator ERNST. Okay. I would just encourage our partners in that region to buy American. Maybe that is the message that we need to send.

General KURILLA. I would be happy if they just bought Western.

Senator ERNST. Western—well, compatible——

General KURILLA. It would be great with all of our systems.

Senator ERNST. No, excellent point. Excellent point, General. I do want to thank you for your tireless efforts to build partnerships in the region. I was recently on a CODEL where we visited Israel, the Kingdom of Saudi Arabia, and the UAE. I heard over and over again your name mentioned specifically, and we described that or we have described that in the past as leadership by walking around.

You did State earlier that you spend 50 percent of your time in the AOR, and I know that that is greatly appreciated by our partners. So, thank you for doing that. Truly appreciate your leadership. Presence is power.

General Langley, I know that you are out there and engaged as well. I do have a question I will submit for the record for you. It deals with a 127 ECHO program, which I think is incredibly important in your region to maintaining stability.

Thank you, gentlemen, very much. My time has expired. Thank you, Mr. Chair.

Chairman REED. Thank you, Senator. Let me note that the vote has begun and recognize Senator Sullivan.

Senator SULLIVAN. Thank you, Mr. Chairman. Gentlemen, thank you for your service, testimony today. Very much appreciate it. Your team members behind you. I know how much they put into these kind of hearings.

General Langley, I want to begin by also mentioning, we probably are getting the picture, we had a number of Senate CODELs to the region recently. I think that is actually important. I was part of the CODEL with Senator Rosen and seven U.S. Senators to the Abraham Accords countries.

Started in Morocco. Really impressive ally, one of our longest standing allies anywhere in the world. I don't know to what specificity you can provide thoughts, and maybe this is kind of even against your own interests, but it did occur to me that I think it is time to have AFRICOM headquarters in Africa, somewhere. Morocco, I think they would be a great candidate. What do you think about that?

General LANGLEY. Senator, this has come up numerous times in the past.

Senator SULLIVAN. I know, and it has been blocked by some Members of the Committee, and they are always like, well, we don't know where to put it, so let's keep it in Germany. That is not a good answer, right?

Come on, we don't know where to put fricking CENTCOM's forward headquarters, but we chose Qatar. So, like, real countries make real tough decisions. What do you think we should do? I don't think that is a good answer, which is too tough. Too many good countries, so let's keep it in Germany. What do you think?

General LANGLEY. Senator, I see the—I see some utility being on the continent, but at this time, just with our processes of getting down to visit to numerous countries has been beneficial. As far as how we are laid out now, I think we are right sized. Because when we are in Europe, there is other partners there in proximity that we can plan——

Senator SULLIVAN. What about like a CENTCOM is headquartered in Tampa and has a forward headquarters in Qatar. What about a forward headquarters for AFRICOM somewhere in——

General LANGLEY. Senator, I can talk about that in closed session because we do have something established——

Senator SULLIVAN. Okay. Let me, both of you keep talking and the military loves the phrase, whole-of-government, all instruments power. We have been talking about critical minerals, which is really important and a big part of the discussion.

How much sense does it make for the United States to shut down our critical mineral production capacity, as a Department of Interior has done in Alaska, and then you guys come here and say, boy, oh boy, we sure got to work on critical matters.

Do you think that is smart, like we have—not you guys, but other agencies literally shutting down—There is something called the Amber Mining District in Alaska, one of the resource rich, critical mineral areas of the world. We had an environmental impact statement Energy Information Administration (EIA), 7 years, $10 million, ready to go.

Then the Department of Interior came in and reversed that and said, hey, America, Alaska, start all over. We will keep getting critical minerals from China. Were you guys informed of that? Were you informed of that interior making that idiotic national security decision?

General LANGLEY. No, sir.

Senator SULLIVAN. Do you think it makes sense for us to look at areas of critical mineral capacity in America and say, we are not going to do that because lower 48 environmental groups don't like it. You would think that makes sense from a national security perspective to shut down our critical mineral production when this whole hearing has been about critical minerals? Does that make sense? General, in your personal opinion?

General LANGLEY. Senator, I am just here to pass a cautionary tale about China and their illicit activities on the continent of trying to corner the critical——

Senator SULLIVAN. But if we can help uncorner it by producing our own, doesn't that make sense?

General LANGLEY. Senator, I don't have a position on that.

Senator SULLIVAN. Come on, General, you do have a position. You just don't want to say it. What is your personal opinion on that? Does it make sense to produce more critical minerals in America if we have them?

General LANGLEY. Senator, we can discuss that in that closed session about essentials for——

Senator SULLIVAN. This is the problem, you talk all instruments of power, whole-of-government, and we don't do it. Again, that is not you, but it is Biden, it is the Administration. It is national security suicide, and we do it every damn day. We have shut down resource development in our own country. It is idiotic.

That is the right answer, by the way. Real quick, General Kurilla, you mentioned Iran taking shots at our troops. Are we retaliating against them? I think one of the lessons we learned when they were providing very sophisticated IEDs [improvised explosive device] to kill and wound thousands of Americans in the 2005, 2006, 2007 timeframe, that that was a bad signal to let them just kill our people, the best and brightest in America.

I am sure you lost soldiers to the Quds Force, IEDs, and until we killed Soleimani, which I think was a really important message, we weren't retaliating. So, I hope either covertly or overtly, when these guys are trying to kill Americans, which they are pretty good at and they do a lot, that we are sending messages like, all right, you want to try and kill Americans, game on.

What are we doing to retaliate against these guys?

General KURILLA. Senator, I am prepared to retaliate overtly, but also not all responses are overt.

Senator SULLIVAN. Okay. But can you assure this Committee that we are not just letting them try to attack Americans? You have already mentioned that they are—without some form of retaliation.

General KURILLA. Senator, we have all the capability to be able to retaliate. But not all retaliations are overt.

Senator SULLIVAN. Good. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Sullivan, and thank you, gentlemen, for your testimony. We have a vote on, so I would encourage all my colleagues to vote, and we will reconvene within about 15 minutes in SVC–217 for the closed session of this hearing. I will now adjourn the open session. Thank you.

[Whereupon, at 11:47 a.m., the Committee adjourned.]

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JACK REED

UNITED STATES AFRICA COMMAND

1. Senator REED. General Langley, the United States provides limited but growing assistance to fight severe malnutrition including through the distribution of U.S.-made Ready to Use Therapeutic Food (RUTF). From your perspective, how important are such efforts to United States Africa Command (AFRICOM) mission to "advance U.S. national interests and promote regional security, stability, and prosperity"?

General LANGLEY. United States humanitarian and food security assistance is critical to United States Africa Command's (AFRICOM) mission to advance U.S. national interests and promote regional security, stability, and prosperity. Twentyseven of the fiftythree countries in my Area of Responsibility are enduring complex humanitarian and food security emergencies due to a myriad of factors. These countries cannot focus on security, stability, and prosperity when a significant percentage of their populations are struggling to meet basic needs. When populations are malnourished and under duress, this impacts every aspect of their human development and increases their vulnerability to communicable diseases such as COVID which impacts global health security. When populations are malnourished and under duress, AFRICOM cannot achieve our objectives to build partner capacity and sustain security. In addition, when complex humanitarian crises persist involving conflict, DOD inherits more issues to address such as violent extremism and protracted State failure that our adversaries are taking advantage of like Wagner in Mali, Central African Republic and other areas. USG efforts, particularly USAID's efforts in AFRICOM's area of responsibility, to address critical human development concerns such as malnutrition and food security are vital to AFRICOM's mission.

QUESTIONS SUBMITTED BY SENATOR ELIZABETH WARREN

FUTURE USE OF UNFUNDED PRIORITIES LISTS (UPLS)

2. Senator WARREN. General Kurilla and General Langley, historically, have previous Unfunded Priorities Lists items been included in the following year's base budget?

General KURILLA. Mission-critical items requiring funding outside the base budget have historically been addressed in subsequent budget submissions.

General LANGLEY. Yes, although USAFRICOM's objective is to have requirements captured in the Department's base budget. The Command has submitted Unfunded Priority List (UPL) items in the past. For example, in fiscal year 2021 and fiscal year 2023, Congress provided $22 million for Force Protection and $14.5 million for Force Protection, respectively. During the annual fiscal year 2024 Program Budget Review (PBR) cycle, the Department included in the base budget $99.2 million ($269.7 million across the Future Years Defense Program-fiscal years 2024 to 2028) for Force Protection to support physical protection at several in-theater posture locations.

3. Senator WARREN. General Kurilla and General Langley, have Unfunded Priorities Lists items from fiscal year 2023 been included in the fiscal year 2024 base budget? If yes, please provide detail including the requested item, funding amount, and vendor executing the effort. If no, why not?

General KURILLA. For the fiscal year 2023 budget, we requested Congress consider adding $35 million to replace the stockpile of the GBU–57 Massive Ordnance Penetrator. The Massive Ordnance Penetrator allows us to neutralize or destroy hardened, deeply buried targets. This stockpile has dipped below validated levels due to necessary live fire testing performed with the weapon system. The Fiscal Year 2023 Unfunded Priorities List submission simply allows us to replace those munitions expended in the testing. The U.S. Air Force chose not to add this to their fiscal year 2024 base budget until they complete a study on the potential replacement for this munition. The U.S. Air Force did fund in fiscal year 2023 additional testing on the GBU–57.

General LANGLEY. Yes. The command submitted fiscal year 2023 Unfunded Priority List (UPL) items to Congress for $23.5 million for Force Protection and for $70.1 million for Counter-Unmanned Aircraft Systems (C-UAS). The Department, during the annual fiscal year 2024 Program Budget Review (PBR) cycle, included in the base budget $99.2 million ($269.7 million across the Future Years Defense Program—fiscal years 2024 to 2028) for the Force Protection submission to support physical protection at several in-theater posture locations and provided additional funding to the Joint C-UAS Office. USAFRICOM does not have acquisition authority and can only provide limited information on vendors. The Force Protection vendor in fiscal year 2024 will come from the Army's Logistics Civil Augmentation Program (LOGCAP) contracts and equipment purchases awarded to several vendors over the fiscal year.

4. Senator WARREN. General Kurilla and General Langley, do you agree that Federal agencies should be required to work within the confines of base budget process?

General KURILLA. U.S. Central Command follows the budget process directed by the Department of Defense and the U.S. Congress. The Fiscal Year 2017 National Defense Authorization Act requires Combatant Commands to submit an Unfunded Priority List.

As a Combatant Command with few assigned forces and no acquisition body, CENTCOM relies on the Military Services for most resourcing. The Unfunded Priorities List allows us to inform the Department of Defense regarding which of our mission-critical capabilities are not resourced by the Military Services.

Additionally, the congressionally mandated Unfunded Priority List program offers an opportunity to resource against changes within the operational environment since delivery of the base budget. In so doing, the program allows CENTCOM to buy down risk to force and risk to mission.

General LANGLEY. I agree that all Federal agencies should be good stewards of taxpayer dollars and to abide by the law. The Department's fiscal year 2024 budget request seeks to adequately fund the efforts necessary to implement the 2022 National Defense Strategy (NDS). AFRICOM follows the current statute for submitting an annual Unfunded Priority List (UPL) as described within the 2017 National Defense Authorization Act (NDAA), Section 222a and as amended in the Fiscal Year 2022 NDAA, Section 1051, that "the commanders of combatant commands shall submit to the Secretary of Defense and the Chairman of the Joint Chiefs of Staff, and to the congressional defense committees a report on the unfunded priorities of the combatant commands."

INFORMATION ON UNFUNDED PRIORITIES LISTS

5. Senator WARREN. General Kurilla and General Langley, what was the cost of putting together this Unfunded Priorities List?

General KURILLA. Development of the Unfunded Priority List is part of our annual research and budget analysis, a core staff function for U.S. Central Command, and elicits no additional cost.

General LANGLEY. AFRICOM's internal fiscal year 2024 Unfunded Priority List (UPL) development process did not incur any additional costs over and above day-to-day costs to the Command. Instead, the fiscal year 2024 UPL was developed over a 3-month period by one full-time GS–13 Federal civilian employee and two O–4 military members, at a reduced quarter-time need, working within the United States Africa Command's J8 Resources and Assessments Directorate (ACJ8). Three O–5 military member subject matter experts (SME) and three GS–13 civilian employee SMEs also contributed at a reduced one-tenth need from three separate Command joint directorates (ACJ2/ACJ4/ACJ6). From these actualities, a nominal cost can be produced using the following assumptions: 1) a GS–13 Federal civilian or an O–5 military member costs approximately $120K annually; 2) one ACJ8 GS–13 working at full-time; 3) two ACJ8 O–4s working at one-quarter time; and six other directorate SMEs working at one-tenth time. With these assumptions, the total cost for the Command to develop the fiscal year 2024 UPL equals approximately $63,000. This is a low-cost investment for providing risk mitigation to emerging and/or unfunded Command requirements that were unable to be fulfilled within the Department's top-line.

For each item on the unfunded priorities list you submit in response to Title 10 U.S.C. 222a, please provide the following information:

6. Senator WARREN. General Kurilla and General Langley, please provide a detailed description of the Unfunded Priorities Lists.

General KURILLA.

Providing for Air Defense

a. *Air Vigilance Operations and Sustainment:*

Executive Summary: Countering Unmanned Aerial Systems is a top CENTCOM priority. State and non-State actors continue to mature their Unmanned Aerial Systems capabilities, tactics, techniques, and procedures at an alarming rate and present a direct threat to the United States and its regional partners and allies.

Operational Impact / Risk to NDS: The Air Vigilance system delivers a ground-based passive signals intelligence sensor employed to detect, track, identify, geolocate, and report UAS threat activities. Within the CENTCOM area of responsibility, 18 Air Vigilance systems in eight countries provide force protection capability for both forces and critical infrastructure.

b. *Crestone UxS Data base Inventory:*

Executive Summary: Crestone is being used operationally throughout the CENTCOM region to identify and track specific signals of interest. Funding will be used to hire additional engineers, shorten testing timelines, and expand the signal of interest library capacity to enhance defeat options against the UAS threat throughout the CENTCOM AOR.

Operational Impact / Risk to NDS: Additional investment in Air Vigilance and CRESTONE systems sustains operational capability to collect critical intelligence data on emerging aerial threat systems and provide early warning of operations in restricted air space. The requested funding supports the required communications transport layer and the maintenance services for power, heating-ventilation-air conditioning, and Intrusion Detection Systems. Any loss or degradation of our ability to collect and report on adversarial attack vectors and share collected data with other Geographic Combatant Commanders increases operational risk to United States and Partner Forces.

Priority	CENTCOM Fiscal Year 2023 Unfunded Priorities Budget Line Item Number (LIN)	Sub-Activity Group (SAG)	Program Element (PE) Number	Amount ($ in millions)
1	Tactical Electronic Surveillance System—Adv Development / Air Vigilance Operations and Sustainment	121	0603766A	$14.7
	AF TENCAP / CRESTONE Data base	012C	0207247F	$15.0

Building Joint Force Resiliency / Agile Logistics

a. *Prepositioned War Reserve Materiel (PWRM) Stockpile Readiness:*

Executive Summary: Sufficient PWRM stocks are a necessity to compensate for the lack of forces and footprint in theater. Additional investment will help build a long-term enduring advantage in managing risk and preparing to respond to small-scale, short-duration crises without substantially impairing high-end warfighting readiness caused by the diversion of resources. Contingency preparedness in the form of PWRM readiness is foundational to deterrence. Mobile prepositioned stocks are critical to quickly stand up temporary and smaller-scale logistical support locations near the point of use as conflict unfolds.

Operational Impact / Risk to NDS: Without PWRM levels requested, CENTCOM is unable to fully meet contingency plan operational base requirements in the specified time period. Funding is critical to filling shortages of bed-down and life support systems, fuel support distribution and storage equipment, and rapid runway repair sets. The requested $125.1 million will replenish PWRM stockpiles up to the quantity required to achieve a C–1 readiness rating.

Priority	CENTCOM Fiscal Year 2024 Unfunded Priorities Budget Line Item Number (LIN)	Sub-Activity Group (SAG)	Program Element (PE) Number	Cost ($ in millions)
2	Expeditionary Airfield Basing Assets (BEAR, AGE, RADR)	021D	0401135F	$82.2
	WRM Equipment / Secondary Items (Fuels Support Equip)	021D	0208031F	$25.6
	Globally Positioned Network CENTCOM (GPN–CENT)	041Z	0708550F	$16.0
	WRM Equipment / Secondary Items (APS–5)	212	0208031A	$4.1

Innovation

a. *Data Analysis and Artificial Intelligence (AI) Initiative Baseline:*

Executive Summary: Additional investment is critical in moving CENTCOM toward leveraging data as a strategic asset. CENTCOM's military advantage is increasingly reliant on data-driven technologies and the integration of diverse data sources, elastic computing to the edge, and rapid software deployment. Data provides new ways and means to monitor, respond, and deter aggression at the speed of operations.

Operational Impact / Risk to NDS: CENTCOM requests $8 million to recruit data scientists and provide hardware and technology capable of processing large amounts of code, and data libraries.

b. *Maven Smart System (MSS) Enterprise Licenses:*

Executive Summary: CENTCOM's military advantage is increasingly reliant on data-driven technologies and the integration of diverse data sources, elastic computing to the edge, and rapid software deployment. Information sharing and data analytics are principal mechanisms for understanding China's encroachment, illuminating Russia's activities, disrupting Iran's UAS / Advanced Conventional Weapons supply chains, and spoiling ISIS and AQ external operations. We are currently using MSS as a component of our Joint All Domain Command and Control (JADC2) capability in CENTCOM.

Operational Impact / Risk to NDS: Funding provides CENTCOM with an enterprise license for users of MSS as a component of our JADC2 capability. MSS allows users to explore and visualize the battlefield while increasing ability to anticipate, monitor, and respond to destabilizing activities from strategic competitors. Leveraging MSS as a strategic asset provides new ways and means to monitor, respond, and deter aggression at the speed of operations.

c. *Cloud Computing Environment / Cloud Transition:*

Executive Summary: Cloud Computing Environment is the foundation upon which CENTCOM builds and tailors effective cyber security, advanced analytical capabilities, command and control, and future enabling technologies. CENTCOM cloud strategy focuses on agility, flexibility, and modernization. Rapid delivery of enterprise resources and services result in an organization equipped to respond and fight in the digital age. When mission needs change, a flexible cloud-based IT enterprise can rapidly scale or reallocate resources or react and remediate incidents. The desired end State is to establish a multi-vendor, multi-cloud ecosystem that hosts both on-and off-premise services across all classification levels.

Operational Impact / Risk to NDS: Funding facilitates CENTCOM's migration to this new capability and provides resources to leverage existing systems and develop tools and protocols for secure operations and applications. Without these funds, CENTCOM falls short of meeting DOD CIO mandates. CENTCOM and coalition partner operations are put at risk due to increased network security threats due to the inability to securely manage and implement critical software / firmware updates on all networks and systems throughout the Command.

Priority	CENTCOM Fiscal Year 2024 Unfunded Priorities Line Item Number (LIN)	Sub-Activity Group (SAG)	Program Element (PE) Number	Amount ($ in millions)
3	CCMD Direct Msn Support / Data Analysis and AI Initiative	015F	0201138F	$8.0
	CCMD Direct Msn Support / MSS Licenses	015F	0201138F	$34.0
	CCMD Direct Msn Support / Cloud Transition / Computing	015F	0201122F	$30.0

Active Campaigning:

Executive Summary: Full Motion Video Extension Unified Relay (FEURY) serves as a critical enabler of precision strikes, force protection, and mission command within the Combined Joint Operations Area (CJOA). Since January 2022, seven Operation Inherit Resolve (OIR) FEURY sites have enabled 53 airstrikes, linked to 1,779 Rover feeds, and supported 5,672 total mission hours in the ongoing fight against Da'esh and Iranian-Aligned Militia Groups (IAMG). The situational awareness that FEURY provides is vital to the exercise of mission command, even when not resulting in an airstrike. In January 2022, FEURY provided decisionmakers and operators real-time, situational awareness of a prison break in Syria. FEURY was a vital link in coordinating ground force responses used to contain the situation. FEURY also gives Combined Joint Task Force-Operation Inherit Resolve (CJTF-OIR) the ability to monitor politically sensitive sites and the Iraqi forces the ability to leverage their airpower in protecting United States forces in a theater constrained by Force Manning Level (FML) limits and competing NDS priorities.

Operational Impact / Risk to NDS. Service funding support for seven FEURY nodes in the CENTCOM area of responsibility ends in November 2023. CJTF-OIR requires support for these seven FEURY nodes for an additional year to preclude gaps in Full Motion Video (FMV) capability while alternative means for providing similar capability is pursued. Complete loss of FEURY FMV would severely degrade CJTF-OIR's ability to identify and prosecute targets, execute mission command, and place personnel and CJTF-OIR missions at risk.

Priority	CENTCOM Fiscal Year 2024 Unfunded Priorities Line Item Number (LIN)	Sub-Activity Group (SAG)	Program Element (PE) Number	Amount ($ in millions)
4	Agile ISR / Full Motion Video Extension Unified Relay (FEURY)	011C	0305206F	$12.0

Digital Modernization

Executive Summary: CENTCOM Digital Modernization is essential to the Command's ability to maintain information and decision advantage, preserve C4 systems, and ensure critical kill chains. CENTCOM's Digital Modernization plan applies the Department of Defense 2019 Digital Modernization Strategy principles to develop its Future Mission Environment. The Future Mission Environment is an essential element for integrating CENTCOM into Joint All Domain Command and Control and the DOD Mission Partner Environment.

Operational Impact / Risk to NDS: The Future Mission Environment replaces legacy counter-violent extremist organization-oriented capabilities developed over the past 3 decades that tether the Command to fixed information technology hubs that are becoming increasingly vulnerable to state-based adversaries. Future Mission Environment implementation requires several Digital Modernization enhancements.

Zero Trust Architecture (ZTA) / Internet Protocol v6:

Executive Summary: In existing CENTCOM networks, users and endpoint devices are automatically trusted within the perimeter and put the organization at risk from malicious internal actors and those with assumed legitimate credentials with unauthorized and compromised accounts-wide access within the network.

Operational Impact / Risk to NDS: With funding for Zero Trust Architecture, CENTCOM will be able to implement networks that leverage micro-segmentation, security monitoring and response, and general protective / preventative controls that improve an organization's cyber security posture and reduce risk.

Software Defined Networks:

Executive Summary. Software Defined Networks use software-based controllers or application programming interfaces to communicate with underlying hardware infrastructure to direct network traffic. Use of this approach is directed in the DOD Zero Trust Reference Architecture / Software Defined Networking, December 2020. SDN benefits include cost savings realized through reductions in time spent on manual tasks and improved utilization of existing CENTCOM network resources.

Operational Impact / Risk to NDS. Not resourcing SDN critically degrades operational availability and uptime / loading of software upgrades to all CENTCOM networks. SDN speeds system recovery times and reduces CENTCOM networks failure rates.

Army Intelligence Information Technology (IT) Systems and Networks:

Executive Summary: U.S. Army Central Command's (ARCENT) funding to support Army Intelligence Information Technology Systems and Networks has been decremented 100 percent in PB24. United States Army Central Command requires $5 million for the information security systems necessary to protect Department of Defense intellectual property and technical advances.

Operational Impact / Risk to NDS: Without additional funding, the Joint Worldwide Intelligence Communication System network and system support would be severely degraded. The number of organic military personnel with the appropriate Military Occupational Specialty are insufficient to fill the contract void. The loss of JWICS support to OIR and Spartan Shield would result in an unacceptable loss of actionable intelligence to support targeting, force protection, collection management, and threat monitoring across the AOR.

Army Strategic Network Transport:

Executive Summary: U.S. Army Central Command requires Command, Control, Communications, Computer, Information Technology (C4IT) infrastructure in order to direct operations, access information needed for situational awareness, decisionmaking, and maintain the ability to exchange information in a contested environment. In this role, USARCENT provides the C4IT capabilities and infrastructure in the Southwest Asia (SWA) Theater supporting Operation Spartan Shield (OSS) and CJTF-OIR. To meet these requirements, USARCENT requires resources for South West Asia (SWA) network modernization, sustainment, and service support necessary to meet the Theater's on-going and future operational requirements. Recent Theater transition, both operational and budgetary, has led to a gap in required funding in PB24 placing risk on USARCENT's ability to operate, maintain, modernize, and defend the SWA network.

USARCENT provides Southwest Asia network support across theater via Commercial Satellite leases, Terrestrial Fiber leases, Southwest Asia Theater Signal Service Support, and Field Service Representatives. These capabilities require sufficient funding to support USARCENT, Joint, and Coalition operations across Southwest Asia. The decrements to these requirements present a high risk to the USARCENT's mission to provide C4IT capabilities in support of on-going operational requirements. Failure to fund effects the two highest priority requirements that support strategic communications—commercial satellite and terrestrial fiber leases.

Operational Impact / Risk to NDS: Without an additional $25.3 million in fiscal year 2024, USARCENT will be unable to lease the primary and alternate means of transporting data to the Department of Defense Information Network (DODIN) and source FSRs to maintain the network. Lack of funding reduces USARCENT's ability to protect and defend the SWA strategic network against cybersecurity threats on all voice, video, and data services across the Non-Secure Internet Protocol Router (NIPR), Secure Internet Protocol Router (SIPR), and coalition networks. This translates to degraded command and control and increased risk to operations in what remains a very kinetic and dynamic theater.

Priority	CENTCOM Fiscal Year 2024 Unfunded Priorities Line Item Number (LIN)	Sub-Activity Group (SAG)	Program Element (PE) Number	Amount ($ in millions)

General LANGLEY. The fiscal year 2024 USAFRICOM Unfunded Priority List (UPL) addresses actions to establish a Somalia persistent presence to further ensure strategic access, confine Violent Extremist Organizations (VEOs), secure Sea Lines of Communication and limit competitor military expansion. More precisely, a lodgment in Somalia will serve to degrade the growing threat from al-Shabaab, assure freedom of navigation through the Bab al Mandab sea-lane chokepoint, and monitor the expanding Chinese presence in Djibouti. In addition, USAFRICOM requires Intelligence, Surveillance, and Reconnaissance (ISR) services and bandwidth increases to meet Departmental High-Risk ISR requirements for the African theater. Next, USAFRICOM Command and Control (C2) services and capabilities on the African Continent must be addressed to ensure USAFRICOM is postured for network resiliency and survivability in a denied, degraded, intermittent or limited (DDIL) communications environment. Last, USAFRICOM requires additional commercial satellite leases to compensate for the shortage of communication access on the African continent.

7. Senator WARREN. General Kurilla and General Langley, what does the Unfunded Priority List purchase?

General KURILLA. The Unfunded Priority List purchases mission-critical capabilities not funded within the base budget, thereby buying down risk to force and risk to mission. As combatant commands do not procure military capabilities, the Unfunded Priority List is necessary to mitigate risk.

General LANGLEY. The fiscal year 2024 USAFRICOM Unfunded Priority List (UPL) request that supports the return to persistent presence in Somalia addresses estimated one-time costs including: $42.0 million for airfield improvements, $43.0 million to improve life support areas, $11.0 million for communications improvements, and $56.0 million for increases in basic life support/communications costs.. Our High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) UPL will purchase additional contract ISR services, comprised of B–350 and MQ–9 aircraft, and will provide additional bandwidth and associated processing, exploitation, and dissemination (PED). Meanwhile our Command and Control (C2) Resiliency UPL will purchase information technology (IT) equipment to enable network resiliency and survivability on the African continent, and the Commercial Satellite Communications (COMSATCOM) UPL would procure COMSATCOM services to compensate for the shortage of communication access on the African continent.

8. Senator WARREN. General Kurilla and General Langley, please include detail on all end items with quantities, contractor full-time employees (FTE), etc.

General KURILLA. All such details are provided by the Military Services as they are directed to resource any items on our Unfunded Priority List.

General LANGLEY. The fiscal year 2024 USAFRICOM Unfunded Priority List request (UPL) that supports the return to persistent presence in Somalia addresses required infrastructure and communications improvements and associated sustainment. The request does not intend to procure specific end items or hire specific contractor manpower equivalents. Our High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) UPL item will purchase contract ISR services that will provide three B–350's and two MQ–9 lines (4 aircraft each), additional data bandwidth, and the associated processing, exploitation, and dissemination (PED) of data. Our Command and Control (C2) Resiliency UPL item will purchase network and computer equipment, digital storage equipment, peripheral keyboard, video, and mice (KVM) switches, cryptographic material, facility infrastructure upgrades, and a surge installation labor team. Our Commercial Satellite Communications (COMSATCOM) UPL item will be for a satellite communications services contract for satellite communication bandwidth. The government would not receive end items or labor.

9. Senator WARREN. General Kurilla and General Langley, what specific capability will the Unfunded Priorities List provide?

General KURILLA. Our submitted Unfunded Priority List is intended to provide a range of mission-critical capabilities not funded within the base budget, thereby buying down risk to force and risk to mission.

General LANGLEY. The fiscal year 2024 USAFRICOM Unfunded Priority List (UPL) addresses actions to establish a Somalia persistent presence to further ensure strategic access, confine Violent Extremist Organizations (VEOs), secure Sea Lines of Communication, and limit competitor military expansion. The funding will fully enable U.S. military capabilities to degrade the ability of VEOs to threaten the U.S. Homeland, allow ready crisis response, guarantee strategic access to support U.S. contingency plan execution, isolate and delay strategic competitor military expansion in the Command's area of responsibility, and limit spillover impacts on other Combatant Commands/North Atlantic Treaty Organization (NATO). The High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) UPL will increase time-on-station for collection coverage in East, North, and West Africa. For East Africa, this equates to increased Full Motion Video (FMV) and Signals Intelligence (SIGINT) collection, target development, and force protection to support United States periodic engagement and partner nation operations in high-risk areas. For North Africa, this equates to increased FMV and SIGINT collection against Global Power Competition (GPC) requirements and supports Key Leader Engagements (KLE). For West Africa, this equates to increased FMV and SIGINT collection against VEO operations, target development, and support to Allied partners. The Command and Control (C2) Resiliency UPL will enable a continent-based network at Camp Lemonnier, Djibouti-Horn of Africa (CLDJ-HOA) to function independently in a denied, degraded, intermittent, and limited (DDIL) environment independent from Europe, the location of the greater USAFRICOM enterprise network. The Commercial Satellite Commu-

nications (COMSATCOM) UPL will compensate for the shortage of communications access across the African continent.

10. Senator WARREN. General Kurilla and General Langley, what gap will this fill that is not in the base budget?

General KURILLA. All of these gaps are identified in the executive summary and the operational impact if not funded portion of question #5 that outlines each Unfunded Priority List items and risk associated.

General LANGLEY. The fiscal year 2024 USAFRICOM Unfunded Priority List (UPL) addresses an emerging requirement with the return to persistent presence in Somalia that was identified, approved by the President, and planned out of sequence with the Department's yearly Program Budget Review (PBR) cycle. It addresses unprogrammed costs to the Services for Intelligence, Surveillance, and Reconnaissance (ISR) not identified within the Department's recently concluded fiscal years 2024 to 2028 PBR. It addresses un-programmed costs for Command and Control (C2) Resiliency to address a threat that emerged after USAFRICOM's Program Objective Memorandum (POM) fiscal years 2024 to 2028 submission to establish a standalone, on-continent network necessary for a resilient Defense Ecosystem. Finally, the Commercial Satellite Communications (COMSATCOM) UPL will compensate for the shortage of communication access across the African continent since USAFRICOM's POM fiscal years 2024 to 2028 submission.

11. Senator WARREN. General Kurilla and General Langley, how will this capability support objectives outlined in current National Security, Military, and Defense Strategy documents?

General KURILLA. The capabilities identified in our Unfunded Priorities List all serve to enhance CENTCOM's support of the objectives outlined in the U.S. National Security Strategy, National Military Strategy, and National Defense Strategy.

The National Military Strategy and National Defense Strategy both identify the People's Republic of China as the Nation's pacing challenge and Russia as its acute threat. Meanwhile, the National Defense Strategy identifies Iran and Violent Extremist Organizations as persistent threats. All of these threats and challenges are active in the CENTCOM region. The systems, programs, and capabilities identified in the CENTCOM Unfunded Priorities List all serve to address them.

The CENTCOM region holds the greatest risk of derailment of the National Security Strategy and the National Defense Strategy, both of which correctly prioritize the Indo-Pacific region. A flashpoint with Iran, a crisis in the world's central region, a successful large-scale attack on a partner country, or an attack on the Homeland by a Violent Extremist Organization all will likely require a response, drawing unplanned resources away from higher priority theaters into the Central Command region. Therefore, the CENTCOM Unfunded Priorities List can serve as a hedge against derailment of national strategy.

General LANGLEY. The fiscal year 2024 USAFRICOM Unfunded Priority List (UPL) addresses capabilities that fully support National Defense Strategy (NDS) priorities, the National Military Strategy (NMS) in accordance with the concept of Strategic Discipline, the Department's NDS-Implementation (NDS-I) Memo, and the USAFRICOM NDS-I Memo. For example, the 2022 NMS tasks USAFRICOM to reinforce diplomacy and strengthen relationships with Allies and Partners. Our return to Somalia and partnership with the administration of Somali President Hassan Sheikh Mohamud, is vital in the fight against Violent Extremist Organizations (VEOs) in the region. Further, this requirement fully supports the Department's direction in the recently published fiscal years 2025 to 2029 Defense Planning Guidance dated 22 February 2023. The High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) UPL will further the Command's efforts to monitor, react to, and shape the strategic environment while fully aligning with the NDS's approach to Africa. Both the Command and Control (C2) Resiliency and Commercial Satellite Communications (COMSATCOM) UPLs support the NDS, as it calls on the Joint Force to build a resilient Defense Ecosystem. They are also fully supported by the NMS in accordance with the concept of Strategic Discipline, as well as the Department's NDS-I Memorandum.

12. Senator WARREN. General Kurilla and General Langley, what is the operational requirement and how does this Unfunded Priorities List support current or future operations?

General KURILLA. The response to question 5 offers a detailed description of the operational requirement for each item on our Unfunded Priorities List.

General LANGLEY. The fiscal year 2024 USAFRICOM Unfunded Priority List (UPL) request supports establishing an operational/persistent presence in Somalia

that prioritizes strategic access, confines Violent Extremist Organizations, and limits competitor military expansion. This requirement enhances the reliability of existing airfield infrastructure and life support areas which addresses operational risks at the USAFRICOM posture locations in support of persistent presence in Somalia. The High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) UPL will increase services provided by specialized, manned B–350 aircraft and contract MQ–9 aircraft. These platforms provide intelligence collection operations with sufficient range and flexibility in deployment locations, and are politically acceptable on the African continent. The Command and Control (C2) Resiliency UPL addresses an emerging threat for increased capability and required resiliency particularly in the area of cyber security needs for the USAFRICOM C2 enterprise network. The Commercial Satellite Communications (COMSATCOM) UPL fulfills the need to communicate with units in austere locations supporting all USAFRICOM assigned missions/operations on the Africa continent.

13. Senator WARREN. General Kurilla and General Langley, what is the operational impact if this Unfunded Priorities Lists is not funded in fiscal year 2024?

General KURILLA. The response to question 5 offers a detailed description of the risk associated with failure to fund each item on our Unfunded Priorities List.

General LANGLEY. For the return to a persistent presence in Somalia, if unfunded, there would be a direct and significant increase in risk to mission and risk to force for United States forces operating in/near East Africa If the High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) UPL is not funded, the threat to U.S. forces conducting operations in the USAFRICOM area of operations (AOR) will remain high risk. This is due to the limitations of available airborne ISR platforms and the need to balance force protection against operational objectives. In a not-so-distant past, 83 percent of available ISR assets committed to an AFRICOM operation were re-tasked to support another Command's operation. For the Command and Control (C2) Resiliency UPL, lack of funding would add risk to on-continent USAFRICOM operations and Enterprise Network (AEN) resiliency if the European based network were to be compromised. By not funding the Commercial Satellite Communications (COMSATCOM) UPL, force protection/security personnel, C2 communications, day-to-day troop communications, base support activities, as well as special operations units working with local partner forces at continent posture locations would incur significant risk to force and risk to mission.

14. Senator WARREN. General Kurilla and General Langley, are there plans to include this item in the fiscal year 2025 base budget?

General KURILLA. As we do every year, we will coordinate with the Military Services for the fiscal year 2025 base budget requirements.

General LANGLEY. Yes, USAFRICOM will continue to advocate for our Command's Unfunded Priority List (UPL) items to be included in the DOD fiscal year 2025 base budget. We do this through our annual Advocacy Letters provided to the Services and many Agencies, along with the annual DOD Program Budget Review (PBR) process.

15. Senator WARREN. General Kurilla and General Langley, why was this Unfunded Priorities List not included in the fiscal year 2024 President Budget (PB) submission?

General KURILLA. These items were submitted to the Military Services. Based on internal priorities, the Services did not include these items in their Fiscal Year 2024 President's Budget submissions.

General LANGLEY. The fiscal year 2024 USAFRICOM Unfunded Priority List (UPL) includes the Presidential-ordered return to persistent presence in Somalia. This is an emerging requirement directed by the President and out of sequence with the Department's Annual Program Budget Review (PBR) cycle. Somalia Persistence Presence addresses un-programmed cost to the Services not identified within the Department's recently concluded fiscal year 2024 PBR. The High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) UPL addresses Joint Staff validated, but consistently unfulfilled requirements for the USAFRICOM area of operations. The Command and Control (C2) Resiliency requirement emerged after USAFRICOM's Program Objective Memorandum (POM) fiscal years 2024 to 2028 submission. The Commercial Satellite Communications (COMSATCOM) requirement was included in USAFRICOM's POM fiscal years 2024 to 2028 submission but ultimately not funded by the Army.

16. Senator WARREN. General Kurilla and General Langley, what is the name of the vendor(s) executing this effort? Sub-vendor(s)?

General KURILLA. We rely on the Services and Service Support Agencies to select the vendors and let the contracts to deliver the capability we require to meet our National Defense Strategy objectives.

General LANGLEY. USAFRICOM does not have acquisition authority and can only provide limited information. For the fiscal year 2024 USAFRICOM Unfunded Priority List (UPL) items, the return to persistence presence in Somalia will be executed via multiple means to include a combination of troop labor, the Army's Logistics Civil Augmentation Program (LOGCAP) life support task orders (incoming performance contractor is Fluor), and through competitively awarded supply and construction contracts by cognizant contracting offices, in accordance with the Federal Acquisition Regulation (FAR) and associated supplements. The High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) UPL requirements will be executed through the current USAFRICOM Reconnaissance Intelligence Exploitation Services (ARIES) contract. The ARIES contract is administered by the General Services Administration (GSA) and was awarded to Smartronix, LLC. The Command and Control (C2) Resiliency UPL requirements will be satisfied by a variety of information technology (IT) equipment using government contracts. The Commercial Satellite Communications (COMSATCOM) UPL will be executed on an existing USAFRICOM COMSATCOM contract with SES S.A. and Peraton.

17. Senator WARREN. General Kurilla and General Langley, how often has your command met with the vendor executing this effort? Please provide a list of all such meetings, and the agenda for these meetings?

General KURILLA. As a Combatant Command, we are reliant on the Services and Services Support Agencies to meet with vendors.

General LANGLEY. USAFRICOM does not have acquisition authority. In general, USAFRICOM does not meet with specific vendors, as this is a function of our lead service components and subordinate contracting activities. USAFRICOM publishes guidance on engagements with non-Federal entities in an internal instruction. USAFRICOM J5 Strategy, Engagement, and Programs Directorate has a non-Federal entity "gatekeeper" that coordinates engagements with members of industry.

18. Senator WARREN. General Kurilla and General Langley, what is your history with this vendor? Please detail when the relationship began, the number of contracts applied for by this vendor, the number of contracts awarded to this vendor, and if you have had a personal relationship with the vendor.

General KURILLA. As a Combatant Command, we are reliant on the Services and Services Support Agencies to meet with vendors.

General LANGLEY. USAFRICOM does not have acquisition authority. In general, USAFRICOM does not meet with specific vendors, track the number of contracts bid by a vendor, or track the number of contracts awarded to a vendor. These are functions performed by our lead service components and subordinate contracting activities. There are no personal relationships established.

19. Senator WARREN. General Kurilla and General Langley, has anyone who formerly worked for your command represented the vendor in meetings?

General KURILLA. We do not participate in vendor meetings and do not track vendor representation.

General LANGLEY. USAFRICOM Office of Legal Counsel provides comprehensive post-employment guidance to outgoing personnel. USAFRICOM does not prohibit or track employment of former personnel by commercial entities. However, those prospective employees are subject to post-service employment rules as stipulated in the Code of Federal Ethics.

20. Senator WARREN. General Kurilla and General Langley, what is their name, what was their position, and when did you meet with them?

General KURILLA. We do not participate in vendor meetings and do not track vendor representation.

General LANGLEY. USAFRICOM Office of Legal Counsel provides comprehensive post-employment guidance to outgoing personnel. USAFRICOM does not prohibit or track employment of former personnel by commercial entities. However, those prospective employees are subject to post-service employment rules as stipulated in the Code of Federal Ethics.

21. Senator WARREN. General Kurilla and General Langley, in which city/State will the Unfunded Priorities Lists be executed?

General KURILLA. We do not participate in vendor meetings and do not track vendor representation.

General LANGLEY. USAFRICOM does not have acquisition authority and can only provide limited information. Somalia Persistent Presence, High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) and Command and Control (C2) Resiliency, would be executed Outside Continental United States (OCONUS). The Commercial Satellite Communications (COMSATCOM) UPL would be executed in Manassas, VA, Tampa, FL, and Herndon VA.

22. Senator WARREN. General Kurilla and General Langley, is this requirement on an existing contract? If so, with who and what is the history of the contract?

General KURILLA. We rely on the Services and Service Support Agencies to select the vendors and let the contract to deliver the capability we require to meet our National Defense Strategy objectives.

General LANGLEY. USAFRICOM does not have acquisition authority and can only provide limited information. For the fiscal year 2024 USAFRICOM Unfunded Priority List (UPL) items, the return to a persistent presence in Somalia would be executed via multiple means to include a combination of troop labor, the Army's Logistics Civil Augmentation Program (LOGCAP) life support task orders (incoming performance contractor is Fluor), and through competitively awarded supply and construction contracts by cognizant contracting offices, in accordance with the Federal Acquisition Regulation (FAR) and associated supplements. The High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) UPL requirements would be executed on an existing contract with Smartronix, LLC that currently provides contract ISR services. The current contract was awarded in August 2022 and is a follow-on to a previous contract. The Command and Control (C2) Resiliency UPL requirements will be satisfied by a variety of information technology (IT) equipment using government contracts. The Commercial Satellite Communications (COMSATCOM) UPL requirements would be executed via multiple existing contracts with SES S.A. and Peraton.

23. Senator WARREN. General Kurilla and General Langley, what is the anticipated contract award date if the Unfunded Priorities Lists receives funding?

General KURILLA. We rely on the Services and Service Support Agencies to select the vendors and let the contract to deliver the capability we require to meet our National Defense Strategy objectives.

General LANGLEY. USAFRICOM does not have acquisition authority. Due to the critically of these Unfunded Items, USAFRICOM would seek our Components to award contracts as soon as funds are made available.

24. Senator WARREN. General Kurilla and General Langley, what funding lines are associated with this Unfunded Priorities Lists?

General KURILLA. Development of the Unfunded Priority List is part of our annual research and budget analysis, a core staff function for U.S. Central Command, and elicits no additional cost.

General LANGLEY. The funding lines associated with our Unfunded Priorities List are identified in the answer to question 5.

Somalia Persistent Presence

Total				$12

25. Senator WARREN. General Kurilla and General Langley, if multiple appropriations fund this requirement, must all appropriations be funded simultaneously to source this requirement, or can each appropriation stand on its own to fund a portion of the requirement?

General KURILLA. No single Unfunded Priorities List item is split between multiple appropriations.

General LANGLEY. USAFRICOM requires all appropriations to be funded simultaneously to synchronize efforts within each individual fiscal year 2024 USAFRICOM Unfunded Priority List (UPL) item.

26. Senator WARREN. General Kurilla and General Langley, how much was enacted and obligated (or expended for research, development, test, and evaluation (RDT&E)) in fiscal years 2022 to 2023 for this requirement?

General KURILLA. The services have expended funds for similar types of capabilities, but we cannot identify specific allocations to our requirements identified in the UPL.

General LANGLEY. No research, development, test, and evaluation (RDT&E) funding was enacted or obligated for any of our fiscal year 2024 Unfunded Priority List (UPL) items in fiscal years 2022 to 2023.

27. Senator WARREN. General Kurilla and General Langley, how much was requested in fiscal year 2024 for this requirement?

General KURILLA. The services have expended funds for similar types of capabilities, but we cannot identify specific allocations to our requirements identified in the UPL.

General LANGLEY. Given the emergent nature of the Somalia Persistent Presence requirement, execution represents an un-programmed cost to the Services and was not identified within the Department's recently concluded fiscal years 2024 to 2028 Program Budget Review (PBR). Consequently, this fiscal year 2024 Unfunded Priority List (UPL) funding request is USAFRICOM's attempt to secure funding. For the High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) UPL item, USAFRICOM requested $223.8 million in its Program Objective Memorandum (POM) fiscal years 2024 to 2028 submission through the Army and DOD's fiscal

years 2024 to 2028 Program Budget Review (PBR) processes. The Command and Control (C2) Resiliency item emerged after the Army's POM process for fiscal year 2024. The Commercial Satellite Communications (COMSATCOM) item was included in USAFRICOM's POM fiscal years 2024 to 2028 submission through the Army for $12.0 million.

28. Senator WARREN. General Kurilla and General Langley, is there a tail associated with this Unfunded Priorities Lists?

General KURILLA. Some of the capabilities will require sustainment after fielding and integration. Exact costs will be driven by chosen solutions to meet the requirements, and we will incorporate the costs in future budget requests.

General LANGLEY. The return to persistent presence in Somalia will require annual basic life support and communications sustainment. The High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) and Commercial Satellite Communications (COMSATCOM) UPLs will continue to be a requirement at the increased level, as these services will be required across the Fiscal Year Defense Plan. The Command and Control (C2) Resiliency UPL will have an annual sustainment requirement and an equipment refresh requirement every 3 years.

29. Senator WARREN. General Kurilla and General Langley, is any tail funded in the future years defense plan?

General KURILLA. Once solutions are identified and resourced, we will incorporate the associated costs in future planning and programming.

General LANGLEY. Tails associated with the return to persistent presence in Somalia have not been funded in the future years defense plan due to the emerging nature of the requirement. Tails for our other three Unfunded Priority List (UPL) items, i.e., High-Risk Intelligence, Surveillance, and Reconnaissance (ISR), Command and Control (C2) Resiliency, and Commercial Satellite Communications (COMSATCOM) requirements are included in USAFRICOM's POM fiscal years 2025 to 2029 submission to the Army.

30. Senator WARREN. General Kurilla and General Langley, please describe how much the requirement will cost per year for the next 5 years.

General KURILLA. The breakdown of associated costs will be driven by selected solutions to our required capabilities and how the services integrate those requirements into their budgets.

General LANGLEY. The return to persistent presence requires annual basic life support and communications sustainment is approximately $97.0 million per year. The High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) cost per year is $224.0 million. The Command and Control (C2) Resiliency requirement is $600,000 per year with an equipment refresh cost of approximately $14.0 million in fiscal year 2027. The Commercial Satellite Communications (COMSATCOM) requirement is $12.0 million per year.

31. Senator WARREN. General Kurilla and General Langley, please provide in detail the previous funding requests and enacted for this requirement, including if it was in the base budget or Unfunded Priorities Lists.

General KURILLA. We have not previously requested funding for the requirements identified in our UPL. The capabilities identified address emerging threats and changes in our operational environment.

General LANGLEY. Given the emergent nature of the return to persistent presence in Somalia, the requirements were not identified within the Department's recently concluded fiscal years 2024 to 2028 Program Budget Review (PBR). The High-Risk Intelligence, Surveillance, and Reconnaissance (ISR) requirement was submitted as an Unfunded Priority List (UPL) item for fiscal year 2023 (Requested: $219.4 million, Funded: $50 million). In addition, the requirement was included in USAFRICOM's fiscal years 2024 to 2028 PBR submission and USAFRICOM's Program Objective Memorandum (POM) fiscal years 2024 to 2028 and fiscal years 2025 to 2029 submissions. The Command and Control (C2) Resiliency requirement was submitted as an UPL item in fiscal year 2023 (Requested: $10.0 million, Funded: $0.0 million). The requirement was included in USAFRICOM's POM fiscal years 2025 to 2029 submission to the Army. The Commercial Satellite Communications (COMSATCOM) requirement was submitted as an UPL item in fiscal year 2023 (Requested: $17.75 million, Funded: $0.0 million). The requirement was included in USAFRICOM's POM fiscal years 2025 to 2029 submission to the Army.

32. Senator WARREN. General Kurilla and General Langley, if the requirement is not included in the future years defense plan, will that be rectified in the next Pro-

gram Objective Memorandum or the Program, Planning, Budget, and Execution (PPBE) cycle?

General KURILLA. If a decision is made to fund any of the capabilities in our UPL, we will incorporate the associated costs in future submissions to the service POMs.

General LANGLEY. USAFRICOM has requested the Services include these requirements in the next Program Objective Memorandum.

33. Senator WARREN. General Kurilla and General Langley, please provide photos of this requirement for visual aid.

General KURILLA. We rely on the Services and Service Support Agencies to select the vendors and let the contract to deliver the capability we require to meet our National Defense Strategy objectives. Because the Services will select the vendors, we do not know who they will select; therefore, do not have pictures.

General LANGLEY.

CIVILIAN HARM MITIGATION

34. Senator WARREN. General Kurilla and General Langley, how many subordinate commanders are currently authorized to provide *ex gratia* payments under section 1213 within U.S. Central Command (CENTCOM) and AFRICOM, respectively?

General KURILLA. I have retained approval authority to provide ex gratia payments at my level. However, each of my subordinate commanders at echelon across CENTCOM actively considers ex gratia payment when reviewing each civilian casualty scenario in theater that meets statutory requirements.

General LANGLEY. USAFRICOM has not delegated ex gratia payment authority to any subordinate commanders.

35. Senator WARREN. General Kurilla and General Langley, what training does CENTCOM and AFRICOM, respectively, provide to commanders on providing *ex gratia* payments? Please provide details on what this training consists of, the training length, how often a commander receives an updated training on this, and when this training was last updated.

General KURILLA. In concert with my guidance, all my subordinate commanders receive legal consultation regarding ex gratia payment statutory authority.

General LANGLEY. AFRICOM does not provide training to subordinate commands on providing *ex gratia* payments. The Office of Under Secretary of Defense Memorandum on Interim Regulations for Condolence or Sympathy Payments to Friendly Civilians for Injury or Loss That Is Incident to Military Operations dated 22 June 2022 states that "The authority to approve *ex gratia* payments under section 1213 is delegated to geographic commanders. Geographic combatant commanders may further delegate this authority to subordinate commanders". CDR AFRICOM has retained this authority for AFRICOM, and therefore does not require a training program for subordinate commanders.

36. Senator WARREN. General Kurilla and General Langley, for how many cases did CENTCOM and AFRICOM, respectively, consider providing *ex gratia* payments? If it did not ultimately provide an *ex gratia* payment after considering it, please detail why this was the case.

General KURILLA. My subordinate commanders consider ex gratia payments for all incidents of damage, personal injury, or death that meet the conditions of section 1213 of the National Defense Authorization Act for 2020. To date, during my time as CENTCOM commander, we've not had an event that meets these conditions.

General LANGLEY. Since January 1, 2021, USAFRICOM has conducted six civilian casualty assessments with one being substantiated and five unsubstantiated. The one substantiated assessment was from a U.S. airstrike conducted on 1 January 2021 in support of operations. USAFRICOM works with the Federal Government of Somalia and the United States Department of State to determine the appropriate measures for civilian casualty response, including *ex gratia.*

37. Senator WARREN. General Kurilla, the Department of Defense (DOD) admitted to 12 civilian deaths and 2 civilian injuries resulting from United States military operations in Afghanistan in 2021 in its "Annual Report on Civilian Casualties in Connection with United States Military Operations in 2021". Yet the Department of Defense only made one ex gratia payment in 2021 for the death of a civilian in Afghanistan on January 8, 2021. Why has CENTCOM failed to provide these payments despite an annual $3 million authorization from Congress to do so?

General KURILLA. I intend to offer ex gratia payment to the family from the August 29, 2021 strike in Kabul that tragically killed ten civilians once the entire family has safely arrived in the United States.

38. Senator WARREN. General Kurilla, how much was the ex gratia payment that CENTCOM provided for the death of one civilian in Afghanistan on January 8, 2021?

General KURILLA. An ex gratia payment of $5,000 was delivered directly to the primary beneficiary of the civilian killed in that event.

39. Senator WARREN. General Langley, the Department of Defense admitted to 3 civilian injuries resulting from United States military operations in Somalia in 2021 in its "Annual Report on Civilian Casualties in Connection with United States Military Operations in 2021". Yet the Department of Defense did not make any ex

gratia payments. Why has AFRICOM failed to provide these payments despite an annual $3 million authorization from Congress to do so?

General LANGLEY. In June 2021, USAFRICOM released its Civilian Casualty Assessment Quarterly Report; which substantiated three civilian casualties following a United States airstrike in the vicinity of Qunyo Barrow, Somalia, on January 1, 2021. After a thorough assessment of the information and circumstances following the January 1, 2021, airstrike, USAFRICOM assessed that more likely than not, the airstrike inadvertently injured three (3) civilians. USAFRICOM, working with the Federal Government of Somalia and the United States Department of State, determines the applicable actions for civilian casualty response, including *ex gratia.* To date, no individuals have been identified or organizations representing the victims have come forward. Because al-Shabaab has access to public information about United States military operations, the embassy or partner may determine it is not safe for individuals to receive monetary compensation or public recognition in the media. Al-Shabaab regularly taxes citizens and punishes them for perceived complicity with its enemies, including the United States. USAFRICOM's ability to ensure al-Shabaab would not seize *ex gratia* payments or punish civilians is limited. The limited number of United States military personnel in Somalia and the potential impacts to United States force protection are considered when identifying the feasibility of a U.S. representative meeting with prospective *ex gratia* recipients.

40. Senator WARREN. General Kurilla and General Langley, what steps is CENTCOM and AFRICOM, respectively, taking to use *ex gratia* payments more frequently when there are civilian casualties resulting from U.S. military operations?

General KURILLA. My commanders and I will actively consider *ex gratia* payments for each civilian casualty that meets the statutory and regulatory requirements. When applicable, we also consider beneficiary requests made under the Foreign Claims Act, as well as all other authorized measures to provide redress for any civilian casualties.

General LANGLEY. USAFRICOM's approach and response to civilian harm is based on legal, moral, strategic, operational, and other military considerations. USAFRICOMs response efforts reflect on U.S. and our professional military values, including the importance of preserving human life. Under the law of war, commanders, at all levels, have a great responsibility to exercise the leadership necessary to reduce the risk of harm to civilians and civilian objects. USAFRICOM demands that our leaders demonstrate moral leadership in the conduct of combat operations, maintain the support of partner s and vulnerable populations, and avoid unnecessary civilian harm. An "*ex gratia* payment" may be one of several possible response options that might be appropriate for DOD to take when U.S. military operations injure or kill a civilian or damage or destroy civilian property. Other possible response options could include an acknowledgement of responsibility, medical care, or other appropriate measures that may be consistent with mission objectives and applicable law. Such action help express condolences, sympathy, or goodwill, and are used to support mission objectives. Such actions are not required by law, does not constitute an admission of wrongdoing, and is not for the purpose of compensating the victim or the victim's family for their loss. Any *ex gratia* will be in accordance with Section 1213 of Public Law 116–92 and DOD regulations for implementing the authority in section 1213 to make payments. USAFRICOM adheres to the Office of the Under Secretary of Defense Memorandum on Interim Regulations for Condolence or Sympathy Payments to Friendly Civilians for Injury or Loss That Is Incident to Military Operations dated 22 June 2022. AFRICOM, when allegation is received, considers all the relevant factors, determines the cause of the damage, injury, or death, determines whether the prospective recipient is "friendly to the U.S.", obtains legal advice, and then compiles, maintains, and submits a written record of the decided ex-gratia action.

41. Senator WARREN. General Kurilla and General Langley, how does CENTCOM and AFRICOM, respectively, plan to accurately apply the "more likely than not" standard of credibility for reports of civilian casualties amidst concerns from a RAND Corporation report on "U.S. Department of Defense Civilian Casualty Policies and Procedures" that DOD applies a standard that is "higher than advertised" and "often required having positive proof indicating civilian harm in military information"?

General KURILLA. CENTCOM has fully implemented the August 2022 Department of Defense Civilian Harm Mitigation and Response Plan, to include the standard that civilian casualties were more likely incurred than not. We will have no problem applying this standard to any kinetic situation in our theater.

General LANGLEY. USAFRICOM takes stringent measures to prevent civilian casualties. Protecting civilians remains a vital part of the command's operations to promote greater security for all Africans. USAFRICOM, when it identifies or is notified of a civilian casualty allegation, seeks out and considers all public and classified sources of available information when deciding if civilian casualties "more likely than not" occurred as the result of an USAFRICOM operation.

USAFRICOM leverages information from Non-Government Organizations, public and social media venues, and all-sources of intelligence capabilities available at the time to determine the credibility of the allegation and to as accurately as feasible determine the "more likely than not" standard of credibility. USAFRICOM continues to be as transparent as possible by providing a quarterly civilian casualty report to the public through its public website and provide the public the ability to report any allegations of civilian casualties in their native language. USAFRICOM is confident in their processes and capabilities of their people to mitigate the potential for civilian casualties, but also recognizes the absolute necessity for continuous assessments and improvements of those same processes and capabilities.

42. Senator WARREN. General Kurilla and General Langley, what steps is CENTCOM and AFRICOM, respectively, taking to give proper weight to civilian casualty reporting from outside sources?

General KURILLA. In any report or concern of civilian harm, CENTCOM incorporates and gives weight to credible information provided by Non-Governmental Organizations, eyewitnesses, or media outlets.

General LANGLEY. USAFRICOMs policy is to assess all allegations of civilian casualties regardless of source, especially outside sources. For example, in 2021 all reports of potential civilian casualties that USAFRICOM assessed were from public sources such as news media and social media accounts, with few reports received from NGO's or through the electronic form on USAFRICOM's website. Additionally, USAFRICOM reconsiders existing assessments of civilian causality if new relevant information becomes available through any source to include new information received from NGO's, media reporting, the USAFRICOM Civilian Causality Portal, or other outside organizations.

43. Senator WARREN. General Kurilla and General Langley, what steps is CENTCOM and AFRICOM, respectively, taking to proactively seek out and incorporate information regarding civilian casualties from external sources, such as nongovernmental organizations, in assessing and investigating reports of civilian casualties resulting from U.S. military operations?

General KURILLA. Our leadership in Tampa as well as our operational and component commands across the region have established relationships with international and regional Non-Governmental Organizations that report civilian harm. We also routinely coordinate with regional media outlets on sensitive issues. In the event of a report of civilian casualties we will not wait for information to come in to us; we will activate these networks and aggressively seek analysis, eyewitness reports, and open source information.

General LANGLEY. USAFRICOM investigates allegations of United States military-caused civilian casualties regardless of source. USAFRICOM proactively identifies claims of civilian harm from United States operations by monitoring media websites used in Africa, public social media, and through USAFRICOM's public website. Maintaining channels of communication for engagement with civil society organizations and international organizations, including those that engage in or support humanitarian activities, assist USAFRICOM's efforts to ensure that the Command's assessments are accurate. USAFRICOM encourages these organizations to assist in efforts to reduce civilian harm. USAFRICOM has had several meetings with non-governmental organizations (NGO's) to learn their processes and to establish better lines of communication, which facilitates the discussion of civilian harm prevention. In July 2022, USAFRICOM hosted a Protection of Civilians Working Group with an NGO that operates on the African continent.

44. Senator WARREN. General Langley, according to the "Annual Report on Civilian Casualties in Connection with United States Military Operations in 2021", AFRICOM reopened an assessment regarding reports that a joint Somali-United States military operation caused civilian casualties on May 9, 2018. Please provide an explanation for why AFRICOM maintained its original conclusion that the report was not credible.

General LANGLEY. USAFRICOM reopened this assessment based on information received in 2021 through the USAFRICOM on-line reporting portal. The Command publicly reported the decision to re-open the assessment to illustrate USAFRICOM's

commitment to thoroughness, accuracy and transparency regarding potential occurrences of civilian harm. After a review of the information provided, USAFRICOM's assessment remained unchanged because the further inquiry did not provide any new details that were not considered in the initial assessment. The events that generated the civilian casualty allegation were not a result of USAFRICOM actions.

45. Senator WARREN. General Kurilla and General Langley, what does CENTCOM and AFRICOM, respectively, consider to be "credible" reports of civilian harm resulting from U.S.-origin arms?

General KURILLA. We evaluate each concern of civilian harm with care and sensitivity to the civilian population. Rather than unambiguous evidence, which is not always available after a kinetic strike, we seek the best assessment of the information available in search of a standard that civilian harm was "more likely than not." We will conduct every such investigation with transparency, and we will give weight to credible on-the-ground reports.

General LANGLEY. Presidential Executive Order 13732, which provides the pre- and post-strike measures to address civilian casualty, is only for U.S. operations involving the use of force and the 2018 NDAA requires an annual report on civilian casualties in connection with U.S. military operations. Neither document requires the U.S. military to conduct, or report on, civilian casualty investigations for non-U.S. military operations including those that may have involved U.S.-"origin arms." USAFRICOM does not formally investigate civilian casualty allegations that do not involve U.S. military personnel conducting operations. For allegations that involve USAFRICOM military operations, this Command determines "credibility" using all reasonably available information to make a determination that the potential exists that a civilian casualty could have occurred. Available information can consist of, but not limited to, video surveillance from Intelligence, Surveillance, and Reconnaissance (ISR) assets, other forms of intelligence collection, munition employment and function data, and post-strike assessments.

46. Senator WARREN. General Kurilla, a January Oxfam report found that "that air raids by the Saudi-led coalition, using weapons solely supplied by the UK and U.S., accounted for a quarter of all attacks" on civilians from January 2021 through February 2022. These air strikes resulted in attacks on hospitals, clinics, and ambulances, and forced people to flee their homes. Has CENTCOM looked into this reporting and what steps has it taken to evaluate the civilian deaths and injuries resulting from Saudi-led coalition attacks in Yemen?

General KURILLA. While CENTCOM has no jurisdiction or legal authorization to conduct a proper investigation into strikes by sovereign states such as the Kingdom of Saudi Arabia, we share our concern to the Saudis over any report of civilian casualties. CENTCOM remains engaged with the Saudis on the importance of avoiding civilian harm and the need to constantly improve methodology and procedures for doing so. We are working closely with the Saudis to enhance their civilian harm mitigation and law of armed conflict training. We also share best practices with the coalition on investigations into allegations of civilian casualties.

47. Senator WARREN. General Kurilla, what steps has CENTCOM taken to address findings from the June 2022 Government Accountability Office report on "Yemen, State, and DOD Need Better Information on Civilian Impacts of U.S. Military Support to Saudi Arabia and the United Arab Emirates", that it is likely that United States-origin arms were used by coalition partners to conduct war crimes in Yemen?

General KURILLA. We have reviewed and continue to aggressively address the findings from this report. We are evaluating mechanisms to report on civilian harm caused by United States defense articles used in Yemen by Saudi or UAE forces. We also seek to develop effective training programs regarding civilian harm mitigation for our Saudi and UAE partners. We also assess the effectiveness of that training.

QUESTIONS SUBMITTED BY SENATOR JEANNE SHAHEEN

WOMEN, PEACE AND SECURITY

48. Senator SHAHEEN. General Kurilla and General Langley, can you provide an update on how CENTCOM and AFRICOM are implementing the 2017 Women, Peace and Security (WPS) agenda?

General KURILLA. Our WPS program is among our most successful in advancing our regional partnerships to reach a sustainable security and stability. Through the

program, we advocate for women's meaningful participation in their nation's security efforts.

We advise our partners on ensuring women serve as critical actors in their national security. We seek to model this kind of behavior and then export it to our partners. Our WPS program managers have established a baseline assessment for each of our 19 partner countries which will allow us to evaluate progress in the years to come.

We've incorporated the principles of the WPS program into both our Theater Strategy and our Campaign Plan. We've highlighted WPS initiatives within each of our Country Security Cooperation Plans. As the program evolves, we observe growing interest from partners throughout the region.

General LANGLEY. At AFRICOM, we are implementing the 2017 WPS agenda through a 3-Phase approach for the fiscal years 2023 to 2026 timeframe, which we are currently in Phase 2 and portions of Phase 3 of our process.

Phase 1 (Planning and Informing)—entails training AFRICOM staff to serve as Gender Focal Points in relevant issue areas, and establishing and updating WPS doctrine, products, and developing 5-year WPS plans focused on Angola (but on hold given bandwidth), Botswana, Zambia, and Niger (but on hold due to coup).

Phase 2 (Implementing and Executing)—entails ongoing training, integrating WPS equities into AFRICOM Campaign Plan and Order, establishing online resources for AFRICOM staff, and implementing the 5-year WPS plans.

Phase 3 (Operations, Activities, and Investments Integration)—entails integrating Command actions across the range of AFRICOM HQ, Component, and Embassy Offices of Security Cooperation activities. This phase also includes assessments.

49. Senator SHAHEEN. General Kurilla and General Langley, what additional support or resources do you need to better integrate WPS within your structures but also in your efforts with partner forces?

General KURILLA. Across much of the CENTCOM region, the accepted male-dominant social construct combined with regional cultural norms often serve as a challenge to a broader, more rapid WPS application. This obstacle may be reduced through a whole-of-government approach across all instruments of American power applying pressure on partner governments to advance and promote women's security efforts.

We are working additional government funding for our WPS program. For fiscal years 2022 and 2023, CENTCOM maintained a $307,000 shortfall against our requested $492,000 for the WPS program.

General LANGLEY. At AFRICOM, a full-time Gender Advisor onsite and within each of our focus countries is needed to significantly implement our WPS agenda. This would enable us to better respond to a range of Partner requirements, including the development of doctrine, inclusion of gender consideration in DOD security cooperation programs, and solutions to address barriers to women's participation in security.

50. Senator SHAHEEN. General Kurilla and General Langley, how are CENTCOM and AFRICOM looking ahead to ensure the WPS agenda is resilient and will see long-term success?

General KURILLA. The key to long-term success of the program is persistent engagement with willing partners. To that end, we've developed long-duration education and training programs built on the WPS guidelines.

Success of the program will ultimately rely on small progress sustained over time. Rather than moving mountains, we're pushing rocks, with an understanding that small advances will manifest in broader social change into the future.

General LANGLEY. At AFRICOM, we published a first-of-its-kind TASKORD at AFRICOM that required every AFRICOM Directorate and component command to integrate gender considerations into the Command's Operations, Activities, and Investments. The TASKORD also tasked four of our components to develop 5-year WPS plans in coordination with their assigned WPS focus country (i.e. ANGOLA/NAVAF, BOTSWANA/SETAF-AF, NIGER/AFAF, ZAMBIA/CJTF-HOA). This was to ensure a long-term relationship was built specific to WPS support and multi-year WPS programming developed for a designated country.

51. Senator SHAHEEN. General Kurilla and General Langley, how can CENTCOM and AFRICOM integrate Women, Peace, and Security into bilateral and multilateral partnerships in the respective Areas of Operation your command covers?

General KURILLA. We integrate WPS into bilateral and multilateral partnerships by modeling the program's principles within our own forces. We also highlight the strategic value of inclusivity in our own formations, demonstrating the prominence

of American women military leaders. Further, we plan targeted engagements wherein we encourage partners to bring women into their planning and command and control operations. Through anecdotes and engagements, we seek to ensure that our partners appreciate the role women can play in regional security and stability.

General LANGLEY. At AFRICOM, in addition to our WPS TASKORD, our full time Gender Advisor at AFRICOM leads our Gender Network to ensure integration of WPS across Operations, Activities, and Investments with our bilateral and multilateral partnerships. Outside of AFRICOM HQ, our Gender Network includes a full time Gender Advisor at Naval Forces Africa to cover the maritime domain, a full time Gender Advisor at Special Operations Command Africa to integrate into special ops objectives, a full time Gender Advisor at Air Forces Africa to cover the air domain, and a full time Gender Advisor at our only base in Africa, Combined Joint Task Force—Horn of Africa (vacant, actively being advertised), to deploy across the continent and integrate gender considerations into CJTF-HOA requirements.

INFORMATION OPERATIONS

52. Senator SHAHEEN. General Kurilla and General Langley how are CENTCOM and AFRICOM addressing the Wagner Group's information operations and what additional support is required to allow CENTCOM and AFRICOM to more thoroughly counter Wagner information operations?

General KURILLA. We seek to counter the Wagner Group's information operations through our Military Information Support Operations program, which counters the group's messaging and highlights the group's malign behaviors.

General LANGLEY. At AFRICOM, our WPS programing aims to fully integrate women as active agents in their respective country's defense and security spheres. We have assessed that women in our focus countries have different access and influence roles than men that positions them as necessary to help counter malign actors that aim to undermine democracy. AFRICOM recognizes that malign actors integrate gender considerations to achieve an objective, which is why we see the recruitment of women by Al-Shabaab. We can counter malign actors by fully integrating both men and women in defense and security to ensure the military reflects its population, has stronger security initiatives, better identifies early warning signals of terrorism and conflict, and can better counter the negative effects of climate change that results in instability. Last, we are aiming to replicate past Military Information Support Operations (MISO) efforts by executing micro-campaigns with thematic content such as women working to defeat Al-Shabaab in Somalia.

QUESTIONS SUBMITTED BY SENATOR MARK KELLY

ARMED OVERWATCH

53. Senator KELLY. General Kurilla and General Langley, both of your theaters have been plagued with conflict from extremists and terrorist organizations for decades. You both have demonstrated leadership providing armed ISR missions through use of remotely piloted aircraft, modified C–12s, multi-role fighters, and any other platform the DOD has to get the job done. You have collaborated with SOCOM to provide an outstanding and lethal capability-defending our Homeland from terrorists and helping reduce the atrocities committed by extremists worldwide. SOCOM awarded a contract to L3 Harris last year for the development of a new light attack aircraft to conduct Armed Overwatch and Close Air Support. Even as we pivot our 4th and 5th generation aircraft for readiness against peer adversaries, it's critical we don't lose site of the very real threat we face every single day from extremists in Africa and the Middle East. Please describe the importance of Armed Overwatch capabilities in your theaters.

General KURILLA. CENTCOM leverages Armed Overwatch capabilities for a range of critical missions. These assets support force protection, allow battlespace awareness for partner and U.S. forces, and provide indications and warning against strategic threats.

We also employ Armed Overwatch assets in tracking the movement of Violent Extremist Organizations. Finally, we employ these assets for the interdiction of material and financial resources for Iran-backed groups.

General LANGLEY. Our ability to provide armed overwatch in support of our personnel and our partners at remote locations in our AOR is critical. When our teams go beyond the confines of our bases and when we support our African partners at the forefront in the fight against violent extremism, we rely on armed overwatch to keep them safe. A mix of short and long endurance armed aircraft capable of per-

forming ISR, find/fix/finish, direct action, response, and strike missions is the optimal solution for the African continent.

54. Senator KELLY. General Kurilla and General Langley, what assets do you have in theater now that support Armed Overwatch mission requirements, and is that enough?

General KURILLA. Our rotary and fixed wing, manned and unmanned Airborne Intelligence, Surveillance, and Reconnaissance assets throughout the region are heavily tasked with a range of mission sets, including Armed Overwatch. While we have sufficient assets in theater now that support our Armed Overwatch mission requirements, these assets are stretched thin.

Additional dedicated armed overwatch aircraft would allow us to focus our MQ–9s on target development, which could increase our ability to target and defeat ISIS leaders in Iraq and Syria. CENTCOM is allocated a set number of MQ–9 sorties per day in Iraq and Syria for fiscal year 2023. These sorties provide armed overwatch for Coalition and Iraqi forces when conducting counter-ISIS operations. For fiscal year 2024, CENTCOM will receive a 10 percent reduction in MQ–9 sorties per day in support of operations in Iraq and Syria.

General LANGLEY. USAFRICOM utilizes both long range-long endurance and shorter-range armed overwatch platforms. Long flight-times enroute to our objectives limit our access and loiter times to provide force protection in most of our locations on the continent. USAFRICOM is not sourced with enough of these platforms and supplements with contractor owned, contractor operated MQ–9s and B–350's. This frees up government owned, government operated platforms, such as the MQ–1 or MQ–9 to provide armed overwatch for our troops. The current limited resourcing of armed overwatch capable platforms constrains USAFRICOM's ability to conduct operations, which includes advise and assist missions with partner forces in multiple locations simultaneously.

55. Senator KELLY. General Kurilla and General Langley, as we continue to pivot to the Pacific, do you think you'll have the resources needed to sustain your Armed Overwatch and ISR requirements with theater assets?

General KURILLA. We currently have the Armed Overwatch and ISR requirements to meet our National Defense Strategy objectives in Iraq, Syria and areas outside of Afghanistan. We are working to increase our ISR in Afghanistan through the introduction of long duration alternative airborne ISR. However, any loss of resources to another theater of operations will introduce strategic risk, risk to force and risk to mission within the region. Given the presence of the persistent threats of Iran and Violent Extremist Organizations within our region, our theater holds the greatest risk of derailment of the National Defense Strategy. Specifically, a flashpoint incident with Iran or an attack by Violent Extremist Organizations on American interests in the West or the Homeland may require unplanned, unscheduled resources from higher priority theaters outlined in the National Defense Strategy.

General LANGLEY. Currently, I cannot cover all my validated ISR requirements. Air Force and SOCOM ISR divestments will exacerbate this issue. Alternative options, such as shorter endurance aircraft such as those under development by L3 Harris will have limited impact in Africa, they will be limited to a handful of bases from which they cannot cover all our teams on the ground, nor will they be able to provide in extremis support to all our high-risk posts.

56. Senator KELLY. General Kurilla and General Langley, how would a dedicated SOCOM Armed Overwatch capability impact your theater?

General KURILLA. A dedicated SOCOM Armed Overwatch capability may benefit the CENTCOM region if it is additive to our requirements vice used to substitute for current platforms that include manned and unmanned Airborne Intelligence Surveillance and Reconnaissance, rotary and fixed-wing attack aircraft, and gunships.

General LANGLEY. A dedicated armed overwatch platform in a country such as Somalia would be of benefit, as much of the support would be reachable from several airfields and forward staging bases. In West Africa, by contrast, it would require more aircraft at more bases closer to the areas of violent extremist activity where our forces are more at risk. This would come at the cost of adding more bases closer to those areas, such as the Chad-Niger-Nigeria tri-border area and/or south of current staging locations in the nation(s) of Ghana, Togo, or Benin, for example.

VIOLENT EXTREME ORGANIZATIONS IN AFRICA

57. Senator KELLY. General Langley, in addition to my concerns about the malign influence of China and Russia in Africa, I'm also concerned about the situation with terrorist groups and violent extremists across Africa. Last year, your predecessor testified that "7 of the 10 countries with the largest increase in terrorism were in Sub Saharan Africa—with Burkina Faso suffering a 590 percent increase." ISIS and al Qaeda-aligned groups remain a potent and growing threat across much of Africa. In the Sahel region, Jama'at Nasr al-Islam wal Muslimin is continuing to spread and destabilize the region. Moreover, al Shabab and the situation in Somalia poses a direct threat to the Homeland—they have capability, and they have intent. This is extremely concerning, and I have several questions on how Congress can best support DOD to reduce threats and stabilize the region. What ISR capabilities do we have in the region to get after these challenges, and is it enough?

General LANGLEY. USAFRICOM and its components have a layered mix of national and tactical ISR capabilities to counter threats and stabilize the region. They are the full spectrum of intelligence collection to include: GEOINT, SIGINT, HUMINT and OSINT.

No, USAFRICOM does not have enough ISR capabilities and can only achieve ~26 percent of our requirements using a combination of Global Force Management (GFM) and contract ISR. This causes the command to make daily decisions about which operations to support, provide overwatch for VEOs to target, Russian and Chinese activities to monitor, and where else we will have to take risk. It also limits our ability to provide timely indications and warnings support to diplomatic facilities.

58. Senator KELLY. General Langley, what type of ISR would best help you capture VEO activity in Africa?

General LANGLEY. USAFRICOM's greatest ISR needs are for additional Signals Intelligence (SIGINT) and Full Motion Video (FMV) collection. However, equally important is the need for additional linguists and analysts to conduct the processing, exploitation, and dissemination (PED) of material collected.

QUESTIONS SUBMITTED BY SENATOR ROGER WICKER

NAVAL SMALL CRAFT INSTRUCTION AND TECHNICAL TRAINING SCHOOL

59. Senator WICKER. General Langley, as you know, the Naval Small Craft Instruction and Technical Training School (NAVSCIATTS) provides training to foreign partners on small boat operations and maintenance, unmanned aerial systems, and other related skills. What is your assessment of the value that NAVSCIATTS provides to United States Africa Command in support of its theater security cooperation requirements and objectives?

General LANGLEY. African partner nations have difficulty maintaining the readiness of their assets and frequently request assistance with ship and small boat maintenance. NAVSCIATTS provides valuable training to our foreign partners in this critical area. In addition to NAVSCIATTS, the United States Coast Guard Deputy Commandant for International Affairs, utilizing Mobile Training Teams, hosts resident and exportable training classes for African Partner Nations. The wide range of training made available by the USCG Mobile Training Teams is vital to continued logistical and operational expertise within our partner nation's maritime forces. The ability to combine maritime law enforcement training, such as Illegal, Unregulated, and Unreported Fishing, small boat operations, and the International Maritime Officer Course in support of theater security cooperation ensure those requirements are met and exceeded. The USCG international training components are small but mighty in meeting USAFRICOM objectives.

AUTHORIZATIONS FOR THE USE OF MILITARY FORCE

60. Senator WICKER. General Kurilla and General Langley, as Congress examines the future of the 2001 and 2002 Authorizations for the Use of Military Force (AUMF), it would be useful to understand how each of your combatant commands have utilized these authorities. Please provide a list of operations and activities that have been conducted under each of these AUMFs, respectively, since 2013.

General KURILLA. Since 2013, CENTCOM has relied on the 2001 AUMF as the domestic legal basis for its operations in Afghanistan, Iraq, Syria and Yemen, and for other counterterrorism operations conducted throughout the region. Meanwhile, the 2002 AUMF has been employed only as an "additional authority" for operations

in Iraq and Syria in certain circumstances. For example, the 2002 AUMF was employed in the targeting of terrorist threats emanating from Iraq.

General LANGLEY.

ODYSSEY RESOLVE

USAFRICOM does not use the 2002 AUMF. Since 2013, USAFRICOM has conducted counter terrorism operations in Africa under OPERATION EMINENT SHADOW, OPERATION JUNIPER MICRON, OPERATION JUNIPER SHIELD, OPERATION OCTAVE QUARTZ, and OPERATION OCTAVE SHIELD. These operations derive their authority, at least in part, from the 2001 AUMF. The activities conducted under these operations include the authority to use force against organizations determined by the President to have planned, authorized, committed, or aided the terrorist attacks that occurred on September 11, 2001 in order to prevent future attacks against the United States by these organizations. Other activities under these operations include working by, with, and through partners and allies and collecting and sharing intelligence with partners and allies.

61. Senator WICKER. General Kurilla and General Langley, please provide a list of the current and ongoing operations and activities for which each of these authorization for the use of military force (AUMFs), respectively, has been invoked as part of the legal justification.

General KURILLA. CENTCOM relies on the 2001 AUMF as the domestic legal basis for its operations in Iraq and Syria, and for other counterterrorism operations conducted throughout the region. We have no ongoing military activities that rely solely or primarily on the 2002 AUMF.

General LANGLEY.

OPERATION OCTAVE QUARTZ
OPERATION JUNIPER MICRON
OPERATION JUNIPER SHIELD
OPERATION NEW NORMAL
OPERATION OCTAVE VIPER

USAFRICOM currently conducts counter terrorism operations in Africa under OPERATION JUNIPER MICRON, OPERATION JUNIPER SHIELD, OPERATION OCTAVE QUARTZ, and OPERATION OCTAVE SHIELD under the 2001 AUMF. The activities conducted under these operations include the authority to use force against organizations determined by the President to have planned, authorized, committed, or aided the terrorist attacks that occurred on 11 September 2001 in order to prevent future attacks against the United States by these organizations. Other activities under these operations include working by, with, and through partners and allies and collecting and sharing intelligence with partners and allies.

62. Senator WICKER. General Kurilla and General Langley, if the 2001 authorization for the use of military force (AUMF) were repealed, what types of current operations or activities would no longer have a legal basis to continue, and would therefore need to be reevaluated or stopped?

General KURILLA. The 2001 AUMF remains the cornerstone domestic legal basis for ongoing CENTCOM operations against Violent Extremist Organizations such as al Qaeda and ISIS. Repealing it without a replacement would significantly limit our ability to counter Violent Extremist Groups operating within our region.

General LANGLEY. If Congress repeals the 2001 AUMF, we would have to reevaluate or stop the following activities: 1) United States direct action in support of allies

and partners who have come under attack by al Qaeda, ISIS, or associated forces; 2) United States intelligence-sharing with allies and partners that may lead to direct action by allies and partners against al Qaeda, ISIS, or associated forces; and, 3) United States unilateral direct-action operations against al Qaeda, ISIS, or associated forces, consistent with Presidential policies. All three types of operations derive their authority from the 2001 AUMF, which permits the President to use all necessary and appropriate force against organizations that planned, authorized, committed, or aided the terrorist attacks that occurred on September 11, 2001 in order to prevent future attacks against the United States by organizations.

QUESTIONS SUBMITTED BY SENATOR TOM COTTON

CHINESE INFLUENCE IN AFRICOM AND CENTCOM

63. Senator COTTON. General Kurilla and General Langley, how are each of your commands working to counter China's influence with our allies in your respective Area of Responsibilities (AOR)? Please describe specific programs or actions.

General KURILLA. Strategic competition with China is deeply manifest in the region. The People's Republic of China aggressively expands its informational, military, and economic instruments of national power across the region. With the recent announcement to normalize relations between Saudi Arabia and Iran, Beijing is expanding its diplomatic influence in the region. China, dependent on the region for more than half of its imported crude oil and more than a third of all its natural gas, is also moving beyond energy-based investments to encompass physical and telecommunications infrastructure that advances its Belt and Road Initiative. 19 of 21 CENTCOM countries have signed a Belt and Road agreement with China. So, we are in a race to integrate with our partners before China can penetrate the region.

To compete with China, we invest deeply and aggressively with partners throughout the region. These abiding partnerships are our strategic advantage over China in the region. These include developing Regional constructs that exclude China and promote regional stability.

Additionally, our innovation efforts—including our innovation Task Forces 39, 59, and 99—are helping to connect our partners to cutting-edge technologies and new processes to meet the regional threats we face.

Additionally, as China expands its activities in the region, CENTCOM illuminates those actions that undermine sovereignty and the rules-based order. Through our public messaging, we continue to counter false narratives offered by our competitors.

General LANGLEY. United States Africa Command (USAFRICOM) continues to position the U.S. as a willing and trusted partner, offering alternatives to PRC cooperation. We are reworking our approach to security cooperation, countering transnational threats, and cooperation with the interagency in the context of competition. We offer the most sought-after security cooperation programs and activities, from training and education in the U.S. through the International Military Education and Training Program; complex joint and multilateral exercises; partner-centric grant assistance; foreign military sales, and financing for quality military training and equipment with an eye toward the sustainability of these investments. In fact, the demand for these programs always outstrips supply. Our efforts are not only focused on defense, but on development and diplomacy. On the development front, USAID continues to have a robust presence in Africa. Their efforts are extensive and long lasting, with a focus on economic viability integral to promoting prosperity and progress. On the diplomatic front, we closely coordinate with our Embassy country teams to ensure advancing of our values and democratic governance. We now have Security Cooperation Offices in almost all our embassies across Africa. We welcome and are increasing defense cooperation with our closest allies and partners in Africa and the Indian Ocean Region. Most of USAFRICOM's Western and Indo-Pacific allies do not see the PRC exclusively as a strategic competitor. Most Western allies see China as an economic competitor, but also a partner at times, and, because the West has been inconsistent in providing economic alternatives to the PRC, many of our African partners ask us not to try to force them away from their Chinese economic projects and agreements. However, our allies and partners often express consistent concerns regarding Chinese illegal, unreported, and unregulated fishing, in conjunction with the detrimental impacts to African food security and stability. We assist partners in responding to this challenge through initiatives to build partner capacity in areas such as Maritime Domain Awareness and Maritime Security. Through these and other efforts, we demonstrate U.S. commitment through a responsive, requirements-driven approach. Additionally, the announce-

ment of PRC building a spaceport in Djibouti may become a concern of allies that have bases there.

U.S. SECURITY PARTNERSHIPS IN AFRICOM AND CENTCOM

64. Senator COTTON. General Kurilla and General Langley, please provide a detailed assessment of how the nations in your AOR view the United States as a security partner, focusing on the aftermath of the Chinese brokered rapprochement between Saudi Arabia and Iran and the disastrous withdrawal from Afghanistan. Do the nations in your AOR see the U.S. as a reliable partner? Why or why not?

General KURILLA. Unlike China, the United States has been in the region for over 75 years. We have invested in the security and stability of the region, and developed deep, abiding partnerships. The United States remains the partner of choice; however, that position is not guaranteed and it is something we must continue to work on with our partners. The United States is viewed as a reliable partner but some regional partners are beginning to hedge with a multi-vector policy based on their perceived uncertainty of our long-term commitment.

The National Defense Strategy states that China is the pacing challenge, Russia is the acute threat and Iran and violent extremist organizations are persistent threats. Some partners view the increase in posture to counter China and Russia as coming at the expense of the Middle East and Levant; therefore, they are uncertain as to the future of the United States long term commitment.

General LANGLEY. The United States remains the security partner of choice in most of Africa. United States military training, professional military education, and exercises are still considered the gold standard. United States equipment, on the other hand, is expensive and often takes a long time to procure. Because of cost and procurement delays, some African partners choose to source equipment elsewhere.

Generally, African nations make defense decisions based on pragmatic assessments of their defense needs, the economic value of a transaction, and the overall political relationship with a partner. African nations tend to avoid predicating decisions on the ideology of a partner or the current status of a partner's global military operations—they don't want to get caught up in great power competition. This has been clearly communicated to United States Defense officials and is demonstrated by African nations' widespread reluctance to formally criticize the Russian invasion of Ukraine.

USAFRICOM maintains enduring and substantive defense relationships with many African states, and USAFRICOM always seeks to expand our engagement on the continent. Defense relationships are only one component of broader U.S. Government policies. This carries implications for where and how we engage in Africa. Many countries in Africa lament the United States' perceived lack of interest in engaging with them on areas of mutual interest and bristle at how long U.S. assistance takes to execute and at the restrictions placed on it. In many countries, the security and economic situation is quickly deteriorating in a way that makes navigating the lengthy and bureaucratic nature of U.S. security cooperation untenable, forcing them to seek assistance from alternative actors like the PRC and Russia and, more recently, countries like Turkey and Israel.

65. Senator COTTON. General Kurilla and General Langley, how are your commands working to reassure allies that the United States remains the preferred partner of choice?

General KURILLA. We reassure our allies through our presence and engagement, and a vision of increased capabilities based on innovation and integration. Our basing, extensive training exercises, operations, and leadership visits all reveal our enduring commitment to the region. Our Foreign Military Sales, information sharing, and innovation efforts speak to our deep commitment to the region.

General LANGLEY. We execute Operations, Investments and Activities to support the AFRICOM campaign plan. We work with our African Partners on countering mutual threats and malign actors through building partner capacity with security cooperation. USAFRICOM, through its campaign plans and component commands, places a premium on engaging with and providing assistance to our partner nations across the full spectrum of our capabilities, to remain the partner of choice. Against some threats like al-Shabaab or ISIS—West Africa our assurance and reassurance may look more like conventional military operations, while in most of the rest of continent we work to remain the partner of choice through security cooperation, engagements, and consistent forward presence. Great examples of our ability to demonstrate forward presence include the use of the USS Hershel "Woody" Williams and our Security Force Assistance Brigade mentor teams. Our security cooperation runs the gamut from large scale multilateral exercises on land such as AFRICAN

LION, or at sea through the EXPRESS exercise series to increase our partners' capabilities to respond to threats and build interoperability. USAFRICOM has a robust engagement schedule, including conferences and key leader engagements, both of which seek to synchronize activities and foster regional dialog on issues of importance.

QUESTIONS SUBMITTED BY SENATOR JONI ERNST

REGIONAL AIR AND MISSILE DEFENSE COOPERATION

66. Senator ERNST. General Kurilla, what is the implementation status of the air and missile defense architecture for our allies and partners in the Middle East, as required within 180 days of enactment of the James M. Inhofe National Defense Authorization Act for fiscal year 2023?

General KURILLA. Our allies and partners provide opportunities for cooperative air and missile defense regionally during both steady State and crisis situations by leveraging multi-lateral capabilities, the Regional Security Construct (RSC), and Middle East Air Defense (MEAD) initiatives. These programs allow us to take advantage of partner contributions, increase opportunities for international collaboration, distribute financial burdens, deepen interoperability among systems and operators, and better defend U.S. deployed forces.

The current priority we are working is a Common Shared Air Picture that every partner nation can observe. We also work together in sharing information on missile and Unmanned Aerial System (UAS) threats, both before and after launch. Prelaunch information sharing is crucial to understanding adversary missile and UAS capabilities and intentions, ensuring all partners have the most accurate and up-to-date information, and developing response plans to potential attack.

67. Senator ERNST. General Kurilla, will the report be delivered on time? If not, please explain when the report is anticipated to be delivered and the reason for delay.

General KURILLA. I will defer to the Office of the Secretary of Defense and the State Department on the timing of this report.

68. Senator ERNST. General Kurilla, what is the current State of integrated air and missile defense infrastructure in the region? Please describe the key barriers to further implementation.

General KURILLA. Integrated air and missile defense serves as a top functional priority for CENTCOM. Across the region, we've developed a series of programs and exercises to advance this priority. We are making the most progress with C-UAS.

Specific to the UAS threat—we have just established Red Sands, an experimentation center in Saudi Arabia for new tactics, techniques, procedures, processes, and technology to counter Unmanned Aerial Systems. Red Sands is our partnership with the Royal Saudi Armed Forces to test and experiment and ultimately improve tactics, techniques, and procedures to defeat Unmanned Aerial Systems. Our firm, longstanding military-to-military relationship with the Royal Saudi Armed Forces allowed us to quickly develop and implement the program, which serves as a benefit to both military forces.

We conducted our first Red Sands live fire exercise event in mid-March in the Kingdom of Saudi Arabia. During the live fire, we executed a complex multiple Unmanned Aerial System threat against a layered defense that included both United States and Saudi systems.

We will evolve the program in the coming months, with additional capabilities, systems, and technology. During the next iteration of Red Sands in September, we will defend against more complex drone attacks. While Red Sands is currently a bilateral event, both CENTCOM and the Saudis intend to expand the program to other regional partners in the future.

We have also established Green Sands, a 5-day program to certify every Base Defense Operations Center entering the CENTCOM region against complex theater specific threat-based Unmanned Aerial Systems—prior to deployment into theater. Green Sands will ensure all sections are more capable of defeating complex, multi-drone attacks using multiple systems and platforms.

In addition, Task Forces 39 and 99 constantly test and field new counter-Unmanned Aerial System capabilities, working closely with our partners to implement best practices. The aim is to develop an integrated air and missile defense system to defeat adversary drones, inclusive of electronic warfare, directed energy, traditional systems, AI-based systems, and increased sensors and data collection. For

CENTCOM, this is about taking ideas, concepts, and systems from industry, from our partners, in practice in Ukraine, and applying them to the threat we face in the region. We seek an integrated air and missile defense architecture that is ubiquitous within the region, integrated with our partners, and capable of defending our forces and assets.

Key barriers to implementation to integrated air and missile defense are each country's reticence to share relevant data with all regional partners. Almost all are willing to share with the United States and bilaterally and with many other countries. Many countries are unwilling to share multilaterally but that is slowly changing.

Another barrier to implementation is Foreign Military Sales (FMS). If a partner buys Chinese or Russian equipment we will not allow it to operate on our networks. China and Russia are often viewed by regional partners as more accommodating than the United States, offering lower costs, favorable financing, faster delivery times, and no end-use monitoring agreements. During my trips to the region and calls with regional Chief of Defense, I routinely hear how much faster and easier China's foreign military sales program is than ours. While the American foreign military sales process involves multiple steps going through multiple layers of government bureaucracy, the People's Republic of China can move much faster, often making us non-competitive by comparison.

Our partners have real security needs and they want to invest in American systems. They know that when they "buy American," they buy the best equipment, training, sustainment, and upgrades. They also know that they buy into our bureaucracy.

Streamlining our multi-layered Foreign Military Sales program, allowing us to move at the speed of relevance, would drive down Russia and China's opportunities for influence in the region.

69. Senator ERNST. General Kurilla, what is the status and estimated delivery date of the 10 most important approved Foreign Military Sales supporting integrated air and missile defense for allies and partners to the region?

General KURILLA. Our top ten Foreign Military Sales cases relate to the most significant challenges facing our partners as we reduce our footprint in the region—Integrated Air and Missile Defense and Countering Unmanned Aerial Systems. Many of our Middle Eastern Gulf partners live under constant threat of attack from Iran and its proxies. It is a positive indicator that our partners are seeking to counter existential threats with U.S. systems rather than from our competitors. That said, seven of these ten cases are off track. It is imperative that we continue to work to improve our FMS process and make it more responsive. Otherwise, we risk driving our partners to Russia and China.

Saudi F–15SA

- *Status:* This case is on track. Case is for 84 F–15SA (Saudi Advanced) aircraft and conversion of 70 F–15Ss to the SA, a unique, fly by-wire variant of the aircraft. Total case value is $29.4B.
- *Estimated Delivery Date:* All new production and 20 (of 70) conversion aircraft have been delivered; deliveries of conversion aircraft continue. Final delivery is expected in October 2027.

Saudi Terminal High-Altitude Area Defense (THAAD).

- *Status:* This case is on track. The case is for seven THAAD batteries and 360 Interceptor missiles. Total case value is $13.3 billion. While on track, training associated with this case is at risk due to size of program.
- *Estimated Delivery Date:* For interceptors, delivery is planned from the second quarter for fiscal year 2024 through fiscal year 2028. Initial Operating Capability (IOC) is planned over the period of the second quarter of fiscal year 2025 through fiscal year 2027.

Bahrain Patriots.

- *Status:* This case is not on track due to U.S. Army prioritization and production rate limitations. U.S. Army fill level for Patriot Advanced Capability—3 Missile Segment Enhanced missiles has caused worldwide delivery slippage. Bahrain PAC–3 MSEs delivery delayed 6-months. This case is for two Patriot Fire Control Units (FCUs), 60 PATRIOT PAC–3 MSE missiles, 36 Guidance Enhanced Missile—Tactical (GEM-T) missiles. Total case value is $1.15 billion. Bahrain is one of three countries experiencing Patriot delays.
- *Estimated Delivery Date:* Estimated deliveries of two FCUs is on track for July 2023 and November 2023. Delivery for 36 GEM-Ts is scheduled for 31 May

2023. Delivery of PAC–3 MSEs will begin in the fourth quarter of fiscal year 2024.

UAE Patriot Interceptors

- *Status:* This case is not on track due to U.S. Army prioritization and production rate limitations. U.S. Army fill level for Patriot Advanced Capability—3 Missile Segment Enhanced (PAC–3 MSE) missiles has caused worldwide delivery slippage. UAE PAC–3 MSEs delayed 2 years from original projection. Case is for 452 PATRIOT PAC–3 MSE missiles and related support equipment and services. Total case value is $2.5 billion. UAE is one of three countries that is experiencing delays to PAC–3 MSE deliveries.
- *Estimated Delivery Date:* Delivery projected over the period of fourth quarter of fiscal year 2023 through fiscal year 2025.

Qatar Patriot Interceptors

- *Status:* This case is not on track due to U.S. Army prioritization and production rate limitations. U.S. Army fill level for Patriot Advanced Capability—3 Missile Segment Enhanced (PAC–3 MSE) missiles has caused worldwide delivery slippage. Qatar will experience a two-and-a-half-year delivery delay to remaining PAC–3 MSEs. Case is for 10 Patriot Fire Control Units (FCUs) and 146 PAC–3 Missile Segment Enhancement (MSE). Total case value is $7.3 billion. Qatar is one of three countries experiencing delays to PAC–3 MSE deliveries.
- *Estimated Delivery Date:* To date, the 10 firing units and 114 PAC–3 missiles have been delivered to Qatar. Upcoming deliveries are expected from the second quarter of fiscal year 2024 through fiscal year 2026.

Qatar National Advanced Surface to Air Missile System (NASAMs).

- *Status:* This case is not on track due to an industry delay. Cases support Direct Commercial Sales (DCS) of 20 NASAMS including 80 AIM–120C and 100 AIM–120ER Advanced Medium Range Air-to-Air Missiles (AMRAAM). Total case value is $404 million.
- *Estimated Delivery Date:* To date, 40 of 80 AIM–120Cs have been delivered. We anticipate delivery of the remaining 40 AIM–120C's by the second quarter of fiscal year 2024. 50 of 100 AIM–120ERs are prepared to ship.

Qatar F–15QA

- *Status:* This case is not on track due to multiple radar development and ferry issues. Two cases are for 48 F–15QAs, associated equipment, and construction. Total case value is approximately $14 billion. These cases have experienced multiple delays due to radar development and ferry issues.
- *Estimated Delivery Date:* The next ferry of five aircraft is expected to arrive in Qatar July 2023; this will bring the total to 33 aircraft in Qatar, 3 aircraft will be delivered in the United States in Jul 2023 completing delivery of the 36 tranche of aircraft. The next 12 aircraft begin delivery early 2024.

Qatar Fixed Site—Low, Slow, Small Unmanned Aircraft Integrated Defeat System (FS-LIDS)

- *Status:* This case is on track. The case is for 10 FS-LIDS with Coyote Block 2 Interceptor missiles. Total case value is $544.3 million. On 24 Mar 2023, the Army offered the case to Qatar.
- *Estimated Delivery Date:* Initial delivery is expected 64-months after Qatar signs the case.

Bahrain F–16 Block 70

- *Status:* This case is not on track because of multiple industry delays. The current version of the Airborne Integrated Defense Electronic Warfare Suite (AIDEWS) is no longer in production, and the follow-on Advanced-AIDEWS is not available until July 2025. The case is for 16 F–16V aircraft and associated equipment. Total case value is $2.05 billion.
- *Estimated Delivery Date:* Bahrain's first F–16 Block 70 rolled out March 2023. We anticipate delivery of all aircraft through the third quarter of fiscal year 2024 with AAIDEWS available in July 2025.

Jordan F16 C/D Block 70

- *Status:* This case is not on track due to multiple issues. The case is for 12 F–16s Block 70 aircraft and associated support. Multiple delays in pricing and availability (P&A) data resulted in a near doubling of the price. The total case value is $1.97 billion which will be funded by a combination of Foreign Military Financing (FMF) and Jordanian national funds.

- *Estimated Delivery Date:* We anticipate delivery of the first aircraft in the fourth quarter of fiscal year 2026 with additional deliveries through fiscal year 2028.

70. Senator ERNST. General Kurilla, what is the risk of Chinese and Russian arm sales to United States partners to integrated air and missile defense infrastructure?

General KURILLA. Expanding regional arms sales—particularly in the area of integrated air and missile defense—provides China opportunities to expand its influence and interoperability. More importantly, we cannot integrate Russian or Chinese equipment into our Regional Air and Missile Defense construct. We will not allow Russian or Chinese equipment to operate on our networks.

71. Senator ERNST. General Kurilla, what recommendations do you have for mitigating this risk?

General KURILLA. China is often viewed by regional partners as more accommodating than the United States, offering lower costs, favorable financing, faster delivery times, and no end-use monitoring agreements. During my trips to the region and calls with regional Chiefs of Defense, I routinely hear how much faster and easier China's foreign military sales program is than ours. While the American foreign military sales process involves multiple steps going through multiple layers of government bureaucracy, the People's Republic of China can move much faster, often making us non-competitive by comparison.

Our partners have real security needs and they want to invest in American systems. They know that when they "buy American," they buy the best equipment, training, sustainment, and upgrades. They also know that they buy into our bureaucracy.

Streamlining our multi-layered Foreign Military Sales program, allowing us to move at the speed of relevance, would drive down Russia and China's opportunities for influence in the region.

MARITIME DOMAIN AWARENESS

72. Senator ERNST. General Kurilla, what are the barriers to advancing partner-enabled maritime awareness?

General KURILLA. Maritime domain awareness requires the ability to gather, communicate, and process information to provide a common operational picture and act on that information. Partner nations have a variety of sensors including coastal radars and crewed assets which could be augmented with unmanned technology solutions. We enable the sharing of information as a go-between among partners, facilitating the Maritime Threat Network.

There are not many barriers other than cost to advancing partner-enabled maritime awareness.

SAUDI ARABIA AND IRAN DIPLOMATIC RELATIONS

73. Senator ERNST. General Kurilla, in your personal opinion, what is the impact to United States security interests from the agreement negotiated by Iran and Saudi Arabia?

General KURILLA. The impact to U.S. security interests is not yet fully understood. While a reduction of tensions in the region may yield positive benefits, an agreement is not implementation. We do not believe Iran will adhere to the agreement over the long-term. In the 90 days while Iran and Saudi Arabia were negotiating the agreement, USCENTCOM and partner forces interdicted five major shipments of Iranian arms headed to Houthi fighters; some of which were advanced components like inertial navigation systems for short range ballistic missiles.

We are also concerned about China's role as diplomatic mediator. China seeks to undermine American influence in the region. In addition to the economic, informational, and military instruments of power it has employed in the region, China has now demonstrated its ability to influence the security environment with the diplomatic instrument of national power.

74. Senator ERNST. General Kurilla, in your personal opinion, what do you assess is the impact to our partners from the agreement negotiated by Iran and Saudi Arabia?

General KURILLA. If the agreement truly lowers tension in the region it will provide some benefit to our partners in the region; however, Iranian diplomatic efforts and the actions of the Islamic Revolutionary Guards Corps are historically not aligned. That being said, it remains to be seen as this is still in development.

There is little trust in the Middle East that Iran will fully honor agreements, including this one. The agreement may offer us an advantage by serving as a tool to hold Iran accountable for its malign activities. Further, the agreement may demonstrate China's inability to uphold the agreement in that it will not stop Iran's malign behavior.

75. Senator ERNST. General Kurilla, do you assess that Iran has agreed to cease weapon shipments to the Houthis? Please describe any rationale and supporting facts for an assessment.

General KURILLA. We do not believe Iran has completely ceased weapons shipments to the Houthis at this time. This is based on intelligence, pattern of behavior and partner nation feedback.

76. Senator ERNST. General Kurilla, do you assess that China will have increased access to Iran or Saudi Arabia as a result of this agreement? Please describe the level of Chinese penetration in Saudi Arabia and in Iran.

General KURILLA. Chinese influence and interest in Iran is based on its energy needs, while Iran needs economic investment from China. This agreement can assist in securing those needs as it lowers the tension between Saudi Arabia and Iran as well as stabilizing Chinese energy purchases from both counties.

China penetration in Saudi Arabia is based on Chinese economic interest, particularly energy. While Saudi Arabia has purchased some limited Chinese military equipment—Saudi Arabia continues to purchase Western and United States military equipment. FMS delays can cause further facilitate Chinese penetration in Saudi Arabia.

SECTION 702E

77. Senator ERNST. General Langley, could additional resourcing to the 127 Echo program buy-down risk in AFRICOM?

General LANGLEY. Yes, 127e programs allow U.S. special operations forces to mitigate the threat of attacks against the U.S. Homeland and interests abroad by providing a sustainable option to maintain pressure on violent extremist organizations (VEOs). These programs represent a relatively low-cost, low-risk, high-payoff opportunity to achieve counter-VEO objectives while enhancing partnerships, especially when synchronized with Department of State security assistance and Department of Defense security cooperation programs. In alignment with the recently published National Defense Strategy (NDS), 127e programs facilitate the shift from "U.S.-led, partner enabled" to "partner-led, U.S. enabled" counterterrorism operations. Leveraging 127e-resourced foreign forces in a C-VEO role also enhances USSOCOM's ability to balance limited assets in consideration of NDS priorities—gaining efficiencies where C-VEO and Combatant Command Integrated Deterrence Campaigning are complementary.

QUESTIONS SUBMITTED BY SENATOR DAN SULLIVAN

PRC REACTION TO IRANIAN ACTIONS IN THE VICINITY OF THE STRAIT OF HORMUZ

78. Senator SULLIVAN. General Kurilla, China imports approximately 47 percent of its oil supply from the Middle East. China-bound oil tankers must pass through the Strait of Hormuz, into the Indian Ocean, through the Straits of Malacca, and up through the South China Sea to reach Chinese ports. In 2018, the Iranian Government threatened to close the Strait of Hormuz in response to United States oil sanctions. In the 1980's, Iran and Iraq both attacked civilian oil tankers in the Persian Gulf, which led to the United States reflagging Kuwaiti tankers as U.S. ships and escorting them with U.S. Navy vessels. China is well aware both of this history and its reliance on the steady flow of oil through the Strait of Hormuz and into Chinese ports. Considering China's economic and military presence in the CENTCOM AOR and the fact that it now has the world's largest navy, what actions do you think China would take in your AOR if it thought its oil supply might be disrupted or cutoff because of a regional conflict?

General KURILLA. China viewed previous Iranian threats to close or restrict access to the Strait of Hormuz as unacceptably provocative. In the event of a regional contingency, Beijing would prioritize efforts to deescalate through diplomacy by asserting itself as an impartial mediator. Beijing would likely frame the conflict as the consequence of failed United States regional policies while promoting China's Global Security Initiative as an alternative basis for stability, dialog, and dispute resolution.

79. Senator SULLIVAN. General Kurilla, could such a Chinese reaction lead to something like the Tanker Wars of the 1980's?

General KURILLA. Given the possible resource cost and associated risk to its influence, the People's Republic of China is unlikely to engage in a protracted conflict at sea in the Middle East.

HOUTHIS

80. Senator SULLIVAN. General Kurilla, on January 19, 2021, the Houthis were designated as a Foreign Terrorist Organization (FTO), which the current administration revoked 1 month later. Subsequent actions by the Houthis have shown the folly of this decision. The administration has argued the Houthis' FTO designation was revoked to avoid exacerbating Yemen's humanitarian situation and to create conditions for peaceful dialog between that group and the Government of Yemen. Two years later, Yemen's famine persists, the cease-fire agreed to on April 2, 2022 has collapsed, arms continue to flow from Iran to the Houthis, some of which have been interdicted by the 5th Fleet and naval forces from the UK and France, and in February 2022 these terrorists attacked our base in the United Arab Emirates (UAE). Do you see the Houthis as a terrorist organization with the means and motivation to attack our servicemembers and allies in the region?

General KURILLA. The Houthis have engaged in terrorist activities in that past. While the Houthis have the means and capability to threaten U.S. troops and partner forces, currently, they likely do not intend to target U.S. troops in the region. They have shown in the past their capability and will to target partner forces in the region.

CHINESE ILLEGAL UNREGULATED AND UNREPORTED FISHING IN THE AFRICOM AOR

81. Senator SULLIVAN. General Langley, according to your testimony, at least a third of the world's ships engaged in illegal, unreported, and unregulated (IUU) fishing are Chinese. The Office of Naval Intelligence estimates the Chinese illegal fishing fleet is between 12,000 to 17,000 ships. Chinese IUU fishing, occurring throughout your AOR, is too big of a problem for any one country to monitor on its own. I recently returned from a Middle East CODEL [congressional delegation] where I met with the Commander of the 5th Fleet and learned about Task Force 59, which is employing unmanned surface vessels at scale to increase U.S. and partner domain awareness in CENTCOM's AOR. Along with building partner capacity through exercises with the United States Navy and Coast Guard presence, how might AFRICOM employ something like Task Force 59 to detect, monitor, and deter Chinese IUU fishing in your AOR?

General LANGLEY. Chinese illegal, underreported, and unregulated fishing (IUU-F) in my opinion is a significant issue with both the West and the East and an issue my Command, in particular United States Naval Forces Africa (NAVAF), is focusing on for capacity-building efforts to counter IUU-F. IUU-F was prevalent in discussions between United States and Africa partner maritime leadership at the recent Africa Maritime Forces Summit. My Navy component, NAVAF, is the lead to garner broad interagency and international support for a Tri-Service enabled multinational effort on counter IUU-F.

The first step in countering IUU-F is detecting it. Learning from Task Force 59, unmanned resources would allow persistent presence, at a relatively low cost, to defect illicit activity and sharing this information with local partners, thereby building maritime domain awareness. Unmanned resources can then be used to monitor illicit actors once found and allow African partners to take appropriate action. Finally, these actions by our African patterns can be communicated in a public manner resulting in a deterrent effect. NAVAF has several unmanned platforms that can assist our African partners with maritime surveillance, to include fisheries surveillance. Each littoral partner in Africa has different capabilities and capacities, but we realize that unmanned technologies are cost-effective and represent an opportunity for Maritime Domain Awareness capability for our African partners.

CHINESE BASING IN THE AFRICOM AOR

82. Senator SULLIVAN. General Langley, as you point out in your testimony, China seeks to expand its military presence on the African continent with a new base on Africa's Atlantic coast in Equatorial Guinea. It already has a military base in Djibouti, which it is expanding to include a spaceport. Can you describe how more Chinese naval and airbases in AFRICOM impact the global military competition be-

tween the United States and China? For example, what could China do with a military base on Africa's Atlantic Coast that it cannot do now?

General LANGLEY. Beijing has pursued additional military bases and logistics facilities in numerous African countries to support the People's Liberation Army's (PLA's) ability to project and sustain military power at greater distances. China's basing outreach in Africa has focused along the continent's vast coastline. A Chinese military base on the Atlantic coast of Africa would change the strategic geography of the AFRICOM area of responsibility and could pose threats to United States operations. We already have observed a similar pattern in Djibouti, where the PLA has interfered in United States operations via suspected lasing events and airspace disputes. Speaking strictly from a military capabilities perspective, a Chinese naval base on the Atlantic coast of Africa could enable persistent PLA Navy power projection in the Atlantic Ocean that spans from the Cape of Good Hope to the Strait of Gibraltar and westward toward the United States East Coast—a significant expansion of the PLA Navy's current capabilities. Equatorial Guinea is a likely location for this goal. During the past few years, we have seen the Equatoguinean press report that China has signed a basing agreement in the country. In 2021, we also observed China and Equatorial Guinea announcing an agreement to adopt joint strategies to counter piracy in the Gulf of Guinea. These developments suggest the distinct possibility of a Chinese military presence on the Atlantic coast of Africa in the coming years.

DEPARTMENT OF DEFENSE AUTHORIZATION REQUEST FOR APPROPRIATIONS FOR FISCAL YEAR 2024 AND THE FUTURE YEARS DEFENSE PROGRAM

THURSDAY, MARCH 23, 2023

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES
Washington, DC.

UNITED STATES NORTHERN COMMAND AND UNITED STATES SOUTHERN COMMAND

The Committee met, pursuant to notice, at 9:30 a.m. in room SD-G50, Dirksen Senate Office Building, Senator Jack Reed (Chairman of the Committee) presiding.

Committee Members present: Senators Reed, Shaheen, Gillibrand, Blumenthal, Hirono, Kaine, King, Warren, Peters, Manchin, Rosen, Kelly, Wicker, Fischer, Cotton, Rounds, Ernst, Sullivan, Cramer, Scott, Tuberville, Mullin, Budd, and Schmitt.

OPENING STATEMENT OF SENATOR JACK REED

Chairman REED. I would like to call the Committee to order. As an initial point of business, since a quorum is now present I ask the Committee to consider 3,059 pending military nominations. All of these nominations have been before the Committee the required length of time.

Is there a motion to favorably report——

Senator WICKER. So moved.

Chairman REED. Is there a second?

Senator SHAHEEN. Second.

Chairman REED. All in favor say aye.

[Chorus of ayes.]

[The list of nominations considered and approved by the Committee follows:]

MILITARY NOMINATIONS PENDING WITH THE SENATE ARMED SERVICES COMMITTEE WHICH ARE PROPOSED FOR THE COMMITTEE'S CONSIDERATION ON MARCH 23, 2023.

1. **In the Air Force there are 27 appointments to the grade of brigadier general (list begins with David J. Berkland)** (Reference No. 196)
2. **Col. Corey A. Simmons, USAF to be brigadier general** (Reference No. 198)
3. **RADM George M. Wikoff, USN to be vice admiral and Commander, US Naval Forces, Central Command/Commander, FIFTH Fleet and Commander, Combined Maritime Forces** (Reference No. 211)

4. **RADM Frederick W. Kacher, USN to be vice admiral and Commander, SEVENTH Fleet** (Reference No. 212)
5. In the Army there are 101 appointments to the grade of major (list begins with Tolulope O. Akinsanya) (Reference No. 238)
6. In the Marine Corps there is 1 appointment to the grade of lieutenant colonel (Jason W. Price) (Reference No. 257)
7. **In the Air Force Reserve there are 11 appointments to the grade of brigadier general (list begins with Sean M. Carpenter)** (Reference No. 290)
8. **In the Air Force Reserve there are 2 appointments to the grade of brigadier general (list begins with Kristin A. Hillery)** (Reference No. 291)
9. **In the Air Force Reserve there are 10 appointments to the grade of major general (list begins with Elizabeth E. Arledge)** (Reference No. 292)
10. **Col. Carlos M. Caceres, USAR to be brigadier general** (Reference No. 310)
11. **RADM Shoshana S. Chatfield, USN to be vice admiral and US Military Representative to the North Atlantic Treaty Organization Military Committee** (Reference No. 311)
12. In the Air Force Reserve there is 1 appointment to the grade of colonel (Shane K. Doty) (Reference No. 312)
13. In the Air Force Reserve there are 9 appointments to the grade of colonel (list begins with Speight H. Caroon) (Reference No. 313)
14. In the Air Force Reserve there is 1 appointment to the grade of colonel (Brandi Barnard King) (Reference No. 314)
15. In the Air Force Reserve there are 3 appointments to the grade of colonel (list begins with Daniel S. McPherson) (Reference No. 315)
16. In the Air Force Reserve there are 10 appointments to the grade of colonel (list begins with Matthew J. Andrade) (Reference No. 316)
17. In the Air Force Reserve there are 10 appointments to the grade of colonel (list begins with Adam James Cole) (Reference No. 317)
18. In the Air Force Reserve there are 2 appointments to the grade of colonel (list begins with Eric K. Wilke) (Reference No. 318)
19. In the Air Force Reserve there are 13 appointments to the grade of colonel (list begins with Kelli M. Bermudez) (Reference No. 319)
20. In the Air Force Reserve there are 2 appointments to the grade of colonel (list begins with Lisa Carol Giugliano) (Reference No. 320)
21. In the Air Force Reserve there are 7 appointments to the grade of colonel (list begins with Joseph Catalino, Jr.) (Reference No. 321)
22. In the Air Force Reserve there are 9 appointments to the grade of colonel (list begins with James M. Bershinsky) (Reference No. 322)
23. In the Air Force Reserve there are 2 appointments to the grade of colonel (list begins with Gary Monroe Boutz, Jr.) (Reference No. 323)
24. In the Air Force Reserve there is 1 appointment to the grade of colonel (John Charles Easley) (Reference No. 324)
25. In the Air Force Reserve there are 37 appointments to the grade of colonel (list begins with Robert M. Acosta) (Reference No. 325)
26. In the Air Force Reserve there are 2 appointments to the grade of colonel (list begins with Nicole Dyan David) (Reference No. 326)
27. In the Air Force Reserve there are 7 appointments to the grade of colonel (list begins with Karrie Megan Bem) (Reference No. 327)
28. In the Air Force Reserve there are 3 appointments to the grade of colonel (list begins with Douglas A. Collins) (Reference No. 328)
29. In the Air Force there is 1 appointment to the grade of major (Marquis A.T. Smith) (Reference No. 329)
30. In the Air Force Reserve there are 61 appointments to the grade of colonel (list begins with James S. Akers II) (Reference No. 330)
31. In the Air Force Reserve there are 31 appointments to the grade of colonel (list begins with David I. Amar) (Reference No. 331)

32. In the Army there is 1 appointment to the grade of colonel (Sashi A. Zickefoose) (Reference No. 332)
33. In the Army Reserve there is 1 appointment to the grade of colonel (Howard F. Stanley) (Reference No. 333)
34. In the Army there is 1 appointment to the grade of lieutenant colonel (Bobby J. Chun) (Reference No. 334)
35. In the Army there are 7 appointments to the grade of colonel (list begins with Joshua G. Glonek) (Reference No. 335)
36. In the Army there are 7 appointments to the grade of lieutenant colonel (list begins with Alex J. Duffy) (Reference No. 337)
37. In the Army there are 4 appointments to the grade of major (list begins with Liza B. Crawford) (Reference No. 338)
38. In the Army Reserve there are 2 appointments to the grade of colonel (list begins with Jeremy S. Stirm) (Reference No. 339)
39. In the Army Reserve there is 1 appointment to the grade of colonel (Renee R. Kiel) (Reference No. 340)
40. In the Army there are 2 appointments to the grade of lieutenant colonel (list begins with Melissa B. Riesterhartsell) (Reference No. 341)
41. In the Army there is 1 appointment to the grade of lieutenant colonel (Kimberly A. Dilger) (Reference No. 342)
42. In the Army there is 1 appointment to the grade of major (Abigail R. Osman) (Reference No. 343)
43. In the Army Reserve there is 1 appointment to the grade of colonel (Andrew J. Archuleta) (Reference No. 344)
44. In the Army Reserve there are 8 appointments to the grade of colonel (list begins with Christopher C. Cross) (Reference No. 345)
45. In the Army there are 37 appointments to the grade of major (list begins with Michael J. Baierlein) (Reference No. 346)
46. In the Army there are 575 appointments to the grade of major (list begins with Austin P. Abarr) (Reference No. 347)
47. In the Army there are 489 appointments to the grade of major (list begins with James H. Abney) (Reference No. 348)
48. In the Army there are 981 appointments to the grade of major (list begins with Mitchell A. Ables) (Reference No. 349)
49. In the Army Reserve there are 9 appointments to the grade of colonel (list begins with Peter B. East) (Reference No. 350)
50. In the Navy there is 1 appointment to the grade of lieutenant commander (list begins with William M. Schweitzer) (Reference No. 351)
51. In the Navy there is 1 appointment to the grade of captain (list begins with Louis V. Scott) (Reference No. 353)
52. **Col. William F. Wilkerson, USAR to be brigadier general** (Reference No. 359)
53. **Col. Evelyn E. Laptook, USAR to be brigadier general** (Reference No. 360)
54. **BG Ronald R. Ragin, USA to be major general** (Reference No. 361)
55. **In the Army there are 37 appointments to the grade of brigadier general (list begins with Brandon C. Anderson)** (Reference No. 362)
56. **In the Marine Corps there are 8 appointments to the grade of brigadier general (list begins with David R. Everly)** (Reference No. 363)
57. **In the Navy there are 2 appointments to the grade of rear admiral (lower half) (list begins with Walter D. Brafford)** (Reference No. 364)
58. **In the Navy there are 16 appointments to the grade of rear admiral (lower half) (list begins with Eric J. Anduze)** (Reference No. 365)
59. **In the Navy there are 2 appointments to the grade of rear admiral (lower half) (list begins with Brian J. Anderson)** (Reference No. 366)
60. **In the Navy there are 2 appointments to the grade of rear admiral (list begins with Casey J. Moton)** (Reference No. 367)
61. **RADM(lh) Rick Freedman, USN to be rear admiral** (Reference No. 368)
62. **RADM(lh) Kenneth W. Epps, USN to be rear admiral** (Reference No. 369) 3

63. **In the Navy there are 13 appointments to the grade of rear admiral (list begins with Stephen D. Barnett)** (Reference No. 370)
64. **Capt. Frank G. Schlereth III, USN to be rear admiral (lower half)** (Reference No. 371)
65. **In the Navy there are 2 appointments to the grade of rear admiral (lower half) (list begins with Joshua C. Himes)** (Reference No. 372)
66. **In the Navy there are 4 appointments to the grade of rear admiral (lower half) (list begins with Thomas J. Dickinson)** (Reference No. 373)
67. **In the Air Force there are 2 appointments to the grade of major general (list begins with Thomas W. Harrell)** (Reference No. 379)
68. In the Air Force there is 1 appointment to the grade of colonel (Maximilian S. Lee) (Reference No. 380)
69. In the Navy there is 1 appointment to the grade of lieutenant commander (Justin J. Reeb) (Reference No. 381)
70. **LTG James W. Bierman, Jr., USMC to be lieutenant general and Deputy Commandant for Plans, Policies, and Operations, Headquarters, US Marine Corps** (Reference No. 389)
71. In the Army there is 1 appointment to the grade of colonel (Matthew J. Clementz) (Reference No. 397)
72. In the Army there is 1 appointment to the grade of major (Samuel T. Kramer) (Reference No. 398)
73. In the Army there is 1 appointment to the grade of colonel (Carla A. Kiernan) (Reference No. 399)
74. In the Army there is 1 appointment to the grade of colonel (John W. Brock II) (Reference No. 400)
75. In the Army there is 1 appointment to the grade of colonel (John D. Horton) (Reference No. 404)
76. In the Army Reserve there is 1 appointment to the grade of colonel (Joel N. Buffardi) (Reference No. 405)
77. In the Army there is 1 appointment to the grade of colonel (Sarah D. Eccleston) (Reference No. 406)
78. In the Army there is 1 appointment to the grade of major (Nicholas P. Fiebke) (Reference No. 407)
79. In the Army there is 1 appointment to the grade of major (Andrew J. Doyle) (Reference No. 408)
80. In the Army there is 1 appointment to the grade of major (William T. Griggs) (Reference No. 409)
81. In the Army there is 1 appointment to the grade of major (Megan L. Maloy) (Reference No. 410)
82. In the Army there is 1 appointment to the grade of major (Kaitlyn M. Hernandez) (Reference No. 411)
83. In the Army Reserve there are 15 appointment to the grade of colonel (list begins with Timothy I. Arcelay) (Reference No. 412)
84. In the Army there is 1 appointment to the grade of major (Sara C. Adams) (Reference No. 413)
85. In the Army there is 1 appointment to the grade of major (Christina G. Nalley) (Reference No. 414)
86. In the Army Reserve there are 7 appointments to the grade of colonel (Andrew Adamczyk) (Reference No. 415)
87. In the Army there is 1 appointment to the grade of colonel (Ashley S. Lee) (Reference No. 416)
88. In the Army there is 1 appointment to the grade of major (Timothy W. Lindeman) (Reference No. 417)
89. In the Army there is 1 appointment to the grade of major (Ebony Q. Star) (Reference No. 418)
90. In the Army there is 1 appointment to the grade of major (Sarah A. Delarosa) (Reference No. 419)
91. In the Army there is 1 appointment to the grade of major (Mark T. Sopkiw, Jr.) (Reference No. 420)
92. In the Army there is 1 appointment to the grade of major (Justin T. Thomas) (Reference No. 421)

93. In the Army there is 1 appointment to the grade of major (Rei T. Israel) (Reference No. 422)
94. In the Army there is 1 appointment to the grade of major (Adam L. Fox) (Reference No. 423)
95. In the Army there is 1 appointment to the grade of major (Jason L. Workman) (Reference No. 424)
96. In the Army there is 1 appointment to the grade of major (Stephen J. Cumby) (Reference No. 425)
97. In the Army there is 1 appointment to the grade of major (Stephen M. Anderson) (Reference No. 426)
98. In the Navy Reserve there is 1 appointment to the grade of captain (Elisabeth Crumpler) (Reference No. 427)
99. In the Navy there are 27 appointments to the grade of captain (list begins with Kyle A. Aduskevich) (Reference No. 428)
100. In the Navy there are 9 appointments to the grade of commander (list begins with Bramwell B. Arnold III) (Reference No. 429)
101. In the Navy there are 34 appointments to the grade of lieutenant commander (list begins with Jeffrey R. Biermann) (Reference No. 430)
102. In the Navy there is 1 appointment to the grade of lieutenant commander (James H. Knight) (Reference No. 431)
103. In the Space Force there are 9 appointments to the grade of major (list begins with Ross M. Boston) (Reference No. 432)
104. In the Space Force there are 38 appointments to the grade of colonel (list begins with Jason M. Adams) (Reference No. 433)
105. In the Space Force there are 68 appointments to the grade of lieutenant colonel (list begins with Christopher John Alban) (Reference No. 434)
106. In the Space Force there are 58 appointments to the grade of lieutenant colonel (list begins with Bridget L. Ajinga) (Reference No. 435)
107. In the Space Force there are 76 appointments to the grade of major (list begins with John W. Anderson) (Reference No. 436)
108. In the Space Force there are 100 appointments to the grade of major (list begins with Christina M. Akers) (Reference No. 437)
109. In the Space Force there are 2 appointments to the grade of lieutenant colonel (list begins with Cassandra R. Hidalgo) (Reference No. 438)
110. In the Space Force there is 1 appointment to the grade of colonel (Edward E. Jones) (Reference No. 439)

TOTAL: 3,059

Chairman REED. The motion carries. Thank you very much.

Good morning. The Committee meets today to receive testimony from General Glen VanHerck, Commander of United States Northern Command and North American Aerospace Defense Command, or NORAD, and General Laura Richardson, Commander of United States Southern Command. I would note that this is General VanHerck's last appearance before the Committee in his current role. General, I would like to express my profound appreciation for your decades of exceptional service to the Nation and the Air Force, including your outstanding leadership of our NORTHCOM forces. Thank you, sir, very much.

On behalf of the Committee, I would also thank the women and men who serve under your respective commands for their selfless service to the Nation.

The global threats to the United States are edging closer and closer to home. The 2022 National Defense Strategy identifies one of the Defense Department's top priorities as "Defending the Homeland, paced to the growing multi-domain threat posed by the People's Republic of China." General VanHerck, your command is responsible for this Homeland defense mission. To be successful,

NORTHCOM will need to re-evaluate its assumptions and plans against the PRC's growing capabilities to threaten us territorially, as well as in cyberspace and space. I understand NORTHCOM has been working to develop a new Homeland Defense Policy Guidance to meet this challenge, and I would ask for an update on its status and how it would transform the homeland defense plans of the Department.

The recent shoot-downs of a Chinese surveillance balloon and three other unidentified aerial phenomena in our airspace have raised concerns that we may have an "awareness gap" that needs to be resolved. America's skies and seas must be secure to protect our citizens, and the Department must pursue technologies that provide 'forward detection' to buy decision time for decisionmakers.

Relatedly, Congress is considering auctioning the "S" band spectrum, which is the spectrum in which NORTHCOM radars operate for early warning around the continental United States, for missile defense on the ground in Alaska, and for maritime domain awareness with our AEGIS weapons system. General VanHerck, the Committee would like to know the impact of curtailing or losing this spectrum with regard to your operations.

Regionally, NORTHCOM provides support to U.S. law enforcement to counter cartels engaged in drug smuggling, human trafficking, and money laundering across the southwest border. General VanHerck, I am interested to know more about your efforts to build the capabilities of the security forces in Mexico and the Bahamas to address these regional threats, and your recommendations for strengthening those efforts.

Turning to Southern Command, General Richardson, your command faces growing challenges from China and Russia in Latin America. The political and economic instability in the region presents a situation that our adversaries are seeking to exploit to increase their own influence. China, in particular, is expanding its presence in the region, primarily through acquisitions and investments in strategically critical locations like Panama, and, reflecting the growing influence Moscow has exerted in the region, most South American countries have been non-committal on Russia's war in Ukraine.

A critical task for SOUTHCOM is to find ways to counter China and Russia's malign, hybrid activities. This challenge includes addressing sources of insecurity among our partners that our adversaries seek to exploit. It is also important to strengthen the capabilities of U.S. partners' security forces, including by building defense institutional capabilities that adhere to the rule of law and respect human rights.

General Richardson, I am interested in your assessment of the challenge from near-peer competitors in the SOUTHCOM area, and how we might work strategically with our partners in the region to build resilience against these activities.

SOUTHCOM, like NORTHCOM, continues to work closely with the U.S. Government interagency to support counternarcotic and counter-transnational criminal organization missions. A critical component of this effort has been the Joint Interagency Task Force-South, which provides a model for the Defense Department to work

with civilian agencies and partner nations to build domain awareness and enhance interdiction capabilities.

To help compensate for its limited resources, SOUTHCOM has sought to leverage "non-traditional" approaches, such as artificial intelligence and machine learning, to serve as a testbed for new tactics and operational concepts. General Richardson, I would like to know how the Department is taking advantage of the SOUTHCOM area as a valuable environment for innovative experimentation.

Thank you, again, to our witnesses. I look forward to your testimoneys, and as a reminder for my colleagues, there will be a closed session immediately following this hearing in room SVC–217.

Let me now turn it over to the Ranking Member, Senator Wicker.

STATEMENT OF SENATOR ROGER F. WICKER

Senator WICKER. Thank you, Mr. Chairman, and I also want to thank our witnesses for being here and also for their gracious allocation of time to visit with us before the hearing.

We rightly focus a lot of attention abroad, on Russia's unprovoked invasion of Ukraine, the Chinese Communist Party's constant march to dominance in the Pacific. But the dangers we face are not limited to areas like Ukraine and the Pacific. We also face dangers in our own neighborhood.

General VanHerck has been a frequent visitor here recently, and I appreciate his candid briefings on the Chinese surveillance balloon that violated our sovereignty earlier this year.

Unfortunately, Secretary of Defense Austin has declined to answer the simple questions Senator Rubio and I sent regarding the Department of Defense's apparently inaction during the earliest days of the balloon's excursion. In response to the letter Senator Rubio and I sent with questions, we received a very dismissive response from Under Secretary Colin Kahl, which said that all of our questions had already been answered. In fact, they were not answered and have not been answered by the Secretary. I expect General VanHerck will get some questions about that today, and I am grateful for his help in understanding what went wrong and how we can fix it.

The Chinese surveillance balloon is the most public example of our Homeland defense gaps, but it is not the only one. Keeping in mind Putin's threats against our Homeland during the Ukraine war and China's threats of a military conflict with the United States over Taiwan, I hope General VanHerck will explain his requirements for keeping the American people safe.

I am also concerned about the situation on both sides of our southwest border. President Biden's lax border policies have created a major opportunity for the Mexican criminal cartels and an unprecedented humanitarian and security crisis. In 2022, more than 70,000 Americans died of opioid overdoses, largely from Mexican-produced fentanyl. Since President Biden took office, more than 1.2 million illegal migrants have evaded law enforcement and entered our country. Most recently, the cartels murdered two American citizens.

This simply cannot continue and does not have to continue. Given the scale of the current crisis, I hope our witnesses could comment on ways in which the southwest border support mission could be made more effective. I would also like to know whether there is anything Congress can do to work more effectively with the Mexican Government to counter the cartels.

We also have challenges further south, in Central and South America. The implications of the growing Chinese threat continue to concern us. The Chinese Communist Party is following a well-known playbook on SOUTHCOM. It is aggressively using predatory economic and diplomatic practices to bully countries while it sets conditions to buildup the PRC military presence, gather intelligence, and limit United States access and influence. As General Richardson has stated before, proximity matters. We should all be concerned by what China is doing in the Southern Hemisphere and what it means for the stability of our partners and our national security.

Despite the significant and growing security threats in that region, I am troubled to see that SOUTHCOM consistently faces a mismatch between its requirements and its resources. I look forward to General Richardson's candid assessment of SOUTHCOM's most pressing resource and capability shortfalls. I hope to understand how these shortfalls impact our troops' ability to accomplish the mission and defend our Nation. I would also like to hear how the Office of Strategic Capital might be used to help achieve military objectives at a lower cost.

With that, Mr. Chairman, I yield back and thank our witnesses.

Chairman REED. Thank you very much Senator Wicker.

Now let me recognize General VanHerck. Sir?

STATEMENT OF GENERAL GLEN D. VANHERCK, USAF, COMMANDER, UNITED STATES NORTHERN COMMAND AND NORTH AMERICAN AEROSPACE DEFENSE COMMAND

General VANHERCK. Chairman Reed, Ranking Member Wicker, and distinguished Members of the Committee, thank you for the opportunity to appear today and represent the men and women of the United States Northern Command and North American Aerospace Defense Command.

Today's strategic environment is the most complicated and potentially dangerous in my more than 35 years of service. While the United States military remains the most powerful and professional force in history, we have to account for the recent erosion of military advantage and take actions now to invest in modernization, implement innovative processes, prioritize our personnel and civilian hiring practices, and increase agile decisionmaking at all levels.

Our competitors' actions and ambitions are global and all-domain in nature. It is also clear that they have the capability and intent to hold our Homeland at risk above and below the nuclear threshold and in multiple domains to achieve their strategic objectives. The PRC and Russia have fielded cruise missiles, delivery platforms, and non-kinetic capabilities to hold at risk critical infrastructure of military and civilian in the United States and Canada. Those capabilities allow them to strike with limited warning and significant consequences. Limited warning due to a lack of all-do-

main awareness inherently limits the decision space and options available to our national leaders which increases the risk of miscalculation and escalation.

To address today's strategic environment, for nearly 3 years I have focused on four strategic priorities: domain awareness, information dominance, decision superiority, and finally, global integration. Those priorities are critical to successfully defending the Homeland and to providing our national leaders with the only thing I can never give them enough of, and that is time—time to create deterrence options, and if required, defend and defeat options.

While we have work to do, there has been some notable progress toward these key priorities. I am grateful to the Department and Congress for your support of the over-the-horizon radars that will significantly improve air, maritime, and space domain awareness and the ability to detect and track threats well before they reach North America. But we need to go faster. An acquisition plan based on more than a decade is too long.

Both the Department of Defense and the Canadian Department of National Defense have committed to funding over-the-horizon radar capabilities, and I respectfully urge both governments to ensure this vital and proven capability is fielded as quickly as possible. Likewise, Space Force's investment in advanced space-based warning capabilities and the Navy's commitment to modernizing the Integrated Undersea Surveillance System are vital to my homeland defense mission. Yet again, we cannot wait a decade or longer to field these new capabilities.

Our commands need your continued support to outpace the rapid gains made by our competitors. Continued progress will require the Department and Congress to accept some risk by prioritizing modernization and innovation over maintaining obsolete platforms, organizations, and infrastructure, and occasionally accepting failure as part of the process.

The generational challenges ahead of us require the best minds and expertise we can find, and the Department must also invest accordingly in civilian and military personnel recruiting, hiring, and retention. We must continue to build an enormous advantage that comes through our international alliances and partnerships.

I believe that the greatest risk for the United States stems from an inability to change at the pace required by the strategic environment we are operating in. Homeland defense must be recognized as essential to contingency plans at home and for power projection abroad, and it is vital that all military planning account for that reality. In an era of incredible innovation and technological achievement, inflexible, outdated processes are a greater impediment to success than many of our competitors' advancements.

Finally, I would like to comment on the incursion of the PRC high-altitude balloon into our airspace. The PRC HAB was obviously a significant event that shined light on the PRC's brazen intelligence collection against the United States and Canada. It was the first time NORTHCOM conducted an engagement over United States in our history. From this event, I commit to you that we have already generated critical lessons learned, and I can guar-

antee that we are doing whatever is necessary to keep our country and North America safe.

On behalf of all the soldiers, sailors, airmen, marines, guardians, and civilians of NORTHCOM and NORAD, I would like to thank the Committee for your steadfast support, and I look forward to your questions.

[The prepared statement of General Glen D. VanHerck follows:]

PREPARED STATEMENT BY GENERAL GLEN D. VANHERCK

Chairman Reed, Ranking Member Wicker, and distinguished Members of the Committee: thank you for the opportunity to testify, and for the honor of representing the men and women of U.S. Northern Command (USNORTHCOM) and North American Aerospace Defense Command (NORAD). From the day I assumed Command in August 2020, USNORTHCOM and NORAD have worked tirelessly to defend the Homeland and North America in an extraordinarily challenging strategic environment requiring the commands to adapt new approaches to how we plan, prepare, and operate. That innovation and evolution is necessary to outpace our competitors and is a testament to the devotion of our military and civilian personnel who stand constant watch over the United States and Canada.

The commands have made tremendous progress in a short time, yet much work remains. While the United States military remains the most powerful and professional force in history, and our alliances and partnerships provide a vital strategic advantage over any potential adversary, it is clear that our competitive advantage is eroding. The successful defense of North America requires the Department of Defense to move beyond outdated assumptions and plans that do not fully reflect competitor capability, capacity, and intent to threaten the Homeland. Likewise, continued action is required to build enduring advantages and outpace the gains made by competitors around the globe. This will require the Department to invest in modernization, implement innovative processes, prioritize our personnel and improve civilian hiring practices, and increase agile decisionmaking at all levels.

STRATEGIC ENVIRONMENT

Today's strategic environment is the most complicated and potentially dangerous in my 35+ years of service. Our competitors and potential adversaries, particularly the People's Republic of China (PRC) and Russia, continue to challenge the rules-based international order that has provided global stability and prosperity over the last 7 decades. They seek to advance their interests and gain global advantages through political intimidation, economic coercion, cyber and information operations, asymmetric attacks on infrastructure, and the direct threat or actual employment of military force.

The People's Republic of China (PRC)

The PRC remains NORAD and USNORTHCOM's long-term pacing challenge. Beijing continues ambitious military modernization at an alarming pace. It would be naive to think their sprint to develop advanced cyber tools, maritime capabilities, and hypersonic technology has only regional applications, as the PRC continues to develop advanced long-range conventional and strategic capabilities and the infrastructure necessary to project military power at greater distances. Underpinning this growth is a rapid nuclear expansion that is on pace for the PRC to expand their nuclear stockpile from what DOD estimates is over 400 today to about 1,500 by 2035. While less observable, the PRC's aggressive efforts to exploit the information technology sector are accelerating an increasing threat to North America.

The PRC's aggressive actions in the Pacific in mid–2022 following congressional visits to Taiwan illustrate how regional events create geostrategic ripple effects that can quickly reach our shores. President Xi is likely to use his next term in office to double down on the PRC's revisionist foreign policy, and is likely to include global efforts to undermine the United States and bolster partnerships with United States competitors, including Russia. In February 2022, Xi signaled his intent to follow this path when he declared the PRC-Russia friendship would have no limits in a public pronouncement just weeks before Russia's illegal and unprovoked full-scale invasion of Ukraine. The PRC has almost certainly watched the war to draw lessons that will inform its next steps toward Taiwan.

Xi's statement also proved to be more than rhetorical when, in May 2022, the PRC and Russia conducted a combined bomber patrol over the Sea of Japan coinciding with the Quad Leaders' Summit in Tokyo. The May 2022 bomber patrol was

followed by a second bomber patrol in November 2022. The cooperation is not confined to the air domain. PRC and Russian naval forces conducted a combined patrol in the fall of 2022 that covered 7,000 nautical miles in the Pacific, included a first-ever combined naval transit of the Aleutian Islands, and came on the heels of Xi sending scores of troops to Russia to participate in Moscow's largest annual military exercise. For years, the PRC has relied on Russian military materiel to build its armed forces, and I am aware of reports that the PRC has transferred materiel with military applications to Russia during Russia's war against Ukraine. These actions are more than symbolic and demonstrate the PRC's growing power projection capabilities, which will likely encompass the Arctic in the next decade—a region the PRC is eying with its self-proclaimed status as a near-Arctic State.

Russia

As USNORTHCOM and NORAD take necessary measures to defend against a growing PRC threat, the commands continue to defend the United States and Canada every day against Russian aggression in all domains. Russia's brazen and unprovoked full-scale invasion of Ukraine in 2022 proved that Russia has the capability and capacity to inflict significant damage to infrastructure and other critical targets with its all-domain long-range strike capabilities. Russia also has a history of conducting clandestine operations in other nations to achieve its political objectives. While Russia has overplayed its hand, suffered significant losses to the heroic Ukrainian defense forces, and inadvertently helped to unify NATO, it has gained real-world combat experience as it enters its second year of the full-scale invasion. The meager performance of Russia's ground forces in Ukraine should not overshadow other capabilities it has showcased in Ukraine, including air- and sea-launched cruise missiles capable of striking North America, cyber activities, and economic coercion. For the first time, we also saw Russia employ its new KILLJOY air-launched hypersonic missile in combat.

Concurrent with its war against Ukraine, Russia has also continued to conduct major military exercises and test developmental capabilities that will compound the threat to North America once fielded. In April 2022, Russia tested the massive SARMAT ICBM, a highly capable strategic weapon that helps reinforce the critical importance of a modern and reliable United States strategic deterrent. Meanwhile, Russia is testing its special mission Belgorod nuclear submarine, a modern platform capable of carrying the nuclear-capable Poseidon torpedo, designed to hold the Homeland at risk by striking coastal targets from thousands of miles away.

The test of the Belgorod followed Russia's Arctic military exercise that included live-fire cruise missile launches designed to test Moscow's readiness for a conflict in the high north. Last fall, Russia added its first *Severodvinsk*-class conventional and nuclear capable cruise missile submarine to the Pacific Fleet, which poses a new challenge to our defense of the western approaches to North America. In October 2022, in the midst of elevated international tensions stemming from Russian threats to escalate its already brutal campaign in Ukraine, Russia chose to proceed with its annual strategic forces exercise, including demonstrations of multiple nuclear strike capabilities. Finally, in January 2023, a Russian *Gorshkov*-class frigate transited the western Atlantic while armed with Tsirkon hypersonic cruise missiles.

I believe it would be shortsighted to view Russia's war against Ukraine as a limited regional crisis. Russia's actions increase the very real risk of miscalculation and the conflict's expansion beyond its current boundaries—scenarios that could rapidly increase the risks to North America and continental defense. If Russia should seek to compel allies to reconsider their support for Ukraine through escalatory actions or follow through with the desperate threats to use nuclear weapons in Ukraine, the risks to the Homeland would increase.

DPRK and Iran

The Democratic Peoples' Republic of Korea (DPRK) tested at least 65 conventional theater and long-range nuclear capabilities over the last year. That number includes the first tests of a new larger, longer range, and more capable ICBM, adding another missile that can likely reach the entire Homeland and one the regime claims is capable of carrying a hypersonic glide vehicle payload. The DPRK tested more missiles in 2022 than any time in its history, showing that the regime will continue to prioritize military capabilities at the expense of needed food and pandemic relief for its people. Public reports of renewed nuclear test preparations further highlight the grave danger this regime poses to regional and global stability. We must remain ready for multiple contingencies and potential crisis on the Korean Peninsula.

The DPRK's reckless pursuit of advanced nuclear capabilities and robust ballistic missile research, development, and testing threatens regional stability, our allies and partners, and potentially the Homeland. However, today I remain confident in

our current capability to defend the Homeland against a limited DPRK ballistic missile threat. Looking forward, I am concerned about future capacity and capability to respond to advancing DPRK ballistic missile threats, making it crucial to field the Next Generation Interceptor (NGI) as funded in the Fiscal Year 2023 Consolidated Appropriations Act (P.L. 117–328).

Iran has not shied away from pursuing malign global activities, including in North America; the regime continues to pose a significant threat to the United States, as well as our partners in the Central Command region. The August 2022 disclosure of an Iranian plot to assassinate a former senior United States official on United States territory illustrated the brazenness of the Iranian Government. The regime's decision to provide Russia with unmanned loitering munitions used to attack civilian infrastructure in Ukraine provides further evidence of Iran's embrace of destabilizing activity. A future decision by the regime to pursue an ICBM-class missile would add yet another threat vector capable of striking North America.

Regional Security Threats

I remain concerned about transnational organized crime in Mexico and the Western Hemisphere and the unrelenting violence it spawns and insecurity it creates, as cartels vie for control of lucrative illicit markets. Cartels control fentanyl, cocaine and methamphetamine trafficking as well as other drugs, and are demonstrating the capability to use improvised explosives and small-unmanned aerial systems against Mexican security forces in Mexico, which will likely embolden the cartels and challenge our partners. As USNORTHCOM supports our law enforcement and international partners in countering transnational criminal organizations in our area of operations, I remain steadfast in my commitment to our military partners in Mexico and The Bahamas.

I commend Mexico's arrest last summer of the cartel member who brutally murdered a DEA agent decades earlier, as well as the recent arrests of Ovidio Guzman Lopez, the son of Sinaloa Cartel leader Joaquin "El Chapo" Guzman, and Jose Rodolfo Villareal-Hernandez, a Mexican cartel leader known as "El Gato." These arrests are examples of a shared commitment to justice, buttressed by shared values and our decades-long partnership, which stands in stark contrast to PRC and Russian malign and self-serving activities in the Western Hemisphere.

I am committed to deepening the already strong partnership with the Mexican and Bahamian militaries to advance our mutual goals, from upholding human rights to ensuring hemispheric defense. I was proud to host my counterparts from the Mexican Department of National Defense (SEDENA) and Department of the Navy (SEMAR) in early 2022 and visit The Bahamas in late 2021, and we will continue to work with Mexico and The Bahamas to stamp out attempts by the PRC or Russia to divide our countries and our partnerships.

Transnational challenges

USNORTHCOM's 20th anniversary offered a reminder of the transnational challenges that have shaped the Command from its inception. Foremost is the enduring transnational terrorist threat to North America, led by Sunni extremist groups and their supporters in North America. The arrest in August 2022 of an ISIS-inspired individual in New Mexico who had surveilled a United States military base is a stark reminder that military facilities remain attractive targets to terrorists. More broadly, the Taliban's return to power in Afghanistan and violent extremist groups' ongoing presence in the region indicate a renewed threat to the region that we cannot discount. This extremist threat transcends south Asia and extends to other regions with security challenges, including the Middle East and sub-Saharan Africa, where terrorists continue to operate, train, and plan.

Where We Are Today: 20 Years of USNORTHCOM and 65 Years of NORAD

USNORTHCOM was established on October 1st, 2002, in the immediate aftermath of the 9/11 terrorist attacks against the United States, marking the first time since the colonial era a single commander was responsible for the defense of the U.S. Homeland. Twenty years later, the likelihood of a major attack inside the United States by a foreign violent extremist organization has diminished following a generational, whole-of-nation effort. However, the primary threat to the Homeland is now far more significant and consequential. Multiple peer competitors and rogue states possess the capability and capacity to threaten our citizens, critical infrastructure, and vital institutions. These competitors possess, or are developing, the modern capabilities that limit the time and options available to decisionmakers responsible for defending our interests. In addition to destructive kinetic and cyber capabilities, malign actors actively exploit our democratic society by spreading disinformation that drives wedges between our citizens, undermines democracy, and weakens our alliances.

In crisis or conflict, potential adversaries will likely seek to interfere with the Department's ability to project power abroad. Disruptions of military and civilian transportation infrastructure in North America could impede the ability of the United States and Canada to project combat power. Today I assess, as I have for nearly 3 years, that homeland defense is a potential limiting factor to ensuring rapid and effective implementation and execution of global contingency plans. This is due to my lack of domain awareness, limited timely access to forces that are ready to operate throughout my areas of responsibility, including the Arctic, and a lack of resilient infrastructure enabling the Joint Force to fight in and from the Homeland while ensuring forward power projection.

Defending the Homeland against an ever-growing array of kinetic and non-kinetic threats will continue to require a collaborative, whole-of-nation approach to assessing vulnerabilities and developing appropriate deterrence, denial, and defense strategies. Cyber risks to critical infrastructure remain a significant concern and a domain awareness gap. DOD is tasked only with defending defense networks, but military facilities and missions frequently rely on civilian lifelines such as energy grids, transportation infrastructure, and other critical infrastructure. USNORTHCOM, due to law and policy, has limited insight into potential risks to commercial networks, which could lead to uncertainty in planning for consequence management. DOD's establishment of policy regarding the defense of critical infrastructure is a necessary step forward, and USNORTHCOM will continue to work with the Department and key mission partners, to include agencies with critical infrastructure security and cybersecurity responsibilities, to ensure key defense infrastructure is defended from attacks.

NORAD, the unique United States and Canadian bi-national command, was established in May 1958 to defend North America from cold war-era Russian strategic bombers entering United States and Canadian airspace from the Arctic approaches. Sixty-five years later, Russia has restored its capability to threaten North America with modernized bombers, surface ships, and submarines armed with long-range, highly precise nuclear and conventional cruise missiles. The PRC is making rapid progress in developing similar capabilities, which will further complicate NORAD's warning missions and affect national strategic decisionmaking.

While NORAD's missions to provide aerospace warning, aerospace control, and maritime warning remain critical to homeland defense, action and investment are needed to keep pace with competitors that clearly seek to hold North America at risk above and below the nuclear threshold. For decades, NORAD has relied heavily on the North Warning System arrayed along the Arctic coasts of Canada and Alaska to detect potential airborne threats to North America. It is clear that our competitors possess long-range strike capabilities that could be used to attack the United States and Canada from outside the detection range of legacy sensors.

In order to maintain domain awareness and ensure integrated threat warning and attack assessment to national leadership, the United States and Canada must continue to move swiftly to field Over the Horizon Radar (OTHR), as funded in the Fiscal Year 2023 Consolidated Omnibus Appropriations Act (P.L. 117–328). OTHR is a proven, affordable technology that will ensure our ability to detect threats from surface to space in the approaches to North America. I commend both the Department of Defense and the Canadian Department of National Defence for their commitment in fiscal year 2023 to investing in OTHR, and I respectfully urge both Governments to ensure this vital capability is fielded as quickly as possible.

NORAD's contributions to Homeland and continental defense will remain vital for many years to come, and will continue to rely on strong cooperation and shared investment between the United States and Canada. The United States and Canadian continental defense framework has an unrivaled legacy of success and serves as an international model of defense cooperation. I remain encouraged by the bi-national commitments to modernizing the platforms, sensors, and capabilities necessary to execute NORAD's missions; this collaborative approach to deterring and defending against threats to North America is critical. NORAD must continue to look to the future and take necessary measures today to counter the threats of tomorrow, and investments by the United States and Canada must address kinetic and non-kinetic threats to our nations.

Potential threats to North America routinely transit international borders and the boundaries between U.S. geographic combatant command areas of responsibility. NORAD's ability to provide timely aerospace warning and control and maritime warning will be bolstered by the United States and Canada's joint commitment to improving global domain awareness, modernizing command and control systems to provide faster, better-informed decisionmaking, and continuing collaborative research, development, and innovation. These efforts will ensure NORAD's ability to

compete with the PRC and Russia for years to come while clearly signaling a lasting commitment to a robust, modern, and effective defense of North America.

USNORTHCOM and NORAD Priorities

My priorities for NORAD and USNORTHCOM directly reflect the need to inform the rapid, agile decisions required of senior leaders in this dynamic and complex strategic environment. Our competitors continue to field capabilities specifically intended to strike with limited warning, which decreases the time and options available to national leaders in a crisis. Continuing to trust legacy processes and capabilities increases risk to the Homeland and compounds the risk of miscalculation and inadvertent escalation. USNORTHCOM and NORAD are working urgently to increase the domain awareness, information sharing, and global integration necessary to ensure national leaders have as much time and as many options as possible.

As competitors and potential adversaries continue to field advanced all-domain capabilities with the potential to create significant effects in the Homeland, it is imperative that the United States and Canada move quickly to improve domain awareness from the seafloor to space and cyberspace for all approaches to North America. The Over-the-Horizon Radars (OTHR) funded in the Fiscal Year 2023 President's Budget, along with the OTHRs announced by the Government of Canada as part of NORAD modernization, will leverage proven technology and will significantly improve the ability of USNORTHCOM and NORAD to detect and track potential threats to North America and the Homeland from the Earth's surface to space. That capability, in turn, will directly correlate to more time available to leaders at all levels, enabling the creation and employment of better deterrence options and if required, defeat options.

U.S. Space Force investments in advanced space-based missile warning sensor capabilities show great promise with particular regard to hypersonic and advanced missile threats. These future systems will detect, track, and identify threats, including hypersonic threats, enable better warning and assessment, and develop actionable targeting solutions, at a much faster pace than we currently experience, while also delivering an inherent operational resilience. Given our competitors' advanced maritime domain capabilities, I fully support the Navy's investment in a modernized Integrated Undersea Surveillance System. These capabilities, in turn, will directly correlate to more time and options available to produce a favorable outcome for the United States and Canada.

Canada's plans to fund a layered surveillance system that will improve shared domain awareness in the northern air and maritime approaches to North America will have significant, long-term benefits for both NORAD and USNORTHCOM's missions. Planned Canadian investment in Arctic and Polar radars and spaced-based surveillance systems, along with advanced munitions, communications, and infrastructure clearly demonstrates shared commitment to NORAD and the combined defense of the United States and Canada.

In addition to the investment in OTHR, NORAD and USNORTHCOM have also demonstrated the potential for linking existing platforms and sharing data with multiple commands, interagency and international partners. By sharing data previously trapped in bureaucratic and organizational stovepipes through innovative programs like Pathfinder, Northstar, and the Global Information Dominance Experiments (GIDE), USNORTHCOM and NORAD have proven that it is possible to rapidly improve domain awareness and streamline global information sharing without the costs associated with fielding exquisite new capabilities. It is crucial that the Department of Defense and the Services, as well as the Canadian Department of National Defence, continue the work to unlock the remarkable potential of these initiatives.

I am encouraged by the establishment of the Department's Chief Digital and Artificial Intelligence Office (CDAO), and I believe that the CDAO must be empowered to rapidly integrate systems, software and platforms in order to maintain our competitive advantage across the Joint Force. Over the past several years, actions by each of our competitors and potential adversaries have made it clear that regional actions have global diplomatic, economic, and military ramifications. It is simply unrealistic to assume that crises will remain confined by artificial boundaries, and we must adapt plans and perspectives to account for that global reality.

The feasibility of every other Geographic Combatant Command's plans will require active campaigning in and from North America, and successful defense of the Homeland is necessary to deter adversaries and assure allies and partners. Therefore, I have also directed that USNORTHCOM and NORAD prioritize homeland defense campaigning to demonstrate our readiness, capabilities, and resiliency. I am also operationalizing the commands to accelerate the flow of information from sen-

sor to decisionmaker. Our competitors and potential adversaries have shown that they will hold the Homeland at risk in a conflict, and USNORTHCOM and NORAD are acting today to ensure homeland defense plans are understood, exercised, and resourced.

While USNORTHCOM and NORAD have made strides in the homeland defense mission, building a resilient Joint Force is a fundamental element of all Department planning, exercises, and operations. The DOD's worldwide missions and responsibilities must evolve from regionally focused approaches to globally integrated efforts that account for finite resources and associated risks. At present, I am concerned for the commands' ability to execute assigned missions—including contingency and operations plans in support of homeland defense. I am limited by a lack of timely access to forces that are organized, trained, and equipped to operate throughout the NORAD area of operations and the NORTHCOM area of responsibility, as well as by insufficient supporting infrastructure.

A strong homeland defense is the foundation of our Nation's ability to project power globally while deterring aggression and achieving our strategic objectives in competition, crisis, and conflict. As such, every plan, exercise, and policy decision must consider the necessity of defending the Homeland when evaluating competing demands for forces and threats to global campaigning. That, in turn, will require the Department of Defense and the Canadian Department of National Defence to place greater focus on developing the depth, flexibility, advanced technologies, and supporting infrastructure required to respond to future challenges while addressing growing threats to the Homeland.

Defense Support of Civil Authorities (DSCA)

When directed by the Secretary of Defense, USNORTHCOM provides Defense Support of Civil Authorities (DSCA) in the Continental United States, Alaska, and Puerto Rico. In preparing for and responding to major natural and human-caused disasters, USNORTHCOM serves as the DSCA synchronizer to support assessment and recovery while simultaneously acting as the supported combatant command in the command's area of operations.

USNORTHCOM often supports Federal, State, tribal, territorial, and local (FSTTL) disaster relief efforts. These collaborative, whole-of-government efforts demonstrate national resilience that should reassure the American public, while also making clear to potential aggressors, that the United States routinely executes interagency domestic relief operations that allow our Nation to recovery quickly following even large-scale disasters. It is equally important for our FSTTL partners to identify and address their capabilities and capacity gaps to fully perform the roles, missions, and operations under their authorities. This kind of response, particularly when it is accomplished with little or no military support, can generate a deterrent effect by casting doubt in competitors' minds about their ability to produce significant effects from an attack on the Homeland.

USNORTHCOM is uniquely suited to support our Federal partners in the aftermath of a chemical, biological, radiological, or nuclear (CBRN) attack. The Department must remain committed to this crucial mission to ensure these highly trained, specialized elements stand ready to respond immediately in the event of a weapon of mass destruction event in the United States.

I continue to stress the importance of USNORTHCOM's defense support of civil authorities, as rapidly executed, well-planned, multi-agency responses to wildfires, hurricanes, pandemics, and other significant disruptions are perhaps the most visible demonstration of the military's support to the American people. USNORTHCOM works year-round with our mission partners at every level to strengthen relationships, improve communications, and incorporate lessons learned from previous responses in order to deliver rapid and effective support to lead Federal agencies. Our command takes tremendous pride in supporting our FSTTL partners, while helping to highlight the resourcefulness and solidarity of the American people in the face of adversity. It should be clear to competitors and potential aggressors that the United States routinely responds to and recovers quickly from large-scale disruptions—and USNORTHCOM is always ready to support those efforts with military capabilities as directed by the Secretary.

USNORTHCOM support to civil authorities includes the command's ongoing support of Federal law enforcement efforts to counter the transnational criminal organizations (TCOs) that have caused so much harm to our Nation. Illicit drugs trafficked by transnational criminal enterprises kill more than one hundred thousand U.S. citizens each year, and the number of fatal overdoses have risen dramatically as cartels have increased the volume of fentanyl smuggled into the United States. As directed by the Secretary of Defense and in accordance with my direct guidance, USNORTHCOM's subordinate command, Joint Task Force North (JTF-N), provides

U.S. Federal law enforcement partners with intelligence and counter-threat finance analysis and other support as requested to disrupt the sophisticated financial and physical networks used to infiltrate illicit goods and exploited human traffic into the United States. The important work done by USNORTHCOM and JTF-N in countering transnational criminal organizations and disrupting the flow of illegal drugs into the United States is a national security imperative that directly supports homeland defense.

Natural disasters, public health threats, and transnational irregular migration will likely continue to require DOD support for our lead Federal partners. Environmental change will also continue to have a direct impact on military readiness and resources, as was made clear by the massive destructive power of Hurricane Ian in September 2022 and by western wildfires that are growing in scale and frequency as fire seasons now extend throughout most of the year. It is necessary to plan and account for the growing likelihood of natural disasters that disrupt military operations and damage critical infrastructure, while units involved in response operations require time to reset and recover after completing their missions. The long-term consequences of extreme weather, rising sea levels, and increased flooding will continue to affect DOD missions, infrastructure, and personnel, especially those in the Homeland.

Security Cooperation

In addition to our more visible homeland defense and DSCA operations, USNORTHCOM continues to reap tremendous benefits from our military-to-military relationships with our allies and partners in Canada, Mexico, and The Bahamas. Security cooperation with our neighbors is crucial to regional security, countering the influence of peer competitors, and addressing shared challenges. Security cooperation provides a critical and lasting advantage over our more isolated competitors, and I am grateful to the Department and to this Committee for your ongoing support of USNORTHCOM's vital work with our allies and partners. I am proud to work with my military counterparts in Canada, Mexico, and The Bahamas as we support one another's efforts to defend our nations and stand united against malign actors seeking to expand influence and presence in the Western Hemisphere.

The military-to-military relationship between the United States and Canada remains extraordinary and vital. In addition to standing side by side as partners in NORAD for nearly 65 years, Canada has been a stalwart ally in continental defense and operations overseas for decades. The unique trust between our militaries is immediately apparent within the USNORTHCOM and NORAD headquarters, as United States and Canadian personnel work side-by-side in pursuit of shared missions and objectives. The Canadian Armed Forces' shared commitment to improved domain awareness, information sharing, and modernization of the capabilities necessary for deterrence and continental defense is essential to our united efforts to defend North America, and I am fortunate to serve alongside such steadfast and trusted allies.

The Mexican Department of National Defense (SEDENA) and Department of the Navy (SEMAR) continue to meet daunting internal and external security challenges with professionalism and resiliency. Keenly focused on enhancing regional defense, our Mexican military partners continue to make major investments in a modern, capable, and reliable force capable of interoperability with the United States and other partners. In light of that important effort, USNORTHCOM strongly supports SEDENA and SEMAR modernization initiatives, including the potential divestment of their fleet of MI–17 helicopters in favor of Western helicopters.

In April 2022, it was my honor to host the Secretaries of SEDENA and SEMAR at USNORTHCOM for the Bilateral Military Cooperation Roundtable (BMCR). During this important annual dialog, USNORTHCOM and our Mexican military partners conducted a candid and highly productive assessment of our mutual security challenges, associated requirements, and shared commitment to addressing threats to our nations. Over the course of 3 days, Secretary General Sandoval, Secretary Admiral Ojeda, and I reaffirmed our military-to-military relationship and committed to a number of concrete steps that will have significant and lasting positive impacts on regional security.

Our partners in the Royal Bahamian Defence Force (RBDF) continue to punch above their weight as they continue to provide important contributions to regional security. USNORTHCOM and the RBDF operate maritime surveillance systems at Great Inagua and Coral Harbour, and plans are on track to add a third site in the coming years. That shared capability has significant benefits for domain awareness in the southern approaches to North America and demonstrates The Bahamas' ongoing commitment to security cooperation with USNORTHCOM. Our collaboration has taken on added importance as the PRC's diplomatic corps in Nassau continues to

produce anti-United States public statements while highlighting Chinese economic investment and humanitarian relief efforts in The Bahamas.

USNORTHCOM is strongly committed to a long-term partnership with the RBDF, and continued whole-of-government engagement and investment by the United States. As you know, the United States has been without a confirmed Ambassador to The Bahamas since 2011. No action was taken on the President's nominee last year, and the nomination was resubmitted in January 2023. This senior diplomatic position is critical to demonstrating the importance of the relationship between the United States and The Bahamas and to mitigating the PRC's efforts to gain a foothold only 50 miles from the United States east coast.

The Arctic

The ability of the joint force to operate and campaign in the Arctic remains a pressing concern for USNORTHCOM and NORAD. The PRC and Russia continue to invest in Arctic capabilities as both seek to increase presence and influence in the region while shifting the rules-based international order to their advantage. More than 50 percent of USNORTHCOM's area of operations is in the Arctic, and USNORTHCOM and NORAD's priorities in the region continue to focus on increased presence, campaigning through joint training and exercises, and close collaboration with allies and partners.

The effects of environmental change in the Arctic will have significant impacts on accessibility, infrastructure, and competition for the foreseeable future, and the region remains the most unforgiving operational environment on earth. As the Department balances the demands of global mission requirements with difficult budgetary choices, USNORTHCOM and NORAD require access to trained and ready forces capable of operating throughout the commands' areas of responsibility—to include the Arctic. The Joint Force must keep sight of the fact that special training and purpose-built equipment are necessary to operate in a region in which extreme climate, distance, and geography quickly overtake the unprepared.

Over the last year, USNORTHCOM and NORAD collaborated with USEUCOM, USINDOPACOM, USTRANSCOM, USSOCOM and the military Services while conducting joint exercises in Alaska, Greenland, and northern Canada. These demanding events expose Joint Force participants to the demands of the Arctic operating environment and help to reinforce the necessity of a force trained and equipped to survive in the extreme cold and remoteness that defines much of the region. I am encouraged by the strategic objectives stated in the U.S. National Strategy for the Arctic that support better understanding of the region, exercising presence, and capitalizing on the definitive advantage of our international alliances and partnerships.

While the military Services' respective Arctic strategies acknowledge the importance of the Arctic and the need to develop the capabilities needed to operate and compete in the region, direct investment in Arctic-capable platforms, training, and infrastructure continues to lag. It is necessary that the Joint Force has the ability to compete, fight, and win in the Arctic in the coming years, and the time for the Services to invest in the required equipment, infrastructure, and training is now. The PRC and Russia have clearly demonstrated their intent to expand their Arctic presence and operations, and I urge the Department of Defense, the Services, my fellow combatant commanders, and the Canadian Department of National Defence to move faster toward improving our collective ability to succeed in this strategically vital region.

Conclusion

Homeland defense remains the core mission of both USNORTHCOM and NORAD. The one constant throughout my time in command has been the extraordinary pace at which our competitors have advanced their capabilities to threaten the Homeland. Despite those clear risks, the processes used by the Department of Defense and the Canadian Department of National Defence for planning, acquisitions, personnel hiring, technology development, and other activities necessary to the success of the defense enterprise remain largely unchanged from when I received my commission nearly 36 years ago.

As competitors develop greater capability, capacity, and intent to challenge the United States, Canada, and the rules-based international order, I believe that the greatest strategic risk for the United States stems from our own inability to adapt at a pace required by the changing strategic environment. In an era of incredible innovation and technological achievement, inflexible, outdated processes are a greater impediment to success than many of our competitors' capability advancements. We cannot continue to rely on Industrial Age practices and legacy platforms to compete in a digital age, and if we fail to evolve at the pace demanded by the strategic environment, our competitive advantage will continue to erode.

The Department and Congress must also be more willing to accept the relatively low risks associated with retiring legacy platforms in order to ensure our ability to fight and win against advanced and well-resourced competitors. Over the last decade, the PRC and Russia have made extraordinary technological advancements while the Department remains encumbered by obsolete capabilities and associated costs. To defend the Homeland, USNORTHCOM and NORAD require a modern force with the capacity and capability to deter and if required defeat advanced peer competitors. Retiring systems that have exceeded their operational lifespans—to include fighters and command and control platforms at the end of their service lives—is necessary to accelerate the arrival of next generation capabilities.

Along with faster, more flexible development and acquisitions, the Joint Force requires predictable and timely funding to maintain readiness and increase capability, capacity, and resilience. The Continuing Resolutions that have become commonplace over the last decade have direct and lasting adverse consequences for military readiness, modernization, and planning. Predictable, on-time annual budgeting and appropriations, along with streamlined Department processes and greater tolerance for risk in developing and testing new capabilities, are essential to maintaining our competitive advantage.

The need to move faster is clear. The PRC and Russia have already fielded highly advanced hypersonic capabilities, while the United States' hypersonic program, although accelerating, still languishes well behind our competitors' efforts. Further, DOD faces operational challenges with civilian hiring processes for recruiting and hiring the innovative and experientially diverse workforce needed to drive innovation and advancement on pace with the civilian tech sector. Simply put, the Department must continue to strategically tackle hiring and personnel management improvements to move its workforce goal of being an employer of choice forward.

Finally, the PRC high altitude balloon (HAB) incursion into our national airspace was obviously a significant event that shined a light on the PRC's brazen intelligence collection against the United States and Canada. It was the first time USNORTHCOM conducted an engagement over the United States in our history, and it made it clear that our competitors have the capability and intent to reach the Homeland. The three Unidentified Aerial Phenomena (UAPs), also shot down days later by USNORTHCOM and NORAD, clearly demonstrated the challenges associated with detecting and identifying unmanned objects in U.S. airspace. As for NORAD and NORTHCOM, I commit to you that this event has already generated critical lessons learned for my commands and our mission partners, and I can guarantee that NORTHCOM and NORAD are going to continue to learn from it and do whatever is necessary to keep our country safe.

While we face significant challenges, there should be no doubt we have the finest military on the planet and that the commands will defend our nations with tenacity and resolve. In what is likely my final appearance before this Committee, I remain deeply humbled and immensely proud to lead the noblest mission of any Combatant Command—defending the Homeland. I am grateful to the Committee for your longstanding support of our missions and of the men and women who stand watch over our Nation every day. I thank you for the honor of representing our soldiers, sailors, airmen, guardians, marines, and civilians.

Chairman REED. Thank you very much, General VanHerck.

General Richardson, please.

STATEMENT OF GENERAL LAURA J. RICHARDSON, USA, COMMANDER, UNITED STATES SOUTHERN COMMAND

General RICHARDSON. Chairman Reed, Ranking Member Wicker, and distinguished Members of the Committee, thank you for the opportunity to appear before you with General VanHerck. I am honored to represent the men and women of United States Southern Command to discuss the challenges we share with our neighbors in Latin America and the Caribbean.

As stated in the National Security Strategy, "No region impacts the United States more directly than the Western Hemisphere." Last year I testified before this Committee and stated, "This region, our shared neighborhood, is under assault from a host of cross-cutting, trans-boundary challenges that directly threaten our Homeland." This is still true today, and is a call to action.

In the last year I have spent time in the region, meeting with leaders to better understand these challenges and the threat they pose to our mutual interests. The world is at an inflection point.

Our partners in the Western Hemisphere, with whom we are bonded by trade, shared values, democratic traditions, and family ties, are feeling the impacts of external interference and coercion. The People's Republic of China, our pacing challenge, continues to expand its economic, diplomatic, technological, informational, and military influence in Latin America and the Caribbean. The PRC has the capability and intent to eschew international norms, advance the brand of authoritarianism, and amass power and influence at the expense of these democracies.

The PRC has expanded its ability to extract resources, and gets 36 percent of its food imports from the region and 75 percent of its lithium from South America. The PRC also leads the hemisphere in illegal, unregulated, unreported fishing, raiding the fish of coastal countries, costing a profit loss of about $3 billion.

The PRC has also established ports in multiple countries, manipulated governments through predatory investment practices, and built potential dual-use space facilities, the most space facilities in any combatant command region.

Russia, an acute threat, bolsters authoritarian regimes in Cuba, Nicaragua, and Venezuela, and they continue its extensive disinformation campaign and has media agreements with 11 countries in the region. There are over 30 million followers of Russia Today en Espãnol and nik Mundo. These activities undermine democracies and challenge our credibility.

Both China and Russia exploit the presence of transnational criminal organizations and amplify their destabilizing impacts on democratic governments. TCOs spread violence and corruption throughout the region and beyond. Their fentanyl-laced cocaine contributes to the deaths of Americans in cities and towns across the country.

The good news is by working with our very willing parts this leads to the best defense. We must use all available levers to strengthen our partnerships with the 28 like-minded democracies in the region who understand the power of working together to counter these shared threats. Our partners look to us to lead in the hemisphere. We have an obligation to meet them where they are and continue to aggressively address our common security challenges.

We must continue to maximize the effectiveness of important tools like security cooperation programs to train and equip our partner militaries and security forces; conduct multilateral exercises; and build interoperability, and increase the State Department's international military, education, and training, foreign military sales programs to educate, train, and build capacity that our partners put to immediate use to stand shoulder-to-shoulder with us.

As the National Defense Strategy stages, the United States derives immense benefits from a stable, peaceful, and democratic Western Hemisphere that reduces security threats to the Homeland. USSOUTHCOM is putting integrated deterrence into action every day, using innovative methods to work seamlessly across all

domains with the other combatant commands, the Joint Force, allies and partners, Congress, the U.S. interagency, NGO's, and the private sector to help build a hemisphere that is free, secure, and prosperous for our generation and generations to come. I call this Team Democracy, and we need to field a resourced team.

Thank you, and I look forward to your questions.

[The prepared statement of General Laura J. Richardson follows:]

PREPARED STATEMENT BY GENERAL LAURA J. RICHARDSON

Chairman Reed, Ranking Member Wicker, and distinguished Committee Members, 2022 marked two important milestones for U.S. Southern Command (USSOUTHCOM): the 25th anniversary of our move from Panama to Miami in 1997, and the 25th anniversary of our Human Rights Initiative. For a quarter of a century, the brave women and men of USSOUTHCOM have called Miami home, while working with allies and partners to improve security, advance democratic ideals, and promote peace and prosperity throughout our shared neighborhood.

At the end of the cold war, the United States, its allies, and partners believed that democracy would displace authoritarianism around the globe. Twenty-five years later, the strategic environment in Latin America and the Caribbean (LAC) has changed significantly. The 2022 National Security Strategy (NSS) states, in no uncertain terms, that "autocrats are working overtime to undermine democracy."[1] We see this right here in our own hemisphere that external malign actors like the People's Republic of China (PRC) and Russia are aggressively exerting influence over our democratic neighbors.

The NSS also states "no region impacts the United States more directly than the Western Hemisphere."[2] Presence and proximity absolutely matter, and a stable and secure Western Hemisphere is critical to homeland defense. After traveling across LAC and meeting our partners face to face, I can confirm our security at home is directly impacted by the challenges facing this strategic region.

Our adversaries use a multidisciplinary and multidomain approach to counter democracy and SOUTHCOM, our allies, and partners must use the full weight of integrated deterrence, leveraging the whole-of-government, industry, private sector, and academia, in order to effectively respond. With shared purpose and mutual trust, we must collectively act with a much greater sense of urgency to ensure this hemisphere remains a stronghold for democracy.

Today, the PRC has both the capability and intent to eschew international norms, advance its brand of authoritarianism, and amass power and influence at the expense of the existing and emerging democracies in our hemisphere. This is a decisive decade and our actions or inactions regarding the PRC will have ramifications for decades to come.

While the PRC remains our pacing challenge, other malicious actors erode regional security. Russia continues its extensive disinformation campaigns and bolsters authoritarian regimes in Cuba, Nicaragua, and Venezuela. Transnational criminal organizations (TCOs) spread violence and corruption throughout the region and beyond. These TCOs traffic drugs that contribute to the deaths of thousands of Americans in cities and towns across the country, from Alabama to Washington, from Rhode Island to Mississippi and everywhere in between. TCOs foment violence and instability that contribute to irregular migration, forcibly displacing hundreds of thousands of people who risk their lives to reach U.S. territory each year. TCO corruption creates insecurity, deteriorates rule of law, and leaves partner nations susceptible to the actions of malign State and non-State actors.

We aren't alone in our efforts to create a stable and peaceful hemisphere. Integrated Deterrence includes campaigning with our partners and allies as force multipliers for achieving success in this resource-constrained reality. With our partners and allies from the United Kingdom, Canada, France, and the Netherlands, we recently adopted the Framework for Western Hemisphere Collaboration. The framework commits us to more frequently share information, and work more closely together on our aligned strategic interests.

---

[1] *https://www.whitehouse.gov/wp-content/uploads/2022/10/Biden-Harris-Administrations-National-Security-Strategy–10.2022.pdf*

[2] *https://www.whitehouse.gov/wp-content/uploads/2022/10/Biden-Harris-Administrations-National-Security-Strategy–10.2022.pdf*

Our USSOUTHCOM lines of effort in the face of these challenges are clear: by strengthening alliances and partnerships, collectively countering threats, and building our team, we are working to preserve democracy in our shared neighborhood. While doing so, we are pioneering ways to outcompete even our most innovative adversaries and address these transnational challenges.

EXPANDING CHALLENGES IN THE REGION

Strategic Competition with the People's Republic of China—A Decisive Decade

When regional leaders and experts discuss the PRC's engagement in the Western Hemisphere, they focus largely on trade and investment. In 2002, PRC trade with Latin America and the Caribbean was just $18 billion; in 2022 it ballooned to $450 billion. That number is expected to increase to $700 billion by 2035. Conversely, current United States trade within the region amounts to $700 billion, which suggests that the United States' comparative trade advantage is eroding.[3] [4]

What concerns me as a Combatant Commander is the myriad of ways in which the PRC is spreading its malign influence, wielding its economic might, and conducting gray zone activities to expand its military and political access and influence in the AOR. The PRC is investing in critical infrastructure, including deep-water ports, cyber, and space facilities which can have a potential dual use for malign commercial and military activities. In any potential global conflict, the PRC could leverage strategic regional ports to restrict United States naval and commercial ship access. This is a strategic risk that we can't accept or ignore. These activities are heavily subsidized through PRC state-owned enterprises (SOE), allowing them to underbid on infrastructure projects, quickly displacing local and international competitors. SOEs are developing deep-water ports in 17 countries, particularly around strategic maritime chokepoints in this region. In Asia, Africa, and the Middle East, PRC SOEs abused commercial agreements by conducting military functions at host-country ports. What's to keep them from doing the same right here in this hemisphere?

In Panama, PRC-sponsored companies are engaged in, or bidding on, several projects related to the Panama Canal—a global strategic chokepoint. These projects include port operations on both ends of the canal, water management, and a logistics park. Meanwhile, in Argentina, a PRC SOE is attempting to secure the rights to build dual-use maritime installations near the southern port city of Ushuaia, which would support sustainment and power-projection while providing proximity to the Strait of Magellan, Drake Passage, and Antarctica. This would be a potential game-changer for the PRC, dramatically improving its access to Antarctica.

The PRC also sees this region as key to expanding its space domain awareness and improving its military space capabilities. There are at least 11 PRC-linked space facilities across five countries in this region, more than any other geographic combatant command's AOR, that provide Beijing with space tracking and surveillance capabilities. This includes a joint space-monitoring facility in Chile and a deep space station in Argentina that is managed by an agency subordinate to the People's Liberation Army (PLA).[5]

Our Nation's leaders have expressed concern about the insidious nature of the PRC-sponsored 5G technology providers for years now. In our region alone, five countries adopted Huawei's 5G technology, and 24 countries have existing Chinese telecommunication infrastructure (3G/4G), increasing their potential to transition to Chinese 5G. There are also 12 countries using PRC-created Safe City programs that provide persistent surveillance and give PRC SOE technicians access to government networks. These actions, among others, create a potential counterintelligence threat to the United States military, our civilian personnel, and our regional partners. The proliferation of this technology has also led even more partner nation military personnel to travel to China to receive training on cybersecurity and military doctrine.

The PRC relies heavily on resources, including food sources and minerals from the USSOUTHCOM AOR. This region is one of the richest in the world in critical rare earth minerals. The PRC's efforts to extract South America's natural resources to support its own population of 1.9 billion people are conducted at the expense of our partner nations and their citizens. These actions have the potential to destabilize the region and erode the fundamental conditions needed for quality private sector investment.

[4] *https://www.atlanticcouncil.org/in-depth-research-reports/china-lac-trade-four-scenarios-in-2035/*

[5] https://features.csis.org/hiddenreach/china-ground-stations-space/

Environmental crimes such as illegal, unreported, and unregulated fishing (IUUF), illegal logging, and illegal mining continue to have devastating impacts on the region and the PRC is the largest perpetrator of these biodiversity crimes. Every year, there are between 350 and 600 Chinese Communist Party (CCP)-subsidized vessels fishing off the coast of South America. These vessels severely deplete fish stocks, disregard environmental safeguards, destabilize the economies of coastal states, and exacerbate security challenges at a cost of nearly $3 billion in lost revenue annually.[6] When I meet with our partner nations, IUUF, along with transnational criminal networks and cyber security, is consistently among their top national security concerns. As a result, their militaries are increasingly being asked to play a leading role in combating this illegal activity.

Russia as an Acute Threat

The impacts of Vladimir Putin's illegal, unprovoked invasion of Ukraine reverberated around the world, worsening a global energy and food crisis. The USSOUTHCOM AOR has not been spared. Families across the region are struggling to put food on the table and gas in their cars because of the sharp rise in prices, compounding the negative impacts in this region from COVID–19.

Through military engagements and gray zone operations, Russia colludes with authoritarian regimes in the region to undermine United States influence. In the past year, Russia continued its military engagements with both Venezuela and Nicaragua. Last year Venezuela hosted *Sniper Frontier 2022,* a shooting competition and subcomponent of Russia's International Army Games. Nicaragua has publicly supported the Russian invasion of Ukraine, voting—along with only North Korea, Syria, and Belarus—against a U.N. resolution condemning Russia for its invasion. These engagements increase Russian influence with nations who are destabilizing forces in the region.

Russia uses disinformation to further its malign influence, sow instability and undermine democracy in the region, activities that promote Russian geopolitical goals and undermine United States national security interests. For example, Russia spreads false narratives about its invasion of Ukraine through its Spanish-language media arms, RT en Español, Sputnik Mundo, and its various social media sites. RT en Español's Facebook page has 18 million followers, more than its English-language site or even CNN's Spanish-language channels.[7] Despite efforts by Facebook and Twitter to take down accounts spreading disinformation, Russian operators continue to generate bot accounts to spread falsehoods quickly. We are in a constant fight to counter and remove the disinformation spread by fake accounts and correct the misperceptions this disinformation propagates. It is in our interest to help develop our partner nations' knowledge and understanding of these tactics and false information before this malign activity permanently erodes this hemisphere's confidence in democracy.

Transnational Criminal Organizations

Although many partner nation leaders recognize the threats the PRC and Russia pose to democracy in the region, they see TCOs as their primary security challenge. The number one cause of death among citizens ages 15 to 49 years old in Latin America and the Caribbean is violence and more than 60 percent of the world's most crime-stricken cities are in this region.[8]

USSOUTHCOM estimates that there are 200 TCOs and four terrorist groups operating throughout the region. TCOs such as the Sinaloa Cartel and Jalisco New Generation Cartel in Mexico are spreading their reach to the region. The National Liberation Army (ELN), Revolutionary Armed Forces of Colombia—People's Army (FARC-EP), Segunda Marquetalia, and Sendero Luminoso continue to operate along primary cocaine trafficking corridors. First Capital Command (PCC) operates in Brazilian urban streets, the Amazonian jungle, in neighboring Paraguay, Bolivia, and in the United States. In Haiti, gangs control roughly 60 percent of the country, blocking roads for much-needed food and fuel.

TCOs are engaged in a wide variety of illicit activities, including drug smuggling, arms dealing, illegal logging and mining, human trafficking, IUUF, and manufacturing counterfeit goods. They are also invested in numerous legitimate enterprises,

[7] *https://www.nytimes.com/2022/08/09/business/russia-propaganda-spanish-social-media.html*

[8] *https://www.maplecroft.com/insights/analysis/latin-america-hosts-over–60-of-worlds-most-crime-stricken-cities—global-ranking/*

including, but not limited to, commercial banking, manufacturing, agriculture, consumer sales, and real estate. The diverse activities amount to a war chest of roughly $310 billion annually, 5 times the combined military budgets of every nation in Latin America and the Caribbean. TCOs are better funded, equipped, and manned than the security forces trying to fight them and increasingly rely on PRC-connected criminal organizations to launder billions of dollars around the world.[9]

Drug trafficking originating from this region contributes to the deaths of more than 100,000 Americans every year. Interdicting the flow of drugs directly saves lives by removing product from the pipeline. It also reduces TCO revenue. The type of contraband or destination is irrelevant as the money remains in the Western Hemisphere and TCOs use their illicit funds to exacerbate regional corruption, insecurity, and instability. This in turn disrupts legitimate economic opportunity, compromises the rule of law, allows malign State actors the opportunity to make inroads, and drives irregular migration. TCOs victimize migrants, by extorting them, forcing them into human trafficking, and saddling them with debt. The human toll TCOs cause is heartbreaking.

Iran

Iran is focused on rebuilding its economic and diplomatic ties in the region and pursuing opportunities to circumvent United States sanctions. Tehran's intelligence and security activities continue to be a concern and over the past 2 years Iran has increasingly used Venezuela to assert its presence in the region.

Regional Humanitarian Crises

Fragility. The COVID–19 pandemic severely impacted the economies of Latin America and the Caribbean, driving 170 million people into poverty.[10] Countries in the region suffered disproportionately from the pandemic. While accounting for only 8 percent of the world's population, Latin America and the Caribbean suffered nearly 29 percent of the world's COVID–19 deaths. Fragility and instability drive irregular migration and create an environment ripe for corruption and exploitation.

Haiti. In recent years, Haiti has suffered an onslaught of setbacks including corrupt leaders and political assassinations, rampant gang violence, disease, and devastating natural disasters. Violence in Haiti is at its worst level in decades, according to the United Nations, characterized by gender-based violence, homicides, and kidnapping for ransom. Civil unrest, inter-gang fighting, and road blockages hinder commerce and humanitarian access. Today, Haitian citizens are suffering, and its government faces a myriad of challenges to include insecurity, limited governance capacity, and health concerns. The chaos caused more than 69,000 Haitians to seek refuge in the United States in fiscal year 2022.[11]

Nicaragua. President Daniel Ortega's regime continues to detain and prosecute political opponents, even targeting clergy and shutting down hundreds of civil society organizations and independent media outlets.

Since switching diplomatic allegiance from Taiwan to the PRC in December 2021, Nicaragua has engaged with the PRC in bilateral talks for a comprehensive Free Trade Agreement. In September 2022, PRC Foreign Minister Wang Yi met with Nicaraguan Foreign Minister Denis Moncada on the sidelines of the U.N. General Assembly, highlighting that the new bilateral relationship has already yielded "early harvests."[12]

Cuba. President Miguel Diaz-Canel's government continues to repress all Cuban citizens critical of the regime. The government engages in arbitrary detention, including children, and limits access to information and freedom of expression, and incarcerates political dissidents. The Cuban Government's oppressive tactics have forced more than 230,000 Cubans to seek refuge in the United States in fiscal year 2022.[13] In September 2022, Hurricane Ian struck Cuba, devastating homes, causing flooding, and knocking out power to many communities.

Venezuela. The humanitarian crisis caused by the Maduro regime in Venezuela remains one of the most severe in the world. President Nicolas Maduro's regime and security forces continue to target and deny access to critical services to any citizen who speaks out against them. His regime continues to engage in extrajudicial killings, forced disappearances, torture, and prosecution without due process. The

International Criminal Court is currently investigating possible crimes against humanity in Venezuela.

The Maduro regime's oppressive tactics and gross economic mismanagement have caused more than seven million Venezuelans to seek refuge elsewhere, causing instability and deepening challenges for those nations that have welcomed them. United States Customs and Border Protection statistics show that more than 187,000 Venezuelan migrants were encountered at the United States-Mexico border in fiscal year 2022.[14]

Levers: Overcoming Threats and Challenges in the AOR

The pervasive threats and challenges highlighted above pose significant risks to U.S. and regional security interests. We cannot accept such risks so close to home and we confront them by strengthening partnerships, countering threats, and building our team.

Strengthen Partnerships

As the Secretary of Defense said, "you can't surge trust at the eleventh hour; trust is something you have to work on every day."[15] We need to continuously engage our partner nations to build and sustain that trust and be their preferred partner. As we campaign in strategic competition to enable integrated deterrence and build enduring advantages, our engagements, presence, and policies must be flexible, consistent, and responsive to counter malign influence in the region.

The best way to outcompete our adversaries is to help partner democracies deliver for their populations at the speed of relevance. We achieve this by improving partner nation capability, capacity, and resilience through security cooperation, exercises, and training programs while upholding democratic values to ensure malign influence and autocratic alternatives do not further take root in this region.

The main priority in our USSOUTHCOM Campaign Plan is to expose and mitigate PRC malign activity. Ultimately, strategic competition with the PRC is an ideological one between democracy and authoritarianism. Presently, the majority of nations in the Western Hemisphere are democracies, and 8 of the 14 nations that still recognize Taiwan are located in USSOUTHCOM's AOR. Beijing is seeking to reduce that number and increase influence throughout the region while putting the defense of the United States Homeland at risk.

Security Cooperation. Building Partner Capacity (BPC) programs are my main lever for engaging partners in this posture-limited theater. These programs allow us to be on the field and engaged, to strengthen our partnerships, and develop military capabilities to counter a broad spectrum of threats and challenges. From high-end technical training that keeps partner intelligence, surveillance, and reconnaissance (ISR) assets in the air, to building institutional capacity that develops logistics and lifecycle management disciplines, to professional military education, we are developing trust and interpersonal linkages. USSOUTHCOM's BPC programs aim to make our partners resilient to the adversaries operating in this hemisphere.

Our embedded Ministry of Defense Advisors and field service representatives within partner nation security ministries, such as those in Colombia, support modernization and innovation efforts in such areas as personnel, defense intelligence, and doctrine development to help our partners meet threats to their national security.

The United States Colombia Action Plan enables Colombia to provide training and readiness directly to several countries, including Panama, Honduras, El Salvador, Costa Rica, the Dominican Republic, Ecuador, and Paraguay in Spanish, and at a fraction of the cost of United States-provided training. We really appreciate congressional support of this program.

These security cooperation programs offer a huge return on investment as they build trust and enhance capabilities and security throughout the region—a little goes a long way here.

Department of State Security Assistance. State security assistance programs increase interoperability with our partners while meeting their individual security requirements. Foreign Military Sales (FMS), Foreign Military Financing (FMF), and Excess Defense Articles (EDA) programs produce an exponential return in this AOR. Brazil recently made an FMS purchase of $15.8 million of 12 Joint Light Tactical Vehicles as part of the Brazilian Marine Corps modernization plan, strengthening its ability to counter threats and enhancing interoperability with United States Forces. The former United States Coast Guard cutters Albacore, Cochito, and Gan-

[14] *https://www.cbp.gov/newsroom/stats/nationwide-encounters*

[15] Secretary of Defense Lloyd Austin, speech to United States and NATO troops in Bulgaria, 18 March 2022.

net were delivered to Uruguay on November 12, 2022. These ships greatly enhance the maritime security of Uruguay and demonstrate that the United States is the preferred partner in the region. The Colombian Army received 86 armored vehicles in 2022 via the EDA program, giving Colombia a more modern capability to counter threats facing the country.

USSOUTHCOM executes State's International Military Training and Education (IMET) program that provides professional military education to personnel from 28 countries in the region. In 2022, USSOUTHCOM countries were allocated $13.9 million for the IMET program. On average, this allocation provides professional military education for approximately 800 international students in United States schools. The IMET program is one of USSOUTHCOM's strongest levers for countering the PRC and other malign actors in the region by acquainting international students with democratic ideals and professional military doctrine. Partner nation personnel who attend these schools often go on to become senior military leaders in their countries. The relationships built at these schools last a lifetime.

Joint Exercise Program. Our Joint Exercise Program continues to provide an outsized return on investment not only in building readiness, but also in strengthening partnerships that allow us to counter malign influence. In 2022 we had over 11,000 participants from 34 nations take part in our exercises, demonstrating once again that the United States has the convening power to bring nations together. These complex training events were multi-domain in nature and provided us year-long engagement opportunities across the AOR, to include engagements with key leaders.

USSOUTHCOM's exercise program in the counter-TCO realm also brings together the Drug Enforcement Administration, the Federal Bureau of Investigation, the Bureau of Alcohol, Tobacco, Firearms and Explosives, the Department of State, and Department of Homeland Security (including the U.S. Coast Guard), along with partner nation and allied military forces to enhance readiness, interoperability, and domain awareness, and to increase intelligence and information sharing.

Additionally, our exercises include training on human rights and on Women, Peace, and Security, which helps to enhance professionalism and advance democratic principles.

USNS Comfort. The USNS *Comfort* hospital ship deployed to five countries in the region from October to December 2022—Guatemala, Honduras, Colombia, the Dominican Republic, and Haiti—taking part in a humanitarian assistance, readiness building, and goodwill mission. The USNS *Comfort's* crew included military and civilian personnel as well as personnel from non-governmental organizations and partner nation militaries. Since its inception in 2007, the Continuing Promise mission has treated more than 580,000 patients overall and conducted over 7,000 surgeries. The USNS *Comfort* mission to the USSOUTHCOM AOR historically lasts approximately 159 days, but even during this year's reduced mission of 52 days, the *Comfort* managed to treat over 30,000 patients, conduct 350 surgeries, and positively impact 100,000 people with its outreach activities. This tremendous soft power asset will have lasting effects not just on the individuals who were treated, but also on the entire region.

Operation Health Engagement Assistance Response Team (HEART). During Operation HEART, a team of 34 medical professionals and 17 support personnel conducted orthopedic, ophthalmology, and dental surgeries in Guatemala and Honduras. In just 56 days, Operation HEART treated 993 patients and conducted a knowledge exchange with medical residents and doctors from Honduras, Guatemala, Nicaragua, Costa Rica, and El Salvador.

Key Leader Engagements. Since I last addressed this Committee, I have visited 13 countries and conducted over 90 key leader engagements with ministers and chiefs of defense. Increasingly, I have also met with heads of State and vice presidents as the appetite grows amongst our partners to engage at senior levels with the United States. To date, I have engaged eight presidents, three vice presidents, and two prime ministers, and I have a full calendar of engagements planned throughout 2023. Establishing and cultivating these relationships is vital and we must step up our presence in the region to maintain relevance. Relationships absolutely matter, and our partner democracies are desperate for assistance from the United States, but if we're not there in time, they have no choice but to take what's available, creating opportunities for the PRC to expand its influence. Just like with the COVID–19 vaccine, they wanted a United States vaccine, but some partner na-

tions had to take the Chinese Sinopharm or Russian Sputnik vaccines at 50–60 percent effectiveness because we weren't there with our Pfizer or Moderna vaccine.[16] [17]

U.S. Army Corps of Engineers. Infrastructure is one of our partners' critical needs, and the PRC is leveraging that need to achieve influence overmatch in the region. We need to step up with much greater responsiveness in our processes if we want to address our partner nation requirements and outcompete the PRC in this domain. The U.S. Army Corps of Engineers (USACE) works with USSOUTHCOM and partner nations to advance security, preserve environmental sustainability and climate resiliency, and protect at-risk indigenous populations. USACE is providing technical support to the Panama Canal Authority to help ensure the canal operates successfully for the next 50 years. It also supports Ecuador to mitigate the negative effects of a substandard PRC construction project at the Coca Coda Dam. In January 2023, at the request of the embassy and the government of the Dominican Republic, USACE assigned a subject-matter expert embedded within the Dominican Republic's Agency of Mines and Minerals to assist with developing efforts to preserve rare earth materials.

From a defense and security cooperation perspective, USACE's recent agreement with the Peruvian Navy to build out Peru's port facilities, and its continued construction efforts on Tolemaida Air Base in Colombia, facilitating the development of the largest rotary wing training and maintenance facilities in the region, will increase our partners' capacity to counter TCOs in the region.

State Partnership Program. Through the State Partnership Program (SPP), the National Guard continues to develop relationships with our partner nations. Eighteen United States states, Puerto Rico and the District of Columbia have active partnerships with defense and security forces from 30 nations in the Caribbean, Central America, and South America. By providing long-term and consistent support and building trust and teamwork, National Guard servicemembers give us the presence on the field that is so critical. For example, this year, the South Dakota National Guard worked with its partner Suriname to renovate a school for 450 children and provide medical and dental care to three separate rural and underserved communities, impacting approximately 2,500 civilians. This year, the Regional Security System (RSS), consisting of seven Eastern Caribbean nations, conducted 25 events across the RSS and in the continental United States.

SPP's success is enhanced through National Guard participation in partner nation exercises like those in Brazil and Colombia. The National Guard also provided medical servicemembers from Puerto Rico, Louisiana, Arkansas, and South Carolina to our successful Continuing Promise operations through the USNS *Comfort* deployment.

Humanitarian Assistance and Disaster Response (HA/DR). Latin America and the Caribbean are susceptible to hurricanes, earthquakes, droughts, and other extreme natural disasters. The United States is there with assistance before, during, and after disaster strikes. USSOUTHCOM engages our partner nations regularly, encouraging and assisting them to take positive steps toward disaster risk reduction, mitigation, preparedness, and resiliency. Several of our annual exercises, including TRADEWINDS and CENTAM GUARDIAN, have a HA/DR component to help build resiliency and readiness related to climate change and natural disaster response.

A recent example of our support is our response to Haiti's widening political and humanitarian crises. Supporting a whole-of-government effort led by the U.S. Agency for International Development and the State Department, USSOUTHCOM delivered thousands of gallons of much-needed fuel and 300,000 cholera treatment packets to Haiti. This operation relieved strain on the local healthcare system and enabled the U.S. Embassy to remain open to facilitate life-saving assistance.

Humanitarian assistance activities also address basic needs of the population and build partner capacity to maintain a healthy population. Activities emphasize public health capacity building, such as improving medical facilities, disease surveillance systems, and providing basic medical equipment, education, prevention, and training. Basic infrastructure activities focus on building partner capacity to provide essential services, like potable water. Finally, we recently joined with 12 other countries to identify logistics processes, procedures, and protocols that are required to improve the military logistics support to HA/DR activities in the Western Hemisphere.

Confronting Climate Change. This is one of the regions most impacted by climate change. Hurricanes, rising sea levels, flooding, and drought are causing grave harm

---

[16] *https://apnews.com/article/china-gao-fu-vaccines-offer-low-protection-coronavirus-675bcb6b5710c7329823148ffbff6ef9*

[17] *https://absolutelymaybe.plos.org/2022/04/20/did-we-ever-find-out-how-effective-sputnik-v-vaccine-actually is/*

to the region's health, food, water, energy, and socioeconomic development. Extreme weather events impact our partners' national security, displacing populations and increasing irregular migration already accelerated by TCOs and insecurity.

These calamities know no borders. In 2022, Hurricane Fiona slammed into the Dominican Republic and Puerto Rico, Hurricane Ian ravaged western Florida and Cuba, and Hurricane Julia caused landslides and wiped-out crops in Central America. To help address threats from climate change and support humanitarian assistance, USSOUTHCOM works to strengthen our partners nations' ability to address more demanding disaster response roles, mitigate the effects from climate change, protect the environment, and enable the transition to clean energy through subject-matter expert exchanges and by incorporating energy security scenarios in exercises. Successfully confronting this complex issue requires a true integrated approach. For example, USSOUTHCOM partners with the Pacific Disaster Center in Hawaii to facilitate disaster response training and conduct National Disaster Preparedness Baseline Assessments with our partner nations. These assessments promote a multi-agency approach to disaster risk reduction and national disaster preparedness, in collaboration with partner nations' national disaster management agencies.

Countering Threats

Countering PRC malign efforts. In alignment with the 2022 National Defense Strategy's integrated deterrence approach, we strive to use all levers through campaigning to deny the PRC the perceived benefits of aggression. USSOUTHCOM leverages the expertise of the Executive branch, to include the Departments of State and Commerce, to improve partner nations' knowledge of effective legal frameworks to develop reliable and secure telecommunication infrastructure and cyber resilience, while highlighting state-of-the-art substantive alternatives to counter PRC state-owned enterprise expansion in the region.

By methodically identifying and synchronizing separate initiatives, from building cyber capability to exposing PRC malign activities, we can strengthen critical infrastructure to improve our collective ability to operate in the face of multi-domain threats posed by the PRC. Information sharing with our partners on the malign activities of the PRC in other nations and regions that have undercut sovereignty is critical to ensuring our partners can make informed decisions on their engagements with the PRC. However, information sharing alone is insufficient. Collectively, in a whole-of-nation integrated approach, we must also provide viable alternatives for partnerships and offer significantly more incentives through campaigning for critical infrastructure investment and port development in the region.

While the PRC consistently works to expand its network of military space infrastructure across the AOR, we are focused on strengthening relationships with our allies and partners through sustained engagement and investment with what we currently have, including by assisting our partners to build capability to conduct space operations to meet their needs. By focusing on strengthening relations, the United States demonstrates what a true partner looks like, which stands in stark contrast to the transactional nature of PRC engagements. This strategy, coupled with continued exposure of the military purpose of the PRC's scientific or academic space sites in the region, may slow and possibly reverse the expansion of the PRC's space network in our neighborhood.

Illegal, Unregulated, Unreported Fishing. IUUF is another area where we must leverage diverse capabilities and authorities. We have teamed up with the Department of State, partner nation stakeholders, the private sector, civil society, international organizations, and an interagency team of U.S. Government experts to confront this issue head on. The U.S. Coast Guard is conducting various IUUF missions in the AOR, and USSOUTHCOM has four ongoing IUUF initiatives that are complementary in nature.

Enhanced Domain Awareness is a secure, unclassified, virtual environment where USSOUTHCOM, interagency, and foreign partners can leverage commercially and publicly available information and analytics. This allows us to collaborate on diverse security challenges including strategic competition and IUUF as well as issues like migration, human trafficking, and illegal mining.

USSOUTHCOM has signed a memorandum of understanding with Global Fishing Watch and has a longstanding relationship with Florida International University through which we partnered to create the Security Research Hub—a virtual research community that brings together the United States, partner nations, academic institutions, civil society, and the private sector to foster shared understanding of the most pervasive security issues, to include IUUF.

USSOUTHCOM is also exploring areas of cooperation and opportunities to provide technical assistance and support to the Eastern Tropical Pacific Marine Cor-

ridor, a voluntary regional cooperation mechanism created by the coastal states of Ecuador, Costa Rica, Colombia, and Panama.

Finally, working with 14 partner nations and the National Maritime Intelligence-Integration Office, U.S. Navy South leads the way for an intergovernmental approach to information-sharing efforts. When fully implemented, they will collectively foster timely, actionable information sharing, multifunctional collaboration, and multinational trust. This collaboration will illuminate nefarious actors negatively impacting our partner nations' economies and populations.

Countering Russian malign influence. USSOUTHCOM is postured to compete with Russia through the coordination and application of information-related capabilities. While Russia may seem distant, its presence and influence is felt in our hemisphere, actively undermining the security and stability of our partner nations. Our multifaceted approach aims to bolster partner efforts and expose malign activities, with the goal of blunting Russian exploitation in the information environment.

Our partners are inclined to support efforts that impose costs on Russia. Some are willing to exchange their Soviet-era equipment for NATO-interoperable, United States-made equipment. However, as our partners agree to support efforts against Russia, the United States must have responsive mechanisms in place to rapidly provide replacement assets to maintain partner nation readiness—if not done right, we could lose this opportunity.

Cyber. Cyber is an all-encompassing domain capable of affecting every sector of society, not just defense. USSOUTHCOM partners with other U.S. agencies and organizations such as the Departments of State, Commerce, Homeland Security, and Justice along with U.S. Cyber Command, our National Guard SPP teammates, and the U.S. Coast Guard, to deliver the right support at the right time to assist our partners with their cyber-related challenges.

Through our cyberspace advise and assist efforts, including subject-matter expert exchanges and leveraging the expertise of our Joint Combatant Command Cyber Assistance Teams, we support our partners' efforts to advance their defensive cyber capabilities and develop cyber resiliency. These programs are enablers that help our partners tactically defend against the threats posed by Russia and its proxies in the cyber domain. However, with the significant increase in nation-State cyber attacks and hacktivist attacks in the region, our partner nations are struggling to protect their citizens in the cyber domain, and we are in a race to help them protect their cyber assets before they choose competitor solutions. [18]

Competing in the Information Space. Additionally, our information operations team shapes pro-U.S., pro-democracy narratives, counters disinformation by promoting fact-based information, and works aggressively to reduce U.S. adversary influence in the information environment. This team highlights democratic ideals such as respecting human rights and protecting the rule of law. This capability is postured to provide accurate, timely, and valid information to support reasonable decisionmaking, resulting in better outcomes and ultimately decreasing the effectiveness of propaganda.

Agile Processes. To outcompete our adversaries and win through campaigning, we need to be agile and support our partners at the speed of relevance. While we are committed to transparent processes, we must be faster and more innovative to outcompete our adversaries. Right now, our partner nations are quickly losing confidence in the U.S.'s ability to deliver capability. At a recent event when I spoke about what I call "Team Democracy," a term I use to describe integrated deterrence and working together to counter adversary malign activity, a head of state responded that there aren't very many on "Team Democracy" anymore, citing multiple examples of countries turning away from democracy because the U.S. overpromises and underdelivers. FMF, FMS, and Security Cooperation are great levers that can make huge inroads in the AOR when delivered at the speed of relevance for our partners. However, these programs are only as good as the processes by which we execute them. While a little goes a long way in this AOR, we need to do better to support and react at the speed of need, armed with the capabilities our partners can implement quickly and sustain for the long term. When we don't support our partners at the speed of need, our competitors willingly fill the gap.

To help improve processes, the Office of the Under Secretary of Defense for Policy has established two working groups to break down barriers to our success. The Campaigning in the Western Hemisphere Group brings together entities within the Department of Defense that play a role in building partner capacity, and the Defense Opportunities Group convenes interagency partners that have a stake in a stable and secure Western Hemisphere. We aspire to quickly gain efficiencies across

[18] *https://www.recordedfuture.com/latin-american-governments-targeted-by-ransomware*

the U.S. Government so we may apply all levers of national power in this vital strategic competition.

Countering TCOs. Our Joint Interagency Task Force-South (JIATF-S) conducts the statutorily directed mission to detect and monitor illicit drugs transiting toward the United States in the maritime and air domains, delivering a high return on modest investments. In fiscal year 2022, JIATF-South facilitated the disruption of 371 illegal smuggling events, including a total of almost 300 metric tons of cocaine and over 140,000 pounds of marijuana, with a combined wholesale value of $7.5 billion and saving an estimated 2,976 American lives. In addition to saving U.S. lives and reducing TCO revenue, JIATF-South-facilitated drug trafficking disruptions produce evidence in the form of contraband, detainees, and other information. Our interagency and international law enforcement partners use this evidence, to help affect judicial end states that degrade and dismantle TCOs.

I want to highlight our international partners' participation in these operations, as they are key to overall mission success. Our international partners participated in 76 percent of the JIATF-South-facilitated disruptions (up from 62 percent last year) and were responsible for removing 475,000 kilograms of transit zone cocaine headed toward the United States. This is a testament to their commitment to support this regional effort and build their capability and capacity.

United States-led, multinational counternarcotics operations ultimately result in our international partners taking the lead on their own operations, as Colombia does via their Operation Orion. Colombia executed two iterations of Orion in 2022, leading a coalition of 41 countries, resulting in the disruption of more than 180,000 kilograms of cocaine and seizing dozens of conveyances. This is an excellent example of integrated deterrence return on investment—gained by combining willing and able international partners with a committed U.S. presence in the Western Hemisphere. Each of these operations was only successful because of the United States investment to train and equip our Colombian military and security partners.

Notwithstanding our significant achievements over the decades in this mission space, there is still more to do. As U.S. resources against this threat decline, we will continue to innovate—both in strategy, like re-examining current authorities, and unconventional resourcing, like contract assets, commercial data, and artificial intelligence and machine learning.

Combating Money Laundering. Systemic political corruption and lack of strong anti-money laundering policies make the region a permissive environment for illicit financial activity. USSOUTHCOM continues to identify TCO financial support networks, providing direct analytic support to U.S. Treasury Department and other interagency partners that facilitate sanctions, arrests, and prosecutions against TCOs. Recently, USSOUTHCOM supported Treasury's designation of Ecuadorian national Wilmer Emilio Sanchez Farfan, one of the most significant drug traffickers in the world and a major cocaine supplier to the Sinaloa cartel.[19] While continued disruptions of illicit drug movements toward the United States remain critical, to truly disrupt these billion-dollar conglomerates, we must also support interagency efforts to follow the money.

Coast Guard Support. The U.S. Coast Guard is one of USSOUTHCOM's strongest partners, with its National Security Cutters and Fast Response Cutters providing the bulk of our counterdrug forces. U.S. Coast Guard assets enhance operations with unique capabilities and authorities which, when used in conjunction with the U.S. Navy and partner nation platforms, maximize the effectiveness of a variety of missions. The Coast Guard is executing its largest fleet recapitalization since World War II. These recapitalization efforts will provide capabilities that support three USSOUTHCOM strategic initiatives: enhancing Theater Security Cooperation, countering IUUF, and combating TCOs. Additionally, the Coast Guard provides valuable humanitarian mission support across the region, saving lives and delivering much-needed aid when natural disasters suddenly strike the region.

Building our Team—People First

Housing. Our servicemembers and families are our strength and foundation. While having our headquarters and two subordinate commands in South Florida offers a great synergy with our AOR, our team faces extraordinary pressures with the expensive, competitive, and volatile housing market. In September 2022, Secretary Austin announced immediate and long-term actions to help strengthen the economic security and stability of servicemembers and their families. We benefited with automatic increases in the Basic Allowance for Housing (BAH) for the Miami-Dade and Broward County areas that have carried forward in the calendar year 2023 BAH rates. We are seeking similar relief for the Key West area. We are also continuing

[19] *https://home.treasury.gov/news/press-releases/jy0592*

our work with the Department of the Army and the Office of the Secretary of Defense (OSD) on a housing solution to address servicemember concerns about cost and availability of housing in the Miami area.

JIATF-South Resiliency. JIATF-South is currently operating out of 70-year-old facilities that are severely degraded. We received full fiscal year 2023 planning and design funding to complete the design for a new command and control facility. We appreciate this continued support as we look to finalize the design and request the military construction funding to construct a resilient facility for this critical mission for the Nation.

Women, Peace and Security (WPS). At USSOUTHCOM, we deliberately integrate gender perspectives throughout all ranks into our operations, activities, and investments, exemplifying a truly diverse joint force and encouraging our partner nations to do the same. Our main objective is to maximize the talents of the force through recruitment, retention, training, and advancement. We also highly encourage partner nation leaders to increase their numbers of women who participate in IMET and other special programs. We are seeing results. In August 2022, the Florida National Guard and Guyana's Defense Force hosted the first Caribbean Regional WPS conference with leadership from 12 partner nations—including Guyana's First Lady Arya Ali and the AOR's first female Chief of Defense, Jamaica's Staff Rear Admiral Antonette Wemyss-Gorman, advocating for gender inclusivity and advancing regional influence in ways that our adversaries cannot. In September 2022, Colombia appointed its first female Senior Enlisted Leader of the Colombian Military Services, Command Sergeant Major Consuelo Diaz Alvarez, and in October 2022, for the first time in its history, the Colombian Navy promoted two female Navy Captains, Beatriz Helena Garcia Restrepo and Carolina Gomez de Castillo, to the rank of Rear Admiral. Although much work remains, these are just a few of the examples that demonstrate USSOUTHCOM and its partners' commitment to provide opportunities for women to become leaders in the defense and security sectors.

Total Force. The United States military is the most powerful in the world, and USSOUTHCOM leverages all available personnel, making us flexible and agile to counter any challenges we may face. Of the servicemembers at USSOUTHCOM, up to 20 percent at any given time are Guard or Reserve members conducting operations in more than 20 locations throughout the AOR.

One such total force mission has been ongoing for a decade. Since 2003, Air National Guard Airmen have supported JIATF-South's detection and monitoring mission through the Host Nation Rider Program. This program provides technical language support and translation/interpretation that has been instrumental in achieving successful detection and monitoring of air operations within the AOR. In fiscal year 2022, this program was involved in the seizure of over 49,000 kilograms of cocaine, 24,000 pounds of marijuana, and the apprehension of 154 detainees.

The Reserve component is a force multiplier used in a cyclic manner to provide predictability, operational capability, and as a strategic force, providing depth to support a full spectrum of conflicts. Guard and Reserve support is critical to USSOUTHCOM's mission continuity and success.

What Resources Does USSOUTHCOM Need?

In this region, a small investment—whether in time, physical resources, funding, or collaboration—goes a long way. We don't have to outspend the PRC to outcompete, but we must be present on the field and deliver at the speed of relevance. This requires having a timely budget—continuing resolutions are disruptive to United States and partner nation efforts to defend against threats. If we don't, China and Russia will fill the void.

Security Cooperation is our main tool for building the capability of our very willing partners. These partners take our small investments and immediately employ them against the threats and challenges that affect our entire hemisphere. Our partner nations are a force multiplier in a posture-limited theater. The support Congress provided for the fiscal year 2023 budget toward making our partners more capable makes us all stronger. We look forward to putting those funds to good use to support both our fiscal year 2023 and fiscal year 2024 programs for security cooperation in our region.

Security Assistance goes hand-in-hand with security cooperation. The security assistance we provide to countries like Colombia, Ecuador, and Panama is a game-changer for our partners who are working every day to counter illicit trafficking, address irregular migration, and secure our region. However, in contrast, Honduras, Guatemala, and El Salvador are currently not eligible for FMF. We will work with the Department of State to consider tailored solutions to advance regional policy goals.

Domain Awareness is key to countering PRC, Russia, and TCO malign activities that threaten hemispheric security, as well as assisting our partners during disaster relief. Air, maritime, land, space, and cyber domain awareness projects in the region fill debilitating coverage gaps and enable our partners to counter drug smuggling, IUUF, money laundering, human smuggling, weapons trafficking, and illegal trade in natural resources. These projects reveal shared problems, illuminate opportunities, foster enhanced collaboration, and enable us to export security regionally. The ability to sense, make sense, and share data with our partners is critical. Maintaining a comprehensive threat picture with our allies and partners through our Enhanced Domain Awareness platform enables us to react quickly to threats and to collaborate in real time as we engage in combined operations and activities. Critical to building this shared picture is commercial imagery, open-source intelligence, and off-the-shelf bulk data analytics that allow us to harness this data in the public and commercial space to address critical gaps.

Aerial ISR is also paramount to maintaining domain awareness. To stay ahead of the growing pernicious threats that State and non-State actors pose, we require long-range, long-dwell, next-generation aerial ISR, such as solar-powered aircraft with a greater range and time over target. Aerial ISR aircraft have been critical to our ability to detect and deliver actionable information to other U.S. agencies and partner nations that enable their counternarcotics and counter-TCO operations. In fiscal year 2022, information provided by airborne ISR assets operating overland accounted for the seizure of 322 metric tons of cocaine and deprived TCOs of over $9 billion in profits. To further enhance our ability to enable counternarcotics and counter-TCO operations, we are pursuing ISR technologies with a greater ability to detect active drug production laboratories. When deployed, this capability will allow us to collect over a four times larger area with twice the sensor resolution of any comparable platform in the U.S. Government's inventory.

The National Geospatial-Intelligence Agency (NGA) also remains a key intelligence provider in meeting U.S. Southern Command's priorities. Warning decision-makers of the breadth and depth of challenges in the Western Hemisphere requires geospatial analysis at speed and scale. We appreciate Congress's continued support for NGA's budget request and for their personnel supporting the Combatant Commands.and scale. We appreciate Congress's continued support for NGA's budget request and for their personnel supporting the Combatant Commands.

Innovation, Science, and Technology. Today we face a more level playing field in technology, and we need to rapidly adjust how fast we get technology to the warfighter to maintain dominance and confound the adversary. The USSOUTHCOM AOR provides a permissive environment that has a high tolerance for technology experimentation, willing partners, and diverse climates and geography, all close to the U.S. Homeland. This affords us great opportunities to conduct innovative activities with our partners that help gain and maintain a strategic advantage over the PRC, Russia, and other malign actors.

We take every opportunity to capitalize on these benefits. We are developing green energy capabilities, working on the first unmanned persistent solar-powered aircraft with a 300-pound payload, creating small-scale autonomous low-profile vessels, and developing laser communications systems with a low probability of detection and faster speeds than conventional solutions on the market.

A good example of this innovation is our collaboration with the Office of Naval Research, which has designed an experimentation series known as SCOUT. SCOUT's inaugural cycle automates antiquated processes and places capabilities into warfighters' hands faster. The SCOUT team, comprised of warfighters, engineers, academia, and industry partners, executes small-scale, discovery-focused events that provide multiple opportunities to test and measure technologies. This year we will conduct our first main event in JIATF-South to integrate prototype solutions focused on enhancing counternarcotics operations.

Information Related Capabilities. To compete in the information environment, USSOUTHCOM needs an adequate force structure with the requisite skills to counter the overwhelming threat from malign State actors in the information domain. Our adversaries are dedicating significant effort and resources with unrestrictive policies to undermine democracy in this region. We must do better to keep pace with them and outcompete them.

NAVSCIATTS. While considering modern warfare, we tend to focus on five domains: the high seas, inland regions, air, space, and cyber. However, littorals and rivers are the lifeblood of maritime commerce, large population centers, and bustling seaports for most of the 31 LAC countries. Ensuring security in these vital areas is essential to good governance, economic growth, and long-term prosperity. Malign State and non-State actors know the significance of littorals and rivers and routinely use them to transport bulk currency and illegal drugs, smuggle people and

a vast array of illicit commodities, and enable illegal mining and logging activities that imperil the environment.

We appreciate the support Congress offered last year for the Naval Small Craft Instruction and Technical Training School (NAVSCIATTS) in Stennis, Mississippi. The maritime training and education programs at NAVSCIATTS generate outsized return on investment, providing invaluable opportunities to military and law enforcement personnel from the United States and our allies and partners, most of whom operate smaller craft. Expertise shared at NAVSCIATTS generates reciprocal trust, shared knowledge and understanding, collaboration, and multifaceted technical skills that enable integrated deterrence against the PRC and other malign actors. They also reduce environmental damage and protect natural resources.

Ambassadors. We truly appreciate Congress's efforts to confirm additional Ambassadors in the Western Hemisphere last year. Having a confirmed Ambassador in country is critical to maintaining strong relationships and, conversely, not having one in place can have a detrimental effect and opens the door to our adversaries in the region. We look forward to Congress's continued support in the effort to strengthen diplomatic ties in our neighborhood.

Conclusion

The defense of the United States Homeland is directly linked to the resilience, stability, and security of the Latin America and Caribbean region. Proximity places us on the frontline of strategic competition, as we share transboundary challenges and global threats. This requires the USSOUTHCOM team to be a trusted partner and pursue efforts that meet our partners where they are, maximizing our efforts where their priorities align with our own national interests. Meeting these challenges requires campaigning through an integrated approach to utilize all available levers across the DOD, U.S. interagency, Allies and Partner Nations to establish the desired conditions of security, peace, and prosperity throughout our neighborhood.

Chairman REED. Thank you very much, General Richardson.

General VanHerck, as you know, Congress is considering disposing of the S-band or auctioning parts of it to the commercial sector. I want to personally commend Senator Rounds and Senator King for the very effective work they have done in making sure the military and the Department of Defense has an opportunity to look at this.

But this is a spectrum in which your early warning system is there, your missile defense system, the Aegis system, which you use for defense. Could you tell the Committee what the impact of curtailing, selling, or compromising this spectrum would have on your operations?

General VANHERCK. Chairman, absolutely. I am concerned about the potential national security impacts of auctioning or selling off that spectrum. It is my assessment there will be impacts, as you pointed out, to our domain awareness capabilities. What I think is good is a study that we understand the national security impacts before we make any decisions on auctioning or selling off any spectrum.

Chairman REED. Thank you, sir. I understand there is a study ongoing with the support of the Secretary of Defense and the Secretary of Commerce. Are you participating in that?

General VANHERCK. I have not been asked to participate directly in that. I would welcome the opportunity to discuss impacts to homeland defense.

Chairman REED. Thank you very much, sir.

General Richardson, you have indicated the growing competition with China and Russia in South America and Central America. China is using economic leverage at ports and other infrastructure. They are trying to introduce 5G telecommunications. They have set up a network of space tracking stations which are probably doing

more than space tracking. Russia is acting through proxies like Venezuela, Nicaragua, and Cuba, and as you pointed out and which I think comes as an interesting surprise to many of us, institutional investors very active with the media, with Sputnik Mundo and RT en Espãnol.

Do you have the resources to counter these efforts?

General RICHARDSON. Thank you, Senator. I could use additional resources in order to counter. We can do a lot more in this region and a little goes a long way with our partners. This region is fraught with critical infrastructure by the PRC that has been invested in. As you aid, Senator, the deepwater ports, space, telecommunications, Safe City/Smart City, which is really surveillance of the populations, and things like that.

So with the disinformation, I mean, we play by the rules. We have rules to follow. We have the rule of law that we follow in the United States, and our adversaries do not follow any laws, and they do not play by the rules. So the answer is yes, Senator.

Chairman REED. One of the areas that I think you are probably deficient in is ISR, and that requires additional equipment and also might be an opportunity to test autonomous vehicles. Is that something that you are suggesting to the leadership?

General RICHARDSON. Absolutely. This region and in the SOUTHCOM AOR, where our adversaries might not be watching so closely, is to be able to test in a real-world mission the innovation, the technology, and things like that. We work with our partners. They are very much involved with wanting to advance their ability to see and have domain awareness, just like us at SOUTHCOM.

If we can see more and spot this malign activity, expose the malign activity, we are able to better counteract the adversaries and that malign activity in the region.

Chairman REED. Thank you.

General VanHerck, the threats to the Homeland have changed dramatically and suddenly. The models we used, the systems we used in the cold war, and in the interim between the cold war and the present situation, do not seem to be applicable, with hypersonics, with long-range precision cruise missiles, with a host of different threats to the United States. You are looking at sort of the assumptions and the plans that we have had and tried to reconstruct for this new threat, new world.

How are we doing in terms of getting a new plan in place and also new weapon systems? You commented that one of our problems is speed, and that is a function of not only getting new equipment in place but putting aside legacy equipment. Can you just comment, General, on those points?

General VANHERCK. Chairman, yes. So after 2 years I got policy on what to defend. I cannot go into that in this forum. But the task that came back to me was to develop a plan on that defense-critical infrastructure. It is inside the Department of Defense critical infrastructure. I have provided that back to the Department on what I recommend.

Where we are now is further assessment on my recommendations. I provided a list of options from the status quo to also including future types of systems. I think the future of homeland defense

is vastly different than what we see today. It is likely including autonomous platforms, airborne and maritime platforms, unmanned platforms with domain awareness sensors, and effectors that are kinetic and non-kinetic.

We also need to take those over-the-horizon radar capabilities that I discussed and take that data and information and fuse it into an integrated picture, a globally integrated picture that allows us to see, globally, threats before they become threats here in the Homeland, and tie that to an integrated air and missile defense system and also into effectors, which are non-kinetic and also kinetic.

I see the future likely being much less kinetic. There will be some areas that we should defend kinetically that could bring us to our knees, but also non-kinetic such as deception, denial, and the use of the electromagnetic spectrum.

Finally, that policy needs to expand beyond defense. Those discussions are ongoing within the Department and the interagency and the Security Council, and I look forward to hearing back on that.

What I would just point out—sorry my time is up—but much of the critical infrastructure that I defend, and to ensure that we power project from the Homeland, is not solely held inside the Department or even Federal entities. It relies on commercial entities, states, municipalities, and we need to ensure that is part of the discussion.

Chairman REED. Thank you, sir.

Senator Wicker, please.

Senator WICKER. Thank you, Mr. Chairman.

First of all I have a unanimous consent request. I mentioned in my opening statement that Senator Rubio and I sent a letter to the Secretary of Defense and received a very dismissive, non-answer from Under Secretary Colin Kahl. I would like to ask unanimous consent to insert those two letters into the record at this point.

Chairman REED. Without objection, so ordered.

[The information referred to follows:]

United States Senate

WASHINGTON, DC 20510-0908

February 8, 2023

The Honorable Lloyd Austin
Secretary
U.S. Department of Defense
1000 Defense Pentagon
Washington, D.C. 20301

The Honorable Avril Haines
Director
Office of the Director of National Intelligence
1500 Tysons McLean Drive
McLean, VA 22102

Dear Secretary Austin and Director Haines:

Since it became public knowledge on Thursday, February 2, that a high-altitude Chinese surveillance balloon was traversing our nation, the Senate Armed Services Committee and Senate Select Committee on Intelligence have requested information on the timeline of events and the Biden Administration's response to this serious matter.

We are grateful to our men and women in uniform and our intelligence community who did their duty at the tactical level. However, there are a number of outstanding questions about what happened and why the Administration allowed an adversarial intelligence platform to move from Alaska to the Carolinas uninterrupted. We also lack a clear understanding of our senior national security leaders' response to the Chinese surveillance balloon's trajectory from first detection to January 28, when the Commander of U.S. Northern Command and NORAD Gen. Glen VanHerck notified his chain of command of the balloon, and until February 1, when President Biden finally ordered the Department to shoot down the balloon over water.

The appropriate Congressional committees need to understand better what President Biden and other senior officials knew about the Chinese surveillance balloon, when they knew it, what options were presented at different points in time, and why our government did not take action sooner. This incident is only the latest in a series of increasingly brazen violations of our nation's sovereignty by the Chinese Communist Party. It is also hard to separate Beijing's intent to conduct new forms of reconnaissance over our most important nuclear weapons sites from the recent news that Chinese ground-based nuclear launchers now outnumber ours.

We are also requesting an explanation of why the Department of Defense has failed repeatedly to propose relevant investments to enhance air domain awareness capabilities for Northern Command – especially in the Alaska air defense identification zone – in its budget requests. We want to know what opportunities exist for Congress and the Department of Defense to partner in accelerating such investments.

Finally, in light of the Biden Administration's recent acknowledgement of previous Chinese surveillance balloons that have entered U.S. airspace, we need to understand whether the Administration had developed any options to counter this threat prior to the latest balloon and what changes to air defense procedures may be necessary. We also need to understand why the Administration chose to disclose intelligence publicly during this incident in a manner that

served no public warning purpose and generated a climate of partisan recrimination that placed our intelligence agencies at the center of it.

It is of paramount importance that we receive a full accounting for these questions. We respectfully request answers, in a classified form if necessary, to the questions in the attached document by February 17.

Thank you for your attention to this urgent matter.

Sincerely,

Roger Wicker
U.S. Senator

Marco Rubio
U.S. Senator

Questions

NORTHCOM has indicated that Gen. VanHerck notified the Secretary of Defense and the Chairman of the Joint Chiefs of Staff of the high-altitude Chinese surveillance balloon on Saturday, January 28.

1. When did Gen. VanHerck receive his first indication of the balloon, and how?
2. At what point did Secretary Austin first become aware of the balloon and its trajectory?
3. At what point did the Chairman of the Joint Chiefs of Staff become aware of the balloon and its trajectory?
4. At what point did either the Department of Defense or the Joint Chiefs of Staff notify the President's national security adviser of the balloon and its trajectory?
5. At what point was President Biden notified of the balloon and its trajectory?
6. At what point did the Department of Defense present options to the Secretary of Defense and the President, respectively, for addressing the Chinese surveillance balloon?
7. Please provide a full accounting, with date and time stamps, of Gen. VanHerck's electronic, written, and verbal communications regarding the balloon both within NORTHCOM and to his chain of command.
8. Please provide a full accounting, with date and time stamps, of the Chairman of the Joint Chiefs' engagements with the National Security Council and the President of the United States, regarding the balloon and its trajectory.
9. Please provide a full accounting, with date and time stamps, of the Chairman of the Joint Chiefs' engagements with the National Security Council and the President of the United States, regarding the balloon and its trajectory.

- Since the Chinese surveillance balloon became public knowledge, the Biden administration has said that multiple balloons had entered U.S. airspace during the

previous administration. However, Gen. VanHerck said publicly that those balloons were discovered by the intelligence community "after the fact," and not known to senior officials at the time.

10. At what point did the intelligence community and/or the Department of Defense become aware of the Chinese high-altitude balloons that had previously entered U.S. airspace?
11. How many balloons does the intelligence community and/or the Department of Defense assess entered U.S. airspace, when did they enter U.S. airspace, and what were the capabilities and trajectories of those balloons? Please provide a full list and account with the known details.
12. Given the Department's awareness of these prior Chinese high-altitude balloons, did the Department develop any options for countering those balloons before they entered U.S. airspace, upon entry into U.S. airspace, or soon after entering U.S. airspace?
    a. If so, what were those options?
    b. If so, why were those options not presented to the Secretary of Defense and/or President when Gen. VanHerck notified the chain of command of the most recent balloon on January 28?
13. Please provide a full account of the Department's engagements with the press regarding Chinese high-altitude balloons' entry into U.S. airspace during the previous administration.
14. Have senior DOD officials spoken with the press about these previous high-altitude balloons, whether on- or off-the-record? Please provide the dates of his press engagements on this matter.

- General VanHerck stated that Northern Command did not possess the requisite air domain awareness capabilities to detect prior airspace incursions by Chinese high-altitude balloons.
    15. In General VanHerck's independent assessment, what capabilities would be required to reliably detect and track high-altitude balloons across U.S. airspace?
    16. Are there any unfunded requirements proposed by Northern Command over the past five years that would have assisted in mitigating this air domain awareness gap?
    17. Does the Department of Defense assess that any capabilities currently in the Department of Defense acquisition system process or resident in the Global Force Management Allocation progress that could help to mitigate air domain awareness gaps at Northern Command?
    18. After the intelligence community (IC) reportedly began tracking the Chinese high-altitude balloon at Hainan Island, how was this intelligence passed to the relevant combatant command, US Indo-Pacific Command (USINDOPACOM)? Was USINDOPACOM able to maintain custody of the Chinese high-altitude balloons?
    19. At any point on their trajectory, did these balloons traverse Guam or any of the Hawaiian Islands?
    20. Did USINDOPACOM produce any intelligence reports or finished intelligence regarding the Chinse high-altitude balloons traversing their area of responsibility?
    21. How was the IC able to assess that the Chinese high-altitude balloon that entered US airspace through Alaska was not an intelligence threat?
    22. Since the IC was able to identify the Chinese high-altitude balloon's origins, when did the IC begin collection and/or exploitation against its payload?

UNDER SECRETARY OF DEFENSE
2000 DEFENSE PENTAGON
WASHINGTON, D.C. 20301-2000

POLICY

FEB 2 7 2023

The Honorable Roger F. Wicker
United States Senate
Washington, DC 20510-0908

Dear Senator Wicker:

Thank you for your February 8, 2023 letter on the Chinese high-altitude surveillance balloon (HAB). I am responding on behalf of Secretary of Defense Lloyd Austin.

Senior officials from the Department of Defense, including the Office of the Under Secretary of Defense for Policy, the All-domain Anomaly Resolution Office, the Joint Staff, and U.S. Northern Command, provided briefings for all senators on February 9, 2023, and February 14, 2023, on the HAB and other Unidentified Anomalous Phenomena (UAP). The Department has also provided additional briefings to committee and leadership staff since February 2, 2023, to update the Senate on our approach to recent events. We hope these briefings have answered the questions raised in your letter. If you have additional questions regarding the HAB, please let us know.

The Department is modernizing our surveillance capabilities paced to the current and future geopolitical environment. In the near term, we are augmenting the existing North Warning System, including deployment of a new system of sensors that will enhance our ability to detect approaching airborne objects. We also are working closely with Combatant Commanders, the All-domain Anomaly Resolution Office, intelligence community, interagency, and the Military Departments to understand and advocate for the resources necessary to protect our nation. The Department looks forward to working with Congress to advance these efforts.

We appreciate your continued support of the men and women of the Department of Defense.

Sincerely,

Colin H. Kahl, PhD

cc:
Senator Marco Rubio

Senator WICKER. Thank you very much.

Now General VanHerck, with regard to these letters, I have received quite a bit of information from talking to you about this balloon incident, and you mentioned it in your statement, so let me just go through some quick questions so we can understand who knew what about the Chinese balloon.

You first learned about this on January 28 of this year. Is that correct?

General VANHERCK. Senator, I learned about it on January 27th. We first detected it by radar, my sensors, on January 28th, in the vicinity of St. Matthew Island, Alaska.

Senator WICKER. Okay, and that is United States territory, right?

General VANHERCK. That is correct, sir.

Senator WICKER. You notified your chain of command on that day, January 28, right?

General VANHERCK. I had a conversation on the evening of the 27th with the Chairman of the Joint Chiefs of Staff about my plan to intercept and identify and make an assessment, which we did on the 28th of January.

Senator WICKER. You sent that notification to Secretary of Defense Austin, Chairman of the Joint Chiefs of Staff General Milley, via classified email. Correct?

General VANHERCK. I sent it to the Chairman of the Joint Chiefs of Staff and to Secretary Austin's military assistant. I am assuming that the military assistant passed it to the Secretary.

Senator WICKER. Okay, and you still are not certain at what point President Biden or Secretary Austin were made aware of the balloon. Is that right?

General VANHERCK. I do not know when the President was made aware.

Senator WICKER. Fine, and when you confirmed the balloon's existence on January 28, you tasked NORTHCOM, your command, with preparing options to counter the balloon. That is correct also?

General VANHERCK. I tasked my NORAD team to develop options, and Senator, what I would point out is I have options every single day to defend our Homeland. In this case, the balloon did not meet the requirement or the authority for me to engage it because it was not demonstrating hostile intent or committing a hostile act. Hostile intent would be maneuvering to an offensive advantage on a platform, an airplane, or shooting missiles or weapons would be a hostile act.

Senator WICKER. You prepared options, you asked NORAD to prepare options in that instance?

General VANHERCK. I directed my team to be ready with options, just as we are every day. That is correct.

Senator WICKER. Okay, and had the Secretary of Defense requested options for shooting down the balloon on January 28, while the balloon was still over Alaska, you would have been prepared to provide him those options. Is that correct?

General VANHERCK. Senator, I am prepared every single second of every day to defend our Homeland. That is correct.

Senator WICKER. Ultimately you did not get a chance to provide those options to the Secretary until February 1st. Is that correct?

General VANHERCK. On February 1st at 0700 I was in DC, and that was the first time we had a discussion.

Senator WICKER. Okay. So there is January 28, 29, 30, 31, February 1st. So on the fifth day—it is apparent you took the right steps, but it is also clear that you received no direction from the President of the United States or the Secretary of Defense until the fifth day of this crisis, by which point the balloon had traversed Alaska and Canada and then reentered the United States.

So I would publicly call on the Secretary of Defense to answer the questions which the Vice Chairman of the Intelligence Committee and I have asked him.

You have already talked about kinetic and non-kinetic dangers in case we are in a major war in China. Do we have the capabilities you need to defend our Homeland from a kinetic or non-kinetic attack by Russia and China?

General VANHERCK. Senator, what I would like to do is talk about that in a closed session in detail. I have concerns, as I have articulated for 3 years, about my ability to provide threat warning and attack assessments with the threats to our Homeland. Why that is crucial is threat warning and attack assessment are crucial for continuity of government and our nuclear force posture. That increases the risk of escalation and strategic deterrence failure. Those are significant challenges for me.

I also have concerns about the time it would take me to set the theater in the AOR [area of responsibility] to meet potential threat timelines from oversea threats.

Senator WICKER. Okay, and quickly—we are being a little lax on the time today—if the border control agents that we have now, and ICE personnel, employees of the U.S. Government, were allowed simply to do their statutory jobs along the Texas-Mexico border, would we be in a much better situation now, and are they being restrained from fully enforcing the law as they have in the past?

General VANHERCK. I would have to defer to Customs and Border Protection and Border Patrol whether they are being restrained or not. I do think that the best solution here is to fully resource Homeland Security and their entities to conduct their law enforcement mission for the laws of our Nation. I do not see this as an enduring mission, long-term. We are happy to supported, as directed, to each and every day.

Senator WICKER. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you very much, Senator Wicker.

Senator Shaheen, please.

Senator SHAHEEN. Thank you both, General VanHerck and General Richardson, for being here this morning and for your service to the country.

I would like to start with asking both of you about drug trafficking. General Richardson, I am very concerned, as I know you are, about drugs flowing into the United States through Latin America. In 2022, illegal drugs killed over 100,000 Americans, so this is a significant threat to the country, and fentanyl and the access to fentanyl has made it much worse. While I recognize that some of those precursor chemicals are not coming from Latin America, too many of the drugs are.

General VanHerck, I understood that we are also seeing an increase in drug trafficking coming across the northern border. Is that something that you have seen?

General VANHERCK. Senator, I understand there is a slight increase, along with migration, coming across the north border as well, but ultimately I defer to Border Patrol and Customs and Border Protection.

Senator SHAHEEN. Well, that is really the question I wanted to ask both of you is how your commands are coordinating with other

U.S. interagency partners, and have you seen any particular initiatives that have been effective? General Richardson, I will start with you.

General RICHARDSON. Well, thank you, Senator, and to comment on the ability to be able to see and with domain awareness, as the urgency is at an all-time high and the drug flow is at an all-time high, my ability to see and my allocated resources is at an all-time low. The P–8s that I used to have provided the long dwell, being able to see the capabilities that I have for vessels, for maritime flow of counternarcotics mission is also degraded because of the migration and the assets being needed for that.

But in terms of the capabilities that I have within my own headquarters and Joint Interagency Task Force South as well, I have a whole host of interagency and law enforcement. We work together to provide that synergy and sharing of information, so it is quick and immediate. Then also our partner nations that are inside of JIATF South as well, because our partner nations have been able to participate in 76 percent of the interdictions and disruptions of the counternarcotics flowing to the United States.

Senator SHAHEEN. So if you were going to get all of the resources that you need, do you have any estimate of what that would mean, in terms of equipment, assets, dollars?

General RICHARDSON. I would say a little goes a long way, as I have said before, and the ability to be able to see. I have about 2 percent of the DOD ISR, which gets after about 17 percent of my requirement. I do not need 100 percent, but I need a little bit more than the 2 percent, I would say, Senator.

Senator SHAHEEN. We had a hearing in the Foreign Relations Committee yesterday with Secretary Blinken, and one of the issues that was raised was the potential to designate drug cartels in Latin America as foreign terrorist organizations rather than just TCOs. Do you have any view about what that might enable you to do differently? Would that provide any other authorities to address drug interdiction?

General RICHARDSON. I think the more that we can do to get after this problem with the transnational criminal organizations, the better. I have 42 of the 40 most violent cities in the world. The TCOs create that instability and that insecurity within our partner nations, and that is what they are dealing with every single day. That is at the top of their lists.

I also am very concerned about the PRC and the long-term strategic competition that we have with the PRC, but what our partner nations are facing every single day are the transnational criminal organizations and how much more powerful they are getting, the ability to do the money laundering around the globe, we have really got to get after that.

Senator SHAHEEN. So I interpret that answer is a yes, it might be helpful, that designation.

General RICHARDSON. Yes, Senator.

Senator SHAHEEN. I am going to switch topics because I am almost out of time. General VanHerck, what do you think is the most significant threat to our security in the Arctic Region?

General VANHERCK. I think the most significant threat is the growing Russia influence, the illegal influence, and also the Chi-

nese influence right on the back of that, as we develop capabilities. I used the analogy last year, you have got to be on the field to play the game, in a football analogy, and we are in the locker room, still developing a game plan. We need to develop additional capabilities.

I am encouraged that the Department and the services have a strategy. We just have not funded those strategies.

Senator SHAHEEN. If we entered the Law of the Sea Treaty, would that give us any additional ability to address the challenge there?

General VANHERCK. I think it gives us more credibility to sit at the table and have that discussion, and I would absolutely support that.

Senator SHAHEEN. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Shaheen.

Senator Fischer, please.

Senator FISCHER. Thank you, Mr. Chairman. Thank you, General VanHerck, for your many, many years of service to this country. It is deeply respected and also appreciated.

On your unfunded priorities list you included several requests for programs to strengthen domain awareness, allowing us to better detect and also to track potential threats. Can you describe in detail some of the capabilities you have requested and why they are so vital for your needs?

General VANHERCK. Thanks, Senator. Absolutely. Over-the-horizon radar capability acceleration would procure a test asset—it is $55 million—to go faster to give us the capability rather than fielding capabilities in 8 to 10 years. Maybe we could shorten that to 4 to 5 years to enable me to get after the hypersonics that I described earlier, the cruise missiles, etc. By the way, I need Canada to do the same thing. A fielding of a capability in a decade from now is not where we need to be. So those are some of the dollars there. There is $55 million.

There is $211 million in the nine long-range mobile radars that would help me plug the gaps when we have radar failures or to get after critical defense infrastructure if tasked to do that. As we move around the country I can move those radars to give me additional domain awareness.

That is a couple of examples.

Senator FISCHER. Okay. Thank you. I know that NORTHCOM is required to track all kinds of threats to the Homeland, from the Chinese spy balloons to hypersonics that you mentioned. Do you have tools you need right now to be able to defend against them, not just to track them but to defend?

General VANHERCK. Yes, so for the high-altitude balloon I think we are in a good place for that. For hypersonics and cruise missiles, hypersonics specifically, the U.S. base forces proliferated low-earth orbit capability in satellite constellation will get us there, along with the HBTSS, the MDA is working on. But we cannot wait decades to field these things. So any way that we can accelerate those capabilities.

Let me give you an example. We are stuck in an industrial age process for acquiring and we field things in serial processes. In today's digital and information environment we can virtually test, we

can virtually and do things in parallel. These are things we should do differently to field capabilities faster.

I would also ask for your help here in Congress. When we go faster, we may have some failures. Let us not take a 2-year investigation of those failures. Let us jump back on the horse and ride and move forward. We have to be as transparent in the Department with Congress as possible and make sure that you are part of the discussion.

Senator FISCHER. We always learn from failures too. In fact, in many cases we learn more.

General Richardson, you made the comment that you have 2 percent of the ISR right now in SOUTHCOM. How does that lack of ISR limit your options as a commander?

General RICHARDSON. So it does limit. I have got a very large AOR when you look at Central America, South America, the Caribbean as well, and all the counternarcotics or the narcotics flow out of the region and the ability to see malign activity and be able to expose it. That is really what we need the ISR and the domain awareness to provide.

Senator FISCHER. You do not necessarily need the very high-tech 5-Gen ISR at this point in time for your AOR, do you?

General RICHARDSON. I need a little bit of that, but some of the lower capable platforms work very well in this region, and then the long-dwell duration works well.

Senator FISCHER. So you would encourage us to look at considering keeping those other platforms?

General RICHARDSON. Well, as we talked about, Senator, it is always trying to turn over and get the next wave of technology, to be able to have that while keeping some legacy going. But certainly we have some low-end type things that we could utilize in the SOUTHCOM AOR.

Senator FISCHER. Okay. Thank you. General VanHerck, have you seen any advances or movements from China or Russia in the Arctic lately?

General VANHERCK. Absolutely, Senator. Russia has modernized their fleet of icebreakers. They have modernized their strategic defenses along there, their submarine forces. China is sailing into the Arctic under the guise of research vessels, and we know they are doing military options, surveying the seabed. You have seen that recently as Canada released their recovery of a Chinese buoy. Those are all things that are ongoing in the Arctic right now.

Senator FISCHER. General Richardson, do you see China presently working even harder to build access and influence in Latin America?

General RICHARDSON. Absolutely, Senator.

Senator FISCHER. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Fischer.

Senator Kaine, please.

Senator KAINE. Thank you, Mr. Chair, and thank you to our witnesses for your service.

General Richardson, I would like to start with you on sort of this resource shortage issue that you have testified to and other colleagues have asked you about. One of the bits of testimony that I recall pretty vividly from last year was when you were talking

about SOUTHCOM's cyber capacity. You have got partners in the region that have cyber threats just like we do, and I think you testified that the cyber capacity you have in SOUTHCOM is just what is provided through your State partnerships with State Guard units. Is that correct?

General RICHARDSON. Yes. I have a small capability within my headquarters, but we do rely a lot on the National Guard State Partnership Program as well and their cyber teams.

Senator KAINE. I think those are really good programs but I was shocked to hear that you did not have a more robust in-house capacity in addition to the partnerships with our cyber teams from the National Guard.

One of the potent things that the United States can do is joint exercises with other nations' militaries, and this is something that we do and that China, for example, is not yet doing in the Americas. Is it my understand that a common exercise that you have been doing with Southern Cone nations you are not able to do this year?

General RICHARDSON. Right, and we have that on my unfunded priority list. We really need to get down to the Southern Cone. That area, tyranny of distance, Chile, Argentina, Paraguay, Uruguay, all want to continue to do exercises. So I want to be able to put that Southern Star Exercise back into play. Our exercises bring together like over 20 partner nations, and that is absolutely what the PRC is not able to do is to convene all these countries to come together and work through exercises.

Senator KAINE. This Southern Star Exercise has been common in the past but you are not resourced currently to be able to do that.

General RICHARDSON. Correct, and I have put that forward to put that exercise back on the plate so we are able to do that.

Senator KAINE. Let me ask you about Colombia. Colombia has been a very strong military partner of the United States in recent years. It has been a success story. Colombia participates in global peacekeeping exercises. I have seen Colombian troops in the multinational force of observers in the Sinai, and they do a lot of good work together with the United States. I think there were some concerns after the Colombian elections last year about whether that would continue.

Describe for us the mil-to-mil cooperation with Colombia currently.

General RICHARDSON. Our relationship with Colombia is very, very strong and continues to be very strong. We have not canceled anything. All the exercises, all the military-to-military cooperations is absolutely continuing, and that relationship could not be any more stronger than it is now.

Senator KAINE. Have you met personally with President Petro of Colombia?

General RICHARDSON. Yes, Senator. Twice.

Senator KAINE. Thank you.

General VanHerck, you had some questions about the Chinese balloon incident. I want to ask you questions about the following week, when your mission was involved in taking down some other unidentified or kind of not completely described aerial assets. They were generally described as commercial or benign, but they were

in civilian airspace, so they were not completely, even if they were not hostile, they were not completely benign if they are in commercial airspace where they could pose challenges to civil aviation.

So talk a little bit about how things get into commercial airspace without us being aware of them, and are there rules of strategies we need to put in place to be more careful about even benign assets in commercial airspace.

General VANHERCK. Yes, ultimately the airspace is the Federal Aviation Administration. They do have policy and regulation in place for objects that fly within the airspace structure. If you are flying objects—and I believe the number is if it weighs more than four pounds it is required to have an identification device. In the case of the three unidentified objects you are talking about, the FAA was not tracking, was not aware of those objects, and when we assessed them they were assessed to be of a size and potentially a safety threat to aviation hazards. So we did not know exactly what they were.

I have talked to the acting FAA administrator about being more aggressive of messaging the requirements and also putting out and enforcing those requirements as well. Those are not mine to do, but I will identify and respond to anything that is in our airspace the we need to potentially assess as a potential threat.

Senator KAINE. General VanHerck, you indicated that the FAA was not tracking them. Did that mean that these devices did not have the identifier that they are supposed to have if they are in that band?

General VANHERCK. I cannot confirm whether they had it or not. We did not recover them, due to the locations that they were. But my assessment would be it was likely they did not have a device if the FAA was not tracking them.

Senator KAINE. All right. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Kaine.

Senator Cotton, please.

Senator COTTON. Welcome, General VanHerck, General Richardson. Thank you for coming back and for your service.

General VanHerck, I want to return to the topic of the Chinese spy balloon. You were discussing it with Senator Wicker earlier. You had said your radars first picked up the balloon on Saturday, January 28th. Is that right?

General VANHERCK. That is correct, Senator.

Senator COTTON. But you were aware of it on Friday, January 27th.

General VANHERCK. The intel community made me aware on the 27th.

Senator COTTON. On Friday, January 27th, you communicated—is that when you communicated to General Milley, the Chairman of the Joint Chiefs, and to Secretary Austin's military assistant?

General VANHERCK. I communicated with the Chairman only on the 27th, and conveyed my plan to intercept, ID, and assess the balloon when it became a radar capability we could do.

Senator COTTON. When did you communicate with Secretary Austin's senior military assistant?

General VANHERCK. I did that on the 28th.

Senator COTTON. The 28th. Did you ever speak with Secretary Austin about this balloon?

General VANHERCK. I spoke with Secretary Austin on the 1st of February.

Senator COTTON. Wednesday, the 1st of February.

General VANHERCK. To the best of my recollection, that is the first verbal discussion with the Secretary. There were emails transmitted back and forth. I set up a battle rhythm, Senator, and updated the Department every 12 hours beginning on January 28th, the location, threat, projected flight path, and intent.

Senator COTTON. Is it your customary practice to speak to Secretary Austin's military assistant and not Secretary Austin?

General VANHERCK. No. Verbally I routine speak with the Secretary of Defense. Email communication typically goes through his assistant and provides it back that way.

Senator COTTON. Okay. On what date did you have fighter aircraft in the air that could have shot down this balloon?

General VANHERCK. I had fighter aircraft in the air on the 28th of January. They were armed. I sent two F–35s and two F–16s.

Senator COTTON. They were armed on the 28th?

General VANHERCK. Yes. The F–16s were armed. They flew off of alert. In Alaska I have aircraft on alert, and they were armed.

Senator COTTON. So all that was needed on January 28th was to pull the proverbial trigger.

General VANHERCK. So to say pull the proverbial trigger, yes, had they had hostile intent or hostile act. I had the authority and I would have made that decision. So you are exactly correct. After that point it was not my decision to pull the trigger, as you say.

Senator COTTON. There has been publicly released pictures, maybe and video, I think one pilot taking a selfie with this balloon behind him. Were you confident, on January 28th, what the payload on that balloon was?

General VANHERCK. Based on the intel community's assessment I would say I had 80 percent confidence level we knew exactly what we were going to see. That was further developed over the next several days as we were able to collect additional intelligence before finally downing the balloon off the South Carolina coast.

Senator COTTON. I am aware of that assessment and I k now we cannot talk about it here, but I cannot say that I would have had the same level of confidence that it did not have some kind of offensive capabilities. Are you aware of at what point the President was personally aware of this balloon?

General VANHERCK. Senator, I am not.

Senator COTTON. Why was it okay to shoot the balloon down off the coast of South Carolina but not off the coast of Alaska?

General VANHERCK. Well, I think there are many things that go into that decisionmaking. First is originally we did not really have a good model for what the payload would look like when it fell or potentially threatened anybody on the ground. Now you can look at population density for various places where the balloon flew over.

Senator COTTON. I am not talking about anyplace over the continental United States. I do not dispute that. I am talking about the coast of Alaska versus the coast of South Carolina.

General VANHERCK. There is nothing that physically prevents us from shooting that down on the 28th to the 1st.

Senator COTTON. If the Administration's policymakers thought they had legal justification to shoot it down off the coast of South Carolina surely they had legal justification to shoot it off the coast of Alaska, right?

General VANHERCK. Senator, my assessment is the legal basis would have been the same for either place.

Senator COTTON. That is what I think too.

Well, I am glad that you had fighter aircraft in the skies that were ready to shoot it down. I think that would have been the right call. I know it was not your call, that it goes up higher than you, but I think it was a bad mistake to let a Chinese spy balloon float all across America and only to leak it to The New York Times once some rancher or amateur photographer in Montana spotted it. I suspect if they had not it would have floated on its merry way all across America and this would have never become public. I think that is a dangerous precedent to set, not just with China but with all of our adversaries. But I am glad you had fighter aircraft from your command in the sky that were ready to act.

Again, thank you both for your service, and since this is your last hearing, thank you for many years of service. I know that you will not regret missing these appearances in the future, but we have always enjoyed having you here. Thank you, General. Thank you, General Richardson.

Chairman REED. Thank you, Senator Cotton.

Senator Hirono, please.

Senator HIRONO. Thank you, Mr. Chairman. Thank you very much to both of you for your years of service and commitment to our country.

General VanHerck, you are responsible for homeland defense, and you noted this morning that you have concerns about attack assessment and threat warning, and that brings me to concerns I have about the missile defense of Hawaii, concerns that I have been expressing for a number of years now. I do remain concerned that the Department of Defense does not have a plan to address the current and future missile defense needs of Hawaii. We did have HDR-H Hawaii that is no longer on the table, and int appears to me that between NORTHCOM, INDOPACOM, SPACECOM, STRATCOM, and the Missile Defense Agency there is no single commander entirely responsible for coordinating the DOD's defense of Hawaii.

So just as we saw in the crisis at Red Hill, when no single leader has ultimately responsibility for the coordination and execution of the mission, there is room for issues to fall through the cracks, and adding to the concerning lack of trust that Hawaii's communities have regarding the military.

General VanHerck, do you have the authority to coordinate across the Department of Defense to ensure there is a plan for missile defense of Hawaii?

General VANHERCK. Senator, I am the authority for ballistic missile defense such as an ICBM from DPRK, and I am confident in my ability to defend Hawaii from those ballistic missiles. Admiral Aquilino is responsible for the defense of Hawaii, and in the

INDOPACOM AOR, and I would say he is the coordinating authority for that region. But I am the authority for ballistic missile defense of Hawaii.

Senator HIRONO. I think that is the concern that we have, is ballistic defense, so that would fall to you then. I am assuming that of course you are going to talk with Admiral Aquilino.

General VANHERCK. Absolutely. We do coordinate, and in many ways I will coordinate in real time with him for the need to defend Hawaii from ICBMs potentially from North Korea.

Senator HIRONO. And China.

General VANHERCK. I am not tasked to defend against China or Russia for ICBMs. That is the nuclear deterrent, Senator. Admiral Aquilino has a responsibility in the INDOPACOM AOR for further defense of Hawaii.

Senator HIRONO. You see, this is where I begin to have concerns, continuing concerns about who exactly is responsible, who is going to come and tell me that the missile defense of Hawaii is going to take place, because as I said, for years HDR-H Hawaii was going to be the way that we were going to provide missile defense. That is no longer on the table, and to date I have not gotten any clear information. I am going to get a briefing on Monday, and General, I do not know if you have someone who is doing that briefing with me and my staff on Monday. Are you involved?

General VANHERCK. I am not aware of that. But let me just talk about the Homeland Defense Radar Hawaii. First of all, I do not need Homeland Defense Radar for Hawaii for the mission I am tasked to do, for ballistic missiles that emanate from North Korea. Homeland Defense Radar for Hawaii would be a contributor to an underlayer, which Admiral Aquilino could certainly use, which could tether to *Aegis*-class ships or other ballistic missile defense capabilities in the region.

Senator HIRONO. Well, but then Admiral Aquilino has said that he too is not looking to HDR-H Hawaii for the missile defense of Hawaii. General, do you know if there is missile defense for Hawaii that is going to take care of your area of responsibility as well as his? Because we are talking about missile defense against intentions from North Korea as well as China.

General VANHERCK. Senator, I——

Senator HIRONO. HDR-H Hawaii was North Korea.

General VANHERCK.—I am confident in my ability to defend Hawaii from ballistic missiles from DPRK. From China, I am not tasked, and I will defer to Admiral Aquilino. That is his responsibility.

Senator HIRONO. Thank you. I think that provides some level of better clarification.

General VANHERCK. I want to add one thing, Senator. General Cotton is responsible for the nuclear deterrent, and ballistic missiles such as nuclear ballistic missiles from China toward Hawaii, that is the nuclear deterrent that does that. Conventional, I will defer to Admiral Aquilino.

Senator HIRONO. So again, I am talking about nuclear deterrent, not conventional. Nuclear deterrent. It is the missiles emanating from China and North Korea that I want Hawaii to be defended from, and yes, the shooters are not in Hawaii. We are not talking

about putting shooters on Hawaii. Those are in Alaska and in California.

So again, you know, all my attempts to get clarification as to who is the one agency, one entity, that is responsible for missile defense of Hawaii writ large. You know, I am not talking about any particular, whether it is ICBMs or whether it is the ballistic missiles. You can sense my frustration, so I will continue to pursue my line of questioning.

I am sorry. I will add some questions for the record relating to the impact of climate change on your AORs. Thank you.

Chairman REED. Thank you, Senator Hirono.

Senator Rounds, please.

Senator ROUNDS. Thank you, Mr. Chairman, and to both of you I want to thank you both for your service to our country and your teams' as well.

I would like to begin by following up with General VanHerck with regard to the same line of questioning that the Chairman began with, with regard to spectrum. I do have real concerns about the loss of any portion of the spectrum to sales to commercial operations, and I recognize that, General VanHerck, your role in defending the Homeland is critical. I just wanted to clarify or at least better understand part of your response to the Chairman's question.

There is a study, which is underway, which has been recognized by both the Secretary of Commerce and the Secretary of Defense, specifically regarding the sensitivity or the need to maintain, or the impact of the sale of the 3.1 to 3.45 GHz portion of the spectrum, which currently is under DOD control. Could you share with us, in this unclassified setting, the significance of that portion of the spectrum to the defense of our country at this time? Do we use all of that in the defense of our country today?

General VANHERCK. Senator, absolutely we do. There are multiple platforms, to include maritime homeland defense platforms, airborne early warning platforms, ground-based early warning platforms that enable me to provide threat warning, attack assessment, defend from potentially airborne assets, et cetera. So we need to understand the national security impacts of selling or auctioning, and make a conscious decision before we do so.

Senator ROUNDS. I also understand, and what I wanted to followup with in particular was, it would seem to me that if we are doing a study, a legitimate study, that there would be some participation by NORTHCOM since this is part of the spectrum that they rely on. Confirming you are not aware of being involved in that particular study at this time?

General VANHERCK. Senator, I have not personally been involved. I will confirm the coordination with my staff, but I have not personally been involved in that discussion. I would welcome the opportunity to be personally involved.

Senator ROUNDS. I would imagine that you probably would, sir, seeing as how it is a critical part of the defense of our country. I thank you for, when you have provided this Committee with your professional military advice it really does ring true that there is a very serious concern with the loss of any part of that spectrum. So I appreciate that.

I did want to just followup a little bit as well. Senator Cotton laid out a very clear line of questioning with regard to the timing and the decisionmaking process with regard to the observation balloon from the PRC. If this was a communications-gathering or an intelligence-gathering unit you did have the ability and you could see it coming from a long way off, several days in advance, not just with intelligence recognition but also with radar catching it.

But during that time period there was a point at which, as you have indicated, it was not identified as being hostile or trying to gain an offensive position, therefore, still in international air, no reason to, or any purpose for taking it out at that point. That is correct, is it no?

General VANHERCK. There is no legal basis in international airspace to take action. That would actually undermine our position globally by taking action in international airspace.

I would like to clarify one thing. I did not have the capability to see that days away. That came through intel community channels. I could not see it until it got within radar, and I will talk to you in a classified environment. But that was not days away. That was the 28th only.

Senator ROUNDS. On the 28th, though, on the 28th it was still outside of our legal operating area in terms of protecting our borders.

General VANHERCK. So it passed within sovereign territory on the 27th, at the end of the Aleutian Island chain, and then back into international airspace, until the 28th, where it passed within our sovereign space near Saint Matthew Island, Alaska, and then transited over Alaska.

Senator ROUNDS. During that time in which it had passed out in international waters you were aware of it and knew that it had the possibility of coming back into our airspace again. But by then pretty clear on your part that it was not an offensively armed balloon or object.

General VANHERCK. That is correct, Senator. The intel community assessed that. That was what I verified on the 28th, when we intercepted and I had fighters get their visual on it and their targeting pods to be able to make that assessment. That is not a 100 percent guarantee, but my assessment at that time, based on all the info, was there was no physical military threat to the Homeland at that point.

Senator ROUNDS. The reason why I am bringing this out and going back through it again with you is, number one, I think the American people have to understand that if it would have been viewed as a threat our armed forces would have protected and we would have taken it out prior to the point of getting in and damaging any property or individuals within the United States at that time. But the second piece on this is it became a decision, not necessarily yours, but somewhere farther up the chain of command as to not to take it out, even though it was entering our airspace. It was not your decision because it was not deemed a threat, or to become an offensive threat at that time. Fair to say?

General VANHERCK. So if it was a threat I am delegated the authority by the President, through the Secretary, and I would have

taken that out. In this case I did not assess it as a threat, and therefore I did not have the authority.

Senator ROUNDS. The authority would have rested with someone above you in the chain of command.

General VANHERCK. Depending on the legal basis for assessment it would have resided either with the Secretary of Defense or the President.

Senator ROUNDS. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Rounds.

Senator King, please.

Senator KING. Thank you, Mr. Chairman. I am going to ask both of you about unfunded priorities. General Richardson, we are under attack—110,000 people died last year of overdoses. That is 300 a day. Twelve people have died in America since we have been sitting here in the last hour, and yet your ISR capability to at least assist in detecting and helping us to interdict this dread attack is on an unfunded priorities list. Why is it not in the base budget? This seems to be one of the most serious and intensely important responsibilities that you will have in order to help us to deal with this scourge. Why is it an unfunded priority and not base budget?

General RICHARDSON. Senator, I do not think any commander will say they have enough ISR, and so certainly as we look across the——

Senator KING. But 2 percent of the ISR that is dealing with this brutal attack that is killing our citizens just does not seem to me to pass the straight-face test.

General RICHARDSON. I could do more with a little bit more, and our partner nations, with the capabilities and building their maritime domain awareness and being able to share air tracks and things like that, all of us working together. We have very willing partners.

I would like to, if I might, Senator, behind me in the audience we have part of our Inter-American Defense College, and part of their instruction is to come here and watch us testify as commanders to our Congress and talk about the challenges——

Senator KING. It is a lesson to them of what to avoid, I would think.

General RICHARDSON. If they would raise their hands back there, so you can see all of them.

Senator KING. Thank you.

General RICHARDSON. They are in that whole group right there.

Senator KING. Let me followup.

General RICHARDSON. Yes, Senator.

Senator KING. We have established that you do not have enough ISR. The ISR that you have, previous testimony by your predecessors has been we do not have the resources to interdict but something like 25 percent of the drug shipments we know about. Is that still true?

General RICHARDSON. I have the detection and monitoring mission for the Department of Defense through JIATF South, Joint Interagency Task Force South, and so——

Senator KING. But when you detect and notify——

General RICHARDSON.—we pass that right over to law enforcement or partner nations to do the interdictions.

Senator KING. What percentage is interdicted, as far as you know?

General RICHARDSON. We believe that we are getting after about 10 percent of what we know is the known flow of narcotics flow.

Senator KING. We are only getting 10 percent of what we know.

General RICHARDSON. Correct, Senator.

Senator KING. That is appalling, and I realize it is not your responsibility but it is a collective responsibility that we are just simply not meeting in this country, to have, number one, inadequate ISR on this problem, and number two, to not make effective use of the ISR we do have.

General VanHerck, let me turn to you about unfunded priorities. One of your major unfunded priorities, again, is essentially ISR, capability to observe what is going on. We know the Russians are heavily militarizing their shore of the Arctic Ocean. Again, my question to you is, it seems to me you have made a powerful case in your unfunded priority list. Why is it not in the base budget?

General VANHERCK. I will have to defer to the Department in the present budget why it did not come across, Senator. I am asking for it. I would also point out I asked for $38 million for additional support for transnational criminal organizations, to lead Federal agencies that I am short as well. There is additional money in my unfunded priority list for that as well.

Senator KING. Well, I am starting to think what we should do is fund your unfunded priority list instead of the base budget because you have articulated priorities that are so important to us.

Talk about—well, perhaps this has to be in a classified setting, but the lack of visibility, of domain awareness as the Arctic is fundamentally changing and becoming one of the most strategic places on Earth.

General VANHERCK. Yes, Senator, thank you for the opportunity to talk about that. The National Defense Strategy tasked me to monitor and respond in the Arctic.

I am encouraged with the monitor piece. We have got some over-the-horizon radars. We need to go faster there. Canada is committed to that. Again, we need to go faster. But under monitor we need to think about the use of SpaceX and Starlink capabilities and buying terminals that gives us data and information sharing. I am encouraged by the Jobs and Infrastructure Bill. There is $250 million in that to modernize the Port of Nome. We need to move forward to give us some capability to be persistent in the Arctic for the monitor piece as well.

But you need icebreakers as well, so we have got to go faster there.

Senator KING. You have just listed, basically we have an Arctic gap. Is that correct?

General VANHERCK. That is my assessment.

Senator KING. Not geographically. I mean, national security wise.

General VANHERCK. That is my assessment. As I mentioned earlier on the respond side, we are not organized, trained, and equipped to operate and respond in the Arctic. Infrastructure is a big concern for me, whether that be runway lengths, whether that be building, whether that be weapon storage, whether that be fuel storage. When you only have a few days' worth of fuel and that fuel

is shared with indigenous local communities, those are challenges that we will face in a crisis.

My homeland defense design is a layered defense. It starts forward, and we need the Arctic to do that.

I would point out that Thule Air Base in Greenland is crucial. There is some money in the budget for Thule, but not to support my homeland defense design, which I am tasked to do a layered defense of the Homeland by the Department.

Senator KING. Thank you both, and thank you for your candid testimony today and for your service to the country.

Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator King.

Let me also, on behalf of the Committee, recognize the Inter-American Defense College. Bienvenidos.

Senator TUBERVILLE.

Senator TUBERVILLE. Thank you, Mr. Chairman. Thanks to both of you for being here and your service.

General VanHerck, just to followup on Senator King's question how would Maxar and Saildrone help you in the Artic? Would it be, you know, commercially, and how would that help you?

General VANHERCK. Can you say that again?

Senator TUBERVILLE. Maxar and Saildrone. Would it help you in the Arctic?

General VANHERCK. I am not familiar with specifically. I am familiar with the OneWeb efforts, Starlink, satellite communications, anything that gives me additional domain awareness, data, and information-sharing will absolutely help in the Arctic. It is very challenging above 65-North to communicate, to share data, to share information.

Senator TUBERVILLE. Thank you, and I do not want to pound on this balloon nonsense but how would you assess your relationship with your Canadian counterparts through this entire scenario?

General VANHERCK. I think my relationship with our Canadian counterparts—by the way, I have a boss in Canada, General Wayne Eyre, is exceptional.

Senator TUBERVILLE. He runs NORAD, right?

General VANHERCK. No. I run NORAD. He is the Chief of the Defense Staff——

Senator TUBERVILLE. Okay.

General VANHERCK.—in Canada. He is the CHOD. He is their senior military member.

Senator TUBERVILLE. So your relationship was good through this whole scenario?

General VANHERCK. Absolutely. Yes.

Senator TUBERVILLE. If that same balloon took off today, same path, loaded the same way, now that we know what was on it and that we brought it down, should or would we shoot it down?

General VANHERCK. That is a policy decision. My job is to maintain options. I did that. I am very comfortable that we had options from the moment we detected it until the moment we shot it down. Ultimately "should" is a policy decision. That is not a military decision.

Senator TUBERVILLE. Okay. Thank you.

General Richardson, thanks for being here today and thanks for the hospitality last week, coming to SOUTHCOM. You have got a great organization. The people working for you, they are outstanding. We learned a lot. I would hope that we have more people come down that way would look at your new program that you are building, quarters for your personnel, through lend/lease, which I think we should look at through the Air Force and through the Navy, because I think we need to privatize more things on basis to cut back on costs. But I look forward to seeing how that turns out.

Could you comment on that?

General RICHARDSON. Thank you, Senator. That is for our family housing for our servicemembers in Miami and certainly a really tough housing market. This will absolutely get after being able to counter all of those really high prices in a big city like Miami. So we are very thankful that we are able to get that off the ground, and with the support of Congress we have been able to do that, so thank you very much.

Senator TUBERVILLE. Yes, and we are looking forward to seeing how that works out. I was very impressed with the people, after I go to Panama, that were there, actually from my State of Alabama, Mobile. The Corps of Engineers are down there working, and we have got a lot of good people.

Just tell us how important, in your eyes, the Panama Canal is to us here in the United States, in your eyes, since you have been there.

General RICHARDSON. Well, Senator, more than 70 percent of our global goods go through the Panama Canal for the United States. So the importance to the global economy, though, it is not just about what the United States gets, but that is the give-back through that canal being open as the exchange of goods across the world. I talked about trade before, over $740 billion in trade, and so very, very important to the global economy for the Panama Canal.

Senator TUBERVILLE. On top of that, recently, over the last few years, China has signed 30 contracts with the Panamanians, some of it to do with the canal, and the Panamanians are now trying to get out of some of those contracts because the Chinese have breached some of those contracts, which we need, as the United States of America, to protect Panama, because that is how important it is to all of us. But really good people down there.

Could you talk a little bit about the two Iranian ships that are parked outside the Panama Canal and the process that we need to look at. Do they need to be able to use the Panama Canal?

General RICHARDSON. So in terms of the Iranian warships that transited into the SOUTHCOM region and since departed, but as part of their announcing their global voyage to go around the globe, and certainly some of the countries that were able to deny port calls and things like that. But very concerning because they were just in the region 2 years ago with missiles and with launchers on those same two ships. So very, very concerned that they are transiting again. We did not have the intelligence that they had this cargo on board this time, but still the fact that they came into the region again, and doing a global voyage, is concerning.

Senator TUBERVILLE. Thank you. Thank you for your service. General VanHerck, thank you very much for what you have done for our country.

Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Tuberville.

Senator Warren, please.

Senator WARREN. Thank you, Mr. Chairman, and thank you to our witnesses for your service.

The Pentagon's budget request is $842 billion. This is one of the largest requests in history, but it is not enough money for many components of DOD. Each year they push to get even more money using unfunded priorities lists, or what I call wish lists.

Now our colleagues on both sides of the aisle are concerned about this and they want to see this practice stopped. One of the excuses that I have received, as I have asked about these lists, is that they reflect emerging threats that cannot be accommodated in the regular budget process. Now we have transfer and reprogramming authority to account for exactly that situation, but even so let us assume that is true. That means wish lists would only include items that have been requested before. You could not know about it when you put your budget together.

General VanHerck, last year your unfunded priority list contained a request for $50 million for missile defense. Is that right?

General VANHERCK. For this year or last year?

Senator WARREN. Last year.

General VANHERCK. I would have to go back and review it. I believe that is correct.

Senator WARREN. Well, I will tell you. It is there. I understand you may not remember all the details, but it is there. Had you requested funding for that program before?

General VANHERCK. Yes. In this year's list as well. Everything on my unfunded list——

Senator WARREN. So let me just be clear here. I am just trying to track this one argument, and that is, is this some unexpected expense. You knew about it last year. How do I know you knew about it last year? Because you had also requested funding for it from the year before. In other words, this is not an unexpected requirement for missile defense that you are trying to get funded through the unfunded priorities list. Is that right?

General VANHERCK. Senator, everything on my unfunded priority list I POM'ed for, asked for. It was not funded.

Senator WARREN. I have no doubt that it was——

General VANHERCK. Please allow me to finish.

Senator WARREN. I have no doubt that it was not——

General VANHERCK. Can I finish answering your question?

Senator WARREN. I am the one asking the question here. Was this on your list before and was it a surprise what you put on your unfunded priority list?

General VANHERCK. There are no surprises on my unfunded priority list.

Senator WARREN. Okay. That is what needed to know.

General VANHERCK. All of those were POM'ed for. They are all missions I am tasked to do, which I am not resourced to do, and

the law directs me to put in an unfunded list within 10 days of the budget, and that is exactly what I did.

Senator WARREN. No. Excuse me. The law does not require that you put in any request. We know last year that two different divisions actually put in requests of zero. They did not go to an unfunded priorities list.

Now General Richardson, intelligence surveillance and reconnaissance capabilities have repeatedly appeared on your wish list as well. As Commander of Southern Command you are on the front line, confronting transnational criminal organizations, trafficking drugs in regions there and home, and I appreciate that work. Last year you asked for an additional $268 million on your wish list.

Now General Richardson, did DOD approve reprogramming money for any of the missions under your command this year?

General RICHARDSON. So this year in terms of the funding that I have received, I have $130 million for security cooperation for the region. So in terms of the reprogramming, I am not aware of that.

Senator WARREN. Well, according to the Controller's website, $750 million was reprogrammed to support drug interdiction. Does that sound about right to you?

General RICHARDSON. I am not tracking the 750, Senator.

Senator WARREN. Okay. All right.

But look, here is the point I want to make on this. DOD already has the tools to reshuffle its resources when needed. Not only that, they have also done so for a key SOUTHCOM mission in an amount that was almost three times larger than your wish list. Both of you have already submitted your lists for this year. I will be submitting questions for the record to learn more about why you could not include these in your budget priorities.

I understand you want more money, but you have to work within the budget that is given to you. That is what every other part of the government has to do. I have got a bill with Senator King, Senator Lee, Senator Braun, that would end the statutory requirement for these lists. But I want to make clear—DOD could shut them down on their own right now. We do not let any other part of government behave like this, and for good reason.

The budget process is about making tough choices and setting clear priorities, and refusal to demonstrate leadership here I think is a real mistake.

General VANHERCK. Chairman, I want to correct the record.

Chairman REED. Senator——

General VANHERCK. One hundred percent of my items on my unfunded priority list were submitted as part of the budget process.

Chairman REED. I understand, sir. Any other comments, General Richardson?

General RICHARDSON. The same here, Senator. Those requirements that I put forward to the Department as well.

Senator WARREN. I do not think I quite understand what our witnesses are saying here.

Chairman REED. I think what they wanted was to be able to fully respond to your questions, Senator, and with that I would——

Senator WARREN. But these are not on their budget now.

Chairman REED. I think the time has expired. Thank you very much.

Senator Schmitt, and Senator Rosen will preside as I go to the Appropriations Committee.

Senator Schmitt, please.

Senator SCHMITT. Thank you, Mr. Chairman, and I want to thank you both for being here. I would note to the Committee that both of these witnesses have Missouri ties and Missouri roots.

It is my belief, and I have talked about it a little bit in this Committee before, that too few people, quite frankly, understand the urgency, the gravity, and the proximity of the threat that the PRC, China, poses to the United States of America. They are rapid development as being a militarized power now, and projecting that power is very real. It is that proximity that I want to ask both of you separate questions about, given your roles.

The Belt and Road Initiative clearly is an initiative to further their economic, militaristic, and political goals, and the dual use that they get out of this once they are involved with these countries is very real.

So General Richardson, I wanted to ask you. It seems me that China is gaining far too much traction in the Western Hemisphere, if we sort of look at this under the old Monroe Doctrine. In the Western Hemisphere they continually abuse, not just the debt traps that are established but they abuse those agreements to then later expand militarily.

Could you talk about a couple of those examples that you see, and Senator Scott, I think, had a great line of questioning about how we can better explain to our folks back home the real risks. So from your perspective, a couple of examples that you would want to highlight that raise real concerns for you in the Western Hemisphere.

General RICHARDSON. So that Belt and Road Initiative, Senator, that you talk about, that is really the guise or the disguise of how I see that the PRC gets their foot in the door, to expand a lot of these projects into the critical infrastructure for the partner nations. So when you are talking deepwater ports in 17 countries, the telecommunications, the 5G, 5G backbone in five of the countries, 24 countries having the PRC 3G or 4G, and I worry about that, the stealing of information. There have been numerous cyberattacks of our partner nations in the region.

You have a communist nation that does not respect the human rights of their own people, with Huawei and ZTE, and fostering this out to all of the other partner nations across the globe, not just in my region. So they do not respect the human rights of their own people. They are not going to respect the human rights of every other nation. So that is a huge concern in terms of telecommunications.

The space, space infrastructure. Eleven space-enabling infrastructure sites in five countries in the region as well.

So it is very, very concerning, especially with the dual use that they come in, they are state-owned enterprises from the PRC, which means that they can be used for military application at a later date, if needed or wanted.

Senator SCHMITT. General VanHerck, we have talked about it before in classified briefings here and in previous settings about the Chinese spy balloon, you know, fiasco, and showed how brazen the

Chinese Communist Party is willing to be to gain intelligence. I think that opened the eyes of a lot of Americans of, again, just how brazen they were.

But one obvious concern is that they will not just send a spy balloon. There will be something else, and you have talked about awareness. What are specifically a couple of things that this Committee can do to help with that?

General VANHERCK. We need to continue to accelerate domain awareness capabilities. The Department has done a good job with recognizing my domain awareness capability gaps, which includes funding over-the-horizon radar. But we need to think differently about how we field capabilities in a more timely and rapid manner, using digital technology we have today vice industrial age processes. You can help with encouraging that and moving forward with that, and also encouraging testing, development, and when there are failures, let us not stop everything. Let us move forward more quickly to field and rapidly develop capabilities.

Senator SCHMITT. Thank you. Thank you, Mr. Chairman.

Senator ROSEN. [Presiding.] Senator Peters, you are recognized.

Senator PETERS. Thank you, Madam Chair.

General VanHerck, I would like to build on the concerns you mentioned in your earlier testimony regarding cyberattacks here in the Homeland, and specifically, could you further explain some of your gaps with authorities, personnel, and instructions for synchronizing and responding to cyberattacks affecting local defense communities and how you would coordinate with the Department of Homeland Security in the event of such an attack.

General VANHERCK. Senator, thank you. First, my largest domain awareness gap, and my biggest concern, is actually cyber domain awareness. The vast majority of the critical infrastructure in our Homeland resides outside of DOD, which General Nakasone is responsible for, and outside other Federal networks, which Jen Easterly at CISA is responsible for.

My authorities there are limited to have domain awareness. FISA–702 is crucial to having domain awareness, to giving us indicators of potential threats in the Homeland, whether they be violent extremist threats or whether they be peer threats. So I would encourage that we continue doing that, to give the National Security Agency and General Nakasone the ability to help fill those domain awareness gaps.

My responsibility for cyber is I have two cyber protection teams that defend my critical infrastructure in my headquarters. More broadly, General Nakasone is responsible for the DODIN. I am responsible for providing defense support to civil authorities. So for example, if Jen Easterly at CISA needs support, and DOD is going to provide Title 10 support, that support will go through me to provide just like I do for hurricane or wildfire response.

Senator PETERS. Well, I chair Homeland Security Committee here in the Senate and work on the cyber issues, so I look forward to working closely with you as to how we coordinate that, because there is no question that cyber is one of the most significant threats we face in the Homeland on a daily basis, and I want to throw out an example of this and get your response.

Let us take an example in Fayetteville, North Carolina, home to the Army Special Operations Command and the Immediate Response Force. If they had suffered a cyberattack to degrade the mobilization and deployment of the 82d Airborne Division, in response to some crisis, would your command have the appropriate authorities and personnel to respond and to mitigate? Do you have concerns and are those things we should be looking at pretty seriously?

General VANHERCK. We should talk in a classified environment about potential impacts, but to respond to the actual cyber incident, that is going to be General Nakasone, or of it is outside of the DODIN it is going to be Jen Easterly. I am comfortable that I have everything I need to do to respond to provide defense support of civil authorities should we be tasked to do that, to support a lead Federal agency.

Again, it is a concern for me to not have domain awareness in the cyber domain about potential threats.

Senator PETERS. Well, I look forward to discussions in a secure environment as we further examine that, to make sure that it is working properly.

The other question I have for you is you discussed the challenges of ensuring that Joint Force is able to operate in the Arctic, and you are challenged to respond to potential threats with forces that are either organic to the National Guard command structures or assigned to external combatant commands.

Given the awareness at NORTHCOM of the potential threats in the Arctic—and I think I am asking this question before Senator Sullivan can ask you a question related to this, but I am sure will be coming—given that awareness would you recommend the services prioritize Arctic training and cold weather operational readiness for units who may be ultimately assigned to your command? When I say Arctic training that does not necessarily mean necessarily in Alaska but also other cold weather environments like the State of Michigan, with our training facilities there.

General VANHERCK. Senator, absolutely I would. Fifty–2 percent of my AOR is in the Arctic, in the NORTHCOM AOR. As I said earlier I am tasked to monitor and respond. On the respond piece it is crucial that we conduct training operations. It is also crucial for campaigning, to demonstrate we have the capability, the readiness, the responsiveness, and the resiliency to operate in the Arctic day-to-day, as part of our campaigning plan.

It is also crucial that we invest in research and development to ensure that our platforms are able to sustain and operate and the human is able to sustain and operate in this environment. I think we have work still to be done there.

Senator PETERS. Thank you, General. Thank you, Madam Chair.

Senator ROSEN. Senator Scott, you are recognized.

Senator SCOTT. Thank you. I thank both of you for what you do. Thanks for your hard work to try to take care of national security.

General Richardson, can you talk a little bit about, first, your ability to sort of watch what is happening in the area that you are responsible for, and do you have the resources you need to be able to monitor what is going on, and do you have good partners with the military in countries outside of our country?

General RICHARDSON. So we have outstanding partners, Senator, that want to work with us, and very willing partners, and to be able to see everything, see the malign activity, be able to spot it, be able to go after it, you have got to see it in order to go after it. So the domain awareness, as I have talked to this Committee before, I get about 2 percent of the DOD ISR, gets after about 17 percent of my requirement. I would just say in terms of the urgency right now being at an all-time high, narcotics flow being at an all-time high, my capability and capacity to see is at an all-time low for my allocated resources.

Senator SCOTT. So what do you need?

General RICHARDSON. So I would need the resourcing in terms of the platforms. I would say in terms of allocated forces the ideal platform would be a P–8——

Senator SCOTT. How many?

General RICHARDSON.—with a long dwell, long operation, being able to see. I would say anywhere from four to six, which is what SOUTHCOM had a couple of years ago, and those went away about a year ago in January.

Also for our partner nations their ability to see as well. The ground-based radars are very important.

Senator SCOTT. So Guyana now is a rich country with lots of oil, and they have got a lot of bad actors around them. From a national security standpoint for us and also to make sure they continue their democracy, what support do we need to provide and what support can you provide?

General RICHARDSON. That is a very willing partner, Guyana, and the relationship that we have with Guyana, fastest-growing economy in the world right now because of the light, sweet crude that was discovered off their shores. But they are very vulnerable in terms of their capacity and being able to—you know, our embassy there needs to be a little bit bigger to help them channel and guide them with all these new additional resources. My little DOD team needs to be a little bit bigger as well.

But they can be a stabilizing factor in the region, Guyana, just by fact of where they are located. They are a neighbor to Venezuela, also to Brazil and Surinam, but a very willing partner.

Senator SCOTT. Thank you. General VanHerck, the southern border, there has been conversation in DC that the military could go in and secure the entire southern border, and I know we have National Guard down there that are helping at the southern border.

Without taking a policy position on whether we should or should not do it, is there really the ability, does the military really have the ability to have much of an influence on the security of the southern border?

General VANHERCK. Senator, within the authorities we have we cannot do that, but our military, the most professional, capable on the planet, if tasked to do that, absolutely we could. That is a policy decision, as you alluded to. We have incredible capability to do whatever we desire to do, as United States military.

Senator SCOTT. So, and I am sorry, you might have answered this question before I got here. Talk about hypersonics and our ability to defend ourselves against hypersonics.

General VANHERCK. I am not tasked to defend against hypersonics in the Homeland, with the exception of cruise missiles. Where I am most concerned is about my ability to detect and provide threat warning as the NORAD commander and attack assessment, because of the erosion of strategic stability that it has for providing continuity of government and nuclear force posture survival.

We can talk more in a classified session. I will give you some more details.

Senator SCOTT. All right. Thank you.

Senator ROSEN. Senator Kelly, you are recognized.

Senator KELLY. Thank you, Madam Chair.

General Richardson, I want to followup a little bit on Senator Scott's question about what you need in SOUTHCOM, and then the same for NORTHCOM, just recognizing that, you know, my State, the State of Arizona, has 370 miles of border with Mexico, and just the amount of transnational criminal organizations that are operating south of the border and the fentanyl that is coming from, you know, chemicals that come from China into Mexico, manufactured there and then come across our border is killing tens of thousands of Americans every single year. That is unacceptable.

You talked about needing four to six P–8s. How long ago was it that you had a single P–8?

General RICHARDSON. A year ago in January the P–8s were retasked to another area.

Senator KELLY. How many did you have then?

General RICHARDSON. At that time it was two——

Senator KELLY. You had two?

General RICHARDSON.—from a high of six.

Senator KELLY. You feel you need four to six.

General VanHerck, do you have P–8s available?

General VANHERCK. I get a little more ISR than General Richardson does, but my ISR request is pretty much on a not-to-interfere basis that I get along the southwest border. Now, Senator, you have to realize that I am limited on collecting intelligence in the Homeland, by the law, and so therefore you cannot expect me to be able to do that on this side. We do try to get additional information on the other side of the border, as well, on transnational criminal organizations as well as the National Security Agency helping us.

Senator KELLY. So you cannot fly the airplane south of the border without permission from Mexico. But can you fly a P–8 along the border and get some valuable information? I mean, is there something that, some utility?

General VANHERCK. So we do fly U–2s and RC–135s, not necessarily P–8, to gather information about threats to the Homeland that emanate from all of our borders, not just the southwest border. My actual allocation of that ISR is very low compared to, you know, forward geographic combatant commanders.

Senator KELLY. But does NORTHCOM have P–8s available right now?

General VANHERCK. I have P–8s available, one allocated to me for maritime homeland defense, which would be in support of submarine activity, not necessarily southwest border activity.

Senator KELLY. Where is that airplane based?

General VANHERCK. That airplane is in Whidbey Island, Washington.

Senator KELLY. I imagine it probably as a significant OPTEMPO to it right now?

General VANHERCK. Well, it is not one airplane. It is an entire organization wing up there. The one airplane is access to a single airplane. They are continually doing their mission training and support. I get access to that one airplane under the Maritime Homeland Defense EXORD.

Senator KELLY. What do you think we would need to do to provide like a detachment to SOUTHCOM?

General VANHERCK. Is that for me?

Senator KELLY. Either of you.

General RICHARDSON. Senator, if I might be able to talk about security cooperation in addition to the ISR capability because our partner nations, that security cooperation is my main lever in SOUTHCOM, and being able to train and equip our partners to be able to handle and counter the effects of the transnational criminal organizations, which are at the top of their list that they deal with every single day. The TCOs are way more powerful. They are more sophisticated. They are five times more than all the defense budgets added together for my entire region of partner nations, and we have got to really get after that.

But the foreign military sales, foreign military financing, excess defense articles, we have got to speed that process up because every delay in a piece of equipment, a little goes a long way in this region. I do not need big aircraft carriers. Our partner nations do not need big brigades of soldiers or helicopters, but they need five or six helicopters, a maritime patrol aircraft, the King Air 250. I mean, these go a long way for them, but every delay in that means our partner is not in the fight with us, and so we need to make them stronger to counter the powerful TCOs.

Senator KELLY. General?

General VANHERCK. I would just like to followup. We are not going to interdict our way out of this problem. It is part of the transnational criminal organization model. What we are attacking are the symptoms of the problem. That is the human migration, the counternarcotics trafficking, those kinds of things. The problem is transnational criminal organizations and their network.

So I am encouraged. I just sat through the Interdiction Committee. It is chaired by the Commandant of the Coast Guard with interagency support, and there is a great strategy out of the Office of National Drug Control Policy to get after this. The challenge is operationalizing that strategy across all the entities of the government who have a hand in this. You cannot have multiple entities all doing their own thing.

So I do not see this as a DOD lead, but I do think we need a lead Federal agency empowered to get after the problem that you are talking about across multiple agencies across our Nation.

Senator KELLY. Thank you, General VanHerck and General Richardson, and my office will followup.

Chairman REED.

[Presiding.] Thank you, Senator Kelly.

Senator Ernst, please.

Senator ERNST. Yes, thank you, Mr. Chair, and thank you both for your time this morning. This testimony is important to this Committee because right now our adversaries are probing our Homeland and really looking for weakness right here in our hemisphere. Our Homeland is no longer a sanctuary, so thank you again.

General Richardson, your statement cites at least 11 China-linked space facilities across 5 different countries in the region, and this is more than any other area of responsibility that we see around the globe. So what are the national security implications of these particular space facilities?

General RICHARDSON. Well just the ability for the Chinese to be able to track and launch their own satellites, but then also the ability to surveil not just the United States but our partner nations' satellites as well across the globe.

Senator ERNST. Right, and what are you doing to mitigate that surveillance that you spoke of? Are there things that we can do?

General RICHARDSON. So we are partnering together, of course, with SPACECOM, with NORTHCOM. We hosted the very first inaugural Space Conference of the Americas, bringing all of the space-faring nations together to talk about responsible space operations. Also the capabilities and being able to get after the malign activity possibly associated with those. It is always under supposed research and development and that sort of thing, and the concern is maybe it is not.

Senator ERNST. Right. That is my concern, and what are we doing then to prevent more of these space facilities from being located in your AOR?

General RICHARDSON. So I think just working with the partner nations, with the governments in terms of the responsible space operations and things like that, and talking about and discussing and warning the possibilities associated with it.

Senator ERNST. Again, relationships matter, so it is very important in this region specifically.

General Richardson, during your confirmation you committed to notify Congress if China emplaces long-range missiles in the area of operations. How do you assess the risk of this in the midterm?

General RICHARDSON. So I assess all the development and the Belt and Road Initiative and the critical infrastructure as just setting the theater, or setting the table, if you want to put it that way, in terms of possible basing and that sort of thing in the future. I would say that we are probably about 7 to 10 years behind what has happened in Africa, and with the state-owned enterprises from the Chinese in the region I worry about the dual-use capability and used for military application.

Senator ERNST. Right. I do as well, and what more can we do for SOUTHCOM to prevent China from continuing to expand in the region?

General RICHARDSON. Well I would say that Team USA can do a better job in terms of tooting our own horn about all the investment from the private sector all the way to what I do in the military and defense sector. Foreign military sales and foreign military financing, excess defense articles, training and equipping is really

what we get after. We introduce the Inter-America Defense College that is behind me here for their professional development session. You know, our schools are so important to build trust with our partner nations that we can communicate, talk in the same language. That is what I really bring to the table is being able to work with our partner nations in building that trust, so we can counter the malign activity together.

Senator ERNST. I think that is so important. Again, those relationships matter in this area of operations, and you normally place in front of us what we call a placemat that shows the region and Russian influence, Chinese influence. I just want to make sure that it is very clear to everyone that is watching today, listening to us, that they understand that while China is our pacing threat and we focus on the INDOPACOM, we have to recognize that they are in this hemisphere as well. They are here. They are everywhere around us. They are building space facilities. They are building other points of operation, and they are in our backyard.

So while we do focus on the INDOPACOM it is very, very important. We have got to focus here as well and understand that they are surrounding us, and we have got to do more about that.

General VanHerck, just in the remaining few seconds that we have, what would be the homeland defense implications of persistent Russia or Chinese cruise missile submarines off of our coasts? Do you assess this risk is increasing or decreasing?

General VANHERCK. It is absolutely increasing. Within the last year Russia has also placed their *Severodvinsk*-class submarines in the Pacific, so now not only the Atlantic, we have them in the Pacific. It is just a matter of probably a year or two before that is a persistent threat, 24 hours a day potentially. That impact is reduced decision space for a nation's senior leader in a time of crisis.

Senator ERNST. Absolutely, and again, thank you both so much for your service and dedication to protecting our Homeland. I just want to emphasize again how important it is that we pay attention to Russia and China in this hemisphere as well. Thank you.

Chairman REED. Thank you, Senator Ernst.

Senator Rosen, please.

Senator ROSEN. Thank you, Mr. Chairman, for holding this important hearing, and I want to thank both Generals Richardson and VanHerck for testifying today, for your service, and General VanHerck, of course, for your service to our very own Nellis Air Force Base in Nevada. Thank you.

I am going to buildupon what so many others have already been talking about, our adversaries in our own backyard, China and Russia, 5G technology, all of that.

General Richardson, you mentioned in your opening statement 24 countries in SOUTHCOM's AOR have existing 3G and 4G Chinese telecommunication infrastructure. Of course, we have been talking about the Belt and Road. An additional five countries have upgraded to Huawei's 5G network, and as has been discussed, this adoption of all this technology in your AOR, it is more than concerning. It impacts our national security and the security of all our regional partners.

So again, I just want to build on what they have been asking. What role do you, not just in countering the adoption of the 5G

technology in Latin America, do you think there are ways to leverage public-private partnerships so you do not have to do everything, and can you speak to this and how you are doing that please?

General RICHARDSON. Absolutely, Senator, and the fact that traveling to the region and putting all of these data points together and hearing from the leaders in the region and then coming back here to the United States to talk to our private sector as well, and hear from them, the billions of dollars of investment. But then when you hear of the big projects and tenders coming down from our partner nations, and then there are only six Chinese companies that compete for that project or the tender, then there is a disconnect there. That is why I think that we have got to show the investment that our private sector is doing, which is billions. When I hear from them and talk to them there is billions of investment into the region, and we have got to advertise that.

Team USA is there. Our partners want to work with us. They will turn to us first. But their economies are hurting, and if we cannot do it fast enough, and our foreign military sales and our training and equipping sometimes is not as fast. They are on a political timeline of one term, which is 4 years, and so they are on a stopwatch to deliver for their people, not a calendar. So we have got to speed up our processes. Because they will look to us first, but if we do not have capability to deliver then they are going to look elsewhere to wherever they can get it.

Senator ROSEN. I think accelerating the process and having a budget, not a CR, going through, everyone has talked about that.

General VanHerck, I want to speak with you a little bit about this because we know Huawei and foreign-owned companies, they are responsible for our United States miliary installations and ICBM fields, our training ranges, obviously, at Nellis. We know that people are building these telecommunications sites nearby all of these so they can collect information.

I know we are in an open setting, but can you talk about the threat this poses, what can we do, public-private partnership, and your opinion. Can you elaborate a little bit?

General VANHERCK. Absolutely. I am very concerned about Chinese communications infrastructure being built not necessarily by Chinese but with companies here in the United States in close proximity to national security locations. We have to keep an eye on that. That is a threat to our national security. It is an intelligence collection threat. It may be even a more broad threat.

I would also point out in my AOR, in the Bahamas, China is very aggressive. Their Ambassador in the information space, they have built a new embassy. Economic investment in the largest resort outside of China is right in the Bahamas, right off of our coast. It sits right on top of the Navy's AUTEC test and train ranges, which there is potential collection there. They are interested in developing smart cities here in the region. I will not go into detail. I would in a classified environment. Selling equipment that we, or our partners, utilize for assessment of goods crossing the border, all those kinds of things.

I would also point out one of the main lessons from COVID for me was the supply chain and our supply chain vulnerabilities, that

we have farmed out so much to China. You know, when you get 80 percent of your pharmaceuticals from somebody that you may face in a crisis in the future, that is a national security imperative that we need to go look at.

Senator ROSEN. Thank you. We just had a hearing about that in Homeland Security yesterday, bringing back particularly that pharmaceutical supply chain, critical medications.

I am going to take my next question off the record, but I want you to elaborate on cyber domain awareness that you spoke about. But my time is up so we will just submit that. Thank you again.

Chairman REED. Thank you, Senator Rosen.

Senator Budd, please.

Senator BUDD. Thank you, Mr. Chairman, and again, thank you both for being here. General Richardson, it was great to sit down with you yesterday and have a helpful conversation.

Following up a little bit on Senator Rosen's questions about foreign military sales, I have got a couple of yes-or-no questions about the process, and I have asked similar questions of other combatant commanders. General Richardson, is the current FMS process fast and flexible enough to meet our foreign partners' security needs in your AOR?

General RICHARDSON. No, Senator.

Senator BUDD. Does the transfer of U.S. defense articles build our partners' capacity to provide for their own defense?

General RICHARDSON. Yes, it does, Senator.

Senator BUDD. Is China increasing arms exports to any other countries in your AOR?

General RICHARDSON. Yes, Senator.

Senator BUDD. Is the United States still the security partner of choice in your AOR?

General RICHARDSON. The U.S. is the security partner of choice, Senator, yes.

Senator BUDD. Thank you. Is the United States at risk of losing that security partner of choice status to China?

General RICHARDSON. Yes, Senator.

Senator BUDD. If you would explain a little bit about how FMS challenges are impacting strategic competition with China in your AOR.

General RICHARDSON. Yes. So the ability to be able to deliver quickly. I think that there is also a backlog from COVID and the impacts that our own private sector and industries had to take, and being able to not be a year or 2 years behind delivery. Again, we do not need a lot in this region. A little goes a long way. When we are talking about one country needing one King Air 250 maritime patrol aircraft or four coastal patrol vessels or six helos, we are talking about something that is not that large but that they need to get after the transnational criminal organizations, the malign activity that occurs in their countries. Then that impacts, provides some stability. It curbs irregular migration. It keeps the flow down if our partner nations can provide that security and stability for their countries.

Senator BUDD. Thank you for that.

General VanHerck, again thank you for being here as well. The North Carolina National Guard currently has personnel mobilized

to the southern border in support of CBP, Customs and Border Patrol. We are very proud of them and we want to make sure our troops have all the resources they need to help secure the border.

Are there additional resources we could provide that would make the southwest border deployment more effective?

General VANHERCK. Senator, I am comfortable with the resources I have based on the mission and authorities I have right now.

Senator BUDD. Thank you. So nothing else needed? They have everything they needed?

General VANHERCK. Their commanders have not asked for anything to me. They are working for me in their Title 10 mobilization capacity and I am not aware of any asks.

Senator BUDD. Thank you. and for both of you, we know that illicit drugs are not the only thing being trafficked through your AORs and into the United States. Human trafficking is an all-too-common occurrence, and just this week we learned that groups of Chinese nationals are paying coyotes a premium to be smuggled across the southern border.

From your perspectives, what is driving this humanitarian crisis in your respective AORs, and what resources would be helpful to enhance your work in countering the human trafficking side?

General Richardson first.

General RICHARDSON. So I would say the security cooperation funding is my main lever, Senator, and that really empowers the partner nation militaries and their security forces to be able to handle that. That malign activity, as you said, is not just narcotics. It is human trafficking. It is illegal mining. It is illegal logging, illegal fishing. It is counterfeit goods. It is the whole money laundering piece. They are more powerful, they are more sophisticated, they are corrupt, and they drive violence and irregular migration, and strengthening our partner nations to be able to handle that is what makes them stronger and then generally ends up helping us in the Homeland, where those malign activities do not end up on our southwest border.

Senator BUDD. Thank you. General VanHerck?

General VANHERCK. Yes, thank you. So the problems, I call the symptoms. It is the human trafficking, migration, those kinds of things, are driven by an instability created by transnational criminal organizations. If you do not want your family to live within that environment you are going to try to get out, and you are willing to pay whatever it is to get out of there. That is part of their business model.

I would also say natural disasters. They have had several major hurricanes in Mexico and Central America within the last few years, and also COVID. That created an environment where folks who wanton leave, and they want to come to the United States, and transnational criminal organizations are seizing on that opportunity as part of their business model.

We will not interdict our way out. This requires a strategy to go after transnational criminal organizations. We know how to do this as a nation—cut off the funding, cutoff the weapons. Seize on those opportunities. Interdiction will not get us out of this problem.

Senator BUDD. Thank you both. My time has expired. Mr. Chairman, I will be submitting a question for the record.

Chairman REED. Thank you, Senator Budd.

Senator Blumenthal, please.

Senator BLUMENTHAL. Thank you, Mr. Chairman, and thank you both for your service and for being here today.

I want to focus on Russia for the moment, and particular, General VanHerck, the resources that you have, NORAD and NORTHCOM, in the Arctic area. Do you think those resources are sufficient to protect our national security? Should they be enhanced?

General VANHERCK. Senator, no, I do not think I have the infrastructure, the communications, the ability to respond and be persistent in the Arctic.

Senator BLUMENTHAL. What kind of additional resources do you think should be provided?

General VANHERCK. Yes, I would point back to the report that NDAA directed me to do, that I provided to Congress, that gives a list of the challenges that I face. I need additional communications capability, data and information sharing, the ability to be persistent, so fuel north of Dutch Harbor, Alaska. We need to do more research and development on capabilities that are going to go into the Arctic platforms to ensure they operate. When you send platforms into the Arctic and they are non-functioning, that is a concern for me. I can talk more in a classified environment.

The infrastructure is the biggest concern. So in a layered defense concept I need to have forces forward. That would include at Thule, Greenland, in Canada as well. So NORAD in Canada has to be part of this discussion as well. We need persistence. That requires icebreakers. We, as a Nation, are in a bad shape when it comes to icebreakers, and I fully support the Coast Guard's plan. We need to go faster.

Senator BLUMENTHAL. The Coast Guard needs more icebreakers in that area. Do you agree?

General VANHERCK. I do agree.

Senator BLUMENTHAL. General, have you seen any effect in terms of the Russian resources or threat as a result of the Ukrainian operation?

General VANHERCK. So I am not aware of any direct kinetic threat to the Homeland. We continue to monitor the cyber domain, and especially through their proxy actors. I can talk in a classified environment. I am most concerned about that cyber domain. I would point out that while Russia appears to be a failure in the land domain in Ukraine they still maintain significant strategic capabilities to hold our Homeland at risk, and we have seen them just as active, actually more active globally, to include in the NORTHCOM AOL, such as sailing the Gorshkov with hypersonic missiles just a couple of months ago, through my AOR and into General Richardson's AOR, and more persistent submarine activities that can hold our Nation at risk.

Senator BLUMENTHAL. Let me ask you both, maybe beginning with General Richardson, the Wagner Group has been very active in Ukraine. It has been very active in Africa. Have you seen any evidence of its malign activities in your command?

General RICHARDSON. Russian malign activity is alive and well in SOUTHCOM, and in my statement I talked about the disinformation campaign. Over 31 million followers now on Russia Today Espãnol and Sputnik Mundo. They do not play by the rules. They do not have any rules, and they pose journalists to be legitimate journalists. They are not. Twitter bots are off the charts, and these especially increase right before elections in our partner nations. It is very concerning, but it is very much alive and well with Cuba, Nicaragua, Venezuela that Russia continues to keep their alliances with.

Senator BLUMENTHAL. Thank you for that. That is very helpful, and do they operate also through proxies, like the Wagner Group?

General RICHARDSON. Yes, Senator, they do.

Senator BLUMENTHAL. In your command, General VanHerck, what have you seen?

General VANHERCK. Russia is active. As you know, the Mexican military utilizes Russian helicopters. I would love to see those helicopters go. They have asked, through foreign military sales, for options. We do not move fast enough, the question we got earlier about foreign military sales, to deliver capability to basically punt the Russians out of Mexico.

I would also point out that from a space perspective that Russia is actively seeking, under academic and research facilities, access for space monitoring in my AOR as well. I will just leave it at that. I will talk to you more in a classified environment about that. But it is alive and well right here in the NORTHCOM and NORAD AORs.

Senator BLUMENTHAL. Thank you. I agree with you about the helicopters, by the way. We should be providing American helicopters, not relying on Russian helicopters.

General VANHERCK. Yes. Can I point out one more thing?

Senator BLUMENTHAL. Sure.

General VANHERCK. I have been working for more than a year after I committed to provide radars to the Mexicans for domain awareness for transnational criminal organization and drug control. We still have not been able to donate those radars. The process is too slow.

Senator BLUMENTHAL. Thank you. Thank you both for your testimony. Very informative and helpful. Thank you.

Chairman REED. Thank you, Senator Blumenthal.

Let me note that the vote has started, and recognize Senator Sullivan.

Senator SULLIVAN. Thank you, Mr. Chairman, and I want to thank both of the witnesses today for their outstanding service to our country and excellent testimony. General VanHerck, is this your last hearing?

General VANHERCK. It is my last hearing in front of this Committee. I am sure there will be others.

Senator SULLIVAN. So I am sure you are sad about that.

General VANHERCK. Senator, I actually enjoy the opportunity. It is a great chance to tell our story. I have been telling it for 3 years. Recent events have brought it further into the light.

Senator SULLIVAN. Well, I want to compliment you both, but I want to compliment you in particular on your career in the military

and your outstanding work that you did over the last several months. It was a busy time for NORTHCOM, and I think you led the troops of Northern Command exceptionally well, not just the last couple of months but during your tenure. So thank you for that.

I do want to reference—can you do a quick shout-out to the men and women in Alaska, their operations over the last couple of months and what they were doing on a regular basis, whether it is Chinese spy balloons or Russian Bear bombers. Just your thoughts, very quickly, on General Nahom and the team up there, including the Guard and Reserves.

General VANHERCK. Yes. Some exceptional work, not only in Alaska but across the Department, especially when it comes to the high-altitude balloon. That was Ph.D.-level employment tracking. But most importantly the engagement.

That balloon went down, as you know, on the ice shelf off the coast of northern Alaska with limited infrastructure to support, and the National Guard stepped up, Tory Saxe and his team, and General Nahom, to do incredible work, in just incredibly challenging conditions, and monitoring additional threats to our Homeland. So I could not be more proud of the entire team.

Senator SULLIVAN. Thank you on that, and Mr. Chairman, I think this hearing has clearly, clearly highlighted the need for serious FMS reform. Senator Budd and I were in the Middle East on a codel with Senator Rosen, Senator Kelly, a number of us, and everywhere we went our allies, our military were like, "You have got fix FMS. It is killing us." So I think that is something we need to be looking at hard during this NDAA.

General VanHerck, can you briefly touch on the highlighted challenges of domain awareness? You have been talking about this for 3 years, but I think the Chinese spy balloon and other recent activities have really driven home what you have been talking about, and how we need to do it more rapidly and in a timely manner.

General VANHERCK. Yes. So the bottom line, Senator, is if you cannot detect something, you cannot defeat it, and you certainly cannot deter, and so what has happened since Shock and Awe. Our operations in the Middle East, is Russia and China, particularly, have developed capabilities to hold our Homeland at risk, to reduce our decision space, delay and disrupt our flow. My challenge is to detect those capabilities.

We have assumed, for decades, that the Homeland is a safe and secure environment, two moats on each side, friendly nations on each side. That model is gone, and my ability to detect those threats, whether they be undersea to on orbit and in cyberspace has not kept pace with the threat. That reduces decision space for our Nation's senior leader, it erodes strategic stability, and increases the risk of strategic deterrence failures.

Senator SULLIVAN. Let me ask you, it is a multi-part question and I would like you to answer it in the time I have left. I have appreciated Senators Peters, King, Tuberville, Blumenthal all raising the issues of the Arctic and your ability to currently monitor and respond to threats against the Homeland, specifically in the Arctic.

Now can you also explain why the Arctic, why the Alaska avenues of approach are so important, not just to Alaska—we want to protect the great State of Alaska, my state—but we also recognize, and you recognize, that Alaska often is the avenue of approach with our adversaries' weapons systems to attack the Lower 48, if they were going to do that, whether that is Chicago, Miami, or New York.

So could you explain a little bit on the issue of what you need more in the Arctic—I appreciate your leadership on this—and the domain awareness issues that relate to the importance of those assets in Alaska, not just for Alaska but for the whole country.

General VANHERCK. Yes, Senator. So Alaska may be the most strategic location on the planet.

Senator SULLIVAN. I think I have said that a few times before here, Mr. Chairman. That is Billy Mitchell's famous quote. Correct?

General VANHERCK. It is. So deploying from Alaska, short to the Indo-Pacific, short to the Yukon AOR, shortest avenue approach for ballistic missiles from Russia, potentially China and DPRK to our Homeland.

You know, allowing China and Russia to move forward with putting ballistic missile submarines, due to the ice now receding, in close proximity to Alaska and our Homeland, seriously erodes my ability to provide adequate threat warning, capabilities, domain awareness. So I hope the Air Force comes forward with an unfunded request to accelerate the Wedgetail. The AWACS is worn out. We need a Wedgetail, and we need it much faster, so I can monitor things in the Arctic as well.

The communication capabilities, I hope that terminals are funded for SpaceX, Starlink capabilities to give us the domain awareness, and that we accelerate over-the-horizon radar, and then more broadly think about globally integrated air and missile defense, which would include sensors in Alaska, strategic sensors in Alaska. We need to get long-range, discriminating radar online sooner and utilize that data better for deterrence purposes but if required, defeat purposes.

Senator SULLIVAN. Great. Thanks again to both of you, and again, General, thank you for your outstanding service to our country for decades. We very much appreciate you here on this Committee.

Chairman REED. Thank you, Senator Sullivan.

General VanHerck, General Richardson, thank you for your outstanding testimony today.

We have a vote on so we will vote, but I would announce that we will reconvene in approximately 15 minutes in SV–217 for the closed session.

With that I will adjourn the open session, and thank you both.

[Whereupon, at 11:44 a.m., the Committee adjourned.]

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JEANNE SHAHEEN

TRANSNATIONAL CRIMINAL ORGANIZATIONS

1. Senator SHAHEEN. General VanHerck and General Richardson, would labeling drug cartels in your respective regions as foreign terrorist organizations support

your operations? Please explain the benefits or negative consequences of such a designation.

General VANHERCK. I assess that designating the drug cartels within my Area of Responsibility as Foreign Terrorist Organizations would be of negligible benefit, if any. With specific regard to USNORTHCOM support to interagency and international partners, I defer to the State Department for further discussion on FTO designations in accordance with Section 219 of the Immigration and Nationality Act.

General RICHARDSON. Labeling drug cartels in the USSOUTHCOM AOR as foreign terrorist organizations (FTOs) would be of small consequence to operations in the USSOUTHCOM AOR. It would blur the line between traditional criminal enterprises and terrorist organizations. The drug cartels are criminal organizations driven by money while terrorists are driven by ideology. There is also a potential for concerns from impacted partner nations because the United States would be labeling a drug cartel as a "terrorist organization" which that partner nation views as an internal criminal enterprise/organization. I defer to the Department of State, which owns the authority to make this designation, on how it might impact other United States Government efforts to counter drug cartels.

SECURITY COOPERATION

2. Senator SHAHEEN. General VanHerck and General Richardson, security cooperation with our allies and partners is crucial in the fight against illicit activities. One proven method to build partner capacity is through the legal sale of United States made weapons to vetted foreign militaries and law enforcement, such as the recent sale of rifles and pistols to the Mexican Navy and Marines. How do you view the importance of United States material being provided—in terms of building partner capacity and influence—instead of material sold by foreign governments that do not share our moral values?

General VANHERCK. The timely provision of U.S. material and support is critically important as we seek to enhance the institutional capacity of our military partners. This, in turn, serves to limit our competitors' influence in the region.

General RICHARDSON. Our Foreign Military Sales (FMS) play a significant role in U.S. Security Cooperation and is a way to achieve our diplomatic and defense strategic objectives. The strength of our programs compared with malign global competitors is our enduring partnership to develop military capabilities and institutions with the full spectrum of lifecycle management disciplines. This includes strategy and doctrine, interoperability, personnel and administration, logistics and infrastructure, and systems and institutions. Our malign global competitors do not invest in holistic approaches to build enduring capabilities, rather they exploit investments to advance malign interests. In contrast, the long-term nature of our FMS sales helps us maintain strong partnerships with countries to emphasize the importance of democratic values such as rule of law and respect for human rights.

3. Senator SHAHEEN. General Richardson, what can your respective commands do to ensure these partnership activities are continued?

General VANHERCK. Responsiveness to USNORTHCOM's partners' validated requests is a key element in maintaining the growing activities with the Mexican military. The current system whereby we provide support is antiquated and slow. There would be significant benefit in streamlining the process across the whole-of-government to move faster and provide more timely support.

General RICHARDSON. The access and presence of our Security Cooperation Personnel in our embassies throughout the USSOUTHCOM AOR are the vanguards of these partnerships but we need sufficient resources to stay engaged. A little goes a long way in this region, and we must be present via the broad spectrum of Security Cooperation programs at our required resourcing levels, including:

- Train and Equip Programs (§ 333, § 8068, Foreign Military Financing, Global Peace Operations Initiative)
- Ministerial Level Advising (Logistics, Cyber, Budgeting, Human Rights)
- Transfers of U.S. Origin Defense Articles and Services (Near Coastal Patrol Vessels, Jeep J8s, Maritime Patrol Aircrafts) via the FMS process
- Exercises (PANAMAX, RESOLUTE SENTINEL, TRADEWINDS)

4. Senator SHAHEEN. General VanHerck and General Richardson, when foreign governments that do not share our moral values provide security cooperation and material to local governments in your region, how does that impact stability and influence in those countries?

General VANHERCK. Revisionist and revanchist powers seek to gain footholds throughout the hemisphere. If provided the time and space to operate, they may be capable of buying some influence and access to the region. USNORTHCOM's ongo-

ing Security Cooperation engagements are vital to limiting competitor influence throughout the AOR.

General RICHARDSON. The People's Republic of China (PRC) has significantly increased its outreach and activities in the Western Hemisphere, with 21 of 31 nations in the USSOUTHCOM AOR having joined the Belt and Road Initiative (BRI). The non-transparent nature of PRC "investment" in the region leads to debt-traps and corruption that can break down democratic values in the region. This is true of security assistance, as well as infrastructure projects by the PRC that are all aimed at increasing PRC influence close to our Homeland. These actions have the potential to destabilize the region and erode the fundamental conditions needed for quality private sector investment. This in turn disrupts legitimate economic opportunity, compromises the rule of law, allows malign State actors the opportunity to make inroads and drives irregular migration. Through military engagements and gray zone operations, Russia colludes with authoritarian regimes in the region to undermine United States influence. In the past year, Russia continued its military engagements with both Venezuela and Nicaragua to increase influence with these two nations that are destabilizing forces in the region.

QUESTIONS SUBMITTED BY SENATOR MAZIE HIRONO

CLIMATE RESILIENCY

5. Senator HIRONO. General VanHerk, climate change is affecting the readiness of our military. Abroad, particularly in South and Central America, hurricanes, rising sea levels, flooding, and drought damage the region's health, food, and water supply destabilizing institutions and making your missions harder. how does climate change's effects on our critical infrastructure impact your ability to protect the Homeland?

General VANHERCK. The effects of environmental change have direct impacts on NORAD and USNORTHCOM's missions, planning, and infrastructure. For example, melting permafrost impacts construction and infrastructure sustainment at northern bases, while diminishing sea ice in the Arctic will lead to increased competition and drive requirements for increased sustainable presence in the region. The increased duration and intensity of wildfire season in the western United States and Canada will continue to require USNORTHCOM's support to civil authorities, while more powerful hurricanes have direct economic and readiness impacts on installations and personnel along the Gulf and Atlantic coasts. This reality is factored into NORAD and USNORTHCOM's planning and will affect the commands' operations for the foreseeable future.

6. Senator HIRONO. General Richardson, I have been focused on supporting green technologies for our own infrastructure. From your perspective, what types of technologies help prepare communities for the effects of climate change?

General RICHARDSON. Within the USSOUTHCOM AOR, our partner nations face a wide variety of transboundary challenges, to include natural disasters such as water shortages in Paraguay and Uruguay, flooding in Ecuador and Honduras, wildfires throughout Chile, the dry corridor that runs through Central America, and significant risk from sea-level rise. Below are technologies that could help prepare for and mitigate the effects of climate change.

Freshwater production and storage capability and drought resistant crops: With changing climate patterns, emerging areas of increased dry days resulting in drought conditions will affect reservoir levels and access to water for drinking and crop production. Island nations may see an increase in saltwater intrusion into freshwater drinking supplies due to an increase in demand for freshwater and an increase in sea-level. The ability to produce or capture freshwater and store it is essential for agricultural. When used with additional means of freshwater storage, drought resistant crops may also allow agricultural areas to remain viable instead of relocating. One area in the USSOUTHCOM AOR that is experiencing significant drought is the "dry region" that extends through El Salvador, Guatemala, Honduras, and Nicaragua. Over the last 3 decades, drought in this region has resulted in an approximate loss of $5 billion dollars in the agricultural sector. This is a major factor that results in food insecurity and irregular migration.

Early warning systems: The ability to provide advanced warning for environmental impacts such as severe storms, flash floods, volcanic eruptions, and tsunamis is critical to protect the population. Some severe storms such as tropical cyclones allow forecasting days in advance and allow early warning to populations through media or word of mouth. Quick onset events that give minute to hour forecast win-

dows require additional warning systems such as sirens or alarms that don't require a media source to inform the population.

ILLEGAL FISHING

7. Senator HIRONO. General Richardson, your Command is at the forefront combating illegal fishing. This maritime crime is depleting fish stocks worldwide, contributing to food insecurity. In the Pacific I certainly have heard from our allies and partners, like the Compact of Freely Associated States, that this is a pressing issue made only worse by climate change. In your engagements with our partners, what lessons have you learned from your efforts to combat illegal fishing that can be applied worldwide?

General RICHARDSON. Engagement and information sharing with Allies and partners has informed our understanding of the environment and the threat posed to the region from illegal fishing. The ability to quickly share unclassified information with partner nations as well as with interagency and NGO partners has been especially critical to countering this threat. USSOUTHCOM utilizes our Enhanced Domain Awareness (EDA) platform to illuminate IUUF activity, trends, and patterns in USSOUTHCOM's AOR and mitigate these vessels' attempts to evade detection. Our IUUF dashboard within EDA fuses commercial GEOINT, academic and NGO data, and publicly available information to provide allies and partners with near real-time awareness of IUUF, improving their ability to respond to the growing number of Chinese fishing vessels conducting these malign activities (over 1,000 as of June 2023).

Beijing subsidizes the Chinese distant water fleet (DWF), which almost certainly facilitates the DWF's expansion, helps address China's domestic food needs, and generates revenue for its domestic fishing industry. These subsidies include oil, preferential loans, and tax breaks that pay for construction and equipment procurement as well as covering insurance premiums and vessel decommissioning costs. Beijing provides the DWF with satellite imagery and research vessels to facilitate the fleet's efforts to locate fish stocks. China's DWF also uses government-subsidized supply ships and oilers to sustain itself at sea for several years without a port call, ensuring a continuous fishging cycle that facilitates year-round fish transshipment for the Chinese market. The DWF trawls the edge of the countries' Exclusive Economic Zones (EEZ), operating legally in international waters. The vessels regularly switch off their automatic identification systems (AIS), which broadcasts the ship's identity and position, likely to fish undetected in the EEZ. With the transponder disabled, the fishing vessels appear to go dark, preventing law enforcement tracking.

HUMANITARIAN AID AND DISASTER RESPONSE

8. Senator HIRONO. General Richardson, Latin America and the Caribbean are particularly vulnerable to extreme natural disasters. An important pillar of our Nation's response for humanitarian crises is the Marine Corp embarked on amphibious ships, like the Landing Platform Dock. What will the impact be in your area of responsibility if the Marine Corp does not have the ships it needs to deploy in a timely fashion to give humanitarian aid in the event of a crisis?

General RICHARDSON. In our area of responsibility, the presence of United States Marines embarked aboard amphibious warfare ships physically demonstrates America's commitment to our Latin American and Caribbean partners. 29 of 31 regional countries are connected to the maritime domain; moreover, a majority of the region's 500 million inhabitants occupy littorals that surround or partially frame national borders. U.S. Marines have a long history of operating from the sea and conducting humanitarian assistance operations in the littorals. Two recent examples include timely response to Hurricanes Matthew in 2016 aboard the USS *Mesa Verde* (LPD–19), and Maria in 2017 aboard the USS *Wasp* (LHD–1), USS *Kearsarge* (LHD–3), and USS *Oak Hill* (LSD–51). Without these amphibious warfare ships, USSOUTHCOM's response would have been limited in capacity and capability.

In addition to providing emergency aid for natural disasters and other crises, the episodic presence of amphibious ships deters Malign State Actors (MSAs) who are actively establishing footholds in the Western Hemisphere. Lack of U.S. presence degrades and imperils partner nation trust—a dangerous circumstance that MSAs can exploit by filling voids created by inadequate numbers of U.S. amphibious ships.

QUESTIONS SUBMITTED BY SENATOR ELIZABETH WARREN

FUTURE USE OF UNFUNDED PRIORITIES LISTS (UPLS)

9. Senator WARREN. General VanHerck and Richardson, do you agree that if funding is needed for a project, it should be a part of the command/service budget?

General VANHERCK. Yes, NORAD & U.S. Northern Command (USNORTHCOM) follow the budget process directed by the Department of Defense (DOD) and Congress and identifies priorities for inclusion in the annual budget process. The Fiscal Year 2017 National Defense Authorization Act requires Combatant Commands to submit an Unfunded Priority List (10 USC 222a). As a Combatant Command with no assigned forces and no acquisition authority, NORAD & USNORTHCOM rely on the military Services for most resourcing. The Unfunded Priority List allows us to inform the Department of Defense and Congress of our mission-critical capabilities not resourced by the Services.

General RICHARDSON. Yes, I do agree. The UPL process offers an opportunity to address emerging priorities that arise after the budget process closes to meet the evolving dynamic environment in my AOR. As a combatant commander, I am reliant on the Services and ultimately the Department of Defense to fund my priorities. In accordance with the law established in the fiscal year 2017 National Defense Authorization Act (10 USC 222a), I submitted to Congress those mission-critical priorities that remain unfunded through the regular budget process.

10. Senator WARREN. General VanHerck and Richardson, historically, have previous Unfunded Priorities Lists items been included in the following year's base budget? Have Unfunded Priorities Lists items from fiscal year 2023 been included in the fiscal year 2024 base budget? If yes, please provide detail including the requested item, funding amount, and vendor executing the effort. If no, why not?

General VANHERCK. In general, requests on prior NORAD and USNORTHCOM Unfunded Priority Lists (UPL) have not been included in subsequent year base budgets. Those requests not included in the subsequent year base budget are generally out-prioritized for Department resources. However, the USNORTHCOM fiscal year 2023 UPL had two requests that were not appropriated in fiscal year 2023, but were included in the Fiscal Year 2024 President's Budget Request:

> The fiscal year 2023 UPL included a request for $29.8 million to resource NORAD and USNORTHCOM Joint Operations Center (JOC) modernization. The Fiscal Year 2024 President's Budget includes $29.5 million for JOC modernization. The requested funding will procure and install components to support ingesting, aggregating, processing, displaying, and disseminating data. If authorized and appropriated by Congress, NORAD and USNORTHCOM will utilize the Naval Information Warfare Center for purchase and installation of required components. Components will be purchased through Government Services Administration-authorized vendors that have not yet been identified.
>
> The fiscal year 2023 UPL also included a request for $50.87 million to resource a Cruise Missile Defense of the Homeland demonstration. The request included sensor procurement, fire-control integration, testing, and a live-fire demonstration. The Fiscal Year 2024 President's Budget includes $14.5 million to the Office of the Under Secretary of Defense for Acquisition and Sustainment to begin procuring an elevated sensor; and $5 million to the Department of the Army to begin fire-control integration. NORAD and USNORTHCOM are not directly involved in the obligation of this funding; the vendor(s) will be selected by lead agency.

General RICHARDSON. USSOUTHCOM works with the Army as our Combatant Command Support Agent (CCSA), the other Services, the Office of the Secretary of Defense, Defense Agencies, and the Joint Staff to include enduring Unfunded Priorities in subsequent year funding. Occasionally, these priorities are resourced.

INFORMATION ON UNFUNDED PRIORITIES LISTS

11. Senator WARREN. General VanHerck and Richardson, what was the cost of putting together this wish list?

General VANHERCK. Development of the Unfunded Priority List is part of our annual research and budget analysis activity and has no additional cost.

General RICHARDSON. USSOUTHCOM did not incur additional expense to put together the unfunded priorities list since the list is simply a compilation of the Command's already existing resource requirements that are compiled as part of a core staff function.

For each item on the unfunded priorities list you submit in response to 10 U.S.C. 222a, please provide the following information:

12. Senator WARREN. General VanHerck and Richardson, what is the description of this Unfunded Priorities Lists?

General VANHERCK. A description of my unfunded priority list follows:

(1) *Arctic Capable Pre]positioned Shelters* ($10 million): Funds requested will support RDT&E efforts to design expeditionary base camp systems capable of providing life support, mission command, critical asset storage and large area maintenance shelter (LAMS) capability in an Arctic environment at temperatures as low as –65F. Requested funds will enable continued system modification, augmentation, and testing at the U.S. Army Engineer Research and Development Center (ERDC) Arctic Infrastructure Research Center in Fairbanks, Alaska to ensure the ability to operate in extreme Arctic conditions.

Explanation: Existing expeditionary shelters in Army Prepositioned Stocks can operate at temperatures as low as –25F. The most recent research and development efforts have demonstrated Arctic modifications that increase performance capability to temperatures as low as –40F. The requested funds ($4.5 million) enable RDT&E in support of base camp equipment capable of operations at temperatures as low as –65F in cooperation with the ERDC Arctic Infrastructure Research Center. Current LAMS capability in prepositioned stocks can operate at temperatures as low as –20F but require a temperature of +25F to set up. The requested funds ($5.5 million) enable the Air Force Civil Engineer Center in cooperation with the ERDC Arctic Infrastructure Research Center to conduct RDT&E in support of LAMS capable of operations at temperatures as low as –65F. The National Defense Strategy (NDS) notes that the United States seeks a secure and stable Arctic region. Developing equipment that enables campaigning in the harsh Arctic environment reduces risk in the Department of Defense (DOD) to generate and deploy forces to the region if needed to support on-going stability.

(2) *Counter Strategic Competitors in the Western Hemisphere* ($5.2 million): Requested funds will enable DOD/USNORTHCOM to support expanded intelligence and aerial & land detection and monitoring capabilities for United States Federal Law Enforcement Agencies and the Mexican Military. These capabilities will better position lead agencies, as part of a whole-of-government approach, to reduce the threat to the Homeland from transnational criminal organizations and deter Strategic Competitors in the Western Hemisphere, and particularly in Mexico.

Explanation: USNORTHCOM's relationships with Allies and partners support integrated deterrence by using additional tools at the Department's disposal to deter competitors and potential adversaries from aggression and undue influence. DOD's alignment of counter transnational criminal organization policies, investments, and activities sustain and strengthen deterrence by reinforcing the United States as the partner of first choice.

Increasing air and land domain awareness in the approaches to the Homeland directly supports deterrence by denial as noted in the NDS by maintaining our ability to advance U.S. national interests.

(3) *Arctic Campaigning* ($7.0 million): Funds requested will support infrastructure improvement efforts at Pituffik Space Base (Thule, Greenland). Pituffik SFB is the DOD's northernmost military installation and the only installation north of the Arctic Circle. The existing base infrastructure requires significant restoration and improvements to withstand the harsh environmental conditions of the region and support campaigning.

Explanation: USNORTHCOM and the U.S. Army Corps of Engineers (USACE) have worked together to define project requirements at Pituffik SFB to enhance support for Arctic operations. Posturing defensive forces forward, while actively campaigning, enables improved response time and longer "flying time on-station" to deter competitors and mitigate threats to the Homeland.

USACE will conduct geotechnical and topographic surveys at Pituffik SFB to ensure appropriate design for infrastructure restoration/construction and airfield pavement sites. The presence of permafrost drives special foundation design to avoid future melting of permafrost and severe settling of infrastructure floors ($1 million). USACE will design projects to repair two non-serviceable hangars. One environmentally controlled hangar will meet requirements to accommodate Personnel Recovery aircraft and personnel on alert status; and the other will serve as a facility for large aircraft maintenance and maintenance administrative spaces ($6.0 million).

(4) *Over the Horizon Radar (OTHR) Capability Acceleration* ($55 million): The funds requested will procure a testbed and fund RDT&E to integrate OTHR with space-based sensors.

Explanation: Funding will procure a replacement test asset ($20 million) to conduct wintertime atmospheric study and assess hardening issues. The collected data will better characterize impacts of Auroral clutter and identify strategies to mitigate impacts for northern-looking High Frequency (HF) radars. The existing test set is currently supporting real world operations and is expected to do so for an extended time period. RDT&E efforts to integrate OTHR with MDA space sensors and systems ($35 million) supports improving early warning and tracking of challenging threats, addressing gaps for both Space and OTHR systems. Funding would purchase backend servers at 2 sites and the required software development. Aligned with the NDS, domain awareness reduces risk and aids in escalation management. Additionally, in the event of crisis, globally integrated domain awareness capabilities increase warning and allow for flexible decisionmaking to respond, as necessary.

(5) *Domain Awareness Technology Development* ($9.75 million): The funds requested will provide for a demonstration of Cryogenic Exploitation of Radio Frequency (CERF) sensor technology in an operational environment (Alaska).

Explanation: The CERF prototype provides an ultra-wide band passive sensor that contributes to all domain awareness for USNORTHCOM and NORAD Homeland Defense missions. The system leverages Intelligence Community (IC) investments to provide operational indication and warning of potential threats by means of RF transmissions. Funding would enable deployment planning, transportation, sensor installation, communications architecture, and sensor demonstration as well as sensor employment in an operationally relevant environment (Alaska). The communications architecture will provide domain awareness data to existing exploitation systems. The National Security Agency's Warfighter Integration Program and Tactical Investment Portfolio program managers in Y1432 will execute funding. Additional details and applications are available at higher classification levels. Aligned with the NDS, domain awareness reduces risk and aids in escalation management. Additionally, in the event of crisis, globally integrated domain awareness capabilities increase warning and allow for flexible decisionmaking to respond, as necessary.

(6) *ARCHER* ($27 million): The funds requested will advance air domain awareness capabilities by completing the planned ARCHER fielding in Alaska and provide RDT&E funding required to deploy ARCHER well north of the Arctic Circle.

Explanation: ARCHER is a passive sensor that contributes to all domain awareness for USNORTHCOM and NORAD Homeland Defense. The systems leverage commercial-off-the-shelf technology within an Air Force TENCAP rapid acquisition effort. There are currently 21 of 35 planned systems in Alaska. The requested funding would transition ARCHER from the rapid acquisition process into the long-term sustainment process ($17 million). The funding request also includes RDT&E to develop improved system shelters ($2.5 million), communications pathways ($2.5 million), and upgraded geolocation software ($5 million) to enable deployment of ARCHER systems into remote Arctic locations further north than the current North Warning System.

Aligned with the NDS, domain awareness reduces risk and aids in escalation management. Additionally, in the event of crisis, globally integrated domain awareness capabilities increase warning and allow for flexible decisionmaking to respond, as necessary.

(7) *Three-Dimensional Expeditionary Long Range Radars (3DELLR)* ($211.SM): The funds requested will procure nine (9) 3DELLR's to fill surveillance gaps caused by existing radar failures.

Explanation: Current long range radars fielded in the 1980's reach the end of program life in 2025 and will begin to fail at increasing rates. These radars include 45 Federal Aviation Administration (FAA) Air Route Surveillance Radars (ARSR–4) ringing CONUS, 14 (FPS–117) radars at the North Warning System and 15 in the Alaska Radar System. Procuring 3DELLR systems enable deploying a gap filler capability when existing radar systems cannot be repaired in a timely manner. Additionally, 3DELLR can be used to defend critical infrastructure as required. There is no current Program of Record to replace the existing radars, making 3DELLR the only option to maintain required domain awareness for Homeland Defense.

Increasing air domain awareness in the approaches to the Homeland directly support deterrence by denial as noted in the NDS. Further, this capability is a risk mitigation in defending the Homeland-the number one NDS priority.

(8) *Modernize Homeland Defense Communications System (HDCS) Infrastructure* ($4.2 million): The funds requested will enable procurement and sustainment of infrastructure and technology updates for 61 radio sites; and the Eastern Air Defense Sector and Western Air Defense Sector that supports access to 386 radars. The investment will mitigate risk-to-mission from equipment facing accelerated end-of-life timelines.

Explanation: Hardware and software upgrades at each site are required for sensor data access and transport, communications transmission, and information sharing enabling aircraft scramble capability, cyber security needs, and Domain Awarene]ss for Homeland Defense, POTUS travel, and National Security Special Events. Air domain awareness in the interior and approaches to the Homeland directly support deterrence by denial as noted in the NDS. Further, this capability is a risk mitigation in defending the Homeland-the number one NDS priority.

(9) *Modernize NCR Domain Awareness [Enhanced Regional Situational Awareness (ERSA)]* ($33.21 million): The funds requested will modernize the legacy standard definition ERSA camera system in and around the National Capital Region (NCR) with high-definition systems.

Explanation: The ERSA camera system includes 21 electro optical/infrared cameras and 8 visual warning systems. The standard-definition cameras are designed to provide a timely and accurate local air picture of low altitude, slow-and fast-moving aircraft that pose particular identification problems within the NCR. Replacing the standard definition with high-resolution cameras will provide a better visual identification and characterization solution and be more cost effective than sustaining the legacy cameras (with limited capabilities) and scrambling United States Coast Guard helicopters and/or USAF fighters to investigate and visually identify tracks of interest. Increasing air domain awareness in the approaches to the Homeland directly support deterrence by denial as noted in the NDS. Further, this capability is a risk mitigation in defending the Homeland-the number one NDS priority.

(10) *Core Technology Investment* ($13.85 million): The requested funds will enable procurement and installation of hardware and data transmission technologies that support data sharing and collaboration to enhance domain awareness and information dominance. Component modernization will address shortfalls in Unclassified, Secret, and Nuclear Command, Control, and Communications (NC3) networks.

Explanation: Rapid and agile communications infrastructure increase the capability to see, understand, and share information that increases the decision space for senior leaders. Specific investments will address the NC3 network ($1.1 million); video teleconference deficiencies ($2.25 million); the transition of the unclassified telephone system to modem Voice Over Internet Protocol

(VOiP) technologies ($4.6 million); and deficient network servers, fiber optic systems, and encryption devices ($5.9 million). Improving domain awareness and information dominance support increased global integration—the foundational elements to integrated deterrence. Funding this request will reduce risk in the NOS priority to defend the Homeland.

General RICHARDSON. The information provided in our UPL submission to Congress on March 21, 2023, in accordance with 10 USC 222a, provides a narrative description for each requirement. Please see our UPL for this information, which is attached as an enclosure for your convenience. [The attachment has been retained in Committee files.]

13. Senator WARREN. General VanHerck and Richardson, what does the Unfunded Priorities Lists purchase? (Include all end items with quantities, contractor Full Time Equivalent, etc.)

General VANHERCK. Please see response to question #12.

General RICHARDSON. The information provided in our UPL submission to Congress on March 21, 2023, in accordance with 10 USC 222a, provides detailed information for each requirement. Please see our UPL for this information, which is attached as an enclosure for your convenience. As a clarifying detail on UPL requirement #3 (Cyber Domain Awareness/Network Interoperability), the funding requested will provide 30 contractor full time equivalents to run three shifts and maintain a 24/7/365 network cyber operations support center that is required by USCYBERCOM EXORD. [The attachment has been retained in Committee files.]

14. Senator WARREN. General VanHerck and Richardson, what specific capability will the Unfunded Priorities Lists provide?

General VANHERCK. My submitted Unfunded Priority List, in accordance with 10 USC 222a, is intended to provide a range of mission-critical capabilities not funded within the military Services base budget, thereby buying down risk to force and risk to mission.

General RICHARDSON. The information provided in our UPL submission to Congress on March 21, 2023, in accordance with 10 USC 222a, provides a description of the capability for each requirement. Please see our UPL for this information, which is attached as an enclosure for your convenience. [The attachment has been retained in Committee files.]

15. Senator WARREN. General VanHerck and Richardson, what gap will this fill that is not in the base budget?

General VANHERCK. Please see response to question #12.

General RICHARDSON. The information provided in our UPL submission to Congress on March 21, 2023, in accordance with 10 USC 222a, provides information on impact if not funded for each requirement. Please see our UPL for this information, which is attached as an enclosure for your convenience. [The attachment has been retained in Committee files.]

16. Senator WARREN. General VanHerck and Richardson, how will this capability support objectives outlined in current National Security, Military, and Defense Strategy documents?

General VANHERCK. The Unfunded Priority List serves to enhance NORAD & United States Northern Command's support of the objectives outlined in the United States National Security Strategy, National Military Strategy and National Defense Strategy. Defending the homeland is the #1 priority of the National Defense Strategy and the National Military Strategy; the systems, programs and capabilities identified in the NORAD & USNORTHCOM Unfunded Priorities List all serve to address this. Furthermore, as the DOD Arctic Capability Advocate, I am designated to coordinate with other Combatant Commands, the Military Services and Defense Agencies to ensure that Arctic capability gaps are identified and prioritized. Arctic related N&NC Unfunded Priority List items are submitted in accordance with this designation.

General RICHARDSON. The NSS states "no region impacts the United States more directly than the Western Hemisphere." Presence and proximity absolutely matter, and a stable and secure Western Hemisphere is critical to homeland defense. The USSOUTHCOM UPL identifies requirements in Domain Awareness, Security Cooperation, Cyber Domain Awareness, Exercises and Partner Nation Training, Crisis Response, and Countering Disinformation. All items on this list are requirements that contribute directly to ensuring stability in our hemisphere.

17. Senator WARREN. General VanHerck and Richardson, what is the operational requirement? How does this Unfunded Priorities Lists support current or future operations?

General VANHERCK. The response to question #12 offers a description of the operational requirement for each item on the NORAD and USNORTHCOM unfunded priority list.

General RICHARDSON. The information provided in our UPL submission to Congress on March 21, 2023, in accordance with 10 USC 222a, includes descriptions of the operational requirements and impact if not funded for each requirement. Please see our UPL for this information, which is attached as an enclosure for your convenience. [The attachment has been retained in Committee files.]

18. Senator WARREN. General VanHerck and Richardson, what is the operational impact if this Unfunded Priorities Lists is not funded in fiscal year 2024?

General VANHERCK. The response to question #12 offers a description of the operational impact resulting from lack of funding for each item on the NORAD and USNORTHCOM unfunded priority list.

General RICHARDSON. The information provided in our UPL submission to Congress on March 21, 2023, in accordance with 10 USC 222a, includes a description of the impact if not funded for each requirement. Please see our UPL for this information, which is attached as an enclosure for your convenience. [The attachment has been retained in Committee files.]

19. Senator WARREN. General VanHerck and Richardson, are there plans to include this item in the fiscal year 2025 base budget?

General VANHERCK. The Military Service Departments are currently developing their fiscal year 2025 proposals, and the combatant commands do not participate in those deliberations. NORAD and USNORTHCOM will not know if any of the requested capabilities are included in the fiscal year 2025 base budget until the fiscal year 2025 President's Budget Request is released.

General RICHARDSON. As USSOUTHCOM does every year, we will work with the Army as our Combatant Command Support Agent (CCSA), the other Services, OSD, Defense Agencies, and the Joint Staff to include all our requirements in the fiscal year 2025 budget submission.

20. Senator WARREN. General VanHerck and Richardson, why was this Unfunded Priorities Lists not included in the Fiscal Year 2024 President's Budget submission?

General VANHERCK. These items were submitted to the military Services in accordance with the Department of Defense's budget process. Based on internal priorities, the Services and/or the Department did not include these items in their Fiscal Year 2024 President's Budget submissions.

General RICHARDSON. As the USSOUTHCOM Commander, it is my responsibility to articulate my requirements and the risk to force and mission if these requirements are not met. The President's Budget Request is ultimately determined by the President.

21. Senator WARREN. General VanHerck and Richardson, what is the name of the vendor(s) executing this effort? Sub-vendor(s)?

General VANHERCK. USNORTHCOM and NORAD do not have insight into potential vendors. Combatant Commands determine requirements but are reliant on the Services and Service Support Agencies to determine vendors and execute contracts.

General RICHARDSON. As a Combatant Command, USSOUTHCOM articulates the capability that is required, with no regard to specific vendors. If these requirements are funded, we would work with the appropriate acquisition authority to source the capability. For those items on the list that are already partially funded or active, vendor information is provided below:

- 1b. Airborne Long-Wave Infra-red (LWIR) Hyperspectral Imagery (HSI) Sensor: Lawrence Livermore National Laboratory (LLNL); Smartronix Inc. (SMX)—Vendor: MAG Aerospace (MAG)—Sub-Vendor
- 1c. Center for Southeast Tropical Advance Remote Sensing (CSTARS): Smartronix Inc. (SMX)—Vendor: University of Miami (UoM)—Sub-Vendor
- 1d. Single Aircraft Precision (SAP) High Frequency (HF) Direction Finding (DF) and Geolocation: Applied Signals Intelligence (ASI); Smartronix Inc. (SMX)—Vendor: MAG Aerospace (MAG)—Sub-Vendor
- 3. Cyber Domain Awareness/Network Interoperability: General Dynamics Information Technology (GDIT)—prime contractor
- 5. NAVSCIATTS: RMGS, Inc.
- 6. The Global Prepositioning Network (also referred to as Maritime Prepositioning Force (MPF)) will not be executed by traditional vendors. It will be supported by the same enablers that support the GPN/MPF and will leverage them in a similar fashion but with alternative funding solutions (UPLs). These enablers include MSC, Blount Island Command, Naval Beach Group, and the Navy Expeditionary Logistics Support Group.
- 7. Countering Disinformation: FWG, Peraton, and Digital Always-On

22. Senator WARREN. General VanHerck and Richardson, how often has your command met with the vendor executing this effort?

General VANHERCK. Please see the response to question #21.

General RICHARDSON. For those requirements that are already partially funded or operational, vendor information is provided below:

- 1b. LWIR-HSI: Over the last 3 years, USSOUTHCOM has coordinated and collaborated with LLNL regarding the development of this capability on an as needed basis, but not less than quarterly.
- 1c. CSTARS: USSOUTHCOM interacts daily with SMX/UofM regarding this capability because they are executing the mission in the field today.
- 1d. SAP-HF-DF: Over the last 5 years, USSOUTHCOM has coordinated and collaborated with ASI regarding the development of this capability on an as needed basis, but not less than quarterly.
- 3. Cyber Domain Awareness/Network Interoperability: GDIT is the existing IT/Cyber provider for USSOUTHCOM, and as such we collaborate daily.
- 5. NAVSCIATTS: USSOUTHCOM does not have a direct relationship with RMGS, Inc.
- 6. The Global Prepositioning Network: MARFORSOUTH has met with the Crisis Response-South (CR-S) enablers (vendors) on average once per week since December 2022 to include regular attendance at the Marine Corps' Preposition Force Structure Review to convey Crisis Response requirements.
- 7. Countering Disinformation: USSOUTHCOM staff meets with the vendors on a daily basis.

23. Senator WARREN. General VanHerck and Richardson, what is your relationship history with this vendor?

General VANHERCK. Please see the response to question #21.

General RICHARDSON. I have no relationship history with these vendors.

24. Senator WARREN. General VanHerck and Richardson, has anyone who formerly worked for your command represented the vendor in meetings? What is their name, what was their position, and when did you meet with them?

General VANHERCK. NORAD and USNORTHCOM do not participate in vendor meetings and do not track vendor representation.

General RICHARDSON. I am not aware of anyone who formerly worked at USSOUTHCOM representing these vendors in meetings. SOUTHCOM has processes in place to review vendor visits to ensure that each one is conducted in accordance with applicable Federal laws and regulations, whether related to the acquisition process (e.g. Competition in Contracting Act) or restrictions on individuals based on ethics restrictions, e.g. 18 U.S.C. § 207.

25. Senator WARREN. General VanHerck and Richardson, in which city/State will the Unfunded Priorities Lists be executed?

General VANHERCK. NORAD and USNORTHCOM do not participate in vendor meetings and do not track vendor representation. I defer to the appropriate Service or Service Support Agency regarding locations and vendors.

General RICHARDSON. For those requirements that are already partially funded or operational, vendor execution information is provided below:

- 1b. The completion/procurement of the capability would be executed through LLNL of Livermore, CA. The installation and integration onto the airframe would be executed through Smartronix, LLC of Hollywood, MD, and in conjunction with MAG Aerospace of Fairfax, VA.
- 1c. This effort is executed through Smartronix, LLC of Hollywood, MD, and in conjunction with the University of Miami located in Coral Gables, FL.
- 1d. The procurement of the capability would be executed through ASI in Sterling, VA. The installation and integration onto the airframe would be executed through Smartronix, LLC of Hollywood, MD, and in conjunction with MAG Aerospace of Fairfax, VA.
- 3. Coral Gables, FL
- 5. Stennis Space Center—Hancock County, MS
- 6. MSC's Reduced Operating Status (ROS) vessel and crew are based out of Jacksonville, Florida. Marine Corps equipment will be sourced primarily from Blount Island Command located in Jacksonville, FL but will be globally sourced from Marine Corps holdings located at Marine Corps Logistics base in Albany, GA as well as from the Fleet Marine Forces located at Camp Lejeune in Jacksonville, NC. Navy enablers will be sourced primarily from Amphibious Base Coronado in San Diego, CA and from Cheatham Annex located in Williamsburg, VA. Marine Corps forces will be sourced primarily from Reserve Component units located across the country. As necessary, Active Component forces will be sourced primarily from Camp Lejeune located in Jacksonville, NC.
- 7. Doral, FL

26. Senator WARREN. General VanHerck and Richardson, is this requirement on an existing contract? If so, with who? What is the history of the contract?

General VANHERCK. NORAD and USNORTHCOM rely on the Services and Service Support Agencies to select vendors and let the contract to deliver the required capability to meet National Defense Strategy objectives.

General RICHARDSON. The requirements that are on existing contracts are:

- 1c. The CSTARS requirement is currently in Option Year 1 on a General Services Administration contract. The current Period of Performance (PoP) runs from 24 August 2022 to 23 August 2023.
- 2d. Acquisition is through a U.S. Navy Program of Record—I defer to the Navy.
- 3. GDIT is the existing IT/Cyber provider for USSOUTHCOM.
- 5. USSOUTHCOM acquires this training directly from NAVSCIATTS. NAVSCIATTS uses RMGS, Inc. to augment its faculty. USSOUTHCOM does not have a history with this contract.
- 7. FWG and Peraton. Our FWG contracts started in 2019 and 2021, our Peraton started in 2021, and our Digital Always-on contract is new this year.

27. Senator WARREN. General VanHerck and Richardson, what is the anticipated contract award date if the Unfunded Priorities Lists receives funding?

General VANHERCK. I defer to the appropriate Service or Service Support Agency regarding potential contract award dates.

General RICHARDSON. Obligation and expenditure of resources is highly dependent on when funds become available if Congress ultimately supports these requirements. My team is ready to execute these requirements and activities in a timely manner and within the authorization limits imposed by the type of funding.

28. Senator WARREN. General VanHerck and Richardson, what funding lines are associated with this Unfunded Priorities Lists?

General VANHERCK. General VanHerck Funding lines were submitted with our Unfunded Priorities List in accordance with 10 USC 222a.

Over the Horizon Radar Capability Acceleration

General RICHARDSON. The funding lines are included in our UPL submission to Congress on March 21, 2023, in accordance with 10 USC 222a. Please see our UPL for this information, which is attached as an enclosure for your convenience. [The attachment has been retained in Committee files.]

29. Senator WARREN. General VanHerck and Richardson, if multiple appropriations fund this requirement, must all appropriations be funded simultaneously to source this requirement, or can each appropriation stand on its own to fund a portion of the requirement?

General VANHERCK. NORAD and USNORTHCOM submitted 10 items on the commands' fiscal year 2024 UPL. Three of the 10 requested capabilities included multiple appropriations: Over-the-Horizon Radar, ARCHER, and Arctic-Capable Prepositioned Shelters. Each appropriation funds a distinct and independent aspect of the requested capability, allowing each appropriation to stand on its own.

General RICHARDSON. For all but two items in the USSOUTHCOM UPL, a single appropriation is being requested. My second priority requirement within ISR (1b) would be funded by two appropriations [Procurement (PROC) and Operation & Maintenance (O&M)]. Due to the lead time to complete acquisition of the capability, it would be necessary to receive the PROC resources prior to the O&M; however, the O&M is essential to operationalize the capability in theater. Delaying the O&M delays the critical capabilities the Command requires. USSOUTHCOM continues to accept risk in this mission. One other ISR requirement (1d) would be funded by two appropriations [Procurement (PROC) and Operation & Maintenance (O&M)]. Due to a short lead time to complete capability and existing aircraft platforms, the funding for both appropriations would be needed simultaneously.

30. Senator WARREN. General VanHerck and Richardson, how much was enacted and obligated (or expended for Research, Development, Test, & Evaluation) in fiscal year 2022–23 for this requirement?

General VANHERCK. The following UPL titles and parenthetical references will be used in questions 30 to 34:

Over the Horizon Radar (OTHR):
Fiscal Year 2022: $66.022 million Fiscal Year 2023: $12.21 million

Three-Dimensional Expeditionary Long Range Radar (3DELRR):
Fiscal Year 2022: $0 Fiscal Year 2023: $14.49 million

ARCHER:
Fiscal Year 2022: $.095 million Fiscal Year 2023: $0

Modernize Homeland Defense Communication System (HDCS) Infrastructure:
Fiscal Year 2022: $0 Fiscal Year 2023: $0

Modernize National Capital Region Domain Awareness—Enhanced Regional Situational Awareness (ERSA):
Fiscal Year 2022: $0 Fiscal Year 2023: $0

Arctic Campaigning (Campaigning):
Fiscal Year 2022: $0 Fiscal Year 2023: $0

Arctic Capable Prepositioned Shelters (Shelters):
Fiscal Year 2022: $0 Fiscal Year 2023: $0

Domain Awareness Technology Development—Cryogenic Exploitation of Radio Frequency (CERF):
Fiscal Year 2022: $0 Fiscal Year 2023: $0

Counter Strategic Competitors in the Western Hemisphere (Competitors):
Fiscal Year 2022: $0 Fiscal Year 2023: $0

Core Technology Investment (CTI):
Fiscal Year 2022: $0 Fiscal Year 2023: $0

General RICHARDSON. Below is information for those requirements that were funded in fiscal years 2022 to 2023:

- 1c. In fiscal year 2022, $10 million in RDT&E was enacted for this requirement. No RDT&E resources were enacted or obligated for this requirement in fiscal year 2023.
- 2c. $16 million will be funded from the enacted fiscal year 2023 Consolidated Appropriations Act § 8068 for Regional Andean Ridge Environmental Multi Domain Awareness.
- 2d. Total fiscal year 2023 funding enacted for this initiative is $21.5. An initial $16.1 million was provided in base budget. An additional $5.4 million will be funded from the enacted fiscal year 2023 Consolidated Appropriations Act § 8068.
- 2e. Total fiscal year 2023 funding enacted for this initiative is $3.7 million.
- 2f. Total fiscal year 2023 funding for this initiative is $13.43 million, which will be funded from the enacted fiscal year 2023 Consolidated Appropriations Act § 8068.
- 4a. $3.5 million will be funded from the enacted fiscal year 2023 Consolidated Appropriations Act § 8068 for Southern Star.
- 4b. $1.2 million was obligated in fiscal year 2022 to conduct Keel-Billed Toucan 2022. $1.2 million was obligated in fiscal year 2023 to conduct Keel-Billed Toucan 2023.

31. Senator WARREN. General VanHerck and Richardson, how much was requested in fiscal year 2024 for this requirement?

General VANHERCK. The Fiscal Year 2024 President's Budget includes resourcing as noted below:

OTHR: The Fiscal Year 2024 President's Budget includes $553.1 million for the Air Force OTHR program. This funding supports development, initial procurement, and planning and design for future military construction. The UPL request includes funding for a testbed and RDT&E to integrate OTHR data with space-based sensors. These two efforts are not included in the Fiscal Year 2024 President's Budget Request.

3DELRR: The Fiscal Year 2024 President's Budget includes $103.5 million for the Air Force program to procure three radars. The NORAD and USNORTHCOM UPL requests funding for an additional nine radars.

ARCHER: The Fiscal Year 2024 President's Budget includes $.577 million to procure one sensor and conduct continuing RDT&E. The NORAD and USNORTHCOM UPL requests funding to establish long-term sustainment and RDT&E to improve communication links and enable deployment in Arctic regions.

HDCS: There is no funding for this specific requirement in the Fiscal Year 2024 President's Budget. Sustainment funding for the existing system is supported from the Global C3I & Early Warning Sub-activity Group (SAG 12A)

ERSA: $0

Campaigning: $0

Shelters: $0

CERF: $0

Competitors: $30.4 million is included in the USNORTHCOM baseline allocation. The UPL includes requests for additive capability not supported within baseline allocation.

CTI: $2.4 million is included as a line item add to USNORTHCOM in Air Force Operations and Maintenance Justification Books.

General RICHARDSON. The funding requested for fiscal year 2024 is included in our fiscal year 2024 UPL submission to Congress on March 21, 2023, in accordance with 10 USC 222a. Please see our UPL for this information, which is attached as an enclosure for your convenience. [The attachment has been retained in Committee files.]

32. Senator WARREN. General VanHerck and Richardson, is there a tail associated with this Unfunded Priorities Lists?

General VANHERCK. The NORAD and USNORTHCOM methodology for developing requests to be included in the UPL specifically seek capabilities that drive minimal or no follow-on ("tail") costs.

OTHR: The Research, Development, Test, and Evaluation (RDT&E) request does not have follow-on funding requirements. The OTHR testbed will have some level of follow-on operations and sustainment (O&S) costs that will be determined by the Department of the Air Force (DAF). These costs will be funded through the OTHR program.

3DELRR: The Air Force Program Office estimates O&S costs will be approximately $15 million per year if all 9 requested systems are authorized and funded. This O&S cost is not effective until fiscal year 2026 when the radar systems are delivered, which provides ample time for NORAD and USNORTHCOM to work with DAF for resource alignment.

ARCHER: The RDT&E request does not have follow-on funding requirements. The request includes $17 million specifically intended to establish long-term sustainment of existing capability.

HDCS: There are no follow-on costs. The request supports a one-time software modernization. On-going maintenance of the existing capability will be funded through the program baseline.

ERSA: There are no anticipated follow-on costs. The request supports a one-time camera modernization. On-going maintenance of the modernized capability will be funded through the existing program baseline.

Campaigning: There are no follow-on costs. This request resources one-time facility Planning and Design work.

Shelters: There are no follow-on costs. This request resources specific RDT&E work only.

CERF: There are no follow-on costs. This request resources specific RDT&E work only.

Competitors: There are no follow-on costs.

CTI: There are no anticipated follow-on costs. The request supports a one-time investment in technology component modernization. On-going maintenance and sustainment of the modernized capability will be funded through the existing program baseline.

General RICHARDSON. All items in the UPL have funding requirements beyond fiscal year 2024, except item 6, the Global Prepositioning Network, which is a one-time cost in fiscal year 2024 until USMC decides to sustain this capability. No recurring expenses apply to USSOUTHCOM as sustainment is within USMC's budget in subsequent years unless the GPN is activated in response to an emerging in-theater crisis at which point USSOUTHCOM will use appropriate O&M funding mechanisms.

33. Senator WARREN. General VanHerck and Richardson, is any tail funded in the future years defense plan?

General VANHERCK. The NORAD and USNORTHCOM methodology for developing requests to be included in the UPL specifically seek capabilities that drive minimal or no follow-on ("tail") costs. As noted in question 32, the only requests that

may drive future-year funding requirements are the OTHR testbed and 3DELRR. If funding for this request is authorized and appropriated by Congress, NORAD and USNORTHCOM will work with Department of the Air Force to develop an appropriate sustainment plan.

General RICHARDSON. No.

34. Senator WARREN. General VanHerck and Richardson, please describe how much the requirement will cost per year for the next 5 years.

General VANHERCK.

OTHR: The Research, Development, Test, and Evaluation (RDT&E) request does not have follow-on funding requirements. The OTHR testbed will have some level of follow-on operations and sustainment (O&S) costs that will be determined by the Department of the Air Force (DAF). These costs will be funded through the OTHR program.

3DELRR: The Air Force Program Office estimates O&S costs will be approximately $15 million per year if all 9 requested systems are authorized and funded. This O&S cost is not effective until fiscal year 2026 when the radar systems are delivered, which provides ample time for NORAD and USNORTHCOM to work with DAF for resource alignment.

ARCHER: There are no additional costs per year. The system is a passive sensor requiring only periodic maintenance and sustainment. The request includes $17 million specifically intended to establish long-term sustainment of existing capability.

HDCS: There are no follow-on costs. The request supports a one-time software modernization. On-going maintenance of the existing capability will be funded through the program baseline.

ERSA: There are no anticipated follow-on costs. The request supports a one-time camera modernization. On-going maintenance of the modernized capability will be funded through the existing program baseline.

Campaigning: There are no follow-on costs. This request resources one-time facility Planning and Design work.

Shelters: There are no follow-on costs. This request resources specific RDT&E work only.

CERF: There are no follow-on costs. This request resources specific RDT&E work only.

Competitors: There are no follow-on costs.

CTI: There are no anticipated follow-on costs. The request supports a one-time investment in technology component modernization. On-going maintenance and sustainment of the modernized capability will be funded through the existing program baseline.

General RICHARDSON. Below is the information for the outyear costs that are known or anticipated at this time:

- 1a. This requirement will have a future cost; however, at this time that amount is unknown.
- 1b. This requirement is anticipated to cost $45.5 million over the next 5 years.
- 1c. This requirement is anticipated to cost $35.7 million over the next 5 years.
- 1d. This requirement is anticipated to cost $0.9 million over the next 5 years.
- 2c. This requirement is anticipated to cost $351.8 million over the next 5 years.
- 2d. This requirement is anticipated to cost $31.7 million over the next 5 years.
- 2e. This requirement is anticipated to cost $48.6 million over the next 5 years.
- 2f. This requirement is anticipated to cost $81.4 million over the next 5 years.
- 2g. This requirement is anticipated to cost $1.5 million over the next 5 years.
- 2h. This requirement will have a future cost; however, at this time that amount is unknown.
- 2i. This requirement is anticipated to cost $64.6 million over the next 5 years.
- 3. This requirement is anticipated to cost $93.6 million over the next 5 years.
- 4a. This requirement is anticipated to cost $15.8 million over the next 5 years.
- 4b. This requirement is anticipated to cost $19.5 million over the next 5 years.
- 5. This requirement is anticipated to cost $80M over the next 5 years.
- 6. This requirement will be funded through operational or disaster relief funding based on employment of the capability in year of execution.
- 7. This requirement is anticipated to cost $17–25 million over the next 5 years.

35. Senator WARREN. General VanHerck and Richardson, please provide in detail the previous funding requests and enacted for this requirement, including if it was in the base budget or Unfunded Priorities Lists.

General VANHERCK. The capabilities included in the NORAD and USNORTHCOM fiscal year 2024 Unfunded Priority List (UPL) were not included

in prior UPL. The fiscal year 2022 UPL did include a request for $25.1 million to accelerate Over-the-Horizon Radar (OTHR) procurement and fielding. That funding request was enacted and the Air Force Program Office responsible for OTHR is obligating the funds. The fiscal year 2024 OTHR related request addresses new and distinct requirements to increase capability and further accelerate OTHR fielding.

General RICHARDSON. No resources have been enacted for UPL items 1a, 1b, & 1d. Item 1a was submitted in USSOUTHCOM's fiscal year 2023 UPL at $10.2 million but not funded. 1b was submitted in the fiscal year 2023 UPL at $9.7 million but not funded. In fiscal year 2021 ($7 million) and fiscal year 2022 ($10 million), the CSTARS requirement was funded via RDT&E resources that were provided to a national government agency. The Paraguay Riverine Security Resilience Program (RSRP) and the Paraguay Special Operations Forces (SOF) requirement were both funded under the fiscal year 2023 Consolidated Appropriations Act § 8068. $27.3 million was funded for Regional Andean Ridge Environmental Multi Domain Awareness from the enacted fiscal year 2023 Consolidated Appropriations Act § 8068. For the Regional Caribbean Domain Awareness requirement, an initial $16.1 million was provided in base budget and an additional $5.4 million was funded via the fiscal year 2023 Consolidated Appropriations Act § 8068. $3.7 million was enacted in the fiscal year 2023 base budget for the Jamaica SOF requirement. The fiscal year 2023 Consolidated Appropriations Act § 8068 also is also providing $13.43 million for the Theater Maintenance Partnership Program. No resources have been enacted for items 2g, 2h, and 2i. USSOUTHCOM has submitted the Cyber Domain Awareness/Network Interoperability requirement to the lead service or funding authority in the fiscal year 2023, 2024, 2025 budget/POM cycles. USSOUTHCOM has also submitted it to OSD, which directed the U.S. Army to partially fund it in President's Budget Request 2023 ($8.3 million) and President's Budget Request 2024 ($8.6 million) respectively. $3.5 million of the funds enacted in the fiscal year 2023 Consolidated Appropriations Act § 8068 for will fund the Southern Star Exercise. $1.2 million was obligated in fiscal year 2022 to conduct Keel-Billed Toucan 2022 (base budget). $1.2 million was obligated in fiscal year 2023 to conduct Keel-Billed Toucan 2023 (base budget). The Countering Disinformation requirement was funded in fiscal year 2023 at $11 million in the base budget. No resources have been enacted for any other requirements on the UPL.

36. Senator WARREN. General VanHerck and Richardson, if the requirement is not included in the future years defense plan, will that be rectified in the next Program Objective Memorandum or the Program, Planning, Budget, and Execution (PPBE) cycle?

General VANHERCK. The Military Service Departments are currently developing their fiscal year 2025 proposals and the combatant commands do not have visibility on those deliberations. NORAD and USNORTHCOM will not know if any of the requested capabilities are included in the fiscal year 2025 base budget until the fiscal year 2025 President's Budget Request is released.

General RICHARDSON. I commit to working with the Army as my Combatant Command Support Agent (CCSA), the other Services, OSD, Defense Agencies, and the Joint Staff to include all USSOUTHCOM requirements in future budget submissions.

37. Senator WARREN. General VanHerck and Richardson, please provide photos of this requirement for visual aid.

General VANHERCK. NORAD and USNORTHCOM rely on the Services and Service Support Agencies to select the vendors and let contracts to deliver the capability we require to meet National Defense Strategy objectives. I have no insight into what vendors the Services might select for any given contract, and therefore I do not have the ability to provide photos.

General RICHARDSON. As a Combatant Command, USSOUTHCOM outlines the capability required and an acquisition authority will contract or purchase a capability to meet that requirement. At this time, the exact equipment to be purchased for most of our UPL items are unknown. For those items where specific equipment has already been identified, we have included photos below:

1c. Center for Southeast Tropical Advance Remote Sensing

2c. Near Coastal Patrol Vessel

2d. Utility Boat (UTB)

2h. C–182 aircraft

2i. TPS–78 Radar

4a. Southern Star Exercise Support—photo from 2022 exercise

4b. Keel-Billed Toucan 24—photo below from 2023 exercise

4c. FIDAE—photo from 2022 trade and air show in Chile

4d. CRUZEX—photo from 2010 exercise

4f. RELAMPAGO–24—photo from 2022

5. NAVSCIATTS

QUESTIONS SUBMITTED BY SENATOR JOE MANCHIN III

TRANSNATIONAL ORGANIZED CRIMES AND FENTANYL

38. Senator MANCHIN. General Richardson, how are you working with the Assistant Secretary of Defense for Special Operations and Low Intensity Conflict, who has led in the Department of Defense for the counternarcotic mission, to combat this epidemic?

General VANHERCK. USNORTHCOM personnel work with the Assistant Secretary of Defense for Special Operations and Low Intensity conflict through the Office of the Deputy Assistant Secretary of Defense for Counter-narcotics and Stabilization Policy (DASD/CNSP). DASD/CNSP provides continuous programmatic and policy guidance for the Department's counterdrug mission to all combatant commands, including USNORTHCOM, to implement the authorities provided by Congress, which enables military support to lead Federal agencies and partner nation law enforcement. DASD/CNSP further provides an annual budget to USNORTHCOM, coordinated to ensure policy and program goals are met.

General RICHARDSON. The Deputy Assistant Secretary of Defense—Counter Narcotics/Special Projects (CN/SP), within the Office of the Assistant Secretary of Defense for Special Operations and Low Intensity Conflict, is the DOD lead for CN, Counter Drug (CD), and Counter Trans-Criminal Organizations (C-TCO). We work closely with this office as we develop the operational requirements to meet our statutorily directed mission to detect and monitor the trafficking of illegal drugs in the air and maritime domains throughout Latin America and the Caribbean.

CRITICAL INFRASTRUCTURE PROTECTION

39. Senator MANCHIN. General VanHerck and General Richardson, what additional authorities or resources are you looking for that will allow you to better perform your duties of security our critical infrastructure?

General VANHERCK. I do not currently require additional authorities for the defense of critical infrastructure. Regarding resources, domain awareness is my top priority. The NORAD and USNORTHCOM Unfunded Priority List includes requests for an Over-the-Horizon Radar testbed to accelerate fielding and for procurement of nine Three-Dimensional Expeditionary Long Range Radars (3DELRR). The 3DELRR radars could be used to fill surveillance gaps in support of critical defense infrastructure if tasked. NORAD and USNORTHCOM have submitted a plan to the Department of Defense (DOD) identifying a range of options to defend defense critical infrastructure, and I am awaiting a DOD assessment of those options. I believe that policy guidance should expand beyond defense critical infrastructure, and NORAD and USNORTHCOM are working closely with the Department, the interagency, and the National Security Council toward that effort.

General RICHARDSON. USSOUTHCOM focuses efforts on exposing, illuminating, and attributing Malign State Actor (MSA) activity through information and intelligence sharing with the interagency and partner nations. For example, we work with the interagency and partner nations to provide assessments of partner nation infrastructure vulnerabilities and look for opportunities to assist interagency partners like the Departments of Treasury and Commerce to provide U.S. assistance to our partner nations with civil-military activities. These activities are meant to meet our partners at their need and demonstrate the U.S. commitment to the region, while outmaneuvering malign actors who might otherwise step in to capitalize on those vulnerabilities.

It is critical for our interagency partners to be appropriately resourced and staffed for this mission as much of the influence fight takes place outside USSOUTHCOM authorities. In those areas that directly affect our authorities, we need more efficient vetting processes to be able to reduce the lag time in identifying and getting partner personnel into training and education programs like the International Military Education and Training (IMET) program. We need a more streamlined foreign military sales pipeline to meet the real-world challenges that partner nations face. We need the ability to react at scale to support USG messaging, counter disinformation, amplify key narratives, and refocus target audiences on topics of national security. This can only be accomplished through a multi-front campaign including, removal of disinformation, the timely release of messages that are amplified at scale, the use of third-party validators that are able to reinforce that narrative, the ability to offer a private/public alternative that is viable, and a proactive technologically advanced protective force that can work on partner nation infrastructure.

CHINESE ACTIVITIES IN THE REGION

40. Senator MANCHIN. General VanHerck and General Richardson, what challenges do you foresee in pursuing security cooperation with these countries?

General VANHERCK. A challenge to USNORTHCOM security cooperation efforts is the mandate under 10 U.S.C. § 312 that restricts how combatant commanders can expend funds to facilitate partner nation participation in Traditional Commander's Activities. For example, The Royal Bahamas Defence Force (RBDF) is a willing partner, and the Bahamian Government has made substantial investments in new ships and improving their military bases. 10 U.S.C. § 312 requires "extraordinary circumstances" for a waiver to pay for RBDF expenses incident to engagements that strengthen our alliance, even if it is more cost effective to conduct them in the United States. This requirement affects my ability to be a consistent and responsive security cooperation partner to this vital partner, and constitutes my biggest challenge in countering malign Chinese influence in The Bahamas.

General RICHARDSON. In this region, a small investment—whether in time, physical resources, funding, or collaboration—goes a long way. We don't have to outspend the PRC to outcompete, but we must be present on the field and deliver at the speed of relevance. The USSOUTHCOM Security Cooperation program has historically been resourced at approximately half of our requirement. In the fiscal year 23 Consolidated Appropriations Act (§ 8068), Congress supported our Security Cooperation program, funding some of those requirements that had not previously been resourced. Further, it is critical to have a timely and predictable budget—continuing resolutions are disruptive to U.S. and partner nation efforts to defend against threats. If we don't have presence in the AOR, the PRC and Russia will fill the void.

41. Senator MANCHIN. General VanHerck and General Richardson, while I recognize the challenges associated with detecting and identifying unmanned objects into our national airspace, could you provide as an update on USNORTHCOM and NORAD's efforts to identify/deconflict non-security related activities in our airspace?

General VANHERCK. NORAD and USNORTHCOM coordinate directly with the FAA on a daily basis for both security and non-security activities in our airspace.

General RICHARDSON. I defer to General VanHerck on USNORTHCOM/NORAD's efforts to identify/deconflict non-security related activities in U.S. airspace.

CRITICAL MINERALS IN LATIN AMERICA

42. Senator MANCHIN. General Richardson, do you assess that we are providing viable alternatives for partnerships with our Latin American partners, especially as China has taken a hit on the international stage due to their role in failing to contain the COVID–19 outbreak?

General RICHARDSON. While China did take a hit on the international stage due to COVID, the PRC was also first on scene within our AOR to deliver vaccines and support in the wake of COVID. The United States response was slow in this region, and I believe we have some work to do make up ground that we lost following the pandemic.

Both the U.S. Government and private industry are working closely with our partners in the hemisphere to increase security and economic investment and opportunities, but we must do better. First, we must do a better job of taking credit for all that Team USA does, from providing critical life-saving aid to countries following a disaster to supporting construction of critical infrastructure. United States Federal agencies and United States-based companies already do so much to partner with the nations of this hemisphere, but United States presence and engagement is not always evident to our partners, nor our adversaries. Second, we must work closely with these nations to learn about opportunities for partnership and collaboration where our shared democratic values can thrive, as opposed to allowing malign State actors to take advantage of the needs of our partners. Specific to DOD, we must work with our partner nation militaries and security forces to ensure a secure environment where Western businesses can invest without concern for the corruption and insecurity brought by TCOs.

FISA REAUTHORIZATION

43. Senator MANCHIN. General VanHerck and General Richardson, what impact would a failure to reauthorize Title Seven have in your ability to assist our partners and support your efforts to defend our Nation against malign actors?

General VANHERCK. Without FISA Section 702, NORAD and USNORTHCOM's missions to defend the homeland will be impaired. FISA Section 702 has helped the commands to understand the strategic intentions of the foreign governments we are most interested in: the People's Republic of China (PRC), Russia, Iran, and the Democratic People's Republic of Korea. It allows the intelligence community to acquire communications of specific foreign actors overseas and use those details to identify and mitigate terrorist plans, cyberattacks, and foreign intelligence threats. In the last 2 decades, the PRC has evolved as America's primary geopolitical challenge while Russia continues to pose an acute and ongoing threat to regional security in Europe. There has also been a change in conflict. Cyberspace is now a battleground and cybersecurity has become one of our most pressing national security concerns. Section 702 is needed to address these evolving challenges and plays an important role in keeping our Nation secure. In recent examples, FISA Section 702 assisted in identifying multiple foreign ransomware attacks on U.S. critical infrastructure and helped positioned the interagency to respond to and mitigate these events, and in some instances, prevent significant attacks on U.S. networks. FISA Section 702-acquired information related to sanctioned foreign adversaries was used in USG efforts to stop components for weapons of mass destruction from reaching foreign actors.

General RICHARDSON. Reauthorization of this authority is key to USSOUTHCOM's intelligence gathering and helps us close our intelligence gaps. It is the authority that gives us insights into hostile foreign actors, reporting of cybersecurity threats, counterterrorism threats, and protecting U.S. allied troops. Without this authority, USSOUTHCOM's mission to provide indications and warnings, track external State actors, protect the Homeland, and gain insight into malign State actors and their activities in the AOR would be severely impaired.

CYBER OPERATIONS

44. Senator MANCHIN. General VanHerck and General Richardson, based on the importance of the Cyber domain and its critical integration into all domains of the Joint Operational environment, is your command resourced and staffed appropriately to keep pace with the integration of Cyber capabilities in an operational environment?

General VANHERCK. I have significant concerns about emerging cyber threats to the homeland, however I believe NORAD and USNORTHCOM are appropriately staffed at this time. In particular, USNORTHCOM has gained significant capability through the USCYBERCOM Cyberspace Operations Integrated Planning Element (COIPE) assigned to my headquarters. The COIPE coordinated defensive and offensive cyber capabilities within the USNORTHCOM area of operations and is integral to my ability to compete in the cyber domain. COIPEs are in high demand in all operational theaters, as they provide crucial expertise, domain awareness, and capability in the cyber domain.

Regarding resourcing, the USNORTHCOM fiscal year 2024 Unfunded Priority List included requests for $4.2 million to modernize homeland defense communications system infrastructure and $13.85 million for core technology investments. These efforts will improve USNORTHCOM communications and information security and mitigate risk to mission from equipment that is nearing the end of its service life. The core technology investment would enable procurement and installation of hardware and data transmission technologies to enhance domain awareness and information sharing while addressing shortfalls in unclassified, secret, and nuclear command, control, and communications networks.

General RICHARDSON. USSOUTHCOM is accepting risk based on the resources and staff I currently have to address the growing and evolving need to integrate cyber capabilities in an operational environment.

QUESTIONS SUBMITTED BY SENATOR JACKY ROSEN

IRAN'S PRESENCE IN THE WESTERN HEMISPHERE

45. Senator ROSEN. Latin America is viewed by the Iranian regime as a key area in which it can expand its influence. By forging partnerships with leaders in the region, Iran develops new arenas in which it can conduct illicit activities and circumvent sanctions. This deepening of ties is perhaps best encapsulated by last year's agreement between Iran and the Maduro regime in Venezuela. Under this 20-year agreement, the two countries will cooperate in the areas of oil, defense, and agriculture. Iran has also deepened its presence in Latin America through its proxy Hezbollah. Hezbollah is not only a potential terrorist threat in your Area of Respon-

sibilities, but also an actor deeply embedded in transnational organized crime networks in the region, including drug trafficking. That's why last Congress, Senator Blackburn and I introduced the Hezbollah in Latin America Accountability Act to hold Iran and Hezbollah accountable for their activities in the region.

General Richardson, can you update the Committee on Hezbollah's recent activities in Latin America? In addition, can you explain how the Iranian regime has expanded its influence in the region and the steps SOUTHCOM is taking to disrupt and degrade both actors' power projection capabilities?

General RICHARDSON. Hizballah is active in Latin America, exploiting the region for fundraising and terrorist operations. The Lebanese Hizballah Foreign Relations Department is charged with liaising with diasporas throughout the world. We estimate the Lebanese diaspora in Latin America sends more than $212 million annually in remittances, some of which lands in the hands of Hizballah. Support for Hizballah is most pronounced within the diasporas in Venezuela and the Tri-Border Area of Argentina, Brazil, and Paraguay, and we have seen terrorist-related activity in Bolivia, Chile, Colombia, and Peru during the last decade.

Hizballah's Islamic Jihad Organization (IJO) is responsible for the systematic clandestine planning, coordination, and execution of terrorist activities, such as the development of contingency-based attack options, outside of the Levant to include in Latin America. In late 2021 in Colombia, Hizballah was planning to assassinate an Israeli national in Bogota to avenge the January 2020 killing of Iran's Qods Force commander Qasem Soleimani as part of a broader operation that also targeted Americans. In 2017, Bolivian authorities identified a Hizballah-affiliated warehouse and seized enough explosive precursor material to produce a two-and-a-half-ton bomb. In 2014, Peruvian police arrested a Hizballah operative in Lima for planning a terrorist operation and regional security services disrupted a plot targeting civilians in Chile.

Iran seeks to improve its standing in the region, while also portraying the United States as culpable for the region's socioeconomic and citizen security challenges. To do so, Iran uses its relationship with Venezuela, the Shia Muslim diaspora, cultural centers throughout Latin America, Spanish-language media, and military outreach. Venezuela is Iran's primary ally in the Western Hemisphere. Tehran's relationship with Caracas has consisted primarily of economic cooperation to assist each country with circumventing sanctions, arms transfers, and intellectual and skill exchanges. Iranian leaders will periodically travel to the region to bolster economic and social ties. In mid-June, Iranian President Raisi visited Nicaragua, Venezuela, and Cuba to discuss increased cooperation in the areas of science, biotechnology, and energy, as well as to expand economic ties and trade. Earlier this year, Iran's foreign minister or deputy foreign minister have conducted diplomatic engagements with Bolivia, Colombia, Cuba, Nicaragua, and Venezuela. Iran uses its cultural centers to gain access to prominent individuals within the Islamic and indigenous communities throughout the region. In late 2022, the Iranian ships Makran and Dena (oiler and frigate respectively) initiated a round-the-world cruise that concluded in early 2023, with a 1-week stop in Rio de Janeiro, Brazil to "show the authority of the dear people of Iran to the whole world," according to Iran's Navy Chief. In mid–2021, midway through a trip to Venezuela to deliver seven small fast-attack boats, Iran diverted two ships to St. Petersburg, Russia, suggesting Caracas acquiesced to United States diplomatic concerns.

SAFEGUARDING DOMAIN AWARENESS

46. Senator ROSEN. Our competitors continue to field advanced capabilities across domains that have the potential to threaten the Homeland. In light of these threats, NORTHCOM and NORAD must ensure that the systems providing the Homeland with domain awareness are survivable, adaptable, and modern. In addition, these systems must be hardened, as they will be subject to an array of cyberattacks during any contingency. I am encouraged by NORTHCOM's continued efforts to modernize legacy detection systems such as the Over the Horizon Radar, but detection alone is not sufficient. Operators must also have the ability to effectively communicate the operational picture to other commands, as well as to our partners and allies, often under highly compressed timeframes.

General VanHerck, what steps are you taking to sufficiently harden our command and control nodes, particularly in the cyber domain, so that we are able to effectively share the operational picture during a conflict?

General VANHERCK. I have conducted an assessment of requirements for defending NORAD and USNORTHCOM command and control assets in the homeland against kinetic and non-kinetic threats. My recommendations include acquiring automated sensors to detect cyber intrusions, ensuring first line cyber-defenders are

tasked and resourced, and ensuring adequate defensive Cyber Protection Teams are tasked in the event of a detected intrusion. I have provided those recommendations to the Department to inform decisions regarding resourcing, the Services who own the assets, and USCYBERCOM, which has the technical expertise to execute the defensive recommendations. Cyber Domain Awareness is a key part of this initiative, and while I can visualize the cyber assets controlled by NORAD and USNORTHCOM, my missions rely on many more critical nodes that are not owned or operated by NORAD or USNORTHCOM.

QUESTIONS SUBMITTED BY SENATOR TOM COTTON

CHINESE SURVEILLANCE BALLOON

47. Senator COTTON. General VanHerck, prior to the late January/early February shootdown of the Chinese surveillance balloon, had NORTHCOM developed options for countering this threat?

General VANHERCK. Yes, NORAD and NORTHCOM maintain options daily to engage potential threats to North America and the United States.

48. Senator COTTON. General VanHerck, when were these options presented to the Secretary of Defense?

General VANHERCK. As I testified in open session before the Senate Armed Services Committee on 23 March 2023, I presented options relating to the PRC HAB to the Secretary of Defense on 1 February 2023. However, I'd like to reiterate that I am prepared every single second of every day to defend our Homeland.

CHINESE AND RUSSIAN ACTIONS IN USNORTHCOM AOR

49. Senator COTTON. General VanHerck, I have an article from last year which quotes you as saying that China and Russia are "very aggressive and active" in the whole area of the Northern Command's area of responsibility, including the Bahamas and Mexico. We've seen what happened with the Chinese spy balloon. Can you give other examples of aggressive actions?

General VANHERCK. In The Bahamas, the PRC continues its aggressive economic and political engagement. The PRC Ambassador remains active in an effort to present the PRC as the alternative to United States partnership in the region, and has renewed offers to provide economic assistance, to include renovating the Bahamas' largest stadium. The PRC also donated medical assistance during the COVID–19 pandemic and relief supplies such as greenhouses following Hurricane Dorian. Since at least 2013, Chinese entities and intermediaries have supplied Mexican transnational criminal organizations (TCOs) with precursors and equipment for the production of synthetic opioids and methamphetamine, and facilitated illicit exports of Mexican iron ore, timber, and other commodities and raw materials. In addition, Chinese entities have assisted Mexican TCOs in laundering the revenues and profits generated from the drug trade and other illicit activities. These activities ultimately bolster the financial and operational bases of the TCOs, contributing to the threat they pose to Mexico's internal security as well as enabling flows of synthetic drugs into the United States.

Although Russia's focus continues to be on its war against Ukraine, Russian long-range aviation remains capable of executing high-priority missions and is routinely used to demonstrate Russia's capabilities and global reach, including through Air Defense Identification Zone incursions off the Alaskan and Canadian coasts with their heavy bombers.

50. Senator COTTON. General VanHerck, what do we need to do in order to adequately deter Russia and China in your Area of Responsibilities?

General VANHERCK. In The Bahamas, the PRC continues its aggressive economic and political engagement. The PRC Ambassador remains active in an effort to present the PRC as the alternative to United States partnership in the region, and has renewed offers to provide economic assistance, to include renovating the Bahamas' largest stadium. The PRC also donated medical assistance during the COVID–19 pandemic and relief supplies such as greenhouses following Hurricane Dorian. Since at least 2013, Chinese entities and intermediaries have supplied Mexican transnational criminal organizations (TCOs) with precursors and equipment for the production of synthetic opioids and methamphetamine, and facilitated illicit exports of Mexican iron ore, timber, and other commodities and raw materials. In addition, Chinese entities have assisted Mexican TCOs in laundering the revenues and profits generated from the drug trade and other illicit activities. These activities ultimately

bolster the financial and operational bases of the TCOs, contributing to the threat they pose to Mexico's internal security as well as enabling flows of synthetic drugs into the United States.

Although Russia's focus continues to be on its war against Ukraine, Russian long-range aviation remains capable of executing high-priority missions and is routinely used to demonstrate Russia's capabilities and global reach, including through Air Defense Identification Zone incursions off the Alaskan and Canadian coasts with their heavy bombers.

SOUTHERN BORDER

51. Senator COTTON. General VanHerck, 2 weeks ago, United States Border Patrol Chief Raul said that we do not have "operational control" of the southern border. Do you agree with that assessment?

General VANHERCK. U.S. Northern Command is in a supporting role to the Department of Homeland Security's (DHS's) Southwest Border (SWB) mission and is neither in a position nor tasked to assess DHS's SWB operations.

52. Senator COTTON. General VanHerck, if you do agree, what actions need to be taken to regain operational control?

General VANHERCK. Please see previous response to question #51.

53. Senator COTTON. General VanHerck, what role does Joint Task Force North play in regaining operational control?

General VANHERCK. Joint Task Force North's primary mission is support to the interagency in the counter TCO and counter narcotic missions. For the ongoing Southwest Border support to DHS, Joint Task Force North (JTF-N) commands and controls Department of Defense forces supporting the Department of Homeland Security (DHS), as directed in the Secretary of Defense's Southwest Border Action Memos. JTF-N is executing its mission within the authorities of the Chairman, Joint Chiefs of Staff's Defense Support of Civil Authorities Execute Order.

54. Senator COTTON. General VanHerck, what do you believe the proper role of the U.S. military is in securing the border in concert with Department of Homeland Security?

General VANHERCK. I believe that securing the U.S. border and enforcing immigration laws are inherently law enforcement functions. I believe it is lawful and appropriate for the Department of Defense to contribute secondary support to a lead Federal law enforcement agency at the request of the Department of Homeland Security and as approved by the Secretary of Defense. As I have previously testified, Department of Defense support to DHS at the Southwest Border should only occur in extremis situations and should not be an enduring Department of Defense mission.

55. Senator COTTON. General VanHerck, are there areas of coordination that need to be improved between the U.S. military and Department of Homeland Security?

General VANHERCK. DOD and DHS have a long-established collaborative and coordinated working relationship; however, it is important to note that USNORTHCOM does not directly coordinate with DHS. Instead, OSD coordinates with DHS, and then, OSD provides guidance to USNORTHCOM through the Joint Staff. With that, USNORTHCOM will continue to support direction from military leadership by providing military capabilities in support of properly vetted DHS Requests for Assistance (RFAs) in response to natural or manmade disasters and/or countering criminal organizations. As with most relationships, coordination and communication can always be improved. Receiving DHS RFAs as early in the decisionmaking process as possible allows DOD to better respond to and process those requests. USNORTHCOM is poised to support improved and streamlined coordination efforts with respect to future DHS RFAs to assure unit sourcing is identified in a timely manner and the needs of the Nation are met.

56. Senator COTTON. General VanHerck, does the Mexican military have more combat power than cartels?

General VANHERCK. Yes. Mexican military maneuver elements have a decided advantage over cartels in terms of firepower, tactical proficiency, organizational cohesion and discipline, leadership, mobility support, and sustainment. Mexican light attack aircraft can provide close air support for engaged ground forces, and firefights between cartel gunmen and military elements typically end with cartels being the first to disengage and break contact, often after suffering disproportionate casual-

ties. The Mexican military has openly acknowledged that it is facing challenges to receiving maintenance on its Russian-made helicopters due to the war in Ukraine. I believe the Mexican military would increase its advantage over the cartels if equipped with reliable helicopters. A more streamlined interagency process for approving Foreign Military Sales to our partners would also benefit the Mexican armed forces and help to reinforce the United States' position as the partner of choice. With that said, I remain concerned by TCOs' increasing emphasis on fielding military-grade arms and explosives, and their aggression against Mexican security forces.

THREATS TO THE HOMELAND

57. Senator COTTON. General VanHerck, General Kurilla said 2 weeks ago it was his Commander's estimate that ISIS-K could conduct an external operation against United States or Western interests abroad in under 6 months, with little to no warning. Do you judge the southern border to be a possible vector of attack for foreign terrorists?

General VANHERCK. Yes, it is certainly possible that the southern border, and any border for that matter, could be used as an attack vector. With that said, although it is accurate to judge the southern border as being potentially vulnerable to foreign terrorists moving into the United States, USNORTHCOM has no information of plans to do so. Instead, foreign terrorist groups prefer individuals who have no known association with a terrorist organization or have no record who can use safer, cheaper, legal, and more direct methods, such as flying, to enter the United States.

58. Senator COTTON. General VanHerck, does ISIS still assess the southern border to be an opportunity to smuggle their operatives into the United States commit terrorist attacks?

General VANHERCK. Although it's possible that ISIS, or any entity that desires to inflict harm to the United States could use any border to gain access, there is no evidence to suggest ISIS is interested in or has sent operatives to exploit the United States southern border to enter the United States to conduct attacks. Even during the group's high-water mark in 2015, ISIS was unable to conduct a directed attack in the United States. Instead, ISIS relied on Homegrown Violent Extremists to conduct attacks on the group's behalf. With substantial CT setbacks over the last several years, the group likely will continue to rely on HVEs to target the Homeland.

59. Senator COTTON. General VanHerck, do you agree that Iran remains intent on conducting attacks on the United States Nation's capital?

General VANHERCK. Yes, I agree with that assessment. Iran remains intent on directing attacks within the United States and is not limiting its efforts to Washington DC. During the past year, Iran has targeted Iranian nationals living in the United States that Tehran views as critical of and a threat to the Iranian regime. Iran has also stated a clear intent to seek revenge for the death of former Quds Force Commander, Qasseim Soleimani, and has sanctioned plots against United States Government officials that Iran views complicit in Soleimani's death. This includes a failed murder-for-hire plot against a former U.S. National Security Advisor.

RUSSIAN INTELLIGENCE

60. Senator COTTON. General VanHerck, last year, you warned the Armed Services Committee that Russian military intelligence had more officers deployed to Mexico than any other country in the world. Is that still your assessment?

General VANHERCK. Yes. While I appreciate the Mexican Government's attention to this matter, I have seen nothing to change my assessment regarding the concerning number of Russian military intelligence officers deployed to Mexico.

61. Senator COTTON. General VanHerck, what aspects of Russian activity most concern you?

General VANHERCK. I am most concerned by Russia's ability to hold the homeland at risk with nuclear, conventional, and non-kinetic weapons. I am also concerned by the potential for a regional crisis, such as what we are seeing in Ukraine, to escalate into wider conflict that directly impacts the homeland and/or the territories of our allies and partners. As we are witnessing in Ukraine, advanced long-range Russian cruise missiles are highly precise and difficult to detect and track. They can be fired from long-range bombers, submarines, surface vessels, or road-mobile launchers and can reach targets in the United States and Canada from well outside

our territory. Some of those missiles could be used to strike targets in North America with conventional or nuclear warheads. Limited warning times and uncertainty about what type of payload a missile is carrying increases the risk of miscalculation, potentially limiting our options.

62. Senator COTTON. General VanHerck, according to Department of Homeland Security data, Customs and Border Protection encounter more than 100 Russians attempting to illegally enter the United States every month near just a single location on the United States-Mexico border. Do you know how many have had ties to Vladimir Putin's government?

General VANHERCK. I'll defer to DHS for the totals, by country, of foreign nationals entering the United States and if any have ties to the Russian Government. I am aware of the ongoing efforts by United States law enforcement agencies to uncover actors with nefarious intentions at our border crossings, including any Russians.

63. Senator COTTON. General VanHerck, how are you working with Department of Homeland Security to secure this threat?

General VANHERCK. DHS and FBI have the primary responsibility to assess, characterize, and respond to activity by irregular migrants with possibly malign affiliations or intent. USNORTHCOM coordinates regularly with the Intelligence Community, FBI, DHS on border security issues, and I have DHS and FBI representatives permanently assigned to my headquarters to keep the command apprised of potential threats from foreign terrorists or foreign intelligence operatives.

QUESTIONS SUBMITTED BY SENATOR MICHAEL ROUNDS

CHINA'S ROLE IN DRUG TRAFFICKING ON SOUTHERN BORDER

64. Senator ROUNDS. General VanHerck, is Joint Taskforce North (JTF-NORTH) tracking China's involvement with the drug manufacturing that happens in Mexico, specifically fentanyl?

General VANHERCK. Yes, USNORTHCOM and JTF-North are aware that Chinese expatriates and China-based companies are part of the supply chain that provides chemicals used to manufacture synthetic drugs, including fentanyl, in Mexico. Chinese chemical companies are the primary producers of chemicals used to make illicit fentanyl.

65. Senator ROUNDS. General VanHerck, if they are, can you explain to me what the Chinese role in the process is? Are they simply shipping the component chemicals over from Asia or are they an integral piece in the development, trafficking and selling of illicit drugs in America?

General VANHERCK. Chinese nationals and companies are producers and brokers of chemicals used in the production of synthetic drugs. Chinese chemical companies are the primary producers of chemicals used to make illicit fentanyl and methamphetamine. Aside from a small number of direct precursor chemicals, the chemicals used to make illicit drugs tend to be unregulated and uncontrolled by China, so their production and sale is generally legal in China. Brokers facilitate the sale and shipment of the chemicals to buyers in Mexico. Some of these transactions are for illicit purposes from their outset, while others are for precursor chemicals that do have legitimate, dual-use applications, but which are subsequently diverted to illicit use. Accordingly, the role—and complicity—of the Chinese producers and brokers in the synthetic drug supply chain varies.

TRANSNATIONAL CRIMINAL ORGANIZATIONS

66. Senator ROUNDS. General VanHerck and General Richardson, do you believe that having Department of Defense involved in the United States' approach to countering transnational criminal organizations results in inter-agency information sharing that would not occur if Department of Defense was not involved?

General VANHERCK. Yes, but only marginally. The Department of Defense, through USNORTHCOM and Joint Task Force North, does facilitate information sharing as a by-product of the support we provide to various U.S. and foreign partners. However, we are limited in what the Department of Defense can affect, due to the lack of a lead Federal agency that is empowered to coordinate a whole-of-government strategy for countering transnational criminal organizations. As I am previously testified, I do not see the TCO mission and the mission on the Southwest Border as enduring DOD missions. We need a whole-of-government strategy with

a designated lead Federal agency fully resourced to execute this mission. DOD resources should only be utilized in extremis.

General RICHARDSON. Yes. There are currently 18 Interagency representatives from nine different agencies and departments assigned full time to USSOUTHCOM Headquarters to enable effective interagency integration into operations and planning to counter transnational criminal organizations. USSOUTHCOM has a robust law enforcement presence and a Law Enforcement Working Group (LEWG) focused primarily on the counter-TCO mission set. The LEWG brings law enforcement agents and intelligence officers together with key members of the Staff and Components to discuss law enforcement issues, align targeting, provide information sharing, and refine Concepts of Operation.

DOD supports C-TCO interagency efforts through a variety of technical and procedural means and ways. Interagency partners share information with DOD to help the Department leverage its resources under Title 10 to support law enforcement and foreign partners combat transnational criminal organizations. In the case of Joint Interagency Task Force-South (JIATF-S), the information shared by the interagency feeds a "cycle of success," enabling JIATF-S to fuse information and cue partners to interdict drug trafficking and gather evidence used to further illuminate and prosecute criminal activity and the criminal networks behind them. The DOD is uniquely postured to help facilitate collaboration, integration and synchronization across the USG.

67. Senator ROUNDS. General VanHerck and General Richardson, is there any increase in authority that may assist the Department in furthering the goal of countering Transnational Criminal Organizations?

General VANHERCK. No. I have the appropriate authorities to perform my assigned support missions. Transnational Criminal Organizations are a global security problem, and the Department of Defense is not the lead for countering them. I believe designating and empowering a lead Federal agency to get after this problem would provide greater benefits than increasing the Department of Defense role.

General RICHARDSON. USSOUTHCOM is currently reviewing our existing authorities as part of the development of the fiscal year 25 Legislative proposals process. As we look specifically at our ability to counter TCOs, we will keep the Congress apprised of any additional authorities we believe would be helpful in this mission.

JTF-NORTH'S MISSION IN COUNTERING TRANSNATIONAL CRIMINAL ORGANIZATIONS

68. Senator ROUNDS. General VanHerck, it's my understanding that JTF-NORTH's ultimate mission is to set up its mission partners to counter Transnational Criminal Organizations without Department of Defense support. Do you think this goal is achievable? Or do you expect Department of Defense to be a necessary component in this task indefinitely?

General VANHERCK. The goal itself is appropriate given Defense Department priorities and authorities, but I consider it aspirational in light of how the Federal Government counters TCOs. We simply cannot interdict our way out of this situation. We need a strategy that goes after the networks, rather than focusing on specific commodities. With a designated, resourced, and empowered lead Federal agency, and in a truly whole-of-government approach, we could begin to see progress. But, until a lead Federal agency is identified and properly resourced, I believe we will continue to see only marginal, superficial success.

MEXICAN CARTELS

69. Senator ROUNDS. General VanHerck, what happens if the Mexican cartels are designated as foreign terrorist organizations? How would that designation affect Department of Defense?

General VANHERCK. With specific regard to the U.S. Northern Command operations, I assess that designating the Mexican drug cartels as Foreign Terrorist Organizations would be of negligible benefit, if any, to those activities we conduct in support of our interagency partners. I defer to the Department of Defense for assessments of Department-wide effects.

UNITED STATES-MEXICO MILITARY-TO-MILITARY RELATIONS

70. Senator ROUNDS. General VanHerck, what does the mil-to-mil situation look like with our Mexican counterparts?

General VANHERCK. The military-to-military relationship between USNORTHCOM and our Mexican military partners is exceptionally strong and getting stronger. We have progressed beyond the traditional transactional relationship into one of a true and resilient partnership. USNORTHCOM remains attuned to

Mexican sensitivities and understands that we must go at the speed and pace of our partners as they continue to take on more leadership in the region.

QUESTIONS SUBMITTED BY SENATOR JONI ERNST

MISSILE DEFENSE

71. Senator ERNST. General VanHerck, what is the risk to homeland defense of persistent Russian or Chinese cruise missile submarines off our coasts?

General VANHERCK. The risk is decreased decision space for our Nation's leaders, which erodes strategic stability and increases the risk of an attack on our homeland and the potential for strategic deterrence failure. It also potentially limits timely power projection from the homeland to a forward fight. Russia's strategy, and likely the PRC's in the future, is to delay and disrupt forces flowing from the homeland and to destroy the will of the American people in order to terminate a forward crisis on terms favorable to their goals.

72. Senator ERNST. General VanHerck, are there capability gaps in current missile defenses against this threat?

General VANHERCK. Yes, gaps and limitations in present day surveillance and response options greatly limit NORAD and USNORTHCOM's ability to detect, track, ID, and engage cruise missile threats to the Homelands.

73. Senator ERNST. General VanHerck, what is the risk to homeland defense from containerized missiles? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General VANHERCK. Containerized missiles systems can conceal cruise missiles enroute to a launch location, decrease indications and warning, and make it difficult to detect and defeat a missile threat. Russia currently produces the Club-K containerized missile system, which provides a long-range precision strike capability against land, sea, and air targets and includes four ground or sea-launched cruise missiles concealed by a standard 40-foot shipping container. One of the missiles available for the system is a special anti-ship variant that accelerates to supersonic speeds of up to Mach 3, generating a catastrophic kinetic effect on a target vessel.

The PRC is reportedly building a long-range cruise missile that could be fired from shipping containers. This development likely would be similar to the Russia Club-K type missile system and disguised as a commercial shipping container. This new weapon could help the PRC turn its fleet of freighters into potential warships and commercial ports into potential missile bases. This development would make distinguishing civilian maritime traffic from military vessels more difficult and could limit the ability to warn of an attack against North America.

74. Senator ERNST. General VanHerck, what is the risk to homeland defense from cruise missiles generated by platforms other than submarines? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General VANHERCK. In the maritime domain, Russia's development and fielding of cruise missile capable surface combatants and deployment outside of Russian territorial waters will increase the risk to homeland defense as the Russian naval order of battle expands. Most of Russia's new surface combatants are capable of carrying the KALIBR cruise missile, and the Club-K containerized missile system is the export version of the KALIBR. Russian heavy bombers already have the capability to launch cruise missiles against targets in North America without entering NORAD radar coverage. Russia's long-range aviation command continues modernization efforts intended to improve the capabilities of its bombers to ensure their continued viability. This includes upgrades to propulsion, avionics, and weapons, enabling LRA to strike deeper into North America. LRA's heavy bombers continue to be a flexible tool for Russia to perform strategic messaging and conventional precision strikes, as well as providing Moscow with a nuclear option. Russian heavy bombers frequently conduct Air Defense Identification Zone incursions off the coasts of Alaska and western Canada and have the capability to conduct cruise missile strikes against North America with little to no warning.

The People's Liberation Army (PLA) Navy has expanded its force of large surface combatants by building *Renhai*-class guided missile cruisers and the *Luyang III*-class guided missile destroyers. The *Renhai* cruiser is equipped with a 112 cell vertical launch system (VLS) and the LUYANG III has a 64 cell VLS. Once operational, these systems will be capable of carrying a variety of weapons including

anti-ship cruise missiles, and likely land-attack cruise missiles (LACM) and anti-ship ballistic missiles. As the PLA Navy continues to transition into a global multi-mission force, the addition of land attack capabilities to its modern array of anti-surface and anti-air capabilities is a logical next step. In the coming years, the PLA Navy will probably field LACMs on its newer cruisers and destroyers and developmental *Shang III*-class SSGNs. The addition of land attack capabilities to the PLA Navy's surface combatants and submarines would provide the PLA with flexible long-range strike options and allow the PRC to hold land targets within North America at risk.

75. Senator ERNST. General VanHerck, what is the risk to homeland defense from threats posed by long-range bombers like the H–20? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General VANHERCK. The H–20 will indeed pose an enhanced risk to the homeland, especially compared to the legacy long-range bombers that the PRC currently fields. The H–20 is expected to operate at or beyond the range of the PRC's current bomber fleet. The aircraft's extended range, combined with long-range weapons will provide a new capability for the PRC. The low-observable nature of the H–20 will present additional challenges regarding the ability to detect the aircraft and provide warning. However, while the H–20 poses an enhanced threat compared to its predecessors, the PRC's arsenal of currently fielded ICBMs continue to pose the biggest threat to the Homeland and will remain the largest portion of its nuclear triad for at least the next decade.

AERIAL THREATS

76. Senator ERNST. General VanHerck, what is the risk to homeland defense from ubiquitous armed balloons?

General VANHERCK. NORAD and USNORTHCOM are not aware of an armed balloon threat to the Homeland.

77. Senator ERNST. General VanHerck, what active and passive measures can we adopt to reduce vulnerability ubiquitous armed balloons?

General VANHERCK. NORAD and USNORTHCOM are not aware of an armed balloon threat to the homeland. However, increased domain awareness, improved information sharing, and global integration between commands will all reduce vulnerability to potential airborne threats.

78. Senator ERNST. General VanHerck, has NORTHCOM's guidance for defeating potential aerial threats changed since the four incidents earlier this year? If so, in what ways? If not, why not?

General VANHERCK. No, NORAD guidance for defeating potential aerial threats has not changed. Our Rules of Engagement have not been modified for these types of events, and we continue to execute our missions in accordance with that NORAD ROE.

DOMAIN AWARENESS

79. Senator ERNST. General VanHerck, what is the gap in NORTHCOM capabilities to detect and analyze cruise missile threats? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General VANHERCK. Although NORAD's current line-of-sight surveillance architecture is capable of addressing certain legacy threats, it is inadequate for modern threats to include cruise missiles and hypersonic weapons. The Department must secure multi-domain, layered, integrated, passive and active sensor capabilities to enable timely warning, detection, identification and persistent tracking of low attitude multi-axis cruise missile attacks.

80. Senator ERNST. General VanHerck, what is the gap in NORTHCOM capabilities to detect and analyze threats in the cyber domain? Please provide an unclassified answer to the extent possible; please provide an additional classified answer if necessary.

General VANHERCK. USNORTHCOM requires increased domain awareness in all domains, to include the cyber domain, to effectively conduct operations and maintain domain awareness for prioritized defense critical infrastructure (DCI). The cyber threat remains a significant concern as competitors continue to expand their

capacity to exploit and exfiltrate data and deny services, and to disrupt critical infrastructure, commercial services, and military operations. USNORTHCOM is working with USCYBERCOM, the military Services, and the Cybersecurity and Infrastructure Security Agency to improve domain awareness and information sharing to better protect DCI in the cyber domain.

CHINESE AND RUSSIAN THREATS

81. Senator ERNST. General Richardson, what are the national security implications of 11 China-linked space facilities in your Area of Responsibilities?

General RICHARDSON. The presence of China-linked space facilities in Latin America and the Caribbean enhances Beijing's ability to track our space assets as well as their own and to collect on the United States. The PRC's access to space sites is critical to its efforts to become a leading space power. Beijing may use these sites to spy on United States facilities and attempt to intercept communications. China's ground stations in South America provide coverage of the skies over the Western Hemisphere and many of the China-linked space facilities are located along the same longitudinal sector as the United States Eastern seaboard, Washington, and most of the U.S. military's telecommunications and reconnaissance satellites that service the area while in geosynchronous orbit. These facilities make up one segment of a global network of ground stations that maintain communications with satellites as they pass over different geographic regions along their orbit.

82. Senator ERNST. General Richardson, what has SOUTHCOM done to mitigate surveillance capabilities related to the 11 China-linked space facilities in your Area of Responsibilities?

General RICHARDSON. USSOUTHCOM is actively engaging with our partners in the AOR to develop a shared commitment to utilize space in a manner that is in keeping with the international norms of behavior for peaceful use in virtually every dimension of our bilateral and multilateral relationships.? Working with partners across the U.S. interagency, we continue to engage our foreign partners to help them to understand the nature of MSA utilization of their space facilities. Few have a desire for their country to be used as a platform for military capabilities.

Additionally, USSOUTHCOM, in conjunction with USSPACECOM, has partnered to establish common objectives to closely monitor and, when appropriate, address the PRC's space capabilities and influence in the AOR. This is done through collaborative partner nation engagements to promote Space Domain Awareness aligned with U.S. interests.

83. Senator ERNST. General Richardson, how is SOUTHCOM preventing installation of additional People's Republic of China-linked space facilities?

General RICHARDSON. The PRC consistently works to expand its network of military space infrastructure across the USSOUTHCOM AOR. USSOUTHCOM continues to strengthen relationships with our allies and partners by positioning ourselves as a partner of choice through subject matter expert exchanges (SMEE) and capability building with partner nations throughout the AOR. As USSOUTHCOM builds out our common operation picture while mapping current and potential MSA space facilities, we provide guidance and requested assistance to partner nations while illuminating nefarious actions performed by MSAs. Additionally, we continue to expose predatory and failed MSA influenced contracts which create unfavorable conditions for partner nations.

In a truly integrated deterrence approach, we coordinate with the Department of Commerce on critical advocacy cases to deny unchallenged penetration to the MSA State Owned Enterprises. We also collaborate with their Commercial Law Development Program, highlighting opportunities to advise and assist partner nations in developing robust legal frameworks to secure their critical telecommunication infrastructure. This effort is coordinated with the Department of State and is further guided by NSC prioritization to ensure synergy.

84. Senator ERNST. General Richardson, does the United States have capabilities to hold at risk potential Chinese or Russian military targets located in your Area of Responsbilities? If so, what capabilities? If not, what are the capability gaps?

General RICHARDSON. While USSOUTHCOM has no assigned forces and limited capabilities to hold targets at risk, the United States does have those capabilities and there are mechanisms in place by which USSOUTHCOM could request additional capabilities, if required.

85. Senator ERNST. General Richardson, does the United States have capabilities to hold at risk valued military targets of states in your Area of Responsibilities that host Chinese or Russian military or dual-use capabilities? If so, what capabilities? If not, what are the capability gaps

General RICHARDSON. While USSOUTHCOM has no assigned forces and limited capabilities to hold at risk valued military targets of states in this AOR that host Chinese or Russian military or dual-use capabilities, the United States does have those capabilities. Also, there are mechanisms in place by which USSOUTHCOM could request additional capabilities, if required.

QUESTIONS SUBMITTED BY SENATOR DAN SULLIVAN

CHINESE BALLOON OVER COLOMBIA

86. Senator SULLIVAN. General Richardson, while many are tracking the Chinese Spy Balloon incursion over my State in January 2023, most may have forgotten the Colombian military reportedly sighted a similar balloon over their country in the same timeframe. United States military officials have confirmed a Chinese balloon was spotted over Latin America but have never specified exactly where. The existence of Chinese balloons in both our NORTHCOM and SOUTHCOM AORs are to me a startling message from China. What have you learned from the Colombians on the Chinese Balloon that flew over their country?

General RICHARDSON. Colombia was aware the Chinese balloon flew through its airspace at a high altitude and sent a report through established channels with information about the balloon. The object was detected at an altitude of 55,000 feet, moving into the airspace to the north at an average of 25 knots, or 29 miles per hour. The object was monitored until it left the airspace. The government did not see the balloon as a threat to the civilian population and had no additional information to share about the balloon.

87. Senator SULLIVAN. Since the previously mentioned incident, what changes have you made in your tracking capability to monitor future activity?

General RICHARDSON. This incident demonstrated that we need to be more aware of this type of surveillance threat within the USSOUTHCOM AOR. We have learned that we need to be actively monitoring and sharing potential tracks and threat assessments with NORAD/NORTHCOM, other COCOMs, and the Joint Staff, as well as our regional partners that may be in its flight path. In doing so, the USSOUTHCOM Joint Operations Center (JOC) has increased its coordination and communication with NORAD/NORTHCOM and the Joint Staff with monitoring and tracking these occurrences. The JOC has also added these events to its reporting requirements to the USSOUTHCOM Commander and senior staff to provide consistent and continuous updates for analysis and decisionmaking.

COUNTERINTELLIGENCE THREATS IN SOUTCOM

88. Senator SULLIVAN. General Richardson, can you please speak to how you mitigate China and Russia from collecting on our Tactics, Techniques, and Procedures during trainings in which our forces train SOUTCOM-based military's who also receive instruction from China and Russia?

General RICHARDSON. Training is done at the level of disclosure permitted by classification guidance. Additionally, the Command utilizes Foreign Disclosure Officers to review training material prior to its release to partners. All host nation forces that we partner with are vetted through the Leahy vetting process. United States forces receive operational security training prior to entering the theater in order to protect critical and sensitive information as well as receive force protection briefs from United States Embassy Regional Security Officers and Senior Defense Officials once in theater. Sensitive TTPs are closely safeguarded and those with whom we share those in training and advisory capacities are closely vetted.

RUSSIAN PRESENCE IN THE ARCTIC

89. Senator SULLIVAN. General VanHerck can you please speak to how Russian demands for experienced troops and its primary focus in Ukraine has impacted their force disposition in the Arctic region?

General VANHERCK. Russia has drawn ground forces and equipment from its Arctic territories to support its conflict with Ukraine. Despite the requirements of the conflict, Russia continues to develop military infrastructure in the Arctic, as well as

field advanced military platforms. We judge Moscow will prioritize reconstituting its Arctic forces following the conclusion of its conflict with Ukraine.

INFRASTRUCTURE IMPROVEMENT IN ALASKA

90. Senator SULLIVAN. General VanHerck what specific infrastructure improvements in Alaska would most benefit NORTHCOM's mission to monitor and defend the Homeland?

General VANHERCK. Alaska plays a pivotal role in defending the Homeland as well as providing access to the United States European Command and United States Indo-Pacific Command AORs in support of multiple strategic plans. Though all Alaskan infrastructure is key, my primary concern is the infrastructure that meets these no-fail plans requirements. To that end, USNORTHCOM has funded a $2 million Area Development Plan (ADP) through the U.S. Army Corps of Engineers-Alaska District. This ADP will allow for a holistic analysis of requirements needed to support OPLANs and CONPLANs in conjunction with those to support the Indo-Pacific theater. I am awaiting the results of this ADP to identify any gaps and seams and identify our highest priority infrastructure. Other improvements that will facilitate Joint Force support of NORAD and USNORTHCOM mission requirements include alert, fuels, laboratory, and maintenance facilities at various Alaskan installations, as well as an operations facility at the Joint Pacific Alaska Range Complex (JPARC). I am working closely with the Services and the Department to prioritize investment in these improvements in the coming years.

DEPARTMENT OF DEFENSE AUTHORIZATION REQUEST FOR APPROPRIATIONS FOR FISCAL YEAR 2024 AND THE FUTURE YEARS DEFENSE PROGRAM

TUESDAY, MARCH 28, 2023

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

THE DEPARTMENT OF DEFENSE BUDGET REQUEST

The Committee met, pursuant to notice, at 9:30 a.m., in room G50, Dirksen Senate Office Building, Senator Jack Reed (Chairman of the Committee) presiding.

Committee Members present: Senators Reed, Shaheen, Gillibrand, Blumenthal, Hirono, Kaine, King, Warren, Peters, Manchin, Duckworth, Rosen, Kelly, Wicker, Fischer, Cotton, Rounds, Ernst, Sullivan, Cramer, Scott, Tuberville, Mullin, Budd, and Schmitt.

OPENING STATEMENT OF SENATOR JACK REED

Chairman REED. I would like to call a hearing to order, and since we have a quorum, I would ask the Committee to consider Tuesday's nominations and a list of 27 pending military nominations.

First, I ask the Committee to consider the following civilian nominations. Mr. Ronald Keohane to be Assistant Secretary of Defense for Manpower and Reserve Affairs, and Hon. Nickolas H. Guertin to be the Assistant Secretary of the Navy for Research, Development and Acquisition. Is there a motion to favorably report these——

Senator WICKER. So, moved.

Chairman REED. Is there a second?

Voice: Second.

Chairman REED. in favor, say aye.

[Chorus of ayes.]

Chairman REED. Finally, I ask the Committee to consider a list of 27 pending military nominations. of these nominations have been before the Committee for the required length of time. Is there a motion to favorably report this list of 27 pending military nominations?

Senator WICKER. So, moved.

Chairman REED. Is there a second?

VOICE. Second.

Chairman REED. Thank you. All in favor, say aye.

[Chorus of ayes.]

[The list of nominations considered and approved by the Committee follows:]

MILITARY NOMINATIONS PENDING WITH THE SENATE ARMED SERVICES COMMITTEE WHICH ARE PROPOSED FOR THE COMMITTEE'S CONSIDERATION ON MARCH 23, 2023.

1. **In the Air Force there are 27 appointments to the grade of brigadier general (list begins with David J. Berkland)** (Reference No. 196)
2. **Col. Corey A. Simmons, USAF to be brigadier general** (Reference No. 198)
3. **RADM George M. Wikoff, USN to be vice admiral and Commander, US Naval Forces, Central Command/Commander, FIFTH Fleet and Commander, Combined Maritime Forces** (Reference No. 211)
4. **RADM Frederick W. Kacher, USN to be vice admiral and Commander, SEVENTH Fleet** (Reference No. 212)
5. **In the Army there are 101 appointments to the grade of major (list begins with Tolulope O. Akinsanya)** (Reference No. 238)
6. In the Marine Corps there is 1 appointment to the grade of lieutenant colonel (Jason W. Price) (Reference No. 257)
7. **In the Air Force Reserve there are 11 appointments to the grade of brigadier general (list begins with Sean M. Carpenter)** (Reference No. 290)
8. **In the Air Force Reserve there are 2 appointments to the grade of brigadier general (list begins with Kristin A. Hillery)** (Reference No. 291)
9. **In the Air Force Reserve there are 10 appointments to the grade of major general (list begins with Elizabeth E. Arledge)** (Reference No. 292)
10. **Col. Carlos M. Caceres, USAR to be brigadier general** (Reference No. 310)
11. **RADM Shoshana S. Chatfield, USN to be vice admiral and US Military Representative to the North Atlantic Treaty Organization Military Committee** (Reference No. 311)
12. **In the Air Force Reserve there is 1 appointment to the grade of colonel (Shane K. Doty)** (Reference No. 312)
13. In the Air Force Reserve there are 9 appointments to the grade of colonel (list begins with Speight H. Caroon) (Reference No. 313)
14. In the Air Force Reserve there is 1 appointment to the grade of colonel (Brandi Barnard King) (Reference No. 314)
15. In the Air Force Reserve there are 3 appointments to the grade of colonel (list begins with Daniel S. McPherson) (Reference No. 315)
16. In the Air Force Reserve there are 10 appointments to the grade of colonel (list begins with Matthew J. Andrade) (Reference No. 316)
17. In the Air Force Reserve there are 10 appointments to the grade of colonel (list begins with Adam James Cole) (Reference No. 317)
18. In the Air Force Reserve there are 2 appointments to the grade of colonel (list begins with Eric K. Wilke) (Reference No. 318)
19. In the Air Force Reserve there are 13 appointments to the grade of colonel (list begins with Kelli M. Bermudez) (Reference No. 319)
20. In the Air Force Reserve there are 2 appointments to the grade of colonel (list begins with Lisa Carol Giugliano) (Reference No. 320)
21. In the Air Force Reserve there are 7 appointments to the grade of colonel (list begins with Joseph Catalino, Jr.) (Reference No. 321)
22. In the Air Force Reserve there are 9 appointments to the grade of colonel (list begins with James M. Bershinsky) (Reference No. 322)
23. In the Air Force Reserve there are 2 appointments to the grade of colonel (list begins with Gary Monroe Boutz, Jr.) (Reference No. 323)
24. In the Air Force Reserve there is 1 appointment to the grade of colonel (John Charles Easley) (Reference No. 324)
25. In the Air Force Reserve there are 37 appointments to the grade of colonel (list begins with Robert M. Acosta) (Reference No. 325)
26. In the Air Force Reserve there are 2 appointments to the grade of colonel (list begins with Nicole Dyan David) (Reference No. 326)
27. In the Air Force Reserve there are 7 appointments to the grade of colonel (list begins with Karrie Megan Bem) (Reference No. 327)

28. In the Air Force Reserve there are 3 appointments to the grade of colonel (list begins with Douglas A. Collins) (Reference No. 328)
29. In the Air Force there is 1 appointment to the grade of major (Marquis A.T. Smith) (Reference No. 329)
30. In the Air Force Reserve there are 61 appointments to the grade of colonel (list begins with James S. Akers II) (Reference No. 330)
31. In the Air Force Reserve there are 31 appointments to the grade of colonel (list begins with David I. Amar) (Reference No. 331)
32. In the Army there is 1 appointment to the grade of colonel (Sashi A. Zickefoose) (Reference No. 332)
33. In the Army Reserve there is 1 appointment to the grade of colonel (Howard F. Stanley) (Reference No. 333)
34. In the Army there is 1 appointment to the grade of lieutenant colonel (Bobby J. Chun) (Reference No. 334)
35. In the Army there are 7 appointments to the grade of colonel (list begins with Joshua G. Glonek) (Reference No. 335)
36. In the Army there are 7 appointments to the grade of lieutenant colonel (list begins with Alex J. Duffy) (Reference No. 337)
37. In the Army there are 4 appointments to the grade of major (list begins with Liza B. Crawford) (Reference No. 338)
38. In the Army Reserve there are 2 appointments to the grade of colonel (list begins with Jeremy S. Stirm) (Reference No. 339)
39. In the Army Reserve there is 1 appointment to the grade of colonel (Renee R. Kiel) (Reference No. 340)
40. In the Army there are 2 appointments to the grade of lieutenant colonel (list begins with Melissa B. Riesterhartsell) (Reference No. 341)
41. In the Army there is 1 appointment to the grade of lieutenant colonel (Kimberly A. Dilger) (Reference No. 342)
42. In the Army there is 1 appointment to the grade of major (Abigail R. Osman) (Reference No. 343)
43. In the Army Reserve there is 1 appointment to the grade of colonel (Andrew J. Archuleta) (Reference No. 344)
44. In the Army Reserve there are 8 appointments to the grade of colonel (list begins with Christopher C. Cross) (Reference No. 345)
45. In the Army there are 37 appointments to the grade of major (list begins with Michael J. Baierlein) (Reference No. 346)
46. In the Army there are 575 appointments to the grade of major (list begins with Austin P. Abarr) (Reference No. 347)
47. In the Army there are 489 appointments to the grade of major (list begins with James H. Abney) (Reference No. 348)
48. In the Army there are 981 appointments to the grade of major (list begins with Mitchell A. Ables) (Reference No. 349)
49. In the Army Reserve there are 9 appointments to the grade of colonel (list begins with Peter B. East) (Reference No. 350)
50. In the Navy there is 1 appointment to the grade of lieutenant commander (list begins with William M. Schweitzer) (Reference No. 351)
51. In the Navy there is 1 appointment to the grade of captain (list begins with Louis V. Scott) (Reference No. 353)
52. **Col. William F. Wilkerson, USAR to be brigadier general** (Reference No. 359)
53. **Col. Evelyn E. Laptook, USAR to be brigadier general** (Reference No. 360)
54. **BG Ronald R. Ragin, USA to be major general** (Reference No. 361)
55. **In the Army there are 37 appointments to the grade of brigadier general (list begins with Brandon C. Anderson)** (Reference No. 362)
56. **In the Marine Corps there are 8 appointments to the grade of brigadier general (list begins with David R. Everly)** (Reference No. 363)
57. **In the Navy there are 2 appointments to the grade of rear admiral (lower half) (list begins with Walter D. Brafford)** (Reference No. 364)
58. **In the Navy there are 16 appointments to the grade of rear admiral (lower half) (list begins with Eric J. Anduze)** (Reference No. 365)
59. **In the Navy there are 2 appointments to the grade of rear admiral (lower half) (list begins with Brian J. Anderson)** (Reference No. 366)
60. **In the Navy there are 2 appointments to the grade of rear admiral (list begins with Casey J. Moton)** (Reference No. 367)
61. **RADM(lh) Rick Freedman, USN to be rear admiral** (Reference No. 368)
62. **RADM(lh) Kenneth W. Epps, USN to be rear admiral** (Reference No. 369) 3

63. **In the Navy there are 13 appointments to the grade of rear admiral (list begins with Stephen D. Barnett)** (Reference No. 370)
64. **Capt. Frank G. Schlereth III, USN to be rear admiral (lower half)** (Reference No. 371)
65. **In the Navy there are 2 appointments to the grade of rear admiral (lower half) (list begins with Joshua C. Himes)** (Reference No. 372)
66. **In the Navy there are 4 appointments to the grade of rear admiral (lower half) (list begins with Thomas J. Dickinson)** (Reference No. 373)
67. **In the Air Force there are 2 appointments to the grade of major general (list begins with Thomas W. Harrell)** (Reference No. 379)
68. In the Air Force there is 1 appointment to the grade of colonel (Maximilian S. Lee) (Reference No. 380)
69. In the Navy there is 1 appointment to the grade of lieutenant commander (Justin J. Reeb) (Reference No. 381)
70. **LTG James W. Bierman, Jr., USMC to be lieutenant general and Deputy Commandant for Plans, Policies, and Operations, Headquarters, US Marine Corps** (Reference No. 389)
71. In the Army there is 1 appointment to the grade of colonel (Matthew J. Clementz) (Reference No. 397)
72. In the Army there is 1 appointment to the grade of major (Samuel T. Kramer) (Reference No. 398)
73. In the Army there is 1 appointment to the grade of colonel (Carla A. Kiernan) (Reference No. 399)
74. In the Army there is 1 appointment to the grade of colonel (John W. Brock II) (Reference No. 400)
75. In the Army there is 1 appointment to the grade of colonel (John D. Horton) (Reference No. 404)
76. In the Army Reserve there is 1 appointment to the grade of colonel (Joel N. Buffardi) (Reference No. 405)
77. In the Army there is 1 appointment to the grade of colonel (Sarah D. Eccleston) (Reference No. 406)
78. In the Army there is 1 appointment to the grade of major (Nicholas P. Fiebke) (Reference No. 407)
79. In the Army there is 1 appointment to the grade of major (Andrew J. Doyle) (Reference No. 408)
80. In the Army there is 1 appointment to the grade of major (William T. Griggs) (Reference No. 409)
81. In the Army there is 1 appointment to the grade of major (Megan L. Maloy) (Reference No. 410)
82. In the Army there is 1 appointment to the grade of major (Kaitlyn M. Hernandez) (Reference No. 411)
83. In the Army Reserve there are 15 appointment to the grade of colonel (list begins with Timothy I. Arcelay) (Reference No. 412)
84. In the Army there is 1 appointment to the grade of major (Sara C. Adams) (Reference No. 413)
85. In the Army there is 1 appointment to the grade of major (Christina G. Nalley) (Reference No. 414)
86. In the Army Reserve there are 7 appointments to the grade of colonel (Andrew Adamczyk) (Reference No. 415)
87. In the Army there is 1 appointment to the grade of colonel (Ashley S. Lee) (Reference No. 416)
88. In the Army there is 1 appointment to the grade of major (Timothy W. Lindeman) (Reference No. 417)
89. In the Army there is 1 appointment to the grade of major (Ebony Q. Star) (Reference No. 418)
90. In the Army there is 1 appointment to the grade of major (Sarah A. Delarosa) (Reference No. 419)
91. In the Army there is 1 appointment to the grade of major (Mark T. Sopkiw, Jr.) (Reference No. 420)
92. In the Army there is 1 appointment to the grade of major (Justin T. Thomas) (Reference No. 421)
93. In the Army there is 1 appointment to the grade of major (Rei T. Israel) (Reference No. 422)
94. In the Army there is 1 appointment to the grade of major (Adam L. Fox) (Reference No. 423)
95. In the Army there is 1 appointment to the grade of major (Jason L. Workman) (Reference No. 424)

96. In the Army there is 1 appointment to the grade of major (Stephen J. Cumby) (Reference No. 425)
97. In the Army there is 1 appointment to the grade of major (Stephen M. Anderson) (Reference No. 426)
98. In the Navy Reserve there is 1 appointment to the grade of captain (Elisabeth Crumpler) (Reference No. 427)
99. In the Navy there are 27 appointments to the grade of captain (list begins with Kyle A. Aduskevich) (Reference No. 428)
100. In the Navy there are 9 appointments to the grade of commander (list begins with Bramwell B. Arnold III) (Reference No. 429)
101. In the Navy there are 34 appointments to the grade of lieutenant commander (list begins with Jeffrey R. Biermann) (Reference No. 430)
102. In the Navy there is 1 appointment to the grade of lieutenant commander (James H. Knight) (Reference No. 431)
103. In the Space Force there are 9 appointments to the grade of major (list begins with Ross M. Boston) (Reference No. 432)
104. In the Space Force there are 38 appointments to the grade of colonel (list begins with Jason M. Adams) (Reference No. 433)
105. In the Space Force there are 68 appointments to the grade of lieutenant colonel (list begins with Christopher John Alban) (Reference No. 434)
106. In the Space Force there are 58 appointments to the grade of lieutenant colonel (list begins with Bridget L. Ajinga) (Reference No. 435)
107. In the Space Force there are 76 appointments to the grade of major (list begins with John W. Anderson) (Reference No. 436)
108. In the Space Force there are 100 appointments to the grade of major (list begins with Christina M. Akers) (Reference No. 437)
109. In the Space Force there are 2 appointments to the grade of lieutenant colonel (list begins with Cassandra R. Hidalgo) (Reference No. 438)
110. In the Space Force there is 1 appointment to the grade of colonel (Edward E. Jones) (Reference No. 439)

TOTAL: 3,059

Chairman REED. The ayes have it. Thank you very much. Welcome, Secretary Austin, General Milley, and Secretary McCord. Before I get into my statement, I want to take a moment to recognize the tragic disasters that struck Mississippi and Alabama this weekend.

Our hearts are certainly with the people of Mississippi and Alabama after tornadoes caused terrible loss of life and intense damage, and I know Senator Wicker, Senator Tuberville are doing everything they can to help their States, and we are thinking about the families and loved ones who were suffering.

Senator WICKER. Thank you very much.

Chairman REED. Good morning. The Committee meets today to receive testimony on the President's Budget Request for the Department of Defense (DOD) for fiscal year 2024. Witnesses this morning are Secretary of Defense Lloyd Austin, Under Secretary of Defense Controller Michael McCord, and Chairman of the Joint Chiefs of Staff, General Mark Milley.

Thank you for appearing before us today and please extend the Committee's thanks to the servicemembers and Defense civilians in the Department. I would like to take a moment to recognize that this will be General Milley's final posture hearing before his retirement later this year. General, you have served this Nation for 43 years with honor, skill, and steadfast leadership, and we are deeply grateful.

We thank your family for their support throughout your service, and we congratulate you on a very well-deserved retirement. Thank you, sir. Earlier this month, President Biden released his fiscal year 2024 budget request for the Department of Defense with a top

line of $842 billion. As the President's Budget recognizes and as his national defense strategy makes clear, China is our primary competitor.

The PRC [People's Republic of China] is the only nation with both the intent and the capability to challenge the security and economic interests of the United States and our allies and partners. At the same time, Russia remains a violent, destabilizing force. Putin's assault on Ukraine is inflicting horrific suffering on innocent civilians, threatening European stability, and harming the global economy.

However, if Putin thought his war would drive a wedge between NATO members and the international community, he was badly mistaken. The international community has united in a way not seen in decades, and our potential adversaries around the world are taking note.

The Biden administration and the witnesses before us today deserve great credit for leading this effort. In addition to the threats posed by Russia and China, nations like Iran and North Korea continue to push the boundaries of military brinksmanship and issues like terrorism and climate change remain persistent.

Prevailing in this environment will require thoughtful strategies and a budget that is structured to meet the challenges we face. During today's hearing, I would ask our witnesses to update us on the strategic planning documents published over the past year, including the National Defense Strategy, National Military Strategy, Nuclear Posture Review, and Missile Defense Review, and how the 2024 budget will execute this strategies.

An essential element for the United States long-term strategic competition will be our ability to build a joint capabilities of our Armed Forces across all domains, including space, cyber, and information operations. As the Defense Department's recently released Joint Concept for Competing makes clear, the object of our Nation's adversaries is to win without a fight.

The concept warns that if we do not adapt to the realities of long-term competition, "the United States risks ceding strategic influence, advantage, and leverage while preparing for war that never comes." I am interested to hear from our witnesses how this budget supports joint capabilities to ensure our military remains the world's premier fighting force.

To that end, I am encouraged that the budget includes the largest ever request for research, development, testing, and evaluation, a total of $145 billion. The budget would provide significant funding for modernization areas such as microelectronics, artificial intelligence (AI), hypersonics, and 5G, technologies that will be critical for our national defense.

Our strategy toward China and Russia should not be solely defined in dollars by how much, but rather where and why we are investing to achieve the greatest comparative advantage. Keeping our competition with China front and center, this budget request includes $9.1 billion for priorities covered by the Pacific Deterrence Initiative, or PDI.

I am encouraged by the progress we have made through PDI thus far, and this Committee will continue working to help improve the design and posture of the Joint Force in the Indo-Pacific region.

This should include strengthening logistics, modernizing infrastructure, conducting exercises, and training and building the capabilities of our allies and partners. Indeed, our approach to the Indo-Pacific should be informed in part by lessons drawn from the European Defense and Deterrence Initiative, or EDI, which has played a decisive role in strengthening Ukraine for the last 9 years.

The Department's 2024 budget request wisely includes $3.4 billion for EDI related investments and $300 million for the Ukraine Security Assistance Initiative. I am also pleased to see that this budget request prioritizes taking care of our men and women in uniform and the civilians who serve alongside them by providing an across the board pay raise of 5.2 percent.

This pay increase sends an important message to the workforce at a time when recruiting is particularly challenging. The budget request also includes $16.7 billion for military construction projects, and I am particularly pleased to see] increases in barracks sustainment. The improvements to our facilities' repair and modernization will go a long way toward the Joint Force's readiness and quality of life for military personnel.

With regard to our nuclear strategy, I understand that the budget request supports important steps for the modernization of our nuclear triad. Given the reckless behavior of Putin over the past year, our allies and partners depend on our extended deterrence now more than ever.

We must also be acutely aware of China's rapidly growing arsenal. Modernization of our strategic forces is needed to reassure not only our allies but deter any attack on our Homeland by any of our nuclear armed competitors. Even as we modernize, we should seek ways to promote strategic stability, reduce the risk of miscalculation, and, if possible, reduce nuclear stockpiles when verifiable for all parties.

Given these strategic threats, the proposed investments in tried-and-true platforms like the *Columbia* and the *Virginia*-class submarines is a prudent decision. Similarly, this budget supports the further development of long-range stealth bombers, strengthening the fighter fleet and building up the defense industrial base, including upgrades to the Navy's public and private shipyards.

At the same time, taxpayers should not have to pay for programs and systems that are wasteful or ineffective, and Congress must not shirk its responsibility to divest outdated platforms in favor of more effective new technologies. We are engaged in a struggle between autocracy and democracy, and we cannot fail in succeeding in that struggle.

Again, I would like to thank the witnesses for their participation today. I look forward to the testimony and let me now recognize Ranking Member Senator Wicker.

STATEMENT OF SENATOR ROGER F. WICKER

Senator WICKER. Thank you, Mr. Chairman. I, too, want to thank our distinguished witnesses for being here. For the third year in a row, President Biden has sent through Congress a budget request that cuts military spending amid a more dangerous and complex threat environment.

We are in the most crucial years of our efforts to prevent aggression by our peer adversary, the Chinese Communist Party. The cost of failure in this effort would be nearly unthinkable. Despite international efforts to the contrary, Russia was not deterred from invading Ukraine, and that invasion has already cost the global economy well over $1 trillion, in addition to untold suffering and loss of life.

These costs will continue to mount unless we give the Ukrainians every single tool they need to win as soon as possible. Our intelligence community tells us a deterrence failure over Taiwan would make the economic effect of Ukraine conflict look vanishingly small. This year's budget is the last one that funds capabilities that are likely to be fielded before 2027.

That is the year by which Xi Jinping says he wants the People's Liberation Army to be ready to take Taiwan. That makes our work here very urgent. I am heartened to see that the budget request prioritizes some programs of critical importance to near-term deterrence and warfighting, including the Strategic Capabilities Office, DARPA [Defense Advanced Research Projects Agency] led Assault Breaker II, electronic warfare and cyber programs, and the emerging efforts to deliver real warfighting capability out of the JAC2 program.

These near-term high return investments are crucial. Even so, I remain concerned that we are not moving fast enough on some of these efforts. At the same time, while the National Defense Strategy emphasizes the importance of our posture in the Western Pacific, I note this budget actually cuts the level of spending on key planning and design activities.

This is despite the clear congressional signal sent by Senators Reed and Inhofe in the statute when they created the Pacific Deterrence Initiative several years ago. We cannot successfully deter Xi with a brittle basing and logistics infrastructure. Further, we must work together to think bigger and more creatively about the scale of investment and focus needed to compete with Beijing in the decades to come.

Our current nuclear modernization efforts are moving too slowly and will produce a force ill-equipped to deter multiple nuclear armed adversaries. The current approach to rebuilding our shipbuilding industrial base is also woefully insufficient. The Department of Defense has failed our shipbuilders by promising stability and then pulling the rug out from under them.

This has hit amphibious shipbuilders particularly hard. This budget also fails by actually shrinking the U.S. Navy this year and in future years, instead of growing the fleet as is required by law. Congress again will need to rectify these failures. Yet even where Congress and the Department of Defense have agreed on our approach, such as with the submarine industrial base, progress has been too slow or nonexistent.

We need to make generational investments across our basic defense infrastructure, including shipyards, munitions, and ammunition plants, advanced test ranges and even barracks for our servicemembers. I do appreciate the Chair emphasizing that in his statement.

Similarly, we cannot effectively compete with and deter our adversaries with the recruiting deficiencies we have heard about, for example, at last week's hearing, I hope our witnesses will address this issue and State whether this budget contains every single possible investment that could alleviate the recruiting crisis. Last, I want to discuss the Department's relationship with Congress.

I think we have some work to do on this front, and let me mention two instances. First on February 8, I sent the Secretary of Defense a letter asking some simple questions about the facts and decisionmaking surrounding the Chinese spy balloon. This was signed by Senator Rubio, the co-chair of the Senate Intelligence Committee. Three weeks later, the Deputy wrote back with a non-answer, which I can only describe as dismissive. So, I sent another letter reiterating my request.

Yesterday afternoon, the day before this hearing, I finally received a response to my letter from the Secretary. I have significant questions about that response, and I will address that in questions for the record. So, that is one thing. Also, early last Thursday morning, an Iranian backed attack killed one American contractor and injured several United States servicemembers in Syria.

These troops are there to ensure that ISIS [Islamic State of Iraq and Syria] does not pose a threat to the United States. That very day, the Senate was considering several significant votes relating to the use of force against Iran, and yet no member of the Senate, to my knowledge, was told that day about an attack by this very adversary while we were voting on issues involving them.

Given the number of legislative affairs personnel that the Office of the Secretary has, I find it hard to believe that no one in the executive branch was tracking the votes on the Senate floor or thought of the nexus between our decisions and the very acts that were going on, on the other side of the globe. It is unacceptable that no one informed the Senate of this attack in a timely manner.

Mr. Secretary and Mr. Chairman, we are all in this together. We are all on the same side here. I would strongly prefer that the Biden administration treat the Congress as a partner moving forward, and I thank the witnesses for appearing today.

Again, I thank them for their service and I look forward to their testimony. Thank you, Mr. Chairman.

Chairman REED. Thank you very much, Senator Wicker. Let me recognize Secretary Austin. Mr. Secretary, please.

STATEMENT OF THE HONORABLE LLOYD J. AUSTIN III, SECRETARY OF DEFENSE

Secretary AUSTIN. Chairman Reed, Ranking Member Wicker, and distinguished Members of the Committee, at the outset, let me echo your comments, Chairman, regarding the tragedies that we have just witnessed in Mississippi and then Alabama, and our condolences go out to all. I am glad to be here with you today to testify in support of the President's Budget Request for fiscal year 2024.

I am joined, as always, by General Milley, and I remain grateful for his leadership. I am also glad to be joined by the Department's Comptroller and CFO, Michael McCord. This is a strategy driven budget and one driven by the seriousness of our strategic competition with the People's Republic of China. At $842 billion, it is a 3.2

percent increase over fiscal year 2023 enacted, and it is 13.4 percent higher than fiscal year 2022 enacted.

This budget will help us continue to implement our national defense strategy and the President's National Security Strategy. Now I have three key priorities, to defend our Nation, to take care of our outstanding people, and to succeed through teamwork. The PRC is our pacing challenge and we are driving hard to meet it.

Our budget builds on our previous investments to deter aggression. We are investing in a more resilient force posture in the Indo-Pacific and increasing the scale and the scope of our exercises with our partners. This budget includes a 40 percent increase over last year's budget for the Pacific Deterrence Initiative, and it is an all-time high of $9.1 billion.

That will fund a stronger force posture, better defenses for Hawaii and Guam, and deeper cooperation with our allies and partners. This budget also makes the Department's largest ever investments in both R&D [research and development] and procurement. We are investing—we are requesting more than $61 billion to sustain air dominance. That includes funding for our fighters and extraordinary B–21 strategic bomber that I helped unveil last December.

We are also seeking more than $48 billion for sea power, including new construction of nine battle force ships. We are boosting capacity in America's shipyards to build the ships that our strategy demands. We are investing a total of $1.2 billion in the submarine industrial base, and we are buying two *Virginia*-class attack submarines and one *Columbia*-class missile submarine.

On land, we are investing in air and missile defense and in defenses to counter unmanned aerial vehicles. We are also requesting $11 billion to deliver the right mix of long-range fires, including major investments in hypersonics. We will also continue to modernize all three legs of our nuclear triad and bolster our strategic deterrence. We put forward the largest budget, largest space budget in Pentagon history.

We have requested $33.3 billion to improve our capabilities in our resilience in space. Well, let me again thank Congress for providing the Department with multi-year procurement authorities and appropriations for critical munitions.

In this budget, we are requesting more multi-year procurement authorities, and we are asking for more than $30 billion to further invest in the industrial base, and to buy the maximum number of munitions that American industry can produce.

This budget also moves us away from aging capabilities that aren't relevant to future conflicts so we can focus on the advances that our warfighters will need. Now our national defense strategy calls out Putin's highly aggressive Russia as an acute threat. Under President Biden's leadership, the United States has rallied the world to help Ukraine fight Russia's indefensible invasion.

We have reinforced NATO's defense and deterrence on its Eastern flank. Our allies and partners have provided crucial security assistance coordinated through the Ukraine Defense Contact Group that I lead. We will support Ukraine's defense for as long as it takes. Meanwhile, the Department remains vigilant against other persistent threats, including North Korea and Iran.

We will take all necessary measures to defend our troops and our interest overseas, as seen in our recent air strikes against facilities linked to Iran's Islamic Revolutionary Guard Corps. We are also investing in over the horizon counterterrorism capabilities. Mr. Chairman, our Joint Force stands ready to meet any challenge.

You can see the forces readiness after Russia's unprovoked invasion of Ukraine, when we swiftly deployed elements of the 3d Infantry Division to Poland to shore up NATO's Eastern flank. We closely monitor readiness at the unit level and maintain response forces at our highest State of readiness, while the rest of the force, by design, is preparing for future contingencies.

So, this budget will help us maintain our readiness with $146 billion in funding for operations, training, and maintenance. This budget also invests in improving our readiness and resilience in the face of climate change and other 21st century threats. Mr. Chairman, we are going to remain the strongest military in the world.

As we mark the 50th anniversary of our All-Volunteer Force, I am enormously proud of the brave men and women who choose to wear the cloth of our Nation. We owe it to them and to their families to take the best possible care of all of our people. Over the past 2 years, we have made moves easier, we have cut commissary prices, and we have made childcare more affordable.

This budget funds other key steps to increase the quality of life of our teammates, including the largest military and civilian pay raises in decades. Now, we are also pushing hard to help eliminate suicide in our ranks, including immediate steps to hire more mental health professionals and improve access to mental health care. Meanwhile, we are working toward a military that's free of sexual assault.

We worked with Congress to improve the response of sexual assault and related crimes under the Uniform Code of Military Justice, and those reforms will be fully implemented by the end of this year. The Department is also investing in a specialized workforce to combat sexual assault, harassment, suicide, and more.

Now, the Department's third priority is succeeding through teamwork, and our rival network of allies and partners magnifies our power and expands our security. In recent months, our friends in the Indo-Pacific have taken major steps forward. The Philippines has agreed to nearly double the number of sites where we cooperate together. Japan is committed to double its defense spending.

Through the historic AUKUS partnership, we will work with our Australian and British allies to build game changing defense advantages that will deter aggression and boost our defense industrial capacity. In sum, Mr. Chairman, this is a budget that will meet this moment, and I respectfully ask for your support.

The single most effective way that this Committee can support the Department and our outstanding troops is with an on time full year appropriation. So, I look forward to working with all of you so that we can continue to defend our democracy and support the forces of freedom in this hour of challenge. Thank you, Mr. Chairman.

[The prepared statement of Secretary Lloyd J. Austin III follows:]

PREPARED STATEMENT BY LLOYD J. AUSTIN III,

INTRODUCTION

Chairman Reed, Ranking Member Wicker, distinguished Members of the Committee: thank you for the opportunity to testify in support of the President's Budget Request for fiscal year 2024.

On behalf of Deputy Secretary Hicks, the leadership of the Department of Defense, and our servicemembers, civilian workforce, and their families, let me also thank you for your continued support and partnership as we work to defend the United States. I also want to thank the Chairman of the Joint Chiefs of Staff, General Mark Milley, and the Department's Comptroller, Mike McCord, who are both testifying with me and are vital partners in realizing the Department's priorities.

The President's $842 billion defense budget request for fiscal year 2024 provides us with the capabilities and investments to advance our three key priorities: *defending the Nation, taking care of our people,* and *succeeding through teamwork.*

This is a strategy-driven budget that provides the resources to continue to implement our 2022 National Defense Strategy (NDS) and the President's National Security Strategy. This budget will also enable us to strengthen our deterrent and defensive capabilities across domains, informed by our 2022 Nuclear Posture Review and our 2022 Missile Defense Review.

As President Biden has said, we are in a "decisive decade," and the choices that we make today will set our course for generations to come—not just for the United States but for the world. So the Department is rising to meet this moment, seizing on opportunities to outpace our competitors, strengthen our security, and move our world toward a more secure future.

As our National Defense Strategy makes clear, the People's Republic of China (PRC) is the Department's pacing challenge. To meet this challenge, the Department is honing new operational concepts, deploying cutting-edge capabilities, and making essential investments for the long term. This budget request shows it, including requests for the Department's largest procurement and R&D budgets ever—$170 billion and $145 billion respectively, and our budget request will also help us meet the acute threat from Russia, as Russia's unprovoked war of choice against Ukraine is now in its second year.

To maintain our edge, this budget will invest in vital technological advancements for the Joint Force, while also reflecting the need to eliminate capabilities that no longer best serve our national defense. Such decisions can be difficult, but they will enable us to invest in the advanced programs that our security demands.

The Department is also intensely focused on taking care of our people, who remain our greatest asset. This budget invests in significant quality-of-life improvements, including the largest military pay raise in 22 years and the largest civilian pay raise in 43 years. We remain focused on continuing to recruit, retain, and develop the best talent from across the country to serve in both uniformed and civilian roles.

We owe it to our outstanding servicemembers, civilian employees, and their families to provide the support that they need to thrive. We also owe them environments that reward excellence, promote teamwork, and are free from harassment and abuse. So, we are implementing military justice reforms, fighting sexual assault, and redoubling our efforts to end suicide in our ranks. These challenges are personal priorities for me, and this budget paves the way for even more progress.

We rely on teamwork within our Department and beyond it—including with our interagency colleagues, Congress, the defense industrial base, and our peerless network of Allies and Partners worldwide. That network is a strategic advantage that no competitor can match. From rallying the world to support Ukraine's fight for freedom to conducting joint exercises in the Indo-Pacific with like-minded countries, our Allies and Partners are a huge force multiplier. They magnify our power, advance our shared security interests, and help uphold a world that is free, open, prosperous, and secure, and this budget will support the security partnerships that make America even stronger.

I have never been more confident in the power of our fighting force and the talents of our civilian workforce. The fiscal year 2024 budget request will help ensure that we meet America's national security challenges and use this decisive decade to defend our democracy and forge a world of greater security, prosperity, and liberty. I therefore ask for your support of our budget and our mission as Congress writes authorizing and appropriations bills in the months ahead.

DEFENDING THE NATION

We are deeply aware of our responsibility to be responsible stewards of taxpayer dollars. This budget request has been carefully prepared to provide the resources for the objectives laid out in our 2022 NDS, Nuclear Posture Review, and Missile Defense Review.

The NDS directs the Department to act urgently to sustain and strengthen U.S. deterrence, with the PRC as our pacing challenge. The NDS also directs the Department to tackle the acute threat of Russia, as well as the persistent threats from Iran, the Democratic People's Republic of Korea (DPRK), and global terrorist groups.

The NDS clearly articulates our priorities: defend the Homeland from the growing, multi-domain challenge posed by the PRC; deter strategic attacks against the United States, our allies, and our partners; deter aggression, while preparing to prevail in conflict if necessary, by prioritizing the PRC challenge in the Indo-Pacific, followed by the Russian challenge in Europe; and build a resilient Joint Force and defense ecosystem.

Within the Department, the NDS is our North Star, and we have aligned our processes, policies, and plans to implement it. The fiscal year 2024 budget is the latest concrete manifestation of our strategy—and its deep recognition that the PRC presents a challenge now and in the years to come.

PRIORITIZING THE PRC AS OUR PACING CHALLENGE

In recent decades, the PRC has demonstrated both the will and, increasingly, the economic, diplomatic, military, and technological power to reshape its region and the international order to suit its preferences. The United States will not let that happen. This budget will enable us to continue executing our strategy and outpacing the PRC, across all timeframes and domains.

Through the fiscal year 2024 budget, we will strengthen U.S. deterrence and continue advancing new operational concepts, deploying cutting-edge capabilities across all domains, and investing in the innovations that we will need in the future. Through a $9.1 billion request for the Pacific Deterrence Initiative, the largest ever, the Department is expanding the scope and scale of our activities to reinforce security and stability in the Indo-Pacific region, strengthen deterrence, and bolster our advantages and those of our allies and partners.

The Department is also investing in a more resilient posture across the Indo-Pacific region. For example, in Japan, Australia, Guam, and the Compact of Free Association States, we are forward-stationing and deploying more capable forces even as we make major infrastructure investments in airfields, logistics, domain awareness, and resilience. In addition, throughout Southeast Asia, we are executing rotational deployments, logistics cooperation, and targeted security assistance to strengthen our partnerships, deepen our interoperability, and enhance our collective readiness. This budget allows us to continue to support Taiwan's self-defense, consistent with our longstanding commitments enumerated in the Taiwan Relations Act, the three United States-PRC Joint Communiques, and the Six Assurances.

Across the Indo-Pacific region, we have increased the complexity and scale of our exercises and operations. In addition to building interoperability with our allies and partners, we are experimenting to build our warfighting advantages, which will help us further refine our operating concepts and investments. This budget request will enable us to continue that crucial work.

MEETING THE ACUTE THREAT OF RUSSIAN AGGRESSION

Russia's unprovoked further invasion of Ukraine poses a historic challenge to European and global security. Russia's campaign of conquest is also an attack on the rules-based international order that has helped to make the world safer and more secure since its creation in the aftermath of World War II. If Russia succeeds, it would send a message to other aggressor nations that they can attack and conquer their neighbors. With United States leadership, a broad coalition of allies and partners have rallied to help support Ukraine's defense of its sovereignty.

Over the past year, the United States has committed more than $32 billion in game-changing security assistance to support Ukraine's fight against Russian aggression. This has helped meet Ukraine's most urgent needs—including for air defense, artillery systems, tanks and other armored vehicles, and other crucial capabilities—and it has translated to tangible gains on the battlefield. In the year since Russia's unjust war of aggression began, Ukraine's military forces have won the battles of Kyiv, Kharkiv, and Kherson—and they have inspired the world with their courage and resilience.

We will continue to support Ukraine's fight for freedom for as long as it takes. To keep pace with Ukraine's urgent security needs even as we maintain our own readiness, we are pushing to expand production from the defense industrial base. We are focused on increasing the resiliency of supply chains that are critical for national security. Ee are focused on accountability of the security assistance that we have provided.

Our NATO Allies face a historic challenge from Putin's aggressive Russia, and we are making significant investments in bolstering European security. Those build on foundational investments in posture and presence that we have made in Europe since Russia's 2014 invasion of Ukraine and seizure of the Crimea region. These investments paid dividends in 2022 when we rapidly surged an additional 20,000 United States Forces into the European theater to deter Russian aggression and reassure our NATO allies. With little advance notice, the United States deployed additional combat power, repositioned United States forces already in Europe, and integrated deploying forces with prepositioned stocks of munitions and supplies. Our continued investments in posture and presence in Europe help deter Russian aggression against NATO—now and in the future.

TACKLING ADVANCED AND PERSISTENT THREATS

We remain vigilant against the advanced and persistent threats from the DPRK, Iran, and global terrorist organizations.

We continue to shore up security on the Korean Peninsula despite the DPRK's provocations, including through bilateral and trilateral cooperation. We will continue to stand with our allies, the Republic of Korea (ROK) and Japan. We remain steadfast and ironclad in our extended deterrence commitments to the ROK and Japan, and we continue to demonstrate our ability to respond rapidly and firmly to any DPRK provocation. We are working to strengthen and modernize our alliances with the ROK and Japan and will continue to ensure that our forces in and around the Korean Peninsula are ready to "Fight Tonight" in the event of DPRK aggression.

Iran's nuclear program, its dangerous proxies, its support for terrorism, its cyber threats, and its proliferation of one-way attack unmanned aerial systems (UAS) all undermine Middle East security and threaten United States forces and partners. We have acted decisively when Iran-backed militia groups have attacked United States forces in Iraq and Syria. As Iran deepens its partnership with Russia, including Russian military support to Tehran in return for Iranian one-way attack UAS to deploy in Ukraine, we are developing and fielding effective approaches to counter the proliferating threats from Iran's UAS. This budget request seeks to tackle these persistent challenges through investments in integrated air and missile defense, maritime domain awareness, and counter-UAS systems. We have repeatedly demonstrated our ability to deploy combat-credible forces into the region to deter potential Iranian aggression, and we will continue to take necessary and proportionate military action to defend United States forces and facilities from attack, or threat of attack, from Iran or Iran-backed proxies. The United States will support and strengthen partnerships with countries that subscribe to the rules-based international order, and we will make sure those countries can defend themselves against foreign threats. These actions have the added benefit of demonstrating our commitment to the region's security that will offset the efforts by external powers to reshape the region in their interest and to our detriment.

Meanwhile, ISIS, al Qaeda, and other terrorist groups continue to threaten the security of the United States, our citizens, and our Partners in the Middle East, Africa, and South Asia. We are investing in a modernized, over-the-horizon counterterrorism architecture to prevent future attacks on our citizens and the United States Homeland, and we have proven our continued ability to remove the most threatening al Qaeda and ISIS operatives from the battlefield.

One legislative authority that is key to our ability to tackle these advanced and persistent threats—Section 702 of the Foreign Intelligence Surveillance Act—expires at the end of this year. Section 702 provides essential, irreplaceable insights on the activities of critical foreign targets. The loss of this authority, or its renewal in diminished or unusable form, would profoundly damage the Department's ability to see and mitigate some of the most profound threats against the United States as well as its allies and partners. Reauthorization is therefore a matter of utmost priority. Along with our colleagues in the Intelligence Community and the Department of Justice, we look forward to working with this Committee and others, in order to secure section 702s extension.

INNOVATING AND MODERNIZING

The fiscal year 2024 budget request will enable the Department to develop, acquire, and modernize across all domains to address all the above challenges, especially our competition with the PRC.

To maintain and expand our advantage over the PRC, we need to modernize not just our weapons systems but also our operational concepts and the ways that we do business. To operate effectively in a dynamic security environment, the Department is prioritizing investments to maintain a ready warfighting capability, build a skilled defense workforce, and work more effectively with our allies and partners.

A safe, secure, and effective U.S. nuclear deterrent is the ultimate backstop to deter strategic attacks on our country and our allies. The Department is committed to maintaining and modernizing our nuclear triad, while seeking to reduce the role of nuclear weapons in U.S. national strategy. The fiscal year 2024 budget request, including an investment of $37.7 billion in fiscal year 2024, fully funds the nuclear triad and nuclear command, control, and communications, demonstrating our commitment to maintain reliable and effective legacy systems while pursuing their timely replacements.

The Department is also accelerating investments in cutting-edge defense capabilities, such as uncrewed systems that can operate on the water, underwater, in the air, and on land. Integrating human-machine teaming, autonomous systems, and resilient networks will make our operations significantly faster, more lethal, and more survivable.

The fiscal year 2024 budget request includes $30.6 billion specifically for our munitions enterprise. It invests in modernizing and growing our munitions industrial base and expanding production capacity and procurement quantities. The Department is seeking to use the unprecedented multiyear procurement authorities provided by Congress to affordably acquire critical munitions, while bolstering our inventories and providing our industry partners with a more predictable "demand signal."

The fiscal year 2024 budget request makes long-term investments of $33.3 billion in the resilience of our space architecture in the event of an attack. These investments will further expand and diversify constellations for space sensing and communications resilience, as well as augmenting our space warfighting capabilities. These steps will drive even deeper cooperation with the robust American commercial space sector.

In the cyberspace domain, this budget request makes targeted investments to speed the development and management of new cyber tools. This will help us integrate our sequentially developed Cyber Mission Force capabilities. It will also aid our transition to, and sustainment of, advanced cyber capabilities from the Department's Science and Technology (S&T) activities. These efforts will enhance the interoperability and effectiveness of our Joint Cyberspace Warfighting Architecture and maintain an efficient pipeline from America's world-class cyber-innovation workforce into the Department's cyberspace operations forces.

The Department is also adapting to America's changing labor market to ensure that we have the right team to execute the NDS. This budget funds a new civilian cyber workforce-incentive program to target skill gaps, and it develops a curriculum of advanced cyber training for our military. We are also increasing investments in international research partnerships on critical technologies with our allies and partners.

Our technological superiority is not a given; we have to work for it every day. That includes rapid prototyping and commercial integration. So, the Department is investing in tomorrow's technology, such as responsible cutting-edge artificial intelligence, enhancing our critical supply chains, and modernizing our testing and training capabilities.

The Department continues to vigorously develop and test advanced weapons prototypes. Against the backdrop of our recent successful flight tests, the fiscal year 2024 budget request expands the development of several hypersonic weapons programs, as well as demonstration and testing activities. This budget will also improve our subsonic cruise missiles to ensure their effectiveness against rapidly changing threats and targets.

The Department is pursuing a range of initiatives to harden U.S. basing and ensure that it is resilient against air and missile attacks. For example, we have made major investments in missile defenses for Guam and Hawaii, as well as infrastructure improvements across the entire Indo-Pacific region.

This budget request also funds the advancement of our joint warfighting concepts and the rapid experimentation and fielding of emerging capabilities across all do-

mains. Ultimately, these initiatives will ensure a Joint Force that is increasingly agile, innovative, interoperable with allies and partners, and resilient.

After decades of combat and coalition experience for our Special Operations Forces (SOF) in recent conflicts, we are pioneering new SOF approaches to help meet today's primary challenges. This budget enables our SOF enterprise to continue to modernize its crisis-response capabilities, while developing creative, adaptable, and asymmetric options that ensure our Joint Force will present a range of dilemmas to our adversaries.

The Department will also expand the Pacific Multi-Domain Training and Experimentation Capability, which will help our forces train in the ways and places they may be called upon to fight. These investments boost our readiness and lay the foundation for advances in sensor-to-shooter networks that will multiply our forces' lethality. To improve the speed and global integration of our operational decision-making, we will deliver proven Joint All Domain Command and Control enhancements to our warfighters by 2027.

The fiscal year 2024 budget is rooted in the recognition that our competitors and adversaries are not standing still, and we must make the right investments now to retain our technological advantages in the decades to come.

The Department will continue to draw on America's longstanding strategic advantages by investing in critical innovations—such as quantum computing, advanced materials, renewable energy projects, integrated networks, and future-generation wireless technology. To maintain the United States' position as the global leader in research and development, we are cultivating a strong, adaptive, and highly skilled workforce of scientists and engineers through programs like the Science, Mathematics, and Research for Transformation scholarship-for-service program.

INVESTING TO WIN ACROSS ALL DOMAINS

On land, the fiscal year 2024 budget continues to build a combat-credible, ready, and lethal Army that can tackle challenges around the world. Our budget request seeks to strengthen Army capabilities in the Indo-Pacific region, with significant investments in our air and missile defenses as well as land-based long-range fires. We are also revitalizing and strengthening the Army's Organic Industrial Base by modernizing the Army's arsenals, maintenance depots, and ammunition facilities.

The fiscal year 2024 budget builds on past investments in the Marine Corps Force Design 2030 concept, which focused on fielding capabilities and updating the Corps' force structure in the Indo-Pacific region. It also makes important new investments in electronic-warfare capabilities, command and control systems, air and missile defenses, and ground-force survivability, as well as in training and exercises.

At sea, this request helps deliver a ready and formidable naval force focused on deterring potential aggression from the PRC. The budget request continues the transition of our naval force to Distributed Maritime Operations, with an increased focus on uncrewed surface and underwater vehicles. Our request expands investments in long-range fires, more advanced weapons systems, and next-generation platforms, including development of the *Columbia*-class submarine. The Department also continues its critical investments in the submarine-construction industrial base; we will begin investing in better submarine-maintenance capacities, and we will increase our investments in the optimization of our shipyard infrastructure to make our industrial base healthier and more capable of meeting future needs. The budget request continues to move the Navy away from systems that are ill-suited for operations in highly contested environments.

In the air domain, the fiscal year 2024 budget request makes significant investments to ensure air dominance in future conflicts. This includes F–35 and F–22 aircraft modernization, next-generation fighter development, and autonomous combat collaborative aircraft. These investments complement global strike capabilities such as the B–21 family of systems. The budget request invests in the development of strategic nuclear capabilities, such as Sentinel and the Long-Range Stand Off weapon. It also prioritizes long-range fires like hypersonic weapons, as well as a modern air command-and-control framework, rapid global mobility, and improved electronic warfare capabilities. To fully realize the tremendous advantages offered by our next-generation fighter and bomber platforms, we are investing in air-launched weapons that offer greater range, speed, precision, flexibility, and lethality. We are also closing shortfalls in supplying critical munitions by accelerating procurement where feasible, as well as expanding and procuring additional production capacity for our top-priority air-launched weapons. Moreover, this budget request continues to responsibly make the transition away from air-weapons systems that do not support our strategy, even as we invest in the maintenance and development of more advanced systems.

In the space domain, we continue to build our advantages over our competitors by investing in missile warning and tracking, data transport, communications, and space sensing. This budget request also funds upgrades to our launch infrastructure to support more government and commercial launches. Consistent with our recently completed Space Strategic Review, additional investments will deter hostile uses of space, and if deterrence fails, ensure that we can prevail in conflict in this domain, too.

This budget also strengthens our cyberspace operations force, which persistently engages both State and non-State cyber actors seeking to harm the United States, its interests, and its Allies. It upgrades our cyber operations training platform, accelerates the use of cloud-based capabilities, and invests in rapidly modernizing the software and hardware needed to further fortify our cyber posture.

Finally, over the past 3 years of the COVID–19 pandemic, we have seen the massive impact that biological threats can inflict on our country. Accordingly, the President's Fiscal Year 2024 Budget will enhance our ability to address any future pandemics or other biological threats.

MEETING THE CLIMATE CRISIS

As the NDS makes clear, climate change is increasingly shaping the context in which the Department operates. That places new demands on the Joint Force, with implications for our readiness. Climate change is also creating new potential points of friction in places such as the Arctic, while affecting security relationships with Allies and Partners around the world. We are determined to ensure that the United States can meet and deal with these challenges.

This budget therefore invests in enhancing operational capability, mission resilience, and readiness. This includes programs that mitigate the risk of energy supply disruptions to critical military facilities—whether caused by extreme weather, cyber operations, or kinetic attack. The budget request also includes funding to improve the energy efficiency of combat operations and platforms while deploying new technology to improve lethality and mitigate logistics risk in contested environments. Throughout, our focus is on building our operational advantages. These are not only essential steps for the climate of the world that we share, but also strategic moves to defend our country and strengthen our military.

TAKING CARE OF OUR PEOPLE

The U.S. Military is without a doubt the strongest fighting force in human history, and we remain determined to keep it that way. The foundation of that strength is our people. The Department is deeply committed to taking care of our total workforce by growing our talent, building resilience and readiness in the force, ensuring accountable leadership, and tackling even the most difficult workforce challenges.

This budget prioritizes our ongoing actions to take care of our outstanding servicemembers, and their families, including by increasing servicemember and civilian employee compensation, raising housing allowance, and improving military housing. The budget also helps make quality childcare more accessible and affordable, including through the launch of universal pre-kindergarten at all Department of Defense Education Activity schools. We are also making investments to fight a range of problematic and harmful behaviors. That includes continued efforts to combat sexual assault and sexual harassment, reform the military justice system, and prevent suicide in the Force.

GROWING OUR TALENT

To defend our Nation's security, we must tap into the talent that exists all across our Nation. We must recruit and retain the best of America, building pathways of opportunity for all qualified patriots who seek to serve. In this budget, we continue to provide our force with exceptional opportunities for service and professional development. This means being the employer of choice for personnel with technological skills, mastery of foreign languages, and more. We are also investing in training and education, as well as creating scholarships for science, technology, engineering, and math. We will continue to deepen the Department's partnerships with America's best universities, paving the way for the next generation of leaders. I am proud that the Department recently established its first university-affiliated research center at an Historically Black College and University—just one of the many ways that we are building new ways for talented Americans to join our team.

BUILDING RESILIENCE AND READINESS

Ensuring the safety, health, and well-being of our servicemembers is a sacred trust—and a matter of readiness. We know that when economic challenges hit our teammates where they live, it can make it even harder to serve. However, we also know that when we take care of our servicemembers and ensure they are well trained and well equipped, they continue to serve.

So, in addition to robustly funding the factors that immediately contribute to readiness—training, equipping, and maintaining—we have made continued investments to support our servicemembers and their families, launching targeted initiatives to bring down daily costs for servicemembers. Those efforts have made childcare more accessible and affordable, lowered prices in the commissary system and made access to affordable food easier through online ordering, eased moving costs, and increased opportunities for spousal employment and career mobility including through the launch of the Military Spouse Career Accelerator Pilot, a paid fellowship for military spouses that allows employers to connect with this diverse and talented pool of talent. We have also raised pay and allowances across the board. The fiscal year 2024 budget will support a 5.2 percent pay raise for our servicemembers and our civilian employee workforce—the largest pay raise in decades. The fiscal year 2024 budget also invests in full day pre-kindergarten at all Department of Defense Education Activity schools, providing our military children an essential head start on their education. There is no greater testament to the resilience and readiness of our force than the historically high retention rates across the Services.

ENSURING ACCOUNTABILITY

The Department of Defense is committed to the health, safety, and well-being of our servicemembers and will not tolerate prohibited harmful behavior. This is a leadership issue, and we will lead. In February 2021, I ordered the creation of a 90-day independent review commission (IRC) on sexual assault in the military. The Department, including the Military Services, are now implementing the IRC recommendations that I approved.

The Department also worked with the President and Congress to enact historic legislation improving the response to sexual assault, domestic violence, and related crimes under the Uniform Code of Military Justice. The Offices of Special Trial Counsel, newly established to prosecute these crimes with independence and specialized expertise, will reach full operating capability in December 2023.

We will continue to work relentlessly to end sexual assault and related crimes, including through investments in a specialized prevention workforce and through important tools like the On-Site Installation Evaluations, which help us identify where our efforts are working and where more support is urgently needed.

The Department remains focused on efforts to eliminate suicide in the ranks and to respond better when these tragedies occur. This budget makes a significant investment in suicide prevention, and we are accelerating efforts to expand and increase access to mental health care, to including increased hiring and training of mental health professionals, to ensure that our servicemembers can access the help they need when they need it.

SUCCEEDING THROUGH TEAMWORK

Our world is increasingly defined by strategic competition, profound technological change, and 21st century challenges that pay no heed to borders. In this changing strategic environment, the United States is far stronger because of the power of our like-minded allies and partners, the improvements in industrial exchanges with our friends, the integration and development of innovation, and the interoperability of our forces. Our cooperation with allies and partners is central to co-developing advanced capabilities and rushing tangible improvements to our warfighters. These are strategic advantages that no rival can match. The Department is deeply committed to further strengthening our work with the allies and partners who magnify our might.

THE AUKUS PARTNERSHIP

The historic AUKUS partnership breaks new ground in working with two of our closest Allies—Australia and the United Kingdom—to take on the threats of the 21st century, just as we did together in the 20th century. As the President outlined in his State of the Union address, we are building bridges between partners in the Pacific and those in the Atlantic, and AUKUS is a generational opportunity at the center of this change. This initiative translates our strategy into action, and it helps

to forge a more advantageous balance of power in the Indo-Pacific, where the United States, Australia, and the United Kingdom are actively strengthening deterrence across the region. AUKUS will enhance our collective military capabilities, especially in the advanced technologies that we believe will be critical for security and stability in the future.

On March 13, 2023, the President announced our plans for the first major initiative of AUKUS: providing Australia with a conventionally armed, nuclear powered submarine capability. This phased approach will allow us provide this capability on the fastest possible timeline, while upholding the highest standards for nuclear stewardship and setting a precedent that strengthens the nonproliferation regime. As the President made clear, our three nations are making concrete commitments to each other, and we are backing these commitments up with significant investments to strengthen the industrial bases of each of our nations.

ALLIES AND PARTNERS IN THE INDO-PACIFIC REGION

In the Indo-Pacific region, we continue to build and strengthen our peerless network of alliances and partnerships. Recent progress only underscores the enormous value of our Allies and Partners in the region.

For example, we are working closely with Japan to expand the roles and missions of our alliance. We are forward-deploying more versatile, resilient, and mobile United States capabilities even as we enhance Japan's capabilities, including in counterstrike, unmanned vehicles, and counter-hypersonic weapons. We are also increasing our trilateral cooperation among the United States, Japan, and Australia, further demonstrating regional commitment to a free and open Indo-Pacific region.

We are working with the ROK to ensure that our combined forces are able to deter the DPRK and help ensure peace and stability in Northeast Asia, including by returning our defensive exercises to historical norms.

In Australia, we have built a deep partnership on technology and the development of advanced capabilities, including space cooperation and space domain awareness. We are continuing the rotational presence of United States capabilities through Australia, across the air, land, and maritime domains. Working alongside our ally, we are identifying locations to support enhanced U.S. presence with necessary infrastructure improvements. In 2022, we also announced that we will preposition munitions and fuel to support United States capabilities in Australia.

In the Philippines, we are modernizing the United States-Philippine Alliance by enhancing maritime cooperation, improving interoperability and information sharing, and adding four important new locations under the Enhanced Defense Cooperation Agreement. These steps underscore our unwavering commitment to the Mutual Defense Treaty with the Philippines.

In Thailand, we are continuing to strengthen the long-standing United States-Thai alliance. Our annual Cobra Gold exercise, for example, contributes immeasurably to peace, security, and stability in the Indo-Pacific, while ensuring we are prepared to respond rapidly and effectively to a humanitarian disaster.

Meanwhile, with India, we are advancing our Major Defense Partnership and launching a new chapter in United States-India ties. The Department is bolstering the Indian military's deterrent capabilities to ensure that India remains the preeminent power in the Indian Ocean and can help uphold a favorable balance of power across the wider Indo-Pacific region. We are committed to working closely with India on technology cooperation; deepening our interoperability across key defense and security domains, including space and cyberspace; and ensuring that the United States-India partnership supports the efforts of our broader network of like-minded Allies and Partners, especially the Quad.

EUROPEAN SECURITY COOPERATION AND SUPPORT TO UKRAINE

Under President Biden's leadership, the United States has changed the course of history by surging critical security assistance to Ukraine over the past year. With the support of Congress, our response to Russia's full-scale reprehensible assault on its peaceful and democratic neighbor has provided historic levels of security assistance to Ukraine through a combination of Presidential Drawdown Authority and the Ukraine Security Assistance Initiative. The United States has also rallied like-minded countries around the world to support Ukraine's brave defenders. The engine of our efforts is the Ukraine Defense Contact Group, the coalition of some 50 countries that I convene regularly to spur and coordinate support to Ukraine. Our Allies and Partners have collectively committed approximately $20 billion in security assistance to Ukraine, including hundreds of tanks, thousands of other armored vehicles, vital air-defense systems, hundreds of artillery systems, and other crucial capabilities.

In the face of the biggest threat to European security since the height of the cold war, the NATO Alliance is more united than ever. We have moved urgently with our Allies to further fortify NATO and bolster its defenses on its eastern flank. Our commitment to Article Five of the North Atlantic Treaty remains ironclad. We will not be dragged into Putin's war of choice, but we will stand with Ukraine as it fights to defend itself, and we will continue to strengthen NATO's collective defense and deterrence.

BUILDING TEAMWORK AT HOME

Our partners at the Federal, State, local, tribal, and territorial levels provide essential support for our servicemembers and their families, caregivers, and survivors at military installations and communities around the country. The Department is committed to working even more closely with these vital partners. Meanwhile, our servicemembers continue to proudly support our fellow Americans in times of crisis, as they have this year during natural disasters and amidst the lingering COVID–19 pandemic.

At the same time, we are supporting our Federal, State, local, tribal, and territorial partners' efforts to become more resilient and less reliant on Department of Defense support. Increased national resilience will ensure that America stands ready should an adversary choose to test our will with cyber or kinetic attacks on the U.S. Homeland.

In addition, our partners in industry remain an engine of innovation—one that ensures that our warfighters remain ready to tackle the security challenges of this century. Our budget request will shore up our defense industrial base, strengthen its ability to produce the capabilities that we need, and develop critical technologies for the future.

It is the honor of my lifetime to lead our exceptional and dynamic team at the Department of Defense. We continue to strengthen our internal processes to ensure that we make timely decisions based on rigorous cooperation among civilian and military teams across the Department and with our interagency partners. We will demonstrate that spirit of partnership at the highest levels, and we will expect it from every person in the Department.

CONCLUSION

The way that we respond to today's challenges will help determine America's course for generations to come. The Department is seizing this inflection point in history. We will never flinch in the defense of the democracy that we have vowed to protect, and we will take care of all of the extraordinary patriots who comprise the world's strongest fighting force.

The fiscal year 2024 budget enables us to deliver on these priorities, and we ask for your support as we build the Department of the future. We remain deeply committed to working with Congress on oversight and appropriations to ensure that we have the resources that our Total Force needs and deserves—today, tomorrow, and in the future.

We will be good stewards of those resources, for both warfighters and taxpayers. Defense reform will ensure that we use taxpayer dollars efficiently by modernizing our business processes, improving our financial and contract management, and completing the Department's audit. Above all, our accountability to both our own forces and the American public is core to our democracy and sets us apart from our competitors on the world stage.

Finally, we are grateful for our extraordinary soldiers, sailors, airmen, marines, guardians, their families, caregivers, and survivors, and civilian employees. They are the foundation of America's strength, and we are honored to serve alongside them. Thank you.

Chairman REED. Thank you very much, Mr. Secretary. General Milley, do you have a statement?

STATEMENT OF GENERAL MARK A. MILLEY, CHAIRMAN OF THE JOINT CHIEFS OF STAFF

General MILLEY. I do, Chairman, and Chairman Reed, Ranking Member Wicker, and distinguished Members of the Committee, thank you for the opportunity to testify before you today. I want to echo the condolences, about the Secretary and the Chairman, for the great people of Mississippi and Alabama. Tragic losses.

Our hearts go out to them, and many, many soldiers and sailors, airmen, marines in uniform come from your two great states, so our hearts go out to you. I have been privileged to defend this country for 43 consecutive years in uniform, and as the Chairman said, this is likely my last set of posture hearings.

But I do want to thank the Congress for your continued support to our military, not only on this budget, but for the last 4 decades. I ask that you support this year's request with an on-time budget approval. I am honored to represent here today the soldiers, sailors, airmen, marines, guardians, and families of the United States Joint Force, along with Secretary Austin and Mike McCord. I want to publicly thank them both for their leadership.

Our Joint Force, as the Secretary says, is the most lethal and capable military in the world because of your support. Our purpose, the military's purpose, the uniformed military, is simple. It is to defend the United States, and our task is to fight and win in all the domains of combat to secure America and prevent a great power war.

Readiness for us in uniform, and readiness now and readiness in the future, through modernization, is our number one priority, and there is no other number one other than the readiness for combat. The joint boards will accomplish this at the fiscal year 2024 budget request of $842 billion.

Right now, as pointed out by Senator Wicker, the international system is under stress. For the first time, the United States is facing two major nuclear powers whose vital national security interests are in competition with the United States. Both the People's Republic of China and Russia have the means to threaten our interests and our way of life. But war with either one is neither inevitable nor imminent.

A great power war has not happened in the last 80 years, in large part because of the rules put in place at the end of World War II and the capabilities of the United States military, along with our allies and partners. We must remain the most powerful Nation and the great power peace then will be prevailing.

The People's Republic of China remains our number one long-term geostrategic security challenge. The PRC intends to be the regional hegemonic Asia within the next 10 years and to exceed the United States overall military capability by mid-century, and they have publicly said 2049. The PRC's actions are moving it down the path toward potential confrontation with its neighbors and the United States.

But again, war with China is neither inevitable nor imminent. Additionally, Russia is an acute threat and remains quite dangerous. Over a year ago, Russia undertook an illegal and unprovoked war against Ukraine, threatening the peace on the European continent and global stability.

We are supporting Ukraine to protect its sovereignty and supporting NATO with the United States force presence in every single nation on NATO's Eastern flank. This fight is not just in Ukraine's interest. It is in the United States interest to protect the system that has prevented a great power war. In Iran, Iran threatens to push the Middle East into regional instability by supporting terrorists and proxy forces, as we recently saw.

Just last week, Iranian aligned groups killed one American and injured seven in attacks on coalition bases in Syria. We acted immediately to defend our troops and we will continue to counter terrorist threats in the region and anywhere else we find them.

Iran has taken actions also to improve its capabilities to produce a nuclear weapon. From the time of an Iranian decision, Iran could produce enough fissile material for a nuclear weapon in less than 2 weeks and would only take several months thereafter to produce an actual nuclear weapon.

The United States remains committed as a matter of policy that Iran will not have a nuclear weapon. The United States military has developed multiple options for our national leadership to consider if or when Iran decides to develop a nuclear weapon.

North Korea's continued ballistic missile testing and nuclear weapons development pose threats to our Homeland and our allies and partners, but we stand together, shoulder to shoulder with the Republic of Korea, to deter North Korean aggression, as we have for 7 decades.

Terrorists continue to operate around the globe, threatening fear, destruction, destabilization, and this budget supports our continued counterterrorism effort. In short, the United States military stands ready to protect our Nation's interests and the American people. We are currently standing watch on freedom's frontier with nearly a quarter of 1.25 million troops in Europe, Asia, Africa, the Middle East, and South America.

The United States never fights alone. The key source of our strength is our large global network of alliances and partnerships. Just this month, we conducted 63 operations and joint combined exercises globally with our allies and partners. Last, our operational readiness rates are higher now than they have been in many years.

Currently, 60 percent of our Active force is at the highest State of readiness and could deploy to combat in less than 30 days, well exceeding our minimum standard of one-third of the force, Ten percent, in fact, could deploy in less than 96 hours. This military, the United States military is ready.

The Joint Force is at an inflection point, and we must balance operations, readiness, and modernization. We must not allow ourselves to create the false trap that we can either modernize our forces for the future or focus only on today. We must do both. We must integrate advancing technologies, including precision long range fires, hypersonic weapons, quantum computing, artificial intelligence, robotics, and all domain sensors.

The time is now. We have very little margin to wait, and the common thread critical to accomplish all of this is our people. We must continue investing in training, education, and talent management to be prepared for future operating environment.

I urge Congress to support this budget's significant pay raise, health care, housing, and childcare initiatives. This budget sustains our readiness and adapts the Joint Force to the future warfighting requirements. There is nothing more expensive than fighting a war. Preparing for war is very expensive, but nothing more expensive than fighting it, and preparing for war will deter a war, and that is our goal.

We must act with clear eyed urgency in order to deter a great power war. By doing so, no adversary should ever underestimate the resolve of our Nation and the strength of our military. Thank you, and I look forward to your questions.

[The prepared statement of General Mark A. Milley follows:]

PREPARED STATEMENT BY GENERAL MARK A. MILLEY, USA

INTRODUCTION

After 43 years in uniformed service, 4 years as Chief of Staff of the Army, and 3.5 years as Chairman of the Joint Chiefs of Staff, this will be my last set of posture hearings. I want to thank the Congress up front for your continued support to our military, not only this year but every year for the last 4 decades. We would not have a military without the generous support of the American people and their elected representatives. Thank you for what you have done and, yet again, I ask that you support this year's request with an on-time budget approval.

I am honored to represent the soldiers, sailors, airmen, marines, guardians, and their families of the United States Joint Force. They are the most lethal and capable military in the world. Our troops are the best led, best equipped, and best trained force anywhere because of your support. Side by side with our allies and partners, American soldiers, sailors, airmen, marines, and guardians are standing watch in 158 countries and conducting operations every day of the year to keep Americans safe.

The United States military is a key component of our national power. In concert with our diplomatic corps, economic organizations, and democratic institutions, we support efforts to sustain a stable and open international system. This hard and soft power provides a range of options to this legislative body and the Commander-in-Chief. Our strength deters adversaries and preserves peace. Although, if deterrence fails, the United States military is prepared to fight and win against those who attack the United States or our vital interests.

The Joint Force appreciates the work that our elected representatives do to ensure that we have the resources needed to train, equip, and man the force in order to be ready. The increased level of military funding beyond last fiscal year will ensure we continue future modernization while simultaneously meeting the national security readiness requirements of today.

The Joint Force will deliver modernization of our armed forces and security to the people of the United States at the fiscal year 2024 budget request of $842 billion. The people of the United States, through this body, have committed significant funding and we will work diligently to ensure it is spent prudently in the best interest of this Nation. This budget will enable the investments and transformations necessary to build the Joint Force of 2030 and beyond.

In alignment with the National Defense Strategy (NDS) and National Military Strategy (NMS), this budget delivers a ready, agile, and capable Joint Force that will defend the Nation, while taking care of our people, and working with our partners and allies. There are direct linkages from the NDS and NMS to the Joint Warfighting Concept (JWC) which describes how we will employ and succeed as a Joint Force. The JWC is threat informed and fully integrated into our resourcing and requirements processes to build the force required for the future.

Stable, predictable, and timely budgets are critical for this Nation's defense. The passage of these budgets enables proper planning, prioritization, and programmatic investments necessary for continued progress. Continuing resolutions risk future modernization and impair our ability to meet our missions.

Preventing great power war through readiness and deterrence is very expensive but not as expensive as fighting a war and the only thing more expensive than fighting a war is losing a war. This budget is a significant step in the right direction to ensure that the United States military maintains the current readiness and develops the future modernization necessary to deter war and, if deterrence fails, to fight and win.

STRATEGIC ENVIRONMENT

The People's Republic of China (PRC): War with the PRC is neither imminent nor inevitable, however the potential for armed conflict is growing. The PRC remains our #1 long-term geostrategic security challenge. Since the reforms of Deng Xiaoping in 1979, the world has witnessed the greatest geopolitical shift in economic power in over 100 years. In the wake of the PRC's economic growth has come rapidly in-

creasing PRC military capability. Using economic and military hard power, the PRC's goal is to revise the global international order by midcentury, and it intends to be the regional hegemon in Asia within the next 10 years. Its intention is to exceed the United States' military capability within the Western Pacific in the next decade and to exceed the United States' overall military capability by 2049.

The PRC continues to take increasingly aggressive actions to reshape the Indo-Pacific region and revise the global order. It is making significant economic investments in its military to improve technology and modernize its military forces. The PRC continues to challenge the stability and security in the Pacific as well as across the globe. Through economic coercion, the PRC is expanding its global footprint and increasing its ability to project military power at range and scale. It is aggressively modernizing its military in order to protect its authoritarian interests and are prepared to use force if required. The PRC seeks to strengthen its hard power enabling the PRC to coerce others with militarily might. These PRC actions continue to move its nation down the path toward confrontation and conflict.

The PRC remains focused on revising the global international order by midcentury. In short, the PRC continues to develop significant nuclear, space, cyber, land, sea, and air capabilities. It is working every day to close the technology gap with the United States and our allies. We must maintain our military superiority over the PRC in all the domains of war if we are to preserve the great power peace of the last 80 years. The PRC represents a real and growing national security challenge. This is a matter of national urgency.

History is not deterministic and war with the PRC is not inevitable. While the PRC is clearly an increasingly capable strategic competitor, it is imperative that we keep our relationship in competition and not in conflict. By maintaining a strong military with overmatch against the PRC, we are postured to deter conflict with the PRC. Through integrated deterrence, we will raise perceived costs to the PRC and deter aggression. If deterrence fails, then we will end the conflict on terms favorable to the United States.

Russia: Over 1 year ago, Russia undertook an illegal and unprovoked war against Ukraine threatening peace and stability on the European continent—a peace that ensures global stability and an international order where all nations can prosper. Russia's invasion of Ukraine is in complete contradiction to the basic rules that underline the United Nations Charter established at the end of World War II. Russia's war is a brazen assault against the free people of Ukraine and threatens to destabilize all of Europe and beyond.

In response to this Russian war of choice, we are supporting Ukraine as it fights to protect its sovereignty and supporting our NATO allies with a United States force presence in every single nation on NATO's eastern flank. Putin's war of choice has caused untold human suffering and terrorized a free country and its people. Putin attempted to seize Kyiv, overthrow its government, and fracture the NATO alliance. NATO remains more unified than ever, and Ukraine remains free and independent.

The Ukrainian people have demonstrated immense bravery and resilience and inspired the world. The international community has come together to ensure that this unambiguous act of aggression by Russia does not go unanswered. This fight is not just in Ukraine's interests, it is in the global interest to protect the system and rules that have prevented great power war since the conclusion of World War II.

With the backing of the U.S. Congress, the United States is determined to continue to support Ukraine with the means to defend themselves. The United States has committed to provide Ukraine 160 155mm Howitzers, over 1,000,000 155mm artillery rounds, 38 High Mobility Artillery Rocket Systems (HIMARS), a Patriot air defense battery, 8 National Advanced Surface-to-Air Missile Systems (NASAMS), 31 Abrams tanks, and 109 Bradley Infantry Fighting Vehicles.

A broad mix of air defense systems protect the skies over Kyiv and the cities of Ukraine. Armor systems strengthen Ukrainian front lines enabling offensive and defense operations. Ukrainians employ long range fires to challenge Russian command and control and its ability to sustain Russian aggression. These systems will enable Ukraine to ensure that Russia does not achieve its strategic objectives. Russia failed in its initial war aims and continues to revise its strategic goals due to its sustained operational failures. Russia continues to pay extremely heavy costs on the battlefield.

Last year, in Poland, we established the first permanent United States installation on NATO's eastern flank. The United States maintains significant numbers of combat capable forces in Europe to deter aggression and to stand shoulder to shoulder with our allies and partners.

Russia retains a large nuclear capability to threaten the United States, Europe, and the globe. Vladimir Putin and his regime continue to use irresponsible nuclear

rhetoric and posturing. Russia has repeatedly demonstrated its capability and will to conduct complex malicious cyber activities targeting American digital infrastructure, both military and commercial.

Through private military companies, Russia continues to undermine other nations' sovereignty and create unstable security situations. Aside from its brutal war in Ukraine, Moscow's actions in Africa and the Middle East demonstrate its aggressiveness, resourcefulness, and opportunism. Russia is an immediate acute and very dangerous challenge to the United States' national security.

North Korea: Its continued weapons testing and development pose real threats to our Homeland as well as allies and partners in the Indo-Pacific. North Korea's rhetoric is becoming increasingly aggressive as it is growing more confrontational and continues to enhance its ballistic missile capability and capacity. Pyongyang shows no signs of relenting in its focus on its Weapons of Mass Destruction (WMD) program at the expense of its citizens and the peace of the Korean Peninsula as well as the entire region. Readiness of United States military forces on the Korean Peninsula and our ability to rapidly respond to provocation ensure stability and prevent war.

Iran: Iran's support for and involvement in conflicts in the region and its neighbors threaten to push the Middle East into broader regional instability and chaos. Through its funding of terrorist activities and support to partner and proxy forces inside the borders of its neighbors, along with its ballistic missile programs, Iran seeks to revise the regional order and balance of power in its favor. Iran's proliferation of UAVs across the region and into Russia pose critical security challenges for the United States and our partners. Iran is taking actions to improve its capabilities to produce a nuclear weapon, should it make the decision to do so, while continuing to build its missile forces. From the time of a national decision, Iran could produce enough fissile material for a nuclear weapon in approximately 10–15 days and it would only take several months to produce an actual nuclear weapon. The United States remains committed, as a matter of policy, that Iran will not have a nuclear weapon. The United States military has developed multiple options for our national leadership to consider, if or when Iran decides to develop a nuclear weapon.

Violent extremist organizations: Terrorist organizations such as Al-Qaeda, ISIS, Al-Shabaab, and others continue to export terror, destruction, and destabilization. Unless the root causes of instability that give rise to these types of groups are resolved, terrorists will continue to take root around the globe, threaten others with attacks, and undermine legitimate governments. The root causes can only be effectively addressed by including governments of the region and we can best influence outcomes with diplomatic, economic, information, stability, and counterterrorism efforts. Through coalition efforts to train, advise, and assist partners and allies as well as intelligence sharing, we will continue to ensure that terrorists do not possess the capacity and capability to exert their will. Our counterterrorism strategy is to work by, with, and through our regional allies and partners and to conduct direct action counterterrorism strikes when necessary to protect the United States or our interests.

Allies and partners: Our alliances and partnerships are key to maintaining the rules based international order and a stable and open international system promoting peace and prosperity. This budget allows us to build our partners' and allies' capabilities, foster interoperability, and strengthen relationships. Doing so allows us, our allies, and our partners to counter the coercion of our strategic competitors, oppose the malign activity of regional threats, and meet the varied security challenges posed by State and non-State actors. We are stronger when we operate closely with our allies and partners.

READINESS AND MODERNIZATION

Right now, we are experiencing a fundamental change in the character of war. The character of war—how, where, and with what weapons and technologies wars are fought—is changing significantly. We must fully integrate developing technologies including precision long range fires, hypersonic weapons, quantum computing, artificial intelligence, robotics, and pervasive all-domain sensors.

The current rapidly changing technology will provide decisive advantage to the nations that can integrate and fuse the capabilities into military weaponry, doctrine, training, organization, and professional development. The future operating environment will be highly lethal and will be characterized by the ability to see and sense the environment like never before. The attributes of the future Joint Force will be characterized by stealth, resilience, speed, distributed, agile, adaptive, in a constant State of motion, and, most importantly, highly lethal. Our leaders and forces will

operate independently in degraded communication environments with mission type orders in austere logistics.

Continued modernization is imperative for the Joint Force. Building the Joint Force required to implement our National Defense Strategy requires modernizing our capabilities, design, and employment. We must not allow ourselves to create the false trap that we can either modernize or focus only on today. We must do both. The United States has always had the advantage of time to conduct a long buildup prior to the beginning of hostilities. Our fortunate geography with oceans on our east and west borders and friendly neighbors to our north and south have given us the strategic advantage of buffer zones to threats. With advances in technology and a growing global interconnectedness, we will no longer have the luxury of a long protected buildup prior to conflict. It is imperative that we have a modern advanced force in sufficient size and readiness to enable sustained deterrence and, if required, to be able to fight and win. We must make some fundamental changes to our Joint Force in order to leverage our military overmatch to deter conflict in a future operating environment.

Our strategic competitors are modernizing their militaries, weapons, and capability. We must continue to modernize ours; we have no choice. We must divest legacy systems to enable the modernization of our forces.

In the fall of 2019, the Secretary of Defense tasked the Joint Staff to develop the Joint Warfighting Concept (JWC) to address strategic conflict. This year, the Joint Staff published the third iteration of JWC and will integrate the ideas into new joint doctrine. Today, JWC is the unifying vision to guide future force design, force development, and force employment to ensure we have the right people, equipment, training, roles, and doctrine. It will continue to incorporate evolving threats to help us shape our strategic environment and future operations. JWC 3.0 contains an updated description of the overarching military challenges facing the Joint Force, a refined explanation of the military solution—expanded maneuver—and a detailed description of how the Joint Force will apply this solution. This version of the JWC includes greater fidelity on key warfighting concepts and more precision on the operational approaches that will enable the Joint Force to gain positions of advantage against peer adversaries.

Joint All Domain Command and Control (JADC2) is a warfighting capability to sense, make sense, and act at all levels and phases of war, across all domains, and with partners, to deliver information advantage at speed to our forces and decision-makers.

We are revising our leader development *Joint Professional Military Education (JPME)* to support the JWC. We are modernizing our JPME curriculum to develop strategically minded joint warfighters, who think critically and can creatively apply military power. Our focus remains on instructing mission command, operational agility, and ethics to ensure our military leaders can effectively employ forces at all levels of warfare and respond to a dynamic battlefield. Additionally, we are increasing the amount of JPME devoted to the study of the changing character of war and Great Power Competition.

We are focused on building a more lethal Joint Force by ensuring that we continue to modernize our concepts, doctrine, training, and military education. We must continue to invest in capabilities that sustain our military overmatch, while strengthening alliances and attracting new partners. Investments in this budget ensure the Joint Force can execute all requirements leveed by our Nation. The investments made in this budget will ensure that we remain a capable and ready force while funding our priorities of *nuclear modernization, long range fires, hypersonic technology, artificial intelligence, robotics, shipbuilding, space, and cyber.*

Nuclear modernization: The *nuclear triad* is the foundation of our strategic deterrent. Our adversaries are improving their nuclear posture and potential nuclear threats continue to emerge. It remains critical that all three legs of the triad—bombers, intercontinental ballistic missiles, and submarines—remain a viable deterrent and allow us to hedge against geopolitical, technological, operational, and programmatic risks. Our legacy systems have been extended well beyond their original service lives and we must recapitalize our nuclear enterprise. Modernizing the nuclear triad will cost 3.7 percent of the Defense budget at its peak not including DOE/NNSA warhead modernization. Costs will be significant but relatively less burdensome on the overall Defense budget relative to previous recapitalization efforts. Modernization of our nuclear forces, weapons complexes, and requisite nuclear command, control, and communications (NC3) capabilities are a high priority.

Long range fires: The war in Ukraine highlights the strategic and devastating effect provided by long range fires. The Joint Force must have a long range strike capability without having to also maintain air superiority. Long range fires provide significant offensive capabilities that are both cost-effective and cost-imposing

means of improving deterrence. By enabling power projection from standoff ranges, the risk to critical United States assets decreases while the defensive burden imposed upon the enemy increases. These fires challenge an adversary's logistics, command and control, and basing forcing them to choose between increased risk or decreased effectiveness. The PRC has thousands of ground-launched theater-range missiles in its arsenal that would be difficult for the United States to counter given its current inventories. Investments in long range and hypersonic missiles launched from ground, sea, and air platforms are a cost-effective strategy that improves our ability to compete with the PRC. Recent budget requests have enhanced the lethality and resilience of the Joint Force by developing and expanding the long-range fires portfolio.

Hypersonic technology: Our adversaries are undertaking hypersonic weapons testing and development from a variety of delivery platforms. These weapons operate at speeds greater than Mach 5 and are maneuverable, which make the weapons challenging to detect and defeat. Weapons operating at these speeds will provide significant offensive capability that will challenge an opponent's decision timelines. We must invest in this technology to provide a suite of capabilities that provide transformational warfighting capability to our Joint Force.

Artificial intelligence and robotics: Decisionmaking in warfare is fundamental to the outcome. Militaries must be able to collect, analyze, and assess vast quantities of data in order to make effective decisions. The military that can iterate through the decisionmaking framework fastest will have decisive advantage. Artificial intelligence has the potential to reform military decisionmaking processes at the tactical, operational, and strategic levels of war to enable rapid assessments and decisions that outpace human abilities. Additionally, artificial intelligence combined with new military platforms could enable the proliferation of robots across the battlefield. Robots in the land, sea, and air domains could provide significant quantities of firepower, logistics, and communications capabilities while decreasing risks to our military forces. Through human-machine teaming, each human warfighter would have exponentially increased abilities to shoot, move, and communicate in battle to prevail over the enemy.

Legacy platform divestment: Maintaining and operating weapons that are not relevant in the future fight and whose capabilities are matched by superior technology need to be divested. Continuing to purchase and maintain legacy equipment takes needed Defense dollars away from the acquisition of higher priority systems necessary for modernization. I strongly urge Congress to enact legislation that authorizes the Department to divest select legacy platforms to ensure that every Defense dollar spent on programs and equipment is relevant for the next fight. We must not be influenced by a sunk cost bias, and we cannot continue to mortgage our future by being wedded to technology of the past.

Shipbuilding: The United States Navy must always be the world's most powerful naval force in capacity and capability. We must never accept 2d place in naval power. We are a maritime nation and the vast majority of international trade moves across the world's oceans. The United States is committed to a free and open global maritime common. Manufacturing our warships overseas is a strategic risk and is not in our national interest. Our shipbuilding and supporting vendor base are a national security capability that needs support to grow and maintain a skilled workforce. The fiscal year 2024 President's Budget reflects the Administration's strong commitment to continued American naval dominance, including improvements to our industrial base to meet the demands of our current and future defense needs. This Nation must have the right ships, with the right crews, and the right capabilities on the right timelines in the theaters where they matter. This budget specifically procures warships and submarines with credible combat power to deter the PRC. We must continue to invest in the industrial base to support remotely operated ship development, fleet modernization, on time delivery of the COLUMBIA class submarine, and to accelerate production and maintenance of VIRGINIA class submarines to support both the United States and AUKUS needs.

Recapitalization of the *sealift fleet* is necessary to enable joint power projection. Sealift ships transport 90 percent of war material and supplies in support of major combat operations. The DOD sealift fleet is approaching the end of its useful life with an average age of 48 years. Our overall sealift readiness rate is consistently below our stated requirements. I urge Congress to remove all limitations on the Department's ability to procure additional used vessels to replace these aging ships.

Space: Space is essential to our way of life. Space capabilities are vital to our economy, quality of life, exploration initiatives, and national security. Every year we see additional commercial space launches and increased competition for lower earth orbit.

Our adversaries view space as a warfighting domain and believe that achieving supremacy in this arena will be a decisive factor in winning future conflicts. The exosphere is already contested as Russia has tested both a ground-based anti-satellite missile and an on-orbit anti-satellite weapon prototype, which threaten our space capabilities. Both the PRC and Russia view counterspace capabilities as a means to reduce United States and allied military effectiveness. Additionally, our adversaries have demonstrated space-jamming capabilities and maintain independent launch capabilities. Left unsecured, our capabilities in space will become strategic vulnerabilities. I urge Congress to support the significant increase in this budget for United States space capabilities.

Cyber: Adversaries continue to use operations in the cyber domain to compete with the United States and attempt to gain an information advantage. Malign cyber actors exploit commercial software vulnerabilities to gain network access and conduct cyber operations against United States citizens, organizations, and institutions. The low-cost barrier to entry and attribution deniability make this a priority method for adversaries to compete below the level of armed conflict while minimizing risk of escalation. The PRC, Russia, Iran, and North Korea use a range of cyber capabilities from information operations (IO) to cyber-attacks to collect intelligence, position for future operations, impose costs, and signal to the United States and adversaries.

Therefore, we must increase our ability to compete and prevail in cyberspace while ensuring all elements of informational power are integrated into operations, activities, and efforts to deter our adversaries and protect the United States Homeland. This requires investments in technology, building and maturing cyber readiness and operations, reducing risk to weapon systems and critical infrastructure, strengthening cybersecurity, and improving network resiliency.

Advanced Capabilities: The changing character of war necessitates that we continue to modernize and innovate our technology, capabilities, and training. Data and communication networks are fundamental to how the United States trains, plans, and employs force. We must have rapid and robust linkages from sensors to shooters in a networked information environment. This will require investments in *microelectronics and quantum computing* to ensure we maintain a technological edge over our adversaries. The current globally distributed supply chains as well as access to critical materials and rare earth metals present vulnerabilities to the Joint Force's ability to acquire necessary parts and technology in the event of crisis. We must also find ways to deepen collaboration on advanced capabilities with our closest allies and partners, such as our trilateral cooperation under AUKUS.

TAKING CARE OF OUR PEOPLE

People are our most important resource in the Joint Force. We must ensure that we are doing all that we can to take care of and guard our most critical resource. Taking care of people is a critical readiness issue and it decisively impacts unit cohesion, recruitment, retention, and confidence in leadership.

To attract, grow, and retain the best talent in the world, we must ensure that we are always taking care of our people. I urge Congress to support this budget's significant pay raise, healthcare, and housing initiatives. Additionally, this budget strengthens our accountability and prevention measures for sexual harassment and sexual assault. Finally, this budget supports improving our mental health and suicide prevention programs. Each of these initiatives is fundamental to taking care of our troops and their families.

We are ensuring that the military departments increase their *childcare capacity,* and the DOD system remains the gold standard of childcare. The DOD operates the country's largest employer-sponsored childcare program, with over 27,000 staff members providing daily care for more than 160,000 children from infancy up to age 12. This fiscal year, the DOD is making a significant investment in constructing new child development centers as well as repairing, renovating, and maintaining existing child development centers to ensure our children are in safe and well-maintained facilities. Funding support from Congress is vital for fully staffed military childcare, and to support efforts to expand capacity in the community. Childcare is key to keeping working families working, reducing the high unemployment faced by military spouses, and ensuring the safety of our military children. Despite the childcare capacity and quality provided by the DOD there are still challenges for military families to access that care or quality care in the community.

This budget equips our servicemembers and families with the tools, skills, and resources necessary to ensure their health and well-being. The health and wellness of our force is a readiness, retention, and recruitment issue.

The Joint Force is committed to *growing our talent* and ensuring that all who meet the requirements to serve are able to serve. The Joint Force competes for the

talent of America's youth along with every other business and organization who seeks our Nation's best and brightest. The Joint Force's objective is to field the most lethal and combat effective fighting force in the world. We will continue to support the accessions of all qualified people to all jobs and positions within the Joint Force.

CONCLUSION

The United States Joint Force is a flexible and adaptable force ready to deter, fight, and win our Nation's wars. Significant threats exist across the globe and the United States is ready to respond to these challenges. The PRC continues its aggressive attempts to revise the global order for its own benefits. It is building up its military might to achieve its goals through the use of force. With its illegal and unprovoked war in Ukraine, Russia attempted to overturn the rules based international order and fracture NATO. Russia's war of aggression and nuclear rhetoric is irresponsible and risks miscalculation and escalation.

International aggression, where large countries use military force to attack smaller countries and change recognized borders, cannot be allowed to stand. The Joint Force will continue to work with the interagency and in cooperation with our allies and partners to deter aggression and threats to the free world. America's network of allies and partners is a strategic source of strength. It is this robust network, this team of teams, that stands against those autocratic, revanchist, and revisionist regimes that are uninterested in a connected and prosperous world.

It is within this framework that it is imperative we modernize our force, training, and doctrine to remain the most capable and ready force on the planet. The United States has been challenged before by many other adversaries. Yet, conflict is not inevitable—our military might makes war less likely by allowing us to deter across the spectrum of conflict. Our contract with the American people is that we, the United States military, will always be ready to protect the Constitution and the fundamental principles of what it means to be American. We will always protect and defend this experiment in liberty, to deter our enemies, and, if deterrence fails, then to fight and win.

Chairman REED. Thank you very much, General Milley. Secretary McCord, do you have a statement?

Mr. MCCORD. No, Mr. Chairman, other than to wish your staff director a speedy recovery.

Chairman REED. Thank you very much. Secretary Austin and General Milley, logistics is not the most exciting topic, but in many cases, it is one of the most crucial topics, particularly in the Pacific where distances are much an enemy as our opposing forces.

First, Mr. Secretary and then General Milley, can you comment upon the investments we are making in modernizing our logistics, particularly INDOPACOM area, Command and control activities that would help deliver these resources to our troops?

Secretary AUSTIN. Thanks, Chairman. As I stated earlier, we in this budget, we are asking to invest some $9.1 billion in the Pacific Deterrence Initiative. That will enable us to strengthen forward infrastructure so we can continue to forward deploy troops.

That will enable us to deter further forward in theater. In addition to that, we have pushed a number of our sustainment elements like fuel further in into the theater, and we continue to make sure that we have a diverse and agile footprint so that we can rapidly respond to any challenge.

But I think that we are investing in the right things and going after the right capabilities to make sure that we can operate further forward.

Chairman REED. General Milley, please.

General MILEY. Yes, Senator. Thank you. The key here is—one of the keys here is ammunition. The Secretary has directed that we analyze all of our ammunition stoppages in light of what is going on in Ukraine.

Well, that is a key area that we need to increase our capabilities here in the coming years, is ammunition. The second piece there is lift. In the area of lift, both sealift and airlift, there is a lot of investments in this budget and previous budgets.

That will be an area that requires continued sustained levels of effort, is in order to move the force, projecting power is a key attribute of the U.S. Military, and we do that through sealift and airlift.

That is the second key point, and the last one, I would say, is the posture. The Secretary has initiated a series with the INDOPACOM Commander, a series of posture adjustments in the Pacific, which should better position us for sustainment, logistical sustainment, if any conflict ever happens.

Chairman REED. Thank you very much. Mr. Secretary, we are in a moment where we are having a challenge getting general officers off the floor of the Senate and to their assigned stations after they have been recommended by the Department of Defense and cleared in terms of their performance and their capabilities.

Can you tell us what the cumulative effects of this would be in terms of denying promotions to people who are going to take key jobs?

Secretary AUSTIN. Thanks, Chairman. The effects are absolutely critical in terms of the impact on the force. This is one of the busiest times or one of the most complex times that we have seen lately.

We see a war, the largest conflict in Europe since World War II. We see an aggressive China operating in the Indo-Pacific. We see Iranian backed elements going after our troops, and there are a number of things happening globally that indicate that we could be in a contest on any one given day.

Not approving the recommendation for promotions actually creates a ripple effect through the force that makes us far less ready than we need to be. If you look at what we have coming up, I mean, there are three, I think—well, five, three-star promotions that are near term, and one of those is a Commander of our fleet out in the Gulf. That is a critical position, and then that starts to multiply, 70 more positions, three-and four-star positions over time.

They include the chiefs of the Army, the Marine Corps, the Navy, and also the Chairman's replacement at some point in time, although nobody wants to see that happen. So, the effects are cumulative and it will affect families, it will affect kids going to schools because they won't be able to change their duty station, and so, it is a powerful effect and will impact on our readiness.

Chairman REED. As I look forward, I have never in my almost 3 decades here seen so many key military positions coming up for replacement. We have the Commandant of the Marine Corps, the Chief of Staff for the Army, the CNO [Chief Naval Officer] of the Navy, and as you mentioned, the Chairman of the Joint Chiefs of Staff by law has to leave in September.

If we cannot resolve the situation, we will be, in many respects, leaderless and at a time of great conflict. So, I would hope we would expedite and move quickly on this front. Thank you. With that, let me recognize Senator Wicker.

Senator WICKER. Thank you, Mr. Chairman. Let me just start with a couple of short answers—I hope these will be. Secretary Austin, first, would you agree that this is the most complex and dangerous threat environment since World War II?

Secretary AUSTIN. Yes, Senator, I would say that is one of the most complex periods that we have seen.

Senator WICKER. General Milley.

General MILEY. Yes, Senator.

Senator WICKER. Over the past 2 years, Congress has added nearly $30 billion to the President's request in fiscal year 2022 and $45 billion to the President's request in fiscal year 2023—$75 billion added over the request of the President. Have these additional resources increased our national security and decreased military risk? Mr. Secretary.

Secretary AUSTIN. They have, Senator. It always helps when you get additional resources, but if you get additional resources with additional requirements, it doesn't help as much.

Also, if we can stop doing some of the things that create a drag on our force in terms of cau]sing us to spend money on things that are not relevant in a future fight, that also helps as well. We appreciate Congress's support in the past for allowing us to get rid of things that are no longer relevant.

Senator WICKER. You are welcome on that. General Milley, same question. Has the $75 billion added to our national defense expenditures—have those funds increased our national security?

General MILEY. Yes, I believe they have.

Senator WICKER. Decreased military risk?

General MILEY. Correct.

Senator WICKER. Okay. Thank you very much. Secretary Austin, the Biden administration has authority to send $1 billion worth of United States weaponry to Taiwan. That is similar to the policy and the authority we authorized with regard to Ukraine. Will the Biden administration exercise this $1 billion and draw down the authority that Congress provided last year?

Secretary AUSTIN. We will, Senator. My team is working diligently to make sure that we have the right capabilities in that particular draw down. Of course, we have the authority. We will need the appropriations as well.

Senator WICKER. Okay, you will need an appropriation to replenish that. Is that correct?

Secretary AUSTIN. That is correct, sir.

Senator WICKER. The Administration will be requesting a replenishment funding for the transferred defense articles. Is that correct?

Secretary AUSTIN. That is correct.

Senator WICKER. Okay. Let me then talk about your assessment with regard to Ukraine, I believe you told me, Secretary Austin, that you believe Ukraine now has the upper hand in the war against Russia. Is that correct?

Secretary AUSTIN. That is correct. This is a highly contested fight, Senator, as you know, and we have seen the tide move back and forth. Most recently we have seen some pretty significant fighting in the Bakhmut area.

Senator WICKER. Right. But just with regard to your optimism about Ukraine having the upper hand, that is what you told me yesterday.

Secretary AUSTIN. It is now—what I was about to say, Senator, is that the Ukrainians have inflicted significant casualties on the Russians and they have depleted their inventory of armored vehicles in a way that no one would have ever imagined.

Now we see Russia reaching for T–54 and T–55 tanks because of the level of damage that the Ukrainians have inflicted on them, and we have in the meantime——

Senator WICKER. But that means reaching for those tanks demonstrates what to you, sir?

Secretary AUSTIN. It demonstrates that their capability is waning, and we have continued to witness them being challenged with artillery munitions and other things, and are reaching out to Iran, are reaching out to North Korea.

I think, we will see an increase in the fighting in the spring as conditions for maneuver improve. Based upon the things that we have done and continue to do, I think Ukraine will have a real good chance——

Senator WICKER. Do you believe—yes, we are pressed for time, sir. Do you believe there is a real chance for significant Ukrainian advancements between now and the beginning of winter?

Secretary AUSTIN. I believe that there is a chance and we are doing everything that we can do to ensure that they have their best opportunity to be successful, Senator.

Senator WICKER. Thank you, and if the chair will indulge me, Mr. Secretary, you have got a pretty big congressional relations office in your shop, do you not?

Secretary AUSTIN. I do.

Senator WICKER. Do you agree that it should have occurred to someone in that office to inform Senators who were debating about Iran last Thursday about what had occurred with regard to attacks in Syria?

Secretary AUSTIN. Senator, I think you know that we take the War Powers Act very, very seriously. After every operation, we are required to debrief Congress and we lean forward and try to ensure that Congress is briefed before we conduct an operation.

We also—in this case, we had an attack in—and we launched an attack on the adversaries in the same time period, same short period of time. Because of that compressed time, we did both notifications at the same time. We should have notified you earlier, and we will endeavor to do so——

Senator WICKER. Well, as a matter of fact, Mr. Chairman, if I might, the attack occurred and counterattack occurred in the wee hours of the morning, and Members of the Senate were not notified until very late in the afternoon or early evening. That is the fact, is it not?

Secretary AUSTIN. No, sir. The attack occurred in the morning and the counterattack occurred evening, our time, eastern time.

Senator WICKER. Okay, and so, after the attack occurred, it did not dawn on anybody in Congressional Affairs to notify Members who were debating this very issue on the Senate floor. I think that is correct.

Secretary AUSTIN. Senator, our goal is that is to make sure that we keep you informed. We will do everything within our power to make sure that we improve our performance.

Chairman REED. Thank you very much, Senator Wicker. Senator Shaheen, please.

Senator SHAHEEN. Thank you. Secretary Austin, General Milley, thank you both for being here this morning and for your service. General Milley, thank you, especially for all of the years that you have given to this country and to all of us.

We will miss you, even if you may not miss these posture hearings. Secretary Austin, I understand that the Department may be in the final stages of the review of information operations that was required by the 2020 NDAA.

Can you give us any insights into what that may show and how important you think information operations are as we look at the modern defense and whether there is money in the budget requested to address expanded information operations?

Secretary AUSTIN. Thanks, Senator. I think what we will find is that that work will show that information operations is increasingly relevant and increasingly valuable in terms of enabling our operations, and also understanding and countering what our adversaries are doing.

So, we will continue to work to refine our policies and procedures and develop talent in this area as well. But this is a key area, and we see it every day as we watch the Ukraine, Russia fight and the relevance of those operations in that fight.

Senator SHAHEEN. Well, one of the areas where information operations have been important is in the Black Sea region, and certainly, we saw with the downing of the drone just how important that region is to our national security.

Can you talk about what the most pressing threats are that Russia poses in the Black Sea and what we are thinking about going forward as a strategy to respond to that?

Secretary AUSTIN. Well, certainly, Senator, Russia would aim to completely control the Black Sea and deny our allies and partners the ability to have continuous access to the sea. You know, I was in the region before this fight started and had engaged with our allies and partners and talked to them about the importance of the access to the Black Sea, encouraged them to work together, and also wanted to make sure that we were doing everything within our power to help them strengthen their capability and strengthen their interoperability. So, this is critical and this is something that I think we need to continue to put energy into.

Senator SHAHEEN. Well, thank you. I was in the region in February, and I can tell you and the countries that I visited, Georgia, Romania, that there was a great deal of interest in the fact that we might have a more comprehensive approach to the region that deals not just with national security, but also with economic and democratic initiatives there.

Over the past several years alone, Congress has appropriated over $1 billion in funding for PFAS [Per- and Polyfluoroalkyl Substances] related activities, testing, remediation. My—the most recent information I have seen suggests that there are more than 700

contaminated military sites across the country, including the former Pease Air Base.

Congress has shown a willingness to accelerate testing and cleanup by increasing funding, and yet the Department claims that it is unable to execute those increased funding levels. We appropriated $517 million or authorized it in fiscal year 2020.

Can you speak to what needs to happen in order for the Department to make better use of the funds that Congress appropriated to—appropriates to address PFAS?

Secretary AUSTIN. We will continue to make every effort to make best use of those funds. I think you see in this budget, we have asked for another $400 million.

To your point, Senator, if funds are not executed in one particular year, I think they roll over to the next year. So, we have the benefit of using the funds that were not completely executed last year, plus the $400 million we are asking for this year.

We will make every effort to make sure that we are doing everything within our—that is possible to utilize the funds, and where we need more, we will come back and ask you for more.

Senator SHAHEEN. Well, thank you. I appreciate that. I hope you will also take a look at our willingness to be transparent with the public where sites have been contaminated because there is a great deal of distrust, I think, about information sharing from the Department of Defense, and least we have seen that in the site in New Hampshire.

I think that undermines our ability to address what needs to be done in those sites to clean up the contamination and to encourage the communities to do what they need to do to address the problem. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Shahee. Senator Fischer, please.

Senator FISCHER. Thank you, Mr. Chairman. For years, we have underinvested in our munitions production and we are starting to reverse that trend but more needs to be done to increase production. Secretary Austin, what is the Department currently doing to increase munitions production capacity and what more does it seek to do in fiscal year 2024?

Secretary AUSTIN. Well, thank you, Senator. Let me thank Congress for what you have done to authorize a multiyear procurement capability. That sends a strong signal to the industrial base.

Also, the numbers that you see reflected in our budget request for procurement sends a strong signal as well. In this particular budget, we are asking for $30 billion to invest in munitions and that helps us go after the right kinds of munitions that we think we need to replenish stocks and to make sure that we get ahead as well. Also, it allows us to invest a bit in the industrial base.

Now, we are engaging the, you know, our partners in the industry and trying to do everything we can to work with them, to expand their capacity and their capability. But to your point, there's a lot more work that needs to be done.

Senator FISCHER. The Committee has worked to modify or remove older and unnecessary contracting requirements so we can get contracting officers to move faster on replacing munitions in Ukraine. Would it be useful to be able to remove or modify these

unnecessary requirements for weapons related to most, really our most pressing challenges in the Western Pacific and in Taiwan as well?

Secretary AUSTIN. Absolutely. Absolutely, it would.

Senator FISCHER. Thank you. General Milley, the current U.S. nuclear modernization plan was originally designed in 2010 when nuclear threats were much less severe than they are today. However, since then, every DOD modernization program, along with every Department of Energy (DOE) infrastructure project and warhead program, has been delayed or it has been reduced in its scope.

Can you tell me how we are going to meet the rapidly growing threats from China and Russia with a force that is smaller and with a force that delivers later than we planned for more than a decade ago? Basically, I am asking you, how are we going to recognize challenges we have today and meet them?

General MILEY. Thanks, Senator. As you know, the nuclear capability of China is growing, and we can cover that in some detail in a classified session, if you so desire.

The recapitalization of the nuclear triad is the Secretary and President's number 1 defense priority. That is what has been one of the most significant contributors to great power peace in the last eight decades. So, it is imperative for us, the United States, to recapitalize that entire system with the silos, the bombers, as well as the subs, but also the NC3 system.

That is really critical, and it does bother me that some of these programs are behind and they are coming in at over cost, over budget. But we are going to get there and it will be a safe, secure, reliable system, guaranteed that, and we will maintain the strategic deterrence that we have kept for 80 years.

Senator FISCHER. Last year, you, along with nearly every other senior U.S. military officer, testified that we need to provide Presidents with more nuclear options than we have today. Do you still agree with that sentiment?

General MILEY. I do. I believe that——

Senator SHAHEEN. Okay, thank you. Yes, is fine.

General MILEY. Sure.

Senator FISCHER. As a Member of this Committee and also as a Member of the Senate Commerce Committee, I have worked for years to promote efficient spectrum management by the Federal Government without endangering the mission critical operations of the Department of Defense.

Coordination among the agencies can be difficult, and it can be slow. Proactive communication among all stakeholders, I believe, is key for that better coordination. That is why I, as Ranking Member of the Strategic Force Subcommittee, I send a letter to the Subcommittee Chairman—with the Subcommittee Chairman, Angus King, to the Department of Defense last year that asked for more details about the Department's concerns with proposed spectrum reallocation in the lower 3G.

DOD's response pointed to the 2020 IDA [Institute for Defense Analyses] report, but there are still far more details that we need to learn about what may or may not work for reallocation in this band. Fortunately, there is an ongoing study, and I appreciate that, the Path study that should provide those details.

General Milley, my time is almost up and I expect my friend from South Dakota will have a conversation with you about this as well. But for the record, and please answer yes or no, is it your best military advice that the ongoing Path study as currently authorized, as currently authorized, should be completed in order to inform the ongoing spectrum negotiations?

General MILEY. Yes.

Senator FISCHER. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Fischer. Before I recognize Senator Gillibrand, let me just remind all my colleagues, there will be a classified hearing in the sciff SCV–217 at the conclusion of this open hearing. Senator Gillibrand.

Senator GILLIBRAND. Thank you, Mr. Chairman. Mr. McCord, I was disappointed that for the second year in a row, the All-Domain Anomaly Resolution Office, or AARO, was not fully funded in the Department's budget request. Understanding that we cannot get into specific budget figures in this form, can you discuss why AARO was not fully funded?

Mr. MCCORD. Senator, I don't have any information from my colleague, Under Secretary Moultrie, that he needed additional funding in this area. It is a relatively new office we are standing up, so I was under the impression, I am under the impression that we have adequate funding for the relatively new State of this. But I will double back with him if there is a concern.

Senator GILLIBRAND. I need you to send a letter to this Committee in writing about why it wasn't fully funded. Several Senators signed a letter to Secretary Hicks asking that it be fully funded in this budget and we specified in a classified annex exactly what funding wasn't being met and its operational funding, its basic operational funding, so I am highly concerned about this.

Secretary Austin, the incidents last month involving the Chinese high-altitude balloon and the three unknown objects highlighted the need for us to continue to improve our understanding of UAPs over United States airspace. Do you intend to ensure AARO receives full funding in the future?

Secretary AUSTIN. I will, Senator, and we—in this budget, we have asked for $11 million in support of the office, of that initiative.

Senator GILLIBRAND. That is not the budget request. Will you investigate why the budget request isn't being met and be part of the response——

Secretary AUSTIN. I will. I will.

Senator GILLIBRAND. Thank you. Secretary Austin, on March 17, Qin Gang, the Chinese Foreign Minister said that the United States and China are heading toward inevitable "confrontation and conflict."

This comes as the STRATCOM Commander testified that "the PRC seeks to match or in some areas surpass quantitative and qualitative parity with the United States in terms of nuclear weapons."

During the cold war, the United States and the Soviet Union developed lines of communication to prevent escalation or outright hostilities during heightened tensions and developed norms and mechanisms to avoid miscalculations.

How would you characterize your relationship with your PRC counterpart, and what steps are you taking to reduce the risk of miscalculations during a period of heightened competition between our countries?

Secretary AUSTIN. Well thanks, Senator. I think you have heard me say two things. The first thing is that Chairman—what the Chairman said earlier that I don't see conflict as being imminent or inevitable.

But I do think it is important that leaders and great powers have the ability to talk to each other, to manage escalation, to manage crises. You have seen me reach out to my former counterpart, Minister of Defense Wei, who has now moved on, and encourage him to keep the lines of communication open.

He has now been replaced by a new minister and I have yet to have the have the ability to engage him, but I will continue to make sure that we reach out. I do think that is critical.

Senator GILLIBRAND. Secretary Austin, we have international legal structures to address the conduct of our forces in war. While we have international treaties that govern the use of space, there is ongoing debate about whether these treaties would apply during an armed conflict, and what types of counterspace weapons are permissible.

What steps is the Department taking in coordination with Department of State to reinforce international norms and whether we can safely rely on our use of space assets, both legally and lethally during a conflict?

Secretary AUSTIN. Well, this is an issue that the interagency of our Administration, we continue to engage on. Secretary Blinken, as you know, also has engaged our allies and partners on this issue at the U.N. [United Nations] and in other fora. We think it is important. The Administration thinks it is important, and this is something that we will continue to work on.

Senator GILLIBRAND. Thank you, Mr. Secretary. I appreciate the policies you issued on March 22d supporting our military families, and it is critical to their well-being and ability to retain strong military force. DOD's own surveys show that 24 percent of our servicemembers experience food insecurity.

Last year, I met with military families on Staten Island who spoke about the challenges they face in basically putting food on the table to feed their kids. However, very few servicemembers are considered eligible for basic needs allowance or the BNA, under existing BNA programs since BAH [Basic Allowance for Housing] is included in family income calculations.

Can you tell me how you intend to ensure that food insecurity in military families have access to the BNA or other measures?

Secretary AUSTIN. We will have the authority next year to move to a higher number, a higher percentage, 150 percent will actually move before we are required to move. We plan to move in July.

That will allow us to help more families. But you have seen this with your support, Senator. You have seen us ask for a pay raise last year, 4.6 percent. You have seen us raise BAH amounts, and you have seen us work to get childcare costs down. So, we are trying to increase the resources and reduce the strain on families and

hopefully that total equation will create benefits for our families and our troops.

Senator GILLIBRAND. But will you consider removing BAH from the calculation for BNA?

Secretary AUSTIN. We will do whatever what is ever feasible, what we are allowed to do by law.

Senator GILLIBRAND. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Gillibrand. Senator Cotton, please.

Senator COTTON. Mr. Secretary, I want to return to the issue of the strikes in Syria last week and Senator Wicker's line of questioning about the timing of notification to Congress. You said that you "should have notified Congress earlier."

These attacks happened against our troops, killing one contractor early in the morning eastern time. Do you believe that you should have notified us that morning while we were voting on amendments directly related to this kind of attack?

Secretary AUSTIN. Again, there is no connection between when we notified you, Senator, and your vote. The Chairman and I were testifying that morning as well, so as soon as we came out of testimony, we began work on crafting response options.

Senator COTTON. Secretary Austin, I don't believe you. I believe that your office specifically withheld notification of this deadly strike against Americans because the Rubio amendment, on which we voted midday, directly touched on exactly this scenario, not repealing these use of force resolutions if the President couldn't certify that Iran was no longer attacking us in Iran, in Syria.

That is what I believe. Nothing you can say is going to change my belief about that, and I got to say, I think I speak for a lot——

Secretary AUSTIN. I just want to say, Senator, that is absolutely not true.

Senator COTTON. Maybe you didn't personally do it, maybe you didn't personally do it, but I believe entirely that people in your office did that. You have a vast legislative operation, as Senator Wicker pointed out. Do you really expect us to believe that they didn't know that we were voting on a Rubio amendment that directly, directly covered exactly this kind of attack? I don't believe that.

I don't believe it. I believe there was a conscious decision made not to inform Congress because you fear that it might lead to the passage of the Rubio amendment, which would kill the entire bill.

But I want to move on to a more important part, which is these attacks in the first place. How many attacks has Iran or its proxies launched against American positions in Iran and Syria since Joe Biden took office?

Secretary AUSTIN. There has been about 83 attacks, I think, since—in the last several years.

Senator COTTON. That is a lot of attacks over 2 years. How many times have we retaliated against Iran or its proxies?

Secretary AUSTIN. We have launched four major strikes, Senator. But an attack can consist of a number of things. It can consist of, a rocket that is fired in the direction of one of our bases but not effective.

Senator COTTON. Mr. Secretary, I am well aware of what an attack could entail. So 79 and 4 is Iran's record right now, and our four attacks have not been against Iran, right, they have been against Iran's proxies in Iraq or Syria or elsewhere. Is that correct?

Secretary AUSTIN. That last attack was against IRGC [Iranian Revolutionary Guard Corps], Quds force infrastructure and——

Senator COTTON. Okay, and after we retaliated, Iran attacked us again, injuring another American, didn't it?

Secretary AUSTIN. They did.

Senator COTTON. We retaliated for that attack on Friday.

Secretary AUSTIN. We have not yet, Senator.

Senator COTTON. So, what kind of signal do we think this sends to Iran when they can attack us 83 times since Joe Biden has become President, we only respond 4.

Maybe it is because they know that until—that we will not retaliate, until they kill an American, which emboldens them to keep launching these attacks which kill Americans.

What is our rules of engagement for on the ground Commanders throughout the region? Are they allowed to engage immediately if their position has been attacked?

Secretary AUSTIN. They can and they do, and there have been several instances of that.

Senator COTTON. I have got to say, I have heard from company and field grade Commanders who have been in the region very recently, and they say there is a lot of confusion over that.

Let me move to a related topic, and that is our operations of unmanned aircraft in the Black Sea. Russia down one of our Reaper aircraft a couple of weeks ago. Have we flown those aircrafts into the exact same space since it was downed?

Secretary AUSTIN. We have flown on the paths that we want to fly in the Black Sea to collect intelligence information.

Senator COTTON. So that is a far—that is far from a yes answer. I said, have we flown in the same airspace? You have said we have flown in the path we want to fly to collect intelligence. So, if we adjusted our flight patterns, have we moved down of that airspace?

Secretary AUSTIN. We will fly the paths that we feel necessary to collect intelligence information.

Senator COTTON. So according to an Administration official from an article in CNN on March 21st, we are not flying in that airspace "to avoid being too provocative." So, are we removing our aircraft out of the space from that which that Reaper flew because we don't want to be too provocative toward Russia?

Secretary AUSTIN. Senator, you may have heard me say immediately after this incident to—that I told my counterpart that we are going to fly the skies, the international skies, and sail the seas as we wish, and so, we continue to fly in that airspace.

Senator COTTON. In the exact same airspace where that Reaper was downed?

Secretary AUSTIN. Again——

Senator COTTON. You haven't pulled back from Crimea or from the Ukrainian or the Russian coasts?

Secretary AUSTIN. I recommend we take this to a closed session.

Senator COTTON. We can and I think it answers the question, though, and it gets to the point I am trying to make here. We con-

tinue to deter ourselves against our adversaries. We let Iran launch 83 attacks against us and we only respond 4 times.

Russia downs one of our aircraft and we pull back from that airspace just like we have been delaying ballistic missile tests over the last 2 year, or over the last year. Just like we let a Chinese spy balloon float across the country when we could have done it across the Aleutians.

Now, I don't necessarily think these are Secretary of Defense calls. I think these are Commander-in-Chief calls. But we shouldn't be surprised when our adversaries get emboldened and more aggressive in all these theaters when we continue to deter ourselves.

Chairman REED. Have you finished, sir? Thank you, Senator Cotton. Let me recognize Senator Blumenthal.

Senator BLUMENTHAL. Thanks, Mr. Chairman. Thank you all for being here. Thank you for your service, not only over many decades, but in this role, and particularly at a time when the threats are as great as any time that most of us can remember.

I have been to Ukraine three times over roughly the last year visiting Kyiv and President Zelenskyy, and recently followed you, Mr. Secretary, to visit our base in Bavaria, where we are training Ukrainian fighters in the use of Bradley armored vehicles and combined arms.

The bond between our soldiers and their fighters is extraordinary because of our respect for their will to fight, and that is what I have seen in the Ukrainian people. They will fight with pitchforks, if necessary, but they need a lot more.

I want to thank you and the President for committing to do whatever it takes. I think I am almost quoting exactly. In my view, whatever it takes includes airplanes, aircraft. Would you agree that as a strictly military matter, and you know a lot more about this than most of us at this side of the table, that that kind of air support from the United States is going to be necessary, and the sooner, the better?

Secretary AUSTIN. Thanks, Senator. First of all, thanks for your continued support and for the support of Congress. It is phenomenal what we have been able to do in what we have helped Ukraine be, the kinds of effects they have been able to achieve based upon our support.

As you know, the United States of America leads the way on that. We talk to our counterparts every week, sometimes multiple times a week, and I meet with them in person every month.

What they need right now more than anything else is air defense, and that is the critical need on the battlefield, and they also need long range fires in armored capability. We are providing them a real substantial package of capability in terms of platforms, but not just that, we are also providing training and we are providing sustainment.

Sir, you witnessed some of that coming together when you were in Grafenwohr, and I really appreciate you going out there and visiting our troops. I think those capabilities will make the biggest difference in the near term, and they must be successful going forward.

We know the spring fighting seasons in front of us here and we want to make sure that they have what they need to be successful.

Senator BLUMENTHAL. I apologize for interrupting, Mr. Secretary, but I want to come back to the aircraft, because as you have identified it very clearly and I agree totally, air defense is critical.

We have a narrow window of time, and in fact, this spring will be crucial. Some of our allies are providing planes, but we have the resources, and only we really have the resources to provide the aircraft necessary for fully robust air defense.

Secretary AUSTIN. If you are talking to F–16s, whenever you make that decision, in order to put together what needs to be put together, to provide that capability, is going to be 18 months or so in the making.

That won't help them in this current fight, and will they have a capability at some point down the road? We all believe that they will. What that looks like, it could look like F–16s. It could look like some other fourth generation aircraft. But we will continue to work with our allies and partners to make sure that Ukraine has what it needs.

Senator BLUMENTHAL. Thank you. Thank you, Mr. Secretary, and again, I want to thank you and the President for your commitment, which I think is deeply appreciated by the people of Ukraine as well. I want to focus on a very narrow issue relating to procurement, which is the helicopter acquisition and development for the FLRAA contract.

A number of my colleagues and myself had asked the Army for an explanation for the award of that contract—it is under challenge right now. Will you commit to provide us with an adequate explanation? So far, the Army has been totally unforthcoming.

Secretary AUSTIN. I will commit, Senator, once the protest is resolved, we will make sure you get a thorough briefing on this issue.

Senator BLUMENTHAL. Shouldn't we have it now rather than at some indefinite point in the future?

Secretary AUSTIN. Well, sir, you know that it is inappropriate to once—while this is under protest, to do that. I commit to you that as soon as we can, we will provide you that information.

Senator BLUMENTHAL. Thank you. I want to ask one last question. Suicide among our servicemembers continues to be a desperately important problem. I will be meeting later today or this week with the family of Master of Arms Seaman Recruit Xavier Mitchell Sandor, who took his own life while he was stationed on the USS *George Washington.*

He was among three who committed suicide while that ship was under maintenance and repair. Similar kinds of suicides have happened on other ships under similar circumstances. The report is still outstanding. There have been no completion of the investigation a year after that event. I know you are very concerned about the troops.

Nobody cares more than you do about the well-being, and I include the Chairman in that sentiment. Can you tell us that additional measures will be taken and that there will be a report forthcoming about Xavier Sandor?

Secretary AUSTIN. I will. I will make sure that Secretary Del Toro ensures that this investigation moves on a timely fashion and in a very thorough fashion.

I would also tell you that I have asked Secretary Del Toro to make sure that he is personally focused on this issue, specifically related to ships that are in maintenance and the berthing associated with those ships.

He has, in this budget, Senator, asked for some $258 billion to address that issue, and I think that is a good start, but I think we need to continue to make sure our leadership is doing the right thing, that we have adequate housing for our young men and women. They are our national assets. I truly believe that he will remain focused on this, but I will as well, so.

Senator BLUMENTHAL. Thank you, Mr. Secretary.

Chairman REED. Thank you, Senator Blumenthal. Senator Rounds, please.

Senator ROUNDS. Thank you, Mr. Chairman. Let me begin by thanking all of you for your service to our country, recognizing Secretary Austin, not just for your time in uniform, but your time as Secretary as well. General Milley, recognizing your time as Chairman of the Joint Chiefs, but not only that, but the amount of time that you and your family have served our country, we sometimes gloss over that.

I recognize I don't have a lot of time, but I just want to make this clear, it is not just the time that you spend in the Pentagon, it is the time that you have spent boots on the ground.

You have had operational deployments, including the Multinational Force Observer, Sinai, Egypt, Operation Just Cause in Panama, Operation Uphold Democracy in Haiti, Operation Joint Endeavor, Bosnia, Operation Iraqi Freedom in Iraq, and three tours during Operation Enduring Freedom in Afghanistan.

You have also deployed to Somalia and Colombia. We thank you for your service to our country, sir, and your family as well, because when you deploy, they are deployed as well. Thank you.

Gentlemen, both for Secretary Austin and Chairman Milley, last week you both clarified that you support waiting until the conclusion of the ongoing study before any decision should be made on auctioning parts of or any of the 3.1 to 3.45 gigahertz spectrum band.

My question is, should an auction occur before the study is complete? What are the real-world impacts on national security from a defense and budgetary perspective?

Secretary AUSTIN. It would be devastating, Senator, and it would take us somewhere north of 20 years to try to recover from a loss of that spectrum. Parts of that spectrum are vital to our national defense and the protection of the Homeland.

In order to describe exactly what the specific platforms are, but we would have to go to a classified section to speak in detail about this. But I would tell you that this is not something you can fix overnight once you break it. It will take 20 years plus to recover from that.

Senator ROUNDS. Thank you, General Milley.

General MILEY. Same thing, Senator. I firmly believe that we should wait till the study is measured twice, that one sort of thing. But we don't want to vacate because of the severe national security implications to that.

The sharing is obviously a goal for everybody, but it is how you share and the technical capability to do that, and that is what the study should tell us. We want to make a fully informed decision, and the Secretary and I will be making those recommendations and writing to the President when the time comes.

Senator ROUNDS. Thank you, sir, once again, for Chairman Milley, as the principal military adviser to the President, would you say that it's essential for you to be able to provide an independent recommendation about spectrum sharing and its impact on national security to the President?

General MILEY. Yes, I do. I would also say, though, that every recommendation I make to the President is an independent military best military advice, no matter what the topic. The Secretary is very good about that, and I will always inform the Secretary if I disagree with the Secretary ahead of time.

But he and I were always in there together with the President and I will always make it independent best military advice recommendation. That is why I signed, when I was confirmed, that I would do that with the Senate as part of this Committee, as part of becoming the confirmation process. So, I will always do that and every Chairman should always do that.

Senator ROUNDS. Thank you, sir. Secretary Austin, INDOPACOM has listed an unfunded requirement of $147 million for the development of a missile defense system for Guam.

Can you discuss how that decision by the Department not to fund this INDOPACOM requirement comports with the Department's priority to defend Guam?

Secretary AUSTIN. Thanks, Senator. As you know, we have and we continue to invest heavily in the defense of Guam, and that work is ongoing. Again, there is always choices that we have to make in a specific time horizon, and in this case, that is a capability that I think we can and will consider going forward.

Senator ROUNDS. I think part of the reason for the question is because there has been some criticism on the Department providing a list of unfunded requests. Would you agree that this one should be very seriously considered by Congress?

Secretary AUSTIN. As you know, Senator, we are required, or the Service Chiefs and Commanders are required by law to submit those unfunded requests. I do believe that all of our Commanders and Chiefs believe that what is on there is important.

Now, I have asked our Commanders and our Chiefs to make sure that they build their requirements for readiness and also combat capability into their base budget. We try to do that at every turn. But at some point, in time, there are choices that you have to make.

Senator ROUNDS. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Rounds. Senator Hirono, please.

Senator HIRONO. Thank you, Mr. Chairman. I thank all three of you for being here today, and especially for General Milley. Thank you very much for your 43 years of continuous service. I extend to you my thanks and respect.

For Secretary Austin, investments in the military's infrastructure are directly correlated to our readiness and ability to execute

deterrence. However, as the people of Hawaii saw from the disaster at Red Hill, military infrastructure also impacts our cities and towns. Fuel, chemical, and sewage spills have lasting impacts on our lands and erode the trust of servicemembers and their communities.

We must invest in the systems they rely on each day. Basic things like pipelines, power grids, and barracks. Yet this year, in Hawaii alone, there is over half a billion in unfunded infrastructure improvements on the service's unfunded priorities list.

Secretary Austin, how is the Department ensuring that infrastructure maintenance and modernization needs are met before disasters like Red Hill occur? Basically, don't we need to get more of these projects off unfunded priorities lists?

Secretary AUSTIN. These are, to your point, Senator, requirements that are critical and they should be met as soon as possible. In my budget, I have asked for $5.1 billion to increase operational effectiveness and survivability. Part of that has to do with the effects that are caused by climate.

But nonetheless, those are facts or real facts, and so, we will continue to invest in this, but to your point, services should invest in this to make sure that the infrastructure they need to support them is, in fact first rate.

Senator HIRONO. Secretary Austin, you know that I have been very much focused on those kinds of infrastructure needs. What comes out of our pipes, whether electricity stays on—those continue to capture my attention and be assured that I will continue to focus on these issues and the needs being met.

Mr. Secretary, in your tenure, you have issued several policies that increase servicemembers access to childcare, which you have mentioned, institute parental leave, which is very popular, and ensure access to reproductive health care for all women no matter where they are stationed.

These are prudent changes that put our people first, and I appreciate your leadership on these issues. Senator Austin, how did you identify these servicemember needs? Once those requirements were a record, what was the process to implement updated policies?

Secretary AUSTIN. Well, I talked to our troops. I talked to the family members. As I go around the country and around the world, I am very much interested in what their challenges are and how we can do things to make life better for them. With your help, we have been able to do some things.

That includes the things that you have mentioned, Senator, but also the pay raises, the raise in BAH and BAS. We are asking you for another pay raise this year. Probably the biggest pay raise for our troops and civilians in decades. But that is how I get the input by engaging the troops and the family members.

Senator HIRONO. You have been heavily criticized for your decisions to enable particularly women servicemembers to attain reproductive health. I, for one, commend you for that.

I want you to stay the course. In the same vein of wanting to support our servicemembers, I do want to mention that there is the potential for significant cuts to the cost of living of Hawaii's servicemembers. I have noted this before, and I think that these

are huge cuts for Hawaii servicemembers are unjust and unfair, and I hope that there will be a reconsideration of that decision.

I also want to note, I have been asking about missile defense of Hawaii for quite some time. I had a productive meeting yesterday with leaders from your staff about their roles in and plans for the current and future missile defense of Hawaii. While there is certainly more work to be done to establish and execute a long-term plan for the missile defense of Hawaii, I am encouraged to see the Department treating this issue with the seriousness it demands. I remain focused on it, on the issue, as I request updates from your staff.

Thank you very much, Mr. Chairman.

Chairman REED. Thank you, Senator Hirono. Senator Ernst, please.

Senator ERNST. Thank you, Mr. Chair. I just want to State for the record that I am adamantly opposed to the DOD's new policy on allowing travel expenses for those that are going to other states to seek abortions.

I think it is incredibly important that we remain adherent to the Hyde Amendment, which prohibits taxpayer dollars from going toward abortions. I know this is an extension of travel services for family members and those servicemembers, but again, those are taxpayer dollars being spent to fund the extension of an abortion.

I am adamantly opposed. I know that there are others that are on this Committee that agree as well. We are not saying that women can't seek abortions. They can do that, but that is to be privately funded.

So, thank you both, gentlemen, for being here this morning, and Secretary, I do worry that there is a mismatch between strategy and resources at the heart of the President's budget. The national defense strategy calls this a "decisive decade" and commits to act urgently to strengthen deterrence against the pacing threat of China.

General Milley, would investments in posture presence and lethal capabilities like long range fires reduce our risk in the Western Pacific?

General MILEY. Absolutely, long range fires would reduce our risk. Not only the west—anywhere, but for sure yes—That is correct.

Senator ERNST. Thank you, General Milley. I know that you addressed this with Senator Rounds, but Secretary Austin, as we discuss those unfunded requirements, we see that we are three and a half billion dollars short in the INDOPACOM, which includes critical strike capabilities and posture enhancements.

So, I do hope that this is something we can work with those Commanders on those requirements. I think it is incredibly important and I know my colleague from Alaska may address our requirements in defending Taiwan, but it is incredibly important.

If we are saying in the National Defense Strategy that this is a decisive decade, we need to act accordingly. As Congress, we must fund accordingly. Chairman Milley, as you know, our special operations forces are a strategic capability. How can soft help deter and defeat great power competitors?

General MILEY. Well for Special Forces, regardless of theater, relative to a great power competitor, there is ongoing intense competition in the so-called gray space. They play a key role in that area. In addition to that, they can provide tremendous capability in train, advise, assist in indigenous partners and allies and region. That's important.

Also, I would argue that irregular warfare is often an overlooked component. As you start looking at larger conventional war, irregular warfare plays a very key role in all forms of war, and that will play a key role in any great power war as well.

So those are some of the key things, that strategic reconnaissance, there is development of the battlespace events force operations, the whole litmus test or a litany of capabilities that special operations forces bring that have a direct role prior to the onset of hostilities and can contribute to the deterrence of war with any great power.

Senator ERNST. Very good, and I appreciate that because you answered my next question about surrogate forces and partnering with those forces and indigenous actors, and they do help soft compete against great powers, so I do appreciate that. Secretary Austin, will the Department's guidance to the SOF [Special Operation Forces] enterprise place our great power competition above counterterrorism and crisis response mission?

Secretary AUSTIN. I am sorry, Senator, I missed the question——

Senator ERNST. Yes, SOF, as it applies to great power competition, will you be placing their mission with great power competition over the other mission of deterring terrorism?

Secretary AUSTIN. We have to strike a balance, and we see our SOF forces doing that. I know you have talked to our special operations force Combatant Commander. He is looking at this in a very methodical way and making sure that he maintains a balance of capability that can serve both challenges there.

They are doing a great job, and I have seen some of our Tier 1 forces very rapidly transition and start thinking about how they are going to be relevant, not just thinking about it, but developing capability to be relevant in great power competition. At the same time, keeping a good handle on transnational terrorist organizations.

Senator ERNST. Thank you. I appreciate it. I think it is incredibly important that we continue to fund our SOF as necessary because they do strike a balance between great power competition, working in that gray zone, and also deterring terrorism around the globe.

I would just encourage Members of this Committee to continue to focus on the strength within our SOF forces. Chairman Milley, thank you very much for your service to our great United States Army, as well as the Joint Force.

Also, my best wishes to Hollyanne. We know that behind every great leader is someone who supports them thoroughly, and she has been a tremendous force in working with our Gold Star families, with all of the members of their service and their families. So, my best wishes to you and your entire family. Thank you, Mr. Chair.

Chairman REED. Thank you, Senator Ernst. Senator Kaine, please.

Senator KAINE. Thank you, Mr. Chair, and thank you to the witnesses. General Milley, I also want to compliment you on your stellar career, and I also offer the congratulations of your college classmate, my wife, Anne, who I mentioned I would see you today, and she wanted me to extend her congratulations as well.

On the 15th of the month, during our Personnel Subcommittee hearing, Senator Kelly and I asked Secretary Cisneros and Martinez Lopez about implementation of the Brandon Act. I appreciate both of you in your opening statements talked about the need to get a hold of military suicide issues and resources that are being devoted to this.

We asked the Secretaries about Brandon Act implementation and also about a report on Brandon Act implementation that we were supposed to receive that is overdue. I don't really want to get into that with you here today, but just to put it on the radar screen, that during the course of the development of the NDAA, we really want to get into the implementation of the Brandon Act that we passed.

Make sure that it's being implemented. Find out if there are things, we can do to make that implementation easier, and I really want to work on that between now and the time that we take up the NDAA in committee. It is possible that we don't need to do anything more on that space if we are convinced that implementation is moving out.

If we are not convinced of that, we will need to do more, and I just wanted to kind of put that on the record to begin. Secretary, I also want to ask you about your recent trip to Iraq.

I think it was either 2 or 3 weeks ago that you were there and reports suggest you had productive meetings, both with political leadership, Prime Minister Al Sudani, but also with military leadership. Could you describe that visit for the Committee?

Secretary AUSTIN. Well, first of all, let me tell you that our troops are doing well there, and they are enabling and helping their host, the Iraqi security forces, and they are very much valued by the Iraqi leadership. The prime minister was very complimentary of their performance and the value that they add.

Good meeting with the prime minister and his leadership. I think, you know, it is not only me, but other leaders in the region are also saying that the prime minister shows a lot of promise in terms of a person that is willing to work with others to move things forward.

Senator KAINE. Describe the current State of the mil-to-mil relationship. So, talking about the prime minister discussions, but we have got about 2,500 United States troops in Iraq, as you point out. We are being hosted. They are there at the invitation of the Iraqi Government because they value the United States as a partner. Describe a little bit about the current mil-to-mil relationship.

Secretary AUSTIN. I think the mil-to-mil relationship, Senator, is good, really good, and again, I think our partners understand the value that we add to their overall effort. If you unplug that, then what happens with their efforts to maintain pressure on ISIS [Islamic State of Iraq and Syria]?

What happens with their efforts to continue to develop their professional force? I think we are very much appreciated. What I saw

was goodness. I think, you know that the Commander there is doing all the right things and working in conjunction with the Ambassador to continue to move things forward. So, I was really encouraged by what I saw.

Senator KAINE. You have had a number of chapters in Iraq, in 2003, and then in 2010, and then as CENTCOM Commander, and some of these chapters are with an Iraq that was an adversary of the United States. How would you characterize this relationship where they are at their invitation and now, we seem to be working in partnership to help them advance security in their country and in the region.

Secretary AUSTIN. It truly is remarkable, and you cheated me on one of the rotations there. I had three rotations to Iraq——

Senator KAINE. I left one out.

Secretary AUSTIN. But this is something that has developed over time and it is developing in a very meaningful way. It hasn't always been easy. It has been lumpy from time to time. But I think we are in a pretty good place now, and this is something that we are going to have to work on each and every day.

We know, Senator, that not every person in Iraq believes that Americans ought to be there. But the Government is very much appreciative of what we bring in and what we are doing to train and enable their forces. I think we are in a pretty good place.

Senator KAINE. Well, I appreciate that, Mr. Secretary. I think that is important, that one of the capacities the U.S. has shown throughout our history is the, to use a biblical phrase, to beat a sword into a plowshare.

To take a nation that was an enemy, and over time, and as you point out, bumpy, not always smooth, but over time turn the relationship into one of partnership, not one of being an adversary.

That is an important aspect of the United States, Iraq relationship, and it also sends a message to others that that is something that the United States can do and we can be proud of. I appreciate your testimony. I yield back.

Chairman REED. Thank you very much, Senator Kaine. Senator Cramer, please.

Senator CRAMER. Thank you, Mr. Chairman. Thank you both, all three, for your service. A special thank you, General Milley, for your decades of service. I want to jump down to talking back about Ukraine a little bit.

There have been a lot of reasons, rationale, excuses, perhaps for not providing certain advanced weapons systems, some legitimate I am sure, maybe all of them, I don't know. But of course, oftentimes that leads to eventually providing them. But one system we have never offered, and I haven't heard a lot of talk about are the MQ–9s.

But since we just lost one recently in the Black Sea, where it is probably more likely to be recovered by Russia than the United States, and the fact that the Air Force wants to retire 48 older MQ–9s, is there any chance that the United be a reasonable system to offer Ukraine, either one—or maybe start with Secretary Austin.

Secretary AUSTIN. Yes. As we look at this, Senator, as you know, that air domain is a very hostile airspace because of the capability

that the Russians have for air defense. It is not a survivable platform if they try to use that in that environment.

Senator CRAMER. General Milley.

General MILEY. Yes, that is—one, it is not survivable. It is big and slow. It is going to get nailed by the Russian air defense systems. In terms of its capabilities, I am not sure what it will get you beyond the smaller, faster, more nimble UAV systems that we are providing, as well as some other countries are providing. So, I think that it is a good system for certain uses in certain environments, but in the current situation in Ukraine, it may not be the best system.

Senator CRAMER. Thank you. Secretary Austin, I want to now go to back to China a little bit, and you are probably familiar with the what I consider the nearly year and a half of torment that the city of Grand Forks went through while considering an investment by the Chinese Communist Party investors for Fufeng, which would have provided a wet corn milling facility 12 miles from the Grand Forks Air Force Base, 12 miles from the 319th Reconnaissance Wing, and now an SDA [Space Development Agency] ground station for low-Earth orbiting satellites.

After sort of cutting a deal and then going to CFIUS [Committee on Foreign Investment in the United States], where CFIUS has spent 60 days determining they didn't have jurisdiction. Finally, after, I don't know, 14 months or so of all of this, the Air Force finally came out and said it would present a significant risk.

That, I think, has helped kill the project, although I understand there is now a 90 day pause. My hope for all of that is not only that Grand Forks avoided an unfortunate situation, but that many other communities might have avoid it as well.

Could you talk to us just a little bit about either in the context of Fufeng and Grand Forks, or the broader context of are we giving adequate cover and information and coaching perhaps to other communities around the country? Because it is my understanding that this is not necessarily a unique circumstance to Grand Forks.

Secretary AUSTIN. Well, first of all, Senator, let me thank you for your personal leadership on this issue. To the point that you are making, this applies to installations all around the United States of America.

We will continue to emphasize to the Service Chiefs, Commanders, secretaries, and that we have to be vigilant about what is going on outside of our fences. We have got to work with the communities to make sure that we do have some kind of a situational awareness.

We have to advocate for the protection of our bases and installations. Again, every one of these cases will be complex, but there are cases that we must take on. But again, thanks for your leadership in area.

Senator CRAMER. Well, I appreciate you saying it that way, actually, because I think you are right. I think we need to, "take them on," and rather than sort of punt them to the CFIUS process or some other political process, particularly when it comes to the Chinese Communist Party and their involvement, and their ability—not just ability, but obvious willingness to do recon in all sorts of matters and ways, and so I appreciate that.

My hope, like I said, is that the experience that ground force went through is not just in vain to the rest of the country, but rather perhaps sheds light on this issue throughout the country. So, thank you for that.

Again, thank you, General Milley, for your decades of service, and I yield. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Cramer. Senator Warren, please.

Senator WARREN. Thank you, Mr. Chairman, and thank you all for your service to our Nation. This year's Department of Defense requests an $842 billion budget, one of the largest budgets in history.

Now, despite the massive size of this budget request, the Committee is already receiving letters from various parts of DOD saying that they need billions of dollars more. DOD calls these unfunded priority lists, I call them wish lists, and I am concerned about how they distort our budget process.

So, Secretary Austin, if I could let me ask this directly, are you comfortable with the figure in the President's proposed budget that it is sufficient to meet our defense and national security objectives?

Secretary AUSTIN. I am, Senator. As you know, we made this budget request based upon our strategy. Our request is directly linked to the capabilities that we need to execute our strategy, and we spent a lot of time on that.

I have asked the Commanders and Service Chiefs to make sure that they go after warfighting capability and readiness in their base budget, and for the most part we have done that. But again, we are required by law——

Senator WARREN. I understand. So, we are going to go there. We are going to go there, Mr. Secretary. Now, Secretary Gates understood that leaders at DOD can always find a gap or a requirement to justify asking for what he called however many billions dollars more you want.

He reduced wish list by about 90 percent, and he was able to do this during the surge in Afghanistan. Secretary Austin, you have a unique perspective here because before you were Secretary of Defense, you were the Commander of a major Combatant Command, a job that is now held by the people who are asking for unfunded priorities.

When Secretary Gates cut these unfunded lists down, you were Commanding General of United States Forces in Iraq. Secretary Austin, did our national security suffer when Secretary Gates cut down the service wish lists?

Secretary AUSTIN. I can say that while we were in Iraq and Afghanistan, we based upon the support of Congress, we had what we needed to be able to prosecute our operations, and so, we didn't go for—we didn't want for much of anything.

Senator WARREN. Okay. So, let's talk then about the budget process. Each Combatant Commander thinks about how they could spend more money than you have allocated to them in this process that you describe.

I assume these Combatant Commanders act in absolute good faith, but they have a narrow perspective. Secretary Austin, in putting together the overall budget, you have to weigh our global na-

tional security priorities. Do the Commanders submitting these wish lists have to do the same?

Secretary AUSTIN. They are primarily focused on their region and in what they would like to have for their region in order to be successful. But again——

Senator WARREN. I take that as a no. Yes, all right. You know, as my colleagues on this Committee are well aware, I have been using these budget posture hearings to ask Combatant Commanders, folks who occupy the roles like the one you used to serve, about these lists.

Almost all of them have defended their requests, although the justifications vary. Three of them said they needed the items on this list to address unexpected threats that couldn't be considered in the budget process.

But these same Commanders often repeat the same requests year after year after year, suggesting that if there were a real need, they would have worked it into the underlying budget. Secretary Austin, does DOD have sufficient tools to address emerging threats without relying on the unfunded priorities list?

Secretary AUSTIN. We do, and again, we account for that as we build the budget.

Senator WARREN. Okay, and one last question. Do you support removing the statutory requirement to send Congress these lists every year? If so, are you confident that we could do so without jeopardizing national security?

Secretary AUSTIN. I would support that, Senator.

Senator WARREN. Thank you very much, Mr. Secretary. I would also like to submit a letter for the record from Under Secretary McCord supporting my bill with Senator King, Senator Lee, and Senator Braun to end the statutory requirement for these lists. As he notes in the letter these lists are, "not an effective way to illuminate our joint priorities."

We don't let any other part of Federal Government behave this way, and it is for a good reason. The budget process requires making tough choices. I appreciate that the Secretary leads in that, and I would like to submit this for the record, Mr. Chairman.

Chairman REED. Without objection.

[The information referred to follows:]

UNDER SECRETARY OF DEFENSE
1100 DEFENSE PENTAGON
WASHINGTON, DC 20301-1100

COMPTROLLER

MAR 20 2023

The Honorable Elizabeth Warren
United States Senate
Washington, DC 20515

Dear Senator Warren:

I am responding on behalf of Secretary Austin to your letters of December 5, 2022, and January 31, 2023, regarding the submission of unfunded priorities lists (UPLs) to Congress.

The Department appreciates your sustained commitment to our service members, their families, and our entire work force. We are grateful for your leadership, and we share your commitment to maximizing the impact of every dollar Congress appropriates.

The practice of senior military leaders providing to Congress a list of unfunded priorities was initiated by Congress, first as a request and, since 2017, as a statutory requirement. This process was created by Congress and we agree the Congress should reconsider the merits of this approach. Every Department of Defense (DoD) budget supervised and submitted by Secretary Austin is built to implement his National Defense Strategy and represents the Department's highest priorities. The current statutory practice of having multiple individual senior leaders submit priorities for additional funding absent the benefit of weighing costs and benefits across the Department is not an effective way to illuminate our top joint priorities.

Although Secretary Austin follows a similar practice to that of former Secretary Gates by requiring that these lists are submitted for his review, that process alone does not effectively address the underlying issue of requiring individual leaders to submit proposals with no necessary connection to the Secretary's global priorities. Therefore, the Department supports your proposal to repeal the requirement in 10 U.S.C 222a.

In contrast to the UPL requirement, in November 2022, after the Congress had already decided to increase the Department's budget, and in response to multiple Congressional inquiries as to how higher than expected inflation was impacting the Department, DoD provided the congressional defense committees, as drafting assistance for conference, our best assessment of the highest priorities for additional funding, with a focus on addressing unbudgeted inflation. This document was in lieu of, not in addition to, any unfunded priority list submitted under 10 U.S.C. 222a.

That list included upward adjustments for various fact-of-life increases including service member's Basic Allowances for Housing and Subsistence rates, health care costs, additional costs to complete military construction projects, and fuel price impacts. The list also included other critical emergent requirements such as the Civilian Harm Mitigation and Response Action Plan you noted, as well as additional funds to increase capacity to enable the Defense Industrial Base to accelerate the replacement of defense articles being drawn down and provided to Ukraine.

I hope that this information is helpful and look forward to working with you in the 118th Congress. A similar letter is being sent to the other signatories of your letter of January 31.

Michael McCord

Michael McCord

Senator WARREN. Thank you.

Chairman REED. Thank you, Senator Warren. Senator Tuberville, please.

Senator TUBERVILLE. Thank you, Mr. Chairman. General Milley, thanks for being here. Thank you for your service. Secretary Austin, thank for your service, and your call last week. Secretary McCord, thanks for being here today. You are not getting a lot of questions but thank you for being here.

You know, I ran for Senate to serve on this Committee. I ran because my dad, he was a World War II veteran. He earned five Bronze Stars and a Purple Heart, and he died on Active Duty, and I ran to support the warfighter. You know, we owe our freedom to our troops.

For 50 years, our All-Volunteer Force has answered the call. I think you would agree to that. Since 1973, we have asked a lot of our Americans, young volunteers, to fight in Vietnam, Grenada, Bosnia, Somalia, Iraq, Libya, Syria, and Afghanistan. They have never wavered. In boom times and bust, young Americans have raised their right hands to defend the Constitution with their lives, if necessary.

War is hell. You know that better than anybody. Every recruit should know that. But in the last few years, we have put them through a different kind of hell. In one of your first acts, Mr. Secretary, you put our military, every single member, Active Duty and Reserve, through a mandatory training to root out extremists.

That sent a message, Mr. Secretary, that our military is filled with extremists. Our military is one of the most diverse organizations in the world. It is full of patriots. Eight months later, we watched the collapse of Afghanistan. It was the worst defeat of the United States in my lifetime and agony for most Americans who watched on the 20th anniversary of September 11th.

That defeat gutted our troops who served there. The President called it an extraordinary success. That is not what our veterans of Afghanistan call it. Our withdrawal, a big letdown to our allies, a military disaster, and national disgrace. I have talked to leaders all over the world, they have told me the same thing. Not one general or political appointee has been held accountable.

Senator TUBERVILLE. Now, I want to give you an example of accountability. General Milley, May 2021, I sent you a letter asking for, why did we give up Bagram? Now, you did answer, but it was a few months later. Now you have 4,500 people, you know, for the next person in line on the joint staff and a budget of $250 million. We have got to find ways to get information back to Congress.

Secretary Austin, I sent you a question on September 2021. It took almost 4 months. Congress deserves better. America deserves better. We all deserve better. Now we are on the brink of a world war with Russia.

China is openly violating our airspace. But it took Congress to step in and tell our military leaders, you, to stop throwing our troops out who objected to a vaccine. Most of them on a religious factor. Given what we put our troops through in the past 2 years, it is no wonder that the Army missed its goal of 15,000 soldiers. General, you know, that is an entire division.

We can't afford that, and it is getting worse. The Navy and Air Force will probably miss their numbers this year. Yet some of my colleagues claim that the real crisis is my hold on the promotion

of 158 general flag officers. Mind you, these were promotions that the majority leader can bring to the floor at any time.

Those same people claim expanding abortion will make our military stronger. You know, I want to be clear on this. My hold has nothing to do with the Supreme Court decision to the access of abortion. This is about not forcing the taxpayers of this country to fund abortion. That has been a bipartisan consensus for more than 40 years.

The military has performed abortions for years. All were cases of rape, incest, and the harm to the mom. Over the past 40 years, I don't recall one military person ever complaining that we weren't performing enough abortions.

Nor did the military raise alarm that our service men and women were being placed in areas that had restrictive policies on abortion. Poland's restrictive policies. Japan. Djibouti. All these theaters have abortion policy.

Yet our military changed the policy to do this job in these different theaters. As of 12 days ago, you all got the American taxpayer on the hook to pay for travel and time off for elective abortions, and you did not make this with anybody in this room or Congress taking a vote. In fact, this contradicts what Congress has actually voted for. Most of us, some of us in the room, if not all Senators that have been complaining about this, have voted for the Hyde Amendment many, many times.

But now, my colleagues on the left, like this abortion issue is good for a campaign, and that is what this shouldn't be about. I am not going to let our military be politicized. I want our military to be the strongest and deadliest it has ever been. But I also want the Administration to follow the law. As long as I have a voice in this body, Congress will write the laws. Not Secretary Defense, not the Joint Chiefs.

General, you said nothing is more expensive than preparing for war or fighting a war. I truly agree. That is the reason, if we want something to spend money on, let's pass it and let's put it in the NDAA.

You know, I represent Alabama, but I also represent everybody in this country. Everybody, all 320 million. All of us do. Y'all represent the military. But you also are responsible and represent every citizen in this country. That is the reason this country is so strong and we all need to understand that.

Get on the same page. I am willing to work with you. I am not here to fight. I am here—we are all on the same team, and I want to work with you to make this happen. Thank you, Mr. Chairman.

Chairman REED. I think it is appropriate that the Secretary and, or the General—need to respond.

Secretary AUSTIN. Well, thank you, sir, and first of all, let me just say thanks for the support you have given us to this point. I really implore you to reconsider and allow our nominations to move forward. It will make a significant difference for our force. Just to address a couple of things that you mentioned.

First of all, you said that I had our troops focus on rooting out extremism and nothing could be further from the truth. You know, each of our units, troops spent a couple of hours talking about a number of things.

Now, we have always had regulations against extremist behavior. You have heard me say that 99.9 percent of our troops are focused on the right things each and every day. But in this case, a small set of actions can have outsized impact.

On the vaccine mandate, the vaccine mandate, in my view, saved lives and it saved a lot of lives. So, you know, I—we don't see a strong correlation between vaccine mandate and recruiting. We don't see that because we have done the surveys that indicate that that is just not true, that there is not a strong correlation.

Now, on the issue of providing non-covered reproductive health care for our women, I would just say, Senator, almost one in five of our troops are women and they don't get a chance to choose where they are station.

So almost 80,000 of our women are stationed in places that—where they don't have access to non-covered reproductive health care, and I heard from our troops, I heard from our senior leaders, I heard from our Chiefs and also our Secretaries.

This policy is based on strong legal ground, and it is not a law, it is a policy, and so, you know, we obviously don't pass laws in the Department of Defense. But again, I assure you that we have great respect for this body, Congress, and we will do everything within our power to make sure that we continue to work with Congress.

Again, you supported us in a number of ways, Senator. I am personally grateful for that support, and I know my colleagues are as well. Thank you.

Chairman REED. Let me recognize Senator Manchin.

Senator MANCHIN. Thank you, Mr. Chairman. I want to thank all of you for your service and for being here today to testify. I first want to say to General Milley, I want to take a moment to thank you for your 43 years of service, the commitment to our country, and the dedication and sacrifice your family has made for that with you able to serve. I look forward to you have an enjoyment retirement and your second career.

I know whatever it will be, it will be something special, and we look forward to continuing to work with you. Secretary Austin, multiple sources, including retired General Officers, and National Defense Industrial Association, American Enterprise Institute, and your colleague, Mr. McCord, have all recognized the damage failing to pass a budget on time has both in our national security and the taxpayers.

What I am trying to get to, and Mr. McCord, no one knows better than you how damaging delays and CRs [continuing resolutions], have they been. Previously, you noted that from fiscal year 1991 to 2010, the average delay for defense appropriation was 29 days. That was between 1991 and 2010, and that has since ballooned out to 118 days.

Also, we are talking about the American Enterprise Institute. They threw out a rough estimate of $200 million per day, $200 million per day under the latest continuing resolution that covered the start of fiscal year 2023. That has a total of $18 billion.

So, I guess what I am asking is both of yours and Mr. McCord's commitment to get Congress, all of you, to do accurate. I mean, I know you come in here and you preach the high heavens, and we seem to not take it seriously at all.

We are talking real dollars now, real dollars, and they think that basically the budget keeps ballooning out of sight and we have no oversight whatsoever. If we as Congress just did our job on time, we are told that overall, you could save anywhere between 5 to 10 percent of the request you have. That is $40 to $80 billion a year. Is that an accurate statement?

Secretary AUSTIN. I think so, and I defer to Secretary McCord for exact figures——

Senator MANCHIN. Well, let him respond also.

Secretary AUSTIN. But you are absolutely right, Senator, and you heard me say in my opening statement that the best way that Congress can help us in this year going forward is to try to get an on-time appropriation done. You know, without that, we can't do new starts. We can't do a number of things, and you can't get that time back. You know, it is gone, and so that puts us further behind in terms of our competition with adversaries like China.

Senator MANCHIN. Secretary McCord.

Mr. MCCORD. Yes, I would concur. Your figures are accurate, Senator. As the Secretary said, we can't buy back time with money, and that goes on the readiness side if a missed training rotation due to shortage of funds.

But especially harmful on the contracting side, where we have got areas like the triad where we are trying to move the bomber into lower production, that we can't take those next steps under CRs, as you know, and that is the biggest lost opportunity when it comes to moving forward. We are very constrained legally.

Senator MANCHIN. So basically, we have nonproductive money that we are appropriating that is used basically to make up for the inefficiencies of Congress because of our budget process.

Without you having to say anything or confirm that, that is what I am taking away from this little conversation that we have had. I am doing everything I can to make sure we do our job on time. You know, by April 1st, by law, House and Senate was supposed to have a budget.

By April 15th, by law, we are supposed to have one reconciled. By September 30th, by law, we are supposed to pass. That would change the course of what we are doing how we are spending right now, tremendously, rather than cutting anything, just being efficient. So, I would hope that we would all take that seriously.

General Milley, as you know, since the beginning of the Putin's illegal war in Ukraine, the United States has provided over $76 billion in justified funding to support Ukraine in both the military defense of their people in freedom, but also in humanitarian and infrastructure support.

Can you speak to your confidence in the United States, NATO, Ukrainian weapons accountability, and possibly elaborate on the Joint Strategic oversight plan that was announced by this year by the Inspector Generals of the DOD, State Department, USAID. You know, they all——

General MILLEY. As you know, Senator, we do not have any uniformed troops or civilians, for that matter, accompanying Ukrainian forces in the front line. We do have folks working out of the embassy, so they are working at the Ministry of Defense level, and that is as far as our own hands-on accountability goes.

We do have some other means through reporting that the Ukrainians report to us, and I will be happy to talk about that in a classified session. But the there are some means and mechanisms of doing some accountability. It is not as rigorous as you might think. But I think the biggest way to measure the accountability is effectiveness on the Russian forces.

These are anti-tank munitions, this artillery is having a devastating effect on the Russians. As you know, publicly, the Russians have well over 200,000 casualties. Their offensive aspirations have come essentially to a halt.

Their capabilities have been—their ground forces have been absolutely impaled on this Ukrainian bayonet, so to speak, and that is largely due to the resources that the United States and other countries have provided. Although we don't have by name DODIC [Department of Defense Identification Code] sort of accountability, shell number accountability, you can see the accountability on the battlefield.

Senator MANCHIN. Yes, my time is running out. I would love to ask you about the AUMF [Authorization for Use of Military Force], but I am sure you probably talked about the AUMF before I got here. But thank you so much. I appreciate it.

Chairman REED. Thank you, Senator Manchin. Senator Schmitt, please.

Senator SCHMITT. Thank you, Mr. Chairman. Secretary Austin, by the way, for both of you, thank you for your service to the country. We really do appreciate it. I do. I know I do. The folks back home do. Secretary Austin, I wanted to ask you a couple of questions sort of along the lines of what Senator Tuberville asked.

You mentioned earlier that you didn't want to spend a lot of time and you thought that there was a drag on our force, and spending money on things that don't make us a fighting force. You just mentioned that you don't get the time back.

With the stand down day to address extremism, that cost the military and taxpayers nearly 5.4 million man hours. As we talk about recruitment, I think it is completely naïve to, when we talk about the numbers, to separate the challenges that we have now from the politics, the divisive politics that have been injected now into the military.

The military stands as this great meritocracy where people can achieve great things. But by infusing divisive DEI trainings, by infusing abortion politics, by infusing COVID vaccine mandates, it has created division in the ranks.

We have heard from those military members, and I sent you a letter last week, and I want to ask you, we talked about in the letter, referenced the $86.5 million for dedicated diversity and inclusion activities. I want to ask you here today, how many DEI related positions exist in the Department of Defense?

Secretary AUSTIN. I can't speak to that specific number. I will take that question for the record, with your permission, Senator.

Senator SCHMITT. Sure.

Secretary AUSTIN. In terms of that number, it is a small percentage of an $842 billion budget. I would just further point out with respect to DEI, I think, you know, Senator, that Congress requires that we have a DEI program. In the 2020 NDAA, it states the Sec-

retary of Defense shall design and implement a 5-year strategic plan for diversity and inclusion in a Department of Defense.

Senator SCHMITT. Yes, I don't—but I don't know what these activities are, which is the purpose of the letter. I don't know what materials are being submitted. We looked, so hopefully the response to the letter will be in fact be responsive to what actually is being pushed with these so-called trainings. Then I do want to ask you, so there were nearly 17,000—well there are over 8,000 military men and women who lost their jobs because of the COVID vaccine mandate. Is that correct?

Secretary AUSTIN. That is about right.

Senator SCHMITT. Okay. So, when we talk about recruitment challenges, are you actively going after to try to get those 8,000 people back?

Secretary AUSTIN. They have the ability to——

Senator SCHMITT. Well, right. No, I am asking, what are your efforts?

Secretary AUSTIN. They have the ability to reapply for readmission——

Senator SCHMITT. Are you recruiting these folks?

Secretary AUSTIN. We are not recruiting, but they have the ability to——

Senator SCHMITT.—Sayonara 8,000 well-trained folks.

Secretary AUSTIN. We are recruiting new recruits.

Senator SCHMITT. Okay, and so, what happens now to the remaining several thousand who didn't get the vaccine? Are you intending to fire them as well? There are several folks that weren't immediately dismissed who refused the vaccine. They are still in the military. Are you planning to fire those folks as well?

Secretary AUSTIN. The vaccine mandate, Senator, has been rescinded.

Senator SCHMITT. So, you don't—now, even though they were refusing when you did have the policy?

Secretary AUSTIN. That is right.

Senator SCHMITT. So, your commitment here today is those folks are not going to lose their jobs.

Secretary AUSTIN. Not for a vaccine mandate, Senator——

Senator SCHMITT. Okay. Well, I would submit that with——

Secretary AUSTIN. If I could, like would like to go back to the——

Senator SCHMITT. Sure.

Secretary AUSTIN.—5 million hours that you mentioned, and I would like to ask the chairman, who submitted that number, where that number came from.

Senator SCHMITT. We would be happy to back it up. If you take the stand down day by the number of folks that didn't work that day, that is where we get the numbers. So, we would be happy to followup specifically. I do have a question——

Secretary AUSTIN. That is not accurate, Senator.

Senator SCHMITT. Okay. Well, how—maybe you can answer, how many man hours were sacrificed that day? You just testified you can't get those hours back. How many hours were sacrificed on the stand down day?

Secretary AUSTIN. Let me ask you and tell you where the numbers came from.

Senator SCHMITT. Okay. Well, maybe you can get us those numbers when you respond to the letter also.

Secretary AUSTIN. As simple as this. You know, when asked to provide that number, his approach was, there are 2.1 million troops, each one each troop spent 2 hours, and that is where the number comes.

Senator SCHMITT. Okay. Well, you can't get the time back, right. Whatever that number was, you can't get that time back. General Milley, I do want to ask you a question, because I am limited on time. I do want to ask you about the Philippines, which I think you had mentioned in your previous remarks about that strength, that relationship continues to grow, which I personally think is critical in the Indo-Pacific.

Can you talk about what some of those efforts, where you think that is headed? I think as we, you know, obviously the allies that are talked about the most, Japan, Australia, and India, but I think the Philippines are critical. Could you talk about the strategic value of strengthening that relationship?

General MILLEY. Again, Senator, but just a point of clarification. It is 2.1 million, 2 hours, in fact, 2 hours per person. That is with where the 5.4 million. That is out of 2.8 billion man hours available, in fact, on a 10-hour workday, 5 days a week for the U.S. Military.

Senator SCHMITT. Okay. Well, whether we are talking about dollars or hours, millions still matter. No, no, I folks, I represent they a million is a big number.

General MILLEY. I am just saying where the math came from, and on the Philippines, but in broad—more broadly than the Philippines, generally the Western Pacific. It is my view that China is, you heard it in the opening statement, is trying to become the regional hegemon within perhaps 10 or 15 years or so.

Part of that, of course, is putting the Philippines and other countries in the region at a disadvantage. Those countries want the United States presence there. They clearly do. There is a really an underreported arms race going on in the Western Pacific right now. These countries are arming themselves up and they very much, with very few exceptions, want the United States there.

That is why the Secretary traveled to the Philippines. That is why we are looking at access, basing, and oversight. That is why we are looking at a repositioning in the Western Pacific. It is a design there to be forward deployed in order to deter armed conflict with a great power, great power being China in this case, and deter Chinese aggression, not only in the Western Pacific, perhaps elsewhere.

So, these are all linked together, tied together. There are many other initiatives ongoing by the services and also by other countries as well. But it is really critical and it is really critical that we get it done right, and we need to move out with a sense of urgency because the next 5 years, I think, are going to be determinative of really what comes in the future with our relationship with China.

Senator SCHMITT. Thank you, General.

Chairman REED. Senator Peters, please.

Senator PETERS. Thank you, Mr. Chairman, and to the three of you, thank you for your testimony here today and thank you for the

work you do. I also want to begin by commending the Department's efforts to invest in and incentivize funding to build semiconductor manufacturing facilities and advanced research and development activities at both the national and the regional levels.

Under Secretary McCord, could you speak to how the fiscal year 2024 DOD budget request takes advantage of the CHIPS Act [CHIPS and Science Act of 2022] that Congress passed recently, that funding, and makes the necessary investments to ensure that we have both a resilient and a robust domestic microelectronics manufacturing ecosystem for both state-of-the-art as well as legacy chips.

Mr. MCCORD. Thank you, Senator. First, I just want to say that the Department really appreciates congressional leadership on the CHIPS Act. It really speaks to the recognition of the whole-of-government approach needed with China.

CHIPS is separate from our budget in the sense that it is now a stand-alone authorization. We had prior to that in the 2022 and 2023 budget started a pretty robust microelectronics effort, Under Secretary Austin, that was really tied to defense specific capabilities like radiation hardening.

What we are doing with CHIPS on top of that then is really that broader industrial base, the fabrication, labs to fabs. I understand that that is now—we are now in our request for solution source selection for the proposals that went out in that first year of CHIPS that Congress created last year.

So, we are moving out now with source selection to actually build out that capability. Then that—again, that sits on top of the more defense specific microelectronics, which is over $2 billion in our budget.

Senator PETERS. Thank you. Secretary Austin, the development of Taiwan's reserve military capacity is without question a key component of ensuring that their military is well prepared to deter, and if needed, to defeat a potential PRC invasion of the island.

However, I remain concerned that the Department is not sufficiently addressing the hardships that exist at the authority and funding level with increased mil-to-mil and civ-mil interactions between the United States and Taiwan. Current policy restricts the level of interaction that United States Forces, particularly the National Guard, have with Taiwan, both CONUS [Contiguous United States] and OCONUS [Outside the Contiguous United States].

Additionally, current restrictions do not allow the Guard to consistently engage with Taiwan under the same authority that the State partnership program utilizes. Rather, other authorities must be utilized to justify and to fund National Guard's involvement in this strategic relationship.

Essentially, what is happening is creating this maze of funding and authorities that restricts consistent engagement that is so important. It creates undue processes and procedures to coordinate and fund cooperation.

So, my question for you, sir, is how is the Department reassessing the relevant authorities and lines of funding to help streamline the National Guard's ability to support security cooperation efforts with Taiwan?

Secretary AUSTIN. We are taking a hard—thanks for Senator. We are taking a hard look at all the things that we can do to increase the capability in the reserve forces. You are right, Senator, this is a—this is critical for them going forward.

Our guard has done amazing work with other countries across the globe. Most recent example, as you know, is the work that they did in Ukraine prior to this invasion, and so that kind of engagement, we think, is critical. So, we are going to continue to find ways to make sure that we are we are helping as much as we can in accordance with the Taiwan Relations Act.

We will relook all of our policies and authorities to make sure that we can streamline this as best possible. In the meantime, we are going to continue to do what we are doing to increase our capability.

Senator PETERS. Secretary Austin, on Saturday, Russia accused Azerbaijan of violating the cease-fire, which ended the 2020 war with Armenia. This comes as Azerbaijan has blockaded the Lachin corridor, and more than 3 months—for more than 3 months, leading to what is a humanitarian crisis in Karabakh.

I recently wrote to you and Secretary Blinken regarding the use of section 907 waiver authority and the potential effects of U.S. support in that conflict. My question for you is the military, is United States military aid supporting the Azerbaijani military in enabling their aggression against Armenia?

Secretary AUSTIN. We are clearly not enabling aggression, Senator. As you know, we have had a relationship with them and we have provided assistance in some cases, but in all cases, in use monitoring is really important and we have been focused on that. So, we have we have taken a responsible approach to this, and again, we do not support, will not support aggressive activity.

Senator PETERS. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you very much. Senator Peters. Senator Mullin, please.

Senator MULLIN. Sorry, my microphone came off there. Thank you, Chairman, and thank you all for being here. General Milley, I want to thank you again for the phone call and the conversation we had yesterday. I greatly appreciate your time on that. As we stated in that conversation, I wanted to have something for the record.

Before I begin with the rest of my questions, I would like to touch base on the disastrous withdrawal from Afghanistan with American troops. Will you commit to providing a complete after-action report on the withdrawal to Congress that provides accountability and transparency for the American people, for the closure of lives that were lost and the people left behind?

General MILLEY. Absolutely, and the Secretary of defense has directed that we do that, and that is done by the Joint Staff in CENTCOM as well. But also, the Department of Defense is doing that, so I absolutely commit to that.

Senator MULLIN. Thank you. General, as you know, the industrial base is going through some changes right now.

Prior to the Russian invasion of the Ukraine sites, or invasion of Ukraine, sites like McAllister's Army ammunition plant, we are planning on seeing to see a decrease in productivity.

Since this invasion, there's obviously been a new emphasis on where we are moving. Can you speak to what we are seeing with plans like McAllister and the ammunition depots, what the plan is and the future looks like for the industrial era?

General MILLEY. Yes, the—thanks, Senator. The defense industrial base, as the Secretary said, has had several different sessions to include the SecDef and others within the Department to really go over the defense industrial base in some detail.

One of the big lessons coming out of Ukraine is the incredible consumption of conventional munitions and the conduct of what is really a limited regional war. So, a great power war, if that were to ever happen, God forbid it does, the consumption rates would be incredible.

The Secretary tasked us to go back and review all of the various operational plans and the COCOMS to determine if our estimates are correct, because if those estimates then feed into these budgets to buy the ammunition, that study is ongoing.

But we can tell you that, for example, 155 ammunition, which is in high demand in the Ukraine fight, we report out daily in a written report to the Secretary of Defense on all the various ammunition statuses that we have.

I won't go over that in an open session, but in a closed session, we can do that if you would like. The bottom line is the defense industrial base is critical to the defense of the United States, and our ability to produce, manufacture and produce the logistical capability, especially munitions, is fundamental.

You mentioned McAllister. I had an opportunity to visit McAllister. That is an incredible facility with incredibly skilled workers that are highly motivated and it is really a one of a type facility. It is an amazing place.

Places like that exist elsewhere in the United States as well, and we need to pay great attention to that defense industrial base if we are ever going to successfully compete and hopefully not actually have a war with the great power.

Senator MULLIN. What is interesting is the relationship between the public and private service there. A lot of our industrial areas around the country, especially in McAllister, where we have the public sector working with the private sector and delivering missions on time.

I think there is a great amount of pride there, that I think the communities that have the ability and actually the desire to help are standing ready, and McAllister is no different.

General MILLEY. That is great. The workers there are off the charts incredible. Skilled workers, highly motivated.

Senator MULLIN. Focus on Fort Sill just a second. General Rainey stated recently, the Army Futures Command will be reviewing their use of cross-functional teams. Fort Sill in Lawton, Oklahoma is currently home to two cross-functional teams. As the original architect of this system, while serving as Army Chief of Staff, can you speak to the usefulness of the future of these programs, sir?

General MILLEY. Yes, they the Army Futures Command and the priorities that the Army laid out for modernization 6, 7 years ago are still what they are working on. They have had the most suc-

cessful modernization programs they have had in decades as a result of that Futures Command.

Key to that was the cross-functional teams led by General Officers in each case. Those cross-functional teams were designed intentionally to be temporary until those programs are brought online. For example, long range precision fires, feature vertical lift, the next generation combat vehicle, those are programs that once they get brought online and brought into the force, those cross-functional teams will go away.

But it has been a highly successful and innovative organizational concept. What General Rainey is talking about now is the next step, getting it to the next level, because those programs are well underway. So, he is not talking about getting rid of those CFTs. He is talking about looking at the next set of CFTs.

For example, all the main sensing would be one. There is several of these others that they are looking at, and they have not made any decisions yet. The Army hasn't. But Secretary of the Army will make those decision in due time.

But it is an excellent program, it is an excellent Command, and they are really moving out very, very well in the modernization of the U.S. Army.

Senator MULLIN. Thank you for clarifying that. I yield back.

Chairman REED. Thank you, Senator Mullin. Senator King is recognized and will take over as I go vote, and the vote is on, for those who have not yet voted.

Senator KING. Thank you, Mr. Chairman. Secretary Austin, I just want to clarify a couple of things about vaccines and vaccine mandates. I am told that a routine mustering into the service requires something like 13 vaccinations. Is that accurate?

Secretary AUSTIN. I think it is nine, Senator. Depending on where you are going. At any one point in time, that number can increase up to about 13, sir.

Senator KING. Depends on the on where the soldier, sailor, marine, or guardian will be assigned.

General MILLEY. Right.

Senator KING. That is just routine. That is part of the military for as long as we can remember. Is it true, General, that—or sorry, Mr. Secretary, that General Washington mandated vaccination against smallpox in the Continental Army at the time of the Revolutionary War?

Secretary AUSTIN. That is true.

Senator KING. The purpose of this vaccination mandate had nothing to do with politics. It had to do with saving lives and maintaining readiness, did it not?

Secretary AUSTIN. That is exactly right.

Senator KING. I remember being on a call when we were in sort of lockdown here with regard to the USS *Teddy Roosevelt,* where the—in early March, April, and May 2020, the virus ripped through the ship.

I think over 1,000 people tested positive because of the nature of their close military proximity. Doesn't that make vaccinating against an infectious disease all the more important in the military?

Secretary AUSTIN. To me and to all of my colleagues, it absolutely does, Senator. I told chairman a number of times that in my lifetime, the only thing that I have seen that has been able to disable a carrier is this vaccine.

Senator KING. It is interesting because General Washington said that, when it alerted John Hancock about the vaccine, he said, this is the most dangerous thing to our troops, more dangerous than the sword of the enemy.

Exactly what you just said. General Milley, I want to thank you for the integrity that you have demonstrated in your position. I remember, and I am sure you, too, to questioning you at your confirmation hearing.

My question was, will you tell the truth, will you give your best military advice, even if it doesn't suit the leadership that you were working with at the time? You have done that, and I want to thank you for that and for the extraordinary service that you have provided to this country throughout your career, but over the last 4 years.

I appreciate your keeping your word to me and this Committee from the date of your confirmation. General Austin, allowing the intelligence about the imminence of the Russian invasion was, I think, a brilliant move by the Administration at the beginning.

However, why are we telling everybody in the world what we are sending and when we are sending it? This morning I learned on National Public Radio, and I suspect Putin did, although I don't know if he listens to National Public Radio, how many tanks have arrived in Ukraine and when they are going to be deployed. Why do we—why do we broadcast that information?

Secretary AUSTIN. Well, we certainly try not to, Senator. As you know, as various countries provide contributions, they are proud of those contributions, and sometimes we find our colleagues providing a bit too much information. But I——

Senator KING. You understand my question?

Secretary AUSTIN. I do. I do. When I meet with our colleagues here, and I meet with them every month, this is a point that I will continue to drive home that the Russians are absolutely focused on where this equipment is and what it is doing. So, we have got to help ourselves.

Senator KING. I fully agree. A couple of questions. I am going to submit for the record about ISR [Intelligence, Surveillance and Reconnaissance] capability, both in NORTHCOM and SOUTHCOM, which was in their unfunded priority list. But you can make a strong case that should have been in the base budget if ISR is so important, particularly in counter-drug, where people are being killed every day. I think my calculation is about 20 people have died in this country of overdoses since this hearing started this morning.

To not have sufficient ISR and resources to interdict what we can find, I think is a misallocation of resources. I am going to submit that for the record. Finally, General Milley, probably the word that has been used the most today is readiness.

The question I have is, are we preparing for the right war, in terms of the change nature of war that you have seen over the course of your career. If a conflict comes, it is going to start with

cyber, electronic, directed energy, space. Are we adequately taking account of the changing nature of conflict so that we are not preparing for the last war, but for hopefully there won't be another one, but if there is another conflict, that is where our effort should be going?

General MILLEY. Really briefly, Senator, I think we are in a pivotal period here, a transition period, where we have a method of war that is based out of an industrial age sort of thing, and we are moving to a different operational environment sometime in the future.

So, think about things like robotics, artificial intelligence, hypersonics, cyber. There is a wide variety of technologies that are coming at us very, very quickly. And the country that maximizes and optimizes those technologies for the conduct of warfighting is going to have a decisive advantage, at least at the outset of the next war.

Now, at the same time, you can't throw the baby out with the bathwater. We are in a transition period, so we are still going to need ships and planes and tanks, et cetera. But we are in that transition period, and I think this budget, and the last one, and future budgets are going to have to move us in the direction of modernizing the force, transforming this force into a future operating environment that is probably not very far away, probably about 10 years or so, and we need to move all with a sense of urgency.

Senator KING. Thank you. I agree, and the R&D [research and development] emphasis in the last budget, in this budget, I think is one of the most important policy directions that this budget represents. On behalf of the Chairman, Senator Sullivan.

Senator SULLIVAN. Thank you, Mr. Chairman, and I want to thank our witnesses, General Milley, in particular, for your service, and General Austin, as well General—I am sorry, Mr. Secretary. I appreciate you highlighting the suicide issue in your opening statement. As you know, that is hitting the forces in Alaska particularly hard.

Still having a hard time getting our arms around that. It is still happening, so working together on that one is a high priority of mine, and I appreciate you putting a lot of attention to that. I first want to begin by quickly covering an oversight issue deeply concerning to Members of this Committee, which was an abuse of the President's Commander-in-Chief authority when he gave a campaign speech last fall with Active Duty marines as political props.

This wasn't a speech about Veterans Day or Memorial Day or speech about the heroic actions of the marines in Iwo Jima or the chosen reservoir. It was the most partisan political speech of the President's 2 years in office where he disparaged tens of millions of Americans that he claimed threaten the Republic, did not respect the Constitution, on and on and on. Really harsh partisan campaign speech, and there flanking the President of the United States were two Active Duty marines.

Shameful, outrageous, infuriating. I have raised this issue with both of you and other military leaders and how inappropriate this image was to our republic. General Milley, you have talked about how the military needs to stay out of politics. I assume in good faith on both of your parts that you didn't know this.

But what I want is a commitment from both of you the next time some White House staffer thinks it is a good idea to politicize the military with a political speech like this, with two Active Duty marines or anyone else standing by the President, that both of you will put your foot down and not only say no, but say hell no. Can I get your commitment on doing that to this Committee?

Secretary AUSTIN. Senator, I think you know that I am opposed to any type of politicization of the military, and I will not comment on my President's actions.

Senator SULLIVAN. You think that was appropriate, Mr. Secretary?

Secretary AUSTIN. Again, Senator——

Senator SULLIVAN. Do you think that was in your personal opinion, General Milley—you have been speaking about this. Look, I thought both you were just—you guys are going to go, no. I have got a bunch more questions. But if we are debating this, let's have the debate. Do you think that was appropriate, General Milley?

You have spoken about not politicizing the military. That is just outrageous, and by the way, Democrats and Republicans agree with me. So, this isn't even that controversial. The President made a mistake and politicized—go read the speech. What do you think, General Milley?

General MILLEY. I am firmly committed to a nonpartizan, nonpolitical military.

Senator SULLIVAN. Okay, so if the White House has an idea to do something like that again, will both of you commit to this Committee to tell whoever the staff is, hey, don't do that. Bad idea. Marines shouldn't be——

General MILLEY. I will speak for myself. I have been asked in the past in two different administrations on things just like that, and I have always said, keep the military out of politics.

Senator SULLIVAN. I am surprised we are having a debate on this. Unfortunately. I am burning a lot of time. It is an important issue, though. I think we all would agree. I am going to next turn to Senator Wicker's point on the budget. Budgets are a reflection of an administration's priorities.

This Administration is now three different times in a row, submitted inflation adjusted cuts to the Department of Defense, while many other Federal agencies have gotten double digit increases. This was the 2022 budget. You see, the DOD was last, second last with a 3 percent cut. The 2023 budget, same kind of issue.

We are down there last. That was actually a 4 percent cut. In this budget, once again, one of the down here with 3 percent cut, while other agencies, EPA almost 20 percent. Both of you said this is the most dangerous time since World War II. This current budget shrinks the Army, shrinks the Navy, shrinks the Marine Corps.

Doesn't that embolden our allies like Xi Jinping and Putin, not deter them? General Milley, in your personal opinion, do you support a budget that actually shrinks three of the four services, particularly the Navy? The Congress here has been very clear that we want to grow the Navy. The Chinese are looking at our Navy naval fleet and we are shrinking it.

That is the budget. The President probably assumes correctly that this Committee will bump it up significantly. But do both of you support a budget that shrinks three of the four services?

What would you say to the issue of emboldening our allies when they see budgets like this that we 3 years in a row have to rectify by adding significant funding to them. I will ask both of you, gentleman.

Secretary AUSTIN. Well, Senator, first of all, let me thank you for your continued support for DOD. We really appreciate what you and your colleagues have done over the years. I think you heard me say earlier that we went through great pains to link our budget request to our strategy.

We are going after the capabilities that we think we need to be successful in any endeavor, and so, I am satisfied that this budget gives us what we need. It is an $842 billion budget. Again, I think it allows us to go after the right capabilities.

Senator SULLIVAN. General.

General MILLEY. Senator, as I said in my opening statement, I think the uniformed military can defend this country with an $842 billion budget. That is a lot of money, and I think if we put it in the right place against the right priorities, we will be able to adequately defend this country.

Senator SULLIVAN. In your personal opinion, do you agree with shrinking the Army, Navy, and Marine Corps?

General MILLEY. The size of the forces—I will go one into one here. When I was Chief of Staff of the Army, I had advocated for about a 525 to 50 size ground——

Senator SULLIVAN. This budget takes it to 450.

General MILLEY. Right, and so, I advocated for that because my analysis of future combat indicated that. This strategy, though—this is a strategy informed budget. This strategy and starting under General Mattis, or Secretary Mattis and now Secretary Austin, this strategy takes us to an essentially a one war strategy, a one war strategy with a main effort being China.

So, the question is, what forces are going to be required to confront or potentially fight China? I think the Army and Marines definitely have a role to play, but the weight of the effort is going to be the Navy and the Air Force—the Navy and the Air Force. Senator Sullivan: Budget shrinks the Navy.

General MILLEY. It does buy a couple of ships for a temporary period of time. I talked to the CNO [Chief Naval Officer] last night at length about this to make sure that I was clear on the Navy piece of it. The ships that are being decommissioned and divested of are having significant maintenance—in fact that the ships for the amphibs, they have been in the yard for years. They are costing way more money just a repair than are worthwhile.

So, they are trying to shift to the next generation of amphib. You will see the curve, I think, when they submit their shipbuilding plan, you will see the curve going up in the not-too-distant future. So, there is a temporary downward spiral of a couple of ships in the overall shipbuilding program.

But this budget buys nine. If you are down two, the net effect is you down two ships out of a 296 ship Navy. Then it goes down to 293, and then it starts coming back up. Now, is that huge? I

think the capability of those ships matters. As we all know, the capability of our ships are different than the capability of the Chinese ships.

I know that the Chinese have a lot of ships. However, we not only have the United States Navy, we have the United States Navy working with the Japanese Navy, working with the Australian Navy, working with the British Navy, work with the French Navy.

If you start adding up these navies, China is not only outnumbered, but they are outgunned, and in terms of capabilities, if you look at just what I think is the most lethal capability in the United States Navy today is the submarine.

Our subs, the Chinese Navy or the Russian Navy are not even in the same ballpark as our submarine force. Our submarine force can bring people to their knees just by themselves. So, our Navy and this budget—we never have enough things that we always—we always want something else. But this budget adequately protects the American people.

I am not going to—I can't compare it against the rest of the President's priorities. But this $842 billion budget buys a lot of kit, a lot of training. We are focused on two things, lethality and readiness, lethality and readiness, that is all we do every day. 24,000 live fires last year. The 24,000 of those—you talked about a continuing—I am sorry, Senator.

Senator SULLIVAN. No, no, I thought it was a good answer. Thank you, Mr. Chairman. Mr. Secretary, General, appreciate your service. Again, thank you.

Chairman REED. Thank you, Senator Sullivan. Senator Duckworth, please.

Senator DUCKWORTH. Thank you, Mr. Chairman. Mr. Chairman, earlier this month a former soldier was sentenced to 45 years in prison for attempting to murder U.S. servicemembers, for attempting to provide material support to terrorists, and illegally transmitting national defense information.

In fact, Mr. Metzler, the convicted gentleman, provided sensitive details about his unit, including information about its location, movement, and security to members of the extremist organization Order of the 9 Angles, a white supremacist, neo-Nazi and pro-jihadist group.

Mr. Chairman, I ask unanimous consent to enter into the record a RAND report dated 2021 that is entitled Reducing the Risk of Extremist Activity in the United States Military.

Chairman REED. Without objection.

September 2021

Perspective
EXPERT INSIGHTS ON A TIMELY POLICY ISSUE

MAREK N. POSARD, LESLIE ADRIENNE PAYNE, LAURA L. MILLER

Reducing the Risk of Extremist Activity in the U.S. Military

In recent years, news headlines have highlighted the involvement of current or former U.S. military personnel in protest violence;[1] supremacist groups;[2] the January 6, 2021, insurrection at the U.S. Capitol;[3] and other forms of violent extremism spanning different political and ideological spectra.[4] The threat of extremism is not new, but the proliferation of social media has made it easier for radical ideas to spread quickly and for extremist groups to organize, even reaching into the military community (e.g., service members, military spouses, military dependents, civilian employees, and contractors) to expand membership and gain operational capabilities.

The U.S. Department of Defense (DoD) has long prohibited service members from actively advocating for extremist activities.[5] DoD policy establishes the expectation that commanders detect prohibited activities, investigate them, and take corrective action. It also relies on commanders to help minimize the risk by intervening early, "primarily through counseling" when they observe "signs of future prohibited activities."[6] Thus, commanders have a dual mandate to enforce current policy violations and anticipate future violations by personnel. DoD policy also places great responsibility on commanders to appropriately weigh the potentially competing interests of national security; service members' right of expression; and good unit order, discipline, and effectiveness.[7]

In this Perspective, we outline a framework to help commanders reduce the risk of extremism in the military. First, we provide highlights from research on extremism, including a framework for understanding these types of activities. Second, we use this framework to outline four strategies for reducing the risk of extremism in the military. Third, we recommend a community-based approach that leverages existing military programs to better support commanders as they carry out their responsibilities to prevent and mitigate exposure to extremism within the military.

Key Points

- *Extremism* is a term used to characterize a variety of attitudes, beliefs, and behaviors that often are on the extreme end of the political, religious, or ideological spectrum within society (e.g., white nationalist, anarchist).
- Extremist beliefs, affiliations, and activities are constantly evolving.
- Service members, military families, and civilian employees might actively or passively associate with extremist groups.
- DoD prohibits active involvement in extremist activities, but laws place limits on what activities the military can and cannot restrict or punish.
- Current policy requires commanders to intervene when they observe extremist activities or behaviors that might lead to future extremism.
- We present a framework to assist DoD in reducing the risk of extremism in the military.
- We make five recommendations, each focusing on a community-based approach that leverages existing DoD programs to help commanders and their subordinates prevent, detect, intervene, and measure extremist activities earlier rather than later.

Seeking Identity, Meaning, and Social Bonds, Service Members Might Find Them in Extremist Movements

Recent news headlines raise questions about the extent to which and the reasons why current and former members of the U.S. military would associate with extremist movements. For example, in 2017, U.S. Marine Corps Lance Corporal Vasillios Pistolis was imprisoned over his participation in the violent white supremacist "Unite the Right" rally in Charlottesville, Virginia.[8] In another case, the government charged U.S. Army Private Ethan Melzer with conspiring to murder his fellow soldiers by allegedly sharing sensitive details about his unit's upcoming deployment with a neo-Nazi and white supremacist group to facilitate an attack.[9] In January 2021, the government arrested ousted ex-soldier and self-proclaimed "hardcore leftist" Daniel Baker, who is accused of making online threats and attempting to organize violence against fascists, white supremacists, conservative protestors, and U.S. military officers.[10]

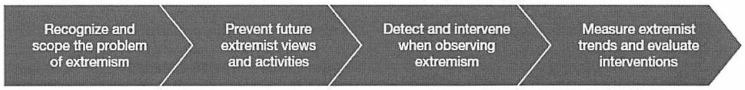
Individuals labeled as *extremists* (1) identify with beliefs and organizations that are on the far end of political, religious, or ideological spectra within a society and (2) advocate for activities that are outside societal norms and laws. These individuals often draw meaning from the

identity that they apply to themselves and others based on their group affiliations (e.g., race, gender, religion, nationality, political beliefs). Studies have identified a variety of factors that lead people to join extremist movements, such as having a passion for political change, looking for a sense of belonging, and seeking excitement.[11] One former leader of a white nationalist group claims that new members are often seeking to form a sense of identity, community, and purpose[12]—some of the same reasons that people join the military.[13] Research has identified at least four types of experiences that people tend to follow into extremism:

- *life events*: traumatic life events that prompt people to consider extremist views as a framework to understand their trauma
- *propaganda*: consumption of extremist material, including books, music, or online content
- *recruitment*: interactions with members of extremist groups that either reach out to individuals or that individuals seek out after self-radicalizing
- *social bonds*: social interactions with other members of extremist groups, especially if individuals are feeling lonely or isolated.[14]

There is no single factor that sufficiently explains why people become active in extremist causes. Often, a combination of factors leads individuals to become increasingly active in extremist activities. This ratcheting up of involvement might help people construct a new identity that is defined by an extremist ideology. Specifically, research has proposed that extremist identities become problematic when they (1) consume a large part of one's life[15] and (2) are defined by extreme hatred or prejudice toward other groups of people.[16]

Current and former military personnel might come into contact with extremist beliefs or groups on their own initiative, be exposed to those beliefs or groups online or through friends or family, or be approached by extremists seeking to recruit them.



Framework for Reducing the Risk of Extremism in the Military

Figure 1 shows a four-part framework we use to categorize the ways in which the military could combat extremism. We first provide an overview of the framework, and then we examine each element more closely. The first part is to recognize the problem of extremism and define *extrem-*

FIGURE 1
Framework for Reducing the Risk of Extremism Within the U.S. Military Community

ist activities. The military has already done this through policy, public statements by military leadership, and a one-day "stand down" of activities to discuss extremism in the military.[17] Some experts argue that the scope of extremism should be narrow, with the goal of isolating the most-dangerous members participating in fringe elements of these movements.[18] Others argue that a broader scope can help identify those supporting extremists or provide an early warning about those at risk of becoming extremists. Our proposed framework focuses on addressing these early warning signs of extremism.

Second, the military could better leverage existing violence prevention programs to prevent service members from becoming involved with extremist groups. Some examples of existing prevention resources within the military are chaplains, mental health counselors, the Family Advocacy Program, and Military OneSource.

Third, this framework focuses on detecting extremist activities and designing interventions to respond to them. The military has existing authorities to detect broad patterns of extremism in its ranks; for instance, the military is authorized to coordinate with civilian law enforcement agencies, conduct defense criminal investigative services, and track extremist activities online. Leveraging existing resources designed to support the military community could help commanders detect early signals that might lead to future extremist activities, and then the commanders could intervene. People in existing programs, such as chaplains, counselors, and other sources of support, might become aware of emerging extremist groups, ideologies, rumors, and misinformation being circulated. Although those sources cannot violate their professional and ethical codes or standards for confidentiality, privacy, and the protection of sensitive health information, they could be encouraged and provided with a means to share general information about those trends so commanders could address them across the population at large.

Finally, our framework includes measuring extremist activities and using the results to inform the evaluation of programs designed to prevent, detect, and intervene when commanders become aware of signs of extremist activities. DoD currently tracks bias motivations in the Defense Incident-Based Reporting System (DIBRS), but it might need to reevaluate and revise these reporting codes in DIBRS and consider whether alternative forms of data collection would be useful to measure extremist trends in the future.

Part 1. Recognize and Scope the Problem of Extremism

The first part of our proposed framework is to recognize and define the problem of extremism. Military leadership has publicly recognized this problem, as is evident from the policies against it, recent statements made by U.S. Secretary of Defense Lloyd J. Austin III and various senior civilian and defense leaders, and the 2021 DoD order for commanders to conduct a one-day "stand-down" to discuss extremism with personnel.[19]

Defining the problem of extremism has been a challenge, however, because there is no widely accepted set of criteria for making that determination. In an attempt to draw the line for legal purposes, U.S. courts have tried to balance freedom of expression with the need to protect the public from disruptions and threats.[20] U.S. military courts have focused on the degree to which extremist behaviors were either damaging the reputation or public esteem of the military ("service discrediting") or harming good order and discipline, two concepts that are outlined in the Uniform Code of Military Justice.[21] The U.S. Department of Homeland Security (DHS) and the Federal Bureau of Investigation (FBI),[22] however, focus their definitions on how a particular belief system motivates someone to commit acts of violence. There are also definitions of extremism employed by private and nonprofit organizations. The Anti-Defamation League, for example, uses a broad definition of extremism that includes any "religious, social, or political belief systems that exist substantially outside of belief systems more broadly accepted in society."[23]

Historically, the military has struggled to identify and manage personnel whose beliefs might lead to future problems. During World War II, for example, the Army created the 620th Engineer General Services Company as a holding unit for personnel, many of them German-born, whom commanders suspected of being disloyal to the United States.[24] During the Vietnam War, basic military functioning was undermined by racial conflict within the ranks, some of which involved violence—including attacks against officers and enlisted leaders.[25] During the 1980s, following reports of service members involved in Ku Klux Klan activities, then–Secretary of Defense Caspar Weinberger released a memo broadening the policy against participation in hate groups, stating that active participation in white supremacy groups was "utterly incompatible" with military service, and authorizing commanders to discipline or even discharge those involved in disruptive activities.[26] Although the memo did not forbid joining these groups, the American Civil Liberties Union (ACLU) criticized the policy as overly broad.[27] In 2013, the ACLU also criticized U.S. Army Equal Opportunity training materials that characterized a variety of beliefs as extremism, including some held by evangelical Christian, ultra-Orthodox Jewish, and Ku Klux Klan groups.[28]

It is beyond the scope of this effort to develop a standardized definition of extremism. However, to further illuminate the complexity, we review select definitions from federal law enforcement agencies, DoD, and the military Services.

How Law Enforcement Agencies, the Department of Defense, and the Military Services Define Extremism

This section focuses on definitions of extremism used by selected federal law enforcement agencies, DoD, and each of the military departments as of the date this document was written. These definitions varied in scope. For example, some federal law enforcement agencies narrowly focus on the link between ideological beliefs and unlawful actions. In the U.S. military, however, the focus more broadly includes participation in activities that undermine good order and discipline or are service discrediting.

Federal Law Enforcement

As required by law, the FBI and DHS, in consultation with the Director of National Intelligence, developed definitions for terms related to domestic terrorism.[29] Their definitions for extremism are not identical to one another, but both the DHS and FBI define *domestic violent extremist* as

> an individual based and operating primarily within the territorial jurisdiction of the United States who seeks to further their ideological goals wholly or in part through unlawful acts of force or violence. It is important to remember that the mere advocacy of ideological positions and/or the use of strong rhetoric does not constitute violent extremism, and in some cases direct or specific threats of violence must be present to constitute a violation of federal law.[30]

Department of Defense

DoD policy related to extremism recognizes that "a service member's right of expression should be preserved to the maximum extent possible."[31] Furthermore, it notes that, while balancing the rights of service members, no commander should be indifferent to conduct that undermines unit effectiveness.

The policy also delimits prohibited and preventive activities. First, DoD policy states,

> Military personnel must not actively advocate supremacist, extremist, or criminal gang doctrine, ideology, or causes, including those that advance, encourage, or advocate illegal discrimination based on race, creed, color, sex, religion, ethnicity, or national origin or those that advance, encourage, or advocate the use of force, violence, or criminal activity or otherwise advance efforts to deprive individuals of their civil rights.[32]

Furthermore, the policy instructs personnel to reject active participation in criminal gangs or other organizations that advocate such prohibited views, activities, and illegal discrimination. Some examples of active participation include fundraising, demonstrating or rallying, recruiting, training, and wearing gang colors, clothing, or tattoos. The policy gives commanders authority to use a variety of administrative and disciplinary actions:

> The functions of command include vigilance about the existence of such activities; active use of investigative authority to include a prompt and fair complaint process; and use of administrative powers such as counseling, reprimands, orders, and performance evaluations to deter such activities.[33]

Second, DoD policy requires actions to prevent extremist activities. Specifically, the policy instructs commanders to intervene early (primarily with counseling) when they observe signs of potential future policy violations or actions

Current policy places a significant amount of responsibility on commanders to not only identify current violations of policies that prohibit extremist activities but also anticipate when behaviors might suggest a future policy violation.

that could undermine good order and discipline. For example, the policy states that possessing literature associated with extremist causes, ideology, doctrine, or organizations is not necessarily prohibited, but it signals that further investigations or counseling might be warranted.

Put simply, *current policy places a significant amount of responsibility on commanders to not only identify current violations of policies that prohibit extremist activities but also anticipate when behaviors might suggest a future policy violation.*

Military Departments

Military department policies reiterate key elements of the DoD policy and provide more detail for specific implementation. For example, guidance from the U.S. Department of the Air Force (DAF) prohibits personnel from active advocacy of "supremacist, extremist, or criminal gang doctrine, ideology, or causes."[34] These causes include the advocacy of "illegal discrimination based on race, creed, color, sex, religion, ethnicity, or national origin." Furthermore, prohibited causes include advocacy for "the use of force, violence, or criminal activity" that deprive the civil rights of others. DAF policy also highlights that efforts to counter violent extremism must be balanced, because "commanders must preserve the service member's constitutional right of expression to the maximum extent possible, consistent with good order, discipline, and national security."[35]

The U.S. Department of the Army policy on extremist organizations and activities, Army Regulation 600–20, which was revised in July 2020, is designed to be used in conjunction with DoD Instruction 1325.06. This Army policy prohibits extremist activities. Specifically, the revised policy clearly states that "it is the commander's responsibility to maintain good order and discipline" and notes that "every commander has the inherent authority to take appropriate actions to accomplish this goal."[36] The Army defines extremism by a variety of views that groups are advocating for, including hatred, intolerance, or discrimination based on race, sex, gender identity, sexual orientation, or ethnicity. It also includes the use of violence to deprive people of their individual rights; support for terrorism, sedition, and violence against the United States or

DoD; and unlawful violence to achieve political, religious, discriminatory, and ideological goals.

Furthermore, Army policy prohibits a wide variety of activities if associated with extremist groups; for instance, policy prohibits participating in public demonstrations or rallies, attending meetings on or off duty, fundraising activities, recruiting or training others to join such groups, holding apparent leadership roles, distributing literature on or off military installations, or receiving financial assistance from others associated with extremist groups.

Similarly, the U.S. Department of the Navy's policy prohibits participation in organizations that espouse supremacist causes. It also prohibits participation in organizations that create illegal discrimination based on race, creed, sex, religion, or national origin; advocate the use of force against the United States or subdivisions of the government; or seek to deprive individuals of their civil rights. This policy defines *participation* as conduct that is performed alone or with others (e.g., rallies, fundraising, recruiting, training) and describes the link between prohibited activities and impacts on good order, discipline, or mission accomplishment.[37]

Furthermore, the Navy's military personnel policy outlines a process for administrative or disciplinary actions for personnel who are involved in "any substantiated incident of serious misconduct resulting from participation in supremacist or extremist activities."[38] This policy describes relevant prescribed misconduct that relates to "illegal discrimination based on race, creed, color, sex, religion, or national origin" or "advocating the use of force or violence against any federal, state, or local government[s]."[39] The policy also lists various types of violations (e.g., insubordinate conduct, maltreatment of subordinates, rioting, provoking speech or gesture, assault, disloyal statements), noting this list is not exhaustive. More recently, the U.S. Marine Corps issued an order that consolidates various policies to prohibit a variety of activities, including "hazing, bullying, ostracism, retaliation, wrongful distribution, or broadcasting of intimate images, and certain dissident and protest activities (to include supremacist activity)."[40]

To summarize, the department-level policies share many of the same features, including prohibitions on extremist and supremacist ideology and active advocacy of these beliefs. These policies primarily focus on service members. All policies focus on illegal discrimination or depriving personnel of civil rights and prohibit violence against others or the government. The list of groups mentioned in these policy documents are not exhaustive, and there are a variety of potentially marginalized groups who might become targets. The policies also rely on the judgments of commanders to adjudicate policy violations, but there appears to be less guidance for commanders on how best to identify future violations and preserve service members' right of expression. We conclude that DoD, military department, and Service policies should maintain a standard definition of extremism and provide more guidance for commanders on how best to balance the rights of service members with unit functioning and national security interests. Furthermore, policy should also include guidance on a broader variety of members within the military community who might exhibit extremist behaviors (e.g., military families, military dependents, civilian employees, and contractors).

Part 2: Prevent Future Extremist Views and Activities

The second part of our proposed framework is to design programs to prevent members of the military community from associating with extremist groups or beliefs. Figure 2 outlines some of the features of extremism and proposed corresponding types of interventions. This encompasses activities within narrow definitions of extremism (labeled here as "extremist manifestations") and broader emotions, beliefs, and activities (characterized as "initial states" and "initial manifestations") that might be precursors to those extremist manifestations. The features displayed in Figure 2 are not necessarily linked as a linear process. The goal of these prevention programs should be to counsel individuals when they exhibit initial states or manifestations of extremism—two of the three attributes of extremism that are displayed in Figure 2—and to alert leaders to signs of misinformation, recruitment, and emerging groups that might be posing a threat to the military community.

The initial states of extremism include feelings and emotions, such as frustration and anger, that might not be noticed by others because they might be kept internal and are also common human emotions.[41] In the case of

FIGURE 2
Features of Extremism and Levels of Intervention

Initial states	Initial manifestations	Extremist manifestations
Internal emotions about society, institutions, culture • Anger, frustration, outrage • Dissatisfaction, distancing • Alienation, "otherness" • Revenge, hatred • Grievance, distrust, rejection of authorities and society • Disempowerment, lowered resilience to radicalization	Beliefs and actions more visible to friends, families, colleagues • Lack of participation in political processes • Negative feelings at lack of status, recognition in mainstream society • Acceptance of views that violence is acceptable, justifiable, necessary • Online interactions with extremists • Involvement in sharing extremist material	Activities often shared with like-minded others • Recruitment, radicalization, mobilization of others • Criminality to aid extremist groups • Membership, indoctrination, training in extremist groups • Terrorism, traveling to commit an act of terrorism
Prevention	**Early intervention**	**Aggressive intervention**
Preliminary prevention and detection by military community	Early and intensive intervention by military community	Aggressive intervention using law enforcement

SOURCE: Adapted from Baruch et al., 2018.
NOTE: This figure organizes three broad sets of features. It is not a linear progression of stages, and one might exhibit some or all of these features simultaneously.

extremism, however, the risk is that these intense, hostile feelings can be directed toward the wider society, culture, and authorities. Mentors and service providers, such as counselors and chaplains, can help members manage these feelings in productive ways and find legitimate channels for members to register their grievances.

Initial extremist manifestations are more-clearly visible identifiers of violent extremism—for example, dropping out of political processes and mainstream cultures, accepting extremist group narratives regarding the justification of and need for violence, and interacting with extremist groups and materials.[42] These attributes might be cause for concern for family members, military peers, or commanders, but to preserve the rights of service members, a sophisticated approach to addressing them will be needed, particularly when no policy has been violated.

Finally, extremist activities might be shared with wider groups of individuals who also hold similar beliefs. And, in some cases, these activities may cross into support, or justification, of violence that includes criminal activities.[43] These are the more clear-cut activities for which law enforcement should be contacted.

Existing military programs could augment commanders' efforts, particularly with the initial states and initial manifestations of extremism. These resources include but are not limited to chaplains; mental health counselors; Family Readiness Groups (FRGs); the Military Crisis Line; Military OneSource; the U.S. Army Family and Morale, Welfare and Recreation (MWR) program; and Air Force Community Action Boards. Behavioral and mental health resources and counseling are indispensable for identifying and countering extremism, and a majority of these programs might embrace psychosocial approaches that examine a combination of psychological and environmental factors.

Chaplains are a key line of defense for service members' existential, spiritual, or moral concerns.[44] They can be a point of referral for those in need of behavioral health care services and also provide privileged communication that other service providers would often be required to report.[45] Furthermore, perceived stigma associated with mental health treatment is a complicated barrier to seeking behavioral health interventions,[46] so some service members might be more inclined to seek out the support of military chaplains instead of counselors.

Extremist activities might be shared with wider groups of likeminded individuals and sometimes cross the line by supporting and justifying the use of violence, up to and including committing a criminal offense.

Rather than deciding to seek counseling on their own, service members might be encouraged or required to do so by their commander or other relevant personnel. One study examined how active-duty military personnel choose between options for help with emotional or mental health concerns and reported that soldiers generally seek out *civilian* mental health professionals for family and substance abuse problems, whereas *military* mental health professionals are primarily consulted for stress management, depression, anxiety, combat or operational stress, or anger management.[47]

Established in 2012, DoD's Military Family Readiness System comprises a diverse set of policies, programs, services, resources, and practices to support and promote family well-being. Commanders are supposed to work within this system when addressing many of the service member attitudes and behaviors that fall within the initial states and initial manifestations of extremism. Service member and family well-being fosters family readiness, which in turn enhances service members' readiness.[48] DoD's Military Family Readiness System includes such resources as FRGs (and their equivalents in the Services), the Military Crisis Line, and Military OneSource. As official command-sponsored and command-resourced organizations, FRGs offer assistance, mutual support, and a network of communications between family members, the chain of command, and community resource providers.[49] The Military Crisis Line is a free, confidential resource for service members. Military OneSource offers support for nonmedical counseling (e.g., marriage counseling, stress management) and referrals to other types of resources. Military mental health professionals address such issues as suicidal and homicidal thoughts; experiences of sexual assault, child abuse, or domestic violence; alcohol and substance abuse; and serious mental health conditions that require medical treatment. MWR and its partners offer education and counseling services for such issues as suicide prevention and survivor outreach.[50]

Air Force Community Action Boards and Community Action Teams (CATs) are another viable resource for coordinating strategies to identify and address patterns related to signs of initial states or initial manifestations of extremism. These are entities at the installation, major command, and headquarters level composed of representatives from diverse organizations (e.g., leadership, law enforcement, service providers) who coordinate periodically to identify and monitor the needs of the various populations within the military community (i.e., service members, their families, Air Force employees) and develop strategies to address them. For example, Air Force Instruction 90-5001 encourages commanders to consult with CAT members, Community Support Coordinators, and Violence Prevention Integrators to enhance well-being and resilience within their units.[51]

Part 3: Detect and Intervene When Observing Extremism

The third part of our proposed framework is to detect early trends of extremist activity at the installation level and then intervene at these installations, accordingly.[52] Coordination between military and civilian law enforcement and collection of open-source intelligence are two strategies for detecting these trends.

First, civilian and military law enforcement agencies have useful information they could share on which groups

pose the greatest threats for service members online and in the areas surrounding particular installations, as well as whether they observe indicators of extremist affiliations, such as symbols or slogans.[53] Military leaders, educators, and service providers could draw upon these resources for education, training, and informational awareness activities. For example, installation-level Air Force CATs (or equivalents in other Services) could develop a toolkit to provide access to videos, reports, bulletins, or other materials that could inform unit or community programming. The toolkit could offer ideas on organizations to contact for guest speakers who could educate and warn members about particular extremist groups and their beliefs, activities, and recruitment tactics. This information could help provide counter-messaging or inoculation against narratives and propaganda by extremist groups.

There are various criminal investigative services across DoD that might encounter evidence of extremist activities during investigations, either directly or indirectly. These include the Defense Criminal Investigation Services,[54] Air Force Office of Special Investigations,[55] U.S. Army Criminal Investigations Command,[56] and Naval Criminal Investigation Service.[57] Although they need to preserve the integrity of their investigations, there might be patterns or broader trends they could then share with military leaders and service providers to aid in detection, stop the spread of harmful information, and engage in other countermeasures. The Office of Law Enforcement Policy and Support within the Defense Human Resources Activity could also help coordinate the detection of extremist activities and sharing of information across DoD.

Second, the internet has made it easier for extremist groups to interact with a broader variety of potential members. New machine learning techniques can aid in searching for online trends of extremist involvement.[58] For example, models can be trained to detect extremist communities on such social media platforms as Twitter and to infer the degree to which users who appear to have current or past associations with the military are engaging with these extremist groups. From these online discussions, insights could be drawn to inform headquarters-prepared materials targeting misinformation, recruitment language, and so on for broader use by the military community. However, there are risks associated with the use of artificial intelligence and machine-learning tools, including privacy concerns, false positive or negative results, and algorithmic bias that require continuous recalibration by a human-in-the-loop.[59]

Detection and intervention are not solely the domain of law enforcement or data analysts. Service providers might have information about potential risks for extremist activity, although they might not always recognize it as such. Chaplains, psychologists, social workers, Military and Family Life counselors, psychiatrists, and health care providers might be providing support for individuals exhibiting the initial states or initial manifestations of extremism. These support service providers must preserve their professional and ethical obligations regarding confidentiality and act in ways that promote rather than undermine help-seeking behaviors and treatment. We do not imply that these professionals should report every individual who feels frustrated with the government, feels alienated from others, or is withdrawing from political processes, for example, but in the course of their work they might become aware of information that could be impor-

tant for detecting and intervening to counter extremism. Such information might include

- extremist materials appearing on the installation (e.g., left in the chapel or hospital waiting rooms)
- emerging extremist groups, movements, or causes
- rumors or misinformation being spread that could stoke the flames of social conflicts (e.g., race, gender, sexual orientation)
- justifications of extremist activities that resonate with members
- poor reputation of military channels for filing complaints or appeals, or service members' lack of awareness of these channels.

Sharing this type of information—not tied to any particular individuals—could inform efforts to keep abreast of ever-evolving groups and social movements, to actively dispel myths and misinformation or dismantle justifications that could increase the risk of adopting extremist views, and to improve the awareness and functioning of complaint channels to encourage people to work within them.

It is important that providers (1) understand the types of aggregate information that they could share with commanders that would be helpful and (2) have a safe way to share this information.

Part 4. Measure Extremist Trends and Evaluate Interventions

The last part of our proposed four-part framework involves the measurement of extremist trends and subsequent evaluation of the early interventions previously described. DoD already collects some data on extremism using the DIBRS, which records law enforcement activities and statistics within the military and reports criminal data to the FBI as required by the Uniform Federal Crime Reporting Act of 1988.[60]

One data element in DIBRS is "bias motivation." *Bias* is defined as "a performed negative opinion or attitude toward a group of persons" (e.g., racial, religious, ethnic or national origin, sexual orientation, or disability groups).[61] Table 1 displays some of these codes in DIBRS.

There are several potential areas of improvement for data collection related to extremism in the military. First, the codes used in DIBRS might not always align with those used in the FBI's National Incident-Based Reporting System (NIBRS).[62] For example, NIBRS has a code for "Anti-Native Hawaiian or Other Pacific Islander" while DIBRS has a separate code just for "Anti-Pacific Islander." DIBRS has separate bias motivation codes for seven religions, while NIBRS has 14 codes for religious bias. Furthermore, NIBRS has a code for "Anti-lesbian, gay, bisexual, or transgender (mixed group)" while DIBRS has no code for transgender bias.

Second, there might be biases in how incidents are reported to DIBRS. For example, incidents in the FBI's NIBRS are not necessarily representative of all incidents among the U.S. population,[63] and some have reported a nonresponse rate in reporting by law enforcement agencies to the FBI.[64] The same might hold true for DIBRS. Furthermore, some have raised concerns in the past about the reliability of data from the DIBRS.[65] Thus, there might be a need to continuously review what is reported to DIBRS (i.e., consistent use of correct motivation bias codes), the frequency of reporting (i.e., consistent reporting by the Services over time), and the sharing of data with the FBI to ensure that broad trends related to

TABLE 1
Bias Motivation Codes in the Defense Incident-Based Reporting System

Race and Ethnicity	Religion	Sexual Orientation	Mental and Physical Disabilities	Unknown Bias
• AW = Anti-White • AH = Anti-Black • AD = Anti-Arab • AM = Anti-Hispanic • AC = Anti-American Indian • AB = Anti-Alaskan • AE = Anti-Asian • AT = Anti-Pacific Islander • AR = Anti-Multi-Racial Group • AZ = Anti-Other Ethnicity	• AO = Anti-Jewish • AI = Anti-Catholic • AN = Anti-Islamic (Moslem) • AU = Anti-Protestant • AS =Anti-Multi-Religious Group • AA = Anti-Agnostic • AY = Anti-Other Religions	• AQ = Anti-Male Homosexual • AK = Anti-Female Homosexual • AL = Anti-Heterosexual • AG = Anti-Bisexual	• BA = Anti-Mental Disability • BB = Anti-Physical Disability	• AX = Unknown Bias

SOURCE: DoD, 2020, p. 26.
NOTE: Table 1 does not display the code "NB = None (no bias)."

extremism are captured between civilian and military law enforcement organizations.

Third, there could be alternative ways to collect data on trends related to extremism and how they might relate to intervention activities. For example, the Army's iSALUTE program is an online reporting tool for members of the Army community to report suspected extremist activities.[66] As military leaders release new tools, there will be a need to continuously evaluate these data sources and subsequent interventions.

Conclusions and Recommendations

This Perspective outlines a framework for reducing the risk of extremism in the U.S. military. It provides a brief review of relevant background information about extremism and presents a four-part framework for mitigating such activities. The first part is recognizing and defining the problem of extremism, which the military has already done. The second part is preventing future extremist activities from occurring across the ranks, and the framework outlines ways for the military to accomplish this. The third part involves using strategies to detect what might be precursors of extremism and helping commanders intervene accordingly. The fourth part describes ways for the military to measure extremist trends and evaluate interventions using an evidence-based approach.

Conclusions

We have identified four conclusions using this framework.

First, current DoD policies clearly prohibit extremism in the military and place significant responsibilities on commanders to implement this policy. Specifically, policy requires commanders to take corrective action when they observe active forms of extremist activities. It also requires commanders to intervene when they observe behaviors that *might* lead to a future violation of policies that prohibit extremism. This is a tremendous responsibility, particularly given that commanders are not subject-matter experts in extremism and that, even for experts, this would be difficult, because many of the precursors to extremism are common (e.g., frustration with society, institutions, and culture) and do not lead to extremism.

Second, there is no widely accepted definition of extremism that delineates where to draw the line between *extremism* and beliefs and behaviors that are simply *outside the norm*. That presents challenges for commanders in trying to balance the rights of service members with detection of current extremist policy violations or problematic behaviors that have a high probability of leading to extremist activity in the future.

Third, policy largely focuses on extremist activities by service members. The problem of extremism emerges from and affects the broader military community, meaning not only service members but also their families and civilian employees.

Fourth, DoD has several existing support programs that could be better leveraged to support commanders in implementing DoD's ban on extremist activities while protecting the rights and needs of those they serve. Such programs could also help a broader variety of members of the military community (e.g., military spouses, dependents, civilian employees, contractors) to detect and intervene earlier rather than later when they observe extremist activities that affect the military.

Recommendations

We offer five recommendations that inform a strategy to support commanders in mitigating extremism within the military.

DoD efforts to combat extremism should engage the wider military community, not focus solely on service members. Given the diversity of the U.S. military community, any policies or programs designed to prevent or detect extremism should consider *all* members of the military community—in partnership with relevant civilian community members—as potential partners in the fight against extremism. In 2019, there were more than 1.3 million members on active duty, but also more than 1 million members of the Ready Reserve, more than 200,000 members of the Standby or Retired Reserve, almost 900,000 DoD civilian employees, more than 965,000 military spouses, and more than 1.6 million children of members.[67] Additionally, military installations and deployed environments can include contractors, personnel from other agencies, and members of other nations' militaries. Any member of these groups might adopt and promote extremist beliefs and act upon them, including becoming active or passive members of extremist groups promoting racial supremacy, religious extremism, or specific social or political issues. Commanders and supervisors face major challenges detecting early signs of extremism across the various members in the broader military community, many of whom commanders will rarely if ever directly meet. Anti-extremism efforts focused just on active-duty personnel will miss key sources of information and opportu-

nities for influence. Such military activities and resources as stand-downs, town halls, information campaigns, and channels to share tips with leaders should also engage the broader community, including active and reserve component personnel, spouses and partners, children, civilian employees, and contractors.

Efforts to address extremism should take a community-based approach that leverages existing military programs. Responding to early signs of extremism is preferable to waiting until initial extremist states manifest in ways that directly affect military readiness or preparedness. Service providers from the various support agencies already do help individuals find more-acceptable ways to manage emotions, such as frustration and anger directed toward authority figures or certain segments of society. Community service providers could also think about broader ways to counter the influence and impact of extremist groups. For example, they could

- provide general guidance on how to break cycles of outrage and hate and to manage personal relationships with any friends or relatives who hold extremist views or are involved in violent extremist groups
- organize activities to dispel stereotypes and myths promulgated by hate groups and to illuminate the harm of hate speech, targeted threats, and other extremist activities
- organize real-time live or virtual question-and-answer sessions with reformed extremists to understand the impacts of extremism and how people disengage from these groups.

Service providers could also alert leaders to signs of misinformation, recruitment, and emerging groups that might be posing a threat to the military community.

A community-based approach would also emphasize the need to support unit and broader installation-wide morale, welfare, and recreational activities to strengthen the military identity, community, and sense of belonging. These may counterbalance extremist recruitment strategies, which seek to build rapport, camaraderie, and loyalty at the small-group level as a bridge to introducing extreme beliefs and actions. A stronger sense of unit cohesion and community well-being can make personnel and their families more resistant to these strategies within the military community.

The Office of the Secretary of Defense (OSD) should continue to coordinate information-sharing between civilian and military law enforcement agencies. Extremist groups are volatile by nature. Such groups might form, evolve, splinter, or disintegrate relatively quickly, only to reemerge later in new forms. The tracking of these trends will require cooperation among federal law enforcement agencies (e.g., FBI), state and local law enforcement agencies, military law enforcement organizations (e.g., Army Criminal Investigation Command), and domestic intelligence and security agencies (e.g., DHS and the Defense Counterintelligence and Security Agency).

OSD and the military departments should employ machine-learning technologies to help detect broad, emerging trends of extremism that might affect members of the military community. The internet and social media have reduced the costs of creating, sustaining, and growing extremist organizations—not only in the United States but also around the world. Many of these online data are publicly available, and recent advances in machine-learning methods would allow trained professionals within OSD and the military departments to spot early patterns of extrem-

ist activities that might target members of the military community.[68] Such tools are useful for identifying broad trends at the installation level, using de-identified data. We distinguish this approach from law enforcement analyses of individual-level identifiable data for investigation purposes. The use of these machine-learning tools does carry risks, including privacy concerns, false positive or negative results, and algorithmic bias. Thus, we recommend continuous recalibration of these tools that involves a human-in-the-loop.

OSD should continually measure existing extremist trends and evaluate programs designed to prevent, detect, and intervene when members of the military community express extremist views. There is a paucity of data on trends surrounding the prevalence of extremist activities in the military. For example, extremism might occur at the nexus of civil-military relations, whereby civilian extremist groups attempt to recruit members of the military community; but civilian and military law enforcement agencies might not always share information about possible extremism. The bias motivation codes used in DIBRS and the process for collecting and reporting bias-motivated incidents should align with the FBI's NIBRS. This integration would ensure that trends in extremism are shared between civilian and military law enforcement agencies. Furthermore, as the Services and OSD develop new tools for collecting data on extremism, opportunities will arise to identify best practices for measuring extremist activities over time.

Cautionary Points on Implementation

This section discusses four cautionary points on the issue of scope creep when implementing policies designed to reduce the risk of extremism in the U.S. military. First, policy should avoid loosely applying the label of *extremist* to *all* people who exhibit initial states of extremism. Not all people who express anger, frustration, outrage, or feelings of alienation are or will become extremists. Second, we are not suggesting that the military should assign the mission of combating extremism to any of its existing community support services. These services are a set of tools out of many (e.g., law enforcement entities, counterintelligence efforts, mental health services) and should be part of a comprehensive strategy to combat extremism.

Third, the military should avoid using its community support services as an extension of law enforcement. Chaplains, mental health counselors, and FRGs should support personnel and their families versus collecting evidence on individuals for future law enforcement actions.[69] These services can help provide information about misinformation, patterns, and external groups but must not undermine their

Community support services are a set of tools out of many that should be part of a comprehensive strategy to combat extremism.

own efforts, ethics, or professional standards. Finally, "early interventions" refer to leveraging existing support services to prevent people from ever taking up active involvement in extremism that requires disciplinary actions. Preventive work can be achieved through helping individuals manage difficult feelings and life experiences and guiding them to more-productive channels for expressing their grievances and bringing about change.

Closing Thoughts

The vast majority of military personnel and their families are not extremists. But even a small number of people engaged in extremist activities could damage the U.S. military's reputation, its force, its members, and the larger community. Extremist activities can also be harmful to the individuals who are radicalized and their friends and family. DoD has existing programs that support personnel and their families, promote diversity and inclusion, and prevent violence. A community-based approach that leverages these existing programs could help the military to prevent service members and their families from associating with extremist groups and to respond sooner—and more effectively—when they do.

About the Authors

Marek N. Posard is a military sociologist at the RAND Corporation and an affiliate faculty member at the Pardee RAND Graduate School. His primary area of research focuses on social problems in military organizations. Posard's research has focused on a variety of topics, including unit cohesion, the countering of disinformation efforts, military families, the recruitment and retention of personnel, and modeling the will to fight. Most of his research uses survey, experimental, or qualitative methods. Posard holds a Ph.D. in sociology.

Leslie Adrienne Payne is a political scientist at the RAND Corporation with a combined background in social and political science and qualitative research methods. Since 2012, much of her research has focused on counterinsurgency, counterterrorism, and civilian-military relations. Payne holds M.A. degrees in security policy studies and international political theory. She is currently working toward her Ph.D. in defense studies.

Laura L. Miller is a senior social scientist at the RAND Corporation. For nearly 30 years, she has studied the lives of military personnel and their families through surveys, observations, discussion groups, interviews, and analyses of military policy and personnel data. Research topics include military culture and organization, deployment experiences, social integration, social problems, health and well-being, military spouse education and employment, unit cohesion and morale, and civil-military relations. Miller holds a Ph.D. in sociology.

About This Perspective

In recent years, news headlines have highlighted the involvement of current or former U.S. military personnel in protest violence; supremacist groups; the January 6, 2021, insurrection at the U.S. Capitol; and other forms of violent extremism spanning different political and ideological spectra. The threat of extremism is not new, but the proliferation of social media has made it easier for radical ideas to spread quickly and for extremist groups to organize, even reaching into the military community (e.g., service members, military spouses, military dependents, civilian employees, and contractors) to expand membership and gain operational capabilities.

This Perspective outlines a framework to help commanders reduce the risk of extremism in the military. First, we provide highlights from research on extremism, including a framework for understanding these types of activities. Second, we use this framework to outline four strategies for reducing the risk of extremism in the military. Third, we recommend a community-based approach that leverages existing military programs to better support commanders as they carry out their responsibilities to prevent and mitigate exposure to extremism by members of the military community.

RAND National Security Research Division

The research reported here was completed in July 2021 and underwent security review with the sponsor and the Defense Office of Prepublication and Security Review before public release.

This research was sponsored by the Office of the Secretary of Defense and conducted within the Forces and Resources Policy Center of the RAND National Security Research Division (NSRD), which operates the National Defense Research Institute (NDRI), a federally funded research and development center sponsored by the Office of the Secretary of Defense, the Joint Staff, the Unified Combatant Commands, the Navy, the Marine Corps, the defense agencies, and the defense intelligence enterprise.

For more information on the RAND Forces and Resources Policy Center, see www.rand.org/nsrd/frp or contact the director (contact information is provided on the webpage).

Acknowledgments

We are grateful for Melissa Bauman's dedicated work to improve the prose of this report. Further, we acknowledge early contributions by Aaron Frank and S. Rebecca Zimmerman to the initial scoping of this work. We also thank Ryan Brown of RAND and Morten Ender from the United States Military Academy at West Point for their thoughtful reviews.

The RAND Corporation is a research organization that develops solutions to public policy challenges to help make communities throughout the world safer and more secure, healthier and more prosperous. RAND is nonprofit, nonpartisan, and committed to the public interest.

Research Integrity

Our mission to help improve policy and decisionmaking through research and analysis is enabled through our core values of quality and objectivity and our unwavering commitment to the highest level of integrity and ethical behavior. To help ensure our research and analysis are rigorous, objective, and nonpartisan, we subject our research publications to a robust and exacting quality-assurance process; avoid both the appearance and reality of financial and other conflicts of interest through staff training, project screening, and a policy of mandatory disclosure; and pursue transparency in our research engagements through our commitment to the open publication of our research findings and recommendations, disclosure of the source of funding of published research, and policies to ensure intellectual independence. Senator DUCKWORTH. Thank you, Mr. Chairman. This report states, and I will just briefly say this, the vast majority of military personnel and their families are not extremists, but even a small number of people engaged in extremist activities could damage the United States military's reputation, its force, its members, and the larger community.

Extremist activities can also be harmful to individuals who are radicalized and their friends and family. That said, as someone who wore the uniform for 23 years, I mean, I was just a reservist and a guardsman, did not reach the ranks of the gentleman here or even some of my colleagues on the other side of the aisle.

I have to say I am offended at the implication that conducting extremist training means that our military is filled with extremists. Just as I personally am appreciative of the fact that we have sharp training and by conducting sharp training, we are not saying that every member of the military is a harasser or a perpetrator of military sexual assault.

Similarly, my entire time since I have left the military has been spent working on mental health for our troops. By providing mental health training and resiliency training, we are not saying that the military is filled with people who are about to commit suicide.

This is simply part of readiness. So, that said, I am going to switch. I just want to put this on record because it is very offensive to me to very politically say that extremism in the military and training against it is saying that the military is full of extremists.

The military is full of the bravest, most amazing men and women who do the best job that they can, and they need to be equipped to do their jobs. That means that they need to be equipped with the training to recognize sexual harassment when it occurs, to recognize extremism when it occurs, to recognize signs of hidden wounds of war, when it occurs so that we can keep our units in the highest levels of readiness. Okay, I am done with that.

Last month, I led a CODEL [Congressional Delegations] to Japan in Indonesia, and I am planning to going back to the region twice more in just the next few months, and this, in June, Senator Sullivan and I will be leading a delegation to the Shangri-La Dialog.

Mr. Secretary, I believe you are going to be speaking there, and I look forward to hearing your remarks there. In August, I am planning to take a bipartisan group of my colleagues to visit the Philippines, Indonesia, and Thailand to spotlight the importance of opportunities that our nations have to partner together.

Mr. Secretary, in your testimony, you highlighted the DOD's enhanced maritime security with the Philippines and exercises with Thailand. In what other ways does the Department's budget request support our allies and partners in Southeast Asia? And how are you program to achieve integrated deterrence in this area of the Indo-Pacific?

Secretary AUSTIN. Well, thanks, Senator, and certainly you with a PDI, Pacific Deterrence Initiative, we are asking you for some $9.1 billion to improve infrastructure in the region so that we can position our troops further forward and we can be more interoperable. You know, presence matters.

We see a significant investment in the AUKUS agreement, Australia, and the UK, and the United States are working together to provide the Australians a conventionally armed nuclear powered submarine capability. And another pillar of AUKUS calls for us to work together on key technologies like AI and hypersonics and long-range fires.

I think that kind of thing, building interoperability is really, really key. We are doing some of the same things with the Japanese as we work to become more interoperable with them. We are helping our partners and allies strengthen their capabilities in terms of cyber.

I think all of those things will add value. But we are seeing things in the region now that we weren't seeing 2 years ago, the Japanese doubling its defense investment more access to the Philippines.

As you know, 2 years ago, we were about to get kicked out of the Philippines. But we have moved to strengthen our relationship, and I just think that is powerful.

Senator DUCKWORTH. Thank you. I just want to touch on the cyber piece. In fact, last year, I included—I am sorry, in 2021 NDAA, I included legislation that authorized the Department of Defense to establish a pilot program to enhance cybersecurity, the resilience and the readiness of the military forces of Vietnam, Thailand, and Indonesia.

General Milley, next month I will introduce legislation to expand this important program to include Malaysia and the Philippines.

Can you comment on the value of direct engagement with our overseas partners to help build their cyber skills?

General MILLEY. I can. Not only cyber skills but any of the military skills. We have excellent military to military relations with so many countries. If you look at, for example, the contact group in Europe that the Secretary has organized, 54 countries show up to support Ukraine and obviously there is only 30 and NATO's so many countries from around the world in Asia.

It is particularly important, I think, given the dynamic nature of the geostrategic environment in Asia. So, the more countries that we have with us, whether it is cyber or anything else, is critically important.

In the world of cyber, though, we know that cyber and space are two domains now of armed conflict, including the traditional ones of land, sea and air. So, as we modernize the force and move into cyber space, those two domains are going to be fundamental to success in any kind of conflict.

Working with our allies and partners in the region and developing their capabilities along with ours, I think will go a long way to deterrence. If necessary, if deterrence fails and it is necessary, then it will go a long way to prevailing in the armed conflict.

Senator DUCKWORTH. Thank you, and thank you for your remarkable career of service to this Nation and also that of your wife. She not only directly saved lives herself in a very hands-on way, quite literally, but also her work on mental health for our troops is continuing to pay off dividends. Thank you.

Chairman REED. Thank you, Senator Duckworth. Senator Budd, please.

Senator BUDD. Thank you, Mr. Chairman, and again, thank you all for being here today and for your time. It has been very helpful. You know, this week, the Senate will likely vote to repeal the 1991 and the 2000 to authorizations of use of military force against Iraq.

Now, one of the amendments considered was whether to replace the 2000 to AUMF with an authorization for the use of force against Iranian backed militias in Iraq.

That vote failed but I think there is an important issue here that needs to be addressed. Now, despite the likely repeal of the 2002 AUMF, the United States still has forces in Iraq at the invitation of the Iraqi Government to train, advise, and to assist Iraqi forces. We also have forces in Syria conducting operations against ISIS.

Now, given Iran's continuing malign activities in the region, our forces are at risk of attack from Iranian backed militias, and in fact have been attacked by those militias more than 80 times, including just last week, resulting in the death of a United States contractor and injuries to U.S. servicemembers.

Secretary Austin and General Milley, a brief yes or no, please. Do you agree that the President has both the authority and the responsibility under Article 2 of the Constitution to protect the United States and our forces from attack and the threat of imminent attack? Again, yes or no, Secretary Austin

Secretary AUSTIN. I do, Senator.

General MILLEY. Yes, same——

Senator BUDD. Yes. Thank you. But despite the more than 80 attacks by Iranian backed militias, the United States has only re-

sponded with force just a handful of times. In my view, that is unacceptable. Secretary Austin, earlier you told my colleague, Senator Cotton, that our last the retaliatory strikes against IRGC infrastructure, it was against infrastructure doing.

Now, does that mean a building or a warehouse? The question behind the question is really why not target the IRGC leadership or officers directing these attacks?

Secretary AUSTIN. Thank you, Senator. We can be more specific in closed session, but it included a headquarters element building and also storage sites where key munitions were being stored and other capabilities were being developed, and there were people in those facilities.

Senator BUDD. Thank you for that. The point being that we need to reassert deterrence and our current responses don't seem to effectively do that. Weakness only breeds more aggression. Weaknesses are provocative.

If we only respond when they kill an American, they will continue attacking, hoping to injure as many as possible. There is no reason why this Administration should not respond more forcefully should Iranian backed militias threaten United States Forces in Iraq or in Syria. It is important for the American people to know that it is not because the Administration doesn't have the legal authority to do so. This Administration simply seems to lack the will.

Secretary Austin, another issue that needs to be addressed is the Department's use of taxpayer dollars to facilitate abortions. Now, I join my colleagues in publicly denouncing the policy changes, unfortunately made at your direction, to authorize unasked, uncharged absences and travel pay for those seeking abortions.

The military is not a place for social agendas. So, I will ask you here, will you rescind those abhorrent policies?

Secretary AUSTIN. What I will say, Senator, is, number one, this policy does not fund abortions, and I want to be clear on that. This policy provides access to non-covered reproductive health care. As I said earlier, almost one in five of my troops, our troops are women.

Senator BUDD. Very aware. But I understand that ultimately it is taxpayer dollars that are for this uncharged absences and the travel expenses related to that. I understand your point, but I still think that is not the right answer.

Until these policies are rescinded, I am going to also have to consider holds against DOD nominees in solidarity with my colleagues. Mr. Secretary, you can fix this, 158 holds, in essence, are there. You can fix this in nearly in an instant, so I would encourage that. Shifting gears, a bit——

Secretary AUSTIN. Sir, I would encourage you to help us make sure that we have the leadership in place to lead our magnificent——

Senator BUDD. I would agree with you, completely agree with you, and you can fix that nearly instantaneously with a change in policy. So, thank you. We understand, Secretary Austin, that the Committee has heard from most of the Combatant Commanders so far earlier this year.

I have asked each of them about foreign military sales and how that's working in their areas of responsibility, and each have said

that the process is not fast or flexible enough to meet our partners' defense requirements and that we are at risk of losing our security of partner of choice status to China.

So what efforts are the Department taking internally to streamline the FMS [Foreign Military Sales] process, and are there issues that you think need to be addressed by Congress?

Secretary AUSTIN. A year ago, I put together a tiger team to address this specific issue, and you are right. I mean, there are a number of our allies and partners who clearly want to see capability be provided quicker.

I fully understand their concerns. So, we are doing everything we can to identify logjams and work through those to speed up things. Industry is coming out of a 2-year trough there because of COVID, as you know, sir, and, you know, it will take a little time for our industry to catch up.

But we are going to do everything we can to make sure that the bureaucracy is not slowing things down. And we will continue this work. But I don't disagree with you that this is something that requires consistent focus on, and we are going to do that.

Senator BUDD. Thank you both. I yield.

Chairman REED. Thank you. Senator Kelly.

Senator KELLY. Thank you, Mr. Chairman. Secretary Austin, earlier today at this hearing, Senator Ernst asked General Milley about conflict in the INDOPACOM region, and the General's response referenced the importance of irregular warfare. So, Secretary Austin, I have been rather disappointed with the halting and repetitive process that DOD has exhibited as it attempts to establish the irregular warfare center.

As you may recall, the IW [Irregular Warfare] Center was authorized by this Committee back in 2020, and the project was intended to honor Arizona Senator and former Armed Services Committee Chairman John McCain's legacy of support for the concept of a whole society approach to our national security.

He knew that traditional military strength isn't enough in today's geopolitics and that we also need to succeed in the irregular and in the competition spaces, not just in conflict. In recognition of the original intent for this project, this Committee supported naming the Center for Senator John McCain. Now, I have also been working closely with this Committee and the Department to ensure that we leverage expertise and ideas from universities to help our Nation get after these significant challenges.

The original authority identified the McCain Institute at Arizona State University as a site to be reviewed as a location for the establishment of the center. I appreciate your memo, Mr. Secretary, from July 2022 affirming your decision to create the Center for Security Studies in irregular warfare and directing DOD to act expeditiously, including in determining allocation.

But now we are nearly 3 years down the road and we have had numerous duplicative site reviews and we are still waiting for a final decision, and what I don't think we need is a new basing process. We need a decision.

It is clear to me that it is time to move forward with Arizona State University and ensure that the IW Center can deliver on its promise for DOD and the Nation. So, Mr. Secretary, can I have

your commitment that you will look into these delays and push the Department to come to a final decision on this?

Secretary AUSTIN. Certainly, Senator, you have my commitment that I will look into the delays. You know, what I have required the team to do is to make sure that we have a process that is transparent and also that avoids outside influence and to make sure that we are aboveboard. But I will certainly look into it and get a brief back to you on specific delays that we have encountered.

Senator KELLY. Well, thank you. Thank you, General, because 3 years is just, it is too long, and this is, as General Milley pointed out, is just as important if we wind up in a conflict in the Western Pacific. So, thank you, Mr. Secretary.

General Milley, last year, Congress authorized multi-year procurement contracts as a way to boost our Nation's dwindling supply of munitions and to purchase additional systems in support of Ukraine, and this has had a meaningful impact on a lot of Arizona businesses who produce some of these critical munitions. Multi-Year procurement can save the Government a lot of money. It can save it a lot of money over the long run and provide much needed stability for manufacturing business, while also ensuring that our military and our key partners and allies have the munitions that they need.

General Milley, can you please, in the time I have remaining, just talk about the impact that multi-year procurement has had so far in securing weapons, both for the United States but also for Ukraine. Has this been beneficial? And do you think that the munitions that Congress authorized for multi-year procurement is enough, or should we have more products being considered for multi-years?

Chairman REED. You have 19 seconds.

General MILLEY. So first, multi-year contracts are essential, and passing a budget on time with no continuing resolution is essential to ensure we have multi-year contracts. So, those two things are linked, and I cannot emphasize that enough. That is important, and it has had a big impact, positive impact on Ukraine, and it will help to replenish our stocks as well.

Senator KELLY. Do you think we should expand it to some other products?

General MILLEY. I do.

Senator KELLY. Thank you. Thank you.

Chairman REED. Thank you, Senator Kelly. I would ask, I have been very tolerant of the time, but I ask people to stay within 5 minutes. We are running quite late. Senator Scott, please. Thank you.

Senator SCOTT. Only for Senator Rosen and me. Only for us two. Thank you. Thank you for—thank you guys for your service. Thank you for all the men and women that serve. On the Personnel Subcommittee for Armed Services, Senator Warren and I had a presentation on how bad we are doing on recruiting.

Our recruiting numbers are pretty pathetic right now. It seems like, I remember I joined in 18 and joined the Navy. We knew who our enemies were, we knew what the military's role was and I think unfortunate.

A lot of Americans are a little concerned. There is recent polling data from the Reagan Institute and the National Independent Panel on Military Service and Readiness, showing us that many Americans and majority of Active Duty servicemembers find the military to be politicized and focused on what divides us instead of what unites us.

If that is true, what can you do and what are you doing to make sure, because I think Senator Sullivan was bringing up the fact that we shouldn't have marines in pictures like that and with speeches.

What are you doing to make sure our military is not perceived to be a political arm of whoever, whoever the President is, doesn't matter whether the Republican or Democrat.

Secretary AUSTIN. Well, first of all, I would just do two things. First, in terms of the satisfaction of the troops that are in the ranks and how we view ourselves. Senator, I would just point to the fact that we have the highest reenlistment rates probably that we have seen in several decades.

What that means is that people are satisfied with the opportunities they are provided and with the development that they are receiving. The second thing is with respect to recruiting, as you know, there are a number of things that have combined to create headwinds, and they include the lowest jobless rate that we have seen in many, many years. Also, 2 years of COVID, and, you know, Senator, without recruiters not having access to high schools and centers of influence for 2 years will have a profound impact on our ability to recruit. Our leadership in the services is doing the right thing. I mean, our Secretaries, our Chiefs are doing the right things.

They are they are investing, beginning to invest the right moneys in advertising and encouraging their recruiters to be in the right spaces. They are hiring the right people to be recruiters, and I used to be a recruiter, so I am not guessing at what this takes. I know how hard this is and what you need to do to be successful. They are beginning to do those things again, and I think we will see this—we will see the trends move in a different direction.

Senator SCOTT. So, the next year, we will have good numbers?

Secretary AUSTIN. Next year, you will have better numbers. We will be where we want to be probably the year after that. It took 2 years to get us to where we are because of COVID. It will take a little bit longer to get to get turned around.

General MILLEY. Senator, I have had many thanks and conversation with all the chiefs on this whole topic. Yes, we have a recruiting challenge, no question about it. I do think there is a cause-and-effect link to COVID and I am not blaming that. But we do know that recruiting numbers are directly linked to contact time.

Because kids have been in high schools and we haven't had the recruiters in high schools, contact time is very, very low. So, consequently, you have much lower recruiting numbers as one key factor. Another key factor is just the familiarity with the American citizenry, with their military.

Now we are at an all-time high, 50 year high of re-enlistment, which is incredible, actually. That indicates that the people in the military are satisfied with what they are doing every day.

So that is an all-time 50 year high. But 80 percent, 70 to 80 percent in that range, depending on the service, of our folks in uniform are in uniform who have a family member in uniform, either a father, mother, brother, sister, aunt, uncle, grandfather, grandmother, something along those lines.

So, it is familiarity with the military that makes a difference, I think, in terms of recruiting, and that is what we got to get out. We have to get out more into the society. We got to make sure we increase our contact time significantly.

On the politicization piece, look it, I have tried from day one to make sure that we have an apolitical, nonpartisan U.S. Military. If we have anything other than that, that is a danger to the Republic.

We must remain a nonpartisan, apolitical military that is fundamental to this country and that is what I am committed to. That is what all the generals are committed to, and that is what you have right now, and that is what we want to continue to keep.

Senator SCOTT. General Milley, I like your answer to Senator Sullivan on you being able to compete against China. Do you actually believe that all the countries you named will show up if China invades Taiwan?

General MILLEY. I think in different ways, yes. Perhaps not all with combat forces and that sort of thing. I think allies operate differently. Every country operates in its own strategic interest at the moment in time. But I do know that we have an incredible network of allies and friends around the world.

In the Pacific, we have a series of bilateral defense treaties that are ratified by the Senate, and those are ironclad, you know, with the Republic of Korea, Japan, Philippines, Thailand, Australia. These are treaties that we are committed to fight on their behalf sort of thing. So, I think we have a network of allies and partners that gives us a strategic advantage over China or Russia, for that matter. If you look at who China's friends are, it is not very many.

They are operating in a purely transactional way around the world. They are trying to garner as many natural resources as they can from around the world. But there is not a lot of people who are "friends" with China.

There are many, many countries that are very tight, very close with the United States, and that is a great strength of ours, and I do think they would be there in time of need.

Chairman REED. Thank you, Senator Scott. Thank you very much. Senator Rosen, please.

Senator ROSEN. Well, thank you, Mr. Chairman. I really appreciate holding this hearing. I want to thank each of the witnesses today for testifying for your service to the country.

General Milley, I know this is going to be your last time before the Committee, and I want to thank you for your decades of distinguished service leading the brave men and women of our Armed Forces and really navigating so many challenges worldwide. We all appreciate your service.

So, we are going to—I am going to talk a little bit about combating Iranian aggression, because attacks on the United States installations and servicemembers by Iran's terrorist proxies are increasing, particularly by rocket and drone attack.

The Pentagon estimates that hundreds of American troops have been killed by Iranian backed militias, including, as we have discussed already today, a deadly attack last week on a United States base in Syria.

There are families across the country without their loved ones as a direct result of Iranian aggression. I can't repeat that enough, a direct result of Iranian aggression. Yet Iran's regime has never been held accountable for orchestrating attacks against Americans. So, Secretary Austin, I appreciate that in this latest instance, last week, the United States responded with airstrikes against individuals connected with the IRGC.

But just as you told my colleague, Senator Cotton, Senator Budd, we know there have been about 83 such attacks by Iranian proxies on United States forces in Syria in the past 2 years alone. We have only retaliated four times.

So why has the United States responded so infrequently, particularly when these militias are most pervasive threat, the most pervasive threat to U.S. and coalition forces in the region?

Secretary AUSTIN. Well, first of all, as was stated earlier, our troops have the ability to certainly protect themselves, and there have been responses, local responses to certain types of activity in those—our troops always have the ability to do that. In terms of major responses, strikes, you are right, there has only been four of those.

At the three tours I spent in Iraq I can tell you that me and my troops received a lot of attacks from Iran. But when we respond, we want to make sure that, Iranian backed militias, we want to make sure that that we are going after the element that is responsible for whatever that activity is. So, it takes a little time to develop attribution.

Then we want to make sure that we are holding the right element accountable, and we are doing everything that we can to protect our troops, and so, all of those things go into our consideration when we plan a response option.

Senator ROSEN. Well, I have two questions. One for you, General Milley, another one for you, Secretary Austin. So, the first one is for General Milley to followup. What can we do proactively to counter these militias before they injure and kill American servicemembers? Then, Secretary Austin, can you tell us, do our Commanders who I know want to do more, have the necessary authorities to target Iran's proxies other than the ability for self-defense? So, General Milley, we will start with you.

General MILLEY. In terms of proactive measures, what we are looking at is force protection in all of the various camps and outposts in the Central Command area of operations, specifically in Iraq and Syria, where these attacks occur. They have, we think, adequate force protection in terms of the kind of rocket and missile defenses.

They are able to, in fact—forward responses is probably an understatement because we end up shooting down a lot of these incoming UAVs, for example. If a rocket or a 107 rocket or something like that is going to miss the compound by 2 or 3 or 4 or 5 kilometers, that is a significant amount.

Really what we owe you is some better numbers actually on attacks that I would categorize as actual attacks on the compound, and missing a compound by 2 or 3 kilometers, that may or may not—we don't know what that was necessarily. So, we owe you some better numbers.

But to get to your point about proactively, we have to work closely with the Iraqi Government for those Shiite militia groups that are inside Iraq. We have to continue to work with our partners in the region for the attacks that are occurring in Syria. So, working with our indigenous allies and partners is key, and then also putting these groups on notice, the various Shiite militia groups who know who they are, letting them know that we will respond affirmatively and forcefully if they attack our troops.

We have done that. There are some of these groups that are much more aggressive than others, and we have actually in the past done some things to those groups that are not necessarily on the front page of the paper.

There are activities that are occurring that do act as a proactive measure. The last thing I would say with respect to Iran. Messaging Iran is critically important. The Iranian Government is a complex, large organization, and the supreme leader may or may not be making every single decision.

We do know that the Iranian Revolutionary Guard force and specifically their Quds force, which is designated a terrorist organization, that group there is what we need to be targeting and targeting them very harshly over time, and that is exactly what we plan on doing.

Senator ROSEN. Thank you. I know my time is up. But Secretary Austin, just asked if we have the necessary authorities, quickly.

Secretary AUSTIN. I think we do, Senator, and this is something that we need to continue to review as we go forward. We certainly have the right to self-defense. We have authorities under the 2001 AUMF, and that enables us to do what we need to do to in or counter ISIS efforts.

But again, as we go forward, it is always good to look at the authorities and make sure that we evolve them if that is required. You have my commitment to work with leadership and with you to continue to do that.

Senator ROSEN. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Rosen. The Committee will stand in recess until 12:55 p.m., and we will reconvene in closed session in SVC–217. Thank you, gentlemen.

[Whereupon, at 12:38 p.m., the Committee adjourned.]

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR TIM KAINE

NON-DEPLOYABILITY POLICIES

1. Senator KAINE. Secretary Austin, it came to my attention during visits to the Mid-Atlantic Regional Maintenance Center following the suicides of four sailors that a contributing factor to the stressors at the command was a manning policy that allows for a 60 percent increase in the assignment of personnel (30 percent for limited duty and 30 percent for pregnancy/post-partum) with no additional resources to support a population that requires extra care and attention. What is the Department of Defense's ("Department") position on the assignment of temporarily non-

deployable servicemembers and ensuring that there are the proper policies and resources in place to support their rehabilitation and reintegration?

Secretary AUSTIN. One life lost to suicide is too many. That is why I am committed to addressing mental health issues and suicide in the Force. In May, I directed the Department to take critical, immediate actions informed by the work of the Suicide Prevention and Response Independent Review Committee that I stood up in 2022, to increase access to behavioral and mental health and servicemember wellness.

Specific to temporarily non-deployable servicemembers, the Department provides broad latitude to the Secretaries of the Military Departments to consider all aspects of a member's ability to serve, for retention and assignment purposes. The Department does not normally restrict the assignment of servicemembers who are temporarily non-deployable for a medical condition, except for pregnant servicemembers beyond 36 weeks of gestation, where there is a medical travel restriction for servicemembers or the servicemember's spouse. The Department is committed to, and has a vested interest in, aiding servicemembers to address and remedy conditions that result in a non-deployable status, and it is important that servicemembers maintain continuity of care.

PRE-POSITIONED WAR RESERVE MATERIEL

2. Senator KAINE. Secretary Austin and General Milley, what is your assessment of the Department's long-term pre-positioned war reserve materiel requirements, such as those associated with the National Defense Sustainment and Logistics Review?

Secretary AUSTIN. Maintaining effective prepositioned equipment and war reserve materiel requirements is critical to our ability to project power around the world, respond to global contingencies, and execute war plans. Our reinforcement of NATO's eastern flank following Russia's February 2022 invasion of Ukraine demonstrated the value of prepositioned equipment. DOD forces rapidly deployed from the United States, drew prepositioned armored brigade combat team equipment, and built battle-ready formations with significant combat power to deter aggression against NATO. Moving forward, we are pursuing a range of investments to replenish and improve our prepositioned equipment in Europe as we also add new prepositioned capabilities—including long-range fires and logistics—in the Indo-Pacific region. These investments are key to maintaining our deterrent posture and warfighting advantages.

General MILLEY. Prepositioned War Reserve Material (PWRM) is strategically located to facilitate a timely response in support of Combatant Commander requirements during the initial phases of an operation and provide a quick response across a range of military operations.

The services made instrumental investments and must continue to grow PWRM capability and capacity. There will likely be some challenges in sufficient storage space, storage locations, perishable assets material degradations and an aging fleet of prepositioning ships.

Services will have to continue to prioritize resources and mitigate some risk derived from insufficient funding through the use of retrograde equipment, sourcing requirements from other Combatant Commands, and/or utilizing theater transportation from Active components.

DEPLOYABILITY RATES

3. Senator KAINE. General Milley, during your opening statement you said that operational readiness rates are higher now than they've been in many years and that currently, 60 percent of the active force could deploy to combat in less than 30 days and 10 percent could deploy in less than 96 hours. How are these readiness rates determined and could you provide additional data, especially related to strategic lift capabilities, to support these figures?

General MILLEY. Determining operational readiness rates is governed by DOD and Joint Staff policies: DODD/DODI 7730-series and CJCSI 3401.02B—Force Readiness Reporting. These documents detail the requirements for all operational units to periodically report resource category levels (C-levels), as well as unit capability assessments for designed and assigned missions as informed by Mission Essential Task (MET) assessments. The C-levels reflect the status of the unit's resources (personnel, equipment/supplies, and training) measured against the resources required to undertake the wartime missions for which the unit is organized and designed. The operational readiness rates specifically for the strategic lift capabilities (all components) are extremely similar to those of the active force. Additional readiness data is available at the classified level.

HYPERSONICS TECHNOLOGY

4. Senator KAINE. Secretary Austin, the Nation's current capability for developing and testing hypersonic technology is slow and expensive, resulting in our hypersonic technology maturity being behind the current, pacing threat. To address this gap, the Multi-Service Advanced Capability Hypersonics Test Bed (MACH-TB) program was created to increase the rate and reduce the cost of the Nation's hypersonic test flights. Last year, a team of several industry partners was named to leverage commercially available launch vehicles for hypersonic payloads. This will offer the Department of Defense (DOD) a national hypersonic testing capability that can be leveraged by a broad range of U.S. Military hypersonics programs, DOD research programs, industry partners, and academia stakeholders. Could you please explain the value of leveraging commercially available launch vehicles for hypersonic testing?

Secretary AUSTIN. We have made significant progress as a result of our hypersonic investments over the last 2 years. In the last year alone, we have performed 12 successful hypersonic flights tests, and we plan to conduct 20 hypersonic test flights this year. Our fiscal year 2024 budget request also invests $11 billion to deliver a mix of hypersonic and long-range subsonic missiles.

Use of commercial launch vehicles is one of the primary enablers for our hypersonic testing. Commercial launch vehicles can provide proven launch capabilities at reduced cost and complexity when compared to traditional DOD launch vehicle providers. Commercial launch providers will deliver turn-key launch services that increase accessibility and reliability of DOD hypersonic flight tests. Work with commercial launch vehicles can also help us develop and validate technologies prior to integrating them into advanced weapon systems. By using these turn-key solutions to our advantage, the Department can conduct hypersonic flight testing more frequently and more affordably.

5. Senator KAINE. Secretary Austin, how do programs like MACH-TB program benefit the DOD and the U.S. national security strategy in the near term and long term?

Secretary AUSTIN. Our strategy relies on delivering the right mix of capabilities to support our warfighting concepts, which includes delivering the right mix of long-range fires, including both hypersonic and long-range subsonic missiles. In the near-term, MACH-TB enables rapid risk reduction for hypersonic prototypes, accelerating delivery of new capabilities to the Warfighter. In the long-term, MACH-TB allows an affordable and accessible approach to developing new technologies that will enable next generation hypersonic weapons.

6. Senator KAINE. Secretary Austin, what is the importance and associated timing of full-scale hypersonics flight tests and the expansion of critical test infrastructure?

Secretary AUSTIN. We are in a global technology competition that will shape the future of warfare. This requires the Department to develop the right defensive and offensive systems to remain ahead of our adversaries. Deterrence today and tomorrow requires integrating capabilities into new operational concepts, and hypersonics are a logical and necessary addition to our mix of capabilities. As a result, we have made significant progress, performing 12 successful hypersonic flight tests in the past year. The fiscal year 2024 budget invests $11 billion to deliver a mix of hypersonic and long-range subsonic missiles, and the Department plans to conduct 20 hypersonic test flights this year.

Through the fiscal year 2024 budget request for $29.8 billion for missile defeat and defense, we are also pursuing a layered counter-hypersonic defense strategy by increasing our investments in interceptors, and the Department has procured the glide-phase interceptor for an additional layer of defense. As we continue to further develop these capabilities, the Department will work closely with the defense industrial base to ensure that they can produce the right mix of munitions the joint force needs today and in the future.

7. Senator KAINE. Secretary Austin, how can we ensure that the DOD, industry partners, and academia stakeholders work together on requirements definition and program execution of MACH-TB and other programs to further the Nation's hypersonics capabilities?

Secretary AUSTIN. Our hypersonics test bed, also known by the acronym MACH-TB, has established a working group composed of stakeholders from DOD, industry, and academia. This working group meets quarterly and is structured to identify hypersonic experiment requirements, allocate experiments to available flight tests, and develop an execution plan for the flight test campaign.

Bringing together the right stakeholders from the Department, industry, and academia will help ensure our hypersonic capabilities continue to advance at the pace and scale necessary to maintain deterrence and, if necessary, fight to win.

RECRUITING

8. Senator KAINE. Secretary Austin, how have school restrictions on the release of Armed Services Vocational Aptitude Battery (ASVAB) scores (Option 8) affected recruiting in the past 10 years?

Secretary AUSTIN. We are working every day to recruit America's best talent, and the Department does not have any data to indicate that school restrictions on the release of test scores have negatively impacted recruiting in the past 10 years. Rather, we have been facing multiple years of headwinds. Notably, the pandemic created significant challenges, keeping recruiters out of schools and communities for more than 2 years. Also, a historically strong economy and tight job market are creating fierce competition for talent. We must address these headwinds and connect with young people, their families, and community leaders to show the value of public service, and the Military Departments are working hard to do just that.

QUESTIONS SUBMITTED BY SENATOR ANGUS KING

INTELLIGENCE SURVEILLANCE, AND, RECONNAISSANCE (ISR) SUPPORT TO COMBATANT COMMANDS

9. Senator KING. Secretary Austin, your statement submitted to the Committee does not address your title 10 obligation to serve as the single lead agency of the Federal Government for the detection and monitoring of aerial and maritime transit of illegal drugs into the United States. The Northern Command (NORTHCOM) and Southern Command (SOUTHCOM) Commanders testified last week that they need more ISR and domain awareness support and assets, yet these are listed on their unfunded priorities list—not in their base budget. Why are the 'small' amount of domain awareness and ISR assets—so vital for the Homeland and today's threat—NOT in your base budget?

Secretary AUSTIN. Our strategy drives our budget, and we are focused on ensuring the right mix of capabilities to meet its objectives. The Department is acutely aware of the need to enhance persistent surveillance of the aerial and maritime approaches to North America. I have been working closely with Combatant Commanders and the Military Services to understand and advocate for resources necessary to protect our Nation against an increasingly wide range of threats.

Intelligence, Surveillance, and Reconnaissance remains a priority for the department, and we will continue to ensure we have significant ISR capability. However, we also must ensure that we have the flexibility and agility to outpace our competitors in the future. This is about having the right mix of capabilities, and it requires getting the capability to process, exploit, and disseminate the ISR we collect. Ultimately, our budget is designed to implement the 2022 National Defense Strategy and we will continue to invest in the right mix of capabilities today and into the future.

10. Senator KING. Secretary Austin, who oversees the counterdrug and counter-transnational criminal organization mission for the Department? Does this same person also oversee and provide recommendations for ISR investments to fulfill your title 10 obligations to help curb the flow of illegal drugs into the Homeland?

Secretary AUSTIN. I oversee policy and operations for all of DOD. The Under Secretary of Defense for Policy (USD(P)) approves DOD counterdrug and counter-transnational organized crime strategy, policy, and plans consistent with national strategies and DOD strategy, policies, and objectives. Under the authority, direction, and control of the USD(P), the Assistant Secretary of Defense for Special Operations and Low-Intensity Conflict (ASD SO/LIC) oversees and approves DOD efforts for the detection and monitoring of suspected illicit drug aerial, maritime, and surface traffic bound for the United States.

The Combatant Commanders are responsible for counterdrug operations in their respective areas of responsibility, including requesting intelligence, surveillance, and reconnaissance (ISR) assets using the Global Force Management process. The USD(P) and ASD SO/LIC participate in this process and provide recommendations to me on the allocation of ISR assets globally. When those assets are unavailable due to higher priority missions, we pursue government-owned/contractor-operated aircraft, contract aircraft, and periodic deployments of DOD aircraft as part of a training mission. Using this approach, we have increased the number of flight hours by more than 2,000 hours since 2018 in support of the counterdrug mission.

QUESTIONS SUBMITTED BY SENATOR JACKY ROSEN

MAINTAINING OUR DEFENSE TECHNOLOGICAL EDGE

11. Senator ROSEN. Secretary Austin, global competition for a skilled workforce, declining investments in research and development (R&D), the DOD contracting challenges, and the science, technology, engineering and mathematics (STEM) workforce gap are all impediments eroding our technological edge with our adversaries. Meanwhile, China is investing heavily in advanced technologies such as artificial intelligence, biotechnology, and quantum computing. That's why I am working to establish a public-private partnership pilot program to accelerate the scaling, production, and acquisition of advanced capabilities for national security by creating incentives for trusted investment in American small businesses working on innovative defense technology. How might a public-private partnership that catalyzes investment in advanced capabilities help maintain our technological edge, especially with regard to China?

Secretary AUSTIN. It is critical that we draw on all elements of national power to continue to outpace the PRC, including through public-private partnerships. The Department is focused on leveraging America's capacity for innovation to deliver cutting edge capability to the battlefield as fast as possible. That is why the fiscal year 2024 budget invests $145 billion in RDT&E—the largest ever—and continues to build bridges with America's dynamic innovation ecosystem. This includes investments of $1.8 billion for artificial intelligence, $687 million for the rapid defense experimentation reserve, and $115 million for DOD's new Office of Strategic Capital to drive American investment in critical technologies. Our capital markets give us an advantage over adversaries like the PRC, and we need to fully leverage those markets. The Office of Strategic Capital will allow us to drive private capital into the critical technologies our warfighters need most.

Additionally, we are actively working to reverse the downward trend in small business prime contractors. The Department encourages use of other transaction authorities, which offer flexibility and drives innovation by inviting non-traditional companies to participate in the defense industrial base. Cooperation is critical to building the talent we need and DOD will continue to increase talent exchanges with industry to cross-train and grow talent in high-end technologies across the Department.

CYBER SURGE CAPACITY

12. Senator ROSEN. General Milley, our Nation faces unprecedented cyberattacks and a consistent shortage of cyber talent at DOD and other Federal agencies, which together pose a significant risk to our national security. To address these challenges, I am working to find solutions to provide the Department with qualified civilian personnel to support the Department's cyberspace operations and ensure we have the talent needed to defeat, deter, and respond to malicious cyber activity, especially at times of greatest need. How might non-traditional cyber reserve models be a possible pathway to recruit personnel who might not otherwise choose to join the active or reserve components, or who might lack the physical eligibility, but possess valuable cyber skills?

General MILLEY. Deputy Secretary of Defense Dr. Kathleen Hicks signed the 2023–2027 DOD Cyber Workforce (CWF) Strategy, which sets the foundation for how the Department will foster a cyber workforce capable of executing the Department's complex and varied cyber missions. The strategy enables the Department to prioritize retaining highly skilled cyber talent by closing workforce development gaps.

Through the CWF Strategy, the DOD CIO ensures alignment with the Joint Staff, United States Cyberspace Command, and Services to focus Department efforts on cyber-related human capital initiatives in support of the 2022 National Defense Strategy. Additionally, a forthcoming Cyber Workforce Strategy Implementation Plan provides a list of initiatives that outline how the Department will pursue a comprehensive approach to overcome cyber talent shortages.

One of the initiatives is to establish mechanisms for surge capability for mission needs. The Department of Defense has a well-established group of Reservists and National Guardsmen that are highly trained and positioned to fill this gap. Even with these personnel the Department requires more surge cyber capability and the Department is exploring expanding the scope beyond traditional service and looking at all possibilities to fill this need.

One non-traditional pathway for creating more surge capability is a USCYBERCOM initiative to create a Cyber Alumni Program. Instead of the traditional Reserve model, it allows the mission owner to maintain a connection with

Service Members and Civilians that have separated from the Joint Force. Personnel that participate in this program are eligible to retain their security clearance and gain access to additional professional development opportunities. This initiative gives the mission owner access to a searchable Alumni data base of skilled professionals that may be eligible to surge when the time comes to respond to an increase in cyber activity.

COMMUTING ASSISTANCE FOR SERVICEMEMBERS

13. Senator ROSEN. Secretary McCord, airmen stationed at Creech Air Force Base and servicemembers stationed at many rural or remote installations have to commute many miles to base from where they live. Creech has very limited housing nearby, so the vast majority of airmen live in Las Vegas, which is about 45 miles away. It's an even longer commute for those who have to drop off their kids at the child development center or utilize other services at Nellis Air Force Base, which is on the opposite end of town. Does DOD have the existing authorities to provide these servicemembers with a gas stipend or something similar to make their commute less expensive as they deal with rising costs or is this something the services would need help from Congress to address?

Secretary MCCORD. In general, outside of congressionally approved programs like the Mass Transit Benefit Program [5 U.S.C. § 7905.], commuting costs are considered a personal expense of the servicemember.

The Department also notes that a gas stipend, as suggested in the question, would be considered taxable income for members under the Internal Revenue Code. At this time, the Department has no authority to provide reimbursement for single-occupant motor vehicles used for daily commuting from servicemembers' domicile to their assigned duty stations.

The Department does, however, have a program in place that Services can use to incentivize hard-to-fill assignments (37 U.S.C. § 352), and a program to account for the cost of living in high-cost areas (37 U.S.C. § 403b). Currently, Creech Air Force Base does not qualify for either of these programs.

MIDDLE EAST SECURITY COOPERATION

14. Senator ROSEN. General Milley, the Deterring Enemy Forces and Enabling National Defenses (DEFEND) Act—which Senator Ernst and I introduced last year and which was included in the Fiscal Year 2023 National Defense Authorization Act (FY23 NDAA)—advances an integrated air and missile defense architecture between the United States, Israel, and Arab states to protect against Iranian aggression in the Middle East. I appreciate the discussions you and I have had about this issue. Can you provide an update on Central Command's (CENTCOM) efforts to develop an integrated air and missile defense architecture in the Middle East, and to promote Israel's integration into regional partnerships?

General MILLEY. USCENTCOM is working diligently with allies and partners across the Middle East to design, plan, and resource an integrated air and missile defense architecture. Over the past 18 months, USCENTCOM has started multiple efforts with the interagency and regional partners to forge a multi-lateral construct to counter aerial threats in the Middle East. These efforts include combined training exercises, FMS/FMF cases, and liaison officer exchanges, often at the multilateral level. USCENTCOM supports security-related engagement between Israel and other nations in the region inherent in the Abraham Accords and diplomatic initiatives such as the Negev Forum.

USCENTCOM's efforts to develop an overarching security architecture now includes Israel. USCENTCOM and Israel are planning and conducting joint training events that significantly increase the interoperability of United States and Israeli military forces. Notably, in January 2023, United States and Israeli forces conducted EXERCISE JUNIPER OAK. This exercise included a large-scale live fire event with over 140 aircraft, 12 naval vessels, High Mobility Artillery Rocket Systems, and Multiple Launch Rocket Systems.

POTENTIAL UKRAINIAN COUNTEROFFENSIVE

15. Senator ROSEN. General Milley, Russia committed significant manpower and equipment to launch offensives in Ukraine this winter. Their gains have been limited, and their losses have been significant. Nonetheless, the defense of these towns has not come without costs to Ukraine. Are we providing the Ukrainian Armed Forces with the necessary capabilities and quantities to successfully reclaim territory in a coming counteroffensive and if not, what is required that they could immediately employ to reclaim their sovereign territory from Russian forces?

General MILLEY. The United States is fully committed to ensuring Ukraine has the capabilities it needs for a successful counteroffensive. Along with our allies, we have consulted with Ukrainian leaders as they have planned their military operations to resist Russia's illegal full-scale attack on their sovereign territory.

We have trained Ukrainian Armed Forces (UAF), focusing on: basic individual combat tasks, collective combined arms maneuver tasks, and proficiency on donated weapons systems and equipment.

We are providing Ukraine arms and equipment to support both upcoming operations to liberate territory from Russian occupation and to maintain the defense of territory from further Russian advances. United States and ally assistance has included supply of critical weapons systems and ammunition: Armored ground vehicles, air defense weapons; unmanned aerial vehicles; Ammunition for High Mobility Artillery Rocket Systems (HIMARS); Tube-Launched, Optically Tracked, Wire-Guided (TOW) missiles; Artillery ammunition, (including precision-guided rounds); demolition munitions and obstacle clearing equipment; High-speed Anti-radiation missiles (HARMs); other precision aerial munitions; mortar systems and ammunition; AT–4 anti-armor weapon systems; anti-tank mines; Claymore anti-personnel munitions; grenade launchers, small arms and associated ammunition.

16. Senator ROSEN. General Milley, what is your assessment of how short-range drones and one-way attack anti-tank munitions are being used in this conflict and their effectiveness given the electronic environment?

General MILLEY. The utilization of short-range drones follows the historical airpower progression from primarily intelligence, surveillance, and reconnaissance purposes to a relatively low-cost offensive capability. The small drones provide increased ability to observe and target ground forces, while providing greater standoff for Ukrainian forces, while also shortening the targeting process.

Effectiveness depends not just on the uncrewed aerial system (UAS) itself but also on the operator's proficiency in target recognition and knowing what munition is most effective against what target. Munition effectiveness varies on target type (e.g., tank, infantry fighting vehicle, or troop formation).

One-way attack munitions have shortened the targeting cycle and enabled the Ukrainian Armed Forces (UAF) to attack specific targets without human input after munition launch.[1] This application of UAS technology has the twofold effect of destroying Russian fielded equipment and forces, and demoralizing Russian troops.

17. Senator ROSEN. General Milley, what lessons have we learned about these kinds of weapons for our own force and defense industrial base?

General MILLEY. We have learned that drones and one-way attack (OWA) UAS strikes are effective, but not decisive in themselves. We observed Russia implement defense mechanisms, such as fencing and use of alternative materials that degraded the effectiveness of UAS munitions and OWA strikes. UAS support targeting efforts and help to shape force protection, but they are vulnerable to electronic warfare. We must enhance resiliency of UAS systems, increase electronic protection measures to make them more survivable in highly contested environment, while remaining cognizant of their relatively short lifespan and high attrition. No single materiel or non-materiel enabler can tip the scales one way or the other. It is the cumulative effect of these capabilities, ably employed.

QUESTIONS SUBMITTED BY SENATOR MARK KELLY

F–16S TO UKRAINE

18. Senator KELLY. Secretary Austin, I organized a letter to you with a bi-partisan group of 8 Senate colleagues, requesting that you take a hard look at what it would take to provide F–16 fighter jets to Ukraine. I would like to thank you for your prompt response to this letter and the analysis your team provided. You highlighted that F–16s are currently Ukraine's seventh priority, and that it would take 12–18 months to train pilots, in addition to a significant length of time to deliver jets. I understand this, however we cannot be short-sighted when it comes to Russia. It is imperative that the Russians don't win this war-or any other war they decide to start. Providing modern fighters to Ukraine needs to be part of a long-term Euro-

[1] Information provided by Joint Counter UAS Office (JCO)

[2] "The Ukraine/Russia Conflic: Monthly Threat Report from March 2023" National Ground Intelligence Center, 10 April 2023

pean deterrence strategy against Russia. Please explain the long-term strategy regarding providing military equipment and fighter jets to Ukraine.

Secretary AUSTIN. The United States, in partnership with allies and partners, is focused on building Ukraine's capabilities to defend its territory for both the near and long term. We are in constant contact with Ukraine's military leadership regarding their evolving capability requirements. Our focus has been ground-based air defense capabilities to protect Ukraine's people and critical infrastructure, artillery, and armored vehicles. We are working with allies and partners to lay the groundwork for Ukraine to be prepared in the months and years ahead to utilize fourth-generation fighter capability, which we see as an important element of Ukraine's future force to deter and defeat Russian aggression in the longer term. This work begins with training, but will also include maintenance and sustainment planning.

General MILLEY. Our primary focus remains providing UKR with the capabilities it needs to defend its territory. No single materiel or non-materiel enabler can tip the scales one way or the other. It is the cumulative effect of these contributions, ably employed, that will put Ukraine in a position of relative advantage.

Currently, air defense is a critical concern for Ukraine and its people as Russia targets critical national infrastructure. Delivering effective fires is also a critical concern'to enable the Ukrainian Armed Forces to conduct combined arms maneuver. As part of a comprehensive approach, western multi-role fighter aircraft can contribute to both air defense and delivering fires. We, along with our allies, are exploring options to ensure the most impactful equipment and capabilities are making it to Ukraine at the right time.

19. Senator KELLY. Secretary Austin, what did DOD learn from the assessment of Ukrainian pilots at Morris Air National Guard Base (ANGB) earlier this month?

Secretary AUSTIN. The Ukrainian military has inspired the world by fighting bravely and effectively against the further invasion of their sovereign country by Russia. The two Ukrainian pilots who traveled to Tucson participated in a pilot familiarization event with the United States Air Force. The familiarization event was part of our routine military-to-military dialog designed to build mutual understanding of how each Air Force operates, not an assessment or a training event. We continue to support Ukraine through the provision of capability and weapons and platform training, and in coordination with our allies and partners.

20. Senator KELLY. Secretary Austin, how did that assessment inform our analysis on providing aircraft in the short term?

Secretary AUSTIN. The equipment we provide to Ukraine is based on a collective prioritization, driven by Ukraine's input, of the capabilities required to be successful on the battlefield, while balancing United States readiness requirements, training, sustainability, and other factors. The familiarization event was not an assessment. Rather, it was part of an existing program to build mutual understanding of how each Air Force operates.

21. Senator KELLY. Secretary Austin and General Milley, did it inform other aspects of United States support to Ukraine, e.g. planning support?

Secretary AUSTIN. As stated, the pilot familiarization event was part of our routine military-to-military dialog to build mutual understanding of how each Air Force operates.

General MILLEY. With an assessment pool of only 2 Ukrainians it's difficult to generalize the assessment to inform broader planning support. However, the after-action report identifies that prior to future highly technical training of this caliber the Ukrainians would require formal English training.

22. Senator KELLY. Secretary Austin. how does it inform our plans to potentially support F–16s or other fighter jets in the long-term?

Secretary AUSTIN. For now, we remain focused on providing what is most effective and what is most urgently needed for the counter-offensive, and on supporting training the Ukrainian military. Our priorities are ground-based air defense capabilities to protect Ukraine's people and critical infrastructure, artillery, and armored vehicles. We are engaging our allies and partners to lay the groundwork for Ukraine to be prepared in the months and years ahead to utilize fourth-generation fighter capability. Fourth-generation aircraft will be an important element of Ukraine's ability to deter and defeat Russian aggression in the longer term. Training, sustainment, and maintenance planning is an important first step.

23. Senator KELLY. Secretary Austin and General Milley, how has the prolonged conflict in Ukraine changed the calculus with regard to what military equipment we

are willing to provide our partners and allies over the course of the current conflict (beyond the spring if the conflict continues)?

Secretary AUSTIN. We have provided more than $32 billion of security assistance to Ukraine, focusing on the capabilities that are most urgently needed for success on the battlefield. The Ukrainian military has used this assistance to inflict tremendous damage on Putin's forces. Many of the same capabilities that are having the greatest effect in Ukraine, including air defense systems, portable anti-tank weapons, and cannon and rocket artillery, are also in high demand from other allies and partners globally.

We are committed to ensuring that the Department of Defense can support the defense needs of both the United States and our partners, and with the support of Congress we have invested nearly $3 billion to support the expansion of the U.S. industrial base to increase critical manufacturing capacity for these key systems and weapons.

Decisions to provide specific systems to all partners and allies are made in a comprehensive and deliberate manner by the Department and our interagency colleagues, taking into account the need to balance the operational requirements of our partners with the urgency of maintaining U.S. readiness and protecting critical U.S. technologies. These decisionmaking processes consider a wide range of factors, including our partner's capacity to absorb the system into their inventory and support it through its lifecycle, the partner's ability to train on the system to employ it safely and effectively, and the partner's ability and willingness to maintain accountability and protection for the system.

General MILLEY. The conflict in Ukraine has given the United States Military greater insight into the requirements to conduct large-scale combat operations. Taking into consideration worldwide inventory, and the ability of the U.S. and global defense industrial base to produce and replenish needed capacity, the U.S. must always balance requests from allies and Partners against meeting our own requirements. There are certain numbers of munitions and types of systems that we cannot provide our allies and partners because it creates unacceptable risk to our ability to defend the Homeland, and meet operational and contingency requirements elsewhere.

MULTI-YEAR PROCUREMENT

24. Senator KELLY. General Milley, you indicated that it would be prudent to consider expanding this authorization to additional munitions. Please provide further details about what specific munitions should be authorized for MYP, and the impact this would have on United States weapons supply and in support for Ukraine.

General MILLEY. We thank Congress for the multi-year procurement and other flexible acquisition authorities granted in recent legislation. MYP authorities will improve taxpayer buying power, bolster inventory, and provide a more stable and predictable demand signal to industry.

The Department is constantly evaluating its munitions inventories and munitions procurement strategies. Our President's Budget 2024 request includes plans to pursue MYP for five munitions and will continue to identify additional opportunities to leverage existing MYP authorities, and recommend additional authorities, where it makes sense and provides value to the Government.

25. Senator KELLY. General Milley, please explain how MYP affects the Indo-Pacific Command (INDOPACOM) area of responsibility (AOR). How will this increase our supply of weapons in the AOR, are there any impacts or concerns regarding weapons storage in the AOR, and what impact would all of these factors have in a potential China conflict?

General MILLEY. MYP generates savings through the use of Economic Order Quantity (EOQ) financing to procure greater quantities of munitions using a buy-to-budget strategy. The greater quantities of munitions can be deployed to the INDOPACOM AOR to deter or, if necessary, defeat China.

INDOPACOM supports MYP to acquire long-lead materials and components to support the acquisition of critical munitions to enhance the U.S.' ability to prosecute the National Defense Strategy; USINDOPACOM is also addressing future in-theater munitions storage requirements in parallel with targeted MILCON projects, bilateral agreements, and the dispersal of critical munitions postured across the theater.

QUESTIONS SUBMITTED BY SENATOR ROGER WICKER

PRC SURVEILLANCE BALLOON

26. Senator WICKER. Secretary Austin, thank you for your response to the questions that Senator Rubio and I sent on February 8 regarding the Chinese surveillance balloon. I have additional questions. Please answer them in an unclassified form, except where a classified response is necessary, and please submit all unclassified answers in an unclassified format. Since these questions are for the public record, I expect that all unclassified answers will not be classified as controlled unclassified information (CUI), which would limit its distribution. On February 6, you called me on an unclassified line to provide an update on the high-altitude balloon (HAB). At the time, you indicated that you were not personally aware of the HAB on January 29, while it was still over Alaska, because you were traveling in Asia. You also couldn't recall when you first learned of the HAB's existence. In your March 27 response to the letter that Senator Rubio and I sent on February 8, however, you write that you were first notified of the HAB on January 27, prior to it entering United States airspace. Can you please explain the difference between what you told me on February 6—which was that you had not known for a few days because you were traveling in Asia—and what you wrote in your letter, which is that you knew about the HAB and were tracking it all along?

Secretary AUSTIN. I was first notified about the high-altitude balloon (HAB) by my senior military assistant on the evening of January 27, 2023, prior to it entering U.S. airspace. I received daily updates from NORAD, USNORTHCOM, and other agencies. The HAB then re-entered U.S. airspace on January 31, 2023.

27. Senator WICKER. Secretary Austin, General VanHerck told us last week that he would have been prepared to present options to shoot down the HAB while it was over Alaska. Your letter makes it clear that you never requested options to shoot down the HAB until it traversed Alaska and Canada, and then reentered the United States. Why?

Secretary AUSTIN. The NORAD/NORTHCOM Commander assessed that the balloon did not present a kinetic threat to North America. Working with the Canadian military, NORAD/NORTHCOM began immediately taking action and developing additional options to better characterize the incursion. NORAD continued to track the PRC HAB, ensuring the Department could protect sensitive sites against foreign collection. On January 29, 2023, I departed for travel to the Republic of Korea and the Philippines. Also on January 29, 2023, the NORAD/NORTHCOM Commander advised me and Chairman Milley that he was looking at options to engage the balloon should that be directed. The balloon re-entered U.S. airspace on January 31. That evening, President Biden, through his national security Advisor, directed the military to immediately refine and present options to shoot down the PRC HAB. I, through Chairman Milley, asked for options to shoot the PRC HAB down. On February 1, 2023, while in the Philippines, I convened a meeting with senior military officials to review options to take down the PRC HAB safely, while closely monitoring its path and intelligence-collection threat.

28. Senator WICKER. Secretary Austin, does Northern Command (NORAD) currently have the ability to incorporate open source tracking of private and commercial balloons into the air defense picture?

Secretary AUSTIN. Yes. NORAD and USNORTHCOM also work closely with the Federal Aviation Administration (FAA) when unknown, suspect air tracks appear on radar. Additionally, the FAA has prescribed rules governing the operation of "unmanned free balloons" in the United States in 14 CFR Part 101.

29. Senator WICKER. Secretary Austin, following the public acknowledgment of the HAB, the Department of Defense said that it was aware of multiple previous Chinese surveillance balloons that had entered United States sovereign airspace. Who in the Department would have been responsible for developing options to counter balloons, in light of the Department's awareness of this threat and did that official or office develop those options? Why or why not?

Secretary AUSTIN. I cannot speak to how previous Administrations or previous Secretaries organized the Department's response to any balloons entering U.S. sovereign airspace. As the PRC HAB incident was unfolding, I received updates and advice from USNORTHCOM, NORAD, OSD Policy, and others. On January 29, 2023, the Commander of USNORTHCOM and NORAD advised me and Chairman Milley that that he was looking at options to engage the balloon should that be directed. Working with the Canadian military, NORAD and USNORTHCOM imme-

diately began to develop options to better characterize the incursion. NORAD continued to track the PRC HAB, ensuring the Department could protect sensitive sites against any intelligence collection.

30. Senator WICKER. Secretary Austin, prior to this case, did NORAD have courses of action (COAs) for addressing adversary operation of high-altitude, unmanned reconnaissance aircraft within the 12 nautical mile (NM) line, or over territory?

Secretary AUSTIN. The primary missions of NORAD include providing aerospace warning and aerospace control for North America, and NORAD supports USNORTHCOM in U.S.-only missions, including addressing high-altitude unmanned aircraft surveillance threats to sensitive sites.

The Department allocates forces in Alaska to support USNORTHCOM and NORAD responsibilities, and those forces provide aerial defense for North America. DOD supports homeland defense requirements in Alaska through coordination between the Air Force, USNORTHCOM, NORAD, and USINDOPACOM, to include forces permanently stationed in Alaska and a layered defense network within the Alaska Air Defense Identification Zone. This approach ensures DOD is able to support homeland defense requirements, Indo-Pacific campaigning, and warfighting.

31. Senator WICKER. Secretary Austin, if so, were the HABs considered in light of the COAs?

Secretary AUSTIN. HABs have been considered in operational planning/COA development by the Department.

32. Senator WICKER. Secretary Austin, if not, what is NORAD's future approach to any form of high-altitude reconnaissance that violates U.S. airspace?

Secretary AUSTIN. USNORTHCOM and USINDOPACOM are prepared to respond to future HABs that violate U.S. airspace.

33. Senator WICKER. Secretary Austin, was a National Event Conference (NEC) held at any point for the HAB? Was one held for the Unidentified Aerial Phenomena (UAP) that were engaged by NORTHCOM aircraft after the Chinese HAB?

Secretary AUSTIN. Upon the PRC HAB reentering U.S. airspace on January 31, 2023, President Biden, through his national security Advisor, directed the military to immediately refine and present options to shoot down the PRC HAB. On February 1, 2023, while in the Philippines, I convened a meeting with senior military officials to review options to take down the PRC HAB safely, while closely monitoring its path and intelligence collection threat. A similar course of action was taken with the three unidentified aerial objects that were ultimately shot down.

34. Senator WICKER. Secretary Austin, some commercial HABs have altitude capabilities up to 100,000 feet. Can NORAD maintain tracking of any adversary airframes that might operate at that altitude?

Secretary AUSTIN. In coordination with other Combatant Commands, the Intelligence Community (IC), and mission partners, NORAD has the ability to maintain tracking of objects that might operate at 100,000 feet altitude.

35. Senator WICKER. Secretary Austin, at what point was weather modeling of the HAB's flight path first incorporated into the planning? When was a flight path over the contiguous U.S. first assessed?

Secretary AUSTIN. Weather modeling and flight path trajectory were considered throughout. It was between January 30 and 31 that the flight path trajectory indicated CONUS overflight.

36. Senator WICKER. Secretary Austin, Under Secretary of Defense for Policy Colin Kahl led the Department's public response to the HAB, providing multiple off-the-record media briefings and briefings to Congress. What steps, if any, did Under Secretary Kahl take to notify his superiors and develop response options from January 27 to January 31, while the balloon was in Alaskan and Canadian airspace?

Secretary AUSTIN. Under Secretary Kahl provided me with advice and counsel, alongside senior military leaders, to ensure that the Department was in the best position to respond to the PRC HAB in a responsible and timely manner. Once President Biden gave his authorization to the Department to take the PRC HAB down, the Department executed those orders.

37. Senator WICKER. Secretary Austin, did Secretary Kahl make any recommendations pertaining to the HAB during that period, or direct his staff to develop options, and, if so, please explain?

Secretary AUSTIN. Under Secretary Kahl was among the senior DOD officials that advised me as the PRC HAB incident was unfolding. Thanks to this deliberate and coordinated approach, we were able to enhance our understanding of a sensitive PRC surveillance program.

38. Senator WICKER. Secretary Austin, until Under Secretary Kahl informed the press that three Chinese surveillance balloons had entered United States airspace during the previous administration, that information had been classified. I am concerned that Under Secretary Kahl leaked this information for partisan ends, because he left out an important fact, which was that the Trump administration was not aware of those previous balloons at the time, and therefore had no opportunity to counter them. You wrote in your March 27 response to the letter that Senator Rubio and I sent on February 8, "all information provided in unclassified settings had been appropriately cleared for release," but you provide no information to support that claim. When, and through what process, was the information regarding prior Chinese surveillance balloons cleared for release, and who cleared it for release? Please provide all documentation to substantiate your response.

Secretary AUSTIN. As I explained in my prior correspondence, I have no reason to believe that any member of the Department disclosed classified information at any point during the unclassified engagements with Congress or the public. All information provided in unclassified settings had been appropriately cleared for release. The United States downgraded and authorized for release a series of talking points in response to the overflight of the PRC HAB, including talking points regarding HAB flights over U.S. territory in prior years. The Department received the cleared points after they were downgraded and prior to any public statements about this topic. Any suggestions that a U.S. Government official, including Dr. Kahl, disclosed this information is inaccurate.

SECURITY ASSISTANCE TO UKRAINE

39. Senator WICKER. Secretary Austin, in response to Senator Blumenthal's question concerning critical needs for Ukraine, you said that "long-range fires" are among the critical battlefield needs for the Ukrainian Armed Forces (UAF). Army Tactical Missile Systems (ATACMS) are important long-range fire capability, but the Biden Administration has rejected its transfer to the UAF. Have the Ukrainians requested ATACMS?

Secretary AUSTIN. The equipment we provide is based on a collective assessment of the capability Ukraine needs to be successful on the battlefield, not system requests, while balancing U.S. readiness requirements, training, sustainability, and several other factors. Our assistance is also shaped by my frequent conversations with the Ukrainian defense minister, Chairman Milley's talks with the Ukrainian Chief of Defense, and by the constant interactions that USEUCOM has with the Ukrainian Armed Forces.

The Department remains in regular contact with our Ukrainian partners to assess and support their requirements. We are laser focused on getting Ukraine the weapons and equipment it needs to be successful on the battlefield.

It is our assessment that the GMLRS munitions and launcher capabilities that have been provided to Ukraine can reach the vast majority of targets in Ukrainian territory. The Department is also in the process of procuring the Ground Launched Small Diameter Bomb for delivery to Ukraine, which will significantly enhance Ukraine's precision long-range fires capability.

Based on Ukraine's successes on the battlefield, our near-term and long-term investments are paying off. We believe that the extraordinary efforts we are taking, alongside our allies and partners, will continue to get Ukraine what it needs to be effective.

40. Senator WICKER. Secretary Austin, if long-range fires are among UAF's critical needs for battlefield success, then why has the Administration denied their transfer?

Secretary AUSTIN. We have provided more than $32 billion of security assistance to Ukraine and are in constant contact with Ukraine's leadership to understand their requirements. We are focused on providing what is most effective on the battlefield, and what they need to be successful, such air defense capabilities to protect the Ukrainian people and weapons and equipment to retake territory on the ground. Ukraine has been effective, inflicting tremendous damage on Putin's forces.

Ultimately, all of our security assistance decisions for Ukraine are based on a collective prioritization of Ukraine's battlefield needs, while balancing United States readiness requirements, training, sustainability, and other factors. Priorities include providing Ukraine with critical long-range fires capabilities, such as High Mobility Artillery Rocket Systems and corresponding munitions, which can range the vast majority of targets in Ukrainian territory. The United States also committed to provide Ukraine with the Ground Launched Small Diameter Bomb, which will significantly enhance Ukraine's precision long-range fires capability.

MARCH DELEGATION TO EGYPT

41. Senator WICKER. Secretary Austin, during your visit to Egypt on March 8, 2023, press was prevented from covering your meetings with senior Egyptian officials. Previous defense secretaries have refused to proceed with meetings when the press has been prevented from covering them. Can you please explain what happened, from the Department's perspective, in terms of press access to your meetings?

Secretary AUSTIN. The Department is committed to freedom of the press, and we consistently provide the news media with timely and accurate information. This includes conducting regular press briefings, responding to public inquiries, and answering press queries. My invitation and hosting of credentialed, independent media on my trips, to include my recent visit to the Middle East, is one example.

Prior to travel, my team, alongside a variety of stakeholders such as the Department of State and host countries, negotiates press access for planned events. The Department of Defense considers the traveling press as integral to the success of the U.S. delegation and includes them in all press events and open engagements.

My team consistently pressed for access by all members of the accredited press corps traveling with me before, during, and after the visit to Egypt. After the trip, the Government of Egypt in followup engagements informed my team that they draw a distinction between official press affiliated with the United States Government, such as official photographers and social media experts, and the traveling press corps. This distinction on their part led to misunderstanding between our two sides that ultimately impacted travel press access. Our concerns with this lack of press access were subsequently raised directly with Egyptian counterparts from DOD and State Department Policy and Public Affairs offices.

The position of the Department of Defense is and continues to be that all accredited press traveling with my delegation should have equal access to my official open and public engagements. We will make this clear in adva]nce to any host nations—including Egypt—going forward.

42. Senator WICKER. Secretary Austin, why did the meeting proceed despite the press being prevented from covering it, per usual?

Secretary AUSTIN. The United States and Egypt are cooperating closely to address a range of shared interests, including de-escalating conflicts, addressing humanitarian crises, supporting a negotiated two-State solution to the Israeli-Palestinian conflict, and expanding regional security integration. My meetings in Egypt were a critical opportunity to reinforce the Department of Defense's support for addressing human rights and fundamental freedoms, as well as advancing our work to mitigate civilian harm during Egyptian Armed Forces' operations. I emphasized a range of United States priorities and concerns during my meetings with President Sisi and Minister of Defense Zaki that advanced my Department's focus on implementing the National Defense Strategy and the United States Government's emphasis on regional security and stability.

43. Senator WICKER. Secretary Austin, did you relay anything to the Egyptian Government about the manner in which the press was treated during your visit? Please provide any correspondence you had related to this issue.

Secretary AUSTIN. My team consistently pressed for access for all members of the press corps traveling with me before, during, and after my visit to Egypt. Specific challenges related to my March visit to Egypt were raised directly with Egyptian counterparts.

44. Senator WICKER. Secretary Austin, what measures, if any, does the Department plan to take to ensure proper press coverage of your engagements in the future?

Secretary AUSTIN. The Department of Defense will continue to insist on access to open and public engagements for all members of the accredited press corps traveling with me.

QUESTIONS SUBMITTED BY SENATOR TOM COTTON

CHINESE SPY BALLOON

45. Senator COTTON. Secretary Austin, when did you first become aware of the spy balloon? If you submit an answer labeled CUI, please explain in detail why your answer merits that label, since these questions are for the record.

Secretary AUSTIN. I was first notified about the high-altitude balloon (HAB) by my senior military assistant on the evening of January 27, 2023, prior to it entering U.S. airspace. The HAB then re-entered U.S. airspace on January 31, 2023.

46. Senator COTTON. Secretary Austin, General VanHerck told us last week that he would have been prepared to present options to shoot the balloon down on January 28, but you didn't request any until February 1 when the balloon had already finished its journey across Alaska and Canada, and then reentered the United States. Why didn't you request options sooner? Why did you leave NORAD airspace unprotected for at least 5 days?

Secretary AUSTIN. The NORAD/NORTHCOM Commander assessed that the balloon did not present a kinetic threat to North America. Working with the Canadian military, NORAD/NORTHCOM began immediately taking action and developing additional options to better characterize the incursion. NORAD continued to track the PRC HAB, ensuring the Department could protect sensitive sites against foreign collection. On January 29, 2023, I departed for travel to the Republic of Korea and the Philippines. Also on January 29, 2023, the NORAD/NORTHCOM Commander advised me and Chairman Milley that he was looking at options to engage the balloon should that be directed. The balloon re-entered U.S. airspace on January 31. That evening, President Biden, through his national security Advisor, directed the military to immediately refine and present options to shoot down the PRC HAB. I, through Chairman Milley, asked for options to shoot the PRC HAB down. On February 1, 2023, while in the Philippines, I convened a meeting with senior military officials to review options to take down the PRC HAB safely, while closely monitoring its path and intelligence collection threat.

47. Senator COTTON. Secretary Austin, when General VanHerck told you—or perhaps your senior military aide—that he was prepared to shoot down the balloon in Alaskan airspace on January 28, did you have the legal authority to order the shoot down?

Secretary AUSTIN. Shooting down the HAB was lawful under domestic and international law. DOD has express statutory authority to act to protect against threats to sensitive military installations, including against surveillance from unmanned aircraft. The action we took occurred within U.S. territory against an unmanned foreign surveillance balloon that entered and was operating unlawfully in U.S. airspace.

48. Senator COTTON. Secretary Austin, how could a Chinese balloon conducting a spy mission not be considered a threat?

Secretary AUSTIN. The NORAD/NORTHCOM Commander assessed that the balloon did not present a kinetic threat to North America. Working with the Canadian military, NORAD/NORTHCOM began immediately taking action and developing additional options to better characterize the incursion. NORAD continued to track the PRC HAB, ensuring the Department could protect sensitive sites against foreign collection. On January 29, 2023, I departed for travel to the Republic of Korea and the Philippines. Also on January 29, 2023, the NORAD/NORTHCOM Commander advised me and Chairman Milley that he was looking at options to engage the balloon should that be directed. The balloon re-entered U.S. airspace on January 31. That evening, President Biden, through his national security Advisor, directed the military to immediately refine and present options to shoot down the PRC HAB. I, through Chairman Milley, asked for options to shoot the PRC HAB down. On February 1, 2023, while in the Philippines, I convened a meeting with senior military officials to review options to take down the PRC HAB safely, while closely monitoring its path and intelligence collection threat.

49. Senator COTTON. Secretary Austin, I appreciated General VanHerck's candor last week. He fulfilled the promise he made when he was confirmed to give us his honest assessment, even when it's politically uncomfortable. Will you commit that there will be no retaliation against General VanHerck for his honest testimony last week?

Secretary AUSTIN. I am grateful to General VanHerck for his service to our country. Retaliation is unacceptable and will not be tolerated in my Department, including for testimony before Congress.

QUESTIONS SUBMITTED BY SENATOR MIKE ROUNDS

LANDMINES

50. Senator ROUNDS. General Milley, you have been outspoken on the need for landmine alternatives to be available to the Joint Force to shape engagement areas to kill enemy ground forces and to protect friendly forces. At Munich you described how the Ukrainians have been effectively using these capabilities to destroy Russian armor. Can you describe how the new systems we are developing have self-deactivation / self-destruct capabilities, so they would not harm civilians after hostilities cease?1

General MILLEY. All current U.S. policy-compliant landmine systems incorporate self-destruct and self-deactivate features that exceed the requirements of the Certain Conventional Weapons (CCW) Amended Mines Protocol II. The Army's legacy compliant systems, the Family of Scatterable Mines, have demonstrated extremely high self-destruct and self-deactivate reliability. Throughout lifecycle testing, no armed mined has failed to self-destruct.

The Army is developing new systems to replace the aging inventory of legacy Family of Scatterable Mine systems. These new systems are fully compliant with the U.S. anti-personnel landmine policy and therefore are not designed or intended to be exploded by the presence, proximity, or contact of a person nor will they incapacitate, injure, or kill one or more persons. These systems are also designed to self-deactivate and leave non-hazardous remnants on the field after either a pre-set time or when forces on the ground determine that they are no longer needed.

The requirement for the new systems in development will far exceed the CCW Amended Mines Protocol II requirement with a minimum self-destruct reliability of 99 percent. Additionally, the newly developed mines will have less than 1 in 10,000 probability (e.g. 99.99 percent reliability) of being hazardous after 120 days.

51. Senator ROUNDS. General Milley, is it true that the size and composition of the U.S. Army is based on the assumption that these capabilities would be available to enable our troops to fight and win a ground war?

General MILLEY. Many different variables affect the required size and composition of the U.S. Army and its ability to meet current and future challenges. These vary significantly based on the mission, and various factors of the operational environment, but are not limited to: training, experience, equipment, sustainability, enemy threat, and mobility. President's Budget Fiscal Year 2024 requested end-strength delivers a ready and capable Army able to achieve the Department's modernization goals.

52. Senator ROUNDS. General Milley, have the Ukrainians proven that these are capabilities required to fight and win any future land war?

General MILLEY. The United States has not actually provided Ukraine with the new capabilities. It has provided older anti-tank/vehicle mines that are compliant with U.S. policy.

Landmines have been critical for Ukrainian success against the Russian ground forces. The Ukrainians employ landmines to canalize Russian armored forces, putting them into engagement areas and making them vulnerable to the 60,000 anti-tank weapons systems that we've provided.

The Ukrainian experience demonstrates how the capabilities of policy compliant landmines would increase the effectiveness of U.S. Forces in future conflict by enhancing the effectiveness of friendly fires, denying adversaries the use of terrain, disrupting enemy sustainment operations, and inflicting damage to enemy forces. If developed and used in accordance with international laws, treaties, and agreements, landmines can remain an effective deterrent and defensive option.

QUESTIONS SUBMITTED BY SENATOR JONI ERNST

SPECIAL OPERATIONS FORCES (SOF) IN GREAT POWER COMPETITION (GPC)

53. Senator ERNST. General Milley, how can SOF help deter or defeat great power competitors?

General MILLEY. Our Special Operations Forces are vital to achieving the defense priorities outlined in the National Defense Strategy across the spectrum of conflict. SOF operations and activities in support of integrated deterrence ensure Joint Force advantage in great power competition, crisis, and conflict. SOF accomplish this while maintaining critical crisis response capabilities and continuing efforts to counter Violent Extremist Organization activities. Our adversaries increasingly employ irregular, unconventional, asymmetric, and hybrid / gray-zone activities to challenge the United States and hold our interests as well as those of our allies and partners at risk. Authoritarian regimes undertake these malign activities to contest the rules-based international order and advance their interests.

In response, our SOF are uniquely positioned to provide the means to deter, detect and illuminate, disrupt, and when required defeat our adversaries' competitive strategies. In competition, the DOD may not be in the lead for the USG. Our SOF are well-versed in providing critical support, information, and intelligence to other Government Departments and agencies and to those of our allies and partners that they need to counter our adversaries' malign efforts. SOF strategic competition-related operations and activities complicate adversary decisionmaking, reduce their freedom of maneuver, isolate them, and increase the cost relative to the benefits associated with the continuation of malign activities. Through building the resilience and capabilities of our allies and partners across the globe, SOF help to reduce the impact of adversary malign actions and build awareness, access, and influence, which limit adversary options and again increase the adversary cost / risk.

54. Senator ERNST. General Milley, your personal opinion, would partnering with surrogate forces that are responding to hostilities help SOF compete against great powers?

General MILLEY. The National Defense Strategy directs the Joint Force to impose costs upon our adversaries' malign strategies. The Joint Force should not rule out / eliminate any viable options, including the use of partnered or surrogate forces where our interests align and are mutually beneficial. Our support of surrogate forces must comply with U.S. Law and DOD policy. Our SOF have a long history of building and supporting partner forces to defend their nation's sovereignty and combat internal threats. Their use achieves our objectives, confounds our adversaries' efforts, preserves U.S. resources, and reduces the risk to mission and forces, use of surrogate forces is a legitimate choice and a clear combat multiplier. Failing to consider the capabilities of surrogate forces surrenders maneuver space to our adversaries. Employing surrogate forces, particularly when their activities support a comprehensive, whole-of-government approach, complicates our adversaries' decisionmaking, increases cost / risk for our adversaries, and limits their freedom of maneuver.

PREVENTING THREATS TO N]ORTH ATLANTIC TREATY ORGANIZATION (NATO)

55. Senator ERNST. General Milley, how extensive are Russian manpower and equipment losses?

General MILLEY. Precise casualty information is hard to obtain, but believe that the number of Russians casualties (including those killed and wounded) in Ukraine, perhaps 200,000—250,000. Russian forces have also suffered high losses in their equipment.

56. Senator ERNST. General Milley, by how long has this delayed Russia's ability to reconstitute a threat to NATO's eastern flank?

General MILLEY. Russia has already had to mobilize 200–300 thousand poorly trained reservists in order to sustain their current battle losses.

The losses have directly impacted their ability to threaten NATO's eastern flank, and we can provide additional information on our estimates of Russian combat power at higher levels of classification.

Of note, the United States and NATO have contributed significant resources to deterring Russia from attacking NATO's eastern flank. There are now eight NATO Battle Groups in the alliance's frontline states. There are now more than 100,000 United States Forces in Europe. Air policing over the Baltic Sea has stepped up, and President Joe Biden has repeatedly said the United States will defend every inch of NATO territory.

57. Senator ERNST. General Milley, by your best military advice, has United States support reduced the risk of deterrence failure in Europe?

General MILLEY. Ukraine's military operations, critically enabled by the United States and our allies, have significantly reduced Russia's military capabilities in key areas. However, the key factor that has improved the prospects for deterrence is how this Russian aggression has galvanized the resolve of NATO nations to collectively defend our Homelands. It has even resulted in NATO enlargement—Finland has joined, and Sweden is on a path to join NATO. We are also demonstrating our enormous capacity to rapidly reinforce NATO's eastern flank with United States Forces. We will continue to demonstrate this capacity through regular exercises that showcase United States and allied agility across the depth and breadth of the Balkans, Baltic, and Central Europe.

58. Senator ERNST. General Milley, has degradation of Russia's military likely decreased our operational requirements in Europe?

General MILLEY. Ukraine's military operations, critically enabled by the U.S. and our allies, have significantly reduced Russia's military capabilities in key areas. However, Russia's leaders have demonstrated a commitment to reckless aggression beyond what anyone had previously understood. Until that behavior changes, the United States and our allies must continue to invest in our collective defense, conventional and strategic, globally and across all military domains.

MISMATCH BETWEEN STRATEGY AND RESOURCES

59. Senator ERNST. Secretary Austin, what hard choices has the Department made to free-up resources for readiness and modernization?

Secretary AUSTIN. The Department is focused on having the right mix of capabilities matched to our strategy to deter our adversaries, remain dominant on the battlefield, and prevail in conflict, if necessary. As we look to our most significant challenges, we must divest vulnerable platforms that can no longer be affordably modernized or maintained to provide credible combat power. Failing to do so will impact the readiness of the Joint Force and cause a $4 billion drag on our ability to invest in, and transition to, the capabilities we need to meet our strategy.

We need help from Congress to ensure that we resource the capabilities we need to meet our strategy. Two significant examples of platforms the Department should divest from are the A–10 and some of the early hulls of the Freedom Class Littoral Combat Ship, due to their single-mission focus or limited relevance for future challenges. These divestments will help us transition to a more advanced, capable, and ready force by providing savings that can be utilized to, for example, correct maintenance backlogs and invest in more survivable, lethal, and resilient capabilities.

60. Senator ERNST. Secretary Austin, do you commit to provide documentation of those reinvestments?

Secretary AUSTIN. Yes.

GROUND-BASED MISSILE CAPABILITIES IN WESTERN PACIFIC

61. Senator ERNST. General Milley, would fielding ground-launched, theater-range missile systems in the Indo-Pacific help offset China's advantage in these capabilities? Please explain.

General MILLEY. Yes, the ranges associated with such weapons systems force the adversary to account for threats to assets previously considered in sanctuary.

The presence of long-range weapons systems inside the theater complicates the adversary's targeting problem and forces the PRC to dedicate assets to look for and potentially engage additional targets. When combined with robust and capable air and maritime forces, these ground-based systems work to offset Chinese advantages and deliver competitive United States capabilities within the theater. They provide the Joint Force with the depth to execute fires from dispersed locations at different ranges.

62. Senator ERNST. General Milley, would U.S. ground-launched, theater-range missiles in the Western Pacific help availability of persistent, prompt, and survivable strike options?

General MILLEY. Yes, the Department has long advocated for stand-in, forward deployed forces in the Western Pacific to provide strike options should hostilities commence. The presence of such capabilities, especially when combined with other capabilities within the Joint Force and resilient command and control, will provide increased fires options to the theater commander.

63. Senator ERNST. General Milley, would U.S. ground-launched, theater-range missiles in the Western Pacific help deter of enemy attack or escalation?

General MILLEY. Yes, the art of deterrence is to convince our adversaries that the costs we can impose on them are not worth whatever strategic gain they seek and induce doubt that their objectives can be accomplished. Ground-launched, theater-range missiles in the Western Pacific are an important part of combat-credible forces that contribute to integrated deterrence by altering adversary perceptions of costs, benefits, and consequences of action.

64. Senator ERNST. General Milley, would U.S. ground-launched, theater-range missiles in the Western Pacific help impose of operational costs on enemy forces?

General MILLEY. Yes, diverse, multi-domain strike options force the adversary to apply resources toward different locations with a variety of characteristics. This dilutes the adversary's collection efforts that could have been focused on specific assets and locations if the multi-domain options did not exist. Any time we can complicate a targeting solution it imposes operational costs on our adversaries and degrades their surveillance-strike capabilities.

65. Senator ERNST. General Milley, would U.S. ground-launched, theater-range missiles in the Western Pacific help deliver responsive strikes against time-critical enemy targets?

General MILLEY. Yes, the characteristics of the ground-launched, theater-range weapons systems currently in development will help deliver responsive strikes on time-critical enemy targets with desired effects. We have campaign-level modeling and simulation analysis available at higher classification that supports this conclusion.

66. Senator ERNST. General Milley, would U.S. ground-launched, theater-range missiles in the Western Pacific help destroy high-value targets to enable other joint forces?

General MILLEY. Yes, the specifics are available at higher classification, but our analysis indicates these weapons systems are lethal, responsive, and enable Joint Force campaign objectives.

67. Senator ERNST. General Milley, would U.S. ground-launched missiles at various ranges and launch locations in the Western Pacific create dilemmas for enemy forces?

General MILLEY. The portfolio of weapons we are developing, including ground-launched missiles like the Long Range Hypersonic Weapon, Block V Tomahawk, and Naval Strike Missile, work toward imposing dilemmas on the adversary. When deployed to distributed locations and integrated with other Joint and Combined Force efforts these weapons systems create dilemmas for our adversaries.

NUCLEAR DETERRENCE

68. Senator ERNST. General Milley, given recent nuclear developments, should Congress receive an independent evaluation of the strategic nuclear force requirements of deterring Russia and China?

General MILLEY. I support the congressional Commission on the Strategic Posture of the United States.

We are fully committed to field and modernize the nuclear triad, Dual Capable Aircraft, the nuclear stockpile, and Nuclear Command, Control, and Communications infrastructure.

In light of increasing nuclear threats from Russia and China, I support assessing additional low-yield, non-ballistic nuclear capabilities to better deter, assure, and respond to a potential regional conflict.

We are also improving our internal processes to ensure we identify potential requirements early enough for them to have a deterrent effect against Russia and China.

QUESTIONS SUBMITTED BY SENATOR DAN SULLIVAN

CHINA'S DEFENSE BUDGET

69. Senator SULLIVAN. Secretary Austin and General Milley, in your testimony you stated the PRC remains our number one long term geo-strategic threat and continues to develop significant nuclear, space, cyber, land, sea, and air capabilities. While I agree with your statement, this year's budget is far from sufficient in meet-

ing this threat. China currently has 340 war ships, while we have 297. In 2028, China will likely have at least 400 ships and our fleet will shrink to 291. Under this year's budget proposal, our army, the Nation's preeminent land force will shrink from 485,000 to 452,000 while the People's Liberation Army Ground Force (PLAGF) has an end strength of approximately 975,000. Our Air Force is set to buy the bare minimum of fighters to keep our capability healthy while every publicly released war-game has reiterated the absolute importance of our ability to sink ships for Taiwan to be successful in a cross-strait conflict. Finally, this year's budget fails to provide the Marine Corps with San Antonio-class amphibious warships, an absolutely necessary tool to get marines into the fight. While you're asking to institute an inflation-adjusted defense cut this year, China seeks to increase its military spending by over 7 percent. Does the Department understand our budget is not to counter the China of today, but of tomorrow—a China that continues to demonstrate a willingness to invest in its military, including in areas in which they are already ahead?

Secretary AUSTIN. The U.S. military remains the most capable fighting force in history, and I am confident in the Joint Force's ability to deter, and if required, defeat PRC aggression. The PRC's military expansion is why the Department is focused on the PRC as our pacing challenge and why our fiscal year 2024 budget request includes $9.1 billion for the Pacific Deterrence Initiative to maintain deterrence today, tomorrow, and in the future. This is the largest ever PDI investment, and a 40 percent increase above last year. We are also requesting significant resources to maintain dominance in all domains.

Additionally, we're focused on moving and sustaining forces further forward, west of the International Date Line, and making our force posture more capable and lethal. Alongside our allies and partners, we're improving our posture in the Philippines, Australia, and Japan. We are also focused on funding what is executable to maintain our strategic advantage, building a distributed and resilience security architecture in the Indo-Pacific region.

General MILLEY. The PLA's rapid expansion is one of the reasons the Department is focused on the PRC as the pacing challenge and why we are doing more than ever before to deter, defend, and, if necessary, defeat aggression from the PRC. The National Defense Strategy, with direct linkages to the threat-informed Joint Warfighting Concept (JWC), is fully integrated into our resourcing and requirements processes to build the force required for the future.

Along with the $9.1 billion request for the Pacific Deterrence Initiative that provides the right mix of capabilities to remain dominant against the pacing challenge, we are expanding and connecting our regional allies and partners. Partnerships with countries such as Australia, the Philippines, Japan, and the Republic of Korea are force multipliers for a potential conflict with China. President's Budget Fiscal Year 2024s request, coupled with our unparalleled network of allies and partners, ensures our continued ability to deter, and if required, defeat PRC aggression.

TAIWAN

70. Senator SULLIVAN. Secretary Austin and General Milley, I want to talk to you about Taiwan. I've been giving a series of speeches around town on the theme of "Why Taiwan Matters". I'm doing it because I fear that the biggest disparity between the United States and the Chinese Communist Party (CCP) is around will. I have no doubt that the CCP has the will to fight over Taiwan if it ever comes to it. Frankly, I sometimes worry that the United States does not. Not our servicemembers, of course. I know they will do their duty and do as commanded, and do it damn well. They are the best fighting force the world has ever seen. If we go to war with China over Taiwan, it's going to be a MAJOR war. I'm not sure the American people know why it matters that we defend Taiwan. So, like I said, I've been giving this series of speeches trying to build the will. But I'm just one United States Senator. What are you and the Administration doing to help Americans understand the importance of Taiwan and the sacrifice that it will take to defend it?

Secretary AUSTIN. An invasion of Taiwan by the PRC is neither imminent nor inevitable. The Administration will continue to make clear that cross-Strait peace and stability remains a fundamental U.S. national security interest in the Indo-Pacific region. Taiwan's position within the first island chain is critical to the free flow of commerce and continued advance of personal freedoms and democratic ideals throughout the region. This is why this Administration, like those before it, has affirmed policy commitments enumerated under the United States "One-China" policy, defined by the Taiwan Relations Act, the three joint communiques, and the six assurances.

Moreover, we affirm these policy commitments not only to the American people and our Taiwan partners, but with all allies and partners with shared interests in the Indo-Pacific region. So, the Department will continue to support a peaceful resolution to cross-Strait tensions, consistent with the goals and interests of the people on Taiwan. We will continue to make available to Taiwan defense articles and services necessary to enable it to maintain its self-defense consistent with the Taiwan Relations Act, and we will also work with industry to ensure the swift provision of defensive weaponry and sustainment to Taiwan.

General MILLEY. Taiwan is an important United States partner in the INDOPACIFIC region when it comes to economic trade and democratic values. The Joint Force remains determined to support Taiwan and its right to defend itself. That involves providing them the right tools and training they need for defense. Additionally, we remain determined to modernize our force as the most powerful on Earth to deter aggressive actions.

This budget is informed by our National Defense Strategy and makes the necessary investments to ensure we are equipped and ready for any threat—today and in the future. Every day the Armed Forces demonstrates to the American people that the U.S. military stands ready, and with the capability to help defend Taiwan if asked to do so. I also encourage our elected officials to help carry that message to the American people that we will not tolerate military action against Taiwan, and threatens their democratic way of life, and why it's in our national interest and the global interest to preserve the international rules-based order.

71. Senator SULLIVAN. Secretary Austin and General Milley, continuing on the theme of will, how do you access Taiwan's will to fight?

Secretary AUSTIN. We believe through smart investments and key reforms, Taiwan can send a clear signal that its society and armed forces are committed and prepared to defend Taiwan. We therefore appreciate that President Tsai has prioritized the development and acquisition of asymmetric capabilities best suited for its defense against People's Republic of China coercion and aggression. DOD is taking a proactive approach to supporting these efforts as we continue upholding our commitment under the Taiwan Relations Act to make available to Taiwan appropriate defense articles and services.

Taiwan must complement investments in these critical capabilities with equal focus on enhancing resilience, supporting whole-of-society defense, and building a strategy that includes defense-in-depth. In this regard, President Tsai's determination to reform Taiwan's reserve forces and integrate civilian and military agencies under the All-Out Defense Mobilization Agency is critical to enhancing Taiwan's overall preparedness—and in doing so will further strengthen deterrence. DOD will continue to work with relevant United States Departments and agencies to support Taiwan's efforts in this regard.

General MILLEY. In March 2022, over 70 percent of Taiwan's population stated they would be willing to fight if the PRC invaded Taiwan.

If the United States did not send troops to support Taiwan during a PRC invasion, 65 percent of Taiwan's population had confidence in the Nation's defense.

72. Senator SULLIVAN. Secretary Austin and General Milley, will they respond with the courage and determination of the Ukrainians if they are attacked?

Secretary AUSTIN. While I would caution against making direct comparisons between Taiwan and Ukraine, I agree that Ukraine's response to Russia's illegal and unprovoked invasion contains broad lessons for Taiwan. Taiwan's commitment to defense reforms, whole-of-society defense and resilience, and increased defense spending are strong signals that its armed forces and society are committed and prepared to defend Taiwan.

General MILLEY. Taiwan is learning lessons from the Russia-Ukraine conflict and taking measures to increase its resiliency.

In December 2022, President Tsai announced an extension of military conscription from 4 to 12 months beginning in 2024. The public is supportive of extending mandatory military service and reserve training as a result of the invasion of Ukraine. The Taiwanese have a more favorable view of military service and training.

Public opinion polling indicates over 70 percent of Taiwan's population would be willing to fight if the PRC invades Taiwan.

Following Russia's invasion of Ukraine, some of Taiwan's citizens are have joined grassroots civil defense organizations.

73. Senator SULLIVAN. Secretary Austin and General Milley, Taiwan spends on its defense, since 2020, (according to the Central Intelligence Agency (CIA)) more than 2 percent of its gross domestic product (GDP)—something we can't get most of our

NATO allies, the biggest of them, to do. And we're the only ones in the world that supply them. Yet, they're waiting for $19 billion in deliveries—things they've already bought. What are you doing to deal with this backlog?

Secretary AUSTIN. We remain focused on identifying the capabilities Taiwan needs and working to provide them as soon as possible. We are focused on tackling the issues we control—cutting red tape, decreasing the Foreign Military Sales (FMS) backlog, and providing innovative capabilities.

Last summer I tasked the Under Secretary of Defense for Policy and the Under Secretary of Defense for Acquisition and Sustainment to establish an FMS Tiger Team to identify efficiencies, clear systemic issues, and accelerate the responsiveness of the DOD FMS process to meet the capability requirements of our allies and partners. We must provide capabilities to our allies and partners as quickly as possible in support of their requirements, as well as our own National Defense Strategy.

Through a review of case studies and past efficiency efforts, as well as meetings with industry and others, the Tiger Team identified friction points in the DOD process and developed dozens of recommendations intended to address the critical and procedural challenges causing delays. The Tiger Team also identified systemic changes that seek to improve the overall efficacy and efficiency of the process, such as accelerating transition to data driven processes to enable monitoring and transparency and continuous process review to ensure implementation of the recommendations. To be clear, there is no one solution. Much like our own challenges, timelines for delivery of equipment are often dictated by production timelines of industry.

We are committed to working with Congress where appropriate to seek necessary authorities to reduce the backlog.

General MILLEY. Since 2000, Congress was notified of over $52 billion in FMS to Taiwan, and the United States delivered over $35 billion worth of defense-related items.

The difference between FMS notification and delivery is mostly the result of factors outside of DOD control including materiel lead times, supply chains, and production limitations within the defense industrial base, and existing laws.

I will support the Secretary's efforts to examine exportability challenges and identify options to accelerate delivery timelines for FMS cases whenever possible.

74. Senator SULLIVAN. Secretary Austin and General Milley, I want to talk to you about the so-called "porcupine strategy" for Taiwan. I know the administration subscribes to the necessity of this. I do, too. Now, to be clear, it doesn't account for all Taiwan needs to defend itself. They have a range of missions and contingencies to plan for, as do we. But they do need to focus on the most defensive weapons, things like harpoons, stingers, and javelins. There was an effort last Congress to help with that—by providing $10 billion in those sorts of arms for Taiwan. We passed that in the National Defense Authorization vAct (NDAA). The problem is the Biden Administration never prioritized it in its conversations with the appropriators. As a result, it went unfunded. Instead, we ended up with a small loan program that Taiwan has been clear it doesn't want and can't use. Will you make it a priority to get this done this year, either in a supplemental or as part of the fiscal year 2024 appropriations process?

Secretary AUSTIN. Thank you for providing us authorities under the Taiwan Enhanced Resilience Act. We remain focused on identifying the capabilities Taiwan needs and working to provide them as soon as possible. This is a shared challenge, and we will need the authorization backed by appropriate resources. We stand ready to work with Congress on this matter.

General MILLEY. China is the pacing challenge for the United States military and we support development of Taiwan's asymmetric defense capabilities against the PRC threat, consistent with the one China policy. Along with other elements of DOD, the Joint Force is engaged in efforts to increase Taiwan's capability and capacity to defend itself, including efforts to identify any further legislative authorities required and sharpening justification for FMF grants.

75. Senator SULLIVAN. General Milley, would acquiring $2 billion dollars in defense capabilities benefit Taiwan's ability to defend itself?

General MILLEY. Yes. Our efforts to support Taiwan focus on deterrence and self-defense, and they remain consistent with our longstanding policy. Ensuring Taiwan has the means to defend itself improves deterrence and contributes to peace and stability in the Strait. Acquiring $2 billion in defense capabilities would certainly aid our efforts.

AUTHORIZATION FOR USE OF MILITARY FORCE (AUMF)

76. Senator SULLIVAN. Secretary Austin and General Milley, in your testimony you stated we have acted decisively when Iran-backed militia groups have attacked United States forces in Iraq and Syria. As we all know, last week Iranian backed terrorists launched rockets and drones at our troops in Syria, killing a contractor and wounding five other servicemembers and we did, as you pointed out in your testimony, respond decisively. One of the key tools we frequently use in these decisive responses is the 2002 AUMF, which some of my colleagues are currently trying to repeal. This is the same authority we used to support taking out Qasem Soleimmani and Abu Mahdi al-Muhandis in 2020, which set back the terrorist Iranian Revolutionary Guard Quds force to this day. Currently, I have an amendment pending on the floor which would require the Office of the Director of National Intelligence (ODNI) to certify that repealing the 2002 AUMF would not degrade United States-led deference against Iranian aggression before it is implemented. In your personal opinions, does repealing the 2002 AUMF hurt our ability to respond to the aggression of Iranian-backed groups?

Secretary AUSTIN. The President has made clear he will not hesitate to protect and defend U.S. personnel. There is sufficient domestic legal authority under the President's Article II authority and the 2001 AUMF to take necessary and proportionate action to protect United States personnel from threats in Iraq and Syria, including threats from Iran and Iran-backed groups. The United States does not conduct ongoing military activities that rely primarily on the 2002 AUMF as a domestic legal basis. Repeal of the 2002 AUMF would have no impact on current U.S. military operations and would support this Administration's commitment to a strong and comprehensive relationship with our Iraqi partners.

General MILLEY. No. Repealing the 2002 AUMF would have no significant impacts or inhibit the United States military's ability to respond to aggression from Iranian-Aligned Militia Groups, provided the 2001 AUMF remains intact. The 2001 AUMF, along with other authorities, allow the Joint Force enough flexibility to respond to aggression when necessary. Any effort to repeal the AUMF should take into account both current and future threats to our national security threats in the region and maintain clear authority for appropriate military action.

RECRUITING IN SCHOOLS

77. Senator SULLIVAN. Secretary Austin and General Milley, this year's budget calls for an additional 12,355 servicemembers. Last week this Committee had a hearing on the Department of Defense's (DOD) recruiting challenges, where witnesses testified to a lack of interest among young people, low test scores, and medical conditions. In your testimony you stated your desire for DOD to seek partnerships with our Nation's best universities to find our generation's next leaders. How detrimental are high schools not allowing recruiters onto their campuses to both current and future recruiting efforts?

Secretary AUSTIN. The Department is working every day to recruit and retain America's best talent to leverage the strengths of all our people. Since the inception of the All-Volunteer Force, military recruiters have sought broad access to high schools campuses, because the schools offer one of the best settings for engaging with prospective recruits. School access allows recruiters to share our message about the opportunities and benefits available in today's military. Limited access undoubtedly makes recruiting efforts more difficult. The Department is working closely with the military services to develop new and creative ways to engage young Americans across all corners of the country, including by increasing access to high schools.

General MILLEY. Federal law (Title 10 (U.S.C., Sec. 503c) encourages recruiter access to high schools and pertinent student directory information for the purposes of recruiting. By law, high schools must provide military recruiters access to high school students' names, addresses, and telephone listings and the same access to high school students as is provided to colleges, or to prospective employers of those students.

The Department is identifying several lines of effort to mitigate the challenges of the recruiting environment and address barriers to accessing a broader cross-section of the population. Focusing on our recruiter's access to high schools is one of these efforts.

The isolation and decreased personal interactions as a result of the pandemic, negatively impacted and stunted the relationship growth between our military personnel and communities. The decreased contact time recruiters had with potential applicants and their influencers in the community exacerbated the already existing challenges we face with a youth population that is disconnected and disinterested

in service, declining veteran population and decreased youth interaction with influences in homes and local communities.

Personal engagement between recruiters, schools and communities is an important aspect of delivering information, dispelling myths of military service and communicating the wide range of opportunities available across the Services and DOD. This is especially key in this era where youth are presented with a wide range of opportunities and education benefits in the civilian sector upon graduation.

ARCTIC AND ALASKA STRATEGY

78. Senator SULLIVAN. Secretary Austin and General Milley, in your testimony you stated climate change is creating new potential points for friction in places such as the Arctic. Last week, during this Committee's hearing with the United States Northern Command (NORTHCOM) General VanHerck who, by the way, alongside the servicemembers in my State, conducted nothing short of varsity level operations against the Chinese Spy Balloon and several unidentified aerial objects, stated that "Alaska might be the most strategic location on the planet." He also testified that DOD currently does not have the infrastructure, the communications, and the ability to respond and be persistent in the Arctic and Russia and China have developed capabilities to hold our Homeland at risk. With Alaska as the gateway for Russian and Chinese threats to major cities like Chicago, New York, and Miami, why does NORTHCOM not have assigned forces to do the aerial intercept mission in Alaska?

Secretary AUSTIN. Forces in Alaska that are assigned to USINDOPACOM routinely are allocated to support USNORTHCOM and NORAD responsibilities including to provide aerial defense for North America. DOD supports homeland defense requirements in Alaska through coordination between the Air Force, USNORTHCOM, NORAD, and USINDOPACOM, to include forces permanently stationed in Alaska and a layered defense network within the Alaska Air Defense Identification Zone. This approach ensures DOD is able to support homeland defense requirements and Indo-Pacific campaigning and warfighting.

General MILLEY. Forces are allocated to NORAD and positioned in Alaska under NORAD command and control to conduct the aerial intercept missions in accordance with the NORAD contingency plan and a Secretary of Defense approved execution order.

The United States and Canada are pursuing infrastructure and communications capability improvements that enhance our homeland defense from the arctic approaches. Specifically, the Sixth Generation Over the Horizon Radars, which Congress provided appropriation for, will increase our ability to execute NORAD's aerospace warning and control mission.

79. Senator SULLIVAN. Secretary Austin and General Milley, who replaces the Indo-Pacific Command (INDOPACOM)-assigned F–22s and F–35s if those aircraft deploy to combat? Have the replacement units operated in Alaska year-round?

Secretary AUSTIN. DOD continuously adjusts our global posture based on operational requirements, risk, readiness and modernization considerations, and tradeoffs across priorities. DOD deploys fighter aircraft to support a range of rotational deployments, and if necessary, combat operations. When executing these deployments, DOD considers the effect on other missions conducted at the locations that deploying aircraft depart from.

General MILLEY. The F–22 and F–35 fighter squadrons based in Alaska and assigned to United States Indo-Pacific Command (USINDOPACOM) deploy in support of USINDOPACOM, and global requirements. Simultaneously these squadrons maintain ready aircraft in support of Aerospace Control Alert Level 1 (ACA 1), which is the steady-State level of readiness, while also maintaining the capability to increase ready aircraft in conjunction with increased ACA levels, all in accordance with Operation NOBLE EAGLE (ONE). By design, when Air Force fighter squadrons deploy, they only deploy with a portion of their total aircraft. Even in the event of the deployment of all four Alaska based fighter squadrons, their remaining aircraft would be capable of maintaining the ONE mission, and not require a replacement.

Additional backfill of Alaska based fighter aircraft would be sourced by Continental United States (CONUS) based fighter squadrons through the identification of pilots that have completed arctic survival training (through previous assignment to Alaska, or rapid training) from multiple CONUS alert aircraft locations, and the augmentation of their air crew flight equipment (survival gear).

80. Senator SULLIVAN. Secretary Austin and General Milley, since 2017, the Army has fielded three theater-specific multi-domain task forces capable of employing

long-range precision effects to include intelligence collection and precision strikes. Currently, two of the Army's multi-domain task forces are concentrated on the Pacific Command Area of Responsibility (AOR) and the third is focused on European Command / Africa Command Currently the Army is looking to field a fourth and possibly a fifth multi-domain task force. DOD's Arctic strategy states "with increasing levels of adversary activities in the region, it is essential for the U.S. Army to employ a calibrated force posture with units that are manned, trained, and equipped to maintain a credible deterrence and the first line of defense of the Homeland." The study additionally rightfully points out the Arctic's place as a center of strategic competition. With the importance of the Arctic as laid out in the Army's strategy on the region and the branch's interest in creating two more theater-specific multi-domain task forces, can you speak to the benefits of having Alaska as the location for the next multi-domain task force?

Secretary AUSTIN. DOD is using the Army's Multi-Domain Task Forces (MDTFs) primarily to support priority warfighting objectives. DOD has activated MDTF headquarters at Joint Base Lewis-McChord, Washington, to support warfighting requirements in the Indo-Pacific region and in Wiesbaden, Germany, to support warfighting requirements in Europe. DOD is in the process of activating a third MDTF headquarters in Hawaii over the course of fiscal year 2023, which will further support DOD's focus on the PRC as the Department's pacing challenge. DOD assesses that this laydown of MDTF capabilities is appropriate to support our requirements. DOD has the ability to deploy elements from the MDTF at Joint Base Lewis-McChord in the event that any requirements emerge in Alaska or the Arctic that call for MDTF capabilities.

General MILLEY. To meet evolving threats, the Army continues to transform by developing capabilities to remain the dominant land force in the world. A key effort in this endeavor is the modernization of the Army's force structure and includes the establishment of Multi-Domain Task Forces (MDTFs).

The Army's MDTFs are designed to be scalable from operational to strategic level, which can be tailored to the requirements and the needs of Joint Force Commanders. The MDTF design will continue to evolve and change based on feedback from experimentation and required capabilities for the Army of 2030. During this analysis, the Army continues to explore options to station the fourth and fifth MDTFs for activation in fiscal years 2027 and 2028.

The Army and the Joint Force must consider how to mobilize, project, and sustain combat power to provide Combatant Commanders (CCDRs) with required forces and equipment. From inception, each MDTF will be assigned or aligned to a Combatant Command, then built, trained, and exercised within the context of the Combatant Commander's requirements.

Alaska is an ideal location for the development of new capabilities applicable to cold weather environments. The determination for the basing of the fourth and fifth MDTFs is currently ongoing. However, all Arctic-capable force structure decisions will be aligned with the National Strategy for the Arctic Region and other relevant posture guidance. Thank you for your strong and continued interest in the modernization and sustainment of our forces.

QUESTIONS SUBMITTED BY SENATOR TED BUDD

SUPPORT TO UKRAINE

81. Senator BUDD. Secretary Austin, as you know, the Ukrainian Armed Forces have been engaged in significant combat operations against the Russian Army in and around the cities of Bakhmut and Soledar. Much of that combat has been urban combat and some of it has been subterranean combat in the salt mines that are near those cities. The casualties for both sides have been significant. The Ukrainians have submitted a Letter of Request to you asking the United States to supply unmanned ground systems and associated systems. These systems would allow the Ukrainians to perform a number of dangerous missions remotely in the contemporary operating environment and thus avoid some of the casualties that they have been sustaining. The Letter of Request was from Major General Kyrylo Budanov, No. 222/9A/1220, and was submitted 19 November 2022. What is the status of this request and when can we expect a decision?

Secretary AUSTIN. The security assistance we provide to Ukraine is shaped by the Department's frequent interactions with Ukrainian counterparts in the Ministry of Defense and Ukrainian Armed Forces. The Ukrainian Main Intelligence Directorate submitted the Letter of Request you referenced without formal endorsement from senior officials in the Ukrainian General Staff or Ministry of Defense who are au-

thorized by the Government of Ukraine to make formal, prioritized requests. However, I have asked my staff to followup, as we are continually looking for new ideas on how best to support Ukraine.

DEPARTMENT OF DEFENSE AUTHORIZATION REQUEST FOR APPROPRIATIONS FOR FISCAL YEAR 2024 AND THE FUTURE YEARS DEFENSE PROGRAM

THURSDAY, MARCH 30, 2023

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

ARMY POSTURE

The Committee met, pursuant to notice, at 9:33 a.m. in room SD-G50, Dirksen Senate Office Building, Senator Jack Reed (Chairman of the Committee) presiding.

Committee Members present: Senators Reed, Shaheen, Gillibrand, Blumenthal, Hirono, Kaine, King, Warren, Peters, Manchin, Duckworth, Rosen, Kelly, Wicker, Fischer, Cotton, Rounds, Ernst, Sullivan, Cramer, Scott, Tuberville, Mullin, Budd, and Schmitt.

OPENING STATEMENT OF SENATOR JACK REED

Chairman REED. Let me call the hearing to order.

Before we start, I would like to acknowledge the UH60 Blackhawk training accident that occurred last night at Fort Campbell. Our thoughts are with the Army family today and I know this hits General McConville in a particularly difficult way as an aviator and as a former commander of the 101st Airborne Division. You know and you feel it personally.

It also demonstrates the enduring risks our men and women who volunteer to serve our Nation face every day, not just in combat zones but in rigorous training. So all of our thoughts and prayers are with these families and with the Army today. Thank you.

The Committee meets today to receive testimony on the President's Budget Request for the Army for fiscal year 2024. Our witnesses today are Secretary to the Army Christine Wormuth and Chief of Staff of the Army General James McConville.

Thank you both for your service and please convey this Committee's appreciation to the men and women serving under your command.

General McConville, as this will be your last posture hearing before your retirement, on behalf of the Committee I would like to offer you our sincere gratitude and congratulations. The Nation is safer and the United States Army is on a path of generational transformation because of your leadership.

We thank you for your many decades of selfless service and we thank your family for their continued support, and most particularly for their continued service. I believe that every one of your sons is in the United States Army and that your son-in-law is in the United States Army. Am I correct?

General MCCONVILLE. And my daughter, Senator——

Chairman REED. I am sorry. You must be Irish. How many children do you have?

[Laughter.]

Chairman REED. The Army is faced with historic challenges, though, and even as the service is undertaking its most thorough modernization effort in 40 years while in the midst of the most difficult recruiting environment in half a century, the Army is being called upon to increase its forward operating presence.

The Army's strength has always been drawn from its soldiers and its leaders and its tenacity to get the job done, and that characteristic grit is certainly needed today.

In its fiscal year 2024 budget the Department of Defense (DOD) has requested $185 billion to the Army, marking the fourth straight year of a flat budget for the service. Even as every other service and element of the Department has benefited from significant increases, the Army has seen its funding essentially plateau.

Understandably, the Department is focused on the pacing threat in the Indo-Pacific where the nature of competition relies heavily on our Nation's sea and air strength.

However, I am concerned that inadequate investment in the United States' primary land component may create vulnerabilities. Combat credible ground forces are fundamental for deterrence, as we are witnessing every day in Europe.

Furthermore, the Army has a critical role to play in the Indo-Pacific including providing long-range fires and ground forces, training and experimentation with our partners and allies, and enabling logistics and prepositioned stocks.

We risk the Army's combat credibility if we do not provide it with the resources it needs to continue to field modernization and to continue to be a force to be reckoned with.

Even as we focus sea and air resources to the Indo-Pacific, the Army will be relied upon to maintain a reliable presence around the world. With that in mind, I am interested in hearing about the Army's view of its mission globally as well as how the service is adjusting its operating concepts and force posture to support the National Defense Strategy (NDS) to include the Indo-Pacific.

To remain competitive with China and Russia we must continue to invest in cutting-edge technologies that will define future battlefields across all domains.

The Army specifically has been pursuing modernization in key areas like long-range fires, air defense, vertical lift, and deep sensing, among others. These are ambitious and farsighted objectives.

I am particularly encouraged by the Army's announcement yesterday of the creation of a new cross functional team focused on contested logistics. This team, under the direction of Army Futures Command, will address the need for more resilient and agile logistics in dangerous environments like the Indo-Pacific.

Secretary Wormuth, General McConville, I would ask you update the Committee on the Army's modernization efforts and what resources are needed to effectively continue them.

As I mentioned, the Army's most valuable asset has always been its people. I am pleased to see this budget request placed as a priority on taking care of our soldiers and Army civilians by providing an across the board pay raise of 5.2 percent and investing in barracks improvements.

At the same time, the Army is struggling to recruit new soldiers. Last year, the service fell far short of its recruiting goals and the same appears likely this year.

There are a number of factors contributing to this challenging recruiting environment, including low national unemployment rates, lingering problems from COVID–19, and historically low numbers of Americans eligible for or interested in military service.

I understand the Army is conducting an overhaul of its recruiting and retention practices including the launch of a major new marketing campaign and an expansion of the Future Soldier Preparatory Course.

I would ask for an update on how you plan to recruit a broader pool of potential recruits and grow back end strength in the coming years.

Finally, the Army must continue to improve its readiness in the context of long-term strategic competition. The Army is focused on large training exercises including Defender Europe and Pacific Pathways, and its leadership in the Project Convergence series demonstrate a commitment to regional preparedness.

These large-scale events not only test system capabilities, unit skills, and logistics resilience, they also facilitate experimentation and training with our allies, reflecting how we would fight in future operations.

We are seeing the importance of efforts like this right now in Ukraine. I would ask for an update on how the Army is designing large-scale exercises to support its focus on our pacing threats, China and Russia.

Again, I thank the witnesses for their participation today. I look forward to the testimoneys. Now let me recognize the Ranking Member, Senator Wicker.

STATEMENT OF SENATOR ROGER F. WICKER

Senator WICKER. Thank you, Mr. Chairman, and I want to thank our witnesses for being here. I also join the Chairman in offering my condolences to the families of those killed at last night's training accident Fort Campbell.

On this Committee we take the safety of our servicemembers seriously and will seek a clearer understanding of exactly what happened. I will also say that when it comes to the Army, the distinguished Chairman of this Committee knows whereof he speaks and I am fortunate to have him as a teammate.

I want to also thank General McConville for his service to the United States. Since earning his commission from West Point in 1981 he has faithfully served his country as an Army aviator and as a general officer.

I also want to recognize General McConville's family, as the Chairman has done, and I do not know if we have recognized the favorite family member, which I understand is his youngest—his grandson, Patton.

No United States soldiers are fighting against Russia in its brutal invasion of Ukraine. This is Ukraine's fight and it is fighting well and valiantly. Even though no United States troops are directly engaged in the fight, the United States Army is providing critical on-the-ground support for Ukraine. Thousands of United States soldiers are deployed to provide logistics to supply Ukraine's military. Thousands more are training Ukrainian military personnel, and the result is a significantly degraded Russian military, as Secretary Austin testified earlier, and that is a positive development.

The lessons of Ukraine should be an example of our efforts in the Pacific. The Army is and will continue to be on the leading edge of efforts to rebalance our Western Pacific forces.

United States Army Pacific, through Pacific Pathways and other engagements, has established significant relationships with allies and partners that promise to enable access and maneuvering capabilities across the theater.

Further, the Army has successfully and rapidly pushed the envelope to rebuild our arsenal of democracy through significant capacity expansion, investments, and proposed multiyear contracts, though more work remains.

The Army also has an important role to play in contested logistics and in providing more options for sensors and shooters to the joint force. I am heartened by the speed with which the Army has sought to reshape itself to provide deterrent value against the Chinese People's Liberation Army, but we should still do more to accelerate this effort.

In particular, we should capitalize on the progress made on the Precision Strike Missile (PrSM) and the Mid-Range Capability (MRC) weapon system. For next-generation combat vehicles platforms like the Optionally Manned Fighting Vehicle (OMFV) and the Armored Multi-purpose Vehicle (AMPV) may soon replace or reinforce their aging counterparts.

I hope to hear more about these advancements and those in network, soldier lethality, future vertical lift (FVL), and air and mission missile defense. None of these achievements or capabilities would work without the dedicated soldiers of the United States Army and I join the Chairman in noting that we are in the front edge of a recruiting crisis.

I would like an update on this year's recruiting goals and how the Army has changed its strategy to meet its recruitment and retention objectives.

Along these lines, let me reiterate a position that I have had for several years now during the markup of the National Defense Authorization Act (NDAA). I am strongly in favor of expanding the Junior ROTC [Reserve Officer Training Corp] and I do believe this is a valuable program not only for potential military members but principally for citizenship and public service in our young people.

Then, sadly, I must mention the Biden administration's disservice to the Army in the fiscal year 2024 budget submission. In

that regard, I associate myself with the remarks of the distinguished Chairman of this Committee.

When accounting for inflation, this year's budget is about a 2 percent cut compared to last year. The impact of that cut is even more severe at a time when personnel expenses are rapidly increasing.

Meanwhile, General McConville submitted a list of almost $2 billion worth of unfunded priorities the Army needs, including support for partnership-building exercises in the Indo-Pacific, and I do appreciate those submissions because it informs this Committee.

Further, the budget request fails to use multiyear procurement authority for critical missiles like Patriot Advanced Capability–3 (PAC–3) and Guided Multiple Launch Rocket System (GMLRS). I am confident my colleagues on a bipartisan basis, again, will join me to correct this inadequate budget and ensure the Army has the right resources to confront the Nation's current and future challenges.

Thank you, Mr. Chairman. I think we share very many views along this and we look forward to hearing the testimony directly from these distinguished witnesses.

Chairman REED. Thank you, Senator Wicker, very much.

Secretary Wormuth, please?

STATEMENT OF THE HONORABLE CHRISTINE E. WORMUTH, SECRETARY OF THE ARMY

Ms. WORMUTH. Chairman Reed, Ranking Member Wicker, distinguished Members of the Committee, thank you for your ongoing support as we continue to build the Army of 2030, and thank you for your comments and thoughts and prayers for the families of our soldiers who were killed in the crash. Our hearts go out to them. It is a heavy day for the Army, I would say, in that regard.

We are pleased to appear before you today. I am, as you noted, joined by General McConville and want to thank him for his years of service and leadership of our Army. I am grateful to work with him every day. We have accomplished a lot this year but we have a lot of work ahead of us.

We remain focused on our three key priorities—people, modernization, and readiness. The fiscal year 2024 budget allows us to support the National Defense Strategy, to provide ready forces to the combatant commanders, and to take care of our people.

By investing over $39 billion in procurement and RDT&E [Research and Development Test and Evaluation], we are maintaining our momentum on our modernization programs and we are, largely, on track to bring 24 systems into the hands of soldiers and across the finish line in fiscal year 2023.

This is a big year for long-range precision fires. Prototypes of the precision strike missile, the mid-range capability and the long-range hypersonic weapon will be in the hands of soldiers this fiscal year.

It is also a big year for next-generation combat vehicles. Mobile protected firepower is in production and Armoured Multi Purpose Vehicle (AMPV) is also being fielded, and it is a big year for our integrated air and missile defenses and the future vertical lift program as well.

As we shift from 2 decades of counterinsurgency and counterterrorism operations to large-scale combat operations we are also transforming our force structure. We are going to need to adapt our force structure to make room for things like the multi-domain task forces as well as other new units like the indirect fire protection capability and our M-SHORAD battalions.

We are a ready Army and we continue to emphasize readiness in everything we do. We are funding 22 Combat Training Center rotations this year.

We have a robust exercise program and we are implementing our new readiness model, which lets us balance modernization, training, and ongoing missions. We are also investing in Army prepositioned stocks, which have been key in everything that has been going on in Europe and will serve us well in other theaters as well.

To assist Ukraine in fighting Russia the Army has provided over $20 billion of lethal assistance including a wide range of munitions, radars, combat vehicles, and other things, and one of the most important lessons we have learned from Ukraine is the need for a more robust Defense Industrial Base. In our budget this year we have $1.5 billion to invest in our arsenals, ammo plants, and depots.

We are also working very closely with our partners in industry to increase munitions production so that we can continue to help the Ukrainians but also, very importantly, to replenish our own stocks, and even as our soldiers provide lethal assistance and train Ukrainian soldiers we are not taking our eye off the pacing challenge of China.

United States Indo Pacific Command (INDOPACOM) may be a theater named after two oceans but the Army has an important role to play there. The best way to avoid fighting a war is to show that you can win any war you might have to fight.

The Army is contributing to strengthening deterrence in INDOPACOM every day as we campaign in the region through our exercises and partnerships, and if deterrence fails the Army will be a key player on the joint force team in the event of a conflict.

As important as it is to build new weapon systems and maintain our readiness, people are the strength of our Army. This budget increases soldier and Department of Army civilian pay by 5.2 percent and funds important quality of life improvements like family housing, barracks, childcare initiatives, and other important programs.

We also, of course, want to build cohesive teams of soldiers that are trained, disciplined, and fit. So the Army is committed to building positive command climates across the force so our soldiers can be everything they can be.

Since appearing before you last year, we have taken steps to build out a prevention workforce that will help us in our efforts to reduce harmful behaviors across the Army, which in turn will help us with recruiting and retention.

We are also continuing to strive to prevent suicide in our ranks. Suicide is a national challenge, but we have to do everything we can to reduce suicide in the Army. So we are pursuing a range of initiatives to help our soldiers be more resilient.

One of the most important things we can do is to make sure that we have engaged leaders at every level who know their soldiers and make sure that their soldiers know their leaders and are connected to their buddies and families.

Our Army is the greatest army in the world, but if we are going to keep it that way we must solve our recruiting challenge. The difficult recruiting landscape we face did not appear in 1 year and it is going to take us more than a year to solve it.

But we are laser focused on this challenge and we are not going to lower our standards to solve the problem. The whole Army leadership is adapting and changing how we are recruiting.

We are generating positive momentum from initiatives like our Future Soldier Prepatory Course, our Soldier Referral Program, and our new advertising campaign "Be all you can be."

Our efforts are geared toward doing one thing, reintroducing the Army to the American public and inspiring a renewed call to service. We very much need your help to be successful in this effort.

I am proud of all that our soldiers do to protect our country every day, and I look forward to your questions.

Chairman REED. Thank you, Madam Secretary.

General McConville, please?

STATEMENT OF GENERAL JAMES C. MCCONVILLE, USA, CHIEF OF STAFF OF THE ARMY

General MCCONVILLE. Thank you, Secretary, for your leadership.

Chairman Reed, Ranking Member Wicker, distinguished Members of the Subcommittee, thank you for the opportunity to be here today.

Before I start, I would like to express my sincere condolences to the families of the crews, the MEDEVAC helicopters from 101st, who are being informed today of their loss. They served our country proudly and I'm very, very proud to serve with them, and they remain in our thoughts and prayers as we go out throughout the day.

The United States exists for one purpose and that is to protect the Nation by being ready to fight and win our Nation's wars as a member of the joint force, and we have hundreds of thousands of soldiers training every single day around the world to make that happen, just like those MEDEVAC pilots.

To do this, the Army has three clear priorities—people, readiness, and modernization, or, in other words, future readiness. We have remained aggressively committed to these priorities while answering the Nation's call during every crisis and every challenge.

This year, the Army continues to undergo its greatest transformation in almost 50 years and we are delivering on modernization because we have been consistent and we have been persistent on our modernization priorities.

Last year, we officially updated our capstone warfighting doctrine to Multi-Domain Operations (MDO), which incorporates emerging lessons from Ukraine. We continue to stand up new organizations to support our new doctrine. Last June we reactivated the historic 11th Airborne Division in Alaska.

In September, we stood up the third of the five Multi-Domain Task Forces (MDTFs). As the Secretary noted, we are on track for 24 signature weapon systems in 2023.

But at the end of the day, we must get the right people in the right place in order for any of these initiatives to be successful. That is why people remain the Army's number-one priority.

We want every young person, every parent, to know that service in the Army is a pathway to success both in and out of uniform. Whether you serve for 4 years or 40 years, the Army offers endless possibilities.

We are not a profession of arms but a profession of professions. You can be whatever you want to be in United States Army. In fact, you can be all you can be.

I am often asked how people can help us and my answer is inspire young men and women to serve, because when we get the call we go with the Army we have. The Army we have is the world's greatest fighting force because we serve with the world's greatest soldiers.

With your continued support we are going to keep it that way. I look forward to your questions.

[The joint prepared statement of The Honorable Christine E. Wormuth and General James C. McConville follows:]

JOINT PREPARED STATEMENT BY THE HONORABLE CHRISTINE E. WORMUTH AND GENERAL JAMES C. MCCONVILLE

ENDURING ARMY PRIORITIES

For nearly 248 years, the United States Army has dedicated itself to fighting and winning the Nation's wars. As old threats evolve and new ones emerge, the Army is making decisions and prioritizing investments that not only contribute to current readiness but will also pay dividends on the battlefields of 2030 and beyond. That is why we are especially grateful to Congress for providing the funding necessary to produce highly trained and lethal forces ready to meet an array of challenges at home and abroad. Our ability to maintain continuity through crisis is a testament to our solemn commitment to the Army's three enduring priorities: people, readiness, and modernization. The Army's Budget Request for fiscal year 2024 of $185.5 billion supports these priorities and will enable us to deliver the Army of 2030 in support of the National Defense Strategy.

READY TO FIGHT AND WIN

America's Army exists to protect the Nation by fighting and winning our wars as a member of the Joint Force. There is nothing more reassuring, and no greater deterrent, than American soldiers on the ground, standing shoulder-to-shoulder with our Allies and partners.

Linchpin of the Joint Force in the Indo-Pacific. From Washington and Alaska, to Hawai.i and Guam, to Japan and South Korea, there are currently 71,000 soldiers serving in the Indo-Pacific theater. The Indo-Pacific is not just an air and maritime theater, but a joint theater with joint problems that require joint solutions. The Army is the linchpin Service, enabling and sustaining our joint and Allied partners. Our fundamental goal is to deter conflict in the region. Thus, the best way to avoid fighting a war is to make it very clear that the Joint Force, in concert with our Allies and partners, can and will win such a war. To that strategic end, the Army contributes to deterrence by campaigning, which plays three important functions in the Indo-Pacific: complicating Chinese decisionmaking; enhancing U.S. access to the region; and placing combat-credible and interoperable land forces forward to create interior lines for the Joint Force.

This year is going to be one of historic modernization for our force posture in the Indo-Pacific. We are working closely with our regional Allies and partners to secure greater operational access and basing arrangements in strategic locations to enable adversary-focused training and exercises. In terms of logistics, the 8th Theater Sustainment Command in Hawai.i will oversee the delivery of supplies, fuel, munitions, and activity sets for U.S. Army Pacific's (USARPAC) joint and multinational training and exercises. Strengthening our ability to operate across the theater requires not only logistics at scale, but also the resiliency to operate in contested environments.

It has been a consequential year for the Army in the Indo-Pacific. USARPAC completed its inaugural iteration of Operation Pathways, representing the Theater Army's new posture paradigm to build and thicken Joint Force interior lines. This gives USARPAC the operational endurance to see, sense, and understand regional threats; sustain, protect, and command and control (C2) large-scale operations; and conduct maneuver and fires. USARPAC demonstrated those capabilities by offloading APS afloat in support of exercise Salaknib in the Philippines. USARPAC, alongside our Indonesian partners, expanded exercise Super Garuda Shield from a modest bilateral venture to a major regional undertaking with 14 partner nations and 4,000 combined forces. Next, we established the Joint Pacific Multinational Readiness Center, bringing the first combat training center to the Indo-Pacific with inaugural rotations at our Hawai.i and Alaska campuses, along with an exportable capability we employed in Indonesia.

Capitalizing on that momentum, the 5th Security Forces Assistance Brigade (SFAB) persistently trained and advised 12 of our Allies and partners across the region. The Army also activated the 11th Airborne Division in Alaska—a unit with an historic Indo-Pacific lineage that provides our soldiers with a clear purpose, identity, and mission. As part of our Arctic Strategy, the 11th Airborne Division is being tailored as a rapidly deployable operational command headquarters. Finally, USARPAC initiated the Unified Pacific Wargame Series, offering key insights on Army capabilities, posture, and contested logistics for a protracted conflict in the Indo-Pacific. In October 2022, America's First Corps certified as a Joint Task Force as part of the Mission Command Training Program Warfighter Series, with participants from Washington, Hawai.i, Colorado, and Kansas. I Corps' experimentation with distributed C2 will enable commanders to present multiple dilemmas to a potential adversary. We also activated the third of five planned Multi-Domain Task Forces (MDTF), task-organized to provide anti-access, area-denial capabilities through long-range precision fires and effects. The 3d MDTF at Fort Shafter, Hawai.i joins the 1st MDTF at Joint Base Lewis McChord, Washington as the second MDTF supporting U.S. Indo-Pacific Command.

Tip of the Joint Spear in Europe. Since Russia's unjust and unprovoked invasion of Ukraine in February 2022, the U.S. Army's tactical readiness and strategic readiness have been on full display across continental Europe. The 43,000 American soldiers in Europe underscore our ongoing commitment to the region, further bolstered by President Biden's force posture announcement at the NATO Summit last June. In Germany, we are forward stationing an air defense artillery brigade headquarters, a short-range air defense battalion, a combat sustainment support battalion headquarters, and an engineer brigade headquarters. In Italy, we are forward stationing a short-range air defense battery. In Poland, the Army has forward-stationed the V Corps Headquarters Forward Command Post—the first permanent U.S. forces on NATO's eastern flank. We are maintaining a substantial rotational force in Poland, including an Armored Brigade Combat Team (ABCT), combat aviation brigade, and a division headquarters. In Romania, we have headquartered a rotational brigade combat team, supporting an additional maneuver force on the eastern flank. In the Baltics, we have enhanced our rotational deployments—which include armored, aviation, air defense, and special operations forces—to reinforce Baltic security, enhance interoperability, and demonstrate the flexibility and combat readiness of U.S. forces.

We have been able to demonstrate our steadfast support to NATO thanks to years of investments in setting the European theater, where we continue to invest in and modernize a robust set of Army Prepositioned Stocks (APS). Importantly, we are moving some of our APS into Poland this year to reinforce NATO's eastern flank. We are also leveraging NATO Common Funding to build a new equipment complex in Poland to house, maintain, and issue an ABCT equipment set. The XVIII Airborne Corps—America's Strategic Response Force—similarly highlighted the Army's investments in rapid power-projection capabilities. The XVIII Airborne Corps' 9-month deployment to Wiesbaden, Germany built upon years of cooperation with the Ukrainian military, providing the training and support required to aid the heroic defense of their homeland. These investments in strategic readiness would not have been possible without congressional foresight and support. This is especially true for the European Deterrence Initiative (EDI). Total EDI funding for the Army in fiscal year 2023 is $2.8 billion to support 9,800 rotational Army forces in Europe, and enhance our forward posture, training, and interoperability.

The United States remains committed to supporting Ukraine's near-term combat needs and its long-term defense requirements against future Russian aggression. The Department of Defense (DOD) has established Security Assistance Group—Ukraine (SAG-U), commanded by an Army three-star general under U.S. European Command, in Wiesbaden, Germany. SAG-U is purpose-built to execute the full

range of our security assistance activities in a more efficient and sustainable manner. SAG-U will reach full operational capability in Q3 fiscal year 2023. The lessons we observe in Ukraine underscore our Army's greatest strengths: combined arms maneuver at scale; the importance of empowered leadership through mission command; and the immeasurable value of a professionalized Non-Commissioned Officer Corps.

The Army continues to supply critical weapon systems, equipment, and munitions to Ukraine, including Stinger anti-aircraft systems, Javelin anti-armor systems, 155mm artillery rounds, and other items. We have provided billions of dollars of Army materiel to Ukraine through the Presidential Drawdown Authority. We are also working to execute billions in procurements for Ukraine through the Ukraine Security Assistance Initiative.

The Army will initiate multi-year procurement contracts for artillery rounds and artillery charges in fiscal year 2023. For fiscal year 2024, the Army will work with Congress to explore additional multi-year procurement contract opportunities for critical munitions. In addition to these potential multi-year contract efforts, the request includes additional funding for a range of munitions, including Javelin and Stinger missiles, and artillery, combat-vehicle, and small-arms ammunition.

We were able to fill critical gaps in Ukraine's defense thanks to our comprehensive modernization initiatives, but we must be able to replenish these stocks. Russia's war in Ukraine is further highlighting lessons from the pandemic that military readiness depends upon a robust and modern Organic and Defense Industrial Base. The Army is working closely with the Office of the Secretary of Defense (OSD) and our industry partners to rapidly increase production capacity and transform our processes from vulnerable supply chains to a more resilient supply fabric.

Readiness is our most effective form of deterrence. The best way to win without fighting is by demonstrating our ability to win decisively by fighting. Forward deployed combat capability, prepositioned stocks, and a resilient sustainment infrastructure will be key to future deterrence. One of the many ways we showcase our combat-credible forces in Europe is through DEFENDER-Europe, the Army's annual joint and multinational exercise series. Last year, concurrent with our support to Ukraine, and alongside our NATO Allies, DEFENDER-Europe 22 stretched across nine European countries, featuring 3,450 American troops and 5,200 multinational servicemembers from 11 Allied nations. DEFENDER-Europe 23 will include over 7,800 U.S. troops, training alongside 15,000 multinational forces from 26 Allied and partner nations. National Guard units from 10 U.S. states will also participate, marking the 30th anniversary of the National Guard State Partnership Program.

DELIVERING THE ARMY OF 2030

The Army continues to progress through our greatest transformation in almost half a century. Fifty years ago, Army senior leaders closely observed the 1973 Arab-Israeli War and incorporated its lessons into the emerging AirLand Battle doctrine, the creation of new Army organizations, and the development of the "Big 5" weapons systems. Today, we are not only supporting Ukraine but paying close attention to the characteristics of modern warfare as they unfold, and incorporating those lessons into new doctrine, organizations, training, and materiel. Last October, the Army officially adopted Multi-Domain Operations (MDO) as our official capstone doctrine, the most significant shift in warfighting doctrine since AirLand Battle. MDO acknowledges that the Army of 2030 will be contested in every domain—air, land, sea, space, and cyberspace. Our soldiers must be ready to fight and win in multiple domains simultaneously to get from fort to foxhole in a contested environment.

The Army has been consistent and persistent in pursuing our modernization initiatives as we work to deliver the Army of 2030 and design the Army of 2040. We remain aggressively committed to our six modernization portfolios—long-range precision fires, next generation combat vehicle, future vertical lift, the network, air and missile defense, and solider lethality—and are on track to deliver 24 new systems into the hands of soldiers by the end of fiscal year 2023. That includes eight fielded systems, six systems issued for testing, and ten systems undergoing soldier touchpoints. Our annual Army Futures Command-hosted experiment, Project Convergence, continues to evolve and expand from the Army-centric inaugural event in 2020 to last fall's combined, joint series of experiments with the entire Joint Force, the United Kingdom, and Australia.

To succeed on the future battlefield and continue to dominate the land domain, there are six operational imperatives the Army of 2030 must do. First, we need to see and sense more, farther, and more persistently at every echelon than our enemies. That is why we are modernizing our aerial intelligence, surveillance, and re-

connaissance capabilities, to include the Multi-Domain Sensing System, Terrestrial Layer System, and the Tactical Intelligence Targeting Access Node, or TITAN.

Second, we have to concentrate highly lethal, low signature combat forces rapidly from dispersed locations to overwhelm adversaries at a time and place of our choosing. To do this, we are investing in a faster, more survivable armored fist. Upgraded tanks and Bradleys will be joined by Armored Multi-Purpose Vehicles, or AMPVs, which are already in production. The Mobile Protective Firepower System, which was just awarded for production, will provide greater protection to infantry forces without sacrificing speed or mobility.

Third, we must win the fires fight by delivering precise, longer-range fires as part of the Joint Force to strike deep targets and massing enemy forces. Since 2016, the Army has invested significantly in fire support systems, and we have made long-range precision fires a top modernization priority. We are working tirelessly to ensure that we have multiple options to service targets at ranges from 40 miles (Extended Range Cannon Artillery) to over 1,700 miles (Long-Range Hypersonic Weapon).

Fourth, we need to protect our forces from air, missile, and drone attacks. We are continuing to field Maneuver Short-Range Air Defense, or M-SHORAD, to protect our maneuver forces against a wide range of air threats. The Army is also developing an enduring Indirect Fire Protection Capability, or IFPC, that will work together with the Army's Integrated Air and Missile Defense Battle Command System to provide an unparalleled ability to identify, track, and defeat aerial threats. Current events also highlight the proliferation and significance of enemy Unmanned Aircraft Systems (UAS). To address this threat, we are investing in counter-UAS division sets that place fixed, semi-fixed, mobile, and portable counter-UAS capabilities in the hands of our maneuver forces.

Fifth, we must rapidly and reliably communicate and share data not just with ourselves, but with our Sister Services, and Allies and partners. The Army has demonstrated how to rapidly combine targeting data from our joint teammates and pass that information to the correct Army fires element—reducing the targeting cycle to mere minutes. The Integrated Tactical Network architecture, in fielding now, enhances classified data transfer with both better network bandwidth efficiency and resilient relay links to ensure persistent connectivity for our warfighters.

Finally, we must sustain the fight across contested terrain for both short, sharp operations as well as for protracted conflict. This will require not only standard equipment, like field kitchens, fuelers, and trucks, but also the niche, often overlooked capabilities like Army watercraft and Joint Logistics Over-the-Shore, or JLOTS. Sustainment must be at the forefront of our planning, preparation, and training—not something that we can assume will always be readily available. Army logisticians are the best in the world, and they are up to the task.

PEOPLE ARE OUR GREATEST STRENGTH AND FIRST PRIORITY

Recruiting Initiatives. We are experiencing the most challenging recruiting landscape in a generation. There is no one-size-fits-all solution. Nevertheless, we are committed to tackling these problems head on by recruiting a force that looks like the Nation it serves. All our recruiting initiatives will be informed by first principles: 1) we will not sacrifice quality for quantity; 2) we will not lower our standards; and 3) we will invest in America's young people so they can meet our standards. The Regular Army Accessions Mission for fiscal year 2023 is 65,500. While we are singularly focused on meeting this mission, we need help from community leaders, parents, educators, coaches, and influencers to inspire young people to serve.

The Army is implementing several important changes to improve organizational understanding, recruiter management, regional awareness, marketing, and applicant eligibility. First, we established the Army Recruiting Task Force, under the direction of a two-star general, to examine the current State of the Army's recruiting enterprise and to make recommendations to Army senior leaders for action. Second, we are overhauling how the Army recruits by selecting recruiters differently, improving recruiter training, increasing recruiter resources, and creating new incentives for high-performing recruiters. For instance, the Army recently launched a "Recruiting Scholars" program to identify, incentivize, and send top-notch captains to graduate school after completing a recruiting-company command. There are 21 talented captains in the first cohort.

Next, the Army designated 15 major cities as priority markets for fiscal year 2023. With help from community partners, including Veterans Service Organizations, Military Support Organizations, and our Soldiers for Life, we are saturating these markets with activities and initiatives to maximize awareness regarding the benefits of Army service. Fourth, we established the Future Soldier Preparatory Course

(FSPC) pilot program in July 2022 at Fort Jackson, South Carolina to support the accession of recruits who are inclined to serve but might need help improving their test scores or physical fitness. As of March 22, 2023, 4,219 FSPC recruits have graduated and moved on to Basic Combat Training (BCT). This represents a 98 percent success rate. FSPC recruits improved their Armed Forces Qualification Test score by an average of 18.5 points. Similarly, 97.6 percent of FSPC recruits achieved the Army's accessions body composition standards. Most importantly, FSPC graduates are performing very well in BCT with just a 4.8 percent attrition rate, as compared to the average BCT attrition rate of 6.1 percent in 2022.

Be All You Can Be. On March 8, 2023, the Army officially reintroduced "Be All You Can Be" as our marketing slogan. "Be All You Can Be" featured prominently in Army advertisements and marketing materials from 1981 to 2001. After a two-decade hiatus, we are excited to introduce "Be All You Can Be" to a new generation of young people. The Army Enterprise Marketing Office hosted numerous in-person focus groups and tested "Be All You Can Be" against 18 other taglines, eventually surveying 20,000 people across five target audiences: prospects, soldiers, veterans, influencers, and engaged citizens. Our extensive market research revealed that the "Be All You Can Be" slogan, once popular with Generation X, resonates with Generation Z by signaling a sense of purpose, passion, possibility, community, and connection unique to the Army. With support from Congress, the Army will spend $116.7 million in fiscal year 2023 to launch this rebranding campaign across multiple media platforms. Additionally, we believe that the "Be All You Can Be" narrative will help veterans and retirees tell their Army stories and inspire a new generation of young people toward military service.

Quality of Life. Recruiting and retaining the next generation of the All-Volunteer Force requires sustained investment and quality-of-life improvements in Army housing, barracks, child care, spouse employment, health care, and the exceptional family member program.

High-quality housing and barracks are key to ensuring overall health and wellness, thereby contributing to readiness and critical for retaining Army soldiers and their families. First, the Army supports DOD's continuous assessment of Basic Allowance for Housing (BAH) rates, ensuring military paychecks keep pace with market conditions across the country. Average BAH rates have increased 12.1 percent since 2022. Personnel in 291 of 300 military housing areas received a BAH rate increase. Second, privatized housing companies began a 6-year, $3-billion investment plan in 2020 to improve the Army's housing inventory, to include new builds and major or medium renovations through 2026. The Army has programmed $1.6 billion for fiscal years 2024 to 2028 to improve the government-owned Army Family Housing inventory. Third, the Army historically invests an average of $1 billion per year in barracks for construction, restoration, and modernization across all three Army components. In fiscal year 2024, the Army is requesting support for permanent-party barracks in Fort Wainwright, Alaska; Joint Base Lewis McChord, Washington; Fort Bragg, North Carolina; and Natick Soldier Systems Center, Massachusetts. Importantly, Army senior leaders remain vigilant in their housing and barracks oversight responsibilities.

With congressional support, the Army has expanded on-and off-post child-care options by increasing staff compensation and benefits, investing in facilities, growing family child care, and extending care hours. Entry level salaries are now $17.39 per hour. We are offering recruiting and retention bonuses for child-care staff and providing them with a 50 percent child-care discount for the first child and a 15 percent multiple-child discount for additional children. In terms of off-post care options, we continue to provide Army Fee Assistance to approximately 10,000 children of the Active and Reserve component per month, all while exploring new initiatives and partnerships. We also increased the provider rate cap to $1,700 per month, thereby reducing out-of-pocket expenses for hard-working Army families. Since fiscal year 2021, Congress has funded seven new Child Development Centers (CDCs) in Alaska, Hawai.i (2), Georgia, Kansas, Kentucky, and Louisiana. The Army is planning to fund more CDCs in the out years.

Army spouses—over 431,000 across all three components—play an important role in soldier and family readiness and soldier retention. Leveraging both Army and DOD programs, and partnerships with other Federal and non-governmental organizations, we remain committed to improving spouse employment and career opportunities. When spouses are satisfied with their careers, employment options, access to services, and overall quality-of-life, they are far more likely to support their soldier's continued service.

There are 46,000 Active component soldiers—9 percent of the force—with family members enrolled in the Exceptional Family Member Program (EFMP), totaling 55,000 family members. We are committed to reforming the EFMP and to providing

comprehensive and all-inclusive support to Army families with a family member with a qualifying condition. In August 2022, we launched the Enterprise EFMP system to improve enrollment, transparency, assignment coordination, and access to support. We have also created a centralized EFMP office within the Headquarters, Department of the Army to coordinate healthcare services, reassignment processes, and education support services. Taken together, these initiatives will help reduce the bureaucratic burden on Army families. Moreover, the Army continues its close partnership with the Defense Health Agency to ensure access to high-quality healthcare for our soldiers and their families.

Reducing Harmful Behaviors. People are the Army's number one priority. We take care of our people by building cohesive teams that are highly trained, disciplined, and fit, that are ready to fight and win, and where each person is treated with dignity and respect. Leaders across the Total Army are steadfastly committed to reducing the harmful behaviors that break trust with our soldiers and the American people—including sexual assault and harassment, acts of extremism, and racism, among others. To reduce harmful behaviors, we are shifting the paradigm from focusing on intervention and response to prioritizing integrated prevention activities. Integrated prevention activities address the conditions that lead to harm by reducing risk factors and increasing protective measures to preclude harmful behaviors. To that end, we are aggressively implementing the fiscal year 2022 Independent Review Commission's recommendations to counter sexual assault and sexual harassment within our formations, to include realigning Sexual Assault Response Coordinators (SARCs) and Victim Advocates from the operational chain of command to the Lead SARC at each installation. This independent reporting structure will enable Sexual Harassment/Assault Response and Prevention, or SHARP, professionals to advocate for victims more effectively.

The Army is committed to working with Congress and the OSD to effectively implement the military justice reforms directed by the fiscal year 2022 and fiscal year 2023 National Defense Authorization Acts. In July 2022, the Army issued a General Order establishing the Office of the Special Trial Counsel (OSTC) as a field operating agency. The Senate confirmed our nominee for Lead Special Trial Counsel in November 2022 and set his subsequent promotion to brigadier general in January 2023. The Army expects the OSTC to reach full operational capability by December 27, 2023, as required by law.

Every single suicide is one tragedy too many. Exposure to harmful behaviors, such as sexual assault, harassment, or other acts of violence, may increase the risk of suicide. The Army is committed to supporting those exposed to harmful behaviors and doing everything we can to address this critical issue. Fortunately, we saw significant decreases in suicide across all Army components in 2022. The Army is leveraging a new public health approach to prevent and respond to suicide at the individual and community levels. We will publish a comprehensive suicide prevention regulation to define this new approach for the force by the end of Q3 fiscal year 2023. Army leaders continue to employ the Health Readiness and Suicide Risk Reduction Tool across our formations. Last year, we introduced the "Stories of Hope" podcast to raise awareness, reduce stigmas, and increase help-seeking behaviors.

50 YEARS OF THE ALL-VOLUNTEER FORCE

As we commemorate 50 years of the All-Volunteer Force, it has never been more important to recruit and retain the talented individuals who make our Army the world's greatest fighting force. We win through our people—our Active Duty, Guard, and Reserve soldiers; our families; Army civilians; and our veterans and retired Soldiers for Life. We need every American to know that the U.S. Army is an organization of endless possibilities that provides a pathway to success both in and out of uniform. Our message is clear: if you want to serve something greater than yourself, if you want to belong to the world's greatest team, if you want to BE ALL YOU CAN BE, then join us. With the limitless talent our Nation has to offer and continued support from Congress, we will remain ready to fight and win, against any adversary, anywhere in the world.

Chairman REED. Thank you very much, General McConville.

Secretary Wormuth, our munitions situation has come into very, very sort of focused and graphic dimensions with the Ukrainian fight. Not only do we have to continue to supply the Ukrainians, we also have to replenish our supplies.

So what obstacles are in your way to do that and what should we do as a Congress to assist you?

Ms. WORMUTH. I think, Senator, the biggest obstacle—there are perhaps two obstacles but let me first say I think we are buying at the absolute edge of defense industrial capacity right now and we are really working to expand that capacity in real time, and that is why you see us investing $1.5 billion in our own organic industrial base so the ammo plants, for example, at Scranton that build 155mm shell casings we are investing in that plant to increase its production capacity, and we have done a lot with industry, as I said.

The multi-year procurement authorities that we have been given are very, very helpful and that is one thing that I think is helping us quite a bit.

The biggest obstacles, really, are twofold, I would say. One, some of the machining tools that are needed to open up new production lines are just very large, complex machines themselves and take time to fabricate and time to install, and there is just a limit to what we can do to compress that timeframe.

Then the other issue is, of course, some of the fragility in the supply chain that we have seen throughout the pandemic and we are, again, working very closely with our defense industry partners to try to help them strengthen those supply chains wherever we can.

Chairman REED. Thank you very much, Madam Secretary.

General McConville, we are at an unfortunate impasse in efficiently nominating and confirming general officers and flag officers. Can you tell us what the real-world effect of this is, unit readiness but also, I think, morale and the personal decisions of families about whether they are going to stay in the service or depart?

General MCCONVILLE. Senator, right now at the Senate we have three three-star generals. One is the space missile commander and the G–4 and also our Assistant Secretary of the Army Acquisition, Logistics and Technology (ASALT) and there is also 37 other one-star generals.

The impact is probably most felt in some ways on the families and the kids. Even though it looks like it is only 40 generals, there are probably four or five other transitions that have to happen so as someone moves up, someone moves, and works their way through.

So what it really does it affects the families and some of the kids. They are trying to figure out where they are going to go to school, when they are going to move, and all those things kind of come in to the readiness of the force.

As you know, we have some major transitions coming up this summer, and we talked about—I am going to retire by law and that is going to be in August and so there will be a replacement that will go through the process.

But with every—at this level there are probably eight moves we made. There will be a promotion to the chief, whoever that person becomes. All those jobs are going to have to change.

All those officers have families and kids that are going to be affected, and anything we can do to help smooth those transitions will put us in a much better position for readiness.

Chairman REED. I think there is another aspect here, too, is that we have some extraordinary talented—in fact, I would say they are

all extraordinarily talented—the senior officers and even captains and majors who could walk out the door tomorrow and command million-dollar salaries as crypto specialists, et cetera.

Is that a dynamic, too, that is being affected?

General MCCONVILLE. Well, I hope not. Most officers do not do it for the pay. If you take a look at the one-star pay, it is $180,000. People go, that is a lot of money. But most of these folks are sitting with 30 years in so actually it is a net of about 45. They make—they do these jobs for $45,000 a year and generals do it for nothing because we are at 40 percent in those type things.

But people do not do it for the money. I think they do it for the respect, and so I think that is very, very important that we actually take a look at what they do. These general officers and these leaders that are coming up in the Army are the best I have ever seen.

I have been doing this for a long time. I have seen a lot of generals. They are all combat proven. Their families have been through 20 years of continuous combat. They are the best I have ever seen and I would ask that we do all we can to get them confirmed.

Chairman REED. Well, thank you very much. My time is rapidly diminishing and just let me commend Madam Secretary, you and General McConville for, again, looking at this contested logistics cross-functional team.

Napoleon, I think, said an army moves on its stomach, and in the Pacific, particularly, we might be able to produce the ammunition, but if we cannot get it to the front lines, we will not prevail.

With that, and I will try to be—I will stop now and, again, thank you.

Senator Wicker, please?

Senator WICKER. It is hard to stop, is it not, Mr. Chairman?

Let us talk about unfunded priorities, General McConville and Madam Secretary.

The Army budget request includes investments to support prototyping for the long-range hypersonic missile flight test, the mid-range capability missile, initial fielding of the precision strike missile, both the mid-range capability (MRC) and PrSM, our own INDOPACOM commanders' unfunded priorities list.

So I want to ask you to talk about that. And also the commander's unfunded priorities list includes $377 million for Army campaigning. Tell us, and we will, first, General McConville, do you agree that expanding the Pacific Pathways program gives us more deterrence in the Indo-Pacific and would you discuss, please, specifically those unfunded priorities?

General MCCONVILLE. Yes. I think it is very important that we continue campaigning in the Indo-Pacific. That is how we build strong allies and partners and relationships, and those are very important in any future conflict.

Senator WICKER. Okay, do you have any idea why they were not funded? Did this come down from Office of Management and Budget (OMB)?

Secretary Wormuth, would you comment on that?

Ms. WORMUTH. Senator Wicker, we have funding in our base budget for Operation Pacific Pathways. I do not have the number

off the top of my head but it is, I think, over $100 million for Pacific Pathways.

I think the unfunded list that you are referring to is the INDOPACOM commanders' unfunded priority list.

Senator WICKER. Indeed, yes, that is my question.

Ms. WORMUTH. I have no doubt that Admiral Aquilino would like to see more invested in both exercises and weapon systems. He is very focused on his theater.

We in the Army have to balance across all of our requirements across the European theater or across the INDOPACOM theater. We have got to be able to invest sufficiently in our modernization systems and take care of our people.

We have invested in Pacific Pathways. We are investing in modernization of the precision strike missile, the mid-range capability.

I just suspect that Admiral Aquilino would like to see us do more but again——

Senator WICKER. Well, would you like to see us do more? If we found the extra money that would be advantageous for national security in the Indo-Pacific, would it not?

Ms. WORMUTH. Certainly, if Congress were to give the Army more money I think we would look at investments in the INDOPACOM region, yes.

Senator WICKER. Okay. Now, let us talk about recruiting, and I think, General McConville, you mentioned inspiring young people and, of course, you have inspired the next generation of McConvilles to do this.

Secretary Wormuth, you are married, I believe, to a retired naval officer.

It occurs to me that with base closures and the shrinking military presence around the country that there are fewer and fewer young Americans who actually grow up knowing members of the military and seeing them go off to work and having them as members of their families.

Yes or no, General McConville, this is part of the problem, is it not?

General MCCONVILLE. I believe so. Eighty-three percent of the young men and women that come into the military come from a military family and that population with 1 percent serving is getting much smaller.

Senator WICKER. Right. I have been a strong advocate for expanding high school JROTC since I became aware of a RAND Corporation study which basically sang the praises of JROTC as a subset of high achievers within a school.

You could even have a poorly performing school but the subset of students there who are participating in JROTC stay in school longer, they graduate with higher grades, and they achieve better in life.

I have never found a superintendent or principal who, when asked about JROTC, did not say they would like to have JROTC in their school or they are delighted that they have them.

General McConville, if we went beyond what the DOD is asking in expanded JROTC in the high schools how helpful would that be?

General MCCONVILLE. What I know, Senator, is that 44 percent of the young men and women that come into the military come

from a high school that has JROTC and 10 percent of the high schools have JROTC, not necessarily in that, and I think what is really important is the structure and the exposure that they get.

But more importantly is the instructors. We have got to make sure whoever the instructors are are of the quality they are going to help inspire young men and women to serve.

Senator WICKER. Indeed, these are probably retired senior officers or retired senior enlisted persons who are very inspiring.

General MCCONVILLE. Many are, but it only takes one to not live up to that standard that can hurt the program. So I think it is extremely important we have strong vetting in place and make sure we have the right people leading these programs.

Senator WICKER. And I agree with you there. Thank you very much.

Chairman REED. Thank you very much, Senator Wicker.

Senator Gillibrand, please?

Senator GILLIBRAND. Thank you, Mr. Chairman.

Secretary Wormuth, in October you ordered inspections into toxic mold on military installations and found that over 2,000 Army facilities have mold problems.

I understand that the proposed budget for new barrack buildings would only pay for five new barracks buildings. How much does the Army need to remediate these mold issues or rebuild impacted facilities?

Ms. WORMUTH. Thank you, Senator.

Yes, we found mold. We inspected 68,000 buildings and found mold in about 2,100, and we are investing $3.5 million to remediate the mold in those 2,100 building and we are going to continue to keep a very close eye on mold in the barracks.

We are spending about a billion dollars a year across all three components—Active, Guard and Reserve—on barracks, both renovations and building new barracks, and we are going to continue to do that through 2030.

The challenge we have, Senator, is just we have such an enormous inventory of barracks that we are not able to rebuild all of them in 1 to 2 years as we might like and still be able to, again, invest in new weapon systems and invest in other initiatives that we need to do. So we are trying to strike a balance.

Senator GILLIBRAND. Are you doing any medical monitoring of the servicemembers who have been exposed to toxic mold?

Ms. WORMUTH. I think we probably need to do more there to make sure that we are tracking that. I know that there has been a DOD IG [Inspector General] report recently that touches on that.

Senator GILLIBRAND. I would like you to submit an analysis about what you intend to do to make sure the servicemembers who have been exposed are healthy.

Ms. WORMUTH. Okay. Thank you.

[The information referred to follows:]

Ms. WORMUTH. Mold in housing, barracks, and other Army facilities can adversely affect the morale and health of soldiers and families, resulting in reduced readiness. To prevent this, U.S. Army Installation Management Command (IMCOM) is ensuring all mold-related work orders in Army facilities are addressed by a certified inspector within 24 hours. IMCOM also ensuring privatized housing companies similarly respond to work orders pertaining to mold.

The Army developed recommendations for remediating indoor mold based on the industry standard for mold remediation.

Trained IMCOM housing inspectors evaluate housing and barracks for health risks. These inspectors focus on areas where mold is suspected or indicated. All relevant data is documented in the DOD enterprise Military Housing (eMH) data base, including inspections and environmental health assessment, data and recommendations; maintenance and repair actions; tenant concerns; work order status; and information regarding potential environmental health exposures, the tenant potentially affected, and the status of the identified risk.

Soldiers and family members are advised to consult their health care provider if they have health concerns about mold. Healthcare providers are prepared to fully evaluate patients presenting with symptoms of asthma, hypersensitivity pneumonitis, rhinitis, or rhinosinusitis, to include ordering any appropriate diagnostic tests. If an evaluation reveals that patient symptoms could be associated with damp housing conditions, healthcare providers will conduct a two-part interview to assist in determining whether a building assessment is justified (e.g., focus on moisture or fungal growth issues.)

This integrated clinical and environmental approach helps determine if patient symptoms could be associated with damp housing conditions. Such a determination can trigger a home assessment and potential International Classification of Diseases (ICD–10) coding in the patient's electronic health record as contact and/or suspected exposure to mold.

Senator GILLIBRAND. Thank you.

General McConville, I was deeply concerned to hear of Private Ana Basaldua Ruiz's death on Fort Hood earlier this month. Yet another young woman who was allegedly sexually harassed is now deceased.

Can you discuss how the Army is progressing in building a prevention workforce and implementing the Independent Review Commission's recommendations to decrease the incidence of sexual harassment and how are you protecting your young servicemembers from these crimes?

General MCCONVILLE. Yes, Senator. Just like I said, parents send their sons and daughters to us. I have sent our sons and daughters to the Army and we have a sacred obligation to take care of them. Commanders will be held responsible.

But it really comes down to from the bottom up, building cohesive teams where everyone takes care of each other, everyone treats everyone with dignity and respect. When that does not happen, we are going to investigate. We are going to hold those accountable that did it.

But the Army's trying to really get after that. There is a lot of prevention for us getting—how do you get ahead of these type things, how do you make sure it comes back to readiness. Everyone has to be a valued member of the team. Everyone has to be treated with dignity and respect, and that is what our commanders are doing.

Senator GILLIBRAND. So with regard to Fort Hood, the previous report said that the climate was so toxic that it was permissive for sexual assault and sexual harassment. What are you doing to address the climate at Fort Hood?

General MCCONVILLE. Well, we have. We changed out—from that report we actually took out 14 leaders, which has never been done in, really—at least I know in the history of the Army.

But the leadership that is in place at Fort Hood I have tremendous confidence in. They are after this. They are on top of it. They are doing everything they can to get the investigation and get the information and they are working very closely with the family.

Senator GILLIBRAND. Thank you.

Secretary Wormuth, will you talk about the development of Multi-Domain Operations and how you have shifted personnel to ensure that Multi-Domain Task Forces are fully resourced? How has staffing for these roles been impacted by the Army failing to hit its recruitment goals by thousands of soldiers?

Ms. WORMUTH. Thank you, Senator.

As you know, we now have three Multi-Domain Task Forces and we will eventually build a fourth and fifth Multi-Domain Task Force. They vary a little bit in size. They are tailor made to the theaters that they support and work in, and right now they are fully manned.

I would expect that we will continue to make sure that they are fully manned even as we work through how we are going to deal with the Army getting slightly smaller and dealing with recruiting challenges.

But they are very, very important because they bring capabilities that are kinetic through the long-range fires battalions but also very important nonkinetic work. They work on intelligence and developing targeting. They have cyber capabilities, electronic warfare capabilities, and they are going to be very, very important in both Europe and Indo-Pacific.

Senator GILLIBRAND. Thank you. Can you discuss in this setting how Project Linchpin is integrating artificial intelligence (AI) into Army systems? I understand that the project aims to improve navigation systems, anticipate maintenance needs, help with targeting, and aid intelligence analysis.

Will you address how this project will or will not keep a human in the loop on intelligence and targeting analyses?

Ms. WORMUTH. That is an important project and we are very much trying to integrate and bring more artificial intelligence capabilities into our Army in various ways. That is very much going to be a wave of the future, I think, clearly.

Army Futures Command is going to be looking as we think—start thinking about the Army of 2040 how can we bring even more AI capabilities.

So we are using AI right now with some of the work that we are doing with the experimentation we are doing with the 18th Airborne Corps. We also have an AI Integration Center at Carnegie Mellon University that we are working with very closely and many of the fellows coming out of that program are going into different parts of the Army to help us do more with AI capabilities.

Chairman REED. Thank you, Senator Gillibrand.

Senator Fischer, please?

Senator FISCHER. Thank you, Mr. Chairman.

Senator Wicker briefly touched on the—really, the need and the value that we receive as Members of Congress from the unfunded priority list that you provide and I would say that the majority Members of Congress view that as a useful tool so that the Committee can use that and you can convey what is needed to meet the challenges that you face.

So I do thank you, General, for the visibility that you have provided on the importance of your needs so that it will allow us to

make more responsible, I think, resourcing decisions on those needs.

If I could, I would like to ask both of you—the Army has spent the last 20 years primarily conducting counterterrorism and counterinsurgency operations in the Middle East. Can you provide an update on how you plan to rebalance your forces, restructure training and exercises, or develop unique capabilities in order to meet the increased demand that we are going to see in the INDOPACOM area? I would especially like to know what you learned from the Project Convergence exercises.

Ms. WORMUTH. Certainly, Senator Fischer.

We are doing a lot to shift from counter-insurgency (COIN) and counter terrorism (CT) to large-scale combat operations through exercises like Defender Europe and Pacific Pathways in the Pacific.

We have come out with a new field manual, 3-O, which is our vision and doctrine for multi-domain operations, and I would say when we look at the Indo-Pacific we are really going to be focused on establishing and setting up and securing staging bases for air and maritime forces, contested logistics.

The Army will play a huge role in terms of making sure that the joint force has the supplies that it needs, and many of the new air and missile defense systems that we are developing are directly designed to deal with the anti-access area denial threats that China poses, for example.

So our entire modernization program is focused on developing the kinds of capabilities that we need for large-scale combat.

Senator FISCHER. General, with Project Convergence what did you learn?

General MCCONVILLE. Yes, I think Project Convergence is really the future. It is the ability to take deep sensing, different types of sensors, and quickly move information to an integrated battle command system, take advantage of artificial intelligence, and then move that data to an effective lethal means.

A good example of that is countering unmanned aerial systems (UAS). So we are going to have a whole bunch coming at us and you do not necessarily want to be shooting Patriot missiles at $100,000 UASs and so if you think about the future battlefield there will be multiple threats.

We will have multiple sensors to pick up those threats. We will bring them quickly into an integrated battle command system, take advantage of the technology, and then get them to the right weapon systems that can deal with that problem.

We are seeing this nascent right now in Ukraine. They are doing a very good job taking advantage of the sensor they have with the fires they have and that is a lot to do with how effective they have been.

Senator FISCHER. When you look at the change in the battlefield, and we talked about this a little bit earlier this week, can you provide the Committee an update on the development of the Army's long-range hypersonic weapon?

General MCCONVILLE. Yes. Right now we have a battery that is already fielded. The systems are ready to go. We are doing testing. We have a couple more tests to do on the weapon systems and we

had to test that we are working through like every test to get it to the final configuration.

But at least the schedule we have right now we anticipate having a hypersonics capability by the end of this year, which has been pretty remarkable.

Senator FISCHER. Yes. Thank you.

Madam Secretary, we spoke earlier this week about the Future Soldier prep course. Can you highlight to the Committee some of the successes of the program?

Ms. WORMUTH. Certainly. This program has been very successful. We have it at Fort Jackson, South Carolina, and also Fort Benning, Georgia. We have had about 8,000 young Americans go through the program. There is two components. It is sort of like a mini boot camp.

There is an academic component, which is designed at helping young people who have not quite scored high enough on the Armed Services Vocational Aptitude Battery (ASVAB) raise their scores, and then we have a physical fitness component because in some cases we have got young kids who want to serve but they are not quite within our body fat composition requirements.

It has been very successful, both pathways, if you will. About 97 percent of the folks who go into it have graduated and have gone on to basic training, and many of them are performing very well at basic training as well.

Senator FISCHER. So that is a way to get closer to the goals that you have for the recruitment——

Ms. WORMUTH. Yes, absolutely, and to do so in a way that does not lower our standards, which both the chief and I feel is very important.

Senator FISCHER. Exactly. Thank you very much.

Chairman REED. Thank you, Senator Fischer.

Let me remind my colleagues that when we conclude this open session we will recess and start a closed session in SVC–217.

Senator Hirono, please?

Senator HIRONO. Thank you, Mr. Chairman.

Thank you both for being here and, General McConville, thank you very much for your service and best wishes on your retirement.

Secretary Wormuth, we have talked a number of times about the State of the military's infrastructure in Hawaii, and I know you have visited Hawaii several times to see the failures for yourself.

I appreciate your attention in this area but as you know there are still rolling blackouts at Schofield Barracks, issues with the water systems at Tripler, and UXO removal concerns on the Big Island.

A majority of the Army's facilities in Hawaii are failed or failing with an estimated cost of repair of almost $5 billion. Fixing this will not happen in 1 year but we must start taking these projects off the unfunded lists and make real progress.

Madam Secretary, how are we going to chip away to the $5 billion in fixing that we have to do? Do we not need to get more of these projects off the unfunded list?

Ms. WORMUTH. Thank you, Senator Hirono.

We do have considerable infrastructure challenges in Hawaii, as you note, and I would say both above ground in terms of buildings

and barracks—I saw some barracks that were not in good shape at Schofield Barracks—as well as our underground infrastructure in Hawaii.

The chief and I right now as we look to the next budget—we are building the next 5-year budget—are looking at how we can invest more in infrastructure. We actually sent out a team from Army Materiel Command and from our installations' energy and environment team to assess the infrastructure.

They came back with, frankly, a multibillion-dollar bill and so what we are trying to do is look at how we can find more resources to put toward that problem and we also want to do it in a way, frankly, that is mindful of the limited construction capacity that is on Hawaii.

It is going to be complex to sort of figure out how many projects we can do a year and how do we phase that in in such a way that we do not overtax the capacity on islands.

Senator HIRONO. It makes a huge difference to the community when the military writ large—because the community is not necessarily making distinctions that Red Hill, oh, that is a Navy issue and Pohakuloa is an Army issue. It is all combined, and every time we can make real progress in dealing with the infrastructure needs I think it would be—it really helps the community to understand that the military is there as part of our community and they are making progress or they are doing good things. We need to think of it in that way and I know you recognize that.

Senator Wicker has asked these questions, General McConville. The National Defense Strategy makes clear that the priority theater is the Indo-Pacific. So efforts like the Army's Operation Pathways, the newly constituted multi-domain task force in Hawaii, and the INDOPACOM aligned fifth security force assistant brigade are crucial to the Army's success in this area.

Yet, despite Admiral Aquilino identifying the need for our $473 million investment in Pacific Pathways what is being requested is only $123 million and—because Pacific Pathways, though, that mainly pays for exercises with allies. Is that not right, General?

General MCCONVILLE. That is correct.

Senator HIRONO. So I assume that when there is such a big gap between what Admiral Aquilino wants and what he is getting that it just means that we are doing far fewer exercises in the Indo-Pacific AOR [area of responsibilities], and I do not know what the numbers are. But at some—is that a good way to think about it, that we are funding far fewer exercises than what Admiral Aquilino thinks is necessary?

General MCCONVILLE. Well, as the Secretary said, we are trying to balance the exercises with the barracks with the training and in the modernization, and we have requested additional funding if it is available to support that campaigning and I stand by the notion the more campaigning, the more resources we have, I think the stronger our allies and partners will be and the stronger our presence will be.

Senator HIRONO. I tend to agree with that and, yet, the military has over an $800 billion budget and one would think that some of these priorities can be better met.

You were asked about the sexual harassment of—both of you—and it continues to be a scourge in spite of the efforts of this Committee, particularly with Senator Gillibrand's leadership.

So, General McConville, you noted that it starts at the top and it goes all the way down. I think both of you agree. I am glad that you took swift action with regard to the culture at Fort Hood.

But with the most recent tragic suicide, I realize the investigation is still going on but I think that how we deal with sexual assault and harassment really impacts our ability to recruit women to the military. Would you agree with that, Madam Secretary and General?

General MCCONVILLE. I think it affects readiness. I think——

Senator HIRONO. Yes.

General MCCONVILLE.—one of the secret sauces of good units is cohesive teams and if you have sexual harassment, you have sexual assault, you have any type of racism, any of those type things hurt the cohesion of a unit and we do not want that in our Army.

Senator HIRONO. We can do a lot more, I know that. So thank you very much.

Chairman REED. Thank you, Senator Hirono.

Senator Cotton, please?

Senator COTTON. On behalf of all our Arkansans I also want to express my condolences for the soldiers whose lives were lost in the crash of two Blackhawk helicopters near Fort Campbell overnight.

It is terrible tragedy for all their families and the 101st community, and if you have served time there as I know General McConville has served more than a day or two at Fort Campbell, it is especially hard hitting.

General McConville, I want to add my thanks and congratulations to you for a highly distinguished and decorated career of service to the Army. I know you are not retiring yet and you will run through the tape later this year.

But we are very grateful for what you have done for our country and we are glad that in the middle of a recruiting crisis we are getting a four for one McConville trade. We may be losing you but we have got three children and one in-law. So thank you and your family for your service.

Secretary Wormuth, I want to talk about the Army Combat Fitness Test and this ongoing years-long saga of that. Last year the Army unveiled gender-based standards after many years of promising gender-neutral standards.

As a result, this Committee directed the Army within 180 days of the enactment of last year's NDAA to promulgate new gender-neutral standards for combat arms, Military Occupation Specialties (MOSs). What is the status of those new standards?

Ms. WORMUTH. Thank you, Senator. We are looking forward to coming to brief you in June about where we are on that NDAA requirement, and I know you and the chief had a discussion about this.

The language in the bill, as you know, talks about gender-neutral standards for combat, military occupational specialties, and we will be able to lay out for you how we have approached that to date.

We also, as you know, are coming up on the deadline for the Active Duty component to finish taking the test for record, the Army

Combat Fitness Test. The Guard and Reserve folks have until October to take that test for record.

But we can also give you an update on the data that we are seeing from that and what we can take away from that and what we can learn in terms of how we might adapt the ACFT, going forward.

Senator COTTON. So the law calling the Army to establish the standards by June, not to brief Congress by June, are you going to—are you prepared to meet that requirement to establish the standards?

Ms. WORMUTH. We actually have standards in a Department of the Army Pamphlet (DA PAM) that lay out requirements for all of the combat MOSs that are gender neutral and we can brief you on those.

Senator COTTON. Can you tell us what those combat MOSs are today or what branches, at least?

Ms. WORMUTH. I believe that we have them for all of the MOSs, Senator.

Senator COTTON. Okay. But it is your understanding—the expectation of this Committee is that we have a single standard for the combat arms branches and then for all the other noncombat arms branches there will be a male and a female standard?

Ms. WORMUTH. As I have read the law that you all put in last year, these are standards. They are physical gender-neutral standards for combat, military occupational specialties, yes.

Senator COTTON. Yes, because I mean—and I was not the only one. Senators Ernst, Gillibrand, and Duckworth expressed concerns about this as well as did most of the Committee.

I mean, when you are talking about things like the infantry there is irreducible physical demands. You have to be able to carry a 75- or 100-pound pack or carry a 250-pound wounded comrade, whether you are a man or a woman. Or if you are an artillery or armor you have to be able to handle shells that can weigh up to a hundred pounds.

The standard, we all think, should be somewhat different if you are, say, working on a computer. That work is very vital but it is not the same kind of physical demands that the combat arms are, and in the middle of a recruiting crisis I do not think we should be taking steps to dissuade anyone, young men or young women, who may not be up to the physical rigors of armor and artillery but are able to perform all those other roles. That is your understanding of what this Congress intended, right?

Ms. WORMUTH. Senator, the DA PAM spells out exactly those kinds of things. I think the issue has been is—there is our combat. There is the fitness test and then there are the standards for the MOSs and there is a distinction there.

Senator COTTON. Correct. I mean, this has been a long saga, as I said, and in retrospect, I mean, we had an Army that, let us see, toppled a Marxist government in Grenada, toppled a narco government in Panama, kicked Saddam Hussein out of Kuwait, toppled the Taliban, toppled Saddam Hussein, doing pushups, sit-ups, and a 2-mile run.

So I think those guys were pretty physically fit that did all those things. But we are where we are. We have moved to the combat fitness test. I do not think the issue are the events on it.

The issue is making sure that we have high standards that are suited for the demands of the battlefield and we just want to make sure that that is what we are going to get from the Army by the 180-day deadline.

Ms. WORMUTH. Yes.

Senator COTTON. Thank you.

Chairman REED. Thank you, Senator Cotton.

Senator Kaine, please?

Senator KAINE. Thank you, Mr. Chairman, and to our witnesses, thank you for your service to the country. I add my sentiment to those who have expressed just sorrow over the incident with the servicemen and women at Fort Campbell. I know that it is tough for the whole Army family and the Committee shares in that.

I just want to share with my Committee colleagues, I had the opportunity to do something 6 days ago. I was at the first of the nine base renamings. Two years ago in the NDAA this Committee in a bipartisan way decided that bases that had been named for Confederates should be renamed for American heroes who whom all could admire, and it was a—it is a pretty tough task.

The naming commission considered about 7,000 or 8,000 names and then reduced that to 2,000 and then to about 500, and eventually reduced it down to 87 names and from those names had to find nine. Talk about a commission I am glad I was not on.

But the first renaming was Fort Pickett, which had been built right before World War I and named in honor of General Pickett, the Confederate general. It was renamed Fort Barfoot.

Van Barfoot was a Choctaw from Mississippi who enlisted, came to train at Fort Pickett, and then was deployed overseas in World War II and fought courageously in Italy and won a medal of honor under the most unusual circumstances, demonstrated great heroism in killing a lot of Germans and capturing scores of Germans and then saving the lives of many Americans.

He then came back and continued to serve in the Army in Korea, served in the Army in Vietnam. When he retired from Active Duty he was connected deeply to the Virginia National Guard, which is headquartered now at Fort Barfoot. Was very involved in the Virginia War Memorial in Richmond that honors those who lost their lives in recent wars.

He last made news when he was about 90 years old because he hung an American flag that was too big, according to his homeowners association, and they had the foolishness to try to test a congressional Medal of Honor winner.

The ceremony was just amazing. It was led by tribal representatives from Virginia, Virginia's recently recognized tribes, and everyone in this community—Dinwiddie and Blackstone and Crewe and Lunenburg, Brunswick Counties—was so proud to be there and the naming commission did a remarkable job.

Just to see the family—Colonel Barfoot's daughter spoke, other family members were there, and to talk to the naming commission about the care that they used in approaching this and knowing

something about the other names that are forthcoming—the other base names—will be done in the months to come.

I just wanted to say job well done to the Army and to the naming commission and doing it and just to report back to my colleagues.

Everyone here around this dais supported that at the time in Committee, and I think if you go to one of these you will be really proud, as I was, to have played a little part in it and appreciate the Army approaching it the right way.

General McConville, I have a couple of questions for you. In watching the Russian invasion of Ukraine we realize how different a conflict is where you have contested logistics and contested airspace versus the war on terrorism where we often had dominance in airspace and there was not such a contest.

Can you share your thoughts—you have talked a little bit about this already this morning—on the contested logistics and how the Army will conduct logistics operations in contested environments and the plans that you are putting in place to do that?

General MCCONVILLE. Yes, Senator. I think, again, one of our biggest changes in our training and how we operate is we are able to operate fairly without any type of enemy contact from here all the way to Iraq, Afghanistan, and we know that is not going to be the case. It is not going to be the case in the Pacific if we have to fight in the Pacific. It is not going to be the case here.

So what we are doing is building those capabilities and some of it is just by prepositioned stocks. We cannot assume we are going to be able to just sail across the seas safely. So we want to position equipment and ammunition in the theater. We need to disperse it. We need to protect it.

There is that old saying about amateurs study tactics and professionals study logistics and what we see is those tanks and artillery pieces and aircraft become expensive paperweights if they do not have fuel, if they do not have parts, and they do not have ammunition.

All that is part of what this contested logistics is about, and you can think about here, I mean, with cyber capability right now. So we are going to be attacked by cyber. We are going to—they are going to use space.

We use space a whole bunch right now to move things, and even how we move by air or sea we are going to have to protect our systems and we are going to have to be aware of that and we are going to have to basically fight our way across.

That is where our allies and partners become so important, the fact we have developed these relations, we have access and presence, we can quickly move into the—whether it is ports or airfields, and then we have the equipment and we have forces in the right place that can facilitate all of this.

Senator KAINE. Just one fact for my colleagues as I conclude, and it will inspire a question for the record.

In World War II we used 1.67 gallons of fuel per soldier. In Iraq and Afghanistan that had gone up to 27.3 gallons of fuel per each member of our troops. The contested logistics with respect to deployment of fuel that we will need will be a real challenge and I will ask a question about that for the record.

I yield back, Mr. Chair.

Chairman REED. Thank you very much, Senator Kaine.

Senator Rounds, please?

Senator ROUNDS. Thank you, Mr. Chairman, and thank you to both of you for coming before our Committee today.

General McConville, thank you for your service and thank you to your family for their service to our country as well.

You make a very good point when we talk about the number of places that you have been but also the fact that we lost young soldiers who were training and that it is not just those that are facing an adversary but those that are training throughout the year throughout our country that also take risk on a daily basis, and our thoughts and prayers are with you, the entire team, and the family of these soldiers.

General McConville, as you know, there is an effort by some in Congress to require sharing of all or some of the 3.1 to 3.4 or .5 band of the electromagnetic spectrum, also known as the S-Band. Right now it is held by DOD and some of the private sector needs it for 5G development, which is also important.

But can you confirm that the Army has systems critical to our national security that reside on this portion of the spectrum?

General MCCONVILLE. Yes, I can, Senator, and from where I sit it is—I know there is a study that is being done. I think it is really important we do our independent study, take a look at what that means, and it happens to some of our bases with encroachment when people want to move close and we understand that that can happen.

But if we cannot do the training we need to do, same thing with these systems. I understand perspectives where you want to develop the communications capability.

But the only thing I would advise if asked is just take a hard look at—independent people looking at that and we know the risks to national security when we make that decision.

Senator ROUNDS. Thank you. I think part of the point that we try to make is is we are practicing at multiple bases across the entire United States. So we have that risk at multiple locations across the entire United States during our training sessions.

Let me just take a step forward here, Secretary Wormuth. Thank you for what you do and your looking ahead in terms of what the Army will be facing.

Part of what it is, and it was just mentioned a minute ago, and that is the—within the cyber domain and the challenge that we literally will not go to war without having a cyber presence.

How well do you believe that the fiscal year 2024 budget supports the growing cyber threat, and where is the Army taking risk in the cyber domain and where would additional funding be most helpful in buying down that cyber risk?

Ms. WORMUTH. Thank you, Senator. We are making a lot of investments related to cyber in this budget because it is such an important area, and ensuring that we have good cybersecurity is really critical, particularly for our modernization programs.

We have got to make sure that they are secure and not able to be stolen by our adversaries. We have over $400 million in this budget for implementation of our zero threat approach to cyberse-

curity. We are spending about a half billion dollars to continue moving to the cloud.

One of my objectives is for us to become a more data-centric Army and, certainly, having our data in the cloud is critical. We have got about $600 million in the budget for modernizing our cryptography and retiring some of our technical debt with our tactical radios.

So I do not think that we are taking a lot of risk in this budget in the cyber area because it is so important. My own view is if there is a place where we are taking risk, and I think this is a place where as an entire joint force we may be taking risk, it is in—I worry a lot about threats to the Homeland, particularly through the cyber domain and so much of the critical infrastructure in our country is outside in the private sector, that figuring out how we work more closely with State and local governments, with private companies, to make sure that we are secured outside the fence line that is where I think we have risk and that is, in my view, more about how do we work together better organizationally necessarily than about the amount of money you spend.

Senator ROUNDS. I agree with you. I also think that you have taken a major step forward, once again, in terms of coordinating with other sectors.

I know that you have entered in or are entering into an agreement with Dakota State University in South Dakota on some advanced cyber activity as well and we appreciate the opportunity to be a part of the solution.

General McConville, I have two thoughts. First of all, I am just going to ask this rather quickly. I understand that the Army is the executive agent for the theater, integrated air and missile defense, including the protection of fixed sites like airfields and supply depots.

The missile threat to fixed and semi-fixed sites seems one of the most challenging threats to the joint forces. What additional investments, if any, does the Army need to make in air and missile defenses?

General MCCONVILLE. Senator, I agree with you. It is a significant threat and we are making significant investments. We are going to build more Patriots. We are building indirect fire protection capability, nine of those units. We are building counter UAS batteries.

I think on the future battlefield we are going to protect it. But what we are also doing is taking advantage of an integrated battle command system and, again, this sensor, this convergence of having multiple—getting away from having one radar for one air defense system.

So you take advantage of all the sensors that are out there and you use an integrated battle command system and you get better sensors so we can see things coming in. Taking advantage of the technology when it comes to artificial intelligence and so we can deal with those systems early on.

But I think when the Secretary and I talk about it that is why air and missile defense is so important, especially in the Pacific, and we want to be able to do that.

Senator ROUNDS. Thank you.

Thank you, Mr. Chairman.

Chairman REED. Thank you very much, Senator Rounds.

Senator Peters, please?

Senator PETERS. Thank you, Mr. Chairman.

First, Madam Secretary and General McConville, I want to add my condolences to my colleagues' here for the horrible accident in Kentucky. I know that my heart goes out to their family, friends, and the entire Army community right now, who I know is all grieving.

Secretary Wormuth, in 2018, the Army requirements oversight councils were held for both the Abrams and the Stryker programs.

A modernization goal was set for the Abrams program at a rate of one full brigade per annum funding cycle, and similarly for the Stryker a modernization goal was set to upgrade one half a brigade each year.

Congress has continually and consistently supported these programs and maintained these desired modernization rates with significant congressional adds along the way to support what Army leadership describes as, quote, "enduring programs that the Army will depend on for decades."

So my question for you, ma'am, does the Army continue to support the Abrams and Stryker programs and at a modernization rate that is workable to support the industrial base that makes this equipment?

Ms. WORMUTH. Senator, we do very much support the Abrams and Stryker programs. Those vehicles—I think we have the best tanks in the world. I think if you asked the Poles and the Australians they would say the same, the Ukrainians as well.

The challenge that we have is that we are trying to both continue buying important enduring platforms like Abrams, like Stryker, while at the same time investing in developing new next-generation combat vehicles like Armored Multi-Purpose Vehicle (AMPV), like the optionally manned fighting vehicle, and with the budget that we have we are only able to buy the volumes that you see in the budget that we have presented.

I do think in terms of Abrams, for example, as I said, there are significant foreign military sales that have been made and I think that will be very helpful with sustaining the industrial base for those programs.

Senator PETERS. Very good.

General McConville, for decades the Latvian—we have had Latvian troops training with the Michigan National Guard up at Camp Grayling to learn skills necessary to counter potential Russian invasion in Latvia and, certainly, never has this training been more relevant than it is right now.

But in addition to Latvians, we routinely have other European allies as well as INDOPACOM partners trained at Camp Grayling to take advantage of the size and the capabilities that that installation offers.

Our National Guard installations, and I hope you agree, are a hidden gem. They offer capacity and unique training environments for not only U.S. forces but also our allies as well.

So my question for you, General, is how does the Army budget invest in the National Guard and in particular into its military in-

stallations, its ranges, its training areas, to help enable the Guard to conduct the multi-domain operations training that is so essential today?

General MCCONVILLE. Senator, first of all, let me highlight what a great job the National Guard is doing with Michigan and these partners, and if you take a look at Ukraine, you take a look at Latvia, these State partnerships have been going on for quite a while and, quite frankly, why these armies have the capabilities, that they have the capacity and the competence.

What we do in the National Guard is we talk to them very closely. We want to resource them within our means we can and we come to their priorities and we lay them out and you will see some of those even on our unfunded priority list that did not quite make it in the budget.

Really, like the Secretary said, to us it is all about balance. We have a fixed budget, as both sides have said. Some would argue that you cannot transform an Army without having 3 to 5 percent real growth.

We are trying to do that and we are trying to do the best we can with what we have and deliver the best Army we can do with the resources we get.

Senator PETERS. Thanks.

General, the National Defense Strategy places great emphasis on the ability of our forces to operate in contested environments and the need to overcome enemy disruption, and my question for you is how is the Army empowering commanders and local installations to replicate live electromagnetic effects during home station training scenarios focused on operating in these domains?

General MCCONVILLE. Yes, that is something we are trying to get to. I would say we are doing a better job at our National Training Centers as such because that is expensive and also the places you can actually do that we have to work our way through it when you start using those type systems.

But as you say, Senator, that is something that is really the big shift that we are seeing. We are going to be jammed in the battlefield. They know how important data is for us.

If you go to the National Training Center right now you have a very different experience than you did a couple years ago. You cannot expect to have—if you are emitting as a command post or you are trying to do things we are going to take all those things that you depend on away from you so when you are in actual combat it should be a lot easier.

Senator PETERS. Right. Right. Thank you, General.

General MCCONVILLE. Thank you.

Chairman REED. Thank you, Senator Peters.

Senator Ernst, please?

Senator ERNST. Thank you, Mr. Chair, and my condolences as well to the families and the fellow soldiers all within the 101st Screaming Eagles family. We are sincerely, sincerely upset about the loss of those soldiers and it hits home for so many of us.

But thank you for being here today, Secretary Wormuth and General McConville.

On Saturday I will have the great opportunity to attend a retirement of a dear friend of mine from the Iowa Army National Guard,

and it seems that many of us that have gray hair are seeing many of our friends and family members retire through the years and, General McConville, I wish the best to you and to your family as well.

We know as we are stepping out of the uniform and out of the boots and leaving the ranks behind that we need young soldiers to step up into those ranks and so I do want to address some of the recruiting challenges that we are seeing today.

On Tuesday, Chairman Milley had told us that the threats of America are at its highest since World War II and our Army is smaller now than it is required to be. By September Army end strength could fall to 445,000 soldiers and that is a 7 percent decline just over the past 2 years.

So today I want to focus on our high schools and how some of those high schools are truly failing our military and their students.

The law requires high schools that receive Federal funding allow access to our recruiters and as the Department of Education admits on its very own website only about 95 percent of the schools actually follow the law by allowing military recruiters access to their students.

Mr. Chair, if I could enter into the record—this is from the Department of Education's website.

Chairman REED. Without objection.

[The information referred to follows:]

What are the requirements of § 9528 of the ESEA, regarding access to student contact information by military recruiters or institutions of higher education?

Each LEA that receives funds under the ESEA must comply with a request by a military recruiter or an institution of higher education for secondary students' names, addresses, and telephone numbers, unless a parent has "opted out" of providing such information.

Section 9528 also requires LEAs that receive funds under the ESEA to provide military recruiters the same access to secondary school students as they generally provide to postsecondary institutions or prospective employers. For example, if the school has a policy of allowing postsecondary institutions or prospective employers to come on school property to provide information to students about educational or professional opportunities, it must afford the same access to military recruiters.

Senator ERNST. Thank you.

It does raise a question. So 95 percent do allow some level of access. So what about the 5 percent of schools that deny access to military recruiters? It really is about following the law of the United States.

But it is not just about the law. It is about the opportunity that is extended to those students and it is about patriotism.

So, General McConville, I am going to ask you to put on a recruiter's badge for a moment—through your years of experience you know this very well—but how would you explain the benefits of service to the many students in the 1,100 schools who deny access? Who have not been able to meet a recruiter?

General MCCONVILLE. Yes. What I would say to those superintendents or those teachers or those counselors that do not want military recruiters you may be depriving your students of doing maybe the most important thing in their life and having an impact.

We use the—kind of the slogan or the motto of "be all you can be" but there are just so many stories of people that have rose to

the highest levels, have gotten an education, whether they did it in the military or gone further.

But I just think that everyone should have an opportunity to serve, not necessarily in the Army or the military but just in general. They will be much better citizens, they will do a much better job, they will get training, they will get education, they will get leadership and they will just be—and when they are older and gray like some of us and they look back on their lives they will say, "I served in the 101st Airborne Division."

Senator ERNST. Yes.

General MCCONVILLE. I was part of the Band of Brothers. There was a young woman from the 82d. We asked her why she joined the military, and she was at Kabul and did some incredible things and what she said to us—she goes, "I did not want to go through life without having an impact."

We just had another—an officer. He was an All-American at Duke, played basketball there. He went to—play professional basketball and he was talking at an event for us, and he served with the Rangers. He came back. He goes, "I worked on a Coach K. It was great team. I worked—played for two professional basketball teams. But the best team I ever was on was the Army.

Senator ERNST. Outstanding, and I know one of my staff members this morning mentioned this is how he came to serve was he met a recruiter at his school.

I think it is really important that we allow that access because, as you said, so many people that join they join because they have a family member. But there is a whole swath of young men and women that are incredible and really deserve the opportunity to serve.

They just have to be exposed. They only know what they know, and those recruiters can really take in discussions about benefits and patriotism and so we think that that is really, really important.

I do have some questions that I will submit for the record, Secretary Wormuth, for you as well in regards to recruiting. But we, certainly, want to make sure that we are correcting this by the high schools and I have legislation I am working on to do that.

But I thank you both very much. General McConville, thank you for your service.

Thank you, Secretary.

Chairman REED. Thank you, Senator Ernst.

Senator Kelly, please?

Senator KELLY. Thank you, Mr. Chairman, and I could not agree more with the senator from Iowa on this, the opportunity to serve, and as you mentioned, General, some of it—just somebody talking about it later, my dad served in the 82d Airborne, and I would hear it from him all the time and one of the reasons I took my path not in the Army but in the Navy.

Also, I want to share my condolences on yours and, Madam Secretary, for you, too, and the Army's loss. We often expect losses in combat. Training accidents are—especially mid-airs are just horrific, and so we are with you in sharing the grief over this.

General, you talked a little bit about training opportunities. I want to talk about a place specific to Arizona because for the last

several years we have been hearing from witnesses as we prepare for this pacing threat of China that we need to be doing everything we can to prepare for this fight that we, obviously, do not want to get in and the best way we can—in my opinion, that we can avoid staying out of a fight is to make sure that our adversaries understand that they are not going to win and that means being as prepared as possible.

Electronic warfare is something we have talked about a lot lately. It is a critical mission. I am really pleased to see that DOD has taken a fresh look at our capability here because it is going to be part and a big part of a potential future fight, especially if it is in the Western Pacific.

I have been looking at this issue closely and I know some of my colleagues on the Committee have as well. But we need expanded airspace. The stick is longer than it used to be. We need more space. The threat is more significant, and we need to be able to replicate the high-end threat and have areas where we can put emitters and have the dynamic opportunities to best equip their forces and train them.

DOD has had officials out to see the electronic proving ground at Fort Huachuca in Arizona and folks agree that this place has the capacity and it also has the expertise and they are willing to do more.

General, can you please talk to the Army's vision and strategy for ensuring that our military is prepared for the advanced electronic warfare threats that we will face in the future?

General MCCONVILLE. Yes, Senator, you make a great point about Fort Huachuca. There is a reason why we have the unmanned aerial system training out there.

There is a reason why we have electronic warfare capability at areas like that. It takes special places. Certainly, got to have the size. But it is also where you can do it. There is—I mean, we do a lot of stuff at the National Training Center. We do it out at Fort Huachuca.

But it is something that is going to be more important in the future. We got to train the way we are going to fight. We got to expose our commanders to that environment, and our intent is that our training centers are so rigorous that when they actually go into combat it is an easier day.

Senator KELLY. Yes. That is what you want, right. You want the training to be the most challenging thing.

General MCCONVILLE. That is right.

Senator KELLY. Not often the case. You know, Fort Huachuca also offers geography and a landscape that really does not exist anywhere else, this natural bowl where you can transmit on a lot of different frequencies at very high energy.

This is a real opportunity, too, and it has got a lot of potential to help the Air Force with their F–35s that every—not every but a lot of their training missions they need to be considering the high-end threats.

We can put emitters at Fort Huachuca. We also have opportunities to extend the size of the Barry Goldwater Range and may be connected to a Military Operations Area (MOA). The Jackal MOA, I think, that is north of Fort Huachuca.

In my remaining time I am going to have another question for the record on the Fort Huachuca range. But I have got about 30 seconds and I really do not want to go over.

Madam Secretary, I am going to submit another question for the record about your vision for human machine teaming and working together. That offers a lot of opportunities for us in future conflicts.

Thank you, and I will yield back my 8 seconds.

Chairman REED. Thank you, Senator Kelly. I appreciate that very much.

Senator Scott, please?

Senator SCOTT. Thank you, Chairman. Thank each of you for being here. Thank you for what you do.

General, can you talk about why should communist China or why should Russia, any of our enemies—why should they be concerned about the capacity that our Army and our military has and why should they—when they look at our recruiting we are not hitting our recruiting numbers.

Support of the military is not what it used to be. Should they be concerned? Should they be concerned whether if they want to invade Ukraine or China wants to go in Taiwan or North Korea wants to do something in South Korea? Should they be concerned or not?

General MCCONVILLE. I think when I look at our adversaries, should they be concerned about the United States Army, absolutely, yes, they should be. It is the most lethal and ready army in the world and I think when we—I have spent a lot of time traveling around the world so when I go to Latvia, Estonia, Poland, Romania, you name it, that is the respect that our soldiers have.

Every one of those countries wants us to be a partner with them and I think it is the same thing in the Pacific. I think it is only going to get better with resources as we transform the Army to make sure that we have the capabilities as part of the joint force that are going to make maybe an amphibious type of assault or an airborne assault or an air assault very difficult to do.

As far as for people side of the house do we have some challenges? Absolutely. But we are looking for everyone's help to work our way through these problems, to inspire young men and women to serve.

Senator SCOTT. What do you think about Taiwan's effort to put themselves in a position that communist China will not want to invade? Do you think they are doing all the right things?

Do you think they are—they have a big enough military and do you think they have made—are going to make it difficult for them?

General MCCONVILLE. What I would like to do, Senator, is take that to the—if we can take it to the next session.

But here is what I would say, generally. I think there are some good lessons learned when we deal with allies and partners from Ukraine, and what I would say is take a look at what are their capabilities, what are their capacity, what is their competence, and by capabilities what type of weapon system they have.

Do they have the right weapon systems to defend themselves? Do they have enough of those weapon systems? Are they competent in those weapon systems?

But, to me, the most important thing is do they have the will to fight, and if they do not have the will to fight to defend their country like the Ukrainians did we need to take a hard look at that.

Senator SCOTT. What do you think about—what do you think about the capacity of the military in South Korea and the willingness of the people to defend their freedoms?

General MCCONVILLE. I think the South Koreans have very good capacity and I think they are very committed to defending their freedom.

Senator SCOTT. So you think that North Korea should be concerned if they wanted to invade?

General MCCONVILLE. I think North Korea should be concerned.

Senator SCOTT. Okay. What about our North Atlantic Treaty Organization (NATO) allies? Do you think they are building the capacity they need and they have the willingness?

I mean, if you look at Germany as an example and you look at their pathetic response to the invasion of Ukraine where they have not put up the resources they should, they have not built the military they should—I mean, what do you think about what NATO allies are doing?

General MCCONVILLE. I think NATO allies respond to their interests. There are a lot of things that go on in each country. I look back to General Marshall when he had my job. He said, you know, when I had the time I did not have the money. Then when I got the money I did not have the time.

We are seeing that kind of play out right now and that is why it is very important that we invest in our militaries during a time we are not in a major conflict and that is why we want to develop these future systems right now while we have the time and we have some money before it is too late.

Senator SCOTT. Do you think that our NATO allies are doing their part?

General MCCONVILLE. I think the NATO allies I have seen—again, the ones that are most in, I would say, harm's way, absolutely. If you look at what the Poles are doing, you look at what the Romanians are doing, you look at what the Lithuanians are doing, Estonia, things have changed.

I have seen a fairly significant change in how NATO has come together because they see a real threat.

Senator SCOTT. Do you think the American public understands enough about the threat of communist China?

General MCCONVILLE. I think Americans may or may not. I would not speak for the Americans. But I think in a lot of ways people are focused on what is happening in this country and when you start to talk about what is happening in Ukraine or what happens in Taiwan it gets to this world order bit, and for a lot of people they are not quite sure how that plays into their lives.

But we can show that regional conflicts have global implications and we want to avoid regional conflicts. It is no one's interest to have a Ukraine or have a Taiwan.

Senator SCOTT. Thank you. Thank you, Chairman.

Chairman REED. Thank you very much, Senator Scott.

Senator King, please?

Senator KING. Thank you, Mr. Chairman.

First, Secretary Wormuth, I want to compliment you on something in the budget. In these hearings you rarely have that happen. The fact that you have a significant increase in R&D [research and development] I think that is very important because my next question is going to be to General McConville, which is about the changed nature of warfare.

We have seen enormous changes—cyber directed energy, all of space, all of those things that have become so much part of conflict that in the first day, I guess, the question is are your Army units going to be able to maneuver if they cannot communicate and if GPS [Global Positioning System] is gone? That is the kind of environment that we are facing.

General MCCONVILLE. I think what we are doing is we are prepared for that environment. So, in fact, one of our cross functional teams is we call it alternate precision navigation timing. Basically, it is how do we figure out what happens when they jam a GPS.

I come from the philosophy you never want to be a one option commander. You never want to be dependent on one option. You never want to be dependent on the weakest link of a supply chain.

As you mentioned so eloquently, Senator, we are moving from air-land battle—if you think about it that is two domains we are kind of focused on fighting, that has been the doctrine used for last 40 years—to multi-domain operations.

So we are going to be contested in space because the Army uses space a lot. Certainly going to be contested in cyber all the way to the Homeland because we are going to have to basically fight from port to—from fort to foxhole.

We are, certainly, going to be contested in the air. You can see how right now even Ukraine we have been contesting the sea. Ships are getting sunk and that matters, and then definitely on the ground.

So it is going to be a very complex battlefield. We have to teach our soldiers. Many of you have visited our soldiers in the field and our operation centers. They were huge operation centers. They had stadium seats. They had big screens on them. That is not the future. They are going to have to learn to move, and how they emit and how they communicate is going to become extremely important.

Senator KING. Are you satisfied that we are taking adequate in terms of both training, expenditure, and culture, if you will, to be thinking in new and different ways in order to deal with this entirely new threat environment?

General MCCONVILLE. I think we are, Senator, but I think we can always do more. But if you go out to our National Training Center and our Joint Readiness Training Center and other training centers, that is what we are making them do.

So they cannot set up the big operation centers. We make them move every couple hours, and they are seeing swarms of unmanned aerial systems and so they are getting their radios jammed. They are getting their GPS jammed, and so what we have to do to our soldiers, who a lot of them have spent the last 20 years doing counterinsurgency and counterterrorism, this is the new fight and we built new doctrine.

We are building new organizations to get after that. We are doing talent management differently now. We are going to be coding on the battlefield. We are going to have to have people that can actually code on the battlefield because then they are going to be trying to defeat algorithms and we have to be able to do that.

Senator KING. Well, I appreciate that, and I have been asking the same kind of questions of the Navy. In fact, the Secretary of the Navy showed up at my office last week with a sextant just to prove that GPS was not the be all and end all.

A question relating to my service on the Veterans Affairs Committee. One of the issues that we have identified with our veterans is the transition between Active Duty and veteran status and how we can facilitate that in a more active way.

Suicide—the disproportionate number of suicides occur within 2 or 3 years of separation from Active Duty.

General, I hope this is something that you are focused upon because it is critical to make sure that that transition happens smoothly and that the new veteran knows that there is available services and that there is somebody that cares about them when they leave the service.

General MCCONVILLE. Senator, as you and I talked about, I am absolutely committed to that. I want to make that work.

Transitions are the most dangerous time. I am a student of suicides. They break my heart every time we lose a soldier and they happen during transitions, whether it is a transition in their relationship, transition in their job, transition in their financial status, or even transition out of the military.

When they leave that warm web of friends, and we have to do a better job of—we do not want them to have a smooth landing. We want them to have a smooth takeoff. How do they leave the Army or the military as a whole and get into that welcome that we talked about and we have to manage that transition for them.

Senator KING. I appreciate that and I also—I want to end with a compliment to you not only for your many years of incredibly distinguished service but when you were talking about Taiwan you listed capability and capacity and I was madly writing notes, and you anticipated because you came down to the conclusion of the most important factor is will to fight—will to fight—and that is the one thing that we have learned from Ukraine was so critical. So thank you for your service and thank you for your important testimony here today.

Chairman REED. Thank you, Senator King.

Senator Budd, please?

Senator BUDD. Thank you, Chairman. Again, thank you both for being here. I just want to extend my condolences to the family of those killed at Fort Campbell last night. I come from a family of aviators including a Blackhawk pilot, so we are certainly keeping them in our prayers.

Secretary Wormuth, quality of life is a major factor in retaining soldiers and their families, as you know. The Army is investing to replace barracks and built a new child development center at Fort Bragg in my home State in North Carolina. These are going to go a long way but there is much more to be done.

Can you please discuss how the Army is investing in quality of life initiatives this year?

Ms. WORMUTH. Certainly, Senator.

One important quality of life investment we are doing is barracks, both building new ones, as you said, and renovating ones that we have.

We have got about a billion dollars in this year's budget for barracks across Active, Guard, and Reserve and we are going to keep that kind of investment until 2030 to really try to get after our entire inventory. In fact, General McConville and I are looking at can we find a way to invest even more in barracks.

We are also investing quite a bit in family housing and we work very, very closely with our five privatized housing partners to try to make sure that they are building new inventory and maintaining the inventory that we have.

We have had some challenges with those companies a few years ago but I think we are in a better place with them now, although there is always work to do.

Another big set of quality of life investments we are making are in—related to child care. In the last couple of years we have built a number of new Child Development Centers (CDCs). What we are really focusing on this year is trying to make sure that we are staffing our CDCs at the highest level possible so we can operate at maximum capacity.

We have raised the minimum wage for our daycare workers. We have raised the fee assistance for our soldiers from $1,500 a month to $1,700 a month. We are giving recruiting bonuses basically for CDC workers.

We are giving bonuses for our in-home child providers—spouses, in many cases, who open up their own homes. If they move from one duty station to another and stay with the program there is a bonus for that as well. So we are really trying to focus on child care.

Senator BUDD. Very good. Do not let up, particularly in North Carolina. If you would keep your eye on that, appreciate it.

General McConville, are the Army and the Marine Corps interoperable in the INDOPACOM theater?

General MCCONVILLE. I believe so. I think we work very closely together. We have done what we call Project Convergence where we are bringing together the forces. We are all trying to get to the point where we have a combined joint all-domain command and control capability and I know that the commandant and the chief level we work very closely. They are training together out there. We are sharing capabilities and, quite frankly, there is plenty of work for everybody out there.

Senator BUDD. So you mentioned their capabilities but how do their missions and their capabilities differ and how are they mutually supportive?

General MCCONVILLE. I think when we take a look at the—when I take a look at the Marine Corps, if you are going to do it. When you think about forced entries, okay, I have looked at the Marine Corps as the experts on amphibious operations.

I look at the Army as the experts on airborne operations from 82d Airborne Division, 18th Airborne Corps, 101st, the expert on air assault operations.

When you take a look at those type of operations that is where it plays out. But the Marine Corps has, certainly—from the maritime environment can do great things. But at the end of the day, where the where the Army comes in is, quite frankly, the capacity and the scale.

You are going to do large-scale combat operations on land. You can do them in the United States Army in conjunction with the Marine Corps.

Senator BUDD. Thank you.

So how is the Army incorporating multi-domain task forces into theater operational plans and theater formations to operate in a denied or degraded environment?

General MCCONVILLE. Yes. I think we are going to see the multi-domain task force being in tremendous demand by all combatant commanders. Quite frankly, it already is. We are seeing some of the value, and I can talk a little more about that in a classified session of what they are doing.

But when you think about what they exist to do is they provide long-range precision fires. So you are going to see hypersonics. You are going to see mid-range capability to sink ships. Precision Strike Missile (PrSM) can do that.

But they also provide long-range precision effects. So they are in intelligence. They are in IO—information operations. They do cyber. They do electronic warfare in space, and you can also bolt in air and missile defense.

So when you start thinking about the ability to assist in maybe a no-fly zone with—from the ground we can assist in that because we will have integrated air and missile defense.

If you think about maybe you want to have a no-sail zone or assist in that because we are going to have anti-ship capability, anti-axis capability, that organization will play very well into that.

Senator BUDD. Thank you very much. I have another question but I will submit it for the record. Thank you both.

Chairman REED. Thank you, Senator Budd.

Senator Blumenthal, please?

Senator BLUMENTHAL. Thanks, Mr. Chairman. Thank you both for your very articulate and informed testimony today, and I join in condolences to the family—the larger family—Army family of the nine soldiers who died at Fort Campbell.

Secretary Wormuth, I want to focus for the moment on helicopters, the Sikorsky and Bell competition for the next long-range assault aircraft contract.

That contract was awarded to Bell. I am sure you are familiar with efforts on my part and our delegation's part to get some of the basic facts, which we are entitled to receive as a matter of oversight.

I am deeply disappointed that we have received none of the essential facts that underlie the Army's decision to go with Bell rather than Sikorsky when, in fact, Sikorsky may have a less expensive, more maneuverable longer-range helicopter under FLRAA.

But as disappointed as I am with the decision I am more disappointed with the lack of an explanation and, in fact, the reliance, apparently, on a regulation, which Deputy Secretary Hicks acknowledged does not bind. The Army has not bound it in the past, does not bind it now from providing this information to us.

I am not going to get into a debate on the legalities here. What I am interested in knowing is your commitment to give us that explanation when the source selection process has concluded, which will be next week when the Government Accountability Office (GAO) issues its opinion.

Will you commit to give us a briefing and an explanation next week when the GAO finishes it?

Ms. WORMUTH. Absolutely, Senator. I have already asked Doug Bush, our Assistant Secretary for Acquisition, to be prepared to give you that briefing the minute the GAO completes its review.

Senator BLUMENTHAL. Thank you.

General McConville, I am struck by your quotation—I do not remember who it is attributed to—General Marshall, that when I had the time I did not have the money; when I had the money I did not have the time.

I am afraid that aptly describes our situation in Ukraine, or more specifically, the Ukrainians' position vis-á-vis are providing the money, the arms, the weapons that are needed because I too had been impressed with the will of Ukrainians.

When I visited three times over the last, roughly, year, speaking not only with President Zelensky but with his top military leadership, with everyday Ukrainians, they will fight to the last person. They will fight with pitchforks, if necessary. They do not want our troops on the ground. They want what we would give our troops if they were on the ground.

I have also been impressed, and I hope you will take this message back to the men and women under your command, with the training that we provide. I visited Grafenwohr in Germany and watched the training that our soldiers are providing to those Ukrainian freedom fighters, men and women who 6, 8, 10 weeks ago were bakers, computer programmers.

Now they are about to go to the trenches in Ukraine, and the bond between them and our soldiers is really inspiring and the kinds of skills that our soldiers are imparting to them really inspiring.

I hope we can give to them the arms that they need and you, as a professional—and I underscore the word professional—not only distinguished but a man who knows how wars are won will also support the kinds of increased arms that are needed now because time is not on our side. The spring is an essential time to provide that aid.

So I want to ask you whether you think Ukrainians are getting enough now to win because if they do get enough they will win, and in your professional judgment whether we should be doing more.

General MCCONVILLE. Some of that question I could talk in a classified session about. But I agree with you as far as on the Ukrainians.

I mean, they learned to operate our Patriots in weeks, which is really pretty incredible, and same thing over in Grafenwohr where they come in, they are really serious about the training, they are very, very professional, and they want to do it.

They are taking our things that people thought were not possible, some of our very sophisticated systems, which historically you could never give to another military because they could not maintain.

It is nice to have the gear but you have to maintain it, you have to sustain it, and so far, I think, they are doing a magnificent job of working that, and we are learning a lot from tele-maintenance to tele-training and when they are down range and they are very innovative on taking our systems and doing that extremely well.

From our standpoint we are giving them the weapon systems that are requested from us at the same time the Secretary and I are trying to make sure that we have what we need to go and do the job, and we appreciate your support in replenishing not only the ammunition but also allowing us to modernize the Army while we go ahead and provide them with the systems they need.

Senator BLUMENTHAL. My time is expired, but thank you both.

Chairman REED. Thank you, Senator Blumenthal.

Senator Sullivan, please?

Senator SULLIVAN. Thank you, Mr. Chairman and General. Madam Secretary, welcome. Thanks for your great service. Appreciated the call yesterday.

My condolences as well to the Army family members in this recent crash. It reminds us that it is a risky profession 24/7.

I wanted to ask you—first, compliment both of you and then ask kind of a two-part question. How is the 11th Airborne Division doing? We love them in Alaska. Very proud of them in Alaska.

General, it was great being with you for the patching ceremony in Fairbanks and Anchorage last year, I know that the Army is looking at standing up two or three—two more multi-domain task forces, and I am not trying to be greedy here but I just happen to live in the State that Billy Mitchell called the most strategic place in the world and, by the way, so did the NORTHCOM commander last week in a hearing. Best training in the world by far, and a gateway to the Arctic, gateway to the Pacific, a couple of miles away from Russia and the Taiwan Strait and—I am talking about Alaska.

We would love to have a multi-domain task force base in our great State. But maybe if you can talk about both 11th Airborne and where you are looking for the next multi-domain task force that would be great. Both of you.

Ms. WORMUTH. Thanks, Senator Sullivan.

We are very pleased with the 11th Airborne Division. I think the reestablishment of that division has really reinstilled our soldiers in Alaska with a sense of purpose. I think morale is quite high as we——

Senator SULLIVAN. Is it not the most—the highest?

Ms. WORMUTH. I was just about to say that. Yes.

Senator SULLIVAN. Okay. Sorry. Did not want to steal your thunder.

Ms. WORMUTH. It is the most popular—most popular duty station right now. One of the——

Senator SULLIVAN. In the U.S. Army. So everybody is requesting it more than—that is so great.

Ms. WORMUTH. Yes. Exactly. They just completed a major training exercise, which went very, very well. I think we set a goal in our Arctic strategy a few years ago to really bring back our cold weather expertise and we are really starting to do that in a way that I think is going very, very well.

As you know, General Eifler and Command Sergeant Major Daley are—and all of the leaders below them are very engaged and I think the division is doing great things.

Senator SULLIVAN. Good. General? Then maybe you can talk multi-domain task force as well.

General MCCONVILLE. Yes, Senator. It is really interesting when you take a look at a unit that gets purpose.

Senator SULLIVAN. Yes.

General MCCONVILLE. In the Army those who have served, like, little tabs, little patches——

Senator SULLIVAN. Mean a lot.

General MCCONVILLE.——mean a lot.

Senator SULLIVAN. Oh, yes.

General MCCONVILLE. What I see is there has been a huge change in Alaska because of the focus and now they—it used to be people were trying to survive up in the Arctic. Now they are thriving——

Senator SULLIVAN. Good.

General MCCONVILLE.——and they are becoming the best in the world and becoming masters of their craft, and now they are working with—around the world in other places, too, where we understand the importance of the Arctic as a strategic environment that we are going to have to deal with and a lot of people look in the Arctic and now we have a force that is fully capable of doing that.

They have taken that mission on from an airborne and air assault. Again, those type tabs mean a lot to our soldiers and I think they are making a huge difference.

On the multi-domain task force right now we are kind of taking a look. I think we are not going to—certainly, not commit here where we are starting to look, but in the Pacific when you start thinking about why you would want that capability is the anti-access capability.

You want the capability to provide maybe a no-sail zone, maybe a no-fly zone capability in conjunction with the joint partners, and then it is just a matter of the type of capabilities.

We are going to have long-range precision fires. Where is—and they do not necessarily have to be all together but you start to kind of lay that down how do you want to do that and then how do you want to position forces or rotate forces forward so they are also operating in the theater, and all those have to come together?

Senator SULLIVAN. Okay. If you can keep me and this Committee informed on what you are looking at for the next deployment and stationing of those that would be great.

My next question is on the budget, and I kind of took Secretary Austin and General Milley to task here. The Biden administration

keeps putting forward defense budget cuts, three in a row. We bolster it up in a bipartisan way. I think that is leading from behind. They know we are going to do that so they put forward significant cuts, and I pressed General Milley and Secretary Austin.

The current budget right now shrinks the Navy, shrinks the Marine Corps, and shrinks the Army to 450. It is a pretty low number for the U.S. Army, and I think this—but they also say it is the most dangerous time since World War II. It is kind of a disconnect there in terms of the signal we are sending, emboldening people like Putin and Xi Jinping.

Can you comment, Madam Secretary or General, on the—going from 485 to 450 and how does that enhance America's national security in terms of end strength for the U.S. Army?

Ms. WORMUTH. Thanks, Senator. I really appreciate the question because I want to make clear that the fact that Army's end strength is decreasing is not due to the budget. It is not because we have been told cut the Army or there is not enough money to invest in a larger army.

The issue, frankly, is really our recruiting challenge and we have talked a little bit about that with you. We have got to solve our recruiting challenge and what you can see in the 5-year budget that we submitted is our intent to build back our end strength.

So over the next 5 years we hope to start increasing our end strength by about 4,000 a year. But we are going to have to work really hard on recruiting to do that.

Senator SULLIVAN. Thank you, Mr. Chairman.

Chairman REED. Thank you very much, Senator Sullivan.

Senator Warren, please?

Senator WARREN. Thank you, Mr. Chairman, and I would also like to express my condolences to the family and the friends of the nine soldiers who were killed in the Army helicopter crash at Fort Campbell. It is a reminder of how much we owe to every one of our servicemembers who put themselves in harm's way on our behalf. So it is a very sad day.

I want to thank our witnesses for being here today. What I want to talk about today is behavioral health. Improving behavioral health resources and access for our servicemembers is critical to supporting those who are already sacrificing so much to serve our country, and I am deeply concerned that we are not doing enough to address the crisis of substance use disorder for our servicemembers.

Last fall I sent a letter to the Defense Department along with my colleagues Senator Markey, Senator Cornyn, Senator Murkowski, and Senator Heinrich on reports of high levels of fatal drug overdoses involving opioids and fentanyl at Fort Bragg, Fort Bliss, and West Point.

In DOD's response we discovered a total of 15,293 Active Duty servicemember overdoses from 2017 to February 2023. There were 332 fatal overdoses.

Now, this is a problem for all of the services but the Army had the highest rate of overdose death.

Secretary Wormuth, one of the ways for us to be able to address this issue is to understand the extent of the problem. Is there any kind of annual public reporting on servicemember overdoses?

Ms. WORMUTH. Senator, I am sure that we track that data. I am actually——

Senator WARREN. I did not ask if you track the data. I asked if you had a regular reporting of the data because I could not find one.

Ms. WORMUTH. We may not and we probably should have one.

Senator WARREN. Okay. There is no annual reporting, and I just want to make clear the only reason we know the numbers that I just cited is because DOD provided it as an answer to our letter.

Public data that are updated on an ongoing basis would help us better understand and track this problem and whether any new policies that DOD implements are effective. We got to collect the numbers to know what is happening here.

Now, one other aspect of this DOD's data showed that more than 80 percent of fatal overdoses by servicemembers were accidental. One thing that could help us prevent accidental overdoses from becoming fatal overdoses is easy accessibility of the overdose reversal drug Naloxone.

Secretary Wormuth, DOD says that it provides Naloxone in high-risk cases, which is a good best practice. How often has the Army provided Naloxone to servicemembers and their families?

Ms. WORMUTH. I do not have that information, Senator Warren, off the top of my head. I do know that we have established a public awareness campaign for our soldiers called "One Pill Can Kill" and, for example, at Fort Bragg every single newly arriving soldier gets that prevention training because we are deeply concerned, particularly with fentanyl being as prevalent as it is—we are deeply concerned about making sure our soldiers know the dangers there.

Senator WARREN. I want you to know I very much appreciate that you are trying to engage in other harm reduction techniques here. I am in favor of that.

But I want to make the pitch that it needs to be more coordinated and that we need better accountability. You got to have the numbers—what programs are you trying and what effect is it having on outcomes.

We know across this country now that harm reduction services save lives. We need to be doing everything that we can to mitigate overdoses among our servicemembers including using harm reduction services that are available and then tracking whether or not they are having the outcomes that we hope for.

So I would like to be able to work with you more on this and see if we can get a stronger program in place.

Ms. WORMUTH. We would welcome that.

Senator WARREN. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you very much, Senator Warren.

Senator Shaheen, please?

Senator SHAHEEN. Thank you, Mr. Chairman, and thank you, Secretary Wormuth and General McConville, for being here this morning.

I would also like to offer my condolences. I was in Romania at the end of February and had a chance to meet personally with a number of members of the 101st Airborne who were there from Kentucky. So I can only imagine how devastating it is for the people, for everybody in the 101st but especially for the families.

I would like to begin, Secretary Wormuth, with asking you about the enhanced night vision goggle binoculars, or ENVGBs, because Congress stepped in to restore the full $300 million in funding for 2023 after the Army budget request did not include any funding for the ENVGBs, and as I have heard from a number of companies and soldiers it is very important to this critical program to maintain the industrial base for it.

That is why I was very concerned and did not really understand why again this year the Army has requested only $30 million for fiscal year 2024 for the ENVGB program and that is especially after, in the words of the Army's unfunded priority list last year, failure to fund the ENVGB program, and I quote, "decreases soldier survivability."

So how does the Army justify this decision?

Ms. WORMUTH. Thank you, Senator. The enhanced night vision goggle binoculars are a great product, great system. Our soldiers—they are very, very popular. They have got a lot of great capabilities.

I would say our approach to funding the ENVGBs is similar, in some cases, to other important systems like Abrams and Stryker. We are trying to strike a balance between investing in enduring programs or well tested systems like the enhanced night vision binoculars while also making sure that we have sufficient resources to invest in some of the new systems that we are developing.

So our judgment was that that funding level was sufficient and allowed us to be able to strike a balance across our program.

Senator SHAHEEN. Well, again, I understand and we have had these conversations before about the Integrated Visual Augmented System (IVAS) program and I know the Army has now ordered an IVAS 1.2 variant.

But I think it is not at all clear and, in fact, I would like, Mr. Chairman, to submit for the record the Integrated Visual Augmentation System report here that was done by the Inspector General—well, it was done by fiscal year 2022 directors of Operational Test and Evaluation. It is their report.

But it confirms, I think, what the Inspector General found when he said the Army is at risk of wasting, and I quote, "wasting up to $21.88 billion in taxpayer funds to field a system that soldiers may not want to use or use as intended and the fact is this report found that IVAS did not demonstrate improvements to deficiencies and that soldiers were, in fact, performing worse than they had without the system.

So, again, I understand the balance that you are trying to strike but it is hard for me to understand how much longer we are going to spend money on a program that does not seem to be accomplishing what you say is the intent.

Ms. WORMUTH. Senator, what I would say there is we have had some challenges with the IVAS program, that is for sure, and the $22 billion figure that is cited in that report assumes that we buy it for the entire Army, which is not our current plan.

With the 1.2 variant if Congress funds that what we are going to try to do is see if it can be successful. We are working very, very hard with Microsoft. But it is a new system that will allow us to train, to rehearse, and to fight and it gives some additional capa-

bilities beyond the night vision goggles, which, again, are superlative.

So if we think it can work then we will invest in it. If it does not prove out this time then we will move on. But I think we believe that we should give it a chance. It is a very important step forward in terms of wearable technology for our soldiers.

Senator SHAHEEN. Again, I understand the intent and why on paper it looks like a technology that would be worth investing in. But the fact is to date it has not proven to be a technology that soldiers can use and improve their ability to operate.

So I would again urge you to take a look at that program and to really question how far down the road we want to go investing in something that is not working.

Thank you, Mr. Chairman.

Chairman REED. All right, and without objection the report will be submitted for the record.

[The information referred to follows:]

Integrated Visual Augmentation System (IVAS)

The Army conducted an Operational Demonstration (Ops Demo) in May - June 2022 to support a production and rapid fielding decision. The Integrated Visual Augmentation System (IVAS) 1.0 did not demonstrate improvements to deficiencies identified during previous IVAS Capability Set (CS) 4 testing. Based on results of the Operational Demonstration (Ops Demo), the Army is adjusting the IVAS acquisition and fielding strategy. The IVAS 1.2 variant will be the full-rate production system, incorporating an improved form factor within 24 months.

SYSTEM DESCRIPTION

The Army intends for the IVAS to increase close combat lethality by providing improved communication, mobility, situational awareness, and marksmanship. The IVAS includes a heads-up display (HUD), a body-worn computer known as a puck, a networked data radio, and three conformal batteries for each soldier. The IVAS HUD provides a see through display and augmented reality capability with integrated thermal and low-light imaging sensors, a built-in compass for navigation, and Tactical Assault Kit situational awareness software. The Intra-Soldier Wireless ultra wide-band network enables passive targeting capabilities, connecting the Family of Weapon Sights – Individual (FWS-I) mounted on a soldier's weapon to the sight picture in the HUD. The IVAS radio enables all IVAS-equipped soldiers to pass data within the company.

MISSION

The Army intends close combat infantry forces to employ IVAS during day (optional) and night missions to increase warfighter lethality through improved mobility, situational awareness, and marksmanship by providing the ability to train, rehearse, and fight on a single system.

Squads will train with IVAS in the Squad Immersive Virtual Trainer in a high fidelity, live and mixed reality, immersive environment, enabling rapid conduct and repetition of training scenarios.

PROGRAM

IVAS is a Middle Tier of Acquisition program in the rapid prototyping and fielding phases, intended to equip over 100,000 close combat soldiers. The rapid prototyping program used an iterative approach of four CSs. In December 2020, after the completion of CS 3 testing, the USD(A&S) approved the IVAS program to transition from rapid prototyping to rapid fielding, authorizing the Army to procure up to 10,000 CS 4 systems. The Army established IVAS as a Middle Tier of Acquisition rapid fielding program. USD(A&S) required the Army to fix problems noted during CS 3 testing and verify corrections prior to Ops Demo and CS 4 fielding.

The Army intended IVAS CS 4 to be a production-ready system addressing CS 3 deficiencies. Microsoft and the Army made changes to IVAS CS 4 and tested CS 4 Engineering Version (EV) 1 at Soldier Touchpoint (STP) 4 in April 2021 and CS 4 EV 2 at User Jury 4.3 in July 2021. Based on the results from STP 4 and User Jury 4.3, the Army delayed the IVAS Ops Demo from September 2021 until May-June 2022, to allow time for the IVAS program to correct deficiencies. The Army conducted STP 5 in March 2022 with CS 4 EV 3 and the Ops Demo with IVAS 1.0 to inform a fielding decision. DOT&E approved the IVAS T&E strategy in May 2022.

Based on results of the Ops Demo, the Army is adjusting the IVAS acquisition and fielding strategy. The updated acquisition strategy provides time for the Program Office and Microsoft to grow reliability, improve low-light performance, and develop a new form factor. The Army intends to field 5,000 IVAS 1.0 systems with improved reliability and 5,000 IVAS 1.1 systems that meet the reliability requirement and are equipped with an improved low-light sensor. The IVAS 1.2 variant will be the full-rate production system, incorporating an improved form factor within 24 months.

» MAJOR CONTRACTOR

- Microsoft Corp., – Redmond, Washington

TEST ADEQUACY

The IVAS Program Manager, with support from Army Test and Evaluation Command, conducted STP 5 with IVAS CS 4 EV 3 in March 2022 at Fort Bragg, North Carolina to validate performance and reliability improvements. STP 5 did not have a DOT&E-approved test plan, but was observed by DOT&E. STP 5 was adequate to support an assessment of military utility, user acceptance, human factors, training, and reliability of CS 4 EV 3.

The Army conducted the Ops Demo with IVAS 1.0 in June 2022 at Fort Bragg, North Carolina in accordance with the DOT&E-approved test plan, and was observed by DOT&E. The Ops

Demo was adequate to assess operational performance, military utility, user acceptance, reliability, and cyber and electronic warfare vulnerabilities. Testing included two 72-hour company-level missions with soldiers equipped with the IVAS, one 72-hour company-level mission with soldiers equipped with their current equipment, and three live fire ranges. The live fire ranges consisted of an individual static qualification, buddy team maneuvering, and squad maneuvering live fire iterations. Soldiers executed all three ranges in both daytime and nighttime with IVAS and with their current equipment.

PERFORMANCE

» EFFECTIVENESS

IVAS CS 4 EV 3 did not demonstrate improvements to deficiencies identified during STP 3 or STP 4. DOT&E recommended improvements to FWS-I integration, low-light sensors, HUD display, and field of vision. IVAS CS 4 EV 3 changes focused on improvement to the HUD display quality. Display quality improvement was variable between systems and did not translate into increases in soldier satisfaction with sensors or with their ability to detect and recognize enemy forces. Performance results are detailed in the IVAS CS4 EV 3 STP 5 report from June 2022.

In the Ops Demo, the infantry company was more successful accomplishing their operational missions with their current equipment than with IVAS 1.0. Soldiers hit fewer targets and engaged targets more slowly with IVAS 1.0 than with their current equipment on the buddy team life fire range. IVAS 1.0 did not demonstrate improvements in low-light sensors, HUD display, FWS-I integration and field of vision identified during previous IVAS CS 4 testing. IVAS 1.0 performance is detailed in the IVAS 1.0 Ops Demo report published October 2022.

» SUITABILITY

IVAS CS4 EV 3 demonstrated its requirement for mean time between system abort (MTBSA) during STP 5. Suitability results are detailed in the IVAS CS4 EV 3 STP 5 report.

The results of the Ops Demo show user acceptance remains low. Soldiers prefer their current equipment (Nett Warrior and PVS-14 and Enhanced Night Vision Goggle-Binocular night vision devices) to IVAS. The majority of soldiers reported at least one symptom of physical impairment to include disorientation, dizziness, eyestrain, headaches, motion sickness and nausea, neck strain and tunnel vision. Soldiers cited IVAS 1.0's poor low-light performance, display quality, cumbersomeness, poor reliability, inability to distinguish friend from foe, difficulty shooting, physical impairments and limited peripheral vision as reasons for their dissatisfaction. IVAS 1.0 MTBSA reliability metric declined during Ops Demo compared to IVAS CS4 EV2 in STP 4. Although the results were less favorable than STP 5, MTBSA is improving. Results for mean time between essential function failures have not improved between CS4 EV2, CS4 EV3 and 1.0. Suitability results are detailed in the IVAS 1.0 Ops Demo report published October 2022.

» SURVIVABILITY

IVAS 1.0 vulnerabilities in a cyber-contested and electromagnetic spectrum environment are detailed in the classified survivability annex to the IVAS 1.0 Ops Demo report published October 2022.

RECOMMENDATIONS

The Army should:

1. Correct the deficiencies identified in the Ops Demo and verify the corrections in developmental testing/operational testing prior to further operational testing to reduce resources and ensure better operational test results.
2. Revise the T&E strategy to support an assessment of performance for IVAS 1.1 and 1.2.

Chairman REED. Senator Rosen, please?

Senator ROSEN. Well, thank you, Chairman Reed. I appreciate you holding this hearing. I would like to thank the witnesses for being here to testify today and, of course, for your service to this Nation.

General McConville, as this will be your last time before the Committee, thank you for your decades of distinguished service leading the brave men and women of the United States Army.

We appreciate you, and I also, too, like all of my colleagues want to express my deepest condolences for the families, the fellow soldiers, of those that were lost in last night's tragedy at Fort Campbell, and just to express my heartfelt sympathies.

So I am going to talk a little bit about Nevada and, General McConville, I want to revisit an issue that I raised with you last year. Thank you for your commitment to ensure that Nevada will finally have its first small arms qualification range, and as we discussed, Nevada's Guard and Reserve soldiers are traveling to surrounding states in order to satisfy their annual weapons qualification, and it is about an average cost of around $500,000 a year per unit.

I appreciate your commitment to look into this, which spurred the effort underway to build a permanent range in Hawthorne Army Depot by fiscal year 2025. I understand that the Nevada Army National Guard is on track to complete their planning and design to meet that timeline and so, General McConville, can I again have your commitment that the Army will see this project through in fiscal year 2025 so that soldiers can meet their annual requirements at greater convenience and lower tax cost to the taxpayer?

General MCCONVILLE. You have mine but I just want to check with the Secretary because she is going to be here. You have my commitment.

Ms. WORMUTH. We will follow through on it, Senator Rosen.

Senator ROSEN. I have been to where they proposed it, at Hawthorne Army Depot. Everyone is so excited. The plans are really great and everyone is looking forward to having that in Nevada and with all the rest of our military there and Reserves there how it can be used for everyone in our State. So thank you for that. Really appreciate it.

Again, I am going to move on to you then Secretary, about Hawthorne Army Depot. It is the world's largest ammunition depot and demilitarization facility, and the depot stores demilitarizes munitions and ensures munitions readiness for the DOD.

Despite its size and crucial role that Hawthorne plays it is in desperate, desperate need of significant infrastructure upgrades. As an example, I heard from folks in Hawthorne earlier this month that the boilers, which were installed in 1974, were inoperable and the facilities were without heat.

The need to invest in our munitions depots has only become more acute in light of our need to ramp up munitions production not to only arm Ukraine but to, of course, backfill our own stockpiles.

So given this, does the Army have plans to invest in repairs or upgrades to the munitions depot, and if it does not can I have your commitment that we can include Hawthorne in Army's—in the Army's next future years defense planning unfunded priority list so that we can—we really need to care about our munitions readiness.

Ms. WORMUTH. Yes, Senator Rosen.

First of all, I would say on life, health, and safety issues we always want to take care of those. So I will make sure that we go out and look at the—at Hawthorne and assess whether there is a life, health, and safety issue with the boiler because if there is we will want to take care of that right away.

We have a 15-year $18 billion organic industrial base strategy and plan to try to address modernizing all of these facilities and many of them are quite old, as you know. They are sort of vintage World War II.

Again, we cannot do all of the modernization in 1 year so we try to phase that over time and, certainly, I believe that there are investments planned for Hawthorne depot a couple of years from now.

We constantly assess that plan every year and will talk to General Hamilton, the new head of Army Materiel Command, to make sure that we have got investments in Hawthorne in the right prioritization.

Senator ROSEN. Yes. I think that—well, first of all, about the boilers not all of Nevada is a desert so it does get cold there and, really, our munitions readiness, building up our stockpile, they have been—they are always so busy but it has really played an even more integral role since we have been in Ukraine.

I guess I will go on to this. Ukraine keeps receiving more advanced equipment—the Abrams tanks, the Patriot missile defense system—and those demands for those teams and capabilities continue to grow.

So what are you doing to expand the current programs and ensure that we are equipped efficiently and accurately to respond to requests from the battlefield, especially as it relates to Ukraine?

Ms. WORMUTH. Senator, we are investing $1.5 billion in the organic industrial base this year to try to expand production for munitions precisely so that we can continue to supply Ukraine what they need but also to replenish our own stocks, and we are using some of the supplemental money that Congress has given us to replenish our stocks and not just buy new old stuff but we are buying new new stuff. So we are replacing M–113 vehicles with the new AMPVs, for example.

We are also working really closely with industry to try to see how they can increase the scope and scale of their munitions production to, again, try to make sure we can keep supplying the Ukrainians.

Senator ROSEN. Thank you. Thank you, Mr. Chairman.

Chairman REED. Thank you, Senator Rosen.

Senator Duckworth, please?

Senator DUCKWORTH. Thank you, Mr. Chairman.

I do want to express my condolences.

General McConville, you and I know inherently how dangerous the job is, especially that of our helicopter crews, and I personally gave you some heavy, heavy nights in Iraq a lifetime ago when my own aircraft went down while you were in—where we were supporting your unit, the first Calvary Division (CAV) there. So know that I have been thinking about those crews and their families.

Good morning to both of our witnesses. I appreciate our candid conversation earlier this week. In your written testimony you highlighted the critical importance of contested logistics in both short sharp operations as well as for protected conflict.

My colleagues have heard me talk about these difficulties in this Committee for some time now, especially as we look into the Indo-Pacific region.

General McConville, in what ways does this year's Army budget request support contested logistics for the joint force and what efforts are you making to bolster sustainment capabilities and capacity, especially in Southeast Asia?

General MCCONVILLE. Thank you, Senator. As we take a look, one of the big things we have done right off the bat is stand up a cross functional team for contested logistics.

As you know very well, I mean, we cannot do what we do without logistics. We are seeing it playing out in Ukraine, and Ukraine is such a great lesson for us all because we are seeing it play out.

But it is on land and we have very robust capability to support logistics in Europe. We need to do the same thing in the Pacific and that is working with allies and partners. In the budget there is funding for watercraft.

There is funding for prepositioned stocks, which is really important moving them forward, fuel distribution, all these type things that we are going to need to operate these weapon systems.

These weapon systems without fuel, without parts, without bullets do not perform their duty. So we are working that very hard and we think it is very important.

Senator DUCKWORTH. Thank you.

A critical vulnerability for any military, as we said, is the logistical tail associated with delivering operational energy to its fielded forces. Both our readiness and our allies' and partners' readiness will be bolstered by, one, reducing reliance on fossil fuels and employing more diverse and renewable operational energy sources; developing innovative delivery systems; distributed storage, as you said pre-po; sources flexible contracting and improved automation; and, of course, ensuring supply lines are resilient in the face of climate change, disruption through energy supplies and also cyber attacks.

Secretary Wormuth, General McConville, how important is logistics cooperation in Europe and the Indo-Pacific, and what efforts in your budget request work toward operational energy security and resilience?

Ms. WORMUTH. Senator, as General McConville said, logistics are going to be critical. It is that old saying of amateurs do strategy and professionals do logistics, and we have made substantial investments in that area in this budget.

Specifically on operational energy, I would say we have got over $1.3 billion in our budget this year for two big areas—about a billion dollars in installations resilience, really making sure that our installations are adapting to extreme weather.

But the other $300 million is investing more in operational energy and looking at electrification of our vehicles, looking at investing in developing hybrid vehicles.

So, for example, we have a hybrid Bradley that I was able to see, as well as hybrid JLTVs, for example, and those are really important because they are going to be much more fuel efficient, which means that we will not have to have the kinds of fuel convoys that we saw in Iraq, for example, which means we are going to put fewer soldiers at risk.

But those hybrid vehicles are also lower signature, which is really important when you are looking at the kind of contested environment, and they are very, very quiet, which is going to increase their survivability and, ultimately, our lethality.

So those operational energy investments are really important.

Senator DUCKWORTH. DOD put out a statistic a while ago about Iraq that said that 80 percent of our casualties in Iraq came from convoy operations and over 50 percent of those convoys were for logistics and fuel—movement of fuel. I think it is highly important.

But when you look to the Indo-Pacific region we are going to have to be able to partner with so many folks both in terms of partner military and allies and friends but also commercial resources as well, and I think it is important to make sure that we plus up our cyber capabilities and that of our allies also.

I know that the Army Futures Command in particular is leading efforts when it comes to developing members across the total force with skill sets in advanced technology areas such as computer programming, coding, AI, ML [machine learning].

I would like to hear from each of you about the benefits to the Department that comes from leveraging the digital skills of its total force servicemembers, particularly those in the Reserve component who have tech skills from their civilian careers.

Ms. WORMUTH. Sure, Senator.

Just briefly, I would say we desperately need to build out our tech skills, our cyber capabilities. They are going to be incredibly important—our AI capabilities—and we need to be able to leverage them not just in the Active component but in the Guard and Reserves.

In many cases where we cannot compete, frankly, financially with the salaries that people can get in the commercial sector, being able to draw on cyber capabilities from people in the Guard and soldiers in the Reserves is a great way to sort of thread that needle.

Senator DUCKWORTH. Thank you, Mr. Chairman.

Chairman REED. Thank you very much, Senator Duckworth.

Thank you, Secretary Wormuth, General McConville. We will recess the open hearing and reconvene at 1200 hours in SVC–217, and I have been informed there is a vote that will commence at 11:45.

Thank you very much and we will see you shortly, and thank you, and we recess.

[Whereupon, at 11:44 a.m., the Committee adjourned.]

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR ELIZABETH WARREN

FUTURE USE OF UNFUNDED PRIORITIES LISTS (UPLS)

1. Senator WARREN. Secretary Wormuth and General McConville, do you agree that if funding is needed for a project, it should be a part of the command/service budget?

Secretary WORMUTH and General MCCONVILLE. In accordance with 10 U.S.C. 222a, the Chief of Staff of the Army is required to submit an unfunded priorities list (UPL) to congressional defense committees. The Army's fiscal year 2024 UPL totals $1.93 billion and reflects rapidly evolving requirements and opportunities in the strategic and operational environment since developing the fiscal year 2024 budget request. The UPL identifies priority items in the event Congress decides to allocate resources above the resources requested in the annual President Budget Request (PBR).

Given the detailed level of specificity of questions regarding the 28 UPL items, coupled with the degree of sensitivity of some of the answers that address capability gaps with strategic competitors, we respectfully recommend an in-person briefing and discussion with appropriate staff to more fully address these questions, provide

broader context, and highlight how each UPL item, in addition to fully funding the PBR, supports the Army's continued priorities of People, Readiness and Modernization and maintains alignment with the National Defense Strategy.

The Army carefully considers all projects and programs through a rigorous review and prioritization process to build each year's budget request. This process is lengthy and takes place several months in advance of execution. As is the case for the Army's fiscal year 2024 UPL, the UPL items reflect rapidly evolving requirements and opportunities and are intended to supplement the annual PBR and are not intended to substitute or displace the fiscal year 2024 PBR.

2. Senator WARREN. Secretary Wormuth and General McConville, historically, have previous UPL items been included in the following year's base budget? Have UPL items from fiscal year 2023 been included in the fiscal year 2024 base budget? If yes, please provide detail including the requested item, funding amount, and vendor executing the effort. If no, why not?

Secretary WORMUTH and General MCCONVILLE. The annual Unfunded Priorities List (UPL) as an opportunity to enhance the Army's enduring priorities of People, Readiness, and Modernization. Some items were included to accelerate readiness such as the HMMWV ABS (OPA) and M-SHORAD (MSLS) lines whereas other items were included to address emergent priorities that presented after the annual PBR was locked.

LI#	PE / LN Item	APPN	TITLE	President's Budget 2023 ($ in millions)	Fiscal Year 2023 UPL (RQST)	Fiscal Year 2023 UPL (Cong. Add)	President's Budget 2024 ($ in millions)	Fiscal Year 2024 UPL (RQST)
81	0604121A	RDTEA	Synthetic Training Environment Refinement & Prototyping	166.452	13.500	40.000	109.714	0.000
3	8082C14300	MSLS	M-SHORAD—Procurement	135.747	275.062	0.000	400.697	22.700
15	8992DA0924	OPA	HMMWVAnti-lock Braking & Electronic Stability Control (ABS/ESC)	10.665	50.458	109.050	45.554	47.473

3. Senator WARREN. Secretary Wormuth and General McConville, do you agree that Federal agencies have to make tough decisions in regards to their priorities and budget?

Secretary WORMUTH and General MCCONVILLE. Agencies and organizations make tough decisions inherent to balancing resources against priorities. We are committed to providing the best Army we can with the resources available.

INFORMATION ON UPLS

4. Senator WARREN. Secretary Wormuth and General McConville, what was the cost of putting together your unfunded priorities list?

Secretary WORMUTH and General MCCONVILLE. In accordance with 10 U.S.C. 222a, the Chief of Staff of the Army is required to submit an UPL to congressional defense committees. The Army developed the fiscal year 2024 UPL as part of the FY24 budget development process, so there was minimal additional cost.

5. Senator WARREN. Secretary Wormuth and General McConville, the Army requested the following 28 items for 1.9 billion dollars in fiscal year 2024: Integrated Air and Missile Defense Battle Command System (IBCS), Maneuver-Short Range Air Defense (M-SHORAD) Increment 1, Trojan Special Purpose Integrated Remote Intelligence Terminal (SPIRIT), Air Launched Effects (ALE) Acceleration, Organic Industrial Base Modernization Planning & Design, Expanding INDOPACOM Campaigning Activities, Abrams SEPv3 Procurement, AH–64E Apache New Generator, Water System Upgrade Projects in Hawaii, Water Intake Pump Upgrades, Radford Army Ammunition Plant, VA, Maneuver Support Vessel, Heavy; Army Watercraft, ARNG Vehicle Maintenance Shop, Network Enterprise Center, Fort Hunter Ligget (FHL), CA, Cost to Complete (CTC) Active Army, Cost to Complete (CTC) Army National Guard, Cost to Complete (CTC) Army Reserve, Army Reserve Center (ARC) located on USMC Logistics Base Albany, GA, Planning and Design MILCON Projects Active Army, Planning and Design MILCON Projects Army National Guard, Automated Multipurpose Machine Gun Range, Camp Blanding, FL, National Guard Readiness Center, New York, NY, Multi-Purpose Athletic Field, Fort Polk, LA, Integrated Visual Augmentation System (IVAS) Development, Integrated Visual Augmentation System (IVAS) Procurement, Black Hawk (HH–60M) Replacement, Apache (AH–64E) Replacement, HMMWV Anti-lock Braking & Electronic Stability

Control (ABS/ESC), Demilitarization Preparation for Hazardous Material (HAZMAT) For each item on the unfunded priorities list you submit in response to 10 U.S.C. 222a, please provide the following information:

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

6. Senator WARREN. Secretary Wormuth and General McConville, what is the description of this UPL?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

7. Senator WARREN. Secretary Wormuth and General McConville, what does the UPL purchase? (Include all end items with quantities, contractor FTEs, etc.)

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

8. Senator WARREN. Secretary Wormuth and General McConville, what specific capability will the UPL provide?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

9. Senator WARREN. Secretary Wormuth and General McConville, what gap will this fill that is not in the base budget?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

10. Senator WARREN. Secretary Wormuth and General McConville, how will this capability support objectives outlined in current National Security, Military, and Defense Strategy documents?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

11. Senator WARREN. Secretary Wormuth and General McConville, what is the operational requirement? How does this UPL support current or future operations?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

12. Senator WARREN. Secretary Wormuth and General McConville, what is the operational impact if this UPL is not funded in fiscal year 2024?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

13. Senator WARREN. Secretary Wormuth and General McConville, are there plans to include this item in the fiscal year 2025 base budget?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

14. Senator WARREN. Secretary Wormuth and General McConville, why was this UPL not included in the fiscal year 2024 President's Budget submission?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

15. Senator WARREN. Secretary Wormuth and General McConville, what is the name of the vendor(s) executing this effort? Sub-vendor(s)?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

16. Senator WARREN. Secretary Wormuth and General McConville, how often has your command met with the vendor executing this effort?

Secretary WORMUTH and General MCCONVILLE. Specific to UPL item numbers 1, 2, 7, 23–27, the Department has existing programs and/or contracts and, therefore, has statutory and regulatory responsibilities required for their management. The Department, at every level—from contracting officer, to Program Manager, to Army Senior Leadership, to numerous personnel in-between—regularly meets with the vendors to ensure compliance with contracts and provides appropriate programmatic oversight. Our engagements with vendors are considered a regular and necessary tool in the prudent oversight and supervision of programs and the expenditure of taxpayer dollars.

In addition, the Department regularly meets with all sectors of business so that industry has the opportunity to discuss with the Government possible materiel solutions or technologies with potential utility to fulfill Army requirements. Again, this is a part of the normal course of doing business within the Acquisition arena.

17. Senator WARREN. Secretary Wormuth and General McConville, what is your relationship history with this vendor?

Secretary WORMUTH and General MCCONVILLE. Specific to UPL item numbers 1, 2, 7, 23–27, the Department has existing programs and/or contracts and, therefore, has statutory and regulatory responsibilities required for their management. The Department, at every level—from contracting officer, to Program Manager, to Army Senior Leadership, to numerous personnel in-between—regularly meets with the vendors to ensure compliance with contracts and provides appropriate programmatic oversight. Our engagements with vendors are considered a regular and necessary tool in the prudent oversight and supervision of programs and the expenditure of taxpayer dollars. In addition, the Department regularly meets with all sectors of business so that industry has the opportunity to discuss with the Government possible materiel solutions or technologies with potential utility to fulfill Army requirements. Again, this is a part of the normal course of doing business within the Acquisition arena.

18. Senator WARREN. Secretary Wormuth and General McConville, has anyone who formerly worked for your command represented the vendor in meetings? What is their name, what was their position, and when did you meet with them?

Secretary WORMUTH and General MCCONVILLE. Specific to UPL item numbers 1, 2, 7, 23–27, the Department has existing programs and/or contracts and, therefore, has statutory and regulatory responsibilities required for their management. The Department, at every level—from contracting officer, to Program Manager, to Army Senior Leadership, to numerous personnel in-between—regularly meets with the vendors to ensure compliance with contracts and provides appropriate programmatic oversight. Our engagements with vendors are considered a regular and necessary tool in the prudent oversight and supervision of programs and the expenditure of taxpayer dollars.

In addition, the Department regularly meets with all sectors of business so that industry has the opportunity to discuss with the Government possible materiel solutions or technologies with potential utility to fulfill Army requirements. Again, this is a part of the normal course of doing business within the Acquisition arena.

19. Senator WARREN. Secretary Wormuth and General McConville, in which city/State will the UPL be executed?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

20. Senator WARREN. Secretary Wormuth and General McConville, is this requirement on an existing contract? If so, with who? What is the history of the contract?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

21. Senator WARREN. Secretary Wormuth and General McConville, what is the anticipated contract award date if the UPL receives funding?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

22. Senator WARREN. Secretary Wormuth and General McConville, what funding lines are associated with this UPL?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

23. Senator WARREN. Secretary Wormuth and General McConville, if multiple appropriations fund this requirement, must all appropriations be funded simultaneously to source this requirement, or can each appropriation stand on its own to fund a portion of the requirement?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

24. Senator WARREN. Secretary Wormuth and General McConville, how much was enacted and obligated (or expended for RDT&E) in fiscal year 2022 2023 for this requirement?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

25. Senator WARREN. Secretary Wormuth and General McConville, how much was requested in fiscal year 2024 for this requirement?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

26. Senator WARREN. Secretary Wormuth and General McConville, is there a tail associated with this UPL?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

27. Senator WARREN. Secretary Wormuth and General McConville, is any tail funded in the future years defense plan?

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

28. Senator WARREN. Secretary Wormuth and General McConville, please describe how much the requirement will cost per year for the next 5 years.

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29. [The spreadsheet has been retained in Committee files.]

29. Senator WARREN. Secretary Wormuth and General McConville, please provide in detail the previous funding requests and enacted for this requirement, including if it was in the base budget or UPL.

Secretary WORMUTH and General MCCONVILLE. Please see the enclosed spreadsheet to address questions 5–29.

30. Senator WARREN. Secretary Wormuth and General McConville, if the requirement is not included in the future years defense plan, will that be rectified in the next Program Objective Memorandum or the Program, Planning, Budget, and Execution (PPBE) cycle?

Secretary WORMUTH and General MCCONVILLE. The Army carefully considers all projects and programs through a rigorous review and prioritization process to build each year's budget request.

31. Senator WARREN. Secretary Wormuth and General McConville, please provide photos of this requirement for visual aid.

Secretary WORMUTH and General MCCONVILLE. We are unable to provide photographs of each UPL item at this time.

LOWER TIER AIR AND MISSILE DEFENSE SENSOR (LTAMDS)

32. Senator WARREN. Secretary Wormuth and General McConville, how does the Army feel about the first two allotments produced of the LTAMDS?

Secretary WORMUTH and General MCCONVILLE. The Lower Tier Air and Missile Defense Sensor (LTAMDS) is the Army's modernization effort to develop the next generation, 360-degree sensor, intended to replace the aging PATRIOT radar. The LTAMDS systems on hand are currently undergoing testing and the Army is encouraged by the emerging results. LTAMDS will mitigate critical capability gaps in defending forces against rotary, fixed-wing, tactical ballistic missiles, and next-generation threats including hypersonic weapons. The Army anticipates providing LTAMDS primary sector capability by December 2023.

33. Senator WARREN. Secretary Wormuth and General McConville, when do you expect the Army to request Lot 3 of the LTAMDS and when does the Army want Lot 3 completed?

Secretary WORMUTH and General MCCONVILLE. The President's Fiscal Year 2024 Budget Request includes funds to award a contract for production of the five sensors in 2d quarter fiscal year 2024 with anticipated delivery beginning in 3d quarter fiscal year 2026.

34. Senator WARREN. Secretary Wormuth and General McConville, how many units for Lot 3 will you request?

Secretary WORMUTH and General MCCONVILLE. The President's Fiscal Year 2024 Budget Request includes funds for three sensors to support the Pacific Deterrence Initiative (PDI), which will provide an Early Operational Capability for the Defense of Guam, and an additional two sensors to support the LTAMDS program's Initial Operational Test and Evaluation activates beginning in fiscal year 2026.

35. Senator WARREN. Secretary Wormuth and General McConville, are there any outstanding issues for the workers regarding the LTAMDS?

Secretary WORMUTH and General MCCONVILLE. Based on the current schedule for production and deliveries, the Army does not anticipate any issues for the workers regarding the LTAMDS program.

MILITARY HOUSING

36. Senator WARREN. Secretary Wormuth and General McConville, a survey from the Military Family Advisory Network found that in 2021 found 40 percent of respondents were unaware of the Tenant Bill of Rights. What is the Army specifically doing to ensure servicemembers and their families are aware about the Tenant Bill of Rights?

Secretary WORMUTH and General MCCONVILLE. All military lessees receive the Plain Language Brief prior to their lease signing and again 30 days after they move in. This Army brief covers the Tenant Bill of Rights and explains tenant responsibilities, informal and formal dispute resolution processes, and off post housing services. Military family members are invited to the Plain Language Brief but are not required to attend.

37. Secretary Wormuth and General McConville, does the Army have any survey data estimating the percentage of members and their families who are aware of the Tenant Bill of Rights? What does that survey data show?

Secretary WORMUTH and General MCCONVILLE. The Army does not conduct such a survey, but will encourage the Office of the Secretary of Defense (OSD) to add it to the annual tenant satisfaction survey in the future. The Army uses the housing office record of delivery of the Plain Language Brief as a proxy for receipt of the Tenant Bill of Rights. Every military lessee receives the mandatory Plain Language Brief prior to signing the lease, and again 30 days after moving in. Military family members are invited to the Plain Language Brief, but are not required to attend.

38. Senator WARREN. Secretary Wormuth and General McConville, if the Army isn't tracking this information, is this something the Army would track in the future?

Secretary WORMUTH and General MCCONVILLE. The Army will request that OSD revamp its annual Tenant Satisfaction Survey to include survey questions regarding the Tenant Bill of Rights. In addition, the Army already has sound processes and policies in place to inform residents of the Tenant Bill of Rights, and will further refine these processes to ensure residents understand their rights.

QUESTIONS SUBMITTED BY SENATOR GARY C. PETERS

CONTESTED TRAINING

39. Senator PETERS. General McConville, the National Defense Strategy places great emphasis on the ability of our forces to operate in contested environments and the need to overcome enemy disruption. Outside of J-R-T-C and N-T-C, would the Army benefit from having training locations with standing approvals to employ Cyber, Electronic Warfare, Space, and Influence Operations into Large Scale Combat Operation training exercises?

General MCCONVILLE. The Army has not identified a requirement for additional training locations. The Army is presently evaluating the optimization of existing training locations and training products for the Combat Training Centers (CTC) including the Joint Readiness Training Center and the National Training Center as well as home station training (HST). Optimization of CTC and HST products to create a contested, congested, and complicated electromatic spectrum environment will include the employment of cyberspace, electronic, and space warfare products and will influence both opposing and friendly forces during training for Large Scale Combat Operations.

The Army has several other initiatives ongoing with regards to operating in a contested, congested, and complicated environment. In fiscal year 2028, the Army is programming an electromagnetic warfare training range at Fort Huachuca, AZ that will provide a realistic representation of adversary capabilities across the electromagnetic spectrum and multiple domains. The Army is also planning a cyberspace and electromagnetic warfare (EW) multipurpose training range at Fort Gordon, GA in fiscal year 2029 that will provide a sophisticated institutional EW training capability for initial entry training for the Army's EW Soldiers. The Army is developing ranges capable of providing a cyber training environment within existing footprints, as well as multi-component training options. The Army is exploring the development of live, virtual, and constructive training capabilities to provide for a more realistic and robust training environment for multidomain operations and opportunities for training integrated with testing and experimentation.

ELECTRONIC WARFARE—MULTI-DOMAIN OPERATIONS

40. Senator PETERS. Secretary Wormuth, on several occasions, the Senate Armed Services Committee (SASC) has expressed concerns about how the Department of Defense is tasked and organized to support Electronic Warfare operations in support of the Joint Force or newly established Multi-Domain Task Forces (MDTF). Although both Cyber and Electronic Warfare personnel are attached to the Army Cyber Branch, EW lacks a 3-star proponent in the Department, and EW capabilities are funded through the Force Development Intelligence (FDI) portfolio—meaning EW funding competes with the intelligence portfolio and priorities. Can you outline what entity owns or will own the manning, training, equipping, budgeting, and capability development for Electronic Warfare operations in the Army?

Secretary WORMUTH. Electromagnetic Warfare (EW) is a warfighting capability which the Army enterprise provides through manning, training, equipping, budgeting, and capability development. The Army Cyber Command (ARCYBER) is the Army's primary Army Service Component Command (ASCC) responsible for directing, and conducting integrated Cyberspace Operations (CO), EW, and Information Operations (IO). ARCYBER is the 3-star ASCC designated to serve as the focal point for identifying, receiving, integrating, synchronizing, and advocating for operational capability requirements through Service, Joint, and DOD-level processes in support of Joint and Service Cyberspace Operations, Information Operations, and Electromagnetic Warfare.

Personnel proponency for EW belongs to the Cyber Center of Excellence aligned under the Combined Arms Center and U.S. Army Training and Doctrine Command (TRADOC). Modernization proponency of EW belongs to Army Futures Command (AFC) for force design and force development and is the capabilities developer and operational architect for the future Army. In addition, the Assistant Secretary of the Army for Acquisition, Logistics, and Technology (ASA(ALT)) and U.S. Army Materiel Command (AMC) is responsible sustainment and logistics of EW materiel. The Deputy Chief of Staff (DCS), G–3/5/7 is the Army's lead integrator and synchronizer across force modernization time horizons. The G–3/5/7 performs force modernization activities and uses the Army Campaign Plan to execute these activities and reach decisions through the Army Synchronization Meeting. Coordinated and synchronized, ARCYBER will manage EW requirements as the Army Command focused on integrated cyberspace operations and EW capabilities. Last, Forces Command (FORSCOM) along with Human Resources Command (HRC) are responsible for pro-

viding, assigning and stationing of EW Soldiers to ASCCs, Army Commands, Field Operating Agencies and Direct Reporting Units.

41. Senator PETERS. Secretary Wormuth, IF NOT, today's threat environment seems misaligned to picking winners and losers for employing capabilities designed to enhance survivability and lethality during Large-Scale Combat Operations (LSCO) or below the threshold of armed conflict. What do you need from us to push this critical effort across the finish line?

Secretary WORMUTH. The Army is investing in three major EW programs. First is the Terrestrial Layered System (TLS) which provides commanders an integrated SIGINT/EW/Cyber capability at all echelons. Each echelon is tailored for their specific operations and likely adversary signals of interest. Second, is the Multi-Function Electronic Warfare—Air Large (MFEW-AL). This system is an EW pod that supports Divisions and BCTs with all facets of EW. It is currently configured to mount to the Gray Eagle, however, it is platform agnostic. Third, is the Electronic Warfare Planning & Management Tool (EWPMT). EWPMT is the cornerstone for EW capabilities and provides command and control for EW and spectrum management.

TLS is an integrated Ground Tactical SIGINT/EW/ and RF-Enabled Cyber capability. It will be developed in two (2) variants—Brigade Combat Team (BCT) and Echelon Above Brigade (EAB). TLS-Brigade Combat Team (BCT) will be fielded on a platform based on the type of formation (e.g. Stryker for Stryker BCT, Armored Multi-Purpose Vehicle (AMPV) for Armored BCT, and a dismounted manpack for Infantry BCT). The First Unit Issue for Stryker is fiscal year 2024 and fiscal year 2025 for AMPV. TLS-EAB will be fielded on a Family of Medium Tactical Vehicles (FMTV) to MDTFs, Corps, and Divisions with First Unit Issue in fiscal year 2026.

MFEW-Air Large is in the testing phase and will be fielded to Division Combat Aviation Brigades (CABs). First Unit Issue is fiscal year 2025.

EWPMT is a software-based program that provides the Common Operating Picture, situational awareness, and planning capabilities within the Electromagnetic Spectrum. It will synchronize all Army EW efforts and is being fielded in fiscal year 2024.

To push the critical effort of employing EW capabilities with today's threat environment, the Army will work with DOD to ensure enabling policies directives are developed to allow for actions in the electromagnetic spectrum that provide Commander's options to support campaigning and integrated deterrence in support of national defense priorities.

M–SHORAD

42. Senator PETERS. Secretary Wormuth, what is the plan to move beyond the initial four battalion goal for MSHORAD and resource the Army's stated need of up to nine battalions of this critical air defense capability? How can Congress help you achieve your goal of nine battalions?

Secretary WORMUTH. The Army uses all components to resource required capabilities and will welcome any assistance with modernization. Fielding additional Maneuver Short Range Air Defense (M-SHORAD) battalions (BNs) will help tactical formations defeat aerial threats that could limit the Army's ability to conduct multi-domain operations. We have three Active Component M-SHORAD BNs with a fourth activating in fiscal year 2025. The National Guard will convert four Avenger Battalions to M-SHORAD BNs starting in fiscal year 2027 upon materiel procurement. The Army will use future Total Army Analyses to determine how to create additional M-SHORAD BNs in our force structure.

C-UAS

43. Senator PETERS. General McConville, when does the Army intend to resource a counter small, unmanned aircraft system (C-sUAS) single vehicle solution?

General MCCONVILLE. The Army has programmed funding for nine Counter-small Unmanned Aircraft System (C-sUAS) Division Sets to protect critical assets and maneuver formations from the sUAS threat. The current composition of those Division Sets includes the two-vehicle configuration of the Mobile, Low, Slow, Unmanned Aircraft Integrated Defeat System (M-LIDS). The Air and Missile Defense Cross Functional Team (AMD CFT), as the Army's C-sUAS lead for operational requirements and capability development, continues to evaluate new capabilities and emerging technologies to keep pace with the evolving sUAS threat. The Army is assessing opportunities to move toward a single-vehicle configuration at the earliest

opportunity and will request resourcing in the appropriate year. The Army appreciates Congress's continued support as the Army continues to develop C-sUAS capabilities to address the evolving threat.

QUESTIONS SUBMITTED BY SENATOR JACKY ROSEN

REMOTE MAINTENANCE SUPPORT TO UKRAINE

44. Senator ROSEN. Secretary Wormuth, as you saw during your visit to Poland last year, the Army is providing remote maintenance teams to allow Ukrainians on the frontlines to receive immediate advice from U.S. Soldiers on weapons and equipment maintenance. As Ukraine receives more advanced equipment, such as Abrams tanks and the Patriot missile defense system, the demand for these teams and capabilities will grow. What is the Army doing to expand this program and ensure it is equipped to efficiently and accurately respond to requests from the battlefield, particularly as we expect Ukraine to soon mount a counteroffensive?

Secretary WORMUTH. Remote Maintenance Operations (RMO) are conducted at the Remote Maintenance and Distribution Center-Ukraine (RDC-U) in Jasionka/Rzeszow, Poland. While uniformed servicemembers are present to administer the RMO program, remote maintenance is currently being conducted by contracted Field Service Representatives (FSRs) from OEMs and defense industry partners. FSRs directly engage with Ukrainian Armed Forces (UAF) users and depots to identify faults, troubleshoot, and determine repair part requirements via group chats.

There are currently 29 U.S. platforms and 33 International platforms supported by the Remote Maintenance Cell at RDC-U, to include Patriot. FSRs for M1 Abrams are expected to establish presence at RDC-U following the completion of initial training and transfer of Abrams to the UAF.

While the remote maintenance operation concept has been proven to be an essential enabler of UAF combat readiness, office space for FSRs at the RDC-U is quickly becoming limited. The RDC-U command team has requested Special Assistance Group-Ukraine (SAG-U)/J4 to establish a process to validate FSR requirements. Based on the complexity and number of components in a platform or weapon system, the number of FSRs required can vary greatly. For example, there are 45 FSRs at the RDC-U to support the Patriot while there is 1 FSR each for M777 and Bradley Fighting Vehicles.

As an alternative method, several coalition partners support internationally donated platforms by conducting remote maintenance from the host country. This and other alternatives will be a consideration for SAG-U's validation process of FSR requirements. Additionally, all chat rooms are being supported by a pool of contracted interpreters which will be considered as the increased number of FSRs and platforms will require increased interpreter support.

ARMY'S IMPLEMENTATION OF ZERO TRUST

45. Senator ROSEN. General McConville, in November, the Department of Defense released its Zero Trust Strategy and Roadmap, which lists as a key goal technological acceleration at a pace that equals or exceeds industry advancements. I am encouraged by the Army's efforts to accelerate its digital transformation by requesting $439 million for Zero Trust Implementation and $95 million for defensive cyber tools. In addition to funding critical digital infrastructure necessary for Zero Trust implementation, what is the Army's strategy to accelerate its technological advancements?

General MCCONVILLE. The Army completed a comprehensive Network Capability Portfolio Review (N-CPR) of Army network requirements from enterprise to tactical levels to ensure the Army has a complete set of stable requirements for advancing the Unified Network, underpinned by Zero Trust (ZT) principles. The CPR examined network operations, cloud and data center infrastructure, transport, software, services and ZT implementation.

Informed by the N-CPR, the Army Unified Network Plan and Implementation Plan established the strategic direction and specific activities required for the Army to modernize its networks and accelerate initial ZT capabilities during fiscal year 2023–2024.

The Army established the Army Functional Management Office—Zero Trust to synchronize, implement, and execute Army ZT efforts across the enterprise to ensure prioritization, resourcing, and alignment with DOD and Service ZT directives, goals, and objectives.

As part of the strategy, the Army accelerated Identity, Credential, and Access Management, a foundational capability to zero trust, that provides endpoint security

and compliance. Additionally, the Army is collapsing several stovepipe networks under Army Cyber Command to ensure a common security approach across the Army. These accelerated activities underpin enhanced ZT capabilities in fiscal year 2025–2026 to include Software Defined Networking, Data Tagging, and Automated Incident Response. The Army's goal is to reach a complete ZT architecture by fiscal year 2027.

This effort will culminate in a Unified Network based on ZT principles, aligned to the DOD Strategy, and will deliver a survivable, secure, end-to-end capability that enables the Army to operate as part of the Joint Force across the competition continuum in all operational domains.

46. Senator ROSEN. General McConville, how do you plan to allocate resources to attract a sufficiently skilled workforce in this domain?

General MCCONVILLE. The Network Capability Portfolio Review (N-CPR) also addressed the required workforce necessary to develop and maintain a unified network aligned with Zero Trust (ZT) principles. The Army continues to use all authorities by Congress to attract the most skilled workforce in this domain. Specifically, the Army is currently expanding the Cyber Excepted Service alternate personnel system, which provides enhanced flexibilities to recruit, compensate, and retain civilian talent for cyber workforce positions.

Additionally, the Army is capitalizing on workforce flexibilities as a key component in identifying, attracting, and maintaining talent. A current example is the Targeted Local Market Supplement (TLMS), which provides additional compensation incentives for critical cyber work roles. Simultaneously, the Army is developing and employing key execution enablers such as ZT Curriculum for the workforce and Army Regulations that incorporate ZT principles. These efforts will enable us to both attract and maintain a sufficiently skilled workforce.

ARMY'S MULTI-DOMAIN TASK FORCES (MDTFS)

47. Senator ROSEN. General McConville, the Army describes the Multi-Domain Task Forces (MDTFs) as theater-level maneuver elements that are designed to employ long-range precision effects to combat our adversaries' "anti-access/area denial" networks in all domains. The Army has further described the MDTF as the "centerpiece" of its ability to operate in a highly contested multi-domain environment. Should future military engagement in the Taiwan Strait involve our allies and partners, what steps is the Army taking to ensure that the MDTFs can generate multinational interoperability?

General MCCONVILLE. The development of the Multi-Domain Task Forces has always been intended to provide the range, speed, and convergence of cutting-edge technologies that gives the Joint Force Commander the decision dominance and overmatch required to fight and win.

The Army has collaborated with key Allies in the development of some of the technologies that are organic to the MDTF as well as collaboration in exercises with those Allies related to the employment of this new formation. During Project Convergence 2022, the Army prioritized assessing the all-service ability to connect and collaborate with allied nations.

The Army will be able to integrate with Allies or partners in the employment of certain capabilities of the MDTF while ultimately providing the Joint Force with the overmatch necessary to fulfill the Combatant Commander's requirements. Examples of this integration is IAW the Australia, United Kingdom, United States (AUKUS) tri-signed Statement of Intent to develop and provide joint advanced military capabilities to promote security and stability in the Indo-Pacific region.

48. Senator ROSEN. General McConville, is there a plan to station future MDTFs in, or closer to, theater in an effort to better integrate our multinational partners?

General MCCONVILLE. Ultimately, the decision to station forces overseas is reserved for the Secretary of Defense and the National Security Council. Based on the priorities established in the National Defense Strategy, the Army will determine the appropriate support to the Pacific, Europe, and integrated deterrence.

QUESTIONS SUBMITTED BY SENATOR MARK KELLY

HUMAN MACHINE TEAMING

49. Senator KELLY. Secretary Wormuth, as Chair of the Airland Subcommittee, I met with General Rainey, the commander of Army Futures Command, a few weeks ago. We had a great conversation about the success of the last Project Con-

vergence exercise at Yuma Proving Ground in Arizona, as well as some of his priorities. We talked about development of uncrewed vehicles and the ability to offload menial tasks, logistics, re-supply capabilities on machines. I see a lot of potential with human-machine teaming. We've seen the success in the air with remotely piloted aircraft, and I want to see success on the ground. What is your vision for how you see human-machine teaming working in the future for the Army?

Secretary WORMUTH. Human machine teaming is a complicated initiative with exciting possibilities for the reduction in cognitive load for soldiers, increased operational capabilities at every level from the squad up, and enhanced logistics to remove soldiers from harm's way by reducing the need for human operators in certain circumstances. The Army is investing $74.3 million (Science and Technology (S&T)) in fiscal year 2024 to address the questions of how to integrate human-machine teams, and how to best leverage the unique strengths of human-machine teams. Key research areas for human-machine teaming for autonomy include the allocation and switching of operational tasks to both human and machine team members; enabling soldiers to rapidly train and adapt machines in the field; a means to assess human-machine teams; and tools to enable mission planning and after mission assessment. S&T initiatives are demonstrating flexible, adaptive interactions between soldiers and unmanned assets including in the areas of autonomous mobility technologies and weapon engagement systems to enable robust manned-unmanned team dynamic environments. The Army's goals are to demonstrate data-driven task handoff in 2024, dynamic-retasking and custom situational awareness by role in 2026, with more natural interactions being demonstrated in 2028.

50. Senator KELLY. Secretary Wormuth, this is something I hear about from innovators in Arizona. How are you thinking about onboarding these capabilities?

Secretary WORMUTH. Onboarding and leveraging the full potential of Robotic Enabled Maneuver requires an integrated and phased approach. Interdependent and mutually supporting themes of soldiers, data, and technology will adapt and undergo a cultural change to deliver a modern capability that can be constantly adapted in response to both threats and tech maturity. Key to aligning and delivering Robotic Autonomous System capabilities is the development of suitable processes and trust, all of which underpin the effective employment of Robotic Enabled Maneuver.

51. Senator KELLY. Secretary Wormuth, how will these efforts support us in future conflicts?

Secretary WORMUTH. Robotic and autonomous systems will exist in future conflicts operating both with and against U.S. forces. The challenge is to learn how to best use robotic and autonomous systems to gain and maintain the advantage on the battlefield. AFC's campaign of persistent experimentation is designed to drive the learning that gives us that advantage.

52. Senator KELLY. Secretary Wormuth, what is the roadmap for development, and how does the Army's budget request support these efforts?

Secretary WORMUTH. Human machine teaming is a complicated problem with exciting possibilities for the reduction in cognitive load for soldiers, increased operational capabilities at every level from the squad up, and enhanced logistics to remove soldiers from harm's way by reducing the need for human operators in certain circumstances. Science and Technology (S&T) is investing $74.3 million in fiscal year 2024 to answer the questions of how to integrate human-machine teams, and how to best leverage the unique strengths of human-machine teams. Key research areas for human-machine teaming for autonomy include the allocation and switching of operational tasks to both human and machine team members; enabling soldiers to rapidly train and adapt machines in the field; a means to assess human-machine teams; and tools to enable mission planning and after mission assessment. S&T is demonstrating flexible, adaptive interactions between soldiers and unmanned assets including autonomous mobility technologies and weapon engagement systems to enable robust manned-unmanned team dynamic environments. The Army's goals are to demonstrate data-driven task handoff in 2024, dynamic-retasking and custom situational awareness by role in 2026, with more natural interactions being demonstrated in 2028.

53. Senator KELLY. Secretary Wormuth, what obstacles do you see in the future with these efforts, and is there anything Congress can do to help?

Secretary WORMUTH. The biggest obstacles to the Army's development and fielding of ground maneuver robotics systems include the development of technologies and software for autonomous cross-country maneuver and human-machine inte-

grated command and control. Rapid technological advances in these areas are primarily driven by Army investments since commercial industry focuses on on-road autonomous technologies. Additional Army funding would increase the speed of innovation and support the accelerated development of the Army's marquee ground robotics effort—the Robotic Combat Vehicle (RCV).

Additional funding for the RCV program will enable the Army to accelerate development of human-machine teams capable of fighting as a robotic enabled maneuver element, which combines crewed combat and control vehicles with robotic combat vehicles capable of performing in operationally relevant off-road, all-weather, and limited visibility combat conditions. Further, the Army would be able to accelerate the development of a robust and resilient network and modular payload integration on the RCVs. These payloads enable Army formations to counter the increased threat of enemy unmanned aerial systems, employ electronic warfare capabilities, and launch loitering munitions. Increased funding for software development would improve the RCV's cross-country mobility and enable the transfer of more tasks from remote operation to autonomous operation, which would reduce soldiers' cognitive loads and accelerate the decisionmaking process.

QUESTIONS SUBMITTED BY SENATOR ROGER WICKER

MEDEVAC OPERATIONS

54. Senator WICKER. Secretary Wormuth and General McConville, as we look to improve the readiness of the Army in a Great Power competition, the speed and consistency of things like MEDEVAC operations take on a new level of urgency. The longer a helicopter is in a hovering position to extract a wounded soldier, the more our soldiers and aircraft are at risk to incoming enemy fire and engine failure related incidents. Any accelerating capability would also have a dual use during peacetime, as MEDEVAC-like operations are routinely conducted by the National Guard in search and rescue missions following natural disasters. What dual use capabilities are currently being evaluated by the Army that would accelerate and improve the confidence of these extractions in the field, and is there anything we can do to accelerate the adoption of these capabilities into the Army and National Guard?

Secretary WORMUTH and General MCCONVILLE. Currently, the Army has three operational techniques for Medical Evacuation (MEDEVAC) missions, with a fourth one under user testing. These techniques can be used in both combat and homeland support scenarios. At present, there are no suggestions to speed up the adoption of these strategies since they are in the developmental testing phase or currently being used. Three systems (dynamic hoist, tag line, and Vita Rescue System-Litter Attachment (VRS-LA)) are currently in development. One technology, the Cascade Rescue Stable Flight Heli-Bag, was recently approved for use on Army Aircraft, the Heli-Bag uses an aerodynamic brake (rudder) to mitigate the spin and oscillation caused by rotor downwash. It provides patient immobilization and containment. This system can be combined with the dynamic hoist technique or used during stationary hovering. It's presently being utilized by certain Army National Guard and Special Operations Units.

QUESTIONS SUBMITTED BY SENATOR TOM COTTON

MUNITIONS PRODUCTION

55. Senator COTTON. Secretary Wormuth, the Russian invasion of Ukraine highlighted a longstanding problem in our defense industrial base. Our nation simply does not produce munitions fast enough. This is not about Ukraine depleting our war stocks—most of the munitions used in Taiwan would be fundamentally different than the ones used in Ukraine. This is about the fact that Ukraine has exposed some cracks in our defense industrial base that we need to shore up to ensure our national security. Here's some sobering facts: In 1945, the U.S. operated 86 ammunition plants. Today, we operate five. In 1 week, the Ukrainian military fires more 155mm artillery shells than the U.S. produces in a month. In the first 8 months of the war, the Ukrainians launched more Javelin antitank missiles than the U.S. produces in 5 years, and fired more Stinger anti-aircraft missiles than we manufacture in 13 years. Beyond Ukraine, war games have shown that the U.S. would run out of some munitions in less than 1 week in a Taiwan conflict. While DOD has made significant strides in beginning to increase our munitions stockpile, I remain concerned about the scale and efficiency of its munitions production. We must act

with the urgency this situation requires. What concrete steps are you taking to decrease delivery times?

Secretary WORMUTH. In order to accelerate deliveries, the Army is reducing acquisition and contracting lead times by taking advantage of the new authorities granted by Section 1244 of the fiscal year 2023 National Defense Authorization Act that allow for streamlined staffing of Justification and Approval documents and increased flexibilities for Undefinitized Contract Actions. The Army is also working to reduce production lead times by ramping up capacity where the Army can and employing second and third-shifts on certain production lines.

Additionally, the Army is working in close coordination with industry partners on three lines of effort to accelerate and increase deliveries: 1) the expansion and modernization of government-owned, contractor operated facilities; 2) the establishment of contractor owned, contractor operated second sources; and, 3) leveraging international partnerships for end items and component production.

Last, the Army is using supplemental funds provided by Congress to shore up current production lines and add additional production lines to expedite the replenishment of U.S. stockpiles.

56. Senator COTTON. Secretary Wormuth, what are your main challenges?

Secretary WORMUTH. The Army's main challenges are speeding up facility modernization, increasing production capacity in a timely fashion to support present requirements, and forecasting future requirements from allies. In addition, the Army has identified certain munitions components and precursor materials—such as propellants and explosives, and nitrocellulose—that are experiencing supply challenges due to a spike in global demand. The Army is currently exploring means to secure those sources of supply, including options to onshore many of them.

57. Senator COTTON. Secretary Wormuth, what can Congress do to break down barriers for you?

Secretary WORMUTH. Congress is providing key support to enable the Army to rapidly respond to Russia's war against Ukraine and to expand production capacity within the munitions industrial base. In particular, the Army is greatly benefited from the temporary contracting and acquisition authorities provided under Section 1244 of the fiscal year 2023 National Defense Authorization Act that have allowed the Army to more rapidly award contracts to provide capabilities to Ukraine, to allies and partners who are assisting Ukraine, and to replenish domestic stocks. Importantly, Section 1244 also provides the authority to enter into multiyear contracts for a select set of munitions. The Army plans to use this authority for munitions in fiscal year 2023 and have requested congressional approval to enter into multiyear procurements (MYP) in fiscal year 2024. These MYPs provide production stability and predictability to industry partners, allowing us to build and sustain capacity within the defense industrial base, while achieving cost savings for the government. Additionally, congressional support of the Army's fiscal year 2024 budget request will be valuable as the request includes significant funding for a range of munitions, including precisions munitions and artillery ammunition, as well as investments in the munitions industrial base.

58. Senator COTTON. Secretary Wormuth, bolstering our defense industrial base it critical. Multi-Year procurement authorities are one of the ways we can help provide a steady demand signal to defense companies. Per your budget request, the Army still has yet to leverage Multi-Year procurement authorities but have stated you are looking at it for the PAC–3 (patriot anti-aircraft system missile) and the GMLRS (artillery round). When should we expect to see that?

Secretary WORMUTH. The Army has submitted MYP requests to Congress for PATRIOT Advanced Capability (PAC–3) Missile Segment Enhancement (MSE) and Guided Multiple Launch Rocket System (GMLRS).

The Army also submitted fiscal year 2023 MYP requests for the 155mm M1128 projectile program and the Modular Artillery Charge System program. Initial contract awards for these programs are expected in fiscal 2023.

59. Senator COTTON. Secretary Wormuth, why are you only using these authorities for two systems?

Secretary WORMUTH. In addition to the four planned MYP opportunities already identified, the Army continues to explore additional systems where use of MYP authority may make sense. The four planned MYP contracts were identified due to the priority of the requirement and, moving forward, we will take a managed risk approach prior to applying the authority to more programs. One of the key challenges in implementing MYP contracts is having a stable funding profile over time. Histori-

cally, the ammunition portfolio has not had stable funding profiles, and thus has not met the criteria for MYP implementation.

60. Senator COTTON. Secretary Wormuth, PrSM is one of your key long range fires capabilities. Have you considered multi-year procurement for PrSM?

Secretary WORMUTH. The Army is not considering utilizing MYP authority for the Precision Strike Missile (PrSM) program at this time. PrSM, Increment 1, continues to execute the engineering and manufacturing development (EMD) phase of the program through fiscal year 2025. Key activities include Production Qualification flight Testing and validating the missile design meets Key Performance Parameters requirements. Once completed, the program will conduct a Production Readiness Review and request Milestone C approval for Full Rate Production (FRP). Based on the current program plan, MYP would be considered beginning in fiscal year 2026 at the earliest. In the interim, PrSM will begin delivering limited quantities of Early Operational Capability missiles in 4th quarter fiscal year 2023 and continue until FRP occurs.

61. Senator COTTON. Secretary Wormuth, are there steps you can take to accelerate its delivery?

Secretary WORMUTH. The program could conduct analysis with the prime contractor and key missile component suppliers to add shift work, additional overtime, examine supply chain bottlenecks, and other factors, to accelerate PrSM production. Currently, the program is executing two more years of technical integration, test, and manufacturing development to mature and document the design and associated technical data, therefore an acceleration of deliveries is not advisable until the program achieves Full Rate Production in fiscal year 2025.

62. Senator COTTON. Secretary Wormuth, will you still be able to effectively execute multi-year procurement authorities under a continuing resolution?

Secretary WORMUTH. Yes, the Army will be able to effectively execute MYP under a continuing resolution. The programs that the Army has identified for MYP contracts are not new starts. Therefore, each system can be funded up to the level of what was appropriated in fiscal year 2023.

63. Senator COTTON. Secretary Wormuth, another key vulnerability of our munitions base is our reliance on foreign nations—at times sworn enemies—for essential materials. DOD does not purchase any munitions fully sourced in the U.S.—not a single bullet, bomb, or missile. Secretary Wormuth, can you tell me what percentage of the Army munitions supply chain relies on China?

Secretary WORMUTH. The Army is currently executing a Munitions Assurance program with the goal of identifying and mitigating those components or precursor materials that come from foreign sources. Mitigation plans include, but are not limited to, onshoring the components and materials in question, and developing new products that "design out" the material or component. The Army can provide additional detail in a classified setting.

64. Senator COTTON. Secretary Wormuth, do you believe any dependence is acceptable?

Secretary WORMUTH. I believe that dependence on critical materials from potentially adversarial nations is not within our national interest, and that is why sourcing mitigating dependence of foreign sources is a top priority for management of the industrial base.

65. Senator COTTON. Secretary Wormuth, are you worried that China would attempt to cutoff our access to rare earth material critical to our munitions development the way they did with Japan in 2010?

Secretary WORMUTH. I would expect any potential adversary to utilize all their levers of power if deemed advantageous to their aims.

66. Senator COTTON. Secretary Wormuth, what steps are you taking to end this dependence?

Secretary WORMUTH. The tools available to the Army for mitigation include: 1) The ability to establish safety stocks or stockpiles of materials where that is feasible and warranted, 2) The establishment of domestic, National Technology and Industrial Base (NTIB), or at least friendly nation sources of supply, and 3) Designing problematic materials out of the supply chain to eliminate the risk posed by them.

Authorities granted to expand the National Stockpile have enabled the addition or expansion of several materials important to munitions production. The Army has

and will continue to leverage the authorities provided under Defense Production Act Title III to establish domestic or NTIB sources of supply for materials sourced from potentially adversarial nations. In addition, Defense Logistics Agency sponsored Small Business Innovative Research efforts are being leveraged to establish more favorable sources of supply for materials. Science and Technology efforts are underway to design alternate paths to achieve munitions solutions that do not require materials sourced from potentially adversarial nations. Once mature, these solutions would be transitioned into munitions programs.

67. Senator COTTON. Secretary Wormuth, Army stated that much of your munitions' requirements have been met by Ukraine supplemental funds, which are not reflected in this budget. What is your estimate of how much funding you have or will received from the appropriated supplemental funds?

Secretary WORMUTH. To date, the Army has received $2.1 billion in Ukraine supplemental funding for munitions.

68. Senator COTTON. Secretary Wormuth, are you confident that this request, in addition to Ukraine supplemental funding already provided, will allow you to replenish your stocks to maintain U.S. readiness?

Secretary WORMUTH. The Army is confident that the supplemental funding requested will be approved for distribution to the Army for replenishment.

69. Senator COTTON. Secretary Wormuth, as the war in Ukraine has shown, our allies' munitions stockpiles will be crucial to any future conflict. What steps are is the Army taking to ensure our allies have the munitions they need in case of conflict?

Secretary WORMUTH. The Army is working with allies to replenish munitions stockpiles by supplementing current production lines with U.S. munitions. This is based on ally stock requirements and current production efforts to support replenishment efforts within ally industrial bases. The Army is also working closely with allies to make munitions fully interoperable with their weapons and fire control systems.

70. Senator COTTON. Secretary Wormuth, are there any additional authorities or resources you need?

Secretary WORMUTH. The Army has received considerable support from Congress to enhance munitions production. Specifically, the temporary authorities provided under Section 1244 of the fiscal year 2023 National Defense Authorization Act enable the Army to accelerate munitions production through contracting flexibilities and the authority to commit to multiyear procurement contracts for select munitions beginning in fiscal year 2023. The Army will work with Congress to assess the need for extending or modifying these authorities, as appropriate, given the ongoing conflict in Ukraine. Additionally, the supplemental funding provided by Congress has allowed the Army to meet many of its munitions-related requirements. The Army's fiscal year 2024 budget request includes significant additional funding for a range of munitions and investments in the munitions industrial base. Congressional support for this request will enable the Army to continue meeting those requirements.

71. Senator COTTON. Secretary Wormuth, the Army budget invests in the defense industrial base, with $726 million slated for ammunition facilities and another $115 million for modernization and upgrades for depots that work on weapons and tracked combat vehicles. Will this funding provide you with adequate capacity to meet all of your munition production goals?

Secretary WORMUTH. At this time, yes. However, efforts to further accelerate artillery production are being developed and if approved by OSD will be provided to Congress in the near future. In addition, the replenishment funding provided to the Army to date is adequate for replenishing stockpiles and supporting Ukraine efforts for present and forecasted worldwide munitions requirements.

72. Senator COTTON. Secretary Wormuth, if not, where do you need additional investment to expand capacity?

Secretary WORMUTH. Likely, the Army will need additional investment to expand capacity. The Army is working on needed investments in artillery shell and propellant charge production to further accelerate and sustain the planned ramp up in production. The Army is working to get that to Congress for consideration in a Ukraine Replenishment Tranche request very soon. In addition, there are enduring requirements outlined in the Army Ammunition Modernization Plan that will help

sustain the needed capacity. The report is provided to Congress on a yearly basis, with the latest delivered in March 2023.

QUESTIONS SUBMITTED BY SENATOR JONI ERNST

DEPARTMENT OF EDUCATION NONCOMPLIANCE

73. Senator ERNST. Secretary Wormuth, would you agree that those administrators of schools that deny access to recruiters are harming your recruitment effort?

Secretary WORMUTH. Administrators who deny or limit the access of Recruiting noncommissioned officers (NCO) into schools impede the Army's recruiting ability. Meaningful, face-to-face interactions between our Recruiting NCOs and potential applicants is the best way for students to learn about the opportunities and benefits the military offers and what military service is really like. In schools where Recruiting NCOs are unable to speak with students, or are not supported by administrators and teachers, it is difficult to ensure those youth are aware of the opportunities and benefits available to them through military service. Recruiting NCOs are not seeking access to convince every student to join, but instead to have the opportunity to educate today's youth about opportunities, benefits, and the role the Army plays in supporting and defending the Constitution; in the end allowing students to make informed decisions about their future.

74. Senator ERNST. Secretary Wormuth, would you further agree that the Federal Government must enforce the law—including by withholding funds?

Secretary WORMUTH. Withholding Federal funding is an available tool. However, in most cases, access issues can be resolved through leader engagement. Professional relationships between Army Recruiters and the school administration are crucial and when local, State, and Federal leadership also support those relationships, it is truly invaluable. The Army fully recognizes that school districts have State and local education requirements that must be met during the calendar year and the Army's Recruiting NCOs do their best to work with schools to achieve the best balance to achieve mutual success. The Army continues to work with local education officials to improve access and in most cases, issues of denying access can be resolved through proactive leader engagement at all levels. This approach opens doors for Recruiting NCOs to develop rapport with school administrators, teachers, and student bodies. It takes time, but quality, meaningful access is almost always achieved as relationships and trust develop. The Army also supports a whole-of-government approach to ensure relationships are built, sustained, and where needed, created if they are not present. Local, State and Federal leadership and agencies play a crucial role in developing trust and sustaining meaningful relationships.

75. Senator ERNST. Secretary Wormuth, what are you going to do to ensure recruiter access?

Secretary WORMUTH. Army leaders continue to work with our local recruiting partners (Civilian Aides to the Secretary of the Army (CASAs), influencers, community partners, Superintendents etc.) to increase meaningful access to schools. For example, in January 2023, U.S. Army Recruiting Command (USAREC) reported approximately 400 of 17,000 high schools denied access to Recruiters. However, USAREC made significant progress by leveraging CASAs, Army Reserve Ambassadors, and local leaders and regained access to all but one high school between January and March 2023. The Army continues to experience success accessing student populations across the country. One example is through USAREC's "High School Blitz" in which they conduct hundreds of high school engagements on a weekly basis. A few challenges that recruiters have faced include the belief that college remains the only viable option for post-high school education, which further creates a disconnect between communities and the military. Recruiters are overcoming this challenge as they continue to develop a positive rapport with school administrators, teachers, and student bodies. These relationships take time but significant progress is being made in building relationship that led to open lines of communication and fact sharing.

76. Senator ERNST. Secretary Wormuth, will you commit to report back on your progress in 60 days?

Secretary WORMUTH. Yes—the Army can provide an update for full transparency in efforts to improve meaningful access to high schools across the country.

PREVENTING THREATS TO NATO

77. Senator ERNST. General McConville, has degradation of Russia's military likely decreased our operational requirements in Europe?

General MCCONVILLE. DOD continues to assess the operational requirements in Europe following Russia's invasion of Ukraine. The Army contributes to the ongoing evaluation of requirements in Europe to ensure the right capabilities fulfill requirements while preserving the readiness of forces. The Army continues to provide trained and ready forces to Europe to support operational requirements determined by the Commander, U.S. European Command and approved by the Secretary of Defense. Rotational and forward-stationed Army forces in Europe are actively contributing to deterrence by integrating with Allies and partners and participating in training exercises. It is important to note that only Russia's conventional ground forces have been degraded and they still remain a significant threat. Also, Russia still remains lethal air, naval, hybrid, and strategic/non-strategic nuclear capabilities. For this reason, deterrence and defense of Europe through NATO will remain a priority.

GROUND-BASED MISSILE CAPABILITIES IN WESTERN PACIFIC

78. Senator ERNST. General McConville, would U.S. ground-launched, theater-range missiles in the Western Pacific help availability of persistent, prompt, and survivable strike options?

General MCCONVILLE. Yes, the synergy and the varied capabilities of the services long range fire capabilities work in concert to provide complex dilemmas for an adversary allowing the DOD to synchronize efforts against singular or numerous targets simultaneously. Missile platforms are rapidly transported via air or sea to engage enemy forces throughout the Western Pacific which avoids lingering to become targets for enemy counter fire.

79. Senator ERNST. General McConville, would U.S. ground-launched, theater-range missiles in the Western Pacific help deter of enemy attack or escalation?

General MCCONVILLE. Yes, U.S. ground-launched, theater-range missiles in the Western Pacific in mutually supporting relationships with their air and maritime launched counterparts provide a combined arms threat to enemy forces. This increased lethality affects enemy decision calculus and contributes to deterring attack or escalation by greatly increasing the joint force's capability to impose operational costs on enemy forces. In addition, the inclusion of ground-launched theater-range missile capability requires the enemy to allocate kinetic and non-kinetic resources to seek and destroy these assets diminishing enemy capacity to concentrate efforts on a singular DOD service.

80. Senator ERNST. General McConville, would U.S. ground-launched, theater-range missiles in the Western Pacific help impose of operational costs on enemy forces?

General MCCONVILLE. Yes, U.S. ground-launched, theater-range missiles in the Western Pacific in mutually supporting relationships with their air and maritime launched counterparts provide a combined arms threat to enemy forces far beyond the threat that each individual platform would pose individually. This increased lethality greatly increases the joint force's capability to impose operational costs on enemy forces and contributes to deterring attack or escalation by affecting enemy decision calculus.

81. Senator ERNST. General McConville, would U.S. ground-launched, theater-range missiles in the Western Pacific help deliver responsive strikes against time-critical enemy targets?

General MCCONVILLE. Yes, the persistent presence of U.S. ground-launched, theater-range missiles in the first and second island chains provides a proximity and high reload speed that helps deliver responsive strikes against time-critical targets. In mutually supporting relationships with their air and maritime launched counterparts, ground launched capabilities provide a combined arms threat to enemy forces far beyond the threat that each individual platform would pose individually.

82. Senator ERNST. General McConville, would U.S. ground-launched, theater-range missiles in the Western Pacific help destroy high-value targets to enable other joint forces?

General MCCONVILLE. Yes, U.S. ground-launched, theater-range missiles in the Western Pacific with their persistent presence, high reload speeds, and proximity to enemy targets form a mutually supporting relationships with their air and mari-

time launched counterparts and provide a combined arms threat to enemy forces far beyond the threat that each individual platform would pose individually.

83. Senator ERNST. General McConville, would U.S. ground-launched missiles at various ranges and launch locations in the Western Pacific create dilemmas for enemy forces?

General MCCONVILLE. Yes, U.S. ground-launched, theater-range missiles in the Western Pacific with various capabilities complicate enemy decision calculus to include ranges and launch locations creating dilemmas for an adversary through supporting relationships from multiple domains providing long range fires from air, ground, and maritime launched (both from the surface and sub-surface fleet) creating a joint combined arms threat to enemy forces far beyond the threat that each individual platform would pose individually.

SHORT RANGE AIR DEFENSE SYSTEMS

84. Senator ERNST. Secretary Wormuth and General McConville, what is the plan to move beyond the initial 4 battalion goal for MSHORAD and resource the Army's stated need of up to 9 battalions of this critical air defense capability?

Secretary WORMUTH and General MCCONVILLE. The Army utilizes all components to resource required capabilities and will welcome any assistance with modernization. Fielding additional M-SHORAD Battalions will help the Army's tactical formations defeat aerial threats that could limit ability to conduct multi-domain operations. The Army will have to balance increased force structure to modernize the Army of 2030. Guided by the National Defense Strategy, the Army is in the process of determining how and where to make these changes. Once analysis is complete and documented in structure, the Army will assess impacts to modernization priorities and Army procurement.

85. Senator ERNST. Secretary Wormuth and General McConville, what is the Army's current timeline to resource a counter small, unmanned aircraft system (C-sUAS) single vehicle solution?

Secretary WORMUTH and General MCCONVILLE. The Army has programmed funding for nine C-sUAS Division Sets to protect critical assets and maneuver formations from the sUAS threat. The current composition of those Division Sets includes the two-vehicle configuration of the Mobile, Low, Slow, Unmanned Aircraft Integrated Defeat System (M-LIDS). The Air and Missile Defense Cross Functional Team (AMD CFT), as the Army's C-sUAS lead for operational requirements and capability development, continues to evaluate new capabilities and emerging technologies to keep pace with the evolving sUAS threat. The Army is assessing opportunities to move toward a single-vehicle configuration at the earliest opportunity and will request resourcing in the appropriate year. The Army appreciates the continued support from Congress as the Army continues to develop C-sUAS capabilities to address the evolving threat.

QUESTIONS SUBMITTED BY SENATOR DAN SULLIVAN

MULTI-DOMAIN TASK FORCES IN ALASKA

86. Senator SULLIVAN. Secretary Wormuth and General McConville, since 2017, the Army has fielded three theater-specific multi-domain task forces capable of employing long-range precision effects to include intelligence collection and precision strikes. Currently, two of the Army's multi-domain task forces are concentrated on the PACOM AOR and the third is focused on EUCOM/ AFRICOM. Currently, the Army is looking to field a fourth and possibly a fifth multi-domain task force. Your department's Arctic strategy states "with increasing levels of adversary activities in the region, it is essential for the U.S. Army to employ a calibrated force posture with units that are manned, trained, and equipped to maintain a credible deterrence and the first line of defense of the homeland." The study additionally rightfully points out the Arctic's place as a center of Strategic Competition. With the importance of the Arctic as laid out in your strategy on the region and the Army's interest in creating two more theater-specific multi-domain task forces, can you please speak to the benefits of having the next multi-domain task force in Alaska?

Secretary WORMUTH and General MCCONVILLE. MDTF stationing is a decision reserved for the Secretary of the Army. The Headquarters, Department of the Army develops options to station our limited resources based on operational requirements found in the National Defense Strategy (NDS) and the Defense Planning Guidance (DPG). The Army Staff is still currently assessing those requirements in our annual

Total Army Analysis (TAA) that will be approved by the Secretary of the Army. Specific for the Arctic, all Arctic-capable force structure decisions will be aligned with the National Strategy for the Arctic Region and other relevant posture guidance. The Army fully realizes and values that Alaska is an ideal location for the development of new capabilities applicable to cold weather environments and for the threats unique to the region.

11TH AIRBORNE DIVISION

87. Senator SULLIVAN. Secretary Wormuth and General McConville, as you know, last June, on the anniversary of D-Day to be exact, the 11th Airborne Division or "Arctic Angels" was stood up at Joint-Base Elmendorf-Richardson in Anchorage. Prior to the stand up, the U.S. Army's Alaska Headquarters was suffering from an identity crisis which unfortunately was contributing to a mental health crisis among the soldiers in my State. Since its stand up, the 11th Airborne Division under General Eifler and Sergeant Major Daly has been nothing but remarkable for the morale of soldiers stationed in Alaska. In fact, as you both know, Alaska is now the top requested duty station in the country. Over the last few months, the 11th Airborne Division completed a forced entry airfield seizure in Scandinavia and next week will conduct an exercise called the "Joint Pacific Multinational Readiness Center-Alaska Exercise." What lessons has the army learned on the 11th Airborne's successes that can be applied to other service's other divisions?"

Secretary WORMUTH and General MCCONVILLE. The Army is very proud of everything that the 11th Airborne Division has accomplished since standing up last summer, as the cutting edge of the Army's Arctic capability. In addition to what the Army is learning on the ground in Alaska about Arctic operations, there are two broader lessons that could be applied across the force.

The first is a strong reminder that America's soldiers are always ready to face a challenge, no matter how great, as long as the Army ensures a clear sense of purpose. In the case of the 11th Airborne Division, this meant orienting on the developing strategic importance of the Arctic, but every formation has a distinct purpose that should animate everything from its training to a sense of *esprit de corps.*

The second lesson is on the importance of symbols like the maroon beret of the paratrooper or the storied patch of the 11th Airborne Division under which the Army pulled Alaska-based forces together. Symbols have an important role in building collective identity and pride. Soldiers are motivated by those distinctive elements that mark them as experts or identify challenges they have overcome. The Army continues to harness the potential of distinctive symbols that create a sense of purpose and belonging attractive to recruits, for diverse units across the Army.

SUICIDE PREVENTION IN ALASKA

88. Senator SULLIVAN. Secretary Wormuth and General McConville, as you know, unfortunately on Monday a soldier in Alaska died by suicide. While the suicide rate among soldiers assigned to Alaska has dropped, from 17 in 2021 to 6 in 2022, we can all agree that one is too many. I do want to commend both your and the rest of the Army's response on this difficult, difficult issue. Part of your response so far has included sending 40 mental health counselors to Alaska. However, I think we can all agree there is more to be done. I have tried to work alongside you to also prevent suicide including my introduction of the Don Young Arctic Warrior Act in last year's NDAA which sought to provide additional services including a home leave demonstration program and special pay for cold weather operations. Again I want to highlight what you both have done so far but can you please tell us what other important steps the Army is taking this year to prevent suicide?

Secretary WORMUTH and General MCCONVILLE. To get at the root cause of suicide and other harmful behaviors, the Army is shifting from responding to events to an integrated primary prevention model as the Army continues efforts to enhance leader engagement; strengthen individual, unit, and community resilience and connectedness; and mitigate stressors that may lead someone to suicide. This comprehensive approach focuses on the integration of a variety of primary prevention and intervention strategies and activities.

In addition, the Army continues to invest in upstream prevention efforts like quality-of-life improvements, sponsorship for new soldiers and families coming into a new unit, and financial literacy to help soldiers and families thrive and navigate the challenges they might face in Army life. The Army will soon publish a standalone suicide prevention regulation and Lethal Means Safety Toolkit.

The Army is actively participating in the DOD working group that is developing the roadmap for implementation of the Suicide Prevention and Response Inde-

pendent Review Committee's (SPRIRC) recommendations. In addition, the Army is proactively addressing the Secretary of Defense's immediate actions directed following the release of the SPRIRC report. Specifically, the directive that Commanders at all levels promote mission readiness through healthy sleep throughout the force.

Again, the Army appreciates Senator Sullivan's support of Army Suicide Prevention efforts. The Army is dedicated to eliminating these tragedies and will not stop until this critical task is accomplished.

WOKEISM IN THE MILITARY

89. Senator SULLIVAN. Secretary Wormuth and General McConville, I want to point out some of the excellent messaging you have created in your recent advertisements which really get at the "Be All You Can Be" spirit of the Army and drive home what our military should be doing, which is increasing lethality and readiness. As you both know, I was confused like many others on the target audience of the "Calling" series last year which featured one segment in particular called "Emma." Additionally, I want to point out as I did in our hearing on recruitment that continued messaging on fake extremism in the military by left-leaning publications is damaging to our Army's recruitment efforts. What is the Army's strategy to ensure wokeism and false allegations of extremism in the military are countered so that we are not pushing away potential recruits from serving their country?

Secretary WORMUTH and General MCCONVILLE. In the current competitive labor market, there are multiple options for young Americans. To compete in this market, the Army continues to tell its story in new ways to ensure the Army remains a top choice for those Americans who want to serve their country. Through the re-introduction of the "Be All You Can Be" campaign, the Army is reaching out to Americans from all backgrounds, talents, and regions and give them multiple reasons to come in and stay in the Army. The U.S. Army is committed to providing opportunities for every American who wishes to serve their country. With that, the Army continues to invest in our country's youth through programs focused on improving test taking skills, advanced degree programs, and safe and effective weight loss training.

THE ARMY'S ARCTIC STRATEGY

90. Senator SULLIVAN. Secretary Wormuth and General McConville, in August 2022, the U.S. Army announced the first BAE-produced BvS 10 "Beowulf" Cold Weather All-Terrain Vehicle (CATV) would be delivered to the U.S. Army Northern Warfare Training Center in Fort Wainwright, Alaska in 2023. In what month do you expect the first CATVs to be delivered to Alaska?

Secretary WORMUTH and General MCCONVILLE. The first Cold Weather All-Terrain Vehicles is anticipated to be delivered to Alaska by September 2023.

QUESTIONS SUBMITTED BY SENATOR ERIC SCHMITT

FUTURE SOLDIER PREPARATORY COURSE (FSPC)

91. Senator SCHMITT. Secretary Wormuth, I was encouraged and interested to learn from your testimony about the early success of the Future Soldier Preparatory Course (FSPC) pilot program. Have the candidates who successfully completed the FSPC continued to basic training only at Fort Jackson, or were some also transferred to other basic or One Station Unit Training sites as well?

Secretary WORMUTH. Future Soldier Preparatory Course pilot program graduates primarily attend either Basic Combat Training (BCT) at Fort Jackson or One Station Unit training either Fort Moore or Fort Leonard Wood based on their contracted Military Occupational Specialty. In rare cases, some may attend training at another BCT location.

92. Senator SCHMITT. Secretary Wormuth, last week, Under Secretary Camarillo testified that the Army will grow the FSPC with "two additional companies at Fort Jackson, South Carolina, and two companies at Fort Benning, Georgia." I think it is great that the Army is expanding the program. Are there currently plans to expand FSPC into other basic training sites like Fort Leonard Wood?

Secretary WORMUTH. At this time, further expansion is not required based on capacity at Fort Jackson and Fort Moore. However, the Army does have conditions-based decisions to expand to other training locations if necessary.

DEPARTMENT OF DEFENSE AUTHORIZATION REQUEST FOR APPROPRIATIONS FOR FISCAL YEAR 2024 AND THE FUTURE YEARS DEFENSE PROGRAM

TUESDAY, APRIL 18, 2023

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

NAVY POSTURE

The Committee met, pursuant to notice, at 9:29 a.m. in room SD–106, Dirksen Senate Office Building, Senator Jack Reed (Chairman of the Committee) presiding.

Committee Members present: Senators Reed, Shaheen, Blumenthal, Hirono, Kaine, King, Warren, Peters, Duckworth, Rosen, Kelly, Wicker, Fischer, Cotton, Rounds, Ernst, Sullivan, Cramer, Scott, Tuberville, Budd, and Schmitt.

OPENING STATEMENT OF SENATOR JACK REED

Chairman REED. Good morning. The Committee meets today to receive testimony on the President's Budget Request for the Department of the Navy (DON) for fiscal year 2024.

I would like to welcome the Secretary of the Navy Carlos Del Toro, Chief of Naval Operations Admiral Michael Gilday, and Commandant of the Marine Corps General David Berger.

We are grateful for your service, for the service of the men and women under your command, and for the support of all Navy and Marine Corps families. Thank you.

Admiral Gilday, General Berger, this will be your last posture hearing before the Committee in your current role. I would like to thank you for your remarkable leadership of the Navy and the Marine Corps as well as your many decades of service to the Nation.

You have guided your services through significant challenges with resolve and vision and we are deeply grateful.

The Navy and Marines are faced with a dangerous and evolving global security environment. Certainly, threats from Russia, Iran, North Korea, and violent extremist groups remain persistent and the Navy has an important role to play in addressing them.

But the clear pacing challenge for our naval forces is China. In the Indo-Pacific and in seas and ports around the world the United States Navy and the Marine Corps will continue to be the first line of deterrence and defense against the PRC's [People's Republic of China] expanding global ambitions.

Recognizing this challenge, the Biden administration has requested approximately $256 billion in funding for the Department of the Navy for fiscal year 2024. This represents an increase of $12.8 billion more than the 2023 enacted budget, the largest increase among the services.

Within this budget the Navy has requested nine new ships. The procurement of several new submarines, destroyers, frigates, and logistics vessels is well reasoned. At the same time, the Navy is proposing to retire a number of ships before the end of their service lives including several Littoral Combat Ships and dock landing ships.

I understand the Navy made the difficult choice to retire some of these ships now, to free up more resources in the future. But it seems that this plan would take us in the opposite direction of the Navy's goal for a 355-ship fleet, particularly regarding the amphibious force structure.

The Committee will want an update on these issues as well as the Navy's forthcoming 30-year shipbuilding plan. Even as the Navy requests newer, more advanced ships I am concerned by the continuing struggles to maintain our current fleet. Deferred ship maintenance, reduced steaming and flying hours, and canceled training and deployments have created serious readiness problems within the Navy.

These problems are also being experienced by private shipyards and Navy shipyards. The 2022 National Defense Authorization Act (NDAA) directed the Navy to study how to improve the capacity in our shipyard industrial base and the Department has since begun the Shipyard Infrastructure Optimization Program, or SIOP.

This program represents more than $25 billion in planned investments over the next 25 years to modernize and improve our shipyards.

Admiral Gilday, I would ask for an update on SIOP and the outlook for Navy maintenance efforts.

The Marine Corps, while maintaining its ability to operate worldwide, is continuing to restructure around two concepts, Littoral Operations in a Contested Environment and Expeditionary Advanced Base Operations.

The key elements of these concepts is a more flexible amphibious force that can support a broader naval fight once ashore. Rather than simply acting as a landing force the Marine Corps intends to help control the sea and air in support of the Navy and as part of the joint force.

To achieve this the Marine Corps is prioritizing a number of modernization efforts including deep sensing, long-range fires to include anti-surface capabilities, enhanced air and missile defense, and improved ground and amphibious combat vehicles.

These platforms will equip the marines with improved force protection and enhanced lethality with a particular emphasis on providing highly mobile capabilities and addressing contested logistics.

General Berger, I appreciated your thoughtful approach throughout this restructuring. Your posture toward adjusting Marine Corps requirements based on the results of experimentation and wargaming has yielded valuable outcomes such as updating the

number of cannon batteries and the size of fighter attack squadrons.

The Committee looks forward to continued engagement on these modernization efforts as they proceed.

Finally, I would note that the United States' greatest competitive advantage over China is our global network of allies and partners.

The recent agreement between the United States, Australia, and the United Kingdom to collaborate on nuclear submarine production through the AUKUS [Australia, United Kingdom and the United States] partnership is a meaningful step forward in ensuring a free and open Indo-Pacific.

Successful implementation of this plan will require responsible oversight and a stable industrial base. I would ask our witnesses for their views on what we have the capacity to produce now and in the future and how we can provide the budget and resources to match.

Again, I want to thank the witnesses for appearing today. I look forward to your testimonies, and now let me recognize the Ranking Member, Senator Wicker.

STATEMENT OF SENATOR ROGER F. WICKER

Senator WICKER. Thank you, Mr. Chairman.

I welcome our witnesses and thank them for their years of distinguished service. I want to associate myself with the generous words of appreciation that the distinguished Chairman has made with regard to Admiral Gilday and General Berger.

I would add to that my appreciation for the talented team of marines and sailors who are seated behind you and have been such a great help to all of us in our efforts to get this right.

I also want to share and associate myself with the remarks made by the distinguished Chairman and his concern that the budget proposal would take us in the wrong direction and I think on a bipartisan basis we will be able to rectify that.

Members of this Committee know all too well that the Chinese Communist Party represents a major threat to the Nation. Today, we are in a more complex and sobering threat environment than we have been in since World War II.

In that war our economy was larger than all of our adversaries combined with an unmatched industrial base. We no longer enjoy that advantage, not by a long shot. The evidence is clear China has launched 75 new warships since 2018 compared to our 35, 75 to our 35.

China has over 200 hardened aircraft shelters, more than eight times what we have available in the Western Pacific, and there are other examples of this imbalance.

I am troubled by China's recent creation of defense mobilization offices, air raid shelters, and wartime emergency hospitals. China is rapidly expanding its military forces and preparedness. We cannot be complacent in our response.

Yet, late yesterday the Navy submitted its statutorily required 30-year shipbuilding plan, which seems to embrace complacency. Even in the most aggressive alternative plan the Navy would not reach the statutory 355-ship requirement until fiscal year 2042.

Compared to last year's plan, it trades 35 amphibious warfare ships for support vessels, harming the ability of our marines to project force. The Navy's fiscal year 2024 budget request is anemic. Under the President's proposal the size of the fleet would shrink further.

Let me be clear. This budget request has failed yet again to build a U.S. Navy fleet that is capable of meeting even basic tasks to say nothing of growing strong enough to deter near-term threats.

Thankfully, there is bipartisan agreement that we must substantially increase the shipbuilding budget. I am concerned with production constraints at our shipyards. Despite congressional support the Navy has proved unable to achieve delivery of two attack subs per year, three destroyers per year, and two frigates per year.

This trend puts us further and further behind the goal to build the Navy we need. Expanding our shipbuilding capacity will require generational investments combined with new approaches to growing the workforce.

Growing our shipbuilding capacity will also require stable demand signals to industry. The Navy introduced uncertainty in the shipbuilding industry by excluding the LPD amphibious ship from the fiscal year 2024 budget. Congress has reversed decisions like this in the past and I certainly hope and I actually am confident that we will do so again this year for LPD 33.

I am also concerned about ship maintenance, which is essential to avoiding a smaller fleet available in the near term. Lack of investment and maintenance together with rising requirements has left the fleet in brittle condition. As a result of decades of deferred maintenance. The Navy wants to decommission 11 ships including 8 before the end of their expected service life.

This strategy of divest to invest does not work. In fact, that failed doctrine is a contributing reason we are in this predicament.

The assumptions included in this budget have the size of the fleet shrinking even more in the next 5 years. I see a whole lot of divest and very little invest in this budget.

I fully expect that Congress will work together in a bipartisan and patriotic way to put a stop to this disgraceful lack of commitment to our naval forces.

Finally, I am concerned that the Navy is not sufficiently leveraging promising new technologies. This is in contrast to the Marine Corps, which has embraced innovative concepts and equipment relevant to the high-end fight.

The Navy should adopt resilient communication advances, invest in autonomous technology, make use of additive manufacturing such as 3D printing, and move to alternative materials such as composites.

Navy acquisition must do a better job of moving cutting-edge programs into production and do so urgently. A Western Pacific conflict would lean heavily on our naval and air forces.

Congress needs to exercise its constitutional obligation to provide these resources, the equipment, and ships necessary to provide for the common defense and I am certain we will.

Thank you all for your service and thank you very much, Mr. Chairman.

Chairman REED. Thank you, Senator Wicker.

Mr. Secretary, please?

STATEMENT OF THE HONORABLE CARLOS DEL TORO, SECRETARY OF THE NAVY

Mr. DEL TORO. Good morning, Chairman Reed, Ranking Member Wicker, distinguished Members of the Committee. It is an honor to appear before you today alongside General Berger and Admiral Gilday to discuss the posture of our Department of the Navy.

Today, our Nation, as you both have highlighted, does face challenges in every region and domain that we operate in. From the seabed to the stars, we recognize principally the People's Republic of China is our pacing threat, executing a strategy aimed at upending international order.

To preserve our way of life, the National Defense Strategy calls upon the joint force to deter aggression while being prepared to prevail in conflict. A strong Navy and Marine Corps are the foundation upon which the successes of the joint force exists.

The President's 2024 Budget does send a strong signal to the American people of the value that President Biden and Secretary Austin place in maintaining a robust Navy and Marine Corps to confront the threats that we face to the tune of an increase of $11 billion.

This year's budget request supports our three enduring priorities: to strengthen our maritime dominance, to build a culture of warfighting excellence, and enhancing our strategic partnerships around the globe.

With your support over the past year we have made major strides to modernize our fleet and our force. The year 2022 saw the deployment of the aircraft carrier USS *Gerald R. Ford,* providing the Navy with lessons learned that will benefit future *Ford*-class carriers.

Construction of high-end surface combatants continue, including the first *Constellation*-class frigate, USS *Constellation,* and the first of our *Arleigh Burke* Flight III destroyers, the USS *Jack Lucas.*

We continue progress on our first *Columbia*-class ballistic missile submarine, the USS *District of Columbia,* while preconstruction activities on the second *Columbia* SSBN, USS *Wisconsin,* have also begun.

On the innovation front, Task Force 59, just as one example, in Bahrain, continues to test a wide range of unmanned surface vessels and we are looking forward to expanding this effort to Fourth Fleet this coming year.

When we consider the composition of our fleet we seek to strike a balance between readiness, modernization, and capacity with an immediate emphasis on readiness. This year our divestment request includes three amphibious ships and at least two cruisers in poor material condition that offer very limited warfighting capability.

Further investment in these platforms just simply does not make sense. It is a waste of the taxpayers' money. Our decisions to divest or extend a ship life are based on a hull by hull evaluation.

For example, we recently announced the modernization of the destroyer USS *Arleigh Burke* DDG–51 to keep it sailing through 2031, 5 years beyond its estimated service life. We hope to be able

to continue that trend with other ships when possible in the *Arleigh Burke*-class and even with our cruisers, the *Ticonderoga*-class cruisers.

We owe it to the American people to be responsible stewards of taxpayer dollars. Investing in platforms with limited capability conflicts with that responsibility.

Our naval forces are more than just platforms and systems, however. It is our sailors, our marines, that are truly our greatest strength. This year's budget request contains multiple investments to support them and their families with services, benefits, housing, and education that they deserve.

In addition to our commitments to our people we are reinforcing our international relationships including those with our Ukrainian partners as they defend their sovereignty in response to Russia's illegal and unprovoked invasion.

In the Indo-Pacific we continue to play a leading role in the AUKUS security partnership. Our Navy will be critical to this initiative's success as we support Australia's acquisition of conventionally armed nuclear-powered fast attack submarines.

We continue to hone our skills with allies and partners in the Arctic, ensuring we are prepared to operate in this challenging and unforgiving environment. Along with our partnerships abroad we are committed to also strengthening our relationships here at home. We value your support and we recommit our leadership toward defueling and remediating the Red Hill bulk fuel storage facility spills.

We are committed to doing what it takes to address the concerns of servicemembers, their families, the people of Hawaii, and all other communities throughout the United States.

As I have said before, we build trust 1 day at a time, one action at a time.

As I close, I would like to emphasize that to meet these commitments and obligations the Department of the Navy does require a strong cadre of senior leaders. Delaying the approval of our flag and general officer nominations before the Senate is especially harmful to our readiness. I urge all of you to reconsider this situation and allow our nominations to please move forward.

Finally, I am grateful for the trust that you have placed in me to lead this department. I look forward to discussing how best to support our sailors, marines, and their families and defense of our Nation working very collaboratively with each and every one of you.

Thank you.

[The prepared statement of The Honorable Carlos Del Toro follows:]

PREPARED STATEMENT BY THE HONORABLE CARLOS DEL TORO

INTRODUCTION

Chairman Reed, Ranking Member Wicker, distinguished Members of the Committee, it is an honor to appear before you alongside General Berger and Admiral Gilday to discuss the posture of the Department of the Navy (DON). We appreciate your trust and confidence in us to lead the DON, and appreciate opportunities like this to come together with you and address how to best to recruit, train, equip, and

prepare our sailors and marines so they can fulfill their vital role in support of the Joint Force, protecting our national security interests.

The United States requires a strong Navy and Marine Corps. The national and economic security of our Nation depends on free and open access to the sea. Ninety percent of international trade travels over the seas and one third of that transits the South China Sea. Over 400 undersea fiber-optic cables carry more than a trillion dollars in transactions every day. And the rules-based international order that benefits us all requires a strong maritime force, campaigning forward alongside allies and partners to provide the sea control and integrated deterrence we need to counter strategic competitors today and into the future.

We find ourselves at an inflection point, one that demands we renew our commitment to naval primacy as we chart a course through this century of intense maritime competition. Over the past two decades, the People's Republic of China (PRC) has more than quadrupled its export trade and used its growing wealth and economic power to rapidly expand and modernize its military and its navy. The People's Liberation Army Navy has added over one hundred combatants to its fleet in that time—a naval buildup that is a key component of its increasingly aggressive military posture. Today it has approximately 340 ships, and is moving toward a fleet of 440 ships by 2030. The PRC is conducting active, aggressive maritime activities in the South China Sea and beyond that have the potential to undermine our system of international law, including the freedom of the seas, a foundational United States interest.

Our maritime challenges are not confined to the Indo-Pacific. Moscow has not abated in its efforts to control large swaths of the Black, Baltic, and Arctic Seas, trying to intimidate and deny other countries the opportunity to exercise their rights to free passage. That is why six of seven of NATO's priority operating regions are maritime-focused, and NATO is moving to adopt its first maritime strategy.

Our Navy and Marine Corps team are meeting these threats on the sea, under the sea, in the air, and in cyberspace every single day. To defend freedom of the sea, we must ensure our sailors and marines have the capability and forward presence to stand by our allies and our partners. That is why I have directed our Navy and Marine Corps team to prioritize our investment in readiness, to make sure our ships and aircraft are always prepared to deploy. This approach will deliver the integrated deterrence at sea required by our National Defense Strategy.

Three Enduring Priorities Guiding the Department of the Navy

Last year I had the privilege of introducing my strategic vision for the Department of the Navy to this Committee, centered on our Department's three enduring priorities, which are complementary to and supportive of both the CNO's *Navigation Plan 2022* and the Commandant's *Force Design 2030.*

First, we are strengthening our maritime dominance so that we can deter potential adversaries, and if called upon, fight and win our Nation's wars. Second, we are building a culture of warfighting excellence, founded on strong leadership, and rooted in treating each other with dignity and respect. And third, we are enhancing our strategic partnerships, across the Joint Force, with industry, with academia, and with our allies and partners around the globe. Over the past year and a half, our DON team has made irreversible progress across our three enduring priorities, supporting positive growth and modernization in our naval force. I highlight the progress we've made and successes we've enjoyed over the past year through the support of the Committee and your other colleagues throughout Congress.

Strengthening maritime dominance requires us to rapidly field the concepts and capabilities that create advantage relative to our pacing threat, with the sustainment necessary to generate integrated, all-domain naval power. That is why we are making the investments now, guided by the CNO's *Navigation Plan* and *Marine Corps Force Design 2030,* to ensure we remain the most lethal, capable, and globally postured force on this planet for decades to come.

Last June, our shipbuilders laid the keel for USS *District of Columbia,* the first of a new class of nuclear-powered ballistic missile submarines that will underwrite the Nation's nuclear deterrent out to the year 2080. The second *Columbia*-class hull, USS *Wisconsin,* has begun pre-construction activities.

In July, we commissioned USS *Fort Lauderdale,* an amphibious warship that will help modernize our amphibious fleet and extend the reach of our marines to fight from the sea wherever there is a need.

What's more, USS *Tripoli,* the second of our *America*-class amphibious assault ships, completed its maiden deployment in 2022, operating throughout the Indo-Pacific with our larger, traditional aircraft carriers as a test of our F–35B "Lightning Carrier / Assault Carrier" concept. Deployments like this one highlight the Navy

and Marine Corps' interoperability as well as the strategic and operational advantages that amphibious ships continue to provide to the Joint Force.

With regard to aircraft carriers, we've made significant progress on USS *Gerald R. Ford,* the first new carrier to be deployed in almost 50 years. We are taking the lessons learned from the *Ford* as we build the future USS *John F. Kennedy,* USS *Enterprise,* and USS *Doris Miller.* Our carriers are not only vital to deterrence, they are also the cornerstone of our interoperability with our allies.

Our most advanced fighter aircraft, the F–35 Lightning II, now brings fifth-generation stealth and multi-role, multi-mission reach and power wherever we need to fight. Meanwhile, the F/A–18E/F Super Hornet will be the numerically predominant aircraft in the carrier air wing well into the 2030's. Service-life modification initiatives and capability upgrades enhance our inventory by advancing the tactical relevance of the F/A–18 E/F and closing the Navy's strike-fighter gap. We are working with industry to ensure trained mechanics are prepared to support induction schedules, and that they are bringing electrical and avionics experts onboard to support Block III transition efforts.

Marine aviation continues to build capability and capacity in the image of the future force. Recently, we stood up Marine Aerial Refueler Transport Squadron 153 in Kaneohe Bay, Hawaii, significantly increasing the reach and sustainment capabilities of marines in the Pacific theater.

The 15 KC–130J tanker aircraft that VMGR–153 will have by 2026 will enhance the organic mobility available to marines during training, in response to crisis, or in conflict. We are approaching 1 year since the CH–53K Sea Stallion program became operational, and we are well underway transitioning Marine Heavy Helicopter Squadron 461 into our first fully operational Sea Stallion squadron. While it is still in transition, HMH–461 is already conducting heavy-lift assault support missions previously impossible with legacy aircraft.

Over the past year, DON personnel have also demonstrated the immense potential of unmanned and autonomous vehicles. The Overlord Surface Vessel Ranger successfully transited from the Gulf Coast to the West Coast without an embarked crew. These unmanned surface vehicles will reduce the risk to our personnel, lower operating costs, and protect access to areas like the South China Sea. In addition, United States Naval Forces Central Command's Task Force 59, a new, first-of-its-kind task force, is rapidly integrating unmanned systems and artificial intelligence into maritime domain awareness in the Fifth Fleet area of operations, and we will soon expand that capability to other regions of the world.

In addition to procuring the modern platforms, we are also expanding the areas available for our personnel to train. With our partners in Congress, through the National Defense Authorization Act of 2023, we are expanding and modernizing our training ranges at Naval Air Station Fallon. This initiative will provide our pilots with the airspace and ground necessary to hone their skills in the advanced aircraft we field.

Another area of improvement is shipyard performance: our significant investment in the Shipyard Infrastructure Optimization Program, known as SIOP, is modernizing our four aging public shipyards by optimizing facilities and infrastructure as well as increasing dry-dock capacity and capability. We are also looking at establishing a parallel high-end technical track in nuclear welding, robotics, hull technology, software and electronics integration, as well as additive manufacturing for high-paying blue collar career.

We have made significant improvements to surface ship readiness. Working with industry partners, we have reduced maintenance delays on major maintenance periods in private shipyards by 39 percent since 2019. On-time completion of availabilities has also steadily increased from 34 percent in fiscal year 2019 to 41 percent for all maintenance periods completed in fiscal year 2022. We have brought data and advanced analytics to inform the plan for each maintenance and repair availability period, and improved our processes to better scope work and structure each availability well before ship arrival dates.

Public shipyards are also improving from fiscal year 2019 in both fewer days of maintenance delay and increases to on-time completion percentages. In fiscal year 2022, despite lingering COVID challenges to production, the public shipyards reduced number of days of maintenance delay by 29 percent from 2019 with on-time completions now at 33 percent.

Our second enduring priority, building a culture of warfighting excellence, demands more aggressive recruiting, more "training like we fight," and a stronger commitment to retaining a strong, diverse, and healthy force—a force that is ready at all times and focused on warfighting and strong, positive leadership at every level. That's why we have expanded community-and school-based outreach while simultaneously increasing media campaigns in underserved and minority markets.

We must attract the broadest possible talent pool from throughout our all Nation, including more women.

Recognizing that quality of life for our servicemembers and families is inseparable from warfighting excellence, we have directed substantial investments in quality-of-life initiatives, infrastructure improvement, and the largest military pay raise in over 20 years. All of these efforts are centered on one goal: combat readiness. Our sailors and marines are better prepared and more focused when they know their families are being cared for and doing well.

Our third strategic priority, enhancing our strategic partnerships, sustains and expands our advantage by seeking to achieve seamless integration, communication, and collaboration with each of our partners. With our Government partners, we have strived toward greater agility, adaptability, trust, and transparency in support of our warfighters. Globally, we have strengthened our relationships with like-minded maritime nations, deepening interoperability and interchangeability in order to enable mutual action to address shared challenges.

Our actions in the face of adversity will long be remembered by our allies and partners. Since the start of the conflict in Ukraine, the Navy and Marine Corps have supported our Ukrainian partners as they continue to defend their sovereign territory in the face of unprovoked Russian aggression. Together, we have risen to the occasion, supplying an unprecedented volume of capabilities to assist in their time of need. In 2022 alone, the Department of the Navy coordinated the identification, adjudication, and delivery of over $1.3 billion in critical systems, weapons platforms, munitions, and support equipment to address critical Ukrainian needs.

Beyond tending to our international partnerships, we are working to expand on relationships here at home. We have made a concerted effort to support our defense industrial base, with special attention paid to supporting entrepreneurs leading small and medium-sized businesses. As a direct result of the President of the United States' Executive Order 13985, "Advancing Racial Equity and Support for Underserved Communities Through the Federal Government," the DON took action to further develop and refine our strategic and tactical approaches to maximize small-business utilization across a diverse industrial base. These deliberate actions have increased our outreach to small businesses, improved subcontracting compliance and oversight, fostered more opportunities to fully utilize the Department of Defense (DOD) Mentor-Protege Program, and increased Phase III Small Business Innovation Research program funding by 16 percent over the previous year.

All of these endeavors contribute to our desired expansion of the DOD's supply chain marketplace.

THE FISCAL YEAR 2024 PRESIDENT'S BUDGET

Despite the successes and progress highlighted above, there is still work to be done on all fronts. The President's Budget for fiscal year 2024 Request to Congress is a clear signal of President Biden's support for our Navy and Marine Corps team and of the recognition of our critical role in the Joint Force especially in light of the complex strategic environment. Our request this year totals $255.8 billion, a 4.5 percent increase over last year. Every dollar of this request will contribute to the warfighting strength of our Navy and Marine Corps, from research and development of next-generation technologies and systems to procurement of high-end platforms critical to defending our Nation, infrastructure improvements, and most importantly, taking care of our sailors, marines, and their families who sacrifice so much.

Strengthening Maritime Dominance

Fleet Investments

A modern, capable, and lethal Navy requires sustained investment across a variety of platforms to complete missions in all environments. President's Budget 2024 prioritizes the development, procurement, and sustainment of our Navy's ships to provide our Nation with the most capable platforms. The request includes the full funding for two destroyers, two nuclear-powered attack submarines, two frigates, one T-AO fleet replenishment oiler, and one AS(X) submarine tender, while providing the next increment of funding for construction of CVN 80, CVN 81, and LHA 9, as well as the first year of incremental funding for the second *Columbia*-class ballistic missile submarine.

The budget request also includes a significant investment in submarine maintenance with the goal of reducing maintenance periods and improving the operational availability of these critical assets. These funds are aimed at improving material availability and strengthening the private and public industrial bases.

President's Budget 2024 prioritizes modernization of the *Zumwalt*-class (DDG–1000) guided-missile destroyer to enable the Navy's first fielding of the conventional

prompt strike sea-based hypersonic weapon system. It also includes key enablers for the Integrated Combat System such as Infrastructure-as-Service. The Integrated Combat System will allow the Navy to deliver future capabilities through software uploads instead of hardware installations.

Fleet Divestments

Within President's Budget 2024 is the request for the divestment of eight surface combatants: three cruisers (CG); three Landing Ships, Dock (LSD); and two Littoral Combat Ships (LCS). The three CGs—USS *Cowpens* (CG–63), USS *Shiloh* (CG–67), and USS *Vicksburg* (CG–69) are all within 3 years of their end-of-service-life dates. While these cruisers have a large vertical-launch capacity for a variety of weapons, the cost associated with repairing, modernizing, and sustaining the hulls requested significantly outweigh any warfighting contribution they provide to the fleet, and occupy limited, valuable private shipyard space that could be better used for maintaining more-lethal ships.

In addition to the three cruisers, we are requesting divestment of USS *Jackson* (LCS–06) and USS *Montgomery* (LCS–08), both *Independence*-class LCS variants. We acknowledge that both hulls are a third of the way through their projected service life of 25 years. However, these platforms are less lethal, less capable, and far more expensive to sustain than what is needed for the contested seas our Navy now finds itself operating in.

Finally, we are requesting the divestment of USS *Germantown* (LSD–42), USS *Gunston Hall* (LSD–44), and USS *Tortuga* (LSD–46), three amphibious ships that are all at or over 34 years of service and in unsatisfactory material condition. The planning and repair periods required for these ships to reach a deployable status would put all three at or near their 40-year end-of-service-life mark. Undertaking the repair of these ships, with potential cost growth, would tie up funding, shipyard capacity, and take an enormous personal toll on our sailors assigned to the projects. However, we recognize this request brings us below the 31 amphibious ships we are required to maintain per the National Defense Authorization Act for fiscal year 2023. The CNO, Commandant, and I are committed to ensuring we meet this requirement and doing so in a timely manner, but with a capable, sustainable mix of ship classes that will support our marines and sailors for decades to come.

In President's Budget 2023, the DON proposed 16 ship divestments, but was only allowed to divest four. Ultimately, it is our sailors and marines who pay the price when we are restricted from retiring legacy platforms and investing in the capabilities needed for the future.

Research and Development (R&D) of Enhanced Capabilities

President's Budget 2024 requests a total of $26.9 billion to increase innovation and modernization efforts in R&D. The budget request commits $718 million of R&D funding to the recapitalization of all portions of the undersea leg of the triad including *Columbia*-class submarines, Take Charge and Move Out (TACAMO) capability, and the Trident D5 life extension 2. The next-generation air defense family of systems includes the F/A-XX, the "Quarterback" of the manned/unmanned team concept, directing multiple tactical platforms at the leading edge of the battlespace. President's Budget 2024 also funds $861 million in R&D for unmanned platforms, including the MQ–4 Triton, the MQ–25 Stingray, the Large Unmanned Surface Vessel, the Extra Large Unmanned Undersea Vehicle, and the MQ–9A Reaper.

Sustaining Maritime Information Superiority

Information is combat power, and we will continue modernizing our information technology infrastructure, ashore and afloat to ensure this essential backbone of our maritime power remains secure and survivable and continues to deliver information everywhere to maintain decision advantage over our adversaries. President's Budget 2024 budgets approximately $13 billion for Enterprise IT, cyber activities, business systems, and other communications across the DON.

These investments are a critical warfighting priority for the Department. The DON is building information superiority to win the naval fight by modernizing its infrastructure, innovating and deploying new capabilities, and defending its information. These initiatives are enabled by data that is managed as a strategic asset.

Bringing the DON's enterprise infrastructure to parity with Industry is essential for us to maintain our advantage in competition, crisis and conflict. We have charted a path to a digital work environment where users can securely access their data anywhere on any device with performance that rivals best-in-class experiences in Industry.

The DON is accelerating the modernization and transformation of our IT capabilities by ensuring that decisions made to sunset or rationalize unneeded, obsolete, unproductive, insecure, and un-auditable IT applications are realized. This effort,

coined Cattle Drive, will accelerate modernization within multiple business and core IT portfolios and self-identify funds for potential re-alignment to transformational investments

The DON is accelerating adoption of game-changing low-earth orbit commercial satellite technology to provide resilient, low-latency, high-speed communications for warfighting, support, and quality-of-life-and-work solutions. We are adopting a new approach to cybersecurity that will move the DON from its current ineffective compliance-based cybersecurity approach to one based on readiness where the right to operate is earned and managed every day.

The DON is a leader within the DOD on the initiative to implement a more effective cybersecurity model called zero trust that is better adapted to today's threat and computing environments. Finally, data management and analytics progress the DON is making on multiple fronts is enabling us to improve decisionmaking, sustain information superiority and meet the goals of the DOD data strategy by ensuring quality data are accessible, understood, and shared to the point of need.

Enabling Cyberspace Superiority

In addition to building information superiority, the Department will ensure our networks and systems are secure, our critical infrastructure and weapon systems are survivable, and our cyber forces can impose costs on adversaries in and through cyberspace when required.
